Indigestion, constipation and the ills to which they lead cause more deaths than war, pestilence and famine combined. Yet—these ills, and the pain and suffering they cause, are *needless*. This is fully explained in a new book called "Colon Hygiene," written by Dr. John Harvey Kellogg, Chief Medical Director of the Battle Creek Sanitarium and a recognized authority on the effect of diet on digestion. In his book, Dr. Kellogg tells you how to take care of yourself so as to avoid indigestion, constipation and the ills to which they lead. Only natural methods recommended. No drugs. Some diet restrictions, if you need them, but—nothing difficult. A little exercise but—no tiresome régime. Proper attention to hours for rest, sleep, recreation and work. These are the important items. In his book, Dr. Kellogg gives you full instructions. If you would be rid of indigestion, constipation and the ills to which they lead, send for this book today. The price is only \$2. And—you take no risk for, if you are not entirely satisfied, the book may be returned at the end of five days, and we will promptly refund your money. Thus, we let you be the judge of this book. Over 400 pages, with many illustrations. Write for it today. Find out, at our expense, whether it can help you. Send your order direct to

GOOD HEALTH PUBLISHING CO.

ISSUES WANTED

Copies of the SURVEY of January 13, January 20 and February 3. Trying to save paper-cost, we cut the supply of these issues so scant that, when they met unexpected popularity, the supply was unequal to the demand. Copies from SURVEY subscribers who have finished with them will be highly appreciated.

To the kind friends who returned copies of the November 25 issue sufficient to fill the empty shelf hearty thanks are rendered.

CIRCULATION DEPARTMENT,
THE SURVEY

ruary, 1916, by the San Francisco Association and the Board of Education. During the conference, President Geo. E. Gallagher, of the Board of Education, publicly announced that the board would take steps to increase the capacity of this school to fifty. The board has also expressed itself favorably toward opening an additional school in another section of the city.

Thus a country sanatorium, more visiting nurses and additional open-air-school provision are practically assured for the city in the near future.

ONE of the most interesting and important parts of the Tuskegee Negro Conference this year was the exhibit of foods available in the region which Prof. George W. Carver arranged in large glass cases. Professor Carver has been for some time developing the agricultural department at Tuskegee Institute, and has made an intensive study of the natural resources and agricultural products of Macon county.

For the exhibit he had arranged attractively in a large glass case, portions of corn meal and peanut muffins, bacon puffs, cooked wild greens (curled dock, dandelion and wild lettuce), bread made from a mixture of wheat and velvet-bean flour, lye hominy, cow-pea bread, a home-made cereal consisting of rye, wheat, and corn and crushed toast served with sugar and cream.

With a keen sense of humor and an appreciation of the average Negro farmer's conservatism, Professor Carver attacked the problem of showing the man on the land how, in truth, he could secure for himself and his family the necessary food for man and beast. When it is remembered that thousands of Negroes have left the South, or are planning to leave the South very soon on account of the actual shortage of food and the hardships which have come to the farmers who are trying to raise cotton in spite of the boll weevil, the significance of this part of the conference is evident.

CALENDAR OF CONFERENCES

Items for the next calendar should reach THE SURVEY before March 14.

FEBRUARY AND MARCH

BOY SCOUTS OF AMERICA, National Council of. Washington, D. C., March 6. Chief scout executive, James E. West, Fifth avenue bldg., New York city.

INDUSTRIAL EDUCATION, National Society for the Promotion of. Indianapolis, Ind., February 21-24. Sec'y, Alvin E. Dodd, 140 West 42 street, New York city.

POSTURE LEAGUE, American. New York, March 10. Sec'y, H. L. Taylor, 1 Madison avenue, New York city.

RELIGIOUS EDUCATION ASSOCIATION. Boston, February 27-March 1. Sec'y, H. F. Cope, 332 So. Michigan avenue, Chicago.

SUPERINTENDENCE, Department of. National Education Association. Kansas City, Mo., February 26-March 3. Sec'y, Margaret T. Maguire, Washington School, Philadelphia.

LATER MEETINGS

INTERNATIONAL

KINDERGARTEN UNION, International. Boston, Mass., May 7-11. Sec'y, May Murray, Springfield, Mass.

NATIONAL

BOYS' WORK CONFERENCE. Buffalo, N. Y., May 22-24. Sec'y, C. J. Atkinson, 1 Madison avenue, New York city.

CHARITIES AND CORRECTION, National Conference of. Pittsburgh, Pa., June 6-13. Sec'y, W. T. Cross, 315 Plymouth court, Chicago.

CHILD WELFARE CONFERENCE. Under auspices of the National Congress of Mothers and Parent-Teacher Associations. Washington, D. C., April 24-May 1. Sec'y, Mrs. A. A. Birney, 910 Loan and Trust bldg., Washington, D. C.

CHILDREN'S HOME SOCIETY, National. Pittsburgh, June 4-6. Sec'y, Wilfred S. Reynolds, 209 South State street, Chicago.

COMMUNITY CENTERS, National Conference on. Chicago, Ill., April 18-22. Sec'y, John Collier, 70 Fifth avenue, New York city.

[Continued on page 591, last column]

INFORMATION DESK

The following national bodies will gladly and freely supply information and advise reading on the subjects named by each and on related subjects. Members are kept closely in touch with the work which each organization is doing, but membership is not required of those seeking information. Correspondence is invited. Nominal charges are sometimes made for publications and pamphlets. Always enclose postage for reply.

Health

SEX EDUCATION—New York Social Hygiene Society, Formerly Society of Sanitary and Moral Prophylaxis, 105 West 40th Street, New York City. Maurice A. Bigelow, Secretary. Seven educational pamphlets, 10c. each. Four reprints, 5c. each. Dues—Active \$2.00; Contributing \$5.00; Sustaining \$10.00. Membership includes current and subsequent literature; selected bibliographies. Maintains lecture bureau and health exhibit.

CANCER—American Society for the Control of Cancer, 25 West 45th St., New York City. Curtis E. Lakeman, Exec. Sec'y. To disseminate knowledge concerning symptoms, diagnosis, treatment and prevention. Publications free on request. Annual membership dues \$5.

COMMITTEE ON PROVISION FOR THE FEEBLE-MINDED—Objects: To disseminate knowledge concerning the extent and menace of feeble-mindedness and to suggest and initiate methods for its control and ultimate eradication from the American people. General Offices, Empire Bldg., Phila., Pa. For information, literature, etc., address Joseph P. Byers, Exec. Sec'y.

MENTAL HYGIENE—National Committee for Mental Hygiene, 50 Union Square, New York City, Clifford W. Beers, Sec'y. Write for pamphlets on mental hygiene, prevention of insanity and mental deficiency, care of insane and feeble-minded, surveys, social service in mental hygiene, State Societies for Mental Hygiene.

NATIONAL HEALTH—Committee of One Hundred on National Health. E. F. Robbins, Exec. Sec'y., 203 E. 27th St., New York. To unite all government health agencies into a National Department of Health to inform the people how to prevent disease.

TUBERCULOSIS—National Association for the Study and Prevention of Tuberculosis, 105 East 22nd St., New York. Charles J. Hatfield, M. D., Exec. Sec'y. Reports, pamphlets, etc., sent upon request. Annual transactions and other publications free to members.

SOCIAL HYGIENE—The American Social Hygiene Assoc. Inc., 105 West 40th St., N. Y.; Branch Offices: 122 South Michigan Ave., Chicago; Phelan Bldg., San Francisco. To promote sound sex education, the reduction of venereal diseases, and the suppression of commercialized vice. Quarterly magazine "Social Hygiene." Monthly Bulletin. Membership, \$5; sustaining, \$10. Information upon request. Pres., Abram W. Harris; Gen. Sec'y, William F. Snow, M.D.

NATIONAL ORGANIZATION FOR PUBLIC HEALTH NURSING. Object: to stimulate the extension of public health nursing; to develop standards of technique; to maintain a central bureau of information. Publications: Public Health Nurse Quarterly, \$1.00 per year; bulletins sent to members. Address Ella Phillips Crandall, R. N., Executive Secretary, 600 Lexington Ave., New York City.

THE AMERICAN RED CROSS—Through its Town and Country Nursing Service, maintains a staff of specially prepared visiting nurses for appointment to small towns and rural districts. Pamphlets supplied on organization and administration of visiting nurse associations; personal assistance and exhibits available for local use. Apply to Superintendent, Red Cross Town and Country Nursing Service, Washington, D. C.

PUBLIC HEALTH—American Public Health Assn. Pres., William C. Evans, M.D., Chicago; Sec'y, Prof. S. M. Gunn, Boston. Object "To protect and promote public and personal health." Seven Sections: Laboratory, Sanitary Engineering, Vital Statistics, Sociological, Public Health Administration Industrial Hygiene, Food and Drugs. Official monthly organ, *American Journal of Public Health*: \$30 per year. 3 mos. trial subscription (to Survey readers 4 mos.) 50c. Address 755 Boylston St., Boston, Mass.

EUGENICS REGISTRY—Board of Directors, Chancellor David Starr Jordan, President; Prof. Irving Fisher, Dr. C. B. Davenport, Luther Burbank, Dr. J. H. Kellogg, Secretary. A bureau for the encouragement of interest in eugenics as a means of Race Betterment, established and maintained for the Race Betterment Foundation in co-operation with the Eugenics Record Office. Address, Eugenics Registry Board, Battle Creek, Mich.

PREVENTION OF BLINDNESS—National Committee for. Objects: To furnish information for Associations, Commissions and persons working to conserve vision; to publish literature of movement; to furnish exhibits, lantern slides, lectures. Printed matter: samples free; quantities at cost. Invites membership. Field, United States. Includes N. Y. State Com. Edward M. Van Cleve, Managing Director; Gordon L. Berry, Field Secretary; Mrs. Winifred Hathaway, Secretary. Address, 130 E. 22d St., N. Y. C.

Racial Problems

NEGRO YEAR BOOK—Meets the demand for concise information concerning the condition and progress of the Negro Race. Extended bibliographies. Full index. Price, 25c. By mail, 35c. Negro Year Book Company, Tuskegee Institute, Alabama.

In addition to information in Negro Year Book, Tuskegee Institute will furnish other data on the conditions and progress of the Negro race.

HAMPTON INSTITUTE, HAMPTON, VA.—Trains Negro and Indian youth. "Great educational experiment station." Neither a State nor a Government school. Supported by voluntary contributions. H. B. Frissell, Principal; F. K. Rogers, Treasurer; W. H. Scoville, Secretary. Free literature on race adjustment, Hampton aims and methods. *Southern Workman*, illustrated monthly, \$1 a year; free to donors.

NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE, 70 Fifth Avenue, New York. Publishes *The Crisis*, a monthly magazine, 63 branches and locals. Legal aid, literature, speakers, lantern slides, press material, etc. President, Moorfield Storey; Chairman of the Board of Directors, J. E. Spingarn; Vice-President and Treasurer, Oswald Garrison Villard; Director of Publications and Research, W. E. B. DuBois; Acting Secretary, Roy Nash.

THE JOURNAL OF NEGRO HISTORY—A quarterly publication concerned with facts, not with opinions. The organ of the Association for the Study of Negro Life and History. To popularize the movement of unearthing the Negro and his contribution to civilization that he may not become a negligible factor in the thought of the world. Carter G. Woodson, Director of Research and Editor. Subscription \$1.00 a year. Foreign subscription 25 cents extra. Address, 1216 You St., N. W., Washington, D. C.

Libraries

AMERICAN LIBRARY ASSOCIATION—Furnishes information about organizing libraries, planning library buildings, training librarians, cataloging libraries, etc. *A. L. A. Booklist*, a monthly annotated magazine on book selection, is a valuable guide to the best new books. List of publications on request. George B. Utley, Executive Secretary, 78 E. Washington St., Chicago.

Recreation

RECREATION—The following pamphlets which have just been issued are full of practical suggestions and information: Preparation—For Peace or War, A Rational Scheme, by George W. Ehler, Price 30 cents; Notes on the Construction and Administration of Swimming Pools, by Joseph E. Raycroft, Price 20 cents; A Municipal Neighborhood Recreation Center, by Harold O. Berg. Price 15 cents. The pamphlets may be secured from Playground and Recreation Association of America, 1 Madison Avenue, New York City.

ALDERMAN MERRIAM and the Bureau of Public Efficiency, if they have their way, will give Chicago a city manager, a short ballot and a simplified municipal government. A review of it and a temperature chart of "voter's daze" by Professor Taylor. Page 593.

STIFF opposition's ahead of the Mills health insurance bill from the New York state Chamber of Commerce. Speaking for business men, the chamber prays to be delivered from the hands of sociologists and reformers as the Scotch dominie did from "witches and warlocks and lang-nebbed things that go 'woo'." Page 606.

FIRST-CLASS designs for workingmen's homes have come out of the prize housing contest of the National Americanization Committee. The next question is, who will get them built? Some drawings and plans and a summary of the results by the SURVEY's advisory editor on housing. Page 595.

MODERN as many of them are in their methods, Pennsylvania hospitals are nervous over the possibility of a major surgical operation on their subsidies from the state. Standards have been set up, and now it is proposed to cut off those which duplicate the work of others with quite stony disregard to the eminence of their boards of directors. Page 597.

CATHOLIC institutions in Chicago are appealing a Circuit Court decision that it is unconstitutional to grant public subsidies to private charities. Page 609.

MOST men who are both serious and sober are ready to prohibit distilled liquors, but there's a widespread belief that beer and wine are not much worse than ice cream soda. History, experience and science are all against this, says Mrs. Tilton; beer is not the cure for the drink evil—not by a jugful. We've got to be either wet or dry. The fourth of five articles telling of the conversion of a charity worker into a prohibitionist. Page 599.

DEMONSTRATION schools run by Mexicans with the help of men and women in this country who have shared in the experimental schooling of the South are announced as the spring style in "intervention." Page 605.

THE social-service program on which Governor Milliken won his election is now before the Maine legislature with the governor pushing it for enactment. Page 612.

AN apple a day keeps the doctor away and a quarter will buy food enough to nourish the biggest of cops. But the food for a family, free or relieved, is another story. Page 607.

THREE states, through a public commission, have declared that the distribution of milk is a public utility, and thereby subject to regulation in many ways. An attempt to get a halter on the milk bottle before it jumps over the moon. Page 605.

JERSEY'S state prison is every whit as bad, by the report of the official investigating commission, as the New York *Evening Post* made it out. Page 610. And for a clear-cut example, on a small scale—and therefore the easier seen—of the evils of prison contract labor, have a look at the college town of New Haven. Page 611.

Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the act of March 3, 1879.

MEXICANS, Mormons and Chinamen—a great cavalcade of them—followed General Pershing across the border. They brought their families, their oxen and asses, their guitars and the typhus lice in their blankets. All were fleeing from the wrath to come, in those parts bearing the name of Pancho Villa. The story of it by the Red Cross man at El Paso in

The SURVEY Next Week

THE SURVEY

112 EAST 19 STREET
NEW YORK

To All New SURVEY READERS:

I hope you are with me in feeling that the SURVEY has made spirited gains throughout the fall and winter—in precision, promptness, make-up; in the substance and stirring quality of its text. Letters reaching us from social workers the country over show that this more adequate service has been meeting with eager recognition.

The break with Germany and the rapid and serious developments of the past month have been of a sort to make us thankful for every reserve of strength and ounce of momentum we can carry into the unsettled period immediately ahead. The SURVEY's responsibilities will unquestionably be heavier than before—both as a transcript of human needs and activities affected by whatever befalls, and as an open channel for discussion of the deep-seated social bearings of situations that develop.

Last February no less than 146 readers enlisted as \$10 cooperating subscribers. They helped us bridge one of the most crucial situations in the history of SURVEY Associates, when through a reduction in grants, our educational fund suffered a shrinkage of between \$6,000 and \$7,000 at one clip. They helped us turn the situation inside out—gave us a flying start, if you will, toward bringing our roster of \$10 cooperating subscribers up to a full thousand before the end of the publishing year on September 30.

Not only is the reduction in grants continuing the current year, but the high cost of living is hitting SURVEY Associates at its most vulnerable point. Paper is the chief item of our bill of fare; and we are paying just twice as much for the paper which you hold in your hand as we paid last year. This means adding \$4,000 or \$5,000 to our manufacturing expenses for the year.

I should be tempted at this time to urge new readers to enlist as \$10 "cooperating subscribers" on the sober plea of seeing this venture of ours through the stress of a period which is sending many publications to the wall, and which puts extraordinary demands upon the SURVEY.

But that isn't altogether my plea. In spite of the difficulties, real as they are, and not altogether to be balanced by economies, we have not been going to the wall this fall and early winter. Our circulation has reacted to the zest and energy which by summer planning and summer retrenchments we have been able to put into the editorial process.

If we can keep up consistent investment in this winter quarter, we are not only sanguine as to clearing the year, but feel that we are in position to render a public service for which, conceivably, all that has been wrought into the SURVEY in the past has been so much preparation. Now if ever, a medium is needed to which men and women concerned in the social welfare can turn confidently for serviceable information and mutual counsel.

So if you are not a \$10 cooperating subscriber, won't you "come in" right now, and help us buckle into these months with a sense of assurance as to the ground under our feet?

PAUL U. KELLOGG
EDITOR.

February, 1917.

THE SURVEY

Unified Government for Chicago

By Graham Taylor

TWO orders of far-reaching significance were recently introduced in the City Council of Chicago by Prof. Charles E. Merriam, alderman, were passed and referred to committees. One called for a report upon "a unified form of local government in Chicago and the best practical methods of obtaining it." The other directed the Committee on Judiciary to present to the council a bill to be introduced in the legislature "authorizing the city of Chicago, by referendum vote, to adopt the city-manager plan of government."

The driving power depended upon to secure these two ends is the growing discontent over the rapidly increasing expense and decreasing effectiveness of local administration. This is chiefly due to the outgrown state constitution, adopted nearly a century ago, by which the charter rights of Chicago are very sharply restricted. The then prevalent determination to protect individual liberty from interference accounts for the early restraints imposed upon all American local governments whereby they were permitted to do only what they were expressly authorized to do by the legislature, while in Europe local governments are generally left free to do anything not expressly prohibited.

In this way no less than twenty-two distinct public agencies have grown up within and around Chicago, having more or less independent authority to expend public revenue. All but four of them are bodies politic sharing the power of the municipality itself to levy their own taxes, and those four having authority virtually to control the levies laid by other bodies. Overlapping functions, duplication of expenses, undefined scope and divided responsibility inevitably result from such confusion worse confounded.

The Chicago Bureau of Public Efficiency, which includes some of the most influential and capable citizens, has just issued a preliminary survey of conditions existing in 1915 as derived from its study of official reports and records. Such a graphic and comprehensive survey was thought to be more useful than an exhaustively detailed study to show the need of unification and to suggest plans for securing it. These plans indicate what may be secured under existing constitutional restrictions and what must await a new state constitution, measures for obtaining which through a constitutional convention are now pending in the legislature. Among the changes attainable under existing law by acts of the legislature or other bodies

are a city-manager type of municipal charter, whereby the mayor, or "council manager," may be selected by the City Council, which can thus be reduced in membership from two to one alderman from each of the thirty-five wards, as the number of elective offices can also be diminished. A \$4,000 salary for aldermen and a four-year term were deemed sufficient to secure the services of capable men of moderate means. Further unification could be secured by "interlocking directorates," a precedent for which has already been established by authorizing the county commissioners to act as commissioners of the forest-preserve district. Sixteen park districts within the city limits, each maintaining a separate management, can be consolidated by referendum vote already authorized by the legislature.

Ultimately the proposed scheme for unification seeks the combination of no less than 110 taxing bodies now within the sanitary district including Chicago, five of which are cities, thirty-five villages, ten park districts, fifty school districts and eight townships, Cook county and the sanitary district itself. No less than seventeen other townships, most of which have only formal existence, might be legally abolished.

Such unified government, however, can be secured only by extending its territorial limits to include "all the contiguous area essentially urban in character, or likely soon to become so, having municipal interests in common." This area now corresponds closely to the sanitary district and is all within the county of Cook. Most of the functions of the county could thus be combined with the metropolitan government. The farther outlying country districts of the county could either be annexed to adjoining counties or could constitute a separate rural county. Court reorganization has for some time been studied by the American Judicature Society, the president of which is Chief Justice Harry Olson, of the Municipal Court of Chicago, and it has already presented a plan for unifying the courts of metropolitan communities with alternative methods of selecting judges.

Under the proposed plan there would be but three regular elections in each four-year period, two biennial elections for the selection of national and state officials and one combined city and judicial election held in intervening years. This would result in an annual saving of \$706,162 and, for the four-year period, of \$2,824,650. Some of the other items of the \$3,208,000 to be saved annually by the proposed unifica-

AN APPETIZING PLACE IF THE FOOD IS AS GOOD AS THE HOUSE

Houses for Wage-Earners

By John Ihlder

WHEN a trouble becomes acute we are forced to pay serious attention to it. Until it becomes acute we are likely to treat it in makeshift ways. So it has been with the housing of immigrant wage-earners and the native born of the same economic status. Many of the industrial towns of the past fifty years are as ugly and unpleasant places as ignorance and neglect could make them. The labor crisis brought about by the war now is forcing us to pay attention.

This crisis came after several years of nation-wide propaganda had taught us something of the importance of good housing. So large employers of labor began to seek means of improving the dwellings of their employes. But so new was the idea to many of them that they did not know how to begin. In order to furnish a starting point, the National Americanization Committee organized a housing competition designed to secure plans for four different types of family dwellings:

1. A single-family house to contain cellar, living-room, two bedrooms, bathroom, and kitchen with sink and laundry-tubs.
2. A single-family house the same as that above, except that it should contain three bedrooms.
3. A house for a family and four lodgers, the lodgers' rooms to be separate from those of the family, with no means of communication except through the dining-room.
4. A boarding-house for thirty single lodgers, the rooms of the family and servants to be separate from those of the lodgers, with no means of communication except through the

dining-room. Ample provision of toilets and other conveniences to be supplied for both family and lodgers.

Notices of the competition were sent broadcast to architectural and engineering societies, to industrial concerns, chambers of commerce, state and municipal housing commissions and associations, housing companies and others likely to be interested. The *Architectural Review* supplemented this by sending notices to 6,000 architects. The result was a widespread interest and, in spite of the competition being held at one of the busiest seasons of the year, the submission of designs by more than one hundred contestants.

In order to carry on the competition, the Americanization Committee appointed a special housing committee and this in turn appointed a jury to pass upon the merit of the plans. This jury consisted of Chester H. Aldrich, architect; Morris Knowles, engineer; Dr. Caroline Hedger, sanitarian; John Ihlder, housing worker; M. B. Medary, Jr., architect; John Lawrence Mauran, architect.

When this jury came to examine the plans it found that the idea was evidently a new one to many of the architects of the country as well as to the employers, for a considerable proportion of the designs would have fitted the incomes of fairly well-paid salaried men rather than those of unskilled wage-earners. Yet there were a number in each classification that did meet the requirements, and some were so excellent as to be real contributions.

It had been no part of the purpose of the competition to secure a "model" plan that might be passed about the country

and endlessly duplicated. Rather the purpose was to secure practical ideas and designs which would show the employer who contemplated house-building the least he should have and the possibility of getting it. For this reason the housing committee, instead of standing for the ideal of no lodgers, recognized the fact that lodgers will continue to exist for some time and called for plans which would reduce to a minimum the evil of their presence in the family.

The simplest problem was, of course, that of the single-family house. By the conditions of the competition, land overcrowding had been ruled out, so windows to adequate open spaces could be placed where the architect chose. His task was to plan a little dwelling that would be economical to construct and maintain, conveniently arranged so that house work would be reduced to a minimum and privacy safeguarded, and so designed that it would be an ornament instead of a disfigurement to the community.

These conditions the winners of the first prizes in classes 1-A and 1-B, the two bedroom and the three bedroom single-family houses, met very successfully. The winners of the first prize in 1-B, who also won second prize in 1-A, scored

rather heavily on their successful competitor in 1-A on the economy side, as a house two rooms deep is cheaper than one which is only one room deep.

With the introduction of lodgers the problem becomes more difficult. The stranger in the family is always a potential source of trouble, ranging from trifles to disaster. To reduce this potentiality to a minimum, the committee sought plans which would show the feasibility of separating the lodgers from the family except at meal times. In this they succeeded, as the winning design demonstrates. The lodgers have their own entrance from out of doors and their own bathroom. They have no occasion to invade the living-rooms of the family.

Most difficult of all, if one may judge from the plans submitted, was the boarding-house for thirty lodgers. Some of the plans showed large waste spaces labeled rest- or smoking-room, though adequate provision for recreation-rooms had elsewhere been made. This, of course, meant unnecessary expense in building and unnecessary labor in maintenance.

The winner of the first prize solved his problem most successfully. While almost severe in its simplicity, the building is pleasing in appearance. The interior arrangement is convenient. The space provided is ample for the purpose, but none is wasted. The separation between family and lodgers is observed. Even the servants, usually those most neglected, are adequately provided for.

While the prize-winning designs here reproduced are, in the opinion of the jury, all things considered, the best submitted, many of the others contain valuable suggestions. The

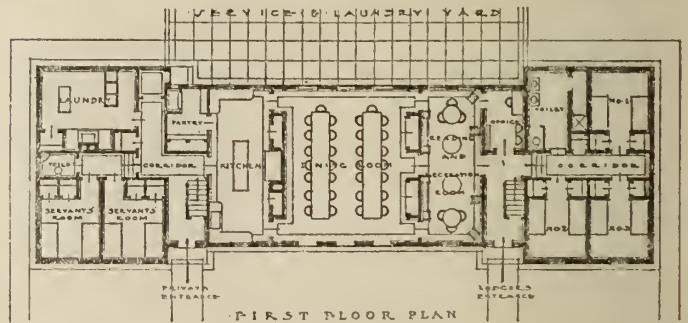

AMERICANIZATION COMMITTEE HOUSING COMPETITION
SINGLE FAMILY HOUSE 1-A

The rules of the competition permitted single-family houses to be built detached or in groups. The winners (Somerville and King) of the first prize in Class 1-A (two bedrooms) show their designs as used either in a semi-detached house or in a group of four houses

FRONT ELEVATION

FIRST FLOOR PLAN

SECOND FLOOR PLAN

Every big industrial concern that houses its employes has to provide a lodging-house for single men. In communities where employers do not assume responsibility for housing, there is equal need of such dwellings to keep single men from living with families in houses not built to accommodate outsiders. The plan above is the best of those submitted in the competition. The architect is Harry E. Warren. Another drawing of this house is reproduced at the head of this article

The winners (Murphy and Dana) of the first prize in Class 1-B (three bedrooms) show semi-detached houses. As these are two rooms deep they are cheaper to construct than the 1-A prize design. Both designs are a great improvement over the ordinary company house, or contractor-built house

Architectural Review, which is devoting its current issue to the results of this competition, reproduces many of these other plans.

All of the originals that received prizes and honorable mention are still in the possession of the National Americanization Committee. It is to be hoped that further use will be made of them. Either by themselves or as part of a larger exhibit they should be sent about the country, so that employers and others who are contemplating the erection of wage-earners'

Lodgers in the family are always a potential danger. The prize-winner in Class 2 shows how this danger may be reduced to a minimum by separating the lodgers' rooms from those of the family, and providing them with their own entrance. The architects are Somerville and King

dwellings may be inspired to do better in the future than they have done in the past. If the committee itself is not in a position to do this, some other organization should offer its services, the United States Chamber of Commerce, the *American City Bureau*, which now has a large city-planning exhibit to which this might be added, or the National Housing Association.

Untangling Pennsylvania's Hospitals

By Neva R. Deardorff

ASSISTANT DIRECTOR, PHILADELPHIA BUREAU OF MUNICIPAL RESEARCH

PENNSYLVANIA "enjoys" a system of state subsidies to hospitals. Perhaps it is a misnomer to refer to the arrangement as a "system," for the subsidies have been granted by the legislature and distributed apparently without any significant relation to the local needs of the communities, their contributions to the state treasury, the quality of the service rendered by the hospital, or any other factor that might reasonably be supposed to enter into the giving of the state's money to private institutions. The apportionment seems to have rested solely on the simple, naïve hypotheses that if there were sick people whom the state wished to see cared for, and if there were institutions which called themselves hospitals, all the state needed to do was to give lumps of money of varying sizes to these institutions and there it ended.

As a matter of fact it would have been impossible, without

the preliminary installation and supervision of their record-keeping and statistical compilation, to have made careful, detailed comparisons of the institutions, had there been any desire to do so.

Of course it is everywhere said that politics plays its usual rôle in determining the amounts of these subsidies, and as no other principle has been discovered, politics will have to assume responsibility. The State Board of Charities exercises a vague, general supervision over the requests of institutions to see that they provide some free beds for the care of the indigent sick, but no definite standards have been imposed and the board has no real disciplinary powers. So matters have gone on year after year.

Naturally, the more intelligent citizens are dissatisfied with the whole scheme of subsidizing private institutions. Their dissatisfaction expressed itself in 1913 in the organization of

the Public Charities Association of Pennsylvania to investigate the workings of the "system" and to agitate for the substitution of more modern and effective methods. The first annual report of that organization states:

"For years a persistent protest had been heard from medical conventions, women's club meetings and social workers' conferences that the method of making charitable appropriations in Pennsylvania was unscientific and unjust and resulted in the neglect of the state's wards. From various and increasing sources the system of state appropriations to private charities had been discredited on five specific counts: That it crippled our public institutions and prevented the fulfilment of our public obligations; that it encouraged the development of unnecessary private charities; that it discouraged private philanthropy; that it confused public responsibility with private benevolence and hindered the development of a uniform and clear-cut system of charities; that it carried our charities into politics and resulted in gross political abuses.

"This widespread but unorganized sentiment reached its climax at the fourth Pennsylvania Conference of Charities and Correction at Wilkesbarre in October, 1912. A Committee on Standards and Classification in Granting State Aid reported to the conference on the weaknesses and incongruities of the present system of making appropriations, and declared that 'appropriations from the state treasury should not be made to charities under private management until the reasonable needs of the state have been fully met and an adequate system of state institutions fully developed.'"

During the year 1913 the Committee on Municipal Charities, a self-appointed body of prominent citizens with a large representation from the medical profession, came into being in Philadelphia to advise with the mayor and the administrators of the Department of Health and Charities on the problems which confronted the city. The sub-committee on hospitals found virgin soil for its researches. Not even an authentic list of the Philadelphia hospitals was in existence, so the sub-committee compiled one and with a few exceptions, gave some pertinent facts about each. Among these data were the number of beds, number of physicians, nurses, graduate and pupil; the number of the various kinds of patients, dispensary, private and ward; the income from various sources and whether the hospital had a social service department or not. The following table,¹ showing data relating to ten hospitals picked at random from the thirty-nine in Philadelphia which received state aid, is illuminating:

Hospital	PATIENTS			RECEIPTS 1910			Beds
	Dispensary	Ward	Private Room	From Patients	State Appropriation	Other Income	
Frankford	2,444	1,033	\$9,753	\$22,500	\$8,948	75
Hahnemann	11,744	2,468	1,000	58,204	77,500	19,782	300
Howard	13,391	622	227	20,871	7,500	2,692	80
Jefferson	24,454	4,687	1,323	97,871	95,000	59,582	359
Medico-Chirurgical	Unreliable data	Unreliable data	Unreliable data	48,177	100,000	No data	439
Mercy	1,924	256	2,333	5,000	1,533	20
Mt. Sinai	15,230	1,143	100	389	15,000	No data	56
Polyclinic	17,894	1,449	297	14,487	40,000	9,915	108
St. Agnes	14,714	2,952	307	45,670	25,000	9,536	241
Woman's	6,839	1,314	642	26,896	20,000	3,209	160

In 1915 these hospitals received the following amounts: Frankford, \$27,500; Hahnemann, \$60,000; Howard, \$10,000; Jefferson, \$97,500; Medico-Chirurgical, \$75,000; Mercy, \$5,000; Mt. Sinai, \$33,000; Polyclinic, \$32,500; St. Agnes, nothing; Woman's, \$27,000. Several of Philadelphia's best hospitals—notably the Pennsylvania—neither apply for nor receive any public aid.

Just publishing the facts was sufficient to show up the subsidies.

As the sub-committee had a somewhat different purpose in mind, it emphasized Philadelphia's need for the regulation

and planning in the location and size of hospitals, and finding the proper relation between city institutions, those state-subsidized, and those privately supported. Unquestionably the general hospital situation, including the subsidies, was and is a hodge-podge.

When the legislature appropriated, in 1915, nearly \$5,000,000 of subsidies for the two-year period, 1915-17, it empowered the State Bureau of Medical Education and Licensure to make an inspection of the 166 state-aided hospitals which exist in Pennsylvania, and to see that a certain portion of the money was spent to modernize the backward ones. The bureau straightway set about its task. It was an interesting job, and it is an interesting report that was made to the governor on September 1, 1916.

The state bureau acted upon the theory that "a hospital, to be worthy of the name and of the confidence of the public, should first be so manned and equipped as to perform efficient service, even if it be to only a few." Definite standards of equipment and efficiency, so far as they have been developed in hospital management, were applied in this inspection.

Among the requirements which the state bureau set up for a good, modern hospital are: clinical, pathological, serological, bacteriological, bio-chemical and X-ray laboratory services, a maternity service, isolation rooms, a complete system of case records, autopsy service, a morgue, terminal rooms and experienced anesthetists. The exclusion of patients suffering from venereal diseases is classed as a deficiency.

As was to be expected, when measured by these tests, many of the subsidized institutions were found to be sadly lacking. But the situation is by no means hopeless. At the time of the first inspection, says the report, "an outline of requirements was clearly presented to each institution with a request that immediate efforts be made to comply with the program presented." Almost all of the hospital administrators, the report states, are of an open mind and are rapidly bringing up their institutions to at least passable standards. Although it makes numerous criticisms, the report deals gently with the hospitals and omits all reference to particular institutions. It is wholly considerate and helpful in its tone. Mention is made of the existence of certain grave abuses and the disinclination of a few responsible hospital officials to remedy those conditions. On these the bureau offers to give the governor specific facts if he wishes them.

Since the first investigation, a re-inspection of the hospitals outside Philadelphia has been made and about twenty institutions are now in difficulties; the unpaid portions of their appropriations are being held up pending a decision of the attorney-general as to whether or not payments can be regularly withheld on the recommendation of the state bureau to the auditor-general.

In addition to toning up the individual institutions, this report has given some attention to the larger aspects of the hospital subsidy problem. The increase in the number of hospitals is ascribed to the fact that "dissensions arose in the management or among the patronizing physicians of the original plant. A division occurred, and the seceding professional men started another hospital."

The bureau suggests that state aid be withheld from institutions which are duplicating the work of others, and "that the policy of the state tend rather toward an effort to perfect the most promising ones by concentrating the available funds upon these."

If this policy is adopted, there will remain but a short step to direct state control and administration, which would perhaps be the most logical and satisfactory evolution from the subsidy system.

¹ Taken from the Report of the Committee on Municipal Charities of Philadelphia, 1913, p. 90.

Turning Off the Spigot

By Elizabeth Tilton

VI.—Is Beer the Cure for the Drink Evil?

"In London at various periods in the early part of 1916 a total number of 903 cases of drunkenness were analyzed, of whom 566 were men and 337 women. Dividing the cases according to cause of drunkenness it was found that 40 per cent had become drunk on beer or stout, 35 per cent on spirits excluding rum, 8 per cent on rum, 10 per cent on spirits and beer, 4 per cent on other drinks. The remaining 17 per cent did not know the nature of their drink."—LORD D'ABERNON, chairman British Board of Control, October, 1916.

"The so-called abstinence movement in the middle of the nineteenth century was only against distilled liquors and came to nothing, or rather it drowned in beer."—PROFESSOR FOREL.

IS beer the cure for the drink evil? That is the question that I want to answer in this article, and I purpose to do it by presenting three cases—first, the case against so-called moderate drinking, second, the case against beer itself, and third, various beer experiments that have been tried.

Frankly, when I became interested in alcohol-prevention work, I believed that men must drink and that, therefore, the best thing to do was to abolish by law distilled liquors like whiskey, and keep beer for the laboring man and wines for the clubman. I fancy I had the idea of the old poem:

For the want of a drop of good beer
Drives lots to tipples more dear,
And they licks their wives
And destroys their lives
Which they would not have done upon beer.

I believe today that men can "lick their wives" on beer and most decidedly "destroy their lives"; in short, that there is no efficient way out of this drink evil but total abstinence supplemented as fast as the sentiment ripens by prohibition of all alcoholic liquors.

My change of opinion was due first to a study of the scientific case against moderate drinking.

This case is a fairly young one, having its aggressive beginnings in the eighties of the nineteenth century. Professor Kräpelin, of Germany, is the father of the many tests that have convinced many thoughtful men that even moderate drinking lowers efficiency. Professor Kräpelin came at his truth by accident. He wanted to measure the mind's action in sickness and in health; to do this he had to throw a healthy man into temporary ill-health by giving him drugs. Among these he gave alcohol and was surprised to find how depressant was its effect. Thereafter, he made many experiments with moderate doses (from seven and one-half to sixty grams), noting the time-reactions, the quickness of response to a given stimulus, before and after alcohol. I think even the most severe critics agree that these experiments did indicate that even so-called moderate drinking will "slow a man down."¹

Many experiments followed Kräpelin. In passing, I will give one test as an example of many. It was made by Herr Joss, at the Protestant Seminary in Berne, Switzerland. Joss tested the capacity of some students to do mental arithmetic. (*Internationale Monatsschrift*, 1900; No. 12.)

Finally he took eighteen boys (about seventeen years of age) and formed them into two equal groups, the "sober" and the "drinking" group. All of these students boarded at the Seminary and had, therefore, the same living conditions. Seven were abstainers, the rest drank their occasional glass of beer. The sober group (including all the abstainers) during the experiment never took any alcoholic drink. To the drinking group Joss gave a little over a pint, later a little over a quart of 4.5 per cent beer.

He found that both quantities gave an immediate momentary increase in mental capacity. He gives tables showing precisely what both quantities did to the "sums" of his pupils and I give below the essential result:

EXPERIMENTS WITH BEER			
Eighteen students: 9 took about a pint of beer (5 dl.), 9 took no alcohol.			
	Possible number of right solutions	Without alcohol	With alcohol
Immediately after taking..	400	254	268
After 1 hour.....	360	197	185
After 2 hours.....	360	215	197
After 3 hours.....	360	209	176
Nine took about a quart of beer (10 dl.); 9 took no alcohol.			
	Possible number of right solutions	Without alcohol	With alcohol
Immediately after taking..	400	268	300
After 1 hour.....	360	212	189
After 2 hours.....	360	210	149
After 3 hours.....	360	208	151

It is seen that even the brimming pint of beer, while it gave, as did the larger amount, a momentary acceleration, thereafter decreased mental capacity. Herr Joss sums up his experiments thus: "Temperate use of alcohol, that is, one to two glasses of beer, caused an initial facilitation of mental work but showed serious after-effects since after 1, 2, 3 hours a considerable lessening of performance appeared (thus, 1 hour, 4.9 per cent; 2 hours, 10.9 per cent; 3 hours, 12.5 per cent)." The genial Joss says further: "We hope that this use of alcohol caused no enduring harm. At first there was a threat of moral injury as the drinker group took to their glasses with considerable pleasure, were happy over their initial victory. But gradually the jubiliations went dumb. The good fellows sat before their quart of beer as if it were a bitter medicine. They were heartily glad when the struggle was over."

Now, of course, the making of these experiments is very delicate and it has been thought loopholes in them invalidated the exactness of each statement. I give below some of the principle criticisms² showing why there has been a call for more careful tests. Benefiting from the experience of the men who have gone before, the Carnegie Nutrition Laboratory, Boston, is engaged in making an extensive investigation, covering a period of years, of the physiological effects of alcohol. The first volume of these researches is already published and I give herewith a short account of these experiments, in so far as the language of the work will permit of elucidation.

There were ten normal subjects. They were not total abstainers, their histories were rigidly studied and their living conditions at the time regulated. Two doses of alcohol were given, dose A, 30 cubic centimetres; dose B, 45 cubic

¹ Even Dr. Ulrik Quensel, of Sweden, whose rigid examinations of anti-alcohol literature are quoted in the Brewers' Year Book, says of the Kräpelin tests: "New investigations made on a larger number of persons and with a greater variety of method are desirable, but Kräpelin and his followers, nonetheless, established that alcohol in comparatively small doses affects disadvantageously certain activities of psychic life."

² Objections, for example, are that some of the experiments were not made on enough people; that the alcohol was not diluted or was gulped down; that the experiments were made on abstainers, upon whom the effect of alcohol would be greater than upon drinkers; that the self-consciousness of the men experimented upon would change results; and, again, that not enough was known of the living conditions of the men taking the doses.

Kirby in New York World

"BALKY MAUD"

William Jennings Bryan has announced that prohibition is the next great issue before the Democratic party

centimetres. Thirty cubic centimetres is about the amount of alcohol in a quart of beer or a wine-glass of whiskey. The alcohol was taken in dilution and sipped naturally. Although the subjects knew of the experiment, several of the tests were on actions so purely reflex as to seem to exclude any invalidation because of self-consciousness. For example, the purpose of the first experiment was to discover whether or not the so-called moderate doses of alcohol above mentioned made the knee jerk come less quick and strong. Great care was taken to control the tests. A small hammer, magnetically released, administered a blow on the tendon beneath the knee-

Kirby in New York World

A BAD CASE OF NERVES

Governor Whitman, a Republican, has come out for prohibition for New York state, without naming the brand

pan and an instrument called a Blix-Sandstrom kymograph run at the rate of 100 millimeters per second recorded the action. The variations in the response are recorded to the 1/1,000 of a second.³

Though there were "wide individual departures from the average," the data on the whole support the conclusion of a decreased response under alcohol, that is, the jerk did come less quick and strong or, to use the book's own vernacular, "the latent time of response was increased 10 per cent and the degree of the thickening of the muscles decreased 46 per cent." Indeed to quote Dr. Fisk, "so extreme was this effect that it made it impossible to measure the knee-jerk of several subjects after Dose B."

The next experiment was also on another action most purely reflex, on the eye-wink. Here again it was found that alcohol impaired the normal wink, so to speak; it did not come so quickly or flash so far (latent time of response being increased 7 per cent; extent of the lid movement decreased 19 per cent). After this, somewhat higher mechanisms were approached, finger movements, speed and accuracy of eye-movements in looking from one point to another, speech reactions to a series of words, and so on. Dr. Benedict, one of the experimenters, sums up the final results thus: "With only one apparent exception (the eye reaction after Dose A) alcohol regularly tends to depress neuro-muscular action." Or if you like Connie Mack's vernacular better, "Alcohol slows a man down."

So also does sleep slow a man down. The fact, however, that the slowing down which follows alcohol quickens the pulse rate, "prohibits us," says our experimenter, "from regarding the neuro-muscular depression incident to alcohol as a conservative process like sleep."

This last word of science on alcohol and efficiency is one more confirmation of the former Kräpelin tests, indicating that the case against moderate drinking is proved; if by moderate drinking you mean the amount of alcohol that would be contained in a wine glass of whiskey or in from a pint to a quart of beer. There is as yet no proof that a "thimbleful drink" will harm a healthy adult.

But this—the point where alcohol becomes harmless—lets us into a whole world of discussions. As long ago as 1903, C. Fränkel sent a questionnaire on this subject to ninety-three professors of medicine in Germany. Many of the answers were opinions based on no special scientific data. C. Fränkel himself gives the gist of the replies thus: "Adult and healthy persons can stand small quantities, 30 to 40 cubic centimeters of alcohol (as much as about one quart of beer, a tumbler of wine, or a wine-glass of brandy) in the course of a day without any evident and injurious effect. Even these should avoid the regular consumption also of small quantities. He only is truly moderate who does not use alcoholic beverages every day, but does it only occasionally and within the above-mentioned limit." (Brewers' Year Book, 1914). Quensel, also widely quoted by the brewers, gives all sorts of opinions. For himself, he says, that if all men could keep within the limit of about 30 cubic centimeters daily, it is probable that we should not have any serious alcohol problem, especially if this dose were not a daily habit. "But," he adds, "to determine with exact scientific accuracy where abuse begins is not at the present time possible." Many, of course, point out that the dose would vary with the individual, and that there is always the risk of increasing the dose, temperance in drugs being well-nigh impossible to mankind as a whole. Dr. Scharffenberg, proba-

³ For a fuller account see Alcohol and Physiology, by Eugene Lyman Fisk. Atlantic Monthly, January, 1917. Without the statement of this kind middle-man, I could not have presented a clear statement of the above.

bly the most prominent advocate of total abstinence in Norway, says: "I . . . think it improbable that very small doses of alcohol could injure the health, though I believe that any daily use is risky. . . . It seems to me impossible to fix a certain daily dose as harmless, and personally I am absolutely unconvinced that the maximum dose of 30 cubic centimetres, defended by various doctors, would, taken daily, be harmless for everybody, even if it were possible to keep to it."

Now to readers who never think about drinking from one year's end to another (and they are legion among my readers), a pint of beer seems a goodly amount. My saloon friends, however, say something like this: "You drink till you are lit up—whiskey, a musty, then ale, ale! Talk flows, wonderful warm talk." But the price that is paid for this divine sense of well-being is more than the cost of a glass of whiskey or a pint of beer. In other words, in order to get this euphoria,

abstinence and prohibition, the ideas that men need not drink and that liquor should not be accessible.

When I came to know the scientific movement against moderate drinking, when I found how small possibly harmless doses were, making them for the people that I wanted to help ludicrously impracticable, and also keeping wide open the door to immoderate drinking, I went over to the total abstainers, precisely as the railroads have gone over to them. They do not say "Go into a saloon and drink a tablespoonful of whiskey and no more." They say "Don't go into a saloon and don't drink at all." They refuse to countenance, as far as their employes are concerned, the drink custom or the liquor traffic.

The psychology that builds up a drinkless world is there, the practical reasoning that gets results is there in the stern covenanter policy of "no quarter." And I am with it, because, with the abstaining doctors, I feel that the drink problem is not

"YOU CAN LEAD A HORSE TO WATER BUT—"

Drawn some time ago by Bradley of the Chicago "Daily News," who died on January 9. A Democratic Congress has taken some long dry steps, but the national prohibition amendment to the federal constitution, now out of committee in the House, is not expected to pass the Senate in these final days of the session.

the addict of the saloon must use quantities far exceeding the possibly harmless amounts mentioned above, and must increase his amounts because it is the nature of sedatives that to continue an effect they must be used in ever-increasing doses.

There are men, however, like Dr. Ulrik Quensel, who believe that it would be better to educate men to the above extreme moderation than to total abstinence. These are the moderates. Others, like Professor Von Gruber, president of the Royal Hygienic Institute, Munich, or Dr. Scharffenberg, of Norway, believe that total abstinence is the more practical thing. This is the idea of the Abstaining Doctors' Society started in Europe by Professor Forel, 1896. These men point out that this alcohol question is not a personal question nor yet alone a medical question. It is also a social question, and while many selected individuals might bring themselves to "thimbleful drinking," mankind in bulk is not equal to this moderation. They point out that the liquor traffic welcomes the ideas of Quensel and the other moderates, realizing instinctively that the majority of men can never conform to an occasional thimbleful. What the liquor interests fight is total

personal nor medical alone, but social. It is not a question of what you might do, but what mankind in bulk will do when exposed to a world that sanctions the drink custom and the open saloon.

The readiness of scientific men in Germany to sacrifice their beer for the good of the race is very impressive to me. We read not only of abstaining doctors, but of every kind of abstaining societies, even to abstaining philologists. *Vorwärts*, the organ of the Social-Democrats, demands nothing short of complete abstinence. And since 1900 beer consumption in Germany has shown a declining tendency. It seems strange that the physician and the scientist, with us, is so often white-blooded about a movement so plainly hygienic and social and moving so fast abroad. We are strong in Prohibition that says No to the traffic, but weak in that stronger things, Organized Total Abstinence that says No to the Custom.

VII.—The Case Against Beer

The case against moderate drinking really makes the case against beer. There might, however, be those who reason

that beer is less harmful, and so may be used as a half-way house, a step toward the final goal, total abstinence. Let us take up, then, the relative harm of distilled liquors and beer. This takes us straight to Germany, the land that has tried beer, if ever land has. Hear Germany talk and a picture immediately arises of the excessive drinking induced by beer. Speaking of Munich, Kräpelin says: "The daily amount there runs from four to eight quarts a day; and about 40 per cent of these beer drinkers add small amounts of distilled liquors, and some men drink daily ten, fifteen and twenty quarts." We do not in America drink beer to such excess, possibly because with us it is not considered bad form to drink whiskey. Consequently, a man who wants to secure "the kick," for which so many drink, hurries the result by drinking whiskey and then beer. In Germany whiskey is more the drink of the lower classes.

Let us now get a picture of the recent German battle against beer. Etiology, the science of the causes of disease, came forward in the eighties. Beer was found to be a chief offender. Noted investigators of this disease-maker were Bauer and Bollinger. They found that out of 5,700 autopsies conducted in a series of years in the Pathological Institute of Munich only six women (the more temperate sex) had died of that enlargement of the heart afterward called beer heart. But one out of every sixteen males had died of it. Sendtner, following up these researches, found that while the general death rate elsewhere (according to the Gothaer Life Insurance) was 5.8 from heart disease, in beer-soaked Munich it was 11.9. He also found that brewery hands in Munich had an even higher death rate from heart disease than did the Munich population in general.⁴ Gradually diseases arising from excessive beer-drinking became acknowledged; the well-known physiologist, Professor von Struempell, brought the matter sharply before

⁴ These figures bring to mind Arthur Hunter's investigation covering forty-three life insurance companies and 2,000,000 policyholders.

BREWERIES		Death rate above normal
Proprietors, managers, superintendents.....		35 per cent
Clerks		30 per cent
Foremen, masters, beer-pump repair men, journeymen.....		52 per cent

Starrett in New York Tribune

ST. GEORGE AND THE FLAGON

No single issue proposed by England's war government brought forth such strong protest as the proposal for national prohibition. The outcome was a compromise by which the sale of liquor is greatly curtailed

the German public in the nineties. In an article in the *Deutsche Monatsschrift* (Vol. IV, p. 242) he says:

"Formerly whiskey and brandy were the universal evil-doers, the only despised drinks as against 'noble' wine and 'harmless' beer. At present we know that in practice the injurious effects of beer are at least as frequent, if not, indeed, more frequent, than those of distilled liquor. For beer-drinking has pressed into all grades of society, and while distilled liquor, with rare exceptions, finds its victims only in the lower sections of the working population, we find the injurious effects of too free beer-drinking (Gambrinism, as I call it) especially among the more cultivated classes. Gambrinism, moreover, differs medically in many respects from simple alcoholism, although the special alcohol effect is to be taken into account in excessive beer-drinking. For although the percentage of alcohol (beer 2 to 4 per cent), is not especially high, yet this low percentage is counteracted by the great quantity drunk; 100 cubic centimetres of beer contain only 3 grams pure alcohol, but a liter contains 30 grams. A moderate beer drinker, who daily drinks his five liters, thus gets every day 150 grams of absolute alcohol into his body. But what gives beer its typical earmark is the fact that beer contains comparatively great quantities of fat-forming, or at least fat-encouraging, foods (malt). Most heavy beer-drinkers are, therefore, overfed. Hence the fatness which may itself become a source of illness. Finally it must be noted that perhaps beer contains besides alcohol other injurious substances from the hops, whose effect is also to be taken into account."

Again, in a lecture at Nuremberg, this same writer says:

"Nothing is more erroneous from the physicians' standpoint than to think of diminishing the destructive effects of alcoholism by substituting beer for other alcoholic drinks, or that the victims of drink are found only in those countries where whiskey helps the people of a low grade of culture to forget their poverty and misery."

I am well aware that the brewers, who, being human, are fighting hard to save their business, can find contrary utterances—especially those made fifteen years ago, before the total abstinence principle was so fully established. But it seems to me that the moderation and beer voices are growing less frequent; that the Kaiser represented the best recent thought of Germany when in 1910 he asked his naval cadets to teach the men under them to give up alcohol. I will quote, also, utterances of various doctors and scientists.

Prof. Emil Kräpelin: "In the production of alcoholism in Germany, beer undoubtedly plays the chief rôle. It must be conceded that beer is capable of producing typical delirium tremens."

Prof. Gustav von Bunge: "No other drink [referring to beer] is so insidious. It has been in Germany worse than the whiskey pest because more apt to lead to immoderate drinking."

Professor Möbius, Leipsic: "I know little of whiskey and wine-drinkers. With us it is beer that ruins the people."

Dr. Johannes Leonhart, a distinguished scientist: "The question concerning alcohol is not whether Smith or Jones believes that he can take two or three glasses a day without harm, but how is it possible to diminish the immense amount of injury from it that the whole German people suffer?"

Professor Forel in the *American Journal of Insanity* (1900): "One only needs to study in Germany the 'beer jokes,' beer conversation and beer literature. They have stifled in young Germany the idealism, the taste for the classics and the finer mental pleasures throughout broad parts of the nation and in both sexes, to an extent that makes one cry for help. Among the academic youth of Germany the drinking of beer has truly killed ideals and ethics and has produced an incredible vulgarity."

Dr. Hugo Hoppe, nerve specialist, Königsberg, points out that before the beer invasion of the nineteenth century women and children drank rarely. Now most well-to-do women take their beer with every meal. "Into the children's world also beer has penetrated." This is in line with the Russian Medical Society, which, when it went on record for national prohibition, discussed the reintroduction of beer, but declared against it because beer, being weaker and pleasant to the taste, had great attractions for women and children.

Beer not only would seem to lead to immoderate use (where whiskey is under the ban), but also to family drinking.

"There has been a tendency," says Dr. A. Delbrück, author of *Alcohol and Hygiene* (pp. 480-482), "to make a great distinction among drinks on the basis of concentration, and thus to declare beer a suitable means for driving out spirits: Surely wrong!" He then points out the following facts, first, that in the case of the very light beer (1.5 to 2 per cent alcohol) it is the custom to make it "digestible" by adding a glass of whiskey. Again there is the universal law that the alcohol drinker goes gradually from the weaker to the stronger drinks. But disregarding these two facts, says Dr. Delbrück, it is a matter of common knowledge that men drink beer and wine in much greater quantities than they do whiskey. His figures, showing the quantities drunk in various German and Austrian localities, prove that these beer-drinkers get into their system as much alcohol as does the drinker of distilled liquors. He shows, also, that Bavaria, the country that drinks the most beer, absorbs more pure alcohol than the country that has the highest distilled liquor consumption, Denmark. It may be said that alcohol taken as Bavaria takes it, that is, more in dilution, is less harmful. According, however, to Dr. Delbrück, although it is true that whiskey may do more harm than beer to the mucous membrane of the digestive tract, and possibly to the liver, the other endangered organs, brain, heart, reproductive glands, kidneys, blood vessels, are washed by alcohol in approximately the same concentration whether it is drunk in spirits, beer or fruit wine, and there is added in the case of beer the immoderate amount of fluid so injurious to heart and kidneys. Dr. Delbrück also declares that beer, besides being a creator of special diseases on its own account, can produce delirium tremens. Jacobson found in the general hospital at Copenhagen (the brandy country) that 6 per cent of the cases of delirium tremens came from cases where beer was the exclusive drink. In the Drink Cure, Ellikon, at Zurich, there were always found a considerable number of patients who had drunk no whiskey at all; also some who had drunk only beer and fruit wine.

Commenting on all this, Dr. Delbrück declares that while it is true that delirium tremens and liver trouble are much more frequent with whiskey drinkers, yet this is completely cancelled, he believes, by diseases of other organs caused by beer. "In short," he says, "we must conclude that beer is by no means a harmless drink, but it must be classed as an equal with distilled liquors."

Dr. Delbrück is a strong advocate of total abstinence. He declares that moderation has too long been the ideal, that under it men have moved from temperance to intemperance. He believes history shows that headway has been made against drinking only in times of a continuous, bitter struggle for total abstinence.

VIII.—Prohibiting Distilled Liquors and Keeping Beer

I will now pass to the third part of my article—experiments with beer. In 1830 England decided to woo men, if possible,

Caricature in New York Sun

THE NEW SIXTH COMMANDMENT

War has decreed sobriety, not only for soldiers but even more as an efficiency measure for the men who are making munitions and battleships in the factories at home

from drinking distilled liquors by allowing beer saloons without license-fee. These sprang up like mushrooms, the result being (Delbrück, *Alcohol and Hygiene*, page 542) that beer consumption rose 25 per cent in the next five years, while at the same time spirits consumption rose 8 per cent. England found that temperance in drugs was an impossibility, and the whole scheme was finally pronounced a fiasco. Early in the history of the bill, Sydney Smith wrote: "The new beer bill has begun its operations. Everybody is drunk. Those who are not singing are sprawling. The sovereign people are in a beastly state."

A beer experiment was also tried in Iowa. In 1855-58 Iowa was under prohibition. In 1858 the law was amended to allow beer and certain wines. The great trouble was that the beer saloons would sell whiskey under the guise of beer, and there seemed no betterment in it (*Canadian Sessional Papers*, No. 21, p. 255). There is, of course, more money in whiskey than in beer, and hence a temptation to introduce whiskey on the sly into beer saloons.⁵

Massachusetts tried a beer experiment between 1870-73. In 1869, Massachusetts was under prohibition. In 1870, the law was amended to allow ales, porter, beer and cider. Records of the increase of drinking in places where the beer saloons were opened may be found in the report of the (Canadian) Commissioners to Inquire into the Workings of the Prohibitory Law, Ottawa, 1875. Drunkenness and crime increased, and everywhere we hear the complaint that the beer saloon would sell whiskey under the guise of beer. In New Bedford, 1872, the year in which beer saloons were opened, the number of

⁵ For personal memories of the beer law in Iowa, write to Major Fleming, State Historical Library, Des Moines, Iowa.

crimes increased over 68 per cent, and cases of drunkenness over 120 per cent.

Hamlett Bates, police justice, Chelsea, Mass., said on January 3, 1873: "The sale of beer should not be legalized. Almost every beer saloon is a rum-shop."

For the effect of the beer law in Suffolk county, practically the city of Boston, see the comparison below between the prohibition year of 1867 and the beer year 1870.

(Report of Canadian Commissioners, page 75.)

In 1874, Massachusetts was again under prohibition, and Mr. Schade, of the Brewers Congress, reported a decrease of sales of 116,585 barrels in Massachusetts that year over the previous year when the beer law was in force.

It is, however, only fair to say that both the beer experiments of Iowa and Massachusetts were tried at times not favorable to reform, the mind of the country being absorbed in slavery or reconstruction.

Not so, however, the near-beer experiment of Georgia (1908-1916). This came alongside a rising tide of anti-booze sentiment. Georgia passed a prohibition law in 1907. In a few months the law was punctured to allow near-beer. In Atlanta, near-beer was beer up to 3.99 per cent. Thus was Georgia dubbed the "wettest dry state." It seemed to be generally conceded that the bulk of the rural districts remained dry despite the beer amendment. The people were afraid to

have saloons, and got around it by various devices, raising the license fee to farcical heights, and so on.

Most of the cities, on the other hand, Savannah, Augusta and others flouted the beer law. In Augusta, where I was, the saloons ran full blast, selling whiskey unmolested, and so it was in most larger places, according to Mr. Eichelberger, of the Anti-Saloon League. But in Atlanta, a modern go-ahead southern Chicago, the beer experiment seemed to have been better carried out. Judge Broyles was a strong prohibitionist who prosecuted whenever he found whiskey in the saloons. But as for the beer in the saloons being near-beer, Judge Broyles said: "A near-beer law is practically unenforceable, as you cannot have a chemist with every barrel to see that the beer is light." Any beer was sold. It was certainly wet prohibition. Georgia repealed her beer law, and on May 1, 1916, became a real prohibition state. Of Georgia under her new prohibition I shall write elsewhere.

Summary: I believed at one time that the thing to do was to abolish distilled liquors and keep beer under a disinterested management. These beer experiments, taken as a whole, gave me pause. But suppose we could achieve a successful beer experiment, one where no whiskey would be sold by the saloon-keepers. Should I now advocate it?

I should not—my reasons being, first, that scientific experiments show that the amount of beer that a man can take without harm is far below any amount that would satisfy men who desire drink as a regular part of their lives. The experience of Germany shows that once whiskey is declared unfashionable, men drinking, as so many do, to be "lit up," drink so immoderately of beer that they suffer not only from the alcohol in beer, but from overnourishment and perhaps from overworking the heart. Beer is a special disease-maker and also a brutalizer. For myself, I often wonder if there is a real connection between Finland's low alcohol consumption and her low infant mortality, and between Germany's high beer consumption and high infant mortality. However, about this I do not know.

But this one thing I do know—that beer is in no way, shape or manner a cure for the drink evil.

Old Age

By Frederick A. Wright

THE night has come down in utter
Darkness, with gusts of rain
That moan round the eaves, and mutter
In the chimney, and rattle the shutter,
And beat on the window pane.

The boughs of the forest are shaking,
And hark how the wind blows free!
Its myriad voices waking,
Like invisible billows breaking
On the reefs of a shoreless sea.

On the hearth, with feverish flashes,
The coals of the dying fire,
Like eyes beneath falling lashes,
Are sinking, ashes to ashes,
The failing of desire.

COMMON WELFARE

THROUGH THE SCHOOL DOOR INTO MEXICO

THE European crisis has overshadowed two developments in our relations with Mexico which, had they come in normal times, would have provoked widespread attention. With one hand the administration has withdrawn the Pershing expedition—the overhang of the first military method of untangling our border troubles, and with the other hand has sent Ambassador Fletcher to Mexico—the beginning, perhaps, of a new era of civil relations. Opportune, therefore, is the announcement this week that the Mexican-American League, which grew out of the informal peace conferences between Mexicans and Americans in the midst of the tense situation last summer, has been reorganized along lines familiar to those who have followed educational growth in the South.

Seventy-five men and women active in public education in this country make up the Mexican Cooperation Society “for the purpose of promoting education, mutual understanding and cooperative action between the peoples of Mexico and the United States.”

In explaining the society’s program, Paul Kennaday, the executive secretary, writes: “We are going to try to prevent the Mexicans from believing that they are ‘to be done good’ by us, and just as clearly we are not going to be meddling and officious. Nor is all the educating going to be confined to Mexico.”

In Mexico itself the society intends to cooperate with Mexicans who realize the need for a very great extension of popular education. As a first step, it is intended to establish in a suitable center in Mexico a small demonstration school where, in addition to instruction in the usual primary school subjects, children may receive training in agriculture, school gardening, manual training and domestic science. This school is to be undenominational in character and independent of the government. The many successful educational experiments in this country, in most of which members

of the society have taken an active part, will be called upon to furnish models for Mexico. “There is a wealth of material to draw upon,” writes Mr. Kennaday.

“We shall avoid cause for the criticism that we are seeking to educate Mexico through foreign teachers and in ways unfamiliar and perhaps unsuited to Mexico. General supervision will be in the hands of the society and of a small group of intelligent and sympathetic Mexicans. But the daily instruction in the field must be by Mexicans in Mexico and the spirit of the whole must be Mexican. The task of building up an adequate system of popular education in Mexico is a stupendous one and is so recognized by the Mexicans. We, as they, see it to be their task and not ours. But we believe it to be a burden which we can help, somewhat, to lighten.

“The question is naturally asked whether the society is a peace organization. We are not, yet if but the half of our program is carried out, there will be no more talk of war with Mexico.”

FEBRUARY WARNING

Legislative Almanac: “About this time watch out for canneries bill exempting women and children from the provisions of the labor law to save next summer’s peaches and peas.” The “World” cartoon above is a year old. The canneries bill is a hardy perennial, native to all states in the north temperate zone

MILK DISTRIBUTION A PUBLIC UTILITY

A JOINT commission of Pennsylvania, Maryland and Delaware, appointed three months ago to study methods by which the price of milk to the consumer might be reduced without discouraging the dairy industry, presided over by Prof. Clyde L. King, of the University of Pennsylvania, has issued its report. Its recommendations extend both to production and distribution; they include suggestions for increased state and municipal supervision to safeguard purity; and attempt to harmonize the interests of all the parties concerned—producers, dealers and consumers.

The chief of the recommendations is that milk distribution shall be recognized as a public utility. That implies the keeping of accounts by dairymen and dealers in a form prescribed by the state and state examination of accounts; the licensing of all dealers (already in effect); the licensing of testers in receiving stations; the standardization of prices.

This recommendation was not evolved theoretically but by a commission composed largely of prominent dairymen, enlightened milk dealers and professors of appropriate branches of agriculture. Public hearings were held once in Baltimore and twice in Philadelphia. The report states that “farmers, dealers, experts, common carriers, educational institutions and individual members of the staffs of educational institutions” assisted the commission in its work. The acceptance of the public utility theory, thus, was the logical outcome of a close study of facts. Both producers and distributors agreed to it.

One of the greatest obstacles to keeping down the price of milk during part of the year and to maintaining during another a price at which dairying remains a paying business, always has been the seasonal inequality of production which, of course, is due to climatic conditions. To some extent this can be overcome by storage of milk in the form of butter, cheese or condensed milk, or by the

stimulation of new uses at times of greatest yield, such as ice cream or confectionery.

But under the best of circumstances this only gets rid of a part of the surplus. The commission, therefore, had to think of means by which production itself might be increased in winter and retarded in summer. This, it decided, can be accomplished by having more cows freshen in August—a change which conservative dairymen will perhaps spurn but which is quite practicable. But even then, if prices are to represent more nearly actual costs than they now do, they have to vary more than at present between the seasons.

Another difficulty is that milk as a food for adults is in direct competition with other foods, also greatly varying in price. While meat and eggs, considering food value, usually are dearer than milk, plant foods are cheaper. A distinct rise in the price of milk during part of the year with a view to regularizing production, therefore, leads to a diminution of the amount of milk actually consumed. In this connection it is stated that the per capita consumption of milk rapidly increased during the years 1901 to 1915 when the price was stable at eight cents. But as soon as prices rose—owing to a considerable increase in the cost of labor and of grain—working-class consumption in the larger cities went down.

To complicate the matter still further, the sources of supply for the cities in these three states are continually widening. Philadelphia gets only 40 per cent of its milk supply from an area within a distance of forty miles. Since cases are now pending before the Interstate Commerce Commission for interstate rates and before the Public Service Commission of Pennsylvania for intrastate rates, the commission did not deem it advisable to make an investigation of milk rates on the railroads. This, however, is one of the most important points, for competition from a distance, often from areas more distinctly suitable for dairy farming, and production of milk as a side line by tenant farmers principally engaged in other forms of agriculture, are among the most prominent reasons why dairying in the immediate vicinity of cities is often unremunerative.

These problems are not easily solved. Yet "the supply of milk must be permanent and adequate to all community needs, and to this end the price cannot permanently go below the cost of production, and tendencies in that direction ought to be foreseen and forestalled." As one possible method of insuring a fair return without unduly raising prices, the commission has laid out a plan for grading milk into three classes, in addition to that known as "certified." This, some of the dealers consider both prac-

ticable and desirable, while others do not feel that the state should recognize and allow to be sold any but grade A milk.

Present methods of milk inspection, in this report, come in for considerable criticism. The existing practice in Philadelphia is stigmatized as "entirely inadequate." Both in state and city more inspectors are needed, and the budget of appropriations prepared by the commission provides for increased expenditure also on clerical help, automobiles for inspectors, purchase of milk samples, printing and stationery.

A bill before the Pennsylvania legislature is strongly supported by the commission. It provides for the registration, with the payment of a fee, of milk establishments of any kind, the issuance of licenses, classification of milk establishments, and penalties for the sale of unwholesome milk or unnecessary handling of milk and milk products.

The commission does not seem to have considered the lowering of cost which might be secured by reducing wasteful duplication of routes in the retail distribution of milk which other recent studies suggest.

BUSINESS MEN ON HEALTH INSURANCE

DOWNRIGHT opposition to any form of compulsory state insurance, in particular the Mills health insurance bill before the New York state legislature, comes from the Chamber of Commerce of the State of New York. At its February meeting the chamber voted to oppose the Mills bill because it "contemplates the creation of a very large overhead charge to be paid by the state and commits the state to the payment in addition of one-fifth of the funds" required; this in the face of the fact that "the state is now overburdened with taxation and the committees of the legislature having the matter in charge are at a loss to know how to raise increased revenues for the current year."

Not only the Mills bill, but "any similar bill at this time," is opposed. Instead, the chamber would create a commission composed of "representatives of business, of capital and labor, one or more physicians, a health officer, an economist, a lawyer, an actuary and a social worker or sociologist." Their task would be to investigate "the condition of employes, particularly in the various trades; to ascertain whether they are paid a living wage; to investigate the conditions under which they live; and the extent to which, in their judgment, sickness and accident can be reduced by increased activity on the part of existing agencies of the state government, and to ascertain as nearly as may be what the cost of provisions similar to those laid down in Senate bill No. 69 [the Mills bill] will be, if divided equitably be-

tween the employer and the employe, and what the cost to the state will be if it assumes the entire expense of supervision and administration."

The principle of health insurance is approved—"an obligation rests on the community and the industries of the community to take care of employes who are unable to work through sickness and who by reason of small wage have not been able to make provision against that contingency." But, the resolution recites, "it is not clear from the facts in our possession that this or any similar plan will meet that obligation."

The facts referred to are contained in a 90-page pamphlet, Social Insurance with Special Reference to Compulsory Health Insurance, written by John Franklin Crowell, executive officer of the chamber (copies may be had on application to 65 Liberty street, New York city).

"Now, after the great powers of religion and morality have seemingly failed to accomplish their purpose," writes Dr. Crowell, "the principle of insurance is appealed to for solving the last of our great social problems, the problem of eliminating human illness and human poverty—twin ulcers of our civilization." And "social insurance is one of the means by which the moral sense of the community expresses its demands in the effort not only to place the man above the dollar, but to have the dollar provided in reserve to save the man when it is most needed."

European systems of sickness insurance are summarized and held to be unsuitable for importation for various reasons—the German because it was established so long ago that it misses all the modern movement for preventive public-health work, the English because of creaky joints in the administrative machinery, due to rushing it through to meet a political situation without calling into play the British "genius for research."

More fundamental than these objections, Dr. Crowell argues that the poverty and exploitation of the weakest among laboring forces, with resulting widespread sickness, do not exist in this country and that European insurance systems based on such conditions are, therefore, not needed here. Such widely diverse witnesses as Frederick L. Hoffman, of the Prudential Insurance Company, and Samuel Gompers, of the American Federation of Labor, are summoned in support of this contention.

Throughout, the pamphlet or brief puts the case for business men. It describes the medical profession as a state-protected "monopoly" and "union" and pleads for delay in adopting the suggestions of the doctors and others who have busied themselves in "concocting laws affecting business vitally, but which have

not received the serious attention of the business community." The members of the Committee on Social Insurance of the American Association for Labor Legislation, which drafted the "model" bill which the Mills bill follows, are all given, with the exception of Mr. Hoffman, of the Prudential, who only recently resigned. "These are all estimable names in their respective professional fields," says the report. "But there is no representation whatever of business interest on this committee of ten; nor is labor, in whose behalf this association avowedly exists, represented."

The author quotes with relish a statement by the Massachusetts Merchants' and Manufacturers' Association that the minimum-wage law of that state was enacted through the efforts of those "whose livelihood is largely derived from service in this or that 'social welfare' organization, theorists on sociology, an occasional college professor and, finally, a large proportion of well-to-do women whose sympathetic tendencies far outweigh their analytical grasp of the laws underlying the business and economic relations of mankind."

From this Dr. Crowell argues for an "American system of social insurance" based on a great development of the existing sick-benefit funds of lodges, unions and other voluntary organizations, together with the public-health agencies, hospitals and dispensaries.

FOOD FOR THE STRONG OF STOMACH

RELIEF workers in New York city are offering compliments and regrets to those who would apply to their work for needy families the results of the police squad diet experiment. The experiment demonstrated that this picked crew of athletic young men can flourish on a diet costing twenty-five cents a day for each man, the food bought from the ordinary corner grocery store open to all purchasers. The diet allowance of the New York Association for Improving the Condition of the Poor is thirty cents a day for an adult in good health, more for the sick and convalescent.

But, the relief workers point out, the buying, cooking and bossing were done by experts under the supervision of Mary Schwartz Rose, assistant professor of nutrition at Columbia University, whereas the ordinary household's food must be handled by the untrained housewife. Moreover, the diet does not apply to families in which there are growing children, who require more nutritious and expensive food. There is, further, they point out, the well-established gameness of the New York cop which would carry him through such an experiment, once undertaken, whereas the ordinary person has but a sulky appetite for the unpalatable.

The official report of the experiment,

UNCLE SAM: "LET THEM DECIDE!"

to be published shortly by the Home Economics Department of Columbia University and the Life Extension Institute, will doubtless answer many criticisms not only of the application of the experiment but of the experiment itself. For the original plan, it is stated, was neither to show that present relief work is extravagant nor to set up a whole new standard based on a 21-day-test; nor were the published menus to be taken as recommended for general use to the exclusion of all others.

Mrs. Rose believes that "the average New York man" can live on twenty-five cents a day—if he wants to—but that a child will cost more in proportion because of the cost of "growing material"—eggs, milk, fruit and fresh vegetables. "The minimum diet is always too low for good relief work," says Mrs. Rose. "But experts must buy and prepare the food or else a margin must be left for errors of judgment in buying and cooking. The experiment shows what is

best to do when one has a little to spend; it does not prove that every family can maintain its efficiency on an allowance so near the nutrition danger mark."

MARKING THE SPREAD OF COMMUNITY CENTERS

"THE community center movement is growing. In six weeks newspaper clippings show either the installation of new community-center systems or a new newspaper-led campaign for installing them, in nineteen American cities, East and West. Ten years ago the phrase was so little known that when an advanced class in education in a western university attempted to discuss social centers in the schools, even the instructor thought it referred to basket parties for the poor, carried out by school children. Now we consider social center an obsolete term and use community center instead."

This quotation is taken from the first number of a new magazine, the *Com-*

munity Center, published by the National Conference on Community Centers and edited by John Collier, its secretary, with Edward M. Barrons as managing editor. The first four issues, to be published before the second National Conference on Community Centers in Chicago next April, take a frankly tentative form as bulletins. In them will be printed the papers read at the first conference, held in New York city last spring. A more journalistic form and scope are expected to develop from the second meeting.

This first number contains contributions on overhead organization, self-governing working-girls' clubs, freedom through self-support, the cooperative principle and other matters of practical interest. Reports from various cities show a refreshing variety of activities undertaken. A center in Springfield, Mass., has been fitted up with complete gymnasium facilities. In Detroit, community center activities have been joined to the movement for teaching immigrants English, in the hope that self-sustaining neighborhood clubs among the foreign-born will eventually result.

In Boston an Italian group, by presenting a play, Columbus and His Discovery of America, have reminded their New England neighbors to whom belongs the credit for first setting foot upon this continent. Bristol, Conn., is trying to raise \$175,000 for a new community building. In Omaha the education authority has remained so deaf to the entreaties of citizens to let them dance in the public schools that the community center organization was obliged to introduce the "hesitation," the "backslide"—or whatever may be the steps in vogue this winter—into the state institute for the deaf.

A WAITRESS AS GUEST OF CONSUMERS

PASSING the plates is the usual function of a waitress at luncheon, but at the twenty-sixth annual luncheon of the New York City Consumers' League last week, a little waitress was served at the guest table as one of the three principal speakers of the occasion.

Bella Burton has been for twelve years a restaurant waitress, and has worked twelve hours at night till she couldn't stand it longer. Her own story was her plea for a shorter work day for her comrades.

"It's not only putting food down to you that makes it so dreadful," she explained, "it's the rush and tear, especially in the business section. An automobile couldn't stand it running steady twelve and fifteen hours on end, say nothing of a human being. First your feet get out of commission and then all the rest of you goes—your head and back. And if you show you're tired the boss yells: 'Got lead in your feet?'"

From the annual report—the twenty-fifth—of the New York City Consumers' League

"Ignorant foreigners come to this country expecting good conditions," continued Mrs. Burton, "but they get absolutely no protection in restaurants. The girls themselves haven't time to get a law passed—they haven't time to sit down, but they're praying you will help them."

Dr. Alice Hamilton, of Hull House, special investigator of the federal Department of Labor, backed up Mrs. Burton's experience with statistics and facts, proving that long hours and night work result in fatigue-poisoning and lowered vitality. Even in England, where women's labor is most necessary now, Dr. Hamilton claimed that the government is so carefully guarding health that regular hours are less than the seventy-hour week of Illinois working women, and permits for extended hours never make so unrestricted a day as the day of the New York restaurant employees.

In her annual report, Mrs. Frederick Nathan, president of the league for twenty years, said that 58 per cent of the women employed in restaurants worked more than the fifty-four hours a week set by law for store and factory workers, while one-fifth of them worked for twelve hours seven days a week. She urged her hearers to support the Graves bill introduced at Albany, which provides that the working day in restaurants shall not exceed nine hours a day and fifty-four hours a week, and that women shall not be employed between 10 o'clock at night and 6 o'clock in the morning.

Mrs. Nathan thus summed up the future program of the Consumers' League:

Extension of the mercantile law to include restaurants.

Repeal of the Christmas exemption in the present mercantile law, which permits overtime work and exhaustingly long hours seven days preceding Christmas.

Agitation for the eight-hour day in New York state, thus raising it to the standard of Arizona, Colorado, Washington and the District of Columbia.

Education of public opinion and agitation for a minimum wage commission to determine what shall be the minimum wage in the various industries.

Agitation to get a woman's division established in the Labor Department in Washington.

A bill looking toward the eventual abolition of all tenement home work in New York state.

OBJECTIONS TO TROLLEY ARBITRATION PLAN

THE tentative plan for the prevention of street car strikes, drawn by Oscar S. Straus and fathered by the New York Public Service Commission for the first district—New York city—of which he is chairman, had a stormy time last week. It had already run the gauntlet of employers and labor men and emerged with some wounds. Last week numerous spokesmen for "that great third party, the public," joined in the hue and cry.

The opinion expressed was by no means unanimous. Few condemned the plan altogether. Indeed it was heartily approved by a former deputy attorney-general of the state, by a former president of a board of trade in New Jersey, and by Everett P. Wheeler of the Reform Club of New York. All three discussed the plan, however, as if it were to apply to steam railroads, whereas it is strictly limited in its scope to street railways.

Among the critics, more or less severe, were Florence Kelley, Pauline Goldmark, Felix Adler, Rabbi Stephen S. Wise, Prof. E. R. A. Seligman, Thomas I. Parkinson, Morris Hillquit and John A. Fitch. One or another of these speakers expressed the belief that the clause requiring officers of unions to sign an agreement to the wage rulings of the commission and not requiring a similar act on the part of the corporation would place labor in a disadvantageous position; that the apparent advantage offered to unions would prove ineffective and that there was insufficient provision for representation of the public on the proposed wage board.

More fundamental to the whole plan was the objection raised to having a rate-making body, appointed presumably for their knowledge of financial and engineering problems, made into a su-

preme court for industrial disputes. It was pointed out that there is no representative of labor on the commission. On one final point, the most vital of all, the critics were fairly agreed. They were opposed to the suspension of the right to strike. The bill as drafted withholds the right to strike "pending" the use of the machinery for adjudication and determination to be set up. The inference intended is that after its exercise the men, if they are still dissatisfied, may strike, as under the Canadian law.

It was pointed out, however, that under the terms of the plan the men would not be free to negotiate an agreement, even though free to strike. The plan provides, specifically, that all agreements, however made, become valid only when they have received the approval of the Public Service Commission. If, therefore, the men were to strike against the terms of a contract which had been approved by the commission, they would find themselves, at the end of it, subject to the commission in all respects, just as before.

It was urged by Professor Seligman, Mr. Fitch and others that whatever differences of opinion there may be over the policy of prohibiting strikes, it ought to be evident to everyone that such a prohibition would be intolerable if the law did not fix definite standards, higher than those prevailing in other employments where the right to strike has not been restricted. Mr. Fitch, who was opposed to any restriction on the right to strike, urged that, if such a prohibition is nevertheless to be put into the law, provision should be made for an eight-hour day and a wage at least 10 per cent higher than that prevailing in other similar employments.

The hearings were ended last Thursday. It is expected that the commission will now revise and redraft its plan, with a view to meeting some of the objections that have been raised.

ROUGH ON BOSTON'S 745,000 RATS

A BILL has been presented to the Massachusetts legislature requiring that all new buildings along the waterfront of Boston be made rat-proof as well as fireproof. This bill is the result of an endeavor to rid the city of its annual expense of \$1,355,000 for the support of rats which, as was suggested last summer, "might carry infection of poliomyelitis," and have been proved to carry infection of bubonic plague.

No outbreak of plague has occurred as yet at the port of Boston; but so many steamers come to Boston ports from South America and Africa where plague is nearly always present that every precaution is, of course, desirable. Throughout the winter the Women's Municipal League has been active in providing publicity matter about the means

of transferring plague infection, as well as about the history of outbreaks of the disease. Also they have given addresses before grocers' associations, showing the economy of removing rat harborages. They have estimated that each rat costs the city \$1.82 a day.

In cooperation with the federal quarantine station at Gallups Island the city Department of Health is examining all rats brought to its laboratory in order to catch any case of plague. At port, rat-guards and other devices are being applied to incoming ships under constant supervision.

The importance of such measures will be the more fully realized by recalling the experience of New Orleans in recent years in this work of rat-eradication. The work there has proved the migratory habits of rats—infected animals being found in six different districts of the state. In the course of laboratory routine, over 100,000 rodents were examined last year. Of these, sixty-seven were found infected. That the infection, once introduced, is difficult to eliminate, is proved not only at New Orleans but

also in Seattle and in California, where it has spread from rats to ground squirrels.

The women's league has published the monograph on rats prepared by Dr. Richard H. Creel, of the federal Public Health Service, who was for some time in charge of the plague prevention service at New Orleans. The study describes the various species of rats in the United States, their prevalence, habits, destructiveness, danger as disease-carriers and the best methods of eliminating them.

CHURCH AND STATE AND SUBSIDIES

IF a recent decision of the Circuit Court of Cook County, Ill., is upheld by the state Supreme Court, all institutions under the auspices of "any church or sectarian denomination whatever" will be ineligible to receive public funds. Hitherto some have depended upon such funds for a large measure of support.

The decision in this test case was handed down by Judge Jesse A. Baldwin and restrains Cook county from paying \$4,151 to the Chicago Industrial School for Girls. This money is claimed by the school for the care and keep of wards of the state committed to it by the Juvenile Court. Judge Baldwin holds that the payment of this bill would constitute a violation of constitutional provisions. He says in part:

"Under our form of government, and particularly under the constitution of the state of Illinois, it seems to be the established policy that such institutions, however humane and commendable their purposes and accomplishments, may not receive public money to aid in their support. Constitutional provisions of the character involved in this case are self-executing, and being a part of the fundamental law of the state, are binding upon all courts, legislative bodies, organizations and individuals, and it is not open to the court to inquire into or consider the wisdom of the constitutional enactment.

"Children of Catholic parents, or themselves members of that church, are, without conscious selection or preference on their part, committed to institutions by the Juvenile Court under a statute which provides that the court in committing children shall place them as far as practicable in the care and custody of some individual holding the same religious belief as the parents of such child, or with some association which is controlled by persons of like religious faith with the parent of such child.

"It is my belief that in a very large majority of cases work of this kind is more economically and efficiently done in institutions controlled, managed and inspired by religious and sectarian organizations than when administered by the

WAR'S LESSON FOR SOCIAL RELATIONSHIPS

A Message from the London Yearly Meeting of the Society of Friends

OUR society has always held that war is contrary to Christ's teaching; we have now come to realize that the conditions under which (whether by necessity or choice) men and women are spending their lives are also a condemnation of the standards of Christianity almost universally accepted today.

Many suggested remedies have been put before us, state and guild socialism, industrial cooperation, copartnership, profit-sharing and the like. We feel that all these conceptions may have their part to play in the task of reconstruction. But we are convinced that it is something much more than this that is wanted, if a Christian social order is to be attained. It is to be noted that labor in its struggle for emancipation is seeking not only improvement of material conditions, but freedom to live a fuller life.

We base our position on our loyalty to Jesus, with thought of service to the uttermost, and on our belief in the divine in every man with all its implications. On these we must found an ideal of life, and be prepared to develop it steadily and apply it fearlessly.

No organization, however complex or firmly established, should be tolerated which thwarts or violates this ideal. In so far as society, as we know it, is based on ignoble or inferior aims, if war, or industry, or social convention treats the individual as a pawn, or as a means and not an end, it is in antagonism to Christ. Where the resources of life are used as means to selfish gain and power, and not to the satisfaction of the common needs of men, we cannot consistently acquiesce.

state, so that in announcing this conclusion I am not to be understood as criticizing the efficiency of the school or the conduct of those under whose fostering care it has achieved so much of usefulness."

Appropriations by Cook county, in 1916, to nine Roman Catholic schools of various kinds aggregated \$250,900. This was paid for the support of more than 2,500 dependent boys and girls committed as wards of the county. In addition, the city of Chicago paid, in 1915, \$31,978 to the House of the Good Shepherd and \$12,000 to the St. Vincent Infant Asylum. The loss of public appropriations to all these institutions would aggregate, therefore, at least \$294,000 a year.

Sixteen other institutions accredited by the State Board of Administration receive appropriations from the county for the care of its wards, but none of them is under ecclesiastical control. Several years ago the German Lutheran Kinderheim was the only institution under Protestant control that received any part of its support from public funds, but the Lutheran synod, convinced of the illegality of this appropriation, discontinued the school and turned its work over to two independent corporations which have since conducted a manual training and an industrial school.

Following the decision of the court, Archbishop Mundelein read a letter on the subject at the cathedral service on February 11. This was read also in every parish church, and printed copies were given to every worshiper the same day. In this letter the decision of the court is stated to be due to the fact that the "outgrown, century-old" constitution of the state "makes no provision whatever for dependent children, never even mentions them, showing that the problem as the city now faces it, and as it may be seen day after day in our courts, was not foreseen," and that its framers could have had "no conception of the tremendous asset a religious training would have for the common good, not to mention the individual." The archbishop, turning "in sorrow, not in anger, from this tribunal to the great audience of the million people bound to him by the ties of affection, allegiance and obedience," appeals "to their tribunal of mercy." His letter concludes with this plea:

"The archbishop is not going to desert the orphan children; he will not abandon them to the cold, soulless care of the state; he will take the place of father and mother to them until they grow old enough to take care of themselves. Even if the great state of Illinois and the rich city of Chicago will not contribute a penny toward their support, he will manage somehow. If need be, he will beg from door to door for them. . . . Surely you would not want

them to be handed over body and soul to the cold-blooded, mechanical, well-paid employes of a municipal commission or institution, or farmed out among strangers to be exploited as cheap child labor for the personal profit of others. Then help us as much as you can to give to other children what you would want for your own."

PLANNING SCHOOLS À LA NEW TELEPHONE LINES

WHY shouldn't a city plan its new school buildings with the same foresight that a telephone company uses in planning its new lines and conduits? The Wisconsin Telephone Company, for example, takes a census of Milwaukee's population every five years, learning the number of families in each block, the rents paid, the types of buildings standing and projected, the quantity of vacant land, and other similar items. On the basis of this information it estimates the probable direction and growth of future population, as well as the kinds of telephones that will be in demand in the different districts. It then plans with more precision and economy than it otherwise could where to lay its new extensions.

Why, asked the City Club of Milwaukee recently, shouldn't the municipality do the same in projecting its school sites and accommodations? The club thought that it should. It, therefore, undertook to prepare, in cooperation with the Milwaukee school board, a ten-year building program based on precisely this method of calculation. The program, if adopted, is expected to meet the needs of the city's growing school population more adequately and cheaply than former methods of building.

Many of Milwaukee's children have for some time been going to school in portable barracks. These were makeshift accommodations, made necessary by overcrowding; they were on the increase. Still other children recited in basements, many of which were poorly ventilated and badly lighted, while assembly rooms were turned over for class headquarters and recitation purposes. Even in suitable rooms overcrowding was a growing menace. To learn the exact extent of these abuses the City Club and a special committee of the school board made a survey, the actual work being done by Hornell Hart, civic secretary of the club, and Frank Harbach, secretary of the board.

The survey revealed a net deficiency of 4,000 sittings in the schools. It found that in various outlying portions of the city the school enrollment would in all probability double in twenty years. In less remote portions it would increase slightly, in others it would remain stationary, and in the heart of the city it would probably recede. For the entire city a net enrollment growth of slightly

less than 800 a year was predicted, taking no account of annexations of territory.

With this information in hand it was easy to lay out a building program for the next decade. Tentative plans already before the school board were found to be wrong, and appropriations were shifted in a radical way from one section of the city to another.

Play space was included in the survey. Twenty schools were found to have less than thirty square feet per child in their playgrounds, whereas sixty-five square feet per player is said to be required for dodge-ball and 500 for playground baseball. Estimates were made as to the probable cost of enough land to give each child in the Milwaukee schools a minimum of fifty square feet.

In addition the survey covered needed high school buildings, requirements for new toilets, for new heating and ventilating plants, for trade and technical schools, and for administrative offices. An average expenditure of \$500,000 a year, it was decided, would carry out a ten-year program meeting all of these requirements.

The school board was impressed and the new program will probably be adopted. The increased funds that it demands cannot be secured until the present law limiting the tax on school buildings is amended. If the attempt to do this at the present session of the legislature is successful, the way will be opened also for the reduction of the number of pupils per teacher.

Meanwhile, the report of the club points out that its program is based on the present method of utilizing school equipment for small and irregular parts of the day, and that the platoon system, recently introduced into several Cleveland schools, ought to be further investigated.

The survey will, says the report, be of value only if kept up from year to year. The club believes that it has suggested a method, based on the practice of a private company faced with an analogous problem, by which other cities can insure more economical and accurate planning of their school accommodations.

REPORT ON THE JERSEY PRISON

WHAT intelligent newspaper publicity about conditions in prisons may accomplish is indicated by recent happenings in New Jersey. The SURVEY has already told how the New York *Evening Post*, acting upon information given to it by Frederick Boyd and Patrick Quinlan, two I. W. W. sympathizers who served terms in Trenton prison after conviction on charges for inciting to violence during the silk strike at Paterson in 1913, sent its own reporter to Trenton and published a series of articles exposing the treatment of prisoners

Donahy in the Cleveland Plain Dealer

in that prison. The commission appointed by Governor Edge to investigate these charges has just submitted a preliminary report substantiating the charges at many points, and the state Department of Health has arraigned the hygienic conditions.

The commission declares it to be true that "prisoners have at times been punished by lodgment in dungeons and by other methods, under intolerable conditions," though it does not report specifically upon the accusation that men were chained to the walls of these dungeons, and that one prisoner was forced to wear a ball and chain riveted to his leg for four years and a half.

It finds further that the law regulating contract labor is violated; that a person suffering from tuberculosis and committed for two years or more "is practically sentenced to death by disease"; that prisoners with contagious and infectious diseases are not properly segregated; that more than one prisoner is lodged in a cell, in violation of the law; that the food is not satisfactorily cooked and that, because of the lack of a proper dining room, meals are served to prisoners in their cells; that the system of education, required by law, is "entirely inadequate"; that an entering prisoner is customarily placed in quarantine for fourteen days, locked in his cell, with no opportunity for exercise; that the facilities for exercise in the open air for all of the prisoners are inadequate; and that the privilege of applying for parole is in some instances denied or delayed.

The commission makes specific recommendations for remedying these evils. Among other things, it urges adequate physical and mental examination and classification of prisoners, the establishment of a prison school and the use of inmate teachers, and the deprivation of rewards and privileges as a method of punishment. The state-use system of prison labor was established and the contract system abolished by the legislature in 1911, but the next year existing contracts were allowed to be continued until sufficient employment under the state-use system could be provided. As a result, the commission found 500 men employed by private contractors. It recommends an immediate extension of the state-use system.

Since this is only its preliminary report, the commission does not attempt to determine how far these conditions are due to the construction of the prison, how far to management, and how far to divided responsibility in supervision. The Board of Prison Inspectors, in which is lodged part of that responsibility and which was accused of laxness in the course of the newspaper exposure, has issued a statement expressing approval of the investigation and admitting most of the commission's findings. Some of these

"HELLO, DOCTOR, COME QUICK!"

it explains as due to failure of the legislature to appropriate money.

Not only is tuberculosis widespread, reports the Department of Health, but the disease is not even recognized until far advanced; nearly a third of the deaths occur within one month after the first record of sickness. Fifteen per cent of the active cases and 20 per cent of the incipient ones are not recognized upon admission, says the department, and 65 per cent either receive infection in the prison or the disease in an arrested state is reawakened. The department severely criticizes the food, the ventilation, neglect in the matter of medical examination and records, and the mingling of syphilitic and tubercular with other prisoners.

Governor Edge endorsed the recommendations of the commission in transmitting its report to the legislature last week. He also sent with the report two

bills introduced by Senator McCran, the majority leader. One of these appropriates \$44,000 to carry out the commission's recommendations and the other extends the life of the commission for a year to complete its work. The commission was appointed not to study Trenton prison only, but also the state reformatory at Rahway, the state home for girls at Trenton, the reformatory for women at Clinton and the state home for boys at Jamesburg.

EXPOSÉ OF CONVICT LABOR IN A COUNTY JAIL

A FORM of contract labor amounting practically to slavery, in which control not only of work but of the very movements and discipline of 200 men is turned over to private manufacturers for a price, has been found in the county jail at New Haven, Conn.,

as the result of an investigation conducted by the Civic Federation of that city. O. F. Lewis, general secretary of the Prison Association of New York, and Hastings H. Hart, director of the Child-Helping Department of the Russell Sage Foundation, were the investigators for the federation.

Under the contract between the county and the manufacturer, the latter is entitled to the services of the prisoners for ten hours five days a week and for nine hours on Saturday. The company's overseers are allowed to assign men to the different branches of work in the shop. The prisoners are to be "respectful, attentive, industrious and obedient, and shall work to the extent of their ability." Any prisoner failing to act or work in this way may be placed by the company or its overseers in solitary confinement for six days, or longer if permission is granted by the county commissioners. No prisoner is allowed to leave his work without permission of the overseer, and the prisoners may not "converse with each other, gaze about the shop, or damage the work or waste the material furnished them." The company is under "no obligation to furnish tobacco or any other gratuity to any prisoner," but may do so as a reward for industry or good behavior.

The contract is signed by the county commissioners and by A. D. Martin for the Ford & Johnson Company, of Cincinnati, manufacturers of chairs. On March 7, 1913, it was assigned to the Metropolitan Chair Company, which now employs the prisoners. Harry V. Whipple, of New Haven, is president of this company. The contract has been in effect since 1908 and expires December 31, 1918.

Commenting on the provisions of the contract, a committee of the federation says:

"The outstanding feature of this contract is that by it the labor of the prisoners is given over to exploitation by private interests rather than left to be utilized for the reformation of the prisoners and the betterment of them and their families. Prisoners are assigned to work not by state or county officials whose duty it is to make better men of them, but by the employes of the contractor who is seeking profit. By the contract the punishment of prisoners is put in the hands of overseers employed by the contractor rather than by the jail. That the difference in aim and interest between official and contractor will give different results depending on which selects the work and metes out punishment seems too clear to admit of argument."

The \$7,000 to be received annually by the county amounts, Messrs. Lewis and Hart point out, to "about ten cents per day for the labor of each inmate, or approximately a cent an hour, out of which should be deducted the overhead

charges of heat, light, power and rent, as well as depreciation of plant."

"The labor-value of the average inmate," they continue, "can be regarded as at least one-half that of free laborers 'on the outside' in similar work, and in the judgment of some operators in the shops, many of the men perform a full day's work, judged by the outside standards."

The leasing of inmate labor to private manufacturers is common enough in state prisons in this country, but is uncommon in county jails. Criminologists condemn it in either place. Messrs. Hart and Lewis say in their report:

"We are opposed, in accord with authorities in prison reform throughout the United States, to the leasing out of prisoners to contractors. The state should be in full authority over prisoners at all times, and prisoners should labor for the benefit both of the state and of themselves. We are convinced that proper methods of employing prisoners and of disposing of the product of their labor can be so worked out in Connecticut that the state can itself market the product of inmates' labor and that prisoners may share in the profits of their own toil."

Wide publicity has attended this investigation of the New Haven jail and a strong agitation for a study of conditions in all penal institutions of the state has resulted. The investigation exposed a number of other serious evils, such as bad sanitation, unwise mingling of all groups of prisoners, overcrowding, danger from fire and insufficient recreation. The report contains specific recommendations with respect to each of these.

The Civic Federation, of which Charles J. Bartlett is president, has caused a bill to be introduced into the general assembly authorizing the governor to appoint a commission of five to investigate all the jails of the state and their relation to other penal institutions.

PACIFISTS IN COLLEGE AND OUT

IN order that American peace bodies might define principles and activities to which all might agree as a minimum platform, delegates from nineteen organizations met February 22-23 in New York city at the call of the American Peace Society. The outgrowth of a similar meeting last October, practically the same organizations were represented. They included the American Association for International Conciliation, American Neutral Conference Committee, American Peace Society, American Society for Judicial Settlement of International Disputes, American Union Against Militarism, Association to Abolish War, Carnegie Peace Endowment, Central Organization for a Durable Peace, Church Peace Union, Commission on Peace and Arbitration of the

Federal Council of Churches of Christ in America, Fellowship of Reconciliation, International Committee of Women, Massachusetts Peace Society, Pennsylvania Arbitration and Peace Society, World Alliance for Promoting International Friendship, World Peace Foundation, World's Court League and the Woman's Peace Party.

Jane Addams, chairman of the National Woman's Peace Party, summoned two delegates from every state and local branch to an all-day emergency meeting February 21.

Pacifist agitation among students has followed the introduction into Congress of the Chamberlain bill providing compulsory military training of all male citizens between twelve and twenty-three.

A petition against compulsory training bearing 1,000 student signatures has been presented to the Committee on Military Affairs by Senator Works; ten representatives of the Anti-Militarism League have appeared at a hearing in opposition to the bill; and a delegation representing many colleges will go to Washington for another hearing on Washington's birthday.

Somewhat as an offset to the card which Columbia University authorities urged students to sign as a moral guarantee that they will offer their services in any capacity for which they may be found qualified, the Collegiate Anti-Militarism League has prepared an enrollment pledge stating that the signer will do what he can to keep the United States out of war and is opposed to universal military training.

The results of the questionnaire of the American Union Against Militarism [the SURVEY, February 10] "have had an immense effect on sobering Congress," according to Charles T. Hallinan, publicity director. From Toledo alone he says, 614 returns have indicated 507 people against war, 127 in favor of it. Congressman Tavenner of Illinois reports returns from his district fifteen to one against war; and Congressman Bailey of Pennsylvania, who had 6,000 referendum cards distributed in his district, declares sentiment against hostilities "overwhelming." Both these congressmen are pacifist, but it is to be remembered that they were defeated this year by the very constituents who are returning the informal vote so strongly favoring peace.

WHAT THE GOVERNOR GOT ON HIS JUNKET

MAINE'S new governor, Carl Milliken, went on a new sort of junket before his inauguration. With Arthur A. Heald, executive secretary of the Laymen's Christian Federation of Maine, as a social-service man from Cook's, he visited the principal social agencies of New York and other cities, had a talk with Thomas Mott Osborne

and saw not only state institutions and the men who manage them, but those other men whose function it is to criticize that management and hold it up to high standards.

First fruits of the trip are a social program proposed to the state legislature, in part measures sought in other years by the State Board of Charities and Corrections and others, in part the governor's own.

First off a new budget for the state's finances was introduced. From that Governor Milliken went on to advocate larger powers for the State Board of Health in the treatment and prevention of tuberculosis and in controlling sources of water supply; an expansion of state care of the feeble-minded, any extension

of the state institution, however, to be based on a preliminary survey; maintaining the fifty-four-hour law for women and children against proposed relaxing amendments; repealing the so-called peonage law; regulating employment agencies—a crying need among the crews of the lumber camps; endorsing the plan of the State Board of Charities and Corrections for district in place of county almshouses; advocating a mothers' aid law similar to the generous Massachusetts statute; reorganizing the control of the state prison in an unpaid board of commissioners authorized to establish employment on the state-use plan; extending medical inspection and physical training in public schools together with a stiffening of the child-

labor law; enacting a law to hit at loan sharks.

We have demonstrated on this new continent, said the governor, "the right and capacity of the people to make their own laws." But we "must develop a corresponding ability to obey our laws after we have made them." And he struck hard at the liquor interests, the sore in the side of Maine, who "have the audacity to demand that the organic law of the state be administered to suit their convenience" and "even have the amazing effrontery to point to the continued existence of their traffic as an evidence of the failure of the very law which, by every known method of bribery, trickery and debauchery, they are constantly seeking to break down."

MY FOE

From Rhymes of a Red Cross Man, by Robert W. Service, reprinted by courtesy of the publishers, Barse and Hopkins.

A Belgian priest-soldier speaks:

GURR! You *cochon!* Stand and fight!
Show your mettle! Snarl and bite!
Spawn of an accursed race,
Turn and meet me face to face!
Here amid the wreck and rout
Let us grip and have it out!
Here where ruins rock and reel
Let us settle, steel to steel!
Look! Our houses, how they spit
Sparks from brands your friends have lit.
See! Our gutters running red,
Bright with blood your friends have shed.
Hark! Amid your drunken brawl
How our maidens shriek and call.
Why have you come here alone,
To this hearth's blood-spattered stone?

Come to ravish, come to loot,
Come to play the ghoulish brute.
Ah, indeed! We well are met,
Bayonet to bayonet.
God! I never killed a man:
Now I'll do the best I can.
Rip you to the evil heart,
Laugh to see the life-blood start.
Bah! You swine! I hate you so.
Show you mercy? No! . . . and no! . . .

There! I've done it. See! He lies,
Death a-staring from his eyes;
Glazing eyeballs, panting breath,
How it's horrible, is Death!
Plucking at his bloody lips
With his trembling finger-tips;
Choking in a dreadful way,
As if he would something say
In that uncouth tongue of his. . . .
Oh, how horrible Death is!

How I wish that he would die!
So unnerved, unmanned am I.
See! His twitching face is white!
See! His bubbling blood is bright.
Why do I not shout with glee?
What strange spell is over me?
There he lies; the fight was fair;
Let me toss my cap in air.
Why am I so silent? Why
Do I pray for him to die?
Where is all my vengeful joy?
Ugh! *My foe is but a boy.*

I'd a brother of his age
Perished in the war's red rage;

Perished in the Ypres hell:
Oh, I loved my brother well.
And though I be hard and grim,
How it makes me think of him!
He had just such flaxen hair
As the lad that's lying there.
Just such frank blue eyes were his. . . .
God! How horrible war is!

I have reason to be gay:
There is one less foe to slay.
I have reason to be glad;
Yet—my foe is such a lad.
So I watch in dull amaze,
See his dying eyes a-glaze,
See his face grow glorified,
See his hands outstretched and wide
To that bit of ruined wall
Where the flames have ceased to crawl,
Where amid the crumbling bricks
Hangs a *blackened crucifix.*

Now, oh, now I understand.
Quick I press it in his hand,
Close his feeble finger-tips,
Hold it to his faltering lips.
As I watch his welling blood
I would stem it if I could.
God of Pity, let him live!
God of Love, forgive, forgive.
His face looked strangely, as he died,
Like that of One they crucified.
And in the pocket of his coat
I found a letter; thus he wrote:
*The things I've seen! Oh, mother dear,
I'm wondering can God be here?
Tonight amid the drunken brawl
I saw a Cross hung on a wall;
I'll seek it now, and there alone
Perhaps I may atone, atone. . . .*

Ah, no! 'Tis I who must atone.
No other saw but God alone;
Yet how can I forget the sight
Of that face so woeful white!
Dead I kissed him as he lay,
Knelt by him and tried to pray;
Left him lying there at rest,
Crucifix upon his breast.

Not for him the pity be.
Ye who pity, pity me,
Crawling now the ways I trod,
Blood-guilty in sight of God.

Book Reviews

THE GATEWAY TO CHINA.

PRESENT-DAY CHINA.

By Gardner L. Harding. The Century Company. 250 pp. Price \$1; by mail of the SURVEY \$1.07.

AMERICA AND THE ORIENT

By Sidney L. Gulick. Missionary Education Movement. 100 pp. Price \$.25; by mail of the SURVEY \$.30.

"There is no question that my country and yours should know each other better," wrote Dr. Wu Lien Teh to the SURVEY when he sent the article appearing in the January 6 issue. Among the attempts, minor, yet sincere, made recently to deepen this acquaintance may be mentioned briefly three little volumes on the large subject. China is discussed by Mrs. Gamewell from a sympathetic and observing traveler's point of view; by Mr. Harding, temperamentally, with respect for old China and enthusiasm for new; by Mr. Gulick, as a very large part of the problem of the new internationalism.

The "gateway" to China is, of course, Shanghai, the name meaning "mart on the sea," though the city itself is now sixty miles inland. Here, says Mrs. Gamewell, "old China in miniature" may be studied. Cleverly she sketches various features of the city, its modern municipal departments—fire, police and health; its ancient customs still entrenched in the "old city," to be overcome only with the passing of another generation. She takes you to the shops on Nanking road, where you may buy a box of Huyler's, a pair of Walkovers, a Singer or a Steinway, according to your taste and pocketbook. She gives you glimpses of modern business enterprise in Shanghai; of schools—native and foreign, day and boarding, kindergartens, technological institute and the University of St. John's. There is the Hall of United Benevolence—celestial for C. O. S. There, too, are factories, great industrial plants where the workday is fourteen hours plus or minus lunch-time, and where women and children may work all night.

The book is decidedly interesting and entertaining. Through its "gateway" are seen vistas that invite a closer view. Such intimate acquaintance is the aim of Mr. Harding's book. From being a

spectator at a clean and comfortable distance, you suddenly are swept into the crowd of revolutionary spirits whose "splendid failure" is Mr. Harding's theme. You meet the little group of women, headed by Dr. Mary Chang, who, at hardly more than a moment's notice when the revolution came prematurely, organized a relief corps—the White Heart Service they called it, since Red Cross was a forbidden term.

You visit prisons, asylums; see (and hear) a maniac ward, shrink from the vacant smiles, dreadful eyes and shuddering howls therein. You are the first foreign visitor at the Evil-to-Good Institution where homeless girls are "helped" to "homes"—at a price. You talk with leaders who will again conspire and presently die. You hear addresses concerning the infernal pedigree of "politicians" that might have been uttered from a soap-box at a Madison Square corner.

In short, Mr. Harding's book is impressionistic, to express it mildly. It deserves the description he himself gives of the revolution—it is "improvised upon a tremendously vital confusion of ideas." It isn't historical, strictly; it isn't accurate, if one may trust other witnesses; it does not wait to consult "authorities" or to verify statements. Its worth is that it plunges one into the quivering uncertainties of things that cannot be charted and diagrammed, that can be *felt*, however, and known by intuition. You realize anew that "the upbuilding of China is vital to the peace of the world."

But now that one has been interested by descriptive writing, stirred by sympathetic appeal, it is time to do some steady thinking on the enormous possibilities of the Far East. Sidney L. Gulick's little volume is planned to just this end. It consists very largely of questions—such downright statement as it makes is mainly historical; concerning the future, it is at no time dogmatic. The Asiatic problem he defines as the "group of questions and difficulties confronting the peoples of Europe and America, due to the adoption by the nations of Asia of the material elements of Occidental civilization and their entry thereby into the life of the world."

There must therefore be a readjustment of the relations of the great nations of the East and West, so that this new contact shall be not disastrous but mutually advantageous. Three solutions are offered by different groups of thinkers. The first solution is, that the white race shall remain supreme through-

out the world. The second is that white races and yellow shall be segregated in different parts of the world. The third solution is "the new internationalism."

This is by no means merely a slogan, as Mr. Gulick treats it. The fundamental principles of internationalism are given as those of service and sacrifice. The real test of racial superiority is not military and commercial power, but the spiritual quality of life. The concrete program of the new internationalism includes a policy of immigration. "Chinese and Japanese are not asking for free immigration to America, but only for freedom from individual and racial humiliation." This statement Mr. Gulick emphasizes strongly. The program includes further the Americanization of the newcomers—a process which must depend largely upon the influence of those already in this country. And, finally, an honest diplomacy, not from motives of self-seeking, personal or national, but with the purpose of helping China to find its place in the world.

The statistical tables and charts, as well as many references to modern history, provide much food for thought. The bibliography for each chapter's topics includes not only books, but pamphlets and articles in periodicals. The book is planned for study groups, whether definitely missionary in purpose or not, and should lead not only to a clear-cut statement of ideals on this subject, but to an appreciation of the actual significance of the demand that "righteousness and good-will dominate America's international policies."

GERTRUDE SEYMOUR.

LEAVENING THE LEVANT

By Joseph K. Greene. The Pilgrim Press. 353 pp. Price \$1.50; by mail of the SURVEY \$1.65.

In 1845 there were seven American schools in Turkey, with an enrollment of 135 pupils; in 1913 there were 450 schools, with 25,922 pupils. These figures are but a faint suggestion of the spread of American influence in the near East through the efforts of American missionaries, of whom Dr. Greene is one of the oldest representatives. Dr. Greene went to Turkey as a missionary in 1859, but his book goes back of that time to the very beginning of the missionary movement in the Levant, records the arrival of the first American missionaries, Parsons and Fisk, at Smyrna in 1820 and the tour of exploration through Asia Minor and Persia by Eli Smith and H. G. O. Dwight in 1830, and carries the tale through the numerous political disturbances that have

marked the chaotic history of modern Turkey past the time (1910) when he himself left Turkey to the present war situation and the Armenian deportations of 1915-16.

It is an amazing story of persistence and courage. Dr. Greene has devoted three chapters of the book to an analysis of the racial and religious problems of the country, but the interest lies less in the study of Turkey herself than in the chronicle of the persistence of the missionaries. For persons to whom the missionary impulse is incomprehensible, Dr. Greene has written chapters on The Satisfactions of the Missionary Career, and The Missionary Motive and Missionary Methods. Indeed, the book is, in one sense, nothing more than an exposition of missionary zeal and determination quite astounding to the person unacquainted with missionary ardor.

But the question that the book naturally leaves in one's mind is, What next? American effort has established schools, colleges, hospitals and churches from the Balkans to the Caucasus. What will American missionaries do in that disputed country under the new conditions that must necessarily grow out of the war?

HELEN DWIGHT.

A COURSE IN CITIZENSHIP

By Ella Lyman Cabot. Houghton Mifflin Company. 386 pp. Price \$1.25; by mail of the SURVEY \$1.40.

This is a textbook for the teaching of good citizenship to children. It takes them, step by step, through their ever-enlarging world; from home to school and playground, neighborhood, town or city, nation and, finally, the all-em-

bracing world family. In this course in citizenship the appeals to the child's understanding and emotions are simple and sound. At every step, corresponding to the grades in primary and grammar school, right conduct is presented as the natural product of right thought and feeling.

A feature of special excellence is the skilful presentation of the various branches of municipal undertaking—health, philanthropy, police, fire, street-cleaning, etc.—in a way both to interest the children and to cause them to feel that these works, carried on at public expense, and for their benefit, should naturally enlist their cooperation. "Nobody can give you a clean city if you prefer a dirty one," says the author. Quite the best thing suggested in this line is an investigation as to what the schools cost as compared to other expenditures; what the particular school which the

children attend costs the taxpayers; why so much of the public revenue is appropriated to education of the young, and what should be the attitude of pupils towards their schools and the community which furnishes them. The same of playgrounds and parks. "This is your property; therefore do not destroy it."

The horrors and wastes of war, the beauty and fruitfulness of peace, the heroisms, and even martyrdoms, of peaceful men (*e. g.*, Walter Reed sacrificing his life to prove the source of yellow fever) and the ever-improving mechanism for peaceful solution of international difficulties, both legal and political—all these are richly and no more than justly remembered. Yet in spite of this, not quite so good, to my notion, is the balance between "militarism" and "peace-at-any-price." By implication, the men who fought to found, and later, to preserve, our national life, were heroes also. But there is no clear call to the youth of today to be prepared for similar services, should duty demand.

This book was written in 1914, when it perhaps seemed to the writer of this section incredible that the earth would ever witness another great war. Should the book run into another edition (as it surely ought) it seems to me that recent history must strike a few ringing notes on the iron string of preparedness, even through the hand of the organizer of the American School Peace League.

This is a book no more needed by teachers than by conscientious parents. I would rather have it than any other similar work I know, for either the matter contained or the wealth of uncommon and invaluable references to other material, which enrich every chapter.

CAROLINE BARTLETT CRANE.

IN SLUMS AND SOCIETY

By James Adderley. E. P. Dutton and Company. 302 pp. \$1.50; by mail of the SURVEY, \$1.60.

In this title the author indicates the extremes between which his personal acquaintanceships and fellowships ranged. They swung from the nethermost to the uppermost social circles in England, chiefly when he was the head resident of Oxford House, the Anglican church social settlement in east London. Reading its pages is like hearing the genial canon talk over his reminiscences of old friends. With the free play of mind and heart full of his vital intercourse with all sorts and conditions of men with whom he worked and played, he rejoiced and sorrowed during stirring events, and while off guard and at leisure.

Churchmen and dissenters, actors and authors, statesmen and radical agitators crowd the volume with their wit and wisdom, their best stories and glimpses of their innermost selves. It lets one into the inner circles of the best of good fellowship not only, but lets up the stress and strain of the very pressures out of which it grew.

G. T.

WHAT IS EDUCATION?

By Ernest Carroll Moore. Ginn and Company. 357 pp. Price \$1.25; by mail of the SURVEY, \$1.37.

Readers of the SURVEY will find in Professor Moore's book much that is in keeping with their dominant mood. He and they, while fundamentally interested in social welfare, the betterment of life condi-

tions for all, are especially concerned with the under dog (in this case the pupil), prevented by tradition from living the life that is his by right. Professor Moore follows Professor Dewey, at least much of the way, in considering that education is life; he accordingly believes that fuller living in the schoolroom is for the child the means to a better education.

The principal thought of the book is that education is one and the same process whether found in freer days before school life begins, or in the school itself, or in that period when school days are over—"the great school of life" as adults like to call it. If education is thus to be one process throughout life, evidently the school as we know it must be remade, in spirit and procedure. It is here that Professor Moore comes into open conflict with our customary educational practice; and the needed reorganization, we are led to infer, is pretty thoroughgoing. Not that the book gives a detailed account of what the modern school should be. Details are left to others. It is the nature or theory of the educative process that is primarily discussed.

The best and all that we as parents or teachers or social workers can do is so to condition the child, or unfortunate adult, that he will of himself build his world aright, using thereto the guidance of the social inheritance. This relation of teacher and pupil, once understood and accepted, means a revolution in method and discipline. Actual situations involving doing and thinking are necessary if the child is to build up in himself the attitudes and habits necessary to fuller living.

Professor Moore thus accepts in full the functional point of view with its far-reaching implications. It is no disparagement to say that this book belongs in

the Dewey school. Excepting Professor Dewey's own writings, no other single book so fully presents the position. The presentation is in no sense a repetition, but is an independent elaboration of practical implications along lines not elsewhere worked out.

On the whole, the book is easy to read, oftentimes quite attractive in style. It should prove useful as a textbook, as supplementary reading, and in teachers' reading circles. Social workers who wish an introduction to the best modern attitude in education will find it here.

W. H. KILPATRICK.

FORMS AND FUNCTIONS OF AMERICAN GOVERNMENT

By Thomas Harrison Reed. World Book Company. 549 pp. Price \$1.50; by mail of the SURVEY \$1.65.

This volume of five hundred pages, simple, clear, free from statistical treatment, and charged throughout with the progressive new ideas in government, makes an entirely new appeal to the young citizen, despite its rather

academic title. Mr. Reed says he intends the book chiefly for those high-school students whose formal education goes no further. He not only gives the facts about the forms and functions of city, state and federal governments, but he gives reasons and explanations fully and simply.

Students will not have to learn facts, as from the older texts; to read this book is to understand. The many photographs, specimen ballots, charts and diagrams all help to make the subject-matter exceedingly clear. The main divisions of the book are, first, a discussion of the background and principles of government in the United States; parties and elections; the state, local and federal

governments; and last, the functions of government taken up in detail under each branch of the public service.

One of the most stimulating features of the book throughout is the constant suggestion as to how the individual can best serve as a good citizen. Not only are practical personal activities suggested, but progressive attitudes of mind on public questions are clearly set forth. The book, of course, is intended for use as a text, but it makes easy reading as well. Among the many volumes recently put out on citizenship for school use, it is clearly one of the ablest, both in its careful preparation and clear writing. In its real appeal to the natural civic interests of the high-school student it stands alone.

and dental clinics;" in my opinion these three things are of first importance. According to the statement of John Spargo, fully 2,000,000 of school children in the United States are badly underfed.

Dr. Ernest Hoag, in his book, *Health Work in the Schools*, says: "Statistics show 60 per cent of the pupils suffer from non-contagious defects which need constantly to be taken into account by the educational authorities. Moreover, the physical welfare of every child is more or less jeopardized by the sedentary occupations, indoor life and nervous strain of the modern school." How physical training can "strengthen the physical foundation" when it ignores fresh air and sufficient food essential to the growth of young organism—I fail to understand.

[President National Conference of Charities and Corrections.]

Buffalo.

UNCLE SAM, SURVEYOR

TO THE EDITOR: Within the past six weeks reports of educational surveys for five states—Iowa, Washington, North Dakota, Colorado, Wyoming—have been issued by the United States Bureau of Education. For the first three states higher education was surveyed, for the second and last two the public school system was surveyed. In all cases the bureau was invited to choose the surveyors and make the survey at state expense, except for cost of national employes and of printing. United States Commissioner Claxton transmits each report—an official document of the Department of the Interior—with his approval.

The following facts about the bureau's surveys are cited for SURVEY readers without comment, as typical of points that are being widely discussed in educational circles, gingerly or freely according to official connection and private temperament.

Communications

FRESH AIR FIRST

TO THE EDITOR: Let me make a few remarks on account of the article by Prof. John H. Finley, In the Service of the State, in the SURVEY of January 13. The introduction of physical and military training into school system "should give such basic health education as no other state or country perhaps has ever sought through law and public agency to provide. It is a program for strengthening the physical founda-

tions in which our higher intellectual and spiritual curriculums are to find support. . . . It covers medical inspection, talks and recitations in hygiene, and all forms of healthful physical exercise, such as setting up drills, gymnastic exercises, supervised recreation, organized play, athletics, and a great variety of individual recreational activities."

I looked in vain to find "open-air school system, free food, free medical

1. One hundred per cent more students per class, 33 per cent more hours per instructor for academic college courses than for teacher training schools are cited as proper.

2. Average occupancy of rooms is found by adding the maximum (e. g., 56) and minimum (e. g., 1) and dividing the two, which in the case cited exaggerates by 100 per cent the actual average occupancy.

3. In counting instructors' teaching loads student clock hours are used, laboratory hours count the same as quiz hours, subjects requiring out-of-class work by instructors count the same as those requiring only class time.

4. While declaring in the Wyoming report (p. 49) that when extremes are great averages mean little, all the reports abound in averages and recommendations for averaging salaries (\$2,000), student clock hours (300), etc.

5. State systems of public education and of supervision are described without a word regarding methods and results of the state superintendents' activities and offices.

6. Arithmetical errors due to lack of supervision or defective proofreading abound: $5 \times 15 = 45$; $5 \times 31 = 85$; graph for 92 per cent the same as graphs for 97 per cent, etc.

7. Higher institutions of learning were surveyed without observing instruction, testing graduate work, analyzing actual administration, or securing statements of fact or suggestions from the faculties surveyed.

8. Persons not themselves teacher trainers were chosen to survey Iowa's teacher training colleges.

9. Statistics of cities and country are mixed in one table.

10. Fact bases are usually not stated and general dissertations requiring no field examination are given the title and dress of field surveys.

11. The hop, skip and jump method was used, trying to "put out a conflagration with an atomizer."

These survey reports contain conclusive evidence that the United States Bureau of Education lacks the equipment necessary to assume responsibility for local surveys, that it employs methods that defeat the purpose of surveys, hamper educational progress and jeopardize the ability of the national bureau to serve the purposes for which it was created.

Only one specialist in higher education is employed by the bureau. When he is surveying he cannot, of course, be studying surveys by others, including the invaluable matter that is now hidden in educational reports from colleges, universities and special investigators. The bureau's library is pathetically weak in these working tools. Having surveys to

Do You Want War?

College men are organizing to preserve peace and democracy.

They are organizing to prevent conscription and universal military training and to keep this country out of the European War.

They are conducting mass meetings throughout the country, co-operating in the publication of a no-war magazine, and going in delegations to state and national capitals to voice the student appeal.

If you are a collegian enlist with these anti-militarism forces; if not, help them financially in their fight.

Collegiate Anti-Militarism League

Actively Represented in Forty Colleges

National Office: Sub-Station 84, New York City

sponsor he is practically estopped from publicly admitting the faults of his own workmanship or of criticizing similar faults in others. He and the bureau in two short years of surveying have already acquired a heavily vested interest in mistakes that must be defended, condoned or "hushed up," although the country needs frank disclosure and discussion of such mistakes by whomsoever made.

WILLIAM H. ALLEN.

[Director Institute for Public Service],
New York city.

JOTTINGS

OHIO women were granted the presidential suffrage by act of the legislature last week.

THROUGH a printer's error, one line was omitted from Peace Among the Nations, President Wilson's address to the Senate, published on pages 488-89 of the SURVEY for January 27. In the following passage the omitted line is given in italics: "Rights must be based upon the common strength, not upon the individual strength, *of the nations upon whose concert peace will depend.*"

THE Jones bill, establishing a woman's division in the federal Department of Labor [see the SURVEY for December 23, 1916] is on the calendar of both houses of Congress. The National Consumers' League urges all friends of the measure to wire their senators in support of it.

SAFEGUARDING Children in Peace and War, Problems of Education, and How to Make Child Labor Laws Effective are announced among the topics for the thirteenth annual meeting of the National Child Labor Committee at Baltimore, March 23-25.

NORTH CAROLINA has passed a law making it illegal to advertise "cures" for incurable diseases. This legislation is the result of long effort by the State Board of Health and many local agencies. The newly elected governor, T. W. Bickett, in his in-

augural address, congratulated the State Board of Health on its campaign against quackery and expressed himself as being in favor of such a law as was later enacted.

CALIFORNIA'S Industrial Accident Commission, 525 Market street, San Francisco, has launched a new periodical, *California Safety News*. The first issue emphasizes slipping and falling as causes of industrial accidents. A foreword gives the purpose of the publication as the education of employers and employes to "reduce materially the altogether too large number of accidental deaths and injuries, which have heretofore been confronting us annually."

TWO prize competitions are announced for 1917 by the National Municipal League. The William H. Baldwin Prize of \$100 is offered for the best essay on Tendencies in Municipal Budget Making. Competitors must be under-graduate students in any college in the United States offering direct instruction in municipal government. The Morton Denison Hull Prize of \$250 will be awarded this year for the best essay by a post-graduate student on any subject related to municipal government submitted to and approved by the secretary of the league. Further information may be had of the secretary, North American building, Philadelphia.

ALL of the thirty-seven cities of Massachusetts have accepted the act authorizing them to establish and maintain schools of agriculture and horticulture. The Massachusetts Homestead Commission, which worked for three years to secure the passage of this permissive measure, believes that it will relieve congestion of population, spread a knowledge of profitable methods of tillage and promote a desire for life in the open. The State Board of Education advises a beginning by providing instruction, at or near their homes, for families and individuals who now have homesteads with tillable land, who could be helped to the possession of such homesteads through private rental or purchase, and who are daily engaged in agricultural or horticultural employment.

THE New York Society for the Prevention of Crime has addressed an appeal to the governor and the members of the legislature to amend the law so as to throw certain restrictions around the exhibition of motion pictures on Sunday. "Under the guise," says the society, "of innocent and wholesome recreation" some commercial interests are urging the unrestricted opening of the movies on

If You Knew What Foods!

If you knew the quantity of nourishment in different foods, you wouldn't need worry over the high cost of living. For—you would then know how to get all the nourishment you need at *very small cost*. If you also knew how to combine foods—that is, what foods eaten together "set well," you need never have indigestion, constipation or any of the headachy, stomachachy ills they lead to. A little knowledge—easy to get—would protect your health and pocket-book. This knowledge is in a book called "The New Cookery," written by Miss Lenna Frances Cooper, B.S.—graduate of the School of Dietetics at Columbia University and now Principal of the School of Home Economics. In "The New Cookery," Miss Cooper tells you what to eat for proper nourishment—for health and for economy. She also gives you 750 recipes for delicious home dishes with the scientific quantity of nourishment under each recipe. More than 400 pages, with numerous illustrations and all substantially bound for home and kitchen use. Price only \$2. Send for the book today. You take no risk. For—if you are not entirely pleased and satisfied, you may return the book within five days and we will promptly refund your money. Thus, we allow you to be the judge. This book is *worth its weight in gold* to the housewife who wishes to feed her family for health—and economically. Order "The New Cookery" today—direct, or through your regular bookseller, from

APPLETON BOOK**
APPLETON & COMPANY, NEW YORK

Sundays. . . . The real force behind this attempt is not popular recreation or amusement; it is cold cash for a few." The society believes that "much that is vicious and debasing is thrown on the screen" and proposes, first, "that pictures, and only those, approved by the State Board of Education, be allowed to be shown on Sundays, and (2) that no admission fee be chargeable either directly, or indirectly."

THE first numbers of two magazines devoted to birth control have just appeared. The *Birth Control Review*, monthly, \$1 a year, 104 Fifth avenue, New York city, is "dedicated to the principle of intelligent and voluntary motherhood." Margaret Sanger is editor and Frederick A. Blossom managing editor. The other magazine, *Birth Control News*, is to be published "occasionally" by the Birth Control League of Ohio, 614 Society for Savings, Cleveland. The first number puts this quotation at the head of its first page: "The rational limitation of offspring is not only a right but a duty; the state should recognize that right and teach that duty."

SIXTY annual reports in 125 pages is the achievement of the second Year Book of the Cleveland Welfare Federation, which is better known to readers of the *SURVEY* under its original name—the Cleveland Federation for Charity and Philanthropy. Fifty-nine of the reports are those of the social agencies in the federation and the sixtieth is that of the federation itself. In addition there is a "Who's Who" of more than 3,000 trustees and committee members, paid and volunteer social workers, and many illustrations. The accounts of the work of each group of agencies—children's societies, settlements, hospitals, and the like—is preceded by an introductory statement showing what there has been accomplished in Cleveland in the field of work to which these agencies belong.

PERSONALS

MARCY I. BERGER has resigned the position of director of the Service Department, Wholesale Clothiers' Association of Chicago, which he has held since inauguration of the department in 1911, to become secretary of the Associated Jewish Charities of Chicago.

EDWIN ROGERS EMBREE, assistant secretary of Yale University, is the new secretary of the Rockefeller Foundation succeeding Jerome D. Greene, resigned. George E. Vincent, president of the University of Minnesota, has been elected president [the *SURVEY*, December 9, 1916]. Charles E. Hughes, Julius Rosenwald, of Chicago, and Wallace Buttrick, secretary of the General Education Board, were elected trustees.

J. BYRON DEACON has resigned as secretary of the Pittsburgh Associated Charities to become secretary of the Philadelphia Society for Organizing Charity. He succeeds Riley M. Little, also a former Pittsburgher, who has been appointed a member of the federal Workmen's Compensation Commission. Mr. Deacon will take office after the meeting of the National Conference of Charities and Correction in June. He was formerly secretary of the Pennsylvania Committee for the Prevention of Tuberculosis and financial secretary of the New York Charity Organization Society.

THE death of William A. Mabon takes from the work of caring for the insane of

New York state one of the leading students and executives. Dr. Mabon was known as a scientist and an administrator; he wrote monographs that were widely read, he taught psychiatry at New York University and at Bellevue Hospital Medical College; as a member of the State Hospital Commission his influence was felt in shaping the state's policy concerning its insane. He was superintendent first at Bellevue Hospital, and later of Manhattan State Hospital. He took part in developing after-care work for the insane, and later, preventive work. He was a member of the first committee on this subject, that of the State Charities Aid Association, in 1906, and of the Mental Hygiene Committee of that association which in 1910 took over both after-care and preventive work. He was a member of the National Committee for Mental Hygiene and of many medical and psychiatric societies.

IN A quiet way, Dr. Arthur Curtis Rogers, for thirty-one years superintendent of the Minnesota Institution for the Feeble-minded, who died recently at Faribault, was a national figure. This was not alone because he transformed the rude beginnings of a school into a great community institution; nor because of his scientific facts and logical expression, nor even because of his personal services. It was rather, writes Walter M. West, "because his studies had made him wise, his wisdom had made him charitable, and his charity had given him power." He worked his way through school and college, and became interested during one summer vacation in the pioneer work being done for the feeble-minded. Determined to study this matter, he worked through a course of medicine at the University of Iowa. His first appointment after graduation was at the Harrison Institute for Indians, in Oregon; two years later he went to Faribault.

The work at Faribault had been but recently organized. To this he first turned his hand. He had to get the support of the legislature; had to separate in the classes the blind and deaf from the feeble-minded for the school had been begun for "defectives." His campaign of education on the needs and interests of the feeble-minded continued through the remaining thirty-one years of his life. To the World's Fair in 1893 he took an exhibit of the work and treatment of patients from the school which was the first of its kind ever shown.

From a little group of fifty "queer" inmates, and four or five teachers and attendants, the school has grown to its present accommodation for fully 1,600 unfortunates, with a staff of about 300 scientists, physicians, investigators, teachers and attendants, housed in sixty-one buildings, beyond which stretch two great farms.

Dr. Rogers was one of the first to introduce industrial and manual training into who has been appointed a member of the federal Workmen's Compensation Commissions for the feeble-minded. He was a firm supporter of the work of grading defectives by mental tests. The cottage plan for housing patients was one of his, as also field investigations on a large scale for tabulating the family histories of patients.

He was a member of many scientific societies, and published in many journals. But his personality was best appreciated by those with whom he was closest in contact. "Seldom was he too busy to be interested in whatever was brought before him," says Mr. West. "He strove to put as much sunshine into the shaded lives of the inmates as possible. He seldom missed the Sunday chapel exercises, the weekly and special entertainments, or the holiday festivals. He ran the merry-go-round; he engineered the launch at the nearby lake, to which all able-bodied inmates were taken every year

for an outing. He was Santa Claus at each Christmas festival, and the disappointment to the children of the school was not to find out that Santa was not real; it was to find out that Santa was not "Doctor." He was active in the city of Faribault, active in his church; he traveled all over the country, returning each time with additions to his surprising number of facts, figures and friends.

"Dr. Rogers had the initial advantage of a remarkable physique. Very tall, and with a large frame, his kind eyes and smiling lips; his agreeable and gentle address commanded more than ordinary attention. When a boy, he refused to commit himself to the conventions of his Quaker faith. His charity for

all creeds and for all men was the nature resultant of this rebellion. But the true spirit of the Friends always lived in him, and made his one of kindness and, what is rare, a great power of great gentleness.

"The day before the funeral services, as the casket lay banked by masses of flowers in the assembly hall of the school, an aged Catholic priest, who had come in contact with Dr. Rogers during his lifetime, entered the darkened hall. He approached the casket and stood for a long time looking down at it. Finally he said aloud: 'We shall never look upon your like again. You made no distinction in race nor creed. Your heart was love. Humanity was your creed. We all had part in you. Dear friend, farewell.'"

The Prudential

Issues

Group Insurance

A Profitable Investment For Employers

This modern form of life insurance protection covers an entire group of persons instead of treating with the individual. It is the crystallization of a definite and concise plan evolved from the experience of earlier ventures.

Group insurance has as its basic principles an appeal to the employer and an appeal to the employee. The employer bears the cost of a blanket policy on all his employees.

A Practical Protection For Employees

The promotion of mutual friendliness is an important feature. The fundamental interests of employer and employee are one. Such practical evidence of the employer's interest in his workmen as the protection of their families

by insurance without cost to them tends to establish a firm bond of good will. Group insurance cultivates loyalty and permanency of working staff, and therefore increased efficiency.

Group Insurance

Promotes a better understanding between employer and employees. It is endorsed by every concern that has tried it. Communications on this subject are solicited. Write for Booklet.

Imported Dress Linens for Season 1917

Reg. Trade Mark

Fashion decrees Linen in White and colors for the smart Suits and Frocks this season. We have made unusual preparations to meet this demand, and complete assortments of weaves and colors are now in stock.

At 75c yard—Yarn-dyed Linen (medium weight) in White and upwards of twenty-five fashionable shades. 36 inches wide.

At 95c yard—Our famous "Non-Krush" Linen in White, Cream and a full assortment of the most-wanted shades. 36 inches wide.

At 95c yard—French Linen, 46 inches wide, in White, Black and a host of new and desirable shades. (Medium weight).

At \$1.00 yard—Cossack Linen, a semi-rough Linen, resembling a Russian Crash, in White and a full line of new shades. 45 inches wide.

At 85c yard—Crepe or Momic Linen, very desirable, White and colors. 46 inches wide. (Special value).

Linen Eponge—A soft, semi-rough Linen in White and colors. 36, 45 and 54 inches, at \$1.00, \$1.25 and \$1.50 yard.

At 85c yard—Special attention is directed to a recent importation of Handkerchief Linen of a superior quality in a choice range of plain colors—Pink, Flesh, Rose, Sky, Copen, Old Blue, Maize, Nile, Reseda, Gray, Helio, Wistaria, Orange, Sand, Golden Brown, Navy, Black. 38 inches wide.

Novelty Handkerchief Linens—Fine, sheer quality, soft finish, White grounds, showing a range of smart printed designs, such as Dots, Checks, Fancy Stripes, Stripe and Cheek combined and several novelty effects. 36 inches wide at 95c yard.

White Linens for Waists, Dresses or Suits, in all the various weights and weaves to meet all requirements.

Samples of any of these lines, except bordered materials, mailed upon request.

SURVEY ASSOCIATES, Inc., is an adventure in cooperative journalism, incorporated under the laws of the state of New York, November, 1912, as a membership organization without shares or stockholders. Membership is open to readers who become contributors of \$10 or more a year. It is this widespread, convinced backing and personal interest which has made THE SURVEY a living thing.

THE SURVEY is a weekly journal of constructive philanthropy, founded in the 90's by the Charity Organization Society of the City of New York. The first weekly issue of each month appears as an enlarged magazine number.

From the start, the magazine and its related activities have been broadly conceived as an educational enterprise, to be employed and developed beyond the limits of advertising and commercial receipts.

PRICE

Single copies of this issue, 25 cents. Cooperating subscriptions \$10 a year. Regular subscriptions weekly edition \$3 a year. Foreign postage \$1.50 extra. Canadian 75 cents. Regular subscription once-a-month edition \$2 a year. Foreign postage 60 cents extra. Canadian 35 cents. Changes of address should be mailed to us ten days in advance. In accordance with a growing practice, when payment is by check a receipt will be sent only upon request. Copyright, 1917, by SURVEY ASSOCIATES, INC. Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the act of March 3, 1879.

THE safe side of the Rio Grande is the side the American troopers are on. So General Pershing and his men were followed home by a great cavalcade that might have reminded Gibbon of the folk who followed the Asiatic invaders into the Roman empire. Sanitation and relief were looked after by the Red Cross, and admissibility by the immigration authorities. The story of it by Mr. Gwin, secretary of the Associated Charities at El Paso, who acted for the Red Cross and whose earlier article, *Over the Bridge at the Border*, will be recalled by readers of the SURVEY for July 8, 1916. Page 621.

NEW YORK'S food riots are not hunger riots, but the final blow-up of the sorely tried patience and purses of the women in self-supporting families. When onions went out of reach it was the last straw for the East Side. Page 638.

PRESIDENT WILSON has asked Congress to authorize him to employ "armed neutrality" in protecting American ships and lives. Page 642.

JUST as it was feared, war talk at home has dried up American giving to foreign relief funds. Page 644.

THE Fellowship of Reconciliation offers information as to opportunities for service to men of good will. Page 643.

MEXICAN children in our border states are children apart as Negro children are in the South and various outlanders in other parts. Yet as neighbors of a California settlement house, they proved to have valuable and endearing qualities. Mrs. King, the settlement headworker, is a California social worker, a student of labor problems at the University of Wisconsin and later an investigator of them, now a member of the new Mexican Cooperative Society in New York city. Page 624.

KENTUCKY'S mountain folk with nary an abc have a fine courtesv and intelligence handed down from their pure "American" forbears. A sketch of them by Miss DeLong, the head of the settlement-school which is meeting their peculiar needs and which has a peculiar need of its own—a decent road to hook it to the wide world. Page 627.

ENGLAND'S conscientious objectors sympathetically interpreted and some of them named by Professor Hannah, of Oberlin. Page 636.

ANNOUNCEMENT last week of a new circus which is to travel entirely by motor will be good news to the health-insurance drummer. For in ten months he has traveled 22,000 miles and he loathes the sight of a Pullman. But his empty mileage books are evidence of the great popular interest in health insurance, for all of his trips have been upon invitation. The literature of the subject grows even faster than the price of the paper on which it is printed. Two states have issued official reports and bills are before ten legislatures. The sweep of it described by Dr. Rubinow, physician, actuary, student of European social insurance and now the very active and itinerant secretary of the Health Insurance Committee of the American Medical Association. Page 633.

THE FELLOWSHIP OF RECONCILIATION

125 EAST 27TH STREET, NEW YORK CITY

February 10, 1917.

TO MEN AND WOMEN OF GOOD WILL THROUGHOUT THE UNITED STATES:

IN this moment of national crisis it is in the heart of every true citizen to give his full measure of service to his country. The great Republic which we love is in its hour of trial. Its responsibility and need are calling for the highest loyalty of all. Yet there have been few moments in history when we could so little afford to render our country ill-considered service. What the United States now does may determine not simply its own course for a few years, but the future of nations, of whole peoples, of humanity for centuries. The primary duty of each of us is a dispassionate endeavor to penetrate through the maze of political complications to those fundamental moral principles which alone can give national conduct a permanently constructive character.

I

THE immediate legal issue is the right of American citizens to pursue their legitimate business on the high seas freely in accordance with international law. This is, without doubt, important enough; yet beside the deeper moral issues it sinks into relative insignificance. The crucial fact in today's world situation is not infraction of international rules, but contempt for humanity and ruthless disregard of moral and spiritual principles. These are the deeper wrongs which every man and woman who reverences human nature instinctively condemns. The task of the United States in this decisive hour is not chiefly to vindicate a legal right, but to uphold the principles by which men live.

Moreover, no adequate moral judgment either upon the immediate crisis or upon the general position in Europe can be reached by reference only to the current standards of international ethics or political values. The principles by which men live are universal and ultimate sanctions of truth and love. These are for the most part ignored and denied in the ever prevailing conflict of national self-interest; yet it is only by reference to these principles, which constitute the only adequate basis of a stable world order, that the Christian is entitled to form the moral judgments by which his conduct is to be governed.

II

GERMANY'S new submarine policy has staggered the world. To condone so great a wrong against mankind would be disloyal to every principle of humanity. The impulse comes to leap to arms. If by this means right could be vindicated no offer of life could be too prodigal, no expenditure of wealth too great.

Yet it is not by war with Germany that the United States can champion the moral order of Christendom. This moral order consists of moral and spiritual relationships between human beings, and these relationships, whether between a few persons or between nations, rest ultimately upon the characters of individuals. Wrong can be successfully opposed only by making men righteous. Not a nation defeated, but the nations won to righteousness is what the world needs.

It is not simply that war with Germany would be a colossal expenditure of life and wealth—a diversion of national resources which would arrest social progress for untold years. But the tragedy of such a war, undertaken for the sake of human welfare, would be that after all the price paid, after all the loss of life, the blood-sweat and the anguish, after all the magnificent heroism and self-sacrifice shown by many of its supporters, it would be found to have defeated its own ends. That all the sanguinary conflicts of history have done no more to make the principles of righteousness effective is due to no strange miscarriage of fate. It is the natural consequence of the contradiction between the method of war and the principles of moral order.

The method of war, instead of defending, inevitably shatters moral principles. In making the defeat of the enemy its supreme object it subordinates the moral law to military necessity. In its wholesale destruction of men by men, in engendering widespread hatred and distrust, it violates that reverence for personality which lies at the heart of the Christian religion. In demanding absolute

obedience to military authority and the surrender of the right to act according to conscience, it cuts at the very life root of moral being. However just a cause may be, the method of war is intrinsically and incurably evil and therefore self-defeating.

III

NOW is the time for this nation to have courage to go forward in a better way. This is the hour for us to dare to make trial of the will to love as the effective power for the maintenance of the moral and spiritual order. Hitherto mankind has made feeble use of the inexhaustible resources of love and good will. We have regarded them as available in our families and among our friends, but notwithstanding Christ and the lesson of the Cross, we have little trusted them in social, industrial and international relations. The moral progress of the world waits for us to make them effective in these spheres. The highest task that confronts us as a people, in the present situation, is to generate and set in operation between nations on a scale never before known the irresistible energies of love. The immeasurable needs of humanity plead with us to dare all risks in trying Christ's method of serving the cause of mankind.

The method of love does not mean that we are to condone the unrighteous acts of any nation, or that we are to live as if in a world of suspended moral values. It does not mean that we are to forget how to pass stern moral judgment on every kind of wrong. It does not exclude the use of preventive forces when these can be employed consistently with the sanctity of personality and the redemptive purpose of Christ. But it demands that we seek to combat wrong not by the annihilation of the wrongdoer, but by a sustained appeal to conscience. It requires that a new passion for righteousness must first of all lift us out of our own selfishness and self-complacency, and that in prayer and self-denying efforts we identify ourselves with the present sufferings of humanity. It calls for the exercise of daring and inventive faith for a vast increase of constructive service. It is the supreme task of overcoming evil with good.

IV

ALL that can be said about the principle of overcoming evil with good will avail little unless we are able to make that principle effective in action. If international good will is to be more than an ideal for the future, adequate means for its expression in service must be discovered and employed. Work now in progress for aiding prisoners of war of all the warring countries and for mitigating the distress of destitute populations in Belgium, Poland and Armenia offers existing opportunities. Plans are under consideration for the extension and greater unification of undertakings to meet immediate needs and to prepare for the great work of reconstruction which awaits us at the close of the war. At this time of widespread suffering—immeasurably the most terrible that we have ever known—shall not the men and women of the United States augment many fold their gifts and efforts to meet the world's need on a scale commensurate with national ability?

The Fellowship of Reconciliation unites men and women who share the conviction that the principles of love and good will, as revealed by Christ, should be unswervingly applied as a transforming power in personal, social, industrial, national and international life. While the Fellowship is not itself an administrative organization, its Committee desires, particularly during these critical days, to do all in its power to extend the constructive application of these principles. It will gladly furnish information as to opportunities for practical work and agencies through which gifts and services may be made effective. It invites the cooperation of all and will welcome communications. Its statement of principles and information concerning its literature, methods of work or other particulars may be had on request. Inquiries should be addressed to the Secretary, Edward W. Evans, 511 Otis Building, 16th and Sansom Sts., Philadelphia, Pa.

War Relief Needs Are Immeasurably Great and Are All the Time Growing

What Is Your Church Doing?

TO THE PASTORS AND CHRISTIAN PEOPLE OF AMERICA:

With every new day of the great war the need for war relief increases, and with this need increases also the obligation of the people of the Christian churches of America and the opportunity for an exhibition of Christian compassion not equalled in the history of the Christian church. We may be distracted for the hour by the new international developments which affect America so seriously, but the need on the other side does not stop for a moment. It grows hour by hour, and will continue to grow in volume and intensity as long as the war shall last, and at the close of the war it will be greater than ever.

Are the churches of America doing their duty? Is your church doing its duty? Are you taking war relief offerings in some regular and adequate way? The church, whether large or small, rich or poor, which in a systematic way is helping to bind up the wounds of the men and women and little children in Europe and western Asia is surely, in these times of unparalleled distress, exhibiting a religion which is pure and undefiled.

America has given 50 cents per capita out of its total estimated wealth of nearly 200 billion dollars for war relief. The total amount given in this country is believed not to exceed 50 million dollars, and yet it is estimated that it would require 90 million dollars to equip merely the needed hospital beds in one country! The Commission for Belgian Relief, for example, has spent over 300 million dollars, yet of this vast sum America has contributed only nine million dollars. Mr. Hoover and others have said that the profits from purchases for Belgian relief in this country are several times that amount.

WAR RELIEF DISTRIBUTION CHANNELS ALL OPEN

Reports from representative war relief organizations are to the effect that recent international developments are not interfering with the distribution of funds. In most cases money is sent, and this is transmitted either by cable or wireless.

REPRESENTATIVE WAR RELIEF ORGANIZATIONS

American Committee for Armenian and Syrian Relief

Treasurer, Charles R. Crane, 70 Fifth Avenue, New York. Work not affected in the least. Most of the aid is financial and sent by cable. Funds sent uninterruptedly to Armenians and Syrians inside and outside of Turkey.

American Red Cross

Hon. John Skelton Williams, Treasurer, Washington, D. C. Work proceeding as usual in nearly all the warring countries.

B. F. B. Permanent Blind Relief War Fund

Treasurer, Frank A. Vanderlip, 590 Fifth Avenue, New York. No slackening in our work and no noticeable diminution in gifts received. Send funds, chiefly to France, for assistance of men blinded in the war.

Commission for Relief in Belgium

Treasurer, Alexander J. Hemphill, 120 Broadway, New York. Work expected to go on with little interruption. This confirmed by latest cables. No anticipated slackening in efforts for gifts of supplies and funds.

Fund for Starving Children

Treasurer, Frederick Lynch, 70 Fifth Avenue, New York. No difficulty in sending funds to hungry and starving children in Belgium, Poland, Armenia and other countries. Work will go on regardless of future international developments.

Joint Distribution Committee, consisting of American Jewish Relief Committee, Central Relief Committee and People's Relief Committee.

Treasurer, Felix M. Warburg, 174 Second Avenue, New York. The work of collection and distribution continuing uninterruptedly.

Polish Victims' Relief Fund

Treasurer, Frank A. Vanderlip, Aeolian Bldg., New York. All gifts are in the form of money. This is sent via Switzerland. Advices are that there is no change in the situation.

Serbian Relief Committee of America

Treasurer, Murray H. Coggeshall, 70 Fifth Avenue, New York. Gifts fluctuating more than usual, but work is uninterrupted and all distribution channels are open.

THE CHURCHES OF EUROPE

American Huguenot Committee

Treasurer, Edmond E. Robert, 105 East 22nd Street, New York. Our need is growing, but otherwise no change. No question about funds reaching destination safely.

Union Nationale des Eglises Reformées Evangeliques de France

Treasurer, Alfred R. Kimball, 105 East 22nd Street, New York. No risk whatever in sending funds.

The Federal Council of the Churches of Christ in America, constituted by 30 Protestant denominations, is under obligation to assist in stimulating the churches of America to generous participation in the greatest work of charity the world has ever seen.

The organizations named have requested the Federal Council to convey this information. They are doing their work efficiently and well. In most cases funds for administrative expense are secured from independent sources. There are, of course, other equally worthy relief organizations. We urge that your church and Sunday School take regular offerings for war relief. Full information may be secured by writing to Rev. E. W. Rankin, Assistant Secretary, whose time is given to this Christian service.

The Federal Council of the Churches of Christ in America

Making Friends of Invaders

Mexican Refugees in Advance of the Returning Troops

By J. B. Gwin

SPECIAL AGENT OF THE AMERICAN RED CROSS AT COLUMBUS

GENERAL PERSHING'S advance guard, almost 2,800 refugees, reached the border near Columbus, New Mexico, a day in advance of the American troops. What a spectacle they presented as they slowly approached the gateway to America! First a wavering speck, barely perceptible across the mesquite lands, passed through and settled to rest on the sand plains a mile from Columbus. There were in this strange caravan 1,435 men, 623 women and 691 children. The Mexicans composed the largest number, 2,030; 522 were Chinese and 197 were American. Of the 691 children 523 were dark little barefooted Mexicans. Like the refugees of other lands, they did not come alone, but brought along all they owned except their houses and lands. Without exception, every family or group had a wagon filled up and piled high with furniture, rolls of bedding, food, grain, cooking utensils and coops of chickens. Horses, mules, burros, cows and men on foot filled the road.

It must have been not unlike the wanderings of those early ancestors of the Mexicans, the Toltecs, the Chichimecs and the Aztecs, whose pilgrimages generally took them southward instead of northward. Yet, in many aspects, this exodus furnishes a striking example of the advance made from those early days of tribal wanderings. The household goods and domesticated animals which followed each outfit; the dress and gentle, unwarlike manners of these people from a land of bloodshed and war suggests a much higher civilization, although the manner in which they camped, the facility with which they built campfires and cooked their meal of tortillos and their ever-present frijoles must have borne a strong resemblance to the evening firesides of their Toltec ancestry.

The border immigration officials were prepared for the refugees days before they arrived. A plot of level land about ten acres in extent midway between Columbus and the border line had been staked off into streets and lots, each street with a letter and each lot with a number. One lot twelve and a half by forty feet was given to each family or family group.

Refugees had first to pass the immigration officials, who were assisted by army officers, in order to receive a "manifesto;" then a medical inspector examined them, vaccinated all and turned them over to another official, who directed them to their "lot." This became, for a few days at least, their new home in America.

Captain Doherty at first had charge of the camp for the army, but on the second day Major Parker was given full charge. The general plan agreed to by Inspector Burkshire, who directs all border immigration work, Major Parker and myself, representing the Red Cross society, was that every effort should be made so to adjust individual conditions that the refugee camp should not become a permanent fixture.

The Chinese present in a way the most difficult problem. They have the best tents and, generally, the most "gold," but they cannot secure admission to this country except in bond, no matter what their financial resources. Their lives are endangered if they return to Mexico, especially if they return to that part where Francisco Villa is in control. Legally, they, like the Mexicans, are neither in this country nor in Mexico. The refugee camp is a neutral zone and it depends entirely upon the immigration officials whether they remain there, return to their homes, or are sent to other parts of Mexico where General Carranza is in power. The Chinese consul-general from San Francisco is on his way here to assist in their disposal.

The returning Americans, most of whom are Mormons, are an independent, healthy group of pioneer farmers. They are leaving their farms and the results of years of toil and privations very unwillingly and with no intention of remaining away longer than is necessary for the preservation of their lives. They have large, well-kept horses and cattle. Most of them have sufficient money at least for all their present needs. None of them has asked for help of any kind and in a few days all will have left the camp for other points along the border. Some will rent farm lands along the Rio Grande; others will move into towns and cities and hire out as laborers and ranchers until they can return safely to their homes.

The Mexican refugees have surprised all beholders with their healthy condition, their quiet polite manners and especially with their failure to appear as half-starved, poverty stricken people from a desolated land. Many were dirty, but it was mostly the dirt, which had come from days of traveling across sand-swept prairies. They probably represent the best element there is in Mexico today, the farmers and small business men who have taken no part in the wars. They have come from around Pierson, Casas Grandes, El Valle, Colonia Juarez and from as far south as Guerrero.

It is an impressive sight at nightfall when the refugee camp-

TYPICAL REFUGEES WITHOUT TENT OR WAGON EATING PINK BEANS AND FLAT CAKES

fires begin to spring up one after another all over the camp site. Each fire lights up the faces of a most unusual and interesting group gathered in a complete circle about the blazing wood. American, Chinese and Mexicans are busy preparing or eating their meals in the shelter of wagons or tents which stand in the center of their lots. Everyone, even the children, is extremely quiet and orderly. This may be due, of course, to the effects of the long and tiresome journey across the sands of northern Mexico.

At this refugee camp there is one problem for the immigration officials, another for the army, which was innocently responsible for their migration, and finally, a problem for the American Red Cross. Immigration workers have to pass upon the admission of the refugees to this country and plan some care for them until they are allowed to enter. They must, also, deport any who cannot finally be admitted. The army has assumed some responsibility by supplying wood to all and provisions consisting of pink beans, "frijoles," corn and flour for making flat cakes, the tortillos, and feed for the animals. The first night the soldiers helped nine families and the second night the number had increased to forty. The army has also supplied two nurses and a physician, two hospital tents and medicine. There has been very little sickness, however, discovered among the refugees; three cases of fever which were isolated because of the possibility of typhus and six confinement cases, all looked after by the nurse in the hospital tents. There has, therefore, been little necessity for Red Cross assistance yet and the only material aid has been to supply four dozen blankets on account of the extremely cold nights.

The camp is growing smaller rapidly. Over fifty have left with their families to go on the "regancia" railroad work. Another forty have gone to the mines of New Mexico. A few have started overland with their wagons to Las Cruces, Deming and El Paso. Nevertheless some still remain who cannot be admitted, either because they have no money, relatives to care for them, or work to go to. These, with the Chinese, will constitute the real difficulty. It will take several weeks and probably considerable expenditure by the Red Cross for food and perhaps for transportation, before the refugee camp becomes a bare sand spot stripped of everything, even the mesquite, by the campers.

All the poverty which exists among the Mexicans has not yet disclosed itself, for they are helping each other and hardly a dinner circle is limited to the members of one family but is

shared with neighbors and village acquaintances. Some village chiefs, whom they call Jefe Political, are supplying food to such a large group that it must include the entire population of the village.

It has been impossible to determine how many Mexican refugees found their way to Ciudad Juarez, across from El Paso, the border town which should attract many. Those who have gone there have been lost among the resident population of Juarez. A few have crossed over into El Paso, but a stringent enforcement of the immigration laws and the new regulations as regards the enforced bathing, "delousing" and fumigation of the clothing has no doubt relieved El Paso for the present, of a refugee problem. Most of the Mexicans with property such as horses, wagons, cows or chickens, came overland to Columbus so that probably more are here than in all the other border towns together.

EVERY DAY IS WASH DAY IN CAMP

CROSSING THE INTERNATIONAL BRIDGE AT EL PASO

MEXICANS IN SEARCH OF PEACE ENTERING HOPEFULLY THE LAND OF THE GRINGO

It has been an interesting sight to see the friendly relationship which exists between the returning soldiers and the refugees. The soldier boys had become acquainted with many Mexicans while encamped down there. Other soldiers had helped the Mexicans on the way to the border, pulling their wagons out of ruts, repairing broken wheels and in several other ways showing kindly feeling. When the soldiers started for El Paso many of them visited their refugee friends and bid them "adios." The expressions of good will and appreciation on the part of the Mexicans indicated a most friendly spirit.

I asked a lieutenant about this and he replied: "Oh, well; all hombres are not animals." He reminded me of a housekeeper in El Paso who had two or three Mexican women at different times to do her washing. She had not been on the

border long and knew Mexicans only by hearsay. She said, "I have had such good women working for me; but then they are so different from other Mexicans!"

This remarkable exodus of almost the entire population from a rather extensive area, leaving empty "casas" and deserted villages to follow an "invading" army to the land of the invaders, has given students of Mexican conditions an opportunity to do some clear and constructive thinking about the future of that little-understood country. The best and most stable people of Mexico have gone from their homes in order to preserve their lives, and what remains of their property, to enter the land of the "hated gringos." They have crossed over the border line apparently without fear and without any indication of that hate and ill-feeling about which we have read so much. They have come because this country was at peace and their country was at war; because they did not want to join any Mexican force, but desired only to till their farms and run their mills in peace.

I was anxious to learn if some had not followed the American troops north because they could not obtain the necessities of life in their home villages. But without exception all who were asked gave the same answer, "Villa!" They are seeking protection from Villa and his bandits.

Many refugees cannot read or write, and yet they can hardly be called ignorant. One man had a good flour mill and had built up a thriving trade among his neighbors. Another, according to the soldiers, had a "tienda" or store at El Valle which would do credit to an American community. Some had rich little farms, some were vegetable gardeners. Everyone who talks with the refugees must be impressed with the picture they give of their happy, prosperous lives before the present revolution began. It is they or others like them who will some day make Mexico a peaceful, happy country.

But how shall these Mexican neighbors be given an opportunity to express the gentleness, the industry and the temperance of their lives for the benefit of their country's welfare? Can this opportunity come from the after-effects of a revolution which must some day die from lack of material to feed upon, or can it come better from outside influences which need not cast a civilization like an ill-fitting mantle over Mexican shoulders, but might give the best elements in that country a chance to develop? The returning soldiers and the appearance of travel-stained, homeless strangers have again brought such questions to the fore.

SHAVE OR QUEUE CUT?

AMERICANS LEAVING A 640-ACRE FARM AT PARRAL

YOUNG AND OLD IN THE SETTLEMENT LEARNING ENGLISH

My Mexican Neighbors

By *Edith Shatto King*

FORMER HEAD RESIDENT, NEIGHBORHOOD HOUSE,
SAN DIEGO

CARMELITA GARCIA lived in a low wooden shack across the street from the schoolhouse where we both went to school. She was soft-voiced with the prettiest brown eyes and jet black hair. Her clothes were always a little ragged, and she spoke broken English. In one corner of the schoolhouse yard, where a sycamore tree stretched its big trunk across the open irrigating ditch following along the side of the road—here, within sound of the running water and under the cool shade of the tree, we American children played with our dolls. But our favorite play spot was forbidden ground to Carmelita. We never asked her to join us, for she was a Mexican. But how wistfully she stood off at one side and watched us at our play!

Instead of suffering in sullen silence with Carmelita and the other Mexican children, the De Soto children quickly flew into a rage at our insults. They showed their strong Spanish heritage. I remember them, quick and proud, lighter complexioned, with long Spanish faces, in sharp contrast to Carmelita's round dark face. It never occurred to me then that we Americans were the real interlopers in that small, new southern California town; that the families of the Yorbas, the De Sotos, Carillos and Figueroas had been there for generations before our coming.

When we came they were mere hewers of wood and drawers of water in our eyes, and they were welcomed as low-paid manual workers in that fruit-growing region. As a child, I was never taught to fear or hate the "dirty" Mexicans, only to despise them.

They lived, for the most part, in shacks decorated with long strings of red peppers drying in the sun. Large castor-bean shrubs hedged them about, and each had its little garden of flowers and vegetables. On moonlight nights one rarely passed by without hearing the soft tones of *La Paloma* from a guitar or a violin, and sometimes laughter and gay Spanish words, coming from the shadows under the pepper trees.

Other families of Mexicans liked the open starlight better than shack or garden. They traveled in groups and camped about the country wherever work was to be found. They slept, worked and cooked in the open or under rude shelters of boughs or gunny sacks. Men, women and children worked together. And how vivid in my memory are the women at work in the peanut fields, clad in gay colors of red and yellow with a black shawl, worn mantilla fashion over the head and

shoulders—and their fat brown babies close by, naked in the sun.

Yet, apparently, my elders could see none of their charm. "All Mexicans are a shiftless lot," is a remark that I remember. "They'd sit and strum a guitar all day rather than do an honest piece of work." If anything was missing about the garden, my father always said, "Probably a Mexican stole it." If a Mexican was heard singing or talking loudly, people would say, "Oh, he's been to the winery again."

Such were the prejudices that I took away with me when I left this small community to go to college—a community which I believe still has these prejudices and is still, for the most part, made up of thrifty pioneer American stock, which had pushed in from the eastern and southern states in the seventies. The picture is made brighter in my own mind by a remembrance of the gay colors, music and light-heartedness of my Mexican neighbors and Carmelita's pretty, sensitive face.

And it is these latter impressions which have been strengthened by a year and a half spent living again among the Mexican people, this time as head resident of the first social settlement in San Diego, a city of 80,000 inhabitants, located not far from the border in southern California.

Our settlement was overrun with children out of school hours. While the babies played in the sand-pile in the back yard, their older brothers and sisters listened to stories, learned folk dancing, made baskets and sewed in the house. Rosa, with her long black braids, though attending school near by, couldn't speak a word of English. Neither could Felipe, nicknamed "Jap," because he looked like a Japanese. Both were children of refugees from across the border and only a few months in the city. Magdalena, on the other hand, had been born in San Diego, as well as her parents before her.

All the children were very deft with their hands. After sewing-class, one day, little Carmen, who wasn't more than six years old, showed me with great pride a dress for small baby brother Juan, the seam of which she had sewed all by herself. Felipe made baskets so quickly, very rapidly inventing new shapes and combinations of colors.

And yet the teachers of neighboring public schools complained that the Mexican children were impossible to teach. I went to the schools to watch their methods. And I found the Mexican child frequently undernourished and poorly

clothed, placed in classes with quick-witted American children younger than they, when often they could not even speak or understand English. On one occasion when a few Norwegian children entered school they were placed in a special class and their teacher told me with great pride of the rapid progress they made. However, I found no Mexican children learning English in special classes. "What was the use—just Mexicans!"

I do not believe anyone on the border can guess what a generation of Mexican children might become were they properly taught not only English and the three Rs, but also skilled hand work, offering a real opportunity to earn a decent living.

Classes of English, organized in the settlement, were eagerly attended by middle-aged men and women and by young men and girls. One member was the son of a doctor who had received his medical education in Paris. Another, who had been forced to do manual labor in San Diego to earn a living, had been a skilled potter in Mexico. Then there was hard-working Matilda, who never missed English class, because, as she said: "Señora, I must learn English for more money for my sister and her husband who is sick." But her two friends, who were laundry workers, Amelia and Cruz, although they couldn't speak English, were not eager to learn. They came to learn dressmaking, because they wanted pretty clothes. Each girl was slender and beautiful, always with a red rose or a chrysanthemum coquettishly over one ear, holding a curl of her black hair. And with what fire they danced the charming steps of La Jota, an old folk dance!

The house was thrown open and thronged with dancers on Thursday nights. Especially did the young men come in crowds. The only real leader among them I soon found was Thomas Alvarado. His great grandfather had been a governor of California while the country was still a part of Mexico, and Tom supported himself and his mother by taking contracts for picking grapes at El Cajon, or lemons in Paradise Valley. He proved invaluable in managing our dances, making up for us lists of young men and women and writing out in Spanish politely worded invitations each week.

In spite of this care, the young women were so reluctant to go to a dance in a house unknown to them that it was a year before they really came in any numbers, and then generally

accompanied by their mothers or fathers or leading by the hand a small brother as their protector.

Both the girls and boys had such grace and charm of manner! The young men who danced with me on Thursday nights were hard to recognize as common laborers working on the street-car tracks during the day. These Mexicans, who were only sullen, slow-moving, dirty "greasers" under the eye of the cursing Gringo boss, had something of the courtly manners of old Spain in the dance-hall.

Our music was furnished by a stringed orchestra among the young fellows who played by ear, haunting, old-fashioned tunes and queer, fiery Spanish airs. Occasionally Alvarado sat down at the piano and led off with a song, the whole company joining in. La Paloma and Golondrina were the favorites.

Guadalupe, seventeen years old, was one of the prettiest señoritas who danced La Jota. When I went to call, I found that she was the mother of the tiny baby who was sick in their house. I asked about the father and expressed my surprise that she was married. She told me a story which evidently was not true. About two weeks later Guadalupe called on me and said: "Señora, I do not wish to live a lie with you." Then followed her real story. She had been married to a young Mexican lieutenant who had been killed two years before. The father of her baby was a young German, who had befriended, or pretended to befriend, the family on their way out of Mexico. He had said he would follow them to the United States, but had never appeared. Her father was a shopkeeper in Mazatlan and wished to send them money to return. She, however, was sure that if her lover knew where they were he would come and help them. She wished me to be godmother to the baby and to name him for his father.

Another trusting and faithful woman among my Mexican friends was Maria, who came to do my housework. Maria was middle-aged, with such a kind, fine face. Later I found that she was married to a white man, an American, then a cripple in the County Hospital. She had remained loyal to him, visiting him at least once each week with presents of clothing and fruit. She had never been to school and still struggled to read and write even Spanish. She was too proud

"JUST MEXICANS—WHAT'S THE USE!"

CARMEN AND FELIPE

to tell me this, and I only learned it after months of effort in trying, with little success, to teach her English.

When Maria first came to us I instructed her in the use of a patent water-heater and gave her free access to a bathroom. I suggested that when she was tired and an attack of asthma threatened that a warm bath would be beneficial. After that I was scarcely able to keep Maria out of the bathroom, where she bathed and washed her long black hair at every possible opportunity. Maria remained with me for more than a year, and then she left to support herself by sewing. No one could have been more loyal or more honest in every detail than was she. Nor her successor, Isabel, another middle-aged woman.

Maria was of large build, slow in her movements and mind. Isabel, on the other hand, was small and wiry and so alert and quick that all the housework was finished in the morning, and she made pretty clothes for her young daughter in the afternoon. Isabel was the daughter of a small ranch-owner near the border and had had some education. I found her one afternoon with a worn paper copy of *Don Quixote* in Spanish. I have never lived with anyone more thoughtful or devoted than these women. Maria had a way, when she knew I was excessively busy or tired, of following me with, "Señora, te, te," and insisting on my drinking her cup of hot tea.

One day I opened the door for a little wrinkled Mexican woman, dressed in the usual black with a black cashmere shawl over her head, who inquired politely for the "American lady who belonged to the Mexicans." She lived miles away, but she had found her way to our house because an American who took an interest in Mexicans had evidently awakened comment and wonder in the Mexican quarter.

Like these women, I found all Mexicans warm in friendship, brave and courageous. They are generous, hospitable and devoted to their families and children. If a friend, a relative or a neighbor is in need they will share to their last crust. This trait has, indeed, been a perplexing problem to relief-giving societies in San Diego, for the needy Mexican family when given groceries is very likely to share at once with poor neighbors without regard to their own needs. I have known families who were fortunate enough to have one or two members working, to take in and care for a whole family for weeks until work and a place to live could be found for them.

Family life is almost patriarchal. The wife devotes herself to her home and her large family and rarely goes out without her husband and babies. The whole family goes abroad together. The reverence of Mexican children for their parents and obedience to them is almost startling to one accustomed to

the rudeness and independence of American children in their family life.

Mexicans are affable and instinctively courteous and kindly. My neighbors much preferred to tell me something that they knew would please me than to be exactly truthful if their plain speaking were disagreeable in the slightest way. Fluent in speech, they love gesticulation and vivacity. It was very interesting to watch the young men of one of our clubs who could hardly read or write yet who could talk fluently in Spanish and with many a graceful gesture.

The Mexican loves diversion, display—a "fiesta" or entertainment with ceremonies and social intercourse. He likes beauty, gay colors and laughter. The honesty and trustworthiness of the average working-class Mexican in my experience is based almost entirely on a feeling of personal loyalty rather than on any generally accepted American standard of right living. Such loyalty is perhaps the most hopeful ground work for future character development in the eyes of their American neighbors. A small groceryman of my acquaintance informed me that he had never lost money when he gave credit to the Mexican working people in San Diego.

When there is no occasion for this personal loyalty, the Mexican is bitter in hatred. He is supersensitive to insults and slights, quick-tempered, proud and high-spirited. He lacks a habit of sustained industry and a practical sense which Americans cannot accept. And his "mañana," or faculty of putting off until tomorrow, and his slowness of movement are constant irritants. So, too, in American eyes, the looseness of their marriage ties is an obstacle to their development. I remember how casually one day black-haired Julian, with a typical Indian face, referred to "one of my fathers-in-law." Yet this apparent indifference to legal marriage is confined chiefly to what is commonly termed the lowest class, numbers of which in Mexico are frequently too poor to pay for a church wedding, which they have been taught to believe is the only binding ceremony.

If some are addicted to petty thievery, which I did not find true in our own neighborhood, it is doubtless due to the fact that many of the poorest persons have come from haciendas where they were paid such low wages that they had to pick up what corn and beans they could lay hands upon to keep alive. This, I was told, was more or less expected on these large estates, and who could blame them if such practices became habitual?

From what I learned of the life of my neighbors, I am convinced that many of the so-called bad characteristics of the Mexicans are due to their living on estates with no incentive for labor, at the mercy of the landed proprietors. This—and a total lack of education.

A SUNNY KINDERGARTEN IN THE SETTLEMENT BACKYARD

The Far Side of Pine Mountain

By *Ethel de Long*

PINE MOUNTAIN SETTLEMENT SCHOOL

WE people on the far side of Pine Mountain have been comparing the utterances of two friends. One of them wrote us, "You are the sentinels of the alphabet on the outposts of civilization"; the other, one of us, our Burns of the mountains, remarked to a teacher from the North, "Bring us your northern culture, but leave us our civilization."

Here is the heart of the misunderstanding. The outside world, hearing of the southern mountains as the home of feuds and the distilling place for moonshine, reading of boys and girls who have no knowledge of books, or of modern achievement, considers the Appalachians the frontier of civilization; while we who know intimately the life of the southern mountaineers long to preserve the old standards of courtesy and behavior, the dignity and simplicity of the hills.

Too often the people of the mountains have been referred to by the ignorant as the poor whites of the South, or even as the mountain whites. There is no excuse for the last phrase, for the mountains are not the home of the blacks. Likewise, the aspersion "poor whites" shows a complete ignorance of the ancestry of the mountain people and their early history. Perhaps there is really no class that should be called poor whites, except as the phrase is appropriate for those of us whose pocketbooks are perpetually thin. Students of social groups in the United States, however, apply it to the half-degenerate white folk of the southern lowlands, some of them undoubtedly descendants of the indentured classes, brought to this country in pre-revolutionary times.

The mountain people, on the other hand, are in the main of sturdy Scotch, English, or Irish stock, whose ancestors came to this country after the revolution of 1740 in England and who are heirs to all the pride, self-respect, and independence of those early non-conformists. The love of the hills was born in them and is strong today in the hearts of their children, who, though they might find life in the lowlands easier, would pine away there for a "whiff of mountain a'r." An old lady left her home in the mountains for a level farm in Ohio and came back after a short year. Her friends expostulated with her: "Why did you come back here, where you have to hoe corn up above your head? Why, your farm 'most any time might slip off the hill down into the creek." "Law sakes, honey," she replied, "there warn't nary a hill fer me to land my eyes up ag'inst."

In Kentucky, too, the rich red blood of the plain people is mingled with strains of aristocratic stock, for in the days when the settlers were coming through Cumberland Gap to seek their fortune in the blue grass country of Kentucky, members of certain notable families never followed the old wilderness trail through the hills to its end, but stopped in those pleasant valleys among the Cumberlands. Thus immigrant from some far-off country and child of Virginia ancestry they have pushed far back into the heads of the hollows and peopled the Kentucky mountains with a superior stock that has known no foreign mixture for over a hundred years.

One finds no better proof of the fact that blood will tell than in eastern Kentucky today. Poverty you find; lack of knowledge you find; conditions needing to be corrected; still, here are a people to bring hope to America. Here is the

ONE OF THE SCHOOL HOUSES ON THE MOUNTAINSIDE

virility of earlier times, wiriness and vigor that withstand even the enormous handicaps of hookworm which, in certain counties, afflicts two-thirds of the people; old-fashioned traditions of behavior that we wish might be the heritage of all Americans.

Kentucky has, it is true, a great deal of illiteracy. But it is the fatal fallacy of a public-schooled world that literacy is counted the earmark of civilization. The keenest intelligence, the sweetest behavior, the most high-born distinction of manner are gifts of the gods to those who can neither read nor write. A dear friend once said: "We uns that cain't read or write have a heap of time to think, and that's the reason we know more than you all." Few indeed attain the measure of gracious influence and bright wisdom of that philosopher. Her children rise up and call her blessed; she has stretched out her hands to the poor and reached them forth to the needy. These same hands have held the distaff, and as her family grew up they were all clothed from the fruit of her loom. No sound is sweeter to her today than the whirl of her little flax-wheel. Once as she was trying to teach me to spin, she said in surprise at my clumsiness, "Hit's quare, I cain't reecollect the time when I warn't about a wheel, and here you're all growed up and don't know how to spin." A half-hour's more observation of my bungling efforts brought forth this bit of sweet philosophy: "Well, I reckon things is about evened up in this world. You've been everywhar and seen everythin', but I kin spin."

Literacy is not essential to high character or social charm. But readers of the *SURVEY* already know through Mrs. Cora Wilson Stewart's account of moonlight schools [see the *SURVEY*, January 8, 1916] that in the matter of illiteracy the mountain people are far more concerned than the outside public. One cannot read her stirring description of old men and women walking miles on moonlit nights in quest of these simple arts without comprehending the pride and ambition of a people so eager for a chance.

A Chicago University professor, who visited the mountains in an unpropitious mid-summer season when fleas, gnats, jiggers, thunderstorms, and excessive heat might have constituted his chief recollection of a trying ten days, remarked to

THE HOUSEKEEPING BRIGADE

me: "Not since I first went to Europe have I had so stimulating and inspiring an experience. I am longing for the time when I can come again."

This educator will never forget the fine bearing of his friends in the hills, their thoughtful hospitality and unflinching courtesy. He has first-hand knowledge of the keen observation and shrewd judgment that make it possible for a mountain boy to compete in the world with a lad who has had every opportunity; and an explanation why, in so many Kentucky and Missouri towns, one finds the leading business man, or lawyer, or merchant a man from the hills. He understands the essential soundness of a race whose code of honor is that no man ever says an insulting word to a woman unless she "first throws the banter."

Just now the world of the Kentucky mountains is meeting an emergency, as capital builds railroads along the creeks and carries away the coal and timber that constitute the material resources of the eastern Cumberlands. The mountain man whose fore-parents have lived a hundred miles or more from any town on the map sells his farm usually at far less than its real worth and moves out from his eighteenth-century surroundings to the hurrying, unfamiliar twentieth century. Not understanding it (and who of us without a friendly interpreter could bridge two centuries), and unprepared for it, he often becomes the victim of it. Over a third of the people applying for aid at relief bureaus in Cincinnati during the winter of 1915-16 were from the mountains. To this pitiable condition, through no fault of their own, had come the children of the proud poverty and simplicity of the hills. Such a loss of human possibilities is tragic.

Meanwhile, for those who stay in the mountains the touch of the twentieth century is equally unfortunate. Chewing gum, slang, the sophisticated notion that people who work with their hands are not so fine as those who keep their hands clean and are always dressed up, the degradation of young girls in their contact with a different standard of virtue—these are the first gifts the railroad brings in with the opening up of the country. The puzzling questions today are: How can the mountain people who go outside be prepared to make the noble contribution to life of which they are capable? How can those who remain live more richly and happily than their fathers and mothers who, as one man put it, have been too bowed under?

Anyone familiar with the difficulty of making rural schools a power even in the North, can appreciate the fact that in

the South, where common-school education is younger than the Civil War, the district schools are still unorganized and undeveloped. Consider the vast stretches of country in eastern Kentucky alone that would require very high-grade supervision—twelve thousand square miles of mountain land. The public schools are improving, but, just as private kindergarten and private trade schools did necessary work in cities before the public institution, so the private school has led the way in the southern mountains.

Moreover, these private schools have a wide vision of education that they often try to suggest by calling themselves settlement schools. Among them the Pine Mountain Settlement School is one of the youngest. It was founded at the head waters of Greasy Creek, under the shadows of Pine Mountain, because a whole neighborhood begged for it and because one magnificent old man, William Creech, who had longed for it for forty years, endowed it with all the land he owned.

Mr. Creech had set up his children on farms of their own, and why should he keep any himself, he reasoned. "There being a great deal of whiskey and wickedness in the country where my grandchildren must be raised, was a serious thing for me to study about," he wrote. And to make a better chance for those grandchildren and for unborn generations was his greatest wish.

When the day came that the Pine Mountain School was really begun, the old man said: "I don't want hit to be a benefit just to this neighborhood, but to all of Kentucky; the whole United States, if they want it; the whole world if they can get any good out of it." Though agricultural experts and trained foresters, Pratt graduates, "the people of northern culture" whom Burns spoke about, may do all they can for the Pine Mountain Settlement School, they can never put into it a deeper hope.

The Pine Mountain Settlement School is a home school. That is, practically all the children who are learning in it live under its roofs. "Roofs" it must be, for the school believes in a family type of life rather than an institutional. All the seventy children are grouped in different cottages, little tots and strapping fellows, boys and girls together, as in a big family.

Although the school ought in the next few years to increase to twice its present size, it will do so only by building more of these cottage homes. In them the children do all the work of the home. The training of the hand is therefore not merely an addition to the regular school curriculum, but an

NO ROAD AND NO DOCTOR FOR EIGHTEEN MILES

integral part of every-day life. Boys and girls have regular duties to perform, necessary to the welfare of the family. So it is that in this school the housekeeping, cooking, the care of the stock, and the gardening are not the work of paid servants, but are the means whereby the children gain normal training and earn at the same time part of their expenses.

Such a system develops in children a fine sense of responsibility and that understanding of the necessity for work which is at the bottom of both success and character. Watch a nine-year-old girl after breakfast tackling her job of making ten beds on a sleeping porch and sweeping and dusting before school begins. They are well-made beds, too, with "hospital corners." Not long ago a little girl with such a task was not feeling very well, and was told that she needn't get up in the morning unless she felt much better. "Oh," she said, "I'm aimin' to be stirrin' soon; hit's Saturday and I wouldn't trust nobody else to put clean sheets on the beds."

The home life of the cottage, too, is natural and spontaneous. Indeed you would find it charming to sit before the fire of an evening with one of the tiniest in your lap, two or three more gathered about your knees begging for a story; another group sprawling on the floor with heads close together over a book, and still others singing away some old ballad of the mountains. In a quiet corner the older ones are playing checkers or reading King Arthur. Perhaps the oldest boy of all is holding a small child, for in the mountains seventeen- and eighteen-year-old boys do not feel obliged to conceal their affection for little children, if they still delight in "nussing" them.

The entire scheme of education has been organized with a view to bettering and broadening children's knowledge of how to perform work necessary to those who live in the country. At the same time the standard set is kept within reach of their own homes. For most of the boys and girls will live in the hills, and their training must be planned to fit them for happy, useful country life. So much for the school proper, which will in the next few years further extend its sphere of influence by cooperation with the district schools and by the establishment in one populous neighborhood, perhaps four miles away, of a little center where a trained nurse and a social worker will live.

The importance of the work of a trained nurse may be gathered from the fact that this neighborhood is eighteen miles from the doctor. The field for obstetrics is covered only by midwives. In our county too the eradication of hookworm must be accomplished, for some 66 2-3 per cent of the pop-

WEEDING BEANS FOR AN EDUCATION

FOUNDER OF THE PINE MOUNTAIN SETTLEMENT SCHOOL

ulation are infected. And not only must the people now infected be cured, but sanitary changes must be widespread in order to prevent a recurrence of the disease. Our own particular pocket of the county has some 20 per cent of its population suffering from trachoma. By clinics and the establishment of a small hospital for study and cure, these conditions may be corrected.

The Pine Mountain School, which is not yet four years old, has had to evolve from its vision of community service a scheme for the building of a road. It had to pay seventy cents a hundred pounds to get goods in from the railroad, although that railroad was as the crow flies just three miles away. And what could the neighbors do with their surplus apples, having no way of getting them to market, except turn the hogs into the orchards? Yet figures show that the state of Kentucky imports about three million dollars' worth of fruit every year.

The economic welfare of a large area depends on getting a road across Pine Mountain. Now road-building in eastern Kentucky is in its infancy. We have not yet arrived at the millennial state of Canada where a petition signed by ten citizens secures an indefinite amount of well-built road. The county is already doing its utmost to build fifty or sixty miles of road along the main creeks in the geographical center of the county. For many years to come it can do nothing for outlying districts, yet several thousand people are penned up by a mountain a mile high. A good road will cost at least \$50,000. Since the road will be a continuation of a highway linking three county seats, the state will pay for half the cost of its construction, though it can do so only in instalments at the rate of perhaps \$1,200 a year. The school is undertaking to secure the \$50,000 by July 1, so that the road can be built next summer. Half of this will go as the gift of America to the Kentucky mountains. The other half will reduce the school and the country's cost of living and will be turned into endowed as it returns from the state.

Kipling quoted a proverb in Puck of Pook's Hill, "Rome's race, Rome's pace." America needs the mountain civilization, but that can go no faster than the pace the roads make possible for it. The slow feet of oxen have drawn corn sleds, laden with the harvest, from the field to the barn; the slow feet of men have brought little cook stoves over a great mountain, and shoulders used to burdens have carried a sewing machine now and then for a mother whose hands were already full of tasks. Little trails wind through the laurel and the rhodo-

dendron. By these you may travel up the mountain on a mule's back, but you must go down on your own two feet, lest you risk a slide over the mule's ears. Over just such a trail sick babies are carried to the doctor eighteen or twenty miles away. A woman dying with cancer has been carried on a cot over one of them four times in search of the help she still believes she may find.

This path is picturesque, even to the extent of an occasional rattlesnake "quarled" in the middle of it, but it sets a pace that is cruel to keep, for us on the far side of the mountain. People of constructive imagination will understand why the

school must devote all its energies to this road-building. Indeed, it sometimes seems to us that we began at the wrong end and should have made the road before the school! An old man in the mountains—a believer in broad highways, though his means are narrow—said:

"I'll give ye somethin' for the road. I allus have got a leetle chinkapin money in my pocket, and I ain't no hog with hit nuther. I'll give ye a nickel for the road!" Why lack faith in great causes, because one's means are small? After all, the road can easily be built, if only people are not "hogs" with their "chinkapin money"!

"YOU'VE BEEN EVERYWHAR' AN' SEEN EVER' THIN'; BUT I CAN SPIN"

20,000 Miles Over the Land

A Survey of the Spreading Health Insurance Movement

By I. M. Rubinow

A QUESTION which as a professional campaigner for health insurance I am perhaps most frequently called upon to answer is: "What states have already introduced this form of social insurance?" Unfortunately, I am still compelled to reply somewhat apologetically: "None as yet, but there surely will be some legislation in the near future." This, being a promise rather than an achievement, is not always satisfactory to the questioner.

On the other hand, when some group representing a particular interest attacks the entire structure of the system as un-American, paternalistic and what not, the temptation is great to insist that health insurance is coming notwithstanding any partisan objections. And such assurances are resented as a threat and are often very irritating to an antagonistic audience.

What assurance can one give that the statement is neither a promise nor a threat, but simply a scientific prophesy? The irresistible force with which the movement has grown and spread in ten European countries (in six of these within the brief period of 1909-13) may be convincing to a few. The people at large, however, will insist upon evidence gathered nearer home, and the strongest body of evidence, in my opinion, may be found in comparisons with the history of the similar reform in the domain of industrial accidents, for admittedly the movement to secure compulsory health insurance for wage-earners is a direct offspring of the compensation legislation of the last five or six years. Notwithstanding many evidences of dissatisfaction with employers' liability settlement for as much as twenty years, the compensation movement did not begin in earnest until about 1908. The first act of any importance was passed in New York in 1910. Not, however, until 1913 did compensation legislation extend beyond two or three isolated states. By January 1, 1917, some thirty-four states had compensation laws in force and during the current year this list is almost sure to be further extended.

The normal evolution of any movement in social legislation may be roughly outlined as follows: literary propaganda, lectures and meetings, voluntary committees, public commissions, drafting of bills, legislative proposals and finally legislative enactment.

As indicated in my article on health insurance eight months ago [see the SURVEY for July 15, 1916], all of these stages, except the last, are going on simultaneously with great energy and enthusiasm. In fact, these various lines of activity are multiplying so rapidly that it is practically impossible to give an accurate review of them without making a painstaking investigation throughout the country, the result of which would be altogether out of date by the time it was ready for publication.

Although I have no intention of injecting my personality into what should be an impartial statement of facts, it is difficult, in view of the rapid developments proceeding simultaneously in so many different localities, to give at this time much more than my personal impressions.

The last six months of 1916 I spent in the service of the Social Insurance Commission of California, a state in which there probably exists a stronger popular health insurance movement than in any other part of the country. Very

recently I have had even a better opportunity to observe the progress of the health insurance movement during a speaking tour through eight states—Massachusetts, New York, New Jersey, Pennsylvania, Maryland, Ohio, Michigan and Illinois. Altogether within less than twelve months I was called upon to travel nearly 22,000 miles, addressed over 100 meetings with a combined audience of nearly 50,000, personally met thousands of people interested in the movement and, of course, talked and was spoken to with reference to little else besides this one subject. The impressions thus gained may be one-sided, but they are not easily discarded.

The literary output on the subject of health insurance during the last year has been enormous and continues to grow very rapidly. When, in connection with the report of the California Social Insurance Commission, the preparation was undertaken of a complete American bibliography, it was almost impossible to find any references on health insurance over three or four years old, while during 1916 several hundred titles appeared. During the current year this output promises to be several times as large. Such a growing volume of material is extremely significant. A book may be largely the result of one man's inner consciousness, but a literature of pamphlets and press articles is always a fair indication of popular interest. Scarcely a day passes without bringing to my desk some pamphlet or some magazine article. And as to newspaper stories, the bills of the clipping bureaus for these threaten to become a serious financial burden. Perhaps I am particularly impressed by this literary current because of the very striking contrast with a serious difficulty I had some fourteen years ago in my efforts to place my first article on social insurance in an American publication.

It is a rather curious fact that most of this literature as yet has appeared in specialized publications. American monthly magazines, which contributed so much to the spread of propaganda for workmen's compensation, have had comparatively little to say concerning health insurance. Perhaps that is an opportunity which they have accidentally overlooked. Perhaps it is only additional evidence that our fifteen-cent magazines have during the last five years changed from public forums to sources of public entertainment. However, recent information indicates that several of the popular magazines are planning to devote considerable space to the subject in the very near future.

The symposium in the *American Labor Legislation Review* for June, 1916, is perhaps the most valuable and helpful collection of papers on health insurance as yet published in this country. Numerous studies have appeared in American medical literature, particularly in the *Journal of the American Medical Association*, and in the medical publications of those states where the movement is strongest, namely, Massachusetts, New York, Ohio, California and Wisconsin.

Thus the issue of the *Boston Medical and Surgical Journal* for February 15 contains three articles, two notes, three letters and one editorial on the subjects of health insurance and compensation, or a total of thirty-six columns out of sixty-eight.

A special series of social insurance pamphlets has been undertaken by the American Medical Association and five pamphlets

in the series have already appeared, while two are in press and several others in preparation.

Not all of these articles represent valuable contributions to the literature on the subject, but all of them do indicate a rapidly growing interest on the part of the medical profession in the possibilities of health insurance. Opinions are about equally balanced in favor of this program and opposing it. It is significant that a transition may be observed from a general discussion of underlying principles to a careful analysis of detailed provisions in different legislative proposals.

Articles, both sympathetic and denunciatory, may also be found in industrial publications circulating among employers, as well as in labor papers. Thus, for instance, the little *Monitor*, the official monthly publication of the Associated Manufacturers and Merchants of the State of New York, during the last year devoted more space to health insurance than to any other subject.

Opposition

PERHAPS the best way to judge of the real strength of the movement is by the opposition it creates. The literature in opposition has not failed to show considerable growth. More or less active attacks on health insurance flourish in the insurance journals of the country, which up to the present are devoted entirely to the interests of private commercial business, their most valuable support. Perhaps the most ambitious offering in this direction is the series of bulletins of the Insurance Economics Society of America, an organization founded by private insurance capital for the protection of its interests and for opposition to the movement toward public insurance. Of the five bulletins published, four come from the pen of William Gale Curtis, secretary of the Educational Committee of that society, but also president of the National Casualty Company of Detroit.

Notwithstanding all the development of the press, the public lecture still remains a very potent means of popular education in matters of social reform. The demand for public lectures on the subject of health insurance seems to exceed the available supply. During my six months in California I was forced to deliver over seventy-five public addresses. Medical societies, women's clubs, city clubs, open forums and luncheon clubs are all clamoring for speakers on health insurance.

Thus there seems to me conclusive evidence that the public is eager to learn about health insurance. Of course, this may be explained as a natural reaction to long systematic propaganda, energetically pushed. But the promising thing about the thirst for information is the broad sympathy for the movement and the support so easily obtained, at least among social groups who approach the problem impartially and without any bias.

Take, for instance, that small but important group consisting of persons who devote their entire time to the study of political and social problems and conditions in this country—namely, social workers and teachers of economics in American universities. In order to ascertain the attitude of these two professions on matters of health insurance and social insurance in general, the California Social Insurance Commission made an enquête of members of the American Economic Association and the National Conference of Charities and Correction. Of 675 replies received and tabulated 87 per cent went on record as favoring social insurance legislation for this country. Some 9 per cent refused to commit themselves because of lack of information. Only 4 per cent were opposed to it.

By a very large preponderance of opinion, health insurance was voted the next step in social insurance legislation, to be acted on before unemployment, old age or widows' and orphans' insurance (of the 450 replies indicating choice, 270, or 60 per cent, made health insurance their first choice, and 117, or 26 per cent, the second choice). It is true that American professors and social workers do not often write our laws; nevertheless any viewpoint gaining such strong support among them must eventually permeate the thought and conscience of the whole American people and lead to some constructive action, for even a superficial review of the history of any progressive tendency in American political, economic or social life will corroborate the use of this generalization. Witness the anti-child-labor movement, the movement for the protection of women in industry and similar movements too numerous to mention.

Even more important than such isolated instances of endorsement are several large national conventions and conferences in which health insurance has been one of the most important topics for discussion. Among them perhaps only three need be referred to, already reported in the *SURVEY*—namely, the meeting of the American Public Health Association in Cincinnati last October [see the *SURVEY* for November 11, 1916], the Social Insurance Conference in Washington early in December [the *SURVEY* for December 16, 1916], and the annual meeting of the American Association for Labor Legislation during Christmas week in Columbus [the *SURVEY* for January 13]. At all these conferences the large audience which every meeting on health insurance drew and the careful discussion given the matter were noticeable features.

The meetings of these and similar organizations planned for the immediate future will devote even more time to health insurance. Of these the American Medical Association, which is to meet in New York, and the National Conference of Charities and Correction, which is to meet in Pittsburgh, are perhaps the most important. At the latter meeting two sessions are to be devoted entirely to health insurance, with one of those large general evening meetings that always draw such multitudes for the general presentation of the broad principle of social insurance.

Again, in this form of activity, the efforts of the opposition are no less significant. Almost at every one of the numerous conventions of the insurance interests dealing with so-called casualty insurance, attacks on health insurance have been the predominating feature during the last six months. At such conventions as the International Association of the Casualty Insurance Underwriters, the International Claim Association, the Health and Accident Underwriters' Conference, the iniquities of health insurance have been discussed at great length.

Countless Committees

THERE was a time when one could take reasonable pride in being a member of the only social insurance committee then in existence. Since then the organization of committees for the study of social insurance has grown so rapidly that hardly a large city exists without one or more such bodies. I have found them in almost every city in the fourteen states that I have visited during the last nine months, and where they did not exist at the time it was an easy matter to foresee that they would form soon after a meeting was addressed. In New York, Massachusetts and California, especially, the number of such committees is very large.

Even in their organization, spontaneous as they appeared

to be, a certain orderly sequence may be observed. The earliest committee in every locality is one formed by those restless people whose main function in life it has become to stir up all kinds of troublesome problems—the local charity workers, people connected with health departments, with economic and sociologic departments of universities, and social reformers in general. But no sooner do they succeed in obtaining some effective publicity when numerous other committees appear, and not all of them for agitation and propaganda—some for impartial study and others, again, for purposes of self-defense and opposition. Such special committees have been organized by medical societies, nurses' societies, boards of trade, chambers of commerce, manufacturers' organizations, and the like. And, of course, it is no secret at all that the feverish activity in the organization of state insurance federations (organizations of insurance interests, primarily of agents and brokers, backed up by large insurance companies for the purpose of exercising the collective political influence in opposition to any state insurance legislation) during the last six months is largely due to the threat of health insurance.

In preparing its report, the Social Insurance Commission of California was anxious to learn of the extent of the social insurance movement throughout the United States, and made an effort to compile a list of these committees which are of more than purely local importance. Some twenty committees of this kind are listed in its report, but they constitute only at present a very small proportion of all the existing committees.

Antagonistic Propaganda

THE fact that the reports of a good many of these committees are antagonistic to the movement does not at all reduce their value as an indication of the substantial strength of the cause which made them necessary. Among the most recent are the report of the New York Board of Trade and Transportation and of the Chamber of Commerce of the State of New York, the latter prepared by John Franklin Crowell. The former report may be dismissed in a very few words. The accuracy of all the statements may be judged from the main underlying argument that the present health insurance movement is a movement by doctors for the purpose of increasing their medical fees. Whoever has followed the recent discussions of health insurance before the various New York medical societies will readily appreciate the inaccuracy of any such statement. The specific criticisms of the Mills bill, introduced in New York, are all of about the same scientific value; as, for instance, the statement that the bill provides for a "like charge upon all employers and upon all wage-earners without the least regard for the conditions maintained by the employers."

A much fairer effort is that of Dr. Crowell. Instead of taking up minor points in the so-called Mills bill, he makes an effort to get at the fundamentals underlying the health insurance movement. The compact little report [see the SURVEY for February 24] of some ninety pages endeavors to cover a very broad field beginning with the history and description of European systems of social insurance and the movement in the United States, through a criticism of the Mills bill and a statement of arguments for and against the whole policy of health insurance in this country. Most of the arguments brought up are not perhaps very novel, as, for instance, the danger of malingering, the supposed excessive cost, the destruction of individual responsibility of the family, etc. As alternatives for compulsory sickness insurance, Dr. Crowell suggests no less than five specific measures: 1, better economic control of voluntary insurance organizations; 2, a

development of group insurance; 3, extension of the compensation law to occupational diseases; 4, larger efforts at prevention of sickness; and 5, an investigation as to the wage incomes prevailing in the lower wage groups.

"This," says Dr. Crowell, "aims at the root of the truth or falsity of the constantly repeated claim that a considerable portion of the wage-earning population receives incomes too small for them to rear a family consisting of the parents and two or three children. This claim is widely disputed. Some hold that these claims are based practically either on statistics belonging to other periods than of recent years or upon facts of so limited application and scope as to make their application to conditions generally not only fallacious, but the fruitful sources of misrepresentation. It should be no difficult matter with the proper organized committee representing labor interests, the employers and economists familiar with these conditions, to ascertain the facts. Then, with the facts before us, it should not be difficult to correct any appreciable failure of the existing wage system to measure up to the requirement of the normal American standard of living."

Of course, this cheerful hope concerning the ease with which the failure of the existing wage system may be corrected sounds refreshing, coming, as it does, from the pen of an old and experienced economic student. In accordance with this report, the Chamber of Commerce has gone on record as favoring a comprehensive governmental investigation of the conditions calling for health insurance in the state of New York.

The other four "alternatives" are, of course, not alternatives at all, because all of them are suggestions which remain quite desirable even in the face of existing health insurance legislation. Regulation of voluntary insurance carriers, and even extension of group insurance, cannot be expected to produce more effective results in this country than they have accomplished in Europe, where those methods have been tried out for decades. The extension of the compensation law to occupational diseases does not cover perhaps more than 1 per cent of the general problem of illness among wage-earners. And as to the emphasis upon the work of prevention, perhaps no better illustration of the typical red herring can be obtained. On one hand, it is obvious that no amount of preventive hygiene can eliminate the problem of sickness either in the community at large or especially in the wage-working part of the community. And on the other, no specific measure of prevention can be as efficient in reducing the amount of sickness and suffering as a system of compulsory health insurance which furnishes financial assistance and medical care to the wage-workers when they need it.

Official Recognition

UNTIL now we have spoken largely of spontaneous activity on the part of the public at large. By this time, official recognition of the health insurance movement is not lacking. The Social Insurance Commissions of California and of Massachusetts have already been referred to in the SURVEY. It is more than likely that as a result of the introduction of health insurance bills in various state legislatures now in session, many similar commissions will be established during the year. Bills to that effect have either been introduced or will be introduced in Ohio, New Jersey, Illinois, Pennsylvania, Wisconsin and New Hampshire. Even in Nevada, with its small industrial population, the governor has recommended in his annual message the establishment of a commission of study. And the list will compare favorably with the three compensation commissions established in 1909 in New York, Wisconsin and Minnesota.

The first two commissions appointed, those of California

and Massachusetts, have by this time completed their work and turned in their reports. The California report, a volume of 340 pages, is significant because of the unanimous conclusions of the commission in favor of health insurance not only in principle, but also as a measure for immediate action. And while the Massachusetts commission, with its larger membership and very much larger field of inquiry, was unable to agree to a unanimous report, it is still fair to say that on the whole the conclusions of the Massachusetts commission offer additional support to the health insurance movement. The major report submitted by the sub-committee on health insurance and signed by four of the nine members, represents a very strong endorsement of the so-called standard bill of the American Association for Labor Legislation, and the bill which it reprints with endorsement is largely based upon the association bill.

The four members signing this report agreed upon the necessity of compulsion in health insurance, upon the wisdom of including all those who earn less than \$100 a month, upon the necessity of distributing the cost among employers, employes and the state, even accepting the division into 40, 40 and 20 per cent as a reasonable one, and approving the type of carriers suggested in the standard bills. This report of the commission and the strong endorsement of health insurance in the message of Governor McCall [see the SURVEY for January 13] have made the issue of health insurance in Massachusetts a very live one indeed, and at present Massachusetts may be said to have perhaps the best chance of originating health insurance legislation in this country.

Mooted Points

PARTICULARLY important is the specific recommendation made by Governor McCall in his message that health insurance plans should include medical aid to the members of the family, because this recommendation goes beyond the requirements of the English law and also beyond the minimum standards, though not the actual practice, of the German system. It is true that several precedents for such extension of medical aid to the members of the family may be found in European legislation, namely, in the laws of Norway and Hungary, but less than a year ago opposition to this broad program looked so dangerous even to the more progressive supporters of health insurance that they voluntarily excluded it from the bills introduced in New York, New Jersey and Massachusetts in 1916. Governor McCall's endorsement of it is therefore exceedingly important. As a matter of fact, in all the bills introduced this year this part of the program will be retained, as well as the maternity benefit, concerning which there was so much bitter discussion last spring.

While the message of Governor McCall seems to have placed the center of health insurance propaganda for a time in Massachusetts, the results achieved in California must not be disregarded, as even a superficial examination of the report will demonstrate. The general tone of the report may perhaps be judged best by the following quotations from the conclusions (pages 121-23), selected because they are emphasized by heavy type in the report itself. Evidently the California commission has unanimously agreed to the following:

"Individual responsibility for illness threatens hardship and economic dependency to wage-workers."

"Group responsibility for illness through health insurance is the practical way to meet the problem created by illness in California."

"Health insurance to be effective must be made compulsory upon the individual worker."

"Some contribution from other sources than the wage-earn-

ers themselves is necessary to secure adequate health insurance for wage-earners."

"Contribution from industry to the health insurance of wage-earners is just and desirable."

"Contribution from the state to the health insurance of wage-earners is desirable."

"Health insurance offers a sensible, practical method of eliminating in part the most distressing features of the present social system—economic dependency and charitable relief."

"Health insurance will distribute the burden which now means hardship, suffering and lavish public expenditure in such a way that it will be a burden no longer."

"Health insurance to wage-earners would mean a tremendous step forward in social progress."

On the basis of this report Governor Johnson, in his message, concludes: "I believe in health insurance, that ultimately it will be established in our nation, and this within a brief period." There appeared, however, in California constitutional difficulties against the immediate adoption of a health insurance law, and therefore the program as outlined by the commission presupposes the adoption of a constitutional amendment during the current year, its submission to the people for ratification in the fall of 1918, and the introduction of a bill in the spring of 1919, if the constitutional amendment is ratified. Provision has also been made for the continuation of the work of the Social Insurance Commission during the two years, not only for the purpose of drafting a bill, but also of carrying on the educational work preparatory to the submission of the amendment to the people at large. As both the constitutional amendment and the appropriation for the continuation of the commission are understood to be administration measures, some definite progress toward health insurance may be expected in California during the year.

Since no bill is to be introduced as yet, the commission did not think it necessary to draft the detailed provisions of a health insurance bill. It has, however, agreed unanimously to the few essential underlying principles as stated in its official findings:

"In order to meet the problem of destitution due to sickness and in order to make health insurance a valuable adjunct to the broad movement for the conservation of public health, any legislation on this subject should provide: a, for a compulsory system for the conducting of the insurance by non-profit-making insurance carriers; b, for a thoroughly adequate provision for the care and treatment of the sick; and, c, for contributions for the insured from industry and from the state."

Criticisms of Standard Bill

ALTHOUGH no one definite system of organization is outlined in the report, the California commission did, in a tentative way, voice its disagreement with some of the provisions of the standard bill of the American Association for Labor Legislation, largely referring to the organization of insurance. This criticism is based upon the fear that under the standard bill the fraternal orders may be discriminated against (fraternal orders are perhaps stronger in California than in many other states), and that cooperation of employers and employes and the health insurance carriers are impractical and undesirable. And the possibility of separation of the medical benefit from the financial aspects of health insurance is suggested, money benefits to be administered entirely by the organizations of the wage-workers themselves, while the medical benefit is to be centralized under direct state administration. A certain degree of novelty cannot be denied to these suggestions, which undoubtedly will be carefully considered both by the California commission and by other students.

The report, however, states very distinctly that the com-

mission "is not at this time prepared to offer a plan for the organization of health insurance." It sees what it believes to be serious objections to the plan of the association. It believes that these objections can be obviated through other forms of organization. In briefest outline it sketches a plan of organization which it believes free from these objections. This plan, however, may be open to objections still more grave. It is submitted at this time simply for study and debate.

All the bills introduced in the other states will be substantially in agreement with that prepared by the Social Insurance Committee of the American Association for Labor Legislation. The little green pamphlet containing the standard provisions does not, however, at the present moment represent the final stage of the standard bill. This can be studied much better from the text of the actual bills introduced in various states which are in substantial agreement, though local committees in a few cases have insisted upon certain slight modifications. The changes between the present draft of the bill and those published during last summer are largely dealing with the better plans for organization of medical aid. Undoubtedly as a result of public hearings and consideration by legislative committees further changes may be suggested. But judging from the progress up to the present, there seems reasonable hope that health insurance legislation, when it does come, will be very much more uniform than has been the compensation legislation until now.

Is there any reasonable hope that the legislative sessions of the current year will result in the passage of one or more health insurance laws? I should not want to be forced to answer this question. Bills have been introduced up to the present, or will be introduced during the current session, at least in the following states: New York, Massachusetts, Connecticut, Maine, Missouri, Michigan, New Jersey, Ohio, Wisconsin, Indiana, Illinois and Pennsylvania. One might perhaps be more inclined to venture upon prophesy and one might also be more inclined to be optimistic about the immediate chances for health insurance legislation, if various international problems now staring us in the face were out of the way. As it is, at any moment all movements for social progress may be swept aside for the time being by some grave international crisis.

But whether this legislative year will see actual health insurance legislation or not is after all not a matter of very great importance. And as to which of the several states may achieve the honor of being the pioneer state in this movement is also rather a local than a national problem. It is quite certain, however, that as a result of this year's consideration several state commissions for investigation of the problem will be created. Judging by the result of the investigations in Massachusetts and in California, the general tone of the conclusions that will be reached by the various state commissions may almost be foreseen. I think even the most bitter opponents of the health insurance movement are willing to admit that the best they can achieve is a certain postponement, and perhaps some modification, of legislation so as to protect their own interests rather than stem the tide altogether.

Position of Private Companies

IT IS therefore significant that the severe attacks upon the whole health insurance movement by private insurance interests are coupled with a plea that private insurance companies be permitted to participate in the insurance. In the San Francisco *Chronicle*, for instance, a few weeks ago a whole page was devoted to an attack upon social health insurance, evidently furnished by the Insurance Federation of the State of California. It is pointed out that the cost would be enor-

mous, that "the abridgement of rights of citizens" through a compulsory insurance is resented as un-American, that health insurance has bred malingering among German workmen, and that it has failed of bettering health conditions. Nevertheless, in the same attack the following curious statement may be found: "The impression is sought to be conveyed that anyone opposing Dr. Rubinow's German, monopolistic social-insurance plan is opposing social health insurance. Insurance organizations and insurance men as a whole seriously object to being placed in a false position by virtue of their objections to Dr. Rubinow's plan."

"It is urged that there is an alternative plan open to California more acceptable than the plan now under discussion. It is claimed that the proper economic solution of this problem calls for the retention in the field of all carriers or agencies now in existence familiar with health insurance and capable of administering it. It is further claimed that any plan adopted by this or any other states should retain stock insurance organizations, fraternal associations and any other mutual organizations which are capable of administering business." The logic of this charge is, I think, perhaps best stated in the words of an editorial in the *Fresno Republican* (Chester Rowell's organ in Fresno, Cal.):

"With amusing stupidity the argument contends that social insurance is a fatally bad policy for the people, but it will be all right provided the insurance companies are permitted to get their share of the business. It is the stock companies who are paying for this page, and they are trying to crawl in under the protection of the fraternal companies, which there is no purpose in injuring."

Danger of Conflict

THE present status of the health insurance propaganda is, I think, very well illustrated by the above attacks. The general public, or at least that part of it which is interested in matters of social progress, is already almost unanimously in favor of the health insurance principle. Labor, organized and unorganized, is very rapidly learning of the advantages of health insurance, notwithstanding the antagonistic attitude unfortunately assumed by a few prominent leaders of organized labor. Even employing interests on the whole are gradually recognizing the justice of the demand for better protection of the wage-workers in time of sickness. In so far as arguments against health insurance are based in general upon political or social considerations, there will be no serious difficulty in overcoming them. The specific objections from wage-workers, employers and from the medical profession can be met either by emphasis on the advantages to either group or by necessary modifications in the provisions of the act.

The opposition that comes from private insurance capital must necessarily be of a more obstinate kind. Not that I imagine for a moment that the development of health insurance is really going to do any substantial damage to the private insurance business as it exists at present, because probably 90 to 95 per cent of the insurance created will be entirely new business. It is even reasonably certain that the development of health insurance among wage-workers will prove a very strong stimulus to the increase in the amount of health insurance written by private insurance companies among higher economic groups. But if a branch of the private insurance business insists upon making the whole program of health insurance a question of principle and wants to fight it as a dangerous symptom of the general tendency away from private toward public insurance, a conflict is created for which the advocates of health insurance in this country are in no way responsible, but which, of course, they will be unable to escape.

The Conscientious Objectors

By Ian C. Hannah¹

PROFESSOR OF HISTORY AT OBERLIN

“AS soon as we got in the prison (I was first), one of them told me, with an oath, to get my coat off. I told him I was not a soldier, and could not obey military orders. The colonel was standing near and he thundered up and shouted: ‘What! you won’t obey me?’ with a thick accompaniment.

“I quietly answered, ‘I must obey the commands of my God, sir.’

“‘Damn your God! Take him to the special room.’”

This is not precisely what we are accustomed to associate with the British Constitution—more than once described by the *London Times* as the admiration and the envy of mankind—but a good many things have been changed by this greatest and maddest of wars.

The conscientious objector (perhaps with the stress rather on the last word than the first) is in the politics of Britain no novelty whatsoever. All diligent students of history are aware that in the days of the American Revolution the best opinion in the old country was on the side of the colonial insurgents. Even Napoleon had his contemporary English admirers, and living in those times Lord Macartney was impressed by the fact that while other nations sometimes put aside their internal bickerings the British never did anything of the kind. He was inclined to attribute it to the grossness of their diet and to the beastliness of their climate!

During the Boer war this feature of the English character was apparent to the whole world, and it is one of the queer ironies of fate that so many of the “pro-Boers” in that struggle, notably Mr. Lloyd George himself, are now high in the counsels of the nation and called upon to deal with another generation of the ever-present conscientious objector.

A large amount of literature connected with the problem, all of it smuggled out of England, has just come into the hands of the *SURVEY*. Part of it is typewritten or in MS.; part consists of copies of the *Tribunal*, the organ of the No-Conscription Fellowship, edited by W. J. Chamberlain till he went to prison, later by B. J. Boothroyd.

In perusing the documents perhaps what strikes one most forcibly is that it should have been necessary to smuggle them at all. The British government seems to have far less to gain from their being suppressed than from their being published throughout the world, for *on the whole* (with perhaps a good many individual exceptions) it appears that British forbearance and love of justice and fair play have done a good deal to ease an utterly impossible position. More than once an officer has told the men that if they object to obeying as soldiers he will ask them to do a favor to himself. Though it is presumably the worst cases that are reported, the desire of the tribunals to be fair is admitted again and again. Prussian the system may be, but Prussian the bulk of British officers are not. The case above is rather exceptional, but far from being unique.

Nothing short of the actual bursting of the black war clouds could ever have induced such a people as the British to acquiesce in recent acts of Parliament. Lord Loreburn (ex-Lord Chancellor) pointed out that the Defense of the

Realm Act destroyed liberties that had been cherished through a dozen generations; the Military Service Acts go very much farther. Realizing that many English would refuse to take up arms of which they conscientiously disapproved, Parliament provided expressly for exemptions.

The first conscription act provides that: “Any certificate of exemption may be absolute, conditional or temporary, as the authorities by whom it is granted think best suited to the case, and also in the case of an application on conscientious grounds may take the form of an exemption from combatant service only, or may be conditional on the applicant being engaged in some work which in the opinion of the tribunal dealing with the case is of national importance.” The second act, which extended the draft to married men, still more emphatically gives to the tribunals discretion to grant absolute exemption.

The trouble mainly arises from the effort to establish in a court of law something so intangible as a state of mind. England has hardly attempted it for the last three hundred years. For those willing to accept alternative (non-combatant) service, the path is relatively smooth under the more recent regulations—though there is still a good deal of browbeating by unintelligent tribunals. Far otherwise for those who decline, directly, indirectly or anyhow at all, to assist in waging war. “With that kind of man,” says Mr. Lloyd George emphatically, though slightly ungrammatically, “I personally have absolutely no sympathy whatsoever. I do not think they deserve the slightest consideration. . . . I shall only consider the best means of making the path of that class a very hard one.”

Bertrand Russell finds “a manly note of primitive ferocity about those words,” and adds some very strong observations highly unflattering to the intelligence of “almost all” British politicians, but there can be not the very slightest doubt that the premier is voicing the sentiments of all but a small minority of his countrymen. A nation which feels itself to be fighting for very life can hardly be expected to look at such questions with the philosophic calm that is possible across the Atlantic.

Twenty thousand Englishmen in the last half-year have made their protest against compulsory military service. No one knows how many of this number have gone into the non-combatant corps, a military unit especially established for conscientious objectors; but probably it includes the great majority. They are assigned to making roads, to repairing railways, and other works of public utility. A certain proportion of them have got “alternative service”; that is, the tribunal has granted them three weeks in which to find alternative service in any civil employment which the tribunal judges to be of “national importance.” Of those whose application for such “alternative service” has been rejected most have been court-martialled and sent to imprisonment. The military prisons were in a short time crowded with these men, but as a result of public clamor they were afterwards sent into civil prisons. The total number of men arrested has never been made public, but is probably about five thousand.

More recently, recognizing that in a large number of cases there has been miscarriage on the part of the tribunal, the

¹ Author of *Arms and the Map*, *Eastern Asia*, etc., and of the recent novel, *Quaker Bora*.

government has instituted a new plan of giving these men work of national importance, not contributory to the war, instead of prison work. This measure immediately divided them into two classes: those willing to accept such work and those unwilling to compromise (popularly called the Absolutists). The former were drafted into various occupations decided upon by the Brace committee of the House of Commons as answering the requirements of the law, such as granite quarrying, tree-felling, road-making and the like. Since the beginning of the winter, some hundreds have been housed in disused prisons in Wakefield and Warwick, where they make mailbags and other materials used in the public service. The latest scheme is one for drafting a proportion of these men on the land to produce food.

The majority of the conscientious objectors are working men. Their number would have been much greater if some trades had not been "starred" as important national trades and exempted from compulsory military service. This, for instance, applies to the whole of the colliery trade which, if included, would probably have doubled the number of resisters. The Rev. Richard Roberts who came to this country early in January to take over the ministry of the Church of the Pilgrims in Brooklyn, offered him last March, and who, with Henry Hodgkin, a young Quaker, was one of the founders of the Fellowship of Reconciliation, has given the SURVEY some interesting facts concerning the social composition of this army of militant pacifists. Among the men in Wormwood Scrubs prison twenty-three different religious denominations have been counted. A large number were conscientious objectors on social and humanitarian grounds. They are not, however, sentimental dreamers, but the majority are of an intellectual type.

Take, for instance, the group of socialists: Clifford Allen, a graduate of Cambridge University, one of the leaders of the younger group in the Fabian Society; Feodor Brockway, son of a missionary and editor of the *Labor Leader*; G. D. H. Cole, author of *The World of Labor*, a book well known in this country among students of industrial problems, and one of the most original younger socialist writers. Take a group of Roman Catholics: Francis Meynell, son of Alice Meynell, the poetess, and godson of Francis Thompson, the poet; Stanley Morrison, member of a well-known publishing house; Allen MacDougall, a civil servant who gave up his post on conscientious grounds, and author of *Pange Lingua*, a translation of hymns from obsolete Latin dialects. Take a group of social workers: Stephen Hobhouse, son of an ex-cabinet minister, who for some time has lived in a workman's flat in the East End of London; Percy Redfern, editor of the *Wheat-sheaf*, organ of the Cooperative Wholesale Society, and author of a history of cooperation; F. R. Hoare, son of a missionary bishop, worker at Toynbee Hall, who now is warden of a colony for delinquent children which he was allowed to organize on original lines as his work of "national importance." On the side of art: Gilbert Cannan, novelist; Clive Bell, poet; Gilbert Thomas, poet; Wyon, a young sculptor, whose *Pax Dolorosa* was said to be the one piece of living statuary in last year's Royal Academy exhibition. This list will suffice to show that this movement is not the result either of pro-German sentiment or exclusively of labor agitation.

Among the conscientious objectors are graduates and undergraduates from every university in the country. Among the ministers, according to Mr. Roberts, there is a curious line of demarcation in their attitude to this question almost exactly at the age of forty. Not all the younger men are pacifists and not all the middle-aged men are out and out supporters of the government; but most of the leaders of the

pacifist movement in the ministry are among the younger group, notably Dr. Orchard, of the Kingway House (Thomas Binney's old church); H. C. Carter, of Cambridge; Prof. C. H. Dodd, of Mansfield College; W. F. Halliday, of New Barnet; Leyton Richards, of Manchester [see the SURVEY December 2, 1916]; William Payton, of the Student's Christian Movement, and many others. If compulsory military service had been extended to Christian ministers, several hundred would have figured as conscientious objectors.

There is not much variety in the actual pleas put forward by the conscientious objectors themselves; nearly all of them are based on the Sermon on the Mount or on the incompatibility of socialism with war. The following are fairly typical but perhaps possess rather more individuality than most:

"I am a Socialist, and so hold in all sincerity that the life and personality of every man is sacred, and that there is something of divinity in every human being, irrespective of the nation to which he belongs. I cannot betray my belief in the brotherhood of all men. To me, war is murder, and will only become impossible when an increasing number of those who share this conviction remain true to their belief, and refuse to take part in warfare, whatever be the pretext for which it is waged. I never have and never will shirk my bounden duty to serve my fellowmen. At present, I believe I can best render such service by striving to advance the cause of peace."—CLIFFORD ALLEN.

"I believe in the spirit of love in its widest sense as the only hope of the salvation of humanity and unswerving faith therein as the sole means of establishing a real and lasting peace founded on human brotherhood, and it would be a violation of my deepest conscientious convictions to become part of, or willingly assist in any way, an organization, the purpose of which is the slaughter of human beings, however much I may desire the end it is hoped to attain by such means, and in spite of an extreme objection to acting counter to any laws passed by constituted authority."—H. S. BEAVIS.

"I believe human life to be so sacred that I can not take the responsibility of inflicting either death or injury. I believe this war and all wars to be immoral and futile as a means of settling any dispute, that it leads only to increased hatred and bitterness and the general lowering of the estimate of the value of personality. I believe that it is the will of God for me that I should live in fellowship and brotherhood with all men. I cannot distinguish between combatant and non-combatant service or even alternative service, the purpose of which is the better carrying on of war."—H. RUNHAM BROWN.

"I am a Negro . . . born in Jamaica. My parents were sent in bondage to Jamaica. They were torn from their home. My country is divided up among the European powers, who in turn have oppressed and tyrannized over my fellowmen. The allies of Great Britain, i.e., Portugal and Belgium, have been among the worst oppressors, and now that Belgium is invaded I am about to be compelled to defend her. . . . As a people the Negroes are the last among men taken into consideration in this country, although we are regarded as British. Even Germans or any aliens who are white men are preferred to us. I am not given ordinary privileges as a citizen. I have tried to obtain work and I have been refused solely because of my color. . . . I have been buffeted from one labor exchange to another. . . . Business men claim that their employes would not work with me; others hold . . . they may lose their customers because I am a Negro. In view of these circumstances, and also the fact that I have a moral objection to all wars, I would sacrifice my rights rather than fight."

Many may doubtless have been under the impression that most of the conscientious objectors are of a timid, cowardly

type, who chiefly object to risking their lives. In some cases this may be true, but the general impression one gets from reading the evidence is very different indeed. To refuse all service with the result of being forced into the army or sent into prison amid men, by no means of the gentlest, who cannot imagine their point of view; to be sent to France that they may come under full military law in the very zone of war; to be condemned to death for disobedience—this is no primrose path. None has actually been shot, for British good sense is not dead—but the death sentence has always been commuted

into one of ten years penal servitude. This sending the objectors into France is one of the most unfortunate acts of the English government and indeed all the evidence re-emphasizes the truism that the spirit of militarism in one nation can never be destroyed by calling it into existence in another.

Few Americans who have studied the unhappy results of conscription, even in so free a country as England, will be anxious to see the same tragedy re-enacted over here. And it is earnestly to be hoped that the British will drop it at the end of the great mad war.

The Food Riots

By Bruno Lasker

OF THE SURVEY STAFF

"Every face in the mob that was gathered around City Hall steps looked as hungry as the cries asserted. Old women with thin shawls and straggling gray hair half falling down raised thin, weak voices; sunken-cheeked women cried; great flabby women had that gray-blue cast that needed but a touch of the biting wind around City Hall to make a picture of starvation."

NO, this is not a description from the "Hungry Forties;" it is from the account of so sober a journal as the *New York Evening Post* of the crowd which assembled on February 20 in front of the City Hall of New York to demand action from the mayor to reduce food prices. There were 300 of them; their demonstration had been preceded by riots on the lower East Side, on Park avenue north of One Hundredth street, in the Claremont Park district of the Bronx and in Brooklyn, in the course of which pushcarts were upset, policemen assaulted, quantities of produce destroyed. The previous day, a smaller riot of a similar kind had taken place in Williamsburg across the East River, and the following day the outburst spread to still other parts of Greater New York. Mass meetings of women were held in different sections of Philadelphia on February 24.

Of course, the highly colored press accounts, including the one just quoted, were much exaggerated. These happenings were not "hunger riots," though universally so described, but outbursts of exasperation on the part of a section of the population which is always close on the border of poverty. Investigations made by the City Department of Public Charities and by private social agencies in New York show that there has not been a sudden increase in dependency, voluntary commitment of children, homelessness, or other symptoms of acute distress. "There is no condition of real starvation existing in these poorer sections of the city," the commissioner of public charities reported to the mayor on the results of a house-to-house inquiry undertaken on Washington's birthday. "While there are a few families (22 out of 1,472) who are suffering from privation and are in immediate need, the proportion of such families is no greater than is found in the city in normal times." Similarly, the Charity Organization Society reported that there was no indication of panic or hysteria in the families with which its visitors are in touch, and no occasion for resorting to desperate emergency measures.

Nevertheless, the situation is serious. "No one thinks," said Edward T. Devine of the Charity Organization Society, "that the increase in wages comes anywhere near meeting the

increased cost of living in families in which there is only one wage-earner." No less than 1,334 of the 1,472 families visited by the Department of Public Charities "are beginning to feel the effect of high prices which appear to be rising out of proportion to wage or salary increase. Only a small number of the families (77 out of 1,472) by skilful management are able to cope with the high cost of living without deprivation or any undue inconvenience."

A considerable degree of actual starvation may well coexist with an *apparently* normal ability of the people to support themselves. Serious under-nutrition may, and among our self-reliant and optimistically inclined immigrant groups does, continue for a considerable time before the effects are visible to the naked eye. Indeed, with the large proportion of our city populations which permanently live on a smaller income than the minimum, set by standard-of-living inquiries, upon which life can be sustained in health and decency, starvation is entirely a matter of degree.

It should be remembered also that food substitutions to escape the high prices of certain commodities—assuming a rise in prices which is not general—are not in practice as simple as they may seem in theory. It is to be feared that some of the educational endeavors now made by the Department of Health in New York and other cities and by private agencies will be no more successful than similar efforts have been in the past. In several of the belligerent countries, a forcible rationing and system of food tickets has been found necessary precisely because at a time of general scarcity and generally high prices people are not open to suggestions that they give up voluntarily the dietary habits of generations.

Such changes are more natural in times of plenty when what to the ordinary housewife must be an experiment, is supplementary to but not in daily substitution of the ordinary diet of the family. It is in this way that our foreign-born groups gradually acquire an American menu. But when everything goes up in price, our Irish neighbors buy less meat and potatoes; they do not look around for cheaper substitutes of equal nutritive value. The Italians, accustomed to a flavoring of almost everything with onions, lose not only some nourishment but a good deal of pleasure in their food. As for German and Jewish citizens, it would be difficult to think of any suitable substitute for sauerkraut on their menus. Not the most alluring presentations of the virtues of rice will console our Irish, Italian, German and Jewish brethren; and as one after another their favorite staple articles of diet are going,

"SHE ONLY GETS THE CRUMBS"

"IN OUR TOWN"

"FOOD FOR THOUGHT"

Examples of the way the food riots looked to New York cartoonists. At the right, *Rehse in the World*. Center, *Cesare, Evening Post*. Left, *Brinkerhoff, in Evening Mail*, reprinted by the Jewish East Side paper, the "*Day*," with Yiddish captions, labeling the farmer at the top, and, in turn, the carrier, the wholesaler, the retailer and the consumer with her yawning apron.

we can only expect a sudden break in temper such as characterized the happenings of last week.

This point was reached by gradual steps. That in so wealthy a country as ours the difficulty of making both ends meet should normally be one faced by so large a proportion of the people should be a matter for earnest cogitation. That the customary patience of the poor should give place to riot under extreme provocation is regrettable, but not surprising. As nearly always in such cases, the immediate cause of the trouble must seem trifling to the uninitiated, and all sorts of fancy explanations—such as machinations of German agents—are resorted to. In this case, it was a sudden rise, principally in the price of three commodities, not necessities in a scientifically regulated diet so long as substitutes are available, but all of which enjoy universal popularity—potatoes, onions and chickens.

They were the immediate occasion for the riots; but the increase in the cost of living in New York as in other parts of the country has been gradual. Not only has the choice of diet been narrowing down for a long time, but in spite of an unusually low percentage of unemployment for this time of the year, there is approaching nearer and nearer the specter of actual hunger. "The testimony from these experts was unanimous," to quote again the report of Commissioner of Charities Kingsbury, "that many families throughout the city are feeling the burden of the mounting cost of living, and these experts are of opinion that it cannot continue long without the pinch being severely felt, and perhaps the health of the masses of the people undermined." In tens of thousands of homes the consumption of staple articles of diet has had to be curtailed and economies unknown except at times of abnormally severe trade depression have been resorted to, until no further economies are possible.

Although savings and life insurance policies seem normal if compared with a year ago, the fact that wages have gone

up in almost every trade during this year and that each time the rise in the cost of living outraced the wage increase, explains the apprehension of the people. The crisis came suddenly, though it might have been foreseen. Within a few days there was a sudden jump in the price of onions and potatoes and—in the Jewish quarters—of poultry, which is the normal *pièce de résistance* of the Sabbath dinner. Until a few weeks ago, onions could be bought in any part of the city for 9 cents per pound. In the week preceding the riots, the price had gone up to 14 cents; from this it jumped in the same few days first to 16 cents and then to 18 cents. The highest price of potatoes, for some time, had been 5 cents a pound; within a few days it advanced to 7 cents and 8 cents. Chicken, raised in price the previous week from 22 cents to 25 and 26 cents a pound, overnight made a further advance to 29 and 30 cents.

The riots for a time fastened upon these three commodities. Unfortunately, they took the form of attacks on street vendors who, themselves living from hand to mouth on a very meager profit, are the last of the different agents in distribution to be held responsible for high prices.

It should be mentioned that the Socialist Jewish newspaper, the *Forward*, which subsequently was largely responsible for the orderly organization of the protestants, came out on the first day of the riots with a large head-line: "Do not attack the peddlers—it is not their fault!" This warning, however, was not heeded. Carts were overturned, quantities of potatoes heaped in the streets and set on fire with kerosene, chickens snatched from carts and purchasers and trampled under foot or carried on poles as banners in street demonstrations.

One phase of the demonstrations deserves mention because it illustrates the potential power of consumers when organized for a purpose. This is the successful boycott in some parts of New York of certain commodities. Regular

MALODOROUS WEALTH

Onions, according to the Jewish paper, "*Forward*," will soon be seen at the opera house worn as jewels by the wealthy who can afford to buy them at present prices.

pickets were established in some neighborhoods and virtually prevented the sale of poultry, with the result that the price of chicken in these districts immediately fell by several cents a pound. "I'm going to tell dem yiddisher women" (meaning the emergency committee organized by the women of the East Side) was a powerful weapon and brought down prices on many a pushcart. "I'll make it a nickel—don't say nothing to nobody," one intimidated dealer, whose potatoes were marked 7 cents a pound, was heard to say in reply.

Since then, pushcart dealers and retailers, themselves of the people and handicapped in earning their livelihood, have joined a boycott declared against the wholesalers and, in their turn, will employ pickets to discourage the killing and selling of poultry in all kosher slaughter houses and retail shops. Other small reductions in price since the riots have been due chiefly to fear of destruction of small stores of commodities known to the public and, of course, to the anticipation of public action. Even before it has become crystallized in legislative or administrative action, the interest of city, state and federal government in the cost of living has proved sufficient in itself to bring about a "bear" movement all along the line.

It is extremely difficult to secure reliable data on the movement of retail prices up to date. I am indebted to the Henry Street Settlement for a collection of facts concerning the most recent price fluctuations as they affect actual households on the lower East Side of New York.

The Bell family has given up all vegetables but potatoes, which they think are more satisfying when small quantities only can be purchased. They say that meat is about the same price as before, but they can buy only a little of it. At one time jam was substituted for butter, but the cost was much the same; so they resumed butter, spreading it thin. Milk and sugar are used sparingly. Potatoes, from 2 to 3 cents a pound before the war, now are 7 cents. A large turnip that cost 4 cents, now cannot be had for less than 12 or 15 cents. Mrs. Maguire, an intelligent Irish neighbor, has gone on record in her own writing: "Meat we cannot buy. Cheakean we cannot buy. Eggs we cannot buy. Poteos we cannot buy. Onions we cannot buy. Butter we cannot buy. Vagitables we cannot buy." She adds, "my husband and my children are eating mainly oatmeal and rice; and I know that if I don't feed the children, I won't get anything off of 'em when I'm old, because they will be all skin and bones." The Schmidt family have given up all vegetables but potatoes. Mrs. Thompson, a delicate woman who works irregularly, has been dependent on a milk and egg diet. She says that milk as bought from the wagon is 11 cents a quart and that, although her health is dependent on two dozen of eggs a week, she can now afford to buy only one dozen. Several women interviewed said that they had given up tea because they could not afford the price of sugar. Granulated sugar, in a typical Jewish street, increased in one week from 29 cents for a bag of three and a half pounds to 34 cents. One grocer refuses to sell more than one pound of sugar to a customer in a day; this he sells at 10 cents.

The price of meat does not seem to have advanced so suddenly, but the general complaint is that butchers now sell it "German fashion," weighing in gristle and bone, where previously the customer had her choice of a piece she fancied. In the same way, while bakers, owing to an unusual sensitiveness to popular feeling which need not here be explained, have not recently advanced the price of bread, the quality is said to have much deteriorated. The price of a flour popular in the lower parts of Manhattan has gone up in one year from 21 cents to 40 cents. Taking longer periods, we find retail

price increases which are phenomenal for a country at peace, able to raise its own food supply. Not only food but everything has gone up. "I never paid more than \$1.75 for a pair of shoes for my daughter," (now fourteen years old), a German woman told me; "now I cannot get them at less than \$3."

It is a mistake to assume that only the very poor are suffering from the high cost of living. Even classes far removed from destitution are obliged to curtail their normal consumption. "I want to tell you," says a mother of eight children in the Bronx, three of whom earn a total of \$36 a week, "how hard it is for our family to get along now because of the high cost of living. Bread has risen from 7 cents a pound to 12 cents. Before this rise in food, 30 cents' worth of bread a day was more than sufficient and now 70 cents is not sufficient. The meat which used to be 16 cents a pound is now 22 cents; and this make a difference of \$1.25 at the end of the week. Potatoes have not entered our home for the last three months. Last year we bought potatoes at the rate of 9 pounds for 10 cents, and they are now 7 cents a pound. Dried beans are now 18 cents a pound and peas are 15 cents. We have to pay 11 cents a quart for milk, and eggs that are only fit for cooking are 55 cents a dozen. A year ago I paid 6 cents a pair for cotton stockings, today I paid 17 cents a pair. I never paid more than \$2.50 for shoes which lasted me about nine months. This winter I had to pay \$9 for a pair which will not wear as well. Before, I paid 40 cents a pair for new soles and heels and now 95 cents for the same thing—and we have at least two pairs a week to repair." Among clerks there is a marked lessening of variety of food, and many go without things which six months ago they deemed essential for their children. For instance, there is much substitution of cereals for fresh vegetables, and less milk is used.

Since reliable data are unavailable, explanations of the causes for this prodigious increase in the cost of living must remain largely a matter of opinion, and it is necessary to postpone judgment until the results of the government investigation approved by the Senate on February 24 are available. In the meantime, it may be pointed out, however, that the total reduction in the world's food supply, owing to the destruction of crops by war and the replacement of large sections of the farming population in belligerent countries by persons without experience, cannot be without effect on the volume and value of crops.

Whether certain American products, such as potatoes, have been sold cheaper abroad than here is a question of comparative minor importance. For this is not a new phenomenon, and the slight fall in prices at home which could be secured by an embargo would hardly be worth risking possible international complications and the probable reduction of acreage to be sown next season. Produce from the southern states probably can be shipped in large quantities to free-trade countries in Europe and sold there at less than in New York; transportation may be actually cheaper and distribution more direct or better organized. It is a common impression, however, that other inducements in the course of the present war have still further stimulated exportation of articles of food at the expense of the home consumer; and much of the indignation which has made itself felt in the recent riots has been due to this belief. On the Atlantic seaboard undoubtedly the congestion of railroad traffic has contributed to a shortage of supplies. Since this whole matter is under investigation, guesses as to the seriousness of this cause seem superfluous.

On the other hand, while it is impossible, owing to the lack of indisputable evidence, to estimate correctly their respective influence on the present situation, three factors should, in these

discussions, be held clearly distinct: First, a general rise in prices extending *over the whole period of the war*, partly, perhaps, owing to an actual shortage of supplies, but certainly due in the first place to the general decrease in the value of the dollar caused by the influx of gold; second, *during the last few months*, a general realization of the actual or potential shortage of supplies, now or future, which may have been obscured by apparently large margins of recent crops over annual consumption, and a consequent "bull" tendency in nearly every line of produce; third, *during the last two weeks*, speculation on still further shortage for home distribution with the possibility of large government requisitions in the event of the United States entering into a state of war. How seriously this speculation really operated it is impossible to tell until exhaustive investigations now made by the district attorney of the city of New York are completed. There is no doubt, however, that relatively large consignments of potatoes and other produce have actually been held up or deviated.

Remedies cannot possibly be fundamental and drastic unless the respective share of each of these three elements is firmly established on the basis of fact. For this reason, I consider unjustified the popular denunciation of the investigations proposed by the federal government. At the same time, the circumstances do call for an immediate endeavor to make the most essential necessities available at a reasonable price—reasonable as measured by the ability of the people to pay as well as by actual cost. Governor Whitman of New York has declared himself willing to support an endeavor about to be made by Mayor Mitchel of New York to secure legislation at Albany which would enable the city to purchase large quantities of staple foods and sell them retail at cost price (of course, including actual cost of distribution) directly to the consumers.

Lillian D. Wald, in her presentation of the case for such action before Mayor Mitchel, laid emphasis on the need of having distribution directly controlled by the city, either by the establishment of additional municipal markets or in the

streets. It is only by direct action that any illegal or legal but morally indefensible combination of wholesalers or middlemen for the purpose of exacting price increases unwarranted by an actual shortage of supplies can effectively be broken. While it is, of course, perfectly fair for a community to protect itself by large cooperative purchases and thus create competition for private dealers who, buying in smaller quantities, are unable to secure such favorable terms, it would not be expedient to create hardship by suddenly depriving so large a section of the community of its normal trade. Miss Wald, therefore, suggested to the mayor that possible criticism of the proposal on this score might be forestalled by fixing the retail prices for the city's direct food supplies to the people at a small profit above the actual cost of purchase and distribution, so as to enable private dealers to retain their custom so long as they will be content with a normal profit.

It is hardly necessary in the SURVEY to point out that the establishment of food kitchens or other methods of charitable aid, far from answering the need of the hour which is quite beyond the possibilities of such expedients, would in every way be most undesirable. Yet, as in the past, there is the danger that misguided philanthropists will express their generosity in this way unless the steps for a more drastic handling of the situation taken by the responsible public authorities are on an adequate scale. While, of course, popular education in food values and advocacy of substitutes for the articles which are scarce form a valuable part of such action, for the reason stated above, this can hardly be expected to be very effective just now. Direct municipal food purchase and distribution apart, there is only one effective means of alleviating the distress caused by high prices without introducing worse evils. This is a general insistence on wage and salary increases which so far have notoriously lagged behind the rise in the cost of living. The public authorities themselves have not too good a record in this matter. Let them set the example, and let all fair-minded citizens support organized labor in just efforts to secure its due.

THE POOR HOUSE

By Sara Teasdale

Contributed as a model poem for competitors in the Minneapolis public schools' "health poetry" contest during that city's community Health and Happiness Week.

HOPE went by and peace went by
 And would not enter in;
 Youth went by and health went by
 And love that is their kin.

Those within the house shed tears
 On their bitter bread;
 Some were old and some were mad,
 And some were sick abed.

Gray death saw the wretched house
 And even he passed by—
 "They have never lived," he said,
 "They can wait to die."

COMMON WELFARE

THE PRESIDENT ASKS FOR ARMED NEUTRALITY

PRESIDENT WILSON on February 26 asked the expiring Congress to grant him authority and means to put into operation the "armed neutrality which we shall know how to maintain and for which there is abundant American precedent."

"No one doubts what it is our duty to do," said the President. "We must defend our commerce and the lives of our people in the midst of the present trying circumstances with discretion but with clear and steadfast purpose. . . . It is devoutly to be hoped that it will not be necessary to put armed forces anywhere into action. The American people do not desire it, and our desire is not different from theirs. . . ."

"I am anxious that the people of the nations at war also should understand and not mistrust us. I hope that I need give no further proofs and assurances than I have already given throughout nearly three years of anxious patience that I am the friend of peace and mean to preserve it for America so long as I am able. I am not now proposing or contemplating war or any steps that need lead to it. . . ."

"No course of my choosing or of theirs will lead to war. War can come only by the wilful acts and aggressions of others. . . ."

"I believe that the people will be willing to trust me to act with restraint, with prudence, and in the true spirit of amity and good faith that they have themselves displayed throughout these trying months; and it is in that belief that I request that you will authorize me to supply our merchant ships with defensive arms should that become necessary, and with the means of using them, and to employ any other instrumentalities or methods that may be necessary and adequate to protect our ships and our people in their legitimate and peaceful pursuits on the seas. I request also that you will grant me at the same time, along with the powers I ask, a sufficient credit to enable me to provide adequate means of protection where they are lacking, including adequate

insurance against the present war risks.

"I have spoken of our commerce and of the legitimate errands of our people on the seas, but you will not be misled as to my main thought—the thought that lies beneath these phrases and gives them dignity and weight. It is not of material interest merely that we are thinking. It is, rather, of fundamental human rights, chief of all the right of life itself.

"I am thinking not only of the rights of Americans to go and come about their proper business by way of the sea, but also of something much deeper, much more fundamental than that. I am thinking of those rights of humanity without which there is no civilization. My theme is of those great principles of compassion and of protection which mankind has sought to throw about human lives, the lives of non-combatants, the lives of men who are peacefully at work keeping the industrial processes of the world quick and vital, the lives of women and children and of those who supply the labor which ministers to their sustenance. We are speaking of no selfish material rights, but of rights which our hearts support and whose foundation is that righteous passion for justice upon which all law, all structures alike of family, of state, and of mankind must rest, as upon the ultimate base of our existence and our liberty."

Readers of the SURVEY had in their

"THE DASHING WAVES AND THE IMMOVABLE ROCK"

hands three weeks before the President made armed neutrality the basis of American policy a clear interpretation of what the term means not only as a program for maintaining rights at sea, but its potentialities in the direction of a league of neutrals.

In the midst of an epidemic, social workers and thinkers turn to socially-minded physicians for counsel as to ways and means. When old laws, like those of master and servant, fail to serve present wage-earning conditions and augment the suffering from industrial accidents, they turn to the socially-minded lawyer for counsel. So, with the human consequences of war written large across all Europe, the SURVEY turned to a socially-minded historian and student of international law for a discussion of alternatives to war in maintaining sea rights.

Professor Hayes' article on armed neutrality in the SURVEY for February 10 was the result. Its analysis has served others than social workers. It is republished in the *March Review of Reviews*—the first of the leading articles of the month. Reprints of it were distributed to Congress by one of the peace committees; and copies were sent to the White House by several friends of President Wilson.

A CALL TO UPHOLD AMERICAN RIGHTS AND HONOR

A CALL to Americans "to assure the united support of the American people in taking effective action to uphold American rights and defend the national honor" was issued February 26 by a committee of which Nathan A. Smyth, New York city, is secretary.

The call is in a sense a rejoinder to the advertisements and appeals sent out by various pacifist groups, which the signers regard as efforts to paralyze action. Whether war or something short of war is necessary, the call does not state. It demands "effectual measures to safeguard our shipping and our citizens, rather than to wait for Americans to be murdered and then go to war to punish the offender." The call reads:

"Many citizens who are intensely convinced that the present state of the German submarine question demands prompt and vigorous action in defense of American rights hesitate to press their views for fear of embarrassing the President. No such consideration stays the hand of those who seek to paralyze any effort he may make to carry into practical effect his pledge to omit no act necessary for the protection of American ships and American citizens engaged upon lawful errands on the high seas. The clamor of extreme pacifists, and of those who from other motives are opposed to this patriotic course, makes itself insistently heard, within Congress and without. It is no longer permissible, therefore, for those to remain silent who wish to support the President in the protection of our national rights and the defense of our national honor.

"Our ships and our flag are being excluded from the seas by the threat of death and destruction conveyed in Germany's declaration of war on neutral shipping. The need of the hour is to take effectual measures to safeguard our shipping and our citizens, rather than to wait for Americans to be murdered and then go to war to punish the offender. To refuse, or too long delay, such protection would be to acquiesce in the subjugation of American rights to German domination. The time has come to assure the President that he will have the overwhelming support of his fellow-countrymen in taking effective measures to meet the intolerable situation with which the country is now confronted."

All those who desire to join in expressing these views are requested to send their names to the secretary at 80 Broadway, New York city.

Among the signers are Joseph H. Choate, William H. Taft, Henry L. Stimson, Robert S. Brewster, Alexander M. White, James Byrne, Julius Sachs, Alton B. Parker, Elihu Root, Philip J. McCook, Charles C. Burlingham, William J. Schieffelin, Thatcher M. Brown.

THE OPPORTUNITY FOR MEN OF GOOD WILL

A MESSAGE on the present crisis to "men and women of good-will" is being distributed throughout the United States by a committee of the Fellowship of Reconciliation. Their approach is shown in the following:

"The immediate legal issue is the right of American citizens to pursue their legitimate business on the high seas freely in accordance with international law. This is, without doubt, important enough; yet beside the deeper moral issues it sinks into relative insignificance. The crucial fact in today's world situation is not infraction of international rules, but contempt for humanity and ruthless disregard of moral and spiritual principles. These are the deeper wrongs

"Confronted with the reality, Dante tears up his description of hell."—
From Berko's Illustrated News (Hungarian), New York city.

which every man and woman who reverences human nature instinctively condemns. The task of the United States in this decisive hour is not chiefly to vindicate a legal right, but to uphold the principles by which men live.

"... Germany's new submarine policy has staggered the world. . . . To condone so great a wrong against mankind would be disloyal to every principle of humanity. Yet it is not by war with Germany that the United States can champion the moral order of Christendom. . . . Now is the time for this nation to have courage to go forward in a better way."

The signers point out that "all that can be said about the principle of overcoming evil with good will avail little unless the proponents are able to make the principle effective in action. If international good-will is to be more than an ideal for the future, adequate means for its expression in service must be discovered and employed."

"Work now in progress," says the committee, "for aiding prisoners of war of all the warring countries and for miti-

gating the distress of destitute populations in Belgium, Poland and Armenia offers existing opportunities. Plans are under consideration for the extension and greater unification of undertakings to meet immediate needs and to prepare for the great work of reconstruction which awaits us at the close of the war. At this time of widespread suffering—immeasurably the most terrible that we have ever known—shall not the men and women of the United States augment many-fold their gifts and efforts to meet the world's need on a scale commensurate with national ability?"

The Fellowship of Reconciliation offers to furnish information as to "opportunities for practical work and agencies through which gifts and services may be effective." Edward W. Evans, 511 Otis building, Philadelphia, is secretary, and the signers include, as individuals, men and women who are active leaders in such different fields as settlement work, business and banking and the bar; Young Men's and Young Women's Christian Associations, the student Christian movement, college faculties, and the church.

WAR RELIEF URGED UPON THE CHURCHES

IN the SURVEY for February 10 it was pointed out that the new handicap to the relief of suffering in Europe raised by the break of diplomatic relations with Germany and the submarine campaign was primarily a psychological one; that a falling off in subscriptions to the various relief organizations was the danger most to be feared. The Federal Council of Churches of Christ in America has realized this and is conducting a special campaign against the mistaken notion that American relief work in Europe is no longer possible or is overshadowed by greater needs at home.

An influential daily paper said recent-

ly that in the matter of war relief "the churches have not been greatly moved." The federal council, which is in close touch with relief activities and with the work of the churches, admits that this is unfortunately true of many of them but asserts that other churches and Sunday schools are giving in a generous and systematic way and expect so to give during the continuance of the war. It reports that there is less disposition on the part of churches and individuals than formerly to feel that, having made a single gift for war relief, there is no further obligation. Indeed, there is an increase in gifts on the basis of regular contributions.

Some in this country say they would prefer to give for a work of permanent

reconstruction in Europe rather than give in the way of charity. But Mr. Hoover and others in intimate touch with the situation in Europe point out that to put food into the mouths of children is the most urgent immediate work of permanent reconstruction. By some authorities it is believed that the greatest permanent injury to the physical well-being of the European peoples will not be the deaths, the wounds and the disablement of the battlefields—though millions of men will be temporarily or permanently crippled—but the weakening of many millions of children through lack of nourishment at a time of life when it is essential to healthy growth and development. There are signs already, in some nations, that the next generation will be undersized, anæmic, stunted in its mental life, with abnormal moral predispositions as well as predispositions to disease.

The work of reconstruction in the usual sense, the federal council urges, cannot take the place of this immediate and insistent appeal to American generosity. Indeed, judged by the scale of American giving to date, it is altogether too great a task for private gifts. The work of physical reconstruction in one country alone, it is estimated, will cost approximately four billion dollars, whereas for all relief purposes in all countries since the outbreak of the war, America has given but fifty millions. The council appeals to pastors, Sunday-school superintendents and other church officers to provide for immediate and regular offerings until the end of the war for the relief of the most immediate and primary wants of men, women and children in the suffering countries.

TO ENFORCE THE FEDERAL CHILD LABOR LAW

THE first public announcement of preparation for the enforcement of the federal child labor law when it shall take effect September 1 is contained in a letter to governors of all the states issued by the secretaries of labor and commerce and the attorney-general of the United States, comprising the administrative board in charge of the task. The governors are asked to call upon their respective legislatures for action which will avoid duplicate state and federal systems of ascertaining the ages of children to be protected. They point out that but one certificate should be required, and that the states need only meet the standard of age-determination set by the federal act to save the bother and expense of duplicate working papers.

Secretary Wilson pointed out that the law permits the federal board to accept the certificates of states which it approves. "There are forty-eight different child-labor laws," he wrote. "On the point of proof of age of children there are more than forty-eight different

PEACE THROUGH SONG

Singing together—one of the most inspiring of common actions—is proposed by the International Music Festival League as a means to mutual understanding and peace. An international music festival, planned for May in New York city, is to include groups of costumed singers from many nationalities and from capital and labor. The cover of the league's announcement is reproduced above. Copies may be had of Mrs. Kenneth J. Muir, 58 West 58 street, New York city

sets of regulations, varying remarkably. The board has suggested that the states having legislative sessions empower a state board or a state official to make state regulations when our regulations have been determined upon." Or they may enact approved requirements for proof of age.

An appropriation of \$200,000 to be used in the enforcement of the law is before Congress and has the hearty support of the National Child Labor Committee and its 9,000 members.

SOCIAL LEGISLATION IN THE STATES

HUNDREDS of bills—very likely thousands—embodying various proposals of social reform are before the forty-two state legislatures in session this year. Most conspicuous are the health insurance measures in ten states reviewed by Dr. Rubinow on page 631 in this issue, the Missouri children's code described at length by Roger N. Baldwin in the SURVEY for December 30, 1916, and a tidal wave of prohibition bills.

"Bone dry" is the watchword of the year. Everybody knows that the federal Supreme Court upheld the constitutionality of the Webb-Kenyon law, which enabled prohibition states to prevent shipments across their borders from unregenerate neighbors. And nearly everybody knows that, by a rider on the post-office appropriation bill, Congress will probably act to make it a crime to ship liquor into a prohibition state, thereby adding to the ten states already "bone dry" fourteen others which prohibit the manufacture and sale of liquor but permit its importation for personal use. The federal prohibition amendment, which proposes the same result for the whole country, is expected to pass the House but not the Senate, this final week of the session.

But of state legislation, even the Anti-Saloon League can scarcely keep track. Its most recent information is that we now have twenty-five prohibition states, fourteen of them being dry by constitutional, eleven by statutory, action. The latest developments are as follows:

The Minnesota legislature has passed a bill submitting a state-wide constitutional amendment at the regular election in 1918 to take effect July 1, 1920. Utah has passed a stringent "bone dry" prohibition statute unanimously in the Senate and with only one opposing vote in the House, and the governor has signed it. Indiana passed an equally stringent law by a vote of more than two to one in the House and more than three to one in the Senate. The Wyoming legislature has voted, without a single dissenting vote in either branch of the legislature, to submit state-wide prohibition to a vote of the people, and is also considering statutory prohibition to take effect January 1, 1919. A state-

Europe's many tongues and consequent misunderstandings

The Fruits of Understanding

Throughout the vast area of this country prevails a common tongue. The whole of Europe hardly exceeds our territory, yet Europe has more than a score of nationalities and many different languages.

In the United States the telephone, as exemplified by Bell System, renders a matchless service in its mastery of distance and in encouraging the use of a universal language. This accomplishment is in spite of the great influx of population from every country in the world.

In Europe the independent countries, separated by barriers of language, and lacking efficient

telephone service, suffer from inadequate facilities for intercommunication.

We now talk from the Atlantic Coast to the Pacific, and eliminate more than three thousand miles. In Europe, contending with a babel of voices and unrelated telephone systems, a bare quarter of that distance has been bridged with difficulty.

The ideal of the Bell System has been day by day to extend its service in the interest of all telephone users. Its efforts have resulted in providing the facilities to unite cities and rural districts in true American democracy.

New Book About Headaches

Headaches are so common and cause so much wholly unnecessary pain and suffering that Dr. W. H. Riley, Neurologist at the Battle Creek Sanitarium, has written a book telling how headaches may be prevented. During his many years of practice, Dr. Riley has prescribed for thousands of cases in which headaches have been prominent symptoms. Therefore, what he now tells you in his book is not theory, but facts—facts which are the result of thoroughly practical experience. Dr. Riley tells you how to get at the causes of headaches and remove them. His instructions are very simple and easy to understand. No difficult regime. Just plain common-sense about diet, exercise, rest and sleep—methods you can easily put in practice in your own home. No drugs. Only natural means. Dr. Riley's book on "Headaches and How to Prevent Them" is not large, but of great value to the headache sufferer. Price only \$1.25. Order today. Ask your regular book dealer or send direct to us. You take no risk for, if you are not entirely satisfied with Dr. Riley's book, you may return it in five days and we will promptly refund your money. We let you be the judge as to whether this book can serve you. Is this fair?

wide constitutional referendum is pending in the Illinois legislature.

"Bone dry" legislation has passed in the dry states of Washington, Oregon, Arkansas, Oklahoma, Iowa, Tennessee; and in Alaska by action of Congress. It is under consideration in Maine, Colorado, South Dakota, and other states. Michigan is considering the submission of a constitutional amendment to be voted on at the state judicial election April 2, forbidding the receipt or possession of alcohol for beverage purposes after April 30. Michigan is already dry by constitutional amendment; the present proposal would put "bone dry" into the constitution, too.

Woman suffrage has made notable gains the past two months. New York and Maine have passed the customary constitutional amendments to go to referendum vote next fall. Ohio has granted presidential suffrage only. North Dakota and Indiana have included municipal and county as well as presidential suffrage, after the Illinois plan, which goes to prove the suffragist contention that votes-for-women tends to spread in a neighborly way from one state to another.

OVERRULING VETERAN PACIFISTS

ABOUT four o'clock on the last day of the conference of some nineteen peace organizations in New York city, February 22-23, the gathering woke up to the fact that it was not a joint effort to find a minimum working plan on which both conservative and radical pacifists might agree, but a "peace town-meeting."

Except for a small insistent minority, the conference had enthusiastically adopted resolutions unalterably opposing war both as a general principle and at the present crisis; urging the settlement of questions now arising by conciliatory and judicial methods; condemning the section of the espionage bill which makes it a crime for anybody to seek information regarding the state of national defense, *even in time of peace*, opposing conscription in state or nation and military training in public schools.

Then it was that Anna Garlin Spencer, herself a radical peace advocate, arose. "I've watched a splendid town-meeting," said she, "but I haven't come to the conference I thought I was invited to attend. I supposed I was to confer in private with delegates with accredited credentials from various peace organizations, and deliberately plan a working arrangement so that pacifists would know how different societies stand on certain specific matters."

The conference, aroused, admitted the truth of Mrs. Spencer's criticism. It decided, however, that it was better late than never to attempt amends and appointed two committees, one on cooperation and leadership, consisting of

ten delegates from as many societies to work after adjournment along the lines in which the conference itself had failed, the other to submit a program of immediate action.

Seven recommendations were made by the latter, including the appointment of a delegation to convey to the President the conviction of the conference that the country could be kept out of war; the establishment of a clearing house and bureau of information of peace societies; the organization of a cross country speaking tour in behalf of peace; the use of country papers and the religious press to spread anti-war literature; and the preparation of a leaflet opposing the military method of settling disputes with Germany.

Despite this eleventh hour effort at reform, the spirit of the meeting could not be changed and no action taken could be interpreted as binding the united support of the peace organizations represented.

Thus it is probable that a resolution, which was finally adopted, demanding an advisory referendum vote of citizens before Congress declares war, would have been dropped from a minimum working program of all the peace organizations. Delegates of older peace societies while endorsing whole heartedly such principles as arbitration and mediation, shied at the idea of popular judgment shaping national policy; those from newer pacifist organizations argued that the people who must wage war should have the opportunity of determining war.

An organization which made some attempt to instruct its delegates to the conference was the National Woman's Peace Party. At a meeting of delegates from state branches in New York city, February 21, the party pledged itself to urge citizens of the United States to refrain from entering the war zone; to remind our government of the successful settlement of international controversies by arbitration; to urge, in case of an "overt act," the use of its navy as a police force without declaration of war; to protest against the United States allying itself with any belligerent; to keep alive the responsibility of America in helping the warring nations to find a basis for a just and stable peace at the earliest practicable moment; and to oppose compulsory service acts, military training measures, and the espionage bill.

Again opposition arose, especially from the Massachusetts branch, to the endorsement of an advisory referendum of the people before a declaration of war. It was finally voted to secure a referendum from the party membership on the question before committing the entire Woman's Peace Party—a somewhat paradoxical proceeding which led Jane Addams, the chairman, to remark: "All the delegates seem to be in sympathy with the principle of the referendum!"

The High Cost of Living

THE increasingly high cost of living can be reduced at once only by the application of Domestic Science, which shows how to lessen the food bills, how to save time and labor, how to keep the family in health, how to manage all the details of housekeeping in the best and easiest way. Domestic Science makes the work of the housekeeper an interesting profession instead of deadening drudgery.

The correspondence courses of the American School of Home Economics were prepared by leading teachers, especially for home study. They have been tested, proved by over 15,000 housekeepers, teachers, institution managers, etc.

The attractive illustrated 100-page handbook of the school, "The Profession of Home-Making," will be sent on request. Address a postcard or note—A. S. H. E., 519 West 69th St., Chicago, Ill.

Essential to Health and Comfort

Mattress Protectors are necessary for cleanliness of the Mattress.

No good housekeeper considers her bed rightly equipped without Mattress Protectors.

A sheet in itself cannot properly protect the Mattress.

During sleeping hours the body in complete repose throws off waste tissues and gases, much of which penetrate the sheet and are absorbed by the Mattress if not properly protected.

Our Quilted Mattress Protectors are made from pure white wadding incased in bleached white muslin easily washed whenever necessary.

Dry out light and fluffy as new.

They protect your Mattress from all impurities and lengthen its life.

A single trial will convince.

"None genuine without
Trade Mark"

Insist on seeing our trade mark and name—Excelsior Quilted Mattress Protector—on each Protector.

President Wilson Looking Once Again Toward Peace	658
Boston Patriots Support the President War or Peace—Letters Evoked by The Fighting Issues	659
	674

"THE constitution follows the flag," we said of the Philippines. But among the camp followers of the great war are the native germs of every far-flung clime whose men are fighting in the common trenches. The battle fronts have become an exchange for microbes as the wheat pit is for grain. And the internationalizing of pestiferous bugs threatens the home of every returning soldier. Page 649.

ALL that Europe has tried in the way of half-loaves (rather half-pints) of prohibition, we in this country have tried and discarded, Mrs. Tilton finds; even the famous Gothenburg system is a weak and erring brother. The final article in her series challenging King Alcohol in his cups and out. Page 651.

APPOINTED first secretary of the pioneer State Board of Charity of Massachusetts in 1863, Frank B. Sanborn was the dean of charity workers and a survivor of the famous literary group at Concord. His recent death was the occasion for many reminiscences, none more interesting than that of Alexander Johnson, himself a pioneer state board secretary in the middle west. Page 656. The photograph of Mr. Sanborn on the cover was taken at the time of his last visit, a year ago, to the office of the Springfield *Republican*, to which he was a contributing editor before the civil war.

PRESIDENT WILSON, in his second inaugural, holds we shall "stand firm in armed neutrality"; our part is "the part of those who mean to vindicate and fortify peace." Page 658.

SOCIAL legislation has been the poor relation at the short session of Congress ended last week. Page 658.

"EVERYBODY'S doing it" in Connecticut when it comes to introducing bills to prevent night work by women in the munitions factories. But the rush for reform has brought forth four inexpertly drawn bills which may fail to get the girls out of the night shifts. Page 665.

WOMEN trade unionists are demanding equal pay for equal work on government munitions and quoting the working women of France in support. Page 665.

YUCATAN has sent the chief of her department of public education to fetch help in establishing the modern sort of little red schoolhouses in this Mexican state ruled by a "socialistic despot." Page 659.

PNEUMONIA, racing tuberculosis for first place in the death rates, is reported on by a commission which the optimistic may hope will shortly turn into a coroner's jury. Page 660.

AIMING at the Rockefeller boards, Congress has shot off a broadside which bars from the service of the federal Bureau of Education all representatives of outside educational bodies who have helped Commissioner Claxton in his research and special report writing, —or have foisted their propaganda on the government and got it franked through the mail, as you prefer to look at it. Page 664.

HIGHBROW and lowbrow, educational and political, administrative and supervisory—all of Illinois' 128 state boards and commissions have been thrown to the sharks, if sharks there be in Lake Michigan. The entire civil administration is to be placed in the hands of nine departments. Page 663.

Social Preparedness

For almost three years, Canada, deeply involved in a war on the far side of an ocean, has found a way to care for soldiers' families and to give effective outlet to the deeply stirred forces of good will throughout the dominion. For an early issue, an article on the Canadian Patriotic Fund, studied on the ground, by

The Editor of the SURVEY

When Microbes Meet Some Long Range Results of the Tug of War

“THE theater of war has become a modern Tower of Babel,” says Dr. William Colby Rucker, of the United States Public Health Service, in the essay for which he received one of the Wellcome prizes, appearing in the March issue of the *Military Surgeon*. “The Siberians suddenly found themselves in Poland; the Russians were quickly transported to Turkey and Persia. French, Irish and Scotch occupied the Gallipoli peninsula, while on the firing line in Flanders, Arabs, Algerians and Sudanese stood shoulder to shoulder. Whole armies suddenly exchanged the northern environment of England for German Africa, Mesopotamia and the Dardanelles. A battalion of Fijis appeared in northern France. The Australians occupied the German islands of the South Pacific and the Teutons poured over into Poland and Serbia. Cairo, Suez and Greece became the temporary abiding place of the New Zealanders.”

The men of all these nations brought with them to the new center their own language, their own customs to some degree, and their own particular diseases. They were subjected to new modes of life, and to change of food and clothing. Groups were placed in intimate contact with other groups in whose bodies live infecting agents of diseases foreign to their comrades. “They have dug deep into soil saturated for generations with the manure of animals and of men.” Only one result was possible, and that promptly followed. Already examinations in military hospitals in the territory of Venice have shown that more than 2,600 soldiers in these hospitals harbored intestinal parasites foreign to the region—one of these parasites the American hookworm. No less than 30,000 cases of typhoid are said to have been present at one time among the French troops; some cholera broke out among German troops in Galicia and the Rakitno marshes; tetanus occurred with frightful regularity; lack of means to rid the troops of lice permitted typhus to make large inroads early in the war. Malaria has invalidated many men, and pneumonia attacked men from southern climates unused to such cold; and enteritis followed the use of poor or unaccustomed food.

“Conversely,” continues Dr. Rucker, “places now occupied

by foreign troops are themselves liable to infection with the organisms which these troops have carried in their bodies from their distant homes. In many instances, these organisms will not thrive because of lack of favorable climatic environment or obligatory intermediate host, but unfortunately this world movement of armed men is bound to result in at least a partial change in the geographic distribution of some of the infections of disease.”

There is, however, another side to the story. Dr. Rucker tells how, as promptly as known scientific means of prophylaxis could be applied, these outbreaks of diseases were controlled. Obligatory inoculation drove typhoid from the ranks. Anti-cholera prophylaxis eradicated that disease. Only one-half of 1 per cent of the German troops had the disease, 10 per cent of these cases proving fatal—a striking contrast to the 50 per cent of fatal cases in the civil population who had not been inoculated. Similarly the proper serum has gone far to check tetanus. And of the total results, Sir William Osler says: “Never before in history has so great a host been assembled; never before in war have armies been so healthy.”

Dr. Rucker's essay describes the practical machinery of sanitation whereby so many valuable results have been attained. There are the groups of non-commissioned officers, including sanitary inspectors, chemists, builders or plumbers, directed by a man who in civil life was a medical officer of health or held a public health degree; or sometimes a bacteriologist or a sanitary engineer. There is the long routine of “guarding water supplies, and teaching those of doubtful origin the testing of rations; the operation of bath-houses and laundries; the issue of parasite-free clothing and blankets; the cleansing and disinfection of houses; the destruction of garbage and manure or other possible breeding places for flies; the cleanliness of camps; the isolation of patients suffering from infectious disorders; also the contacts thereto both in the military and the civilian population; the administration of typhoid and paratyphoid prophylactic; the search for ‘carriers;’ the immediate investigation with the help of the mobile and base pathological laboratories of all outbreaks, whether among the troops in the fighting zone or those on the lines of communication or elsewhere; and the maintenance of spot

maps, charts and tables revealing the health history of every unit in the field."

But besides this tremendous confirmation of what present medical and sanitary science is actually able to achieve, Dr. Rucker outlines some of the problems not yet settled—new and bizarre ailments for which hardly a name has yet been devised, certainly no treatment yet discovered: trench fever, trench foot, war nephritis, epidemic jaundice, "influenza polonica," for instance. And yet more serious, there is the mental disability resulting from the shock of heavy gun-fire. Says Dr. Rucker:

"It has been known for some time that about one-fifth of all soldiers discharged are discharged on account of mental disability. Striking as is the prevalence of mental disease among soldiers and sailors in time of peace, it should be borne in mind that this is greatly increased during war. Injuries of the central nervous system due to the wind of explosives, hysterical aboulias [loss of will-power], developing in the heat of battle, hypomaniacal outbursts in protracted lights, nerve injuries of missiles, malingering of mental symptoms to escape active service, hypochondriasis and neurasthenia in young soldiers—all of these and many more have resulted from the present conflict. The intense emotional strain associated with warfare causes acute exacerbations of some of the milder psychotic and borderland cases, which were able to get along unnoticed under the less stringent requirements of civil life."

Hence, mental disease, even more than physical, will spread over Europe after the war. The resulting danger to the United States through immigration, Dr. Rucker emphasizes and calls for the utmost vigilance of health authorities to guard against an influx of mental defectives.

"Naturally, our sympathies are touched and it will be with regret that we turn from our doors the lame, the halt, the blind, the insane, and all the flotsam and jetsam of the European war, but the national health demands that this duty be performed with thoroughness."

There is in addition an economic element in this probability of the spread of disease. It has often been said that the whole war has had a beneficial effect upon the health of England, the increase in health coinciding with the fall in unemployment and pauperism. A number of foreign residents have left this country, not more to enlist in their respective national armies than to be on hand when the renewed demand for labor begins. Factories destroyed or decayed from non-use will be rebuilt; powder mills turned into dye works; gun factories will turn out plow machines; looms will whirl again; and wheat grow where armies are now camping; labor will prosper as never before, and rights which never have been heard of in Europe will be accorded the industrial class. But the possibilities are also evident of renewed competition, and of the nervous and physical strain resulting therefrom.

"It is interesting to note one disease condition in the United States which is being profoundly influenced by the European war. The improved economic conditions in the United States in 1916, as compared with previous years, resulted in a considerable diminution in pellagra. This disease is an extremely sensitive barometer of economic conditions, and it has been feared that there will be an increase in the number of cases early in 1917. The rise in the cost of forage has caused many wage-earners in the southern United States to sell their cows, thus depriving the family of milk, one of the best pellagra prophylactics. The present high cost of living, particularly the high cost of all foodstuffs, meats, eggs and the

legumes in particular will reduce the ration of the average family. This will react to increase the amount of pellagra. If there is a rise in rents as well as food prices, these will combine to increase the prevalence of tuberculosis.

"To sum up the situation, the increase in disease in the United States as the result of the European war will take place in the economic disease group."

Some practical obligations upon the world form the conclusion of Dr. Rucker's paper, obligations imperative upon all countries, neutral or belligerent. One such obligation is the prevention of infant mortality. High prices and scarcity of food have raised the child death-rate very high. In warring nations child welfare has become a serious matter in the light of maintaining a future population. Throughout all Europe measures for infant welfare are receiving more attention than ever before.

The future of wounded soldiers is another obligation that is being fairly met. "First of all the disabled soldier must be aroused from the condition of moral inertia which is so frequently the outcome of the disablement. . . . The ultimate consequences will be appalling if these cripples are permitted to lapse into a state of mental lethargy."

These measures have a direct bearing on the spread of disease all over the world after the war for, as Dr. Rucker concludes, although health rules are a part of all wounded soldiers' training, some will return to their homes carrying the new infections, particularly those who have been in prisons. There is little need to fear "war pestilences," although tuberculosis will doubtless be a menace for a long time.

Dr. Prinzing's book, reviewed in the SURVEY for February 10, showed that armies of ancient times, of Middle Ages, and even of so modern times as the Balkan wars, have been attacked by infectious diseases because the means of prevention were unknown or imperfectly known. And upon the return of the army to civil pursuits, there occurred widespread dissemination of infecting agents of disease. Hence the belief that war was the inevitable precursor of pestilence. Dr. Rucker thus summarizes the probabilities:

"The amount of disease which will occur in Europe after the war is dependent upon two factors: first, upon the degree of the community's sanitary intelligence; and, second, upon the economic conditions which will prevail. Most of the nations of Europe are well abreast in public hygiene. A few are backward, and these are the ones that will suffer most. On the western front none of the so-called war diseases exist in epidemic form at present. . . . Turkey is in the midst of a typhus epidemic and in view of its lack of generalized hygienic education and the fatalistic character of its people it may be considered as highly probable that outbreaks of other diseases will occur there both during and after the war."

Many who have acquired infection in their new environments will constitute foci of infection at home. The health officer of the future must combat diseases now unfamiliar. This change of habitat Dr. Rucker illustrates from the American Civil War. Before the war, typhoid had been a strictly urban disease; afterward, it followed returning soldiers to their country homes and has made rural districts its headquarters ever since. The preparation, therefore, of all home countries for their returning soldiers and the new possibilities of infection is another obligation of immediate importance. This preparation means, after all, only a larger application of the known principles of community hygiene, more thoroughly than ever by the trained health officer; more loyally and with good-will by the community.

THE TANDEM THAT WINS—ORGANIZED TOTAL ABSTINENCE
 RUNNING AHEAD AND PROHIBITION FOLLOWING AFTER

Turning Off the Spigot¹

IX. Do We Want the Gothenburg System?

By Elizabeth Tilton

"The Gothenburg system, gold in theory but a bad nickel in practice."—PROF. CURT WALLIS, of Sweden (Liberal).

"Up to now regulation [the Gothenburg system] = 0."—DR. IVAN BRATT (Conservative), author of Bratt System for Reforming the System.

"The money interest got ahead of the moral interest and the whole Gothenburg system went off the rails."—AUGUST LJUNGGREN (Liberal), member of Upper House, Sweden.

"Prohibition in Sweden is as certain as Amen in church."—MAYOR PETERSEN, Sodertalje.

IF not prohibition, what? License satisfies no thoughtful man and high license has been found wanting. But, say the academic, the Swedes do it right. The Gothenburg or Company system—keeping the saloon, but reforming it by taking from it the private profit—is what we want. If they are very up to date they add Dr. Bratt's idea of giving each drinker a permit and removing the permit when intemperance occurs, although sometimes they do not know that these permits apply in Sweden only to buying bottles of brandy, and that drinking at the bar requires no permit.

Shall we use this system in large cities where prohibition might not get enforcement, in such boozily backward cities as Boston or Baltimore?

With a view to deciding this question, I am now going to set down the facts concerning Scandinavian legislation as they came to me predisposed by hearsay to believe that, as the Committee of Fifty said, despite its imperfections, the Gothenburg company system contained "the essence of scientific management" of the liquor problem.

First, we note that the countries in which the company system has been used are small and the population homogeneous—Sweden (1911), 5,561,799; Norway, 2,411,948; Finland, 3,154,825. Secondly, the great declines in consumption preceded the system. The story is as follows: In the early part of the nineteenth century drunkenness in both Norway and Sweden reached alarming heights. Beer and wine played almost no part in the drink customs of the masses, but the people drank a heavy intoxicant made from corn or potatoes called branvin, practically whiskey. They

believed it necessary to fortify them against the cold, and almost every cottage had its own still. Drunkenness became fearful, and finally, about 1830, a reaction set in. America sent over helpers; education and agitation arose and consumption fell in Norway from 16 liters per capita in 1833 to 10 in 1843; in Sweden it fell from about 46 liters in 1829 to about 22 liters in 1850. (These figures are only estimates, but all agree that the fall was great.)

But in the forties it was seen that it was not enough to educate; the virile would respond, but the weak and pleasure-loving needed the removal of the ever-ready opportunity. So we get in Norway, 1845-48, and in Sweden, 1855, two prohibition laws, one prohibiting home-distilling, the other giving to country districts in Norway, and to all communities in Sweden, the right to decide whether or no they should have any bar or retail bottle sale of spirits. The response to this last measure was amazing. Dr. Wieselgren, dean of Gothenberg, Sweden, says: "Before 1855 whiskey could be bought in almost every cottage; in 1856 one might travel through whole provinces without finding a single place where it was sold." The result of this educational campaign plus the above prohibition measures was that branvin consumption fell in Sweden from about 22 liters per capita (1850) to 9.5 liters in 1856-60.

Speaking of the similar laws in Norway, Dr. Scharffenberg, of Christiania, says: "The results of this intelligent legislation were magnificent." And he shows us that under it distilled liquor consumption (branvin) fell from 11.3 liters per capita in 1843 to 6.09 liters in 1851-55.

These laws really placed about 80 per cent of the population of both countries under a dry régime, and thus they have lived for over fifty years, the prohibition later, as beer and wine became popular, usually including them also. Importation for private use was, however, allowed and selling to travelers at inns.

I give below two tables, one of Norway, the other of Sweden; both show that the great "sobering up" came before the Gothenburg system. We must, however, remember that it is far easier to bring a high consumption down many points

¹ The final article in Mrs. Tilton's series. The other installments have been published in the SURVEY for January 13, January 27, February 10, February 24.

than a low consumption down a point or two; and both Sweden and Norway made a good showing after the system was introduced.

		NORWAY ²			
Year	Distilled liquor (50 per cent)	Per capita consumption in liters		Beer	Total Pure Alcohol
		(Liters: 1.0567 U. S. liquid quart)			
1833	16.2	Home distilling abounded. From 1835 on livc agitation and education—King Oscar, Bishops and professors lending aid.			
1843	11.3	1845-48, home-distilling prohibited and country districts given right to "go dry"—soon placing about 80 per cent of people under spirits prohibition. (Later under total prohibition).			
1851	6.09	0.63	1859 present mighty total abstinence movement begun		8.5 3.55
1860	4.99	0.38			18.0 3.49
1863	3.93	0.44			13.3 2.71
1870	4.13	0.57	1871 Gothenburg system introduced (used in cities)		11.5 2.73
1875	6.57	1.07	1877 new powerful total abstinence society founded		23.0 4.57
1880	3.68	0.88	In the 80's great progress made by abstaining societies. 65,604 sign petition for total prohibition		18.5 2.86
1890	3.12	1.11			20.9 2.72
1895	3.44	1.44			c. 20.0 2.84
1900	3.15	2.34			26.8 3.09
1905	2.50	0.85			18.8 2.14
1913	3.64	1.61	1913 only twelve towns retain Gothenburg system; Norway gradually going dry by local option; number of organized adult abstainers over 193,000		21.1 2.84

		SWEDEN ³			
Year	Distilled liquor (50 per cent)	Per capita consumption in liters		Beer	Total Pure Alcohol
		(Liters: 1.0567 U. S. liquid quart)			
1829	46 (estimated)	1829, the number of stills was 173,124			
1850	22 (estimated)	About 1830—Live education and agitation led by influential men. 1855 home distilling abolished; communities allowed to prohibit spirits; out of 2,400 rural parishes, 1,800 had decided by 1856 to have no bar or retail bottle sale, thus placing about 80 per cent of population under spirits prohibition. (Later total prohibition allowed)			1851-60 6.70
1856-60	9.5				1861-70 5.35
1861-65	10.6	1865-75, Gothenburg system becomes operative in cities		11.1	
1875	12.4	1877, Rise of great total abstinence crusade		16.4	
1885	8.4			20.3	
1895	6.9				
1910	6.6	1910, about 500,000 total abstainers (organized). Lower House passes national prohibition. Out of 230 members of Lower House 128 are total abstainers and most of these are convinced prohibitionists (1914) (Hercod, <i>Inter. Monatschrift</i> , April, 1914)		47.33	1906-10 4.33

The above tables, as I said, show that the marked declines in consumption both in Norway and Sweden took place before there was any system. After it we see a small decline in distilled liquor in both countries and in consumption as a whole (pure alcohol), a small decline in Sweden and a rather stationary consumption in Norway. Beer, of course, rises. But none the less, to hold total consumption down in those "boozily organized" years of the nineteenth century (to quote Bernard Shaw) was success when compared with the rising consumptions of most countries.

The growing popularity of beer might, and probably did, reduce distilled liquor consumption somewhat, but what held down consumption as a whole?

In the nineties, when prohibition in the United States was for the most part enforced in the country districts and small towns only, men in their hopelessness used to say: "The Gothenburg system is responsible for the better showing made by Norway and Sweden; therefore, let us import it."

Was this true? To judge we must see the Gothenburg saloon at work—called Bolag (joint stock company) in Sweden, and Samlag, in Norway. Moved by the wreckage coming to the poorer classes from drink, the ethical spirits of the town

of Gothenburg (1865), asked the authorities if they might take the saloons away from private dealers and form a company themselves, selling shares (to return 6 per cent) to the townspeople. The request was granted and a company was formed with five main principles: no private profit; no sale on credit or pawn; light, neat rooms; good food at a low price; net profit to be used for the benefit of the workingmen. Distilled liquors alone were to be controlled by the company, because they were apparently about all the laboring man wanted at the time. Beer and wine could be sold outside by any licensed tradesman.

It was, at least in motive, a noble scheme, and gradually with variations it covered the cities of Sweden and Norway, and all but one city in Finland (Helenius). The country districts were for the most part already dry and remained so.

All profits, over 6 per cent, were to go to help the workingman. In a few years, however, the company was obliged either to lose its rights or give the net profits to the city to be used to reduce taxes. This is what some Swedes call "the bad marriage," because it made the saloon with its enormous gains *persona grata* to the taxpayers. Mr. Ljunggren, member of the Upper House, and a great abstinent leader of Sweden, says (International Congress on Alcoholism, 1907):

"In Sweden the towns are ruled by the capitalists and it is to their interest to lessen their taxes by high profits from spirits, so they will not approve any radical measure against alcoholism. They will not even consider the possibility of freeing cities from their dependence upon the drink trade. This very year a proposal of this sort was unanimously adopted by the Lower House, but just as unanimously refused by the Upper House, which is the firm prop of the capitalists of the country. During this debate an expression was heard that was very characteristic. 'If (it was said) the drink trade is forbidden, it will not be pleasant to be a taxpayer in this country.'"

Very recently the revenue has been taken away from the city and given to the state to be, for the most part, redistributed.

In Norway, which adopted the system, 1871, they tried to lessen the evils of this bad marriage by declaring that all profits, over 5 or 6 per cent, must go to charities, hospitals, parks, etc. But even so the revenue was too often found stifling reforms, the Samlag, as they say, being made a milch-cow for the town. Rowntree and Sherwell, therefore, in their scheme for England decided that all net profits must be used simply to secure better recreational facilities for the poor.

Next we learn that the company, taking over old licenses, let eighteen lapse (an excellent thing), used twenty-seven themselves and sublet sixteen to clubs, restaurants, wine shops. In Christiania we read that in 1900 about one-half of the trade in distilled liquors was done by private traders who rented licenses from the company. These dealers plied the trade for private profits—a fact very vitiating to the elimination of all private gain. The reason of this strange looseness, we are told, was that the idea of the system was to help the poor man. As the companies did not care to run the business for the middle and upper classes, they allowed the drinking places patronized by those classes to be run, as before, for private gain. Indeed in the nineties things went so far that not less than thirty-four companies had transferred all their licenses to private persons. (Ljunggren.)

Another loose end is that beer and wine shops are outside the system. Rowntree and Sherwell say: "Every shopkeeper who possesses a trader's license can, if he thinks fit, sell wine and beer for consumption off the premises, and such shops are

² Figures from majority report of Alcohol Commission, 1915, p. 120.

³ The Temperance Problem and Social Reform, Rowntree and Sherwell; Gabriellson, Alcohol Consumption in the Various Countries (1915); Hercod, Jahrbuch, 1914.

frequent, selling wine, beer, cognac with something approaching free trade."

This is the "out" to the Gothenburg system commented on in the investigations made by Carroll D. Wright and John Koren (Massachusetts, House 192). Both speak of the absurdity of trying to cure intemperance by attacking distilled liquors only. They feel that beer may soon be included in the system. But the years have passed and beer still remains outside except in a few towns in Norway. Though for years now beer has become a drink of the people—which it was not when the system began.

It is hard to say precisely how effective the Gothenburg system has been. Swedish and Norwegian experts there on the spot and familiar with local conditions have various opinions. Dr. Scharffenberg, a prohibitionist, and a member of the recent Norwegian Alcohol Commission, which made a lengthy report in 1915, speaks thus of the system in Norway (supposed to have carried out the company idea better than Sweden): "The Samlags certainly have done good by the abolition of private whiskey sellers and by conscientious management of legal regulation. . . . The dark side of the system is the interest which the whole town and especially the largest taxpayers have acquired thereby in the sale of branvin. More or less consciously the whole town became reconciled through the system to whiskey drinking and withdrew with indifference from the struggle against liquor. (Battle Against Alcohol, *Internationale Monatschrift*, June, 1905.)

Dr. Bratt, a Stockholm physician and a conscientious wet, says, "Up to now regulation = O," and in his book, *Alcohol and Society*, he says,

"The wine dealers, renting licenses from the Bolag, drive the whiskey business precisely like any private dealer, have signs—advertise . . . and up to date there have been hardly any indications on the part of the Bolag of taking any measures save those by which the Bolag's income could be increased." Dr. Bratt declares that the companies compete with each other and that regulations are generally violated. This view was endorsed by the Swedish Medical Society.

We get the same picture from the Norwegian Alcohol Commission, 1915, in the majority report (wet). There were five members behind this report and three represented the liquor interests, one being Platou, the great brewery director. They say (p. 195): "The restrictive measures have not shown themselves sufficiently effective to oppose abuse. . . . As far as drunkards are concerned they have missed the mark. . . . New means must be found. . . . The Samlag has not kept pace with its task."

And yet, I think, almost all agree that the company system is better than the old system of license. Precisely what it has done, however, managed so loosely and omitting beer and wine, no man, on the spot, seems to want to say. Dr. Scharffenberg speaks thus: "Alcohol consumption is influenced by such various factors that it is not possible to isolate the influence of one factor with certainty. In my opinion a Samlag conscientiously managed in which no drunken man and no notorious drinker gets brandy can somewhat limit consumption, but not very much can be expected from the Samlags in this direction." Mr. Ljunggren says: "In judging the company system (never yet enforced in Sweden) compared with conditions before the system, it would, of course, mean progress." He believes the fall in drink consumption, however, not due to the system.

A Swedish government report (J. Guinchard, 1914) says: "It is an open question . . . how far the Gothenburg system may in general be credited with the increase in sobriety, which is the aim of these companies. . . . If the system is to perform

"Even the little he hath shall be taken away from him," is the *New York Evening Post's* caption for this cartoon by Cesare. "Bone dry" legislation has swept over the West the past two months since the federal Supreme Court decision on the Webb-Kenyon law made it possible

its function, a watchful public is necessary"—and it states that this has not always been present and abuse has, therefore, resulted (p. 743).

Evidently experts in Scandinavia do not lay declining drink consumption entirely to the Gothenburg system. Truly, many seem to agree with Professor Rygg, statistician for the Norwegian Alcohol Commission, that the decrease in drinking came mainly out of conditions obtaining in country districts. The wet majority report says: "It may be assumed that consumption among the country people has fallen so much that it has more than made up for the tendency to rise which the rapid increase in city population would bring with it."

Now what are the precise things in country conditions that have brought about this decline? The wet majority report says: "We asked the police. The bulk said, 'growing enlightenment,' others said, 'the abstaining movement,' still others, 'prohibition!'" The opinion of the police coincides somewhat with the opinion of experts, wet and dry. Dr. Bratt (wet) says (of Sweden) that sparse population, the difficulty of getting drink in the country, general education, and the great abstaining movement are mainly responsible for the decided improvement in the drink custom.

The minority report of the Norwegian Alcohol Commission (dry) says: "Local prohibition in connection with the untiring abstaining movement has brought about better conditions of sobriety despite the fact that breweries and Samlags [in the cities] still offer easy access to liquor" (p. 7).

This report gives the following table, thus—

PERCENTAGE OF DEATHS DUE TO ALCOHOLISM, NORWAY, 1911.	
Men over twenty years of age.	
Christiania	16.2
Other towns	10.7
Country districts	4.7

"That is a count that counts!" says the report and declares that you can take all the other social results of alcoholism in Norway and find somewhat the same proportion for town and country. Thus we read that in Norway, 1911, there were 54.4 cases of drunkenness (per 1,000) in the cities and only 2.2 in the country; bootleggers prosecuted or punished, 9.51 per 10,000 for the cities, 2.02 for the country. Cases of poor relief have fallen (1866-1913) three times as fast in country as in city, and so on.

In short, the impressive thing in Norway and Sweden is not the Gothenburg system, but the dryness of the country districts under prohibition and the great organized total abstinence movement, the thing the prohibition movement in the United States lacks.

Mr. Ljunggren gives a vivid picture of the abstaining movement, shows how strong leaders keep springing up and how whole countrysides are suddenly on fire for teetotalism. It is all a part of a movement dear to the Scandinavian heart, race-hygiene—and in the forefront of this battle for health they place the battle against alcoholism. There are 500,000 organized total abstainers in Sweden and 193,000 in Norway—that is, in the latter country every eighth person over fifteen years of age belongs to an abstaining society. Many of these societies are aided by money from the government, scientific men are employed to lecture, and both countries are sown knee-deep with the weekly papers of these societies pushing race hygiene and teetotalism into the farthest hamlet.

It really does seem to me that it is this organized total abstinence, supplemented by prohibition in the country districts, that is mainly responsible for the low alcohol consumption of these lands. It is plain that this is what the common people think. In both countries, they are clamoring to extend the prohibition that has so long and successfully covered the country to the cities. Indeed, Norway is slowly going dry, for whereas in the nineties there were fifty-one company systems there are now only twelve left. In Sweden one hears the same clamor for prohibition.

Dr. Legrain, chief physician of important French insane asylums, after a visit to Sweden, pictures the situation thus: the middle and lower classes against the system and for prohibition; the upper class, capitalists, fashionables and aristocrats, scowling them down and the Swedish king rather in sympathy with the abstainers, smiling across at them over the heads of the scowling capitalists whose money is in their dear milch-cow, the Gothenburg system. The whole thing came out vividly, also, in the great national strike of 1909. The workingmen and the abstainers asked the government to close the saloons and it was done. Wonderful declines took place in drunkenness and disorder and the workingmen of Sweden sent forth a ringing manifesto calling for total prohibition for all time. "Away with the capitalist saloon system, let it never again wind its arms of Polypus about the workingman. Forward, fellow-workers, forward, from Sweden's every corner to the goal. Total prohibition for all time."

The government, however, reopened the saloons. But the abstainers were emboldened to get the pulse of the nation by an unofficial vote. The result of votes obtained was as follows: For national prohibition, 1,888,337; against, 16,715. How amazing, say we, that when the people cry out like that to have the saloons closed it should not be done! What are the reasons? First, they have plural voting in Sweden based on property qualifications; a few aristocrats and capitalists hold the balance of power. Then, there is France! Incredible as it seems, this great nation blocks prohibition at every turn. She is the great banker, can lend money

cheap and has also an over-supply of wine. So to nations that wish to borrow (see *Internationale Monatsschrift*, March, 1909, p. 28) she says: "First drink my wine and then you get my money." When the Russian government asked for a loan, France made the condition that the Czar should refuse to sanction the prohibition law passed by Finland. Again, when Sweden had to borrow, France demanded that duty on French wines be lowered by one-half. It is also well-known that the French government has tried to intimidate the Norwegian government into taking from the people the right to vote their towns dry. "No such raging wild animal," says George Brandes, "as a man who sees his purse in danger," and France and the Swedish capitalist are precisely these animals when confronted with prohibition. There are also conscientious conservatives who believe that no matter how well prohibition works in the country, it will not work in the cities where the accelerated pulse of life induces drinking. Dr. Legrain speaks of the "massive intoxication of the cities of Sweden," and Dr. Axel Holst fears prohibition will simply increase illicit selling where, as in Christiania, conditions are so excessively drunken. Dr. Bratt says: "All will depend on public opinion." He fears public opinion is not ripe, since there will be added to the inconvenience that moderate drinkers must suffer great losses to the treasury.

Dr. Bratt would, therefore, reform the system. Whiskey distilleries, he believes, ought to be taken over by the state, and breweries, if this latter could be done. If companies must go on letting out licenses, licensees should sell at cost. This part of the reform has not yet been accomplished, but Dr. Bratt has got Swedish cities to place the retail sale of bottled goods in the hands of the company, which sells only to men who have permits. People must buy at one shop only, and only so much a month, and no permits can be issued to drunkards, paupers, and so on. No permits are required for drinking at the bar, however. As a matter of fact, it was found that about 90 per cent of sale had been bottle sale, and that this sale had been much abused. Restriction has evidently helped, as the following table of the workings of the Bratt permits in Stockholm shows.

COMPARATIVE ARRESTS FOR DRUNKENNESS IN STOCKHOLM BEFORE AND AFTER THE BRATT SYSTEM, INTRODUCED FEBRUARY 6, 1914.

The fact is, the call of the lower and middle classes of Sweden for prohibition in the cities is making the upper classes put the Gothenburg system in order. Whether they can stem the tide of prohibition is an open question.

However, it seems only fair to assume that if you could seal up all holes in the Gothenburg system you might materially reduce wreckage. Mr. Andree, director of the Bolag in Gothenburg, the man who initiated the permit system for drinkers (now developed into the Bratt system), tells how he got the idea from reading in Rowntree and Sherwell of the dispensary system in South Carolina. It is true that South Carolina did make over the sprawling, loose-ended Swedish system into a compact whole, but one golden principle was left out—disinterested managers. Officials appointed by the state were the managers, too often unscrupulous politicians and the graft, even robbery, so they tell you when you go to Columbia, cried aloud. Consequently, the dispensary experiment, be-

gun July 1, 1893, was superseded by prohibition January 1, 1916. (Senator Tillman tells me that the corruption coming through the dispensary was not what his political enemies represented.) However, in spite of its failure to grasp the principle of disinterested management, the dispensary system did get results. The state took over all licenses; sublet none to drink-shops; included wine and beer with whiskey sale. No drinking was allowed on the premises. Liquor was sold only in bottles done up in packages, and liquor dispensing shops closed at sundown. Certificates from the county dispenser were necessary before buying, and no such certificate was to be given to an intemperate person. There were results at first (Rowntree and Sherwell, p. 238, see table below), but certainly in Charleston the scheme seems to have petered out. Chief of Police Black told me that in 1915, the last year of the dispensary, there were, besides the dispensary shops, 365 blind tigers running openly in the city. Arrests for drunkenness for 1915 (Dispensary) were 636; for 1916 (prohibition), 475, albeit the law for arresting drunkards had been made much stricter under prohibition.

There were results, thus (Rowntree and Sherwell, p. 238):

DISPENSARY SYSTEM, SOUTH CAROLINA.

1893.....	412	187
1894.....	459	182

Should we decide to use the Gothenburg system in our large cities of the more "boozily backward" type like Baltimore or Boston, licenses should not be let out, certificates of fitness to buy should be given, drink shops should close at sun-

down, beer and wine should be included—and that ideal, left out by South Carolina, but sometimes achieved in Scandinavia, should be the chief aim—disinterested managers.

But one says to oneself, "If in such miniature countries as Norway and Sweden, they have had difficulty in keeping the management always disinterested, what would it be in our large cities? If profits of the saloons in Scandinavia have stifled reforms, what would happen in our cities with all the surplus profits from the retail liquor business flowing up to the city hall or state house?"

But my main objection is as follows: In setting up a disinterested dispensary system we are turning our backs on the lesson taught by Norway and Sweden—the fact that the increasing sobriety of these countries is usually thought by experts to be due, not so much to the Gothenburg system as to growing enlightenment, to live education against alcohol carried on by organized abstainers, and to the fifty-year-old prohibition of the rural districts containing 70 to 80 per cent of the population.

In the nineties, when the anti-alcohol sentiment here was running low and father's moderation ideal was running high, I can see how despairing reformers dreamed of a perfected Gothenburg system that might regulate some heavy drinkers into moderation. Now, however, that the anti-alcohol sentiment is strong enough to get enforcement of prohibition in larger cities (Denver, Seattle, Birmingham) and to show material results, it seems idle to talk of the Gothenburg system. For it is not woven of the stuff that has helped most to bring about the low consumption of Sweden and Norway—namely, militant abstinence that says No to the custom, and prohibition that says No to the traffic.

History shows that in the few instances where nations have made marked headway over long periods against drink, the headway has been due not to the ideal, moderation, that keeps alive a great organized traffic in business bound to push its wares on weak and strong alike, but to a tandem—organized total abstinence riding ahead and prohibition following after.

The consternation of the German beer-drinker when, in 1910, the Kaiser asked his naval cadets to teach their men to give up all alcohol. Silhouette by Judge Charles B. Wheeler, of the Supreme Court, Buffalo

An Appreciation of Frank B. Sanborn

By *Alexander Johnson*

THAT a prophet may be honored in his own country was shown last week, when, by a vote of the House of Representatives, the flags of the Massachusetts state house hung at half mast for three days on the occasion of the death of Frank B. Sanborn.

The lawmakers of his state did well to honor him, for very few men have done so much to help them as he. He was the first secretary of the first State Board of Charities that ever existed in this country—and that means in the world, for a board of the kind is a strictly American invention. It is within bounds to say that his influence on the many successors of the Massachusetts board, in other states, has been greater than that of any other man.

In this line he was a pioneer. He began a system of inspection and report of the state's charities which showed the way to those who followed.

But Mr. Sanborn's work as secretary was only a part of his usefulness. With tireless energy and ability he began the task of modifying laws relating to the state philanthropic and correctional activities. He brought some sort of order out of the chaos of the settlement law, which, first enacted in 1662, had been added to, altered and amended, until it was said that no man in the state fully comprehended it. He drafted many bills that became laws on other similar subjects.

After five years as secretary of the state board, he took an editorial position on the *Springfield Republican*, under Mr. Bowles, then one of the "big four" newspaper editors of the country. He had been a correspondent of the paper since 1856, and he remained connected with it to his death. But he was appointed a member of the State Board of Charity and became its chairman in 1874. Five years later he became general inspector of charities of Massachusetts, an office he held for nine years, until he was deprived of it, after an animated controversy over the policy of boarding out the insane. This method he had introduced into Massachusetts, having noticed its advantages in Belgium, France and Scotland, and though it has been much criticized and opposed it is still practiced to a small extent.

Although not an alienist he was an expert in the care of the insane and a frequent and often caustic critic of the extravagance, waste and inefficiency that characterized much of the conduct of the asylums and hospitals. He was one of the few public men, outside the state of Wisconsin, who appreciated the sensible, humane and unique plan of county care of the insane of that state, a method he frequently defended at the National Conference of Charities and Correction during the long-drawn-out controversy between the advocates of state and county care.

Although Mr. Sanborn has not attended recent meetings of the national conference, his last appearance being in Boston six years ago, he was for many years a well-known figure at the annual sessions. He was one of the founders of the American Social Science Association in 1865, an officer for thirty-three and its secretary for twenty-five years. The national conference had its beginning under his guidance, as a sub-committee of that association, in 1874. He was the conference's first secretary, its eighth president (at Boston in 1881) and its treasurer five years (1886-1890). During

his term as secretary, although using long-hand, he acted as official reporter as well as editor and the first five volumes of the proceedings were wholly his work, except as the speakers gave him copies of their addresses.

The list of Mr. Sanborn's contributions to the proceedings is a long one. In the cumulative index of thirty-three volumes, published in 1907, twenty-two titles appear after his name, including six reports as chairman of a committee. This is two more than follow the name of the next most prolific writer and more than double the number credited to any but two or three of the most frequently named authors. His most valuable and frequent papers were on such subjects as immigration, insanity, pauperism and settlement laws. Besides formal papers, his participation in debates, his occasional speeches at opening meetings and his reports for the state of Massachusetts brought him frequently before the conference. His shrewd common sense, ready wit, effective speech and abounding though often caustic humor, made him an always interesting, though sometimes disconcerting opponent. Most of his papers written for the conference remain of permanent value today.

Beside his work as the pioneer state secretary and as founder and secretary of the national conference, he had many other connections with public affairs. He assisted at the founding of the National Prison Association. He was a founder of the Clark School for the Deaf at Northampton and remained a trustee during life. He helped to introduce oral instruction in that and other schools for the deaf. In 1867 he helped to establish the Massachusetts Infant Asylum, said to be the earliest of its kind in America. He had part in many other forward movements of charity and correction in his own and other states.

We recognize Mr. Sanborn chiefly as a leader in those fields to which the *SURVEY* is devoted, but he had many other claims to distinction. He was a man highly educated in the best sense and a classical scholar of uncommon ability. Unlike so many who leave their classics behind them when they are graduated from the university, Mr. Sanborn kept his in use, and among his frequent, if not daily, enjoyments, was that of reading the Greek authors in the original; he kept this habit to the end. He was a co-worker with Alcott, Harris and others in founding the Concord School of Philosophy. He was a prolific writer of history and biography. He gave the world its best insight of the characters of Thoreau, Dr. S. G. Howe, Pliny Earle, Alcott and John Brown, and was one of those who knew most and told us best about Emerson. The bulk of his literary work, however, was not in book form, but appeared in magazines and newspapers, especially in the *Springfield Republican*, of whose staff he was one of the most valued.

Mr. Sanborn typified to some of us westerners the ideal New Englander of the old school—determined, democratic, liberty-loving, positive, pugnacious. He was one of the most uncompromising of the abolitionists, a friend and supporter of John Brown. One of the most dramatic events of his career was on the occasion when he was summoned as a witness before a Senate committee to investigate the John Brown raid, and on his refusal to obey, an unsuccessful attempt was made

to kidnap him. At the outbreak of the civil war he was, for six months, editor of the *Boston Commonwealth*, the organ of the Anti-Slavery Society.

Mr. Sanborn's appearance and manner on any platform attracted attention, and, at his prime, held his audience until he had given them all that was on his mind. His love of liberty and passion for justice made him a sympathizer with revolutionary movements against autocratic misrule everywhere. His record secured him many opportunities of platform service.

During his middle life Mr. Sanborn had a striking physical resemblance to Emerson. The first time I saw him, at the Washington conference of 1885, I did not catch the name as the president introduced him, and for a few moments I was certain that it was Emerson speaking. But though the features and the stature were like Emerson's, the expression was of a very different type. In familiar social converse Mr. Sanborn could be most charming. His wealth of knowledge was a continuous surprise, and the play of his humor was irresistible. One long railway journey on which I was his

companion is one of the never-to-be-forgotten memories of my life.

To the old members of the National Conference of Charities and Correction he ranks with the few great men who made that wonderful organization the useful thing that it is. Sanborn, Elmore, Wines, Brinkerhoff, Byers, McCulloch, Garrett, Bishop Gillespie, Letchworth, Henderson, Mrs. Lowell, Mrs. Barrows, Milligan, Paine, Wright—all these and others, have joined the choir invisible whose music is the gladness of the world. But their influence lives after them and is felt, unconsciously, by many who have hardly heard their names.

Only a few of the old leaders are left to us. But to enumerate their worthy successors who are faithfully and zealously carrying on the torch these kindled, would fill many pages of the *SURVEY*. We do not mourn for those who have gone to work in some other mansion of their Father's house. We give fervent and grateful thanks that they lived and worked amongst us and that we had the privilege of their company and friendship.

THE SHADOW

By Elizabeth Carter

THE altar flame was white, the flowers red,
Through the hushed chancel, from the altar side,
Came the priest's prayer before the Living Bread,
He prayed, "O Saving Victim, opening wide—"

Rough scaffolding outside a shadow threw
On the tall window, veiled to hide the sun,
Crossbeams and bars, a tracery that grew
To a mute symbol of the day begun.

For, climbing, pausing, noiseless as a thought,
Black on the amber curtain's narrow span,
Among the bars and beams his hands had wrought,
There rose and crossed the shadow of a man.

A man,—a carpenter. What breath of awe
Swept cold across our prayer-wrapt ecstasy,
In place of lights and kneeling priest, we saw
A Workman's home in far-off Galilee.

Thy Church, Thy brother workmen!—This we know—
(Help us, O Christ, the gulf is deep and wide)
We kneel in peace where the tall candles glow,
Thy brother workmen face the world—outside.

COMMON WELFARE

TO VINDICATE AND FORTIFY PEACE

ON a bitter March day, in the face of a stinging wind that took the words from his mouth before more than the first rows of his audience could hear them, President Wilson delivered his second inaugural on Monday.

"We have sought very thoughtfully to set our house in order, correct the grosser errors and abuses of our industrial life, liberate and quicken the processes of our national genius and energy, and lift our politics to a broader view of the people's essential interests," he said. But "this is not the time for retrospect," it is the time to face those "matters lying outside of our own life as a nation and over which we had no control. . . .

"It has been impossible to avoid them. They have affected the life of the whole world. They have shaken men everywhere with a passion and an apprehension they never knew before. It has been hard to preserve calm counsel while the thought of our people swayed this way and that under their influence. We are a composite and cosmopolitan people. We are of the blood of all the nations that are at war. The currents of our thoughts as well as the currents of our trade run quick at all seasons back and forth between us and them. The war inevitably set its mark from the first upon our minds, our industries, our commerce, our politics and our social action. To be indifferent to it or independent of it was out of the question."

Deeply wronged ourselves upon the seas, we have not wanted to strike back; we have throughout realized "that we were not part of it," we "have drawn closer together," realizing that we were "standing in some sort apart"; we have "been clear that we wished nothing for ourselves that we were not ready to demand for all mankind—fair dealings, justice, the freedom to live and be at ease against organized wrong. It is in this spirit and with this thought that we have grown more and more aware, more and more certain, that the part we wished to play was the part of those who mean to vindicate and fortify peace."

"We have been obliged to arm ourselves to make good our claim to a cer-

tain minimum of right and of freedom of action. We stand firm in armed neutrality. . . . But nothing will alter our thought or our purpose" even though we be drawn into "a more immediate association with the great struggle itself."

Looking forward, "there are many things still to do at home, . . . but we realize that the greatest things that remain to be done must be done with the whole world for stage and in cooperation with the wide and universal forces of mankind, and we are making our spirits ready for these things. . . . We shall be the more Americans if we but remain true to the principles in which we have been bred. They are not the principles of a province or of a single continent. We have known and boasted all along that they were the principles of a liberated mankind. These, therefore, are the things we shall stand for, whether in war or in peace":

"PRINCIPLES OF A LIBERATED MANKIND"

"THAT all nations are equally interested in the peace of the world and in the political stability of free peoples, and equally responsible for their maintenance;

"That the essential principle of peace is the actual equality of nations in all matters of right or privilege;

"That peace cannot securely or justly rest upon an armed balance of power;

"That governments derive all their powers from the consent or by the common thought, purpose or power of the family of nations;

"That the seas should be equally free and safe for the use of all people, under rules set up under common agreement and consent and that, so far as practicable, they should be accessible to all upon equal terms;

"That national armaments should be limited to the necessities of national order and domestic safety;

"That the community of interest and of power upon which peace must henceforth depend imposes upon each nation the duty of seeing to it that all influences proceeding from its own citizens meant to encourage or assist revolution in other states should be sternly and effectually suppressed and prevented."

SOCIAL LEGISLATION OF A WAR SESSION

SOCIAL legislation had but scant attention from the Sixty-fourth Congress during its final session which ended on March 4. Public interest and the interest of the members of both houses centered on the international situation. It was almost a "war session," and the problems of social and industrial justice could fare but indifferently well.

One notable exception is to be found in the prohibition of the liquor traffic. Despite the war spirit—possibly to some extent because of the existence of that spirit—Congress took three steps toward nationwide prohibition. It passed, with scarcely an hour's discussion, the act making Alaska "bone dry" in accordance with the expressed desire of its electorate. It passed by overwhelming vote the bill establishing prohibition for the District of Columbia. More significant still, it adopted as a "rider" in the post-office appropriation bill a clause forbidding the shipment of intoxicants into any "dry" state. A fourth and minor step, which may prove important in the evolution of Latin-America, was the enactment of prohibition, subject to referendum, in Porto Rico.

As contrasted with its first session, during which both the Keating-Owen child-labor act and the Kern-McGillucuddy federal workmen's compensation act were passed, this second session of the Congress saw merely a marking of time on the part of its program of labor legislation. On the calendar when the House met last December were the Casey bill, establishing a women's division in the Department of Labor; the London bill, providing for a federal investigation into the need and best means for securing old-age pensions, sickness insurance and unemployment insurance in the United States; the Nolan bill, providing a minimum wage of three dollars a day for federal civil-service laborers; the Griffin bill, providing old-age retirement pensions for postoffice employes; and the Booher bill, regulating the interstate shipment of convict-made goods. The Crosser bill, providing a scheme of federal development of colonies on the lines followed in

New Zealand, was later placed on the calendar.

Two of these, the Nolan and the London bills, secured a majority, but not the required two-thirds majority, when an attempt was made to secure their passage by suspension of the rules. A favorable attitude toward the Griffin bill was shown when it was rescued from a hostile committee. Passage of all three in the new Congress may fairly be anticipated, thanks to the close division of parties in the next House, and the necessity on the part of the ruling faction to make terms with the progressive independent members.

One measure passed by the House during this session was that providing for a bureau of labor safety in the Department of Labor. Both the House and Senate overruled their committees which had sought to prevent an increase in the annual appropriation for the Children's Bureau. On the other hand, both houses agreed on limiting to \$3,000 the salary to be paid the employe of this bureau who should have direct charge of enforcement of the child-labor law throughout the nation.

Educational interests gained attention on two points. The Smith-Hughes vocational education bill was finally agreed to, after ten years of discussion of its general purposes by successive committees. It provides for limited federal aid, on a basis of equal appropriations by national and state authorities, in the payment of teachers of industrial and agricultural subjects, and in the maintenance of normal schools for such teachers. Formal action was taken, in the agricultural and in the executive, legislative and judicial appropriation bills, forbidding the employment in the Department of Agriculture and the Bureau of Education of persons remaining in the employ of the General Education Board or allied or similar organizations.

Railroad legislation proposed by President Wilson, which would have established the principle of compulsory delay of railroad strikes pending official investigation of the industrial disputes at issue, was defeated in committee, due chiefly to stubborn resistance on the part of the railroad brotherhoods and the American Federation of Labor.

Agitation over the high cost of food and fuel, particularly during the opening and the closing weeks of the session, led finally to the adoption in the House of the bill proposed by the President, appropriating \$400,000 to the Federal Trade Commission for a study of the reasons for the high cost of food, and a report on means of keeping prices down. The Senate refused to pass the bill. Numerous bills were offered, proposing embargoes on foodstuffs, federal control of food distribution, etc., but none were even granted a hearing in committee.

Industrial conscription, to cover em-

IN SUPPORT OF THE PRESIDENT

EIGHTY-SEVEN social workers of Boston have sent the following telegram to President Wilson:

"Because Germany, by its deliberate acts, is not only driving American commerce from the seas, but is killing our fellow citizens, therefore, we, the undersigned, with no love for war, but with a sense of the nation's duty, pledge our unswerving support to the government in immediate and forcible measures of defence."

Among the signers are C. C. Carstens, Meyer Bloomfield, Dr. Richard C. Cabot, Michael M. Davis, Jr., Henry Copley Greene, Fred R. Johnson, Jeffrey R. Brackett, J. Prentice Murphy, William H. Pear, Seymour H. Stone, Robert A. Woods, Ada E. Sheffield, Ida M. Cannon, Charles W. Birtwell, Philip Davis.

ployes in plants producing ships, munitions and supplies for the navy, in time of war, was stricken out of the Padgett amendments to the naval appropriation bill.

Public-health measures got no serious consideration. No attempt was made by Senator Owen to bring up his bill creating a Department of Public Health. Legislation restricting still further the traffic in poisonous drugs was not discussed. The Kent bill providing federal subsidies to sanatoria for non-resident consumptives failed, as did the bill to bring peyote within the provisions of the Harrison drug law. No action was taken on the bill creating a division of rural sanitation and mental hygiene in the Public Health Service, and the Smoot bill, providing for research and experiment in home economics, and the Adamson bill for the labeling of pure fabrics, failed.

Just at the close of the session there were introduced an industrial and an educational measure which will be reintroduced and pressed in the new Congress. The first was the Keating-Robinson bill, drawn on the lines of the child-labor act, forbidding interstate shipment of goods produced in establishments where women are employed more than eight hours a day. The second was the Hollis bill, granting federal aid to elementary education in the several states.

Suffrage was given no recognition during the three months of this meeting of Congress, beyond a report of the Susan B. Anthony federal amendment resolution from the House Committee on the Judiciary. This report was made without recommendation.

Salary increases voted to government clerks in all but the Postoffice Department amounted to 10 per cent on salaries up to \$1,200, and 5 per cent on salaries

from \$1,200 to \$1,800 a year. This was a compromise of demands on the part of some 20,000 clerks, many of whom are employed at rates fixed half a century ago.

Defeat of the attempts at enactment of the Shields dam bill, the Myers waterpower bill and the Phelan oil-lands bill resulted in keeping within the public domain resources valued at more than a billion dollars, which will eventually be developed and operated by the government unless sooner granted for private development.

The military appropriation bill, with its universal compulsory military training, as proposed in an amendment to the military appropriation bill, dies with that bill in the Senate. Hearings on this scheme before the Chamberlain subcommittee of the Senate Committee on Military Affairs developed the most emphatic protest of the session, on the part of educators, physicians, physical trainers, publicists and students of conscription age.

In the new Congress the balanced power in the House, the necessity for cooperation between progressive and administration forces, the character of the constituency which reelected President Wilson—these factors are held to promise more for social legislation in the two years ahead.

YUCATAN SCHOOLS SEEK OUR HELP

WHILE this country was reading the news last week of Germany's intercepted proposal to Mexico and Japan that those nations form an alliance with her against the United States, an emissary of one of the Mexican states that has earned for itself the name of Utopia because of its social and economic reforms during the past two years, was visiting educators, social workers and others in the United States, bringing word of the educational awakening that has overtaken his countrymen and seeking experience that would be of service to them when he returned.

The emissary is Gregorio Torres Quintero, chief of the department of public education in Yucatan. Yucatan forms the tip end of the peninsula that juts out into the Gulf of Mexico, and Professor Quintero represents the interests of education in the general reformation that has attracted so much attention to that state recently. The governor of Yucatan, Salvador Alvarado, a Carranzista, has been called a "socialistic despot." This title has been conferred upon him for his many reforms on behalf of the people, who number about 350,000 and two-thirds of whom are Indians, the other third being of Spanish descent.

Chief among Alvarado's reforms, as they have been reported in this country, is the redistribution of land and the

giving of a tract of about forty acres "without confiscation" to each of Yucatan's 50,000 family heads. Laws protecting women and children in industry have also been notable features of Governor Alvarado's regime. The state now has minimum wage provisions, an eight-hour law, compensation for injuries to workmen and provision for their old age. Children under thirteen cannot be employed.

Professor Quintero tells an interesting story of educational reforms in Yucatan. "In the past year and a half," he says, "we have established 600 schools for the Indian population. Here we teach chiefly Spanish, reading and writing, arithmetic and civics. The three hours in the morning in these schools are devoted to children, both boys and girls, less than twelve years of age. An hour and a half in the afternoon is given over to girls between twelve and twenty-one, and another hour and a half in the evening to boys of the same age. We separate boys and girls of these ages in our educational system.

"This education is compulsory for all under twenty-one, unless they are married. The classes are not limited to persons of that age, however, and, in fact, many older people come. Compulsion has existed for some years, but only under the present administration has it really been enforced. These schools are put up at the expense of the farm owners, but the equipment and material is supplied at state expense.

"What we want to do now is to improve our vocational education. We have in Merida, the capital of Yucatan, a mechanical arts school for boys and a domestic arts school for girls, but we are not content with them; they must be brought up to higher standards. Neither have we competent instructors in these subjects. There are 200 girls in the domestic arts school and thirty boys in the mechanical arts school, which has just been started. We want hundreds in both. We want to teach our young people not only how to work but the dignity of work. We want to offer instruction in the wool and iron industries, in printing, in the making of shoes, in agriculture and in other branches.

"Owing to the climate and other causes young people in our country mature more rapidly than they do in the United States. Our girls marry, many of them, at sixteen, seventeen and eighteen. The vocational schools that we shall establish will take boys and girls of twelve and up.

"We have provision for professional and higher education also. There is a college for engineers in Mexico City and one for physicians in Merida. Our school for lawyers was closed by Governor Alvarado because he believed that the country has too many lawyers al-

ready. Law students now study privately."

Professor Quintero is here to take back Americans as well as American methods. His official instructions direct him to find, if he can, a man experienced in cooperatives; a man skilled in conducting a large printing office and able to speak Spanish; a woman able to take charge of work in domestic arts and science in the state educational system; one or more men for trade schools; two or three men to serve as instructors in the department of education; and one man who is expert in tropical agriculture. Professor Quintero will remain in this country for four or five months.

PNEUMONIA, THE WINTER MENACE

THE Pneumonia Commission of Philadelphia has reported to the city Department of Health and Charities. The commission was appointed in 1915 when Philadelphia's death-rate suddenly sprang from the lowest level in the city's record to the highest. The outbreak of grippe-like disease and pneumonia extended widely through the city, says the report, incapacitating many employes of industrial establishments in the city and making practically every household a focus of infection of acute catarrh of the upper respiratory tract.

The clinical committee of the new commission began with an epidemiological investigation to obtain exact information as to the proportion of the population affected by the outbreak. It addressed 5,100 questionnaires to physicians, schools, homes for the aged, orphan asylums, post-offices, hospitals and various industrial plants. Only about one-third were answered, but the replies received gave the commission some important information.

"Fully 10 per cent of the population of the city was affected by the epidemic," writes Dr. Riesman, chairman of the commission. "That means that about 170,000 people were incapacitated. . . . There was an increase in the number of deaths from all causes, more especially from heart disease, kidney conditions and pulmonary tuberculosis. . . . Three thousand cases of pneumonia were treated by physicians during the period of investigation (December, 1915—January, 1916), according to the replies to questionnaires. Since responses were received to only about one-third, it is evident that there must have been more than 3,000 pneumonia patients.

"An interesting statement was made by many physicians that the spread of the disease had apparently no relation to the hygienic surroundings of the patient. . . . Pneumonia affected several members of one household. This is an extremely important point, for since pneumonia is not a reportable disease,

infections might occur in the same household, giving room for investigation of the spread of the disease.

The laboratory committee was hampered by the lack of funds—the city appropriation being just one-half of the amount asked for; but experiments in the manufacture and use of serum are continuing. At Phipps Institute tests are being carried on to determine the relative value of disinfectants.

The commission believes that the public should know several facts about pneumonia. First, that there are two types of the disease, lobar and broncho-pneumonia. Being a disease of the respiratory system, the causative agent enters through inhalation. The organisms deposited upon the mucous membrane of the nose and throat find suitable place for growth and development. In many individuals these organisms may cause no untoward effect, resistance being sufficient to prevent their invasion. When, however, the organisms become active and the resistance of the person is lowered, disease results.

Again, it should be known that, although persons of all ages are susceptible to pneumonia, the very young and the aged seem predisposed to infection, as they are to "colds." By far the largest percentage of deaths from pneumonia occurred between the ages of 45 and 70 and under the age of two. Men have been found more susceptible than women, because of the more frequent and longer exposure to the weather. Winter is the season of pneumonia because of the possibility of chill, and because then persons tend to gather indoors, where closer contact in overheated and unventilated places favors the spread of infection.

That many cases were reported among the rich as well as among the poor indicates, says the commission, that the importance of ventilation has not yet been generally appreciated.

As to preventive measures, the commission urges a few practical suggestions: "By far the most important general measure . . . is proper and sufficient ventilation. . . . Second in importance is causing the public to refrain from the indecent, repugnant and most unhealthful habit of expectorating upon the sidewalks, public places and highways. . . . The proper clothing during winter months . . . the proper amount of sleep and avoidance of excesses, aid in increasing the resistance of the body. . . . Persons should acquire the habit of sleeping in ventilated rooms. In the workshop . . . suitable ventilators should be installed."

Since this is a problem of the public as a whole, as the commission has shown, the appeal is to the public for obedience to the common sense dictates of personal hygiene, to give as early attention to unfavorable symptoms as is

Ding in New York Tribune

"PARTNERS IN CRIME"

given to a leak in the plumbing; also to refrain from using patent medicines.

Such measures are submitted to the public, says the commission, pending discovery of more scientific and definite means of prevention. The cooperation of all civic bodies and health agencies, plus the good will of the public, are essential to the success of any undertaking to control pneumonia and eventually to reduce its excessive mortality which has become a rival of tuberculosis itself in fatality.

TO CONTROL THE COST OF LIVING

AGITATION over the so-called "hunger riots" is still carried on spasmodically in different parts of New York city, but has now reached the second stage, when the case for public action is taken up by orderly representation. Its net result seems to have been beneficial in at least two ways. First, prices have fallen considerably within a week, and there is some reason to expect a further drop. Second, city, state and federal governments have been aroused to the need for administrative control of the cost of living.

As regards the fall in prices, the riots and boycotts have been remarkably successful. In a few instances, prices have fallen to a figure which two weeks ago would have been considered very reasonable. Potatoes, at the time of writing, are 6 cents a pound as compared with 8 and 9 cents a week ago; onions, 11 cents as compared with 18 cents; dressed chicken, 19 cents a pound as against 29 cents.

"Publicity, fear of federal, state or city action and the recent demonstrations are the cause of the sudden drop in

wholesale prices," says Joseph Hartigan, commissioner of weights and measures, who is in charge of the New York city markets. "As a result of the Mayor's Food Supply Committee's advice to the public to eat rice and other substitutes for potatoes and onions, the wholesalers became panic-stricken. The retailers generally found that their customers were buying few or no potatoes, onions or turnips. The immediate effect was an idle wholesale market. Prices began to drop in an effort to tempt buying. It was a most remarkable situation. A few days ago these products were in constant demand at ever-increasing prices. Over Sunday large shipments came from the West, and Monday found the wholesalers ready to meet the demand. But the agitation and publicity given the subject over the week-end practically killed the market."

A curious situation has been created by the refusal of the organizers of the boycott to stop it. They fear that the reduction in prices is due to a desire of local dealers to rid themselves of perishable stocks, or stocks for which they desire an immediate cash turnover, and that prices will be raised again when these stocks are exhausted. The maintenance of the boycotts is, therefore, likely to continue until either the dealers or some public authority can assure the public that proper means have been taken to avoid a recurrence of excessive prices.

Of the actual measures taken for the relief of the emergency, the least significant but the one which has most caught popular attention was the prompt action taken by the Mayor's Food Supply Commission, of which George W. Perkins is chairman, in throwing on the retail market consignments of smelts from the

Pacific coast, hominy, and Brazilian beans, which, though small in themselves, have undoubtedly had an excellent contributory effect. These provisions are distributed through retail dealers to whom the committee allows a reasonable profit. The lenders of the capital required do not expect or receive a profit on their investment. The endeavor of the committee is more especially to introduce provisions which are not usually consumed in large quantities in this part of the country, so as to avoid as far as possible direct competition with the trade.

In the meantime, the clause of the sundry civil bill providing an appropriation of \$400,000 for the Federal Trade Commission's proposed food investigation, while it failed to be reported by the Appropriations Committee of the Senate, succeeded partly in its purpose by helping to scare food speculators. Senator Borah, of Idaho, introduced an even more far-reaching resolution, to appropriate six million dollars to be expended by the President in aiding local authorities to furnish food and clothing to persons now actually suffering and in investigations of rising prices, their causes, and means of adjusting them. This, of course, had no chance of passage during the crowded last days of Congress.

In New York state, the legislature has before it for consideration the Wicks bill "in relation to agriculture, foods, and markets," a document of 292 pages. Its primary purpose is the creation of a state department of agriculture, foods and markets. While the existing Department of Agriculture in the state has been built up gradually to assume various functions of protection to farmers, under the new

plan the interests of city consumers would receive from the state equal attention to those of producers. For this and other reasons the bill is severely opposed.

Among the functions of the new commission would be to "investigate fully the source of food supply, the production, manufacture, storage, transportation, marketing, and distribution of food sold in the state; the cost of food at the point of production and the expense of transportation, marketing, and distribution;" also "in case of emergency threatening the scarcity of food to take measures for relief," to "investigate and recommend the best methods for increasing the food supply," to "act as a mediator in any controversy between producer and consumer." The commission would also cooperate with municipalities in creating market facilities and in preventing the sale of unwholesome food; investigate and prevent unfair competition and set standards of purity. Adoption of this measure would confer upon the State of New York the power of investigation which by the action of the Senate in cutting off the appropriation sought, was denied the Federal Trade Commission. The commissioners, under this bill, would have full power to go outside the state for their study of food production and distribution.

In New Jersey, a commission appointed to inquire into causes of high cost of living, has started an investigation of the quantity of foodstuffs in storage and, as a measure of immediate relief, proposed to the legislature a bill empowering municipalities to appropriate money for the purchase of foodstuffs to be sold at cost in public markets.

Similar power is sought by the city of New York through the Goodman bill in the Assembly which provides for the establishment of community stores and empowers the Board of Estimate and Apportionment to borrow and spend money on food purchases to alleviate the suffering caused by high prices. This bill, strongly supported by labor and other interests, is likely to pass without delay and will enable the mayor to do officially what the Mayor's Food Supply Committee is doing now through the generosity of its members.

The health department of the city of New York, and the mayor's committee have both tried to use the opportunity for an intensive effort at public education in food economy. In this connection, lack of recognition that education in dietetics must of necessity be a slow process and can only under exceptionally favorable circumstances be successful when applied to adult women, has given rise to some amusing incidents. First, it appeared that the health department rebuked the mayor's committee for putting out educational leaflets which are unsuitable, either because of the cost of the recipes suggested or because these

are too far removed from the dietary habits of the people. But since, it has been learned that the health department itself does not fare much better in its educational efforts. It advises, for instance, women in the poorest parts of the city, who often do not possess the rudiments of dietary knowledge, "Don't use onions merely for their mineral salts. Apples, oranges, and bananas are cheaper," and advises the substitution of cocoa made with milk for tea and coffee on the grounds that it is nourishing. As usual in such cases, the endeavor to instruct has brought the city administration an accusation—undeserved in view of its other activities to relieve the situation—of attempting to avoid taking really vital measures of relief. In the meantime, the rice dealers are reaping a rich harvest from the free advertisement given them by city, state and federal authorities.

SCIENTIFIC MANAGEMENT FACING ABOUT

"I SAW an occasion for nailing to the masthead of the society the flag of hospitality to the discussion of all points of view." This was the explanation of H. S. Person, president of the Taylor Society, of an address delivered last Saturday in Boston, which seemed to set a new course for the members of that society. Whether a mere sociologist has any right to an opinion on subjects connected with scientific management, or whether a professor of economics should venture to differ from any of the teachings of the late Frederick W. Taylor, are questions which some of the scientific management engineers have in the past answered in the negative. As Felix Frankfurter, dean of Harvard Law School, put it in discussing Dr. Person's paper, the followers of Taylor have been "more Catholic than the Pope" in their devotion to the idea that their leader was infallible, and some of them have held all criticism invalid, excepting that coming from the "initiated."

It was this point of view that President Person, who is head of the Tuck School of Business Administration at Dartmouth College, set out to abolish once and for all in his address on the Manager, the Workman, and the Social

Scientist, the three whose opinions must be considered according to Dr. Person's view, in any discussion of problems of management. He held that none of these individuals sees all of the truth; that each is "a functionalized observer of industrial facts and judge of their significance; that each is complementary to and essential to the other, and that no organization which stands as advocate for one of the latest major contributions to industrial development, as does this society, can accomplish its purpose if it fails to consider every possible approach to the examination and valuation of the particular contribution which it seeks to promote."

Dr. Person set out to analyze the qualifications of each of these three "functionalized observers," in order to determine the principal advantages and disadvantages of each. He found the manager possessed of four disadvantages. In the first place, his attention is so concentrated on the details of his business that he is not free to weigh, study and acquaint himself with the thoughts of others. "He may not even keep up with the development of human thought concerning the very service which he performs for society;" second, "the very nature of his responsibilities compels him to regard and to value all things from the point of view of profits." Indeed, went on Dr. Person, "in most instances he is wholly unaware that there are other standards of valuation of the mechanism, processes and policies which he is called upon to consider." Third, he has too great a tendency in the direction of standardization; he forgets that he is dealing with human elements, which in some respects cannot be standardized, fourth "he is subject to the danger of regarding all the elements, which he directs, as commodities, and failing to recognize that spiritual factors are involved. Particularly, he too frequently fails to recognize that labor as a simple physical force cannot be separated from labor as a distinct and original seat of human intellect, feelings, desires and opinions."

The advantages of the manager were not dwelt upon with the same degree of detail because "they are well known and come immediately to our minds." Dr. Person mentioned first of all superior intelligence and great natural ability. Added to these are his sub-conscious understanding of the complexity and delicacy of the industrial machine, a thing which is the product of evolution and with which the manager has grown up. This is what makes the manager a "practical man."

Turning to a discussion of the workman, Dr. Person's address was less an analysis of the qualities of the worker than it was a revelation of a point of view. At the outset he stated that it has been a traditional opinion that the worker "could not exercise sound judgment in such matters (that is, industrial

"SHE NEEDS YOUR AID"

processes or policies) if called upon to do so." But within recent years a different opinion has been developing, held not only by workmen and by many social scientists, but "by an appreciable number of enlightened managers." This is the idea that the worker is entitled to assist in determining industrial policies. A majority of the managers who accept this as a truth, nevertheless regard the active participation of the worker in the making of such judgments as impracticable. A minority, said Dr. Person, both recognize his right and advocate the exercise of it.

Dr. Person did not overlook, however, certain definite limitations which he stated the workman possesses. Honest recognition of the facts, he declared, makes it necessary to point out that a majority of workmen have neither the education nor the experience "to render them broad and sympathetic in their views, and possessed of trustworthy perspective and sense of values." But this he held to be less damning an indictment of the worker than it is of society. The average workman, he said, "has had to leave school at an early age to begin the long struggle of support of self and family, in a regime of the bartering of labor as a commodity in which the advantages of bartering have been against him."

The other disadvantage of the worker, according to Dr. Person, is the class-conscious character of his leadership, and the fact that other matters are neglected for the "militant effort to achieve class solidarity and class prosperity." The speaker did not fail, however, to note that the emphasis laid upon wages on the one hand, is offset by the emphasis of profits on the other, and it is on account of this conflict in interest that "it is expedient to match the workman's judgment against the manager's and the social scientist's, in order to obtain the benefit of the workman's unique advantages for judgment, which in an increasing proportion outweigh his disadvantages."

The disadvantages of the social scientist, according to Dr. Person, are his lack of industrial experience, which lead him to advocate impractical measures, and a tendency toward an unconscious assumption that society is more advanced than it is. His point of view, however, is valuable in a discussion of industrial problems, because he not only has a perspective, which the manager and workmen do not have, but he depends for his judgments, in addition to his own observation, upon the judgments of the manager and of the workmen.

It is because each of these three observers has a distinct contribution to make to problems of industrial management, according to Dr. Person, that "a group of men standing for the Taylor philosophy of management should welcome—should insist upon the widest possible discus-

DETROIT'S UNITED CHARITIES BUILDING

THREE years ago the old Home for the Friendless at 22 West Warren Avenue, in the very center of the new Detroit, was amalgamated with the Society for the Prevention of Cruelty to Children, the two taking the name of the Children's Aid Society. The building has now been turned into a common home for the three largest child-placing agencies of the city, together with other important cooperating societies—the Application Bureau, Associated Charities, Bay Court, Michigan Children's Home Society, St. Vincent de Paul Society, and Visiting House Keeper Association.

sion of all phases of scientific management."

The paper called forth spirited discussion among members of the society and invited guests. Despite a certain amount of dissent on the part of industrial managers, the paper was cordially received. One noteworthy thing about the meeting was the absence of any representative of labor to participate in the discussion of the paper. Strangely enough this was the fault of labor, or rather of the individual representative of labor who, it was announced by the secretary, had accepted the invitation to speak, but failed to appear.

ILLINOIS' REORGANIZED STATE SERVICE

ILLINOIS surprised itself in the passage, by the practically unanimous vote of both houses of the legislature, of the act consolidating the civil administration of the state government in nine departments. The people were surprised at the politicians, whether or no the politicians were surprised at their own unanimity.

The act abolishes or consolidates no less than 128 boards and commissions and 300 official positions or jobs having

salaries aggregating \$400,000, and combines all their functions in the nine departments of finance, agriculture, labor, mines and minerals, public works and buildings, public welfare, public health, trade and commerce, registration and education. At the head of each department there will be a director, assistant director and other officials with functions specialized in accordance with its work. In addition to these paid officials an unpaid advisory and non-executive board is provided for each of six departments.

All these appointive positions are to be filled by the appointments of the governor, with the consent of the Senate for a period of four years. The classified civil service is protected by a provision that nothing in the act shall be construed to amend, modify or repeal the state civil service law and by another requiring that every civil service employe in the classified list at the time this act takes effect shall be assigned to a position having so far as possible duties equivalent to his former office or employment. While those connected with the branches of work that have been consolidated in the several departments will be thus protected, those whose functions have been abolished may be dropped.

The extent and outworking of the changes thus introduced are well illustrated in the newly created Department of Public Welfare. It will combine not only the State Board of Administration hitherto controlling all the state charitable institutions and the State Charities Commission, but also the separate boards hitherto managing the several penal and reformatory institutions which have never been under any centralized control or supervision, except the governor's authority over his appointees and their management. The purchasing and contracting function, however, is hereafter to be exercised for all departments by the Department of Public Works and Buildings. The director, at a salary of \$7,000, and an assistant director at \$4,000, an alienist, criminologist, physical supervisor, superintendent of charities, superintendent of prisons, superintendent of pardons and paroles at \$5,000 each, constitute the staff of the Department of Public Welfare appointed by the governor, who in turn holds the director responsible for the appointments of the wardens, superintendents and other officials not included in the classified civil service.

All these executive officers are supplemented by an advisory and non-executive Board of Public Welfare Commissioners composed of five persons. Its functions are to investigate the condition and management of the whole system of charitable, penal and reformatory institutions of the state, including jails and almshouses, not only upon request but at its own initiative; likewise to inquire into the equipment, management and policies of all institutions and organizations, charitable and correctional. It is authorized, at request and on its own initiative, to report and recommend to executive officers of the department, the governor and the General Assembly, and also to collect and publish annually statistics relating to insanity and crime.

The Department of Labor combines the prerogatives hitherto exercised by the commissioners of labor, the management of the free employment offices, the inspection of private employment agencies, the state factory inspectors, the Board of Arbitration and Conciliation and the Industrial Board, which has operated the workingmen's compensation act. In addition to the director and assistant director of labor, a chief factory inspector, superintendent of free employment offices, chief inspector of private employment agencies and five industrial officers are provided, besides an advisory board of five members for the state free employment offices and a similar board for each local free employment office established by the state. On these boards two members represent labor, two the employing interests and one the general public.

The other departments are organized with similar regard to their functions. The department of finance, however, is

given very large powers to unify, standardize and direct the bookkeeping, accounting and reporting of the several departments and to prepare a state budget, including exhaustive statements of revenues and expenditures for the two years preceding those covered by the budget. Each department, office and institution is required to file estimates of receipts and expenditures for the ensuing two years, accompanied by a written statement giving facts and explanation of reasons for each item of expenditure requested. The state budget thus prepared is to be submitted to the governor and recommended by him to the general assembly.

Governor Lowden has not only assured representative citizens whose counsel he has sought, but has announced to the politicians who are pressing their nominations for appointments, that all departmental heads will be selected primarily with regard to their efficiency, political preferment being distinctly a secondary consideration. His appointments are awaited with hopeful interest. The act becomes effective July 1 and has elicited a support from the legislature and the public such as no governor has hitherto received for any executive measure.

A SIMON-PURE GOVERNMENT DEPARTMENT

NO person associated with any private educational institution or receiving a salary from any private corporation or individual may hereafter be employed by the United States Bureau of Education, either as special collaborator or otherwise, on penalty of being deemed guilty of a misdemeanor and of being fined not less than \$1,000 or imprisoned for not less than six months, or both.

Moreover, no part of the appropriation made for the bureau may be used "in connection with any money contributed . . . by the General Education Board . . . or . . . by any corporation or individual other than . . . state, county or municipal agencies;" nor may the bureau "receive any moneys for salaries or any other purpose from the General Education Board . . . or contributed or tendered by any corporation or individual other than . . . state, county or municipal agencies, except by act of Congress authorizing the same."

These prohibitions are contained in a recently adopted amendment to the executive, legislative and judicial appropriation bill. They grew out of a debate in which the influence of the General Education Board and "allied organizations" was severely criticized, and in which the charge was made that this influence extends to determining policies of state and local boards of education and even to honeycombing the federal bureau with their own employes who use the prestige and frank of the government to circulate the propaganda of the pri-

vate organizations. A federal investigation may be demanded of the relations now and recently existing between the General Education Board and similar organizations and endowments on the one hand, and government departments on the other.

For some years it has been the practice of the federal bureau, under Commissioner of Education P. P. Claxton, to appoint special collaborators from persons employed by universities, colleges, normal schools and in other educational positions throughout the country. These collaborators receive nominal sums of from \$1 to \$25 a year from the government, and carry on investigations, prepare reports and do other service assigned to them. Their connection with the government gives them a certain standing and often results in their researches being printed as bulletins of the bureau and circulated under government frank.

Charges had been made and accepted as true by various senators that the General Education Board "and allied organizations in private control" were paying or controlling the salaries of nearly all of the 150 of these special employes. Early in January a resolution directed the secretary of the interior, in whose department the bureau of education lies, to furnish sundry information concerning the relations existing between private corporations and the bureau, as well as a list of the names, positions and sources of income of all employes of the bureau connected with or receiving money from any source other than the bureau. The list showed that two of the employes were employed directly by the General Education Board and two indirectly. It included many of the best-known teachers and educational administrators in the country, many of whom apparently had no connection with private organizations but were connected solely with state universities, colleges or normal schools or were employed in other public educational capacities.

Concerning the relations existing between private corporations and the bureau, the statement furnished by Secretary Lane and written by Commissioner Claxton said: "There is no relation whatsoever of the organization known as the General Education Board, the Rockefeller Foundation and the Carnegie Foundation to the work of the Bureau of Education. The Bureau of Education has entered into cooperative relations with the Phelps-Stokes Fund, New York city, for the purpose of making a study of Negro education in the United States; with the National Kindergarten Association, New York city, and the International Kindergarten Union for the purpose of investigating and promoting kindergarten education; with the National Congress of Mothers and Parent-Teacher Associations for the purpose of promoting education in the home; and with the Committee for Immigrants in

America for the purpose of investigating and promoting the education of adult immigrants in the United States. No funds whatsoever are contributed to the Bureau of Education directly by any of the organizations above mentioned. The organizations with which cooperative arrangements have been made are now providing for the Bureau of Education the services of certain employes whose salaries, however, are paid directly to such persons by the several organizations. The persons whose services are thus furnished the Bureau of Education are under the direct supervision and control of the commissioner of education, and do such work as is outlined for them by the commissioner."

The amendment referred to at the outset was introduced by Senator Chamberlain, of Oregon. Later Senator Kenyon, of Iowa, offered an amendment to the agricultural appropriation bill applying the same restrictions to the Department of Agriculture. Senator Kenyon estimated the number of nominal employes in the latter department at 500, and was apparently unwilling to credit the statement of the secretary of that department that none of these were paid by the General Education Board or other private organizations. Secretary Houston declared that all such connection had been severed since the enactment of the Kenyon amendment to the 1915 appropriation bill, prescribing the sources from which funds may be accepted. The Senate adopted the Kenyon amendment to the current bill, however.

Among the charges regarding the influence of the General Education Board and its "allies" that Senator Chamberlain intimated he might ask Congress to investigate are: That it determines the policy of state and local boards of education; that its influence is exerted on behalf of anti-progressive legislation, as in the case of a recent survey report in Maryland, in which the issue of child labor was involved; that it is gaining control of state and private universities; that it dominates the non-sectarian educational system of the South; that through its gifts of funds to colleges and universities it becomes dictator of their development; that through the pension system it influences the character of teaching, and molds the tendencies of future teaching, throughout the country; and that this influence is centered in a board of fifteen men, themselves responsible to one great private fortune for the continuance of their activities.

WOMEN MUNITIONS WORKERS AND THEIR PAY

THE announcement by the federal Department of Labor that the War Department had called for a large number of women munition workers is exciting comment in Washington, and the wage question involved will probably

be brought up in Congress. According to the announcement, women are wanted as machine operators at wages of \$1.36 to \$2.24 a day, while men operators are offered \$2.24 to \$2.64—the maximum for women being the minimum for men. Representative Keating of Colorado, who recently secured the passage of a House resolution of inquiry looking to equal opportunity and equal pay for women and men in government service, has announced that he will introduce and work to secure any legislation that may be necessary to obtain equal pay for women munition workers. The Federal Employes Union has filed a protest with the secretary of war and the secretary of labor.

Another phase of the question is being urged by women members of labor unions and suffrage organizations, namely, women's obligation to other women and to men workers. Florence C. Thorne, of the American Federation of Labor headquarters, has called attention to the recent action of women workers in France, who, she states in an article in the February *American Federationist*, have formed an intersyndical committee for action against the exploitation of women. Under the leadership of A. Marechal, secretary of the general syndicate of workers in the linen underwear factories of the Department of the Seine, a declaration and appeal has been drawn up, from which the following is quoted:

"This frightful war, from which women in all nations often have as much to suffer as men, will have some reactions which we must from now on foresee if we are to be guarded against the threats which are increasing daily. . . .

"Women must understand that everywhere they may be called to take the places of men, it is their duty to demand equal pay for equal work. They must demand it: first, because it is the most elementary justice that the labor be paid according to its intrinsic value and not according to sex; second, by personal interest; third, by duty toward other women (as it has been demonstrated that the acceptance of a reduced wage brings inevitably a fall in all wages of the trade); fourth, by duty toward the fighting men who must not find when they return conditions of labor still lower than they were before the war.

"We ask of the women of all countries: first, to make in their respective countries a methodic inquiry into the state of men's and women's wages; second, to arouse all professionals, societies, feminists, etc., to organize a powerful international movement in behalf of equality of pay with the view of obtaining from their governments at the moment of the signature of the peace treaty assurance that pay must be for a definite work absolutely independent of the sex of the individual who executes it."

RUSHING TO PROTECT MUNITIONS MAKERS

NIGHT work by women in munitions factories in Connecticut, brought out in Amy Hewes' article in the *SURVEY* for January 6, describing her investigation in Bridgeport for the Russell Sage Foundation, has led to the introduction of four prohibitive bills in the state legislature. Miss Hewes called attention to the ambiguous provision of the present law, which set a closing hour of ten o'clock but no opening hour, so that its effect was merely to prevent work between ten o'clock and midnight. Moreover, a court decision held that this provision applies only to mercantile establishments and not to factories. And this is on top of a ten-hour day.

Miss Hewes' article was reprinted in full in a Bridgeport paper and extracts from it appeared in many New England newspapers. The president of the State Federation of Labor, commenting on the facts, was widely quoted as saying: "Labor supposed when it secured passage of laws prohibiting the working of women and minors in manufacturing establishments more than ten hours a day or more than fifty-five hours a week, or after 10 P. M., that it had sewed up the whole matter, but now the mistake is evident. At this session of the General Assembly we will urge the passage of a measure to stop the employment of women and minors in manufacturing after 10 P. M. and before 7 A. M. It will be specific enough so no subterfuge may be found. The evils of night employment of women are apparent, and it is for the best interests of the state that the practice be stopped."

The federation bill before the legislature provides for an eight-hour day and a forty-eight-hour week for minors under sixteen and for women in factories, and a fifty-five-hour week, with no daily limit in mercantile establishments. Night work for "females over sixteen years of age" is prohibited between 10 P. M. and 6 A. M. in factories, and after 9 P. M. (with no opening hour specified) in mercantile establishments.

The Consumers' League of Connecticut has had a bill introduced providing for a nine-hour day and a fifty-hour week in factories for minors under sixteen and women, and a fifty-five-hour week (also without a daily limit) in mercantile establishments. Night work for "females over sixteen years of age" in factories is prohibited "before five o'clock in the morning or after ten o'clock in the evening," and in mercantile establishments after 9 P. M., again with no opening hour specified.

The third bill, sponsored by the Connecticut Committee for Shorter Workday Hours for Women and Minors, a branch of a New England committee organized in 1916 at a conference called by the Woman's Trade Union League,

the Consumers' League and other agencies in Boston, provides for a nine-hour day, and a fifty-hour week for minors under sixteen and women in factories or mercantile establishments, and prohibits work for minors and women in factories "before six o'clock in the morning or after six o'clock in the afternoon." Night work for women in mercantile establishments is forbidden "before six o'clock in the morning or after ten o'clock in the evening."

The labor commissioner is said to have planned the fourth bill, which is reported to differ from the others in not shortening the present ten-hour day, while agreeing with two of them in asking for a fifty-hour week in factories and fifty-five hours in stores.

Thus one organization wants an eight-hour day, two want nine, and one wants ten. Three ask for a fifty-five-hour week and one a fifty-hour week in mercantile establishments. The closing hour in factories is ten o'clock in two bills and six o'clock in two, and in the four bills three separate periods for prohibition of work for women at night in factories are named—between 10 P. M. and 6 A. M., 10 P. M. and 5 A. M. and 6 P. M. and 6 A. M. All agree, however, in naming a definite period at night when the work of women in factories is prohibited.

Students of labor problems feel that, valuable as it is, sudden widespread interest in a reform may have disadvantages when the friends of progress do not work together or agree in advance on common objects. They point out that the bills are open to objection because of their phraseology, which may permit evasion. For instance, the phrase, "no minor under sixteen years of age and no woman," does not necessarily include girls between sixteen and twenty-one, in fact several sections of the New York labor law clearly show that the word "woman" means an adult twenty-one years of age or over. And the two age groups, "no female under sixteen years of age" and "no female over sixteen years of age," certainly omit girls of sixteen. Further, none of the four bills restricts labor to six days in the week, and a weekly limit without a daily limit in stores is unenforceable; to set a closing hour and no opening hour in mercantile establishments, as is done in three of the bills, is, they point out, to repeat the same error which made the earlier restriction illusory when the mushroom munitions industry served to test it.

Before the bills were introduced at least one of the groups sponsoring them sought advice from the Legislative Drafting Bureau of Columbia University, but decided to draft its own bill without expert aid and risk the careless phraseology which by the experience of other states nullifies the effect of a statute or causes a verdict by the courts against its constitutionality.

Social Legislation

BILLS PROTECTING WOMEN AND CHILDREN

TO make the federal child-labor law passed by the last Congress more effective when it goes into operation next September, the National Child Labor Committee is cooperating with the Federal Board on administration of the law in urging the states to make their standards consistent with national standards.

West Virginia, for instance, which has never had regulation of hours, has allowed night work under sixteen and mining for boys under sixteen when schools are not in session, and has exempted some children from the fourteen-year limit, is this year considering all such restrictions, together with a standard employment-certificate system, special sixteen- and eighteen-year limits for dangerous occupations, a street-trades law and a night-messenger law. Kansas is working for a sixteen-year limit in mines, extension of the fourteen-year limit to include canneries and mills and standardization of employment certificates. In New Mexico, which has never had a child-labor law, the legislature is considering a bill which exactly conforms to federal standards, and in Utah an eight-hour day and dangerous-trades law for children under sixteen have just been passed by the House.

In Texas the Senate has passed an eight-hour law and a law placing a fifteen-year limit upon employment in factories, mills, workshops, laundries, telegraph offices, theaters and other places of amusement and a seventeen-year limit upon employment in distilleries, mines, quarries, places where explosives are used and in disorderly houses and messenger service requiring calls on such houses. The fact that exemptions are granted to twelve-year-olds under certain circumstances makes it non-conformable to the federal law, however.

Connecticut, where there is now a ten-hour day for children under sixteen, also balks at the standards set by the federal law. Because some people believe the state "is not ready" for an eight-hour law, a nine-hour law has been introduced into the legislature. The National Child Labor Committee, however, is trying to have a substitute eight-hour bill reported by the committee.

Besides West Virginia and Kansas, several other states are stiffening their employment-certificate system, asking more adequate proof of age (South Carolina and Indiana) and, as in Illinois, additional educational requirements.

Four states are attempting to regulate street trades—West Virginia, already mentioned, Connecticut, Minnesota and California. The California bill embodies the highest standards—a fourteen-year limit for boys, an eighteen-year limit for girls and no night work.

Two states are interested in restricting agricultural employment. As a result of an investigation in 1915 by the Ohio Public Health Association, an eight-hour day and forty-eight-hour week for boys under sixteen and girls under eighteen are recommended on onion, celery, and truck farms in Ohio. In Colorado the investigation of beet workers in 1915 by the National Child Labor Committee has resulted in the drafting of a measure for a fourteen-year limit for work in the beet fields. Although there is tremendous opposition from beet growers and workers, the bill is supported by the State Federation of Women's Clubs, Mothers' Congress, W. C. T. U., Federation of Labor, juvenile court officers and four railroad brotherhoods.

The New York Child Labor Committee is stopping gaps and filling up chinks in the present laws with their exceptionally high standards. The committee is planning a bill to provide for transmission of reports to school authorities concerning children found illegally employed and another to put the state-wide inspection of mercantile establishments under the Industrial Commission.

Prompted by the success of the federal child labor bill, the National Consumers' League is actively endorsing a measure (the Robinson-Keating bill), prohibiting in a similar manner interstate or foreign commerce in the product of any mill, cannery, workshop, factory or manufacturing establishment where females sixteen years of age and over have been employed more than eight hours in any one day or more than six days in any one week. The other federal bill which the league is urging is the Casey-Jones bill for a women's division in the federal Department of Labor.

In addition, the National Consumers' League are supporting together with the National Women's Trade Union League certain state measures designed to limit the working day of women—in eight-hour day or forty-eight-hour week bills in eight states, in a forty-nine-hour week bill in Rhode Island, in bills abolishing night work for women in Rhode Island and Connecticut, in a bill regulating home work in New Jersey, and in the

New York bill placing women employed in restaurants under the provisions of the fifty-four-hour law for women in factories.

The last measure is particularly sponsored by the New York City Consumers' League, which helped frame it after conducting an investigation of working conditions in restaurants and is campaigning widely in behalf of its passage. The city league is also endorsing a one-day-rest-in-seven bill for women employed in drug stores and restaurants. It is opposing the Bewley bills proposing certain exemptions to the factory law.

COMPENSATION AND OTHER LABOR BILLS

OF bills affecting labor, those concerning workmen's compensation are in the majority. States in which compensation laws may be passed for the first time are Delaware, Missouri, North Carolina, North and South Dakota and Utah. Bills to amend existing laws range from those in New York to extend the law to all employes and to increase weekly payments to 100 per cent of wages, to the Indiana bill to exempt train employes and the one in Minnesota to repeal the law altogether. In California, Indiana and Minnesota it is proposed to reduce waiting time to one week; in another bill in Minnesota and in Massachusetts and New York to abolish it altogether. Amendments offered in Illinois and Massachusetts would permit the commutation of weekly payments in a lump sum. Other bills propose to increase the proportion of wages to be paid in compensation to 65 per cent in Indiana, to 66 2-3 per cent in Minnesota, Nebraska, New Hampshire and Oklahoma, and to 75 per cent in Wisconsin. In Minnesota, New Jersey and Utah state funds are proposed. Ohio has passed a law prohibiting casualty insurance companies altogether from handling compensation business.

In Indiana there is a bill requiring the injured employe to accept the doctor furnished by the employer, while in Maine, Massachusetts and Minnesota there are bills to permit the employe to select his own physician. An Indiana bill would provide a judge in each congressional district to administer the law, another bill would require the consideration of bonuses in determining the wage which is to be the basis for compensation payments. A Massachusetts bill would permit a man hired within the state to recover for an injury even if it occurred outside the state. In Rhode Island there is a proposal to extend medical and hospital treatment for a period of four weeks. Washington would amend its law by providing for first aid.

In Colorado there are bills for the repeal of the industrial commission act, amending and repealing parts of the

mine-inspection act and declaring certain trades dangerous for the employment of children. In Minnesota there is a bill for the establishment of a commission on industrial relations.

Old-age pensions have received attention in Congress and in New Hampshire, where bills are pending providing for investigation and report. In California, Massachusetts and Pennsylvania there are bills for the establishment of pension systems. The Massachusetts bill would apply to all persons over sixty-five years of age who are unable to work and who have no other means of support. The Pennsylvania bill would give \$5 a week to a single person and \$8 a week to a married couple who are living together, the bill to apply to all over sixty years of age who are "unable to work and without means to live."

BILLS ON PUBLIC HEALTH AND HYGIENE

NURSING organizations are interested in a bill before Congress providing a national charter for the American Nurses' Association and in one before the New York state legislature amending the public health law relative to the practice of nursing. This bill, which was passed by the Senate at the last session, establishes definite standards and requirements for the practice of nursing as a profession, and distinguishes between the graduate or registered nurse and the nursing attendant. Indignation is widespread throughout Pennsylvania concerning the Gans bill, which would annul the nursing practice act of that state and open the ranks of the profession to any person trained or untrained who chose to care for the sick.

The American Social Hygiene Society is following bills in twenty-three states. Injunction and abatement bills are pending in Arkansas, Connecticut, Missouri and Ohio. A bill repealing the present injunction and abatement law has been introduced in Arkansas. The compulsory reporting of venereal disease is proposed in Arkansas, Kansas, New Jersey and North Carolina; Vermont would require drug clerks also to report persons treated or for whom prescriptions are made for venereal diseases; marriage of a person with venereal disease would be prohibited in Arkansas, California, New Jersey, Oregon and South Dakota, a certificate of health being required in all instances save the first. Iowa proposes to prevent the transmission of venereal disease by requiring physicians to advise patients of the character of such diseases and prohibiting all intimacies in the cases of persons infected. Bills providing industrial schools, reformatories or other places of commitment for delinquent girls and women are reported for Arkansas, Connecticut, Indiana, New York and North Carolina. West Virginia forbids

girls infected with syphilis to be committed to any industrial institution.

Provision for bringing control of venereal disease within the scope of public health authorities is suggested in California, whose state health inspectors are to investigate venereal disease clinics; in New Hampshire, where employment of district nurses by the State Board of Health to instruct parents in the subject of sex hygiene is being considered; in Ohio, where the State Board of Health is to arrange for free distribution of antitoxin and serum for use in the treatment of gonorrhoea and syphilis; and Wisconsin, which will withhold license to practice medicine until the applicant presents a verified statement that he is acquainted with the public health laws and the rules of the State Board of Health.

The transportation of women for immoral purposes will be prohibited, if the bills to this effect pass, in California, Delaware, South Carolina, Washington and Wyoming. In several states bills increase the fine for fornication, and provide in addition for a sentence of six months or more. Kansas prohibits the advertisements of "cures" for venereal disease; so does New Jersey. Connecticut would investigate the prevalence and treatment of such infection in the state institutions. Massachusetts would prohibit the employment of students as vice inspectors.

Provision for child-welfare work, either through a special commission or through the State Department of Health, is being considered in New Hampshire and Washington. The age of consent is raised to eighteen years in Massachusetts and Vermont.

The National Committee for Mental Hygiene and the Committee on Provision for the Feeble-minded report bills for the establishment or added equipment of institutions for feeble-minded in Arizona, Arkansas, California, Delaware, South Carolina, Washington and Utah. Pennsylvania asks an appropriation for a new village for feeble-minded women. Bills for the care of the feeble-minded, not more definitely described, are reported from Oklahoma and West Virginia. Sterilization of the criminal or insane in state institutions is proposed in Kansas, Ohio and Oregon. Bills extending the present hospital service are pending in Massachusetts, New York and Indiana. Bills providing for surveys of feeble-minded in schools and in society at large, and for further study of various aspects of the problem of the insane and the feeble-minded come from nine states. The most complete program now represented is that of Massachusetts, under the supervision of the new Commission on Mental Diseases.

These bills are being watched with interest by the American Hospital Association also. This association is like-

wise following the numerous measures providing hospitals of the general type for counties or states all over the country.

Practically all of the measures being promoted by anti-tuberculosis societies aim to secure more adequate provision for consumptives, either in the way of additional nursing or hospital facilities. There is a notable lack of registration laws, indicating that for the most part states have adopted legislation requiring registration of living cases, although many such laws and regulations are far from adequate. The question of compulsory segregation is also coming to the fore in a number of states, notably in New England.

Measures that have been introduced may be commented upon as follows: In Maine, an appropriation of \$500,000 will be asked for the maintenance of state tuberculosis sanatoria and other tuberculosis work. A subsidy for district sanatoria and a law conferring on health boards the power to segregate consumptives is also being asked. In New Hampshire, the anti-tuberculosis society is asking for an appropriation of \$150,000 with which to maintain the state sanatorium and to provide care in other institutions for tuberculous cases. A movement is on foot to turn over the Pembroke Sanatorium to the state, making it a public institution.

A county hospital law providing for referendum and state-subsidy features is being agitated in Vermont. Bills providing for the removal and detention of dangerous cases of tuberculosis and for a special institution for the segregation of such cases are before the Massachusetts and the Rhode Island legislatures. The Ohio Society for the Prevention of Tuberculosis is interested in a number of bills—to provide for a state health day, to give local boards of health power to employ public health nurses, to provide for county tuberculosis dispensaries, and to provide for a complete reorganization of the State Board of Health, with a commissioner and an advisory public health council, following the New York state plan. A bill is before the Michigan legislature prohibiting the employment in restaurants, hotels and similar places of persons afflicted with tuberculosis and other communicable diseases. A number of other measures dealing with tuberculosis will also come before the legislature in the near future, as a result of the activity of the Michigan tuberculosis survey [see the SURVEY for January 20]). Three measures of particular importance are being agitated in Indiana. The registration law, adopted two years ago and found ineffective because of certain flaws is being amended so as to make it workable. The county hospital law is being amended to provide for a state subsidy of five dollars a week and for a referendum feature. Another measure makes it possible for persons who have

recovered from tuberculosis in sanatoria, if they so desire, to be taught special tuberculosis nursing, and providing for institutions for this purpose. A radical reorganization of the entire Minnesota public health situation would be effected by the passage of the public health bill, following the report of a special commission appointed by Governor Burnquist. The bill provides for a commissioner of health with a small state board. The dual administration of tuberculosis is abandoned and the functions of the advisory commission are put under a division of tuberculosis, to be established under the new régime.

Under the direction of the Tennessee Anti-Tuberculosis Association bills providing for county tuberculosis hospitals and for county nurses will come before the Tennessee legislature. South Dakota is considering a bill providing for county tuberculosis nurses and for reorganization of the State Board of Health. To Oregon belongs the credit of having put through the first constructive tuberculosis legislation in the season of 1917, a comprehensive county tuberculosis hospital law with a referendum feature. The bill has passed both houses and is before the governor for signature. A law providing for county tuberculosis nurses has also been passed.

ZONING AND HOUSING BILLS IN FOUR STATES

GOVERNOR BRUMBAUGH, of Pennsylvania, made a strong appeal for the enactment of a state-wide housing code in his annual message. So far, the only bill which has assumed definite form is one drawn up by Samuel G. Dixon, commissioner of health, which has not yet been introduced in the legislature. New Jersey has under consideration a zoning act which is about to be introduced. It is an enabling act, granting to certain cities the power to regulate and limit the height of buildings and to determine the area of open space required for their light and ventilation, also to restrict the location of certain trades and industries.

California, likewise, is endeavoring to provide for still further protection of city extensions. Charles H. Cheney, expert adviser of the California Conference on City Planning, has drafted a bill prohibiting the building of apartment houses in single-family, private-residence districts. The previous zoning act of California, which has served as a model to a number of other states, makes it possible to keep industry and business out of residential districts, but does not distinguish between private houses and multiple dwellings.

The legislature of Minnesota has before it a housing bill applicable to first-class cities only, and that of Michigan one which applies to all cities with a population of 5,000 or more, while

Rhode Island is considering a permissive housing bill. In Indiana a bill has been introduced giving health officers power to vacate insanitary shacks and dwellings and extending the control of the state over housing conditions in villages,—a step in the upbuilding of a complete state housing code for which Albion Fellows Bacon has been so long at work.

RECREATION AND COMMUNITY CENTERS

THERE is only one way in which the responsible public authorities can meet the recreational needs of the people thoroughly and consistently, and that is the appointment of permanent recreation commissions with sufficient appropriations to engage an expert supervisor and with sufficient powers to acquire land, erect buildings, and levy taxes for administration and maintenance. Hence, the legislative campaign for better recreation facilities in recent years has largely been in the direction of securing home rule for towns and cities and of overcoming their disabilities in the matters named.

In New Hampshire, a bill has passed the House almost without opposition and is practically sure of passage by the Senate also, which enables cities to use land owned by them for recreation purposes without the need for securing special legislative sanction, also to purchase other land for playgrounds and to equip and operate neighborhood center buildings, to employ play leaders, instructors, and other officers and, without further recourse to the legislature, to earmark a specific percentage of each year's tax levy for recreation purposes. The bill is entirely optional and permits the giving of new powers to school and park commissions, where these are in charge of municipal recreation activities, or the appointment of separate recreation commissions.

Massachusetts has had an almost identical law on the statute book since 1912, and a similar bill has recently been passed in Nebraska and has been introduced in Minnesota. The last-named state already has a law, passed in 1915, making it obligatory upon the Board of Park Commissioners of Minneapolis to levy annually a tax not exceeding one-eighth of a mill upon each dollar of the assessed valuation of the city for the acquisition, equipment and maintenance of playgrounds as part of the city's park system.

A bill pending in Illinois enables the incorporation of adjoining cities, towns, villages, school or park districts as joint "recreation districts" to be administered by seven commissioners appointed by the county judge—precedence in appointments being given to persons representing school boards, private schools and city or park boards having play space or buildings within the district suitable for

public recreation purposes. The recreation commission is to have power, upon satisfactory arrangement with the school authorities, to establish in school buildings and on school grounds evening and vacation schools, reading rooms, libraries, debating clubs, gymnasias, public playgrounds and other recreation facilities, also to cooperate with other authorities in the management of other playgrounds and buildings. In the acquiring of lands, the commission is to have power of eminent domain. It is empowered to levy an annual tax not exceeding two mills on each dollar of assessed valuation.

There is, further, a unique bill before the legislature of Illinois providing that in the plotting of any tract of land of ten acres or more, subdivided into lots of less than one acre each, situate within or less than five miles outward from the boundary lines of any city, town or village with a population of 100,000 inhabitants, not less than one-tenth of the area plotted, after deducting the land set apart for streets and alleys, shall be dedicated to the public use as public space, park, common or playground.

In Iowa a community center bill is under consideration which provides for the creation of community center districts by the State Council upon the petition of 15 per cent of the property holders in any given district. The assessment of the cost of land and permanent improvement is not to exceed three mills upon the dollar. When established by vote of the property owners, a further tax not to exceed 5 mills upon the dollar may be levied for supervision and maintenance. The bill further provides that the State Council shall appoint three residents of the district who are qualified by reason of their fitness, to form a community center board with authority to appoint a supervisor or director and other officials, and with general authority over the activities. The bill also provides for cooperation of this new authority with the school board with a view to utilization of public school buildings and grounds.

BILLS ON THE MACHINERY OF GOVERNMENT

LINTON SATTERTHWAITE, of Trenton, has prepared for introduction in New Jersey a bill providing that all counties entitled to three or more members of the assembly shall elect them by the Hare system of proportional representation. A bill for proportional representation has also been introduced in Missouri. In Congress, Warren Worth Bailey has again introduced his bill which would permit any state to elect its congressmen by proportional representation if it wished to do so.

A survey of the work of the state legislatures recently made by the Na-

tional Municipal League shows a very general interest in the city manager idea. Bills facilitating this form of government are pending in many of the states. In several, notably North Carolina, bills giving cities the choice of several forms of government have been introduced. The proposals for consolidation of city and county government in Chicago were discussed in the last issue of the SURVEY. Similar proposals are also under consideration in Cleveland and Philadelphia.

In Philadelphia, the abolition of the existing constitutional distinctions between city and county is one of the proposals of a report on charter revision adopted by a citizens' committee. Its principal recommendations are now in the form of a bill before the Pennsylvania legislature and include the following provisions: that the city solicitor who is now an elective officer shall be appointed by the mayor and the receiver of taxes by the city treasurer; that the Board of Revision of Taxes and the Board of Public Education (the latter now appointed by the judiciary) shall be appointed by the mayor, and that the power to levy taxes and to borrow money for school purposes shall be lodged in councils; that the duty of regulating the sale of liquor by granting licenses shall be transferred from the bench to a board of three commissioners to be appointed by the mayor. The bill further provides for reorganization of councils by substituting for the present dual system a single chamber of fifteen members elected at large, composed of one representative from each electoral district, with a salary of \$2,500 (\$5,000 to the chairman of the Finance Committee). The bill contains clauses widening the authority of this reconstituted councils, greatly increasing the authority of the mayor and of the executive departments, abolishing the present state tax on municipal bonds, enabling the taxation of real estate owned by public service corporations which is now exempt from local taxation, increasing the discretion of city councils to determine the terms and conditions upon which city work may be performed or let by contract, and centralizing the control of elections under the authority of the registration commissioners.

The New York Short Ballot Organization is presenting at Albany its familiar constitutional amendment for cutting off minor offices from the state ticket and making them appointive by the governor. The bill at the same time cleans up the confusion in methods of removal and eliminates confirmation by the Senate. Another amendment for what it describes as the semi-appointive judiciary puts upon the governor the duty of making nominations for each judicial office subject to counter nomination being

made by petition in case his nomination is not universally acceptable. All candidates would then go on the ballot without party designation, except that the governor's candidate would be indicated by the words "recommended by the governor."

The County Government Association of New York presents its amendment, removing the obstacles to new forms of county government, and has introduced its bill proposing a necessarily incomplete application of the commission-manager plan of government to counties. In this bill, the district supervisors are replaced by a small board elected at large who appoint a county manager, who in turn appoints all administrative officers who are not required to be elective under the constitution.

The Municipal Government Association of New York state is working for a constitutional amendment giving home rule and the right of cities to draft their own charters; also for a general non-partisan election act applicable after a referendum to any city which wants to adopt the non-partisan system.

EDUCATION AND PROTECTION FOR IMMIGRANTS

IN addition to the bill before Congress providing for an appropriation of \$50,000 to the Bureau of Education, several states have of late increased their attention to the educational needs of immigrants and have made additional provision for night schools without, however, requiring new legislation specifically for the purpose of Americanization activities. A number of state boards of immigration, some of which previously have been no more than land-boosting organs, have begun to realize that in the interest of the state the prosperity of settled farmers is of no less importance than the number of newcomers and are gradually developing into agencies for aiding and protecting immigrant agriculturists. Since, however, with the present high rates of wages in industry, inducements to take up land fall upon deaf ears, there has been no occasion for legislation to aid immigrant farmers.

Only two states, so far, New York and California, have Boards of Immigration which render valuable protective and educational services to the immigrant apart from colonizing schemes, paying attention to distribution, housing and employment, and investigating complaints of exploitation. Now Massachusetts has a bill providing an annual appropriation of \$25,000 for the creation of a permanent state board of immigration. The bill was recommended by the governor in his annual message, is supported by the Boston Chamber of Commerce and was endorsed in the recent elections by both parties.

In New York, the governor's message recommended that steps be taken to

reduce illiteracy by creating a special bureau for educational work among adult immigrants in the Department of Education. A bill has been prepared making an appropriation for this purpose and empowering the state superintendent of education to appoint an expert. The New York legislature also has before it a resolution for a constitutional amendment providing that all voters shall be literate. This was introduced by the majority leader, but has found little support.

In Ohio, provision for the education of adult immigrants in the use of the English language and in citizenship was included by Governor Cox in an emergency program of absolutely necessary legislation which he recommended. This has the support of the Cleveland Chamber of Commerce and of other important bodies.

PHYSICAL AND VOCATIONAL SCHOOLING

IN the field of education, the two subjects that are perhaps attracting most attention among legislators are physical and military training and vocational education. In Delaware a bill is pending to provide compulsory physical training in the elementary grades and compulsory military training in high schools. Similar measures are pending in Michigan and Missouri. New Jersey is considering a measure to make physical training compulsory in all schools and to leave to each municipality the decision as to military training in the high school. Connecticut has a choice between providing military education for boys between fourteen and sixteen, and creating a commission to report upon the practicability of such education. Meanwhile, New York also has a choice between repealing entirely last year's act providing physical training in the schools under partial military auspices, and extending military training for boys between sixteen and nineteen to boys who are employed. A possible militarizing of vocational education is seen by some people in a provision of this amendment that permits military training to be met in part "by such vocational training and experience as will specifically prepare boys for service useful to the state." Massachusetts has a bill providing compulsory physical training in the public schools, subject to the direction of the state board of education, and another calling for an investigation by the commissioner of education relative to establishing courses in citizenship and patriotism.

Though no bills have yet been introduced, it is probable that some of the legislatures now sitting will pass measures making effective the provisions of the federal Smith-Hughes bill, not yet signed by the President, granting aid to states on certain conditions for the de-

velopment of vocational education. Meanwhile, these measures are pending in various states: in Massachusetts, a measure to permit employed children under sixteen to go to school for several hours each working day; in Connecticut, a bill to compel all children who are getting employment certificates to attend school until they are sixteen for 100 consecutive days full time or for forty weeks part time; in Kansas, a measure providing that children between fourteen and sixteen must complete the elementary grades before entering employment; and in Pennsylvania, an amendment to the school code to provide for the establishment and maintenance of evening schools, vacation schools, reading rooms, library stations, debating clubs, gymnasiums, public playgrounds, public baths and similar activities in public school buildings and on school grounds.

Colorado is considering a comprehensive measure revising its educational code; New Mexico, the creation of a commission to eradicate illiteracy; Connecticut, a bill to provide summer schools on petition, another to fix the minimum salaries of teachers, another authorizing the State Board of Education to construct a model rural school at Danbury, and another authorizing the State Board of Health to equip a division of child hygiene; Oregon, two measures providing a method of industrial education for the adult blind and establishing a state school for homeless, neglected, abandoned and dependent children.

In South Dakota a bill has passed the Senate providing for a state-wide survey of education. Kansas is considering legislation to make the county the unit of taxation in school matters. Several states are considering legislation providing pension for teachers. Massachusetts has a measure authorizing certain cities to establish municipal universities, another providing that state-aided vocational education may include vocational guidance, and another establishing a state board of immigration.

In New York great interest has been aroused in a measure sponsored by the State Department of Education making each city board of education the real legislative body for education in the community. It takes a mass of hard-and-fast administrative provisions out of the various city charters and lodges broad powers in the boards themselves. Each board is fixed at nine members except that of New York city, which is left at forty-six. Another measure abolishes the New York city board entirely and substitutes a single commissioner of education. Two other bills make mandatory the education of mentally backward and physically retarded children. Another measure soon to be introduced proposes to make drastic amendments in the compulsory attendance and child-labor laws.

CAPITAL PUNISHMENT AND PRISON REFORMS

PERHAPS never, reports the National Committee on Prisons and Prison Labor, have so many states been debating the issue of capital punishment as this year. Legislators do not, however, seem to be as favorable to the abolition of the death penalty as the recent spread of humanitarian ideas in the prison field might indicate. Colorado, Utah and Vermont have killed measures abolishing it outright. In Massachusetts a bill was lost but the lower house is now considering a measure to refer the question to the people. The upper house in West Virginia voted 13 to 12 in favor of abolition only to have the measure lost next day on reconsideration. The Indiana Senate killed a bill and the House is now considering a similar measure with the expectation that if it fails an abolishing amendment will be brought before the constitutional convention to be held in June. Delaware is considering two measures, one permitting juries to recommend life imprisonment in cases of first-degree murder but retaining the death penalty for five other offenses, and the other empowering the governor to appoint a commission to investigate the question.

In North Carolina a bill is pending to reduce the number of capital offenses to one—murderous assault. Measures to abolish are still pending in Pennsylvania, New York, New Hampshire, Illinois and Nebraska. Meanwhile, Tennessee has re-established the death penalty in two bills, both of which the governor is expected to sign. Oklahoma is considering a measure to increase the number of capital crimes by one, that of bank robbery.

In New York Katharine B. Davis, head of the New York city Parole Commission, is responsible for a measure calling for the purchase by the state of the laboratory of social hygiene at Bedford Reformatory. This laboratory was established five years ago by John D. Rockefeller, Jr., and others to study the causes of crime among women and to work out a new methodology for magistrates in disposing of convicted girls. Dr. Davis' proposal is that the laboratory be made a state clearing house to which judges could send certain women offenders after conviction and before sentence for study and report. The purchase price is estimated at \$309,000.

Two bills affect adversely the new Parole Commission in New York city. One would abolish the commission entirely and repeal the indeterminate sentence act upon which its effectiveness depends, and the other would withdraw the city penitentiary from the jurisdiction of the commission. Two bills would extend the paroling powers of private reformatories for women.

A hopeful effort to establish a farm colony for tramps in New York will be set back if a bill is passed providing that the site intended to be used for that purpose be put instead to military purposes. A joint resolution has been introduced to amend the constitution so as to give children's courts power to dispose in certain cases of adults charged with crime, and also to determine both civil and criminal matters concerning children.

Another New York measure prohibits the fining of convicted prostitutes, purveyors and keepers of disorderly houses, and provides that they must either be sent to prison or released under suspended sentences.

In Connecticut a bill has been introduced authorizing the governor to appoint a commission to investigate all the jails of the state and their relation to other penal institutions. The same state is considering the establishment of a women's reformatory. New Jersey, following the report of a commission on conditions at Trenton prison, has been asked to appropriate \$44,000 for improvements and to continue the commission for another year to investigate other penal institutions. Pennsylvania is considering the establishment of a half dozen state farms to take the place of its county jails. A bill is before the Massachusetts legislature to establish a psychopathic laboratory in connection with the State Reformatory for Women. In Missouri measures abolishing contract labor in the state prison were defeated and Governor Gardner is urging their re-introduction in the second half of the session.

Bills creating the office of public defender are pending in California, New York, Tennessee and Michigan. Colorado has passed a measure establishing this office in Denver.

REMEDIAL LOAN BILLS IN FIFTEEN STATES

WITHIN the year the Supreme Courts of Ohio and Oregon have declared to be constitutional the small-loan laws enacted in those states in 1915, while the Pennsylvania law of 1915 has been upheld by the courts of Philadelphia and a decision in the state Supreme Court on appeal is expected soon.

As to new legislation, a uniform draft of a small-loan bill approved by the Division of Remedial Loans of Russell Sage Foundation and by the American Association of Small Loan Brokers has been prepared for introduction in several states, notably California, Indiana, Illinois and Maine. This bill places all lenders of \$300 or less under the control of the state officer in charge of bank examinations; permits an interest charge of 3½ per cent a month computed on unpaid balances; prohibits the charging of additional fees or bonuses.

It has been found so difficult to safeguard against abuse the charging of fees on small loans that it is the consensus of opinion that the only way to handle the matter properly is to permit a reasonable rate of interest without additional fees of any sort which can be used as a source of revenue by the lender. The bill requires the consent of the wife to an assignment of wages and prescribes adequate penalties for violations of the law in any respect.

In all, some fifteen states are at present considering bills affecting the making of small loans. In California the uniform bill with minor changes has been introduced by California Association of Small Loan Brokers; another bill limiting interest rate to 2 per cent monthly without further fees has been introduced at the instance of the San Francisco Remedial Loan Association, and a third bill, prohibiting higher interest than 1 per cent monthly, first introduced in 1915 by Senator Brown, has been reintroduced this year. This is held to be an antiquated and impractical bill.

In Colorado, a bill limiting interest on small loans to 12 per cent a year has been introduced by Senator Dunklee—described as an inadequate and unsatisfactory bill. In Illinois, the uniform bill, approved by a Chicago committee of representatives of social and civic organizations and remedial loan societies, has been introduced in both branches of the legislature. In Indiana, the uniform bill, approved by the Indianapolis remedial loan association board and the Indianapolis *News*, has passed the Senate by unanimous vote. In Kansas, there is an inadequate bill limiting interest to 2 per cent a month. In Maine, the uniform bill, approved by a committee of the Portland Associated Charities, has

been introduced by Representative Garcelon.

In Massachusetts, five bills affecting the making of small loans have been introduced. Remedial agencies hold that none of them deserves passage; the law as amended in 1916 is apparently working satisfactorily. In Minnesota, a bill modeled on the Michigan law has been introduced by Senator Green. The present law is inadequate but the system of fees provided for in the proposed amending bill is held objectionable. New Hampshire has a bill based on the uniform bill, while in Ohio a bill has been introduced prohibiting building and loan associations from loaning on chattel mortgages,—legislation apparently needed. The Utah bill limiting interest to 3 per cent a month without fees and placing lenders under a supervision of the bank commissioner is based on the New Jersey law of 1914, which has proved generally satisfactory. In West Virginia a small-loan bill has been introduced by Senator Gregory, but information as to its provisions is lacking. In Wyoming, a bill modeled on the objectionable Colorado bill, limiting interest to 1 per cent a month, has been introduced.

Bills legalizing the Morris plan of loans have been introduced in Maine and Pennsylvania, and it is understood are to be introduced in New Jersey, Minnesota and several other states. These bills are intended to relieve companies operating the Morris plan from restrictions to which other loaning agencies are subjected by the general laws. On this account, and for the reason also that they permit the charging of fees and fines in addition to interest, they are opposed by the remedial loan agencies.

Book Reviews

WELFARE WORK

By E. Dorothea Proud. G. Bell and Sons, Ltd., London; the Macmillan Company, New York. 368 pp. Price \$3; by mail of the SURVEY \$3.20.

"It is a strange irony, but no small compensation, that the making of weapons of destruction should afford the occasion to humanize industry," writes Lloyd George in his foreword to Miss Proud's book. Though some may claim that this is an overstatement, in view of the *laissez faire* policy followed

during the opening year of the war and the difficulty with which alleviation of its consequences is being effected, yet the fact remains that the tremendous industrial mobilization of Great Britain, undertaken so successfully by Mr. Lloyd George as minister of munitions, has been accompanied by a greater regard for the welfare of the workers and the development of various plans for industrial betterment, one of the most conspicuous of which is the establishment of a Welfare Department under the Ministry of Munitions.

It is with this department that E. Dorothea Proud, author of the present volume, has been associated since its foundation. What she has to say on

the subject of welfare work, therefore, carries added meaning, even though the book itself was completed before the creation of the department. She has had wide experience in studying such work, both in Great Britain and Australia; and it is on this experience that her discussion is based. The book itself is her thesis as Spence scholar from Australia in the London School of Economics.

Welfare work, as discussed here, does not harmonize with the narrow conception that many of us have of its meaning. Miss Proud's broad definition includes all "voluntary efforts on the part of employers to improve within the existing industrial system the conditions of employment in their own factories." This comprehends not alone the provision of a proper physical environment for the workers, in well-lighted, sanitary factories equipped with rest rooms and lunch rooms, adequate lavatories and cloak rooms, but also attention to the more fundamental problems of health in industry—the causation and effects of fatigue and its relation to output, the adaptation of the task to the physical equipment of the worker. It comprehends not alone such questions as recreation, educational opportunities and housing for the labor force, but also the basic industrial problems of wages and hours of work. Those welfare departments which place the main emphasis on the social side of their work, according to Miss Proud, miss their fundamental purpose, which is more closely allied with work than with play. Such activities as clubs, classes and the organization of sports are incidental to the work of these departments.

The function of the welfare secretary is to bridge the gap left in modern industry by the absence of personal relations between employer and employes. In accomplishing this aim numerous duties must be performed. The task of engaging workers, or at least of their provisional selection, is one which serves as a connecting link between the factory and the welfare department and gives to the latter a *raison d'être*.

Consideration of the motives which actuate employers in undertaking welfare work leads to the interesting observation that, while in England a mixture of humanitarian and business motives prevails, in America the only attitude "tolerated" is that welfare work is a good thing because it pays. This indictment of the American commercial spirit, however, is not based on the same opportunities for observation in this country which Miss Proud has enjoyed in England and Australia.

Aside from the description of welfare work as it is and as it may become, sections of the book are devoted to illuminating discussion of the social function of the employer, of the part played by employers in English factory legislation,

of the attitude of workers toward employers' efforts to improve conditions, and other allied topics. The whole volume constitutes an exceedingly valuable contribution to a field where clarifying discussion is much needed.

HENRIETTE R. WALTER.

THE MOTHERCRAFT MANUAL

By Mary L. Read. Little, Brown and Company. 440 pp. Price \$1.25; by mail of the SURVEY \$1.35.

The scope of this book of the director of the School of Mothercraft of New York city is so ambitious that we are not surprised to find within its covers considerable confusion, inaccuracy and the wrong placing of emphasis. We

may agree with the author that "the intelligent worker with children in the home must be acquainted with what is normal and usual at any stage in child anatomy, physiology and psychology," but we would not grant that "such knowledge and preparation can be acquired only through study of the literature of child psychology, and through intensive first-hand acquaintance with children." The literature of child psychology is so muddled and contains so much twaddle that the average American mother should be warned against it, or at least advised to confine her attention to the one or two clear, scientific, practical books which have permanent value.

To give the essentials of anatomy, physiology and psychology of the child, as well as a complete bibliography and résumé of the literature of these subjects in one ordinary-sized volume, would indeed be a gigantic task and demand an unusually wide and thorough scientific knowledge.

There are a dozen places in the chapters on mothercraft, founding a family, preparing for the baby, and the care and physical development of the baby, where there is evidence of the lack of a sound scientific knowledge not surprising in one who longs for the day when "applied science will be esteemed more worthy than pure science." We are amazed in this day and generation to find tuberculosis given as "a hereditary taint" and one "precluding marriage." "Catarrhal deafness" is also included in this list of ailments which should prohibit parenthood. Adenoids might equally well be included, since they are a contributing cause of chronic nasal infections.

We wish we could hear more of "antitoxic diet," or what constitutes a "toxin free" diet. We wonder what obstetricians would think of indiscriminate ad-

vice to increase carbohydrates in the diet the last months of pregnancy, especially if a small child were a desideratum. We heartily agree that alcohol has no place in the diet of the child, but we object to such quotations as "the time may come when we shall see that every drop of alcohol taken by the parent means a drop of stupidity for the child." Why not state what we know is true, and not what we would like to believe is true?

In the tabulation of the causes of infant mortality, we are surprised to find no mention of the chief cause of death among infants—prenatal and natal injury. Prematurity is equally ignored.

While the description of the nursery and the care of the infant is good, the mother of a family with a small income will find little to help her in its pages. The infant schedule is too complicated to be practical for the mother of many children, unless it is possible for the mother to give up all her waking hours to the care and study of her baby.

The last part of the book, however, on the education of the child, on games, play and story-telling, is full of good points.

The chapter on home nursing and first aid is not at all satisfactory. The part on maternity is especially poor. Miscarriage and kidney complications, the two great dangers of pregnancy, are not mentioned and the statement is made that no satisfactory anesthetic for labor cases is known. How about nitrous-oxide oxygen?

The bibliography is large, loose and incomplete. We miss entirely such standards as Galloway's *Biology of Sex*, Torelle's *Plant and Animal Children*, Slemmons' *Prospective Mother*, Grulee's *Infant Feeding*, Forbush's *Manual of Play*, and Shedloch's *Art of the Story Teller*.

The manual fails, to our way of thinking, because the author has attempted to cover too wide a field, without adequate scientific knowledge of all the topics covered. There is material in the book for half a dozen small books, if the wheat could be separated from the chaff.

DOROTHY REED MENDENHALL, M. D.

A POINT SCALE FOR MEASURING MENTAL ABILITY

By Robert M. Yerkes, James W. Bridges, and Rose S. Hardwick. Warwick & York, Inc. 218 pp. Price \$1.25; by mail of the SURVEY, \$1.37.

To the many students and workers whose interest focuses on the problems of mental hygiene, this publication from the press of Warwick and York will come as a welcome aid. The limitations of the Binet-Simon tests, valuable in many respects, have been felt by many groups for a long time. This new method of measuring mental ability, by a single series of tests, has been devised by Professor Yerkes, of Harvard

University and of the Psychopathic Hospital in Boston, and Professor Bridges, of the University of Alberta; assisted by Rose S. Hardwick, instructor in the Boston School of Physical Education.

Since it is planned to discuss in the SURVEY at an early date the values and limitations of various tests for mentality, it will suffice at this time to call attention to the authors' description of their "point scale." G. S.

CARE OF THE MOUTH AND TEETH

By Joseph Herbert Kaufmann, D.D.S. Rebmam Company. 69 pp. Price \$.60; by mail of the SURVEY, \$.66.

Out of his experience in the Bronx Hospital Dispensary and the Vanderbilt Clinic, New York city, Dr. Kaufman has prepared a "primer of oral hygiene." He has succeeded in making the scientific material simple and in giving it a practical turn, which should make the resulting little volume a decided help to anyone who is trying to teach children the facts of hygiene, whether at home, in school, in community centers or in clinics. A great deal of information is packed into these few pages—information not only about the structure of teeth and the necessity of keeping them clean, but also about the interesting relations between mouth conditions and general health or specific ills. There are very good illustrations both of tooth structure and of various kinds of tooth-brushes, from the full-bristled article to a novel thing with but half a dozen tufts. G. S.

THE TYRANNY OF SHAMS

By Joseph McCabe. Dodd, Mead and Company. 296 pp. Price \$1.50; by mail of the SURVEY, \$1.62.

THE SOCIALISTS AND THE WAR

By William English Walling. Henry Holt and Company. 512 pp. Price \$1.50; by mail of the SURVEY, \$1.62.

THE "SOCIALISM" OF NEW ZEALAND

By Robert H. Hutchinson. New Review Publishing Association, N. Y. 155 pp. Price \$1; by mail of the SURVEY, \$1.07.

THE NEXT STEP IN DEMOCRACY

By R. W. Sellars. Macmillan Company. 275 pp. Price \$1.50; by mail of the SURVEY, \$1.62.

The study of socialism which is being stimulated by the war will be aided by these volumes. Mr. McCabe's iconoclastic criticism of most of the dominant ideas and institutions of the time interestingly and forcibly ex-

presses the rapidly deepening discontent with chaotic disorganization and inefficiency in the present order of life and labor. Out of his destructive criticism of shams and cant, he develops a plea for a national organization of industry and a collectivist social order which he

calls "a new planetary arrangement." His attack on "the military sham" and "the follies of sham patriotism" are particularly timely.

William English Walling's "documentary statement of the position of the Socialists of all countries, with special reference to their peace policy," is a permanently valuable contribution to the history of the war, as well as to that of contemporary socialism. Its value is enhanced by "a summary of the revolutionary state socialist measures adopted by the governments at war."

The trenchant critique of New Zealand's socialism, ending with the denial that New Zealand's "progressive institutions have in any way solved the problems of capital and labor," files an emphatic exception to the continued applicability of Henry D. Lloyd's title, New Zealand—A Country Without Strikes. Whatever evidence may be forthcoming in rebuttal, Mr. Hutchinson seems to caution us against the exemption of socialism from the failure of everything human to realize its ideal.

Professor Sellars, of the University of Michigan, while claiming and defending socialism as the "next step in democracy," by no means takes for granted that it can be taken soon or without long preparation anywhere. Freshly and frankly discussing the objections and tendencies to be reckoned with in urging the socialist propaganda, he everywhere lays emphasis upon the educational and moral discipline which must prevail as a condition and an accompaniment of realizing the hopes of socialism and the efforts to "universalize democracy." G. T.

THE WAR AND THE SOUL

By R. J. Campbell. Dodd, Mead and Company. 300 pp. Price \$1.25; by mail of the SURVEY, \$1.36.

THE FORKS OF THE ROAD

By Washington Gladden. Macmillan Company. 138 pp. Price \$.50; by mail of the SURVEY, \$.56.

While it would not be fair to compare or contrast critically these two volumes, because written for very different reading, they may be taken to characterize two types of writing about the war from the church's point of view. Mr. Campbell's volume consists of a series of disconnected articles printed in an English newspaper and written for the average reader. Personal rather than public issues are dealt with for the most part so individually that one would think the problems of the soul and the war could be kept distinct from the racial, social and big human problems. Strangely for one who has written and

preached so much on social conditions of life and labor and their improvement, Mr. Campbell insists many times and in many ways "that the problem of what is wrong with the world is not greater by one iota because of the war than it was before the war began"; that "not for one moment do I believe that the world is less Christian than it was before the war, or less intent on spiritual things." Thus from a surprisingly individualistic point of view the changes are rung upon this apologetic note with varying degrees of consideration for the plight of humanity and the progress of the race.

Dr. Washington Gladden nowhere hesitates to face the sternest facts with which the war confronts the Christian faith and all who profess it. He sees civilization and the church alike "at the forks of the road," where they must choose, the one between militarism and the parliament of peace, the other between the worship and service of tribal gods and sacrificial loyalty to the Father God, "who hath made of one blood all nations of men for to dwell on all the face of the earth." Before this "scandal of the centuries," this "grotesque anomaly of the coexistence of Christianity and war," before this "one tragic fact of history—the lapse of the church of Jesus Christ from her vocation—the failure to grasp and enforce the central truth of the Kingdom of the Father, which Jesus lived and died to reveal," the church stands, he fears not to say, "dumb and despairing in the presence of the worst moral disaster that history records."

How it and Christian civilization will come out of this tragedy he does not easily take for granted. But it depends upon a choice of the way of life which it is not too much to hope men of vision will discern. G. T.

PATRIOTISM AND THE FELLOWSHIP OF NATIONS

By F. Melian Stawell. E. P. Dutton and Company. 91 pp. Price \$.75; by mail of the SURVEY \$.79.

We have been asked recently to recommend a book which teachers and leaders in children's clubs might use to expound that wider Americanism which President Wilson voiced in his peace message of January 22. We have not

yet found a textbook that can be recommended for such a purpose. The manuals on patriotism usually have no reference to human brotherhood; and the manuals on peace too frequently understate the real claims on the individual of kin and country. There has come to hand, however, this short primer by an English teacher which may serve as a

model for the kind of teaching most needed among our young folks with regard to patriotism and internationalism. Unfortunately, for our purpose, it is English in its references to present problems and to history, a circumstance which naturally makes the book itself ineligible for American use.

As an antidote to the ordinary school teaching of history, Miss Stawell's plan deserves at least intelligent experimentation. She starts out, very properly, with a discussion of law and its relation to the individual conscience. That brings her at once to the conflict between nations, each believing itself to be right. In an English book, one is glad to read: "*Wrong can never be stopped, if those who set out to right the wrong become as unfair as the original wrongdoers.*" (The italics are the author's.) "That is one of the many reasons why war should not be waged at all unless the wrong that is already being done is intolerable. A victorious nation, even when its cause is just, is apt to go much too far and demand a punishment greater than the original offense. Then the defeated country is left smarting under a sense of injustice, and little but further evils, and further wars, can rise from such a triumph of the 'right cause'."

A plea is made for national unity on the basis of common traditions and ideals; but this unity, she insists, must be voluntary, respecting the differences between the component elements of the nation. That intense national patriotism is not necessarily antagonistic to a fervent internationalism is illustrated by the example of Mazzini. But international unity cannot be permanent unless it is established on a firm economic basis. Hence, exchange of goods and migration, the problems of colonization and of the duties of the civilized world towards the backward races naturally fall within the scope of this manual.

On the practical side, the author supports the idea of a world court on the lines of that proposed by the League to Enforce Peace. On the idealistic side, she emphasizes that "change of heart," not only in international politics but also in the every day relationships of the individual citizen, which alone can ensure the end of war and the beginning of a real fellowship of nations. B. L.

THE FIGHTING ISSUES

"A statement by the Editor of his stewardship of the SURVEY in this crisis; and his own approach to the issues of war and peace."—From the SURVEY for February 17.

TO THE EDITOR: . . . I wish I were able to circulate a half million SURVEYS of the kind you put out for February 17. I can conceive of no more patriotic service than this. As it is, I have to be content with more humble deeds.

NEWELL L. SIMS.

[Department of Sociology and Political Science, University of Florida.]
Gainesville.

TO THE EDITOR: Your "Kellogg" article of February 17 is fine. War on Germany or any other people can't end war. . . . "Let us have peace" by forbearance.

HENRY M. HALL.

Pittsburgh.

TO THE EDITOR: I do not care for a magazine edited by one who desires a referendum in the present crisis. I believe this to be a representative democracy.

K. M. MARSHALL.

Chattanooga, Tenn.

TO THE EDITOR: Mr. Kellogg's statement and defense of his position are more satisfactory to me than any statement and defense that I have elsewhere seen or heard, or that I have been able to devise for myself. It did my heart good.

CHARLES E. EDGERTON.

Washington, D. C.

TO THE EDITOR: I have read the SURVEY with interest and profit from the beginning, and during all these years I have taken the good things so much as a matter of course that I have never been thoughtful enough to send the editors a formal expression of appreciation.

I cannot refrain, however, from sending just a line at this time to express my appreciation of your article, The Fighting Issues, in the issue of February 17. Like so many of my fellow-citizens, I have been torn by conflicting emotions in this unparalleled crisis in our international affairs, and your article has been more helpful than anything that has yet come to me.

GEO. S. WILSON.

[Secretary, Board of Charities of the District of Columbia.]
Washington.

TO THE EDITOR: I write to ask you to discontinue my subscription to the SURVEY from this date.

The moral and spiritual issues of the European war seem to me the paramount questions of the hour before the American people. I am convinced that upon their right decision depends the safety, honor and welfare of our country.

The attitude of the SURVEY to these great questions is to me so profoundly unsatisfactory that I can no longer retain my confidence in the social programs which you advocate, and feel constrained to dissociate myself

from them and from those who are directing them.

P. M. RHINELANDER.

Bishop's House, Philadelphia.

TO THE EDITOR: Directed to it first by a friend who did not like it, I have read with increasing delight your article on The Fighting Issues in the SURVEY for February 17. Your analysis is clear, your arguments against brute methods of settlement convincing. I am with you unreservedly in keeping the country out of war.

SOLON DE LEON.

New York.

TO THE EDITOR: Your big editorial is splendid—statesmanlike, clear and cogent, and I hope it will do a lot of good.

C. H. INGERSOLL.

[Robt. H. Ingersoll & Bro.]

New York.

TO THE EDITOR: The Fighting Issues, by the editor, in the issue of February 17 is GREAT! That is the stuff I am preaching, though I feel I am rather a Voice crying in the wilderness now. Mr. Kellogg has done a great service in this critical moment of our national life to present so keen an analysis of the situation and America's outstanding duty. I wish every preacher in the land would take his statement and preach a sermon on the vital Christian truth that is imbedded in it.

ANGELO E. SHATTUCK.

[Pastor, First Congregational Church.]

Kokomo, Ind.

TO THE EDITOR: I cannot refrain from sending you at least a few lines of thanks and appreciation for the courageous stand you have taken. . . . When all other papers were swept away by sentiment and a false patriotism, which, in the long run, would have done us more harm than good, your message of cheer and inspiration struck through the dark clouds and brought hope.

Not that I fear to sacrifice my life for the good of a cause, but because I feel that war is the least efficient way imaginable to secure the desired end for which some would have us engulf the nation, therefore am I anxious to do all in my power to avert the threatened disaster. That I hold is in the long run the best thought and aim of the League to Enforce Peace. . . .

HERMAN F. LION.

[Pastor, First Unitarian Society.]

Gardner, Mass.

TO THE EDITOR: I have read your publication for over a year and occasionally have gotten much good out of the excellent articles published. But the decidedly pro-British and, therefore, un-American tendency of your paper is almost too much for one who knows American history and who loves his country better than any other, including the king-ridden countries of Europe. . . .

The Lincoln message of Lloyd George is ridiculous in its claims that the task and aims of this great American president were the same that England is pursuing today. It is too well known that Abraham Lincoln was not only fighting slavery, but also England, which supported the South in its efforts to maintain slavery and to break up the United States of America into two different sections, the North and the South.

England, so history teaches us, loves no country but England. English militarism exceeds and always has exceeded the militarism of any other two countries, and it indeed fights the militarism of other nations now in this present world war for the sole purpose of coming out of this struggle the undisputed ruler of the earth, on the continent and on the seas. . . .

And it would be a great pity and the greatest mistake America has ever made if our great republic would lend its aid and give its money, means and blood to aid a foreign power in the accomplishing of its own selfish purposes.

CHARLES F. OEHLER.

[President, Evangelical Lutheran Synod of California.]
Sacramento, Cal.

TO THE EDITOR: Please let me thank you for your article, *The Fighting Issues*. It is perhaps the strongest thing that has appeared in the *SURVEY* since it was founded, and certainly the clearest exposition of the whole problem before us that has been written since trouble came upon us. I am not convinced of the wisdom of shouting for a referendum; but the unusual mixture of sanity and idealism in the main program you lay down for the country to follow should appeal to social workers. Surely a President who has led us in such strange new paths of international tolerance will not permit a state of war to exist until positive defense of the realm demands it.

W. J. NORTON.

[Director, Council of Social Agencies.]
Cincinnati.

TO THE EDITOR: The climax of the service which the *SURVEY* has been rendering to the cause of sanity and righteousness and peace comes with your article of February 17 on *The Fighting Issues*. I cannot refrain from sending you a word of hearty thanks. My reading of the New Testament and of the witness of the Inner Light makes me a conscientious objector to all war. I am convinced that it is a tragic mistake for people to think God wants them to kill each other wholesale in order to keep the world from falling to pieces, just as it was a tragic mistake for them to think God wanted them to offer human sacrifices or roast heretics alive—convinced, in other words, that war is foolish and ineffective as well as wrong. To have the futility of going to war in the present crisis so logically demonstrated as you have done is an immense comfort. I pray the logic of the demonstration may appear to many practical, "hard-headed" people, as it will to all natural idealists.

A. J. MUSTE.

[Pastor, Central Congregational Church.]
Newtonville, Mass.

TO THE EDITOR: It is only fair that in this momentous period of our history you should hear from those who have the *SURVEY* magazine very much at heart.

Allow me to thank you for this truly statesmanlike presentation of the war issues in the latest number of the *SURVEY*. The article, *The Fighting Issues*, seems to possess that complete contempt for war, save as a last extremity, which filled the soul of an Isaiah and Micah. Despite the excitement of

A PROTEST

TO THE EDITOR: I have read with great care your extended editorial in the *SURVEY* of February 17, entitled *The Fighting Issues*.

As the situation appears to me, the forces of the civilized world are facing a life or death struggle of the principles of democracy. Shall government of the people perish from the earth, is a question that I think is shortly to be answered. While the sound of guns is remote, while the spectacle of human sacrifice is beyond the Atlantic ocean, yet, measured by time, both may be close to our very thresholds.

The instant Great Britain is defeated, that instant the strongest existing force for democracy has ceased to be. The ambitions of nationalism, as expressed by the Prussian ideal, will be released from all restraint.

Other peoples will be no safer from its insatiable appetite than were the unorganized settlers from the deprivations of the Kiowas or Apaches in 1868 in western Oklahoma, where I lived as a boy and can bear witness to horrible atrocities.

Democracies move slowly, clumsily toward any end that calls for deep intelligence or logical intellectual processes. The consent of the governed means the consent of an average that knows little, thinks little, is not touched by far-reaching considerations, but largely controlled by the emotions or superficial reasoning.

Pacifism at the moment is, to my mind, one of the most deadly influences at work in America. However conscientious its advocates may be, the effect is disintegrating our efforts to protect the principles on which the government is founded. I go further than those who think self-defense for us means simply preparation, for I truly believe that unless Prussianism is scotched it will dominate the earth, and an aggressive warfare employing all the strength of the nation, in finance, in men, in ingenuity, is absolutely essential now to insure a future lasting peace. The American Tory at the time of the Revolution was often personally honest; many Copperheads at the time of the Civil War were men of fine spirit and personal character, but both were unhealthy to the country in which they lived, and both had to be stamped out.

I have no quarrel with the spirit that actuates the many great men and women who are now weakening the virility of the nation, except as they are making the task of protecting our lives, our property and our liberties infinitely more difficult.

WILLIAM E. HARMON.

New York.

[I would favor the people of the United States throwing themselves into the European struggle if I felt, as Mr. Harmon believes, that democracy and liberalism in western Europe were being downed, and that for this country to go in and fight were the only sure way to save them for all of us.—

PAUL U. KELLOGG.]

the hour, you have kept cool and the paragraphs show genuine constructive thought. Such an article should be published in

pamphlet form, together with the letter of David Lloyd George and *In the Balance* by Miss Balch. We need less criticism of the President, but more positive contributions to keep us from war along constructive lines. America today needs clear thinkers who are unafraid. Your contribution is a very real one, and I for one desire to support your stand.

RUDOLPH I. COFFEE.

[Director, Social Service Department, Independent Order of B'nai B'rith.]
Chicago.

TO THE EDITOR: Not only do I think your article sound in policy, but it seems to me sound in law. I think the main thing now is to keep the issue of sea law segregated from the maze of the European war. In every great European war the nation pushed to the limit has adopted extreme measures in violation of neutrals' rights—France did it in 1798, actually seizing American merchant ships not carrying contraband and converting them into French war vessels. Yet Washington and Adams refused to go to war. England did it in 1811—claiming a legal right to impress American seamen. Henry Clay and the hot-bloods of the West plunged us into War of 1812—the treaty of Ghent of 1814 had not a word to say about impressment and it actually continued after the war was over. Now it is Germany's turn. My position is that even a victorious war with Germany cannot establish the principle of sea law for which we contend. I thought you brought this out effectively. If we can hammer this into public opinion, the Government may succeed in holding back.

MANLEY O. HUDSON.

[Professor of Law, University of Missouri.]
Columbia, Mo.

TO THE EDITOR: . . . My position is peculiar. I am neutral. I am neither pro-Ally nor pro-German. I am *for* the peoples of England and Germany and *against* war. I am against no peoples. As to their governments, they are all atrocious. I am against all of them.

I find that your statement is not from a neutral standpoint, but presents a pro-Ally bias. Invidious terms are applied to the acts of the Central Powers, while the same or similar acts on the part of the Allies are not brought into the reckoning.

There is a common error made even by anti-militarists. It is to hold a government, and some go so far as to hold a whole people, responsible for the crimes of an intensive militarism. German militarism is atrocious not because Germany or the Germans are atrocious, but because militarism is atrocious; and Germany has developed militarism, as she has developed many other things, to a high state of efficiency. There is no militarism that is nice and ethical. Militarism without atrociousness is simply mitigated and inefficient militarism. The supreme expression of militarism is atrociousness. If either side in this war attains ultimate and conclusive victory, it will be by a path so strewn with atrocities as to shock the world.

I cannot go with you even "to protect our rights as neutrals to travel on neutral ships carrying neutral cargoes." Of course this is not a part of the dispute. The Central Powers would allow such ships every freedom; the Allies will not. The "right" that is making the fuss is the "right" of American citizens to travel on belligerent vessels carrying contraband. If we were really neutral we should be making a fuss that British shipping employs American citizens and puts them at work below decks where they are most apt to be hurt in the event of disaster. . . .

My own attitude is that war is the unthinkable thing. It is not to be considered as an alternative for anything. It is not to be thought of either as a primary or as a final recourse. We must put it out of our minds. We must cease to think in terms of war.

When we have done this we are in a position to discuss the solution of international problems. Until we have done this we are not fit to discuss them. I would not trust a president to conduct grave international negotiations who believes in war as one of his recourses. He is a highly dangerous person.

How infinitely more dangerous is he when, as is the case with Mr. Wilson, he has been the arch champion of military preparedness, and when he has the astuteness to precede a warlike step, such as the breaking of diplomatic relations with a belligerent nation, by a message of peace! . . .

We must disentangle the monstrous thing we call war from the peoples of Europe who are now its victims; and we must oppose the President, or the press, or the Morgan interests, or the munitions makers, or any other force which offers us war as a way out of an international dispute.

JAMES P. WARBASSE.

Brooklyn.

TO THE EDITOR: I can well understand that a man whose mental outlook is the product of years of social thinking and social activities should reach conclusions in respect to a question of national rights quite different from those of us whose experience has not been so largely affected by these influences. There may come a time when it will not be true that in the last analysis authority rests on force. That time has not come yet. There may be a time in the future when there will be no such thing as national rights to protect and when a spirit of internationalism will control human relationship, but if so, human nature has a long way to travel before that goal is reached. In the meantime, it is proper for you and all right-thinking men to endeavor to hasten the millennium. I conceive it to be your duty, however, in a moment of acute national crisis, to weigh your responsibilities to your country under the conditions as they now exist instead of choosing such an occasion for furthering ideals however noble, but which are

Who's Your Milkman?

Under this title, an article by Dr. J. H. Kellogg was printed in the August, 1916, issue of GOOD HEALTH and created so much interest that the edition containing it was soon exhausted. Since then, we have responded to many requests for the article with type-written copies, but—this is too expensive. Therefore, as the requests for "Who's Your Milkman?" continue to come in, we have had the article reprinted and will hereafter supply copies postpaid at 10c each. Send five 2c stamps, if you wish a copy of this important article about the milk supply. Address—

GOOD HEALTH PUBLISHING CO.
2603 Main Street, Battle Creek, Michigan

only possible of realization under conditions which may exist in the future. . . .

I see that you believe in limiting the constitutional power of Congress to declare war by a popular though necessarily informal referendum. To say nothing of the inconclusiveness of any informal proceeding, or the difficulty of phrasing the questionnaire in a way that would meet the facts of a given situation as it might thereafter actually develop, I cannot but feel that this idea, like most of the ideas in your article in the SURVEY, is prompted by your natural abhorrence of the notion of war rather than by the logical reasoning of which you are capable. Illustrations could be chosen from any and all forms of civic, industrial and social life of the futility of such a course as a national policy, but take a simple example from college sports. The players on a football team are coached by men chosen for their experience and skill. Imagine the confusion and the effect on his opponent if in a critical stage of a game the captain should appeal to the grandstand for advice as to which play he should adopt. . . .

I have written at some length, not for the purpose of persuading you to my way of thinking, but in the hope that you may give "deliberate thought" before you lend your aid, and, directly or indirectly, the aid of the SURVEY to the many efforts that will be made by those who wish to see their dreams realized before the time for this fulfillment is ripe, to say nothing of the efforts of many others who from motives far less worthy than yours, are working to see peace established while Prussianism still has the vital spark of life to rekindle another Armageddon at no distant date. There is a time for thought, for speech and for action. An ill-chosen time for exercising either of these functions is as hurtful to a cause as confused thought, ill-considered speech or mistaken action. The revivalist accomplishes much good at times and with certain types of people, but if he seeks to promote his cause before an audience gathered in a theater for pleasurable relaxation from serious thought, he offends good taste and good sense and is apt to do his cause more harm than good. M.

New York.

TO THE EDITOR: Will you allow me to thank you for your fine discriminating article, The Fighting Issues, in the current SURVEY. . . . Can you not get our young men to see that there is something just as great and heroic and more different in other methods than that of war? It seems such a pity we should just go in for doing the thing which is wrecking Europe when we have such a great chance to do something new, constructive and healing for the future. ANNIE L. SEARS.

Boston, Mass.

TO THE EDITOR: . . . It is not easy to do independent thinking at a time when all the world shouts "Don't think but stand by the Government." But your creed is that civilization will be best advanced by "mobilizing in the opposite direction from war," and you are being faithful to that creed at a time when it is hard to be faithful to it. . . . ELIZABETH TILTON.

Cambridge, Mass.

TO THE EDITOR: I have just finished your confession of faith as regards The Fighting Issues in the SURVEY for February 17, and I want to say that I subscribe to what you have said. I want to thank you, too, for so clearly stating much that has been passing through my mind.

I am a constant reader of the SURVEY and get a great deal of inspiration out of it. I am the United States attorney in Philadelphia, and I wish I could tell you how often

the SURVEY has given me light—real light—on some question coming before me as the prosecuting officer of the United States in this district.

It would have been impossible not to treat of our national duty in the present crisis—not to treat of it, I mean, in the SURVEY—and I think you have handled the matter with great ability and in just the right spirit. The social worker has his own thought upon it, and it is right that his thinking should find expression.

FRANCIS FISHER KANE.

Drifton, Luzerne Co., Pa.

TO THE EDITOR: Will you allow me to say that I think your article, The Fighting Issues, in last week's SURVEY was a most just and lucid exposition of this great question which is in all our hearts and minds just now—and I sincerely thank you. . . . ELLEN DABNEY.

Boston, Mass.

TO THE EDITOR: Your editorial statement of principles in the last SURVEY interested me very much, as it should have done all subscribers to the SURVEY.

But, as I judge you wish some response from your subscribers, I am sending you a word of thanks, though of difference.

I hope to see peace with honor continue as the policy of the United States in this terrible state of almost world-war. But, rather than submit to the insolent orders and brutal policy of Germany, I should choose war, thrust on us by the Prussianism that threatens civilization, as we understand it.

I may be a pagan, but I cannot today be a pacifist as I understand that word. Moreover, a great deal of the present agitation for peace is nothing but pro-German propaganda.

The nation wants peace, so does Mr. Wilson. And I am entirely willing to trust his patriotism and his courage. A nation, as an individual, can be "too proud to fight," and a time may come when that same nation must be too proud and too generous not to fight, no matter what the suffering and loss.

KATE M. MCLANE.

Baltimore, Md.

TO THE EDITOR: The February 17 number of the SURVEY is at hand, in which appears your article, The Fighting Issues. Let me tell you how very, very much I appreciate that article. It is the best thing that has yet come to my desk in this field. Of course, as an out-and-out pacifist it is hardly enough to satisfy my position. To the folk on the other side the same will probably be true. . . . I am exceedingly glad that I have one paper coming to my desk each week that is not willing to sacrifice its great ideal of social vision, even in such critical times as these.

J. COVINGTON COLEMAN.

Niantic, Ill.

TO THE EDITOR: I conclude that I can do you no good, and you certainly are doing me no good. Your "peace" policy would stir my wrath if it were not for my amazement that in the present situation such views can be held by men who hold a position of light and leadership. Will you kindly relieve yourself of the expense of sending me further copies of the SURVEY.

HENRY A. STIMSON.

New York city.

TO THE EDITOR: I want to thank you for that noble, searching article of yours, The Fighting Issues. If we can all learn to search our minds and hearts like that, America will be "saved."

MARY P. SEARL.

THE Canadian men who have not gone overseas have given money generously and have served in the persuading of other men to dig deep into their pockets. But in the Canadian Patriotic Fund the women have done their bit in a big way. Soldiers' families have been cared for, their business kept going, their insurance premiums paid, their children sent to school, all their affairs put in order by a band of devoted women. They worked as if they were all paid for it, when they were not paid at all; as if they were trained for it, whereas most of them had it all to learn; and as if it were the one thing near their hearts, while the hearts of many of them were torn asunder by fear for the brothers and sons in the trenches. And in their efficient embodiment of the good will of a whole people they have raised social service by volunteers to a new estate. The story of it by the editor of the SURVEY. Page 677.

FOREHANDED in packing up before the conventional spring moving day, the Red Cross got its call to service while its records and goods and chattels and things were in packing boxes on their way to its handsome new building. Telegrams were sent, none the less, to its 272 chapters, and the local committees of its country-wide organization are at work. Page 685.

GERMANY'S machinery for preventing distress has, so far as we can tell from meager reports, worked smoothly through existing agencies, such as the social insurance funds and the Red Cross. And new agencies have been devised to meet the bitter need of new times, particularly in the care of soldiers' families and other civilian sufferers. Page 687.

INDUSTRY in this country, under the Council of National Defense, has such an opportunity as never came to it before. Machines can be conscripted under a new law for the service of the country and men, while they may not be under the same degree of compulsion, undoubtedly will rally to the patriotic task. And if in war time, why not in peace time, to serve the common ends? Page 691.

MEXICO'S brand new constitution establishes the eight-hour day and the minimum wage, requires welfare provisions, recommends social insurance and otherwise takes an advanced stand on labor matters. Page 695.

WORKMEN'S compensation laws have now run the gauntlet of all the judges and been upheld by the United States Supreme Court. Page 698.

ALABAMA Negroes, despoiled by both floods and the boll weevil, have been placed in charge of the Red Cross after a congressional appropriation had been all spent without putting them back on their feet. Page 695.

A DETERMINED preacher has finally slammed shut the door on San Francisco's segregated vice district. In the midst of his campaign 300 prostitutes called at his church to urge that they be left alone. Page 694.

PHILADELPHIA'S emergency aid plan of organization. Page 697.

How the Canadian Act Really Acts

FACING a general railroad strike last summer—and with the questions it raised still among our unfinished business—almost the whole country turned to the Canadian industrial disputes act as our way out. But the act is almost as widely misunderstood as it is acclaimed. A study of it, on the ground, has been made for

An Early Issue of the SURVEY

THE SURVEY

A Canadian City in War Time

I. The Patriotic Fund and the Women of Montreal

By Paul U. Kellogg

YOU are met just inside the door by "Billy, the policeman"—not a bluecoat, but the office nickname of one of the remarkable group of Montreal volunteers, members of the Ladies' Auxiliary of the Canadian Patriotic Fund, who, since August, 1914, have put in two days a week, three days a week, some of them six days a week without let-up or vacation, on the work of the Montreal Relief Committee.

You have crossed the threshold of what she calls the "room of smiles and tears," or, if you will—for human nature is much the same in war-time as in peace-time—of "damns and blessings." On an average day you are one of a hundred such callers; one of 500 on a crowded day. In February, 2,678 came, old women and young, children, babies in arms, soldiers in khaki with a limp or a cough from "gassing." There in the long room, covering half of the entire floor of a large office building, with the business-like system of a life insurance company, and with the human insight of modern social work, 10,301 individual applications have been handled since the outbreak of the war. And that, in more ways than one, is only the beginning of the story.

On either side of the aisle are rows of chairs where the English-speaking on the left, the French-speaking on the right, await their turn to go to the little tables and tell their stories to the interviewers.

The afternoon I sat near the door there was a flurry among the people filling the chairs, so that a young Scotch girl who burst out crying reached the refuge of the corridor almost unnoticed. The flurry had to do with Kitty, who was all smiles. Her mother had

brought her, a little six-year-old, with straw-colored hair under a round blue sailor's cap with "H. M. S. Grampian" done in gold lettering on the front. Kitty carried her father's swagger stick for a cane, and once half-way down the aisle turned and waved back at "Billy, the policeman." The gesture almost cost her her balance, for this was Kitty's first visit on her first pair of legs.

Kitty's father is an English immigrant who was a private in training at Amherst, when word reached him that Kitty had been run over by a Montreal street car. One leg was cut off near the hip, the other near the knee. There was no legal redress, for it was the child's fault. Kitty was in the hospital for three months, where a visitor from the Patriotic Fund saw her every day. A friend provided money for a teacher, another a rocking chair. She was one of fifty children from soldier's families to go in groups of eight or ten to a certain country home last summer. Then a Montreal business man came forward with \$1,000 to meet the cost, whatever might befall, of the five pairs of artificial limbs she will need as she grows to womanhood. Meanwhile, the father has come back from the front, gassed, wounded and rheumatic from the wet of the trenches. Besides Kitty there are two other young children.

The future faced by this Montreal soldier and his wife, what war has meant to them and, no less, what the misadventures of ordinary times pile on to what the war brings, epitomize the family problems dealt with under the Patriotic Fund. The notion that, when a man enlists, the drop in his earnings is made good by government, or by patriotic gift; that the situation

KITTY

Her father at the front, both her legs taken off by a trolley car, this scrap of humanity and her changing need of artificial limbs to keep pace with a growing body, epitomizes both the emergent and the continuing relief problems which Canadian women are meeting through the Patriotic Fund

REPRESENTATIVE DISTRICT HEADS

Left to right: Mrs. D. B. Swinton, English ward head, St. Henry district; Mrs. F. W. Wanklyn, English ward head, St. George and St. Andrews; Miss Davidson, ward head, Laurier; Mrs. Huntly Drummond, English ward head, Cuneconde; Mrs. Arthur Terroux, ward head, St. Mary and Papineau; Mrs. Robert Adair, English ward head, St. Mary and Papineau

can be met by a regimental list and a check-book and by rushing food and fuel post-haste to some starving household still clings in the minds of casual thinkers in Montreal. But there are a thousand missionaries of another way of thinking. These are the women who, at the central office of the Patriotic Fund and in its twenty-seven districts, have come to close quarters, many of them for the first time in their experience, with the meaning of the ordinary hazards of life to those who live close to the margin of subsistence.

No sooner had war been declared than the British reservists in Canada set out to join the colors. One hundred and fifty families of these first soldiers were left high and dry in Montreal alone. It was clear that the recruiting of Canadians for overseas forces would create a much heavier burden, although no one then foresaw that the dominion quota would reach to such a huge figure as 500,000 men.

In Montreal the Charity Organization Society was asked to tide over the immediate emergency. After conference at Ottawa, Sir Herbert Ames, member of Parliament from Montreal, initiated the movement which was at once duplicated in

HELEN R. Y. REID

A charter member of the Charity Organization Society and a leader in the University Settlement, Miss Reid brought experience of social work and of men and women to her task as director and convener of the Ladies' Auxiliary of the Canadian Patriotic Fund

other parts of the dominion and led to the incorporation, as early as August 22, 1914, of the Canadian Patriotic Fund, "for the assistance in case of need, of the wives, children and dependent relatives of officers and men on active service." To date, \$15,500,000 has gone through the central treasury to be administered through provincial and local branches.

Something like three times as many families come under the Toronto branch as under that at Montreal, but it has fallen to the latter city to develop the system which is generally recognized as the high-water mark not only of record-keeping but of case work. Although the initial president of the fund was no less than field marshal, His Royal Highness the Duke of Connaught and of Strathearn, K. G., K. P., G. C. B., etc., former governor-general of Canada—the Duke of Devonshire is his successor; although Sir Herbert Ames has spent much of his time since the outbreak of the war organizing 600 branches throughout the dominion; although many other public-spirited men have given themselves unstintedly, one raising over \$4,000,000 in a single week's campaign in Montreal alone, and another, Clarence F. Smith, chairman of the local relief committee in Montreal practically using all his time for thirty months past in this work and that of the Military Hospitals Commission; nevertheless, the fact remains that the administration of the fund in Montreal, the actual work of organization, relief and rehabilitation, which has set the standard for the dominion, has been the achievement of women. Each department is headed and staffed by women. The relief committee has itself met only twice this last year to hear and visé reports, and take formal action.

The primary responsibility of the Patriotic Fund is to assist in making good the income loss of families of bread-winners at the front. It is not a general relief society nor yet a pension office; it deals with a limited group of beneficiaries through a limited time, but with greater freedom to make its help fit the family than any existing government department.

Take the case of the Canadian private. His pay is \$30 a month, ten cents a day field allowance adds \$3 to this. Since January 23, 1915, under an order in council, at least \$15 is to be paid, not to the man at the front, but to his dependents at home. In some cases the man assigns not \$15 but \$20. In addition, the Canadian government grants \$20 a month, separation allowance, to the dependents of volunteers serving in the Canadian overseas contingents. "Dependents" include only wives, children under fourteen of a widower, and in charge of a guardian, and widowed mothers, if the son is unmarried and her sole support. Thus the household of a soldier may receive \$35 or as high as \$40 a month from government sources. Pay and separation allowances are both far less for other soldiers serving in the British or allied armies.

HEADS OF THE OFFICE DEPARTMENTS

In the line above, left to right: Mrs. A. W. Cochrane, emergency cash desk; Margaret D. Sutherland, secretary Ladies' Auxiliary; Frances B. Hains, investigation department; Gwendydd Weller, budget department; Mrs. Alexander Strachan, emergency cash desk; Mrs. Wallis Jamison, filing department; at the left: Mrs. A. W. Mussen, admitting officer; right: Lilian M. Bender, discharges and casualties department

The grants of the Patriotic Fund are above and beyond these flat rates. They make allowance for the varying individual needs of families. The minimum granted to childless wives is \$5, the maximum to any family \$30, which brings the largest family income dealt with under the fund—adding assigned pay, separation allowance and fund grant together (\$20 plus \$20 plus \$30)—up to \$70. This is, of course, the exceptional case. The general principles upon which the Montreal budget is estimated are shown by the following maximum monthly scale:

Wife	\$10.00
With 2 children and under	
15-10 years	7.50
9-5 years	4.50
Under 5 years	3.00
With 3 children and over	
15-10 years	6.00
9-5 years	3.00
Under 5 years	2.00

To quote from the last report, this grant

“is modified by a consideration of the regular earnings of the soldier before enlistment. A widowed mother receives approximately what her son was contributing to the household at the time of his enlistment, minus the cost of his keep. Widowed mothers who have sufficient support from other sources are not recognized as beneficiaries. Mothers of soldiers who have able-bodied husbands living are also not entitled to receive anything from the fund. The fund is not a charity. It is only given where need is recognized as a direct result of enlistment. Unemployment and sickness do not in them-

selves constitute a claim, and no claim is considered unless the committee have the guarantee of assigned pay, going regularly to the dependent. . . . Increase of income from other sources, such as employers, lodgers, government separation allowance, wages, etc., immediately reduces the allowance from the fund.”

So much for the families of men overseas, or on the way. In the late winter and early spring of 1915 the first of the invalided soldiers returned to Canada. These men now come under the Military Hospital Commission and fall in to three classes:

Class 1. Men unfit for overseas service, but capable of taking up their previous civilian occupations; or men whose disability is not the result of service.

Class 2. Men needing further medical treatment or rest in or out of a convalescent home, hospital or sanitarium.

Class 3. Men permanently disabled by the war who would not be benefited by further medical treatment.

Families of the ordinary run of class 2 continue to get pay, separation allowance and fund money, so long as the man is getting indoor treatment. Fund grant ceases and home subsistence allowance begins, if a soldier becomes an out-patient. On his medical discharge, he passes into civilian life, with or without pension, but in either case drops from army rolls, separation lists

MRS. J. A. HENDERSON

and fund. Of serious social concern is the fact that not only fund benefits but case-work with families end with discharge; but this problem of after-care will be taken up later in this series. The Patriotic Fund is concerned solely with the care of the family of an active or invalided soldier up to the point of his discharge, pension or death.

This work begins at the period of recruiting. By no means all the families of Canadians come on to the fund. With help of soldiers' pay and separation allowance they carry their own burden. But the fund makes sure that failure to take advantage of its provisions is not due to ignorance of its existence, and distributes posters, pamphlets, etc., at the armories. Paymasters are supplied by the Montreal Relief Committee with a blank for both recruit and paymaster to sign, giving the names of the soldier's dependents and the assignment of pay, which is one of the first conditions of sharing in the fund. At the same time the recruit gets another blank for the parish priest to sign, certifying to births and marriages from the church registry. Regimental records in a period of emergent recruiting are hard to draw upon, and this simple method of cutting across red tape is one of many inventions of the organizers of the Montreal office to simplify and expedite relief.

The soldier's wife or mother bringing these certificates is shown to a seat in the reception room by "Billy, the policeman." Many a soldier arrives to find out before leaving for active service what the fund will do for his wife and family. Five volunteers divide responsibility for the different days of the week, and from seventeen to twenty-two assistant interviewers, also volunteers, work under them at the little individual tables. Names, ages, birthplaces, religion, employment and wages of all members of the household; rank and regiment of the man; next of kin, employers, references and other data are entered on the application blank. In cases of extreme need, emergent aid is given pending investigation.

From the reception room the case goes to the investigation department, where form letters are mailed to employers, references and priests. One volunteer spends her entire time handling certificates, another looking over references. A corps of six investigators, under a responsible head, all volunteers, visit the home and neighborhood to verify the statements made in the application. Some of these investigators put in half-time, some full time, and in the course of two years the tact, precision and friendliness of their work have developed amazingly. For such intimate family details as the income of the household and the amount contributed by the soldier before and after enlistment must be secured if the trust is to be protected and the family adequately helped. Entries in the investigation slip call for facts as to whether wages are continued in whole or in part; debts, insurance and bank accounts; character of neighborhood and house; number of rooms, number of dark rooms; number in family; health of family; doctor's certificate when illness is pleaded as reason for not working; earnings of all members of the family.

Meanwhile applications and certificates go to the filing room, where 9,700 card records are ranged numerically in the cabinets. Duplicate cards are typewritten, one for an alphabetical file here, and one for the discharge and casualty desk, to be described later. Twelve to fifteen helpers are at work every day at the files under a director, one of the most unusual developments of volunteer work. With 2,000 cases drawn from the files every day, with fifty-seven volunteer ward heads and ten office departments handling them according to their lights, the task of keeping records in apple-pie order is a never-ending one. Large manila envelopes, such as are a nuisance in professional work, serve a conserving purpose in holding the papers together; but even so, three volunteer "house-cleaners" are busy keeping the papers straight, with the latest investigation slips on top, references, application, regimental slips, birth certificates and money slips all in due order. By organization, the volunteer system, with its wealth of help, thus can overcome its frailties and, as the saying goes, make one hand wash the other.

The budget department opens off this room, where, on the basis of the results of the investigation and the terms of the Patriotic Fund, a budget for each new family is carefully worked out by the chairman of the relief committee. All cases are subject to revision from time to time, as changes in employment, number of dependents, discharges and casualties occur. As the budget must please not only the beneficiary, but also the ward head (the district superintendent of relief), and the various agencies of public concern which are stirred alternately by stories of fraud and unworthiness, and by stories of injustice, work in the budget department is a delicate and never-ending job.

One course of correction is the file at the discharge and casualty desk, where lists of invalided men brought to Quebec for medical examination, casualty lists published in the newspapers, and later the official lists of dead and wounded, lists acted on by the Medical Hospitals Commission and the pension department, are checked against the Patriotic Fund data and memoranda sent to the filing room for collation in its daily sheet. Cards, with little colored signals, are grouped in two grim rows of drawers. Dark red tabs stand for missing men, light red for prisoners, black for those who have died of wounds, yellow for invalids home, white for those killed in action, blue or green for wounded. Blue was a German dye, it seems, and Canada ran out of blues the second year!

At every stage in this routine, from the reception desk with its tally of callers to the filing room with its sheet showing the whereabouts of every case, daily record-keeping goes on so that

any clogging in the current flow of work quickly reveals itself. But all this is only the bookkeeping end of the real work. If the activities of the Ladies' Auxiliary stopped here the experiment would be no more than the adaptation of modern office methods to a volunteer force.

Distance, differences of language and religion, the absence of any trained group of investigators and the conflicting aspirations of various local organizations had to be overcome in mobilizing relief forces at the beginning of the war. By its charter, the Canadian Red Cross was barred from such work with civilians. The Soldiers' Wives League was a survival of the Boer war days, but without staff or resources, and the various regimental organizations with their very definite limitations had still to be created. There was danger of patriotic zeal expressing itself in a hundred quarters and scattering the good will of the community. At the same time it was felt that all social and civic sources should be representative in any tremendous enterprise. Finally the Montreal Council of Women called a conference, out of which the Ladies' Auxiliary of the Patriotic Fund came into existence.

The island of Montreal is thirty miles long and fifteen broad, by no means all of it thickly built up. This was divided into twenty-seven districts. Over each district were placed two heads, one English, the other French-speaking, for fully three-fifths of the 800,000 inhabitants are French-Canadians, and many of the wards or districts bear the old French or Indian names—Maisonneuve, Hochelaga, St. Mary and Papineau, St. Cunegonde, Cartierville, Bordeaux and Ahuntsic, Delorimier, Lachine and Outremont. Each ward head has visitors, who are expected to make monthly visits to the families assigned them, and meet with the ward head at headquarters and in her home. With the formation of a Franco-Belge sub-committee, an auxiliary of fifty French and Belgian volunteers was launched.

Each ward head keeps the records of the family visiting in her district, according to methods of her own choosing, so long as the information on current cases desired at headquarters is turned in with regularity. Here greater standardization could, of course, be enforced on a professional staff. Some of the ward heads put in three mornings a week, some three full days, some have enlisted capable assistants, who put in full time. Some prefer to do the initial investigation of every case falling in their territory. If the report is not up to office standards it is turned back for re-investigation.

A "convenience list of neighborhood resources" has been compiled for each district, showing population, infant mortality, doctors, hospitals, nurses, dispensaries, homes, asylums, day nurses, milk stations, provision for the education and care of defectives, playgrounds, settlements, free libraries, employment bureaus, societies, police stations. Every ward head gets a list of hospitals and clinic hours; every visitor a set of instructions on the objects of the fund, ways to meet typical needs and the "five essentials of normal living" drawn from familiar charity organization texts. Every alternate month a pamphlet reaches them on such subjects as treatment, relief, what a social worker should know of her own community, office resources, etc. Some districts have specialized in such activities as clothing sales and country outings. One had a cottage for the summer and sent out soldiers' families for short periods; another weekly picnics. In order to keep the women from being lonely, the districts encourage them to form natural associations with churches and settlements in the neighborhoods or organize ward clubs.

Altogether, the auxiliary consists in addition to the heads of office departments and districts of a volunteer staff of between six and seven hundred workers. Apart from the paid force, which includes secretary, accountant and nine stenog-

*Patriotic Fund volunteers interviewing soldiers' wives.
Miss Reid in the foreground*

raphers, office and home-work alike, are entirely done by volunteers, and all administration expense is met by the interest on the bank balances on deposit.

Such a volunteer staff was not created over night. Stories are told of Lady Bountifuls, naïve, ingenuous, gullible, who pauperized the families to whom they brought relief. But that natural selection has been at work is shown by the fact that perhaps as many volunteers have dropped out in the two years and a half as make up the force that "sticks." About three hundred have gone overseas to be with sons or husbands, but some have drifted from the more difficult task of reconstructing human life to the bandage-rolling and comforts-packing for which the more conventional patriotic societies offer so many opportunities. But not a few of the most serious and efficient among the visitors were those who at the outset had no conception of family problems outside their home circles. Living apart they had known nothing of evil, and in their first untoward case or two, blamed themselves, and, as one experienced woman expressed it, "took the whole sorrow of humanity into their own generous hearts." As time has gone on several of the visitors have been advanced to ward heads, the newcomer today is "broken in" gradually, and the risk of letting inexperienced folk tamper with their fellows is no less real, but far less frequent. "I have just discarded six visitors," said one ward head in coming to headquarters recently, to express that difficult triumph in all volunteer work—the elimination of the unfit.

On the other hand, the auxiliary has not been without resources in women with definite training. There are eight former nurses among ward heads and visitors, twenty-one college women. Ten school teachers take part after school hours and during vacations. The head of the statistical bureau, with thirty-one volunteer assistants, is a retired teacher on pension.

4

To the Proud Wives and Mothers of the Men at the Front

A MESSAGE OF CONGRATULATION
... AND A NOTE OF WARNING ...

IF YOU ARE in regular receipt of Government Separation Allowance, of Assigned pay and Patriotic Fund money, you are, or should be, independent of outside help. The Fund not only gives out the money but is here to protect you and to befriend you with all counsel and advice and in this way to take the place of the soldier who has gone to the front. The Committee are proud to record the double service of most of our women who have not only given their dearest, but are now giving themselves in ways of usefulness to their Country. It is expected of our women that they establish and encourage a high standard of living in their neighborhood. To do this, all care should be directed to payment of just debts, careful spending and saving, health and cleanliness of home and children, regular attendance at church and school and a careful choice of friends and company. In this way you will add to your Country's glory and your City's fame and be a pride to the soldier upon his return from service. It will be distinctly to your disadvantage therefore, to ask or to receive such things as food, fuel, clothing, bread, tickets, money, etc., from other societies or individuals. The Fund is not a charity and you are surely above receiving such relief. Please accept this as both a congratulation and a warning, and in all emergencies appeal to your Fund Visitors or to the office and not to other agencies.

CLARENCE F. SMITH,
Chairman Relief Committee.

August 1915.

CANADIAN PATRIOTIC FUND. — MONTREAL BRANCH.

Several stenographers, now married, are giving their services; and one society girl, instead of starting in the conventional way, went to a business college, took and held down a position in a business office to see if she were fit, and only then made herself known at the Patriotic Fund. Since then she has given full time.

It would be hard, if one were to choose among examples, to say which to put first in devotion: the former-trained nurse in charge of the hospital visiting of the Patriotic Fund, who helped to get together, train and take to England and France something over seventy Canadian girls as "V. A. D.'s" (nurses' assistants) under St. John's Ambulance; the wife of a major at the front who, while running her husband's business, supporting a sister and also a brother dying of tuberculosis, puts in three afternoons a week at the Patriotic Fund; the wife of a bank manager who does her own housework before she comes to the office, spends the entire day there every day, and goes home to cook the dinner at night.

There is a stronger tie that binds these women to their work, and bridges many a social chasm between helper and helped. Of the ward heads, several are mothers of soldiers at the front; two have followed their husbands overseas, one has seen two sons off, one of them since killed; another has a husband at the front, a son at the front, and a daughter nursing in France. So it goes also among the department heads at the central office—one with her husband killed, a second

with her husband in an English hospital, a third with a brother badly injured, another in submarine work, a fifth with a son returned, a sixth with a son at the front, a daughter with the Red Cross. Of two young women at work in the budget room, one has two brothers at the front, the other a mother nursing in France. Not a few of the visitors are young widows—and in some instances they are widows of privates, who have joined in the work. There is the wife of a young Canadian soldier, whose father, an army chaplain, went out under fire and brought back his boy's body from No Man's Land.

But hard-won experience and the bonds of courage and sacrifice would not in themselves have created filing systems nor organized 700 self-controlled, largely inexperienced, women into a city-wide piece of team work which has gone on evenly and competently through zero weather and summer epidemics, in the face of misunderstanding as well as public recognition, day after day, week after week, month after month—and will go on so long as the war lasts and for a year thereafter.

The answer lies in the woman who brought experience and courage and sacrifice and more beside—a genius for organization and the unmistakable flame of leadership. This is Helen R. Y. Reid, director and convener of the Ladies' Auxiliary, and Lady of Grace of St. John of Jerusalem. Americans who know less and care little of chivalric orders may yet be interested to know that the crosses which she may wear only in the presence of royalty and the quaint prayers she can say, hark back to the Crusades, and were given a year ago in rec-

IMPORTANT!

A NOTE OF WARNING

Owing to the outbreak of *Infantile Paralysis* in the City we wish to warn you:—

1. Not to call at the office with your children.
2. Not to take the children to the *Moving picture shows, in Street cars, to Church, to School, or any place where there are other children or crowds of people.*
3. Keep their *noses and throats* clean and wash them out often during the day.
4. Keep their *bowels* open and regular.
5. If your children get sick take them at once to a Hospital or Doctor.

Be warned in time, follow our advice and save your children.

IMPORTANT!

Vu l'épidémie de la *paralyse infantile* dans la Ville, nous désirons vous avertir:—

1. Ne pas venir au bureau avec vos enfants
2. Ne pas amener vos enfants aux *Cinématographes, dans les tramways, à l'Eglise, à l'école* ou autres places où se trouvent d'autres enfants ou *beaucoup de monde*
3. Voir à ce que leur *nez* et leur *gorge* soient libres et lavés-les souvent durant la journée.
4. Tenez leurs *intestins* libres et réguliers.
5. Si vos enfants sont malades conduisez-les immédiatement à l'hôpital ou chez le médecin.

Soyez sur vos gardes, suivez nos conseils et sauvez vos enfants.

FORM 9

CANADIAN PATRIOTIC FUND
MONTREAL BRANCH

**School Days
are Here!**

SEPTEMBER month brings with it the opening of our schools.—Be sure that your girls and boys attend regularly! Without education a child cannot make his way successfully in the world. Now is the time to give them this supreme opportunity.

¶ The Committee are pleased to announce that twenty money prizes will be offered next June to those children on the Fund who present to their Visitors the best school reports for the year for conduct, attendance and general progress.

¶ Watch your children's health and see that they take proper care of teeth, eyes, throat and skin. If they are not well, they cannot do good school work and should be taken to see a Doctor.

CLARENCE F. SMITH,

Chairman Relief Committee.

HELEN R. Y. REID,

Convener of Ladies Auxillary.

September, 1915.

NOTICE.—As the office accommodation is limited, you are requested when calling to come when possible alone — and not with friend or children

OPEN **Bank Account**

THE SAVING OF MONEY IS A HABIT

COMMENCE today by opening an account at the branch of the Bank nearest your home. It is a simple matter; go to the Manager, tell him you wish to open an account (even though your deposit be but a dollar) and he will do the rest.

You will be surprize to see how quickly the habit is acquired and how anxious you are to see your account grow. Then again it will be very comforting to your husband to know that you are handling your money in such a very careful manner, and that you are guarding against the proverbial "RAINY DAY," which sooner or later is bound to overtake some of us through sickness, unemployment, the cancellation of payments by the Patriotic Fund or some other form.

We would therefore strongly advise your commencing at an early date the SAVING OF AT LEAST A PORTION of every cheque you receive from us. You will not regret it and once you have started, a feeling of "Well if anything happens, I have my savings in the Bank to fall back upon" will soon make itself felt.

COMMENCE NOW. — TO-DAY!

Canadian Patriotic Fund

RELIEF BRANCH. — MONTREAL

MONTREAL, OCT. 1st. 1915

CANADIAN PATRIOTIC FUND
MONTREAL BRANCH

Life Insurance

PROBABLY the most valuable and important thing your husband or son left you when he enlisted for his country's service at the front was a life insurance policy.

¶ He is nobly doing his duty to his country and fellow citizens; he showed his love and thoughtfulness for you by insuring his life; and the insurance company or society has done a generous and patriotic act in not increasing the premium, although the risk is so very much greater than they figured on. Now, will you not do your share by keeping the premiums paid up—if not for your own sake do it for the sake of your absent hero, of whom we are all so proud, and of his dear little ones?

¶ Our visitors report, from time to time, cases where the Husband or Son had insurance and the wife or mother has not paid the premium when due. Surely this is only a oversight.

REMEMBER — a Life Insurance Policy is a savings fund and becomes more valuable as each premium is paid.

If the premium is overdue or if you want advice or information regarding life insurance consult us. We consider this a most important matter and will gladly assist you in every way possible.

DON'T FORGET YOUR SAVINGS BANK ACCOUNT. If you haven't started one yet do so with part of the cheque enclosed if possible

CHAIRMAN RELIEF COMMITTEE

Room 104, Drummond Building.

Office Hours: 10 to 12, and 2 to 4, Monday to Friday.

ognition of a full decade of constructive philanthropic work.

Miss Reid was a member of the class of 1888 at McGill University, the first class to include women. With fellow-members she started a kitchen on Jurors street in a factory neighborhood. This grew later into a lunch room, boarding house and girl's club on the thoroughfare known as Bleury street, and, in turn, into the present University Settlement, where four or five workers are in residence in the heart of the Jewish and Chinese quarter. Miss Reid was one of the charter members of the Charity Organization Society when it started fifteen years ago, and is chairman of its educational department. She had charge of the Relief Committee of the Victorian Order of Nurses during the great typhoid epidemic in Montreal. In other ways, too, work has fallen to her which proved an apprenticeship to the great task the war was to bring.

An amateur postoffice in the investigating department affords one index of the many strands which, under Miss Reid's handling, are gathered into an effective skein of work. It consists of a large wall map, city directories, a wire basket, a set of pigeon-holes bearing the names of the fifty-four French and English district heads. A volunteer postmistress who presides over it has resolutely refused to adopt such a new-fangled contraption as a card index and keeps her lists on long legal cap. Two hundred and fifty pieces of internal mail go through this postoffice a day—sometimes as high as 400. A day sheet, for example, comes in from the filing room, where current information from interviewers, investigations, the list desk, budget room and districts is collected. This day sheet is in turn resolved into a sheaf of memoranda for the ward pigeon-holes.

Some idea of the constant changes going forward is illustrated by these statistics for February:

Second enlistments.....	16	Wounded	9
Re-enlistment	28	Killed	11
Transferred	45	Died	3
Discharged	52	Missing	5
Deserted	23	Prisoner	2
Invalided home.....	29		

Nor are the changes all at the front, for in that same month there were twenty-seven births among the families on the fund, five infant deaths, a child and three adults. The entries in the day sheet the morning of my visit had such bits of human color as "Uptons have a new baby," "Cleary wounded," "Good news, Angus not missing," and the more prosaic notations from the cash emergency desk.

For of the women who await their turn in the reception room only a fraction are new cases. Soldiers do not lay their families away in a napkin when they go to the front; all the hopes and mishaps and struggles of every-day living go on. Four thousand checks go out every month from the accountant's office (totaling \$65,000 to \$75,000), and of these fully 500 are held up every month for one cause or another, which means a visit to the fund office. Every woman is given an identification card, which she must show at the bank. Even so, some lose their cards, or drop their money into the fire, or it goes down the drain, and a family situation results. Before the identification cards were contrived there were many cases of forgery. One woman, a soldier's wife, stole her neighbor's checks and forged them so skilfully that bank and fund both thought the neighbor lying when she protested she had not cashed them. The truth only came out in a sick-bed confession to a priest.

The identification cards are important not only at the bank, but at hospitals, dispensaries and other places because of the shifting about. In a single month last year 1,000 removals were recorded. In many instances families have changed homes four or five times during the year. "Many a butcher and grocer comes hot-foot to the fund to find out where the tenant has flown. All addresses, however, are held as confidential, but note is taken of any delinquency, the woman's story is then heard, advice is given, and if the misdemeanor is aggravated and continuous, checks are temporarily held up." The fund is thus able to protect the small butcher and grocer, to the tune of perhaps \$15 a month, while encouraging a high standard of honesty for its soldiers' families.

Delay in the receipt of separation allowance or army pay leads other women to come seeking loans and a business-like plan of repayment is arranged, with the fund protected by its control over subsequent monthly checks. In three months last summer 451 loans were made amounting to \$2,691.46, and 450 returned amounting to \$2,405.68. A considerable proportion were to advance payments on life insurance policies. Some \$200,000 worth of such policies were thus saved last year which otherwise would have lapsed. Most of the policies are on the industrial plan, running from \$20 to \$1,000, but there have been several of from \$2,000 to \$3,000, and one of \$5,000. The war rates made the premiums high, but in many cases it has been more than a question of lending money so as to spread a lump sum out over several months.

Thus one woman with three children had allowed a \$500 policy on her husband to lapse, although he was then with the Canadian troops in France. She had no conception whatever of the value and meaning of life insurance or the waiving of its rules by the company. A medical certificate from the regimental doctor and an application for renewal from the man involved weeks of correspondence, but the policy was reinstated. "We have argued with a woman for an hour," writes George W. Elliott, secretary of the Montreal Relief Committee, "over the relative value of a new skirt and a policy on the life of her husband, who at the time was actually dodging German souvenirs in Flanders." In another case a soldier's wife had an idea that insurance was a pretty good thing for rich people, but was not inclined to make any sacrifice to hold

her husband's \$1,000 policy. She finally consented to borrow \$50 and repay it in monthly instalments. Subsequently both she and her child were sick, and the money had not been fully refunded last June when the man was killed in action.

If death occurs in a family a burial allowance is given, or interment is provided in the Patriotic Fund cemetery lot. Of lesser emergencies, some of the calls for help which come to the reception room are unemployment, desertion, piano to be sacrificed, furniture not paid up, eviction, land lots to be forfeited, no food or fuel in the house, no soldier's pay received after soldier sailed, no separation allowance sent by the government, husband on picket duty, and not enough money for family to live on. Some of the applicants have no claim on the fund and are promptly referred to the regular philanthropic agencies.

In a fund case, the interviewer draws on the case records and calls in the ward head if present. If away and the need is urgent, the latter is telephoned to and immediate help may be given from the cash emergency desk upon requisition of the convener of the auxiliary. In cases of serious illness, "compassionate allowance" over and above the regular grant may be given to fund beneficiaries, and altogether perhaps \$1,000 a month is given in exceptional aid. But in general the whole pressure of the work is to prevent soldiers' families from appealing to other societies, and to meet the ordinary exigencies of life by the careful handling of their monthly income. Leaflets and educational work by the visitors led 951 families last year to take out savings books.

One interesting desk in the office is that of the volunteer who handles trust accounts. Such accounts are opened for orphans or children placed in institutions. A wife goes insane, or is immoral, or intemperate, and the soldier may request the fund to handle not only the fund grant, but his assigned pay and separation allowance. A reservist may ask this for his aged mother. A separate bank book is taken out, grants deposited and checks are drawn to the district head, guardian, institution, the Charity Organization Society, or whoever is responsible for the ward. Little Kitty's artificial-leg money is one of these individual accounts. The first case to come on the fund was that of an English reservist's family, in due time sent at their request to be with parents in England (a practice since largely discontinued because of war conditions). The soldier returned, medically unfit, to find his home "sold up," his family gone. A job on a cattle ship was found for him so that he might rejoin his family, and while he waited for the boat to sail he had the fund keep his pocket money so that he would not drink it up.

A legal aid service is maintained with fifteen English and six French lawyers giving their services. Women have applied under assumed names, passing as wives of soldiers when they had husbands alive and not "on the strength." Others have signed on as widows when a husband has been in the immediate background, while others have hastily adopted one or two children in order to draw increased allowances. But to protect the fund is only part of this legal work.

THE NEW RED CROSS BUILDING AT WASHINGTON, OCCUPIED BEFORE IT WAS COMPLETED

Mobilized on Moving Day

Red Cross Work in the Midst of Difficulties

PERHAPS the nation will never know one story of preparation that has been going on hurriedly but quietly throughout the country since the severance of diplomatic relations with Germany.

If that break threw a bomb into the circles of diplomats, it threw one also into the organization of the American Red Cross. Germany could not have chosen an unkinder time to issue her order concerning unrestricted submarine warfare. On Saturday, February 3, President Wilson broke off relations and gave Ambassador von Bernstorff his passports. By that same action he served notice upon the Red Cross that every scrap of its resources might be needed at a moment's notice to care for sick and wounded American soldiers and for their dependents at home.

Saturday was one of the coldest days Washington has known. Only twenty-four hours before, the national headquarters of the Red Cross had moved into the sumptuous new building provided after long effort by the New York State Commandery of the Loyal Legion as a memorial in honor of the loyal women of the Civil War. It was no reflection on the warm hearts of the donors that the building strongly resembled a refrigerating plant on that momentous day. Uncrated office furniture and unboxed records stood around everywhere. Everything was in confusion. Workmen brandishing paintbrushes rubbed elbows with department chiefs trying to think

what advice to give chapters hundreds of miles away in the emergency.

The Red Cross, in those chilly surroundings and half-moved condition, had to bring its full resources to the point of instant mobilization without delay. Fortunately it had been preparing for some time. The lessons of European war relief and the mobilization of our own troops on the Mexican border had taught it many things. An elaborate organization by each chapter had been well started. Indeed, so effective had been the preliminary work in many communities that when emergency orders were issued on February 3 and subsequently, all that many chapters had to do was to report: "Everything is done. We are as ready as we can be until the actual need is here."

On that first day a long telegram of instructions went from headquarters to every one of the 272 chapters then existing. One step urged was to secure immediate option on adequate space, centrally located, for office and storage room and to get this space rent free, if possible. Another was to appoint the following committees, if they were not already appointed: finance, hospital garments and surgical supplies, comfort bags, packing and shipping, publicity and information, motor service, and a committee on cooperation with outside organizations which should begin work at once. Graduate nurses volunteering for service were to be referred

to the Red Cross Bureau of Nursing Service at Washington. Doctors also were to be referred to Washington. Men wishing to give service were to be urged to take courses in first aid, and the possibility of organizing sanitary training detachments was to be taken up at once.

The responses telling what the chapters had done, what they had under way, and asking for more advice and information, began to come in immediately. Within forty-eight hours headquarters were out of all circulars and instruction blanks, of which they usually have an unlimited supply. The correspondence rose to mountainous proportions almost overnight and fourteen new stenographers were added to handle it. The let-up has not yet come.

The executive committees of many chapters met on Sunday, February 4. The telegram of instructions was gone over phrase by phrase and whatever was not attended to was then arranged for. New committees, if needed, were appointed on the spot. Whatever was required to bring the organization in each community up to plans and specifications was begun.

Elmira, N. Y., wired as follows: "We already have roomy, centrally located headquarters, rent free. Our committees for finance, hospital garments and surgical supplies and comfort bags already appointed, the latter having to their credit over 7,000 surgical dressings and 500 garments, also 2,000 comfort bags. These are already shipped for the most part to European sufferers. Twelve outside organizations are working in cooperation with us."

Glens Falls, N. Y., reported that the vice-president of a local insurance company had offered the chapter the entire fifth floor of the company's building for "as long as required." Here were being established an office, packing rooms and three work rooms. All committees were appointed and fifty people were at work on gauze dressings.

Cleveland reported that its headquarters were established in a twenty-four-room residence only a mile from the center of the city, which it occupied rent free. Here its various committees were actively at work. The committee on motor service, it said, would be appointed at once.

Chicago replied on February 6 that its Red Cross shop was open and prepared to give instruction in the making of surgical dressings and to turn out large quantities of them. The board of education, churches, settlements and women's clubs, it said, had agreed to the use of their facilities whenever it became necessary. An ambulance corps was being recruited in the University of Chicago, and sanitary service corps were being formed in connection with some of the big industrial and commercial firms.

Fond du Lac, Wis., reported that its headquarters were ready for service.

Berkeley, Cal., wired: "Will start Wednesday door to door canvass with neighborhood women in charge. Begin making supplies Wednesday. Ample store accommodations already secured. Civil and fraternal organizations through executives promise immediate and hearty cooperation. Monday papers will contain call for volunteers for different departments."

San Francisco wired that the Union Pacific Club of that city had given it an option on a fireproof building owned by the club, rent free. A committee of manufacturers was working on equipment for the plant and "will be able at a moment's notice to install this," as well as to furnish help from factories to instruct women working in the sewing classes. A large number of power sewing machines, it said, could be secured quickly, a committee of merchants was to act as a purchasing committee for materials, and the committee on packing and transportation was made up of shipping men familiar with that work.

One of the most important instructions was that concerning motor service. Each chapter was asked to compile at once a list of all motor cars and motor trucks available for volunteer service. These, if the need for action came, would be useful for transporting people and supplies, for quick messenger service and for many forms of work.

Boston's response to this instruction was typical. The president of the automobile club was made chairman of the committee on motor service at the meeting on Sunday. Monday morning he spent at his telephone, calling upon friends, acquaintances and strangers to let themselves be listed in the motor corps. The corps was made up in short order, but so much publicity was given the plan that offers of assistance are still coming in.

Boston responded also in other ways. With a view to making cooperation between the Red Cross and other organizations more effective, the chapter has included in its executive committee representatives of many of these groups. The committee on cooperation is reaching definite agreements with outside bodies. The local committee on civilian relief, under the chairmanship of John F. Moors, who had charge of relief work after the Salem fire, as well as experience in San Francisco and Chelsea, is working out plans and may even go so far as to rehearse for emergency relief.

Even before the latest instructions, Boston had shown how Red Cross organization intended for a crisis could do effective community service when no crisis is at hand. Under Mrs. F. S. Mead a corps of women drivers, consisting of women who own and are accustomed to driving their own cars, was formed last fall. Over sixty women joined the corps. Not wanting to be idle until an emergency should arise, they asked what interim service they could render. Fifteen hundred children were then being given after-care treatment at the hospitals of the city as a result of the infantile paralysis epidemic. Some of these children had to be brought in from miles outside the city. The women's motor corps organized to do this service and each member devotes stated hours during the week to bringing distant children to the hospitals and taking them back again. So far the plan has worked with great success, the women sticking to their tasks in every weather.

In such ways Red Cross chapters are preparing themselves for a larger community service. Meanwhile, the work of creating new chapters and increasing the membership has gone ahead by leaps and bounds. On February 1 the number of chapters stood at 272. In the next four weeks twenty-six new chapters sprang into being. In the first week of March fourteen more were added. Chapters are now being formed at the rate of two and three a day. Large cities and small are joining in the desire to be part of the Red Cross organization. Campaigns are just being concluded in New Orleans, Atlanta, St. Louis, Pittsburgh and many other cities. In many places, too small for chapters, auxiliaries are being formed, groups of ten or more members joining to do one or more specific things.

The individual membership, also, has responded to the stimulus of the international situation. On February 1 this stood at 299,000. Today it is probably 350,000. St. Louis began its chapter with a membership this month of between 10,000 and 15,000. Scranton, Pa., has recently pushed its membership to more than 5,000; New Haven and Bridgeport, Conn., to 10,000 and 15,000, respectively, and Ridgewood, N. J., which has a population of 7,000, to 2,100. The Bridgeport chapter was started about two weeks after the possible results of an explosion in one of the big munition plants had been discussed. In many localities large industrial plants are being canvassed and the employes are joining in large numbers.

Thus, out of a membership of 8,000 in the Lynn, Mass., chapter, 3,500 are employed by the General Electric Company.

Eliot Wadsworth, acting chairman of the Red Cross, declared the other day that "the time has come when we must seek and obtain the undivided support of patriotic Americans everywhere," and issued an appeal for 1,000,000 members. On Monday of this week the Federal Council of the Churches of Christ in America endorsed this appeal and declared that

the 207,000 Protestant churches in the country could alone furnish this membership if pastors would present the matter to their congregations and appoint committees to secure members from each church. "Every pastor should himself be a member of the Red Cross," read the council's appeal.

The attainment of this membership does not seem a hopeless goal if the history of the past year is a criterion of what can be done in the future.

The Machinery of Misery

Germany's Social Organization For Civilian Relief During War

By *Bruno Lasker*

OF THE SURVEY STAFF

THE news of German organization for social service during the war which has come to this country has been sporadic and incomplete. Prominent workers to whom we have looked in the past for interpretations of social movements in Germany are too busy creating and organizing to find time for descriptive accounts of what is taking place. Visitors to Germany during the war have rarely seen more than a small section of the country and have brought back with them no concise information on the social forces as a whole. The imperial government is not at present at all anxious that the world should know either what need for social aid there exists in the country or what steps have been taken to make the best of all available resources, and has published no useful statistics. Yet it is possible to piece together from isolated bits of news a general picture of the machinery for preventing distress, and aiding those suffering when it cannot be prevented, which has been built up since the outbreak of the war from the excellent material of a widely diffused community effort long previous in existence.

Even German students have been astonished to find how well the social legislation of empire and states has stood the test of war and how great a structure of voluntary service it has been possible to raise on the solid foundation of its organization. The great state insurance funds, for instance, have not only remained intact and in good working order, in spite of innumerable changes in personnel and many new problems of administration, but, through their principal officers, cooperate actively with the different relief agencies in efforts bordering their own. The most remarkable phenomenon, however, has been the rapidity and completeness with which existing voluntary social services of every kind have fallen into a general national scheme of emergency endeavor which has multiplied the usefulness of their separate efforts. We cannot, in America, adopt much of German social legislation, successful and suggestive though it is, because fundamental conditions are too different. But in this coordination of existing services for a national patriotic purpose, there are lessons of considerable practical importance for an American social preparedness program.

We are not here concerned with those sections of the social service which are in closest affiliation to the army itself or bound up with the conduct of war, the care of wounded and

disabled soldiers, of war prisoners, of the armies en route and in the trenches, though in these also the cooperation of the authorities, the Red Cross, and of voluntary agencies is a remarkably close and successful one. But we are concerned rather with the matter of civilian relief, the fitting of a nation to the task of maintaining civilized standards in the midst of calamity, of protecting the women and children for the time or permanently bereft of their breadwinner, of preventing destitution and supplementing with individual and humane care the wholesale measures of relief taken by the state.

First, and most important, of these tasks is the material provision for the dependents of soldiers in the field. It was a stupendous one from the beginning and has since increased as new mobilization orders included more and more the age groups which contain a majority of family supporters and as, with the rising cost of living, the need for additional payments to supplement the income of wage-earning families rose from point to point. In Berlin alone, 62,980 families were in receipt of war pay, amounting to about \$321,000, in August, 1914. In April, 1916, the number had increased to 228,429 families, receiving over two and a half million dollars; in December, 1916, the monthly total had increased to nearly three and a half million dollars. During the first year of the war, the total payments for the whole empire amounted to a little over twelve million dollars. By December, 1916, the cash payments to soldiers' families in Berlin alone had risen to nearly fifty-four million dollars.

It should be noted that in all but the poorest towns and cities the appropriations of the imperial treasury for this purpose represent only a fraction of these large sums. By far the greater part is raised locally by the taxpayers, either generally to supplement the regular payments to dependents of soldiers or for the support of widows and orphans, or payment of house rent, or discharge of debts incurred during the war, or food and fuel charities. For this reason there is the greatest diversity in methods of administration. The underlying principle is that each family shall be assisted in such a way and to such an extent that the soldier on his return will find its economic position changed as little as possible. The imperial and state governments repeatedly have warned the communes that they must not look upon their work as poor relief and apply to it the accustomed standards. As a result there has

been a general departure from the usual principles of dealing with such matters as unemployment or threatened eviction for non-payment of rent.

New and perplexing problems arose on every hand. They were by no means solved uniformly. Was a minimum standard of nutrition to be made the basis of family relief, or was the local relief payment to be in the form of a regular percentage supplement to the imperial war payment? Both methods have been adopted; the supplement often exceeding the original allowance by over 100 per cent. In some places all relief is given in cash; in others the greater part is provided in kind—no doubt to reduce the cost. In many small towns, having to dispose of only small revenues, no local addition at all has been voted to the war allowances from the imperial treasury, with the result that their residents are much worse off than those of the large cities.

Again, there has been much diversity in deciding whether a woman's earnings during the war were to be deducted from the amount which she would be allowed if not working, and whether grants made by employers to the families of their employes at the front should be so deducted. As regards the latter point, it seems obvious that these payments were not intended to relieve the taxpayers but to constitute a boon to the employes, and this view is taken by most of the local authorities. As to the treatment of the recipient's own earnings, no agreement has been reached by the municipalities which have conferred upon this subject. A few cities, including Mannheim and Charlottenburg, have compromised by setting up the rule that a certain minimum of earnings—usually five dollars per week—is not to be counted, and that from earnings in excess of this amount one-half is to be deducted in lieu of communal war allowance. Another question arises from the necessity of contributing towards the payment of house rent. In Germany, where house owners often are by no means wealthy men, a general moratorium would have ruined thousands of them. On the other hand, if it were generally known that the city was paying all rents due by people unable to afford them, exorbitant claims would soon be made. Ex-

tending the scope of agencies already in embryo in times of peace, some of the cities have tried to get over this difficulty by creating commissions for rent arbitration and with powers, sometimes, of fixing maximum rents for certain classes of dwellings to limit the claims which might be made on the war funds. The importance of the rent payments may be seen from the fact that in December, 1916, the city of Berlin paid over \$525,000 on rent contributions alone, out of a total payment to the families of soldiers amounting to nearly three and a half million dollars.

With all care, it is impossible for the authorities spending from public funds sufficiently to differentiate relief payments in accordance with the accustomed standard of living of the different classes, other than is partially indicated by the military rank of the father. It is obvious, on the other hand, that without such differentiation much hardship is inflicted not only on those of higher social standing but also on those who, by their own exertions, have got a nice home together or made it possible to send their children to better schools. For this reason the patriotic fund (the *Nationalstiftung*), which since the outbreak of the war has collected approximately 150 million dollars to supplement public relief funds, has found it necessary to add to the public payment where this seems desirable in the interest of a social justice which transcends mere equality of claims upon the community.

Gifts in Kind

IN AN emergency affecting large numbers of persons, gifts in kind are bound to play an important part. They enable participation in a great humane effort on the part of large numbers of people who cannot afford appreciable cash contributions. Thus the collection of gifts of clothing, food and other material aid was made the task of a special division of the Red Cross which also acts as a central purchasing agency for other material distributed in relief of distress. This branch is quite separate from the great stores of the Red Cross for war purposes.

The scarcity of food has given rise to new problems which

VOLUNTARY WORKERS AND NURSES ON HOME LEAVE FROM THE FRONT CARE FOR THOUSANDS OF CHILDREN IN IMPROVED OPEN-AIR DAY NURSERIES

ONE OF THE DAY NURSERIES IN THE SUBURBS OF BERLIN WHICH HAVE BEEN ESTABLISHED TO FREE MOTHERS FOR A PLACE IN INDUSTRY

the German municipalities have tackled with ingenuity and courage, though not always with success. Some of them, like Bielefeld, have become farmers and breeders, others have gone into the produce business, both wholesale and retail. Some have started cooperative purchasing societies, either managed entirely by the city or with the aid of private dealers. Again others have acted entirely through existing channels of trade, merely bringing about machinery for frequent conference with every branch of the food trades. The result in many places has been unsatisfactory because, with genuinely scarce supplies, the effect of mass purchases by the city has had an unfavorable rather than a favorable influence upon prices and, in some cases, has even created artificial scarcity where none was before. It is doubtful, however, whether any other measure was possible to lower prices or whether cooperative action on the part of dealers without interference of the municipalities would have succeeded better. The fact is that the imperial government, in this matter, has left the local authorities with a task which it had neither the experience nor the means of fulfilling.

An incident of special interest in connection with the scarcity of food is the alacrity with which the government is making use of the splendid system for cooperative purchase and distribution built up by the German social democratic party in spite of every discouragement and hostility on the part of this same government during the last two decades. It was the only organization equipped to handle a big task of this kind; and the German cooperative wholesale society at Hamburg, which has been its center, as well as the local branches have been taken over with all their premises, supplies and personnel and been given practically official status.

More and more the public kitchen has become an established part of the machinery for reducing the cost of living. In Berlin alone, twenty-three committees of the National Women's Service, with 1,400 voluntary workers, are running charitable kitchens where tens of thousands regularly receive their daily bread. Since July, 1916, the city of Berlin itself has opened "central kitchens," and practically all the suburbs of

the capital have such institutions where meals are served and cooked food is sold for home consumption at cost price. The purchasing department of the united relief agencies in Berlin itself has established a "war kitchen" for its own employes where 1,500 of them daily dine or sup. The Red Cross has opened a number of "cocoa rooms" on the lines of similar commercial establishments, but with this difference that a cup of this nutritious beverage with bread and butter can be had for half a cent.

The Red Cross

AMONG the relief organizations, the Red Cross takes the leading place. For ten years it had prepared and perfected a plan which enabled it, when the war broke out, to clear its deck for action with the same rapidity which characterized the mobilization of the German army. The Red Cross work originally was divided into five main sections under the general control of a central committee of which General von Pfuell is now the president. General welfare work devoted to the combat of sickness and destitution in the civil population formed one of the divisions in the original scheme. Now, however, there are twenty-three divisions, and the welfare work, with which alone we are here concerned, assumed such importance during the progress of the war that it has been subdivided into three groups, the first of which is engaged in fighting tuberculosis and contagious disease, the second has for its task the protection of infancy and motherhood, the third is responsible for family welfare work in the narrower meaning of the term. In all these branches, the organization of the Red Cross has provided a framework within which the numerous national, state and local social activities of the country could group themselves naturally in accordance with their separate functions. The Red Cross itself, during the first half of the war, cared for about 30,000 persons in Berlin; during the whole period of the war up to date well over 100,000.

Shortly after the war broke out, a new division had to be added to the civilian work of the Red Cross, to aid the German refugees who had fled from hostile countries and invaded

territories. With those from Belgium and France, in the first months of the war, streams of impoverished East Prussians rushing towards Berlin from the Russian invasion soon joined. In April, 1915, between 70,000 and 80,000 of them were in Berlin. For many weeks, relief stations were maintained at the railway depots, where nurses and health officers received those arriving, many of them in a pitiable condition, and distributed them to the various homes. Under a ministerial decree of January, 1915, this division of the Red Cross was given the duty of caring for all German fugitives from foreign countries. Receiving stations were opened in Singen (Baden), Goch (Rhine Province) and Sassnitz (on the Isle of Rügen), and distributing centers in Duesseldorf, Cologne, Dortmund, Frankfurt, Cassel, Hannover, Breslau.

These thousands had not only to be provided with immediate necessities and shelter, but as far as possible permanent homes were found for them and the means of earning a living. From one collecting center with 800 beds, in the Criminal Court building of Berlin, the great majority were distributed either into more or less permanent residences of their own or into smaller family shelters. In this connection, the collection and distribution of clothes, already referred to, played a prominent part, since many of the fugitives had saved almost none of their belongings. In addition to gifts received in kind, this branch had spent, by April, 1915, about \$2,000 in linen and woolen goods, about \$10,000 in shoes, and about \$3,500 in garments for confirmation. A special service was established, with the aid of other agencies, to care for the children and youths of these refugees, many of whom were distributed to institutions or boarded out in families. By April, 1915, an employment department established in this division, had found work for over 1,000 girls in domestic service, for 2,000 persons in agriculture, for 3,000 men and 1,000 women in public employment.

Jugendfuersorge, the care of adolescents, in the course of the war, has assumed such importance as to make necessary the formation of yet another separate division. As in England and France, the removal of the father often led to a lack of home control and an increase in juvenile delinquency which threatened to become serious. Under the leadership of the wife of the Prussian minister, Trott zu Solz, this department endeavored, first of all, to disburden mothers thrown by the war into the necessity of going out to earn their living. Agencies for supervising home work and recreation—a form of social service which for long has enjoyed much popularity in Germany—were extended and multiplied. In addition, funds were collected and administered to pay scholarships and provide clothes and shoes for children kept away from school because of inability, owing to the greatly increased cost of living, of their otherwise self-supporting mothers to keep them in these necessities. With the high wages paid for male workers, there was a tendency for boys to escape school attendance and go to work; this also has been corrected as far as possible by a joint effort of the child-caring agencies.

The Children's Bit

THE services of these older children themselves to the fatherland have also been organized. There has been a great increase in the membership of the boy scout corps and in the patriotic duties assumed by them. The collection of metal to be used in the manufacture of munitions was one of their jobs. In one suburb of Berlin, ten carloads full of fruit stones were collected by the juvenile population for oil extraction. In all these matters there has been maintained a close cooperation between the voluntary agencies and the school and city authorities.

One field where this cooperation has been especially fruitful has been the cultivation of vacant plots, though few details of this so far have become known. In most of the large cities the practice of letting large unused plots of city land to philanthropic or cooperative societies at a nominal rent, to have them converted into small lots for workingmen, has borne excellent results for some time past. During the war, the acreage of these *Schrebergaerten* has been greatly increased, and the school authorities have taken a hand in training the older boys and girls in the best methods of cultivation.

The juvenile division of the Red Cross further helps in the selection of suitable guardians for fatherless children, takes steps to apprentice those in their care, and to send sick children to forest and seaside resorts and hospitals. In all these matters, previously existing institutions and services have, under the pressure of war, been extended and made financially secure.

The Day Nurseries

THE infant welfare division of the Red Cross has increased the number and the efficiency, through cooperation, of all the different hospitals, homes and institutions engaged in this branch of social service. Here again the necessity that mothers go into industrial occupations has vastly increased the normal need for communal provision. The accompanying illustrations show typical scenes from one of the day nurseries established since the outbreak of the war, where such mothers may leave their children during the day. It is situated in one of the suburbs of Berlin and has fifty voluntary workers, headed by the Princess Eitel Friedrich, who take care of 230 inmates, ranging in age from a few days to five and six years. Salt water treatment is provided for scrofulous children, and doctors regularly visit and occasionally attend individual cases in the mother's home. Much attention is given to the training of these little ones in good habits. In summer practically all the time is spent in the open. A sewing-room is attached to this nursery, where sixteen voluntary workers sew linen and clothing for the children and their mothers. Some of these workers are Red Cross nurses on home leave to whom this occupation with children, though strenuous, offers a welcome relief from the nerve-racking duties at the front.

In this connection, more especially, a wonderful opportunity has been created for voluntary service. It is typical of German thoroughness that hundreds, perhaps thousands, of girls in comfortable circumstances have already taken a complete year's course in kindergarten training to equip themselves for this patriotic work which, indirectly, of course, increases the fighting strength of the country by releasing for industry and good earnings married women who otherwise would have been kept at home to care for their children. The Infant Welfare division also made itself responsible for home nursing and obstetric care. It has a fund from which to supplement the income of families during varying periods before and after child birth. At such times, special endeavors are made to board the older children in suitable homes.

Another division is for legal advice, under the presidency of the ducal minister of state, Dr. von Richter. The average German woman, at normal times, is inexperienced in public matters. If confronted with extortion on the part of her husband's creditors, or her own, with rent, insurance, inheritance and mortgage questions, with family quarrels, or school requirements concerning her children, she is apt to get confused and do the wrong thing. Sometimes there are perplexing questions concerning her claim on the authorities for war payment or a widow's pension. In all these matters, the existence of a public office of counsel which, if necessary, is prepared to take her case to court, is an inestimable boon.

A Reveille to American Industry

Some Social Consequences of the Stock-taking of Men and Machines

By *John A. Fitch*

OF THE SURVEY STAFF

“NO conscientious reporter can yet say,” writes William Hard in a recent magazine article, discussing social changes due to the war in Europe, “whether it is the greatest war of history by reason of being the most destructive and desolating, or the greatest war of history by reason of being the most creative and fruitful.” This is a new view to take of war. Is it possible that there can be liberalizing influences at work that take their inspiration from a condition in itself the very antithesis of tolerance and liberalism? That is a question worth keeping before us in any consideration of the relation of this country to the struggle in Europe.

That the last Congress passed a conscription bill, and that the President signed it is not generally understood. But that very thing happened. Not the bill to conscript men into military service—that didn’t pass—but a bill to conscript property. Section 120 of the army reorganization bill, approved June 3, 1916 (public document No. 85, sixty-fourth Congress), gives the President power in time of war or “when war is imminent” to place orders for munitions with any firm capable of producing them and compliance with the order “shall be obligatory” on the firm. Compensation is to be fixed by the secretary of war and must be “fair and just.” If the firm in question refuses to fill the order the President is “authorized to take immediate possession” of the plant and to operate it, and the “responsible heads” of the firm thus refusing to serve the government “shall be deemed guilty of a felony” and shall be imprisoned for not more than three years and fined not more than \$50,000.

Such a law would not have been thought of a few years ago. A later indication that individualistic theories may have to give way still further to government control is the creation of the Council of National Defense.

To Mobilize American Industry

IT ALL began with the Industrial Preparedness Committee of the Naval Consulting Board, the latter a semi-official body, the former wholly private in character and voluntary. The chairman of the committee, Howard E. Coffin, vice-president of the Hudson Motor Car Company, was fired with the idea of mobilizing American industry to back up the army and navy. English experience in the early days of the war, when private concerns were not equipped to manufacture munitions, and when the skilled labor force necessary to turn out arms was dissipated by enlistment and departure for the front, was not unnoted by Mr. Coffin and his associates. Accordingly they set out to do what they could to promote industrial preparedness in America.

The cooperation of the five great engineering societies was secured, committees were appointed from their membership to supervise the work in each state in the Union, and a survey of American industry was begun. There are 30,000 odd firms, partnerships and corporations engaged in manufacturing in the United States, doing a business amounting to \$100,000 or more a year each. A searching questionnaire was distributed

among these concerns and fairly complete returns were received from 27,000. The chief information desired was the extent to which these establishments were prepared to manufacture munitions and supplies for the army and navy, and whether they would be willing to receive from the government small annual “educational” orders.

This is Mr. Coffin’s pet scheme. If each manufacturing establishment each year were to make even a small quantity of munitions for the government the factory organization would learn just how to do the work, what raw materials are essential, what tools are required, what tests must be met, and would be prepared to manufacture munitions on a large scale when called upon to do so. Thus, at a blow, as the officers of the council like to tell you, “the ghost of a munitions trust would be laid.”

About 60 per cent of the firms replying to the questionnaire expressed a willingness to accept such educational orders and Congress has authorized the placing of them.

The Council of National Defense

THE Council of National Defense was created by an act of Congress approved August 29, 1916. Its membership consists of the secretaries of war, navy, interior, agriculture, commerce and labor, with a director and an advisory commission of seven civilians, nominated by the council and appointed by the President. These include Daniel Willard, president of the Baltimore & Ohio Railroad; Howard E. Coffin, vice-president of the Hudson Motor Car Company; Dr. Hollis Godfrey, president of Drexel Institute, Philadelphia; Samuel Gompers, president of the American Federation of Labor; Julius Rosenwald, president of Sears-Roebuck and Company; Dr. Franklin H. Martin, of Chicago, and Bernard M. Baruch, of New York. The council has opened headquarters in a Washington office building and is planning a campaign of industrial preparedness of broadest scope.

Its duty is to advise the government with respect to three matters of great present importance: The best and quickest methods of mobilizing troops, the kind of supplies needed for national defense, and the quickest and most efficient methods of producing those supplies. As outlined in the law and duties of the council the aims are:

“To supervise and direct investigations and make recommendations to the President and the heads of executive departments as to the location of railroads with reference to the frontier of the United States so as to render possible expeditious concentration of troops and supplies to points of defense; the coordination of military, industrial and commercial purposes in the location of extensive highways and branch lines of railroad; the utilization of waterways; the mobilization of military and naval resources for defense; the increase of domestic production of articles and materials essential to the support of armies and the people during the interruption of foreign commerce; the development of sea-going transportation; the collection of data as to amounts, location, method and means of production, and availability of military supplies;

the giving of information to producers and manufacturers as to the class of supplies needed by the military and other services of the government, the requirements relating thereto, and the creation of relations which will render possible in time of need the immediate concentration and utilization of the resources of the nation."

The advisory commission has organized by appointing committees and dividing the work among them. These committees, with the chairman, are as follows:

Transportation and communication, Mr. Willard, chairman; munitions, manufacturing, including standardization and industrial relations, Mr. Coffin, chairman; supplies, including food, clothing, etc., Mr. Rosenwald, chairman; raw materials, minerals and metals, Mr. Baruch, chairman; labor, including conservation of health and welfare of workers, Mr. Gompers, chairman; medicine, including general sanitation, Dr. Martin, chairman; science and research, including engineering and education, Dr. Godfrey, chairman.

Inventories of 27,000 Plants

THE council has taken over the work of the Industrial Preparedness Committee of the Naval Consulting Board, and the 27,000 plant inventories secured by that body are in its files. In order to assist in the preparation of blue prints, and the securing of the gauges and dies necessary to enable the plants that expressed a willingness to manufacture munitions to turn to quantity production, a Munitions Standards Board has been created, consisting of six experts under the supervision of Mr. Coffin.

As to the other problems that are engaging the attention of the council, they may be summed up in the language of Walter S. Gifford, formerly statistician of the American Telephone and Telegraph Company, who is director of the council. Speaking before the Philadelphia Chamber of Commerce last week, Mr. Gifford said, in part:

"Some months ago the medical organizations of the country formed a committee on medical preparedness, and this committee collected records of over 20,000 physicians and surgeons, and inventoried hospitals and nurses. This work has also been transferred to the Council of National Defense and is now being carried on by the council under the supervision of Dr. Martin. The council has already caused the establishment of courses in military medicine in some fifty of the medical schools and colleges of the country, and army medical officers have been detailed to give the necessary instructions. A committee has been formed under the supervision of Dr. Martin for the standardization of surgical instruments and supplies. At present there is no one standard for these articles, with the result that the army, navy, public health, Red Cross and volunteer civilian organizations may each have a standard of its own. For efficiency in time of war it is essential that so far as possible one standard be adopted. The medical section of the council is also finding out from such medical men in this country as have been to the front in Europe what their experience has been and what lessons we might draw from it.

"On transportation, the American Railway Association has formed a committee of which Fairfax Harrison, president of the Southern Railway, is chairman, to work under the supervision of Daniel Willard and to advise and assist in carrying out the transportation duties of the Council of National Defense. This committee, which has four sub-committees, one for each of the military departments of the government, met in Washington recently at the offices of the council and commission and there learned in detail from General Kuhn, president of the War College, and Colonel Baker, of the Quartermaster's Department of the Army, something as to the probable transportation needs of the government in time of war.

"On the subject of labor, Mr. Gompers is studying in

cooperation with Mr. Coffin, whose committee is charged, among other things, with the question of industrial relations, the proper method for building up an industrial reserve in the country through the means of which skilled labor will be kept on the job and not sent to the fighting front in case of war. The experience of European countries has shown that it is fatal to allow the skilled mechanics to be sent to the front when they are needed much more in the factory. A soldier may be made in some months, while a skilled mechanic cannot be made under some years.

"As regards raw materials, minerals and metals, and supplies, including food, clothing, etc., we are finding out the approximate amount of materials that would be needed to put an assumed force of a million men in the field and the amounts needed for each ninety days of service in the field. With this as a basis it will be possible to estimate the amount of raw materials that would be needed and from this information to discover the weak spots and make recommendations as to what should be done in regard thereto.

"As to science and research, we have not only Dr. Godfrey and his committee assisting, but the National Research Council, which was formed at the invitation of the President by the American Academy of Sciences, stands ready to carry out any lines of research that may be deemed desirable in connection with national defense."

Here, then, we have in outline the plans for a movement that has a significance far transcending its immediate importance as a factor in preparedness for war. The fact that most of the program is still in the planning stage—with the brief time that has elapsed since its organization it could not be otherwise—detracts not a whit from its essential importance. Here is an official body consisting of members of the President's cabinet and an advisory body on which science, business and labor are represented, charged with the duty of advising the government respecting whatever needs to be done to eliminate weakness and to foster strength in our national economic life. The council, in addition to specific commissions with respect to defense, is to make recommendations to the government regarding "the creation of relations which will render possible in time of need *the immediate concentration and utilization of the resources of the nation.*"

The Great Opportunity Ahead

COMPOSED as they are of honest and patriotic Americans, the council and its advisory commission will find it impossible to carry out either the spirit or the letter of the requirement just quoted without subjecting to searching examination and test every phase of our national economic life. It is within the power of the council to set in motion a force for the conservation of all our national resources, material and human, on a scale that has never before been possible. Confronted by the possibility of war, real patriotism requires the sweeping away of theories and practices that do not stand the test of whatever will best conserve the national strength.

It is to be expected, therefore, that both labor and capital will be asked to yield somewhat for the common good. Careful research and just conclusions on this point will be awaited from the Council for National Defense to the end that on the one hand there shall be no special interests fattening at the expense of the nation's need, and on the other that no class in society shall be asked to carry burdens beyond its strength or beyond its just share.

We may well believe that the council will not hesitate to point out every weakness in our methods of doing business. To do less would be false to their trust. If at any point the facts indicate that direct government ownership or operation is more economical than to purchase supplies in the market or to contract for them, we may expect them to recommend

such action. For example, the government is now in possession of and is operating an oil refinery on one of the nation's great oil preserves. It was testified before a committee of the last Congress that the government is producing gasoline at this refinery at a manufacturing cost of six cents a gallon. The council will not, of course, fail to appreciate the significance of such testimony.

Already it is proposed that in the event of war and the private manufacture of munitions and supplies for the government, profits shall be strictly limited. The United States Chamber of Commerce has suggested that excess profits due to war conditions, be prohibited; that is, that they be limited to the rate prevailing in times of peace. Whether this would be a just arrangement or not is a matter that deserves careful thought. It may be said, however, that Director Gifford, of the council, is warmly sympathetic with the idea not only that war profits should be eliminated, but that, on the other hand, labor should not be penalized through a decline in real wages due to war prices. If it should be considered fair to establish a peace basis for profits, the same might be done, in the opinion of Mr. Gifford, for wages. That is, they should be so adjusted to the cost of necessities that their purchasing power should not be less in war time than they were before the outbreak of hostilities.

In the whole matter of the relation of labor to the national defense, the experience of England can no more be overlooked than can European experience in matters of strategy. Attention has frequently been directed, in this country, to England's "unpreparedness" in the matter of munitions factories, and to her grievous error in letting her skilled workmen enlist and go to the front. We have been told far less of England's serious mistakes in its treatment of labor in the factories. The government soon recognized the importance of labor as a factor in production, but it failed to consider it seriously as an integral, thinking element in the country's life, and with a stake in its future.

The government failed, in the second place, to consider the requirements of justice with respect to capital and labor in war time. It asked the unions to give up their restrictions on output, on hours of labor and to yield other safeguards that had been won only by years of struggle. It appealed to them to sink their private interests in patriotic service to their country, and it asked them not to strike. Later it passed a law which practically makes it a crime to strike. It did all this without interfering in the slightest degree with the piling up of huge war profits by the employers. It left the increase in the cost of living to take care of itself and asked the workers to be quiescent in the face of a decline in real wages. The result was an unrest and a revolt on the part of the workers

that has been freely denounced in editorial comment in this country as "unpatriotic."

But England learned. She recognized that the workers are a part of the thought and life of the country instead of mere instruments of production, and she invited labor representatives to sit in her reconstructed cabinet. She saw the unfairness of unrestricted profits on the one hand and a declining purchasing power of wages on the other—so she put a limit on profits and raised wages. Most important of all, perhaps, she saw that maximum production is possible only when the workers are healthy and not overworked. She investigated the health of her munition workers and made studies of fatigue with the result that sanitary conditions have been improved, hours have been reduced, and holidays restored.

It may be assumed that Samuel Gompers, who is a member of the advisory commission of the council, knows this bit of history well. In the conference that is being held this week in Washington of the presidents of the national and international unions affiliated with the American Federation of Labor and the executive council of that body, a policy will doubtless be agreed upon and submitted to the Council of National Defense.

With this information at hand the council will, of course, recommend a wiser and juster course than that followed by England in the early days of the war. It will not, however, overlook the fact that in one respect no change has been made in England from the policy adopted in the beginning. The restrictions on output have not been restored. English unions had gone further in this respect than is the practice of American unions, but without doubt the question of the adoption of whatever is sound and socially desirable in scientific management must now be considered in this country as never before. The unions must make concessions in the interest of efficiency, and the scientific management men must give up their blind and narrow opposition to the participation of labor in the determining of standards.

In all of these matters the Council for National Defense has such an opportunity to contribute to a better industrialism and to a sounder national economic policy as seldom has come to a group of men in the history of the country. In a recent statement given out by the council the duty of the council was said to be "to mobilize good will within our borders, to forestall bitter dissension of race or of individuals arising from acts of passion, and in every way to conserve the national unity."

Here is a policy which, if carried out in sincerity and good faith, will result in lasting good to the nation even if the occasion for its inauguration should be the lamentable one of war.

WANDERING

By Hortense Flexner

VAGUE winds of sorrow blow
Across the night's wide lake,
There is a road I know,
But may not take.

There is a house of vines,
Where friendly shadows lie,
The window-candle shines,
But I pass by.

Afar my pilgrim load
I bear—yet ever-more,
My feet are on that road,
My hand is at the door.

COMMON WELFARE

CHURCH CRUSADE ON THE BARBARY COAST

AN "open town" for forty-nine years, San Francisco has ceased officially to tolerate prostitution. In February the police department dramatically closed more than 200 houses in the segregated district, a belated aftermath of the red light abatement law which was passed in 1913 but unenforced by District Attorney Fickert. Even in the present clean-up the district attorney's office has insisted that procedure be under the penal code directed against the women and not under the abatement law attacking property. Where laws and lawmakers failed the achievement may be credited largely to the vice campaign of the Church Federation of San Francisco under the leadership of the Rev. Paul Smith, pastor of the Central Methodist Church.

Challenged by Theodore F. Roche, president of the Police Commission, to prove that San Francisco was not the cleanest city, morally, in the world, Dr. Smith with a friend, a reporter and a private detective made a round of the supposedly non-existent houses in the up-town tenderloin, the beach resorts, the road-houses, cafés, and the prominent houses in the choice residential section which harbor clandestine vice. They had at their disposal evidence collected by the Law Enforcement League in a thorough survey of conditions a few months before. They also had unlimited use of the columns of two leading newspapers which had offered publicity for any statements for which legal proof could be furnished.

On Sunday night, January 14, armed with affidavits and first-hand material, Dr. Smith preached a sermon which literally roused San Francisco. It was printed in full in the newspapers, and as a result the minister attended one or two meetings daily, presenting fresh evidence of law violation and immorality. Public interest was so stirred that a community mass meeting was planned for January 25.

Then early on the morning of January 25 Dr. Smith received a telephone message from a friend who worked in

the segregated district, saying that on the previous night a special policeman in the employ of the madams of the houses had passed around an order saying that on penalty of losing their rooms all the girls must be in Central Church at eleven o'clock next morning to present their case to the public. Repeated rumors have connected this plan with an opposition evening paper, although the managing editor has denied it. Likewise underworld reports have arisen again and again implicating certain city officials and politicians with the move.

At any rate, about nine o'clock Dr. Smith was asked to see a number of the women who wished to seek his advice. He readily agreed, and opened the doors of his church to some 300 prostitutes. Outside were a considerable number of their men, who were refused admission by the police.

A woman reputed to have been the mistress of a prominent city official acted as spokesman. Apparently she had been coached, for she immediately entered into an address calculated to arouse public sympathy. She said the women gathered in the church were children of the poor, that with shoes at twelve dollars a pair they could not possibly live on the wages open to women. She denounced the heartlessness of society and the men who made victims of these women. She concluded with a dramatic appeal: "What will you do with us? What ship will you charter to send us away?"

Mildly protesting that neither his own nor his wife's shoes cost twelve dollars, Dr. Smith asked the women a number of questions. How many were mothers? About two-thirds raised their hands. How many were native daughters of San Francisco? About thirty responded. How many had entered the life because they could not make a living wage? Most of the women agreed on this reason. How many would be willing to do honest work at eight to ten dollars a week, guaranteeing that the community would provide work at standard rates? A derisive storm of laughter greeted this question. The consensus of opinion seemed to be that they could not get along on less than twenty to twenty-five dollars a week.

The leader of the women asked what would have been Christ's attitude toward these magdalenes. The minister replied that Christ had always forgiven, but he also had always preached, "Go and sin no more." Women who wanted to live straight would be welcomed in his church, Dr. Smith said, but he added that neither the church nor society could recognize their profession as legitimate. He invited any girl who was genuinely penitent to join the church, and a social worker, addressing the meeting, offered to see those who wanted employment.

The upshot of the meeting was that the women demanded to be left alone. The reaction upon the community did not rouse the sympathy anticipated nor did it befog the issue. The admission of the women that they would not take work at eight or ten dollars turned people against them. Instead of heckling the minister or ending the campaign, the incident only doomed the segregated district in San Francisco.

The mass meeting on the same night, attended by 7,000 people and from which some 20,000 persons were turned away, marked a new moral and political epoch for the city. Two resolutions were unanimously adopted, one asking for the appointment of a vice commission, the other demanding the granting of ten requests petitioned to the mayor.

The next day the mayor agreed to appoint the vice commission, and on the following Monday night the police commissioner issued orders covering most of the requests. He would not, however, separate the combination of public drinking and public dancing, nor require the serving of bona fide meals with drinks in cafés nor regulate the vicious French restaurants.

Finally, although the question of segregation in San Francisco had not been raised, criticism of the district attorney's record in failing to enforce the abatement law, led to the capitulation of his office. After negotiations District Attorney Fickert agreed to order the closing of every open and tolerated house of prostitution in San Francisco at the end of fifteen days, reluctantly conceding that under the law segregation must be ended.

The struggle is as yet half won. Already it is reported that prostitution flourishes, apparently with the connivance of the police, in scattered hotels and apartment houses; that the women are instructed not to leave the city as yet; that another district will be established. But the whole question has assumed important political aspects. For the first time, Dr. Smith reports, politicians are considering the possibility of reward and punishment by the church vote and are in a chastened mood. Meanwhile immediate efforts are bent toward pushing through the legislature a bill to provide care and treatment for the ousted prostitutes in a state rehabilitation farm for women, modeled after the institution at Bedford Hills, N. Y.

HEALTH INSURANCE PRO AND CON

THAT the agitation for health insurance in New York may result in the appointment of a commission to study the subject was indicated at the hearing on the Mills bill at Albany on March 7. The suggestion came from opponents of the bill and from more friendly witnesses as well, and was accepted by those actively favoring it. A bill for the creation of such a commission was introduced last week.

Just as was the case last year, the hearing revealed a sharp division. There were physicians in opposition and appearing for the bill were other physicians, including a former and the present health commissioner of New York city. Hugh Frayne, of the American Federation of Labor, spoke in opposition, while Pauline Newman, of the Woman's Trade Union League, supported it. James M. Lynch, of the State Industrial Commission, formerly head of the International Typographical Union, said that there is a sharp difference of opinion in labor circles and that organized labor as a whole has not yet taken a definite position; he and many other union men favor health insurance, but there is strong opposition also among labor men. It was the sentiment of the State Federation of Labor, said Mr. Lynch, that so important a matter should not be passed on by the legislature without further investigation and that it favored a commission to investigate.

Representatives of the National Association of Manufacturers and of the State Chamber of Commerce spoke against the Mills bill.

In Massachusetts a large state committee has been formed to advance the study of health insurance and promote health insurance legislation. For some months a small group, including physicians, social workers, an employer and a representative of organized labor has been working quietly further to develop interest in the subject. Members of this group are responsible for the introduc-

MEXICO'S CONSTITUTION ON LABOR

From a translation of the new constitution of Mexico, promulgated February 5, by H. N. Branch, in the Mexican Review for March.

EIGHT hours shall be the maximum limit of a day's work. The maximum limit of night work shall be seven hours. The maximum limit of a day's work for children over twelve and under sixteen years of age shall be six hours.

The minimum wage to be received by a workman shall be that considered sufficient, according to the conditions prevailing in the respective region of the country, to satisfy the normal needs of the life of the workman, his education, and his lawful pleasures, considering him as the head of a family. In all agricultural, commercial, manufacturing or mining enterprises the workman shall have the right to participate in the profits. The same compensation shall be paid for the same work without regard to sex or nationality. The minimum wage shall be exempt from attachment, set-off or discount. The determination of the minimum wage and of the rate of profit-sharing shall be made by special commissions to be appointed in each municipality and to be subordinated to the Central Board of Conciliation to be established in each state.

When, owing to special circumstances, it becomes necessary to increase the working hours there shall be paid as wages for the overtime 100 per cent more than those fixed for regular time. In no case shall the overtime exceed three hours nor continue for more than three consecutive days; and no women of whatever age nor boys under sixteen . . . may engage in overtime work.

In every agricultural, industrial, mining or similar class of work, employers are bound to furnish their workmen comfortable and sanitary dwelling places for which they may charge rents not exceeding one-half of 1 per cent per month of the assessed value of the properties. They shall likewise establish schools, dispensaries and other services necessary to the community. Furthermore, there shall be set aside in these labor centers, whenever their population exceeds 200 inhabitants, a space of land not less than 5,000 square meters for the establishment of public markets and the construction of buildings designed for municipal services and places of amusement. No saloons or gambling houses shall be permitted in such labor centers.

Institutions of popular insurance established for old age, sickness, life, unemployment, accident and others of a similar character, are considered of social utility; the federal and state governments shall, therefore, encourage the organization of institutions of this character in order to instill and inculcate popular habits of thrift. Cooperative associations for the construction of cheap and sanitary dwelling houses for workmen shall likewise be considered of social utility whenever these properties are designed to be acquired in ownership by the workmen within specified periods.

tion of the health insurance bill now before the Massachusetts legislature. This bill follows the general lines of the tentative draft of an act prepared by the National Committee on Social Insurance of the American Association for Labor Legislation, but has been modified in various details with the view of adapting it to Massachusetts conditions.

The small body, however, felt it inadequate to cope with the demand for educational and practical work in connection with health insurance in Massachusetts and have hence proceeded to form a large representative committee drawn from various parts of the Bay State. Dr. David L. Edsall, professor of medicine at the Harvard Medical School, and chief of the East Medical Service at the Massachusetts General Hospital, has taken the chairmanship. Among more than seventy members are included employers, men and women connected with the organized labor movement, twenty-four physicians, and many men prominent in public life or as students of the subject. Some of those on the committee are ready to urge the health insurance bill now before the legislature, others are merely in favor of the general principles of health insurance, but are not yet committed to any specific legislative proposal. An active campaign of educational work by the committee may be anticipated.

NEW ALLIES—FLOODS AND THE BOLL WEEVIL

ONLY within the past few weeks have other parts of the country learned of the serious need that has existed for months among the Negro farmers of Lowndes county, Alabama, and nearby counties as a result of heavy floods last summer and the ravages of the boll weevil. Accounts coming from the stricken region have pictured hundreds of "hungry, half-naked, barefooted, poor Negroes huddled on the frozen ground, waiting their turn to get a little ration of meat and a peck of meal." The thermometer, on the day this particular description was written, is declared to have stood at five degrees above zero, and men, women and children are asserted to have been suffering severely from sickness due to exposure.

Letohatchie, a straggling village of fifty buildings, is in the midst of this suffering region. Most of the accounts of wretchedness have been written by A. W. Jenkins, ticket agent and telegraph operator in Letohatchie, justice of the peace and owner of the local store.

Congress was informed of this distress last fall and made an appropriation to relieve it. This appropriation was expended for the most part in giving employment on roads to those in need. The money lasted only until mid-winter and left the families of the sufferers in much the same condition that it found them.

The plight of the district was first called to the attention of the Red Cross in January. W. M. McGrath, general secretary of the Associated Charities of Birmingham, went to Lowndes county for the Red Cross and found 129 families in need. He issued rations the first day of his visit, and these have been issued weekly by the Red Cross ever since. Taking into consideration the early spring in that section, Mr. McGrath estimated that the rations would have to be continued only until March 1. Relief was administered also in nearby counties, which suffered less severely.

Rains, however, put off the season and the reports of continued suffering became so persistent that Ernest P. Bicknell, director general of civilian relief of the Red Cross, went to Lowndes county early in March. As a result of his visit the weekly rations have been continued, though at a reduced rate, for another month at least, and no definite time has been set for their discontinuance. This plan has the approval of the local relief committee of citizens. Mr. Jenkins, author of the accounts of distress, is chairman of this committee.

PHILADELPHIA'S SUGAR STRIKE

ON February 7, 2,000 unorganized men, sugar workers in the refineries of Philadelphia, declared themselves dissatisfied with their working conditions and struck. They are foreigners, Poles and Lithuanians for the most part, with a sprinkling of Russians, Germans and Italians. Few of them are able to carry on a conversation in English.

Shortly after the strike was called the workers accepted the offered assistance of the Industrial Workers of the World and formed the Sugar Workers' Union in connection with that organization. At once 2,000 I. W. W. longshoremen, who work upon the sugar docks, declared themselves on strike in sympathy with the sugar workers. They made no demands for themselves, but simply refused to unload the sugar that was to be worked by strike-breakers at the three sugar refineries affected—the Franklin Sugar Refining Co. (controlling Spreckles'), a constituent of the American Sugar Refining Co., the W. J. McCahan Refining Co., and the Pennsylvania Refining Co.

The demands of the strikers were five-fold: That their day be cut from twelve to ten hours; that they be paid time and a half for overtime work and double time for work on Sundays and holidays; that they be given a general raise of 5 cents an hour instead of the bonus offered by the companies, and that the companies should recognize their right to organize.

These demands the companies flatly refused to consider. They pointed out that it would be impossible for them to

work their men in ten-hour shifts, as that would leave the sugar in the vats unworked for four hours a day while the shifts were changing. Three shifts of eight hours they likewise were unwilling to grant.

The Sugar Workers' Union conceded that the ten-hour shift would not be practicable, and declared that the workers were ready to return on the same hour scale as formerly. However, it still held to the other four demands. In a large mass meeting the workers elected a strike committee of seventeen men to present their demands to the employers. This committee the representatives of the companies refused to meet.

On February 15, Patrick Gilday, of the State Bureau of Mediation and Arbitration; Joseph A. Steace, of the State Department of Labor and Industry, and Clifton Reeves, of the United States Department of Labor, offered their services as a committee of arbitration. They secured from the strikers a statement of their demands, but returned to report that the representatives of the companies refused to consider them and that nothing could be done.

Following a serious riot which took place on February 22, George H. Frazier, president of the Franklin Sugar Refining Co., issued a statement in the form of a large advertisement in the *Evening Bulletin* of February 23. In this it was stated that on December 1, 1915, the "unskilled" labor of the company had received only 18 cents an hour, or \$2.16 per day; this had been gradually increased to the present scale of 25 cents an hour, or \$3 a day. It was stated that the company had a liberal pension system, and that on February 7, 1917, it had offered a bonus of 8 per cent on the January wages of each employe. It was further pointed out that on December 25, 1916, a Christmas gift of \$5 had been given to each worker.

Mr. Frazier refused to grant a personal interview to the writer of this report, nor could C. R. Hoodless, of the Pennsylvania Refining Co., be reached, but Mr. Peterson, the general manager, outlined the position of the Franklin company at some length. He stated that the company absolutely refused to come to terms. They did not consider that the strikers had a case, and no committee of strikers had been received. If any men returned to work they must come back seeking their positions as new men; if their places had been filled meanwhile they would not be taken back; the leaders in the strike would never be reemployed under any conditions.

Mr. Peterson stated that the companies were competent to handle their own affairs. They asked no one for advice or suggestions, and arbitration would not be considered. The I. W. W.

would never be recognized, and were looked upon merely as agitators. Unionization of any sort, even the best, he considered very dangerous for the foreigners—"Anybody knows that you can't let a Lithuanian organize," he declared.

He denied that the strike-breakers were being paid more than the former employes, but admitted that they were being lodged and fed at the company's expense. When asked how often the men were worked overtime, Mr. Peterson replied, "Not often," but he stated that "when the factory was running at full speed there would be twelve hours' work seven days per week for a large percentage of the employes." In answer to the charge of the strikers that before the strike was contemplated a few of the laborers had joined the I. W. W. and had been discharged, Mr. Peterson said: "The company never discharged anybody for belonging to the I. W. W. That would be bad business. But," Mr. Peterson winked jovially, "when we discovered that a man belonged to the I. W. W. he was invariably fired for other reasons."

At the present time the strike is at a deadlock. The companies are holding fast to their position, and only a few of the strikers have returned to work, in spite of the fact that no strike benefits have been paid. Many of them were questioned and all stated that they were able to find temporary jobs and were tiding over the strike period without much hardship. At strike headquarters it was stated that not one case of actual destitution had been reported.

GERMAN LABOR'S PLEA FOR PEACE

ORGANIZED labor in Washington is much exercised over the developing results of a message cabled to Karl Legien, president of the German Federation of Trade Unions, by Samuel Gompers, president of the American Federation of Labor, on the day following the dismissal of the German ambassador. The message read: "Can you not bring influence to bear on your government so that a breach with the United States may be avoided?"

In American newspapers of February 20 there was published what was represented as a Copenhagen dispatch to the Exchange Telegraph Company in London, stating that the Berlin *Vorwaerts* had published this inquiry and the following reply from Legien:

"Since the war broke out the German laboring classes have worked for peace, and they are against every extension of the war. The refusal of the enemy to consider the sincere German peace offer, the continuation of the dreadful war of starvation directed against our women and children and old people, and the open confession of our enemies that their war aim is the annihilation of Germany

—all that has caused a sharpened submarine war. Influence on our side on the government is only possible if America can persuade England to give up her war of starvation."

The text of the message sent by wireless on February 11 and later received by Mr. Gompers without intervention of the British censor read as follows: "German labor has striven for peace since the outbreak of the war. Eighteen are opposed to extension of the conflict. Rejection of Germany's sincere offer of immediate peace negotiations, continuation of the cruel war of starvation on our women, children and aged, and the enemy's frankly avowed aim of destruction of Germany have provoked the aggravation of the war. No intervention with the government on my part has any chance of success unless America prevails upon England to discontinue the war of starvation as being contrary to the law of nations. *I appeal to American labor not to allow themselves to be made catspaws of the war-mongers by sailing through the war zone and thus contributing to extension of the conflict. International labor must unflinchingly work for immediate peace.*"

THE PHILADELPHIA PLAN OF EMERGENCY AID

SO far as is known, the only attempt in the United States to organize the efforts of a state-group to help the war sufferers of Europe is being made in Pennsylvania. In October, 1914, eight women, well-known in Philadelphia society, met and resolved "that a Philadelphia women's committee be formed to meet the terrible emergencies resulting from the war in Europe, and to devise such relief as may be deemed wise and effective." From this nucleus there has grown up an organization known as the Emergency Aid of Pennsylvania, which now is counted to have 4,000 active members and all of the club women of the state as associated members. Its principal aim is "to bring together a great body of volunteers" and "to serve as a clearing house for their activities." Willingness to serve constitutes the qualification for membership. There are no formal dues.

Its organization partakes of the nature of a federation. It has a chairman, seven vice-chairmen, a secretary, a corresponding secretary, a treasurer and an executive committee which now has twenty-five members. These members fall into four classes: (1) chairmen of committees on raising money for special nationalities, French, British, Belgian, Serbian, Armenian, Italian, Polish, Russian, British American and Montenegrin; (2) representatives of analogous organizations, Red Cross, Philadelphia Chapter of Pennsylvania Women's Division for National Pre-

paredness, American Ambulance Hospital in Paris, British, French, Belgian Permanent Blind Relief War Fund, the State Federation of Pennsylvania Women (membership, approximately 50,000), the eastern division of the federation, the Pennsylvania state branch of the National Surgical Dressings Committee, the Allied Arts, and the main line branch of the Emergency Aid; (3) chairmen of certain committees which perform executive duties for the central organization, House, Ways and Means, Organizing Branches, Entertainment; and (4) the chairman of the Home Relief Division, to be described more fully below.

Each one of these women has a committee and in some cases several sub-committees under her. There are, for instance, numerous sub-committees of the committees on French and Belgian relief. It is the plan of the national committees to cooperate with and assist, so far as they are able, all the reliable relief organizations of the country in which they are especially interested. Lately a professional organizer has been employed to bring together the efforts of individual volunteers throughout the state.

The committees appeal very largely for materials—surgical dressings, and hospital supplies, clothing, shoes, even certain kinds of food. They also appeal for funds. In doing this they have left to the ways and means committee all the money raising for the organization's own expenses, so that other committees may take pains to assure prospective contributors that whatever they give will be sent on *in toto* to the beneficiaries in Europe.

By May 1, 1916, the American Ambulance Committee had sent over \$195,000 in money and nearly \$79,000 in supplies, the Belgian \$60,000 in money and \$740,000 in supplies, the British nearly \$9,000 in money and over \$188,000 in supplies, the French nearly \$258,000 in money and over \$1,000,000 in supplies, the Italian nearly \$8,000 in money and \$137,000 in supplies, the Polish \$52,000 in money and \$2,000 in supplies, the Serbian \$20,000 in money and \$6,000 in supplies. The Surgical Dressings and the Red Cross Committee have sent nearly \$26,000 in money and upward of half a million dollars' worth of supplies. Altogether there has gone to Europe from the Emergency Aid nearly a million in money and three million in supplies.

Office and storage space which occupies four large dwelling houses in the central part of Philadelphia is donated directly and, as has been said, the ways and means committee looks after the other overhead charges. The committee enjoys an especially good fortune in finding people who are willing to give to the prosaic but necessary indirect expense.

All services are, for the most part, volunteer. Some twenty women devote their entire time to looking after the affairs of the organization.

Just at the time that the Emergency Aid was being organized, Philadelphia was in the midst of the industrial depression which followed the outbreak of the war. As suffering at home, due to unemployment, seemed imminent, a Home Relief Division was included in the scheme. "The situation was literally unprecedented," says the committee in a report of its work. "No time, therefore, was wasted on elaborate organization. It was an army of volunteers to meet an unforeseen crisis, and, like a force of minute men, it had to be organized 'on the march' and to pitch in where and when it could."

Somewhat incidentally, the committee on supplies, which was then working on garments destined mainly for Belgium, began employing women whose husbands were out of work. Thus was the "municipal" workshop begun.

In spite of efforts to exclude the "unworthy," the committee's initial funds were soon exhausted. Accordingly Councils were persuaded, in the face of considerable opposition, in which Mayor Blankenburg shared, to appropriate on December 10, 1914, and March 4, 1915, a total of \$100,000 "toward the relief of the unemployed poor . . . to be expended for such purposes by the Department of Public Health and Charities through the Emergency Aid Committee." To this was added from November, 1914, to December 30, 1915, \$165,442.27, raised by private subscription. Of the total \$265,442.27, exactly \$163,661.58 was paid out as wages to those in need of employment.

The committee reports that from February to July, 1915, 2,046 men had been employed for a total of 41,384 days at \$1.20 per day. Positions in private employment were found for 3,131 men. Women numbering 5,373 were given temporary direct employment—plain sewing—and positions were found for 1,792. Thus it was that this volunteer body sought to help Philadelphia's estimated 250,000 unemployed.

At the return of normal industrial conditions the Division on Home Relief ceased its active employment and relief work, but it did not disband. It now acts as an advisory committee of the State Employment Bureau, and in 1916 was entrusted with the care of the families of the national guardsmen sent to the Mexican border. It constitutes an auxiliary committee to the Director of Public Health and Charities. Its special interests have been the after-care of cases of infant paralysis and the formulation of recommendations to improve the city institutions under the direction of the Department of Public Health and Charities.

FAMILY TREES FOR NEW YORK FOUNDLINGS

HEREAFTER stray babies abandoned to New York foundling asylums must prove their claim to board and shelter from the city of New York. Beginning March 1 the Department of Public Charities will enforce the rules of the State Board of Charities providing that a child under the age of sixteen years not committed for juvenile delinquency, shall not be retained in any institution as a public charge unless accepted in writing as such by the appropriate poor law authorities after an investigation into the circumstances of the applicant.

This rule has been a dead letter in the cases of some 1,500 babies a year who have been received "with no questions asked" by certain foundling asylums in the city. Many of these children, it is alleged, come from various parts of New York state as well as from other states.

With this change occurs another revocation of a rule of long standing. For years it has been the practice of the department to have foundlings baptized alternately Catholic and Protestant when the religion of the parents was unknown. Complaints, particularly from Jewish circles, have led to a new rule that every effort will be made to ascertain the religion of foundlings' parents and that the infants themselves will be baptized in accordance with that religion.

The new procedure relating to acceptance as public charges will give the department a record of whether the child is a proper public charge. Likewise it will furnish a history of each child that will to some extent determine treatment.

The present method of disposing of infants encourages the separation of mother and child and this admittedly contributes to the high mortality rate among children under two years of age in asylums. The report of Commissioner Charles H. Strong [see the SURVEY for November 25, 1916] gives figures showing that in the state at large the death-rate of babies from 1909 to 1913 was 87.4 per thousand and that in eleven large infant asylums in the state it was 422.5 per thousand, or approximately five times as large.

In one institution the state board found that during the twenty years, 1895-1914, out of 36,625 infants received, 18,999 died, a rate of 516 per thousand. Although allowance must be made for the poor condition of the babies upon admission to the institution, this cannot account, it is held, for all the discrepancy between this figure and the rate in the population at large. In 1916 the latter was only 61.2 per thousand in New York city.

The single institution referred to in the state board's figures has received practically all its funds from New York city, which pays 55 cents a day for the maintenance of each baby. The city has, therefore, been in an anomalous situation. With one hand it has been spending about \$225,000 a year for infant welfare work throughout the entire city; with the other it has been spending over \$300,000 a year to one institution alone to perpetuate a system that facilitates the separation of infants and mothers and results in extreme infant mortality.

With information obtained through the new order, the Department of Public Charities is convinced that its investigators can persuade many mothers to retain their infants. Its policy is in line with the recommendations of the Strong report, which declared that it had "a great duty to perform in this field," and with the steps which the department has already taken the establishment of its Children's Home Bureau to place young children in families instead of committing them to institutions, however admirable. It is in line also with the act of the Maryland legislature last year, following revelations of high infant mortality in Baltimore foundling asylums, which made it a misdemeanor to separate a mother from a child under six months of age for the purpose of placing the child in a foster home or institution.

The department's course of action has caused an expression of fear among Catholics, notably in a letter by Cardinal Farley to Catholic priests, that Catholic children transferred from institutions will not be placed in homes of the same faith and that the orphanages with their elaborate buildings and equipment will be rendered useless. In answer, Commissioner of Charities John A. Kingsbury has replied that there has been no dearth of good Catholic homes available and that no Catholic child has been or will be placed in a non-Catholic home.

Regarding the possibility of disuse of charitable institutions now in existence, Mr. Kingsbury, in a letter to the Cardinal made public, outlined a plan for opening these institutions to children slightly subnormal physically and mentally, who are living at home where they are handicapped and handicapping their hard-working mothers. If the Children's Home Bureau continues for the next three years to find homes for all children under eight years, the commissioner points out that at the end of that time there will be about 10,000 vacancies in child-caring institutions. This coincides with the requirement of the city for some 10,000 beds for its feeble-minded in need of institutional care. By diverting part of the asylums for normal dependent children to homes for

the feeble-minded the city would save millions of dollars' outlay and at the same time protect society against a potentially dangerous element in the population.

COMPENSATION LAWS UPHOLD BY SUPREME COURT

WORKMEN'S compensation in the United States was finally placed upon an assured and permanent basis when, on March 6, the United States Supreme Court handed down decisions upholding the constitutionality of the laws of Iowa, New York and Washington. At a single blow the court has not only removed all doubt as to the power of states to enact such legislation but it has given approval to all three of the leading types of compensation legislation in the United States.

The Iowa law represented the cautious method employed by a majority of the states, dictated by a fear that if the matter were attacked directly the legislation would be held unconstitutional. The law, therefore, is elective and not compulsory. It gives both employer and employe the option of coming under the compensation statute or continuing with the common law of liability. But it attempts to induce both to elect the compensation principle, by removing the employers' so-called "defenses" under the common law—contributory negligence, assumption of risk and the fellow-servant doctrine. It attempts to induce the employe to elect compensation, offering him the certainty of a fixed schedule of benefits in place of the uncertainty of an appeal to the courts. This is the type of legislation that has been enacted in a majority of the states.

The New York law is compulsory. It was enacted in 1914, after the state constitution had been amended on account of the decision of the Court of Appeals in the Ives case, which held invalid the original compulsory law of 1910. This law was also taken before the Court of Appeals, and was held to be in accordance with the amended constitution. It provides for compulsory compensation in certain hazardous trades and permits the employer to insure his risk, in private insurance companies, in a state fund, or, if approved by the Industrial Commission, to carry his own insurance.

The Washington law is much more drastic. It covers all employments, except agriculture and domestic service, and it excludes private casualty companies altogether. All employers are required to insure their risk in a state fund. This law was sustained by the narrow margin of one vote; four of the members of the court, Chief Justice White and Justices McKenna, Van Devanter and McReynolds, dissenting.

It is apparent from these decisions that the way is now open for extensions

of the workmen's compensation principle far beyond anything that has been attempted heretofore in most of the states. The decision in the Washington case, especially, seems to lay a broad basis for social insurance legislation of an advanced type.

ONE UNION IMPROVES THE SHINING HOURS

THE 30,000 members of Local 25 of the Waist and Dressmakers' Union of New York city, having gained since the big strike of 1913 a shorter working day and higher wages, are turning their organizing genius toward filling more richly their leisure hours.

From seven o'clock until ten every evening several hundred girls fill all four floors of Public School number 40 at 314 East Twentieth street. They go to the school direct from work. On the first floor they get sandwiches and coffee for five cents; upstairs some attend their shop meetings and settle their shop problems; take courses in American history, the labor movement here and abroad, labor legislation, literature, the English language, dancing or gymnasium work. A nurse and a doctor from the staff of the Joint Board of Sanitary Control are there to give medical examinations, and Dr. George M. Price, director of the board, gives health talks.

The girls cooperated with the People's Institute, and so gained the public school building. Juliet Stuart Poyntz was engaged to head the organization and education department and the Board of Education is expected to give help. They call this meeting place a "unity center."

"It is not welfare work," writes Pauline Newman, investigator for the Joint Board of Sanitary Control and at one time organizer for the union, "it is not charity. It is done by the girls for the girls. To secure better wages and shorter hours is indeed the chief object of a union. For those who have no vision, who can get along without the spiritual, this is sufficient. To those who expect from a union a 'fair day's wage for a fair day's work' the material is enough. But not for those who look upon a union as a means to readjust the age-long grievances between master and servant. These need not only food for the body, but food also for the soul and for the mind."

If the unity center succeeds, other schools will perhaps be opened to them; negotiations for one on the East Side are already in progress. This opening of the public school completely to union-labor groups gives it a new significance as a community center. A week-end camp for the coming summer is arranged for, and it is hoped that in time cheap cooperative apartment houses may be built for the independent women among the dressmakers.

Book Reviews

CONTEMPORARY POLITICS IN THE FAR EAST
By Stanley K. Hornbeck. D. Appleton & Company. 466 pp. Price, \$3; by mail of the SURVEY, \$3.18.

OUR EASTERN QUESTION
By Thomas E. Millard. The Century Company. 543 pp. Price, \$3; by mail of the SURVEY, \$3.16.

THE JAPANESE CONQUEST OF AMERICAN OPINION
By Montaville Flowers. Geo. H. Doran Company. 272 pp. Price, \$1.50; by mail of the SURVEY, \$1.62.

our enemies? The explicit rather than implicit answer is furnished. They are arming against us. By both military armament and aggression and by insidious advance in "the conquest of American opinion," these Asiatics are endangering "our" civilization.

We propose in this review to ignore, in the main, the politics of China and Japan and to notice rather the influence of their social systems upon the American people. The East and the West have joined.

Is it not almost time to drop the term "Oriental"—representing chiefly a literary myth—and "Occidental,"—a sectional concept—and deal with real humanity? The scholar of international mind knows no East nor West. The American with a social conscience, who follows the universal man, knowing the solidarity of human nature, prefers to speak of Asiatics as our western neighbors. In these days, when electricity and steel have annihilated—for thought, at least—all space and time, and when war bursts out over night, we should be accurate. It is absolutely necessary for an author writing on China and Japan to have both the social conscience and the international mind; else he interprets only one side of the shield and becomes too jealous and belligerent to be trusted.

Dr. Hornbeck's book is a most sane and admirably written account of politics in the trans-Pacific lands. Although history is now made there as rapidly as in Europe, Dr. Hornbeck's long residence among the people makes fresh to us the past. Especially is this true in showing the awful mistake which the United States government is making in ignoring the protest of Japan against the procedure of one state, in virtually nullifying the treaty which promised treatment of Japanese people in the United States equal to that granted those of any nation. That was Russia's way in 1904. What a dangerous defect in our federal system of government—that what is done in a state capital can override the provisions of a treaty made between the governments at Tokio and Washington! In style, arrangement of matter, self-restraint, judicial temper, and with

a full index, Dr. Hornbeck's book is shown to be the work of a scholar.

The editor, Mr. Millard, who has lived in the seaports of China and knows well the talk of the Hongs and clubs, besides having traveled in Korea, believes that Japan is arming against us. His book, unindexed and bearing many of the earmarks of ephemeral journalism, is replete with facts and assertions that are almost always interpreted with a sinister glance at Japan. The reviewer having known the Japanese, high and low, honorable and contemptible, since 1866, would, in the majority of cases, give a favorable contrariwise interpretation of these same facts, because of his experience. He has heard the same doleful prophecies since, in 1870, he began examining the incessant stream of criticism of the Japanese, finding no more cunning treachery or "orientalisms" in the human nature of Dai Nippon than he sees daily all around him. With Europe's record of conquest, fraud, secret diplomacy and over-reaching in Asia for a century past, and with the "preparedness" and vast naval armament of the United States, how can Japan divine our real intentions? Mr. Millard's chapters on the Philippines are illuminating and informing.

We have heard much of Mr. Flowers and his diatribes against the Japanese and his dreadful arraignment of such men as Sidney L. Gulick, Hamilton Holt, the late H. W. Mabie, the present reviewer and others; his challenges to debate and, despite Brooke's assertion, his fiery indictment of the Japanese nation as well as individuals.

"Do you want your daughter to marry a nigger?" was the standard argument to uphold and justify slavery a half a century or more ago. The pith of Mr. Flowers' argument is in an outcry against amalgamation. His peculiar ideas as to philosophy, history and ethnology are largely his own. If it be the Japanese who have "conquered America's opinion," all honor to them! We Americans began that business under President Fillmore and his peaceful armada of 1853, which was forbidden to fire a shot unless first attacked. Since 1870, over 5,000 invited foreign specialists, advisers and helpers, not including a thousand or so American missionaries, began changing Japanese opinion. The religious teachers commenced their work in 1859. Are not the Japanese turning the other cheek? Mr. Flowers should have furnished an index for students of his closely printed and rather bulky work, so rich in fallacies.

WILLIAM ELLIOT GRIFFIS.

A SOCIAL STUDY OF THE RUSSIAN GERMAN
By Hattie Plum Williams. University of Nebraska Studies. 101 pp. Price, \$.75; by mail of the SURVEY, \$.82.

The subject of this excellent little work, which is both sympathetic and scholarly, is the members of the German colonies, settled on the Volga by Catherine II, who have emigrated to Lincoln, Neb. It appears that, on the whole, they are a thoroughly desirable class of immigrants, frugal, industrious, prolific, preferring the prairies of the West to the cities of the East, and, withal, extremely anxious to be the owners of their own homes. We read with much shame that the worst houses among them are owned by Lincoln capitalists, that the city government has been slack in improvements in their part of the

city and that the local authorities have given them indifferent example in the matter of enforcing the law.

Mrs. Williams has done an extremely useful piece of work; one of the best things of the kind we have seen. If the Russian government, after the war, should prove nasty to its German subjects, these will be welcome here.

IAN C. HANNAH.

WITH THE TURKS IN PALESTINE

By Alexander Aaronsohn. Houghton, Mifflin Co. 85 pp. Price, \$1.25; by mail of the SURVEY, \$1.33.

Two articles which recently appeared in the *Atlantic Monthly* by Alexander Aaronsohn have been issued in book form with illustrations. The book is very well written and affords an interesting narrative of the author's first-hand experience and observations in Palestine. There he was born of parents who migrated from Rumania thirty-five years ago under the impulse which has since given rise to the Zionist movement.

The book is valuable for the trustworthy light it throws upon the pathetic efforts and aspirations of the Jews, who, with all other races in that land, are cursed by the inefficiency, corruption and cruelty of the Turkish government, of which the author gives many illustrations. Significant are his references to German propaganda in Turkey for the past twenty years. As Turkey was being dragged into the war, "the whole country became Germanized as if by magic," says the author. "In all the mosques Friday prayers were ended with an invocation for the welfare of the Sultan and 'Hadji Wilhelm.'"

FREDERICK D. GREENE.

A WOMAN AND THE WAR

By the Countess of Warwick. George H. Doran Company. 270 pp. Price \$2; by mail of the SURVEY, \$2.12.

"The problem that faces a state when it sends its best and most virile men to kill and be killed has certain aspects that few have the courage to handle." In her book *A Woman and the War*, Lady Warwick proves herself to be one of the few. She has written this series of papers in a succinct,

readable manner, and while they vary in interest, all bear the stamp of courageous and independent thought.

There is unmistakable warmth of appreciation of the high endeavors of her countrymen and women, combined with considerable clearness of critical insight into the sources of the present catastrophe and its attendant retrogression from the paths of progress.

Fearlessly she points to the plain truths that mark with folly and worse the social, industrial, educational and moral courses pursued before the war and but little changed today. There is the ardor of the revolutionary in her blows upon the conscription that does not demand capital as freely as it demands life; upon kingship that sends "millions of men who have no real quarrel to slaughter one another under conditions of horror that make description inadequate;" upon false economists who grudge pensions and allowances, and who pare educational grants and permit child labor on the land.

An interesting chapter deals with the prospects for women in agriculture. Lady Warwick speaks with personal authority here; for in 1898 she established the Hostel at Reading, near the Agricultural College there, and later, the Studley Training College, and has long been an advocate of land-work for

women. The successes of today have justified her pioneer faith.

The book is stimulating with its spirit of critical optimism. One may not agree that, by 1934, women will have suffered the change of heart necessary to unite internationally and prevent such a war as that of 1914; one may not be able to hope so greatly from the victory of feminism in Germany. But it is heartening to find such faith in democracy, in freedom and in the future in one who has had great opportunities to study the current of events.

NANNIE YOUNG.

KEEP-WELL STORIES FOR LITTLE FOLKS

By May Farinholt Jones. J. B. Lippincott Co. 140 pp. Price, \$.75; by mail of the SURVEY, \$.83.

A remarkably successful attempt to do something very difficult and very well worth doing—to put the essential facts of physiology and hygiene before children in story form—has been made in this book. A few lapses from rigid scientific fact force themselves upon one's attention.

The baby fly, whose wings grew stronger each day so that at last he could fly away, and the mosquito grub, who took refuge from an oiling brigade in the mud at the bottom of the pool and stayed there till next day, may be considered as somewhat aberrant insects. The covering of the body is not full of little holes through which air and sunlight get into the body; and above all, Pasteur was not paid "immense sums of money" for his work on the silkworm disease and the diseases of wine and beer. This last is almost sacrilege!

Such slips are exceedingly rare, however. Dr. Jones' book is in the main accurate in detail, the topics are judiciously selected, and the style altogether charming. Pauline Wright's quaint illustrations are quite in character. Children (and some grown-ups, too) will find pleasure and profit in reading *The Wonderful Engine (the body)*, *The Story of the Rain Barrel*, *Jack Frost*, who gives old folks a bit of his youth as they feel his frolicsome touch, *Two Little Windows (the eyes)*, *A Wonderful Stream (the blood with its red freight carrying oxygen from lung station to muscle country and its white dreadnoughts fighting the hostile microbe navy)*, and the rest. C.-E. A. WINSLOW.

THE WORN DOORSTEP

By Margaret Sherwood. Little, Brown & Company. 196 pp. Price \$1.25; by mail of the SURVEY, \$1.33.

An Oxford soldier fell somewhere in France. And the woman who had bidden him go fled from friends and sympathy. Deep in country England, where the land was radiant with drift of appleblossoms and clear, still sunshine, she found refuge in a little red house. Madge, a motherly

soul, and Peter, skeptical about the reality of war, anyway, were in charge, but otherwise out of work, since the master of the hall had gone away with his regiment. And the circle widened presently to include Don and Puck, William the Conqueror and his queens, and the wee, furry Atom—dear dog and pony, fowls and kitten, as quaint and sensible and individual as the friendly vil-

large folk, whose shyness slowly wore away. And surely here was peace.

But war loomed nearer, surer. Peter went to Dover, heard real guns afar, wrathfully donned his khaki and departed. Village youth were transformed into recruits. And the tenant discovered that her soldier, departing, had left the gates of life ajar, and the world and its sorrows entered in.

A pathetic procession it was. The village folk finding that she, too, knew the horror of waiting, came for the sympathy that has no words. Then strangers came that way. Belgian Marie, separated from friends and lover in the wild flight; the aged unknown woman whom shock and exhaustion had stricken dumb, but whose dying eyes could look her content at being among friends. Later, directed by the alert agencies in London, Marie's Belgian lover found her here. Later, still, Peter returned carrying in his remaining arm the dainty French child who was to find in the little red house shelter and a new home. And then the tenant found in serving these, sharers with her in a common grief, even more desolate than herself, a strange comfort and an un hoped-for peace.

Most poignant among "war books" is this little volume of velvet lines. No crash of guns is heard in its pages; no gas-choked, bleeding soldiers are carried upon its pastoral scene. But the meaning of it all to those who stay behind is here; and the realities of anxiety, homelessness and sorrow beyond words, are incarnated in the simple folk of its *dramatis personae*.

G. S.

THE LIFE AND TIMES OF CAVOUR (Volumes 1 and II)

By William Roscoe Thayer. Houghton Mifflin Company. 604 and 562 pp. Price, \$3 per set; by mail of the SURVEY, \$3.25.

Cavour, the man of "reason and disciplined emotion," came from a long line of aristocrats. Yet from a precocious boyhood, throughout his life, he was a liberal who held steadfast the ideal of a united Italy, and, though the biographer is not clear on this point, we may believe that Cavour's

relatives in Switzerland played an important part in so shaping his career. "An honest middleman" holding to the golden mean, so Cavour describes himself. He writes as follows to an old friend: "I feel sure that, having danced round the Liberty Tree and caressed the Jesuits, you will rest on ground where are truth and moderation." Bolstering up the wavering king of Piedmont in the fight for the separation of church and state, Cavour played the diplomatic game of Europe and lived to see Italy well on the way to a constitutional monarchy and a throwing off of the temporal power of the church.

With his hatred of conspiracies, Cavour was led to call Mazzini, the revolutionist, the "chief of assassins" and most heartily to wish him hanged. Garibaldi was more suited to his purposes. Yet Cavour finally drew upon himself the bitter hatred of this great soldier-hero of the common people.

Mr. Thayer's book is of especial interest in the present great international crisis. American pacifists will find cold comfort, however, in the author's account of Cavour's "entangling alliance" with the western powers of Europe in the Crimean war. Certainly the author has shown to his own satisfaction at least the supreme value of such an alliance as regarded Italy's future. For did not Cavour as prime minister of the little kingdom of Piedmont deliberately enter the

Crimean war on the side of western Europe and against Russia, and by so doing did he not make a place for himself in the councils of Europe? And did he not by this means secure later on the aid and sympathy of France and England and successfully oppose Austria, the arch enemy of a united Italy? To make the situation more pertinent in the present great crisis, we learn that the Nationalists with Mazzini and the Reds opposed quite unsuccessfully the sending an army from Piedmont to the Crimea.

The author has the highest praise for Cavour throughout his political career, comparing him in his statesman-like qualities with Lincoln. Mazzini, however, is given but scant praise and is pictured for the most part as a fanatic who dreamed of an impossible Italian republic and whose unsuccessful followers met their end at the scaffold. Surely the great Mazzini deserves a far better fate than this at the hands of the historian, and most of all from one who professes, as does the writer of these volumes, such an undying faith in the cause of liberty and the sacredness of human rights.

FRED A. KING.

TALES OF THE LABRADOR

By Wilfred T. Grenfell. Houghton, Mifflin Company. 240 pp. Price \$1.25; by mail of the SURVEY, \$1.35.

Dr. Grenfell's work among the Labrador fishermen is one of the stories of the generation. The courage and unselfishness of this self-devoted missionary have quickened pulses and stirred spirits the world over. His life is his most thrilling tale. But he has also written stories of his experiences which have been published in a volume called *Tales of the Labrador*. These stories picture the lives of simple, hardy fishermen and their Esquimo neighbors, their hard fight with an always hostile nature, and the traits of sturdiness, honesty and self-sacrifice which their stern life develops.

As a picture of life in a little-known part of the world the book is interesting; as it reveals the author's love for and loyalty to the people, it commands sympathy. It lacks the deep insight essential to great literature. Neither in style nor language does it denote the writer of mark. It is, however, so very readable and human that it cannot fail to find a hearty welcome among Dr. Grenfell's many admirers.

- STATE GOVERNMENT IN THE UNITED STATES. By Arthur N. Holcombe. Macmillan Co. 498 pp. Price, \$2.25; by mail of the SURVEY, \$2.49.

Communications

POLISH SOCIAL WORKERS

TO THE EDITOR: It is a part of our job as social workers to interpret our work to the public. However, there are in every community groups of people who, though forming a considerable part of our field of activity, remain uninfluenced by our efforts. I refer to the immigrant groups who are usually not touched by the social worker, except as the individuals become "cases" of social agencies. We come into contact, to some extent, with the second generation through the clubs and classes at social settlements and recreation centers. But few of these people have as yet become vitally interested in social problems, as is evidenced by the lack of well-trained social workers speaking a foreign language.

As an illustration of the gap between the social worker and the foreigner, I shall refer to an incident which took place at the first conference of Polish Social Workers at Indianapolis, May, 1916. At one of the sessions a young Polish woman, who was a resident of Indianapolis, after listening patiently for some time to our discussion, interrupted with the suggestion that the committee hold a meeting for the Polish people who did not have a sufficient knowledge of the English language to derive any benefit from the regular sessions of the conference. Pursuant to this idea, a meeting was held in a parochial school of an outlying district. Among those present was a scrubwoman whom we afterward met working in the corridors of the headquarters' hotel.

The interest manifested and the appreciation shown at this meeting has encouraged us to prepare a program for a similar meeting at the second conference of Polish Social Workers at Pittsburgh, June 9-11, at which we hope to interpret the message of the N. C. of C. and C. to some of the Polish people of that city.

THADDEUS SLESZYNSKI.

[Secretary, American Committee of Polish Social Workers.]
Chicago, Ill.

LINCOLN AND LLOYD GEORGE

TO THE EDITOR: The English premier in his message on Lincoln day, has read into the character and life of our martyred president some things which we cannot endorse. Lincoln was primarily an apostle of peace. He tried hard to avoid war, and went even so far as to propose compensation to the slave-owners for their then property. His offer was spurned by the slave oligarchy. Only after an overt act had been committed by the firing on Fort Sumter did he take up the gauntlet thrown down to him.

Like you, I do not pretend to be versed in

international law. But in deciding whether or no to be drawn into the vortex of the European struggle, I want to use common sense. And this tells me "hands off."

Lloyd George says "we today are fighting not a war of conquest, but a war of liberation." The coalition ministry evidently is at outs. Mr. Long, colonial minister, declares that the African possessions, wrested from Germany, will not, upon conclusion of peace, be restored to her. France proclaims openly she wants Alsace-Lorraine. Ex-Premier Trepoff, of Russia, let the cat out of the bag in the Duma by declaring that the Entente powers promised Constantinople to Russia. What was the Dardanelles campaign undertaken for? Italy makes no secret of wanting Italia *irredenta*. Rumania, the open violator of a treaty as far as her Jewish subjects are concerned, could not want a war of "liberation." Rather, let us assume, she wanted a slice of Austria, if not more. Japan took Kiow-Chow and the Caroline Islands. And lastly Portugal. She, in all likelihood, seeks to pick up some crumbs from the African spread.

In these troublous times it is a hard task to be prime minister of a warring nation. But can Lloyd George's vision be so dimmed that he can no longer discern between conquest and liberation? High-sounding phrases can becloud facts, but cannot alter them.

Chicago.

HENRY L. FRANK.

WANTED—A NAME

TO THE EDITOR: When a change is proposed of the forty-four-year-old name of the National Conference of Charities and Correction all readers of the SURVEY should sit up and take notice. The symposium in the February *Bulletin* of the conference should be continued, if the SURVEY will give space, so that the final vote at Pittsburgh in June may be wise. The tentative vote in the *Bulletin* shows 123 votes for National Conference of Social Workers, with not over fifty-one votes for any other of the thirty names proposed, and only forty-seven protests against giving up the present name.

William T. Cross writes unofficially that to him the favorite name proposed "runs shallow, and even suggests fatigue," and Robert A. Woods says, "The phrase social worker is getting badly frayed." Personally, I am glad, however, that the name favored is National Conference of Social Workers, rather than "on Social Service," for service, like welfare and betterment, has a patronizing, uplift flavor. In Missouri last November, a state Sunday school worker told me that he could not interest churches in social service, but could if he called it community work.

Words have the meaning we put into

them, as is shown by the difference between the associations connected with Fifth avenue and Sixth avenue, New York city; and Boston people know how much more aristocratic Barnstable sounds than barn stable. Even socialism may lose its long hair and become a respectable word. The real way to remove the stigma from charity is to lift it above alms. The word, however, does repel from the national conference many whose work is preventive or educational but thoroughly social, and for that reason many of us favor a change.

May I invite discussion also of the valuable report in the same *Bulletin* of the Committee on Kindred Groups, of which Roger N. Baldwin is chairman? This committee of twenty has a strong membership, and has given much thought to its report. It aims to lessen the secession of important groups from the conference, to bring back some which have separated from it, and to regulate the numerous collateral groups which meet before, after, or during the conference. To many of us the recommendations of this committee seem vital.

In place of nine sections as now, some of which are not permanent, the report proposes nine permanent divisions, and each division can have an indefinite number of sections. Each division is entitled to one general session without competition, but there might be a dozen section meetings at the same hour competing with each other. In this way subjects like social insurance, housing, the church and charity, sex hygiene, etc., which cannot have permanent sections under the present plan, could be carried as more or less permanent sections, according to the interest shown.

The conference has no organ except its quarterly *Bulletin*, but no other conference represents more nearly the interests of the SURVEY and its readers, so that perhaps you can give us space.

And may I add that at the opening meeting on June 6 in Pittsburgh, the exercises will be considerably changed from what has been customary. By authority of the executive committee, the usual addresses of welcome and response will be omitted and the program will begin with an address by the president, Frederic Almy, of Buffalo, on *The End of Poverty, an Impossible Goal which We Can Approach*. This will be followed by an address on *Poverty and Woman*, by Charlotte Perkins Gilman, of New York city, and an address on *The Challenge of a Changing Social Order*, by Raymond Robins, Chicago. Between the addresses there may perhaps be singing by the audience, in accordance with a suggestion from a former president, Alexander Johnson.

FREDERIC ALMY.

[President, the 1917 Conference]
Buffalo.

THE KENT BILL

TO THE EDITOR: I don't like to rush into print in a controversy, and if it were merely a question of my own reputation I should not write you. However, in the SURVEY of February 10 I am quoted in the discussion on the Kent bill and commented on, it seems to me, rather cavalierly, and I wish to take this opportunity to reiterate what I said to Miss Vaile.

1. The Kent bill, by providing a subsidy for the care of the indigent tuberculous away from his home, is a direct inducement for the patient to stay from his home, if not actually to leave it.

2. The bill provides no additional method for returning the tuberculous to his home. All the authority there is for this purpose resides in county officials, and it is a confusion of thinking to read into the law added facilities for the return of the patient to his home

on account of bringing in the federal authorities. They cannot secure one particle more force to the return than is now in the procedure.

My objection to the bill is based on its violation of the fundamental principle of poor relief, *i. e.*, that the community responsible is the community in which the dependent lives. And also upon its violation of an almost as well-established principle of the care of the tuberculous, *i. e.*, that ordinarily the most permanent cure for the tuberculous is to be found in the climate to which the patient is accustomed and to which he must return to earn his living.

I think the tragedy of the states to which the tuberculous go for their health consists in the stream of hopeless invalids who, ignorantly advised, pour into those states as a last resort in the stage of their disease, when any treatment either in their new state or home state isn't of much value. If we are to make headway in this problem of tuberculosis, it must be in our effort to persuade people to take the cure early enough to insure some measure of success. This bill makes no effort to create a healthy public opinion on this line.

F. J. BRUNO.

[General Secretary Associated Charities.]
Minneapolis.

TO THE EDITOR: Mr. Newton's affirmative answer to the question, Will the Kent Bill Help? is exceedingly interesting. There is a certain point, however, on which it seems to be very difficult to reach a common understanding as to the facts. Mr. Newton says, and Dr. Brown said, and it has been repeatedly said, in this discussion, that "citizenship is largely a question of intention. . . . Consumptives may return to their homes after an absence of years, and if indigent, still receive assistance." In my experience that is not the case.

The people who argue thus seem to be unaware that laws of citizenship determining the right of suffrage, and laws of settlement determining the right to receive relief, are totally different matters. It is perfectly true that government employes may remain any length of time in Washington and acquire property there and still keep their legal residence elsewhere. It is true that a man of means may travel the country over and hold his residence where he will and return when he chooses to vote. But if he happen to be penniless and in need of assistance he is not permitted to return. That right has been taken from him by statute in a large number of states.

Permit me to cite a current case. Mr. H. came to Denver from Chicago in the last stage of consumption, bringing with him his wife and two children. Five months after arrival they became dependent. Relief was not given at that time by the public authorities, but was given by organized private charity. Ten months after arrival, the man died. When they had been here a year and a half the widow applied for a mother's pension, having never been more than a few weeks free from the need of relief. I took up with the Cook county agent the question of returning the family to Chicago, where the man had lived all his life until he was about to die, where he was born and married and his children were born. I quote from the answer of Mr. Wilson, the deportation agent, under date of January 25:

"You say the family fell dependent before they had been in Denver a year and are now dependent from a cause which existed before they came. We are caring for not a few such families, as we have been unable to get the city or county from which the family came to accept them on account of their being away a year or more." Evidently the expe-

rience of the Cook county relief authorities is like our own and not as Mr. Newton thinks it would be.

Quoting again from the letter: "Were Mrs. H. able to pay her own transportation and desired to return and did return to Chicago, she would not be eligible for a widow's pension for three years, as her residence here would date from the time of her last return to this county, and *should she ask for assistance within a year we should feel it our duty to return her to Denver*. I trust, Miss Vaile, that you will see the justice of our decision." I do at least see the legality of it, and I am exceedingly grateful to Mr. Wilson for expressing the issue so clearly.

Mr. Newton suggests that the new community to which the patient goes might, in order to protect itself, "require the patient to state that it is not his intention to relinquish his residence in his home state." I would remind Mr. Newton that I have already tried that expedient and it did not work.

In the present condition of settlement laws—and they are in no way affected by the proposed legislation—I can find no way by which a patient who goes away from home for his health can secure the right to return home after a year and receive relief, no matter how desperately he may desire to do so, nor how temporary he may all the time have considered his sojourn. I have diligently sought to find a way. If Mr. Newton can make clear how that can be accomplished it will be a big contribution to the cause and a daily help to me.

GERTRUDE VAILE.

[Executive Secretary, County Bureau of
Charity and Correction]
Denver.

THE SPIGOT

TO THE EDITOR: I have just read the last article by Elizabeth Tilton, *Turning Off the Spigot*. While, in my opinion, there has never been any real basis for argument on the part of the liquor interests against prohibition, such facts as she has set forth in these articles are the strongest possible ammunition for the prohibition party to use. She makes a slight mention here in regard to the habit-forming drug evil as a factor in this prohibition movement, and I hope before she is through with the subject that she will take up that phase of it. As a matter of fact her work in this direction will be incomplete without it. I want to compliment you on being able to publish such able articles on this alcoholic subject at this time. They are bound to do much good.

CHARLES B. TOWNS.

[Charles B. Towns Hospital.]
New York.

TO THE EDITOR: Allow me to congratulate you upon the series of articles by Elizabeth Tilton and especially upon the article in the issue of February 10. It is a most magnificent and telling array of facts and one which will be of widespread educational value.

We have received a number of letters in the past complaining about the attitude of social experts toward prohibition and some very bitter ones recently with respect to a certain report from a certain local welfare organization. I am sure your articles on *Turning Off the Spigot* will be most helpful to social work and social workers in general by the extent to which it will set those workers and their cause right with the growing mass of the public who believe in the closing of the saloon.

ROLLIN O. EVERHART.

[Editor the *American Issue*, New York edition.]
New York.

SAID OF THE SURVEY

TO THE EDITOR: I don't feel that I will ever be able to get along without the SURVEY.
RALPH C. SCOTT.

[Staff of the Y. M. C. A.]
Montevideo, Uruguay.

TO THE EDITOR: I find the SURVEY almost indispensable for such a course as the one I am offering in social problems.

E. T. TOWNE.
[Department of Economics, Carleton College.]
Northfield, Minn.

TO THE EDITOR: I appreciate the SURVEY very much indeed, especially out here in Japan where social work is in so very primitive a stage. I am very closely in touch with a number of social problems here—the prison problems among the number—and so look forward to the SURVEY and what it brings of help in many directions.

MRS. C. A. MACDONALD.
Tokyo, Japan.

JOTTINGS

PRELIMINARY announcements of the New York City Conference of Charities and Correction have been printed and may be had of the secretary, John B. Prest, 287 Fourth avenue, New York city.

APPLICATIONS for the three paid fellowships in social-economic research offered annually by the Women's Educational and Industrial Union of Boston, 264 Boylston street, must be filed before May 1. Candidates must be college graduates.

THE *Loan Gazette* has been launched as the official organ of the American Association of Small Loan Brokers, the men who, themselves in the money-lending business, have united to fight the loan sharks. The editor is George W. Kehr, 204 Chestnut street, Harrisburg, Pa.

"KINGSLEY want ads," the very latest thing in advertising, appear in the *Kingsley Record*, published monthly by the Pittsburgh settlement of that name. In the current issue the "wants" include carpets for clubrooms, a good dictionary, bathing suits of assorted sizes and sexes, and Victrola records.

JUST preceding the National Conference of Charities and Correction at Pittsburgh, the National Children's Home Society will meet June 4-6 with headquarters at the Fort Pitt hotel. Programs and information may be had of Marcus C. Fagg, St. James building, Jacksonville, Fla.

DETROIT'S school board system has been a by-word among educators for years. The board is elected by wards. It is soon to die, however, for the city has ordered that in April its place shall be taken by a board of seven members at large. They are to be nominated upon a partisan ballot, although their election is to be by non-partisan vote.

FIFTY policemen have signified their intention of taking the course in law for policemen announced by Columbia University. The course will require sixteen weeks—two hours a week—and will cover criminal law, criminal procedure, police procedure, evidence, criminology, municipal government and free-hand drawing.

CHICAGO'S Morals Commission, supported by the Department of Health, has submitted to the City Council an ordinance requiring every physician to report each month the number of cases of venereal diseases he has treated, and to give to every venereal patient a pamphlet prepared by the Department of Health and the Chicago Medical Society. The first step in this direction was taken by the New York Department of Health in 1911.

THE Day Before You Die is the title of a new circular with which the committee on tuberculosis of the New York Charity Organization Society begins a campaign to interest citizens in medical examination. Preparatory to the campaign the committee investigated eighty-four firms in New York city, employing 326,000 persons, of whom only twenty-four were found to have medical or social welfare work.

TEACHERS' COLLEGE of Columbia University has accepted an offer from Cleveland H. Dodge and Francis Phelps Dodge to maintain a provisional professorship in scouting and recreation leadership to train boy scoutmasters. An official statement by the Boy Scouts of America denies once more that in case of war the scouts will perform any military service; they will, however, "serve our country well" in other ways.

BY AN amendment adopted March 5, working boys as well as schoolboys are included in the New York measures enacted last year to require compulsory military training not exceeding three hours a week. The amendment passed with only the two voices of the Socialist members dissenting. It requires military training for all able-bodied male citizens between the ages of eighteen and twenty-three in a military camp of instruction for a period not exceeding four weeks in one year.

EDGAR CHAMBLESS, inventor of a new kind of city stretched along a single road with one street underground and another over the roofs, has persuaded a number of architects, builders, sociologists and others that his plan justifies an experiment, and a Roadtown Association has been formed with offices at 110 East 23 street, New York. The underlying idea is that of cooperative home-building and cooperative housekeeping that will combine economy with efficiency and yet maintain the privacy of home life.

HEADQUARTERS of the Southern Sociological Congress have been moved from

Nashville to Washington, D. C., where its fifth birthday was celebrated in new offices in the McLachlen building. The congress' extension campaign, with elaborate staff, exhibit, motion-picture outfit and its own traveling car, will reach thirty-five cities this year with the deliberate intention of reducing the death rate one-fifth in each of the cities visited.

AMONG the new magazines is *Social Progress*, which has as its aim "to make such contribution as it may to the enhancement of family life and to the strengthening of it for the adequate carrying forward of its historic task," as the editor puts it, while the publisher is going a step further "to produce the home atmosphere which we aim that our readers shall always find in *Social Progress*." The name of the editor is not given. The publisher is the Howard-Severance Co., 205 West Monroe street, Chicago. (Monthly, \$2.50 a year.)

INFANT street traders, truck garden workers of Pennsylvania, New Jersey, Ohio, Colorado and Maryland; cotton pickers of Mississippi, Oklahoma and Texas; 90,000 domestic servants under sixteen years in American homes; cash girls and errand boys in department stores—in short, 1,850,000 working children still need protection, according to the twelfth annual report of Owen R. Lovejoy, general secretary of the National Child Labor Committee. The federal law will immediately affect at least 150,000 children, but "the principal value of the act," says the report, "will be in its tendency to standardize the laws of our forty-eight commonwealths by laying a minimum foundation on which state laws may build and also in standardizing the machinery and methods of enforcements."

GERMAN trade guilds have been informed that the Turkish government has applied through the German foreign office for an arrangement to apprentice about 10,000 Turkish youths, between twelve and eighteen years of age, with German master artisans. Other recent social by-products of the war are an appropriation of one million kronen (\$200,000) by the city of Vienna for the erection of a tuberculosis hospital in connection with the city hospital and the establishment of a colony for blinded soldiers on the estate of Emperor William at Cadinen near Elbing, West Prussia.

INVESTIGATION by the Detroit public schools to determine what had become of 100 of its special class children (sixty-one

Four Fellowships of \$600 Each

For college graduates—classes of 1917, 1916 and 1915
Competitive Examination May 5

One Fellowship of \$800

For college graduates with subsequent experience, out of college at least five years. Preference will be given to those not over thirty years of age. A report, form for which will be supplied on application, will be required.

Applications should be filed
before April 16

A REAL BARGAIN

What would that socially-minded friend appreciate in these stirring times more than the weekly visits of The Survey? Social issues are at stake internationally; social experiments made in this country and abroad; great human problems up in city, state and nation. The Survey will bring authentic news and authoritative comment on these vital matters fully, fairly and promptly.

You, as a Survey subscriber, may have, in behalf of your friend, the special rate of two dollars for a year's subscription to the weekly Survey—if sent now and with this offer attached.

THE SURVEY, 112 East 19 Street - - New York City

To Survey Readers

A few months ago the SURVEY announced a new class of subscribers who want to help along the campaign for extension of social information in some definite way. We suggested that such subscribers who sent in a certain number of new subscriptions could, by enrolling as Survey Circulators, qualify for voting membership in Survey Associates.

We figured that four new subscriptions to the weekly SURVEY at \$3, or eight to the monthly issues only, at \$2, would offer enough margin of profit, over actual costs of production, to admit the sender to membership along with the associate members who had sent in a direct payment of \$10 or more.

A brisk band of Circulators is already at work, but we want more—a hundred by the first of June.

Why June? Because the next ten weeks will be crisis weeks when all who have to do with social movements should carefully watch the news of social developments as it appears in the SURVEY.

Will you lend a hand by joining the Circulator group? The coupon is just below. Send it back to us as soon as you have filled it in with your name.

CIRCULATOR COUPON

FILL THIS OUT AND RETURN TO US

Please enroll me as a Circulator in the SURVEY's campaign for wider use of social information.

Name.....

.....

.....

Note:—A Survey Circulator, in addition to being a subscriber himself, undertakes to secure four new \$3 weekly subscribers, or eight new \$2 once-a-month subscribers (or their equivalent). A Survey Circulator is eligible for election as a member of Survey Associates for one year, but assumes no financial liability, nor promises renewal another year.

boys, thirty-nine girls) who had left school at the age of sixteen, none being out for more than five years, revealed that 33 per cent had become delinquent. Commenting on this, the *Journal of Delinquency* says: "It would be interesting to put down in hard, cold figures how much the community would have been saved if these children, now grown up, would have been diagnosed as pre-delinquent when in the special class and measures for their adequate treatment instituted then."

THE 1916 report of the Juvenile Court of Seattle attempts a classification by "dominant individual traits" of children brought to court during the year. The advantage of such a classification over one showing specific offenses, says Lilburn Merrill, diagnostician of the court, lies in the fact that it is "a more reliable index of forms of wrongdoing in which children, by nature, are most prone to engage." The classification deals with 617 children and shows: dishonesty, boys 270, girls 6; adventurousness, boys 113, girls 66; disorderliness, boys, 123, girls 6; truancy, boys 30, girls 3.

ONE HUNDRED women representing leading women's organizations in New York city, will form a committee under the direction of the Woman's Municipal League, to press for social reforms and to work for the reelection of a fusion administration for the city of New York, as the type of government most effective for translating law into terms of service. A detailed platform, looking toward better living and working conditions, public health education, reduced fire hazard, more playgrounds and parks, and greater protection to children has been drawn.

FOR just one year the Board of Protocol Standards, an agency created by the manufacturers' association and the union in the dress and waist industry in New York city [the SURVEY, March 11, 1916] was able to last. On March 10, the board, consisting of representatives of the union, the employers, and the public, was dissolved by common consent. Its purpose had been by means of a test shop to standardize piece-work prices and to minimize seasonal fluctuations of employment. The late Robert G. Valentine had been director until his death on November 13, 1916.

THE PLAY'S THE THING is the title of a leaflet issued by the National Association for the Study and Prevention of Tuberculosis, New York city, telling how to use plays in public health education. It gives the title and a brief description of each of the fifteen plays already issued by the association—Miss Fresh-Air, Visiting Nurse; Don't-Care, Daughter of Mrs. Don't-Know; Health and his Enemies, are only a few. Using these plays to advantage, says the leaflet, does not mean so much elaborate costumes and scenery as wisely assigning the parts, getting a good leader and advertising; and it tells you how to do these things.

MENTAL hygiene societies are now organized in sixteen states—Indiana and Ohio are the most recent—and are being planned in several others, it was announced at the ninth annual meeting of the National Committee for Mental Hygiene. Officers of the National Committee elected for the coming year are: Dr. Lewellys F. Barker, president; Pres. Charles W. Eliot, Dr. William H. Welch, vice-presidents; Otto T. Bannard, treasurer; Dr. Thomas W. Salmon, medical director; Dr. Frankwood E. Williams, associate medical director; Clifford W. Beers, secretary. The president of the Indiana society is Prof. E. H. Lindley of Indiana University, and the secretary Frank B. Loomis of the Indianapolis Children's Aid Society.

Classified Advertisements

Advertising rates are: Hotels and Resorts, Apartments, Tours and Travel, Real Estate, twenty cents per line.
 "Want" advertisements under the various headings "Situations Wanted," "Help Wanted," etc., five cents each word or initial, including the address, for each insertion. Address Advertising Department, The Survey, 112 East 19 St., New York City.

SITUATIONS WANTED

SOCIAL SERVICE and Church Efficiency Secretary. Specialist in Men's Work. Open for engagement. Address 2474, SURVEY.

YOUNG MAN, seven years' experience in social work, used to executive control, able to work with committees, trained in exhibit technique. In addition possesses knowledge of editorial, advertising and arts and crafts. Has been in intimate contact with most branches of social effort. Address 2471 SURVEY.

YOUNG MAN, experienced social worker and public speaker desires change of position. Executive ability. Present salary, \$2,900. Address 2477, SURVEY.

GRADUATE NURSE with twelve years' unusual experience in secretarial capacity, an expert stenographer and accountant, has also traveled extensively, seeks permanent engagement where she will be able to assist along medical, educational, philanthropic or social service lines. Address 2478, SURVEY.

OLD, young teacher, mind, body, craft revolutionizing manual training. Address 2479, SURVEY.

SOCIAL WORKER, graduate of School for Social Workers, and with a nurse's training, who has had experience in medical, social and associated charity work seeks position with child-placing society or social service in hospital in or very near Boston, summer or early fall. Employed at present. Address 2480 SURVEY.

HELP WANTED

GRADUATE NURSES for Public Health Nursing. Several positions now vacant. Apply to CENTRAL COMMITTEE ON PUBLIC HEALTH NURSING, 612 St. Clair Avenue E., Cleveland, O.

WANTED

By a Public School Physical Director, with Six Years of National Guard Experience, position as Physical Director of Boys' Camp. Open for engagements in July and August only. If desired, advanced Practical military training taught, as well as swimming, outdoor sports, and deportment. References furnished in exchange for details, including salary offered. Only responsible individuals or organizations, with references, need apply. M. L. STRONG, Physical Director, Brown School, Hartford, Conn.

BOOKS

Sufferers from Diabetes should understand their cases thoroughly in order that they may cooperate with their physicians. Dr. J. H. Kellogg gives full instructions in his new book. Send for free pamphlet to **GOOD HEALTH**, 2603 Maln St., Battle Creek, Mich.

Diabetes

A new book—**AMONG THE IMMORTALS**. What they are doing in the "Many Mansions." How souls work out their salvation after death. Christ preached to the spirits in Prison—1 Peter 3-19. \$1.50, postpaid. The Author, Box 740, Tenafly, N. J.

COMPULSORY health insurance as proposed in the Mills bill before the New York state legislature will be actively opposed by the National Civic Federation through its Social Insurance Department. It is supported by the New York Association for Improving the Condition of the Poor, by action of its board of managers. Sickness causes a large percentage of the work of a relief organization and "the association believes it is far better to provide for the care of such sickness by insurance rather than to provide for it by relief measures." The association has also endorsed the Perlman bill increasing the number of those eligible under the widows' pension law.

THE COMMERCIAL CLUB, of Elgin, Ill., has issued a report on the plan of that city, prepared by E. H. Bennett, which shows how far we have traveled from the spurious "city beautiful" type of plan. Like other recent plans for smaller cities, it starts out from the topographical needs of industrial development, wholesome housing, sanitation, safe and flexible transit facilities, commercial expansion, recreation, and on these builds up a synthetic subdivision, street and traffic system, and districting. Conceived in a broad and generous spirit, it gives a genuine interpretation to the life and aspirations of the community.

A CANADIAN CITY IN WAR TIME

[Continued from page 684]

The other and greater part has been to serve families in their relations with tenants and landlords, in advising dependents as to their rights under the Quebec and dominion laws, and in seeking new rulings from the government which, on the basis of fund experience, will make for justice. For while it is the exceptional case, which for better or worse, strikes public attention, fully two-thirds of the families are the unexceptional cases—the families in which, as Miss Reid says, the "women are making a huge, big, beautiful fight."

Besides investigating and reinvestigating the ten thousand cases in its files, the fund has done continuous work for the Imperial Pension Office, the Militia and Defence Department and the Pensions and Claims Office in Ottawa, and has often extended its inquiries beyond the island of Montreal. The table of figures up to January 1 last, as compiled by the statistical committee [see page 684], reveal the size of the major task of the Woman's Auxiliary of the Relief Committee of the Montreal Branch of the Canadian Patriotic Fund.

Some of the human problems embedded in these statistics will be brought out in the next instalment of this series. Before turning to them let me quote the estimate placed on the work as a whole by an American social worker of experience, J. Prentice Murphy, general secretary of the Boston Children's Aid Society, who visited Montreal in February:

"The thing that engrossed me most was that such a big job involving such an enormous expenditure of money could be done by volunteers. I have too keen an appreciation of the shortcomings of trained social workers, for my own shortcomings are such, to fail to say that the Montreal office represents a bit of volunteer efficiency that no social worker can afford to ignore. It will never be possible to pay for all the social service needed, and this is especially true when war conditions prevail, and it should be an encouragement to us to know that under intelligent direction volunteers can do the work that the Patriotic Fund staff is doing in Montreal."

"A Train Load of Books" What Clarkson is Doing for the Book Buyer

IN several hundred thousand Libraries in the homes of people in every walk of life—from the day laborer to the college professor and high government official, from the persons who buy a few books of popular fiction, to the persons who pride themselves on having the complete works of all the standard authors in De Luxe Sets artistically printed and bound—almost every book was bought from me, WHY? Because I have no agents and sell you just the books you want—all new—many at a saving of from 50 to 90 per cent. You examine the books in your own home for five days before paying for them. If not satisfied, return at my expense—and owe me nothing.

Sample Prices:

Library of Wit and Humor. \$1.50; My price, 52c.
 Huckberry Finn and Other Mark Twain Books. \$1.75. My price, \$1.25.
 Brann: The Iconoclast. \$2.25. My price, \$1.75.
 Complete: My price, \$2.25.
 History of the World, 3 vols. \$12.00; My price, \$2.85.
 Memory: How to Develop. 85c.
 Century Book of Health. \$5.50; My price, \$1.
 New Americanized Encyclopedia, 15 vols., 3-4 Leather. Publisher's price, \$16.00. My price, \$14.75.
 Century Dictionary and Cyclopedic, 12 vols., 3-4 Leather. Publisher's price, \$120.00. My price, \$39.50.
 New American Encyclopedic Dictionary, 5 vols., 3-4 Leather. Publisher's price, \$21.00. My price, \$4.
 Here are De Luxe Sets, Morocco bound, complete works, many of them at less than 25c on the dollar. Hugo, Kipling, Poe, Eliot, Dickens, Thackeray, Stevenson, and scores of others.

Get My Big, New Catalogue

My new catalogue, sent free for the asking, tells you how to save 50 to 90 per cent on thousands of books. It is a course in literature, giving nationalities, date of birth and death of authors, the author's life and standing in literature, etc. Hundreds of sets and thousands of single volumes listed.

I sell more books direct to the booklover—the individual reader—the rich man who insists upon his dollar's worth—the man who watches his pennies—and sell them for less money—than any other man in America. Every book new and fresh, and guaranteed to please you—you to be the judge. I do not quibble, and would rather have a book or set of books returned at my expense than to have a dissatisfied customer.

SOCIAL WORKERS' EMPLOYMENT EXCHANGE: The Department for Social Workers of the Intercollegiate Bureau of Occupations registers men and women for positions in social and civic work, the qualifications for registration being a degree from an accredited college, a year's course in a professional school training for social or civic work, or experience which has given at least equivalent preparation. Needs of organizations seeking workers are given careful and prompt attention. EMELYN PECK, MANAGER, 130 East 22d St., New York City.

A MESSAGE

FROM THE

Religious Society of Friends (Quakers) in America

To Our Fellow Citizens:

In this time of crisis when our country's highest good is the common aim of all, we voice this deep conviction of patriotic duty.

We rejoice that even at this time, when the world is crazed by war, so many men are judging war by moral and spiritual standards, and by ideals of sacrifice. The causes for which men fight—liberty, justice and peace—are noble Christian causes. But the method of war is unchristian and immoral. War itself violates law, justice, liberty and peace, the very ends for which alone its tragic cost might be justified.

Further, the method of war is ineffective to these ends. Might does not decide the right, ideals cannot be maintained by force, nor can evil overcome evil. True national honor is a nation's own integrity and unselfish service. Only unswerving honesty and self-control maintain it. Rights, the rights of all, are securely defended between nations as between individuals, by mutual confidence, not suspicion; by universal co-operation and law, not by private armed defence.

The alternative to war is not inactivity and cowardice. It is the irresistible and constructive power of good-will. True patriotism at this time calls not for a resort to the futile methods of war, but for the invention and practice on a gigantic scale of new methods of conciliation and altruistic service. The present intolerable situation among nations demands an unprecedented expression of organized national good-will.

Unpractical though such ideals may seem, experience has taught that ideals can be realized if we have faith to practice now what all men hope for in the future. The American Nation, as a more perfect union of States, as a melting pot of races, as a repeated victor through peace, has proved practical the methods of generosity and patience. Throughout many years of an adventurous belief in the Christian principle of human brotherhood, the Society of Friends has seen the triumph of good-will in all forms of human crisis.

The peoples of every land are longing for the time when love shall conquer hate, when co-operation shall replace conflict, when war shall be no more. This time will come only when the people of some great nation dare to abandon the outworn tradition of international dealing and to stake all upon persistent good-will.

We are the nation and now is the time. This is America's supreme opportunity.

Unflinching good-will, no less than war, demands courage, patriotism, and self-sacrifice. To such a victory over itself, to such a leadership of the world, to such an embodiment of the matchless, invincible power of good-will, this otherwise tragic hour challenges our country.

YES, is the answer—American labor will come to the scratch if we have war. But it has very definite ideals it will fight for and it does not propose to throw up its cap for any old war. Page 707.

WHEN a man's married his trouble begins. But when he goes overseas in khaki the needles and pins are for the women of the Canadian Patriotic Fund. The best of soldiers may be informal in his domestic affairs, with a wife each side the ocean or the altar. The great majority of the families cared for, of course, are of a very different sort—some of them have formed an organization of their own to help in the relief work. But there's a feeling that inebriety and other signs of breakdown among the wives will increase as the dreary war months drag on with hope deferred and fear quickened. Page 709.

LAW and order is what they are after, says Vice-President Lynch, of the San Francisco Chamber of Commerce, replying to Mr. Grady's article on the Open Shop in San Francisco. Good enough, says Grady, but how much more telling to do it by example as well as precept. Page 716.

NOT a workingmen's revolt nor a peasant uprising, without bombs or the classical tools of terrorism, the Russian revolution was an accomplished and orderly fact before the world heard of it. Noble and peasant, prince and pauper, socialist and soldier joined hands like a gang of young fellows who suddenly realize they are boys no longer, put on long breeches and, with the eager seriousness of youth, start out on their own. And at 73, Madame Breshkovsky finds her Siberian prison door open, the Finns are free, the Jews are men. An interview with Dr. Simkhovitch of the political science department, Columbia University, a Russian and a liberal, for many years a resident of Greenwich House. Page 718.

THE new flood law sweeps aside the old conventions of navigability and the pork barrel and proposes to domesticate the Mississippi. Page 721.

*CONGRESS has full power to establish compulsory arbitration of industrial disputes, by the Supreme Court decision upholding the Adamson law. The railroad strike threatens no more and, it may be, a basis has been laid for sustaining minimum-wage and maximum-hour laws. Page 722.

ALEXANDER JOHNSON has always delighted in telling that for all the years he was superintendent of a home for the feeble-minded, he tried out his public addresses on the "children," and found the effective ones were those the "children" approved. This winter he is up to a new trick of wheedling institutional appropriations out of state legislators by pictures and stories of those same "children" with an occasional argument thrown in for the benefit of the reporters. Page 725.

CLEVELAND'S school board has issued a statement to other boards defining the relations of the public schools to the national crisis. Page 723.

New Kind of Prohibition

The railway strike is off, but the impetus it gave to plans for prohibiting or preventing strikes is still felt. Bills to hold up a break for 30 days or more pending an investigation, are before the legislatures of a half dozen states. That's the principle of the Canadian industrial disputes act. Ben. M. Selekman of the Russell Sage Foundation went to Canada to find out how the act works. Comment on the subject is contributed by Charles W. Eliot, John R. Commons, James O'Connell of the American Federation of Labor, James C. Watters of the Canadian Trades and Labor Congress, J. E. Williams, Wm. O. Thompson and a number of others in

The Survey Next Week

Will American Labor Fight?

By John A. Fitch

OF THE SURVEY STAFF

"We speak for millions of Americans. We are not a sect. We are not a party. We represent the organizations held together by the pressure of our common needs. We represent the part of the nation closest to the fundamentals of life. Those we represent wield the nation's tools and grapple with the forces that are brought under control in our material civilization. The power and use of industrial tools is greater than the tools of war and will in time supersede agencies of destruction."

IN this manner begins the announcement by representatives of American labor of their attitude and their policy toward war. It was an important and deeply significant occasion—that gathering in Washington on March 12, of one hundred presidents and officers of national and international unions, at the call of Samuel Gompers, president of the American Federation of Labor. They came, sobered by a sense of responsibility in a time of crisis in the affairs of the nation and of the world.

"The whole world is afire," read the call for the meeting, "and there is imminent danger that at any time we may become part of the conflagration. . . . General policies are now in the making, and can be directed either in accord with the interests of humanity or against them. But organized labor cannot delay in expressing itself upon the present and impending critical situation. Now is the time for labor to speak."

So labor did speak, in a voice that left no uncertainty. With fine idealism and with careful discrimination an answer was given to the question, what will labor do in case of war? And the answer is that labor hates war, but that it loves so well those "ideals of democracy which the masses of the people received from our forefathers" that it will fight, if necessary, to defend them; but, if called upon to fight, labor must be convinced that it is these "ideals of democracy" and none other that it is called upon to defend.

The temper in which this gathering entered upon its work is indicated by a paragraph near the beginning of the statement, a statement which was adopted by a unanimous vote of the conference.

"Whether we approve it or not, we must recognize that war is a situation with which we must reckon. The present European war, involving as it does the majority of civilized nations and affecting the industry and commerce of the whole world, threatens at any moment to draw all countries, including our own, into the conflict. Our immediate problem, then,

is to bring to bear upon war conditions instructive forethought, vision, principles of human welfare and conservation that should direct our course in every eventuality of life. The way to avert war is to establish constructive agencies for justice in times of peace and thus control for peace situations and forces that might otherwise result in war."

With an impressive candor, the statement proceeds to set forth the principles for which the labor movement stands. It declares those principles to be grounded upon the basic one of economic justice. It not only insists that these principles must be recognized whether the country is at peace or at war, but it insists that their recognition is the best possible sort of preparedness. "War," these labor men declared,

"has never put a stop to the necessity for struggle to establish and maintain industrial rights. Wage-earners in war times must, as has been said, keep one eye on the exploiters at home and the other upon the enemy threatening the national government. Such exploitation made it impossible for a warring nation to mobilize effectively its full strength for outward defense.

"We maintain that it is the fundamental step in preparedness for the nation to set its own house in order and to establish at home justice in relations between men. Previous wars, for whatever purpose waged, developed new opportunities for exploiting wage-earners. Not only was there failure to recognize the necessity for protecting rights of workers that they might give that whole-hearted service to the country that can come only when every citizen enjoys rights, freedom and opportunity, but under guise of national necessity, Labor was stripped of its means of defense against enemies at home and was robbed of the advantages, the protections, the guarantees of justice that had been achieved after ages of struggle. For these reasons workers have felt that no matter what the result of war, as wage-earners they generally lost."

The labor movement stands for a different order.

"Whether in peace or in war the organized labor movement seeks to make all else subordinate to human welfare and human opportunity. The labor movement stands as the defender of this principle and undertakes to protect the wealth-producers against the exorbitant greed of special interests, against profiteering, against exploitation, against the detestable methods of irresponsible greed, against inhumanity and crime of heartless corporations and employers. . . . A nation cannot make an effective defense against an outside danger if

groups of citizens are asked to take part in a war though smarting with a sense of keen injustice inflicted by the government they are expected to and will defend. The corner-stone of national defense is justice in fundamental relations of life—economic justice.”

The Government's Part

THE word “justice” is a general term. If it is to be applied to any given situation it requires careful definition. This labor conference did not fail, therefore, to put down some specific requirements that must be met if the government is to count on them for fullest cooperation in time of war.

“Industrial justice is the right of those living within our country. With this right there is associated obligation. In war time obligation takes the form of service in defense of the Republic against enemies.

“We recognize that this service may be either military or industrial, both equally essential for national defense. We hold this to be incontrovertible that the government which demands that men and women give their labor power, their bodies or their lives to its service, should also demand the service, in the interest of these human beings, of all wealth and the products of human toil—property.

“We hold that if workers may be asked in time of national peril or emergency to give more exhausting service than the principles of human welfare warrant, that service should be asked only when accompanied by increased guarantees and safeguards, and when the profits which the employer shall secure from the industry in which they are engaged have been limited to fixed percentages.

“We declare that such determination of profits should be based on costs of processes actually needed for product. . . .

“ . . . Service in government factories and private establishments, in transportation agencies, all should conform to trade union standards.

“The guarantees of human conservation should be recognized in war as well as in peace. Wherever changes in the organization of industry are necessary upon a war basis, they should be made in accord with plans agreed upon by representatives of the government and those engaged and employed in the industry. We recognize that in war, in certain employments requiring high skill, it is necessary to retain in industrial service the workers specially fitted therefor. In any eventuality when women may be employed, we insist that equal pay for equal work shall prevail without regard to sex.

“Finally in order to safeguard all the interests of the wage-earners organized labor should have representation on all agencies determining and administering policies for national defense. It is particularly important that organized labor should have representatives on all boards authorized to control publicity during war times. The workers have suffered much injustice in war times by limitations upon their right to speak freely and to secure publicity for their just grievances.”

This statement of labor's demands is put forth in no apologetic spirit, or one of hesitant doubt.

“Organized labor has earned the right to make these demands. It is the agency that, in all countries, stands for human rights and is the defender of the welfare and interests of the masses of the people. It is an agency that has international recognition which is not seeking to rob, exploit or corrupt foreign governments, but instead seeks to maintain human rights and interests the world over, nor does it have to dispel suspicion nor prove its motives either at home or abroad.”

So much for labor's demands. Suppose they are granted—what then? Is labor loyal? Will the working men of Amer-

ica fight to defend their country? Let their representatives answer:

“Workers have no delusions regarding the policy which property owners and exploiting employers pursue in peace or in war, and they also recognize that wrapped up with the safety of this Republic are ideals of democracy, a heritage which the masses of the people received from our forefathers, who fought that liberty might live in this country—a heritage that is to be maintained and handed down to each generation with undiminished power and usefulness.

“The labor movement recognizes the value of freedom and it knows that freedom and rights can be maintained only by those willing to assert their claims and to defend their rights. The American labor movement has always opposed unnecessary conflicts and all wars for aggrandizement, exploitation and enslavement, and yet it has done its part in the world's revolutions, in the struggles to establish greater freedom, democratic institutions and ideals of human justice.”

There was no evidence, however, of a desire to rush madly to the defense of those ideals without careful consideration of just what that would involve.

“Our labor movement distrusts and protests against militarism, because it knows that militarism represents privilege and is the tool of special interests, exploiters and despots. But while it opposes militarism, it holds that it is the duty of a nation to defend itself against injustice and invasion. . . .

“The present war discloses the struggle between the institutions of democracy and those of autocracy. As a nation we should profit from the experiences of other nations. Democracy cannot be established by patches upon an autocratic system. The foundations of civilized intercourse between individuals must be organized upon principles of democracy and scientific principles of human welfare. Then a national structure can be perfected in harmony with humanitarian idealism—a structure that will stand the tests of the necessities of peace or war.”

“Labor, Justice, Freedom, Humanity”

WITH this setting forth of labor's demands, its suspicion of militarism, its insistence on justice as the basis for national strength both in war and in peace; in other words, with the understanding that the America that these men are ready to fight for must be an America just to her people, whether at war or at peace, we come to the final statement of labor's position:

“We, the officers of the national and international trade unions of America in national conference assembled in the capital of our nation, hereby pledge ourselves in peace or in war, in stress or in storm, to stand unreservedly by the standards of liberty and the safety and preservation of the institutions and ideals of our Republic.

“In this solemn hour of our nation's life, it is our earnest hope that our Republic may be safeguarded in its unswerving desire for peace; that our people may be spared the horrors and the burdens of war; that they may have the opportunity to cultivate and develop the arts of peace, human brotherhood and a higher civilization.

“But, despite all our endeavors and hopes, should our country be drawn into the maelstrom of the European conflict, we, *with these ideals of liberty and justice herein declared, as the indispensable basis for national policies* [italics mine], offer our services to our country in every field of activity to defend, safeguard and preserve the Republic of the United States of America against its enemies whomsoever they may be, and we call upon our fellow workers and fellow citizens in the holy name of Labor, Justice, Freedom and Humanity to devotedly and patriotically give like service.”

SOLDIERS' FAMILIES WAITING THEIR TURN AT PATRIOTIC FUND HEADQUARTERS

A Canadian City in War Time

II. Families of Soldiers Overseas

By Paul U. Kellogg

DURING the second war year, 58,000 visits were made to the homes of soldiers' families in Montreal by the volunteers of the Patriotic Fund. How this work was organized was described in my first article (see the SURVEY, March 17). That strategy of war which has overcome barriers of language, creed and race and brought together the fighting men of many nations has had an echo in the *entente cordiale* of these Canadian women. French-speaking women visit French-speaking families; English-speaking women, English-speaking families; Franco-Belgian, Franco-Belgian; Catholic, Catholic; Protestant, Protestant; Hebrew, Hebrew. Through two-fold committee organizations in each of the twenty-seven districts, two-fold district heads, two-fold secretaries, English and French, with a common headquarters staff for record-keeping, filing, budget-making and general oversight, all this work among different races and religions has been coordinated and standardized. More than that, it has been transfused with new, revolutionary conceptions of help and family rehabilitation.

"It's not only the money, it's the living money we have learned to give," said a ward head, a French-Canadian volunteer who confessed to sitting up until two o'clock that morning, writing case-records in order to turn them in on time.

I thought she had come to realize what the cost of living meant to families of the least well-to-do, for in February, on the basis of reports from the districts as to the rise in the price of provisions and other necessities, the Montreal Relief Committee recommended an increase of 10 per cent in all family budgets. But, no; she meant more than that. She meant things of the spirit—counsel, understanding, appreciation, sympathy, encouragement between visitor and visited—"living money."

Every ward committee has one member known as recorder who works under the Social Statistics Department at headquarters in analyzing cases and drawing up monthly reports. The main sheet for each ward has a line for every family and is divided vertically into two parts. In one part are twenty-five columns labeled "disabilities"; in the other eighteen labeled "opportunities." Whatever the statistical limitations of the sheet (obviously a case of tuberculosis in a family is both a disability and an opportunity for treatment and cure), this division is psychologically a stroke of genius. For in every investigation slip, every monthly report by ward and city, every outgiving of the fund as a whole, the challenge is repeated over and over again, that a family in need is a budget of opportunities no less than a bundle of ills. Its reaction upon the 712 visitors and volunteers is at the very bottom of that revolutionary

At the outset of the war Canada was suffering from a severe depression. Of the British reservist and Canadian families which came on the fund the first year, 5,014 in all, only 1,183 of the men were known to be employed at the time of enlistment; 1,874 were known to be unemployed. Presumably a large share of the remainder were out of work. This situation continued into the second year, although not to such an extent; 1,425 of 3,445 breadwinners being without employment at the time of joining the colors. These figures indicate that when a woman came on to the fund she was often handicapped by debts. Further, in the early days, two or three months might pass before her income from the government was satisfactorily regulated. But with the systematization of military pay and separation allowances, the establishment of war industries (munitions and supplies) and the scarcity of labor similar to that experienced in the manufacturing centers of our eastern states, the entire situation shifted.

Taking the Place of Provider

IN MANY cases the war has been an actual stabilizer and promoter of family incomes, to say nothing of domestic serenity. "Now I get money reg'lar, you see, and don't 'ave 'im," said one Englishwoman. And, youngish mother of eight that she was, her auditor was left to infer that she was relishing sort of a bank holiday from perennial child-bearing.

One little girl of fourteen, the eldest of ten children of a British laborer, was sent to a summer camp. She had been sort of assistant mother to the younger children and was white and drawn. The world seemed to owe her a bit of gaiety on

conception of family help which sets off the program of the Patriotic Fund in Montreal—both from the routine fund grants made to soldiers' families in many other Canadian cities and from the dole-giving which characterizes not only some of the older relief agencies of Montreal but some of the war societies.

Here is a summary drawn up by the Social Statistics Department for the second war year. In a way it serves as an index to some of the problems in social case-work which have come to the fund:

SOCIAL STATISTICS

(Second year of war, August, 1915-August, 1916)

Number of families.....	6933
Number of households.....	26684
Number of children under 5 years.....	5574
Number of children, 5-14 years.....	6867

OPPORTUNITIES AFFORDED FAMILIES BY FUND

Medical aid.....	2090
Dental aid.....	78
Optical aid.....	94

In Montreal, the Patriotic Fund must do all of its work in two languages, English and French, and have two ward heads and two sets of interviewers and visitors

her own; but she scarcely knew how to use her leisure. She thought the other children of her own age a "well-behaved lot," and the first night she asked if there wasn't a baby she could take care of. Sure enough, she found one at the next farm, and spent most of her vacation tending it.

Hers was an exceptional case, however, as was well proved when the ladies' committee of a Montreal day nursery descended on the Patriotic Fund in a body to protest that it had robbed them of their charges. Women who formerly put their babies in the nursery and went out to day's work, with the man perhaps at home drunk, had come to find that on half pay, subsistence allowance and fund money they themselves could stay at home and tend their children. And the fund management is courageous enough to encourage them to be spendthrift in just that old-fashioned way—for the sake of Canada and the empire, and the generation coming on, which must take up its load.

A visiting housekeeper is assigned to a district for four months. Taking the families in groups of forty she teaches cooking, sewing, millinery and household management, chiefly the latter. Educational work, carried on by leaflets and visitors, to encourage savings and insurance, was explained in the first article. Altogether, on all subjects, 100,000 leaflets were distributed among the families last year.

An adaptation of the stamp-savings scheme of the Penny Provident Fund was advocated by the Ladies' Auxiliary, but was not taken up by the Relief Committee; and, curiously enough, the old-age pension system of the Canadian postoffice

**DONNEZ AU
FONDS PATRIOTIQUE
CANADIEN ET
A LA CROIX-ROUGE**

has not as yet been promoted as a form of saving. In several instances women have been encouraged to take out war certificates (\$25 each), thus doing their bit toward carrying the war loan.

Although mothers of young families have been encouraged to stay at home, the fund has listed all women who have recorded their wish for work, and even during the earlier hard times was able to secure employment for many. Childless wives have had small inducement to remain in idleness, in the childless wives' rate of the Patriotic Fund. This is only \$5 a month over and above their soldier pay and separation allowance from Ottawa. When other women have taken up regular work of their own accord, their budget allowances have been cut accordingly. In all cases the theory of the fund has been neither to see women bearing the double responsibilities of mother and father, forced to go out to earn the living while the man fights overseas; nor, on the other hand, to see the grant go as a surplus to women who, from choice or fortune, gain an ample income elsewhere.

Wage-Earning Women

SOME soldiers' wives in Montreal are earning as high as \$80 a month in munitions factories, besides half pay assigned by their husbands and separation allowance from the Canadian government. Should the fund continue to pay these women anything in addition? The answer seems simple enough, yet within a week protests showing the most diverse points of view reached the fund from two vice-presidents of one of the largest industrial establishments in Canada. One man said that his workmen, who had contributed four days' pay each to the Patriotic Fund, felt it unfair for soldiers' wives who

**SOUTENEZ

Not only because of language, but because of religion is the two-fold organization necessary, for French-Speaking Canada is devoutly Roman Catholic

had come into the shop and were earning as good wages as themselves, to draw from a fund to which they and not the women had contributed. The other man wrote that his company had contributed a quarter of a million dollars to the fund and that a woman shouldn't be penalized by striking her name from the list if she were decent enough to work and help the country out!

The encouragement given mothers to invest their labor in their children has its counterpart in encouragement given them to keep their children at school. When it is remembered that Montreal is the largest city in the New World without compulsory education, this is no small matter. The continuance of grants to older children at the higher rates (\$6 to \$7.50 a month from ten to fifteen years) is the chief leverage in this policy. A school campaign has been carried on both years, in which teachers and principals, French and English, Roman Catholic and Protestant, have cooperated. Prizes have been offered to fund families showing the best records in conduct, attendance and general progress.

The Youth of the Soldiers' Families

A SCHOOL investigation was undertaken in each district covering especially the reasons given for non-attendance—paternal indifference, work, illness, poverty, etc. This census also recorded the number of saloons, moving-picture shows and other neighborhood influences. Last year's report expressed gratification at the small percentage of fund children that were found at child labor. It expressed surprise on "finding two-thirds of our children under school age, indicating the youth of our soldiers' families." The need of social vigilance was borne out by the extent of illiteracy among the parents. Four hundred and four, or over 11.39 per cent, of the men whose families came onto the fund the past year in Montreal could not write.

This campaign for education has been matched by one for health. Health leaflets are distributed to every mother on the fund. For a while a trained English health inspector, a soldier's wife, was employed in St. Denis ward, but her husband was wounded and she was called to England. Eight or ten nurses are working in the different wards as volunteers, ready to attend any case of sickness. In the summer good health rules are demonstrated in churches and schools, where a nurse bathes and dresses a baby before a group of soldiers' wives. Again, many mothers are induced to send or take their children to milk stations, dispensary or hospital, oculist or dentist. Some inroads last summer on the heavy infant mortality rate in Montreal are attributed to this work, in which city hall doctors, members of the Victorian Order of Nurses and nurses from the Foundling Hospital and the Gardes Malades de Ville Marie cooperated.

Over 300 physicians are on the honor list of the fund, including all members of the medical faculty of Laval University and of the Medico-Chirurgical Society. They stand ready to give free medical attention; but since the earlier months fund families have been urged to meet sickness expenses out of their regular budgets.

Extreme cases, of course, demand exceptional care, as, for example, the mother and four children, all tubercular, who were sent to a sanatorium through the gift of a regimental fund. Another case was that of the family of a railroad laborer, the woman just recovering from pneumonia, a baby two months old and four small children. They were burned out near the railroad shops and housed over night in some cars, along with twenty other families, victims of the same fire. After many vicissitudes the man was invalided

home because of flat-foot and found his family ready to receive him in a comfortable apartment, the wife (who had been tubercular) much improved by her new experience with good food and comfort. Incidentally, the woman was in debt to the fund for five dollars at the time of her husband's discharge and since has come in to pay it off a dollar at a time.

The mother of a British reservist, a competent woman, is sent regularly to families in which the women are ill, and makes her own arrangements with them as to what they shall pay her. In one case she is known to have refused any pay and to have taken down her own mattress and bed to make the patient more comfortable. At present she is caring for two children, the father at the front, the mother dead.

Then take the case of a mechanic overseas in the Army Service Corps, the wife and three children in Montreal. The wife developed cancer and was placed in a hospital, the three children were sent to a home. When a well-to-do Chicago friend of a ward-head wrote that she wanted to adopt a child, she was sent to this sick mother in the hospital. She was attracted to the oldest daughter—an eight-year-old girl—and was eager to take the child into her home. The fund was able to get the father two months' leave so that it could be arranged, and the wife died happy in the thought that the little girl would be provided for.

After the death of the wife of a young Finnish soldier, the fund reached out even further in its ministrations. When the wife came on the fund she had said that her husband had a child (by a first wife) living with grandparents in the old country. Correspondence with the man at the front and with the Finnish priest in New York in whose parish the child had been born and the first wife died brought power of attorney, birth certificate and the other legal documents necessary. Today allowance is going from Canada to the soldier's child in Finland.

The first year 273 births and 140 expectant mothers were on the fund's maternity lists. The second year the births ran up to 604. Ward heads and visitors give "friendly, helpful attention to these lonely women at this time."

Besides maternity allowance from the fund in case of need, the mothers of war babies receive baby trousseaus provided by the Daughters of the Empire and other friends. Baby "Kitchens" and "Patricias" without number in the early stages of the war have given way before a later infant calculated in good time to man a "tank" single-handed. He was christened George Albert Nicholas Victor Poincare Stewart.

It is well that there are military names to turn to, for some of the war babies can scarcely bear the names of soldiers at the front. The plan when illegitimate children are born into families on the fund is to find the man responsible and to hold him for confinement expenses at least; to notify the military authorities at Ottawa and get separation allowance and half pay put in the hands of the fund as leverage for rehabilitating the household. If the woman continues in her mode of life, her Patriotic Fund grant is cut down to the motherless rate, but the allotment to the children is maintained. If she is clearly confirmed in promiscuous living, steps are taken to separate mother and children.

Tangled Family Relationships

SUCH a household was that of a French-Canadian mother living with her daughter and a granddaughter of five. The daughter was the wife of a soldier, but both women were kept by other men. Again, through a veteran of the Russo-Japanese war, the fund learned of the maltreatment of four immigrant children whose mother was receiving assigned pay

and separate allowance from a Russian soldier at the front—one of five husbands. Two other husbands and a boarder were living with her in a joint where she sold liquor, stole from her drunken visitors and took a hand with club or bottle in the frequent free-for-all fights. The case was taken up at Ottawa, government money stopped and the children placed under the protection of the Juvenile Court.

And there was the English-born woman, the mother of four children, who wrote her soldier husband that she would be a wife to him no more. She had met a "perfect gentleman." The letter reached the soldier when he lay wounded in a French hospital and he turned it over to his colonel's wife, who asked the fund to help. The woman and children had disappeared, but through a milkman they were traced to a suburb, where they were found living an apparently normal family life. The new man, who had not yet tired of his adopted family, was earning large pay in a munitions factory. The fund money was cut off, Ottawa warned and the father told how he could take legal steps if he desired. The information never reached him, and now the fund has a pitiful letter from him, asking what has become of his children.

Altogether, ward heads and experienced visitors had to deal last year with 246 cases in which immorality and 404 cases in which intemperance were factors; many of them, of course, in the same households. And entering into the complexity of these family problems is the fact that, while isolation, loneliness and the man's absence may be unraveling the fabric of family life at home, the same process may be going on for the man in barracks and camp, where monotony and loss of identity are coupled with unrestraint of men on leave, too far away to get back to their families. The high percentage of venereal-disease cases treated in the military hospitals is an index of this situation.

When, to begin with, the husband is a heavy drinker, his enlistment may prove a temporary gain to the family—like the reservist's wife who was found in one room, without enough to eat and half clothed, but who, with war income and sympathetic counsel from the fund, is now living in a cheerful flat. There is a different situation when the woman is the drinker. With the man gone overseas, the fund visitors face in such cases one of their most baffling problems. Recently a visitor found the door of the house she sought locked. A child who finally answered said that her mother had forbidden her to open it. Five younger children and the intoxicated mother were behind that locked door. The husband, a skilled mechanic, was at the front, as well as the two oldest boys.

Making a Dry Law Help

SOMEWHAT similar circumstances caused word to come from a police station one evening that two children were being cared for there over night. At first their mother could not be found, but later she was discovered at her mother's—the woman drunk in bed with a ten-days'-old baby in her arms; the grandmother stone drunk, a four-year-old child on the floor, tipsy with the liquor that had been given him; and three men drinking in the house. Drunk, foully dirty and in jail was the woman when the visitor began a slow process of rehabilitation. The baby died. Two older children were placed temporarily in a home. Then the woman was settled in a "dry" suburb, pains being taken to conceal her whereabouts from the grandmother, who was the bell-wether of the family's habits. All seemed to be going well when who should open the door for the visitor on her next call but the old woman herself! It looked as though the jig were up, but living together six miles out from the nearest saloon, mother and daughter have both kept straight for a year past.

There is another class of cases around which a spirited controversy is going on at the present time—those in which two wives have come to light, the first often living in England. Last October the Privy Council voted that in case a woman had been supported regularly by a soldier on a "bona fide permanent domestic basis, for at least two years prior to his enlistment," the separation allowance (\$20 a month) should go to her and not to the legal wife. Similar rules were adopted by the Canadian Patriotic Fund. The practice is defended by the military on the ground that the purpose of the grants is to encourage enlistment, and that men will not enlist if the women for whom they care are to be left stranded. This rule, however, was not enacted till last fall. A more probable reason is the feeling that in a province like Quebec, where there is no means for getting a divorce short of going to Parliament, various informal but self-respecting substitutes are resorted to among the poor, and that when a man enlists to go overseas it is not the time to interfere forcibly with his domestic life.

Legal Wives and Military Wives

HOWEVER this may be, the ruling is one which has been vigorously challenged by the women of the Patriotic Fund in Montreal, on the basis of its injustice to deserted and neglected families. Specifically, the Montreal branch urges that the "claim of the legal wife be always given precedence, provided that no cause of unworthiness or misconduct on her part be proven," and that, in the latter event, the "claim should extend to the first wife's children, for whom, through an appointed guardian, the separation allowance and assigned pay be administered."

An Englishwoman, deserted and so destitute that her five children were in the poorhouse, wrote to ask help in tracing her husband. He was in a Canadian regiment, and the files in the Montreal office showed that a second wife and three illegitimate children were drawing the assigned pay, separation allowance and fund grant. After investigation and much correspondence, which produced birth and marriage certificates and references extolling the excellent character of the English wife, the fund was able to have an exception made in this case. Work was obtained for the second wife, who had known nothing of the deserted family, and fund grants were continued to her three children, the youngest being placed out and the two older ones put under the supervision of a district visitor. Meanwhile assigned pay and separation allowance were diverted to the lawful wife, who was able to take her children from the poorhouse, and was so impressed with the Montreal fund as a domestic mediator that she wrote "since they had been so kind," would they now "get her husband to go back to her"!

Two further cases can be cited to illustrate the involved relationships which the fund is called upon to disentangle. The first is a case of a husband overseas, whose wife died, leaving one boy. He was claimed by her relations, but investigation led to the belief that they were unfit. The soldier wrote asking that his former employer, a Protestant, be made the boy's guardian. The wife's relatives refused to give the child up, basing their claim on religious grounds. A volunteer lawyer secured a writ of habeas corpus. Thereupon, the wife's relations held a family council, appointing the boy's uncle as tutor. The case was up in the Practice Court for three days, the fund taking the ground that the soldier's wish should be respected, the former employer be made the guardian and the boy sent to a Catholic school under direction of the court.

The second case is that of a seemingly inoffensive woman sued by the fund for obtaining money under false pretenses. Her husband was killed in action and she obtained advances from the fund on three different occasions on the ground that her pension had not come. It developed, also, that she had gone to Ottawa, impersonating another woman, giving the correct name, regiment and number of the woman's husband and falsely drawing separation allowance and assigned pay checks. These she cashed, after making her mark, claiming she could not write. Meanwhile the woman had received a year's pension money and remarried within three months of her husband's death.

The "Trouble" Cases

So the cases might be multiplied: the imposter with forged letters from the front in her pocket; the girl of the street who marries just as the troops leave; the canny woman from a neighboring township who wrote that, as she had heard so much good of the fund, she was coming to Montreal with her four children and would they please find her a house; the veteran of Boer and Matabele wars, whose wife, to entice him home for Christmas dinner, wrote of a sumptuous repast to be provided by the Patriotic Fund and who without warning brought five soldiers home from the barracks to share it—to their common discomfiture and the veteran's rage; the mothers and fathers with other sources of support, who feel themselves entitled to a grant, even if their assigned pay is more than their soldier son formerly turned into the family expenses; the invalided soldier who took unto himself a widow and children, and went to the newspapers with his grievance when the government failed to underwrite his new entourage.

There has been a running fire of complaint, not only from those who have wanted the fund to do more than its charter and sense of stewardship permitted, but from those who have wanted it to do less. To these latter a dignified answer was made by the Montreal branch in its last report:

"There are people with little or no social conscience who would feel hurt if any aspersion were made on their so-called patriotism, but who say, 'all this welfare work has nothing to do with the Patriotic Fund.' Can there be anything more short-sighted and less patriotic? Our men are dying for the ideals of liberty and justice as expressed in our free institutions and free people. If our country is worth dying for, it is surely worth living for, and the opportunity to give service to our soldiers' families for development into a higher citizenship of better men and women is certainly the greatest service the women who stay at home can render their country. Love for Canada and our country does not really seem to have been awakened until this war began, and there are still many Canadians who place their safety, comfort and ease before their service for their country. The immortal fruits of life are not material well-being and physical comfort, but integrity, courage, reverence and willingness to serve and to sacrifice, and true patriotism means unselfish public service. The volunteers in the fund are working for the Canada of tomorrow as well as for our city of today, because they are trying to minimize the fearful waste of infant and child life, and because they are affording opportunity—not charity—to the soldiers' families for the fruitful development of the five essentials of normal life—health, education, recreation, employment and spiritual development."

But the best evidence of the worth of this work with families—as well as the best corrective for any tendency to let the exceptional cases of fraud or frailty throw out of perspective the great body of self-respecting households—lies in the testimony of the soldiers' wives themselves. Last week a woman wrote a letter to a Montreal newspaper to thank the

men and women of the Patriotic Fund. That they "never tired of listening to our troubles" bulked large in her bill of indebtedness for "living money." She explained:

"My husband was wounded last year. With the help of the fund I have been able to save what will give us a fresh start. I especially thank the men who have given a day's pay. I have a small family and realize what a sacrifice they have made. My children are too young to go to school. I cannot go to work. I give my thanks to all who have helped our soldiers' little ones."

Perhaps the best testimony of all is to be drawn from the minutes of the Soldiers' Wives' Guild organized by the St. Denis ward committee. Its 192 members subscribe to the following, duly framed and adopted:

"Resolved that we, as members of the St. Denis Soldiers' Wives' Guild, be a mutual benefit society to cheer and comfort one another, and always maintain and keep a high standard of morals, worthy of the wife, mother, sister or sweetheart of the gallant men defending our empire, and to do cheerfully our little bit to keep the home fires burning and the old flag flying."

Thereafter it was moved to engage in Red Cross work, and in the succeeding twelve months 6,000 shirts, socks, convalescent jackets, pajamas, sheets, pillow-cases, bandages, towels and other pieces of sewing were turned out by these soldiers' wives. A monthly social was a natural sequence, and a Christmas entertainment was attended by eighty mothers and 100 children. The guild supplies any member who may be ill in a hospital with "fruit, flowers and good reading," and has appointed a visitor to go "among the sick of our society." Here are four paragraphs from the secretary's report:

"Our president, though perhaps one of the youngest members of the guild, has adjusted accounts and shown the inexperienced a better way of managing; and today we can boast of the ward with least immorality, most bank accounts and most insurance policies in this city.

"Many of our women walk great distances to come to our meeting with a large bundle of Red Cross work in one arm and a baby in the other and sometimes another tugging at mother's skirts.

"We have had beautiful bronze pins made with a red cross center, around which is the motto 'We also serve' and the name of our guild surmounting this. Who has a better right to this motto than faithful women who, in order to do this extra work, have to rise earlier to find time in an already crowded day?

"We are now preparing a parcel of socks from money earned by the guild to send to each man overseas in St. Denis ward, and have a balance of forty dollars still on hand to carry on this work, which we feel, from the numerous letters of congratulation received, has not been in vain."

Things of the Spirit

THE women as a whole are keyed up. "They feel they are doing a bit of the world's work in letting their men go," says Miss Reid. "A certain amount of suffering burns away the crude things in all of us. While the war wastage is horrible, the birth of many things of the spirit that would perhaps otherwise have forever remained dormant has brought our workers and families compensation for the great sacrifice. Doing our part here, 3,000 miles away from the front, we have felt it not only our greatest opportunity for service to all mankind, but also our greatest opportunity for the 'honorable advancement of our own souls,' to use the beautiful expression of a Californian in the British army who was killed

in action last August. When one feels this way one naturally becomes part of a group, and the group grows larger. That's what the war is doing for Canada."

So it is that the Montreal charwoman with a drunken husband and with assigned pay coming from but one of the three sons who went overseas—for the first died of his wounds and the second has been missing these six months—shares in the common psychology that is cementing the nation and feeds her spirit by poring over the letters from chaplain and nurses, who wrote "you must have brought up your boys well."

The impression gathered in looking into this relief work in Montreal is something different, I fancy, from what would be true of similar work in an epidemic or catastrophe. Something deeper perhaps. Those emergencies would bring out courage and fortitude and sympathy. As the pains of childbirth, more than ordinary sickness or injury, elicit the nascent forces of motherhood, so, suffused with a spirit of heroic courage and renunciation, is the suffering of these Canadian women, partners in a great cause with their men overseas, while black tabs and dark red tabs, white, blue and green tabs add up week after week in the filing-case of the Patriotic Fund—tabs which stand for missing men, and men died of their wounds, men killed in action, men invalided home.

Yet, unlike the pains of childbirth, the immediate human issue of this travail and exaltation is not life, but death and broken bodies, broken homes. And the workers tell you another year of war might be hurtful, might even sap the spirit which has uplifted humble women. They tell you of wives who have gone insane because of the lonesomeness and dread of it all. They tell of three women dead of alcoholism whose strength was not enough to stand alone. They fear more and not less of that recoil which makes for immorality.

Here are two cases of what homecoming itself has meant in Montreal. An invalided man, who had been gassed and not altogether right in his head, suddenly broke loose with a long knife, cut down pictures, lamps, furniture and cried out that he had slashed Germans, their heads and arms and bodies and knew what the feel of flesh was. He drove his wife and children out of doors. But he stopped there, shaking, in his senses once more.

Another Montreal man returned who had never actually seen a German, gassed and with one eye gone. He found his wife in jail, sent there for drunkenness and soliciting, and his child in the hands of a hag whose place was an evil resort for young boys and girls.

These are extreme cases, but by infinitesimal grades they

shade off into all manner of dislocated relationships—thwarted hopes, lessened strength, dulled initiative; anxieties, tensions, griefs and the household embodiments of these things. Our modern life which has given war new machineries, planes and U-boats, gas and bombs, has also brought new instruments for gauging the social consequences of war—even if it has not brought new insight into its stern measure of sacrifice, or added anything but bulk to the body of evidence as to its intolerable crudeness as a method for settling human affairs. Only in its convincing purpose, with its re-birth of the spirit, and then only if that purpose can be achieved in no other tenable way, does war find its sanction in the face of such misery as these volunteers are endeavoring so bravely and, after all, so inadequately, to assuage.

Three battalions of Canadian woodsmen have been taken overseas to turn into bridge and trench timbers the noble trees of Epping and Windsor forests which have been spared for centuries, symbols of England's sacrifice. "Lords of lumber, ladrones of logs, looters of limits were they," writes an enthusiastic Canadian of the hardy men mustered to the task from the great woods of the New World. But it is not only Old World timber that is going down. It is the humus and root-holds of countless family groups, which obscurely, and without any blazoning or imagery, are being torn loose from these North American communities.

One rare compensation to Montreal lies in the work of the Patriotic Fund, through which in the thirty months of war the devotion and craftsmanship of a thousand volunteers has found united expression. The "disability" of the fund—to use the terminology of its record sheet—lies in the fact that its case work with families stops short with the point of discharge. Its "opportunity" lies in projecting its ideals and competent method as a social force, dominion wide, in the formative years ahead.

If the United States enters the conflict and forces are recruited for overseas, household emergency and distress will come to our cities as they have come to Montreal. We will have this Canadian experience before us. We have in the Red Cross a dynamic national organization. We have in our cities large bodies of men and women who have engaged in systematic civic and professional activities, and we have trained social workers who can form a nucleus for such war work. But if we fail to elicit such reserves of spirited volunteer effort as Montreal has elicited, then to the other sacrifices of war we will have added the waste of very real social and patriotic resources.

The Open Shop in San Francisco

By *Robert Newton Lynch*

VICE-PRESIDENT THE SAN FRANCISCO CHAMBER OF COMMERCE

THE San Francisco Chamber of Commerce must earnestly protest against the complete misstatement of its law and order program as presented in the SURVEY of November 25 under the signature of Harry F. Grady. Mr. Grady has chosen to interpret the present notable movement of this organization in the light of his own theory stated in the concluding sentence of his article: That the principle of the open shop "destroys the basic principle upon which trade unionism is organized—the power of collective bargaining." Mr. Grady not only assumes that the Chamber of Commerce is fighting trade unionism, but grossly misstates vital facts in connection with the movement. The Chamber of Commerce desires officially to correct these misstatements, to make a clear, categorical statement of the character of its program, the limit of its activities and the settled policies which govern its committee. The following has been prepared not as the personal views of the writer, nor as an interpretation of the facts, but as an official statement of the Chamber of Commerce's position, and as such expressing the attitude of the commercial community of San Francisco.

There is only one plank in our platform, viz: obedience to the law under a free government. Our stand for the open shop is simply that and nothing more. The Chamber of Commerce not only concedes the right of labor to organize and to make its lawful bargains, but would regard it as a serious and irreparable calamity should unions become disorganized or lose their strength. It does not believe that unions should be above the law or that they should be permitted to have a monopoly of labor as long as any workman desires voluntarily to stay outside their ranks. This states the position of the Chamber of Commerce on this subject in its entirety, and the whole law-abiding community of San Francisco supports its program.

The Chamber of Commerce has always been optimistic as to the industrial development of San Francisco. While it recognizes special evils and tyrannies associated with a certain type of labor leadership, an intensive survey of industrial conditions has been conducted for the past two years, based largely upon the theory that labor difficulties were only a part of the problem, and probably a much smaller factor than our reputation as a union-dominated city would warrant. This organization was indeed pledged to meet any handicap which prevented the industrial good of the city, but only to act on full and complete information.

In June, 1916, the strike on the water front of San Francisco was precipitated by the Riggers' and Stevedores' Union. The union broke their solemn contract with the shipowners, sought to enforce a secondary boycott, and by a reign of terror and intimidation, completely tied up the port. No true friend of labor, nor any law-abiding union, could support such a stand. President Murphy, of the Stevedores' Union, granted permits to specially favored firms to get goods from the wharves, and by official certificate issued to the sub-treasurer, a special privilege of hauling bullion from a ship to the sub-treasury was issued. These permits protected the drivers from violence.

This intolerable situation was the immediate cause of the Chamber's law and order movement. It was a community

movement, and a mass meeting of several thousand people authorized the Chamber of Commerce to raise a fund of one million dollars and to appoint a committee to deal with the situation in case the authorities were either powerless or unwilling to enforce the law. The indignation of the entire community was so aroused that the committee which was appointed had little difficulty in stopping the reign of violence. The committee did not concern itself, nor has it at any time concerned itself with the merits of strikes, nor as to the union or non-union character of the workers. It demanded that the law should be obeyed, nothing else, and is still implacable in that demand. The fact is that this strike was ultimately settled, largely to the satisfaction of the strikers, but they were not permitted to tie up the commerce of San Francisco nor to commit violence in furtherance of their settlement. Practically no violence has occurred in connection with strikes in San Francisco since that date.

The chamber has made permanent its position upon this question. If the authorities will enforce the law without distinction the activities of its Law and Order Committee will be entirely unnecessary. But its committee will remain alert and vigilant, and with the backing of its entire resources arouse the entire community whenever criminal violence threatens individual liberty.

On July 22 a bomb outrage was committed during a public parade in San Francisco, killing over a dozen people. Notorious dynamiters, some of whom had had official connection with organized labor, were indicted for this crime, two of whom have already been convicted. The Chamber of Commerce made no effort to connect this crime with labor troubles or leaders, and the persons arrested were ferreted out by city officials sympathetic with labor organizations. Inasmuch as the authorities were doing their duty, the Chamber of Commerce interfered at no point in the proceedings. It recognized that the throwing of a dynamite bomb was no different in principle than the violence on the waterfront, which disgraced the Riggers' and Stevedores' Union, but the chamber had no theory as to the persons responsible for this particular outrage. It was not due to the zeal of the enemies of organized labor, as Mr. Grady states, that the first suspect, Warren K. Billings, was convicted and sentenced to life imprisonment. It was the zeal of an outraged law which did not need, in this instance, the support of a law and order committee.

A culinary strike was precipitated in San Francisco. The Restaurant Owners' Association declared itself for the open shop. The Chamber of Commerce consistently supported the Restaurant Owners' Association in the lawful conduct of its business. The committee did not concern itself with hours or wages or working conditions, but confined its attention to the defense of such restaurants which were being illegally picketed. The Law and Order Committee secured scores of injunctions against the pickets, and finally secured, by popular vote, a city ordinance making all sorts of picketing illegal.

The Law and Order Committee has no quarrel with any man or set of men who obey the law. If organized labor interprets a demand for law obedience to be a drive at their sacred rights and privileges, so much the worse for a leader-

ship which makes a criminal and tyrannous program against constituted authority.

The Chamber of Commerce is against violence, coercion and the boycott. It is against these things by whomsoever employed. Mr. Grady in his article states that the Chamber of Commerce itself is using these same weapons. This statement is resented and categorically denied. Neither the chamber nor its committee nor its agents have encouraged or permitted any violence. It has coerced no business and would regard it as essentially impertinent and wrong to interfere in the slightest degree with the method which any man may desire to take in the lawful conduct of his business or in the character of the people employed. The chamber stands for the right to employ union or non-union men in whole or in part.

Mr. Grady states that the Chamber of Commerce has mobilized the economic, credit and publicity forces of the city against organized labor. This statement is absolutely false. The chamber recognizes that the unions are entitled to use every lawful method to secure and persuade people to join their forces. It likewise grants to the Restaurant Men's Association every legal right to secure members for their economic fights. It does not object to the lumbermen's association organizing a stevedores' company to run their business on an open shop basis, but it refuses to use the entire community to be a recruiting organization for such movements. The chamber did indeed secure from the business houses of San Francisco powers of attorney to make or cancel draying contracts, but it did this in order to secure the movement of freight from the terrorized waterfront, when the draymen and teamsters were unwilling or powerless to act. Not the slightest effort has been made to make the teaming business of San Francisco non-union, and these powers of attorney have never been exercised, as the goods were promptly moved.

It is charged by Mr. Grady that the Chamber of Commerce controls the entire press of San Francisco and has secured this control by the threatened withdrawal of advertising, particularly by department stores. This charge is absolutely false. The press of San Francisco has at no time, nor in any instance, come out definitely in favor of the law and order movement. No pressure has been brought upon any paper, and the press throughout the entire movement has reported the news events for both sides without editorial comment. When the Law and Order Committee has desired to draw the attention of the people to the significance of special tyrannies, or when it has desired to put significant facts before the public, it has purchased advertising space for that purpose and paid full rates for the same.

It is a pity that Mr. Grady made such a partisan report of the conditions in San Francisco as to entirely mislead the readers of the SURVEY. He states that "a splendid opportunity exists for the Chamber of Commerce to recognize the legitimate claims of labor, to further these claims by aiding necessary legislation and to work for the correction of abuses by whole-hearted cooperation with the best leaders; in a word, to adopt a policy that the most enlightened business men are putting into practice in their individual plants." Mr. Grady has thus stated the spirit and actions of this law and order movement. We do recognize the legitimate claims of labor, and under the finest type of constructive leadership are seeking to bring about the best possible condition for the worker.

The committee is composed of men who are distinguished for their fair and generous treatment of employes. The committee will not use the movement or the resources that are back of it for exploitation of labor, the increase of hours or the lessening of wages. It will not fight labor, but it will fight criminal violence and unlawful tyranny.

The Chamber of Commerce is not against collective bargaining. It believes that unions have every lawful right, and should be encouraged to secure through peaceable means an organization and membership which will enable them to bargain effectively with employers or groups of employers. We are well aware that trade unionism regards collective bargaining as absolutely essential and jealously guards every advance which it is possible to make along this line. Unionism is also suspicious of any movement which threatens this power. There is evidently a concensus of opinion among social thinkers that the open shop would destroy the power of collective bargaining. This would certainly be so if the open shop is defined as a shop closed to unions. The San Francisco Chamber of Commerce, however, is not contending for a shop closed against unions.

We do not believe that intimidation and violence are necessary weapons to effective collective bargaining, and we regard the advocates of such a doctrine as arch enemies of the laboring man, of the employers and of a free government. It would be a dangerous and impossible concession to any cause that its interests should be so sacred as to be above the law. No plea that evasion of law has been practiced by other classes with impunity, or that the economic forces seem to be in the hands of employers, can possibly justify the exercise of a law-breaking privilege.

We believe that unions have the fullest opportunity to establish collective bargaining without resort to violence.

In conclusion, in order that the policies and methods of the committee may be fully understood, the following statement of policy is officially made:

(1) A frank declaration of the right of any employer of labor to employ union men and to make such contracts with them or with their organizations and in such manner as he voluntarily desires. This, of course, implies the right of any employer to employ non-union men.

(2) Not the slightest interference on the part of the chamber with the lawful policies or methods of an individual business.

(3) Absolute abstinence from concern or activity in the merits of controversies between employer and employe.

(4) No use of the committee or the chamber as an arbitration or conciliatory board in labor disputes, notwithstanding belief in arbitration, but on the principle that special arbitration boards technically qualified for each controversy should be created and utilized.

(5) The encouragement at all times of the best possible conditions and wages for the worker and sympathy with reasonable legislation in his behalf.

(6) The absolute, unalterable, continuous insistence on the elimination of violence from labor disputes and the support of sworn and constituted authority in the preservation of the rights of every citizen as guaranteed by our government.

A Rejoinder

By *Harry F. Grady*

TO show the essential accuracy of my charge that the San Francisco "law and order" campaign is not bona fide, but is actually directed against organized labor, a brief analysis of Mr. Lynch's article is sufficient. He states that there is "only one plank in our platform, viz., obedience to law under a free government." But what is his next sentence? "Our stand for the open shop is simply that and nothing more"! No one can deny the right of the Chamber of Commerce to oppose the closed shop. I have not done so. But the closed

shop is just as legal as the open shop and a law-and-order campaign has no relevancy whatsoever to such an issue. At the outset Mr. Lynch contradicts his own statement and furnishes the evidence for my charge that the fight is against the lawful activities of the unions.

He furnishes more evidence of the same sort when he says that the Chamber of Commerce opposed picketing in the culinary strike and got an ordinance passed making picketing of all kinds illegal. Picketing was perfectly legal when the Chamber of Commerce began its work. Does the Law and Order Committee exist for the purpose of upholding existing laws, or for getting new laws passed in order that it may uphold them? If the latter, any political group, even the anarchists, could call themselves law and order advocates.

More evidence appears in his admission that "the chamber did indeed secure from the business houses of San Francisco powers of attorney to make or cancel draying contracts. . . ." It would have been better if Mr. Lynch had ended his sentence right there; but he continues, "it did this to secure the movement of freight from the terrorized waterfront when the draymen and teamsters were unwilling or powerless to act." The waterfront strike was adjusted in the middle of July and after that there was no interference with draymen or teamsters. The fact is, nevertheless, that two months after the strike had ended such powers of attorney for a three-year period were being sought by the Chamber of Commerce. I have in my possession an appeal for such powers, signed by the president of the Chamber of Commerce and sent to a San Francisco business man. It is dated September 18, 1916.

Mr. Lynch says of the bomb outrage that the Chamber of Commerce "made no effort to connect this crime with labor

troubles or leaders." Yet in a statement published in the San Francisco *Call* of August 25, President Koster, of the Chamber of Commerce, linked together the waterfront strike and the bomb explosion as evidence of the need of the open shop. It was during the course of the trial of Billings, who was convicted of complicity in the bomb throwing, that I interviewed Mr. Koster on the subject of the open-shop fight. It happened to be on a day when a recess had been allowed in the trial. I had to wait half an hour because Mr. Koster was engaged with a caller. When I did go in I met the district attorney, in charge of the prosecution, coming out. He had utilized the first recess in the trial by seeking a conference with the president of the organization which Mr. Lynch says "interfered at no point in the proceedings."

It is rather curious that, in denying my charge that the newspapers of San Francisco are controlled by the Chamber of Commerce, Mr. Lynch should say: "The press of San Francisco has at no time nor in any instance come out definitely in favor of the law and order movement. . . . The press . . . has reported the news events for both sides without editorial comment." That is precisely the fact. Not a single paper has discussed on its editorial page this movement that has enlisted the interest of the whole country. One of the papers refused to publish a letter that I offered and the editor explained to me personally that he could not do it "without the approval of the Chamber of Commerce," who, he said, were determining the policy of his paper.

Need I say more? No one who is seriously concerned about the future of democratic institutions can view without deep apprehension the "law and order" program of the San Francisco Chamber of Commerce.

A Coalition Revolution

An Interview with Prof. Vladimir G. Simkhovitch

By Ruth Pickering

NOBILITY, working men, peasants and soldiers—all classes apparently are united in the present Russian revolution. In that fact, believes Prof. Vladimir G. Simkhovitch, who has been a student of the Russian revolutionary movement for the last twenty years, lies its peculiar power. A patriotic, national, anti-German sentiment binds the people together against the inefficiency of autocracy made blatant by the privations of both army and civil populace during the three years of war.

For the continuation of this civil balance, Professor Simkhovitch shows some apprehension. "I am like an anxious father," he says, "because I lived through the last revolution with all its high hopes and deep disappointments." He fears that each ultra-radical revolutionist may look now for the immediate achievement of all his dreams, for the complete establishment of the millennium. This would mean ten thousand schemes of government competing; it would lead only to clashes of opinion and interest, a tower of babel with a confusion of tongues, and ruin the result.

As one means of avoiding civil war Professor Simkhovitch rather hopes that a semblance of former rule in the shape of a figurehead monarch may remain; a utilization of an old tradition as in Great Britain together with a thoroughly responsible and democratic government. In the strength of the present council in control Professor Simkhovitch believes im-

licitly—a group of competent, proven executives, liberal and popular. Since power is held by them, whether it be a monarchy or a republic under which they will work is merely a matter of expediency. Doctrinaire discussion and factional enmity would impede their expulsion of the invader and their establishment of government by the people.

Professor Simkhovitch recalls the revolution of 1905 which resulted so disastrously. And, he points out, the land reforms over which the liberals and the ultra-radicals split at that time is a problem which must be faced and settled once more. Much of the poverty and oppression of the Russian peasant has been due to unequal land distribution. In that great and bloody revolution of 1905, after the Russo-Japanese war, which resulted in the creation of the Duma by the October manifesto, the bureaucracy succeeded in organizing the counter-revolution with its fearful massacres. And, in this crisis, radicals of the first Duma contributed unwittingly to the reactionaries. They wanted immediate expropriation by the government of landed estates without compensation to be allotted to the peasants. This meant the confiscation of the property of the entire country gentry, a large and in the main fairly progressive class.

"The Russian nobility and gentry," Professor Simkhovitch continues, "while it furnishes the bulk of the bureaucracy and army officers, is, nevertheless, far more liberal than the landed

THE PEASANT'S BURDEN OF BUREAUCRATIC MISRULE

This cartoon and the two on the next page are from papers, in the possession of Dr. Simkhovitch, which were published during the revolution of 1905-6 and immediately suppressed

aristocracy of Germany, Austria or any other country. It is, in fact, this very gentry that is responsible for much of the good work of the rural county councils called zemstvos, which represent the progressive opinion of Russia. And it was this class which was in the main favorable to the revolution of 1905, desirous of a legal and constitutional order in Russia.

"When the radicals advocated expropriation without compensation, a change very quickly took place in the minds of the nobility. In so far as the peasantry was in need of additional land, it might have been purchased from the owners of estates by the government, subdivided among the peasantry, and the transaction financed by bond issue. Fiscally, it might have been so engineered that financial burdens might have been carried by the rich rather than the poor; and without confiscating property.

"At the proposal of confiscation from the radicals, the government turned the tables. It firmly opposed expropriation, expressed a willingness to buy estates and subdivide them among the peasantry; offering as a matter of fact exorbitant prices.

"The gentry had the alternative of complete ruin on the one hand, and the assurance of either the status quo or the sale of their lands at inflated values. The vivid memory of the recent agrarian revolution that devastated twenty-seven and one-half million dollars' worth of gentry property was sufficient to turn the overwhelming majority of nobility to the support of the reactionary government.

"The reaction thus stimulated by government and extremists alike left Russia far from a parliamentary government. The bureaucratic misrule continued, until it has now again been called to trial for inefficiency by the terrific stress of the present war. Today all classes, including the nobility, support the revolution.

"We must esteem the revolutionary spirit of the workingman, the revolutionary spirit of members of oppressed races," continued Professor Simkhovitch, "but we must not fail to recognize that same spirit of the upper classes, well aware that they have little to gain, and much to lose."

Perhaps more than any one other thing, according to the professor, the zemstvos are responsible for this welding together of classes. They have worked with the soldier and the

TIT FOR TAT

Petrouchka, the Russian Punch and Judy

peasant; they have brought the noble and the revolutionist together.

Because the Duma did not in any way control government policy, people have relied more and more on the zemstvos during this present war. Since the extra-legal unionizing of these county councils the growth of their work and responsibilities has become such that they are today the constructive and at the same time liberalizing influence of the country.

For forty years past they have been extending this influence. Previous to the war the zemstvos promoted education,

built roads, improved the public health and ministered to the people in time of distress. They gave help to settlers in Siberia and to that part of the population suffering from scanty harvest. In the great famine of 1907 they organized most of the relief work. They have, however, been constantly hampered by the government. Their meetings have been held always under the surveillance of police, and the convention of various zemstvos has been very often forbidden.

But their work during the last war has assumed special significance, and in the face of governmental inefficiency has become absolutely essential to soldiers and people. Almost the whole task of interior relief has been in their hands. Not only have they erected hospitals for both soldiers and refugees, but they have supervised the digging of trenches, organized the economic forces of the country to a large extent, transported food, built roads, furnished cars for the wounded. They have, what is more, taken over the manufacture of munitions, commissary supplies, shoe factories, tanneries, clothing factories. By them the coming elections will undoubtedly be to a large extent controlled; and into their hands will be placed now more than ever the responsibility for the distribution of food and ammunition, so neglected by the previous government. Prince Lvoff, chief executive of the zemstvos, is now prime minister of the new government, and the press dispatches seem to indicate that he may be the people's choice for president if the republic is the accepted regime.

Of the specific reforms that the provisional government promises, Dr. Simkhovitch believes all will be carried into effect. Universal suffrage will bring into the Duma more adequate representation of the working classes. He doubts that suffrage will include women, for the time being, though it may easily come in the near future. Trade unionism which has had a precarious foothold in Russia because of government persecution will have hereafter, as in other countries, only the opposition of the employer to reckon with. Whether Russia is to be a monarchy or a republic, it is committed to the principles of democracy without racial or religious discrimination. The emancipation of the Jews is an assured fact. Prison doors in and about the cities where soldiers are

“SIC TRANSIT—”

in control are thrown open wide, and in Siberia political exiles may prepare to return to a new and happier country, whose freedom they suffered to prepare. For the great peasant class the revolution will mean more equitable taxation; better schooling; legislative and fiscal assistance; and wider representation in the Duma.

"It is difficult, of course, to prophesy specific reforms," said Professor Simkhovitch in conclusion. "The main thing

now in Russia is a more concentrated effort to push the war to a decisive conclusion. But Russian revolutionary methods are contagious. Syndicalism and the general strike, emulating the example of Russia's general strike in 1905, were prevalent in France for years following. Perhaps further warfare may lead to a triumph of democracy among the Central Powers, with the possible overthrow of the Hapsburgs and the Hohenzollerns."

Bridling the Mississippi

By Morris Knowles

IN the midst of the dramatic debates on the armed neutrality bill, but little public attention was attracted to the signing by the President of the Ransdell-Humphreys flood bill. And yet it is not too much to say that few pieces of legislation in recent years have marked a more important development in national internal policy. For in this bill the federal government has committed itself for the first time to an interest in the control and prevention of floods—to stream regulation in its largest sense—and has provided, under the "welfare clause" of the constitution, the foundation for a legislative and administrative system that is certain to become one of the important national governmental activities of the United States. The possibilities of benefits to the social and living conditions of some millions of people, living within the flood plains of our great river systems, are almost unlimited.

It is true, of course, that vast sums have been spent upon the improvement of the rivers of the country, and that a portion of these expenditures have been for works that have contributed to the protection of some portions of the country from the destructive effect of floods. The theory of all of the rivers and harbors legislation, however, has been that the federal government could interest itself in river improvements only to the extent that the improvement of navigation was accomplished thereby; and that Congress drew its authority therefor solely from the interstate commerce clause of the constitution. Only projects that could be brought under the head of navigation improvement, therefore, received congressional attention; and, although Congress at times stretched the commerce clause close to the breaking point to include some of the expenditures authorized, nevertheless a vast field of public works, including projects of undoubted national interest, remained closed to the federal government.

Even so late as December 4, 1912, President Taft was hailed as radical in his views, when in an address before the Rivers and Harbors Congress at Washington, D. C., he said, referring to the devastation in the Mississippi valley:

"Under the welfare clause of the constitution, shall we spend for that great section of the country \$40,000,000 or \$50,000,000, in order to make the levees of that river a system which will prevent destruction? . . . Under the constitution we can expend money from the treasury of the United States for the general welfare, and that would seem to include the avoidance of danger if it affects so large a part of the country that it may be said to affect the whole country."

It was, therefore, an event of first importance when both houses of Congress passed and the President approved a bill appropriating \$45,000,000 "for controlling the floods of the

Mississippi river, and continuing its improvement from the head of the passes to the mouth of the Ohio river"; together with \$5,000,000 for "controlling the floods, removing the debris, and continuing the improvement of the Sacramento river."

The absence of any reference to the improvement of navigation in legislation appropriating such large sums is sufficiently striking testimony to the advance represented by this bill, now the law of the land. And the provisions for cooperation of representatives of other national departments with the secretary of war, also with the Mississippi River Commission and the California Debris Commission, a state organization, are suggestive of the still broader cooperation between states, cities, counties, towns and private interests that may prove necessary to carry out some of the future projects of this sort.

Even more promising for the future, however, are the provisions for federal investigation of flood control projects, under the direction of a permanent Congressional Flood Committee.

"All examinations and reports," it is provided, "which may now be made by the Board of Engineers for Rivers and Harbors upon request of the Committee on Rivers and Harbors relating to works or projects of navigation shall in like manner be made upon request of the Committee on Flood Control on all works and projects relating to flood control." In another section, it is provided: "All examinations and surveys of projects relating to flood control shall include a comprehensive study of the watershed or watersheds, and the report thereon in addition to any other matter upon which a report is required shall give such data as it may be practicable to secure in regard to (a) the extent and character of the area to be affected by the proposed improvement; (b) the probable effect upon any navigable water or waterway; (c) the possible economical development and utilization of water power; and (d) such other uses as may be properly related to or coordinated with the project."

Here we have the framework of a system of federal investigation conforming admirably to the doctrines that have been preached for years by the water conservationists—treatment of each stream as a whole from source to mouth; and consideration of all the possible uses of water, so as to secure by development the greatest possible good for the greatest number. If the result is the conservation of but a fraction of the value in water which now runs off each year unchecked to the sea, causing great devastation at times of flood; if it leads us but a step nearer to the dream of completely regulated stream flow, then we are fully justified in referring to this bill as one of the most important legislative events of recent years.

COMMON WELFARE

EIGHT-HOUR LAW UPHELD BY THE SUPREME COURT

ON March 19 the United States Supreme Court sustained the Adamson eight-hour law for railroad employes. The agreement entered into in the early morning of the same day between the railway managers and the chiefs of the four railway brotherhoods terminated a controversy which, in addition to its long duration, was in other respects as well unique in American industrial history.

The threat of a nation-wide railroad strike last week, that brought hurrying to New York two members of the President's cabinet and two members of the advisory commission of the Council of National Defense, to mediate between managers and men, was the third since the eight-hour agitation began. The first one, when a strike was called to take place last September 4, Labor Day, was averted by the passage of the Adamson law.

The situation grew threatening once more when on January 1, the day that the law was to go into effect, dawned to find it held up on account of an appeal to the courts. The brotherhoods wanted the railroads to put the terms of the law into effect without waiting for the Supreme Court. The latter, however, had entered into an agreement with the attorney general to keep a record of hours and mileage from January 1 and to give the men the back pay due them if the court should uphold the law. The brotherhood chiefs pointed out that the strike order of last summer was still in effect, and they issued a circular to the membership of their organizations outlining the situation, evidently with a view to preparing them for eventualities. No strike order materialized at this time, however.

The argument on the Adamson law was made before the Supreme Court on January 8. The brotherhoods expected a decision early in February. None was forthcoming, and as each successive "decision day" has passed by with no opinion on the Adamson law, they have grown increasingly restive.

When no decision was rendered on March 12, the brotherhood chiefs agreed among themselves that their patience had

been exhausted, and they planned to strike on March 17.

Then came intervention from Washington. Secretaries Lane and Wilson, and two members of the advisory commission of the Council for National Defense, Daniel Willard, president of the Baltimore & Ohio Railroad, and Samuel Gompers, president of the American Federation of Labor, came to New York to effect an agreement, if possible. As a result of their intervention the brotherhood chiefs agreed to postpone the strike until March 19, for the purpose of giving the Supreme Court one more of its regular decision days for the Adamson act. It was announced that if the decision should be favorable the strike would be called off; if it should be unfavorable, or if there should be no decision at all, the strike would be put into effect despite the offer of the railroads to leave the adjustment of the controversy to any board of arbitration whom the President might name.

This was the situation when word came early Monday morning of the sinking of three American ships by German submarines. An appeal to patriotism was made and the managers yielded to the demands of the men that the terms of the Adamson law—ten hours' pay for

eight hours' work—should be put into effect regardless of the decision of the court. Thus one of the most interesting situations in the history of industrial controversy was prevented from developing.

The decision of the court on the Adamson law has started some speculation as to the relation of this decision to other cases now before the court. There is the Oregon ten-hour case, involving the constitutionality of a law limiting hours of labor for grown men. There is the minimum wage case, also from Oregon, but vitally affecting legislation in a half dozen states. The Adamson law, according to Chief Justice White, is both an hour-law and a wage-law. It would seem, therefore, that the reasoning in this case must have some relation to one or the other of these Oregon cases, possibly to both.

The full text of the decision of the majority of the court is not yet at hand. Extracts published in the newspapers, however, indicate some very interesting points of view. One of the arguments employed by attorneys for the railroads in attacking the law was based upon the alleged inequality in the law, because it was limited in its application to employes engaged in moving trains. "But," said the court, "such employes were those concerning whom the dispute in which wages existed, growing out of which the threat of interruption of interstate commerce arose—a consideration which establishes an adequate basis for the statutory classification." This might seem to be a suggestion from the Supreme Court that the way to interest the government in conditions of labor, and induce it to take action for the improvement of those conditions, is for employes to threaten to strike.

The majority of the court, moreover, seems clearly to hold a compulsory arbitration law constitutional. "We are of the opinion that . . . the act which is before us was clearly within the legislative power of Congress to adopt, and that in substance and effect it amounted to an exertion of its authority, under the circumstances disclosed, to compulsorily arbitrate the dispute between the parties. . . ."

From a poster in the thrift campaign of the industrial department, International Committee of the Y. M. C. A.

PUBLIC SCHOOLS AND THE NATIONAL CRISIS

At a meeting of the Cleveland Board of Education on March 12, on motion of E. M. Williams, a declaration of principles in the present national crisis was adopted, which had been forwarded to the board of education in the largest city in each county of Ohio and the largest city in each state with the request that they take similar action.

The board bases its action on social considerations. To quote:

"The first duty of a people is to protect from assault of every kind, from within or without, its life as a people and the principles and ideals upon which its national existence as a people is founded.

"Crime, poverty, riot, oppression of the weak by the strong, disease, shirking of duty and ignorance are some of the things from within, from the results of which society must protect itself.

"Unjustified attack by another nation, open or insidious, by armed force or otherwise, denial of our rights, ruthless and wilful disregard by one nation of those common rights of humanity which one nation enjoys with its fellows and which it has a common obligation to defend are some of the assaults from without, against which a people must as a nation take action if that people cares to exist as a nation.

"By means of its courts, police and fire departments, health boards, quarantine and many other agencies, we protect ourselves from the dangers from within. To secure this protection we limit and rightly so the liberty of the individual in so far as it is necessary to insure the welfare of us all.

"As to dangers from without, we must be prepared to combat not the average but the lowest standard of international morality existing in nations strong enough to cause us trouble.

"Until then, the spirit of aggression is definitely removed from the last strong nation, it is necessary for us to be able to resist any possible aggression on its part. The greater we become in our prosperity under high and noble principles and ideals, the greater will be the necessity of our being prepared to defend them.

"A citizenry trained to arms and adequately equipped is the essential of the safe protection of national life from assaults from without. Here, as in the other case, the liberty of the individual must be circumscribed so far as is necessary for the common good.

"In a nation whose government is 'of the people, by the people, and for the people,' the prerequisite for both kinds of defense is education.

There must be a mental and moral equipment in each individual that will enable him on the one hand to care for

himself to his best advantage, and on the other hand will cause him, even to the ultimate degree of sacrifice, to assume his share in the common defense, whether the assaults are from within or without.

"Our state has established *free* education in order that every child might have the opportunity of growing into a useful *man* or *woman*. It has made this education *compulsory* as the most potent means of causing every child to grow into a useful *citizen*.

THE RESOLUTIONS

Resolved, by the Board of Education of the City School District of Cleveland

That, in view of the existing conditions in our country, there can be no loyalty in silence, and that this board can be no longer silent or neutral,

That we express our faith in the essential loyalty and unity of our citizens in this city of over 700,000, of whom more than 75 per cent are said to be of foreign birth or parentage.

That this board recognize that the country is now in a situation of assault from without.

That in the present war the questions that have arisen between the United States and the allies are questions of property and convenience only, questions that can be settled judicially after the war.

That Germany has wantonly attacked the lives of our citizens, that the lives of many more are endangered unless Germany can be induced or compelled to cease the interference with their lawful rights.

That we must safeguard against or redress the worst wrongs first and therefore could not take sides against both groups of combatants any more than we could side with both.

That aside from ourselves, we must stand for the rights of humanity against the lawless and ruthless assaults of a power that seeks no justification other than its own will.

That propaganda of many peace societies and others is undermining national morality and national security and must be combatted.

That clear thinking leading to courageous performance of duty individually and as a people is the need of the hour.

That lessons to this end by lectures, talks or other available means is not only a permissive activity, but an imperative duty on those entrusted with our educational affairs.

"We are now in the United States facing a situation that compels us to a decision that those entrusted with the direction of education must, if true to the obligations of their office, see to it that this now all important side of education be attended to; that the duty of our country in this hour be made plain, not alone to the child, but wherever necessary to the parent who conjointly with the teacher is influencing the child's educational progress.

"Voices and influences making for cowardice and national immorality and consequent destruction are abroad in the land which must be combated and killed at whatever cost, if this generation is to hand on to the next the priceless heritage we are all too prone to forget came to us by virtue of the sacrifice and blood of our fathers.

"We, ourselves and our children, must be taught and again taught and yet again taught that wrong, injustice, oppression, unjust assault must be *fought* and must come to know the utter silliness of declining war if war be necessary to overcome evil and hold up high principles and ideals.

"No nation can rightfully omit to use its schools for this purpose."

The resolutions based on this preamble are published in the adjoining panel.

The president, the superintendent and one member of the board were authorized to arrange for a series of meetings in the schools on the "general subject of duties of citizenship considered especially from the national standpoint." The meetings are to be for scholars or parents or as neighborhood meetings, and either during or after school hours as the committee may decide best in each case. The resolutions direct that the meetings "shall avowedly admit these principles and facts as their motive;" that the speakers be chosen "with the knowledge that their views coincide with the spirit of these resolutions," and that "at such meetings there shall be no debate."

WHERE WAR AND "HYPHENS" TOUCH THE SCHOOLS

AMERICANIZATION and military training in the public schools were prominent themes of discussion before the school superintendents of the country at the annual session of the Department of Superintendence of the National Education Association in Kansas City. Opinions regarding military training were widely divided. Superintendent Snyder, of Jersey City, led the group opposed, while Superintendent Davidson, of Pittsburgh, was the chief spokesman for those who favored it. There was unanimous agreement, of course, that the schools should do everything possible to improve the physical welfare of the children. And whatever one's attitude toward formal military training, an observer could only feel that for these superintendents the national situation has dramatically emphasized the need of supplementing, if not supplanting, the training of the schools with physical exercise and with practical activities from the earliest years that aim to prepare children to live efficiently under modern social and economic conditions.

The great emphasis given in the past

to the discussion of formal methods of teaching was absent this year, marked increase of attention being given to such topics as the meaning and scope of vocational and physical training and the place of play and hygiene in the educational program. The Gary plan, for instance, which was discussed furtively in the lobbies of the Detroit hotels last year, was given an important place on the programs of three of the most important meetings. It was also the topic for the round table discussion of superintendents of the largest cities of the country. This alone indicates the changing attitude of school men toward modern social demands upon education and the recognition of the popular wish that the schools shall be made a more flexible instrument for fitting children for life.

This point was further emphasized in the meeting at which experiments in education were discussed. The conclusion was inevitable that at last the movement to change school systems from factories into laboratories has attained an irresistible momentum and that the time is not far distant when the school will in a real sense become a living, socializing institution.

In the conference on Americanization, Superintendent Jenkins, in speaking of the evening schools in New York city, said that the old plan of offering mere academic courses to foreigners, with strict adherence to the traditional methods of instruction used in the day schools

for children, had failed. The night schools, he maintained, would have to be built upon the community-center basis. The school will become a real Americanizing influence, not, he believed, through emphasis alone upon the form of subject matter taught, but through the socializing influence of group meetings, with due respect to racial and national cleavages. These furnish motives for the teaching of English and for the learning of American customs without sacrificing appreciation of the customs of the old countries.

THE RED CROSS IN THE WAKE OF A TORNADO

PIERCING for one brief day the news of absorbing developments at home and abroad, the tornado that killed twenty-two persons in Newcastle, Ind., and laid waste a large section of the city on March 11, lapsed into a forgotten incident within twenty-four hours. Meanwhile Newcastle, her neighboring towns and territory, and the resources of the American Red Cross, have been bringing order out of devastation and have organized the work of permanent relief.

The storm did not remain in the clouds after striking Newcastle. It touched earth again in Montgomery county, Ohio, and demolished buildings and killed live stock belonging to fifty farmers, causing damage estimated at the time at \$100,000. The damage in Newcastle is estimated at a million.

In Newcastle nineteen people were killed outright and three more died before the end of the week. It was thought that two or three others might die. Ten of the dead were children. One whole family was wiped out. Two orphans, one widow and four widowers were left by the tornado. Forty persons were seriously injured and sixty slightly.

Three hundred twenty-three houses were struck, 200 of these being totally demolished. The majority were workmen's homes. A heavy sleet fell as soon as the storm abated and damaged the furniture and other contents of houses exposed by the cyclone. The plant of a rolling mill employing 200 men was destroyed. Flower-growing is one of the chief industries of Newcastle and many greenhouses were ruined.

The tornado occurred at sundown and news of its destruction was sent abroad that evening. Though the rest of the country did not learn of the disaster until morning, J. J. O'Connor, representative of the Red Cross in Chicago, was in telegraphic communication with Mayor Watkins, of Newcastle, by midnight. At 2 A. M. he had the mayor's report of damage. Early Monday he received instruction from headquarters in Washington to go at once to Newcastle, and he arrived there at three o'clock that afternoon.

Meanwhile Newcastle and her neighbors had come to the rescue. Memories of the 1913 floods were still fresh. Nobody in that part of the country needed

STUDENTS in Central High School, Newark, N. J., gathered around D. C. Knozelton, head of the Department of History, for the weekly distribution of the SURVEY in class use. College classes in applied economics, social economy and related subjects have for years used the SURVEY as required or supplemental reading. Of late it has increasingly proved its value for the younger students in high schools and seminaries

THE SURVEY FOR SCHOOLS

A supplementary text in American history, civics and economics.

to be told what a disaster meant. Houses were opened to the homeless and food and shelter for the sufferers provided by individual families. Governor Goodrich ordered two companies of state militia to the scene on Sunday night. Early Monday the devastated area was under patrol and looting was thus from the start almost entirely prevented. Physicians and nurses hurried to Newcastle from Muncie, Indianapolis and other neighboring towns. The three local ambulances were supplemented within a few hours by three from Muncie, which brought doctors and medical supplies.

The mayor closed all saloons. Workmen from the factories were organized into gangs to clean the streets. Carpenters and masons were advertised for in nearby towns, and fifty carpenters from Muncie were quickly on the scene, stripping away the shattered portions of buildings and getting ready for rebuilding. A strict house quarantine was set up. Moving permits were granted to owners wanting to convey property out of the devastated district. Though a nation-wide railroad strike was threatening, dealers in coal and building supplies did their utmost to provision the city at once.

Mr. O'Connor found few emergency relief measures necessary. No public sleeping quarters had been required, and after Monday night no public feeding was necessary. Local hospital facilities not being sufficient, the Red Cross called twelve Red Cross nurses from neighboring cities and established an emergency hospital. This will be continued as long as necessary. The main task, however, was to make an accurate canvass of the losses and to begin rebuilding and refurnishing houses. For this, money and organization were the chief requisites. At a large mass meeting Monday night the community voted to adopt the Red Cross policies in this work, and their approval was endorsed the next day by the mayor and the city council.

Mr. O'Connor joined hands with the local relief committee. It was agreed not to attempt to restore losses in full or to make a *pro rata* distribution of relief funds; the former would be impossible and the latter would not secure the community against the ultimate dependence of some of the sufferers. The basis of relief, it was decided, should be the actual need of the victims.

On Tuesday the trained relief agents requisitioned by the Red Cross began to arrive—three from Chicago, two from Cleveland and several from Indianapolis, among them a number of nurses to care for the injured. These agents immediately took charge of the registration and visiting of those applying for aid. Three executives of charitable organizations in Indianapolis arrived to superintend the work: Mr. Foster, of the Associated

TAUGHT BY EXPERIENCE

Houses and living quarters for 1,000 of its employes erected some years ago by the Brunswick-Balke-Collender Company at its plant in Big Bay, Mich., proved so successful that it is following suit in the extension of its Muskegon plant. There are to be 48 double houses, shown above in process of construction, each of different pattern but all with hardwood trim and modern improvements

Charities; Mr. Kauffman, of the Jewish Aid Society, and Mr. Loomis, of the Children's Aid Society.

By the end of the week it was clear that assistance in rebuilding and refurnishing homes would be required for 150 families. For this work Newcastle herself is raising \$25,000. Estimates vary, but it is probable that \$50,000 will be sufficient for the purpose. Neighboring cities have offered financial assistance and individuals have made large donations. It is not likely that there will be any lack of money. Meanwhile hammers have already begun to resound, and Newcastle is busy rebuilding her devastated area.

PICTURES THE CURE FOR LEGISLATIVE SLOTH

A STORY current in one of our states recites that a recalcitrant legislator was once won over to a belief in provision for the feeble-minded by having to witness an imbecile boy, planted on his own front steps by the advocates of such provision, throw an epileptic fit while there were distinguished guests in the house. Whether such an event ever occurred or not, much of the argument that has most impressed legislators this year has been given to them in the form of pictures and stereopticon slides showing concretely why the feeble-minded need to be segregated and what can be done for them in good custodial institutions. To it may be credited much of the legislative progress which promises that the winter of 1916-17 will go down in history as a banner year in provision for the feeble-minded.

Legislators have been presented with pictures of comely individuals, who would pass for normal to any but the

most experienced observers, and then they have been told that these people are feeble-minded and that their children stand a strong chance of perpetuating the taint. Family charts have been put before them, showing the vitiating spread of mental defectiveness throughout a whole stock, and they have been made to see as never before what a continuous and costly menace feeble-mindedness is.

In Arkansas an aggressive fight for a first state institution for the feeble-minded, conducted largely by the State Board of Charities, has just been won. Both houses of the legislature have passed the bill and the governor is committed to it. It not only provides 4,000 acres for the new school but also one-fourth of the proceeds from the sale of other land estimated to be worth \$200,000. Four hundred and fifty feeble-minded inmates of the State Hospital for the Insane, the state penitentiary and other institutions, may be "requisitioned" by the superintendent of the school. These institutions must continue to pay for the maintenance of inmates so transferred.

The lower branch of the legislature passed this bill by a vote of 64 to 1. It passed the Senate five days later by a vote of 20 to 3. A fortnight before both houses had been addressed in joint session by Alexander Johnson, field secretary of the National Committee on Provision for the Feeble-minded, who was introduced by the governor and who used stereopticon slides to drive home the modern arguments for segregation. Local advocates of the bill attribute its passage, in large measure, to this method of presentation.

In South Carolina, which also has yet to establish its first institution for the feeble-minded, the impression made

upon the law-makers by the same graphic mode of argument goes back to 1915. At the State Conference of Charities and Corrections that year both the governor and the speaker of the House heard, and saw, the lecture. They invited Mr. Johnson to address a joint session of House and Senate in January, 1916, and this lecture was repeated to the present legislature. Meanwhile some intensive field work had been done in the state and the newly created Board of State Charities had urged action. Last month the House passed a measure providing facilities for segregation and the bill was favorably reported in the Senate. It was crowded out in the final rush of legislation and goes over to 1918, as on second reading, so that it will not have to return to the House unless amended.

In Delaware, where a bill is still pending, the law-makers themselves have not come under the influence of the stereopticon lecture but much of the general demand for the measure has come from audiences that have heard it. Several of these have consisted exclusively of men. The measure has already passed the house unanimously and those interested are confident of its adoption. A canvass of Newcastle county by the federal Children's Bureau showed the percentage of feeble-mindedness to be quite up to the usual estimate of one in 300 of the general population.

A comprehensive bill is now pending in the Arizona legislature. Though the legislation proposed by a Utah commission that has been studying the subject failed of passage, the commission will continue its work during the coming year. Seldom have so many states showed in any one session so vigorous a sense of the desirability of fending off this racial taint.

THROWING LABOR LAWS ON THE SCRAP HEAP

WHILE England is now reducing hours of work and raising wages to remedy her mistake of repealing women's labor laws at the beginning of war, patriotic fervor in the United States has led to a first attempt to break down safeguards protecting women workers.

In the New York Assembly Louis Johnson, of Seneca Falls, has introduced a bill amending the labor law so as to permit night work, a seven-day week and unrestricted working day for "persons sixteen years of age and upward engaged in the manufacture of supplies of any sort for the military and naval forces of the United States or of any state." Although the bill is called an emergency measure, no time limit is set for its applications to the labor law. Its applications, too, are endless. It includes women employed in the manufacture of

buttons, shoes, canned goods and all the innumerable paraphernalia for military equipment, as well as in the making of guns and gunpowder.

The bill has been referred to the Committee on Labor and Industries before whom a hearing will be held in the near future. The New York City Consumer's League is leading the opposition to its enactment.

AN OLD VILLAGE ON A NEW MODEL

WHAT is claimed to be "the first complete community survey in Ohio" is hailed by Bellville as the starting point of its race to become "the model village of the United States." Its initiative had an interesting social source.

Twenty-four years ago a young man, Rollin H. Cockley by name, became one of its citizens and ventured upon the hazardous undertaking of establishing a bank after two others had failed. In token of gratitude for his success, he desired that all the property he had accumulated in Bellville be devoted to the promotion of the highest welfare of that community. His widow, who survived him only one month, carried out this desire by bequeathing \$20,000 to his brother, Prof. William B. Cockley, of the Ohio State University Department of Law, leaving him to decide how the fund could best promote the interests of Bellville.

After conference with some of its citizens and with some of his university colleagues, a village survey and program were undertaken. Prof. James E. Haggerty, dean of the College of Commerce and Journalism at the university, undertook to direct the work, with the assistance of Prof. E. W. Burgess, then one of his associates, who recently moved to the University of Chicago. A local executive committee cooperated effectively throughout.

Experts investigated the village wells and drainage, applied physical and educational tests to the school children, gathered and analyzed its vital statistics and took accurate inventories of the economic, educational, social and religious assets and liabilities of the village. It was found to be losing population, especially the young men and women educated in its high school. To fit its young people for efficient life in the village, a domestic science laboratory, agricultural courses, a gymnasium and a large assembly hall were shown to be necessary. Recreational facilities were to be sought through the cooperation of the village and the county. Protection against undesirable outside influences undermining the work of the schools was deemed necessary. A large number of aged couples and widows living alone disclosed the field for a state system of old-age insurance or pensions.

The churches were brought to realize

the need of cooperation by learning that they had 1,675 seats for a population of 913, a membership of 534 comprising not more than half the men and two-thirds of the women, and yet an average attendance of only 245 on public worship and 357 at Sunday school. With an investment of over \$28,000 in five separate establishments, they so split up the \$4,500 contributed to all that no one of them had an adequate support.

The survey and recommended program, within the few months since the findings were submitted to the village, have resulted, according to the *Mansfield News*, in a new civic spirit which has already expressed itself in the organization of the Bellville Community Welfare Association, with a trained community secretary, the cooperation of the merchants to improve the commercial service of the village, the rally of Boy Scouts' and Campfire Girls' interests to increase recreational facilities and the appointment of a permanent church organization, which it is said will use the information gathered by the survey to advance the religious and moral life of the entire community.

MODERN METHODS FOR A COUNTY PENITENTIARY

THE appointment of Calvin Derrick as first warden of the new Westchester county penitentiary, and the creation of a new department of prevention and cooperation under the charge of John R. Shillady, were announced recently by V. Everit Macy, commissioner of charities and corrections of Westchester county, New York.

The penitentiary is one of three institutions consolidated under Mr. Macy's management by the new law that went into effect January 1. The other two are the general county hospital and the almshouse. An appropriation of \$650,000, in addition to the \$300,000 already authorized, has just been made for the hospital. This brings the total money spent by the county on these institutions up to \$2,400,000. The hospital will have 500 beds, 200 of which will be for tuberculous patients.

Mr. Derrick, who went to Sing Sing last August to take charge of the self-government activities there and left because he believed his work was not being given a fair trial by the state prison administration, will become warden March 15. The appointment is provisional, since the office is a civil service one. One hundred twenty county prisoners will shortly be transferred to the new penitentiary from Blackwell's Island, New York city, where they are now being boarded, and Westchester county will begin for the first time to care for its own law-breakers. It is expected that Mr. Derrick will inaugurate methods of self-government and that prisoners will be paid

for their work. The new warden is still superintendent of the state reformatory at Ione, Cal., but an effort will be made to secure another year's leave of absence for him. He is now acting as expert adviser to the New York city Department of Corrections.

Dr. Bernard Glueck, psychiatrist at Sing Sing, will spend three half days a week at the Westchester penitentiary starting a psychiatric clinic there.

The work of the new department of prevention and cooperation will be done without expense to the county, following the precedent of others of Mr. Macy's innovations. It will study the charitable and correctional problems of Westchester county, the causes of dependency and delinquency, and collect information regarding the best methods practiced elsewhere to deal with similar evils.

"The department will aim," said Mr. Macy, "to coordinate our work in a very definite way with medical and school clinics, with probation officers and truant officers, with courts and judges, with agencies working for social betterment, and with physicians and teachers.

"We plan, through the department, to utilize every available means of making sure when our sick are discharged to their homes that they return to conditions favorable for continuance in good health. We intend, if a proper hospital is erected, that Westchester county shall be fully abreast of the best type of hospital social service work, as it is called, now being done by other public hospitals, such as Bellevue and Allied Hospitals in New York and the Massachusetts General in Boston.

"Within a few weeks we will be ready to receive inmates in our new penitentiary. We have approximately 180 short-term prisoners, mostly young fellows, now 'farmed out' to New York city and incarcerated on Blackwell's Island. Why should we not try to find out why these young fellows become petty criminals and do something about it before they land in Sing Sing as hardened criminals? In the penitentiary the men will be trained to habits of industry, in the best methods of efficient workmanship, and in self-control through the self-governing system. An employment bureau to secure suitable work for these men when discharged will be organized."

Mr. Shillady has been secretary of the New York Mayor's Committee on Unemployment since the winter of 1914-15.

CHURCH FEDERATION MAKING GOOD LOCALLY

MOVEMENTS for the federation of Protestant church agencies and resources have succeeded in formulating ideals and standards to which denominational bodies subscribe and which their

GRADUATE NURSES OF GUAM

THIS year seven native girls will receive from the United States Navy Medical Department diplomas as trained nurses. Already there is a waiting list for future classes. The increased staff of American surgeons and nurses to conduct these classes in addition to the hospital work, is already felt in Samoa [the SURVEY, August 1, 1914]. The girls are graduates of a mission school. Their nurses' course includes ordinary nursing, obstetrics, sanitation, personal hygiene and dietetics. After graduation they go into the country districts and return later to the hospital for review and supervision.

foreign and home missionary agencies accept. But locally in cities and suburbs, in towns and villages, with a few notable exceptions, the disastrous competition or non-cooperative deadlock prevails. To meet this real emergency in the federation movement the Federal Council of Churches of Christ in America has organized its Commission on Federated Movements, with Fred B. Smith as chairman and Roy B. Guild as executive secretary, at whose initiative this commission was suggested as the follow-up agency of the Men and Religion Forward Movement. The latter was also headed by these men.

On his return from a country-wide tour, Dr. Guild reports church federations so well organized in the following fourteen cities as to have employed executive secretaries: Cleveland, Cincinnati, Indianapolis, Chicago, New York, Atlanta, Louisville, Buffalo, Sacramento, Toledo, Erie, Dayton, Kansas City and Pittsburgh. Committees were appointed in Minneapolis, St. Paul, Seattle, Spokane, Portland, San Diego and Denver, to organize city federations so strongly that executive secretaries might be employed. Federations to depend upon volunteer leadership were initiated at Fargo, Grand Forks, Billings, Butte, Great Falls, Spokane and Tacoma. Duluth and Superior are considering the feasibility of uniting to employ one man, to be known as "head of the lakes secretary."

The little newspapers which are be-

ing started by some of these city federations attest their grappling with fundamental local problems. The *Federated Churches* of Cleveland reports the completion of a survey of 287 Protestant churches and missions in Greater Cleveland, having a combined membership of 105,207. To keep pace with the growth of population 11,000 accessions are demanded this year. A campaign including district visitation of the unchurched with the vigorous prosecution of both personal and social evangelism is now in progress. The *Men's Federation News* of Louisville contains such evidence of aggressive civic action as a frontal attack on race track gambling, a report of an investigation of the segregated vice district during the week of the state fair, a list of the violations of the Sunday closing law, which escaped legal penalty, and an endorsement of the reelection of members of the board of education whose services to the school had been found highly valuable.

BRITISH PENSIONS AND MEDICAL FEES

THE British are facing a serious problem in the care of some 50,000 disabled soldiers who apparently are being discharged from military hospitals and sent home where there is no real provision for their care. Most of them are insured under the health insurance act and automatically come back to the care of their panel physician. But he is already overburdened with patients,

since he has had to take on part of the practice of physicians who have gone to the front; he is not a specialist and cannot give the sort of care that is needed. Moreover, most of the specialists are in military hospitals; they are not to be had by the men returned home, even if payment of their fees were possible.

A new Pensions Board has been instituted and finds itself faced with the task of perfecting a pension scheme which will provide adequately for these men for whom the whole nation feels the liveliest concern and sense of obligation. Here the medical profession becomes involved because it foresees undue demands for inadequate pay and is inclined to insist that for the period of the war the army hospitals, with their corps of specialists and their ample equipment, be forced to keep and care for these disabled soldiers till they are able to return to civil life.

COUNCIL OR COMMISSION CONTROL OF HEALTH?

WHETHER the control of the centralization of all municipal health activities in Minneapolis shall rest in the hands of the mayor or of the City Council has brought a sharp clash between the Legislative Committee of the council and a Citizens' Committee which was appointed through the council several months ago to make a scientific study of the health system of the city and to draw up a bill embodying the results of its study.

The bill proposed by the Citizens' Committee provides for the creation of a board of public welfare consisting of seven members, two of whom shall be the mayor and the president of the City Council ex-officio, and five others to be appointed by the mayor, one each year for a term of five years. This board, it was proposed, should have entire charge of the protection and preservation of health, the care and management of hospitals, relief of the poor, and the management of all penal and correctional institutions. Only the medical inspection and promotion of health as now carried on by the Board of Education in the public schools was to be exempt.

At a hearing before the Legislative Committee of the council, marked by the acrid exchange of personalities and a generous heckling of speakers, the members of the council declared the report of the Citizens' Committee "entirely unfit." A substitute bill drawn by members of the council was unanimously adopted. This substitute bill places all the health work of the city, with the exception of that being done in the schools, entirely under council control. Provision is also made for the appointment of a general superintendent of health by the council, together with

"such other officers and employes as it shall deem necessary," the latter to be under civil service.

When members of the Citizens' Committee and others, including Dr. H. W. Cook, chairman of the Health Committee of the Central Council of Social Agencies, C. F. Keyes, a prominent attorney, Mrs. W. J. Marcle of the Woman's Club, remonstrated, stating that this substitute bill would perpetuate the medieval health system now in vogue with all its attendant political intrigue, a bitter debate ensued.

This debate brought out that Minneapolis has one of the least efficient health systems of any city in the country with a per capita expenditure for the Health Department of about thirteen cents. The department, which at the present time is under council control, does no educational work, there being no funds available for that purpose. Its nursing service is inadequate, the nurses of the tuberculosis division being so crowded with work that they give no bedside care; there are no nurses available for infant welfare or contagious disease service.

The whole system itself was shown to be antediluvian, consisting of three distinct departments, each responsible to independent boards. First, there is the Health Department with an under-paid commissioner, and an annual budget of less than \$65,000, the whole department being under the control of the Health and Hospitals Committee of the City Council. Since, during 1916, the council could not agree upon a commissioner, the city was without one, having only an acting officer. Second, the hospitals, workhouse and relief department are under the Board of Charities and Corrections, a board appointed by the mayor. Third, the health work done in the schools is under a third distinct head, the Board of Education. Thus, like all Gaul, the health work is divided into three parts.

However, with the support of Mayor Van Lear—who, by the way, is the first Socialist mayor that the city has had—and the backing of progressive citizens, it is hoped that the citizens' bill can be passed through the legislature, a necessary procedure, since Minneapolis has no home-rule charter.

SPENDING THE WINTER IN THE SOUTH

THE Children's National Tuberculosis Society is still doing business, it appears, though not at the same old stand. Its agents are in North Carolina now, according to the latest bulletin of the State Board of Health.

At the pressing invitation of the Bureau of Soliciting Schemes of the Cleveland Chamber of Commerce, the society withdrew its activities from that city

and gave up collecting dimes from people "who would never miss them" for a "children's sanatorium" somewhere in New Mexico which, it was reported after local investigation, had few if any children there. The society folded its tents and stole away from Indianapolis, and also from Milwaukee, and from the entire state of Illinois, as chambers of commerce, merchants' associations, district attorneys and Curran committees proved inquisitive about the society's books (which were not always forthcoming) rather than hospitable to its pleas.

The *Journal of the American Medical Association* published some remarks about the National Children's Tuberculosis Society and its promoters which were really almost libelous, but there was no threat of suit. The Wisconsin Anti-tuberculosis Association issued a warning about the scheme and was promptly threatened with suit. The National Association for the Study and Prevention of Tuberculosis expressed its opinion of the methods of the society and also was threatened with suit. The SURVEY had the same experience because of a note in the issue for October 9, 1915. But nothing has happened yet.

FROM PONCE DE LEON'S TIMES TO OURS

FROM the time that the quest for the fabulous Fountain of Youth was definitely given up until a few years ago, Florida did little for her children. The state shared, to be sure, in the general American advance of four centuries, though in a leisurely southern way. She shared, too, in the common poverty following the civil war. And the first years of mending tended chiefly to offer her children a place in industry rather than a school seat—a chance to shuck oysters, solder tin cans, strip tobacco or caddy for the winter tourists.

In five years there has been a great change, backed by a growing body of public opinion led on by the Children's Home Society of Florida and other progressive social agencies. It was just five years ago that the first juvenile court was established and the state's policy definitely turned from punishment to correction and prevention. Later followed a child-labor law which Marcus C. Fagg, state superintendent of the Children's Home Society, ranks as the best in the South. It had taken 1,400 children out of trades, partly through the efforts of J. C. Privett, state factory inspector, and put many of them in school four years before the federal law could reach them and shame the state. And this in turn has been supplemented by an education law which makes novel application of the local option principle by providing that any county which wishes it may adopt compulsory education—a half loaf, but generally held to be tending toward required schooling

throughout the state. Schoolhouses are building and rebuilding in many parts—Jacksonville is spending a million and a half dollars on them—and teachers' salaries are rising.

Supplementing the juvenile courts, the old reform school, which was no more than a prison, has been replaced by modern industrial schools, one each for boys and girls. Medical inspection has been made legally possible for every community. The orphanages are following the lead of Mr. Fagg's society in placing out their children young.

Of other social measures, the notorious convict lease system is being abolished and a state prison farm has been established, wife desertion has been made a felony, tuberculosis and visiting nurses are employed by private societies and cities, and twelve of them by the state, the physical condition and administration of jails and almshouses are being modernized, associated charities are ministering in the smaller cities in addition to those long established in larger centers, a state conference of charities has held four annual meetings, Y. M. C. A. buildings are springing up, the churches and colleges have become interested in social service.

For the session of the legislature which opens in April the program includes further displacement of local lock-ups by district workhouses, where wife deserters and their like may be sent and employed, their wages, above actual cost of keep, to be paid to their families; an amendment authorizing juvenile courts to deal with adults who contribute to the delinquency of children; an increase in the number of juvenile probation officers; a school for feeble-minded youth and an institution for adults, both black and white; a law forbidding the marriage of insane, feeble-minded and epileptic persons; an enlargement of the girls' and more trades for the boys' industrial school. The Widows' Pension Commission will ask for more time before making its report.

Altogether it is a picture of a state going ahead by leaps and bounds, which Mr. Fagg draws in a recent review. Many individuals and societies have shared in Florida's social advance, but, says Mr. Fagg, chief credit is due the Federation of Women's Clubs.

A STATE PROGRAM FOR THE FEEBLEMINDED

AS a result of the recent conference of the Massachusetts Society for Mental Hygiene, a comprehensive plan for the care of feeble-minded in the state is being developed, based on conclusions of studies presented at the conference. These studies were summarized at the closing session by Dr. F. E. Williams, executive secretary, thus:

That feeble-mindedness represented an arrested mental development which showed itself in either quantitative or

qualitative brain differences; that the social difficulties which arose incident to feeble-mindedness were due to the fact that adult standards of conduct were required of individuals who were not equipped with adult mental ability; that, in general, the social potentiality of these individuals was either for good or for bad; that those who became a social menace became so because of social neglect.

Further custodial care of all of the feeble-minded was deemed neither practicable nor necessary; many, early trained in either the special classes in the public schools or in special schools for the feeble-minded, and later paroled, could, under proper and standardized supervision, live in the community without becoming a menace; and feeble-minded children, after a period of special training, should be given an opportunity to live in the community under supervision. It was believed that on exhibiting a-social traits, such individuals should be removed from the community

and committed to an institution for permanent custodial care.

The conference considered that the commonwealth should have a commissioner on feeble-mindedness whose duty it would be to standardize methods of examination, education, care and supervision of the feeble-minded. Also, that all cases of feeble-mindedness coming to the attention of the public schools, the courts, penal institutions or persons be, by law, registered with the commissioner who would keep a complete mental, physical and social history of each case; that on parole or discharge from class, school or institution, all feeble-minded come under the supervision of the commissioner and his agents to remain in the community or to be removed therefrom as might become indicated.

Papers were presented by Dr. W. E. Fernald, Dr. E. E. Southard, Dr. R. M. Yerkes, F. B. Dyer, superintendent of public schools, Boston; Ada McFitts, supervisor of special classes, Boston public schools, and many others.

Communications

"THE FIGHTING ISSUES"

TO THE EDITOR: I renewed my subscription to the SURVEY last fall most reluctantly, because at about that time a few numbers appeared, so excellent and so confined to the legitimate field of the magazine that I hoped it had seen a light. This hope was disappointed.

The heartless inhumanity of the SURVEY, earlier in the war; its clamor for swift peace that should leave Belgium and Serbia in a living death; its tiresome iteration of descriptions of the trip of the Ford pilgrims, who, in their silly self-conceit, and their ignorance of history and of the international situation made such a cruel spectacle at the cost of American repute for intelligence, honor and humanity, disgusted me from the beginning, as it must have disgusted most of your better-informed readers.

It was as if a child had thrown its soft arm over the neck of a citizen desperately struggling with a robber that had sand-bagged him by surprise, and was crying out: "Stop fighting the robber this instant! You will stop, won't you, Mr. Robber?"

The robber: "Yep. I'll stop. I've got his watch and money."

Fortunately the citizen was so keen in the fight, fortunately the would-be restraining arm was so extremely feeble, that the highwayman's victim scarcely felt the attack of the robber's pal; was rather vexed by it than really impeded.

We had hoped, many of your readers, that this was a passing obsession; that the essential cruelty and falseness of your position would presently dawn upon you; possibly that it had already dawned.

Now comes a six-page explanation of the mental processes of the editor during the world crisis. These processes in themselves are not of the slightest consequence; they are not worth six pages or six lines; but it is of consequence to know whether a hitherto

useful publication supposed to be devoted to humane purposes is going on from inhumanity in the German cause to actual treason in aid of an enemy now engaged in and proclaiming open warfare upon the United States.

I, for one, find my curiosity satisfied. Please cancel my subscription.

JOHN L. HEATON.

New York.

PACIFISM

TO THE EDITOR: We, the undersigned, engaged in various forms of social work and allied activities in Baltimore, and readers of the SURVEY, have been surprised at the chill spirit of "pacifism," so called, which of late seems to have pervaded every nook and corner of your publication. We dislike to use this word "pacifism" to describe what we have in mind, for we are all essentially pacifists in the true sense of the word, differing only in opinion as to the means necessary to achieve the end in view.

Whatever feelings we may have as individuals in respect to your personal viewpoint in this time of national crisis is beside the question here. We do feel, however, that it is closely akin to fact, if not fact itself, that the present editorial policy and news tone of the SURVEY in respect to events of national importance, create abroad generally the impression that the larger portion of social workers of the country are advocates of, or at least are in sympathy with, the doctrine of non-resistance, as the proper national policy to follow in our present foreign difficulties.

We desire, therefore, to go on record publicly, as social workers who do not agree with and who will not sustain such a policy and to express our desire to support, to the limit of mental and physical endurance, the means deemed necessary by our President to

uphold the common-sense laws of humanity and the country's honor.

(Signed) ROBERT C. POWELL, GEORGE L. JONES, WILLIAM H. DAVENPORT, W. PERRY BRADLEY, THEO JACOBS, PETER M. SIEWIERSKI, CHARLOTTE BELLE MANN, GEORGE E. BARNETT, J. W. MAGRUDER, EMMET W. WHITE, ALDA L. ARMSTRONG, ROSCOE C. EDLUND, WILLIAM BURDICK, H. WIRT STEELE, HORACE E. FLACK, WILLIAM E. STRAUS, B. M. BERNHEIM, M. D., ARTHUR E. HUNGERFORD, LESTER W. FEEZER.

Baltimore.

[The sole article along non-resistance lines we have published recently was a sermon in the same issue which carried Lloyd George's Lincoln Day address to America, upholding war for democracy's sake. Surely socially-minded ministers who believe in applying in an hour of stress what to them are the social tenets of Christianity should be given a hearing in the SURVEY—especially when the general run of periodicals practically bar them out.

I stated my own positions in the issue of February 17, and have no inclination to engross the space of the magazine. That every social worker should think these issues through for himself, was the distinct challenge of my statement which at the outset brought out the fact—a fact of which many a nook and corner and central page of the SURVEY has borne evidence—that there are deep cleavages of opinion among social workers, just as there are among churchmen and lawyers and physicians. It is but natural that the more ardent, either for or against war, should be most vocal. And it is healthy that those slower to express themselves, for or against, are now so expressing themselves, and basing their positions on social grounds.

Incidentally, in welcoming this statement, I can only ask these Baltimore friends and subscribers to judge the SURVEY not by what somebody says of it—on the basis, perhaps, of reading a single contribution—but on what they actually find there.

Before the policy had been broached in any other journal, Professor Hayes in the SURVEY for February 10, and the editor of the SURVEY in the issue for February 17, advocated the principle of armed neutrality. This principle underlies what the President on February 26 asked Congress for authority to carry into effect, what, in spite of the Senate filibuster, he carried into effect. To advocate it was not to advocate non-resistance, and to urge it in advance was the reverse of going back on the President. I should like to join these Baltimore social workers in a pledge to "support him to the limit of mental and physical endurance," for that can only mean thinking as well as acting.—PAUL U. KELLOGG.]

NATIONAL SERVICE

TO THE EDITOR: I am a man thirty-four years old, intensely desirous of serving in war if I know that this country is also serving by war, if the attitude is to be intelligent zeal for justice, not expediency or being forced into war.

I know that the Great War was brought about by government and not by democracy. I know that war is usually stupid and yet a result of machinations of the few—but not always. I know that peace is not an end in itself, but a condition rising from understanding and spiritual efficiency. I know that killing and maiming of bodies is not so bad as killing of souls by fatness and cant and indifference. And I am sure that lack of informed stirred quality with material welfare for the upper half is the basic cause of our neutrality more than noble ideals or feeling. The inherent hypocrisy of civilization, naïve or clever, is the root. Our real ideal is the survival of the fittest,

meaning the cleverest, strongest, most expedient.

I have felt keenly the social program of the President; and I have as keenly felt the insidious attitude of that continuing compromise which is the foundation of our essential faith. I have seen the delay in even eventually standing out bravely for Belgium and France and Serbia (as years ago we should have stood for Armenia), though the nation had scoffed; we have been true to type in failing to rectify that delay. Instead, the "last straw," a question of rights in trade routes and freedom of the seas, is all that brings us diffidently into the first step to war. Not affirmative defense that is positive advancing of those ideals we mouth so easily, but negative defense, the absolute necessity alone makes us think of war. Even then we wait for the event to push us in—never a decisive gesture that would prove our fitness of spirit. We shall not allow Germany, it appears, to stop our ships from crossing the ocean, and meanwhile evade anything more than the threat by refusing to try the issue our mere words brought upon us. At bottom there is still the matter of blockade, and rather technical, too, when the average fair mind endeavors to see the difference between England and Germany, since both warned us off, and we have in both cases so far "behaved ourselves" as the phrase goes. What England would have done is another matter. But the blockade by England we did obey, and talked of benevolent neutrality—another evasion of risk and service for the sake of that peace we will have.

I have no doubt as to which side is the more impelling to my sense of right and justice. Germany must be stopped, and this in full consideration of England's imperialism and complacent cant. I suspect the duality of Belgium's need and England's need—of trade routes and Asiatic opportunity. Hypocrisy and good taste, religion and permitted poverty, power and culture, these and the other old paradoxes of life are the troubles—and yet we strive so hard for dramatic solutions like leagues to enforce peace. We expect to change the motives evidently, since only such change could stop wars—wars are made by rulers, not by peoples. We want "results." We are indeed efficient, since a new word must be coined to express the thought of spiritual efficiency.

Now, in this crisis, I am sure that unless I am informed by my government in non-diplomatic language just what we are intending to do in case of war with Germany, just what our attitude and purposes are, I have no intention of helping, save only in case of urgent necessity of real defense against an enemy. We may do some good, of course, in our safe helping of England, but I see no chance of essential service, aside from actual defense against an aggressor, if we are to take the attitude that has been followed by the President all through our international relations since his inauguration. We have stood utterly for that calmness and expediency which are cloaked in noble words and a basic ideal of safety and quiet, applauded by lovers of tranquillity, specious Christlikeness, and pacifists deluded or serene. One can excuse only one attitude if the ideals of Mr. Wilson, espoused so calmly and divorced so innocently, are followed—and that attitude is intelligent ardor, stirred emotion. It is hypocrisy we must fear, naïve or knowing, hypocrisy in garments of safety called peace, evasion called calmness.

What have we understood by "life more abundant," and "thy neighbor as thyself"? I say a leader is not a man who follows but who leads, who expresses the great hopes and needs of the deeper heart beneath the fears and meannesses, the gropings of the people. He must be weighed, not tolerantly, but justly. The President has but expressed

the indifferent and safety-first attitude of perhaps most of us. His social program simply can not deceive us as to the essence of his quality, if we are not stupid. He has lacked the heart of the matter, that quality which in spite of generations of cant and under-creed interpretation was in Christ and all real leaders—stir and brave defiance and intelligent sincerity. A president is not to be judged leniently, but justly—and first of all if he shall lead well he must be brave and sincere, surely not to be praised if his calmness is inertness of spirit rather than controlled fire. This is not time for excuses, when a leader fails to strike out a path, acting on the motives which alone can make us respond and do good works. He seems to follow great ideals, and he says so. It is the same old story—negations and evasions gloriously appareled in noble sentiments, indecisiveness and fear masking as patience and plan.

Yet always the event decides, not the man. Our patriots are as stupid as our inert ones, for they condemn Mr. Wilson, and offer the old brave stupidity far more than any decent visioned path for the fulfilment of our wasted millions. Both alike fail to see that the vacuum is our spiritual poverty, our stupidity that fights at old calls of honor unanalyzed, our calmness and evasiveness that calls neutrality and failure to respond to visions something fine and considerate of humanity. Yet the vision is before our eyes. We will not see that stirred love (not meek and patient) and service mean happiness, that personality is wasted for safety and comfort, and that egoism revels in self-righteousness and coercions of others.

And so when I think of phrases like "watchful waiting," "too proud to fight," "neutral in thought and act," and those words of Mr. Wilson's to the Senate, "we purpose nothing more than the reasonable defense of the undoubted rights of our people," I wonder just what we may be going to war for. I resent injustice to us as to others, but what of these careful unringing words, words consistently the same since Mr. Wilson's elevation to captaincy. I remember no strong, great-hearted words, unselfish and stirred, to Germany or anyone else, in any defense but our own, save in safe and legally justifiable measures. I remember only cautious desire to stay at peace with the State-godly German government, intent on mere peace, not good will or justice. I remember no spiritualized anger against an immorality that would crush all in its way, calling itself idealism as surely as Mr. Wilson calls his method moral. I remember that now if we go to war, the President has said "we wish to serve no selfish ends." We shall serve little else it appears to me. I cannot find where the Christian devotion and love come into all this. I do not find myself a-quiver with anything but resentment that when this last straw was laid on our backs (we, the camels) we could not have atoned for our remissness toward Belgium and France and all the others we have left to themselves while we fought for peace. But no, we shall only go to war if we are forced into it—never to serve as readily as to defend our rights.

So I want to fight for real matters only, and I want to know what I shall fight for. I want to have a direct expression from our government as to the attitude behind possible war. I could help if we go to war to help the abused, to advance something, or to defend real rights, but I will not fight for a fearful, safety-first, unstirred government unless the country is invaded. That is my idea of waste—to follow leaders unstirred, evasive, full of social sympathy without will to make or do. I will not be wasted if I can help it. And I do want to help.

L. J. EDDY.

Honesdale, Pa.

JOTTINGS

AMERICA'S Relation to the World Conflict and the Coming Peace will be the subject of the twenty-first annual meeting of the American Academy of Political and Social Science, Philadelphia, April 20-21.

HAVING as its purpose the providing of a common meeting place for social workers of every stripe and the arousing of the entire city to a sense of social responsibility, the Sociological Club of Sioux City, Iowa, has been formed with Rabbi Emanuel Sternheim as president.

TRAINING for teachers of Children's Gardens, hitherto carried on in New York city by the International Children's School Farm League, has been taken over by the New York Botanical Gardens, which offers courses beginning May 7 and July 5.

A PRACTICAL course in scouting and recreational leadership, to be given in co-operation with the Department of Education of the Boy Scouts of America, is announced by the Community Service and Research Department of the Division of Public Affairs of New York University.

EVERY type of religious and civic activity in Sacramento was represented among the 400 guests present at the dinner given to Governor Johnson, his successor, Lieutenant-Governor Stephens and the members of the California legislature by California State Church Federation and the local federation. With Governor Johnson and Raymond Robins, of Chicago, as the principal speakers, the evening took a strong social turn.

INSISTENT requests to the Board of Education of Washington, D. C., that all "alien" teachers be dismissed from the public schools have been firmly denied and the board forwards to those making them copies of the "oath of allegiance" that all teachers must take: "I, _____, having been duly appointed by the Board of Education of the District of Columbia a teacher in the public schools of the District of Columbia, do solemnly swear that I will support the constitution of the United States and faithfully discharge the duties of the aforesaid office."

IT IS planned to organize a national women's employment managers' conference in Philadelphia the week of April 2-5, when the National Vocational Guidance Association and the National Conference of Employment Managers will meet in the first joint session these two bodies have ever held. Meyer Bloomfield, director of the Vocational Bureau of Boston, is president of both associations. One of the features of the program will be a discussion of the findings of a vocational guidance survey just made in Philadelphia.

SOCIAL workers from forty-five Detroit social agencies using the Confidential Exchange and Registration Bureau have organized a joint committee to promote closer cooperation and to standardize their case work. The committee grew out of a study of "trouble cases," which had been registered by five or more different organizations. The organizer was Thomas E. Dolan, superintendent of the Poor Commission. Frances Knight, of the Children's Aid Society, is chairman, and Leon W. Frost, of the Juvenile Court, secretary.

WOMAN'S position in reconstructed Germany after the war is perhaps hinted at in a news item in the United States Commerce Reports. The Woman's Cooperative Dwelling Association of Frankfort-on-Main has drawn plans for apartment buildings in attractive residential districts for unmarried women engaged in business or professions. Capital is to be subscribed by the members of the organization, which is a registered cooperative society. Shares of 200 marks (\$47.60) each are to be sold on weekly instalments of three marks (\$.71). Each building will contain sixteen apartments, of one and two rooms with bath and kitchen or kitchenette at rentals of from \$143 to \$190 a year.

HOW the "child world" of the Gary, Ind., public schools replaces the traditional routine of the public school system is vividly shown in a series of motion pictures that were displayed for the first time in New York city last month. The pictures are in four reels and were made at the expense of the Gary schools, the children themselves helping in the production. The pictures were pre-

sented by the Gary School League, affiliated with the Public Education Association of New York city, and requests for their use have been received from a number of states. William Wirt, superintendent of the Gary schools, is now spending part of his time in New York city adapting his plans to schools there.

PETITIONS showing the effect of the high cost of living upon family budgets were presented at a recent meeting of the Boston School Committee. Janitors, declaring that they could not now live without distress upon their salaries, asked for an increase in pay of from 15 to 25 per cent. The Boston School Physicians' Association asked for an increase in the salary of school physicians, now \$504 a year, to \$1,200, and those who assist in the employment certificate office, who now get \$900, to the same sum. The Boston Public School Nurses' Association asked that the minimum salary of school nurses be increased \$96 a year, to \$804, and then raised \$96 a year until \$1,176, the maximum salary of an elementary teacher, is reached. Women

THREE CONTRIBUTIONS TO SEXUAL SOCIOLOGY

THE SEXUAL CRISIS

By GRETE MEISEL-HESS

Authorized Translation from the German

A sociologic and psychologic study: a criticism and an affirmation. It expresses the *newest* and *best* thought in Sexology, interpreted in terms of social need and social action.

The book opens with a critique of marriage in its present form, and proceeds to discuss the increase of celibacy, the social factors in our sexual misery, trial marriages, sexual need and the woman's movement,—in fact, *all* the forces that make for the movement for sexual emancipation. Instinct with delicacy, sympathy and imagination. Price \$3.00, *postpaid*.

FEWER and BETTER BABIES

Or, *The Limitation of Offspring.*

By William J. Robinson, M.D.

With an Introduction by A. Jacobi, M.D., LL.D. The pioneer American book on Birth Control, with all the arguments for and against contraception. Dr. Robinson stresses the *social* aspects. An important book for sociologists and social workers. Ninth edition. Price \$1.00, *postpaid*.

Our catalogue of authoritative literature on sexual problems is yours for the asking. Send for it to-day.

NEVER-TOLD TALES

Tragedies of Sexual Ignorance.

By William J. Robinson, M.D.

Jack London said of this book: "I wish every person, man and woman, young and old, could have a copy of *'Never-Told Tales.'*" A damning indictment of sexual ignorance, told in the form of vivid fiction based upon facts gleaned from the experiences of a sexologist. Twelfth edition. Price \$1.00, *postpaid*.

THE CRITIC AND GUIDE CO.

12 Mt. Morris Park, W., New York City

Unnecessary Indigestion

Indigestion, constipation and the ills they lead to are so *wholly unnecessary*—and cause so much *needless suffering*—that Dr. Kellogg, Chief Medical Director of the Battle Creek Sanitarium, has written a book, "Colon Hygiene," in which he tells you how such ills may be avoided. During his more than forty years' experience at the Sanitarium, Dr. Kellogg has prescribed for thousands of cases of indigestion, constipation, and the more serious ills to which they lead. Therefore, what he tells you in his book is the result of experience. He deals with facts—not theory. Dr. Kellogg recommends only natural methods—diet, exercise, rest and sleep. No drugs. Instructions given in "Colon Hygiene" are so full, complete and plainly stated that you can easily follow them right in your own home. No tre-

some regime. No exhaustive system. Only what your own common sense promptly tells you is rational and natural. Over 400 pages. Many illustrations. Price \$3. Write for the book today. You take no risk. For, after five days' examination, if you are not entirely satisfied, you may return the book for prompt refund of your money. Is this fair? We let you judge the value of this book for your own needs.

Better Poise AND Self-Control

You can't do good work, if you are nervous and irritable—if little things annoy and you are indecisive and quick tempered. Poise is out of the question—self-control next to impossible. Yet—most such conditions are due to habits which may easily be corrected. This is fully explained in Dr. Kellogg's new book, "Neurasthenia." For more than forty years, Dr. Kellogg has been Chief Medical Director of the Battle Creek Sanitarium. Here he has

observed and prescribed for thousands of people whose condition has been the result of over-work, over-worry and inattention to the natural requirements of their bodies. Therefore, Dr. Kellogg knows what he is talking about when he tells you that nervousness and irritability are usually symptoms of internal conditions which may be corrected and controlled. He speaks from experience. His findings are those of practice—not theory. In his book he tells you what to do—diet, exercise, rest, sleep and careful attention to posture and working habits. Thus most obstinate cases of nervous exhaustion may be relieved. Full and complete instructions which you can easily follow in your own home. Write for this book today. Find out what it can do for you. The price is only \$2. And—if you are not entirely satisfied, after five days' examination, you may return the book and we will promptly refund your money. Is this fair? We let you be the judge of what Dr. Kellogg's book can do for you.

teachers in normal and high schools asked that they be paid on an equality with men. All these requests were taken under advisement.

ABOLITION of the city workhouse and the immediate establishment of a municipal farm for petty offenders is recommended by the St. Louis Municipal Commission on Misdemeanants, which was appointed last summer under an ordinance secured through the efforts of social workers. St. Louis still has an old-fashioned workhouse with its stone-quarry and guarded walls within the city limits. The commission recommends the purchase of a farm of 2,000 acres. As the present periods of commitment are too short for effective treatment, it also recommends the indeterminate sentence, for which a bill has been drafted. The commission was aided by investigations of court cases and commitments made by the Missouri School of Social Economy, under the direction of George B. Mangold.

THE rapid growth of educational research during the past few years was signalized at the second annual meeting of the National Association of Directors of Educational Research, by the appointment of a committee to prepare a summary of such research up to the present time. The association itself came into existence, writes Walter S. Monroe, director of the Bureau of Educational Measurements and Standards at the Kansas State Normal School, to the SURVEY, "to promote the type of educational research which is beginning to be carried on in public schools. A number of school systems have created the position of director of educational research, notably Boston, New York city, Detroit, Oakland, Cal., and Kansas City. In addition, there have been established in a number of states organizations which direct and furnish a clearing house for similar work in smaller cities."

A FEW weeks ago State Commissioner of Insurance Olson was murdered in Olympia, Wash., by a workman who had applied for compensation and had been refused. The man was reported to be feeble-minded. He committed the murder within a block and a half of the building in which the state legislature was sitting, and immediately a bill was introduced providing for the reintroduction of the death penalty for murder in the first degree, with an option of the jury to make the penalty life imprisonment. Washington abolished the death penalty in 1913. The upper house has already defeated a measure to bring the question before the people on a referendum, and Governor Lister is thought to be opposed to the legislation. The National Society on Prisons and Prison Labor reports that the Central Labor Council, women's clubs and educators throughout the state are opposed to it. No proof is said to have been offered in the upper house that the abolition of the death penalty results in an increase of crime.

WHAT is said to be the first war hospital in France to be officially conducted by the American Red Cross will be opened in another month with Dr. Joseph A. Blake, an American surgeon, in charge. This is the hospital built and conducted by Dr. Eugene Doven, the famous French surgeon who died two months ago, now being re-equipped as a war hospital. While the American Ambulance at Neuilly is an American undertaking, it is organized solely under American doctors who practiced in Paris before the war. The invitation to Dr. Blake to become head of the new hospital was issued by the French government and is said to be the greatest honor that could be conferred upon an American surgeon. Dr. Blake's work at the British hospital in Ris-Orangis has won the admiration of French surgeons. The new

name of the hospital will be the American Red Cross Hospital of Paris, and it will take only the most badly wounded cases. The Robert Walton Goelet Research Laboratories have been incorporated as part of the hospital, with Dr. Kenneth Taylor, the American bacteriologist, in charge.

IT ISN'T often that the chairman of a legislative finance committee calls economy a "mistaken policy," yet that is what Henry M. Sage, chairman of the Senate Finance Committee in the New York legislature, did recently in addressing the City Club in New York city. Senator Sage declared that the public and legislature must be more willing to spend money. In New York he said that the state institutions especially had been handicapped during the past ten years by severe and ill-advised cuts of sums urgently needed for new construction of hospitals, charitable institutions and prisons. "The talk of decreasing the budget is either ignorant or dishonest," he said, and added that a "budget of a hundred million dollars looms in the near future," as compared with the budget of seventy or eighty millions this year.

PERSONAL AND PROFESSIONAL

JOSEPH LEE has been elected chairman of the Boston School Committee to succeed David D. Scannell.

WILLIAM B. BUCK has returned to the charities service of New York city as director of Sea View Hospital and City Farm Colony at West New Brighton, Staten Island.

ARTHUR D. DEAN, chief of the division of vocational schools of the New York State Education Department, has been appointed professor of education at Teachers' College, Columbia University, New York city. Mr. Dean's new work begins during the summer session.

JOHN YATES, secretary of the Associated Charities of Harrisburg, will succeed J. Byron Deacon as secretary of the Associated Charities of Pittsburgh. Before going to Harrisburg he was for a time with the Pittsburgh society following his graduation from Princeton and a divinity course.

JEROME D. GREENE, whose retirement as secretary of the Rockefeller Foundation was announced some time ago, has become associated with the New York office of the banking firm of Lee, Higginson and Company. Mr. Greene remains a trustee of the Rockefeller Institute for Medical Research and the General Education Board, and a director of the American Social Hygiene Association.

MAY ALLINSON, formerly head of the research department of the Women's Educational and Industrial Union, Boston, has become assistant secretary of the National Society for the Promotion of Industrial Education. She will devote her time principally to the industrial work of women and girls and the educational problems arising from it.

HEINRICH HERKNER, one of the most progressive of German economists, whose work on The Labor Problem has been printed in six editions, and perhaps the most eloquent social reformer in the Reichstag, has been called to the chair of political economy, finance and economic history at the Univer-

sity of Munich, vacated by the emeritation of Prof. Lujo Brentano.

DR. H. L. ROCKWOOD, superintendent of the tuberculosis sanitarium conducted at Warrensville, Ohio, by the Cleveland Division of Health, has been appointed chief of the Bureau of Tuberculosis, succeeding Dr. R. H. Bishop, Jr., now commissioner of health. Dr. Carl Mulky, formerly Dr. Rockwood's assistant, has been appointed to the superintendency of the sanitarium.

GEORGE W. GUTHRIE, ambassador to Japan, who died at his post on March 8, had been a leader in many civic reforms in Pittsburgh. An independent in local politics, he was the reform mayor of the city at the time of the Pittsburgh Survey in 1907-8 and he was one of three men in Pittsburgh who had the vision and courage to give the use of their names to the new enterprise—the first of the social surveys—which local public opinion in general attacked as an outside muckraking expedition.

DR. J. T. GILMOUR, for twenty-one years warden of the Central Prison, Toronto, Canada, and latterly of the famous Guelph Industrial Prison Farm as well, and one of the best-known prison administrators on this continent, has recently been appointed inspector of paroled prisoners for the province of Ontario. This office has been created to keep the Provincial Parole Board more closely in touch with paroled prisoners, who heretofore have reported to the local police. He is succeeded at Guelph by Supt. C. F. Neelands, of the Burwash Prison Farm, Northern Ontario.

AFFILIATION of all Protestant denominations in a common endeavor for the public welfare is the purpose behind the announcement that the Rev. Worth M. Tippy had resigned from the pastorate of the Madison Avenue Methodist Church, of New York city, to become associate secretary of the Federal Council of the Churches of Christ in America, in charge of social service. Dr. Tippy's program includes an effort for the short workday and one day of rest in seven; efforts to bring employer and employe together; the seven-day-a-week use of the church plant for community purposes; cooperation of the churches in the social movements of communities; socialization of religious education; arousing the churches in behalf of a better social order. Dr. Tippy was for ten years pastor of Epworth Memorial Methodist Church in Cleveland, which had the reputation of being one of the most highly socialized churches in Methodism.

LEONARD G. ROBINSON, general manager of the Jewish Agricultural and Industrial Aid Society in New York city, has been appointed president of the federal land bank for the eastern district, established at Springfield, Mass., under the farm loan act of 1916. This "district No. 1," one of twelve, includes the six New England states, New York and New Jersey. Mr. Robinson has been the first to accomplish successfully the permanent settlement of Jewish farmers on American soil, the principle underlying his methods being cooperative self-help. For some years his counsel has been sought and valued on many difficult problems of rural economy in a much wider field. It will be applied henceforth to a problem of rural regeneration consisting largely of wisely directing and aiding the settlement of immigrant farmers as well as of getting up a progressive spirit among those long settled who have not followed the westward trend. Mr. Robinson's place in the Jewish society has not yet been filled. Gabriel Davidson, assistant manager, will be in charge for the present.

FOOD FOR THE WORKER

By FRANCES STERN
and
GERTRUDE T. SPITZ

With a Foreword
By Professor Lafayette B. Mendel

Price, \$1.00 net

The authors have prepared menus for seven weeks with tested recipes giving food values and costs for the dishes included in the menus. The daily cost of food, at the prices of 1914, is twenty cents per day per person. In the supply sheet, prices up to July, 1916, have been given. All weights of the component food principles are figured and also the values in calories of each serving. The cost in cents is given for each serving.

Whatever may be the variation in prices this attempt to solve the problem of an adequate, *varied* diet on an inadequate wage is one that must be of great service not only to all social workers, but to any intelligent housekeeper of moderate means who wishes a proper foundation on which to build a family's diet.

Experience has fitted the authors for this work. As visiting housekeeper in Boston for the Association for the Relief and Control of Tuberculosis and later for the Boston Provident Association Miss Stern learned home conditions, and as inspector for the Massachusetts State Board of Labor and Industry learned the economic causes for those conditions. Miss Spitz, as secretary to Dr. Edwin A. Locke, assisted in the preparation of his well-known book "Food Values."

WHITCOMB & BARROWS
Publishers

HUNTINGTON CHAMBERS
Boston, Mass.

THE selection of Frank E. Spaulding, of Minneapolis, to be superintendent of public schools of Cleveland is being widely attributed to the liberalizing influence of the recent school survey of that city conducted by the Cleveland Foundation. Mr. Spaulding has been given a four-year contract at an annual salary of \$12,000, the largest salary paid to a school superintendent in the United States. One of the most significant features of the affair is the resolution passed by the Cleveland Board of Education before they chose the new superintendent, defining the relation that they would try to cultivate with that official. The resolution is: "Resolved, That it is the sense of this meeting that educational policies should not be imposed upon the new superintendent by the Board of Education, but that he should be looked to to inaugurate such educational policies by and with the approval of the board as he deems advisable; and to maintain them without interference by the board, unless and until the lack of wisdom of any such policy be shown by experience; subject always, however, to financial exigencies which face the board."

CALENDAR OF CONFERENCES

Items for the next calendar should reach THE SURVEY before April 12.

APRIL CONFERENCES

- CHARITIES AND CORRECTION, Connecticut State Conference of, Meriden, April 29-May 1. Sec'y, John D. Strain, Meriden, Ct.
- CHARITIES AND CORRECTION, New Jersey Conference of, Montclair, N. J., April 29-May 1. Sec'y, Ernest D. Easton, 45 Clinton street, Newark, N. J.
- CHILD WELFARE CONFERENCE. Under auspices of the National Congress of Mothers and Parent-Teacher Associations. Washington, D. C., April 24-May 1. Sec'y, Mrs. A. A. Birney, 910 Loan and Trust bldg., Washington, D. C.
- COMMUNITY CENTERS, National Conference on, Chicago, Ill., April 18-22. Sec'y, John Collier, 70 Fifth avenue, New York city.
- NURSING EDUCATION, National League of, Philadelphia, Pa., April 22-May 2. Sec'y, Isabel M. Stewart, Teachers' College, New York city.
- PHYSICAL EDUCATION ASSOCIATION, American. Pittsburgh, April 5-7. Sec'y, Dr. J. H. McCurdy, 93 Westford avenue, Springfield, Mass.
- POLITICAL AND SOCIAL SCIENCE, American Academy of, Philadelphia, April 20-21. Sec'y, J. P. Lichtenberger, Philadelphia.
- PUBLIC HEALTH ASSOCIATION, Virginia. Lynchburg, Va., April 16-18. Sec'y, Dr. W. Brownley Foster, Roanoke, Va.
- PUBLIC HEALTH NURSING, National Organization for, Philadelphia, Pa., April 26-May 2. Exec.-sec'y, Ella P. Crandall, 600 Lexington avenue, New York city.
- SOCIAL AGENCIES, California State Conference of, Oakland, Cal., April 23-27. Sec'y, Stuart A. Queen, 411 Call bldg., San Francisco.
- COUNCIL OF THE WOMEN'S CLUBS, General Federation of, New Orleans, La., April 10-12. Sec'y, Elizabeth H. Everett, Highland Park, Ill.

LATER MEETINGS

INTERNATIONAL

- KINDERGARTEN UNION, International. Boston, Mass., May 7-11. Sec'y, May Murray, Springfield, Mass.
- POLICEWOMEN, International Association of, Pittsburgh, Pa., June 6-13. Sec'y, Mrs. G. Sharrot, 40 Court House, Minneapolis, Minn.

NATIONAL

- BOYS' WORK CONFERENCE. Buffalo, N. Y., May 22-24. Sec'y, C. J. Atkinson, 1 Madison avenue, New York city.
- CHARITIES AND CORRECTION, National Conference of, Pittsburgh, Pa., June 6-13. Sec'y, W. T. Cross, 315 Plymouth court, Chicago.
- CHILDREN'S HOME SOCIETY, National, Pittsburgh, June 4-6. Sec'y, Wilfred S. Reynolds, 209 South State street, Chicago.
- CIVIL SERVICE COMMISSIONS, National Assembly of, Boston, Mass., June, 1917. Sec'y, John T. Doyle, 1724 F street, N. W., Washington, D. C.
- FIRE PROTECTION ASSOCIATION, National. Washington, D. C., May 8-10. Sec'y, Franklin H. Wentworth, 87 Milk street, Boston.

INFORMATION DESK

The following national bodies will gladly and freely supply information and advise reading on the subjects named by each and on related subjects. Members are kept closely in touch with the work which each organization is doing, but membership is not required of those seeking information. Correspondence is invited. Nominal charges are sometimes made for publications and pamphlets. Always enclose postage for reply.

Health

SEX EDUCATION—New York Social Hygiene Society, Formerly Society of Sanitary and Moral Prophylaxis, 105 West 40th Street, New York City. Maurice A. Bigelow, Secretary. Seven educational pamphlets, 10c. each. Four reprints, 5c each. Dues—Active \$2.00; Contributing \$5.00; Sustaining \$10.00. Membership includes current and subsequent literature; selected bibliographies. Maintains lecture bureau and health exhibit.

CANCER—American Society for the Control of Cancer, 25 West 45th St., New York City. Curtis E. Lakeman, Exec. Sec'y. To disseminate knowledge concerning symptoms, diagnosis, treatment and prevention. Publications free on request. Annual membership dues \$5.

COMMITTEE ON PROVISION FOR THE FEEBLE-MINDED—Objects: To disseminate knowledge concerning the extent and menace of feeble-mindedness and to suggest and initiate methods for its control and ultimate eradication from the American people. General Offices, Empire Bldg., Phila., Pa. For information, literature, etc., address Joseph P. Byers, Exec. Sec'y.

MENTAL HYGIENE—National Committee for Mental Hygiene, 50 Union Square, New York City, Clifford W. Beers, Sec'y. Write for pamphlets on mental hygiene, prevention of insanity and mental deficiency, care of insane and feeble-minded, surveys, social service in mental hygiene, State Societies for Mental Hygiene.

NATIONAL HEALTH—Committee of One Hundred on National Health. E. F. Robbins, Exec. Sec'y., 203 E. 27th St., New York. To unite all government health agencies into a National Department of Health to inform the people how to prevent disease.

TUBERCULOSIS—National Association for the Study and Prevention of Tuberculosis, 105 East 22nd St., New York. Charles J. Hatfield, M. D., Exec. Sec'y. Reports, pamphlets, etc., sent upon request. Annual transactions and other publications free to members.

SOCIAL HYGIENE—The American Social Hygiene Assoc. Inc., 105 West 40th St., N. Y.; Branch Offices: 122 South Michigan Ave., Chicago; Phelan Bldg., San Francisco. To promote sound sex education, the reduction of venereal diseases, and the suppression of commercialized vice. Quarterly magazine "Social Hygiene." Monthly Bulletin. Membership, \$5; sustaining, \$10. Information upon request. Pres., Abram W. Harris; Gen. Sec'y, William F. Snow, M.D.

NATIONAL ORGANIZATION FOR PUBLIC HEALTH NURSING. Object: to stimulate the extension of public health nursing; to develop standards of technique; to maintain a central bureau of information. Publications: Public Health Nurse Quarterly, \$1.00 per year; bulletins sent to members. Address Ella Phillips Crandall, R. N., Executive Secretary, 600 Lexington Ave., New York City.

THE AMERICAN RED CROSS—Through its Town and Country Nursing Service, maintains a staff of specially prepared visiting nurses for appointment to small towns and rural districts. Pamphlets supplied on organization and administration of visiting nurse associations; personal assistance and exhibits available for local use. Apply to Superintendent, Red Cross Town and Country Nursing Service, Washington, D. C.

PUBLIC HEALTH—American Public Health Assn. Pres., William A. Evans, M.D., Chicago; Sec'y, Prof. S. M. Gunn, Boston. Object "To protect and promote public and personal health." Seven Sections: Laboratory, Sanitary Engineering, Vital Statistics, Sociological, Public Health Administration, Industrial Hygiene, Food and Drugs. Official monthly organ, *American Journal of Public Health*; \$3.00 per year. 3 mos. trial subscription (to Survey readers 4 mos.) 50c. Address 126 Mass. Ave., Boston, Mass.

EUGENICS REGISTRY—Board of Directors, Chancellor David Starr Jordan, President; Prof. Irving Fisher, Dr. C. B. Davenport, Luther Burbank, Dr. J. H. Kellogg, Secretary. A bureau for the encouragement of interest in eugenics as a means of Race Betterment, established and maintained for the Race Betterment Foundation in co-operation with the Eugenics Record Office. Address, Eugenics Registry Board, Battle Creek, Mich.

PREVENTION OF BLINDNESS—National Committee for. Objects: To furnish information for Associations, Commissions and persons working to conserve vision; to publish literature of movement; to furnish exhibits, lantern slides, lectures. Printed matter: samples free; quantities at cost. Invites membership. Field, United States. Includes N. Y. State Com. Edward M. Van Cleve, Managing Director; Gordon L. Berry, Field Secretary; Mrs. Winifred Hathaway, Secretary. Address, 130 E. 22d St., N. Y. C.

Racial Problems

NEGRO YEAR BOOK—Meets the demand for concise information concerning the condition and progress of the Negro Race. Extended bibliographies. Full index. Price, 25c. By mail, 35c. Negro Year Book Company, Tuskegee Institute, Alabama.

In addition to information in Negro Year Book, Tuskegee Institute will furnish other data on the conditions and progress of the Negro race.

HAMPTON INSTITUTE, HAMPTON, VA.—Trains Negro and Indian youth. "Great educational experiment station." Neither a State nor a Government school. Supported by voluntary contributions. H. B. Frissell, Principal; F. K. Rogers, Treasurer; W. H. Scoville, Secretary. Free literature on race adjustment, Hampton aims and methods. *Southern Workman*, illustrated monthly, \$1 a year; free to donors.

NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE. 70 Fifth Ave., New York. Proposes to make 10,000,000 Americans physically free from penance, mentally free from ignorance, politically free from disfranchisement, and socially free from insult. Membership 8,600, with 70 branches. Official organ, *The Crisis*, 38,000 monthly. Pres., Moorfield Storey; Chairman, Board of Directors, Dr. J. E. Spingarn; Treas., Oswald Garrison Villard; Director of Publications and Research, Dr. W. E. B. Du Bois; Sec'y, Roy Nash.

THE JOURNAL OF NEGRO HISTORY—A quarterly publication concerned with facts, not with opinions. The organ of the Association for the Study of Negro Life and History. To popularize the movement of unearthing the Negro and his contribution to civilization that he may not become a negligible factor in the thought of the world. Carter G. Woodson, Director of Research and Editor. Subscription \$1.00 a year. Foreign subscription 25 cents extra. Address, 1216 You St., N. W., Washington, D. C.

Libraries

AMERICAN LIBRARY ASSOCIATION—Furnishes information about organizing libraries, planning library buildings, training librarians, cataloging libraries, etc. *A. L. A. Booklist*, a monthly annotated magazine on book selection, is a valuable guide to the best new books. List of publications on request. George B. Utley, Executive Secretary, 78 E. Washington St., Chicago.

Recreation

RECREATION—Are you interested in the growth of the playground movement? If so, you will want to know what cities and small communities throughout the country are doing to provide wholesome recreation. The Year Book telling how people "played" during 1916 in over 400 communities may be secured for 50c at the office of the Playground and Recreation Association of America, 1 Madison Avenue, New York city.

Children

CHILD LABOR—National Child Labor Committee, 105 East 22d St., New York. Owen R. Lovejoy, Sec'y. 25 State Branches. Where does your state stand? How can you help? List of pamphlets and reports, free. Membership fee nominal.

CONSERVATION OF INFANT LIFE—American Assoc. for Study and Prevention of Infant Mortality, 1211 Cathedral St., Baltimore. Gertrude B. Knipp, Exec. Sec'y. Literature on request. Traveling Exhibit. Urges prenatal instruction; adequate obstetrical care; birth registration; maternal nursing; infant welfare consultations.

EDUCATIONAL HEALTH POSTERS COVERING CARE OF BABIES AND CHILDREN—Second edition of Parcel Post Exhibit. Photogravure reproductions in color with simple, easily understood legends, attractively illustrated from original paintings; 25 posters (18" x 28") in set. Further information regarding these and other exhibits on request. Illustrated booklets on Baby and Child Care. Lantern slides. National Child Welfare Exhibit Association, Inc., 70 Fifth Ave., New York City.

NATIONAL KINDERGARTEN ASSOCIATION—250 Madison Ave., New York. Object: To have the kindergarten established in every public school. Four million children in the United States are now without this training. Furnishes Bulletins, Exhibits, Lecturers, Advice and Information. Works for adequate legislation and for a wider interest in this method of increasing intelligence and reducing crime. Supported by voluntary contributions.

Women

WOMEN IN INDUSTRY—National Consumers' League, 289 Fourth Ave., New York. Mrs. Florence Kelley, Gen'l Sec'y. 87 branch leagues. Reports, pamphlets sent on request. Minimum membership fee \$2.00, includes current pamphlets. Minimum wages boards, protection of women workers, sweat-shops, etc.

WORKING WOMEN—National Women's Trade Union League stands for self-government in the work shop through organization and also for the enactment of protective legislation. Information given. "Life and Labor," working women's monthly magazine, 5c. a copy. Mrs. Raymond Robins, Pres.; Mrs. Amy Walker Field, Editor, 166 West Washington St., Chicago.

EVENING CLUBS FOR GIRLS—National League of Women Workers, 35 East 30th St., New York. Organizing Sec'y, Jean Hamilton. Recreation and instruction in self-governing and self-supporting groups for girls over working age. Monthly magazine, "The Club Worker," Twenty-five cents, 1 year.

HOME AND INSTITUTIONAL ECONOMICS—American Home Economics Association, for Home, Institution, and School. Publishes Journal of Home Economics. 12 issues a year, \$2.00. Next meeting: University of Minnesota, August 22-28, 1917. Address 1211 Cathedral St., Baltimore, Md.

Organized Charity

CHARITIES AND CORRECTION—National Conference of Charities and Correction, 315 Plymouth Ct., Chicago. Frederic Almy, Buffalo, N. Y., President; W. T. Cross, Gen. Sec. Proceedings carefully indexed comprehend all fields social work. Bulletins and misc. publications. Conducts information bureau. Forty-fourth annual meeting, Pittsburg, June 6-13, 1917. Membership, \$3.00.

ORGANIZED CHARITY AND CO-ORDINATED SOCIAL WORK—American Association of Societies for Organizing Charity. Mrs. W. H. Lothrop, chairman Executive Committee; Francis H. McLean, gen'l sec'y, 130 East 22d St., New York City. To promote the extension and development of Associated Charities and to further the proper co-ordinations and alignments in the social work of communities, including the making of community plans.

Settlements

SETTLEMENTS—National Federation of Settlements. Develops broad forms of comparative study and concerted action in city, state, and nation, for meeting the fundamental problems disclosed by settlement work; seeks the higher and more democratic organization of neighborhood life. Robert A. Woods, Sec'y, 20 Union Park, Boston Mass.

Work With Boys

BOYS CLUB FEDERATION—National Headquarters, 1 Madison Ave., New York City. Federation includes Boys' Clubs, Boys' Depts. of Recreation Centers, Settlements and Community Houses. A clearing house for information on subjects relating to work with boys. Printed matter distributed; workers furnished; assistance given in organizing. Wm. E. Hall, President; C. J. Atkinson, Executive Secretary.

Civic Problems

MUNICIPAL PROBLEMS—National Municipal League, North American Bldg., Philadelphia. Lawson Purdy, Pres.; Clinton Rogers Woodruff, Sec'y. Charters, commission government, taxation, police, liquor, electoral reform, finances, accounting, efficiency, civic education, franchises, school extension. Publishes *National Municipal Review*.

SHORT BALLOT AND COMMISSION GOVERNMENT—The Short Ballot Organization, 383 Fourth Ave., N. Y. City. Woodrow Wilson, Pres.; Richard S. Childs, Sec'y. National clearing house for information on these subjects. Pamphlets free. Publish *Beard's Loose-Leaf Digest of Short Ballot Charters*.

ALCOHOL QUESTION—The Scientific Temperance Federation, 36 Bromfield St., Boston. Mass. Cora F. Stoddard, Exec. Sec'y. Has a strong special library on the alcohol question, including hygienic, industrial, economic, and sociological relations. Publishes results of reliable researches in the Scientific Temperance Journal and other literature. Has models, posters, and lantern slides for exhibits. Dues—Active, \$5.00; Associate, \$2.00; Sustaining, \$10.00. List of publications free.

PROPORTIONAL REPRESENTATION—Adoption of which by Ashtabula, O., 1915, promises new era in civic development—Headquarters for information, American P. R. League. Pres., Wm. Dudley Foulke; Gen. Sec.-Treas., C. G. Hoag, 802 Franklin Bank Bldg., Philadelphia. *Proportional Representation Review* (quarterly), 40c a year. A subscription of \$1 gives membership in League and entitles to all publications for year. Larger subscriptions much needed.

Church and Community

THE CHURCH AND SOCIAL SERVICE—The Federal Council of the Churches of Christ in America operates through its Commission on the Church and Social Service. "A Year Book of the Church and Social Service." (Paper, 30c.; Cloth, 50c.), gives full information regarding social movements in all the churches. For literature and service address the Secretary, Rev. Charles S. Macfarland, 105 E. 22nd St., New York.

EPISCOPAL SOCIAL SERVICE—The Joint Commission on Social Service of the Protestant Episcopal Church. For literature and other information, address the Executive Secretary, Rev. F. M. Crouch, Church Missions House, 281 Fourth Avenue, New York City.

UNITARIAN SOCIAL ADVANCE—The American Unitarian Association through its Department of Social and Public Service. Reports and Bulletins free. Lecture Bureau. Social Service Committees. Elmer S. Forbes, Secretary of the Department, 25 Beacon St., Boston.

Aid for Travelers

AID FOR TRAVELERS—The Travelers' Aid Society provides advice, guidance and protection to travelers, especially women and girls, who need assistance. It is non-sectarian and its services are free irrespective of race, creed, class or sex. For literature, address Orin C. Baker, Gen. Sec'y, 465 Lexington Ave., New York City.

Immigration

NATIONAL LIBERAL IMMIGRATION LEAGUE—Advocates selection, distribution and Americanization and opposes indiscriminate restriction. Summarized arguments and catalog of publications on request. Minimum membership (\$1) includes all available pamphlets desired, and current publications. Address Educational Dept., National Liberal Immigration League, Sun Bldg., N. Y.

IMMIGRANT GIRLS—Council of Jewish Women (National), Department of Immigrant Aid, with headquarters at 242 E. Broadway, New York City—Miss Helen Winkler, chairman—gives friendly aid to immigrant girls; meets, visits, advises, guides; has international system of safeguarding. Invites membership.

RUSSELL SAGE FOUNDATION—Department of Recreation announces a cloth-bound handbook "Community Center Activities" giving information about 183 activities suitable for school and recreation centers, settlements, Y. M. C. A.'s and church houses. 127 pages. Price, 35 cents. 130 East 22d Street, New York City.

IMPORTANT MARCH PUBLICATIONS

WOMAN

By VANCE THOMPSON

Author of EAT AND GROW THIN

Has Man Made of Woman a Strassbourg Goose?

Vance Thompson answers that question in his new book, the most picturesque contribution yet made to the Feminist controversy. He argues that the specialization for sex which has been forced upon woman has been the cause of endless trouble, and he points out the lines along which woman will have to make her fight, her costume being one of them, if she wishes to escape from that domination. A piquant and provocative book. Net \$1.25

RUSSIAN MEMORIES

By MADAME OLGA NOVIKOFF. Net \$3.50

For forty years Mme. Novikoff has worked interestingly to bring about friendships between Russia and Great Britain. Among her many friends Mme. Novikoff has numbered Gladstone, who helped her fearlessly in her work; Carlyle, Tyndall, Kinglake, the late Lord Clarendon, Hon. Charles Villers, Skoteleff, Verestchagin, Sir Henry and Lady Campbell Bannerman, Froude, Dostoevsky. Few women in history have played so important a part in international affairs. General Ingatieff referred to her as a gallant and intrepid warrior, and Disraeli called her the M.P. of Russia in England.

THE UNBROKEN LINE

By H. WARNER ALLEN. Net \$2.00

Along the French Trenches from Switzerland to the North Sea.

Excellent chapters about Vosges and Lorraine. . . . The Champagne assault affords the author great scope. . . . His tales of Verdun are fascinating. The book is one to be read by all.

GERMANY IN DEFEAT

By COUNT CHARLES DE SOUZA. A Strategic History of the War. 3 Vols. Each Net \$2.00

Third Phase, covering the period from the close of the first battle of Ypres to and including the German attacks on Verdun. (Just published.)

The First Phase, from the beginning of the war to the close of the battle of the Marne.

The Second Phase, to the close of the first battle of Ypres.

GERMANISM FROM WITHIN

By A. D. McLAREN. Net \$3.00

N. Y. Tribune says: "To be a second Augustan Rome, mistress of all the world. That in this author's conception has long been the German ambition, and the present war is simply a culmination of those designs. Mr. McLaren has diligently studied Germany from within in both peace and war and he gives us the impression of having got pretty close to the heart of things. There is no rancor in his writing. It is a volume which the thoughtless will not read, and which the thoughtful will scarcely fail to read through when once they have begun it."

A CRYSTAL AGE

By W. H. HUDSON. Author of "The Purple Land." Net \$1.50

With a critical appreciation by Clifford Smyth, Litt.D. It is as clear and sparkling as the title. Its subject matter is one that to a tired humanity never grows stale. It is fascinating as a story and beautiful as an art.

FIGURES OF SEVERAL CENTURIES

By ARTHUR SYMONS. Net \$3.00

The London Times says: "These papers are aimed so directly at the heart of the subject that in each case they seem to show us something we had missed before. And it is always done as the poet knows how to do it without display of knowledge or chain of argument, but directly, simply and fully. He has so fine an instinct for the aim and quality of each writer that the result seems effortless and brimming with truth."

GRAIL FIRE A Novel

By ZEPHINA HUMPHREY. Net \$1.50

Contrasting the struggles in the soul of a young man for a sweet and beautiful girl with the consciousness of a vocation for the priesthood the author has successfully made the rare combination of a really interesting story and a most exalted spiritual idealism.

IF WISHES WERE HORSES

By COUNTESS BARCYNKA. Net \$1.50

In this clever and acute study of a self-made man's career the Countess Barcynska holds up the mirror to modern life and shows us the shams and falsities which inevitably bring about their own retribution.

THE GOLDEN ARROW

By MARY WEBB. Net \$1.50

The author has set her scene in a lonely mountain glen on the borders of Wales. The homely wit, the rustic seriousness about trifles, the forces of elemental passion and antique superstition, the alternate sweetness and grimness of life lived close to the soil and dependent on the moods of Nature, these form the background for the drama of a great-hearted woman's love and self-sacrifice which at last brings her into the golden "haven where she would be."

IDLE DAYS IN PATAGONIA

By W. H. HUDSON. Author of "The Purple Land." Net \$1.50

The late Professor William James of Harvard gives high praise to this particular book and says of the author, "A MAN WHO CAN WRITE."

The New York Herald says: "From first page to the last the author's vivid yet simple mode of writing paints pictures that make the volume one of the most charming that has appeared in a long time."

MALICE IN KULTURLAND

By HORACE WYATT

Illustrated after Tenniel, by W. Tell

The cleverest parody of "Alice in Wonderland" which has yet appeared, and at the same time a brilliant satire on Prussian Methods in War, Diplomacy and Propaganda. Net 75 cents

Postage Extra. At all Bookstores.

E. P. DUTTON & CO., 681 Fifth Ave., New York

THE SURVEY

The Supreme Court on Strikes

By John A. Fitch

OF THE SURVEY STAFF

THE fact that it settled a strike is the reason why the Adamson eight-hour law is constitutional. That isn't exactly what the United States Supreme Court said, but that is what it meant in the decision handed down last week in the case of *Wilson vs. New*—the test case that was brought up in record time from the United States Circuit Court in Kansas City. The decision is based on a theory of compulsory arbitration rather than upon the social justification for laws regulating hours and wages. In fact, the latter was not considered at all, and we are as much in the dark as ever as to the probable fate of the ten-hour and the minimum-wage laws now before the court.

After reviewing the circumstances that brought the case before the court, the question to be decided is stated as follows: "Did Congress have power *under the circumstances stated*, that is, in dealing with the dispute . . . to provide a permanent eight-hour standard and to create by legislative action a standard of wages . . .? Or, in other words, did it have the power *in order to prevent the interruption of interstate commerce* to exert its will to supply the absence of a wage scale resulting from the disagreement as to wages between the employers and employes and to make its will on that subject controlling for the limited period provided for?" (Italics mine.)

The court points out that "the business of common carriers by rail is in a sense a public business." This is so "because of the interest of society in the *continued operation* and rightful conduct of such business." That the public interest "begets a public right of regulation to the full extent necessary to secure and protect it" is settled by many decisions.

There exists also, the court declared, a "private right" of the railroads and their employes to agree on a standard of wages and put it into effect. But this was exactly what they had failed to do. As a result there was grave danger that there would be an interruption in that "continued operation" in which the public is so deeply interested. It was to meet this emergency that Congress passed the Adamson law. Was this an exercise of its legitimate power to regulate commerce? Said the court:

"Taking all these propositions as undoubted [*i. e.*, the power

of Congress to regulate interstate commerce, the public interest in continued operation and the private right to make a bargain] if the situation which we have described and with which the act of Congress dealt be taken into view, that is, the dispute between the employers and employes as to a standard of wages, their failure to agree, the resulting absence of such standard, the entire interruption of interstate commerce which was threatened, and the infinite injury to the public interest which was imminent, it would seem inevitably to result that the power to regulate necessarily obtained, and was subject to be applied to the extent necessary to provide a remedy for the situation, which included the power to deal with the dispute. . . ."

The decision points to previous decisions of the court on the power of Congress to regulate commerce. These decisions have established its right to fix reasonable rates to be charged by the railroads, to control the contract power of the carrier in the public interest, to regulate the relation of employes with their employers and with each other. Beyond all this it is clear "that an obligation rests upon a carrier to carry on its business, and . . . that government possesses the full regulatory power to compel performance of such duty."

In view of all these powers, the court held that the power of Congress to settle a wage dispute follows logically. It declared that if it could not do so, all these powers that have just been enumerated "would be rendered unavailing or their enactment inexplicable."

"What would be the value of the right to a reasonable rate," inquired the court, "if all movement in interstate commerce could be stopped as a result of a mere dispute . . .? Again, what purpose would be subserved by all the regulations established to secure the enjoyment by the public of an efficient and reasonable service, if there was no power in government to prevent all service from being destroyed? Further yet, what benefits would flow to society by recognizing the right, because of the public interest, to regulate the relation of employer and employe and of the employes among themselves . . . if there was no power to remedy a situation created by a dispute between employers and employes as to rate of wages, which if not remedied would leave the public helpless, the whole people ruined and all the homes of the land submitted to a danger of the most serious character? And finally, to

what derision would it not reduce the proposition that government had power to enforce the duty of operation, if that power did not extend to doing that which was essential to prevent operation from being completely stopped . . . ?”

Then comes the final and definite affirmation of the right of Congress to act—not because the health of the employes or the welfare of the public demand it, but because “under the circumstances,” it was necessary for Congress to act.

“We are of opinion that the reasons stated conclusively establish that from the point of view of inherent power the act which is before us was clearly within the legislative power of Congress to adopt, and that in substance and effect it amounted to an exertion of its authority under the circumstances disclosed to compulsorily arbitrate the dispute between the parties by establishing as to the subject matter of that dispute a legislative standard of wages operative and binding as a matter of law upon the parties—a power none the less efficaciously exerted because exercised by direct legislative act instead of by the enactment of other and appropriate means providing for the bringing about of such result.”

So much for the decision. The Adamson law is upheld. In the reasoning that leads to that result something altogether new has been injected into the field of social legislation, something that may not have been foreseen or desired by any of the parties in interest.

There is promise, to be sure, in one lone passage in the decision that stands out from the rest and breathes a conviction and a purpose that must be welcomed by all democratically-minded people. The court intimated that the attorneys for the railroads, instead of basing their arguments on fundamental legal grounds, attacked the law as an unwise exertion of legislative power due to “some misconception or some mistaken economic view.”

“To state such considerations,” said the court, “is to state also the entire want of judicial power to consider them—a view which therefore has excluded them absolutely from our minds and which impels us as a duty to say that we have not in the slightest degree passed upon them. While it is a truism to say that the duty to enforce the constitution is paramount and abiding, it is also true that the very highest of judicial duties is to give effect to the legislative will and in doing so to scrupulously abstain from permitting subjects which are exclusively within the field of legislative discretion to influence our opinion or to control judgment.”

Nevertheless, from the standpoint of social advance through legislation, the decision must be distinctly disappointing. It establishes no precedent that can be depended on to justify legislation carefully and thoughtfully drafted for the purpose of destroying industrial evils or promoting social progress. It merely establishes the right of Congress to act in an emergency and for no social purpose except to save the public from inconvenience. Whatever precedents are established may prove disquieting, not only to the unions and their friends, but to employing corporations as well.

The fact that it was the emergency and no consideration of social policy beyond the prevention of inconvenience that led to the sustaining of the law is repeatedly insisted upon throughout the decision. It appears, therefore, that a threat of the interruption of traffic is sufficient to justify Congress in regulating conditions of work if that will avert the impending calamity.

A second proposition grows directly out of it. The way for employes engaged in any public service to induce the government to enact legislation in their interest is to threaten to

strike unless the desired standards are put into effect. Not only can this be inferred from the general grounds on which the decision of the court was based, but it appears with startling clearness in the reply to the argument that the Adamson law denied to some of the employes equal protection of the laws, in that it established a wage and hour standard for the train employes alone. Said the court, “but such employes were those concerning whom the dispute as to wages existed, growing out of which the threat of interruption of interstate commerce arose—a consideration which established an adequate basis for the statutory classification.”

Could there be a stronger suggestion than that to the employes who were not included that they may get the same benefits by threatening to go on strike?

Whether this decision affirming the right of Congress to interfere in the contractual relations between employer and employe will prove, in the long run, any more pleasing to the railway managers than to the employes is open to question. There are no limits expressed as to the power of Congress in this regard. It seems clear that if the power of compulsion extends to the wages of the employes, it may extend also to the salaries of the managers. If Congress is to enter upon the program of regulating conditions of employment, in order to secure such contentment among the employes as will prevent the interruption of traffic, it seems not at all improbable that it may be called upon to fix a maximum salary as well as a minimum wage.

It is already apparent from the public utterances of representatives of the brotherhoods and of the president of the American Federation of Labor that the affirmation of the right to compulsory arbitration is not relished by organized labor. Curiously enough the only grains of comfort for labor on this point appear in the dissenting opinions. “I am not prepared to admit,” said Mr. Justice Day, “that Congress may when deemed necessary for the public interest coerce employes against their will to continue in service in interstate commerce. Nor do I think it necessary to decide, as declared in the majority opinion, that in matters of this kind Congress can enact a compulsory arbitration law.” And Mr. Justice Pitney said, “I am unable to find in the constitution any authority on the part of Congress to commandeer the railroads or the service of the trainmen.”

Of course, the statement by the majority of the court that the action of Congress in passing the Adamson law was valid as an act of compulsory arbitration, does not foist upon the country a compulsory arbitration law, nor does it make it absolutely inevitable that if Congress should enact such a law the court would sustain it. As Mr. Justice Day said, “These questions [the coercion of employes and the enactment of a compulsory arbitration law] are not involved in this case, and their decision need not be anticipated until they actually arise.” It is doubtless a fact, however, that this opinion will give strength to the movement for a compulsory investigation law, with a limitation on the right to strike.

The Adamson law is constitutional and the country breathes more freely. A strike has been averted. By next week there may be a decision affirming the Oregon ten-hour law, or the minimum-wage law. At the present moment, however, there is no judicial sanction for the limitation by law of the working hours of a man in private employment, however long they may be, unless he is an underground miner or has recently threatened the peace and comfort of the whole country. And judicial sanction for the legislative raising of wages, however low they may be, is limited at present to the second of the two classes named.

"QUI DOIT GAGNER: LA CROIX DE FER OU LA CROIX-ROUGE?"

A Canadian City in War Time

III. Way-Marks in Organized Giving

By Paul U. Kellogg

BACK of the relief work carried on among soldiers' families by the Ladies' Auxiliary of the Patriotic Fund in Montreal, back of similar work attempted by six or seven hundred branches of this Canadian fund throughout the dominion, lies a continent-wide scheme of giving which is perhaps without duplicate in the history of American philanthropy.

Certain it is that as a single incident in it, the "victory campaign" in Montreal early in February raised the largest sum of money from voluntary contributions ever drawn from a single American city in a week's time. The famous Y. M. C. A. campaign fund in New York was brought up to four million dollars by some eleventh-hour gifts of the largest donors. When the Montreal campaign closed on February 12, \$4,344,839 was paid or pledged, and when all returns are in an even four and one-half million may be in hand.

Set off against this wholesale loosening of Canadian purse-strings in the largest city are stories of generosity from every corner of the dominion. There was the Russian farmer who in December came down to the town of Burdette on the border between Alberta and Saskatchewan. He had been pioneering away from any railroad and did not know that there was a war! When he heard Canada and Russia were allies he wanted to help, and said he would give ten dollars a month for as long as the war had gone on. When they told him thirty months, he promptly produced \$310 (one month to go on), turned it in, and went back into the wilderness. The Servian who traveled many miles from his settlement to a Western town to give three \$20 bills to the Patriotic Fund is

another example of the response of immigrant settlers throughout the country.

Thousands of dollars have been turned in by the Indian bands, one estimate placing the total above \$10,000. A poster used by the Patriotic Fund in the western provinces reproduces a letter received by the fund in monosyllabic Cree. No one at headquarters could make out the letter, but the \$2.50 which came with it was plain. Translated the note proved to be from an Indian who was sending twenty-five cents apiece from his wife, himself and his five children. One of the most whimsical stories comes from the banks of the Fraser river. An old Chinaman applied to the mayor of a British Columbia town: "Mr. Mayor, you give job, me help soldier's wife." The mayor answered, "Sorry, John, but I haven't any job for you." The Chinaman went away. Next week he came back. "You catchee me job; me give to soldier's wife." Again the mayor said no. Once more in due time the Chinaman came back: "Me no catchee job," he said. "You give me names five soldiers' wife; me cut chop wood for them," and he has cut and chopped wood at their back doors every Monday morning since. That is the way he has helped in the war. Another hard-earned contribution mentioned in the bulletin of the Patriotic Fund was from an old lighthouse keeper at the end of Prospect Park, Vancouver. Last summer when the local fund for returned soldiers was opened there the old guardian had no money to spare from his meager salary. He spaded up the little plot of land around his lighthouse and sold bouquets to motor parties and passers-by. In the fall he turned in \$1,035 to the soldiers' fund.

In a sense, this is all part of a scheme of voluntary income taxation, laid from the Atlantic to the Pacific, from the United States border to the Arctic Circle, to supplement government aid to the families of soldiers overseas. In recruiting her quota of 500,000 men the dominion has urged skilled and unskilled alike to enlist, youths and heads of families; but, at the same time, the government pays every man in the ranks the same—\$30 a month, with ten cents a day field allowance. Only as a private goes up in the scale of army organization does he get more. This army system, which Canada inherited from Europe, is modified by a subsistence allowance to the dependents of married recruits far in excess of anything paid abroad; that is, it distinguishes between a single man and a married man. It stops there, however, the flat rate of \$20 subsistence allowance a month being the same whatever the size of the family.

In the early days of the war, various relief organizations

the absence of any national organization, as broad of scope as the American Red Cross (the Canadian Red Cross is limited by its charter to the care of the sick) was a civil body, auxiliary to the government and its militia department, which first of all would come at the problem from the point of view of the home rather than of the armory. It must break away from the cast iron army regulations which treated the childless wife of a young recruit on the same footing as the family next door with half a dozen children to clothe and house, to feed and send to school. The general scale of the Patriotic Fund's family budgets, not unlike those of our workmen's compensation laws, was described in the first of these articles on the ladies' auxiliary of the fund in Montreal. These basic rates are modified in different parts of the dominion. The average grant to the families on Prince Edward Island, living in an agricultural community, is \$10 per month. In Nova Scotia the average is \$12.50; in New Brunswick \$14; in

EVERY DAY HAD ITS OWN KEYNOTE IN THE VICTORY CAMPAIGN

sprang up all over Canada to remedy this shortcoming; but many of them, to quote one of the organizers of the Patriotic Fund, were "without form or comeliness" and there was no coordination among them. A conference was called at Ottawa of representative men from all parts of the dominion, to "beat out" a working scheme which would be nation-wide and non-partisan; which would be flexible, quick-acting and sympathetic; which would take into consideration both the size of the family and the cost of living in every locality; which would be even-handed so that the poor district sending many men would be as well able to do for its soldiers' families as the centers of wealth; a scheme which would have a sound accounting basis so that it could not easily be raided; one which would have so real an appeal that it could be adequately financed. All this, in remarkable degree, the Canadian Patriotic Fund has realized.

To take these factors up in order: What was needed, in

Quebec and Ontario it rises to between \$15 and \$16, and in the mining camps of northern Ontario where provisions are high it goes to \$18. Further west it reaches still higher—\$18 in Manitoba, \$19.50 in British Columbia, \$20 in Alberta, \$21 in Saskatchewan, and even more in the Yukon. These averages reflect careful estimates of the prices of necessities in the different provinces. Moreover as the cost of living has gone up this past winter in the manufacturing centers, budget estimates have been increased 10 per cent.

The fund is not a delegated body nor an official one. It is vested in fifty men of standing scattered from one end of Canada to another, and forming a national executive which meets once in six weeks. An expert advisory committee of six or eight men, volunteers who are giving a large part of their time to the actual administration of the grants in different localities, meets in advance of this executive, acts as a "strainer" for practical problems and recommends rules.

Each local branch has two bank accounts, a disbursing account and a collecting account into which all money raised locally goes and thence automatically comes under control of the national treasurer, Sir Thomas White. Altogether \$15,500,000 has gone through the central treasury to date, and by an arrangement with the banks by which 4 per cent interest is paid on the fund's balances, the interest has very nearly met the administrative expenses. All of the committee work is volunteer so that out of every \$100 received in cash to date \$99.25 has reached the soldiers' families.

The fundamental financial principle is that each community is asked to "raise all it can and spend all it needs." For example, Montreal with its 4,000 cases has raised perhaps double what has been distributed locally; Toronto with 12,000 cases has three-fourths Montreal's population, but treble the family need. For recruiting has been very uneven in Canada—one man out of fifty has joined the forces in

The checking up of these disbursement sheets is the key to the system. It is based upon the army records of families of soldiers at the front receiving separation allowances under the Canadian law. These records have been transcribed for the head office of the fund at Ottawa and arranged in an alphabetical file of 105,000 cards. Every day the fund receives from army sources overseas and at home, from the Military Hospitals Commission, the recruiting officers and employers, all discharges, desertions, enlistments and changes which would add to or cancel these cards or affect the status of soldiers' families. The cards are marked to show through what local branch the families represented are getting their grants. Every day 150 letters go out from headquarters to the branches, notifying them of changes in eligibility. Every month the disbursement sheet from the branches is checked off against the cards—a swift and precise audit, which is quick to catch such matters as a woman moving from one town to an-

REDUCTIONS OF DISPLAY ADVERTISING IN MONTREAL PAPERS

Quebec, one out of sixteen in Ontario, and one out of twelve in British Columbia and other of the western provinces.

While the basis of the fund's appeal for contributions, therefore, is a community's ability to give, the basis of the credit of any community—that is, of the money it can draw from the central treasury—is proven need.

Each branch of the fund fills out a requisition signed by two responsible officers, affirming the amount it will require the coming month. If the branch is in good standing, as 99 per cent of them are, a check is at once sent from Ottawa. At the end of the month the branch supplies the national headquarters with a disbursement sheet giving the name and make up of every family under its care, the name and battalion of the soldier in the case, the amount the committee considers the family's requirement for subsistence, the known revenues of the family from all other sources, and the difference made up by the fund grant.

other and enjoying fund money from both; a man raised from the ranks to a sergeant's pay with resulting reduction in fund grant; a recruit dropped from the payroll of some large employer after being carried for six months, thus calling for fund money to make up the gap in his household's budget.

Branches and sub-branches are worked out on the political unit system. Ontario, Quebec and New Brunswick are near enough Ottawa so that their 150 local offices report direct. But outside the area where a letter mailed one day will reach headquarters the next, provincial clearing houses have been created, as in Prince Edward Island and the West.

American readers will be interested to know that fifteen auxiliaries have been established by the Patriotic Fund at different centers in the United States. A year ago something like 1,200 names of families dependent upon American men who had enlisted in Canadian regiments were on the records at Ottawa. These families were resident in every state in the

union. The charter of the fund restricted its grants to families living in Canada or Newfoundland. If a soldier's wife lived in Morrisburg, Ont., she could benefit by the fund, but not if she lived in Ogdensburg, N. Y., across the river.

Many pitiful letters were received and there was, moreover, an epidemic of desertions on the part of American soldiers who found that their wives could not get along on half pay and separation allowance. The fund, therefore, established auxiliaries in Boston, Philadelphia, Buffalo, Chicago, Cleveland, Minneapolis, Seattle, Spokane, Portland and San Francisco. There is a chief auxiliary in New York which looks out for all parts of the country not covered from the smaller centers. These auxiliaries are made up of Canadian-born, British subjects and American sympathizers, who have raised the necessary money from among themselves and local sources to make up fund grants so that every family in the United States with a breadwinner in the Canadian forces is cared for by the same method and at the same rates as soldiers' families within the dominion. Notifications of discharges, changes, etc., go to these auxiliaries just as they go to the local branches in Canada.

In Canada itself, since the outbreak of the war, Sir Herbert Ames, M. P., of Montreal, honorary secretary of the fund, has visited every town of any size. For the first two or three months it was a matter of negotiating with all manner of local war relief bodies to come into the central fund, and with four or five minor exceptions they have done so. After that came general agitation and organization.

A great deal of care was taken to keep the local branches from getting into the hands of small political or personal cliques. The effort was to make them non-partisan and non-sectarian, to approach the strong men of the community, and to have the whole plan publicly known and talked over before the organization meeting so that the fund would draw on all representative elements in the community. Of course, this didn't happen in every case. In the course of the last two years one of the delicate undertakings from headquarters has been to break up ineffective local committees. For example, in one town a thousand dollars in relief money was being distributed regularly while the community, prosperous though it was, turned in less than \$3,000 a year. A representative from the Ottawa headquarters paid a visit which proved successfully irritating to the local committee, led to their resignation and the organization of a new committee. Subscriptions of upward of \$25,000 in a single week were the result of public confidence in the new organization.

The first year, when the Duke of Connaught, governor-general of Canada, issued an appeal for five million dollars 85 per cent of this came in without stimulation. The cities which contributed most generously this first year pledged themselves to meet the heavier load of a second year, if they had assurance that the amount which they were expected to raise was a fair allotment, and that every part of the dominion was doing its bit. This necessitated re-organizing the financial work on a truly national scale. By means of a rough and ready inventory of every area in Canada, the number of British- and Canadian-born living in it, its prosperity, wealth and previous record in giving, something like an index figure was arrived at for every province, county, town—almost every village.

"Laying the Tax"

TO ILLUSTRATE the method of "laying the tax": The province of Alberta falls naturally into two parts, with Edmonton as the chief city of the north and Calgary to the south; these dis-

tricts are about equally well off and the provincial allotment of \$500,000 in 1916 was split in half. Next, at Edmonton, a conference was held of representative men from the city's twenty-six constituencies north of the Red Deer river. A whole day was given up to a canvass of resources, constituency by constituency, taking into account the social composition of each, for some are peopled largely by foreigners, and some by French-speaking farmers. Roughly \$130,000 was allotted to the city of Edmonton, leaving \$120,000 for the twenty rural constituencies. Each of these was asked to take six, seven or eight thousand dollars as its share, according to wealth and make up. This disposed of all but about six thousand dollars, which was spread out by a sort of inverted auction at the close of the day.

In inaugurating the third financial campaign, which has just been completed, the figure set for the whole dominion was \$13,500,000 and the allotments were as follows:

British Columbia	\$1,000,000
Alberta	750,000
Saskatchewan	1,000,000
Manitoba	1,500,000
Ontario	6,000,000
Quebec	3,000,000
Nova Scotia	750,000
New Brunswick	500,000
Prince Edward Island	50,000

There is "give" of about a million dollars in this table, yet not only will every province reach the figure set but half of them will exceed their allotments.

This preliminary program completed, local branches in many regions have shouldered their load of money-raising without further stimulation. Five paid money-raisers were sent out to assist in certain districts. In the province of Quebec, where even church and benevolent funds are raised through taxation, an exception was made and a provincial grant of a million dollars made good the allotment.

Among the large cities of the dominion, Toronto beat all records the first week in February by setting out to raise \$2,500,000, and reaching no less a mark than \$3,260,000. Here was competition for Montreal, with its long history of successful money campaigns, where fifteen years ago \$300,000 was raised for the local Y. M. C. A. in fifteen days, and where in succeeding years other large sums have been gotten together by the familiar Y. M. C. A. method—for the General Hospital, McGill University and the Theological Colleges. Montreal raised \$1,600,000 in the first Patriotic Fund campaign, that of September, 1914; \$2,500,000 in the second, that of January, 1916. So that the city was on its mettle for the third.

The Montreal Campaign

MONEY-RAISING, as these Montreal experts view it, is a "scientific problem psychologically applied." Given certain preparations, they say, within reason you can achieve what you want. It is a question of knowing how much machinery is needed to bring about results, and this depends, of course, on the breadth of the appealing power. The Y. M. C. A. campaign only appealed to the Protestant population; the general hospital to the English speaking, but here in the Patriotic Fund they had an appeal to the whole city and laid their plans accordingly. John W. Ross, one of the leading public accountants of Canada, honorary treasurer of the Montreal fund, and the man who has been at the center of all the local money-raising campaigns, shut up his desk for two months and went at it.

The campaign was limited to five days in the belief that the attention of the public can be held for a short period, and only for a short period. "A man can give as much in five days

as he can in five months," says Mr. Ross. In the early days a big meeting was held with much talk before we started in to make preparations, with the result that enthusiasm dwindled and left the job to a faithful few. This mistake is no longer made, and although preparations go on for two or three months with compilations of lists and printing of blanks and the like, even the captains of the teams were not approached this year until ten days before the campaign was actually on.

Each captain was limited to a team of fifteen, built up around a nucleus of his close friends and from lists supplied by the committee. Fifteen English-speaking teams, ten French-speaking and two women's teams, one English and the other French, made up the campaign organization. In addition, there were four special committees whose gleanings were thrown into a pool and divided equally among all teams. Back of this team organization was a general executive committee of one hundred leading men, a smaller finance committee, and a finance executive which ran the campaign under the chairmanship of W. M. Birks. The campaign opened with a meeting addressed by the governor general of Canada, who also spoke at a mass meeting of French Canadians in the evening—thus ushering in a new stage of inter-racial giving and civic cooperation in Montreal, which the promoters of the Patriotic Fund campaign hail as an augury of new municipal unanimity in the future.

The customary luncheon meetings were held for five days, with reports from teams and the reading off of the names of the larger donors—French day, bankers day, khaki day (with forty invalid officers at the speaker's table), Red Cross day (for this was a joint collection, and the Red Cross received one-eighth of all moneys), and a final banquet on Friday evening, with Lord Shaughnessy, president of the Canadian Pacific, in the chair.

Of the special committees, one cleared around \$112,000 from firms in munition trade. The chief banks of Montreal doubled this sum, and the two railways, the Canadian Pacific and the Grand Trunk, trebled it. Montreal appropriated a million dollars, and the little suburban municipalities small sums each.

Four Days' Pay

THE most startling haul of all was \$849,000 raised among the workers of the city by the contribution of four days' pay each, or in the case of salaried men, 1 per cent of their earnings, to be paid monthly throughout the year. Posters, slips, noonday meetings, shop committees, speeches by foremen, all were resorted to. The plan was not one of individual collection, but practically a "check-off" system by which a workman authorized his employer to send in one day's pay a quarter direct from the pay department. Some companies went to the extreme of notifying their men that unless individual men instructed them to the contrary they would include all as contributors in the quarterly check. The house employes of one club got together and voted that any man who didn't make a contribution should be barred out of next year's Christmas gratuities. Complaints were heard that some clerks felt they were under compulsion to give, but if this were done it was without the sanction of the committee.

The "ladies' campaign" took the form of a self-denial week, and just as the wage-earners of the community were asked to give four days' pay, housewives, house servants and schoolgirls were reached by box collections from door to door. Doctors, dentists, and small shops in the residential districts, schools, churches, the railway stations and the hotels fell to the women canvassers.

Twenty-five thousand statements of fact about the fund and the Red Cross in French and English were posted at the beginning of the campaign to those whose names had been placed in the hands of these different teams. Not only were society, club, board of trade, fraternal and other lists systematically classified, but every merchant in Montreal able to afford a telephone became a prospect. Banners went up on the street cars, boy scouts tacked posters all over the town, and something like \$60,000 worth of advertising and reading space was given up by the Montreal newspapers to a publicity campaign organized by J. M. Gibbon, publicity manager of the Canadian Pacific. This, as every other part of the campaign, was volunteer work; stereos and engravings were free, cartoons, posters and leaflets free, billboard paintings free; and in addition to the straight news of the luncheon meetings and all manner of feature stories, a carefully conceived plan of free display advertising was worked out with all the care of an experiment in a psychological laboratory.

The Advertising Campaign

THOUSANDS of people had already subscribed to the Patriotic Fund in the earlier campaigns. The general objects were known and carried conviction. As the publicity manager expresses it, there was no necessity for the "sob stuff" used in the earlier campaigns and no justification for it, for the fund was there to see that neglect did not happen. What had to be shown was that the money subscribed had been economically administered and that more was needed. The history of the fund, the facts that interest on its bank balances had more than paid its cost in Montreal, and that the work was practically all volunteer, were crystallized into a general slogan,

"EVERY CENT OF EVERY DOLLAR HAS GONE
TO THOSE FOR WHOM IT WAS INTENDED."

It was an appeal to one of the oldest and most naïve prejudices in public giving; for, of course, the outstanding achievement of the relief work in Montreal had been not so much that every dollar turned in went into some family budget, but that with every dollar that went to a family there went, at a low estimate, at least a dollar's worth of volunteer service, which in many cases meant far more than money value in family rehabilitation and succor. But in this instance the appeal was in keeping with the spirit of the financial campaign itself, an appeal to business men by business men, who donated the "overhead," dropped everything else for five days, and raised more than \$4,000,000 at an actual net outlay of \$4,180, or one-tenth of 1 per cent.

Taking its title from some of the successful war loans, this was a "victory campaign." But along with the economy note there was another of sacrifice which raised the cry,

"GIVE UNTIL IT HURTS."

There were two preliminary days of advertising, Friday's a straight war appeal with a "tank" at the top, and a rather brutal verse at the bottom; Saturday's, with a sentimental turn, an appeal to old subscribers to renew and increase their subscriptions.

Monday's advertising, the beginning of the actual campaign, head-lined self-denial week entered upon by the women of Montreal. Tuesday's stressed patriotism with the flags of France and England and the phrase

"THEY LEFT FOR THE FRONT TRUSTING TO YOU:
DON'T FAIL THEM NOW."

By Wednesday the campaign had been going on for three days, and those who would give readily were already in. From

an advertising point of view, the teams were up against the "tight-wads," the people who were hesitating. So the publicity department put out "a stinger":

"ARE YOU FOR THE PATRIOTIC FUND, OR ARE YOU
A SUNSHINE PATRIOT?"

READY TO WAVE THE FLAG, BUT NOT TO PAY THE COST?"

By Thursday the canvassers were so excited that, to quote one of them, they had forgotten what it was all about. They merely knew that they were to beat the other teams, and especially that Montreal must beat Toronto. For had not Toronto, with its paid fund raisers and advertising men, scooped some \$60,000 worth of contributions from American firms who the year before had given to Montreal? These firms had "fallen" for ten thousand telegrams which the hustling Ontario city had sent out the week before, so ingeniously worded, it is alleged, as to raise no qualms in the donor's mind that he was not putting his money into the same collection plate as the year before! Friday saw the round-up, and as a last whip the morning advertising carried the old Scotch saying,

"TO-NIGHT IS THE NIGHT IF THE LADS ARE THE LADS."

A regular banking department with a dozen experts, volunteers drawn from banks and insurance companies, collated the returns every noon. Lists were made out and rushed to the afternoon papers. Books, ledgers and thousands of receipts printed in advance were ready to hand. Within twenty-four hours a receipt was mailed to every cash giver as a check upon fraud and imposture in a city-wide campaign in which 2,000 people were bearing a hand. At hotel headquarters, given free, were free telephones, free safes, free office furniture, even free detectives who rounded up two bona fide workers sent out without identification cards by an enthusiastic captain for house to house collection. Not counting the money received through the donation of day's pay, collections or pledges were secured from ten thousand people and over one million dollars was given in cash, all of which within a month was listed, receipted, banked and balanced off to a cent.

Big and Little Motives

THIS is not the place to discuss the social and ethical questions bound up in such wholesale schemes of public solicitation and subscriptions. These volunteer managers were practical people, well aware that mixed motives enter into large giving and playing on those motives with precision; the committee discussed such canny questions as whether or not it's more productive to publish only the names of \$1,000 givers in the papers (in the hope of bringing up some \$500 men through publicity), or to put in \$25 givers and above (in the exception that a lot of ordinary \$25 and \$50 people would be glad to see themselves listed at \$100 in the public prints). Such bald considerations do not mean that the promoters were unconscious of the real moving spirit of their cause, or unmindful of the heart searchings which moved hundreds and thousands of givers.

At the opening luncheon in Montreal, Sir Herbert Ames told the story of an old couple in Nova Scotia. Their son was sailing for the front, and they had saved \$40 to go to port and see him off. They thought it over and came to believe that the sacrifice they could make was not to see their son off, however much their hearts ached, but to send the money to the Patriotic Fund.

Another story he told was of Indians in Saskatchewan who were given a contract for road building. It was hard work. It took three weeks, and the Indians in those regions are very poor. But they poured all their earnings for the three weeks

into the fund for the families of soldiers overseas. The next morning one of the Montreal committee men had a telephone message from an insurance canvasser, a French Canadian. He said he had heard the stories of sacrifice. Since he was a boy he had saved \$2,000 and he gave half.

Moreover, some promoters of the "victory campaign" have a constructive civic philosophy about it. "There are men who wouldn't subscribe a dollar to anything before the first campaign in Montreal," said the quiet-spoken man who is credited with being the mainspring of the work. "Perhaps they gave grudgingly in the second, when they were chaffed about it at the clubs or saw their friends' names in the paper.

Later they gave gladly; still later they have gone out and induced others to give. Now their interest goes with the giving. So the circle has widened. Money comes easier. Once a man has given \$1,000 he gives again. People realize that after all it doesn't make them poorer.

"The cost of war, like the casualties of war, always falls unequally. People in Canada don't know what it means until they go over to England. There is sacrifice for you. They come back and wonder how people can go on living their ordinary life as they do here. But the newsboy who turned over all he had earned at midday, the little corner grocer who discussed the Patriotic Fund with his wife after they were abed, and came down with \$50 in the morning; the Chinaman who couldn't speak English, but came in with a bill, and the millionaire who doubled and trebled what he had given a year ago, each made in his way a remarkable gift. And as I look back over twenty years of money-raising I feel that this campaign, with the patriotic appeal which was bound up in its fellowship and success, will mean a great deal to the future of Montreal."

In the Northwest

BUT however compelling these great city campaigns, they are relatively outclassed by the unselfishness in some of the new communities of the great Northwest, which not only have sent a far larger proportion of men to the front, four and five times as many as the province of Quebec, for example, but have given unstintedly. There are towns in British Columbia where every man without exception pledges a day's pay a month. Here the giving to the Patriotic Fund runs as high as \$20 per capita; that is, with 600 people in a town, \$12,000 is turned in in the course of a year.

In Trail and Rossland, for example, all the miners and smelters give one day's pay a month. They get high wages, and their earnings represent the purchasing power in these towns. The miners and smelters came to the conclusion that the storekeepers were not doing as much as they should, so they got out a highly decorative window card reading,

"WE ARE GIVING OUR SHARE EACH MONTH TO THE
PATRIOTIC FUND."

A committee visited every storekeeper in town, who had to satisfy the members that he was giving the equivalent of a day's pay for a miner, or 3 per cent of his gross earnings. If he did, the card went up in his window and the miners' wives spent their money there. The card comes down any month that a storekeeper neglects to keep up his payments. The result is that Trail and Rossland, with a population at most of 10,000 inhabitants, turn in a total of \$75,000 a year.

Open-handed as these western towns are, their giving, spontaneous and compulsory alike, is perhaps less surprising than that which has characterized some of the older agricultural districts. The work of the Patriotic Fund in rural Ontario, for example, is built up on the county council unit. Each municipality has its reeve (like an alderman) who

knows every man, woman and child in the neighborhood. He is the advisory correspondent who gives information about families to the secretary of the county branch.

The Farmers Respond

AT THE county center is a small committee of men known throughout the county, whose judgment carries conviction—so much so that every county council in Ontario makes a monthly grant to the fund from the public treasury. Meeting in open parliament, as it were, they tax themselves on a scale which has no duplicate in the history of Canadian development.

Sir Herbert Ames tells of sitting for an hour while the members of a rural county council argued pro and con over appropriating \$125 for a bridge; and then, when the need of the Patriotic Fund and the soldiers' families has been put before them, of watching an appropriation of \$50,000 go through by unanimous vote. Some counties give as high as \$10,000 a month. Two million dollars comes in annually to the national treasurer of the Patriotic Fund at Ottawa from the county councils of Ontario alone.

With such a spirit in giving, such devoted work by hundreds of folk throughout the dominion, with such ingenuity for raising money and such deft organization for its even-handed distribution across a continent, it is perhaps ungracious to point out, in closing, one serious limitation of the work. But that limitation is so clear and so remediable that any other course would be a dis-service. The soldier's pay is based on the rigid military unit, a man in the ranks. The subsistence allowance made by the dominion government broadens the conception. It recognizes that some men have families, but the allowance is a flat rate to each. The Patriotic Fund breaks up the rigid conception that all families are alike in size and need, and works out a sliding budget. But what the subsistence allowance is to the soldier's pay, what the Patriotic Fund family budget is to the subsistence allowance, the social case work carried out by the women volunteers under the Montreal Relief Committee is to the ordinary patriotic fund grant. The Montreal volunteers recognize a family as made up of living human beings and comprehend the ever-changing household needs in which sickness, death, birth, insanity, all the emergencies of ordinary living enter—needs which are, in many cases, to be met not by money, but by counsel, education, neighborly help; needs upon which the family itself has spiritual resources to bring to bear if they can be organized.

The scope of this work for families in Montreal has been interpreted in the two earlier articles¹ in this series. Other Canadian city branches, set down for the excellence of their social case work by those who have had an opportunity to observe administration of patriotic relief throughout the dominion, are Hamilton, Brantford and Kingston, in Ontario; St. John, in New Brunswick, and Victoria, in British Columbia. Such social case work is perhaps less necessary in the rural districts where families are in close touch with the reeves, but in other of the cities there is a tendency toward routine disbursement. Such routine handling of grants may unconsciously be an element in a family's undoing; more often it fails to elicit family or community resources to help tide over mishap or misadventure; and in general it fails to use the fund as a leverage for permanently rehabilitating a household ill-equipped by habits, health or competence to meet the emergency caused by the man's absence.

While the Canadian Patriotic Fund has sent volunteer and paid experts throughout the provinces to help organize branches and to show the way to raise money, it has still to send out equally experienced missionaries to build up standards and technique in the conserving use of that money—in the social case work, family by family, and community by community, which would make the patriotic fund not only an unexampled scheme of relief to tide over war time, but, in all localities as it is in some, a great enterprise in human conservation, paralleling, if by no means counterbalancing, the social wastage of war.

An American Opportunity

FLAG-STATIONS and cities of the first class, seaports and smelter towns, county-seats and wilderness—giving, giving until it hurts! The visitor turns from this dominion-wide watershed and its countless springs of succor with a feeling of humbleness. For, large as have been the gifts of the people of the United States to war relief, they have not been proportionate to this.

Would any people give and give, when fear and enmity and the sense of being in the fight are not present? Could they see a great patriotic achievement in spending themselves unstintedly not only for the sake of the families of their own soldiers, but for the help of those uncounted families whose men and homes and communities have gone down in the European war?

We cannot say "no" to these questions, for individually we know men and women who have answered "yes." But we cannot answer "yes," for nationally we have not tried it.

Is it not possible that here has lain, unused, an affirmative course of action which would have made the American people feel that they too were not sitting with folded hands? Is it not possible that such outstanding, all-inclusive, semi-governmental giving, not in thousands nor in millions, but in billions if need be, for relief and reconstruction abroad, now and in the years ahead, would have carried conviction as nothing else that the United States was not merely sitting back, spiritually unstirred, growing rich out of the war? Would it not have gotten "across" to the people of every warring nation as something they could tie to in the midst of their travail—a signal that the reserves of human feeling were not all closed to them; that in dealing with the United States, their governments were not only dealing with a champion of sea-rights, but unmistakably with a friendly people?

Perhaps the spread of such intelligence would not have swerved the German government in its war-zone program; but, like the news of the Russian revolution itself, it would at least have given the civil and democratic elements in Germany another leverage.

Whatever the means we take for protection against the German government's specific acts, whatever funds we raise to look after our own—and in that the Canadian Patriotic Fund affords compelling example—even now, as heretofore, the opportunity lies before us for united, unselfish sharing, without regard to race or creed, with the great masses of common folk in Europe who did not will the great war, and have suffered as few generations have known suffering.

Such a program, nationally entered upon for two or three years, under the lead of the President, would prove an unmatched force for national cohesion at home. It would establish an approach to the people of all Europe which, as nothing else, would win support for the liberal principles we stand for in the day of settlement.

Nine Years of the Canadian Act

The Experience with Compulsory Investigation and its Application to the United States

By *Ben M. Selekman*

DIVISION OF INDUSTRIAL STUDIES, RUSSELL SAGE FOUNDATION

COMMENT in the United States on the Canadian industrial disputes investigation act within the last six months has been at once abundant and diverse. "The wisest and most successful labor legislation anywhere adopted," Charles W. Eliot wrote of it. "A false step, reactionary, un-American," is the verdict of Samuel Gompers on its application to this country. These two remarks typify the discussion that has been going on since President Wilson first recommended to Congress that it pass an act similar in principle to the Canadian law.

The administration bill, modeled on the Canadian law was outlined by John A. Fitch in the *SURVEY* for January 27. The object of this article is to analyze the Canadian law and examine the claim made for it and the facts about its operation. The material is based on a study of official reports, and interviews with labor men, employers, public officials and interested citizens in eastern Canada.

Under the law in question, which was enacted in 1907, it is illegal to declare a strike or lockout in mines or other public utilities until a full investigation into the merits of the dispute has been completed. Thirty days' notice must be given of any intention on the part of either employer or workers to secure a change in wages or working conditions. If at the end of this period no agreement has been reached, application must be made for a board of investigation and conciliation. The minister of labor then arranges for the creation of such a board, one member of which is nominated by the employers, one by the employes and a third by joint recommendation of the other two members.

This board considers the facts of the case in dispute and makes its report to the minister of labor. After that, employers and employes are free to accept or reject the recommendations and to resort to strike or lockout. Penalties are provided, ranging from \$10 to \$50 a day for each man, if employes strike, and from \$100 to \$1000 a day if employers lock out their workers, without asking for a board or without waiting for its decision.

For nine years this law has been operating in Canada. What is thought of it there is more significant, therefore, than what people say about it in the United States. Does the law force men into "compulsory servitude"? Has it established industrial peace?

Canadian Opinion

IN THE dominion, as in the United States, opinion is divided. As in this country, public officials and employers are lined up in favor of the act; but, contrary to the status of opinion in this country, organized labor is not unanimous in condemning it; nor do those groups of workers in Canada who criticize the act, follow the same line of argument as their fellow workers in this country.

Interested citizens with hardly any exception approve the law. "The act has not been a panacea," said an editor of a large Canadian newspaper, "but it is a pretty good thing. It

postpones the occurrence of a strike and gives sober-minded people a chance to exert moral influence in bringing the two parties to an amicable settlement." "The act is based on the principle of arbitration," declared a prominent prelate, "and, therefore, is a very fine thing. It tries to do away with the strike altogether, because it brings the employer and employe together and in this way helps toward an understanding between them before a strike may occur."

The degree of public approval accorded the act can be measured effectively by the attitude of political parties. The Liberal Party is responsible for its existence, but the Conservative Party, now in power, has declared, through the minister of labor, that it will not repeal the law in spite of some objection from organized labor. It intends, rather, to amend and perfect it in order to insure more equitable and effective operation.

Executives of public utility companies reinforce the general argument of public men with their own first-hand experiences. "The act is all right," declared a representative of the Shipping Federation of Canada, "because it prevents hasty action," and he went on to explain how it has helped to maintain a peaceful relationship between longshoremen and shippers in Montreal.

"Now, suppose two or three labor leaders come in here," said an executive of a large railroad, illustrating the benefits of the act, "and they have a thousand men behind them. They put certain demands up to us and say: 'Here, you, give these to us or we'll strike by such and such a time.' Well, we can say to them: 'There is a disputes act on the statutes; you'll have to apply for a board or violate the law,' and thus they are prevented from taking precipitate action against us.

"We had a recent case," he continued by way of concrete illustration. "The men demanded certain increases in their wages, and we informed them that we could not grant the rates desired. They then applied for a board and the report of the board was in their favor. For a time we hesitated to accept the report. But after considering everything—the condition of the labor market, etc., we decided to accept the award, because we knew that if the men struck, they would win. That's the beauty of the act. It gives us a chance to think over and consider all these things."

Mining operators, on the other hand, while commending its principle, complain that the act does not work equitably for them, because the penal clauses cannot be enforced against their employes when the latter violate the law.

So far as labor is concerned, the Canadian Federation of Labour has gone definitely on record as not only approving the law but favoring an extension of its provisions. At its last convention a resolution was adopted favoring compulsory awards. This body is, however, a small organization; its membership consists of about 7,000. The international unions, on the other hand—those affiliated with labor organizations in this country—number over 100,000 wage-earners. We must look to the body representing these unions, the Trades and

Labour Congress, which is affiliated with and corresponds to the American Federation of Labor and to the railway unions, for a more representative body of opinion.

The maintenance-of-way employes and railroad telegraphers, who both singly and jointly have had the greatest experience with the act, are most enthusiastic proponents of it. So much are they in favor of it that, in 1912, they severed their affiliation with the Trades and Labour Congress because, in 1911, the latter went on record as desiring its repeal.

"As one who has had possibly the greatest experience with the act . . .," A. B. Low, the former president of the Order of Maintenance-of-Way Men wrote in 1914, "I do not think it would be right for me to let an opportunity go by of saying a good word for the act. . . . We have invoked [it] in nine cases . . . in which, when conferences between the officials and the representative of the employes failed to reach an agreement, a board was applied for and an award made and accepted. . . . That our organization on both sides of the line knows by practical experience the benefit of the act may be judged by the fact that, at the Atlanta convention of the American Federation of Labor, our delegates introduced a resolution asking that similar legislation be advocated . . . and passed upon by the Senate and Congress of the United States; and that, I am sure, is the opinion of our membership still."

A prominent Canadian official of the Order of Railroad Telegraphers spoke to me in the same vein:

"I feel that the act has been of distinct advantage to our organization. We have always secured favorable results by reference of disputes to boards. It has been especially helpful in case of small railroads. Last year, I negotiated twenty trade agreements. The existence of the act with its threat of publicity was a great help to me in getting these agreements. In not one case did I have to take a strike vote, while officials of my organization in the states had to take many strike votes in their efforts to get similar agreements."

The Brotherhood of Locomotive Firemen and Enginemen in Canada is friendly to the principle of the act, but desires some changes in it.

"Certainly in the case of public utilities," a prominent official of the Dominion Legislative Board of this union explained, "the public interest is so vital that there ought to be an investigation before a strike or lockout shall occur and the public ought to have an opportunity to acquaint itself with the facts. I am absolutely opposed to compulsory arbitration. That robs the workers of all their strength. But compulsory investigation is different. . . . It may be that the disputes act has injured the interest of the workers. But that has nothing to do with the principle of the act. If there has been unfairness in its operation, the law ought to be amended."

The Brotherhood of Locomotive Engineers on the other hand, is a most bitter opponent of the act. Its legislative board expressed itself in no unmistakable language last November in this resolution: "That this board do all in its power to have the industrial disputes investigation act wiped off the statute books."

"The opinion against it was practically unanimous," an official of this board explained. "While some of the men spoke of some minor benefits, yet all of them thought that there were no real benefits from the operation of the act. It simply caused a lot of delay and expense. Many times, when an adjustment committee would go to the railroad manager and say that they wanted to negotiate a new agreement, the manager would simply say: 'Go and apply for a conciliation board under the disputes act.'"

The Trades and Labour Congress, which includes within its membership the other craftsmen coming within the scope

of the act, such as miners, machinists and shopmen employed on railways, street-car employes and longshoremen, also adopted an unfavorable resolution at its convention last November: "That we go on record as opposing the Lemieux [disputes] act in its entirety." This is a change from the original attitude of this body. When the act was first introduced in Parliament, it had the endorsement of the president of the congress, who was a member of Parliament, and in the convention of that year the principle of the bill was endorsed by a vote of eighty-one to nineteen. In every year following 1907 until 1911, amendments were asked for to improve the administration of the law. In 1911, for the first time, the organization went on record as desiring its repeal, by adopting the following resolution unanimously:

Repeal Asked for by Labor

"WHILE this congress still believes in the principle of investigation and conciliation and while recognizing that benefits have accrued at times to bodies of workmen under the operation of the Lemieux [disputes] act, yet in view of decisions and rulings and delays of the Department of Labour in connection with the administration of the act, and in consequence of judicial decisions like that of Judge Townsend, in the province of Nova Scotia, determining that feeding a starving man on strike [i.e., giving strike benefits] contrary to the act, is an offence under the act: Be it resolved, that this congress ask for the repeal of the act."

In 1912 the resolution adopted in the previous year was repeated by the labor congress. In 1913, 1914 and 1915, the congress modified its position and went on record as desiring amendments, but in 1916, after long and heated discussion, they asked again for the repeal of the law.

"The principle of the act is all right," one prominent union official remarked in explaining the last action of this body, "but you can boil it all down to a question of administration. The minister of labour has refused to establish boards in one or two cases and that has made the men feel that he is not administering the law in their favor."

"The delegates were so worked up over their grievances," writes a prominent representative of organized labor, also referring to the resolution, "that they were in no mood to distinguish between the principle of the act and its administration."

The extent to which this is true can be inferred from the fact that the delegates rejected, without calm consideration or criticism, the measure drafted by their own solicitor as a substitute for the present one, in order to meet the objections previously raised by them.

Representatives of this organization, together with members of the railway labor unions, complain about the difficulty of securing a report favorable to labor.

"The very personnel of the boards are against the interests of the workers," said an official of the Machinists' Union. "The chairman casts the deciding vote on these boards. In ninety-nine out of one hundred cases, the two members appointed by the employer and the men cannot agree upon a mutually suitable person. The minister of labour has to choose him, and he usually selects a judge or some professional man whose point of view is capitalistic and who has no sympathy for the working class. As a result, from the very beginning the chances are against getting a favorable decision for the workers. The chairman almost invariably lines up with the representative of the employer."

It is interesting and significant that hardly any of the Canadian trade unionists advance the argument heard in this country against President Wilson's measure—that such a law means compulsory servitude for the wage-earners. On the

contrary, most of them approve of the principle of the law, and direct their criticism purely against administrative defects. Their objections are chiefly that the minister of labor has refused to appoint a board on one or two occasions upon the application of a local union; that delays have often characterized the appointment and the hearings of the boards; and that it is difficult for them to secure a favorable decision.

Procedure Under the Act—Conciliation

TO UNDERSTAND the objections of organized labor in Canada, we ought to know the nature of the procedure under the act. Contrary to the common conception in this country, the disputes act has operated not as a "compulsory investigation," but as a "conciliation" measure. That is, the machinery of the law is used to bring together the opposing parties under public auspices and to adjust their difficulties. The compulsory features of the act which impose a penalty for violation and the definite rules of procedure have not been emphasized in its administration. For this reason, the use of stenographers at the hearings held in the presence of the boards has always been discouraged.

"Experience in the administration of the act," says the registrar of the boards appointed under the act, in one of his reports, "has appeared to show that it is more effectively operated when freed, so far as possible, from the formal procedure suggestive of the ordinary judicial court. The taking of sworn evidence with stenographer's report has been particularly discouraged as having proved far from conducive to an amicable adjustment of difficulties. . . . The most obvious virtue of the act lies . . . in bringing the parties together before three fellow-citizens of standing and repute . . . where a free and frank discussion of the differences may take place and the dispute may be threshed out. . . . Granting that such discussion and investigation take place before a strike or lockout has been declared and that the board acts with proper discretion and tact, the chances are believed to be largely in favor of an amicable adjustment. . . ."

The minister of labor prefers to have the law operate as a flexible, conciliation measure. He has taken the position that he will not establish a board when the cause of the dispute is the desire for recognition of a union on the part of the employees. He will not grant one when the workers of several employing companies apply for one, and when these companies will not agree upon a joint representative; and in cases where two unions may be organized and struggling for supremacy, if one of these organizations objects to such procedure.

The conciliatory spirit and flexible manner in which the act has been administered has probably been responsible for the delays of which organized labor complains. The official reports of the Canadian Department of Labour indicate that at times long periods have elapsed between the application for boards, their constitution and the rendering of their reports.

Ninety per cent of the boards established have been applied for by employees, whose custom is to recommend, usually, their representative in the application. Under the law, five days are given to the employers for the nomination of their representative. Five additional days are allowed the two members so appointed to select a chairman. The board should be completely established within fifteen days after receipt of application. The minister of labor has discretionary power to extend the length of these periods and generally does so.

Thus of the 161 boards that have been constituted in the last nine years, only sixty were established within the fifteen days. It took between sixteen and thirty-one days for sixty-six and between thirty-one and forty-six days for twenty-one boards to be constituted. For six boards, between forty-six

and sixty-one days and for eight boards, more than sixty-one days elapsed.

The workers think their cause suffers also from long periods elapsing between the application for boards and the filing of their reports. For only twelve, or about 8 per cent of the disputes, was this period less than thirty-one days; for forty it was thirty-one to forty-six days; for thirty-six, between forty-six and sixty-one days; for eighteen, between sixty-one and seventy-six days. For an additional twenty-two, between seventy-six and ninety-one days; and for thirty, or about 19 per cent of the cases, more than ninety-one days, or three months, were consumed between the application for a board and the rendering of the final report. For three cases this information is not available.

In reply to the complaints of organized labor with reference to these delays, officials of the Department of Labour maintain that, considering the vast distances over which they have to operate, the boards are appointed quite promptly. If delays do occur, they are in accordance with the conciliatory spirit in which the act is administered.

Files in the department show that employers very frequently delay the procedure by asking for extensions of time. "But we don't want to ride rough-shod over a company," explained a prominent official of the department. "If they say that they will not appoint a representative, we tell them they must do so, and we try to reason with them that they should comply with the law. If they ask for an extension of time, we grant it to them and try to hurry the proceedings on as fast as possible."

How far these delays constitute a real grievance should be indicated to some extent by the character of the reports, when they are finally rendered. They should also show whether, as many trade union officials contend, it is difficult for labor to secure a favorable report because of the bias of the chairman, who, according to them, is chosen almost always by the minister of labor.

For the nine-year period ending March 31, 1916, there were altogether 161 fully established boards which conducted hearings.¹ In ninety-two of these disputes, or over one-half, the reports were unanimous. In only thirty-five cases did the employees' representative dissent from the majority report, and in twenty, the employers' representative dissented. In three cases both dissented from certain features of the reports, and in the remaining eleven either no decision was rendered or the nature of the report is not clearly indicated.

This record seems to show that the unions need to revise their claim that it has been difficult for them to secure favorable decisions.

In only twenty cases did strikes occur or continue after the dispute had come within the scope of the act. In some instances, moreover, a basis of collective bargaining has been established between employers and their men, leading to the signing of long-term agreements.

Nor is it correct to say that the representatives of employers and employees usually fail to agree on the third person to be nominated as chairman, thus leaving the choice to the minister of labor. In nearly one-half, or seventy-five, of the 161 boards which were fully established, the appointment was made on the recommendations of the two other members of the board. Although the proportion of failures to agree on the nomination of chairmen seems large, the facts do not seem to bear out the contention that the administration of the act has injured organized labor in Canada to any great extent.

¹ The total number of applications for boards has been 191. In twenty-two cases no boards were established; in eight they were partially established.

So far, however, we have been considering the success of the act on the sole basis of those disputes which have been referred to it. It is here that the greatest danger of error lies. Most comments in this country on the operation of the act are based on the reports of the registrar of the boards. But these documents contain an account mainly of those disputes which have been referred for adjustment under the act; they do not give the complete facts about the frequency and the importance of all the strikes which have occurred in those industries coming within its scope. For this information we must go to the special report on strikes and lockouts (covering the years 1901-12) and the subsequent annual reports issued by the Department of Labour.

This department was established in 1900 and has kept a record of industrial disputes which have occurred from January 1, 1901, to March 22, 1916. Because of war conditions there have been few strikes in Canada in the last two years (*i.e.*, to March 31, 1916) and none of them has been serious. The disputes act became a law on March 22, 1907, and it will, therefore, be possible to compare the importance of strikes in fairly equal periods before and after its operation.

One difficulty must necessarily be encountered in using the comparative figures of the period before and after the act was passed as a measure of its success. It is all but impossible to say whether there would have been more or fewer strikes in the last nine years on public utilities were the act not in existence. Would those trade unions which have applied for boards have

declared strikes more frequently, or would the usual methods of collective bargaining have averted the occurrence of industrial disputes? Or might not more strikes have been called by these organizations if the act did not provide a simple machinery for the adjustment of difficulties? These questions must be borne in mind in judging the degree to which this law has helped to establish industrial peace in Canada.

The particular problem for which the act was devised was industrial unrest in coal mines. In 1906 a prolonged strike occurred in the western coal fields threatening a fuel famine just when the usually severe winter was approaching. In the province of Saskatchewan the coal supply had been almost exhausted and the settlers scattered in the small towns and large prairies were facing the danger of freezing to death. The local authorities could do nothing to end the dispute and finally appealed for federal intervention. W. L. Mackenzie King, then deputy-minister of labor, was sent by the government and succeeded in bringing about a settlement. So much was he impressed with the suffering that a prolonged strike in this region might cause that he recommended the enactment of a law by means of which "all questions in dispute might be referred to a board empowered to conduct an investigation under oath, with the additional feature, perhaps, that such reference should not be optional, but obligatory, and pending the investigation and until the board has issued its finding the parties be restrained, on pain of penalty, from declaring a lockout or strike."

Working days lost through strikes and persons gainfully occupied, in mining and in all other industries, Canada, 1901-1915. Canadian disputes act in effect March 22, 1907

The act was thus devised with particular reference to strikes in coal mines. A very important test of its efficacy is, therefore, its success in diminishing the social cost of industrial disturbances in this industry.

The period during which the act has been in operation has been practically simultaneous with the one in which the United Mine Workers have attempted to extend their organization in the important coal fields of Canada. These coal areas are the Crowsnest Pass region, which embraces the southwestern portion of Alberta and the eastern portion of British Columbia; Vancouver Island, on the extreme western end of British Columbia; and Nova Scotia, the extreme eastern portion of the dominion. From the point of view of production the eastern and western coal fields are almost of equal importance, but from the point of view of consumption a strike in the western coal fields causes much greater suffering than does one in Nova Scotia. The winters are much colder and the per capita consumption of coal higher in the western provinces. The trans-continental railroads are largely dependent on these western mines for their fuel; without them, it would be almost impossible to move the large wheat crops, the chief asset of the dominion.

Serious Strikes in the West

It is in this western district, the Crowsnest Pass region, that the most serious coal strikes have taken place, both before and after the act was passed. The United Mine Workers of America entered Canada in 1902 and began organizing the miners in this region. In 1906 the first strike, under their auspices, the one which resulted in the passage of the disputes act, was called.

The agreement which brought this strike to an end expired on April 1, 1907. On April 9, these western miners applied for a board, and on April 16, while it was being constituted, they struck, this being the first violation to be charged against them. The board could do very little, but the deputy minister was again instrumental in bringing about a settlement. An important coal-mining strike also occurred in Nova Scotia—not under the auspices, however, of the United Mine Workers—over rates of pay. The total time losses for strikes in coal mines for the year, the first after the act was passed, amounted to 188,360 days, or 30.3 per cent of the total days lost in all strikes in Canada for the year.²

An agreement was signed in the Crowsnest Pass region for two years, but when it expired in March, 1909, a strike was again called "over the renewal of the working agreement in which were involved certain fine points of recognition relating to collection of union dues"—the check-off, in other words. Here the use of the act was not invoked until the strike had been on more than a month, and for the second time the miners violated the act. Neither party accepted the report of the board, but after being out on strike for three months, the men returned to work and an agreement extending to March 31, 1911, was signed.

In this same year, 1909, the United Mine Workers entered into a struggle to gain recognition in Nova Scotia. In this province there had been for a long time a local organization of miners known as the Provincial Workmen's Association, and it appears that the strike resulted in a fight for supremacy between the two unions, with the operators favoring the local rather than the international organization.

² It is the number of men involved and the time wasted that makes a strike costly. The Canadian Department of Labour has reached a composite and most satisfactory measurement by multiplying the number of days in which the particular industry was idle by the number of men on strike, and has thus worked out what might be called "men-days" or, as they are termed in the Canadian reports, "working days" lost.

The strike was centered in three places, Glace Bay, Springhill and Inverness. In the first two places the men applied for boards before they ceased working, but in Inverness the act was completely ignored. In the latter place the strike lasted for some months, at Glace Bay from July, 1909, to April, 1910, and at Springhill from August, 1909, to May, 1911, a period of almost two years. In all three of these places riots occurred and "troops were stationed for a considerable time at each point." The United Mine Workers were defeated in this fight for recognition, but these serious strikes conducted by them were mainly responsible in 1909 for over four-fifths, and in 1910 for over one-half, of the total time losses of each year.

On March 31, 1911, the agreement signed in 1909 between the United Mine Workers and the operators of the Crowsnest Pass region expired, and 7,000 miners went out on strike again without applying for a board until the strike had been on for some time. "The crucial point, as in 1909, was the 'check-off.'" This strike, together with the one that was prolonged from 1909 in Springhill, N. S., and a few minor ones, made the total time losses in 1911 for strikes in coal mines 1,592,800 working days, or 78.9 per cent of all the working days lost in all strikes occurring during the year.

On September 16, 1912, the disputes act was completely ignored and a struggle began between the United Mine Workers and the mine operators of Vancouver Island. The chief demand was "recognition." This strike was not called off until August 19, 1914, nearly two years later. As in Nova Scotia, the United Mine Workers appear to have been defeated, but mainly because of this strike over half a million working days were lost in 1913, or 45.7 per cent of all the working days lost in all of the strikes occurring during the year.

Thus the act does not seem to have an effective hold on the coal-mining industry of Canada. During 1916 some half-dozen strikes occurred in mines distributed practically over all of the coal fields of Canada. In only one case was the dispute referred to a board for adjustment. In the Crowsnest Pass region, in spite of the fact that the agreement signed between the miners and operators did not expire until March 1, 1917, they struck twice last year, in complete defiance of the act, for a "war bonus" because of the abnormal rise in the cost of living.

In all for the six-year period before the act was passed thirty-eight strikes are recorded in coal mines, involving an average loss per year of 121,331 days or 26.4 per cent of all the working days lost in all strikes. In the nine-year period subsequent to the passing of the act, coal miners struck thirty-seven times, involving an average loss per year of 419,223 days, or 46.9 per cent of all the working days lost in all strikes. Thus, in the latter period, in spite of the act, the average loss per year of working days in coal-mining strikes is about three and one-half times as great as before the law was passed, and the proportion of that total to all working days lost in all strikes almost doubled.

The Act a Failure in Coal-Mining

IF WE consider only the coal-mining industry, the conditions of which gave rise to the act, it has clearly failed to accomplish its purpose of averting strikes.

What proportion, it will be asked in criticism, do the miners constitute of the workers of Canada? If it is large, it should not be surprising that the mining industry is responsible for about one-half of the social cost of strikes. Unfortunately, the Canadian census does not give us this proportion each year. But it does give it for the years 1901 and 1911,

and the facts show very clearly how serious the problem of industrial unrest has been in the coal mines of Canada. In 1901, 2.1 per cent and in 1911, 2.4 per cent of the total gainfully occupied population were engaged in mining (both coal and metal). In other words, while the miners have constituted only about one-fiftieth to one-fortieth of the gainfully occupied population, and while this proportion has been nearly constant, they have been responsible for more than one-fourth of the working days lost in industrial disputes during the period 1901 to 1907, and for nearly one-half of the working days lost during the period 1907 to 1916.

The facts show that there have been strikes, and that there have been serious strikes in the coal industry in the period during which the act has been in operation. Although the act was intended primarily to prevent strikes in coal mines, it appears that it has failed to remove this sore spot from the industrial organism of Canada. But before reaching a definite conclusion on the basis of these facts, the difficulty of measuring the results of such a piece of legislation should be borne in mind. Might there not have been more strikes and more serious ones but for the act? As a partial answer there is the fact that Nova Scotia, where as much coal is mined as in the western coal area, has been comparatively free from serious strikes with the exception of the period during which the United Mine Workers were active in that province. It should also be recalled that this union conducted an extensive campaign of organization in Canada during the years 1903 to 1914. There is the additional fact that the Provincial Workmen's Association, which has about 5,000 miners in its membership, has observed the law and has worked under agreements, adopted as a result of the sitting of boards, in disputes between them and the coal operators. There is, however, also the fact that this organization always discouraged strikes even before the act was passed, and for this reason many of its members left it in 1909 to join the ranks of the United Mine Workers.

Railroads and Other Public Utilities

IN CANADA, as in this country, there have been few serious strikes on railroads. Only one may be charged to the railroad brotherhoods during the last sixteen years, and that was called in 1910, three years after the act was passed, when the trainmen and conductors on the Grand Trunk rejected the majority report signed by their own representative. The railroad telegraphers have not struck once during this period, and the maintenance-of-way employes conducted one serious strike in 1901, six years before the statute was passed.

So unimportant has been the problem of railway disputes in Canada that, when the first draft of the act was introduced in Parliament, it did not include the railroads within its scope. Since the passage of the act, it is true that there have been seventy-five applications for boards in railway disputes, and in only six of these cases have strikes occurred. The question naturally arises, would the brotherhoods have called strikes more frequently had not boards helped to adjust the difficulties ensuing between them and their employers? This is not an easy question to answer, and yet it is fundamental. It is true also that the applicants must make a statement, when asking for a board, that if the dispute is not referred to a board or adjusted by it, a strike or lockout will, to the best of their knowledge, take place. Does this mean that sixty-nine railway strikes have been averted?

It is conceivable, in the first place, that employers reluctant to grant the demands of their men would refer them to the act, without going through the complete process of collective bargaining with them. In fact this is, as we have seen, one of the

chief complaints of the strong unions. In the second place, few strikes occurred in the railroads prior to the enactment of the law. Finally, there is the fact that freight handlers and other unskilled and more or less unorganized workers employed by the Canadian railways have struck in violation of the act. Thus we find that during the last nine years [*i. e.*, 1907-1916] freight handlers have called sixteen strikes. In only three instances did they apply for boards, and that was after they had struck.

Most of the representatives of the railroad employes interviewed thought that it was not the act which was responsible for the maintenance of industrial peace on the railroads of Canada, but rather the reluctance of the brotherhoods to strike. "I know that in the annual reports," remarked a representative of the locomotive engineers, "the Department of Labour says that so many disputes and that so many strikes have been referred to boards and averted, but that isn't so. As a matter of fact, as far as I can remember, since I have been in our organization, it never had a strike, even before the act was passed. It can't be said that there would be strikes if the statute did not exist. The railroad brotherhoods will go to any limits before calling a strike. We are constantly securing new agreements without applying for boards."

Similarly most of them contended that negotiations between them and the railroad companies would result in the securing of agreements did no legislation exist. The act for them has merely offered the machinery of collective bargaining different in form, but similar in spirit, to their usual practice before it was passed.

Street-car strikes show a decrease from ten for the period 1901 to 1907 to four for the period 1907 to 1916. As there have been twenty-one disputes referred to boards from this industry, and in only two instances did strikes follow, it does seem that the act has been successful in averting this serious and disastrous type of dispute. Longshoremen called twelve strikes during the first period and fourteen during the second.

The reports of the Department of Labour show for the first period—that is, before the act was passed—that 60, or 8.4 per cent of all disputes in all industries during that time occurred in the industries grouped under the heading "general transport" (including railway employes, freight handlers, longshoremen, coal handlers, teamsters and others commonly employed in transportation). These involved an average loss of 68,684 working days per year, or 15 per cent of all the working days lost in all strikes. For the period after the act was passed, these reports give for the same industries 74 disputes, or 9.6 per cent of all occurring during the last nine years, involving an average loss of 87,776 working days, or 9.8 per cent of all working days lost in all disputes. If we should include strikes in railway construction work (a class of work to which the act has not yet been applied, but which is nevertheless a public utility) the proportion of working days lost, while remaining the same for the first period, rises in the second to 15.7 per cent of the total time losses in all strikes. Considering the fact that the proportion of Canadian workers engaged in transportation increased from 4.8 to 9 per cent between 1901 and 1911, we find that the proportion of days lost from strikes, after the act was passed, actually decreased.

Results Among Public Utilities

TO SUMMARIZE for all public utilities, 108, or 15.1 per cent, of the 716 disputes recorded between January 1, 1901, and March 22, 1907, the period before the act was passed, occurred in those industries coming within its definition. Between March 22, 1907, and March 22, 1916, the period during which the statute has been in operation, 127, or 16.5

per cent of the total of 768 disputes occurred in these industries. Not only was there a slight increase in the proportionate number of disputes, but working days lost, the best measurement of the price the public pays for strikes, show a much greater increase. For the first period the average loss of working days per year due to strikes on public utilities was 201,502, or 43.9 per cent of the total time losses in all industrial disputes. For the second period the average loss of working days per year was 581,936 (including railway construction), or 65.1 per cent of the total time losses in all disputes.

Thus even when allowance is made for an increase in the proportion of workers employed, the social cost of strikes on public utilities has not been materially reduced. The analysis of these figures shows that there has been a marked increase in loss of time through strikes on coal mines. Transportation before 1907 and since that time has been comparatively free from industrial disturbances.

Violations of the Act

As a voluntary conciliation measure, the act has been very successful, but the most serious indictment against it as a "compulsory investigation" act has been the failure to impose penalties for violations. As we have already seen, strikes were not averted or ended in twenty or about one-tenth of the total 191 applications made for boards, but the most serious and important strikes occurring in the coal industry have been illegal; that is, cessation of work took place either before applying for boards or during proceedings or without invoking the act.

The Canadian act is a compulsory one mainly because penalties are provided for the calling of such illegal strikes, and the essential test of any compulsory law is the extent to which it is enforced. Yet it is in this very important aspect that the act has failed as a compulsory measure. The railway labor organizations are the only ones who have strictly observed the law. In their efforts to organize the coal miners of Canada, the United Mine Workers have conducted their most serious and costly strikes in violation of it. Freight handlers and other unskilled workers have frequently ignored it. Altogether, approximately eighty-four strikes on public utilities may be charged up as illegal, distributed approximately as follows: coal mines thirty-four; metal mines fourteen; railroads four; freight handlers sixteen; street cars two; longshoremen fourteen. This may not be an accurate estimate, since the reports do not list strikes as illegal and the facts can only be inferred from the data in two separate documents. That the violations of the law have not been unimportant can best be seen by the fact that the legal disputes in coal mines—the industry for which the act was primarily intended—involved, on the average, about 866 employes, while the illegal strikes involved, on the average, about 890 miners.

"If either an employe or an employer violates the law by causing a strike or lockout before an investigation has been held," commented Victor S. Clark in 1910, after having made a personal inquiry into the operation of the act, "he is practically immune from prosecution unless the other party to the dispute brings action in the court to punish him. In the districts where the law has been violated or evaded in these respects, there is a demand by the party that has suffered . . . that the government assume their prosecution. . . ."

"This situation . . . raises an important question. . . . If the men can strike with impunity in disregard of the law, what is the value of the latter in preventing or postponing strikes? Will the act not fall in abeyance except in those minor and less acute disputes where there is least call for . . . intervention? Has a law any force at all that operates only by the tolerance of law-breakers? It should be recognized that ex-

pediency must constantly be consulted in administering such an act, but it would seem that the latter, though it may retain some residuary value as providing convenient machinery for public mediation, must lose its distinctive character and its interest as experimental legislation unless some way is discovered to secure the observance of the clauses deferring strikes and lockouts until an investigation is made. Unless these clauses are enforced, the law becomes an ordinary conciliation act, burdened by the discredit of its unenforced provisions."

The Department of Labour has taken the position that it will not prosecute for violation of the law. The registrar states the official position of the government in the *Canadian Law Times* for March, 1916:

"There has been also, in industries coming under the act, a considerable number of strikes in disputes which have not gone before a board for investigation. Work ceased in these cases without regard to the act. Many of the serious coal-mining strikes in western Canada during recent years have occurred in this way.

"What, it may be asked, becomes of the penalties prescribed for these apparent infringements of the statute? The reply must be that such cases have seldom gone to the courts. It has not been the policy of the successive ministers under whose authority the statute has been administered to undertake the enforcement of these provisions. The parties concerned, or the local authorities, have laid information occasionally, and there have been in all eight or ten judicial decisions. The mining industry has been the chief delinquent in the matter of infringements, and there have been occasional derelictions on the part of the lower grades of transport or shipping labour; in the higher grades of railway labour the act has been well observed."

Several prominent Canadians were asked why the United Mine Workers, who have been responsible for the most serious violations of the act, have not been prosecuted. One of them, referring to the situation in the Crowsnest Pass region, gave a typical reply.

"In a case of this kind," he said, "the act is powerless; what can you do? Here are about 6,000 men, most of them foreigners. They don't understand the act. They don't care for it. What are you going to do? Fine them? Well, they won't pay. Put them in jail—if you could? The coal won't be mined. As far as I can see, any legislation in the world wouldn't prevent a strike from occurring under these circumstances."

The records of the Department of Labour show, up to March 12, 1915, only eight prosecutions. These have been relatively unimportant ones. Three were against employes of metal mines, an industry in which a strike, under ordinary circumstances, does not cause much suffering. Two were against operators of small coal mines for illegally declaring a lockout. One case, in which three coal miners were charged with aiding in calling an illegal strike, was dismissed. In another, at Inverness, N. S., a union official was convicted for giving strike benefits to the men who had ceased working without applying for a board. In one case, four miners employed by a small coal company were each fined \$40 and costs or thirty days in jail.

Penalties Not Enforced

THE evidence does not seem to show that an extensive attempt has been made to force those responsible for the calling of the important, illegal strikes to pay the penalties provided by the act.

"The government has never laid particular stress upon the penalty end of it," W. L. Mackenzie King, the author of the law, explained in 1914 to the United States Commission on Industrial Relations, "the penalty part . . . has always been treated in much the same light as penalty for trespass. If the

party affected wishes to enter an action to recover damages they may do so. . . ."

The analogy between the penalties provided in this statute and those placed in a trespass law does not appear to be sound. A trespass law is framed to protect the individual against any infringements that may be made on his property rights. The disputes act was intended to protect, not an individual party, but the public against the suffering caused by strikes on public utilities. A violation of this law is a crime against the public. The person guilty of such a violation should be prosecuted at the instigation of the public authority charged with the administration of the act, in this case, the Department of Labour.

"In speaking of the Canadian act as a failure as a 'compulsory investigation' act," a former Canadian official writes on this aspect of its operation, "the alleged failure in compulsion is put down to the non-enforcement of penalties, whereas it was with a view to *compelling investigation* where labor wished investigation as a means of securing a redress of wrong, and not *compelling penalties*, that the act was framed. Let me explain the circumstances that led to the enactment of the compulsory investigation features of the measure. In the dispute in Alberta referred to in the article [*i. e.*, the one leading to adoption of the law], we spent nearly a week trying to get the parties together. We spent nearly another week finding out from each what they were prepared to do. Meanwhile, settlers and others were freezing in their homes. We had no powers other than that of a voluntary conciliator to fall back upon. Had we had legislation providing powers of *compulsory investigation*, we could have effected in two days what took nearly two weeks. It was this experience, and similar experiences in other strikes, which made us seek to get from Parliament powers of *compulsory investigation*, which meant *to labor, power at the expense of the state*, and with the machinery of the state back of it, to choose its own investigator, to summon witnesses, to compel the production of documents, to take evidence under oath, and to give to the public the fullest possible kind of a view of its case, including any injustices under which it might be suffering. This is *the really important compulsory investigation feature* of the act, not the penalties which relate to strikes and lockouts. Never from the time the act was passed when I had to do with it as registrar or as minister was there a *single instance*, that I can now recall, in which when this *compulsory investigation* feature was invoked on behalf of labor, that it was not enforceable and applied. As a compulsory investigation act—that is to say, investigation of a dispute under compulsion at the request of either of the parties, labor or capital—never once during the liberal administration did its provisions in this particular fail, and where investigation took place, the results were for the most part not only beneficial to the parties, but very greatly so to the public as well. I think the same has been true under the present administration."

Lessons for the United States

IN THIS country the common conception has been that the Canadian legislation has been rigidly enforced. In addition the effectiveness of the act has been appraised on the basis of the registrar's reports only and thus opinion has been based on incomplete data regarding the prevalence of strikes in Canada. And, finally, it has not been tested with reference to the particular problem for which it was devised.

The facts, on the other hand, indicate that the act has operated as a voluntary conciliation measure. If it has prevented the occurrence of strikes it has, therefore, done so not because it restrained workers from striking, but because the machinery afforded by it enabled men with personality and tact to bring employers and their men together and adjust their difficulties. In addition, serious strikes have occurred in public

utilities since the act was passed. As to the test of whether it has met the particular situation for which it was intended, strikes in coal mines have apparently been more prolonged and more serious in the last nine years than they were in the six-year period before the act was in operation.

It is largely on the basis of Canadian experience that the strike prevention measure of President Wilson is feared so much by organized labor and endorsed so heartily by most public men. But the Canadian act has not operated in the manner imagined by them, and, therefore, does not throw much light either on the fears of the former or the hopes of the latter. It certainly has not meant compulsory servitude for the workers of Canada. There the workers do not object to the principle of the act. They criticize the manner in which it has been administered; and this criticism appears to be by no means unanimous or entirely justified by the facts covering the general operations of the law.

As for our editorial writers, public officials and employers, Canadian experience hardly justifies their enthusiasm for the essential feature of the proposed measure—that no strike or lockout shall legally take place before an investigation is completed. In Canada this compulsory feature has been a dead letter so far as the miners and unskilled workers are concerned. As for the railroad brotherhoods, it is very doubtful whether it is necessary to restrain them from striking before the completion of an investigation. Most of the railroad employes stated that they observed the law not because they were afraid of being prosecuted, fined, or imprisoned but because they did not wish to appear as law breakers in the eyes of the community and thus antagonize public opinion. "The railroad brotherhoods like to have the reputation of being law-abiding, intelligent citizens and it is for this reason that we have observed the law," declared a representative of the locomotive firemen and enginemen. In other words, they are not opposed to public investigation but they are not greatly influenced by the compulsory features of the law.

Prof. Adam Shortt was chairman of eleven boards in the first two years after the act was passed. In every one of these disputes a settlement was effected and he has the reputation of having been the most successful chairman appointed under the act. In his opinion, the clauses which restrain the men from striking pending investigation are practically unnecessary.

"The only value they have," he said in substance, "is that they make the union reluctant to fly in the face of public opinion. It doesn't make them afraid to violate the law because they know that it cannot be enforced. But the same thing could be gained if you simply provided the machinery for investigation. Those unions which respect public opinion would not strike in the face of this established machinery. Another thing," he continued in substance, "if it has been found difficult to enforce the law in Canada, it means that it will be much more difficult to enforce a similar law in the United States. For in this country [Canada], under the cabinet system of government, fewer laws are passed, the whole government is held responsible for them, and they are taken much more seriously than in your country. We don't speak of laws as being 'dead letters' as you do."

Certainly the public interest in the continuous operation of the nation's railroads is so vital that the facts ought to be known before a strike or lockout occurs. Canadian experience does not show just how effective public opinion can be in preventing an interruption of services. No attempt has been made in Canada to build up a body of continuous facts regarding labor disputes on public utilities, and the data on wages, cost of living, hours of work, rates and dividends avail-

able in the different government departments have not been collected and placed at the disposal of the boards. Each one has made its report on the facts presented by the parties involved in the particular dispute which was before it for adjustment.

The Community Ought to Have the Facts

OUR recently threatened railway strike has awakened the public to the critical situation in which it might at any time be placed. The feeling is growing that the community ought to become a more powerful factor in preventing a tie-up of a public service industry. The public, on the other hand, cannot exert a very strong influence unless it has all the facts necessary to an intelligent opinion. Heretofore it has had them only as they were furnished to the press by the two partisans involved in labor disputes. They should be furnished by an impartial government tribunal on which both employers and workers may have representation.

But this does not necessarily mean that we should restrict the railway employes' right to strike. It does mean, however, that the government ought to establish the machinery both

for the continuous collection of all the facts available on the various aspects of labor controversies and for an inquiry into the merits of particular disputes that arise from time to time. With a background of information previously collected, the facts about a particular dispute become more illuminating. Thus a fully enlightened public could exert a more intelligent influence.

The nation was helpless last fall because no such machinery was available. Present legislation provides only for mediation and voluntary arbitration. The first method had failed; past experiences made the brotherhoods unwilling to submit their case to a body of arbitrators whose award would be binding. But had there been an investigating body in existence, whose duty would have been to recommend an adjustment on the basis of the facts collected by it, it is safe to say that the brotherhoods would not have struck until inquiry had been completed. Such an act on the part of any group of public service employes, unless the investigation were unfairly or unnecessarily delayed, would in itself cause loss of public confidence and respect. A strike so called would in all probability be foredoomed to defeat even before its inception.

The Canadian Disputes Act

A Symposium

John R. Commons

UNIVERSITY OF WISCONSIN

I MAKE the number of illegal strikes under the Canadian law somewhat larger than does Mr. Selekman, but with this exception his conclusions seem to me correct. On the whole, the systems of voluntary arbitration in the United States have been about as successful in preventing strikes as has the Canadian system, and they have the advantage of not adding illegality and not leading public officials into avowed non-enforcement of law.

If one looks into the reasons for the apparent breakdown of the so-called voluntary system on the railroads in this country he will find that the fault lies in the defect of the Newlands act in that it is not really a consistent voluntary system after all. The Newlands act goes on the theory that an arbitration award when once made shall be enforced by a federal court, perhaps by way of a suit for damages against the party that violates the award, or possibly by injunction. The law provides that the award shall be filed in the federal court and thenceforth it is binding on both parties. Then, if there is a dispute over its interpretation, the arbitration board is reassembled and its interpretation likewise is filed with the court and is binding.

This is plainly a theory of compulsory enforcement of the award and this is the very reason why the law broke down.

In one case the arbitration board when reconvened was not able to interpret its own award and the railway companies served notice that they would not be bound by the interpretation, which they

claimed was really a new award and not an interpretation. The brotherhoods, however, did not petition the court for a remedy, and doubtless could not have gotten it if they had.

The fact is, that, with the interpretation in the hands of the arbitration board and court, the railroad companies are the real interpreters of the awards, and it is natural that the brotherhoods should have refused to submit to that kind of one-sided, half-way compulsory system.

The trouble is that the law does not provide for the right kind of a board to interpret the awards. What is needed is a joint board of grievances, or adjustment, composed of equal numbers representing the railroads and the brotherhoods, to take up all matters of interpretation and enforcement. Such a board would be familiar with all the technical points of the business, and, instead of either an outside board ignorant of the business or a one-sided interpretation by the companies, the interpretation would be made jointly by both sides. This is the method in the anthracite coal industry and in every system of joint agreements that has lasted. It is the only truly voluntary system and the Newlands act is fatally weak in not providing it.

This joint board should be a permanent standing board, as it is in other industries, and in case of a deadlock it should provide for an umpire to be called in, as is done in the anthracite industry. Generally, nine-tenths or more of the interpretations would be made without a deadlock. When it comes to making the arbitration award itself, rather than in-

terpreting it, of course when a system has broken down and one side refuses to put any confidence in it, then something else has to be done. Certainly, if preventing strikes is what we want, the Canadian system will not do it. Strikes might be prohibited altogether, but this has also proven a failure in Australia. The other alternative is to get back to a really voluntary system based on the wisdom and experience of other voluntary systems. A half-way compulsory federal court system pieced out, when it breaks down, by the President, the Congress and the Supreme Court is certainly a menace.

If the law had provided, during the past two or three years, for a joint committee of four brotherhood officials and four railway officials, and an umpire when needed, with power to settle and power to stay on the job and interpret the settlement, we should have had a really voluntary system and one that I believe would have prevented strikes. Even yet such a system ought to come out of the present crisis.

Charles W. Eliot

PRESIDENT EMERITUS, HARVARD UNIVERSITY

THE article by Ben W. Selekman entitled *Nine Years of the Canadian Act* is a valuable study of the good effects and the defects of the Canadian act for the investigation of industrial disputes.

The important features of the Canadian act for the investigation of industrial disputes are:

1. The fact that either party to a dispute can procure the appointment of an investigating board;

2. That a special board is appointed for each dispute;

3. That the board so appointed has no arbitral power whatever; but only power to examine thoroughly and report fully to the public, and in the meantime to conciliate and procure a settlement by mutual consent.

The objections to the act are:

1. On the part of labor, that it prevents a strike without notice, and,

2. On the part of capital, that the law provides no effective punishment for unions that disobey it.

If the Canadian act is to be considered for adoption in the United States, it should be amended in two respects:

It should include trades or employments which are concerned with fuel, foods, public lighting systems, telephones, telegraphs, and all transportation. All these are necessities of life for the entire population; and the supply of them should not be liable to interruption. The Canadian act covers only public utilities and mines:

Penalties for violation of the act should be imposed on the organizers, heads, or leaders of unions that violate the law; and it should be made the duty of the government to prosecute such offenders.

J. E. Williams

CHAIRMAN BOARD OF ARBITRATION, HART, SCHAFFNER,
& MARX TRADE AGREEMENT

INDUSTRIAL war has its strategy of time and position like military war, and the objection of the labor leader to the Canadian disputes act is that it gives an important strategic advantage to the employer. To rouse the enthusiasm of a large body of men to the striking point often requires a great deal of stimulation and effort, and it requires also, to be effective, that the accumulated dynamite be exploded at the psychological moment. If after working up the fighting spirit to high tension, the labor leader be required to keep it there during a period of investigation, he would find his task not only more difficult but in some cases impossible. This would be especially true of unorganized bodies, where the heat necessary to fuse refractory masses into some degree of cohesion could only be generated by combative action. Knowing something of the difficulty of forcing the recognition of new unions by employers as a pre-requisite of collective bargaining, I am of the opinion that enforced delay would greatly diminish the chances of success of a strike for recognition. This obvious disadvantage would probably array the labor bodies of this country solidly against the waiting policy, and make it hard to enforce.

It has not been enforced in Canada. Wherever there was opposition, as in the case of the miners, it has been a dead letter. Nor does the compulsory waiting policy seem to be necessary. A former

minister of labor of Canada informs us that the really essential feature of the act is compulsory investigation, "to give to labor power at the expense of the state to choose its own investigator, to summon witnesses, and to give the public the fullest possible kind of a view of the case."

Now there is nothing in this proposal that requires strike action to be deferred until after the investigation. The compulsory investigation could be made after as well as before the strike was begun, and, possibly, with just as good results. The essential thing is that the combatants be compelled to appear before an impartial board, to bring their controversy into a non-militant atmosphere, to purge it of its extravagances, to remove its misunderstandings, to expose it to the influence of the mediatory spirit, and to see whether warring interests are not capable of reconciliation or arbitration. This could be done by a board empowered by law to sit on labor disputes, to compel the attendance of witnesses under oath, to mediate between the parties, to recommend an adjustment in accordance with the facts presented, and to make a public report of its findings. And this it could do after the strike had been called, and while it was still in progress.

But it may be objected that such a proceeding as this would not have prevented a railroad tie-up last fall. This is quite true; but neither would the other sort of investigation, if its results were not satisfactory to the brotherhoods. There is no insurance against a national railroad strike unless the power to strike be taken away from railroad men, and this cannot be done, probably, unless they consent to it. They could only consent if they were given a better remedy than the one they were asked to give up. Such a remedy is perhaps not beyond the wisdom of men to devise. It would have to assure them that their wages, hours and labor conditions would progress relatively with the advance of labor as a whole, that their individual rights as workers, and that the interests of their organizations would be adequately protected. A wage board charged by law with the maintenance of some such standards as these, more fully defined and carefully worked out, in which the brotherhoods should have adequate representation, might be accepted as a possible substitute for the strike. It would mean a great deal for railroad men to give into other hands the power they have acquired with such devoted effort, and which, on the whole, they have so wisely used; yet it may be their patriotism would respond to the appeal of the hundred million whose interests and whose livelihoods would be jeopardized and perhaps destroyed by an industrial war which the brotherhoods might be powerless to prevent, except at a sacrifice they would be unable to make.

While it may be desirable to have an investigation, if it can be secured, preceding the declaration of a strike, I think it should be made optional and not compulsory. I do not think we should be deprived of the benefit of an impartial investigation of a strike because the combatants prefer immediate war to awaiting the slow results of a public hearing. I have known the offices of the state Arbitration Board to be rejected in Illinois because the law required the strike to be suspended before it could legally act, with the result that its influence in that case was negative, and its power in all directions seriously impaired. The compulsory feature of a strike investigation should relate to the obligation of making it, and should not depend on being made before rather than after the strike is begun.

William O. Thompson

FORMER COUNSEL UNITED STATES COMMISSION ON
INDUSTRIAL RELATIONS. REPRESENTATIVE OF LABOR,
BOARD OF ARBITRATION, HART, SCHAFFNER & MARX
TRADE AGREEMENT

MEN of today search for some panacea for our industrial ills as Ponce de Leon and men of his time searched for the spring of eternal youth. Even names have been coined in connection with labor agreements which have been supposed, in some indefinite way, to soften the bitterness of industrial strife. Following the same line of thought we have such pieces of legislation as the Canadian industrial disputes act and we somehow expect by the passage of such an act to bring about an harmonious and orderly adjustment of the conflicting interests of employer and employe.

That this shortcut, like so many others, has failed has been abundantly proved by the article of Mr. Selekman. But even if the Canadian act had had a fair record of apparent achievement in the reduction of strikes and in the reduction of working days lost by industrial conflicts, the value of the act would have been far from proven, because it is very easy to see that the tendency of such an act is to preserve the *status quo*. Consequently while it might have been claimed that it maintained a higher percentage of industrial order, this result might conceivably have been obtained at the expense of industrial justice.

It is my firm conviction that some day there will be a body of industrial law, as there is of common law. I believe that the foundations are already being laid for such development. But such a body of law is apt to grow and develop only step by step and from day to day, as the common experience of men dictates. For man is tied to the earth and moves forward only as he sees and understands, and while some of us may think we see more or less clearly the ultimate of industrial justice, this is not true of the vast body of the people. My experience,

too, has been that the prophets see no clearer.

But it is equally true that there is a general sense that things are not right industrially and that justice is not being attained. This view is entertained by many employers. The result is a very pronounced tendency to move forward and as, from point to point, the people see definitely that which makes for industrial justice, to act upon it without much ado. Some day we will undoubtedly arrive at approximate justice in the industrial world. When that time comes, out of the day by day experience of the past, a body of principles or methods of practical adjustment will undoubtedly have arisen. These will become industrial law and will receive the common acquiescence of the people. The law of the workers will have been woven of the woof and warp of their experience.

If this is so, then all purely industrial restrictive acts, such as the Canadian act, or any acts which attempt to force compulsory arbitration are wrong, first because they tend to maintain the *status quo*, and, second, because they are based on some theoretic rather than practical principles. For this reason I believe that the feeling and instinct of the body of workers of today, as voiced by Mr. Gompers, opposing all such laws is fundamentally sound and their action in desiring voluntary collective bargaining instead is correct.

It is under the collective bargaining arrangements that exist today that we are starting to build industrial law and I think that all those who have had experience with such arrangements and whose minds are free to seek justice realize how tentative and elastic even such arrangements must be. There is a natural dislike to the making of precedents which may be based upon a single case or even a series of cases, because in the present state of making decisions the view is limited to the case in hand and can not be based on broad and varied experiences and adjustments. In the instance of public utilities rights of a third party, the general public, which consists overwhelmingly of workers in other lines of industry, must be realized by both sides to the dispute.

This recognition has and will continue to be a potent influence in all disputes relating to transportation. It is the probable reason why in the past but few strikes have occurred to cripple great arteries of commerce. For the present at least I think this attitude is a much more reliable guarantee of industrial peace in the public utility field than any restrictive or coercive law. It may be reasonably said that a strike in that field is conceivable only when some great readjustment caused by the progress of the workers becomes necessary, as was in evidence in the late railway trouble.

Any laws, which go beyond this normal, natural growth, and attempt to lay down arbitrary methods, are bound to become obnoxious and in the end either become dead letters or are emasculated by common consent, so that they conform to the general opinion. This is what has occurred in the case of the Canadian act, which has become an act of conciliation.

James O'Connell

SECOND VICE-PRESIDENT, AMERICAN FEDERATION OF LABOR

FOR several years a number of well-meaning persons not members of labor organizations, have been advocating the passage of legislation looking toward compulsory investigation in labor disputes, particularly when applied to what is known as public utilities. The subject has been brought more forcibly to the attention of the public mind during the past year because of the controversy between the four railway brotherhoods and the railway companies. The advocates of compulsory investigation point out the wonderful success that has been obtained in Canada through the Canadian industrial disputes act, which law provides that no strike or lockout can take place until the government has had opportunity to investigate. Violators of the law are subject to fines and imprisonment.

To the casual reader compulsory investigation before a strike or lockout can take place seems like a fair and equitable proposition and labor seems to have nothing to lose but much to gain under such a law. But the fact is that there is no equality of opportunity while investigation of a dispute is being made.

The mere statement that a strike or lockout can not occur pending investigation would imply that the responsibility on both sides was equal—such is not the case. Labor is prevented from striking and the employer is supposedly prevented from locking out his workmen, but the employer can close down his plant for any reason sufficient to himself. He may hold that his operations are unprofitable. He may hold that it is impossible for him to secure material. He may hold that shipping facilities can not be secured. He may hold that new contracts are not available and many other reasons may be given showing the necessity of either closing his plant or materially reducing his force of workmen, thus laying off the leaders and active men whom he thinks are responsible for the agitation to improve conditions of employment.

Again, the employer enjoys an opportunity under compulsory investigation to prepare for a strike. He has thirty days or longer for that purpose, while the workmen can in no way fortify themselves, their position being practically the same at the end of an investigation as at the beginning. There is, therefore, no equality of opportunity.

Organized labor in the United States

has declared unalterably against compulsion of any kind in labor disputes. We hold that labor should have the right to quit the employer for any reason or no reason. We hold that this view is in conformity with the constitution of the United States which prohibits compulsory servitude. If a man is therefore compelled to work for any period of time against his will, it is a violation of the constitution of the United States. He could no more be punished for the violation of a law that would compel him to work against his will than the violators of the Canadian law have been punished. It is a well known fact that no attempt has been made to punish a single workman in Canada.

Thousands of workmen in Canada have violated the Canadian law, have gone on strike without notifying the government or requesting an investigation under the law. Others have struck while investigations were being made and still others totally disregarded the awards and quit work. Not one of these workmen was fined or imprisoned. If all who violated the Canadian law were to be imprisoned the penal institutions of Canada would have to be enlarged.

To compare Canada with the United States in population or in the number of its industries is either treating the matter as a joke or is an attempt to impose upon the intelligence of our people. What might work fairly well in Canada with its population of approximately seven million, all of one nationality, would not work in the United States with its one hundred million population made up of all nationalities.

New York city is equal in population to the entire Dominion of Canada. More workmen are involved in one labor dispute in Greater New York than have been involved in all the disputes and investigations that have taken place during the entire life of the Canadian compulsory investigation law. More adjustments have been reached in disputes between the employers and the employes from voluntary mediation, conciliation and arbitration in Greater New York in one year than has been accomplished during the entire period the Canadian law has been in existence.

Organized labor believes in voluntary conciliation, mediation and arbitration. If the employers will meet their workmen in a spirit of fairness, concede them the right of association and representation, then strikes will be reduced to a minimum. But the employers want compulsory investigation only because it delays strikes, thus placing themselves in a position to fortify and prepare in every way to defeat the workmen in their demands. If this were not so why do they not meet their employes before the strikes or lockouts take place without having a law to compel them to do so? We decline to be a party to the enactment of

any law that will for one moment take away from us the right to quit work for either real or imaginary causes.

The advocates of compulsory investigation say, "there is a third party interested whose rights should receive consideration and protection." This third party is the public. If the public interested itself all the time, whether strikes were on or being threatened, this claim might hold true. The fact is, however, the public as a rule is not interested in the conditions under which workmen are employed, nor does it give much thought, if any, whether or not employers deal fairly or humanely with their workmen. It gives little thought to the question of the hours of labor, wages paid labor, or the conditions under which labor is employed. It interests itself little, if at all, in the proper inspection of factories, work shops, or mines. It cares little whether or not employers properly protect their machinery so that life and limb may be spared. It is not intensely interested in whether or not children are employed or in how they are employed. It makes little or no investigation as to the employment of women in factories, work shops, or sweated industries. Its only aim is to see the trains running so that it may not be inconvenienced in traveling from one city to another. It sees only the smoke coming from factories but never looks within. It sees only products coming from the mill but never stops to think how these products are produced. It sees only the coal coming from the mines but never asks the conditions under which it is being mined. The public may be an interested party but it is an extremely selfish one.

Why should organized labor cheerfully and willingly declare for involuntary servitude if it has practically nothing to gain and on the other hand much to lose? Under compulsory investigation the employer has all the advantage: unlimited time to prepare for the strike; right to discharge an employe; right of reducing his force, thus giving him an unequal advantage over his workmen. At best compulsory investigation and awards are only a compromise. This much, organized labor has always been able to secure. The public, as indicated above, is interested only in peace and does not care whether labor secures just treatment or not. Its slogan is, non-interruption and non-interference with business, commerce, finance and industry.

James C. Watters

PRESIDENT, TRADES AND LABOUR CONGRESS, CANADA

THE article Nine Years of the Canadian Act deals both fairly and comprehensively with the operation of the industrial disputes investigation act as it affects the employers and employes coming within the provisions of the act, and the public. A clear distinction is

drawn between compulsory arbitration and compulsory investigation as well as showing clearly the impracticability and non-enforcibility of the compulsory features of the act as applied to employes.

My own knowledge of the practical operation of the act, gained from observation and experience, leads me to agree in the main with the conclusions drawn by the writer after the investigation made by him.

As it appears to me the compulsory aspect with the penalties attached, in providing against a strike or a lockout before the report of the board is submitted, constitutes its most objectionable feature. While the act has been ignored in many instances and penalties have been imposed in only a few minor cases, the fact that the law is on the statute books, nevertheless, is a menace to complete liberty of action.

On the other hand, its conciliatory features have been of the greatest value, and, in principle, are the opposite of compulsion. It would appear, then, that the measure of value attaching to the act is the machinery it provides, first, for conciliation, and second, for investigation with a view to giving the public facts on which judgment as to the merits of the dispute may be based and thus bring the pressure of public opinion to bear on each party to the dispute to accept the award or recommendation of the board.

I am of the opinion that the best purpose would be served by allowing complete liberty of action on the part both of employers and employes to declare a lockout or call a strike. But I would have machinery placed at the disposal of each to bring into being a board of conciliation and investigation either before or after a strike or lockout exists. The mere fact of a means being provided by which settlement of a dispute may be effected without resorting to a strike or lockout would prove a greater factor in maintaining industrial peace and preventing strikes than the act as it now stands, since few would care to invite public opposition and thus jeopardize their case by refusing to take advantage of the provisions made for seeking an amicable settlement.

The administration of the act has proved to be not entirely satisfactory. In support of the administration of the act as it now obtains their claim is made that it should be by a department of government under a minister elected by the people and responsible to Parliament for his actions. Other considerations arise, however, that tend to make it extremely difficult to administer the act with impartiality by a department of government presided over by a cabinet minister. Party advantage, religious bias and its effect on party vicissitudes, the power of capital in election campaigns and the disturbing influence of organized

labor to the retention of the seats by one or the other political parties, combine to make it undesirable for a department of government to be subject to such considerations in the administration of the act. An independent commissioner, therefore, beyond any influence would at least be able to administer the act with absolute impartiality.

Under the heading of Canadian Opinion a part of Mr. Selekmán's article reads "as in this country (United States) public officials and employers are lined up in favor of the act." This is not an exact statement of fact. It would be correct to say that employers are lined up in favor of that feature of the act which prevents a strike until certain formalities have been observed which are calculated to delay action. It would be correct to say, also, that they are in favor of a board bringing about a settlement of a dispute when the employes are in a position to compel agreement with their demands; but it is hardly correct to say that they are in favor of investigation since they have everything to lose and the employes nothing, by a real investigation. Nor are they in favor of the act to the extent of facilitating the formation of the board nor expediting its work. In the majority of cases they are even reluctant to have a board appointed and slow to name their representatives thereon.

As to investigation, if it is conducted in a thorough manner, there is much to commend it. I can recall that on several occasions during periods of industrial warfare in the United States an investigation into the causes responsible for, and conditions accompanying, the strike, was urged by the employes to enable the public to become familiar with the facts and to bring pressure of public opinion to bear on the employers in order that the causes of the strike might be removed. In Canada the employes coming within the jurisdiction of the act have at least the right to such an investigation by applying for a board before warfare breaks out at all, and such investigation can be as thorough and exhaustive as the representative of the employes on the board, within reason, cares to make it.

H. R. Towne

CHAIRMAN OF BOARD, YALE AND TOWNE MANUFACTURING COMPANY

THE accompanying analysis of the Canadian act relating to industrial disputes, and of its effects since its enactment in 1906 is most timely and valuable. I am most heartily in favor of the principle of arbitration, and of any well-considered plan for making it effective. The Canadian act, as pointed out in the foregoing article, is not designed to compel the arbitration of industrial disputes, but to compel investigation and publication of the facts in each case, and the

postponement of a strike or lockout until such investigation has been made. This principle, I think, is excellent, and might well be combined with the principle of arbitration. Arbitration implies investigation, and properly, investigation should precede arbitration. With adequate provision for the avoidance of undue delay, strikes and lockouts might properly be prohibited pending the results both of investigation and of arbitration.

In the case of public utilities, however, I submit that neither investigation nor arbitration is a sufficient remedy for the admitted evil which exists, because, if they fail, the original situation recurs, and the strike or the lockout may follow, with the attending injury to the community. The problem will not be solved until this contingency is eliminated, and the community is absolutely guaranteed against interruption of service of public utilities by the concerted action either of officials or of employes.

A corporation operating a public utility stands in a class apart from all other employers, whether corporate or private, for the reason that it operates under a franchise whereby it has been vested with a certain part of the sovereignty of the state, such as the right of eminent domain, the right of condemnation, and, frequently, the right of monopoly. The state grants such a franchise in order to obtain a desired service which it cannot itself perform, or which it prefers to obtain by a grant of power to a corporation willing and competent to undertake the service. Such corporation thereby becomes in effect a part of the government of the state, with the duties and responsibilities thus implied, and subject correspondingly to regulation and control by the state. The state has long exercised such control as to the public utility corporation and its officers. It is equally justified in exercising such control over the agents of the corporation, its employes, through whom only it can act. And it should exercise such control to any extent reasonably needed to protect the interests of the state, and its citizens, for whose benefit the franchise was granted and by virtue of which the employes find employment in the service of the corporation.

As to all other corporations there are only two parties directly concerned in a labor controversy, namely, the corporation and the employes. But in the case of every corporation operating a public utility there is a third party, the public, whose interest is paramount. Under present-day conditions the uninterrupted operation of public utilities has become indispensable; their complete cessation would paralyze the life of the nation, or of the states or municipalities involved. No group of citizens should be left free thus to make war on the com-

munity, and no legislation should be regarded as complete which does not eliminate this menace to the public peace.

As a supplement to measures for investigation and arbitration, I have suggested certain legislation which has been approved by the Merchants' Association of New York in the following terms:

"Resolved, that the tenure of service of employes of public service corporations, particularly of transportation corporations, should be regulated by law in such manner that each person who voluntarily elects to enter such employment, shall, as a condition of such employment, be legally obligated by contract to continue therein for a specified term, during which term he may not lawfully quit that employment nor the corporation lawfully discharge him from its service, except as provided by such contract; and that such contract shall provide adequate penalties for violation of its terms by either party."

At the instance of the Merchants' Association a bill embodying this principle has recently been introduced at Albany by the Hon. Schuyler M. Meyer, and is now pending. The Meyer bill provides that after a probationary period not exceeding six months a person desiring employment under a public utility corporation, and the corporation offering him such employment, shall enter into a reciprocal contract for the term of one, two or three years, during which the corporation may not discharge the employe, nor the employe refuse or neglect to perform the service for which employed, except under conditions specified in the bill, and to be incorporated in the contract. All previous rights of the individual are recognized and retained, including the right to membership in any lawful organization, and the right, alone or in combination with others, to request concessions in wages, hours or conditions of service.

Before entering such service the individual has no right to interfere with its continuous operation, and the present laws forbid his doing so. By entering that service he acquires no moral right to the contrary, and if at present he thereby acquires a legal right to do so that right should be cancelled. The Meyer bill would accomplish this. No surrender of personal liberty is involved, other than when an individual, in consideration of wages or salary satisfactory to himself, accepts any employment for one month, one year, or any other stated term. The act is purely voluntary. The proposed contract will deprive the individual of no previous right; it denies him any new right to seek to interrupt the service because of his acceptance of employment; it safeguards carefully all of his previous rights.

Space forbids the quotation of the bill *in extenso*, but examination of its terms

will satisfy the unprejudiced reader that it aims equally to conserve and protect the rights of all three parties, employes, corporation and public; to provide by arbitration and appeal for the prompt adjudication of all controversies, and for the redress of all grievances. It proposes at the same time to forbid resort to strikes or lockouts for the attainment of these ends and thus to insure to the public, the grantor of the franchise under which the corporation operates and by virtue of which all in its service find employment, the uninterrupted operation of all public utilities. No plan which fails to accomplish this final result will completely solve this problem, nor afford to the people the assurance, against the menace of disaster, to which they are entitled.

Harris Weinstock

FORMER MEMBER UNITED STATES COMMISSION ON INDUSTRIAL RELATIONS

IN 1908 I was commissioned by Governor Gillette of California to investigate the labor laws and labor conditions of foreign countries with a view of recommending to the California legislature measures that would tend to establish in the state a higher degree of industrial peace. I left American soil with the idea firmly in my mind that the missing link between capital and labor was compulsory arbitration, along the lines established in New Zealand, of which I had for many previous years been a student.

After an investigation in nearly every industrial country around the globe, with the fullest opportunities to exchange ideas with many of the world's greatest labor authorities, I returned to American soil convinced that compulsory arbitration would not fit into our political conditions. I became further convinced, as the results of my study and investigations on that world tour, that the nearest approach to a practicable missing link between capital and labor was a public inquiry act, along the lines adopted the preceding year by Canada, to be applied in the beginning only to public utility enterprises and later, perhaps, broadened out to take in private enterprises as well. I felt then, and I still feel today that while such a compulsory inquiry act will not prevent all strikes and is not the cure-all for labor disputes, it is a long stride in the direction of minimizing strikes and lockouts and its application will have for the common good a very potent influence in lessening hasty action on the part of both employers and workers.

I felt then and I still feel now that any measure which will have a restraining influence and will bring warring elements together under favorable conditions, quietly to discuss and to reason out their differences, makes for indus-

trial peace and diminishes the possibility of industrial war.

The other day I heard a national public speaker make the statement that he had had the opportunity of meeting many of the world's greatest labor leaders. That he had found even the sanest and fairest-minded among them, when they dealt with labor disputes, looking at the situation through one eye only and that eye the eye of labor. That furthermore he had had the opportunity of meeting many of the world's greatest employers, and that likewise he had found even the fairest-minded and sanest among them, when they dealt with labor disputes, looking also at the situation through one eye and that eye the eye of the employer. I find that my experience in this regard has been very much the same as the experience of that public speaker. Both employer and worker are made of the same common clay and as a rule find it extremely difficult to put themselves in the other fellow's place.

Their inability to do this is the cause of many needless strikes and lockouts. A public tribunal, composed of representatives from each side, with an umpire representing the public, becomes, therefore, a very valuable factor in labor disputes as an aid toward getting for each side the other's point of view, thus making it more nearly possible to reach a common ground. Such a public tribunal carries with it the further advantage that its findings and recommendations are likely to be less partisan and to present the points at issue in a fairer spirit than it is possible for either side to do when submitting only its own judgment of the dispute. The findings and recommendations of such a public tribunal are likely to command a far higher degree of public respect and public consideration. Moreover the knowledge of this fact is likely to have a powerful restraining influence on the side in the dispute which feels itself the stronger and which otherwise would perhaps unfairly to the other side make the most of such strength.

The strongest objection that organized labor has to a compulsory public inquiry act is that it robs the worker of his personal liberty because it says to him that he must keep on working, perhaps only for an hour, when he does not want to work. I think this objection will not stand the test of analysis. When a worker joins a union presumably he does so voluntarily. Having once joined, he stands obligated, in the event of a strike, to waive his personal liberty and to quit work when he does not want to quit work; to do so at times when he has no personal grievance. In a sympathetic strike the actual dispute may be between workers and employers thousands of miles away.

In like manner under the compulsory inquiry act when a worker accepts employment in a public utility company he does so voluntarily, but having once accepted the employment he would do so with the knowledge beforehand that while he would reserve to himself under the law the right for any reason or for no reason to quit, he would forego his right to quit work collectively. His loss of personal liberty in this instance would, therefore, be no greater than his loss of personal liberty when joining a union. In both instances he would be waiving his personal liberty for what in the end, presumably, would be a higher good. In the one case he would waive his personal liberty for the higher good of organized labor and in the other case he would, pending the outcome of the public inquiry, waive his personal liberty for the public good.

The worker exercises voluntary action when he enters a union and also when he enters a public utility service. In becoming a member of a union or entering public utility service, he would do so in both instances with the fullest knowledge of the conditions under which he so enters. If he is unwilling to strike at the behest of his union or unwilling to waive his right to strike pending a public inquiry, then he must refrain from joining a union and also refrain, should a public inquiry law be enacted, from entering the service of a public utility.

*Elisha Lee*¹

CHAIRMAN, CONFERENCE COMMITTEE OF RAILWAY MANAGERS

ONE of the strongest objections made against the present form of arbitration by leaders of the railway brotherhoods is that the awards are interpreted and applied by the railroads. An award when handed down by an arbitration board contains certain rates and certain general principles which must be applied on all railroads, and requires the adaptation of the schedules or agreements on the various railroads to the general principles of the award.

In some few cases the existing schedules may be easily adapted, but generally they are so complicated, varying on each road and often on different parts of the same road, that much study and discussion between the men and the managements is necessary in order that each may get whatever benefits accrue to them. It is true that the awards must be put in effect by the railroads, but this is done as quickly as an agreement can be reached.

In the event of a disagreement, the Newlands act provides that questions in dispute may be referred back to the board, and this, therefore, does not leave the final determination in the hands of

the railroads alone. It also must be borne in mind that whatever the final award, it is all retroactive to the effective date of the award—that is, the men get all their back pay in accordance with the final rulings.

Another objection to arbitration raised by the employes is the difficulty of selecting neutral and unprejudiced arbitrators capable of handling the complexities of railroad wage schedules. One of the organization leaders said some time ago that almost any arbitrators chosen to represent the public were bound to be prejudiced. Any arbitrator, he said, who owned any railway securities, would be opposed to increasing the railroad wage bill, and even workmen chosen as arbitrators would be prejudiced against the trainmen, because of the high wages they enjoyed.

We thought that we had met this objection last summer when we proposed to the President, when other forms of arbitration had been rejected, that he should himself name the members of the board of arbitration. But even this proposal was not accepted.

It did not seem to us that the criticisms of the existing machinery for arbitration were of such importance as to justify the train employes in an absolute rejection of any form of arbitration, and in choosing to resort to a trial of strength that might have brought this country to the brink of civil war. But they did make this choice.

I believe that the sober thought of the country is almost unanimous in favor of an early provision for insurance against railroad strikes and for a judicial determination of the merits of these controversies.

The mandate of the people, through acts of Congress and decisions of the courts, is that the railroads must be continuously operated in the public interest—that the public interest is greater than that of the individuals who own these properties, or of the individuals who earn their livelihood in the operation of them.

When the private rights of the railroads have come into conflict with their public duties, the public, through the courts, has declared that public duties are greater than private rights. To the railroads the public says: "You must operate continuously, under such regulations as we provide, and under such tariffs as we approve."

But to the two millions of our citizens who are actually engaged in this public service—and without whom it could not be conducted—the public has neglected to issue any instructions. It has failed to mark the difference between the private rights and the public duties of the employes.

The unfortunate controversy of last August brought vividly before the coun-

¹ From address delivered February 23 at the Massachusetts Institute of Technology.

COMMON WELFARE

THE PLIGHT OF THE JEWS IN PALESTINE

A RECENT dispatch from Jerusalem states that sanitary conditions among the Jews there are exceedingly bad. Several contagious diseases have become endemic, especially typhus fever.

Mortality tables prepared by Dr. Arthur Ruppin, head of the Zionist Bureau in Jerusalem, confirm the impression that suffering among Palestinian Jews is most serious. In October and November, 1916, there was an average of 236 deaths a month among Jerusalem Jews, for a population of about 35,000, as compared with 100 a month before the war for a population of about 50,000—an increase of nearly 250 per cent.

Medical work for the Jews in Jerusalem was almost exclusively in the hands of non-Jewish missionary agencies until, a few years ago, the American Hadassah, an organization of Zionist women, established a nursing settlement with two doctors and two nurses, the latter giving most of their time to training a corps of midwives. Both the nurses, though trained in the United States, were Russian subjects and at the outbreak of the war had to leave the country—one of them taking up work among Jewish refugees in Egypt, the other returning to this country. The two doctors, fortunately, were both Austrian and, therefore, *personae gratae*.

As the war went on and misery increased, these two men found it more and more impossible to cope with their work, and at last have had to decide to give up home visits to patients unless relief is immediately received. The Hadassah is raising \$100,000 for the equipment of a medical unit of ten physicians, ten nurses and adequate medical supplies; it is ready, in fact, to send this unit now, although only \$25,000 has been collected, since the Zionist organization will underwrite the balance.

But the chief difficulty at the moment is that the State Department cannot guarantee a safe passage for doctors and nurses. It has still on its hands the two supply ships lying at Alexandria, the Cesar and the Des Moines, which are even more urgently needed for the

moment than the doctors, but dare not traverse the mine-strewn sea.

Much can be accomplished even now, however, by financial relief which it is possible to transmit by way of Constantinople. In many of the self-supporting colonies of Jews [described in the SURVEY of January 2, 1915, by Maurice Wertheim] economic dependency has increased alarmingly among families which before the war were thriving. They refused, in many instances, to emigrate because they felt it their duty in the cause of Zionism to retain a strong nucleus of Jewish settlers to lend strength to their claim when war is over and to continue the productive organizations built up with much sacrifice and devotion. Relief for these classes has not been given through individual charity, but in the shape of subsidies to self-governing unions for mutual relief.

Although the outlook for Jews in Europe is much improved politically by the overthrow of the Russian autocracy, the immediate economic need is greater than it has ever been before. The distribution of American relief funds, as most SURVEY readers know, has been centralized in the Joint Distribution Committee, of which Felix M. Warburg, of New York city, is chairman. It represents, primarily, the orthodox Central Relief Committee, which raises funds chiefly through the synagogues, the American Jewish Relief Committee, which is making a broader appeal, both among Jews and non-Jews, and the radical People's Relief Committee, collecting principally among Jewish trade unions.

It is to the American Jewish Relief Committee that Julius Rosenwald, of Chicago, made last week his conditional offer of \$100,000 for every million dollars collected from other sources until the fund of \$10,000,000 aimed at by the committee has been reached. The committee is convinced that the whole amount, of which a little over \$1,250,000 has been secured since January, will be raised. In this case Mr. Rosenwald's gift will amount to \$1,000,000, a record so far as relief contributions by an individual are concerned.

ENACTING THE CHILDREN'S CODE PIECEMEAL

OF forty-two bills introduced into the Missouri legislature by the Children's Code Commission eleven were enacted into law before the recent adjournment. But of the commission's three most important bills—state-wide juvenile court system, county boards of public welfare and revision of the child labor laws—only one, the juvenile court act, was passed. Two other important bills were also passed, one providing for pensions to mothers throughout the state, and the other making adoptions or permanent transfers of the custody of children a court proceeding instead of, as at present, a private contract. A number of bills giving the juvenile court jurisdiction over cases of children now heard in the probate or other courts were also passed. Special provision was also made for the treatment in one court of incorrigible minors over juvenile court age. The statutes relating to apprenticeship were repealed.

The children's code as a whole was the most popular piece of legislation before the Assembly. Every bill that came over from the Senate was passed unanimously by the House without debate. If the Senate had sent over more bills the House would have been willing to pass any or all of them.

The chief obstacles to the passage of the bills were the reactionary organization of the Senate, which opposed progressive legislation until the last minute, when they were forced into line, and the critical overshadowing problems of state finances. The wet and dry issue also cut a small figure, although all the dry legislation was passed. The only open opposition to any of the children's code bills was to the group of bills relating to illegitimate children and marriage. The special Senate committee on the code reported all these bills favorably, but they were beaten on the floor.

The county board of public welfare bills, creating an administrative agency in each county to enforce laws relating to children and providing for the employment of trained workers—which

was regarded by the commission as its most important group of bills—were beaten in the Senate because of the fear that they would saddle expense unnecessarily upon the counties. The subject of betterment of social conditions was not one which appealed to many of the senators, and most of them shied at the idea of employing trained workers. The complete revision of the child labor and compulsory attendance acts was a long complicated bill which the committees did not study carefully enough to act upon.

The commission has perfected a working organization throughout the state, and will doubtless continue its work in preparation for the next legislature. Probably no social legislation in Missouri has ever had the widespread enthusiasm and popular backing given the children's code bills. The educational and legislative campaign was in charge of Mrs. Maurice Lowenstein, executive secretary, and Claud E. Remick, legislative agent.

Of bills on the program of the State Committee for Social Legislation only one was passed, that permitting women to serve on school boards throughout the state. The committee's legislative representative, Louis F. Budenz, lays the defeat of most of the program to the fact that the legislature was wrestling with what was known as the "governor's program" to rehabilitate state finances and to take state institutions out of politics. Labor legislation, city planning bills and bills for reorganizing municipal government all failed.

Unexpectedly a bill abolishing capital punishment, which was not on the committee's program, was also passed, almost without public discussion. Opposition from country districts defeated the bill reducing the hours of work for women from nine to eight. The minimum wage law was vigorously opposed and did not come to a vote. Bills providing for state supervision of private charities met unexpected opposition at the last minute. The serious financial condition of the state prevented any action to put the factory inspection system on a salary instead of a fee basis.

Progressive legislation which passed provided a complete revision of the road laws; an appropriation to meet the federal requirements under the industrial education act; creation of a state tax commission and revenue measures recommended by the governor; abolition of the contract labor system in the state penitentiary, and the creation of a paid board to manage all the state penal institutions in place of the local boards of managers. A similar bill for placing all other state institutions under a special board was defeated, as were the bills for workmen's compensation and the calling of a constitutional convention.

A Stimulus for the Social Worker

Three weeks of round-table conference for intensive study of practical social problems in one of three special fields. Membership is limited and is by invitation of the Conductor.

Institute for Tuberculosis Workers

May 14—June 2

PHILIP P. JACOBS, Conductor

A discussion of methods of anti-tuberculosis work, campaigns, co-operation with other social and public health movements.

Institute in Child Welfare June 13—July 3

HENRY W. THURSTON, Conductor

The topics discussed will be of interest to all case workers with children, whether they are working in cities, small towns or institutions.

Institute in Family Welfare June 13—July 3

PORTER R. LEE, Conductor

For public health nurses, medical social service workers, public relief officials, visiting teachers, charity organization secretaries and visitors.

INDUSTRIAL SAFEGUARDS IN WAR TIME

ANTICIPATING efforts to relax labor laws in the event of war, the American Association for Labor Legislation has announced protective labor standards which, it maintains, must be observed in the interest of both output and human conservation. The association warns against the shortsightedness of European countries which permitted a serious breakdown of labor regulations with the result of early and unmistakable loss of health, output and national effectiveness.

"The strength of the nation," declares the association, "is needed as never before and we cannot afford to suffer loss of labor power through accidents, diseases, industrial poisoning and over-fatigue."

Essential minimum requirements are outlined to promote the industrial efficiency of the country in war as well as in peace. They include reference to safety, sanitation, hours of labor, wages, child labor, women's work, social insurance, the labor market and administra-

tion of labor laws. Under hours, emphasis is placed upon such specific regulations as the three-shift system in continuous industries, maintenance of existing standards of the working day as basic in non-continuous industries, one day's rest in seven for all workers. Under wages, the necessity is pointed out for equal pay for equal work without discrimination as to sex, continuation of existing wage rates for basic working day, time and one-half for all hours beyond the basic working day, and the periodic revision of wage rates to correspond with variations in the cost of living.

Other requirements set down the inviolability of laws protecting women and children, the maintenance of workmen's compensation for industrial accidents and disease, the extension of compensation laws to embrace occupational diseases, especially those incident to the manufacture and handling of explosives, and an immediate investigation into sickness among workers to ascertain the advisability of establishing universal workmen's health insurance. Finally, repre-

**THE EDUCATION OF THE
 YOUNG IN SEX HYGIENE**

A Textbook for Parents and Teachers

By Robert N. Willson, M.D., Secretary of the American Federation for Sex Hygiene; Fellow of the College of Physicians of Philadelphia.

The importance of this volume cannot be too greatly emphasized as the subject is of vital interest to all. The following chapter-headings will give a brief idea:—Economic Relations of the Social Diseases; The Boy—his need; The Girl—her need; A Brief Talk on the Heredity of Health and Disease, and the Selfishness of Unhygiene; What must both the Boy and Girl in due time be Taught?; What should the Girl be Taught?; What should the Boy be Taught?; When are the Boy and Girl to be Taught, by whom, and how?; The Training of the Teacher; A talk with boys on physical strength, hygiene of mind and body, character, and citizenship; A Talk with Girls on physiology, sex hygiene, and citizenship; What may be expected of the fully equipped Boy and Girl?; The Social Diseases; The Eradication of the Social Diseases in large cities; Appendix—Educational Charts, relating to Heredity, the Social Diseases, and the Teaching of Sex Hygiene.

sentation of employes, employers, and the public is demanded on joint councils for cooperating with the labor department in drafting and enforcing regulations to put the foregoing principles into full effect.

Not only is the action of the American Association for Labor Legislation timely on account of the attempt in the New York legislature to repeal the laws regulating women's hours [the SURVEY, March 24], but on account of the unstandardized labor supply that bids fair to flood the market in the event of war. By the hundreds societies are pledging their members to national war service. The Woman's Suffrage Party, the National League for Women's Service and other organizations are planning to train women to become chauffeurs, gardeners, munition makers, cooks, seamstresses. But as yet none of these bodies have bulwarked their offers of aid by endorsing standards of hours, wages and sanitation.

**EMERGENCY PEACE VS. WAR
 EMERGENCY**

DURING the week of March 19 an unofficial commission gathered around a council table in New York city upon invitation of the Emergency Peace Federation to discuss ways and means of solving the intricate international crisis without resort to arms. David Starr Jordan came all the way from California to act as chairman; other members were Edward P. Cheney, professor of European history at the University of Pennsylvania; Arthur Le Suer, legal advisor for farmer organizations in North Dakota; William I. Hull, professor of history and international law at Swarthmore College; Joseph D. Cannon, of the Western Federation of Miners; John F. Moors, president of the Boston Associated Charities; Prof. Emily Green Balch, of Wellesley College; Fannie Garrison Villard; Stoughton Cooley, editor of the *Public*; Winter Russell, New York attorney and publicist, and H. A. Overstreet, professor of philosophy, College of the City of New York. Louis P. Lochner, former secretary of the Ford Peace Commission, was appointed secretary.

After listening day after day to persons versed in international affairs who were asked to present their views, the commission threshed out certain proposals which it recommends as substitutes for war. Principal among these is the policy advocated by Professor Hull of appointing two joint high commissions of inquiry and conciliation, with Great Britain and Germany respectively, for the purpose of agreeing at least upon a *modus vivendi* (perhaps upon the basis of the Declaration of London) which shall conserve neutral rights until the end of the present war. Such a pro-

ceeding, Professor Hull pointed out, is in accordance with American ideals and the prime achievements of American diplomacy, including those of the administrations of Presidents Washington, John Adams, Lincoln and Wilson himself in the Mexican settlement.

The commission further urged an advisory popular referendum before entering war, the calling of a conference of neutrals before assuming to establish international law in the interests of neutral nations, and the acceptance of any offer of mediation that might be proffered by a neutral nation in accordance with the Hague convention.

Last but not least the commission adopted the suggestion of Professor Cheney that the President be asked to make a further appeal for a conference of belligerent nations looking toward peace, in view of the changed conditions throughout the world—the new government of Russia, a new ruler in Austria-Hungary, Germany's apparently weakened internal position, a greater desire for peace among all peoples.

Although the meetings of the commission were public, except for notices in one New York paper they were absolutely neglected by the press. The impression was abroad that they were the last disheartened effort of a small, fast-vanishing group of pacifists. But on its final day of conference the commission arranged a mass meeting in Madison Square Garden, packing the big hall with 10,000 cheering pacifists and closing the doors upon more than a thousand left outside. Two nights before the garden was filled by a meeting in support of a vigorous war policy at which Senator Root, President Hibben, of Princeton, and Mayor Mitchel were the chief speakers. To judge by the press, sentiment in New York is overwhelmingly in line with the action of this meeting in calling upon Congress to declare "that by the acts of Germany a state of war does now exist."

**WAR, REVOLUTION AND
 CHILD LABOR**

THERE are those who have wondered why a child labor conference should attempt to compete for popular favor with the Russian revolution and American preparations for war. The answer of the National Child Labor Committee to those who attended the sessions in Baltimore last week was that those were the two things that gave the conference its greatest significance. "The tide of democracy is rising in Europe," said Felix Adler. "The lesson of the hour should be for us to develop and perfect it." Child labor has no place in a democracy whose aim must be to bring out "the uncommon fineness in the common man," as Dr. Adler expressed it, by improving the material

conditions of the majority, by establishing better educational facilities, and by giving a chance to participate in the government determination of what is for the public good. Child labor defeats this aim because it makes impossible the necessary training, and Russia should not be led to think that child labor is something to be adopted along with our truly democratic institutions.

As for the other issue which is now occupying the American public so largely—the question of participation in the war—the warning again comes from Europe. “The excitement of war is fatal to the growth of young minds,” said Julia C. Lathrop, of the federal Children’s Bureau, “fatal to the bringing up of the present generation, and without enriched and educated childhood social advance is impossible.” The rape of the schools and other war measures of England that are endangering social advance were outlined by Owen R. Lovejoy, secretary of the National Child Labor Committee, to much the same effect as Winthrop D. Lane’s article in the SURVEY for February 3. The tendency to let down standards is already evident and will become more so, Mr. Lovejoy predicted, “unless those of us who have dedicated ourselves to the protection of these defenseless ones keep our heads clear and our motives un-mixed, determining that whatever happens all other treasure, all other forms of wealth, all other methods of defense shall be sacrificed before we compel the children of America to pass through the fire.”

A tendency to centralize everything seemed to be the keynote of the sessions. Ethel Hanks Field, agent of the New York Child Labor Committee, who has been making a study of the enforcement of the New York law, advised a central bureau to formulate rules for the issuance of work permits. C. C. Carstens and Roy Smith Wallace expressed a desire for centralized care of dependent, delinquent, defective and neglected children. A. C. Monahan, of the United States Bureau of Education, and Edward N. Clopper declared there was no solution of the problem of non-attendance in rural districts until the schools were organized on a county instead of a local basis. Members of a local school board will not prosecute their friends and neighbors for not sending their children to school. John Dewey and P. P. Claxton said that the states are not large enough to handle their educational problem unaided, that the federal government should give aid to elementary education so that the rural schools might be improved, the problem of educating immigrants more adequately handled, and the states with a large per cent of adult illiteracy assisted.

The only tendency in the opposite di-

THE CRITIC AND GUIDE CO.

12 Mt. Morris Park, W., New York City

rection seems to be in Massachusetts where the Child Labor Committee is working with one community at a time, opening the eyes of the local social organizations to the needs of the working children along recreational, health and educational lines, with the idea that the awakening will eventually resolve itself into a concerted demand for the necessary legislation, which can then be administered by a central body.

CARE FOR THE GUARDSMEN'S FAMILIES

AS a result of the calling out of the national guard on Monday and Tuesday, social workers will find much that is of immediate interest to them in the recommendations just made by the Active Service Auxiliary to the New York National Guard, which was created to care for the families of state guardsmen on duty at the Mexican border. This auxiliary consisted of the wives of staff officers and was established with the approval of both General O’Ryan, commanding the guard, and Governor Whitman. Mrs. Cornelius Vanderbilt was chairman.

The auxiliary strongly recommends that a body similar to it be organized in every state in the union and be made a permanent part of the national guard. So long, it declares, as breadwinners must constitute the majority of men in

military service, “we must have well-defined, responsible, automatic machinery to handle the social and economic problems that will arise.”

The duty of such an auxiliary, it believes, should be “to further the enlistment of men by giving them assurances that their families and those dependent upon them will receive care, thought and attention from the National Guard itself.” The work, it continues, should be financed by the state and supervised by the military authorities of the state. Provision should be made for volunteer contributions to be administered by the auxiliaries.

Mrs. Vanderbilt’s review of its work shows what she and her associates think such an auxiliary ought to do and how to do it. Its own aim was not relief *per se*. In the average case of a dependent wife with several young children, declares its report, “the need was not merely to pay the rent and sustain life until the husband should return, but rather to insure to that family its normal opportunity for development, social growth and education. These needs are not easy to chart, and they are to be insured not by money alone, but by wise adjustments and helpful planning, which must usually be furnished from the outside.”

The method of the auxiliary was to make an emergency payment to a family,

Some of REBMAN'S New Books

DIABETES—

Fasting and Undernutrition in the Treatment of Diabetes.—By HEINRICH STERN, M.D., LL.D., New York.

This little book is based entirely upon personal observations and experiences. It will be found that it differs, in certain essentials and in a number of details, from the rules and regulations laid down by others in articles dealing with the same theme.

It is intended for direct perusal by the diabetic patient.

Cloth—Price \$2.00

FEEDING BABIES—

The Science of Feeding Babies and Normal Care of the Growing Child.—By H. ELIZABETH GOULD.

The author offers so many valuable hints and practical suggestions for almost every phase of a baby's career that her work is bound to meet with great approval.

It is written for young mothers and nurses having charge of babies.

Cloth—Price \$1.50

TEETH—

Care of the Mouth and Teeth. A Primer of Oral Hygiene.—By JOSEPH HERBERT KAUFFMANN, D.D.S., New York.

This brief volume aims at nothing else than the grasping of the fundamental idea of the value of oral hygiene.

To parents, teachers, social workers, and all those who have charge of children, this book should prove invaluable.

Cloth—Price 60 cents

OBSTETRICAL QUIZ FOR NURSES—

A Monograph on Obstetrics for the Graduate and the Undergraduate Nurse in the Lying-in-room.—By HILDA ELIZABETH CARLSON.

The essential feature of this work consists in a description for improvising everything required on an emergency case. It is eminently practical.

Cloth—Price \$1.75

WHAT SHALL I EAT—

A Manual of Rational Feeding.—By F. X. GOURAUD, M.D., formerly Chief of the Laboratory of the Medical Faculty of Paris, France. (Translation by F. J. REBMAN.) With a Glossary containing definitions of the Principal Technical Terms, and an Index of Diseases referred to in the text.

An Analysis of each Article of Food and its Calories are given. Also the actions on the digestive functions, in assimilation, secretion and elimination. Likewise the reasons are given why a food should be employed or rejected, according to the normal or pathological conditions of each individual case. Indications and contra-indications are given in every instance. This makes the choice of food adapted to each case easy.

Cloth—Price \$2.00

HOSPITALS AND THE LAW—

By EDWIN VALENTINE MITCHELL, LL.B. This is a short analysis of the general propositions of law relating to health institutions, and to make it readily comprehensible to those who are professionally or otherwise interested in such establishments.

Cloth—Price \$1.75

Rebman

Company

New

York

if need was immediate, of three dollars. Before a budget was decided upon, a visit was made to the home by an investigator. If there were employable members, these were offered work suited to their abilities. A weekly budget was then voted only after "repeated investigations," and was supplemented, when necessary, with increased payments for unexpected needs.

The auxiliary expended \$16,100.32 on 545 families. It received 633 applications, seven of which were outside its sphere. It returned to contributors an unused sum of over \$12,000.

OHIO COMMISSION ON SOCIAL INSURANCE

BOTH houses of the Ohio legislature have passed and the governor is expected to sign a bill creating a state commission of seven to study social insurance. Interest in health insurance in Ohio has been alive for some time. Two years ago an investigation of occupational diseases was made by the State Board of Health under the direction of Dr. E. R. Hayhurst.

THE CANADIAN DISPUTES ACT

[Continued from page 759]

try the weakness of a system of public regulation of railroads, which fails to provide insurance against a paralysis of the internal commerce of the nation.

Is not this unrestricted right of the railroad employes to quit work in a body a menace to the public welfare? Does not the individual who chooses to earn his livelihood in the public service of transportation assume a duty to help keep open these vital arteries of commerce, a duty greater than the private right to strike?

A member of the Interstate Commerce Commission, Judge Clements, recently expressed the opinion that railroad employes are affected with a public interest that they can no more ignore than can the carriers, and he suggested that there should be a legally established obligation upon these employes not to interrupt the service by strike until the justice of their demands had been determined by some public tribunal.

Such a definition by law of the public duties of railroad employes must have been in the mind of the President when he said recently that "the business of government is to see that no other organization is as strong as itself; to see that no body or group of men, no matter what their individual interest is, may come into competition with the authority of society."

The position taken by the representatives of the employes is that they have no obligation to permit a reasonable consideration of demands which they may formulate; that simply because they have decided they want them, not even the

employers have any right to question them; that the possibility of improving conditions, of which they complain, in some other manner than they propose, is not entitled to any consideration; but they must have an unrestricted freedom to take whatever action they may see fit to take, to compel the concession of their demands in the exact terms and manner and at the time they propose, even to the extent of discontinuing work in a body, and if the public suffers it is only an incident to the situation, and the public should not complain.

For the railroads to take a corresponding stand, they would have to take the position that the demands of the men were beyond all reason and that under no circumstances would they even be considered. But they have not done this; they simply take the position that they are willing that the merits of the claims of the employes, as well as their own, shall be passed upon by some competent but impartial tribunal appointed by proper federal authority, and that they will abide by their findings, whatever they may be.

This right of the employers to have consideration given to their side of the questions is denied by the employes, and any measures considered by governmental authorities to make this obligatory are met with the charge that the rights of the employes are being infringed and that any measure looking to a compulsory investigation of the merits of controversies is a curtailment of their liberties and subjects them to involuntary servitude.

This is a problem in which all of us, as American citizens, have a vital interest. I have endeavored to state the facts without prejudice, I am an advocate of industrial peace—not peace at any price, but peace that will insure the best possible wages and working conditions for our employes, together with the highest efficiency in the operation of our transportation system. There must be, as President Wilson has so well said, "A full and scrupulous regard for the interest and liberties of all concerned."

I am not prepared to say that all wage problems on the railroads should be placed unreservedly in the control of a public commission, but I do believe that when a controversy between the managements and the men reaches a stage where the interests of the public are imperilled—that then there should be a judicial settlement, that will conserve the public interests as well as the rights of the parties to the controversy, and if it is finally determined that any body of men be required in the public interest to subordinate their private rights to their public duties, it should be with the full understanding that their rights must be in every way safeguarded by the public.

White and Colored Dress Cottons

Reg. Trade Mark

For Spring and Summer 1917

Fine Cotton Fabrics will be greatly in demand for the coming season.

During the last few weeks we have received several shipments containing the very latest Parisian novelties. We have also received a large consignment of the sturdy English and Scotch Fabrics.

It is gratifying to hear the comment of our patrons to the effect that the very materials and colors that cannot be found at all elsewhere, can be obtained here in perhaps greater variety than ever before.

Imported Swiss Organdie. in a complete range of plain colors, shadow Checks, Dots, etc., 46 inches wide, \$1.25 yard.

Imported Voile. 42 inches wide, White and range of Pastel and Street shades, special crisp French finish, 75c yard.

Handkerchief Linen. McCutcheon Quality, shown in a range of twenty-five shades, special soft finish to prevent creasing, 33 inches wide, 85c yard.

David & John Anderson's Celebrated Scotch Ginghams, unequalled assortment. Plain colors, Stripes, Checks, Plaids, 32 inches wide, 60c yard.

Japanese Crepe. Hand Woven, shown in White and upwards of 35 plain shades. Special value, 30c yard.

White Fabrics. St. Gall Swisses, Dots of all sizes, French Plumetis, Fancy Voiles, Piques, Skirtings, Madras, Dimities, Batiste, French Lawns, Transparent Organdies, etc., in the largest possible variety.

Samples of any of these lines, except bordered materials, mailed upon request.

AFTER THE WAR IS OVER

What becomes of the discharged soldiers? And, during the war, of those invalidated home? Another leaf of Canada's experience, by **PAUL U. KELLOGG**, in the SURVEY next week.

Shall Labor be Dominated By the Liquor Traffic?

Liquor's "last stand" has been taken in the labor halls of this country. Liquor men control nearly every State Federation of Labor and practically all the over 700 Central Labor Bodies in this country.

They are determined to capture not only the men identified with the organized labor movement, but all other workers as well.

They are issuing false or unsound statements as to what will happen to workingmen's jobs when the saloons are closed.

They are taking an unfair advantage of the pledge of loyalty of trade-unionists toward one another.

It would be a calamity to permit the liquor men to succeed. And it need not happen. **WE ARE EQUALLY DETERMINED TO PREVENT IT.**

We shall purchase advertising space—and use thoroughly authenticated material—in over one hundred leading labor papers to counteract the influence of the liquor interests and the professional labor leaders who are on the pay-roll of the liquor men.

These papers are read by millions of workingmen and their families—read “as carefully as the early Christians read their New Testaments,” a famous student of the labor question once said.

If we can strike NOW—AND HIT HARD—it will count mightily—clear down the line—in the fight on the liquor traffic.

Charles Stelzle, who is directing this campaign, spent two years studying the liquor problem as it affects workingmen and in pushing unusually effective campaigns with this information as a basis.

Don't you want a share in the task of tearing loose liquor's grip on workingmen?

We need \$10,000 to conduct this publicity campaign. And it will be money well invested. There is no better way to spend it—just now—in fighting the saloon.

Send us as large a contribution as you can—and we'll be glad to keep you posted as to the results of the campaign. We will also—upon request—send you reliable material to meet the arguments of the liquor men in your town.

Make your check payable to Alfred R. Kimball, Treasurer.

For particulars regarding the campaign, and for general information, write to Charles Stelzle, 105 East 22nd Street, New York.

We have audited the accounts of SURVEY ASSOCIATES, INC., for the twelve months ended September 30, 1916, and certify that the above statement agrees with the books and is correct.

(Signed) HASKINS & SELLS,
Certified Public Accountants.

New York, Oct. 24, 1916.

SURVEY ASSOCIATES, INC.

SURVEY ASSOCIATES, INC., is a membership corporation, chartered November 4, 1912, without shares or stockholders, under the laws of the state of New York—

“to advance the cause of constructive philanthropy by the publication and circulation of books, pamphlets, and periodicals, and by conducting any investigations useful or necessary for the preparation thereof.”

ANNUAL MEMBERSHIP in SURVEY ASSOCIATES is open to (a) Co-operating Subscribers of \$10 or more in any one year and (b) SURVEY Circulators. [See back cover.] A coöperating subscription includes the \$3 subscription to the magazine, and creates no financial liability on the part of the contributor. Contributors of \$100 or more are eligible to life membership.

THE ANNUAL MEETING of SURVEY ASSOCIATES is held the last Monday of October to elect officers and transact such other business as may come before the meeting. The directors are divided into three classes, whose terms run for three years. The voting is open to life members and to annual members.

BOARD OF DIRECTORS

1914-17

THE GIST OF THIS REPORT

1915-16 A YEAR OF EMERGENCY EDITORIAL

Published 53 issues.

Sacrificed in other directions in order to conserve our service as a weekly chronicle—in news paragraphs of the *Common Welfare*, and short opportune articles.

Closed year with compressed staff, but constructive plans for developing, on less emergent basis, our work of interpreting social practice, invention and experience.

Experimented with magazine numbers as a graphic once-a-month edition to interpret social movements to their natural public.

Major series:

War Boom Towns, by Zenas L. Potter and John Ihlder.

The Social Service of the Federal Government, by Graham Romeyn Taylor.

Life's Clinic, by Edith Houghton Hooker.

Censorship: the Moving Picture and the Pageant, by John Collier.

The Long Road of Woman's Memory, by Jane Addams.

Exporting the American Playground, by C. M. Goethe.

Great Spheres of War Relief, by Ernest P. Bicknell.

MANUFACTURE

Printed 977,250 copies as against 1,040,400 preceding year.

Delivered 1,412 text pages to each subscriber,—a recovery of 12½ pages toward pre-war standards.

Safeguarded by continuing paper and printing contracts, paid from 5 to 100 per cent more for wrappers, engravings and other publishing supplies.

COMMERCIAL RECEIPTS

Wrote \$8,769 in advertising; or \$1,737.62 more than preceding year. (Approximating record for 1913-14.)

Secured gross subscription revenue of \$38,735.56 or \$1,169.61 less than preceding year. (\$5,690.26 less than 1913-14.)

Secured 5,994 new subscriptions; or 218 more than preceding year.

Secured 1,074 restorations; or 341 less than preceding year.

Secured 9,000 renewals; or 262 less than preceding year.

Altogether 16,968 subscriptions; or 385 less than preceding year.

Brought special groups of college subscriptions (used as supplementary texts in sociology, social science, economics, etc.) to a new level of 2,238.

Equalled preceding year's subscription record in last six months, and brought new class of once-a-month subscribers to 1,179.

ADMINISTRATION

Attacked shrinkage in commercial receipts and grants of \$6,201.79 under preceding year (\$12,330.44 under 1913-14), by raising increased contributions, by retrenchments and by investing energy and money in issues and circularization.

Held venture intact and cleared fiscal year.

Drew on \$1,600 from small surplus of previous years, to move offices to new quarters and equip them; better workrooms at lower rent.

FINANCE AND MEMBERSHIP

Brought roster of \$10 co-operating subscribers to thousand mark—the goal set as sound membership base four years ago (1,037 as against 901 the year before).

Raised \$29,912 (all funds) for educational work (against \$24,281.50 preceding year); \$6,920 from new sources.

Suffered reduction of, roughly, one-third in grants (\$6,050).

Carried by new stage process of broadening out sources of support, geographically and numerically, bringing (all funds)

\$1,000	contributions—	from	5	to	6
\$200 to \$500	"	—from	10	to	17
\$25 to \$100	"	—from	75	to	96
\$10	"	—from	908	to	1,041

Membership representing 42 states and 5 foreign countries.

TO SURVEY ASSOCIATES AND ALL SURVEY READERS

WITH a membership—stronger not only in numbers, but stronger in the sense that we have gone through the crucible of difficult experience together—SURVEY ASSOCIATES enters upon its fifth year. For more than half of the time our adventure in coöperative journalism has had to reckon with the unsettled fortunes of war years. For over two years we have had to postpone promising lines of development, while we fended against circumstance and strengthened the organic body of the undertaking. For the twelve months ending September 30 last, to match operating expenses with income we had to clear the fiscal year—and did—

IN SPITE OF—shall we call it?—an “Indian” windfall, a reduction in grants of over \$6,000 which fell to us in December, two months after we had entered upon our publishing year.

IN SPITE OF a continued slump in commercial receipts—(advertising recovered lost ground; not so, circulation).

IN SPITE OF a combined shrinkage (as against 1913–14) of \$12,000 in these sources of revenue and that out of a budget of \$90,000.

IN SPITE OF increased publishing costs (printing and office supplies have gone up from 5 to 100 per cent).

IN SPITE OF the controversial issues thrust forward by the war itself, which have tended to split every group in society, from the Quakers to the Socialists, but throughout which the fairness of the journalistic formula of THE SURVEY has held the venture together.

IN SPITE OF one of the heaviest reportorial years with which we ever have had to deal.

In the industrial field, for example, there has been a succession of tense situations demanding even-handed interpretation—the successful collective bargaining in bituminous and anthracite; occasional flare-ups in the steel industry, such as at Youngstown; the break-up of the oldest protocol, the renewal of the most progressive firm-agreement, and the bitter strike and lock-out in the garment trades; the spread of the eight-hour movement in machine shops and munitions plants; and the dead-lock in railroading. The year has witnessed, moreover, the success of the long campaigns for federal child-labor and compensation laws and the outcropping of a sickness insurance agitation which may parallel that for workmen’s compensation.

And—a final straw—we cleared the year—

IN SPITE OF the contemptible trick which the Gregorian Calendar plays on weekly periodicals once in a dog’s age, popping a fifty-third issue, with its fifty-third printer’s bill, into the hopper of a single publication year!

A THOUSAND COÖPERATORS

A CHIEF factor in surmounting these difficulties has been the forging ahead of SURVEY ASSOCIATES as a mutual organization. Four years ago we set one thousand coöperating subscriptions as the sound membership base to strive for. In September of this year the roster of coöperating subscriptions mounted up and beyond that thousand mark.

In line with a deliberate policy long held—to spread out the foundations of our educational fund nationally and among wider and wider groups of givers—we endeavored to turn our misfortunes inside-out and develop new sources of support. The response brings us fairly to the threshold of a new stage of economic self-dependence as a philanthropic enterprise. Our largest contributors (\$1,000) responded generously, and we added one to their number. We can report seven more contributors at \$200 to \$500; twenty-one more at \$25 to \$100; and 133 more at \$10. Taken together, these groups of individual contributors, new and renewal, now contribute two-thirds of our educational funds. Taken together, they number 1,190 SURVEY ASSOCIATES.

MOREOVER, THE SURVEY enters the new year with constructive gains in equipment as well as membership. Last winter we engaged an expert to overhaul typography and format. Changes in text, headings, captions, and arrangement of illustrations, begun in April and carried out more fully this fall, should, without added cost, make every issue more attractive in appearance, more legible, and more time-saving.

FURTHERMORE, we are entering the new year fully settled in new offices on the top story of an East Nineteenth street loft building, whose windows afford a bird's-eye view of the city problem over the roofs of our neighbors. More practically, these offices give us roughly 500 more square feet of elbow-room, incomparably better light and ventilation, a lunch-room for the clerical force—all at a saving in rent.

WE are entering the new year, also, with the composition, presswork, and binding of THE SURVEY in the hands of a printing house which specializes in magazine publication, and has a soundly won reputation for justice and leadership in its treatment of labor. It is equipped to match in craftsmanship, and to put us on an equal footing in delivery with other weekly periodicals. This coming year THE SURVEY should reach all readers east of the Mississippi in the week of publication.

Without at all attempting to gloss over our weak spots in performance during the course of the twenty-six war months, and

without underestimating the serious obstacles in those ahead (see p. 18), we are entering upon a long plan for more adequate service to readers, and for meeting at least half-way the opportunities for creative work which crowd in upon us. Of these, more later.

WHY THE SURVEY

IN approaching them, let us look at some staff problems which crop out perennially in carrying on the development of **THE SURVEY**. We have to do with a non-commercial undertaking, but not (in either sense) with an easy-going one. It is up to us to "scoop," if you please—or be scooped, in handling news matters. It is up to us to go unflinchingly to the bottom of a situation and carry conviction as to our disinterestedness as against cross-interpretations from possibly a dozen quarters. At the same time, it is for us to consider how **THE SURVEY** can best complement rather than overlap the work of other publications—how, short of sacrificing that "come-hither" without which we could not get a hearing for anything, we can carry material which otherwise would get little or no hearing at all.

AMONG weekly periodicals there have been three outstanding developments the past year. *Harper's Weekly*, maintained at heavy loss by a group of public-spirited men and foraging not infrequently in the social field, has been discontinued. *The Independent* is getting articles by wire and has been translated into an alert news periodical—the most up-to-the-minute in weekly journalism—but unlike either the *Harper's Weekly*, which it absorbed, or the *Independent* of old, distinguished for its contributions to original thinking from writers the world over. Third, comes the rise of the *New Republic*, with its daring initial investment, its high standards of editorial outlay and output, as a glorified editorial page on affairs in general from a progressive social point of view.

Mark, if you will, three other illuminating successes—the mounting circulation of the *Atlantic Monthly* under an editorial management with a genius for eliciting rare transcripts of human testimony; the nation-wide recognition of a daily paper—the *Christian Science Monitor*, which has developed an unexampled foreign correspondence; and the astounding audience of the *National Geographic Magazine*, with its research, its travel and pictures drawn from all races and conditions of men.

Very evidently there is no falling off in people's interest in people. In ever-broadening groups they are interested in ever-broadening phases of society.

NEVERTHELESS there has been a costly reaction in another direction—the dropping out from the staffs of the monthlies of that remarkable group of writers who, first under the leadership of S. S. McClure and later in a dozen editorial offices, fairly revolutionized magazine journalism. They "swung the world by the tail," but they did it not merely by their writing ability and their fierce social patriotisms; they brought in an entirely new conception of accuracy and thoroughness in the gathering and massing of material. They set new standards for the investment of time and energy which it is justifiable to make in a piece of manuscript that takes up no more room than a facile story, but mayhap will overturn a corrupt political machine, re-shape public modes of thought, or bring in some belated reform. The degeneracy of this method at the hands of those with spurious standards of inquiry and accuracy, the circulation tobogganing of two years ago, the mad rush in a dozen offices to find something to counter the semi-salacious appeal of one group of periodicals, the absorption of public interest in "war-stuff," and the recent rise in the cost of magazine manufacture, have all led to one result. Today this

high-calibred service to public knowledge and understanding must largely be done, if at all, as free-lance work; and it brings less than what is paid for short-story writing.

Along with these shifts in the channels for news, opinion, and journalistic research, must be reckoned the appearance of further specialized periodicals,—monthlies or quarterlies,—on race problems, civics, health, etc.—a dozen new ones, there were, this past year; and a veritable snowball of pamphleteering more than matching the sudden rolling up—or out—of book publication along social and economic lines during the last ten years.

THIS report could, of course, be entirely given over to an analysis of the situation, so complex and interesting it is. Such an analysis would, we feel, bring conviction to SURVEY readers, as it has with us:

A

THAT THERE IS NEED AND OPPORTUNITY for a weekly chronicle in the fields covered by **THE SURVEY**.

This is afforded neither by pamphlets nor by books, neither by specialized journals, which come out infrequently, nor by the general periodicals whose attention touches only the high spots in these fields.

B

THAT THERE IS NEED AND OPPORTUNITY for a pooling place for experience, drawn from various fields of social concern.

Books, pamphlets, and technical papers bring out this material, but like the animals of the ark, each after his kind. A lawyer does not read a medical journal, a visiting housekeeper a journal of criminology. The general weeklies and monthlies handle articles which, from the publicity standpoint, get social material before wide and varied audiences. But here again the treatment must be sporadic.

C

THERE IS NEED AND OPPORTUNITY for a channel for forthright, informed discussion, over signatures, of subject matter and issues in the fields covered by **THE SURVEY**.

All too few are the meeting grounds for those who, from different points of view, approach serious questions in social economics. There is need not only for prompt news service, but for space given over to analysis, proposal, and criticism, into which has gone more than a scant allowance of reflection upon the material secured; there is need not only for the marshalling of evidence and experience, but for original and clear thinking, based on both. The academic journals afford ample channels for such discussion in the realm of pure theory; but the service of general periodicals in the practical field is again necessarily scattered and opportunistic.

D

THERE IS NEED AND OPPORTUNITY for a journal which, by crossing and recrossing the various social, racial, economic, professional, and other boundaries, shall help build up a stock of common terms by which all men may understand one another; which by budgets of testimony, personal experience, and the interplay of ideals, shall help lift the common floor on which they may meet to strive or to coöperate. And more, there is need and opportunity for a medium to interpret, consecutively, social movements themselves to their natural public.

E

THERE IS NEED AND OPPORTUNITY for a journal which can bring out promptly the results of investigations by responsible social agencies; and more, which has at call equipped staff members who can be assigned to cover emergent situations and can delve into social needs which are nobody's business.

In this, *THE SURVEY* has been building up a technique which has stood the fire of great controversial situations. The inexpensive way to handle such a situation in the labor field, for example, is to commission some local newspaper man. We look for something more incisive and objective when we are able to put members of our own staff on the job—as we did Fitch in Colorado and Taylor in Calumet. The results more than warrant the cost, which may be ten times as great. In carrying out this procedure, we interview employers, employes, and public officials; make independent inquiries on the spot; submit the manuscript in its first draft to representatives of all sides, and to disinterested observers, if there are any; weigh the resulting criticisms; publish the final draft and stand ready to publish rejoinders and defend our findings in the pages of *THE SURVEY*.

We have no illusions that the truth necessarily rests in splitting the difference between two contentions. We want the responsible staff member to bring out the facts as he finds them, and generalizations close to the facts; to show his approach to the situation, and where he comes off. In each case where this method has been employed,—where perhaps we have been copiously damned by one side or the other, or both,—we have had endorsement of the work from confidential sources in both camps.

The illustration chosen is from the field of industrial relations; but the same need for disinterested approach, linked with exacting standards of investigation and interpretation, holds true in other fields—whenever a situation is clouded with controversy, entangled with personalities, or torn by conflicting interests; or whenever it lies in a matrix of social or political conditions removed from the free action of public opinion.

THE ART OF CHRONICLING

WITH such chartings in mind, our purpose is to enter upon the new year on a less emergent publishing program than has characterized the last two years, in the faith that more adequate service will carry conviction and win support for a grade of work which has been outside our grasp. For, of the five functions outlined above, we have conceived the first named (A) as the journalistic “binder” which we must keep intact if we would hold the venture together.

TO go back a little. The publication year 1913-14 (ending Sept. 30) was the second year of *SURVEY ASSOCIATES*. The spring before we had mapped out plans for lifting our weekly issues, and the staff work lying back of them, to new standards the year ahead. In August came the great war, and a year of short commons. In our printing office it meant cutting down the planned weekly unit (32 pages and cover) to 24 pages. In our editorial rooms it meant either to contract the whole publication scheme of *THE SURVEY* or to continue certain main lines of service and shelve the rest for the time being. We chose the latter course.

This course can be described in a few words. The fields of social concern covered by *THE SURVEY* are not so many fenced-off plots. They overlap. Any given item, whether it is a “stick” long or a ten-page article, may have to do

with three or four of them. Moreover, this area of common interest is national rather than local, is marked by outstanding issues, events, problems, which, in whatever field they fall, are of lively concern to all.

Here we have to do with the service outlined in our first category of journalistic need and opportunity (outlined under A, page 8); and this service we have endeavored to maintain against the enforced economies of two war years—in our news paragraphs of the *Common Welfare*, in our short weekly articles with the opportune element strong in them, in our graphic magazine numbers with their current appeal to the general reader, recognizing that outside his own field each specialist is a general reader.

WE believe this was a right choice. As a program it has held *THE SURVEY* intact; but it was a makeshift choice, one continued for a second year, when our revenue losses exactly doubled, and it has had obvious disadvantages.

This will be clear if we recall the old truism of newspaperdom that action spells news. Case-work which makes for family rehabilitation is fairly overwhelmed—in public attention even more than in fact—by the breadlines and bitter need of a winter of unemployment. Penal reform may go forward for years and fail to elicit one tithe the publicity which comes of a spectacular attempt to oust a prison warden. That undermining of social health which trails after low wages and long hours makes scant impression compared with a fight and flying bricks in a strike.

The intention of *THE SURVEY* is, of course, to get back of the newspaper headlines to the conditions and forces which provoke them, and—a more difficult commission—to gain a hearing from the public for such conditions and forces, out of season as well as in. Yet within bounds, the same psychological rule holds of magazine journalism as of the daily newspaper. Events, legislative campaigns, cleavages—these have that element of action in them which widely appeals.

Given limited space, in any week our brief articles have had that opportune element strong in them. A commission reports, war radically affects some phase of industrial life, a neighborhood experiment reaches a point where it provokes the attention of a city, a fight is on over a piece of social legislation, or two conceptions of child-caring come to a clash. In any given week something which has a still more emergent appeal may be given right of way over any or all of these things. But back of them, in turn, lie great bodies of social practice, of untoward conditions or promising demonstrations which, lacking either spokesman or occasion, stand the chance of being entirely neglected. Such material demands more, rather than less, investment in its gathering and portrayal, if it is not only to be given space, but is to gain the attention which in the long run it deserves. For, by massing evidence of family distress traceable in large part to some one cause, that cause can be given something of the journalistic value of a catastrophe. By analyzing it, the momentum of public interest thus caught can be directed to ways for prevention.

INTERPRETING EXPERIENCE

TO discover more surely and competently the rapidly developing but fragmentary social experience about us, to explore and interpret more fully the life and labor in which it lies embedded, is the work we have in mind. It is work which falls in the second category of journalistic need and opportunity described (Category B, p. 8). It is work which helps answer not only "What is doing?" but "How to do it" for the community leader, living remote from the great centers. To define it more sharply: the range of opportunity which opens out before us lies in interpreting, in less hurried and constricted ways, experience and invention in the primary spheres of social concern grouped on the opposite page.

I

BEGINNING with incapacity and exploitation in the work-a-day life, the upward trend in industrial conditions and relations, including such subjects as minimum wage and labor legislation, collective bargaining, profit-sharing, factory inspection, safety, hygiene, scientific management, social invention, and coöperation in industry.

II

BEGINNING with pauperism and poverty, the upward trend in social economics, including such subjects as relief, rehabilitation, case-work, and charity organization; family budgets, thrift, and cost of living; remedial loans, mutual aid, social insurance against sickness, accidents, invalidity, unemployment, and old age.

III

BEGINNING with squalor and indifference, the upward trend in civic development, including such subjects as neighborhood life, housing, town planning, municipal research, taxation, efficiency, and democracy at work.

IV

BEGINNING with sickness and defect, the upward trend in public hygiene, including such subjects as social control over the preventable diseases (tuberculosis, syphilis, alcoholism, fevers), hospital social service, nursing, sanitation, public health work, the socialization of medical practice, constructive advances with respect to infant mortality, occupational diseases, sex hygiene, the treatment of defectives, mental hygiene, and the prolongation of life.

V

BEGINNING with ignorance and neglect, the upward trend in education and recreation, including such subjects as vocational training, the social contents of the curriculum and the social uses of the school plant; night schools, rural demonstration, and schools for immigrants; child welfare; work for dependent, neglected, and defective children; playgrounds, motion pictures, community drama; the development of stamina and the release of nascent capacities.

VI

BEGINNING with crime and degradation, the upward trend in social control, including such subjects as the police problem, minor courts, psychopathic laboratories, prisons, reformatories, parole and probation, and the application of self-government to processes of regeneration, rather than the old repressive tyrannies of punishment and retribution.

WHAT THIS CALLS FOR

IN the printing office, this program calls for a 32-page weekly unit instead of a 24-page unit. In carrying it out we are entering upon a three months' investment in paper, composition, and presswork, in the expectation that this more adequate service will impel old readers, who appreciate both the service and its expense, to secure new readers and enable us to project it a second three months, and perhaps a third, before we narrow down into the summer's issues.

In the editorial rooms this program calls for the gradual up-building of the staff along departmental lines which had demonstrated their efficiency prior to the war. This coming year we are proceeding conservatively with a smaller headquarters staff than for some years past, and with a wholly inadequate appropriation for correspondence the country over; much less any payment to contributors of articles.

In addition to reporters, proof-readers, and the general assistants of the managing editor's office, such consecutive interpretation calls for the full time in some cases, half-time in all, of a competent staff member in each of the great subject fields outlined; responsible editors analogous to members of an academic faculty, who can "soak" into the problems, know the personalities, apprehend and interpret the vital issues, digest the voluminous literature, recast technical material, often badly written or unwritten at all, which yields only to the application of finer instruments than shears and a paste-pot. It calls for such advancing standards of accuracy, craftsmanship in writing, copy reading, illustration, and make-up as require an editorial outlay we are not yet able to make.

At present, in only one department, Industry (and that by grace of a special fund), have we approached this standard in the matter of staff time. In others it remains on a half, a third, or a fourth time basis. [See special financial appeals, p. 17.] During the current year we are eager to bring our work in the field of economic dependence up to the standard we have in mind.

FIELD WORK

ABOVE all, this standard calls for such leeway as will keep those charged with departmental responsibility from becoming desk-bound and out of touch with realities. Such staff members should have time to perform definite pieces of field work in the course of the year—not only to give consistency to our approach to emergent situations, but to carry out major pieces of journalistic research (Category E, p. 9). The cutting down of this work of investigation has been one of our very real war losses.

THE most considerable magazine feature of the year, based on original inquiry, has been a series of articles on the social, sanitary, and labor problems of the more or less artificial communities called into being by the munitions trade—towns which, in their congestion, their lack of recreation and health facilities, their

heterogeneous mass of workers, have telescoped in a few months conditions common to all rapidly growing industrial centers. This series was entered upon in co-operation with several national organizations, the expense of field work for the three initial articles thus far published being met by the Russell Sage Foundation. These have included:

WAR BOOM TOWNS

BRIDGEPORT AND ITS MUNITIONS MAKERS. *By Zenas L. Potter, formerly of the Department of Surveys and Exhibits of the Russell Sage Foundation.*

PENN'S GROVE AND ITS POWDER MIXERS. *By Mr. Potter.*

FLINT. When men build automobiles, who builds their city? *By John Ihlder, former field secretary of the National Housing Association.*

Flint is distinctive in that it has supplied not the war trade, but the domestic market. Its boom began over five years ago and has gone through the earlier stages, thus affording for new towns the valuable experience which Mr. Ihlder brought out in his expert study. Mr. Potter's incisive article on Bridgeport came at an opportune time when civic spirit was in flux; and in part by arousing local ire, in part by gathering up and pointing out potential forces for development, it has measurably affected the history of the past twelve months in this Connecticut town [see Bridgeport on the Rebound, THE SURVEY, October 14, 1916].

A SERIES of staff articles, based on field work performed a year ago, has interpreted the social activities of the federal departments, at a time when public attention has been focused on the legislative rather than the administrative branch of the government:

WASHINGTON AT WORK. *By Graham Romeyn Taylor.*

The Print-shop. (December 25.)

The Nation's Playgrounds. (January 1.)

National Yardsticks for Health; The Public Health Service. (January 15.)

Underground America; the Bureau of Mines and its work of salvage and invention. (February 5.)

From Plowed Land to Pavements; the government's hand in helping the city dweller by helping the farmer. (April 1.)

At Your Doorstep; the neighborly service of the U. S. Post Office. (May 6.)

AMONG investigations by other agencies interpreted or reviewed the past year have been:

THE MUCKERS. *By William H. Matthews, New York Association for Improving the Condition of the Poor.* An exact and sweeping indictment of what subway construction by means of unskilled labor means in terms of household welfare. (October 2.)

SURVEY OF SICKNESS IN DUTCHESS COUNTY. *By Joseph F. Weber, New York State Charities Aid Association.* (October 16.)

PROBING THE CAUSES OF INDUSTRIAL UNREST. A series in three installments reviewing the reports issued by the United States Commission on Industrial Relations. *By John A. Fitch (staff).*

Introductory, The Manly Report. (December 18.)

The Commons Report. (January 1.)

The Tactics of Violence. (January 8.)

ANCIENT LONG ISLAND. County conditions as found by the Nassau County Association. *Ruth M. Underhill.* (December 11.)

MADISON AND THE UNIVERSITY OF WISCONSIN SURVEY. *Reviewed by George H. Mead, University of Chicago.* (December 25.)

THE SOCIAL WORKERS. Summary of report on positions in social work, for the New York School of Philanthropy. *By Mary Van Kleeck.* (January 1.)

IN THE HEALING LAP OF MOTHER EARTH. How the sick in mind and spirit grow strong from their free life in the fields of Indiana's Farm Colonies. *By Winthrop D. Lane (staff).* (January 1.)

BETTERS. What field labor means to 5,000 children in the Colorado sugar beet districts. *By Edward N. Clopper, National Child Labor Committee.* (March 4.)

SCIENTIFIC MANAGEMENT AND SOCIAL WELFARE. *By the late Robert F. Hozie, University of Chicago.* (March 4.)

UNDER COVER OF RESPECTABILITY. The findings of the Baltimore Vice Commission. *Reviewed by Winthrop D. Lane (staff).* (March 25.)

BUILDING UP A METROPOLITAN CITY PLAN BLOCK BY BLOCK (The New York Commission's Report). *Reviewed by Graham R. Taylor (staff).* (March 25.)

FROM "BOHUNKS" TO FINNS. The scale of life among the ore strippings of the Northwest. *By C. Whit Pfeiffer.* (April 1.)

JUST FLICKERINGS OF LIFE. What the Baltimore Vice Commission learned of Bahy Farming. *Reviewed by Winthrop D. Lane (staff).* (May 6.)

SHALL NEW YORK CITY UNTAX BUILDINGS? A review of the report of the Mayor's Committee on Taxation. *By C. C. Williamson, New York Municipal Reference Librarian.* (June 24.)

LABOR FORCES OF THE ALASKA COAST. *By William Kirk, Rochester Associated Charities.* (July 1.)

MAKING SCHOOL FACTS TOWN TOPICS. How the findings of the Cleveland Survey have reached the people. *By Elwood Street, Cleveland Federation for Charity and Philanthropy.* (July 8.)

REPORTORIAL ARTICLES

WHILE we have not been able to undertake any considerable investigations, we have published a number of reportorial articles by members of the staff and others. These illustrate the consistent carrying out of the larger aspects of our news function (Category A, p. 8):

- HELD TO ACCOUNT FOR THE EASTLAND. *By Graham Taylor (staff). (October 9.)*
- FIRE! THE WARNING FROM WILLIAMSBURG. *By George M. Price, M.D., director Joint Board of Sanitary Control. (November 20.)*
- TWENTY-FIVE YEARS OF THE CONSUMERS' LEAGUE MOVEMENT. *By Florence Kelley. (November 27.)*
- ON GUARD AT THE PORT OF NEW YORK. The persistence of a provincial quarantine system. *By Gertrude Seymour (staff). (January 8.)*
- ONE DAY AFTER ANOTHER AT SING SING. *By Winthrop D. Lane (staff). (April 1.)*
- PEYOTE WORSHIP. The menace of a drug habit spreading among the Indians of the Southwest. *By Gertrude Seymour (staff). (May 13.)*
- CHILDREN OF THE JOY ZONE. A double page of photographs. *By Lewis W. Hine. (November 13.)*
- TURNED BACK IN TIME OF WAR. Ellis Island under war conditions; New York Harbor a tide-water for the flotsam and jetsam of the world conflict. *By Frederic C. Howe. (May 6.)*
- ARSON AND CITIZENSHIP. East Youngstown and the aliens who set it on fire. *By John A. Fitch (staff). (January 22.)*
- FIFTY YEARS OF THE Y. W. C. A. *By Annie Marion MacLean. (January 22.)*
- AT THE BAR OF CHILDHOOD. Some testimony from the investigation of the New York State Board of Charities. *By Winthrop D. Lane (staff). (February 12.)*
- SUDDEN SPREAD OF THE 8-HOUR DAY. *By Ruth Pickering (staff). (April 1.)*
- OUTLAWING EXHAUSTION. The United States Supreme Court to decide on the length of the workingman's day. *By John A. Fitch (staff). (April 15.)*
- ARIZONA'S EMBAROO ON STRIKE BREAKERS. *By John A. Fitch (staff). (May 6.)*
- FOUR YEARS OF PEACE AHEAD IN ANTHRACITE. Negotiation and settlement interpreted by the pastor of the Holy Savior Church in Wilkesharre. *By J. J. Curran. (May 13.)*
- WITH THEIR FEET UNDER ONE TABLE. The railroad conference between representatives of 300,000 men and twenty billion dollars of capital. *By John A. Fitch (staff). (June 17.)*
- HUMAN CONSERVATION AND THE SUPREME COURT. The hearing on the ten-hour case. *By Mary D. Hopkins. (May 27.)*
- MAYOR MITCHEL TAKES THE STAND. A further chapter in the story of the children's institutions of New York. *By Winthrop D. Lane (staff). (June 3.)*
- THE SPREAD OF THE HEALTH INSURANCE MOVEMENT. *By I. M. Rubinow. (July 15.)*
- POVERTY AND POLIOMYELITIS. *By Thomas J. Riley, Brooklyn Bureau of Charities. (July 29.)*
- SUMMER PLAY IN SPIKE OF AN EPIDEMIC. *By Wanda Greineisen, Henry Street (Nurses') Settlement, New York. (August 12.)*
- THE FEDERAL CHILD LABOR BILL. *By Florence Kelley, National Consumers League. (August 26.)*
- WHEN STRIKE BREAKERS STRIKE. The demands of the miners on the Mesaba Range. *By Marion B. Cothren. (August 26.)*
- THE NEW FEDERAL WORKMEN'S COMPENSATION LAW. *By John B. Andrews, American Association for Labor Legislation. (September 23.)*
- LICENSE IN PLACE OF LICENSING. The Massachusetts situation. *By Robert A. Woods, South End House, Boston. (September 30.)*

SOCIAL PRACTICE

FOR purposes of comparison, here are representative titles which illustrate those fresh drafts of social practice (Category B, p. 8) which, under our new year's program, we hope to bring out more adequately in our enlarged weekly issues:

- SAVING THE SIGHT OF BABIES. *By Carolyn C. Van Blarcom, of the National Committee for the Prevention of Blindness. (October 9.)*
- THE TOWN THAT DID NOT STAY CONTENT. The promptings toward reasonable play life for children in a Philadelphia suburb. *By Esther E. Baldwin. (November 6.)*
- UNEMPLOYMENT FROM THE ANGLE OF CASEWORK. The results of an inquiry by the Boston Associated Charities. *By Fred R. Johnson, Boston Associated Charities. (November 13.)*
- WHAT WE KNOW ABOUT CANCER. An interpretation of medical advances to the social worker and laymen generally. *By Alice Hamilton. (November 20.)*
- A DEAD LETTER OFFICE FOR MISDIRECTED MEN. Conclusions from work at the municipal lodging house. *By William Alberti Whiting. (November 27.)*
- KENTUCKY'S MOONLIGHT SCHOOLS. The story of their fight against illiteracy told by their founder. *Cora Wilson Stewart. (January 8.)*
- PUBLICITY BY PROSECUTION. A commentary on the birth control propaganda with especial reference to the history of English attempts at suppression. *By James A. Field, University of Chicago. (February 19.)*
- FIGHTING THE SCOURGE ON TROUBLESOME. The campaign of the Public Health Service against trachoma in the Kentucky mountains. *By Dorothy H. Stiles. (March 18.)*

A YEAR OF THE HARRISON NARCOTIC LAW. (April 8.)
 A STATE AGED ONE HUNDRED. Glimpses of social progress in Indiana during 100 years, in two installments. *By Alexander Johnson.* (April 22 and 29.)
 DISCIPLINE FOR CITY EMPLOYEES. *By Leonhard Felix Fuld.* (April 29.)
 THE CONSUMPTIVE AND HIS NEIGHBORS. *By Edward R. Baldwin, M.D., Saranac Laboratory.* (July 22.)
 CITY PLANNING IN SOCIAL WORK. *By William J. Norton, Director Cincinnati Council of Social Agencies.* (September 9.)
 FOR WORKING WOMEN IN OREGON. Revised code of wage, hour and sanitary conditions issued by the Industrial Welfare Commission. *By Caroline J. Gleason.* (September 9.)
 THE WOMEN'S CIVIC LEAGUES OF CALIFORNIA. *By Katharine C. Watson.* (September 6.)
 HEALTH INSURANCE IN A STUDENT COMMUNITY. *By Edith Shatto King.* (September 23.)
 THE SCHOOL AS A COMMUNITY CENTER. *Nathan Peyser, Principal Public School 39 (Manhattan).* (September 23.)

The most sustained serial feature of the year based on experience was continued from 1914-15, and broken into bi-monthly installments because of restricted space. This was *The Lantern Bearers*, by John Collier, founder (with Charles Sprague Smith) of the National Board of Censorship, who interpreted its six years' experience, and discussed the social ramifications of the invention and spread of motion pictures; their potentialities in recreation, education, leisure, enlightenment; their regulation, censorship, and constructive social development; and the parallel renaissance of the community drama:

THE LANTERN BEARERS. *By John Collier.*
 A series of essays exploring some thoroughfares of the people's leisure. Censorship and the National Board. (October 2.)
 Anthony Comstock—Liberal. (November 6.)
 The Theater of Tomorrow. (January 1.)
 A Film Library. (March 4.)
 For a New Drama. (May 6.)
 The Stage: a New World. (June 3.)
 Caliban of the Yellow Sands: the Shakespeare pageant and masque reviewed against the background of American pageantry. (July 1.)

One of our rarest gifts of the year was the advance publication of three chapters from the forthcoming book of an associate editor:

THE LONG ROAD OF WOMAN'S MEMORY. *By Jane Addams.*
 The Reaction of Simple Women to Trade Union Propaganda. (July 1.)
 War Times Challenging Woman's Traditions. (August 5.)
 Disturbing Conventions. (October 7.)

ONCE-A-MONTH EDITION

JUST as we can carry out major pieces of journalistic research, with the editorial staff needed to garner our subject fields competently from week to week, so can we build up our illustrated magazine numbers as a natural sequence to our weekly issues. This is not merely because these numbers afford space for ampler treatment of material, but for educational and practical reasons. There is a potential public demand for a magazine which can bring out as fresh transcripts of human testimony as the *Atlantic* does in its general field; which can perform as real a service in social exploration as the *National Geographic* does in anthropology; which can link foreign and domestic social work as the *Christian Science Monitor* links public affairs in its world correspondence.

Here we have conceivably one of the few profitable factors embodied in THE SURVEY'S publication scheme. These enlarged and illustrated issues are, of course,

(Continued on page 18)

FINANCIAL APPEAL

SURVEY ASSOCIATES, INC.

As a journal of constructive philanthropy, THE SURVEY endeavors to get at the facts of social conditions and to put those facts before people in ways that will count.

As an educational enterprise, with circulation not yet large enough, nor advertising yet sufficient, jointly to meet publication expenses, much less journalistic research, THE SURVEY must look to contributions to make its larger work possible.

As an adventure in coöperative journalism, 1190 contributors of \$10 or more made up the active membership last year of SURVEY ASSOCIATES, INC.

This wide-spread, democratic backing comes not only from those of means, but from the rank and file of social workers, heads of settlements, teachers, probation officers, lawyers, ministers, physicians, etc. Their names (pp. 23-30) are our best endorsement.

GENERAL APPEAL

To carry THE SURVEY forward in 1916-17 we appeal for \$25,000 for our General Educational Fund.

COÖPERATING SUBSCRIBERS (\$10 each)

During the past year, 1037 readers enlisted as Coöperating Subscribers to SURVEY ASSOCIATES at \$10 each.

We appeal for 1100 \$10 Coöperating Subscriptions in 1916-17.

LARGER CONTRIBUTIONS

In these developmental years we must look to those of larger means and equally constructive vision for the remainder of our General Fund.

We appeal for \$14,000 in sums of \$25 to \$1,000.

ENDOWMENT FUND

SURVEY ASSOCIATES, INC., is in position to administer a short-term endowment fund, to be applied during this period of growth to our general work, or to certain well-defined lines of activity which would amply justify philanthropic investment.

(For audited financial statement, 1915-16, see page 2; for summary of year's work, page 4.)
Checks should be drawn to Frank Tucker, Treasurer, SURVEY ASSOCIATES, INC., 112 East 19th Street, New York City.

SPECIAL APPEALS

SURVEY ASSOCIATES, INC.

INDUSTRY

This work, made possible on its present scale by special contributions, has passed the experimental stage, and sets the standard toward which we hope to bring staff resources in the other major fields of social concern interpreted by **THE SURVEY**. In addition to our regular work in the industrial department, we want to be in position next spring to carry out a quick journalistic survey of a long-neglected industrial district as challenging in its way as Pittsburgh or Colorado.

THE FIELD

Beginning with incapacity and exploitation in the work-a-day life, the upward trend in industrial conditions and relations, including such subjects as minimum wage and labor legislation, collective bargaining, profit-sharing, factory inspection, safety, hygiene, scientific management, social invention and cooperation in industry.

We appeal for \$5,000 in 1916-17.

RELIEF AND LIVELIHOOD

Our purpose is to parallel this departmental work in industry with a similar equipment—full time of a responsible editor—devoted to the interpretation of experience, experiment, and investigation, in the oldest field of social concern covered by **THE SURVEY**.

THE FIELD

Beginning with pauperism and poverty, the upward trend in social economics, including such subjects as relief, rehabilitation, case-work and charity organization; family budgets, thrift, and cost of living; remedial loans, mutual aid, social insurance against sickness, accidents, invalidity, unemployment, and old age.

We appeal for \$5,000 to develop this department.

HEALTH, CIVICS, EDUCATION, CRIME

The coming year our treatment of the social aspects of these major fields is attempted by part-time adjustments of the headquarters staff. With special contributions, we should be in position to bring our work in each of these fields up toward the standard indicated above.

FOREIGN SERVICE

A new range of opportunity opens up in interpreting

The work of relief and rehabilitation in Europe.

The administrative and legislative experiments attempted incidental to the war itself which may prove permanent contributions to social engineering.

The life, labor, aspiration, and outlook of the immigrant groups entering into the American composition.

As a construction fund, by means of which we may add to our staff a man competent to engage in this emergent work, and may lay the groundwork for making **THE SURVEY** an exchange for foreign as well as domestic social practice and advance.

We appeal for \$3,000 annually for three years.

RURAL SOCIAL WORK

Scarcely a month passes but **THE SURVEY** is urged to cover rural conditions—social, economic, sanitary, educational—with something like the consecutive treatment we accord city conditions.

To enter upon such a commission, on an efficient basis which would make it in time a self-sustaining factor in the working scheme of **SURVEY ASSOCIATES**, we should need a similar construction fund of \$3,000 annually for three years.

the largest items in our printing office expense. On the other hand, they have advertising possibilities if we can build up an enlarged circulation for them. Moreover, when the cost of putting the magazine forms on the press is once met, the cost of additional impressions is comparatively small. For some years past we have thought to exploit these issues whenever we could get together a small surplus to invest.

Last spring, with the dropping off in revenue in other directions, we announced a special low-priced subscription [\$2] for the twelve monthly issues. The experiment neither came up to our hopes in the matter of gaining new readers, nor did it warrant our fears lest a large number of \$3 subscribers should lapse to the \$2 class. Some 757 monthly subscriptions were written in the six months, and of these, 38 had been up to this time \$3 subscribers. In the absence of sufficient investment, we do not consider the experiment conclusive one way or another, and shall follow up the plan in modest ways during the coming year.

Our working conception of these once-a-month issues calls for:

(a) A graphic article interpreting at length the results of some investigation (e. g., Mr. Pfeiffer's article, *From Bobunks to Finns*, describing conditions in the mining towns of the Mesaba Range).

(b) A fundamental article of social theory (e. g., Miss Addams' chapters).

(c) An authoritative article by an expert in some great sphere of social work, sharing the trend of thinking or experience in his field for the benefit of all (e. g., Dr. Adolph Meyer's discussion of what a democratic civilization can do about heredity and child welfare). (June 3.)

(d) A striking serial giving in its different installments a consecutive interpretation of some important process, development, or situation (e. g., Mr. Collier's on ten years' development in the moving picture censorship).

(e) A group of opportune contributions on current social work, of all-around interest to the people who are shouldering the every-day load of social advance in their communities.

These numbers should help us broaden the horizon of individual social work, and bring the criticism of social thinkers to bear on general affairs.

BUDGET FOR 1916-17

OUR administrative problem in all this has been to build up THE SURVEY while carrying out a heavy reportorial and analytical routine; to gradually bring commercial receipts up to the point of meeting a fair measure of publishing and editorial overhead in a field where commercial periodicals are not meeting the need; and to demonstrate the educational worth of super-commercial work as we go ahead.

This process has itself absorbed an unconscionable amount of staff energy. Some day we cherish the hope that commercial and membership receipts will reach a stage where we will be free to do our main job—write, edit, print, and distribute a magazine!

That is not this next year, when paper costs have exactly doubled and will add some \$4,000 to our expenses, and the discontinuance of our service as distributor of books for the Russell Sage Foundation (no longer justifiable in view of their curtailed publication plans) throws between \$3,000 and \$4,000 overhead charges into our administrative routine. We have cropped our budget accordingly, with the signal advantage that this year we are able to forecast these new difficulties, and by staff compressions, retrenchments, and new sources of revenue set out to meet them.

The alternative is seriously to consider raising the subscription price to \$4—a move which, however well founded, would hamper the educational reach of THE SURVEY.

All told, in writing our budgets for the three publication years 1914-15, 1915-16, and 1916-17, we have had to bridge gaps in income, or assume extraordinary expenditures, totaling roughly \$40,000. That we have been able to do so is downright evidence of the vitality of the venture.

With new offices, prompter printers, a new circulation staff, typographical changes which should make *THE SURVEY* more attractive in appearance and more time-saving, an issue scheme which should give more adequate service and win friends, and the institution of a new membership class of *SURVEY ASSOCIATES*, *SURVEY* Circulators (see back cover), we are bending every effort to build up circulation and spread out the cost of normal publishing and editorial overhead among larger groups of regular subscribers. Every new one thousand, or one hundred, or even ten subscriptions will bring this cost (now between \$4 and \$5 per subscriber) closer to the \$3 subscription price; and will, thereby, free contributed funds for constructive investment.

For, to carry out the developments outlined in this report, we must look to the sustained backing of old friends and, as occasion and opportunity offer, appeal for new gifts for new and creative work.

WAR AND RECONSTRUCTION

SUCH a second range of opportunity has been thrown wide open by the war itself. We have long wanted to pool foreign as well as domestic experience in the pages of *THE SURVEY*, as an offset to any tendencies toward an ingrowing provincialism. This has been urged at board meetings and in communications to the editors. The events of the last two years have presented this opportunity with a new insistence.

However one apprehends the European struggle, whether most as a threat to our safety, or in its reactions as a threat to our democratic institutions, its social consequences in this country are on every hand and inescapable. The shutting off of immigration, with its effect on labor conditions, is only the most tangible of these consequences. We have reported them and given up such space as we could to their discussion from social points of view, pro and con, as part of our opportune service.

There is a growing body of social workers who feel that at a time of world changes, thus affecting every phase of our life and labor, we have a challenge to American social movements to think in broader terms, to see to it that the humanitarian ties which have bound us hopefully to the peoples of western Europe are not snapped, and that the social values we have struggled for in American life shall be projected along with our trade expansion or our participation in international polity.

We have in mind at least three specific ways in which THE SURVEY can be of service. These are:

1

TO INTERPRET the work of relief and reconstruction in Europe in its social and practical aspects—as a means for keeping socially minded Americans abreast of measures worked out under pressure of war, which may be suggestive in our internal development.

At the present time we are publishing a series of articles by Ernest P. Bicknell, director of civilian relief of the American Red Cross, presenting the first comprehensive review of war relief in the great stricken areas—Belgium, Poland, Serbia, Armenia.

We should like to follow these articles with consistent interpretation of efforts toward rehabilitation not only in invaded districts, but in each of the warring countries. For example, we published an article by Bruno Lasker on Imperishable Belgium, in which he weighed whether or not the remarkable coöperative societies for self-help will persist in the lowlands after the war. Like the very soil they have grown from, he holds that they will endure. Further articles by this same writer described the village for crippled soldiers promoted by the German Garden Cities Association, and the report of a British commission on settling discharged soldiers and sailors on the land.

2

TO INTERPRET those social and constructive aspects of international negotiation and settlement which have to do with the safeguarding not only of the weaker nations, but of the weaker peoples within the strong nations, in their culture, their welfare, and their liberties; to interpret the social and constructive aspects not only of the movements for peace and world government, but the interplay of those social, economic, and scientific forces which had gained such momentum before the war, and which, unless the hate-breeders and prophets of isolation win the day, will weave again at its close a new woof of assurance and security.

Characteristically, American social work has addressed itself not only to the relief of distress, but with convinced optimism to the work of preventing distress. Here in Europe is distress compounded—wretchedness, destitution, sickness piled up as never before—by war. Whatever the outcome of the conflict, it seems clear that there is going to be a recoil against war among the great masses of people of all nations who have borne its chief burdens. Attention will be given as never before to the need for preventing war and its compounded miseries. To bring together evidences of this half-articulate yearning—to bring out the contributions to international organization of those whose business it is to deal with the fabric of human relations in their every-day work—is clearly one of the calls to service which THE SURVEY should meet by keeping its columns open and hospitable.

Our chief contribution in the past twelve months was a group of articles on the second anniversary of the outbreak of hostilities:

AFTER TWO YEARS OF WAR

(August 5, 1916)

- FIRST AID TO EUROPE. *By Ernest P. Bicknell, director of civilian relief, American Red Cross.*
AMERICA'S OPPORTUNITY. *By Henri La Fontaine, professor of international law, Belgium.*
WAR TIMES CHALLENGING WOMAN'S TRADITIONS. *By Jane Addams.*
THE DEMOCRACY OF INTERNATIONALISM WHICH WE ARE WORKING OUT IN OUR IMMIGRANT NEIGHBORHOODS IN AMERICA. *By Grace Abbott, director Immigrant's Protective League, Chicago.*
WHAT WE HAVE TO BUILD ON: THE PERSISTENCE OF INTERNATIONALISM AS A COHESIVE SOCIAL FORCE. *By Carl Conrad Eckhart, University of Colorado.*

TO INTERPRET the life, labor, aspiration, and outlook of the various immigrant groups which enter into the American composition.

It has been the high distinction of South End House, Hull House, Henry Street Settlement, Chicago Commons, and other American settlements that they early rejected the policy of trying forcibly to cast the youth of immigrant neighborhoods into a rigid mold. Rather, they have fired the imaginations and helped conserve the heritage of these "strangers within the gates" by endeavoring to draw from each group its contribution to American life in craft and culture, art and ideals.

We have among us people who have their roots in every hopeful movement for progress and self-realization among the suppressed peoples of Europe.

As one labor investigator expresses it, there is no simile which does greater violence to our hopes than that of the "melting pot." We do not want to boil down all rare metals, all gems and craftsmanship of design which come to us, into a common and meaningless mass. We need them to enrich our life.

At the same time, neglect or repression of such elements in our population clearly leads to narrow, ingrowing separatist movements among them, destructive to their natural relationship to the American whole—as evil an outcome as to have them lose their identity; defeating in either case the possibility of their making a distinctive contribution to the life of the new world, or to the coming international life of which their migration was a symbol.

We want to follow the foreign language papers, so that by observation, appreciation, and criticism we may affect these links between the Old World and the New, what superstitions, hates, falsehoods are spread and encouraged in these ways; what aspiration and social yearnings find play; what interests—liquor interests, political interests, foreign interests, seek to exploit them. (It is said, for example, that some of the foreign language papers are the last haven of the quack medical concerns.)

In other words, we should like to parallel our following of European sources with a following of the leadership, press, and organized action of the immigrant groups—in relation to what goes on, both on the other side and here.

SOCIAL MISSIONS

IN a very special but striking way this opportunity for service which opens out before THE SURVEY has been demonstrated by a series of articles on Exporting the American Playground, which we are now running.

They are contributed as a gift by C. M. Goethe, a Sacramento business man, whose part in building up municipal playgrounds in California led him to help promote the remarkable spread of a recreation system throughout the Philippines, to cooperate in the development of the Japanese Playground Association (patterned after the pioneer American organization), and to open and maintain out of his own funds a recreation center at Calcutta, hard by an old Temple of Hate, which compares in its track equipment, its gardens and vocational work, with the most complete recreation centers in our American cities. To Mr. Goethe organized recreation, of course, means more than children's games. It reaches to the mainsprings of physical and racial motivation and upbuilding. It expresses and translates the combative instincts in a way kindred to what William James had in mind in his speculations on the moral equivalent for war. It is something educational and revolutionary, which should be exported with no less energy than barbed-wire or machine guns or biplanes.

And as a result of Mr. Goethe's two years' tour of investigation, in which he has studied everything from bull fighting in Spain and the world-old play needs of

the Sahara, to recreation hunger at the outposts of western civilization in the Far East, he believes that the people of Latin America, of French Africa, of the British colonies the world over, and of the Orient, will respond to social leadership from the New World more naturally and spiritedly than to any the Old has to offer; and that our own recreational culture will be enriched by the interchange of ideas.

Two hundred and fifty copies of each of these issues of *THE SURVEY* carrying Mr. Goethe's installments are going out each month at his expense to educational leaders and public officials, missionaries, and Y. M. C. A. workers in these lands. Letters received this fall from San Juan, Rio, Valparaiso, Wellington, Lavras, Amoy, Tokyo, Seoul, Calcutta, Manila, Madrid, Cairo, Helsingfors—tell the story of their welcome.

Our treatment of what, for want of a better name, might be called the social and constructive phases of internationalism is thus seen to be, not a scattering over an alien subject matter, but a natural outgrowth of *THE SURVEY*'s treatment of kindred phases of internal affairs. Yet our nearer concern lies, of course, in bringing out those phases of social well-being among us which are obscured by the war itself, for it is to America, after all, that the world may look to carry forward both the sound tradition and the pioneering spirit of the past.

EDUCATIONAL FUNCTIONS: EDITORIAL FREEDOM

IN conclusion, it seems pertinent to press home those educational functions of *THE SURVEY* for which we consistently appeal for support (whether for general or special lines of work), and their relation to editorial management and freedom. *THE SURVEY* is not an organ, a propaganda journal, or an editorial broadside. In projecting *SURVEY ASSOCIATES* as a coöperative undertaking in a field where a dozen controversial questions are up, where new questions arise on which it is foolhardy to expect agreement even among those most directly concerned in the management, it was for us to work out a formula on which staff and council and coöperative membership could reasonably be anticipated to achieve a common basis for both service and support. This we have tried to do, and that the formula has withstood the strain of these war years is our best assurance as to workability.

Our unsigned material is analogous to the news columns of a daily paper. The position which the editor takes on the fighting issues in our field is brought out in the editorial columns; and herein the very fact that we are a journal of social exploration carries with it the premise that we are for progress, for experiment, and for the broadening horizons of life. But one of the clear functions of *THE SURVEY* corresponds, in the practical field, to the functions of the academic journals in the theoretical field. It is a meeting-place for contributors of articles who come at their subject matter from different angles. We by no means underwrite all the manuscripts we publish over signatures. In the field of industry, for example, the labor press and the trade journals present their

varying creeds. In *THE SURVEY*, employers and employes can exchange points of view. That the editor does or does not agree with an article is not the touchstone which includes or excludes it, nor do we feel that the ability of *SURVEY* readers to weigh things for themselves is so toddling that it is invariably necessary to tie them to the apron-strings of accompanying dogmatic editorials.

WE cannot accept contributions to the educational funds of *SURVEY ASSOCIATES* on the basis of positions taken in contributed articles or in editorials. Such a procedure would either turn us into a propaganda journal, or leave us straddling all the fences around the lot.

We retain an independent editorial column as an integral and necessary element in any journal worthy of the name.

We seek and accept contributions to our educational work in the same way that a college or museum would seek or accept contributions—namely, to carry out certain well-defined functions. Those functions fall in the categories already outlined:

- A. As an even-handed chronicle of events and happenings in our field.
- B. As a pooling place for social experience, experiment, practice.
- C. As a forum for the discussion of issues within our field by those who come at them from various angles.
- D. As an interpreter of various groups in the community to each other.
- E. As an investigator and exhibitor of the results of social research.

IF our news treatment is even-handed; if in our field work we set standards of investigation and interpretation which (while not ignoring the personal equation) commend confidence; if our columns are open to both sides on germane issues, then we have a formula, and the only one, which could possibly enable the editors of *THE SURVEY*, with intellectual honesty, to cover a dozen fields of social concern in which social students hold conflicting beliefs and hold them strongly. That way progress lies.

CIRCULATORS

A new membership class of SURVEY ASSOCIATES

IT has been through the generous mustering of coöperating subscribers at \$10 that the most marked gains have been made in securing funds to carry on the non-commercial work of **THE SURVEY**, and to invest in its circulation and growth as an educational enterprise.

This mustering of support does not, we believe, exhaust the reserves of interest and good-will which are to be enlisted if a way can be found.

Many **SURVEY** readers who have not \$10 to contribute stand ready to give time and effort to the venture. Many of them secure for us new readers. This coöperation we shall endeavor to systematize, recognizing it as a basis for membership. Readers of **THE SURVEY** who send in eight new \$2 once-a-month subscriptions within the fiscal year, or four new \$3 weekly subscriptions (in addition in each case to their own renewals), will be eligible for election as annual members of **SURVEY ASSOCIATES**. The cost of filling these subscriptions should leave a margin in each case, equivalent to that left from a \$10 coöperating subscription after deducting the cost of sending 52 issues to the coöperating subscriber.

EDUCATIONALLY this new coöperative membership should be doubly effective—widening the group of readers and at the same time helping to bring **SURVEY ASSOCIATES** to a new level of self-dependence.
