A JOURNAL *of* SOCIAL EXPLORATION

Index

VOLUME XXXVII

OCTOBER, 1916—MARCH, 1917

The material in this index is arranged under authors and subjects and in a few cases under titles, except poems and book reviews, which are listed only under those headings. Anonymous articles and paragraphs are entered under their subjects. The precise wording of titles has not been retained where abbreviation or paraphrase has seemed more desirable.

A

Abbott, Edith, 150, 296, 434.
Abbott, Grace, 214.
Abel, Mary H., 330.
Accidents, blindness from, 41. *See also* Industrial accidents.
Accounting, 422.

OCTOBER 7, 1916

DRAWN FOR THE SURVEY BY JOSEPH STELLA

PRICE 25 CENTS

Charles E. Hughes and Social Progress

Why Workers in Social, Civic and Industrial lines
are eager for the election of Hughes

By Frances A. Kellor

THE BIG ISSUES OF THIS CAMPAIGN ARE:

An undiluted Americanism.

The preservation of American standards of living.

Social and industrial preparedness.

Economic and efficient national housekeeping.

A fair chance for the Youth of America.

These can be guaranteed to the nation only by national action.

Of laws to secure them, we have merely the first crude outlines. We must push on, and in the meantime have an administration of the few Federal statutes marked by high vision, sympathy and courage.

The skeletons of existing laws must be given flesh and blood by an energetic Executive backed by intelligent co-operation. Public opinion, based on nation-wide education, must be called to his support.

The decisions that will face America after the war will determine her future. The workers who have been through the grime of battle with Governor Hughes in New York know that he will do for the nation what he has done for New York.

Upon his record as Governor of New York State, we ask the people of this country to elect Mr. Hughes as President. The qualities he has shown in the State of New York are the qualities most needed in a National Executive for these United States in the critical years before us.

THE RECORD OF GOVERNOR HUGHES.

Let us examine his record as an effective worker for social progress in New York.

Every social and civic worker was behind Hughes when he was Governor of New York.

They were always welcome, they were consulted, and they were trusted to serve the State in many responsible positions.

Hughes used the power, the vision, the spirit, the intelligence, the facts, the organization, the resources and the facilities of these workers for the State-wide improvement of conditions.

From 1906 to 1910 the record of social progress in New York State is a record of co-operation, understanding and service between the Chief Executive and the thousands of disinterested public spirited men and women who work unceasingly for the welfare of the whole people of the State.

GOVERNOR HUGHES' CONSTRUCTIVE ACTS.

He reorganized the Department or Labor, and made it a real power in the State.

He secured the passage of laws restricting the employment of

children in factories, and prohibiting their employment in certain kinds of dangerous trades.

He insisted upon the adequate inspection of mercantile establishments, so that the safety and protection of women might be greater.

He strengthened the regulations of employment agencies so that the New York law now offers the most adequate protection the unemployed have in any state.

He initiated the movement for Workmen's Compensation. New York was the first state to adopt the principle of compulsory compensation.

He protected the savings of the people by a thorough system of banking reform. He protected the youth of the state by the abolition of race track gambling.

In all these efforts Mr. Hughes was a pioneer, building solidly as he went. The stability of his social measures and their permanent place in our national record are due to their combination of social idealism with sound legislative detail.

GOVERNOR HUGHES FOR AMERICANISM.

What America is discovering in 1916 of the need for uniting America under one flag, New York under Governor Hughes in 1910 knew, and set about to remedy. A Commission of Immigration was appointed and its findings led to the organization in the State Department of Labor of a Bureau of Immigration to

deal with all the phases of the problem—education, citizenship, employment, home conditions, savings.

This Bureau of Immigration provided information centers, where the immigrant could be started right, and also for a court of conciliation—the first in America—where the immigrant could be set right in his relations to other men. It provided facilities for learning English and for qualifying for effective citizenship.

New Jersey, Massachusetts, Rhode Island and California have since appointed commissions based upon the New York State policy.

GOVERNOR HUGHES AND THE HOME.

Failing to get legislative authority in 1910 for the appointment of a commission to study congestion of population, Governor Hughes nevertheless named an unpaid commission, appointing to it such experts as Florence Kelly, John Mitchell and Stephen Wise.

He signed bills curbing the "loan sharks," controlling dance halls, restricting the sale of cocaine, guaranteeing a safe milk supply, protecting sailors in New York harbors and in boarding houses. He stood against every attempt to weaken the law governing tenement houses. It was during his administration

that the anti-tuberculosis crusade was inaugurated and laws passed establishing county hospitals.

antagonism, a law was finally passed creating a state commission to supervise the reform of the probation system. Later, Governor Hughes secured other laws to extend the system and increase its efficiency. In the appointment of probation officers, he was a staunch defender of the merit system.

A law passed under his administration authorizing the appointment in New York City of a board of inebriety contained the most modern ideas on the subject of the reformatory and curative treatment of drunkards. It included the protectionary oversight of those not under the care of institutions, and it provided a farm colony, a hospital and a parole plan for those committed to institutions.

Now, all this is practical Americanism. It insures a united America in the homes and industries of

America. Every one of us who is interested in social progress wants to see such a programme translated into action on a national scale, and we know that the

man to do it is the one who made this record as Governor of New York—Charles E. Hughes!

Enroll in The National Hughes Alliance!

It is a union of men of all parties. The Hughes Alliance is not the Republican party; it is not a party at all. Whatever your political creed, you can join the Alliance without cutting loose from your own party. There are no dues; no pledge to support any party platform or any candidate except Hughes. Women may enroll through the Woman's Committee through The National Alliance.

In his first message as Governor, he advocated a probation system which deals with offenders without commitment to institutions. In the face of vigorous

AN IMPORTANT AMERICAN BIOGRAPHY*

THE story of Joseph Fels, manufacturer of "Fels-Naptha Soap," who turned away from business with the deliberate object of making the world better, appeals intensely to students of social problems, teachers, women's clubs, clergymen.

The romance of Joseph Fels's life work is told in a compact volume of 275 pages by his widow, Mary Fels, who was his inspiration, and who is the inspiring genius of the agencies carrying on the work he began.

In a narrative having the progressive interest of a novel and the informing value of a treatise on current modern history, Mrs. Fels relates how her husband's philanthropic endeavors, moving at first along the more conventional lines of charity, were, through a logical evolution, consecrated to the nobler object of making charity, in its present sense, unnecessary.

Mr. Fels became a single taxer, not because he wanted to reform fiscal methods, but because he gradually learned to understand that the general property tax, and the system of private land monopoly which it implies, are throttling humanity and raising up the most monstrous injustice the world has ever seen.

SURVEY ASSOCIATES, INC., is an adventure in co-operative journalism; incorporated under the laws of the state of New York, November, 1912, as a membership organization without shares or stockholders. Membership is open to readers who become contributors of \$10 or more a year. It is this widespread, convinced backing and personal interest which has made THE SURVEY a living thing.

THE SURVEY is a weekly journal of constructive philanthropy, founded in the 90's by the Charity Organization Society of the City of New York. The first weekly issue of each month appears as an enlarged magazine number.

From the start, the magazine and its related activities have been broadly conceived as an educational enterprise, to be employed and developed beyond the limits of advertising and commercial receipts.

PRICE

Single copies of this issue twenty-five cents. Co-operating subscriptions \$10 a year. Regular subscriptions once-a-week edition \$3 a year. Foreign postage \$1.50 extra. Canadian 75 cents. Regular subscriptions once-a-month edition \$2 a year. Foreign postage 60 cents extra. Canadian 35 cents. Changes of address should be mailed to us ten days in advance. In accordance with a growing commercial practice, when payment is by check a receipt will be sent only upon request. Copyright, 1916, by SURVEY ASSOCIATES, INC. Entered as second class matter March 25, 1909, at the Post Office at New York, N. Y., under the act of March 3, 1879.

MORE THAN 1,000 cooperating subscribers enrolled in Survey Associates, Inc., for the fiscal year ending September 30, bringing the total up to the goal set four years ago and now for the first time achieved.

JANE ADDAMS finds the new chivalry of women for each other as well as a gentler attitude of society toward sex immorality based in part on the personal experiences of women who have been forced to challenge the age-old conventions safeguarding family life. Page 1.

TYPHUS and famine have been more cruel invaders of Serbia than the Austrian armies. Between sanitation and food distribution the Rockefeller War Relief Commission has been kept on the jump trying to patch together this broken Balkan state. Page 6.

THE SAME old drama of man and wife and "the other woman" enacted in a Slovak tenement house with a new motive and a new ending. Page 26.

THREE red lottery tickets landed Dolores, the Spanish snail vendor, in jail. And the same mania to get something for nothing has landed Spain in a muddle of corrupt politics and false standards of work and play. Page 15.

BELLINI painted the Magdalen with sorrowing clear eyes, white skin, wonderful long hair. But today realism would put on the canvas Violet Lanz, foul with disease, wasted by drugs, ugly and filthy. Page 20.

GOVERNMENT regulation of food prices, housing, the liquor traffic and employment is evidence in England that the state is taking new interest in the citizens that serve it. If only the spirit of social reform can endure after this period of national stress, one member of the English Parliament believes the terrible cost of war may be mitigated. Page 23.

MILK may be worth its weight in molten gold in New York city by the end of this week. The newly organized Dairymen's League and the milk-selling companies are at loggerheads. Page 30.

THRIFT in its larger social aspects was one of the chief topics discussed by the American Bankers' Association at a meeting marking the centennial of the first savings bank. Page 30.

CHARITY?—with a question mark—and How Life Begins, two motion picture films in the social field, were privately exhibited last week. Page 33.

FOOD in Philadelphia has been put under fly-netting, a first step, it is hoped, toward real regulation in the interest of the public health. Page 32.

THIRTY CAR-LOADS OF FOOD FROM MARSEILLES TO BELGRADE

THIS Red Cross train ran from France through Switzerland and Austria and into Serbia. It is probably the only train which has crossed such a succession of hostile frontiers in Central Europe since the outbreak of the war; and as a feat of ingenuity and persistence, is attributable to Dr. Edward Ryan, who was first active in fighting the typhus epidemic in the Balkans and later in the relief work. It took three months to carry through the negotiations, uncoiling the red tape, unloading and transhipping the cargo at each frontier. Repeatedly, when the way seemed open for smooth progress, some new complication from an unexpected quarter would threaten to defeat the entire project. Dr. Ryan would then dash off to Marseilles or Paris or Berne and break the deadlock. At the other end of the journey were thousands of impoverished and destitute civilians in interior Serbia. (See "Doctors Courageous," by Ernest P. Bicknell, page 6.)

Disturbing Conventions

By Jane Addams

IN sharp contrast to the function of memory as a reconciler to life, are those individual reminiscences which, because they force the possessor to challenge existing conventions, act as a reproach, even as a social disturber. When these reminiscences, founded upon the diverse experience of many people unknown to each other, point to one inevitable conclusion, they accumulate into a social protest, although not necessarily an effective one, against existing conventions, even against those which are most valuable and are securely founded upon cumulative human experience. But because no conventionalized tradition is perfect, however good its intent, most of them become challenged in course of time, unwittingly illustrating the contention that great social changes are often brought about less by the thinkers than by "a certain native and independent rationalism operating in great masses of men and women."

The statement is well founded that a convention is at its best, not when it is universally accepted, but just when it is being so challenged and broken that the conformists are obliged to defend it and to fight for it against those who would destroy it. Both the defenders of an old custom and its opponents are then driven to a searching of their own hearts.

Such searching and sifting is taking place in the consciences of many women of this generation whose sufferings, although strikingly influencing conduct, are seldom expressed in words until they are told in the form of reminiscence after the edges have been long since dulled. Such sufferings are never so poignant as when women have been forced by their personal experiences to challenge the valuable conventions safeguarding family life.

A WOMAN whom I had known slightly for many years made an appointment with me one day and came to Hull House escorted by her little grandson. Her delicate features, which were rather hard and severe, softened most charmingly as the little boy raised his cap in goodby from the vanishing automobile. In reply to my admiring comment upon the sturdy lad and his affectionate relation to her, she began the interview by saying abruptly: "You know he is really not my grandson. I have scarcely

admitted the doubt but the time is coming when I must face it and decide his future. If you are kind enough to listen I want to tell you my experience in all its grim sorrow.

"My husband was shot twenty-seven years ago, under very disgraceful circumstances, in a disreputable quarter of Paris. You may remember something of it in the newspapers, although they meant to be considerate. I was left with my little son and with such a horror of self-indulgence and its consequences that I determined to rear my child in strict sobriety, chastity and self-restraint, although all else was sacrificed to it. Through his school and college days, which I took care should be far from his father's friends and associations, I always lived with him, so bent on rectitude and so distressed by any lack of self-control that I see now how hard and rigorous his life must have been. I meant to sacrifice myself for my child; in reality I sacrificed him to my narrow code.

"The very June that he took his master's degree, I myself found him one beautiful morning lying dead in his own room, shot through the temple. No one had heard the report of the revolver, for the little house we had taken was so on the edge of the college town that the neighbors were rather remote, and it must have occurred while I sat alone in the moonlight on the garden bench after he had left me, my mind still filled with plans for his future.

"I have gone over every word of our conversation that evening in the garden a thousand times. We were planning to come to Chicago for his medical course, and I had expressed my exultant confidence in him to withstand whatever temptation a city might offer, my pride in his purity of thought, his rectitude of conduct. It was then he rose rather abruptly and went into the house to write the letter to me which I found on his table next morning.

"In that letter he told me that he was too vile to live any longer, that he had sinned not only against his own code of decency and honor, but against my lifelong standards and teachings, and that he realized perfectly that I could never forgive him. He evidently did not expect any understanding from me, either for himself or for 'the young and innocent girl' about to become the mother of his child; and in his interpretation of my rigid morals he

was quite sure that I would never consent to see her, but he wrote me that he had told her to send the little thing to me as soon as it was born, obviously hoping that I might be tender to the innocent although I was so harsh and unpitying to the guilty. I had apparently never given him a glimpse beyond my unbending sternness, and he had all unwittingly pronounced me too self-righteous for forgiveness; at any rate, he faced death rather than my cold disapprobation.

"The girl is still leading the life she had led for two years before my son met her. She is glad to have her child cared for and hopes that I will make him my heir, but understands, of course, that his paternity could never be established in court. So here I am, old and hard, beginning again the perilous experiment of rearing a man child.

"I suppose it was inevitable that I should hold the girl responsible for my son's downfall and for his death. She was one of the wretched young women who live in college towns for the express purpose of inveigling young men, and often deliberately direct their efforts toward those who are reputed to have money. I discovered all sorts of damaging facts about her, which enabled me to exonerate my son from intentional wrong-doing, and to think quite honestly that he had been lured and tempted beyond his strength.

"The girl was obliged to leave the little town, which was filled with the horror and scandal of the occurrence, but even then, in that first unbridled public censure against the 'bad woman' who has been discovered in the midst of virtuous surroundings, there was a tendency to hold me accountable for my son's death, whatever the girl's earlier responsibility may have been. In my loathing of her I experienced all over again the harsh and bitter judgments through which I had lived in the first years after my husband's death. I had secretly held the unknown woman responsible for his end, but of course it never occurred to me to find out about her, and I certainly could never have brought myself to hear her name, much less to see her. I have at least been better than that in regard to the mother of my 'grandson', and Heaven knows I have tried in all humility and heartbreak to help her.

"She fairly hated me, as she did anything that reminded her of my son—the entire episode had seemed to her so unnatural, so monstrous, so unnecessary—she considered me his murderer, and I never had the courage to tell her that I agreed with her. Perhaps if I had done that, really abased myself as I was willing she should be abased, we might have come into some sort of a genuine relation born of our companionship in tragedy. But I couldn't do that, possibly because the women of my generation cannot easily change from the traditional attitude towards what the bible calls 'the harlot'. At any rate, I didn't succeed in 'saving' her. She so obviously dreaded seeing me, and our strained visits were so unsatisfactory and painful, that I finally gave it up and her son has apparently quite forgotten her. I am sure she tries to forget him and all the tragic scenes associated with his earliest babyhood, when I insisted not only upon 'keeping mother and child together' but also in keeping them with me."

After a moment's pause she resumed: "It would have been comparatively easy for me to die when my child was little, when I still had a right to believe that he would grow up to be a good and useful man, but I lived to see him driven to his death by my own stupidity. I have encountered the full penalty for breaking the commandment to judge not. I passed sentence without hearing the evi-

dence; I gave up the traditional role of the woman who loves and pities and tries to understand; I forgot that it was my mission to save and not to judge.

"As I have gone back over my unmitigated failure again and again, I am sure at last that it was the sorry result of my implacable judgment of the woman I held responsible for my husband's sin. I did not realize the danger nor the inevitable recoil of such a state of self-righteousness upon my child."

AS she paused in the recital I rashly anticipated the conclusion, that her bitter experiences had brought the whole question to that tribunal of personal conduct whose concrete findings stir us to our very marrow with shame and remorse; that she had frantically striven, as we all do, to keep herself from falling into the pit where the demons of self-reproach dwell, by clinging to the conventional judgments of the world. I expected her to set them forth at great length in self-justification and perhaps, belonging as she so obviously did, to an older school, she might even assure me that the wrong to those to whom it was now impossible to make reparation, had forever lifted her above committing another such injustice.

I found, however, that I was absolutely mistaken and that whatever might be true of her, it still lay within me to commit a gross injustice, when she resumed with these words: "It is a long time since I ceased to urge in my own defense that I was but reflecting the attitude of society, for, in my efforts to get at the root of the matter I have been convinced that the conventional attitude cannot be defended, certainly not upon religious grounds."

She stopped as if startled by her own reflections upon the subject of the social ostracism so long established and so harshly enforced, that women seem held to it as through an instinct of self-preservation.

She was, perhaps, dimly conscious that the tradition that the unchaste woman should be an outcast from society rests upon a solid basis of experience, upon the long struggle of a multitude of obscure woman who, from one generation to another, were frantically determined to establish the paternity of their children and to force the father to a recognition of his obligations; and that the living representatives of these women instinctively rise up in honest rebellion against any attempt to loosen the social control which such efforts have established, bungling and cruel though such control may be.

Further conversation showed that she also realized that these stern memories inherited from the remote past have an undoubted social value and that it is a perilous undertaking upon which certain women of this generation are bent in their efforts to deal a belated justice to the fallen woman. It involves a clash within the very mass of inherited motives and impulses as well as a clash between old conventions and contemporary principles. On the other hand, it must have been obvious to her in her long effort to get at "the root of the matter" that the punishment and hatred of the bad woman has gone so far as to overreach its own purpose; it has become responsible for such hardness of heart on the part of "respectable" women towards the so-called "fallen" ones, that punishment is often inflicted not only without regard to justice, but in order to feed the spiritual pride, "I am holier than thou". Such pride erects veritable barricades across the path of human progress, deliberately shutting out sympathetic understanding.

The very fact that women remain closer to type than

men do and are more swayed by the past, makes it difficult for them to defy settled conventions. It adds to their difficulty that the individual women, driven to modify a harsh convention which has become unendurable to them, are perforce those most sensitive to injustice. The sharp struggle for social advance, which is always a struggle between ideas long before it becomes embodied in contending social groups, may thus find its arena in the tender conscience of one woman who is pitilessly rent and pierced by her warring scruples and affections. Even such a tentative effort in the direction of social advance exacts the usual toll of blood and tears.

FORTUNATELY the entire burden of the attempt to modify a convention which has become unsupportable, by no means rests solely upon such conscientious women. Their analytical efforts are steadily supplemented by instinctive conduct on the part of many others. A great mass of "variation from type" accelerating this social change, is contributed by simple mothers who have been impelled by a very primitive emotion. This is an overwhelming pity and sense of tender comprehension, doubtless closely related to the compunction characteristic of all primitive people which, in the earliest stages of social development, long performed the first rude offices of a sense of justice. This early trait is still a factor in the social struggle, for as has often been pointed out, our social state is like a countryside of a complex geological structure with outcrops of strata of very diverse ages.

Such compunction sometimes carries the grandmother of an illegitimate child to the point of caring for the child when she is still utterly unable to forgive her daughter, the child's mother. Even that is a step in advance from the time when such a daughter was driven from the house and her child, because a bastard, conscientiously treated as an outcast both by the family and by the community.

SUCH an instance of compunction was recently brought to my attention when Hull House made an effort to place a subnormal little girl twelve years old in an institution in order that she might be protected from certain designing men in the neighborhood. The grandmother, who had always taken care of her, savagely opposed the effort step by step. She had scrubbed the lavatories in a public building during the twenty-five years of her widowhood, and because she worked all day had been unable to protect her own feeble-minded daughter who, when she was barely fifteen years old, had become the mother of this child. When her granddaughter was finally placed in the institution, the old woman was absolutely desolated. She found it almost impossible to return home after her day's work because "it was too empty and lonesome, and nothing to come back for. You see," she explained, "my youngest boy wasn't right in his head either, and kept his bed for the last fifteen years of his life. During all that time I took care of him the way one does of a baby, and I hurried home every night with my heart in my mouth until I saw that he was all right. He died the year this little girl was born and she kind of took his place. I kept her in a day nursery while she was little, and when she was seven years old the ladies there sent her to school in one of the subnormal rooms and let her come back to the nursery for her meals. I thought she was getting along all right and I took care never to let her go near her mother."

The old woman made it quite clear that, because her

daughter was keeping house with a man to whom she was not married, she seldom went to see her. In her simple code, to go to such a house would be to connive at sin, while she was grateful that the man had established a control over her daughter which she had never been able to obtain. She always referred to her daughter as "fallen", although no one knew better than she how unguarded the girl had been.

As I saw how singularly free this mother was from self-reproach and how untouched by indecisions and remorse for the past, I was once more impressed by the stout habits acquired by those who early become accustomed to fight off black despair. Such habits stand them in good stead in their old age, and at least protect them from those pen- sive regrets and inconsolable sorrows which inevitably tend to surround whatever has once made for early happiness as soon as it has ceased to exist.

Many individual instances are found in which a woman hard pressed by life, includes within her tenderness the mother of an illegitimate child. A most striking example, of this came to me through a woman whom I knew years ago as she daily brought her three children to the Hull House day nursery, obliged to support them by her work in a neighboring laundry because her husband had deserted her. I recall her fatuous smile as she used to say that "Tommy is so pleased to see me at night that I can hear him shout 'Hello, ma' when I am a block away." I had known Tommy through many years, periods of adversity when his father was away and succeeding periods of fitful prosperity when his father returned from his wanderings with the circus with which "he could always find work" because he had once been a successful acrobat and later a clown, and "so could turn his hand to anything that was needed."

Perhaps it was inevitable that Tommy should have made his best friends among the warm-hearted circus people who were very kind to him after his father's death, and that long before the child labor law permitted him to sing in Chicago saloons, he was doing a successful business singing in the towns of a neighboring state. He was a droll little chap, "without any sense about taking care of himself," and in those days his mother not only missed his cheerful companionship, but was constantly anxious about his health and morals. After he grew older and became a professional he sent his mother money occasionally, although never very much and never with any regularity; but she was always so pleased when it came that the two daughters supporting her with their steady wages were inclined to resent her obvious gratification, as they did the killing of the fatted calf on those rare occasions when the prodigal returned "between seasons" to visit his family.

It is possible that his mother thus early acquired the habit of defending him, the black sheep, against the strictures of the good children, who so easily become the self-righteous when they feel "put upon". However that may be, five years ago, after one daughter had been married to a skilled mechanic and the other, advanced to the position of a forewoman, was supporting her mother in the comparative idleness of keeping house for two in three rooms, a forlorn girl appeared with a note from Tommy, asking his mother "to help her out until the kid came and she could work again."

The steady daughter would not permit "such a girl to cross the threshold" and the little household was finally broken up upon the issue. The daughter went to live with her married sister while the mother, having moved into

one room with "Tommy's girl," went back to the laundry in order to support herself and her guest.

The daughters, having impressively told their mother that she could come to live with them whenever she "was willing to come alone," dropped the entire situation. In doing this, they were doubtless instinctively responding to a habit acquired through years of "keeping clear of the queer people father knew in the circus and the saloon, crowds always hanging around Tommy," in their secret hope to come to know respectable young men. Conscientious that they had back of them the opinion of all righteous people, they could not understand why their mother, for the sake of a bad girl, had deserted them in this praiseworthy effort in which hitherto she had been the prime mover.

Tommy had sent his "girl" to his mother on the eve of his departure for "a grand tour to the Klondike region" and since then, almost four years ago, she has heard nothing further from him. During the first half of the time the two women struggled on together as best they could, supporting themselves and the child, who was brought daily to the nursery by his grandmother. But the pretty little mother, gradually going back to her old occupation of dancing in the vaudeville, had more and more out-of-town engagements, and while she always divided her earnings with the baby, the grandmother suspected her of losing interest in him, a situation which was finally explained when she confessed that she was about to be married to a cabaret manager who "knew nothing of her past," and to beg that the baby might stay where he was. "Of course, I will pay board for him, but his father can be made to do something, too, if we can only get the law on him."

IT was at this point that I had the following conversation with the grandmother, who was shrewd enough to see that the support of the baby was being left upon her hands, and that she could expect no help from either his father or mother, although she stoutly refused the advice that the whole matter be taken into the Court of Domestic Relations.

"If I could only see Tommy once I think I could get him to help, but I can't find out where he is, and he may not be alive for all I know; he was always that careless about himself. If he put on a new red necktie he'd never know if his bare toes were pushing out of his shoes. He probably didn't get proper clothes for 'the Klondike region' and he may have been frozen to death before this. But whatever has happened to him, I can't let his baby go. I suppose I've learned to think differently about some things after all my years of living with a light-minded husband. Maggie came to see me last week, for she means to be a good daughter. She said that Carrie and Joe were buying a house way out on the West Side, that they were going to move into it this month, and that she and I could have a nice big room together. She said, too, that Carrie would charge only half-rate board for me, and would be glad to have my help with the little children, for they both think that nobody has such a way with children as I have. The night before, when she and Carrie were playing with the little boy, they remembered some of the funny songs father used to teach Tommy, and how jolly we all were when he came home good-natured and would stand on his head to make the candy fall out of his pockets.

"I know that the two girls really want me to come back, and that they are often homesick, but when I pointed to the bed where the baby was and asked, 'What about him?'

Maggie turned as hard as nails and said as quick as a flash, 'We're all agreed that you'll have to put him in an institution. We'll never have any chance with the nice people in a swell neighborhood like ours if you bring the baby.' She looked real white then, and I felt sorry for her when she said, 'Why, they might even think he was my child, you never can tell,' although she was ashamed of that afterwards and cried a little before she left.

"She told me that she and Carrie, when they were children, were always talking of what they would do when they got old enough to work; how they would take care of me and move to a part of the city where nobody would know anything about the outlandish way their father and Tommy used to carry on. Of course, it was almost telling me that they didn't want me to come to see them if I kept the baby."

My old friend was quite unable to formulate the motives which underlay her determination, but she implied that clinging to this helpless child was part of her unwavering affection for her son when, without any preamble, she concluded the conversation with the remark, "It's the way I always felt about him," as if further explanation were unnecessary.

Was it all a manifestation of Nature's anxious care—so determined upon survival and so indifferent to morals—that had induced her long devotion to her one child least equipped to take care of himself; and for the same reason had the helpless little creature whose existence no one else was deeply concerned to preserve, become so entwined in her affections that separation was impossible?

FROM time to time a mother goes further than this, she fairly "drags memory aloft" with her in her determination to deal justly with the unhappy situation in which her daughter is placed. When the mother of a so-called "fallen" girl is of that type of respectability which is securely founded upon narrow precepts inherited through generations of careful living, it requires genuine courage to ignore the social stigma in order to consider only the moral development of her child, although the result of such courage doubtless minimizes the chagrin and disgrace for the girl herself.

In one such instance the parents of the girl, who had been prevented from marrying her lover because the families on both sides objected to differences of religion, have openly faced the situation and made the baby a beloved member of the household. The pretty young mother arrogates to herself a hint of martyrdom for her faith's sake, but the discipline and responsibility are working wonders for her character. In her hope of earning money enough for two she has been stirred to new ambition, and is eagerly attending a business college. She suffers a certain amount of social ostracism, but at the same time her steady courage excites genuine admiration.

In another case a fearless mother exacts seven dollars a week in payment of the board for her daughter and the baby, although the girl earns but eight dollars a week in a cigar factory and buys such clothing for two as she can with the remaining dollar. She admits that it is "hard sledding," but that the baby is "mighty nice". Whatever her state of mind, she evidently has no notion of rebelling against her mother's authority, and is humbly grateful that she was not turned out-of-doors when the situation was discovered. It is possible that her mother's remorse at her failure to guard her daughter from wrong-doing enables her thus grimly to defy social standards which, al-

though they are based upon stern and narrow tenets, nevertheless epitomize the bitter wisdom of generations. Such mothers, overcoming that timidity which makes it so difficult to effect changes in daily living, make a genuine contribution to the solution of the vexed problem.

IN spite of much obtuseness on the part of those bound by the iron fetters of convention, these individual cases suggest a practical method of procedure. For quite as pity and fierce maternal affection for their own children, drove mothers all over the world to ostracize and cruelly punish the "bad woman" who would destroy the home by taking away the breadwinner and the father, so it is possible that, under the changed conditions of modern life, this same pity for little children, this same concern that, even if they are the children of the outcast, they must still be nourished and properly reared, will make good the former wrongs. There has certainly been a great modification of the harsh judgments meted out in such cases as women all over the world have endeavored, through the old bungling method of trial and error, to deal justly with individual situations.

Each case has been quietly judged by reference to an altered moral standard, for while the ethical code as well as the legal code needs constant revision, the revision is always privately tacit and informal in marked contrast to the public and ceremonious acts of legislators and judges when the former is charged.

Such measure of success as the organized woman's movements have attained in this direction, has come through an overwhelming desire to cherish both the illegitimate child and his unfortunate mother. In addition to that, the widespread effort of modern women to obtain a recognized legal status for themselves and their own children, has also been largely dependent upon it, at least in the beginnings of the movement.

Women slowly had discovered that the severe attitude towards the harlot had not only become embodied in the statutory law concerning her, as thousands of court decisions every day bear testimony, but had become registered in the laws and social customs pertaining to good women as well; the Code Napoleon, which prohibited that search be made for the father of an illegitimate child, also denied the custody of her children to the married mother; those same states in which the laws considered a little girl

of ten years the seducer of a man of well-known immorality, did not allow a married woman to hold her own property nor to retain her own wages.

The enthusiasm responsible for the world wide woman's movement was generated in the revolt against such gross injustices. The most satisfactory achievements of the movements have been secured in the Scandinavian countries where the splendid code of laws protecting all women and children have apparently been founded on the instinct to defend the weakest, and upon a determination to lighten that social opprobrium which makes it so unreasonably difficult for a mother to support a child born out of wedlock. In Germany, where the presence of over a million illegitimate children under the age of fourteen years made the situation acute, the best women of the nation, asserting that all the attempts to deal out social punishment upon the mothers resulted only in a multitude of ill-nourished and weakened children, founded the Mutter-schutz movement which, through its efforts to secure justice and protection for these mothers, has come to be the great defender of the legal rights for all German women.

In this contemporary modification of an age-old tradition there are also evidences of that new chivalry of women for each other, expressing protection for those at the bottom of society. It suggests a return to that idealized version of chivalry which was the consecration of strength to the defense of weakness, unlike the actual chivalry of the armed knight who served his lady with gentle courtesy while his fields were ploughed by peasant women misshapen through toil and hunger. There are many examples of this new chivalry such as the recent protest of the best women of Hungary who rose in protest against a proposed military regulation requiring that young women in domestic service who are living in the vicinity of barracks be examined each week by a medical officer in order to protect the soldiers from disease. The women spiritedly resented the assumption that these girls simply because they are the least protected of any class in the community, should be subjected to this insult. An incident of this sort once again illustrates that moral passion is the only solvent for prejudice, and that women have come to feel reproached and disturbed when they ignore the dynamic urgency of memories as fundamental as those upon which prohibitive conventions are based.

TWO POEMS

By Charles Haven Myers

THE BIRTHRIGHT

A CHILD is born. 'Tis God's divinest ray
That sends, washed clean in heaven's etheric sea,
This lovely, throbbing casket of sweet clay.
The answer to a mother's holy plea.
Today the hope of life mounts higher;
Here dimly burns the potent fire of one
Ordned to rule or teach; perchance his lyre
Shall catch the music of the primal sun.
What sacred venture waits this urgent soul
To conquer fear and hate, to stem the tide
Of sordid lust and still maintain control.
O Love, enswath with Truth and calmly guide
Until he face the battles for the Right,
Then dower the man with regnant will to fight.

THE INTRUSION

A CHILD is slain. Immortal plans are spoiled
And swift the painful tremor runs until
Each lonely star doth know God's will is foiled.
Once more the laws of Moloch we fulfill.
Shall nascent dreams of eager youth be wrecked,
Shall lust for pelf, or deadly ignorance,
Or our emasculated creeds neglect.—
Nay, kill these tender buds of innocence?
Where prison-mills shut out the fragrant air,
Where poisoned alleys reek with fetid breath,
Where speeds the wicker motor car to tear
In crimsoned dust a crumpled form—grins Death.
Awake! Ye stupid men. Stain not with blood
Of helpless babes the Galilean code.

Doctors Courageous

Serbia, the Battleground not only of the Balkan Armies but of Physicians and Nurses

By *Ernest P. Bicknell*

DIRECTOR DEPARTMENT OF CIVILIAN RELIEF, AMERICAN RED CROSS

BURYING THE TYPHUS DEAD

Copyright by International News Service

SIR THOMAS LIPTON visited Serbia at the height of the typhus epidemic. He brought physicians and nurses and hospital supplies in his yacht, "Erin," to the harbor of Saloniki, and transported them thence by rail into the interior. On entering Serbia he called at the American Red Cross Hospital in Gevgheli, where he quickly established himself on terms of friendship. Two weeks later, returning through Gevgheli, Sir Thomas learned that his friend Dr. Donnelly was lying dead of typhus. Before the physician had passed into the period of delirium which characterizes the progress of typhus, he stated that in case the attack should prove fatal he wished to be buried with the American flag and the Red Cross flag wrapped about him. The hospital in Gevgheli possessed no flags large enough for this purpose. When this story was told Sir Thomas, he sent immediately to his yacht for large flags, which were hurried back to Gevgheli, and Dr. Donnelly's dying wish was granted.

This is but one incident in the history of the Balkans during the last two years, one human episode perhaps a trifle more dramatic than others, which has marked the process through which sturdy and independent little Serbia has been beaten to earth by a series of crushing misfortunes, and throughout which help has been reached out to her stricken folk against unexampled odds, by physicians and nurses and friendly people of many nations.

To what extent Serbia has been the author of her own miseries I know not, nor shall I here attempt to discuss that subject. A country of simple, primitive peasantry, Serbia had fought herself free from the yoke of the Turk,

and had arisen erect and vigorous after four hundred years of galling subjection. Through a succession of internal wars, won first by the leaders of one and then of another of two rival families, she had gradually brought herself into the forms of a stable government.

A period had been reached some five years ago when Serbia seemed ready for industrial and commercial development. It was true that the individual pastoral life of the farmers and mountaineers had not equipped them for the more complex relations of such community life as accompany the upbuilding of industrial and commercial centers. Education was not extensively developed, but had not been neglected. A national university in Belgrade was attended by several hundred students. A statue had been erected in Belgrade to a famous educator who had simplified the language and had reformed the alphabet by eliminating four of its thirty-six letters.

As Serbia, like her sister Balkan states, is without recognized caste or social stratification, she has no class of nobility expect the members of the royal family; and as the royal line has shifted frequently from one dynasty to another, even the recognition of royalty itself has not led to the establishment of a permanent and hereditary royal line. Kings have been set up and removed so frequently by revolutionary movements, that the monarch is not hedged about by those traditions of sanctity or divine right which are to be found in older and more highly developed societies. No iron bonds of custom prevent Serbia's lowliest shepherd from aspiring to place or responsibility in the public service. The men of Serbia have universal suffrage.

Serbia is a land of small estates. Great landholders are virtually unknown. As a rule the Serbian farmer or mountaineer lives upon his own small farm. He is assured of the permanency of his home by a wise law which provides that a certain minimum number of acres of land cannot be taken from him for taxes or debt. He cannot mortgage or otherwise encumber this land in such a manner as to make it possible for a creditor to deprive him of it. He is also entitled to retain, against all financial obligations, a certain number of oxen and other farm animals and a certain equipment of implements. It has thus come about that Serbia is owned by a great number of small farmers who are absolutely secure in the possession of their homes. The result is that there are no large fortunes in Serbia and that there is a remarkably uniform and equitable distribution of land. This system makes for the development of a highly individualistic and independent people. The idea of combined effort or co-operation has made but little impress upon the Serbian mind.

Lady Ralph Paget, who has lived much in Serbia, where her husband for some years was the British Minister, said to me that the loyalty of the Serbian is to his home rather than to his country. It was her opinion that the impelling force which drives the Serbian to join the army and fight valiantly is the intense desire to save his home. Lady Paget was authority for the statement that in the course of the war which now prevails the Serbian soldier in some measure lost heart and determination when the section in which his own home was situated was overrun and captured by the enemy.

Although Serbia has no titled nobility, a sharp and striking distinction exists between the peasants and the military leaders. The contrast between the simple, plodding peasant, in his primitive homespun garb, and the dapper, alert, elegant, and ultra-sophisticated army officer is constantly thrust upon the attention of the traveler. As a whole the people are hospitable and kindly, but the necessity for protecting themselves for centuries against the exactions of the Turks, and later against the aggressions of ambitious and lawless factional leaders among their own people, has made them cautious and suspicious. It is only fair to say of them that their troubles as a people have been due, so far as Serbia has been at fault, to the machinations of a few ambitious leaders. The people as a whole would be content to live quietly within their mountains and valleys, with little thought or knowledge of those questions whose solution leads to relations either of friendship or hostility with other nations.

Simple, Independent and Home-Loving

If I have accomplished my purpose, I have pictured the Serbian people as strong, simple, kindly, independent and home-loving. Although not yet developed by education and experience to a high order of ability in the organization of complex public or private affairs, the nation seemed to have so freed itself from the handicap of oppressive governmental fetters as to be on the threshold of a new epoch of prosperity and advancement. At this point Serbia's attention was diverted from the cultivation and strengthening of her home affairs by the outbreak of the war with Turkey, in which Greece and Bulgaria were her allies. No sooner was this war carried to a successful issue than a controversy arose between Serbia and Bulgaria in the division of territory wrested from Turkey. This difficulty led on immediately to war, in

which Serbia was the victor, with the result that a large section of Macedonia, which had been taken from Turkey and claimed by both Serbia and Bulgaria, was added to Serbian territory.

Serbia now found herself saddled by a national debt of over two hundred million dollars. Her population was about four and a half million, of which one-third, living in the territory just taken from Turkey were unassimilated, unfriendly and a source of immediate expense rather than help. She had lost approximately thirty-one thousand men by death through the wars of the two years preceding, and her recuperative power had been further reduced by the permanent disability of many thousand men who had been wounded. Here the system of small land holdings proved of great value, because it enabled the wives and children of the soldiers to successfully continue the cultivation of the farms while the wars proceeded. The country, however, was much reduced in resources, which only years of effort could restore.

Before the recuperation of the country could fairly begin the heir to the Austrian throne was assassinated by a Serbian, and Serbia was again plunged into war. Her lack of preparation for this contest was obvious and pathetic. However, she put her army, now composed largely of thoroughly tested veterans, into the field, equipped as well as possible under the circumstances. Then came the outbreak of an epidemic of typhus, believed to have been more extensive and fatal than any similar outbreak of that disease of which any record exists. Finally came the tremendous invasion by the Teutonic and Bulgarian forces, which swept the army, the court, and the entire governmental organization beyond the country's boundaries and left the little nation prostrate and helpless in the hands of the conqueror.

Serbia's Multiplied Woes

FAMINE followed quickly upon the subjugation of the country, and the people, especially those within the cities and towns, faced the threat of starvation. Thus, Serbia's woes have been multiplied and heaped mountain high during the last five years, these crowding calamities having fallen upon the country at the moment when her prospects for future prosperity and development seemed brightest.

In the autumn and winter of 1914 Serbia was twice invaded by the Austro-Hungarian forces. Although in both instances the Serbian army drove the invaders out of the country, these invasions and counter military operations resulted in great destruction of life and property in the northwestern part of the country, which is its most fertile and productive section. Five-sixths of Serbia consists of mountains, the remainder comprising the level and well-cultivated plain adjoining the frontier of Austria together with many narrow, winding valleys, which contain restricted agricultural areas.

The military operations in the region invaded, therefore devastated the most highly developed and densely populated portion of the country. The population of this region fled southward into the mountains or congregated in the cities and towns remote from the Austrian frontier. Of the population of Belgrade, the capital, amounting normally to approximately one hundred thousand, only fifteen thousand remained in the city when that place was taken by the Austrians. The flight of the refugees southward led to a serious congestion of population in the cities and towns of the interior. Without accumulated stocks of food supplies and with the richest farm lands in

the hands of the enemy, Serbia saw her people brought suddenly face to face with famine.

Fugitive reports of these conditions came to the attention of the War Relief Commission of the Rockefeller Foundation, whose mission in Europe was to investigate the effect of the war upon civilian peoples and to assist in organizing measures for the relief of distress among non-combatants. Accordingly, the members of the Commission of which the writer was director, resolved to visit Serbia for the purpose of offering their services if an investigation confirmed the reports of suffering which were in circulation. As it was not possible at that time to cross the Austro-Serbian frontier, the commission traveled by way of the neutral countries of Roumania and Bulgaria (the latter not having declared war at that time), and entered Serbia from the east, reaching Nish, the temporary capital, in the middle of February, 1915.

It was not until the commission had arrived at Nish that we learned of the actual extent of the epidemic of typhus, of which we had previously heard only incidental mention. For military and diplomatic reasons, it seems, the Serbian government and its allies had withheld the full facts from publication. Therefore it was with surprise that we found ourselves in the midst of conditions which were more menacing and deadly than the threat of armed invasion by the enemy's forces.

Origin of the Typhus Epidemic

DIFFERENCES of opinion exist as to the origin of the epidemic. In Nish, we were informed by the Serbian authorities that the outbreak of typhus and its swift extension to every part of the country were to be explained as follows:

When the Austrian army invaded Serbian territory it brought with it this disease. Many Austrian soldiers died of typhus while with the army of occupation, and in this way Serbian houses, in which Austrians were quartered, became infected. Later, in an important battle in which the invading army was defeated, the Serbians captured about sixty thousand Austrian prisoners. The burden of maintaining and guarding these prisoners was so heavy that the Serbian government found it necessary to distribute the load. Accordingly, detachments of prisoners were sent to all the important cities and towns in the country, where they were quartered in public buildings. In this way the seeds of typhus were widely scattered.

Serbian soldiers, who guarded the prisoners, and civilian employes about the places of confinement, contracted the disease, and through them it spread into both homes and barracks. All the railway cars in the country were employed in the transportation of the prisoners, and the lice, which are the medium of the dissemination of typhus, were left in the cushions and upholstery and crevices of the cars. When civilians occupied the same cars later, they carried away some of the lice upon their bodies or clothing, and these dangerous insects were gradually distributed among the private homes, the hotels, the soldiers' quarters, and even the cabs upon the city streets. A more effective means of introducing infectious disease into every section of a country and into every home cannot easily be imagined. It became quite impossible for anyone in Serbia, no matter how scrupulously he endeavored to safeguard himself, to avoid exposure to the disease.

Later we were officially informed by Austro-Hungarian authorities that their armies did not introduce typhus into Serbia, but that, on the contrary, their soldiers had

found the epidemic when they entered the country and that it had been only by the application of the most drastic measures that the typhus had been prevented from causing widespread havoc among the Austrian and Hungarian troops.

No matter what had been its origin, the epidemic had reached appalling proportions when we entered Serbia. Absorbed in the prosecution of the war, without adequate resources to combat the spread of the disease, and with a tinge of fatalism which seemed to explain the absence of that fierce activity of resistance which similar conditions would evoke in a Western population, the helpless people were swept away by thousands.

Typhus Conditions Described

ONE DAY during our stay in Nish it was reported that the local cemetery contained the unburied bodies of two hundred and fifty typhus victims, the force of grave diggers being entirely unable to keep up with the work. In the city of Skoplje, with a population of probably about seventy thousand, including refugees and soldiers, we were informed on our visit there of more than two thousand cases. In the American Red Cross Hospital in Gevghele, out of about fourteen hundred patients, one thousand were suffering from typhus. In the American Red Cross Hospital in Belgrade, where health conditions were better than at any other point in all Serbia, were 165 cases of typhus, with a much larger aggregate number in several other hospitals in the same city.

In a camp near Nish containing two thousand Austrian prisoners, we found 666 cases. No facilities existed for segregating the sick from the well, but all together occupied long, unfloored buildings, where they lay upon loose straw placed upon the ground. The single medical attendant was an Austrian physician, himself a prisoner, but when we visited the camp this physician had himself fallen a victim to the disease. Serbian soldiers, guarding this camp, came and went freely between camp and city, and civilians also traveled back and forth frequently in connection with various kinds of employment. There can be little doubt that this camp served as a malignant center of infection for the city of Nish and the surrounding country.

A military hospital in the outskirts of Nish was so crowded with patients that it had been necessary to fasten the narrow iron beds together in pairs and to place three patients crosswise upon each pair of beds. This expedient was still insufficient, and several hundred patients lay upon blankets on the floor between beds. Of the nine hundred patients in this hospital, about three hundred and fifty were suffering from typhus.

In going about this hospital we came upon one elderly woman engaged in washing the hospital linen. She had had several companions, but all had died from typhus contracted by contact with the linen from the hospital beds. Other women refused to accept this dangerous employment. The only washing of hospital linen for the nine hundred patients was therefore being done by this one woman, with the aid of the most primitive equipment.

Doctors and Nurses Unprotected

THE PHYSICIANS of Serbia could do little. We were told that in all Serbia, prior to the outbreak of the last war, there were only 367 physicians. During the first sixty days following the outbreak of the epidemic, ninety of these physicians had died of typhus, and before the epi-

demic was terminated in midsummer fully one-third of all the native physicians had given up their lives.

Many foreign physicians and nurses had gone to Serbia, following the outbreak of the war, to give their services in the care of the sick and wounded in military hospitals. The United States, France, England, Russia, Greece, Switzerland and perhaps other countries were represented among these groups. When the typhus suddenly swept across the country, the foreign doctors and nurses were caught wholly unprepared to protect their patients or themselves against its approach. Wherever we went about Serbia stories were told us of the calm courage and the gallant fight which these foreigners had made against hopeless odds.

In Skoplje, where eighteen English doctors and nurses, sent by the British Red Cross Society, were in charge of a hospital, only three of the number had escaped the disease at the date of our visit. Several had died, others had been invalided home, and others were at that time lying ill in the care of the three members of the unit who had not yet succumbed.

Lady Ralph Paget, at the head of another unit of doctors and nurses, informed us that her people were being attacked by typhus one by one, and she stated, in a matter of fact and entirely passionless way, that she had no doubt whatever that she herself would presently be attacked by the disease. About two weeks afterward, and just after we had left Serbia, we learned that Lady Paget was a victim of typhus and that her recovery was extremely doubtful. Happily, however, she did recover, and resumed her work immune now and more capable of useful service than before.

Six American Red Cross physicians and twelve American Red Cross nurses were in charge of the military hospital at Gevghele. This hospital was situated in an ancient tobacco warehouse, and was without any modern and adequate facilities for sanitation or disinfection. When the epidemic appeared among the patients, the physicians and nurses, without the means of self-protection, threw themselves with unselfish devotion into the attempt to check its spread. This they were unable to do, but as a result of their self-sacrifice, two of the physicians and nine of the nurses contracted the disease. Dr. James Donnelly, head of the unit, died. Dr. Ernest MacGruder died. Fortunately, the others recovered. Throughout this bitter ordeal the little group of foreign men and women, far from home and friends, faced their terrible plight without panic, going steadily about their duties until one by one they were struck down.

Even in Belgrade, where better conditions and facilities were to be found than elsewhere for combatting the spread of the disease, it continued for many weeks in the hospitals and among the civilian population. Several of the American Red Cross nurses contracted it but eventually all recovered. Dr. Edward Ryan, director of the hospital, himself came down, but after his associates had despaired of his recovery, fought his way through, and at the end of weeks of slow convalescence resumed his duties.

As an illustration of that calm strength and unswerving devotion to duty which characterized the services of the American physicians and nurses in Serbia, I may be pardoned for relating the following story:

It was in the early winter of 1914 when the armies of Austria had forced their way into Serbia. The surrender of Belgrade, the capital, was imminent. Late at night a Serbian official hurried to the Red Cross Hospital, awakened Dr.

Ryan and informed him that the Serbian army was evacuating Belgrade. He was urged to get his American doctors and nurses quickly together and accompany the evacuating forces. The Austrian army, it was said, was expected to attack the city at any moment.

Refused to Desert His Post

DR. RYAN declined to go. He said that his hospital was filled with sick and wounded men, and that it was the duty of himself and his associates to remain. He was strongly urged, and the dangers of remaining, while the victorious, conquering army entered and took possession of the city, were pointed out to him. He conferred with his associates, and steadfastly refused to leave. When the Serbian official found that it was impossible to persuade the American Red Cross unit to flee, he requested Dr. Ryan to take charge of several other hospitals in Belgrade, filled with sick and wounded Serbians. This increased responsibility was accepted. The Serbian army withdrew; the civil governmental officials, both national and municipal, also, and with them went most of the people of the city.

After the evacuation, the Austrian forces did not at once come into the city, and a number of days elapsed during which Belgrade had no government. Disorders broke out among the lawless part of the population, robberies and murders were committed upon the streets, and a period of demoralization began. Dr. Ryan called a conference of such men of substance as could be found, and led in the formation of a committee of fifteen which set up a provisional government for the city. This government quickly restored order and maintained it until the

VILLAGE SCENE IN SERBIA

The ox-carts are bringing water from the mountains.

Austrian armies entered. Without authority, without citizenship, this young American doctor, by force of moral courage and determination, thus rendered an important service to a large number of helpless and leaderless people.

When the Austrian army entered Belgrade and took possession of the city, an officer called on Dr. Ryan and notified him that the Austrian military authorities, being now in full possession of Belgrade, desired to take charge of the hospitals, and requested that Dr. Ryan and his unit withdraw. Dr. Ryan declined, stating, as he had previously stated to the departing Serbians, that his duty to the great number of sick and wounded in his charge required him to remain. He added that he was ready to care for Austrians as well as Serbs. The Austrian officer's request changed to a demand, but without avail. Dr. Ryan then went to the headquarters of the commanding officer of the Austrian forces, explained his position and his sense of duty to the thousands of patients in his charge, and the commanding general thereupon yielded, consenting to allow the Americans to remain in control.

Enmity Died Under Red Cross Flag

IMMEDIATELY the Austrians began sending their sick and wounded into the hospital, and soon the suffering soldiers of both Serbian and Austrian armies, enemies as they were, lay side by side, under the neutral flag of the American Red Cross. Then appeared the great underlying fact that these men were not personal enemies at all. They fraternized in the hospital, and seemed for the time to forget the deadly warfare which existed between their countries.

Two weeks after the Austrian armies marched victoriously into Belgrade, the Serbian forces again drove them back across the border into their own country, and the Serbian people were once more in control of their capital. They found the Red Cross hospitals filled with patients, of whom now a majority were Austrian. Before the Austrian army departed, its commander expressed his strong appreciation of the stand which Dr. Ryan had taken, and of the devoted and skillful service which his group had given to the Austrian patients placed in their charge. He stated that his army was now about to leave, and he asked only that Dr. Ryan would look after the welfare of his Austrian patients, following the departure of the Austrian army, as bravely and faithfully as he had looked after the welfare of the Serbian patients following the entrance of the Austrian army into the Serbian capital.

This story cannot be complete until I have added that Dr. Ryan and his people remained peacefully and usefully in Belgrade until the last invasion by the Austrian and German forces. When Belgrade was again taken the captors again found Dr. Ryan and his group in charge of the hospitals. This time, without question and with every evidence of confidence, they placed the care of their own sick and wounded men in his care.

A Benevolent Regicide

THE ROCKEFELLER FOUNDATION War Relief Commission spent two weeks in traveling about Serbia, observing conditions among the civil population, conferring with government officials, the officers of the Serbian Red Cross, the National Serbian Relief Committee, and many local officers and committees. Every facility for obtaining all necessary information was placed at our disposal, and an attaché of the Foreign Office was detailed to travel with us in order to give us every possible assist-

ance. In the city of Skoplje we received great help and many courtesies from the military commander in charge, who proved to be General Popovich, one of the leaders in the conspiracy which a few years before had caused the assassination of Serbia's King and Queen. The connection of General Popovich with this desperate enterprise naturally led us to regard him with peculiar interest. Regard for fairness compels me to say that he is a man of benevolent appearance, with a kindly blue eye and gentle manner. He was thoughtful of our comfort and wishes, self-effacing and most courteous, possessing none of those outward characteristics which might be expected to mark a man who had been an active participant in so tragic and deplorable an event.

As we went about the city of Skoplje, a member of our party observed in a shop window some ancient, brass-bound and richly ornamented weapons, and remarked that, when opportunity offered, he intended to return to the shop and purchase one or two as souvenirs. Later in the day an officer drove up to our hotel and left for us an armful of strange, picturesque and beautiful old pistols and yataghans. He also left a message from the commanding general, who begged us to accept these mementoes with his compliments. Afterward, when we again saw the general and protested against the acceptance of these rare weapons, he assured us with a shrug and a wave of the hand that in the recent war with Turkey the Serbians had captured vast quantities and had tons of them stored in a warehouse.

We permitted ourselves to be persuaded to retain these gifts, and later packed them into a shipping case and entrusted them to an express company to be forwarded to New York. They eventually reached the Bulgarian port of Dedeagatch, where they were deposited on the dock and were awaiting the arrival of a steamer when the port was bombarded by British warships. The waterfront is said to have been badly knocked to pieces, and we have heard no more of the fate of General Popovich's souvenirs.

Serbia has but one line of standard gauge railway. This traverses a series of narrow and winding mountain valleys, southward from Belgrade through the country's greatest length, and terminates in the Greek port of Saloniki. At the city of Nish, about mid-way of this railway line, a branch line extends southeastward across the Bulgarian frontier and on through to Turkey to its terminus in Constantinople. Several short, narrow gauge lines connect with the main line and lead back through the valleys into the interior.

Because of its inadequate railways, Serbia experienced great difficulty in transporting her troops and military supplies. The facilities were taxed to the utmost. Passenger travel as a result, was extremely slow and inconvenient. All passenger trains were packed to the limit of their standing room with soldiers and civilians, and it was common to see scores of men perched on the tops of the cars.

The members of the War Relief Commission traveled from Nish to Belgrade by a night train. At every station throngs struggled to get on board, and in each instance the train drew away leaving many angry and disappointed persons on the station platform. For our comfort there had been reserved for us a compartment, which the three of us occupied with our Serbian attaché, a young man provided by the Foreign Office.

As the train proceeded, passengers crowded solidly into

every available foot of space. The corridor outside our compartment was densely jammed with standing passengers. But our door was locked and we were protected from invasion. The compartment was lighted by a candle, and through a crevice in the door, those standing in the corridor were able to see that we were traveling in comfort, with ample room. We were not quite conscience free concerning these conditions, and suggested to our guide that the door of the compartment be opened in order that some of those in the corridor might enter.

The guide, however, had been expressly charged by his superiors to protect us, and he resolutely declined to open the door. As the hours passed, the men in the corridor

The result of our observations in Serbia led to the conclusion that although a great deal of destitution existed throughout the country, the typhus epidemic so far overshadowed all other problems at the moment, that first of all an attempt should be made to establish measures for its control. We thereupon sent a cable message to the Rockefeller Foundation explaining the conditions and urging that a commission of American physicians and sanitary engineers be sent to Serbia for that purpose.

In response to this appeal the trustees of the Foundation conferred with the officers of the American National Red Cross, with the result that the Red Cross undertook the organization of a sanitary commission for Serbia, the

became more weary and discontented, and began trying the lock. Finally at about three o'clock in the morning they threw themselves against the door with such a tremendous effort that it splintered to pieces and flew back with a crash. They crowded tumultuously into the small compartment, crushing themselves into the seats, crowding over and about us in a manner which at first seemed to promise serious trouble. They were young officers of the Serbian army, in uniform and wearing their swords. The candle was knocked from its socket in the scramble and we were all in the dark. When the outcries and confusion had subsided, and the candle was re-lighted the invaders learned that the occupants of the compartment were foreigners. They became quieter though they thrust our guide out into the corridor, learned our mission through one of their number who spoke French, and the remainder of the night was spent in discomfort—but quiet.

expense of which was borne jointly by the two organizations.

Dr. Richard P. Strong, professor of tropical diseases in Harvard Medical School, was selected as head of the commission, and a staff of about fifty eminent physicians and competent sanitarians was rapidly brought together. The commission sailed from New York on April 3, 1915, and before the end of that month had entered upon what to many seemed its hopeless task.

While the sanitary commission was in process of organization in the United States and was en route to Serbia, members of the War Relief Commission traveled from Serbia to England and France, where conferences were held with the heads of the medical service of the armies of those countries for the purpose of securing their cooperation with the American Commission. This effort was entirely successful, and a large number of English and French physicians joined with the Americans in com-

prehensive measures in Serbia.

Upon the arrival of the American Commission in Serbia all cooperating agencies were combined under the name of "International Sanitary Commission of Serbia." The personnel of the governing board of this organization was as follows: President, the Crown Prince Alexander; vice-president, Sir Ralph Paget; medical director, Dr. Richard P. Strong; other members, the chiefs of the British, French and Russian missions, the chiefs of the Serbian civil and military medical departments and a medical representative of the Serbian Parliament.

Under the administration of this board the work went forward harmoniously and effectively. It was not thought advisable to place men of different nationality in the same community. The country was therefore divided into fourteen administrative districts, with the British, French and Russian groups in seven of these and the American group in seven. The combined effort received all requisite legal and moral support from the Serbian government.

Typhus Vanished Swiftly

THE RESULT of this united and comprehensive attack upon the epidemic was successful beyond the expectations of the most optimistic. Typhus is a winter disease, and always subsides in virulence with the coming of warm weather. The measures taken by the sanitary organization, reinforced by the approach of summer, caused the epidemic to disappear with a rapidity scarcely less amazing than the swiftness with which it had enveloped the entire country a few months earlier. By the middle of August it had almost vanished, and a few weeks later the main body of the Sanitary Commission withdrew, having completed its task and leaving Serbia wholly free from the presence of the scourge.

As executive head of the work, Dr. Strong spent much time in traveling from district to district. For this purpose he was provided with a special train of three cars and a small automobile. Of the three cars, one was fitted up as office, bed room and bath room for Dr. Strong's personal use; one was occupied by his assistants, and the third was an open flat car for his automobile. In this primitive train Dr. Strong lived during the greater part of his stay of four months in Serbia. When it became necessary to visit places not reached by rail, the train was taken to the nearest railway point and set on a sidetrack. Then the automobile was called into service to carry the party into the interior.

Upon Dr. Strong's return to the United States he prepared for the Red Cross a brief report of the work of the Sanitary Commission. From this report the following quotation is taken:

"House to house inspection for the discovery of cases of typhus in the cities, with the removal of the patients to hospitals and wards devoted to the care of typhus cases; disinfection of such individuals, disinfection of the other inmates of houses in which cases of typhus had been discovered, as well as of their clothes, and finally disinfection of the houses themselves, was systematically begun. Quarantine of individuals who had been in contact with typhus cases was undertaken after disinfection of their persons and clothing. In a number of such instances, these were cared for in tents sent by our Red Cross where houses were not available as detention camps. In some instances the districts were so badly infected that it was necessary to evacuate them en masse and to destroy, by partially tearing down and by fire, the majority of the dwellings. Dispensaries were established in the different

cities where the people were treated free of charge. These proved a great aid in the finding of cases of infectious disease.

Sanitary Trains Are Operated

"AS TYPHUS is conveyed from man to man by vermin (the bite of the body louse) the bathing and disinfection of very large numbers of people and immediate disinfection of their clothing, became an important problem in combatting the disease. For this purpose sanitary trains, consisting each of three converted railroad cars, were fitted up. One car contained a huge boiler which supplied the steam for disinfection of the clothing. In a second car fifteen shower baths were constructed. A third car was converted into a huge autoclave (disinfector), into which steam could be turned under atmospheric pressure. In this manner the vermin were immediately destroyed and the clothes thoroughly disinfected.

"Large tents were erected beside the railroad sidings on which the cars were placed. The people were marched by the thousands to these tents, their hair was clipped, and a limited number undressed themselves, carried their clothes to the disinfecting car and then passed to the car containing the shower baths. After a thorough scrubbing with soap and water they were sprayed with petroleum as an extra precaution for destroying the vermin. They then received their disinfected clothing. In instances, in which the clothing was very badly soiled, fresh clothing was supplied. Many of these people stated that they had not bathed for ten months or longer. Their faces in some instances betrayed surprise and in others fear when the water touched their bodies.

"In the larger cities and in those situated away from the railway, disinfecting and bathing plants were established and separate hours were arranged for bathing women and men in large numbers.

"In many towns the clothes were disinfected by baking them in ovens, either specially constructed for this purpose or those which had been built previously for the baking of bricks, or other purposes. As all the hospitals were infected it was necessary systematically to disinfect them as well as their inmates.

"The patients were removed from a ward, which was then thoroughly disinfected first by sulphur fumigation to kill the vermin. Beds were then removed and disinfected, mattresses, sheets, etc., being disinfected with steam or boiled. Walls, ceilings and floors were then scrubbed with solutions of bichloride of mercury or carbolic solutions. In many instances the interiors of hospitals were thoroughly whitewashed. The patients were given a thorough bath by being scrubbed with soap and water and disinfectants. They were then given clean clothing and placed in the disinfected ward. Their old clothing was usually boiled.

"During the last three weeks before my departure from Serbia we could not find a fresh case of typhus. The sanitary condition of the army and of the people was then excellent. I trust that the sanitary demonstrations, in the prevention of typhus, which have been given the Serbian people, and the construction of the various permanent disinfecting plants throughout the country will prevent the occurrence of another epidemic of typhus such as we have just witnessed and which destroyed between 135,000 and 150,000 people."

At the end of the summer of 1915, when the typhus had been driven out, Dr. Strong and most of his men withdrew, leaving, however, a party of twelve physicians and sanitary engineers. This remaining group was to devote six months to the completion of certain plans intended to permanently improve health conditions in Serbian towns. Problems of water supply, drainage, disinfection and kindred subjects were to be studied and the

most practical means of solving them pointed out to the proper authorities.

Flight of the Serbians

BUT IN THE MIDST of this work the Teutonic Allies launched their overwhelming drive against Serbia, and all other interests were swept away. The Serbian army, fighting stubbornly, was driven southward into Greece and westward into the mountains of Albania. With the retreating army fled the King and his entourage, the Skuptschina (parliament), most of the official body of the national and municipal civil governments, and scores of thousands of the civil population.

This flight, through wild mountain passes in mid-winter, was marked by frightful sufferings from cold and hunger. Many thousands of the weaker refugees, the old, the children, the frailer women, succumbed to the hardships, and their bodies were left scattered along the trails over which the multitude had passed. It is to be regretted that no strong, commanding spirit arose to this emergency by calling upon the Serbian people to remain quietly in their homes. There was reason for this flight of the army and the court, because, if captured, they would have been imprisoned and the hope of repairing the country's unhappy fortunes would have seemed to be destroyed. But so far as the common people were concerned, they would have been much better off at home, where, after temporary inconvenience and doubtless some hardship occasioned by the quartering of the enemy troops upon them, they would have settled down to approximately normal life.

With the Teutonic invasion, the sanitary work of the American Red Cross Commission suddenly terminated. The members of the commission were instructed to turn their attention to the relief of the Serbian refugees, and for that purpose divided their forces, one group going to Saloniki, another to the Albanian coast and another to Corfu.

From Sanitation to Relief Distribution

AFTER A FEW WEEKS, reports were received that much destitution existed in the interior of Serbia and Edward Stuart, director of the commission, was instructed to go to Sofia for the purpose of requesting permission of the Bulgarian government to establish a relief organization in southern Serbia, that section of the conquered territory having been taken over by Bulgaria. This permission was denied. Mr. Stuart then traveled to Vienna in the hope of obtaining permission to undertake relief operations in northern Serbia which had fallen to Austria. The Austrians were more responsive than the Bulgarians, and granted the requested permission in part.

The Americans were authorized to set up an organization for the distribution of relief among the civil population of Belgrade, the Serbian capital, where about thirty thousand persons were in need of help. As supplies of food could not be obtained in Austria or Serbia, and could not be imported from America, because of the blockade which the entente Allies had thrown about the Central Powers, these supplies were purchased in Roumania, and transported by barges up the Danube river to Belgrade. Several months later the Austrian government so broadened its permission as to allow the extension of relief operations into the interior of northern Serbia, where a preliminary investigation had indicated that probably one hundred thousand persons were in extreme destitution.

While Mr. Stuart continued to represent the Red Cross

in negotiations and conferences with the Austrian government and the distribution of relief supplies in Belgrade, Dr. Edward Ryan was placed in charge of distribution in the interior. Both Mr. Stuart and Dr. Ryan, because of extended and varied experience in Serbia in the earlier part of the war, were particularly well equipped for the administration of relief among the Serbian people. Both had shown such discretion and such a sense of fairness that they had won the respect and confidence of Austrians and Serbians as well. Dr. Ryan had just completed the very unusual enterprise of transporting a train of thirty car loads of food from Marseilles, through France, Switzerland and Austria to Belgrade, when Austria gave permission to extend the relief operations into the interior and was therefore immediately available for that service.

Food Train Breaks the Embargo

DR. RYAN'S accomplishment in the transportation of this train load of supplies was characteristic of the man. The American Red Cross had these supplies in a warehouse in Marseilles and was most anxious to have them moved to Serbia where they were much wanted. Because of the determination of the entente Allies that no food should be sent into conquered territory held by the Teutonic Allies (with the exception of Belgium and northern France), it seemed sheer folly to expect that France would permit the shipment of these supplies in Marseilles, across Austria, to Serbia. Dr. Ryan was commissioned by the American Red Cross to see what could be done, and in the face of apparently insuperable obstacles, succeeded.

Much traveling back and forth was necessary; active negotiations were carried on for many weeks with representatives of France, Switzerland and Austria; all supplies had to be unloaded and transhipped at each frontier, and miles of red tape had to be unwound. Repeatedly, when all arrangements seemed complete and the way opened for smooth progress, some new complication from an unsuspected quarter would threaten to defeat the entire project. Ryan would then dash off to Marseilles or Paris or Berne, or would set the telegraph lines humming, and presently the troubles would begin to disappear. About three months elapsed between the day he was sent his cable of instructions and the day on which his food train rolled triumphantly into the city of Belgrade.

In the subsequent distribution of relief in Serbia, methods have been adopted which, in some particulars, are a departure from those employed in similar work in the United States. These have been fitted to the unusual conditions and circumstances, and of necessity have been in accordance with the wishes of the Austrian military government in Serbia.

A quotation from one of Mr. Stuart's letters will give a vivid picture of the actual "days work" of distribution in Belgrade:

"These people are all registered at the City Hall and are known by the Citizen's Committee to be in need of assistance. They are all supplied with a red card known as their 'legitimation.' The city of Belgrade is divided into fifteen 'reons' or districts. One Saturday, for example, it is decided that the first five reons are to receive their supply of corn meal or flour on Monday. A crier then goes through these five reons with a drum and announces to the people that they are to go to the American Red Cross on Monday.

"On Monday, they appear at our depot with their legitimations, and are kept in line by gendarmes furnished by

the military, and present their cards to the several women clerks furnished us by the Citizen's Committee, who have the registered lists before them. The name of each person is checked off and the amount of corn meal or flour and the date are entered. The person then passes to the counter, presents the card again, on which has now been marked the amount to be received, which is checked off, and the bag which has been brought is passed to a Russian prisoner who holds it under a funnel. Behind the counter is a large box of corn meal or flour. Several Russians fill small tins holding various quantities of meal or flour, 2, 4, and 6 kilos, or 2½, 5, and 7½ kilos, as the case may be, and dump the required amount into the funnel, thence into the sack. In this way the work goes very rapidly, and a large number can be handled in a day; the record at present being 1,578 families in one day, or about 5,000 people.

"Other classes of people are more difficult to register; first because some apply for help who are not in very great need, and secondly, there are many families in serious condition who are ashamed to ask for assistance. At first all applicants were required to go to the City Hall and there have their applications passed upon by the Citizen's Committee, but there were so many, the committee was rather overwhelmed by them, so that I was not entirely satisfied with the first list.

"I therefore called a meeting of the committee and the representatives of the military government and insisted that a very careful examination of each applicant be made in order to eliminate all of those who have sufficient income to buy the bare necessities. At present, therefore, all applicants from any one reon must present themselves before the chief of the reon, who investigates the cases, usually knowing the applicants personally, and who then passes the list to the Citizen's Committee which revises it and returns it to the reon chief. It is again gone over by both, and then sent to us. We are trying to make it as fair as possible to all concerned, and we shall continually be at work upon the list rejecting names and adding new ones. The method of distribution to these people is the same as that above described. I am also requesting the reon chiefs to seek out those destitute families who are ashamed to ask for charity so that we may help them.

"Recently I have again visited the orphanage and the old people's home regarding which I have already reported to you; and where the conditions which were existing at

the time of our first visit have greatly improved. All the inmates have been moved into a large building situated in an open place; and in which the hygienic conditions are far better than in the previously occupied buildings. They still have a large supply of condensed milk which we have sent to them, so that they are receiving milk twice a day. On account of the flour which we sent to them, they are enabled to have more bread and various kinds of food made from flour. With further and more assorted shipments arriving, we shall probably soon be able to supply them even better than at present."

What the Future Holds

SERBIA'S fate hangs in the balance. Her king and her leaders are in exile. The broken fragments of her army are in Greece under the control of the English and French officers who for nine months have been consolidating them and trying to convert them once more into an effective fighting unit.

Those of her citizens who fled from the country before the invading armies and survived the horrors of the Albanian mountains are scattered in remote places. Some are in Greece, some in Italy, many in Corsica, and others in southern France. They know not the fate of their kindred left behind nor do those kindred know who of the exiles still live nor where is their present abiding place.

Austrian armies have been fortifying the mountain defiles of that share of Serbia which was apportioned to them and Bulgarian armies have been trying to make sure the possession of their share of the conquered territory. For the time Serbia as an integer among nations has vanished. Her tragedy seems complete.

Gathering ominously along the Mediterranean shore to the southward is a huge army of the allies of Serbia. Its movements are veiled, but its object is clear,—to drive northward in an effort to force the conquerors out of Serbia and sever the connecting link between Austria and Turkey. Whether that effort succeeds or fails, Serbia is again a battle ground. Her regeneration can come, if it is to come, only after another period of destruction and bloodshed during which her people once more will be trampled under the feet of war.

The caption on the photograph describes him as seated on the door-step of a deserted house, unable to find admission in one of the over-crowded hospitals at the early stages of the epidemic.

Dolores, Vendor of Snails

B C. W. Goethe

[The fourth of a Series of Articles on
"Exporting the American Playground"]

DOLORES was a cliff-dweller. Not all cliff-dwellers lived only in by-gone days, or only in the painted desert country of Arizona with its faded blue, faded pink, faded yellow mesas. Our cliff-dweller, Dolores, was of our time and an Andalusian. With a bright red poppy in her black hair, with clicking castanets fluttering their red and yellow ribbons, with the guitar of Juan Baustista, her lover, tinkling the softest of half-Moorish music, she used to dance on the bit of cactus-lined flat in front of her mother's cave-like home.

Juan was a vendor of water. Recalling the Orient, big earthen jars imprisoned in thick basket-work, hung on either side of his tiny burro. These diminutive beasts of his country were, like his music, a legacy from Moorish days.

On the road that ran from the row of cliff dwellings hung on the mountain side to the city below, was a little church. To this went Dolores and Juan one day, and there they were married.

Marriage made little change in Juan's work. Month after month he continued mounting the *sierra* to the spring just below the snows for his "coldest of waters." Then through the hot hours, when the sun's rays fell like javelins into the burning streets, he would cry his plaintive "*Agua! agua!*" And on the way to the city, he would improvise songs; for every Andalus is a born poet, a born musician. But all this was many days ago.

One day he was treading the narrow path back to the thirsty and watching the broad green *vega*, or plain, spread out before him. The apricot trees were in blossom, nightingales were pouring out their melodies; everything, everybody seemed happy. Juan sang of Dolores and of their wee daughter, Chico, the little one; Chitquita, the very little,—yes, Chiquitita, most tiny of all.

From the pink and green *vega* his eyes wandered to the little green valley indenting the jagged rock-mass of the mountain. Into the hollow of each dale nature had poured a flood of bright red poppies. In springtime, the Spanish vales always look as though each were filled with the blood of men who once had made the very name of Spaniard a terror throughout Europe, men now forever eliminated from the Spanish race by battle, some thinkers say, by the jungle, say others; and yet others, by the Inquisition. The red poppies in the green valley would have been a token to Juan, had he but known. But Juan knew nothing of history; he could not even write his name. If, once in three years, he had need to send a letter, why, there was the public letter-writer under the tree in the plaza. Juan was merely drinking in the glory of the landscape.

Suddenly, a roar on the mountain above—a landslide plunged—a rock struck Juan's head—a little frightened burro hurried back along the mountain path, alone.

That is why, from that time forward, the family in the house scooped out of the cliff, consisted only of Dolores, old Mercedes, her mother, and Chiquitita, tinstest of all. And that is why Dolores, trying to support all three, had become a vendor of snails.

One morning in the following spring, Dolores started down the road from the little house of one door and no windows. She met the usual wayfarers. Ahead of her walked some English folk, around whom clustered the usual beggar children calling, "A fat dog, señor! Just one fat dog. No? Ah! Then a little dog!" The children, like their elders, jokingly call the copper coins stamped with the lion of Spain "fat dogs," "little dogs."

Hardly had they been driven away before a turn in the road brought another group. One child of these, Matteo, advanced, whining the doleful formula, "I have no mother;

AN ANDALUSIAN SNAIL VENDOR

I have no father; I have no food. Just one fat dog, even a little dog, and God go with the stranger." One of the foreign folk tossed a copper to the youngster. Instantly all appearance of sorrow vanished from his shrewd little face. With a yell of delight, he darted down a side street. In a few moments as she passed thitherward, Dolores saw the child running to a seller of *dulces*. She paused to watch what she knew would follow.

Over large parts of Spain, it is the custom that no child may buy sweets or ices outright. He must gamble with the vendor. Matteo found his *dulce* woman, squatting by the gutter. Her stock-in-trade was wonderful. Her sweets were great brown sugar bubbles, blown into shapes of game-cocks, goats, chickens, burros. When a ragged little customer arrived with a *perrito* or "little dog" in his chubby fingers, out came her gambling wheel. Our little mendicant already had something for nothing; he would again increase his capital without work.

The match between the seller of sweets and Matteo commenced amid the usual excited crowd of children, with a few grown-ups, including Dolores. The wee youngster was successful. Soon half a dozen favorites in the admiring crowd gleefully munched the sugar animals.

Dolores did not go far before she heard more shouts. Little Pedro had also begged a copper. Children came scurrying from everywhere to see the fun. Pedro resisted all the blandishments of a seller of green and purple sea-urchins. He passed three, four *dulce* women, hardly daring to look at their colors, bright against the cloths spread on the flagstones. But he knew of a new

HOME OF A CLIFF-DWELLER

gambling device. At the farthest street corner stood a new trader in ices—white ices, and pink, and yellow. Dolores, too, had heard of this man who had come down from Seville with his wonderful spiral and its bright colored marbles.

Here was an adventure! The Andaluz has always time for an adventure. So Dolores stopped again, this time to watch Pedro try his luck. He laid down his coin, considered the different colored marbles, and selected the red one. Round it went along the curving path, slipped through the hole, hesitated as if it were human, and then finally dropped into the twenty! Perdo had *hielos* enough for all the children; even one for his friend Dolores.

The Sevillian pretended to grumble. The seller of sea-urchins winked, enviously whispering that the ice-seller had intentionally lost so as to advertise the new device.

Dolores proceeded down the narrow winding streets. The crowd thickened as she neared the bazaar. Even in Spain, the bazaar is of the unchanging Orient. But for the different dress of the people, one might be in India, in Java, in an oasis of the Sahara. One man was frying doughnuts, just as they do in Fez, Delhi, or Shanghai. The Moors were no longer there; the camels were no longer there. But so much that is Moorish, so much of the Moor wars had remained! Even the bazaar women crooned to babies wrapped in their black shawls, "The Moors will get you if you don't watch out."

Reaching the bazaar, Dolores went to where stood

A VENDOR OF HIELOS

The can to the left contains the tiny colored bricks found on sale wherever Spanish civilization has penetrated, even to Mexico and the Philippines. The cover of the freezer which has been lifted to the ground contains the inevitable "wheel of fortune"

THE ROAD FROM DWELLINGS TO T

Miguel, the snail king. An old man, shrivelled, evil-eyed, he looked like the miser in the Chimes of Normandy. The bazaar women said his father had been a bandit in the good old days; that Miguel, as a lad, had a hand in some of these affairs of the road; that before sixteen he had killed his man. But whatever his earlier adventures, now he was unquestioned ruler of the snail market. None of his underlings got anything for nothing.

He stood at the end of the row of stalls, surrounded by several dozen baskets, each covered with a rough bit of sack-cloth. In each were snails. One by one the snail women arrived and took their baskets. They squatted on the cold stones just outside the market walls and commenced calling their long-drawn-out "Ca-ra-ca-les!"

Like Dolores, these snail-sellers were practically all widows. Most of them were older, wrinkled, unkempt. Dolores' place was at the end of the line. Old Miguel had shrewdly noticed that she had not deadened, like those who had been long at the selling. She still had life enough

to pick from the roadside a bright red poppy for her black hair. Coldly calculating, he said to himself as he shrugged his shoulders, "In a year or two, she'll move up the line. Today she deserves the best place."

Between the calls of her wares, she crooned softly to little Chiquitita who was unusually restless. Babies are often restless in Spain, for among the resemblances of Spain to the Orient is the high infant death-rate. For several nights Dolores had not slept much. Chiquitita had been sick. There had been no money for a doctor,

A SELLER OF ICES

The freezer is beneath and the wheel on top. The leather to the right shows how even this heavy load is carried by the seller. The man with the cane is a vendor of lottery tickets. The two are, frequently found together. The heilo man deals with the children while the ticket seller plies his trade among the adults

none for medicine. Her week's commission had accumulated hardly enough to pay the few *pesetas* for the rent of that hole in the cliff she called home.

Miguel cared little for the sufferings of his salesfolk. Taking his station half way up the next block in the shade of some projecting red tiles, he watched the ebb and flow of the tide of buying.

Then the unusual occurred. The line of saleswomen suddenly noticed that something had happened to the snail king. The oldest woman in the line, the woman nearest his wonted station, whispered to her next neighbor, and soon they all knew it. He had had an ugly misunderstanding with a muscular fisherman named Sanchez. Miguel had a mortgage on the fisherman's boat. The boat was all with which to eké out a living that Sanchez possessed. The loan was a very small one at first, but Miguel had demanded a rate of interest that would have staggered a Hindu *chetty*. The fisherman was a big brawny fellow, with the quick temper characteristic of the dwellers upon the Mediterranean littoral. He was ablaze in a moment when Miguel told him that morning that the interest had consumed the boat.

There was much chattering in the line of snail-women over the discomfiture of their taskmaster who had half run, half been driven by his irate debtor.

Dolores' morning sales had been unusually good. A black-eyed Romeo, enough savage in his make up to be attracted by the red poppy in her hair, had purchased sufficient to treat a boat's crew of passing sailors. The other women craned their necks. Though Dolores thought

E CLIFF
CITY

MILKING
THE GOAT

only of her dead Juan, of the little Chiquitita, yet the snail wives gossiped of a new lover as they enviously stared at her growing pile of coppers. Three baskets of snails were already sold. She would have enough money to make up the rent. If she and Mercedes broke the hard crusts at home into smaller pieces, there would be sufficient for the man at the drugstore. Then little Chiquitita would have medicine.

Dolores had already saved, first of all, the money for the baby's goat's milk. This she bought from another cliff-dweller, Manuelita. Manuelita charged more than Jesus Maria did, who drove the goats along the cliff-dweller's road; but the goat's milk at Manuelita's was pure. Jesus Maria had a rubber bag under his arm with a tube that came down his sleeve. Even while you watched him milk the goat, each pressure of his hand squirted water from the bag. The drugstore man said it was the bad water thus squirted into the milk-cup that had made Chiquitita sick. So Dolores pinched that there might be a little more money to buy from Manuelita instead of from crafty Jesus Maria.

Then, even as Dolores was dreaming about that pile of coppers, something again happened. From up the street where Miguel and the fisherman had gone half fighting, half running, appeared one of those human vultures found all over Spain, and wherever Spain has colonized. A thin, bony fellow he was, puffing a cigarette and carrying a bundle of slips of paper. He bore the name of gentle St. Anthony of Padua, but was a peddler of lottery tickets. One glance showed Dolores to have the most empty baskets. He knew that here was the biggest prize, the greatest heap of coppers.

He commenced to talk alluringly of winnings that had been made. Dolores, begging him to go, told of stale crusts, of overdue rent, and pointing to restless Chiquitita, spoke of higher cost of milk at Manuelita's. Antonio's oily words flowed all the more rapidly. He exclaimed, what a shame she should be in rags, sitting on cold stones; told of the things to be bought with a big winning—perhaps, down on the *vega*, a farm with an olive tree. What purpling figs, what blushing grapes, what bursting chestnuts, what reddening *pimentas* there would be! She could have a fine dress; of lace mantillas, there would be several black and one creamy white. Why, with a winning like one that had been made in Ronda last month, she might even have a carriage drawn by mules, like the bishop's.

Dolores tried to resist. Psychologists tell how deeply habit paths are worn into our brains. Dolores' gambling habits had been there since almost infancy, cut while her child brain was yet plastic. The desire to get something for nothing had worn deep. She had so often joined a group of children spinning the dulce-woman's wheel.

Before she knew it, her hand clutched three pieces of numbered bright colored paper, and Antonio sauntered down the street, jingling all her hard-earned coppers in his pocket.

Just as Antonio turned the next corner, Miguel appeared. Far from handsome before, he was hideous now. His head smeared with blood and gravel, there was a nasty cut over one eye. Most of all to be feared was the rage within. With an oath he demanded his money from the trembling Dolores. She hopelessly showed him the tickets that were to bring mantillas, a little farm, a carriage with mules. He grabbed the little Chiquitita, tossed her into the arms of the next woman, and dragged the sobbing Dolores to the bazaar officer.

TEN minutes later the jail door clanged, and Dolores was moaning piteously behind the barred windows of her cell.

Students claiming Spain as their Motherland, earnestly trying to solve her problems; wise men of other lands, who have unbounded faith in the recuperative powers of the Iberian race.—both advance theories about Spain's present loss of place among nations. Three reasons, each with some probable basis in fact, are generally given. This elimination of the best race strains they hold due to first, war; second, excessive colonization; third, the Inquisition. Is there not perhaps a fourth reason? Studying Spain from another angle, one becomes convinced that there is.

This fourth reason is, that the play of Spain warps the future of many of her Dolores, her Pedros, her Matteos, even her shiftless lottery ticket-sellers, her Antonios. Into impressionable child brains, their play, steeped in custom, cuts deeply the habit paths of deceit, of begging, of gambling, of cruelty. At maturity, is else to be expected than that these children shall plot to get something for nothing? The river of national life cannot rise above its source—that source is the play of its children. If Trafalgar and Waterloo were really won on the fields of Eton and Rugby, may we not just as reasonably assert that Buenos Ayres and Lima, Manila and Santiago de Cuba were lost at the bull-ring, at the cock-pit, at the spinning of dulce-wheels?

New Spain, with yet other capitals as brilliant as these, once stretched thousands of miles from the wintry, galeswept straits of Magellan, across the dark, dank silvas of the equator, to where, at the blockhouse of Russian-America's southern outpost, a yellow-haired Slav lieutenant flirted with Señorita Conception, black-eyed daughter of the commandant of the nearby Presidio of San Francisco.

The history of this downfall of New Spain is one full of tales of the conquistadores' recklessness with gold, of how Pizarro's men gamed with one another for their bloody booty from the gold-tiled Inca Temple of the Sun. The reckless gambling of their gains; their avarice; their desire to gain more gold, were exceeded only by a cruelty that unfeelingly decimated their unfortunate Indian victims. Where has the law of cause and effect worked more clearly than with these men from a play environment like Matteo's and Pedro's? New Spain, founded by Dolores' ancestors, once the greatest of empires, has shrunk to the dimensions of a pricked bubble.

In commerce, the results are similar. Many thinking Spaniards complain that so few of their countrymen venture into trade, industry, mining, compared with the numbers who scheme for even underpaid government positions. These students deplore their hopelessly corrupt politics. Nor are they alone in these thoughts. Foreigners with extensive business, mine, factory interests, speak bitterly of the bribe-taker's palm so frequently extended. "Something for nothing" has become almost instinctive.

At one Spanish port, the foreigners in shipping firms say that half the customs' duties "leak" on what should be the way to the royal treasury. These business men complain about the petty annoyances at the *octroi* stations located wherever a road enters an Andalusian town. Coming from the suburbs into town, workingmen each morning are examined from crown of head to soles of shoes for smuggling. Imagine this tolerated in an American factory town!

Spain's *octroi* collectors often gather hardly enough for their starvation salaries; yet they take pride in their "government job." It is genteel. They are enjoying a kind of

"PLAYING BEAR," OR COURTING IN SPAIN

(In the picture at the right the senorita has opened her barred windows to get a look at the photographer.) The whole system of courting in Spain seems to an American based upon suspicion instead of upon that confidence that relies upon honor among young people, which is found so valuable in playground work. This, like the bull-fight, was transplanted to Latin America

COCK-FIGHTING

This demoralizing form of gambling like the bull-fight, has spread wherever Spanish civilization has gone. One of the problems American officials are working on now is the substitution of American baseball for cock-fighting in the Philippines. Cock-fighting is a gambling game, largely sedentary; baseball, a game requiring skill as any boy who has learned to pitch a curve

knows
Moreover, baseball calls for the team-work necessary for that cooperation requisite to a healthy democracy. It gives expression to primal instincts such as striking, using a stick, throwing, running and chasing. Just as a juvenile court judge stopped the breaking of Pullman car windows by offering the gang the substitute of a diamond with a bat, ball, mask and gloves, so baseball is a tremendous factor in educating the vigorous Philippine lads not only in the play they instinctively yearn for, but in the team-work which is needed to eliminate some of the unfortunate features of the older civilization

"something for nothing"—a freedom from labor. One Spaniard exclaimed, in language like Caesar's description of Gaul, "All Spaniards are divided into three parts—the 'ins,' the 'outs,' and those who have neither brain nor 'pull' ever to fill office, must as they desire it."

Spanish everyday life is saturated with "something for nothing" politics. Is this not the fruit of the begging, and the gambling games of its Pedros?

Spain's colonization history is characterized, too, with cruelty born of mock bull-fighting. The student from the American playground becomes profoundly convinced that the results of Spanish children's play may be traced through the history of not only Andalusia, but Mexico, Peru, the Philippines, Venezuela, Honduras. "Tell me what you eat and I will tell you what you are," may almost be paraphrased into, "Describe your children's play and your national history may be predicted." Cross the Pyrenees, and, with the exception of an occasional tame bull-fight as at Niemes, the sport sickens and dies. Nor does one there ever see children playing at mock bull-fighting.

Spain had a great handicap over her northern Latin neighbor when the latter entered the races for colonial expansion. Today the venturesome Spaniard has little more remaining than the Canaries and a bit of Morocco. His stay-at-home, Paris-loving Latin brother to the north

knows his Tri-color floats from Algiers to the African equator over tens of thousands of square miles. The Spain that failed could ill afford long wars, excessive colonization, the Inquisition, vicious play. She has had to bear all four. And has this last, though unnoticed, been the least?

Has America a substitute for a play system which has thus always made for laziness and for cruelty, which destroyed the affections of Spain's colonies, which paralyzed the latter's politics, her commerce, and saturated both with a "get-everything-possible-for-nothing" standard? Some social students believe most emphatically that America has. That remedy is the playground.

In a previous article on bull-fighting, a Mexican governor was quoted upon the need of substituting in his country directed American play for the national game inherited from Hispania. The same essay also described the substitution in the Philippines of baseball in place of the demoralizing cock-fighting, another legacy from the Conquistadores. Bull-fighting, cock-fighting, gambling for *dulces*, a false Castilian pride about the labor that should dignify—all these would melt away under directed education through play. More Matteos, more Pedros would learn the fun of playing the game squarely, of the joy of expending physical and mental energy, and there would be a continually lessened number of Dolores to sorrow.

LIFE'S CLINIC

THE CONCLUDING SKETCH OF A
SERIES WRITTEN FROM BETWEEN
THE LINES OF SOME MEDICAL
CASE HISTORIES

MAGDALEN

EDITH HOUGHTON HOOKER

A FRIEND of mine came to see me last week whom I had not seen before for nearly ten years. She was announced by the following letter written in a thin hand with many impotent little flourishes and "personal" scribbled in pencil across the upper, left-hand corner of the envelope:

THURSDAY 7, 1915.

DEAR, DEAR MRS. EDITH:

Your little girl Violet Lantz of long ago is sending you these few lines asking if I may be permitted to see you once again before we pass to that great beyond. Just to see you once again, to see you and feel that you still have a warm spot in your heart for me. I have been very, very ill and lonely since the years of absence, and many times if I could have only seen you and felt you near, would have been happier.

Please do not regard this note with coldness, dear, dear Mrs. Edith. God knows I have lived a sad, lonely life since we parted. I know my life has been a sad failure, but could it be otherwise? Dear Mrs. Edith, perhaps the most beautiful years of my life have been wasted, but tonight I feel that I have tried to do my best, and should death claim me tonight I feel prepared to meet my God!

Praying you will grant me this pleasure and see me, will sadly bring to close this missive, I remain, the same true, loveing little

VIOLET LANTZ,
40 East Hamburg Street.

AT LAST

P. S.:

I come to thee at last, O Lord for rest
With wasted years, with mind oppressed
And now Thy promise is to me so sweet
That I shall find forgiveness at Thy feet.
Thy ever heart-broken little

VIOLET.

The letter came nearly a month ago and I replied promptly, urging Violet to come to see me the following Monday. The hour appointed came and went, but brought no Violet and no response to my letter. As the days wore on I decided that she had lost courage or had set forth upon some new adventure.

Then one morning from an upper window I caught sight of someone coming slowly up the hill whom I knew at once must be Violet. She had the same delicate way of stepping, like a small bird, that I remembered so well, and her manner of wearing her hat and carrying her shoulders bent timidly forward a trifle was indescribably characteristic. There had been a violent ice storm the night before, and the hill on whose crest I live was sheeted with a coat of glass, making it impossible to get firm footing.

Above the steep road the glistening trees shrieked and crackled, now and then letting fall small showers of melt-

ing ice and water. Despite the heavy dripping, Violet had not raised her umbrella. She used it instead as a stick to lean on. Occasionally, she would stop as if exhausted and look curiously about her. For some moments I stood watching her, swift, vivid pictures of our past association coming into my mind. It was almost precisely ten years ago that I had come across her, standing irresolutely in the long, gray corridor of the maternity ward with her baby in her arms.

"So you are leaving us, Violet," I had said, "you and your little Lucy." Then in an afterthought, "You will let me hear from you sometime, how you get on? Tell me now, where are you going?"

She had lifted startled, deer-like, brown eyes to my face.

"I don't know. That's just it," she had answered unsteadily, clasping the sleeping child more closely. "I don't know where we are going."

It was after four o'clock on a January afternoon, and she was but eighteen years old, motherless and turned adrift by her family. Eight months later she had come to me again, a few days after my return from a six weeks' visit to England. She was dressed all in black, a great picture hat surmounted by flowing plumes setting off her pale little face to singular advantage. I had never before realized the possibilities of her beauty.

"Lucy is dying," she had whispered brokenly. "Oh, I am a bad, bad girl; it's my sin that's the cause of her dying."

She had been turned off, it appeared, with a week's notice by the uptown woman in whose service I had left her. Then it was a room in Green street where the door had to be kept locked to ward off intrusive male visitors—for what respectable house would take in a girl with a baby?

"I tried, oh, believe me, dear Mrs. Edith, I tried oh, so hard, but they paid only 15 cents a dozen for stitching the rompers. I lived on tea and dry bread for two weeks, and my milk dried up and I couldn't buy good milk for Lucy, and it was so hot and there was no air in my room. Then I took her to the hospital, and they sent her to the Thomas Wilson. It was because I was so lonesome, so sad, dear Mrs. Edith, I went out with him because I wanted to forget, and I was so hungry."

As I watched her painfully picking her way across the frozen grass, I could feel her once more leaning half fainting in my arms as a few days later we followed the dingy undertaker with the slim white casket under his arm to the edge of the small open grave in Hope Cemetery. Three ill-clad children, two little boys and a girl had been playing about the new grave waiting with lively interest for the spectacle of burial.

As the tiny casket, ironically inscribed "Our Darling"

was lowered into the clay, the young mother's grief broke and she flung herself face downward upon the ground, crying out in a very abandonment of despair, and striving with impotent arms to reclaim the dead child below her. The children, horrified, fled, and peeped at us fearfully from behind tombstones at a distance.

Driving home afterward in the swaying hack, with the undertaker sitting aloft, cheerfully smoking beside the driver, I was again struck with the girl's fragile beauty. As she leaned back in the corner, outworn by her grief; now and then she would close her eyes, letting the long lashes shade the softness of her cheek. There was nothing distinguished about the cut of her features, the charm lay in the exquisite texture of her skin, and in the tender youthfulness of her face and slim, small figure. Chiefly it was her eyes that came back to me out of the past, great, innocent, brown eyes, with the look of a wild fawn in them.

I HEARD a step crunching the ice on my veranda, and hastened downstairs to open the door.

"Mrs. Edith, Oh, Holy Jesus!" The umbrella fell to the floor with a rattle. Two sticky black kid gloves with bare fingers protruding seized my hands. My greeting died on my lips. My very flesh recoiled in horror. I tried to turn my eyes away, but my glance seemed frozen.

Could this be Violet? This livid creature with the long purple scar over the left temple, and with the crooked, bulbous nose? The right eye swollen almost shut and lodged in a discolored mass of flesh twitched incessantly as it leered up at me. The left eye, red rimmed, bare of brow and eye-lash, contained in its depths a hideous suggestion of the girl that I had known.

With a cry, the dank, miserable figure flung itself head-long into my arms. "I can see it in your face, I have changed. I am no longer the same Violet." She pressed her face against my breast. I could feel the scalding tears. As I looked down at her bent head, I saw the nits of vermin on her scanty frizzled hair.

"Child, child!" I soothed her, patting her shoulder, "we have both changed somewhat; remember, it is almost ten years."

She lifted her tear-streaked face from which spots of paint had rubbed off on my blouse, and the scaly lips parted in a hungry smile. One of the front teeth was missing, leaving nothing but the blackened end of the root.

"After all this time you love me still, Mrs. Edith?" She crushed my fingers with the old caressing sinuous movements.

"I love you still," I answered mechanically; then as the girl out of the past seemed to look at me from behind the sordid mask, I added with a certain inward passion, "Yes, more than ever," and my eyes were suddenly blinded by painful tears.

I led Violet in beside the library fire and furtively surveyed her as she stood drawing off her dilapidated gloves and warming her swollen hands before the blaze. She had on a scant suit of black velvet from which the nap was almost wholly worn off. It was trimmed with wide bands of mangy white rabbits' fur, altogether bald in spots, and soiled with the foulness of city streets around the skirt at the back. On her head was a battered velvet hat, put together with pins and white cotton, and trimmed with an enormous red satin rose above which a crestfallen white feather stretched its dingy length. Her left ankle, red,

chapped and dirt-begrimed, showed through a hole in the stocking over the back of her run-down, high-heeled shoe.

The crisp, clean winter sunlight danced cruelly over the tawdry figure; the night glow of the city streets would have been more kind. When she stripped off her coat I could see through the flimsy waist great vivid scars on her breast and arms, unmistakable signs of neglected syphilis, and at the back of the low-cut waist brown spots around the neck gave further evidence of the disease. On the back of the right hand curiously enough was another deep round scar seeming to cry aloud the taint in her blood.

As the warmth of the crackling fire permeated her damp clothes the room became filled with a nauseating odor of uncleanness and disease. I seemed to smell the reek of disinherited humanity thrust back beyond vision into ill-kept almshouses and foul jails.

Suddenly she turned full toward me disclosing six oblong bright red buttons as large as plums which pretended to clasp a foot wide girdle around her emaciated waist. Her bare little eyes were overflowing with tears.

"I am so tired," she half whispered, "so tired of trying to please the men."

With the quick impetuosity I remembered so well, she threw herself on the rug at my feet, hiding her face in my lap and bathing my hands with her tears. She had discarded her hat and I could detect round hairless spots on her scalp which she had vainly attempted to conceal with a false braid. So riddled did she seem with disease that I dumbly wondered if even in her tears the pollution could be carried.

"You believe I am still a good girl," she whispered, clasping and unclasping my fingers with her moist hands. The question wrung my heart.

"I believe you have traveled a hard road," I answered, "that you have been unthinkably mishandled by men." I could feel a quiver run over her. She raised a hard, narrow-eyed face.

"There aren't any good men in this world," she said, "anyone that thinks so hasn't seen them the way I have." She smiled wryly, trying to hide the missing tooth by pulling her lip down. "Married men, men with families, men with their collars buttoned down the back, judges as judges us, lawyers, doctors, policemen, army men, sailors, mothers' little boys with the down on their cheeks—they're all the same, rotten, rotten, rotten, through and through."

Her voice rose shrilly. "And the best of them is the worst of them, for it's them as makes us believe 'em. It was a young doctor from the University Hospital who led me off before Lucy died. He kept sayin' it was just nature, that there could be nothing wrong in nature, and I believed him because he seemed clean and true. That's what they all tell girls like me, that it's right to live as you please according to nature, but I notice they don't say the same thing to their daughters or their wives or to the girls they're going to marry.

"There are some men who say they don't know why girls go wrong, but they'd know if they'd look to their own conduct. Who is it that makes the street the easiest way for a girl to earn her living? I've earned as high as \$125 a week from men, but I couldn't earn \$8 a week in a factory."

She hid her face suddenly. "What'm I telling you? I didn't come to tell you all this. I wanted you to believe in me. It was that, your believing in me that seemed to keep me up all those years, that kept me from being

bad inside like some of the rest of 'em." She struggled to her feet with the evident intention of leaving.

"You're good," she said dully, "good, and so you can't understand, and without understanding you can never forgive me."

"I can forgive you," I answered with a curious sense of inadequacy, "when you prove that you no longer mean to live this life."

She shook her head despondently. "It isn't that kind of forgiveness I want," she said. "Besides, you don't know what this life does to a girl. It ruins her in mind and body so she can't go back to honest work. The drugs, the drink, yes," she fairly hissed it at me, "the disease—they take the very life out of you."

"Three years ago I went to the matron at the University Hospital and told her I wanted to study nursing. She said to come back in a few days. I believe she meant to accept me. But when the time came I couldn't go, my nerves were all shattered, I couldn't count on myself. After awhile I went and told her my sister had been sick and I couldn't come, but it wasn't my sister. It was me. Look at me!" She stretched out her arms shaking as if with a palsy. "Who would want me now? What steady work could I do?"

"You can rest and get well and start over again." I assured her.

She burst into uncontrolled tears. "Listen," she said, when she had regained some composure. "I know it's about the end for me. That's one reason I came today. I won't live this life any longer, and there's nothing else I can do."

I sketched out pleasant plans for the future. A long visit in the quiet country, adequate medical care. To all my suggestions she surrendered but a skeptical attention, she was fondling my hands and looking strangely into the fire.

"If I could only tell the others," she said finally. "The good girls that are still young, that will come to take my place, then it wouldn't seem all so much wasted. For I know," she added quickly, "better than you, better than anyone who hasn't been through it, why it's wrong. When Lucy died, when I got the bad disease and it showed so I had to take up with drunken men or young boys who couldn't tell it on me, when I only could get a quarter or perhaps a drink, then I began to see why it was that girls should be straight and that men had no right to tempt them in the beginning."

"I might be married now and have children. Oh, God—children! If I had known that it was life that I was selling, life that had been given me to protect. If you would tell them, the girls and the men, too, that what they're doing is to take their pleasure at the cost of their own helpless little children, then they wouldn't sell out so cheap just for a little fun."

"I'm broken, I'm ruined," she went on wildly, "but I've learned my lesson. I learned it down there," indicating an abyss, "down in that hell. I would kill myself, I'd kill Lucy rather than to let her do what I have done. It's burned into me, it's branded, here and here and here," she touched the livid scars. "love and life must not be bought and sold."

Abruptly she stood up and approached the fireplace with unsteady feet. Her eyes were consuming a beautiful colored print of Bellini's Mary Magdalen. "A man

painted that," she said hoarsely, "I used to love it when I came to your house long ago, you remember, because I thought it true and beautiful. I used even to pray to it, but now I know it is a lie. Look at her wonderful gold-red hair, look at her white skin, her clear, pitiful eyes. See her lovely bosom, her fine delicate hands. Those are real pearls and rubies and emeralds that she wears. She looks like a queen, only more tender and more kind. But that wasn't the Mary that came to our Lord Jesus and threw herself at his feet, that wasn't the Mary he lifted up and forgave and told it'd be all right if she'd go and sin no more."

"No," she went on, the tears rolling unheeded down her cheeks, "that Mary was a woman looked more like me. She was ugly and wasted and foul with disease, but her heart was broken like mine, and our Lord looked straight through and saw her soul purified. And he loved her," she exclaimed, a great light of triumph coming into her face, "he loved her because she had learned."

She threw herself passionately on the floor at my feet, hiding her face in her hands. "Oh, Holy Jesus," she sobbed, "that's the kind of forgiveness I mean."

WHEN she left me it was all arranged that she should first stay at a nursing home and then go out into the country with some simple Quaker people whom I knew. Unconsciously I felt her lack of faith in the plan, so I was not especially surprised when they rang me up an hour or so later from a police station in a downtown quarter of the town.

"There's a body here we want you to identify, a woman. She may be almost any age. They got her in the water down near Long's pier. She looks like a woman who was not much good. In her pocket she had a letter signed by your name. Come, if you can, before the inquest. That will be at four o'clock."

I was there still in the room where I had seen her. Near the hearth was a small pool of dirty water that had dripped from her miserable clothes. The sunlight had shifted slightly along the rug. The fire had ceased its ardent crackling, that was all.

Meanwhile, there had been a struggle down there in the bitter wharf water and one of the many thousands had struck out for peace. A place was empty, as she had predicted,—to be filled by whom? There came upon me with appalling clearness the enormity of the thing. This was not just one case. It was the case of thousands. Today—tonight—tomorrow, the "young girls who would take her place" would be thrown into the mill to come out carrion.

She was but twenty-eight years old, and yet her life was done. The lust of men had devoured her as fire guts a building. She had been left by her mother an innocent and tender child, full of sweet promise. Eleven years under the hands of men had made of her this abject thing, degraded beneath all other degradation.

"YOU have sons, I have sons," an eminent lawyer, counsel to one of America's great railroads, said to me recently, "they cannot, in all probability, marry early. What would you have them do?" The shrug of his shoulders took prostitution for granted.

Would he, I wondered, have the heart to repeat his words in the presence of this dead girl?

National Stress

A Stimulus to Social Action

By Percy Alden, M.P.

IT is extremely difficult while the shock of the earthquake is still being felt to predict the shape, or the lack of shape, that earth will take after the convulsions which have affected it. The war in Europe has produced such profound emotion, such terrific changes in the contour of our national life that we can only prophesy in general terms. We do know that things can never be the same again. The belligerent countries have thrown everything they possess into the alembic of this war; what will emerge from the fiery crucible is beyond the knowledge of the ablest statesman and the most experienced social investigators. In the words of Thomas à Kempis: "It is one of those dark and hidden things, for ignorance of which we shall not be condemned in the day of judgment."

This much, however, is certain that the slaughter and the carnage which we have witnessed and are witnessing will affect us for many generations yet to come. The booming of the guns in France and Flanders and on the eastern front will reverberate down the centuries. Our children's children will bear the marks of the wounds which are now being inflicted. Peace will come, but if we are not careful it will be the peace of exhaustion, and something more than that is required. When the men return from the trenches they will undoubtedly be tired and weary of war.

The story of the bishop of Birmingham who, taking as his text the bestowal of the Victoria Cross upon a wounded soldier who was present, was suddenly interrupted by another man calling out, "Never mind about the Victoria Cross, give me the Victoria bus," typifies the spirit with which our soldiers will return.

Nearly everyone who writes of the war points out that with all its evil there is a higher side to it, that it does produce certain heroic qualities which are only latent in the heart of men, that it does cause a vast output of moral and intellectual energy. For the time being class and caste disappear. Even our criminal population has disappeared. The national life is on the anvil and under the hammer of social stress caused by the war, petty jealousies and petty differences disappear. The community feeling begins to emerge—the desire for a common ideal achieved through suffering and self-sacrifice.

All this is true; but it reminds me of what Balfour said of Winston Churchill who in a speech had made the statement that during his few weeks in the trenches his mind had been clarified with regard to the aims, objects and methods of the war. Mr. Balfour in his reply remarked that "it seemed a pity that it should require a European war to clarify the right honorable gentleman's mind." And in the same way I think that it is a pity that it should require a European war to enable us to discover how great a calamity war must necessarily be.

I don't think that we must disguise from ourselves the fact that war is always a disaster and that this war is an appalling disaster. Of course, there is truth in the saying

of Shakespeare that "there is some soul of goodness in things evil," but I cannot think that the view which is sometimes taken of war as a "purgation of the passions," to quote Aristotle, in respect of the "play," is a correct one. It may purge some passions and it may evoke some good qualities very much as a famine or a pestilence would, but it brings to the surface the worst and most evil side of man and intensifies the brute in our nature.

There may also be some truth in the saying that "this war will help to end war"; that all the belligerent countries concerned will be more inclined to settle their differences by arbitration and conciliation. It is quite possible that just as the circumstances of the war have unified our feeling in Great Britain, so the reaction which this war will produce will subdue the passions even of the militarists in each country and thus enable those who are laboring to create an international mind, to achieve some measure of success.

We must not, however, expect too much in this direction. The war will not solve the problem of nationality, or produce natural frontiers just where we want them, or abolish all the differences created by creed and race. The war won't work a moral regeneration because we want it to. It will work a moral regeneration just in proportion as the democracies of the countries concerned awake to the fact that they have not been governing but governed.

If this great catastrophe does produce a desire to think strenuously upon the causes of war, if it does produce an effort to understand other nations and other races, then there is some hope for the future. The real tragedy will be if following on this war we waste the opportunities which are now offered of building up a new national life. These opportunities have been wasted in the past.

One cannot say that either the Crimean war or the South African war, so far as England was concerned, did much good. The struggle against Napoleon did produce a sense of unity which was of value. Our own civil war of 260 years ago caused the figure of Oliver Cromwell to emerge and in a sense made modern England possible, but in every case we had a reaction. I well remember after the Boer war the chastened feeling that existed amongst our people. We were saying this was a foolish and bloody adventure. Let us now try to heal the wounds of South Africa, and let us also try to remedy the social evils which have too long been neglected in our own midst. An attempt was made, not altogether unsuccessful, by Sir Henry Campbell Bannerman, to reconstruct and rebuild our shattered ideal.

What are we going to do when the period of national stress is over? Are we going to relapse into a stupid individualism? Are we going to relinquish our collective effort and once more leave everything to chance? I hope not, and it is that hope which enables social reformers to go on working in these dark days.

Let us for a moment look at the most immediate effects of the war in England. Amongst the best men there was a good deal of heart burning. They knew that the narrow individualism of the past had made it difficult for us to rise to the emergency. Educationalists saw that Germany at all events, whatever may have been her motive, had done much to prepare the nation for any crisis that might come. We did not at first even see what ought to be done to safeguard ourselves against a shock which threatened the stability of the nation itself.

You will remember the measures that were devised to maintain our credit, how that all bankers and financiers of the country were called to the aid of the government. You will recall the steps that were taken to secure our food supply, and the large funds that were raised to help that section of the people which we felt would feel most of all the distress occasioned by the war.

Those who anticipated a considerable amount of unemployment began at once to organize to meet what they conceived to be the probable need. There never was a time in the history of the United Kingdom when measures, astounding in their magnitude, were devised and passed through the House of Commons in the space of a few days. All opposition to social legislation was swept away. Confronting a gigantic need, even the hide-bound Tory consented to a form of Socialism which would have horrified him at any other time. Money was voted in millions, not only for specific purposes, but for all sorts of unspecified purposes contained in the various expenses arising out of the existence of a state of war, assisting the food supply, promoting the continuance of trade industry and business communications, whether by means of insurance or indemnity against risk or otherwise, and for the relief of distress. Not only was this money voted, but the prime minister said that the moment it became apparent that more was required that moment he would not hesitate to ask for a further grant.

England's Food and Drink

A SYSTEM of insurance for ships and cargoes was set up, the government assuming 80 per cent of the risk. Committees were appointed to deal with the question of food prices, and all the existing traders' organizations were mobilized to the assistance of the government. A method was devised for fixing prices both for food and all military supplies, and the unreasonable withholding of food supplies was made illegal.

In fact, the Board of Trade had power if it wished to requisition all foodstuffs in the country, just as the war office or the admiralty requisitioned material for their own purposes. Every possible step was taken to prevent the big dealers from speculating in food, and in the case of sugar it was felt necessary that the government should create a sugar monopoly, which it has done by purchasing nearly 200,000,000 dollars' worth of sugar in the markets of the world. In that way the price of sugar has been controlled by the Board of Trade and although it has gone up in price the profit is partly an exchequer profit. The trade can be dealt with immediately simply because the actual price he pays to the government is known.

Just at first the rich started the bad practice of buying large stocks of provisions and traders were told that if this practice were encouraged by them they would be dealt with as criminals. Since that time there has been no need even for such a threat.

In connection with this question of food, it ought to

be mentioned that the co-operative societies of England, owing to their promises not to make any extra profits by the rise in prices, have secured an enormous increase of membership and there is no doubt that co-operation from this time forth is destined to play a much larger part in our economic history than ever before.

It is interesting to note that the government has pursued the same policy but on a still larger scale. It is now sole purchaser of practically all the meat consumed by the British and French and to some extent Italian armies.

What is not required for the armies is sold to the dealers at the market price. This was not achieved without a great struggle. The railways had already been unified and placed under government control, but the shipping had not been fully commandeered, although the government possess now nearly 70 per cent of all the mercantile marine. The shortage of meat owing to the enormous armies in the field made it possible for the foreign owners of cattle and of sheep to greatly increase their prices, and this price would have become prohibitive had not the government commandeered or purchased all the cold storage space in the British mercantile marine and as much more as was obtainable. New Zealand and Australia commandeered this entire supply of mutton and beef. In this way it became quite impossible for the big meat producers in South America or anywhere else to charge exorbitant prices, because in that case the government simply refused to carry the goods. An attempt to monopolize the whole of the meat producing trade on the part of a few companies was thus broken down at its outset.

Mr. Lloyd George was anxious to secure if possible a large measure of prohibition in connection with the liquor traffic, but this effort failed. Since then, however, choosing the line of least resistance, he has been able to place all the areas of the country that can in any way be considered munition areas (and that, of course, means the greater part of the country) under a board of control which has almost unlimited powers.

This board can, for example, in any munition area take over the whole of the public houses and saloons and close any that it chooses. It can run the rest itself, making them in effect government concerns. It can start canteens of its own inside or outside the works. It can sell just what liquor it likes or if it chooses no liquor at all. By extending the area in each case, it has now succeeded in covering the thickly populated parts of England and Scotland, and the result will be seen in the diminished statistics of drunkenness and in the enormously increased output of the munition shops.

Added to that there is a recent decision to take over all the spirit distilleries of the United Kingdom and run them all for munition purposes. Spirits can no longer therefore, be manufactured, and only existing supplies can be used. The price will no doubt be increased and it is hoped the quantity consumed will be seriously diminished.

Side by side with this campaign against the evils of the liquor traffic in time of war is a limitation of the hours in all camp and troop areas, during which saloons are entitled to be open.

Organizing Employment

MAY I now return for a moment to the question of unemployment which seemed to many to threaten at the outbreak of the war? Herbert Samuel, who was then president of the local government board, urged all traders

and manufacturers to keep their mills and factories going even at a loss. The road board which had some millions of money on hand was instructed to use any such funds for employing laborers in improving the condition of the roads, and the development commission was urged to take action in the same way. The development commission had already made its plan for very big constructive and reclamation enterprises.

Circulars were sent out to the municipalities and county councils urging that their undertakings should not be curtailed but rather increased, and the War Emergency Workers' Committee was appointed representing every section of labor. The business of this committee was to co-operate with government departments in the efforts that were being made to reduce the distress from want of employment and later to deal with all questions of labor disputes and labor conditions arising out of the war.

Happily the unemployment measures proved unnecessary, although they may be required after the war is over, but it is significant that such steps should have been taken and that a measure for building working class cottages in agricultural districts which had been suggested was put through both houses of Parliament in a few days. That measure, housing (No. 2) bill, appropriated \$20,000,000 for the building of houses and cottages for the working classes in the United Kingdom.

It is desirable that some of that money should now be used in certain areas in order to provide accommodation for the working classes who have crowded into certain war districts. The government has, however, already spent a very large sum in places like Woolwich where large numbers of cottages have been built for the extra workers attracted to the arsenal. The number of legislative measures put through Parliament during the first six months of the war was beyond all belief. Many of them, of course, were purely military measures but at least half were designed to meet the emergencies of the moment. It must be admitted that many of these measures have been successful and yet in the face of all this, I wish to urge that there is still a great opportunity which ought not to be wasted and it is with that thought I propose to deal for a few minutes.

Hundreds of thousands of my fellow countrymen are sacrificing their lives at what seems to them the call of duty. What is the business of those who remain? Surely it is a resolution not only to prevent the recurrence of such a war but to deal drastically with what we know must be the evil effects of the war after all this vast expenditure of blood and treasure. We need some clear thinking. We need a vivid sense of social duty. For the danger will be that after the war is over we shall fall back into the usual rut, content ourselves with the gospel of self-interest and allow that stupid individualism which has been our bane in the past to once more assert itself. Individualists fail to recognize that the highest degree of individual welfare can only be attained by considering the welfare of the whole community.

The Britisher has been condemned as a money grubber. one who cares nothing about the state and nothing about the nation as a whole. We are beginning to see that he has another side to his nature—that he does respond to the call of self-sacrifice, that he can unite and that he can submit to discipline. But he lacks imagination; he fails to see, for example, the importance of spending money on education. In America, there is far more real interest in the colleges and universities than there is in

England. Rich men display a public spirit which is almost unknown on our side. There is no hesitation in giving millions to help research work or to strengthen one side or another of university life. The great universities of Oxford and Cambridge are suffering just now for lack both of men and money owing to the war.

An Educated Democracy

IF WHEN the war is over, combined with a great reform movement, there could be an increase in the funds available for these and other universities it would help us to recover some of our lost ground in the educational world. But, there must be a real reform of educational method and our educational system must not leave out of account organized labor. Both the churches and the universities in the past have been far too apt to forget that after all the great mass of people are manual workers. I sometimes say of the churches "the paucity of Christians is astonishing considering the number of them" and the churches have much leeway to make up if they are to be of use after the war.

If we are to have a true democracy we must have an educated democracy, and I think I may be allowed to add a religious democracy, using "religion" in the broadest sense. The churches in England have perhaps failed to see the possibilities that lie in an organized movement throughout the whole community, in the direction of a better and truer education—an education which makes for citizenship.

When Robert Lowe extended the franchise and created a democratic electorate, he said now we must "set to work to educate our masters." From that time to this, either we have made no attempt or the attempt has been abortive. The people as a whole do not understand the problems they are called upon to solve—problems of economics, of administration, and of international policy and for the matter of that many of our legislators are equally ignorant though they think they know. And then we complain that they make mistakes. Lord Bryce said to me in an interview which he gave me some time ago, "Nations respond to the appeal that is made to them in a time of great national emergency when they have been trained to love truth and honor, to cherish justice and liberty."

Have we trained our people to respond to the call of such high principles? Have we not rather given them a mean and materialistic and selfish view of what England and the empire stand for? How can we expect the average workingman to comprehend what is meant by the British empire or as I should prefer to call it the British commonwealth? How can we expect him to make sacrifices for that commonwealth when he has no conception whatever of what it means and when his interest in his own country has so often been destroyed by the lack of elementary justice. Knowledge is all important. Clear thinking is invaluable, and after this war if the effect is to create a public spirit and increase our social energy, knowledge may enable us to deal with many questions which up to the present have been neglected in whole or in part. We must not drop our interest in the housing question, the question of unemployment, of old age, the drink question, the declining birth-rate, infant mortality, and the shocking frequency of disease amongst the school children of our land.

These will be social duties, not mere matters of inquiry and statistics. These will be moral duties, for every

well-ordered reform is the expression of the moral life of the community. Then again just see what a change the war has wrought in our outlook on the railways, the coal supply, the food supply, the question of shipping, the government control of the manufacture of munitions of war! It is not improbable that after this war is over we shall continue to control all the railways of the country. It is just possible that we may control in the same way the shipping and the mines as being indispensable industries, and meanwhile the state is in almost complete control of thousands of munition works, the largest of which are state owned.

Look at the question of the liquor traffic! Why we have made more progress in one month on the drink question than we had made before for fifty years. It used to be said "better England free than England sober." There is no reason why it should not be both. Indeed, I am inclined to think unless England is sober she will never be free. If the state controlled the whole of the liquor traffic it would give the people a chance to discover their true selves.

This war is a terrible evil—so terrible that we are unable to conceive all its innumerable horrors. Our imagi-

nation boggles at the picture of starving millions and the vast armies of dead and wounded men. Can it fail to be a mighty education for the future? I hope that amongst the lessons we have learnt is the lesson that there must be far more democratic control of foreign policy and less secret diplomacy, but that is only possible if the democracy has knowledge and training. We are so pathetically ignorant in these matters. Ignorance is the enemy of all true progress. True education is the stepping stone toward every pure ideal. I prophesy that party divisions will have much less effect in the future than in the past, that foreign questions and social questions will be, if only we take the right steps, treated as scientific problems to be solved by all earnest thinking citizens, and finally we shall give to the working classes the fullest educational facilities so that democracy may be equipped for the responsible duties which have been committed to its charge.

I don't suppose that I shall live to see more than the slender beginnings of this new republic, but I find my comfort in the words of a great English poet

"For us the day lives only for a little and is gone,
Time and the fruitful hour are more than we."

A Reproach Among Women

By Louise Montgomery

MARY SLOVENSKO laid the four round balls of hamburg steak on a pie-tin and placed the tin at the back of the stove next to the frying-pan. Then she unlocked the kitchen door which was the only means of entrance to her little three-room flat, and sat down on the unpainted wooden chair near the open window.

It was half-past five by the little clock on the shelf over the sink. The supper-table with its spotless oil-cloth covering and thick blue dishes was laid for two, and there was a basin of warm water in the sink within easy reach of a cake of yellow soap and a clean crash towel. For fifteen years Mary Slovensko had made the daily preparations for the evening meal and had sat down to wait by the window that looked out upon the littered and ill-smelling alley through which, during the same fifteen years, her husband had never failed to take the short cut from the the stockyards to the rear of the tenement house.

Mary understood him well, this solid, stolid, hard-working husband. She had once given it as her reason for never leaving the flat at this hour that he always liked to hear "something frying" while he was climbing the two flights of stairs. It was a comforting sound to the man who ate his cold lunch in the sausage room where he worked ten hours a day on six days of the week, and Mary was wise enough to perceive it. In all the simple ways known to women she patiently tried to please her husband. His clothes were carefully washed and mended; she never kept him waiting for his meals, and the three-room flat was always clean. Not that he was more difficult to please than other men. Mary knew that from the beginning she had found favor in his sight and that he still loved her; yet the wife walked humbly before her husband and in the sight of the world, for Mary Slovensko was a childless woman.

As she sat waiting by the open window, the daily conscious sorrow of her married life oppressed her as it always did in her moments of idleness. With her forefinger she gently worked the earth in the green box where each year she planted sweet peas that she might behold anew the miracle of the germinating seed. It was the middle of May and the cool warmth of a spring day stirred her heart. On a day like this ten years ago, after her five years of patient waiting for motherhood, her heart had cried out to her husband even as Rachel had cried unto Jacob more than three thousand years before, "Give me children, or else I die!" And like Jacob her husband had replied with an impulse of anger that he was not in the place of the God who sends or withholds the child. Then Mary had hung her head and sobbed, and from that day her passionate longing was buried in the secret chambers of her own heart.

SHE turned from the green box and saw her husband coming up the alley. His left hand was carrying the empty dinner-pail and his right was holding the four corners of an immigrant's bundle which he had thrown over one shoulder. A young girl followed about three feet behind him. Mary did not stop either to wonder or to look again. Even so unaccustomed a sight could not inhibit the daily act of her married life at the appointed moment. The four round balls of hamburg steak were frying in hot fat when Jaroslov Slovensko reached the upper landing, pushed open his own hospitable door and motioned to the young girl to follow.

Mary's soft blue eyes questioned her husband.

"Julia Mlinik is her name," he replied. "She's no place to go. She's come over to work with her sister Annie and can't find her. Annie worked in the yards in the soap-house and lived by Burzinsky and his wife where

she paid for her room two dollars a month. Burzinsky says Annie didn't come back last night after work. They won't keep this girl who has nothing. She is Slovak like ourselves. You know Burzinsky is a Pole. He brought the girl to me. He says it is more just that we keep her till Annie comes back."

He spoke slowly in the Slovak tongue, according to the habit which fifteen years of life and work in Chicago had not changed, dropped the pail and the bundle on the floor and moved to the sink to wash in the basin of warm water.

The mother-heart of Mary was touched as she looked at the fresh red-cheeked young girl in her peasant dress standing helpless and silent in their door-way. She laid a hand kindly on the girl's shoulder.

"Put off the shawl and sit down. You shall eat with us tonight."

Julia Mlinik spoke for the first time.

"I had reason to come," she said, and pulled from a pocket deep in the folds of her full skirt a soiled letter from Annie bearing the address of the Burzinskys and setting forth the alluring wage of six dollars a week offered to all young girls who could work ten hours a day in the stockyards.

"And now Annie is not here. My sister leaves me like this in a strange country."

Her blue-grey eyes were full of tears, but she sat passively holding the letter between the red palms of her large strong hands.

Again Mary laid her caressing hand upon the young girl. A situation like this was not wholly new in the neighborhood. Mary remembered that she had come with her father and mother, but she knew that the past ten years had seen many young girls leaving their parents in the old country home and coming alone to meet brothers, sisters, or even village neighbors who had gone before them. Lost and mistaken addresses, unaccountable separations and mysterious disappearances were too often a part of this eager search for a new world, and many an aching heart made no outward cry.

"How many years have you, my child?" she asked.

"I have seventeen years today," replied Julia.

Mary shook her head sadly and repeated her hospitable invitation. "Come, put off the shawl. Wash and we will eat. You shall stay by us till something comes."

Jaroslov had his usual portion of meat but Mary shared hers with the newcomer. After the meal the two women washed the dishes while the man smoked his comfortable pipe, pausing now and then to ask some question of the old country. Mary grieved over the poverty that did not allow her the possession of an extra featherbed, but she opened the full drawers of her small chest and drew out sheets and quilts and a pillow to make a bed for the girl on the floor of the front room.

THE next morning Julia followed Jaroslov who showed her where to take her place in the line of women and girls waiting to be selected for the day's work. She returned at six o'clock with the joyful news that she had been one of the first to be chosen to pack the dried beef in the cans for one dollar a day as long as she worked well. Mary's heart yearned over the girl and Jaroslov silently figured that with this amount she could easily pay two dollars a month, which would be clear gain to them, for her lodging in the front room; and as for the cost of food, she would pay for her portion according to the

Slovak custom. It did not once occur to any one of the three that it might be possible to find Annie, for initiative and resourcefulness are not the characteristics of their race, and patient endurance has been for many generations the lot of this people without a national history.

At the end of the first week Mary bought a small mattress to make the girl more comfortable and by the end of the month she had saved enough out of her husband's wage of nine dollars a week to pay for a single bed to place under it. Thus it came about that Julia Mlinik took up her unquestioned abode with Jaroslov Slovensko and his wife Mary.

The summer months passed quickly. Julia had but few idle weeks even when work grew slack and she could report to Mary that many other girls were laid off, for her strong hands were controlled by a mind that placidly and obediently accepted the daily task. When the autumn days came with the frost in the evening air, Mary said to her husband:

"Shall we also keep her through the winter? You must think. It will take more heat if the front room is open."

Jaroslov remembered that it had been their custom during the cold months to close the door between the front room and the kitchen and seal the cracks with heavy brown paper from the butcher's shop, thereby cutting down the cost of fuel. To Mary he seemed to ponder the question long and unduly before replying.

"I think we must keep her for the winter."

SO Julia Mlinik stayed and worked and faithfully paid for her lodging and food. At Christmas she was ill without cause, so Mary said to Jaroslov, and the first week in January found her still unable to return to her work. Then Mary spent fifty cents of her carefully hoarded money for some dried herbs, which the corner druggist assured her he had secured from the southern slopes of her own Carpathian mountains, and from these she brewed an ill-tasting mixture that Julia obediently swallowed at intervals and in such quantities as the elder woman directed. Another fifty cents went for additional fuel because Julia insisted on wearing her shawl in the house and complained of the cold draughts. Seven days dragged by and still the girl seemed to Mary's anxious eye to be spiritless, unhappy, unlike herself and loth to follow Jaroslov to the yards.

It was half-past five by the little clock. Mary sat down in her accustomed seat and with her thumb and finger tried to scrape the frost from the window-pane that she might catch a glimpse of her husband coming up the alley through the falling snow.

"The cold is heavy tonight," she said. "Julia, bring me the big knife."

Julia walked heavily to the drawer in the kitchen table and Mary turned suddenly to look at her. In an instant the woman and the girl faced each other.

"Julia Mlinik, put off the shawl that you must wear to hide your shame."

The girl silently dropped the shawl from her shoulders to the floor.

"Julia Mlinik, what disgrace do you bring to honest people who took you in and cared for you like a daughter. Is it true what my eyes now see for the first time? What man is father to the child that will come to you?"

Mary's voice rose with each accusing question and her soft blue eyes grew steel grey and relentless.

As Julia stood passive and silent. Mary took her fiercely by each shoulder and shook her.

"You must speak! You *must* speak!" she repeated. Then in a gentler tone—

"Tell me. You are after all but a child. If it is some foolish young fellow from our own country that made love to you. Jaroslov will find him and bring him here. The fellow shall marry you and give you a name for the child."

The compelling power of the elder woman broke the stubborn silence. Julia lifted her head.

"Your husband. Jaroslov."

Mary unloosed her hands and shrank from the girl.

"It is a lie you speak. Jaroslov—my husband—he has never been like that. I have cherished a viper in my bosom and now it rises up to strike at my heart. Speak again. The truth!"

Julia shrugged her shoulders. Mary, searching the young face thought she saw a look of scornful and conscious superiority in the girl who was soon to fulfil the destiny of woman. She shrank before that look and clapped her hands to her ears as if to shut out Julia's next words.

"Again I say, Jaroslov. Your husband."

For the first time in all the uneventful years of his married life Jaroslov missed the comforting sound of frying meat as he climbed the stairs. Instead he heard the unfamiliar, strained and high-pitched voice of his gentle Mary mingled with Julia's deeper, persistent, accusing tones, and knew that the crisis in their affairs had come. He pushed through the door and stood before the two women. Mary walked straight to him; she brushed the light flakes of snow from his sleeves and straightened the narrow coat collar that he had turned up to protect his neck from the cold, while her beseeching eyes called for the truth.

"It is a lie that she speaks, Jaroslov. I know it is a lie that she speaks."

Jaroslov Slovensko drew a deep breath and waited, for his tongue was heavy in his mouth.

"She speaks the truth. I want no words now. Get to work, one of you, and make the supper ready."

Silenced before the authority of the man, unquestioned by women of their kind, Julia hastened with the interrupted preparations for the evening meal, but Mary stood idly by the frosty window. Yet when the three sat down together all things were as usual to the outward eye except that by the little clock on the shelf over the sink, supper was fifteen minutes late.

Relieved of the heavy burden of secrecy Julia was soon sleeping soundly in the little bed Mary had bought for her. Then Jaroslov added fuel to the kitchen fire, opened the oven door to let more heat into the room, and drew two chairs together before the stove.

"Sit down, Mary," he commanded.

The wife drew her chair apart and obeyed.

"Now we will talk," he said.

But Mary's lips were firmly pressed together and a stubborn silence fell between them.

"You are accusing me," he broke forth angrily, "you who could not give me a son to work for me in my old age and make my name live in America."

Mary bowed her face in her strong hands and sobbed aloud.

Jaroslov stood up, walked around her chair and back again, and sat down. She had not cried like that since

the time when he had chided her for the *outrage* that had burst from her after her five years of waiting for motherhood. He rose up again and stood over her with a coarse and heavy hand awkwardly trying to caress the bowed head, while he struggled with his explanation in quick short sentences.

"Listen, Mary; listen, I say. The boy shall be ours. He shall stay with us. You shall be his mother. Julia can soon go. The city is large. Nobody will know. There is plenty of work away from here. After a time some man will marry her, and we shall have a son—a son for our old age."

Mary had listened. She arose and faced her husband, confusion and conflict in her simple mind.

"Jaroslov, Jaroslov, did you think of—of me?"

Again Jaroslov Slovensko drew a deep breath and waited. It was hard to speak many words before the look in Mary's face.

"I have said it, Mary; I have said it. Julia shall go; the son shall stay by us."

They grew calmer after these moments of unwonted intensity and Jaroslov retold the story of how he had lost his name in America; of the time fifteen years before when, only half comprehending the questions put to him, he found that he had been registered in the stockyards by the name of the district from which he came, Slovensko. He did not know how to change this mistake and he had hoped for a son to restore the name. Then the talk turned on ways and means. They must keep Julia till after the birth of the boy. She must be well fed and comfortable, for the only son must be strong. It would cost money, but Mary thought it would be possible for her to earn the price of a day's washing now and then and Julia might yet work a few weeks.

DURING the two months of waiting that followed Mary was outwardly calm, practical and busy. There were little clothes to be made and a crocheted cap. She pondered long upon the size of the cap but decided that it must be of good size. Jaroslov was a well-built man and the son would surely be like his father. As they could not afford a cradle, Jaroslov brought a soap-box from the grocery, whittled off the rough edges with a knife and put wheels under it. Then Mary padded the sides and lined it with bright-colored cloth, and from her own pillow took the feathers to make two tiny feather beds. Julia had no part in these preparations. Without will or conscious purpose she had followed the primal instinct and now she passively accepted the protection granted to her.

Jaroslov was secretly rejoiced that both women were behaving so well. He did not know that in the stillness of the night Mary would awake suddenly with the sense of bewilderment and fear that often comes when the mind has unconsciously carried the burden of the day into the sleeping hours. Then she would creep from their bed and sit by the frosty window and beat upon the tender flesh of her breasts till the force of a physical pain seemed to draw the ache from her heart and she could creep back to bed shivering and tearless.

In the morning of the tenth day of March the child was born. Jaroslov was sitting by the stove near the box cradle, hat and dinner-pail in hand, waiting past the hour that had always found him on his way to the stockyards. Mary brought the child wrapped in a little yellow blanket, knelt down by the cradle and tenderly laid it

between the tiny feather beds.

"It—it is a girl," she faltered, not daring to look at her husband.

Jaroslov looked at his wife kneeling over the new-born child and found no words. This was a possibility his slow mind had not dwelt upon in his thought of the coming child. He paused at the threshold of his door a moment, put on his hat and went down the stairway. Mary watched him from the window till he reached the end of the alley and turned into the street, and it seemed to her that his heavy shoulders were bent.

FOR seven days the hungry heart of Mary fed upon a deep and holy joy that even the bitter disappointment of her husband could not withhold from her. Then a great fear entered her heart. Julia, the placid and passive girl, obeying like a child, was growing self-assertive, even commanding. The two women strove in secret jealousy for the right to be first to minister to the wants of the child. Julia found fault with the clothes that Mary had made with so much care. The crocheted cap was too large and Julia audaciously demanded that Mary buy linen thread for another which she herself would make of the correct size. Then they quarreled over the christening, the name the child should bear, and which woman had the better right to carry her during this holy ceremony.

"Would you show your shame to all the world?" asked Mary indignantly. "Jaroslov and I will bear the child. Did he not say the child should be mine?"

"She is mine," retorted Julia, scornfully, "and Jaroslov Slovensko is her father. Does he deny it? He shall walk by me and give a name to my child. Do you think to deceive any to believe that your flat breasts are giving suck?"

Mary turned white before this thrust, but she dared not tell Jaroslov, who as yet knew nothing of the strife between the two women silent and obedient before him, nor of the place Julia expected him to take at the christening.

The next day when Mary returned from the shop where she had gone to buy meat for the supper, Julia and the baby were gone. She could see that the baby's clothes, the tiny feather beds, and the little that Julia possessed of

her own, had been taken in one of the bed quilts. Patient and helpless she sat in the wooden chair by the window to watch for her husband. A thousand fears were knocking for entrance to her brain. The baby had never been out of doors before. Julia had feared to be seen with her and Mary had been sure the child would catch a cold. A raw March wind was blowing. She was glad Julia had the feather beds. The girl had little sense. She would never be able to care for the child alone, and she had no money.

But Jaroslov was coming up the alley. For the first time in her married life Mary ran down the two flights of stairs to meet him and pulled him within the doorway.

"The baby"—she panted, "the baby has gone, and Julia has gone with her, and the clothes, and the feather-beds!"

Sobbing and clinging to him she told of their quarrels over the christening and the naming of the child. By the time they reached the kitchen door, the man comprehended. He looked at the empty box-cradle, the work of his hands.

"Let them go," he said harshly. "After all, it is but another girl. There are already too many women in the world. They make trouble."

He walked to the window and looked out uneasily upon the familiar alley. Mary stood by the cradle, but her eyes followed her husband and clung to him. He also suffered; and in that moment, from her yearning mother-heart there arose a great wave of compassion that enveloped her husband and Julia, and their baby. They were all children in their claim upon her unselfed love; even the strange and unknown purpose of the distant God who withheld her child must be forgiven.

"She will go to some neighbor for the night," Jaroslov continued, "and perhaps tell a story against us. Who knows what she will do? Yet it may be that we can speak to the police to look for her."

But he did not speak to the police, nor did either one know how to make any effort to find Julia and her child. With the patient endurance of his race, Jaroslov accepted this next step in the tragedy of his life while he faithfully carried his daily burden of hard labor; but Mary lived with a new peace in her heart—a peace that had been born of the Spirit.

A MORNING PRAYER

By Frances Beers

ROSY morn that floods the skies,
Flood thou too my languid eyes
Which reluctantly unclose,
That the heart of the world's rose
I may vision clear today,
Not its calyx, dim and gray.
Matin bells, so silver clear—

Tune my ear that I may hear
Not alone the birds that sing,
But the song in everything;
Catch the rhythm in the beat
Of the countless, ceaseless feet,
Hurrying swift or trailing slow,
As to labor forth they go;
Hear a music in the din
Of the trains that past me spin,

Underground and overhead,
Through the labyrinthine spread
Of the giant iron mesh
That the town encompasseth;
In machinery's clanging blow
Hear the gods who forge below,
With such clamorous, fiery stress,
Gifts, the sons of men to bless;
Hear that anvil chorus beat,
Of the earth-song, swift and sweet.

Touch my eyes that I may see,
Fair as dream, reality;
Let me in each waif's wan face
Still the heavenly Christ-child trace;
Let me as a sister greet
Every woman of the street,

Know her kin to me no less
Than the nun in stainless dress,
Who behind her convent bars
Holds communion with the stars.

O,—and hardest task of all!—
Let me keep no portion small
Of myself back, as too fine;
Hold too dear the heart's red wine,
Still to serve and still to pour
For the lowliest at my door;
Let me know my best was meant
But to share in sacrament
Still with all humanity
Seated at life's board with me.
These things bring, and day shall close,
As it dawned, in radiant rose.

COMMON WELFARE

THE MONTH

IN common parlance, New York should worry. Following the long garment strike with its relief problem for thousands of families, the city was plagued all summer with infantile paralysis. It faced at one time the possibility of a real food shortage, had the general railroad strike come off. The railroad brotherhoods placated by President Wilson's eight-hour law, the city found itself without trolley service. Once settled, that dispute broke forth anew. And there was grave question whether the subway and elevated men would not follow the surface car men and, in fact, all organized labor join a sympathetic movement which would have given us the first general strike in the Americas. At the time of going to press that calamity seems to have been avoided by the unwillingness of men and women in other trades to strike in sympathy with the Interborough men who are not themselves on strike in any numbers.

One of the statements of the street-car men's leaders—that in the event of a general strike, milk for babies and invalids would not be tied up—seems now to have been almost prophetic, for 300,000 cows are on strike through the action of their legal guardians, the dairymen. As the total number of cattle who supply New York is about 350,000, the situation is alarming and, by the time this issue of *THE SURVEY* is distributed, may be critical.

Milk-selling in New York city is, broadly speaking, pretty much in the hands of a few very large companies. Their organization is due in part to the increasing pressure, finally culminating in a rigid demand, of the health authorities for pure, clean milk. The companies, in turn, have passed on this pressure to the dairymen and farmers. Now they have organized into a league and demanded not only higher prices but that the city dealers shall buy only through the league. This the dealers have refused to do. The test was scheduled to come this week.

Distant parts of New York state, other states and even Canada have been scoured by the companies for other sources of supply. But their plans seem pretty uncertain in the face of the Department of Health's statement that there will be no relaxing of the milk standards now in force and the general understanding that it is the striking dairymen who have the equipment and experience necessary to meet those standards. And the dairymen, in turn, are probably prevented from suddenly going into retailing for the pasteurizing plants are owned by the companies.

Milk and trolleys, on top of garments and railroads, have led to talk in many quarters of the need of the city's taking steps to control its own destiny, to make it impossible for a dispute between manufacturers and workmen, farmers and merchants, to throw in the comfort, the transportation and even the food of five million people as one of the stakes of the conflict.

It was after the beginning of this month that President Wilson signed the federal workmen's compensation bill, which has been described by a contributor to *THE SURVEY* as "the most scientific and the most liberal compensation act in any country." Although there had been no opposition to it, Congress was indifferent and, as in the case of the federal child labor law finally accomplished in August, only strong pressure from the White House brought it to a vote. Apparently the year of a national election is a good time to press for social legislation.

Among the military appropriations was one of \$2,000,000 for relief of militiamen's families, which went through almost unnoticed, except, perhaps, by the War Department which is charged with administering it.

Maine gave a hearty majority to the fifty-four-hour law for women and minors which came before the voters at the state election of September 10.—Infantile paralysis has declined greatly in New York city and the schools have finally opened with only a small falling off in attendance.

PRIVATE SAVINGS AND PUBLIC THRIFT

THE American Bankers' Association laid emphasis upon rendering a public service as well as promoting the banking business in its commemoration of the first century of American savings banks. At the meeting in Kansas City, the historical review of the hundred years by Edward L. Robinson of Baltimore was broad enough not only to take account of the rise and progress of savings banking abroad and in America, but also to reckon with the economic and social conditions out of which the movement arose and upon which the thrift it promotes will ever have closer and more complicated bearings.

The new campaign for thrift, upon which the association enters to inaugurate the second century of savings banks in this country, starts with a social vision of the past. Mr. Robinson established a broad point of view for the banker and the publicist to take, by sympathetically portraying the humanitarian motives, social ideals and practical business methods which combined to produce the first arguments and agencies for savings.

Daniel Defoe was given the credit of being the forerunner of the movement in his visions of "a mutual marine insurance society," a government pension plan to provide for the old age of the working classes, the abolition of imprisonment for debt—all published in his two books entitled *Essays and Projects*, and *Giving Alms No Charity and Employing the Poor a Grievance to the Nation*. Two hundred years after this visionary pioneering, Germany established the first bank for savings in 1765, France another in 1790, and Switzerland followed in 1792.

But the first savings bank of the modern self-sustaining type that was actually put into operation is credited to the Rev. Henry Duncan, who, in 1810, established a "parish bank" to relieve and prevent the poverty of his parishioners at Ruthwell in Dumfriesshire, Scotland.

The Edinburgh Society for the Suppression of Mendicity was carried out on this local suggestion so successfully that in 1817, Parliament took under government regulation the rapidly multiplying savings banks in the United Kingdom.

It was not until 1816 that Philadelphia established its Savings Fund Society. The Bank of Savings in the City of New York was projected in that year, but did not open for business until three years later. The agitation and education which its promoters advanced meanwhile were worth the delay. For thus the new thrift by savings was shown to supplement or supercede such previously existing agencies as the Society of Mechanics and Tradesmen for supporting sick and injured members, the Society for the Relief of Poor Widows, the lottery of 1803 for "public improvement and charitable purposes," and last but not least, the Society of Tammany or Columbian Order in the City of New York, chartered in 1805 for charitable purposes.

The Address to the Public, issued by the trustees of New York's first savings bank, together with their report of its first year's operation, were cited as suggestive of the motives, standards and ideals with which the savings banks of today might well start upon their second century's campaign for thrift.

However savings banks may have reverted to the promotion of an individual thrift regardless of its effect upon the group or the community, yet the relation between "savings" and public welfare and control were steadily kept in view throughout the proceedings of the convention. An address by Graham Taylor, director of the Chicago Institute of Civics and Philanthropy, brought out the social aspects of thrift and will be published in an early issue of THE SURVEY. The bankers were warned from their own ranks that a nation-wide thrift campaign must seek more than deposits and must be broadly educational if it would be efficacious. Their attitude toward these broader views of their function was tested also by their discussion of the relation of the government to the banks.

The two critical points at which reaction might have been expected were with reference to postal savings and the federal reserve act. The discussion of Government and Private Institutions for Savings by Carter B. Keene, director of postal savings, evoked no dissent and was received with hearty applause. Unchallenged was his claim that "the verdict today is almost unanimous that postal savings have filled a neglected niche in our social and economic systems;" that "postal savings banks have brought \$90,000,000 from unprofitable and insecure hiding places;" and that "the well-defined policy of the postal system is not to interfere with the activities of sound private savings insti-

When Nature Turns Outlaw

*"Blow, winds, and crack your cheeks! rage! blow!—
You cataracts and hurricanoes, spout"*

Thus King Lear, in Shakespeare's tragedy, defies the elements. But man, even today, cannot challenge nature with impunity.

The unsinkable ship goes down like a rock from the impact of an iceberg. The fireproof building is burned. The monument, built for unborn generations, is riven by lightning or shaken down by an earthquake.

There are storms which make train service impossible, which delay the mails and which close the public highways to the usual traffic. Even in the cities there are times when the street cars do not run, and neither automobiles or horse-drawn vehicles can be driven through floods or high-piled snowdrifts.

Such conditions increase the dependence on telephone wires, which themselves are not exempt from the same natural hazards. Fortunately, however, the Bell System has faced these dangers and well-nigh overcome them. Masses of wires are buried underground and lonely pole lines, even the most stoutly built, are practically paralleled by other lines to which their business can be transferred.

Each year the lines are stronger and the guardians of the wires are prepared to make repairs more quickly. So each year increasing millions of subscribers find their telephones more dependable and, within the limits of human power, they count upon their use in storm as well as in fair weather.

An Inspiration to Social Workers

THE CHURCH IN THE CITY

By Bishop Frederick D. Leete

"A book full of varied and valuable information for all persons interested in the great questions of social and moral progress."

—THE NATION.

"Wise sanity, chastened optimism, and clear seeing of hard problems, with practical suggestions as to how to meet them, mark Bishop Leete's volume."—CHICAGO HERALD.

"It is a statesman-like survey of the whole field of urban church life, its difficulties, its opportunities, spiritual, financial, and otherwise."

—SPRINGFIELD REPUBLICAN.

"The whole work is pervaded with a fine sense of the needs of the mass of urban humanity which the church should serve."

—AMERICAN JOURNAL OF THEOLOGY.

tutions."

He declared that "postal savings bear the same relations to the banks as the Salvation Army does to the church." He claimed the government had "kept in full view the important fact that the postal savings system is a government institution for the promotion of the general welfare and that it would be an unpardonable abuse of power were it to swell its figures at the expense of legitimate private savings institutions." The increase of postal deposits within three years from \$34,000,000 to \$100,000,000 and the growth in the number of depositors from 331,000 to 625,000 had been achieved with scrupulous care "not to press publicity at a time and place where it might aggravate disurbed local conditions." Yet "postal savings would continue to increase if not another word were spoken or printed about it."

The director gave expression to his own social vision in declaring that "the most striking and gratifying story of postal savings is disclosed in the fact that 375,000 or 60 per cent of the total number of depositors, were born outside of the United States, and that this provident army owns \$75,000,000, or three-quarters, of all the deposits."

"How much," he exclaimed, "these mute figures mean! What a tribute of confidence the foreign-born have paid to the nation of their choice and adoption. The story of postal savings when told in figures is a simple one. But if you want to see the real service that it is, go into the post offices in industrial and mining centers and witness the patient line of barefoot children, toiling women and begrimed laborers, as they entrust their humble savings to Uncle Sam. Then come with me to the post office department and delve into the confiding letters that report better and happier lives."

The federal reserve act aroused far more discussion and criticism. The country bankers, who constituted three-quarters of the 3,575 registered delegates, were agitated over their loss of the exchange on checks, from which they had derived a considerable share of their steady profits prior to the passage of the act. It was further criticized for not discriminating between the gold reserves of the central banks and the operating bank reserves in the medium acceptable to the people. The influx of gold had not automatically brought about a corresponding reduction in the volume of paper money, as other critics thought the act should have done. But there seemed to be no sentiment favoring the repeal of the federal reserve act, and indeed its critics spoke less of the need of amending it than of their desire to "develop" it. Paul M. Warburg, member of the Federal Reserve Board, compared it with European systems and declared himself an enthusiastic supporter of the federal reserve system.

"Its fundamental principles are sound; its benefits to the country have been immense and will become more apparent with each succeeding year," he said.

Perhaps the most striking expression of the bankers' responsibility to the public and the international obligation and opportunity of banking, was made by John Skelton Williams, comptroller of the currency.

"We have outgrown responsibility to our country and generation," he said. "We have become responsible to the whole world, because we have become the supreme world power, especially in that vital department reaching to the root and core of all things which we here represent—the financial. It is for you, controlling the powerful banking interests of this supreme country, to determine whether these dollars of ours shall prey on our country and the world with teeth and claws, or shall have souls put into them to upbuild, to help, to heal the scars of war." It "we hold a mortgage on the world's physical assets," then he concluded, "the world holds a mortgage on our soul, on our good will and broad nobility of purpose."

FOODS BLUSH UNSEEN BEHIND A VEIL

THE month of September saw the food supply of Philadelphia go under fly netting—the outward and visible sign of the inward conviction that something ought to be done to protect citizens from food dangers. Of course, Philadelphia had pondered on these matters before, but she had given but feeble expression to her thoughts.

In the Bureau of Health there had been for a number of years two divisions whose function was to guard the milk and the meat supply of the city. A working force of 13 milk inspectors and 7 meat inspectors tried to cover a city in excess of a million and a half, with 10,000 stores handling meat or milk, 69 abattoirs, 88 preparing plants (meat products), 160 dairy farms, 129 pasteurizing and bottling plants, 4 ferries, 11 railroad platforms, 7 trolley platforms, 23 market houses, 42 wholesale meat houses and 2 stockyards. Their efforts were somewhat more effective than might be assumed. The milk supply has been pasteurized since July, 1914, and Philadelphia's infant mortality has shown a commendable decline within the last few years. The results attained, have, however, but glimpsed the possibilities.

In order to make clear and generally known the food conditions which actually prevailed throughout the city, the Henry Phipps Institute for the Study, Treatment and Prevention of Tuberculosis and the Philadelphia Bureau of Municipal Research undertook an investigation. The former looked into the sanitary and other conditions actually found where foods were stored and of-

THE TIDE OF IMMIGRATION

By Frank Julian Wame

Author of "The Immigrant Invasion" and
special expert on foreign-born
population.

Year by year for one hundred years, the immigration has rained in numbers and nationalities. What influence has this had on our country? What influence will it have in the future? This is the first volume on immigration to discuss restriction in the light of recent developments in Congress. It is a thorough, illuminating discussion by a staunch advocate of restricted immigration.

ferred for sale and the latter studied the problem of food inspection as a governmental activity.

Janice S. Reed Lit, under whose direction the examination of 1,000 stores and 200 pushcarts was carried on, reported that conditions were far from ideal or even safe; legislation was more in evidence than execution. Violations were not only common, they were blatant. Outrageous conditions were found under the city's own roof, so to speak. In the municipal market-houses, under the administration of the bureau of city property in the Department of Public Works, foods were offered for sale under the most revolting and disgusting conditions. With no protection against flies, with stray animals roaming at will, with spitting prevalent, with dirty vendors and dirty customers handling the meats, the bread, the cakes and other things offered for sale, disease held carnival as far as food is concerned.

Since 1911, the Bureau of Health has refused to license the 400 stalls in the markets, but business has gone on quite uninterrupted.

The report of the Bureau of Municipal Research showed that, as a city, Philadelphia has made but the merest beginning in safeguarding the food supply and could, without being at all rash or unusually paternal, do about five times more than it is now doing. The per capita municipal expenditure for food inspection is .015 cents in Philadelphia, .099 cents in Pittsburgh which, of course, has the same assistance from state and federal agencies, .05 in Baltimore, .05½ in Chicago, and .07 in Boston.

A further development of the consolidation of the milk and meat divisions, initiated by Alexander M. Wilson during his short term as acting director of the Department of Health and Charities, was recommended and the organization of a division of food inspection which should safeguard the entire food supply, was urged.

The report was made public August 27. Coming, as it did, when the infantile paralysis epidemic seemed most threatening, it received instant and effective publicity. The newspapers gave columns of news space, reproduced photographs and helped along the cause with editorials.

And then it was that all Philadelphia went completely under fly netting, rather exceeding the requirements of the law which cover only milk and its fluid derivatives, and poultry, fish and meat, and meat products. Everything from the aristocratic casaba melon in front of the high-priced shop opposite the Union League to the humblest herring in the ghetto, wears its veil in public. Even the municipal markets are getting into line. One has been screened against flies; the other has protected the meats against handling by the customers.

State and city authorities have carried on a feverish campaign of prosecutions which looks dangerously like a series of raids.

But the ambitious reformers are not yet satisfied. They refuse to pin their faith to fly netting. They, like the *Evening Bulletin*, strangely think that fly netting "is little protection against dust" and they are somewhat skeptical of the permanent results of spasmodic endeavors. They have set their hearts on having a real inspection service which will be on the job all the time; which will lead, not follow; which will study, educate, persuade, in addition to making routine investigations and prosecutions.

Whether or not these crusading folk will realize their dream now depends upon whether Mayor Smith and Director Krusen of the Bureau of Health and Charities, plan for such a development and ask City Councils for the wherewithal to run it, and whether councils will see the relative value of this kind of service in comparison with other activities of the municipality—official entertaining and junketing, for instance.

WHEN THE MOVIES GO IN FOR SOCIOLOGY

MIXED feelings were the portion of those social workers who saw private exhibits of two new motion picture films in New York city last week.

Three years ago THE SURVEY took a party of educators and other persons to the laboratories of Thomas A. Edison at West Orange, N. J., to see at first hand what was being vaguely talked about as a revolutionary experiment in the method of imparting facts to the young. These people wrote about what they had seen in THE SURVEY for September 6, 1913, and so for the first time the outside public had an opportunity to know what persons of authority in the pedagogical field thought about the educational moving picture film when applied to subjects of the school curriculum, such as chemistry, physics, nature study and half a dozen others.

At that time biology was among the subjects listed by Mr. Edison for future production. Meanwhile, a biological film, aiming to set forth the story of its title, How Life Begins, has been put together on the other side of the continent. It is intended primarily as a lesson in sex-education for boys and girls of high school age, and even for older people and mothers, and was privately exhibited last week by the American Social Hygiene Association in the Russell Sage Foundation building, New York city. Previously it had been shown to students of the University of California, the Pasadena High School, and the University of Kansas.

In showing how new plants and animals come into existence, the film begins with the simplest forms, protozoans

INSPIRING

THE SOCIAL PRINCIPLES OF JESUS

Walter Rauschenbusch Art leather .50

In clear thinking and vigorous presentation, this new work by Professor Rauschenbusch on the convictions of Jesus regarding social life maintains the high standard set by his previous books on the essential relation of Christianity to social problems. Arranged for daily study. Scripture printed in full.

MORAL SANITATION

Ernest R. Groves Cloth .50

The possibilities of preventive morality are here brought out in a striking way, with special reference to the bearing of Freudian psychology on moral diagnosis.

EVERYDAY LIFE SERIES

Consists of four books, of thirteen chapters each, in which daily Scripture readings and vigorous helpful comment is grouped about a weekly theme. Written by men of acknowledged power.

If subscribed for together, the price of the four books for the year is \$1.50; purchased separately, they are 50 cents each.

Descriptive circular on request.

Salt Mackerel
CODFISH, FRESH LOBSTER

FAMILIES who are fond of FISH can be supplied DIRECT from GLOUCESTER, MASS., by the FRANK E. DAVIS COMPANY, with newly caught, KEEPABLE OCEAN FISH, choicer than any inland dealer could possibly furnish.

We sell ONLY TO THE CONSUMER DIRECT sending by EXPRESS RIGHT TO YOUR HOME. We PREPAY express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want YOU to try some, payment subject to your approval.

SALT MACKEREL, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

CODFISH, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat, at a much lower cost.

FRESH LOBSTER is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in PARCHMENT-LINED CANS. They come to you as the purest and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

FRIED CLAMS is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

FRESH MACKEREL, perfect for frying, SHRIMP? to cream on toast, CRABMEAT for Newburg or deviled, SALMON ready to serve, SARDINES of all kinds, TUNNY for salad, SANDWICH FILLINGS and every good thing packed here or abroad you can get direct from us and keep right on your pantry shelf for regular or emergency use.

With every order we send BOOK OF RECIPES for preparing all our products. Write for it. Our list tells how each kind of fish is put up, with the delivered price, so you can choose just what you will enjoy most. Send the coupon for it now.

STANDARDS OF HEALTH INSURANCE

By I. M. RUBINOW, author of "Social Insurance." \$1.50 net

A popular presentation of the subject and a discussion of all the problems involved in preparing a model health-insurance law. Health-insurance bills have been introduced in three States in 1916; many more States are actively preparing bills for introduction next winter; and a Federal investigation of the subject is probable.

The author discusses the benefits which must be given, the proper way of apportioning the cost, the organization of health-insurance associations, the organization of medical aid, necessity for compulsion, etc.

Special chapters are devoted to the much discussed question of maternity insurance and to an estimate of the probable cost; various objections to health insurance are answered.

An appendix by Prof. J. P. Chamberlain is devoted to the question of constitutionality, and one by Dr. Alexander Lambert to the "organization of medical aid."

The author is at present executive secretary of the "Social Insurance Committee" of the American Medical Association, has been connected as actuary for five years with one of the largest insurance companies, and has been a member of the Social Insurance Committee of the American Association for Labor Legislation since its organization.

AN OPPORTUNITY

To hear the eminent Humanist lecturer and author
CHARLOTTE PERKINS GILMAN

In October, 1916, Mrs. Gilman will start on a tour to the West Coast. Her route is tentatively planned as follows:

Oct. 9 to 14—Toward Chicago	Nov. 7 to 18—California
Oct. 16 to 21—In and about Chicago	Nov. 20 to 30—Utah
Oct. 23 to 28—Montana	Dec. 1 to 15—On route to New York
Oct. 30 to Nov. 5 }—Washington and Oregon	(Subject to change)

If you wish to secure Mrs. Gilman for a club address, a public lecture, or a "Gilman Week," an early application should be made to

CHARLTON COMPANY 67 Wall St., NEW YORK CITY

and yeast, and concludes with mammals, such as rats and kittens. The development of the pea is shown from the earliest union of pollen with the ovule, and the fertilization of the egg of a sea-urchin is pictured. The hatching of the swallow-tail butterfly is described from the moment the female lays her eggs (already fertilized, as the caption informs you) on the leaves of the sweet anise. So, too, with the hen's egg. Copulation is nowhere shown.

After the pictures have made it clear that in each case of a flowering plant and a higher animal "life begins in a fertilized egg cell," the film declares that it is "by the same processes of growth and development that the human being comes into life," and the final scene is that of a smiling child creeping about on the floor.

The film has been produced by George E. Stone, of Berkeley, Calif., in collaboration with Prof. J. A. Long, assistant professor of embryology in the University of California. Mr. Stone has brought it east in an effort to introduce it into educational institutions.

While Governor Whitman is awaiting the report of his special commissioner, Charles H. Strong, on the administration of the New York charities law and conditions in private child-caring institutions, the Frank Powell Productions, Inc., are giving *their* report to the people of the United States. The governor's report will doubtless be a long and effective document in words not all of one syllable; the people's report is a graphic motion picture play or—take it from the prospectus—a "sociological photo-drama," entitled "Charity?" and depicting in lurid detail actual and imaginary evils in what is apparently conceived as the prevailing type of orphan asylum in this country.

Making due allowance for the artistic approach to reality and for the Dickensian method in scenario writing, "Charity?" seemed an egregious exaggeration to the audience of a thousand persons to whom it was "privately" exhibited in a New York theater last week. A semblance of reality is given to the conditions portrayed by generous quotations on the screen from the testimony before the Strong commission of William J. Doherty, second deputy in the New York city Department of Public Charities and minute-man in the whole institution controversy. The common tooth-brush and the weekly bath, the rising at five and the day of rough treatment and child-labor, the "stew" that stews the stomach, the "nit," the command to silence with the cryptic comment, "Tomorrow is a holiday, you can talk then," the lack of any trace of schooling, the inevitable reference to Oliver Twist, the grotesque ruling by fear instead of love—all these are vividly done.

There are features of another sort,

however. Such is the "graft" enjoyed by the superintendent, who lives in luxury and never goes near the orphanage. This benign individual sells the most attractive of his girl charges to houses of prostitution, and even selects occasional ones for his own enjoyment. His weekly profits average \$400 the year round. He buys the silence of any who threaten to complain, and when exposure finally overtakes him he finds escape in self-inflicted death. Matter of this sort, when linked up to so much that is true and presented as typical, seemed to the audience unspeakable.

An effort to give both sides is made toward the end, where scenes are presented of an "ideal" institution, which happened, by the way, to be taken at the New York Orphanage, Hastings-on-Hudson. Since this institution, however, is represented as having been built by characters in the play, as a result of their own bitter experience in childhood, the justice dealt to orphanages as a whole seemed doubtful.

In justice it should be said that considerable changes are promised before the film is shown commercially. The white slavery note is to be stricken out, and other deletions made. If made to conform substantially to facts, it was felt the play might help in securing necessary reforms in child care the country over.

SPLITTING THE EXPENSE OF COMMUNITY CENTERS

A HALF-WAY stand between the cities which make their school social centers free to the people and those who would make the people pay all the cost for use of the buildings outside of school hours, is taken by Cleveland. This fall sees the commencement of the first full season of operating sixteen community centers in the schools. Small membership fees are charged, with the purpose of reducing as far as possible the expense to the Board of Education.

The use of the schools for community centers on a definitely organized basis followed last winter's report on the community use of the schools by Clarence A. Perry of the Russell Sage Foundation. The report was one of the series published on various phases of the school work by the Survey Committee of the Cleveland Foundation. Recommendations of the report were followed in the main details.

John W. Barkley, a young lawyer with social experience, was appointed to the position of director of community centers after the Board of Education had voted \$15,000 to carry out the experiment. Light and heat are to be furnished extra. Thirteen of the sixteen community centers selected were opened on February 1, 1916; all are open this fall. In most of the schools, unorganized use of the buildings had been

A NEW PRINTING OF WORK-ACCIDENTS AND THE LAW

By CRYSTAL EASTMAN

FROM THE EDITOR'S FOREWORD TO THE NEW EDITION:—"During the six years since this book was brought from the press there have been greater and more revolutionary changes in our American laws with respect to work accidents than during the six years preceding. An appendix has been added to this second edition, compiled by the American Association for Labor Legislation, showing the spread of the compensation movement in thirty-four states and territories. This new body of statute law has been cumulative. It is not complete, in the sense that we have thrown its protection over every man or woman employed in industry in America. It is not free from ragged injustices, as comparisons based upon this table of standards reveal. The struggle of the next six years will be to make these laws inclusive, make them sure, and make them ample But in the second stage of the compensation movement, no less than in the first, this volume affords a base-line from which to calculate. It remains the standard, as it was the first, inductive investigation of what accidental injury and death have meant to American wage-earners under the old common law. In the next six years of constructive advance, its findings will continue to have force and application in showing the need for new law and the need to make the new law four-square with justice."

CONTENTS

Editor's Foreword. The Problem Stated.

Part I. THE CAUSES OF WORK-ACCIDENTS.—Pittsburgh's Yearly Loss in Killed and Injured; The Railroaders; The Soft-coal Miners; The Steel Workers; Other Workers; Personal Factor in Industrial Accidents; Suggestions for Prevention.

Part II. ECONOMIC COST OF WORK-ACCIDENTS.—Distribution of the Burden of Income Loss; The Effect of Industrial Fatalities Upon the Home; Problems of the Injured Workman; Policy of Certain Companies, Conclusion, Parts I and II.

Part III. EMPLOYERS' LIABILITY.—The Law, By-Products of "Employers' Liability"; Legislation.

Profusely illustrated from photographs by Hine and drawings by Stella; 12 appendices, 36 tables, 11 diagrams.

PRICE, \$1.50; BY MAIL, \$1.72.

BIND YOUR ISSUES

The Survey May be kept for permanent, ready reference in a special loose leaf binder, made with board sides. It is covered with stout buckram, THE SURVEY stamped in gold letters both on the back and on the side. Put in each issue as received. It does not mutilate issues, which may easily be removed and reinserted. At the end of each six months an index will be sent to you and the volume will then be ready for a permanent place in your library.

Price Postpaid \$1.

THE SURVEY : 112 East 19th Street : N.Y.

allowed groups of citizens pledging responsibility. The cost was \$6 a night.

Last winter's brief experience demonstrated distinctly the social utility of the community centers. Supervisors appointed in each school worked with local committees to such good effect that the average attendance per night was increased over 200 per cent. The use of the buildings was extended beyond the gymnasiums and swimming pools, which previously had been used, into auditoriums and class rooms where clubs, classes and community meetings of many kinds were held. Use of such facilities as the gymnasiums was made more equitable through allowing certain hours rather than whole evenings for group use, and organizing classes instead of featuring contests between picked teams, many of which were backed by business firms. It is considered by Mr. Barkley important to note that the supervisors have worked rather as secretaries of the local committees, making school facilities available, instead of definitely pushing the use of the schools. This system is thought to have made use of the facilities more spontaneous and lasting, in the long run. Expenses were much reduced through payment of membership fees.

This year will see the development of the centers along the same social lines, with a further attempt to make the centers more nearly self-supporting than was possible on last year's partial basis. A charge of 25 cents a month for members, and of \$1 a night for a match game in the gymnasium, will, it is thought, go a long way toward this end if enough users of the centers can be enrolled. Particular stress will be laid on the development of one night each week as community night.

During last summer, two of the centers were opened one night a week for dancing at a charge of five cents an evening. Attendance averaged close to 200, with about a quarter of the couples young married people.

CONVICTS OFFER REWARD

THE inmates of the Wyoming state penitentiary issue a monthly magazine called *Jabs*. It is owned, printed and edited by the inmates of that institution. Wyoming uses her convicts in constructing good roads through the State, particularly those used for automobiles. It is considered an honor for a prisoner to be detailed to this service. This fact is well illustrated by a page ad appearing in the May number of *Jabs* as follows:

You Must Make Good

The inmates will give \$25 for the apprehension of any man who runs away from the road camps this summer. If you can't make good stay here.

COMMON WELFARE

WARDEN OSBORNE RESIGNS FROM SING SING

NOT even the presence of German submarines ten miles off the Atlantic coast could keep from the front pages of the newspapers on Monday the announcement that Thomas Mott Osborne had resigned the wardenship of Sing Sing.

Mr. Osborne's letter of resignation attacking Supt. of State Prisons James M. Carter and Governor Whitman, made clear that the reasons that brought him to this step were the same that have caused almost constant friction between him and his superior officers from the beginning of his wardenship. He believed that he was being interfered with in his conduct of the prison and that unfriendliness to his great reform manifested itself in official orders.

One of the first acts of Superintendent Carter to receive an unfavorable interpretation by Mr. Osborne after the latter's return to the prison as warden last July was an official refusal to allow the transfer of certain prisoners from other state prisons to Sing Sing. These prisoners were to act or had acted as witnesses for Mr. Osborne in his effort to expose the conspiracy that he believed to be responsible for the recent indictments against him. He believed that trouble might be made for them by his enemies if they were allowed to remain in other prisons and asked for their transfer. This was refused on the ground that frequent transfers caused a disturbance in the department.

Another order displeasing to Mr. Osborne condemned the "practice of featuring convicts and indiscriminate prison advertising", and urged all wardens in the state to exercise greater care in the matter of publicity. Mr. Osborne characterized the order as emanating from a policy of secrecy.

A third order, which called attention to an increase of escapes from Auburn and Sing Sing, the two prisons where the Mutual Welfare League is in operation, declared: "I have now come to a definite conclusion that either the new ideas are not workable or that lax methods are employed in their development."

The order promised "decisive action" unless ample precautions were taken against escapes. Mr. Osborne believed that the Mutual Welfare League was in no wise responsible for the increase in escapes, but that they were due to unwise selections in prisoners to be trusted.

Finally, on October 3 came the order that brought to a head Mr. Osborne's decision to resign. This decreed that "lifers" and prisoners having long terms to serve be confined within the walls of the institutions. The walls of Sing Sing do not surround the warden's house and the administrative offices, though both are attached to the prison proper. As a consequence, a great number of prisoners used by Mr. Osborne as assistants, clerks, "spotters" for drugs and other contraband, and in other capacities, had to give up their jobs and go inside the walls. This, Mr. Osborne said, made it virtually impossible for him to run the prison with the free hand necessary to the success of his experiments.

Concerning Governor Whitman's part in the alleged opposition to him, Mr. Osborne said:

"The governor who appointed you [Superintendent Carter] is antagonistic to the system that is being carried on at Auburn and Sing Sing prisons; he has tried to use you and your office for political purposes; he is a believer in the old system of retaliation and brutality. . . . As for the dealings with me personally, I believed originally in Charles S. Whitman's friendship and sincerity; but he broke every promise he ever made to me, both before and after he took office; and I have been finally and reluctantly forced to a realization that without his acquiescence the shameful attacks made upon me in Westchester county would never have been initiated or gained headway."

What his future would be or what part he expected to continue to play in prison reform Mr. Osborne would not say following his resignation, which is to take effect October 16. He intimated that he might participate in the political campaign in behalf of Governor Whitman's Democratic opponent, Judge Samuel Seabury. No successor to Mr. Osborne has yet been announced.

MASSACHUSETTS NEW PRISON DIRECTOR

MASSACHUSETTS has abolished its Prison Commission and substituted a single director of prisons with an unpaid advisory board. The new director of prisons is Col. Cyrus B. Adams who has had wide administrative training and special experience in the management of penal institutions. Born in Ohio in 1864, he was educated in Ohio Wesleyan University. As a young man he was engaged in railroading and commercial occupations in the Northwest and in Ohio. He was treasurer of Delaware county from 1892 to 1897. At that time he was in the Ohio National Guard and attained the rank of lieutenant-colonel.

In the Spanish War he served as lieutenant-colonel of the Fourth Ohio Infantry and went through the Porto Rican campaign. After the war, as provost-marshal of Guyama, Colonel Adams had a difficult problem as military and civilian chief of police of this district in Porto Rico. In 1901 he was assistant adjutant-general of Ohio and professor of military science at Ohio Wesleyan University.

In 1902, his administrative work became entirely civilian. His interest in work for boys led him to undertake the superintendency of the Boys' Industrial School at Lancaster, Ohio, the largest institution in the country for delinquent boys between sixteen and twenty-one years of age and an institution which, with 1,200 boys, was conducted on the cottage plan. As superintendent of the St. Charles School for Boys in St. Charles, Ill., from 1909 to 1915, Colonel Adams developed a farm colony plan, placing on each farm twelve to fifteen boys under the charge of a man and wife. In 1915 he became superintendent of the Reformatory for Boys at Concord, Mass., and while in this position Governor McCall chose him to be director of prisons.

Colonel Adams is one of the board of directors of the American Prison Congress, a director also of the National Conference of Compulsory Education and

ex-president of the National Conference on Delinquent Boys.

Massachusetts prison affairs in past years have not, in the opinion of many, kept pace with the general march of progress. A movement has been gaining strength in favor of state control of all jails and houses of correction; great activity is now manifest toward placing the prisoner out on the land; the probation system is developing rapidly under a courageous commission. The appointment of Colonel Adams is held to be a fortunate combination of the man and the hour.

SEVEN-DAY LABOR BECAUSE OF PROSPERITY

SEVEN-day labor with its accompaniment of the weekly "long shift" of twenty-four hours continuous labor will again become the rule in the continuous industries of New York if the State Industrial Commission grants the application of the Lackawanna Steel Company for exemption from the operation of the law passed in 1913 requiring one day of rest in seven.

The application is based upon the contention that steel companies in other states, with which the Lackawanna Steel Company must compete, are requiring their employes to work seven days a week. This is a time of great prosperity in the steel industry. The Lackawanna company along with the others is making money as never before, and seven-day labor is being justified on the ground that every advantage should be taken of what may be short-lived prosperity.

At a hearing on the application before the Industrial Commission on October 6, the attorney for the steel company asked for an adjournment and invited the commission and those appearing in opposition to the application to visit the steel plant, which is near Buffalo. Accordingly the commission decided to spend October 27 inspecting the plant and to hold a public hearing in Buffalo on October 28. Chairman John Mitchell of the commission announced that a further hearing would be held in New York city if there were a demand for one.

The United States Steel Corporation is named in the application as one of the companies that is running on the seven-day basis, although announcement was made by this company several years ago that it had put into operation a plan requiring every man to have a day of rest even in the continuous processes.

The Lackawanna Steel Company was supposed to have adopted a similar plan at the time. Indeed, the plan itself was worked out in 1911 by the Welfare Committee of the American Iron and Steel Institute, of which Judge E. H. Gary, of the Steel Corporation, was chairman and E. A. S. Clarke, president of the Lackawanna Steel Company, was a member. Other members of the committee were: George Gordon Crawford, president of

the Tennessee Coal and Iron Company; W. B. Schiller, president of the National Tube Company; James A. Campbell, president of the Youngstown Sheet and Tube Company; and Frederick W. Wood, president of the Maryland Steel Company.

At one of the "Gary dinners" held May 4, 1911, members of this committee spoke on the relation of employer and employe. Judge Gary was quoted in the *Iron Age* for May 11, 1911, as saying: "We must put and keep ourselves on a platform so fair, so high, so reasonable, that we will attract the attention and invite and secure the approval of all who know what we are doing." President Clarke of the Lackawanna company, following Judge Gary, was reported in the *Iron Age* as saying:

"We believe that the first thing we all must do is, so to speak, to set our own house in order; to have our dealings with our employes and conditions under which they work in our mills and factories, such as are beyond reproach. . . . The committee feels that it has tackled a very large problem; but it has a great deal of hope and courage. . . . We believe, with his leadership and example [Judge Gary's], through this institute, we are going to be the means of accomplishing another great reform, another great benefit, for the industry."

CHASTENING THE CHARITY FILM

WHETHER the chastening that has been administered to the subject matter of the photo-play, *Charity?*, will cause a withdrawal of the opposition that has been directed against the film remains to be seen. THE SURVEY told last week of the exaggeration that characterized parts of this attempt to portray typical conditions in private child-caring institutions.

The disposal of girl orphans to houses of prostitution has been eliminated from the revised version of the play. So has the reference to profits enjoyed by the grafting superintendent. The element of graft itself has not been entirely removed, however. The conditions in the orphanage remain practically unchanged but there is a clearer indication at the end that not one but many orphanages of a better kind exist.

As stated last week, this film is to some extent predicated on conditions revealed in the Strong inquiry in New York last spring. No sooner had the first private exhibition of the film come to an end than persons prominent in that inquiry and the controversies that followed it, attacked the film. "The whole presentation is a noxious and slimy story which will outrage the decent instincts of the public," declared Mgr. J. J. Dunn, chancellor of the Catholic archdiocese of New York, adding that Catholics would be warned not to view the production. "Was ever a more damnable lie put before an intelligent public?"

asked the Rev. William B. Farrell, signer of the famous Farrell pamphlets.

"Monsignor Dunn came to us at the end of the first performance," said Kilbourn Gordon, of the Frank Powell Productions, Inc., which is producing the film, "and threatened to stop its exhibition. He said that he knew who was backing the film and would see that this individual withdrew his support."

Monsignor Dunn was as good as his word. Frank G. Doelger, vice-president and treasurer of the Powell concern, and chief backer of the film, has not only withdrawn his support, but has resigned from all connection with the company. Mr. Doelger is a Catholic.

Meanwhile the National Board of Censorship has passed the amended film and the commissioner of licenses has been induced to view it. The producing company promises its exhibition throughout the country shortly.

SAFEGUARDING BANKING FOR IMMIGRANTS

THE failure of private bankers among the immigrants in Chicago, through incompetence even more than dishonesty, has so emphasized the need of the public regulation of private banks that both political parties in Illinois have pledged the enactment of such a measure. Judge Julian W. Mack adds the important suggestion that the transmission of money abroad should also be under state supervision. In arguing the point he says:

"The remittances that travel from the United States to Europe represent much sacrifice and family devotion. One of the tragedies that has come with the war is the fact that it has often been impossible to reach those who for years have entirely depended on their relatives in America. The immigrant rarely comes to the United States quite free from all responsibilities and obligations toward those he has left behind.

"While much is said about the desirability of family immigration, it still remains true that the careful husband and father will usually precede his wife and family, find whether he can 'make a go of it,' and have some place to take them upon their arrival. Until the family reaches the United States some part of the weekly wage, however small, must be sent to it in Europe, and something must be saved for the purchase of the steamship tickets which will bring the family to America.

"The temptation to dishonesty is particularly great in transmitting money to foreign countries. Because only the name of the banker appears on the receipt given for money sent abroad through reputable banks, express companies and foreign exchanges, which agencies never assume any responsibility until the money is paid them by the immigrant banker, the temptation to dishonesty is particularly great. For their blanks are placed in the hands of bankers without requiring bonds, although some inquiry is usually made as to the honesty of the banker. If he absconds,

and it is discovered that he has failed to transmit money given him to send abroad, and has taken with him the small savings of the newly arrived immigrant, there is no practical legal redress when, as often happens, no resources beyond a little office furniture are found."

Judge Mack's remedy for this laxity is:

"The requirement of a license or certificate of authority before engagement in the business of transmitting money to foreign countries. The requirement of a deposit of money or securities and a bond by all applicants for such licenses, the bond to be conditional upon the faithful transmission of all moneys received by the licensee for that purpose. Requirement that money received for transmission be sent within a definite short period of time, such as five days from its receipt, the initial burden of proof of the transmission of the money to be upon the licensee. Requirement that proper books of record be kept by the licensee."

A state control of the steamship ticket offices is also suggested as possibly necessary to control conditions such as are discovered by the Immigrants' Protective League, of which Judge Mack is president.

UNIVERSITY HELP IN CIVIC AWAKENING

COLORADO gives tokens of an awakening civic spirit all the more noteworthy because shown by the smaller cities and larger towns of different type. Citizens of Sterling, Gunnison and Grand Junction prompted the state university to add to its extension division the Bureau of Common Welfare the establishment of which was reported in THE SURVEY for July 29. It was the university's response to the claims for help which these and other communities made to solve their local problems.

According to the report of its initial year's work by its secretary, A. E. Gilman, the bureau succeeded equally well in rallying and interesting cooperation and follow-up effort in the smaller rural, mining and commercial centers. At Fort Morgan the active participation of over 100 people in a rural population of 4,000 was secured in the welfare conference and the exhibits devoted to public health, child welfare and civic improvement. As a result the services of a community nurse were secured and the plan for improving the highways is being carried out by the cooperation of the county commissioners and the voluntary contributions of private citizens and corporations.

At Louisville, a typical coal mining town of about 1,800 population with a large foreign element, the problem was to get together the citizens who had been badly divided by labor difficulties. After patiently waiting and working, people of differing nationalities, faiths and labor interests were gotten to work harmoniously together. A street sprinkler, the

October in the Beet Fields

PULLING AND PILING BEETS BY HAND

THE sugar-beets have matured and the harvest is on. Throughout the country where this important crop is raised, the workers are in the fields "pulling." A sort of plow known as a "puller" is run between the rows to loosen the soil. The workers who follow the puller, draw out a beet with each hand, knock the two together to dislodge the clinging soil, throw them in piles, and stoop for the next pair.

Although this is generally called "piling," most of the work is in the pulling, for a child must often exert his full strength, especially when the ground is caked, or very moist and sticky. After having been pulled, the larger beets were found to weigh, with the tops and attached soil, about twelve pounds each, the average weight of the beet alone being five pounds. Instances were found of children working from 5 A.M. to 7 P.M. in the rush season, their average workday being from 6 A.M. to 6 P.M.

In the picture above the children are eight, ten, thirteen and fifteen years old, and are shown pulling and piling on a farm in Colorado. There are ten members of the family cultivating this land.

In addition to being hard work, this field labor keeps the children from school. Although the rural schools of Colorado open early in September, the compulsory attendance law is not enforced in the beet districts, and thousands of children are kept away so that they may help, and thereby make it unnecessary to hire "hands." One parent declared to a school principal that his boy was worth \$1,000 for work during the beet season, but if he went to school he was nothing but an expense. An eleven-year-old girl was found who, with her sister of seven, is kept out of school to work in the beet fields, although her family boasted that they made \$10,000 last year from their farm.

In a study made of school attendance in the beet regions of Colorado last autumn, it was found that each beet-working child missed on the average nearly two whole months of schooling in the harvest season, while the non-beet-working children each missed only about ten days of school. This prolonged absence keeps the children backward in their studies, and although the teachers say the beet workers could do just as well as the others in school if they attended regularly, we find that about 54 per cent of them are retarded as against only 20 per cent of the non-beet-workers.

EACH BEET, WITH THE SOIL CLINGING TO IT, WEIGHS ABOUT TWELVE POUNDS

solution of the water problem, boys' and girls' agricultural clubs, are among the results which followed.

La Junta, a railway center with 7,000 people, many of them Mexicans, presented a difficult task because of the indifference to community conditions and problems. The milk and foods exhibit prompted a chemistry class to inspect the dairies surrounding the town and report its findings in the local paper. The local trades and churches were also stirred to new activities by the conference.

At Holly, a farming community of only 900 population, strong factional feeling over politics was diverted toward the promotion of a better community spirit and efficiency. Special dairy posters were distributed in a thousand country homes, with invitations from the merchants to attend the conferences. A fly campaign and a babies' health conference were thus promoted.

FOR A CIVIC-RELIGIOUS BUREAU

THE SOCIAL SERVICE Commission of the Episcopal diocese of Chicago has initiated a movement which bids fair to bring most of the religious bodies of Chicago into active cooperation with the Central Council of Social Agencies in maintaining a clearing house of information for the use of the constituent organizations, and the public through them.

Last year the commission began to submit to the various religious bodies of the city, Jewish, Protestant and Roman Catholic, the proposal to establish this Civic-Religious Bureau, "devoted to the collection and dissemination among its constituent bodies, and throughout the community, of accurate information on moral questions of civic import, particularly those affected by public administration." The need of such an agency was urged "to guide in the redemption of the city from the many ills from which we now suffer because of the failure to get the civic situation before the people and thus to arouse them to united, intelligent action."

It is planned "to act as the connecting link between the skilled and active social service of the community, as represented by the Central Council of Social Agencies with its affiliated bodies, and the religious people of Chicago." Independent investigations are not contemplated, except in so far as it may be necessary to supplement those of other agencies in order to make them more serviceable to the churches. It is hoped to issue a bulletin as occasion may require, like that by which the Chamber of Commerce of the United States keeps its constituency of business men informed of facts, movements and tendencies. Out of such cooperation it is believed a comprehensive, coordinating social program and a far more united community action would evolve.

The Central Council of Social Agencies hospitably entertains the proposition and has appointed a committee consisting of James Mullenbach, chairman, W. T. Cross, Eugene T. Lies and Graham Taylor to represent it in cooperating with the religious bodies.

William C. Graves, formerly secretary of the State Board of Charities, has most actively promoted this movement, acting officially as the chairman of the Episcopal Social Service Commission. In a forcible address on *Cooperation vs. Competition in Social Service*, at the diocesan convention dinner, he urged that the moral and educational readjustment within the churches, of which the social service movement is a part, requires "united goodness, united virtue, united well-doing." Only by such united action as will be "state-wide and religion-wide," he thought, "the central essence of our Christianity can be maintained."

While conceding that "since professional work has entered into the social field the church has largely withdrawn and the sacred service of ministering to human hearts and souls in the social sense has become to a great extent secular and professional," Mr. Graves maintained that "there must be more than skill in all human ministry, there must be love, there must be religion, because social 'cases' are broken spirits, perplexed souls, despairing hearts." Although many kinds of treatment are necessary, "without one ingredient there can be no cure, and that is love and faith." "Religious people as such," he claimed, "must unite with the social experts and put more friendship and spirituality into social ministry. A new morality, a new social education, a new united action, a new infusing of religious faith and love into a society insufficient unto itself—that is the heart of the social service movement."

Such a spontaneous local initiative as this encourages and justifies the country-wide "federated movements" effort instituted by the Federal Council of the Churches of Christ in America, under the leadership of Fred B. Smith and Roy B. Guild, who is now with a colleague crossing the continent to rally religious bodies and social agencies in cooperative efforts for the advancement of their respective communities.

NOT SHRAPNEL—BUT A LITTLE SYMPATHY

WHEN the Vera Cruz incident was at its height, Congressman William Kent of California made a ringing speech in the House, in which as an American investor, with one or two millions tied up in Mexican properties, he stood out against war or intervention; claiming that he and his fellow investors took the risk for themselves, when they put their money into foreign properties, and that he did not want to send his own sons or anybody else's sons in after his.

Now comes another large California investor, Colonel "Dan" M. Burns, in an interview in the San Francisco *Bulletin*. Colonel Burns went to Mexico thirty-three years ago with a capital of \$100, and his rise to wealth is described by the *Bulletin* as one of the picturesque romances of enterprise with which the whole Pacific coast is familiar. He is identified with large mining interests in Durango and Sinaloa, and has extensive holdings of timber land, a hydro-electric plant, etc.

"I do not wish to see Mexico blotted out in blood by this nation because it is the stronger," says Col. Burns, "or to have tens of thousands of my own fellow countrymen slaughtered because I chance to have some dollars invested there." At the outbreak of the revolution, he points out, there were not less than 125,000 Americans in Mexico. A large proportion of them were scattered among lonely ranches, or engaged in prospecting. Out of this large number, less than 200, as far as he can learn, have lost their lives through lawlessness, and these mostly in the turbulent states of the northern border.

"That is just 200 too many," he adds, "but while judging distracted Mexico it is only fair to take a retrospect of our own history," and especially the period following the Civil War in such border states as Tennessee, Missouri and Kentucky. During the last six years in Mexico, every revolutionary faction that has rocked the country has taken possession of the San Dimas district, where he operates a number of active mines. Nobody has been killed or injured, nor have the wheels stopped running for an instant. He explains it this way:

"What has really played havoc with Mexican investments far more than internal disorder has been the difficulty in shipping in indispensable supplies. . . . In our case, long before the revolution, having some seven thousand men, women and children to feed and clothe, in a mountainous, non-producing region, we made it a rule to keep two years' supplies on hand. This has been our salvation. Owing several hundred pack animals, with a large balance against the future, we have been able to supply the necessities of our people and of our business without interruption."

Colonel Burns points to an increase in imports and exports between the United States and Mexico of from \$88,000,000 to \$119,000,000, as the best evidence not only of an extraordinary revival of international commerce, but an indication "beyond all question of a country rapidly returning to good order and industrial peace." This California mine-owner makes the same challenge that Dr. Washington Gladden made in his noteworthy sermon last June. He says:

"What Mexico needs from the United States is not invading armies or shrapnel, but a little sympathy—a little active help. We have given both without stint to the war-stricken people of Europe.

Why not to the people of our nearest neighbor? While things are mending there is still profound distress in many parts of Mexico with the poorer classes. Among the many fine traits of these people is a deep and abiding sense of gratitude. Just a little work of the practical kind would end at once the feeling of distrust against this country for which recent events have given only too good cause. From the bare standpoint of selfishness, no investment could bring better fruit."

A STATE HOUSE CLINIC ON HEALTH INSURANCE

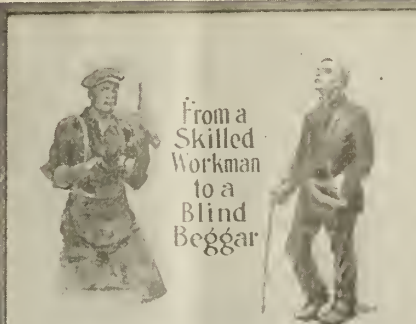

THE MASSACHUSETTS Commission on Social Insurance held its first public hearing on October 3, in the largest audience room in the State House, twice moving to accommodate the interested people who thronged in, several hundred, in all, and remained until after 11 o'clock at night when the discussion closed.

The commission gave its undivided attention to the subject of health insurance, postponing for future consideration the other two parts of its program indicated by Governor McCall, insurance for old-age and for unemployment. Said Carroll W. Doten, a member of the social insurance committee of the American Association of Labor Legislation, in concluding his discussion of the proposed measure:

"I was a member of the Massachusetts commission to prepare workman's compensation bills five years ago; and although there had been several years of spirited discussion of the accident problem, we never had so large a hearing indicative of keen public interest as is shown in this on health insurance. The opposition to health insurance is also milder than that to workman's compensation."

Prominent representatives of hospitals, dispensaries, visiting nurse organizations, labor organizations and practicing physicians as well as social workers were present and spoke at the hearing. A few employers talked about paternalism and pauperism; a few physicians seemed to fear that their practice would be interfered with if such a law as the compulsory insurance law were passed, and others thought that the efficiency of present hospitals and dispensaries would be lessened. But the majority of the audience realized that the present equipment for health protection of Massachusetts was entirely inadequate, and saw in the new movement possibilities of great value. At its recent convention the Massachusetts Federation of Labor, in common with several other prominent labor organizations, instructed its legislative committee to support the health insurance campaign.

The hearings were reported fully in the press all over the state, many papers commenting editorially upon the proposed insurance plan, and indicating cordial approval.

From a Skilled Workman to a Blind Beggar

HE TOOK A CHANCE!

Largely because both employers and workmen take chances there are nearly **200,000 ACCIDENTS TO EYES** in United States industries every year

In one county in Ohio one eye is lost every eleven days

Do you know the methods for reducing hazards in your industry or your trade? Are you using them?

National Committee for the Prevention of Blindness
130 East 22nd Street, New York

ONE of five panels in a new exhibit on industrial hazards to the eye, prepared by the National Committee for the Prevention of Blindness for use at gatherings of employers and employes. Miniature reproductions and half-tone plates for publication may be had of the committee at 130 East 22 street, New York city. North Carolina, and then Minnesota, are to have state-wide educational campaigns in charge of the committee's field secretary, Gordon L. Berry. The new secretary of both the national and New York state committees is Winifred Hathaway.

CHILDREN WHO ARE NEED-LESSLY BLIND

THE National Committee for the Prevention of Blindness has recently completed a census of the causes of blindness that are responsible for the enrollment of 3,858 children in 31 state schools for the blind and 4 classes for blind children in public school systems, during the year 1915-16.

Foremost among the causes discovered is ophthalmia neonatorum, or "babies sore eyes," an inflammation of the membrane covering eyelids and eyeballs, appearing a few days after birth, and frequently (though not always) indicating a syphilitic infection. It has been one of the most prolific and needless sources of blindness in the United States.

The first such census was taken in 1910 by the New York Committee for the Prevention of Blindness, and the number of pupils then blind from ophthalmia neonatorum out of the total of 2,018 in the 16

schools reporting, was 521, or 25.8 per cent. Since that year there has been a gradual decrease recorded until the figures for the year just ended show out of the total enrollment of 3,858, 843 (21.8 per cent) blind from this disease. As to the outlook, Gordon L. Berry writes:

"Of the 666 pupils newly enrolled for the year 1915-16, there were 127 (19 per cent) blind from ophthalmia neonatorum. This is the lowest percentage reported during the past nine years with the exception of that in the school year 1914-15, 15.1 per cent. This gratifying annual decrease is undoubtedly attributable to a more general understanding of the dangers from inflammation of the eyes of the new born, and the adoption of preventive measures."

The census reports the highest percentages of pupils blind from this disease to be in Vermont, 50 per cent; Colorado, 38.6 per cent, and New Mexico, 37.3 per cent. In Vermont and New Mexico there are almost no legislative provisions for prevention of blindness from this cause.

Among pupils newly admitted, the highest percentage for the past year is shown in the figures from Nebraska—50 per cent, with Maryland a close second—40 per cent.

Causes other than ophthalmia neonatorum found to account for pupils' blindness were: accident, 306; progressive near-sightedness, 77; trachoma, 56; interstitial keratitis, 146; decay of optic nerve, 340; congenital defects, 824; wood alcohol poisoning, 5.

That in addition to wide publicity, legal provisions are necessary, the committee urges strongly. Its "Leaflet No. 9" just issued, gives a tabulation of laws on this subject in the different states, summarizing the information as follows:

The reporting of babies' sore eyes to the local health officer, or to a physician is compulsory in 37 states

The reporting law is printed on the birth certificate in 7 " Local health officers are authorized and required to secure medical attention for uncared-for cases, or to warn parents of the dangers and advise immediate treatment in 21 " Births are reported early enough to be of assistance in prevention of blindness work in 11 " The question as to whether or not precautions were taken against ophthalmia neonatorum is included on the birth certificate in 14 " Free prophylactic outfits are distributed to physicians and midwives in 16 " The use of a prophylactic (specified by the State Board of Health) as a routine, is compulsory in 15 " and strongly recommended in an additional 5 " Popular educational leaflets, relating in whole or in part to

prevention of infantile blindness, are distributed by State Departments of Health in. . . . 29 states

FEDERAL HELP TO A STRICKEN CITY

THE advantages of having the federal Public Health Service mount guard over New York's maritime quarantine were pointed out by THE SURVEY last winter (see THE SURVEY for January 8, 1916). Recently the value of the service has been further demonstrated, this time in domestic interstate quarantine in connection with the epidemic of poliomyelitis.

Since the first of July nearly 50 officers of the service have been in the city, one group engaged in epidemiological work; the other, stationed at ferries and other points of departure from the city, issuing, under proper credentials, certificates that, as far as can be known, no infection has existed in the homes of those about to travel. In view of the decrease in the number of cases of poliomyelitis in New York, and therefore the lessening danger that people who leave the city may carry infection with them, this quarantine division, under the leadership of Dr. Charles E. Banks, will presently withdraw from the city.

Certain definite results of permanent value for public health work have followed this certification, and these results have been estimated for THE SURVEY by Dr. Banks himself.

First, the stabilization of public opinion through the influence of regular officers of the service, trained in the management of epidemics, who were assigned to duty in this city. It will be recalled that (see THE SURVEY for August 5) when the Service officers first appeared, many people were alarmed by their khaki uniform, and fearing that they were soldiers, thought that conditions were very serious and that this meant military control. This panic, however, soon gave way to confidence and satisfaction.

A second result was the standardization of methods adopted by local quarantine officers in other states, who had been inclined to adopt harsh restrictive measures in the absence of accurate knowledge of the extent of the epidemic. When heavy headlines first announced the spread of the epidemic, "shot-gun quarantines" were promptly established, ranging from an isolation period of two weeks to one of eight weeks, or even demanding total exclusion of travelers from New York. The uniformity of quarantine, which to some degree at least has been worked out, has meant a better understanding of exact conditions and an intelligent application of scientific principles.

Third, the certification has guaranteed travel as reasonably safe. Identification cards were accepted by outside communities, because they were issued after ex-

amination by trained officials who were not influenced by local sentiment. With the memory still in mind of other epidemics of various kinds, officials in other states naturally looked with suspicion on any certificate issued by local authorities of New York, as coming from those interested.

Finally, the work of the Public Health Service officers has been a demonstration of the value of a centralized authority with power to deal with interstate problems of disease transmitted by common carriers, and with the backing of congressional statute. Such backing is provided for the Service officers by the quarantine law of 1893.

COUNTY BOARDS OF PUBLIC WELFARE

A COMPLETE sketch of the recommendations of the Missouri Children's Code Commission is embodied in a preliminary report recently formulated. The report is being used as a basis of criticism and suggestion, and will be followed immediately by the drafting of the entire code. The report covers all classes of children. It develops new and radical standards, and discusses methods of carrying out the provisions of the code.

The chief recommendation for administrative purposes is the creation of a county board of public welfare in each county, composed of the three judges of the county court, the judge of the circuit court and the school superintendent. This board of five is to employ as superintendent a trained social worker who must hold a certificate of fitness from the State Board of Charities. The commission is also advocating placing the county health officer under the board of public welfare so as to bring all the health and social work of the county under one directing head.

Only two new state agencies are recommended, an industrial commission to take over the work of five or six separate departments dealing with industry, and a state board of medical examiners to license medical practitioners.

An active educational campaign will be conducted throughout the state before submitting the report to the legislature in January. The work is being done under the direction of Judge Rhodes E. Cave, chairman.

A MUNICIPAL PLAYGROUND CAMP

MORE than 1,300 people, among them day laborers and ministers, doctors and clerks, have enjoyed an inexpensive vacation this year at the Los Angeles Playgroup Camp.

Started in 1911 this municipal camp has steadily grown more popular. The first year it was located at a beach resort, the next two in the San Gabriel Canyon, but since 1914 it has been situ-

ated on leased government land in the San Bernardino Mountains at an altitude of 4,500 feet and approximately 76 miles from Los Angeles.

As a camping spot the place is ideal. There is opportunity for long hikes in the forests, for swimming and fishing in the mountain brooks, for tennis, baseball and organized play at the camp itself. This year some forty-six cabins have been constructed as well as a building combining kitchen, store room and cook's headquarters, an open-air dining-room capable of seating 300 people, two modern toilet buildings, a bath house with tubs and showers, a concrete plunge 30 by 65 feet and a graded athletic field. At present a lodge is being completed which will contain an office, reading rooms and a large entertainment hall.

Outings are conducted for boys and men in two groups and for women and girls who also go in two groups. The entire expense covering transportation, food and housing is \$7.50 for two weeks or \$5.50 for one week. Campers are required to furnish their own bedding, towels and other personal effects.

Not only does this simple wholesome vacation react upon Los Angeles in building up a strong and healthy population but in stirring community responsibility and consciousness. People are glad that they are citizens of Los Angeles when they feel that city officials take some interest in their welfare. As one of the city councilmen has put it: "More civic pride is developed around the camp fire in five minutes than in the city in one year."

POOLROOMS IN COLUMBUS, OHIO

A RECENT study of poolrooms in Columbus, Ohio, conducted by the committee on program and surveys of the Central Philanthropic Council, revealed that 112 rooms had no connection with saloons, 100 were inside bar-rooms, and 31 were connected with bar-rooms by doors. Only one out of every three had an unobstructed view from the street.

Of every three men found in poolrooms, one was playing and two were loafing. Of every four high school boys, three knew how to play pool. Many learn to play at the age of twelve, though the greater number learn between fourteen and sixteen. More learn to play in a poolroom than in any other one place—and poolrooms are widely recognized as having a direct relationship to juvenile delinquency—though home, club and Y. M. C. A. teach a considerable number.

Columbus at the present time has no ordinance governing poolrooms. The Central Philanthropic Council urges that the city superintendent of public welfare exercise control of the inspection and supervision of public poolrooms.

The Lighthouse for Blinded Soldiers

By *Winifred Holt*

FOUNDER OF THE NEW YORK ASSOCIATION FOR THE BLIND

FOR many years the good Abbé Moureau had directed a little group of industrial blind workers. His quarters were situated in part of an old church in Bordeaux. In fair weather the blind workers caned chairs in the cloister. In the midst of the cloister was a patch of wild garden where a white donkey had a foretaste of heaven.

Suddenly the war came, blasting this peaceful scene. Although there were more blind men than ever before to be cared for, the resources of the abbé dwindled and dwindled until he even sold his wonderful collection of butterflies to keep his blind patients busy.

I had just landed in Bordeaux and helped by letters from the French ambassador and the Red Cross started at once to see how the Committee for Men Blinded in Battle could supplement the government's efforts in behalf of blind soldiers. I discovered the abbé, heard about his struggle, and immediately realized that here was our first opportunity for helpfulness. With funds remitted from my committee in New York, it did not take long to persuade the abbé to take over the re-education of men blinded in battle who were sent to the Bordeaux hospitals. His "Comité" was

reorganized to help locally while we assisted by giving them games, writing tools, materials, and the like. Now it has bought a charming old chateau where there are forty beds for convalescent blind as well as classrooms, workshops, and living rooms. There are beautiful grounds with yew trees and old rose bushes about the chateau. In the midst of the flowers stands a statue of Jeanne d'Arc, holding her standard. The blind men say that she, their patron saint, will lead them through their battle in the dark to victory and light. The abbé even changed the name of his hostel from *Les Travailleurs du Sud-Ouest* (workers of the southwest) to *Le Phare de Bordeaux* (the Bordeaux lighthouse).

Our flame of hope for the blind soldiers of France thus kindled at Bordeaux

*I*N the first row of the picture above, a young French lieutenant, blinded in battle, holds the seal of the French lighthouse, patterned on its famous predecessor in New York city. Miss Holt stands in the second row, next to the soldier holding the flag.

has spread rapidly. Shortly, we established our home teaching and classes for re-education at the Hôtel de Crillon in Paris where we started a census bureau and had the privilege of giving over 30,000 francs to other organizations working for the blind, good proof that the keystone of our labors is always co-operation. We have also given away over 4,000 gifts, including a radiograph, machines, tools, games, delicacies, etc.

When the work increased, the government offered us a beautiful palace for headquarters, but when it came to signing the last papers we found that the property which has been requisitioned from an Austrian prince might be taken from us at short notice.

We therefore rented our present building 14 Rue Daru, Paris, from the pope. The only stipulation is that we accept English and Belgian as well as French soldiers. Since the former are provided for excellently at St. Dunstan's we probably will have none among our pensioners. But on the continent, we are as far as we know, the only college for the re-education of the blind. The work is under the High Patronage of the President of the Republic, the American Ambassador and the Ministers of War, Marine, Interior and Public Instruction.

We are dependent on the Department of the Interior and the Ministry of War who subsidize us.

Here at the *Phare de France* the demand for our hospitality is great. Among our guests we have a commandant, two captains, four lieutenants, several adjutants and regular soldiers. We accept, here, however, only soldiers of superior intelligence and of sufficient education to profit by the opportunities we offer. It is our plan to give a soldier, who has acquired "ten eyes on his finger tips" and enough knowledge to make him reasonably independent, the necessary tools and materials to follow his calling at home or to send him into other centers of work where he, in turn, can teach his unfortunate comrades.

Thus, we have one captain who, we might say, belongs to our correspondence school. We have given him a typewriter and while he is now studying by himself, we expect soon to have him with us for a short course at the French lighthouse. Another pupil, a lieutenant who stayed two months with us, was recently married. We gave him an Underwood typewriter for a wedding present. He is now on his wedding trip, but expects to return to the *phare* for a sort of "post-graduate course."

In addition to our residents we have day-pensioners who take their meals at the lighthouse and follow the entire day's program, and also men who merely attend special classes.

Among the subjects taught at the *phare*, of course, Braille, typewriting and stenography are the most popular as well as the most necessary since this is the knowledge that will unite the blind with the world of their fellows. Indeed, our special commercial course is such a success that the men would rather miss the theater than that hour.

The arts and crafts school is also popular. Many of the men feel that it is a great advantage for them to have industrial as well as intellectual equipment. We have reconstructed a former stable, making it into an excellent workshop where the men weave, operate knitting machines, or busy themselves with the printing-press which has just been installed. Modeling, too, is popular and a great help in educating the sense of touch.

Still another method of making touch more sensitive is through a small museum containing statues, practical machinery, tools and appliances which the men may study at their leisure. A recent exhibit of the work done by mutilated soldiers included our exhibit of very beautiful pottery, weaving, statues and other objects of art. It was the best possible demonstration of the intelligence, perseverance and enthusiasm of these new recruits of light through work.

Put all work and no play makes blind Jack a dull boy too. Every morning the men have gymnastics and sports of which

they are very fond and which they say puts them in good condition for "real work." Fencing is one of their chief sports and their professor, who is one of the most renowned fencing masters in Paris, brings to his work an enthusiasm which enables him to obtain astonishing results.

We have organized a blind man's club, of which Pierre Villey, the famous blind professor at Caen, is an honorary president. Various entertainments are given, the Théâtre Français puts good seats at our disposal every week and we have a box at the Opéra. In fact it is often through games and amusements that the man's confidence is won and his interest in life reawakened.

For example, I was recently taken by an American Ambulance doctor to a patient from Verdun. He had lost his sight, his right arm and was otherwise wounded. All I could do was to talk to him at the doctor's request and to give him an idea of light through work.

On my second visit I introduced him to an American checker-board adapted for the blind. He consented to play and finally beat me in a game of checkers. He was so pleased at his success that all his boyish sense of fun returned and he giggled with glee until the nurse was afraid he would reopen his wounds. He is now learning Braille and other simple things and is a regular pupil of our home teacher.

The lighthouse staff is admirable. It is headed by a French lady, with a writer of some distinction, as director. We have five professors who are themselves blind—two, refugees from Arras and organists of note. The remainder of our teaching staff is sighted. At present, we have no Americans, excepting among the volunteers. In its small clinic the lighthouse has the benefit of

the advice and constant aid of two well-known French physicians, and, as visiting physician, of Dr. Scarlett, director of the American Hospital at Neuilly and director of the ophthalmological department of the American Ambulance.

In addition we have home teachers who give instruction in the hospitals and in the homes of the *reformé* soldiers. The home teachers' duties are by no means restricted to teaching, however. To give in hospitals and home the first consolation and knowledge of a possible horizon of light for the blind is perhaps the most important task of these emissaries.

A doctor telephones that a new man has come from the front, blind, hopeless, and in need of light. The home teacher goes to him and shows him a new horizon in blindness.

Often the cases are so pathetic that words seem useless. A Zouave, strong and handsome before the war, came back, carried like a little child, with no eyes, no legs and only one arm. But when he discovered that he could read with his left arm he was eager to come to Paris and learn how to be blind. He actually laughed aloud with the idea of his being able to be a wage-earner again and to marry the little girl who was his fiancée and still remained faithful to him.

Another man with no eyes or arms we were able to help principally through his wife, a valiant soul, from whom we have offered to buy all the vegetables she raises. We are in hope, too, that we may discover some simple occupation for the man when articulated arms are fitted to him.

Several of our pupils are already self-supporting. One, in six months, returned to his retail business which he conducts with such entire success, writing all letters and keeping accounts, that he has been forced recently to remove to larger quarters.

Another man in two months, was educated to write excellent typewritten letters and keep his accounts. He became a machine knitter and turns out such excellent work that he has more orders than he can fill.

So it goes on, this work of moulding these heroic men into self-helpful citizens. To weigh its worth one only has to see the look of hope that comes back to their faces and to hear their words of gratitude.

"I would like to be a poet to sing to you of my rebirth," wrote one soldier to me, "but alas! I am neither poet nor writer, only a peasant. . . . Thanks to you, and to the good teachers about you, I can say without exaggeration that I feel glowing within me a light that throws its rays into the closed chamber of a spirit which I believed would forever live in darkness. At the Lighthouse of France I have found the Light."

A blind Swede learning to model at the French lighthouse. Although he has lost both eyes in a war which did not involve his country, he said with a bright smile: "I should have at least done that for France." He has been decorated with the Croix de Guerre and the Médaille Militaire.

Food, Shelter, and Clothing

By Emma A. Winslow

HOME ECONOMIST NEW YORK CHARITY ORGANIZATION SOCIETY

THE high cost of living to the contrary, it is a privilege to have to buy food and clothing and to pay the landlord. There is a great deal more involved in a visit to the market than merely the obtaining of something to eat. The round steak and hashed-brown potatoes which have just been placed upon the dinner table contain a psychological as well as a nutritive benefit. They include an educational factor as important as the public school system. They stand for the principle of barter, a principle that the housewife unconsciously affirms each time she asks her neighbor, "With what butcher do you trade?"

Similarly, living in an apartment has a greater significance than the mere fact of being sheltered from the rain. Each time a five dollar bill is taken from the weekly pay envelope and tucked in the second bureau drawer over against the monthly call of the rent collector, another great educational principle has been observed—the principle of foresight and thrift.

Nor is the value of clothing limited to protection against the weather. Clothing, indeed, is an art that is more universal than poetry or sculpture or music. It is the great vehicle for self-expression, great because it is a vehicle that everybody can use.

This is not to say that the homes we live in and the food we eat are not opportunities for self-expression any more than it is to say that clothing is not a means for developing foresight. Our thesis is simply that each one of these three necessities of life has its dominant psychological factor; that of food being barter, that of rent being foresight, and that of clothing being self-expression.

The poorer a family is the more important a place in its life do these psychological factors take. For the household that is circumscribed by poverty and correspondingly limited in its opportunities for culture and recreation, it is impossible to estimate the educational importance of the business of buying wisely and economically. The dealing with different people, the visiting of different stores, the search for the bargain, and the administering of a two-dollar-a-day income develop shrewdness, judgment and taste and, in addition, increase the acquaintance of the family and the variety of its contacts with the world.

Deprive a person of the function of spending and you make that person poor indeed.

Witness, for example, the experience of Mrs. Czech. For three years after

her husband's death she was not obliged to use money in any way. A charitable society paid her rent and insurance and supplied her and her six children with food and clothing. Mrs. Czech's only economic responsibility was the use of provisions and commodities after they had been delivered to her home.

Theoretically the family was receiving perfect care. And yet Mrs. Czech did not seem to be making the best of her opportunities. Apparently she had no interest in the appearance of her home or of her children. She exerted herself only to the point of fulfilling the requirements of the organization that was helping her. She seldom mended the children's clothing, obtaining instead other garments from the society. Even the health of the family began to deteriorate. The faces of the children became sallow and pasty. Evidently their food was not agreeing with them; nor was this surprising, for the mother was not at all particular about the way it was cooked.

Three Cents for Sauerkraut

RECOGNIZING its failure, the society decided to see how Mrs. Czech would react to a different plan of treatment. Accordingly, a weekly allowance was given to her and she was told to do her own buying. Her first expenditure was three cents for sauerkraut. She had been accustomed to this delicacy from childhood and for three years she had longed for it while packages of macaroni, in which she was not at all interested, lay unused upon her shelves.

Housekeeping soon became a delight, the visit to the corner grocer and then to his competitor across the way, an adventure. Now Mrs. Czech was able to buy what she wanted when she wanted it. She began to cultivate that epicurean attitude toward food that makes the way things are cooked one of the most important subjects of thought and of conversation.

Gradually the scope of her administration was extended until she had full charge of the family budget. Correspondingly, the appearance of her home improved. From an indifferent, dependent sort of person Mrs. Czech grew to be an enthusiastic, systematic housekeeper. It is not surprising that the children gained in health. By the time that they were able to earn enough to maintain the home their mother had become so remarkable a domestic economist and had made such a success of her family life that now the head of the charitable society says that whenever she feels dis-

couraged about her work she pays a call upon Mrs. Czech and straightway forgets all her troubles.

This happened several years ago, and probably it would not be easy to find an instance of such mistaken relief in kind in the current work of any well-conducted charity organization society. But although the present tendency is away from such a method of administration, there is always the temptation to overlook the bad effect which the unwise giving of relief in kind has upon those whom we are trying to help. To send groceries, to pay rent, to supply clothing is such a concrete way of giving assistance; it so certainly reaches the family for which it is intended that the real influence which it exerts upon the education of the family is frequently in danger of being forgotten.

There are many pet theories by which we deceive ourselves into believing in the importance of supplying food directly. We say it educates the family in nutritive values; yet learning by doing is the first principle of pedagogy. We say that it is cheaper for a society to make purchases than it is for the family; but a study of 500 food orders conducted recently by the Junior League and the New York Charity Organization Society shows that families can purchase just as cheaply as social workers. Only those few organizations that buy in such large quantities as to be able to take advantage of wholesale rates can purchase more economically than the ordinary housekeeper. But even so, the first interest of social work should be to save families rather than money.

In emergencies it will always, no doubt, be necessary to send an order of food directly to a family through the grocer, but where a household is receiving aid regularly, the best way to educate that family is to give it the responsibility of buying its own food. Feeling this responsibility, it will be quick to profit by any suggestions about nutritive values that the social worker may make.

Let the Family Buy

IF THE EFFORT of charity organization societies is to develop self-reliance and independence in families, then they should make the fullest possible use of the educational opportunities which the psychology of barter involves. Just as editorial criticism helps people to learn to write, so a kind of editorial judgment passed upon purchases can be made of great assistance in adding to a family's knowledge of domestic economy. Only let the family have the fun of buying;

suggest and advise, but do not send the provisions to the door. The sharpening of wits that comes from the search for the best values at the lowest prices and the exercise of choice and discrimination that the provisioning of a household involves are opportunities for development of which the family should be encouraged to make the most.

Even greater than the temptation to select and send food to a household is the temptation to pay rent. It is perhaps easier to raise money for this purpose than for almost any other. Save-at-home funds and similar enterprises are one proof of this. There is nothing that seems so sensible or so satisfying as to say, when the needs of a family come up for discussion, "Well, we will pay the rent; then the Joneses can be sure of having a roof over their heads." But to assume the responsibility for meeting the landlord's bills is to deprive the person one is helping of the chance of exercising foresight and thrift.

Character and the Rent

THE HOUSEKEEPER must have character or must develop it in order to apportion her budget so that from each week's pay envelope a little money may be set aside against the monthly visit of the rent collector. It involves giving up present needs for more pressing future necessities. Is it not true that frequently families which have been receiving allowances in the form of rent are reluctant and almost unable, when their earnings increase, to arrange their income so as to be able to provide for this part of the domestic expenses? If the family is earning enough money to be self-supporting with rent paid for it, why not pay that family the ten or fifteen dollars a month needed for this purpose? Some social workers may object that they cannot trust the judgment of many of their families. But if the family is not taught how to administer its finances by experience how else is it going to learn?

Clothing is the most usual of all gifts among all classes of society. From father to son, from sister to sister, from rich city cousin to less well-off country cousin, from the misfitted friend to the easily fitted friend, from housewife to housemaid, clothing has been passed since the day the first tailor decided to improve business by changing styles. For this reason, if clothing is given in one of the normal ways just referred to, it can be accepted with less loss of self-respect than any other form of relief.

Because of this custom of passing along clothes, a charitable agency can supply a family with clothing without so much fear of causing dependency as when giving money. But the danger of

dependence is not the only thing to be considered in the giving of clothing. The family's loss of opportunity for self-expression is also involved.

More than an Art

SELF-EXPRESSION is one of the fundamental desires of every human being. Just because people are poor does not mean that they have lost this longing. One of the greatest miseries of poverty is the inarticulateness it forces and the limit it places upon the ways in which the poor can express themselves. Seldom indeed have they opportunity or ability to use music, painting, or literature for this purpose. Nor is this handicap confined solely to the poor. For thousands of men and women clothing is the only art. Careful, therefore, should we indeed be not to deprive the poor of this opportunity for self-expression.

Our tastes are not the tastes of those whom we help. Just because we would express our sense of beauty in the purchase of a certain pair of shoes does not mean that this is a universal kind of beauty that everybody will admire. Thus one woman, having been given the opportunity to select a hat from an assortment sent from a Fifth avenue store, chose rather to spend fifteen cents for a frame on Second Avenue and trim it herself. The Fifth avenue bonnet was not being worn three blocks east and this woman wanted to be in style. A certain green coat given to a certain society which, if worn by a person of fashion would have added distinction to her appearance, was refused by woman after woman. Each one felt that it would make her too conspicuous and the coat was not used until it had been dyed and remodeled in order to blend with the styles in vogue among the families of two-dollar-a-day incomes.

Managers of children's institutions have learned what a depressing effect uniformity of dress has upon their charges. The loss of opportunity to express individuality in this way has a very definite effect upon the character of the children. The same thing is true of adults. It is not fair to a family to decide for it what it will wear.

If our object is to bring a household to a normal way of life, then we cannot well refuse to supply it with a cash allowance large enough to cover the item of clothing. There will always be opportunity for the use of old clothing in emergencies. There will always also be opportunity for offering a family casually, now and then, a piece of material or a garment that can be made over to suit the needs of some one of its members. This sort of giving, however, should only be supplementary. Just as

much as possible it should be left to the family to determine how it will express itself in clothes.

Self-expression is, of course, not the only psychological factor involved in the purchase of clothing. Just as there is a great deal of the aesthetic connected with the selection of food and of a home, so there is also opportunity for the display of thrift in the buying of clothing. Clothing expenditures involve from 10 to 15 per cent of the income of the normal family. There is need for foresight in the saving of money toward the obtaining of clothes, as there is in the payment of rent. Because the art of clothing is important does not mean that it has not also an educational value from an economic point of view.

The cash allowance ought to include all household expenditures, fuel and insurance as well as food, rent and clothing. It requires character to set aside money for the payment of insurance just as much as it requires character to provide for rent. To pay one's own fuel bills means to learn economy in the use of fuel. A woman who undertook to pay the gas bills of a certain family was amazed to find that that family used four times as much gas as any of the neighbors. Yet it was not hard to understand the family's point of view: the gas was free.

The Psychology of It

WHAT has been said thus far about the giving of relief has to do with families that are under care for a period of time; it does not apply to emergencies. Under any circumstances, however, it is well to remember that the normal attitude toward the necessities of life is not that of giving but of using. We should not forget that the fundamental purpose of food is not to be donated, but to be eaten. In other words, we must not consider clothing, rent, and food from the point of view of the giver and with regard to his convenience, but rather from the point of view of the recipient and with regard to his welfare.

Second only to the service which the necessities of life perform for the body is the service they render to the mind. If there is one thing that charity organization work teaches it is that people are human beings not human machines, and that you can do nothing for them in a mechanical way. Only by considering the man as a unit—both body and soul—can one offer him effective help. It is not enough to regard food as something to eat, rent as provision for shelter, and clothing as something to wear; one must also remember their psychological connotations of barter, foresight, and self-expression.

Drugs and the Drug User

By Charles B. Towns

TO understand adequately the general problem of drug addiction as it affects society, one must first get a good mental grip on the personal problem of the individual drug-taker. For unless his problem and his peculiar pathology are comprehended, no working knowledge of the broader aspects of the subject is possible, no remedy for the situation as a whole can be safely proposed or supported. So I shall preface my discussion of the national and international fight against drug abuse with a consideration of the formation of the drug habit, the psychology of addiction, and the methods of reclaiming the individual victim.

The drug habit is in every instance a manufactured article. A craving for drugs cannot be transmitted by heredity. Except in the underworld, where mimetic tendencies and constant search for new sensation are largely responsible for the habit, addiction is due in most cases to the doctor or the patent medicine vendor.

The doctor's manufacture of the drug habit is, unfortunately, too often a very simple and logical process, for which he cannot be entirely or even chiefly blamed. A man in pain, knowing the general character and location of his suffering, tells his doctor of it. The doctor makes his diagnosis and possibly recommends an operation. The patient, as fearful of the surgeon's knife as of the gallows, protests. Perhaps he intimates that if the doctor cannot treat him successfully without recourse to an operation, he will find another man who will.

In the meantime the pain increases. He insists that something be given him to relieve it. The doctor gives him something—something thrust beneath his skin through the hollow needle of a hypodermic syringe.

With that first thrust of the hypodermic the patient has discovered what will ease his pain. What more natural than that another injection should be demanded the following day, when the pain again becomes intolerable? More thrusts. Presently, a habit.

If the doctor, being conscientious, refuses to give morphin, the patient who has become intent on having it will search until he finds a doctor who will give it. The conscientious doctor gets no credit for his probity; instead he probably loses a patient. If the doctor on the other hand yields to the patient's insistence, which he often does against his judgment, he has yielded, we must recognize, to a set of circumstances for which he is not responsible. Both he and his patients have fallen victims to the lack of safeguards against the pressure of nor-

*PROBABLY no one person in this entire country has been more closely in touch with the problems of the drug habit or more energetic in the war against the illegitimate use and sale of drugs than has Mr. Towns. In the fourteen years of his experience he has treated successfully more than 6,000 cases of drug addiction. His relation to the medical profession is unique. He has placed freely at the disposal of doctors the formula of his treatment, has published it in medical journals and has been a welcome speaker at medical society meetings. Endorsements of his work bear many distinguished names. Dr. Richard C. Cabot wrote an introduction to his book, *Habits That Handicap*. Mr. Towns' major interest, however, is not with the cure but with the prevention of the drug habit. He has been closely concerned in promoting the Boylan law and other state, national and international legislation which, he says, "I sincerely trust will eventually put my hospital out of business." This and the succeeding articles which he has written for THE SURVEY are of particular interest at this time in view of the amendments to the Harrison drug law which will be proposed during the coming session of Congress.—*
EDITOR.

mal human impulse under abnormal strain. For the lack of proper safeguards in such emergency, society is responsible; which means that those who legislate and those who demand and support legislation are responsible.

There is another and still more appalling phase of the doctor and patient relation, which arises when the doctor himself is a drug-taker. And this situation, which I will take up more in detail later, crops out far oftener than the layman would imagine. The danger to the patient comes from the peculiar psychology of addiction, for one who takes a habit-forming drug is almost certain to become abnormally sympathetic to the suffering of fellow victims. The doctor so enslaved will administer the drug of his addiction to patients, with friendly intent; he will do what he can to help confirmed users get their drugs, even if he makes no profit from it. He will write prescriptions in evasion if not in violation of the law. It is a curious and tragic fact that the drug-taking doctor will

often spread the habit in his own family.

The second broad and easy road to drug addiction is through the use of patent medicines, headache and sleeping potions. The American public has acquired the vicious habit of appealing to the druggist when the physician's services are clearly indicated. A dozen times a day in the experience of any druggist, a customer enters and says: "I want something to make me sleep," or "I want something to cure my headache." Without hesitation the druggist reaches to his shelf and dispenses preparations in which lurks the utmost peril. For while under the present law, as it exists, I think, in every state, druggists cannot prescribe for sufferers, they can advise customers to purchase advertised preparations or those which they themselves compound.

Only a very powerful drug can stop a headache with the speed and completeness that has come to be demanded by the customer of the American drug store. It must be a preparation of a strength sufficient to deaden disordered nerves. It is practically certain to have no curative qualities whatever, for it is chosen because it will be generally effective, not selectively effective. The time cannot be far distant when government will take cognizance of the danger inherent in an unrestricted sale by druggists of sleeping-powders and hypnotics. In such substances lies a peril comparable to that inherent in morphin and cocaine.

It is a popular impression that only those of weak psychology or mental characteristics become enmeshed in the drug habit. There never was a more inaccurate impression. The mentally strong and the morally lofty are as sensitive to pain as their weaker fellows. Unwarned of the peril of the hypodermic, they are as quick to avail themselves of the relief the anodyne affords. And when the drug has been given until that point of tolerance has been reached when its administration cannot be neglected without the violent protest of the physical body, they are as helpless as the most hopeless defective in similar case. This fact has been established by thousands of letters and cases coming under my personal observation. It is responsible for some of the most pitiful instances of lost self-control in all the history of drug addiction.

Nor is the growth of the habit in the individual inevitably accompanied by mental or moral degeneracy, as is generally supposed. In this the drug-taker differs radically from the alcoholic. The latter will often defend his vice. A library might be filled with books, fic-

tional and otherwise, glorifying alcohol and the good fellowship and conviviality it is held to promote. One would search long to find a victim of the drug habit who would speak with affection of the material which has enthralled him. There is no drug addict living who would not hail with joy any opportunity through which he could be sure of gaining freedom.

Drugs vs. Alcohol

THE ALCOHOLIC feels little interest in methods advertised as remedial until his trouble has reached an acute stage. He will deny to his friends and even to himself that he is an alcoholic until he has reached a point akin to hopelessness. The drug-taker, on the other hand, knows that he is a victim as soon as he becomes one. He is immediately filled with an intense longing to be relieved of his addiction.

A drug victim investigates each hint of hope with eager interest, reading, intelligently questioning, experimenting. He shrinks from publicity with a horror backed by acute consciousness of his condition, while the victim of alcohol becomes so morally callous that he takes no thought of consequences, knows no proper shame.

This extreme sensitiveness and secretiveness of the drug-taker is one great obstacle to his reclamation, despite his anxious desire to overcome his slavery, for where his investigation of so-called cures does not impress him with their validity he will hide his addiction from the eyes of the world for years—in many cases, while life lasts.

Nothing but really enforced restrictive legislation, fashioned after the model of the present New York state law, will ever uncover the majority of drug-takers in a community. The New York law has revealed thousands, and in two weeks after it went into effect, forced Bellevue and other hospitals to devote many beds to sufferers from drug deprivation.

But to deprive the drug-taker of his drug without making provision for his proper and humane treatment, is a hellish form of torture. No suffering on earth is more intense than this. Imagination shrinks and falters before its unspeakable agony. Rather than undergo such suffering a victim will resort to the most desperate expedients. I do not doubt that the establishment of an efficient treatment for drug addiction in prisons would result in the commission of crimes by drug-takers unable to procure their drug elsewhere; for they would gladly endure the misery of jail life to procure relief.

I am not entirely sure that this last does not happen in some cases now. For my experience has convinced me that drugs are obtainable in one way or another in practically every prison, and where the law outside is highly restric-

tive and the drug addict is unable to get his drug he will—if he is familiar with prison conditions—leave no stone unturned to force an entry there.

Lest this statement seem an exaggeration of conditions I will refer readers to the experience of Katherine Bement Davis, upon assuming the duties of commissioner of corrections of New York city, as an illustration of the difficulty of suppressing altogether the purveyance of drugs to inmates. Upon investigation Miss Davis discovered that an organized system of drug smuggling existed in the metropolitan institutions, through the collusion of guards and other employes. And once this was done away with, she was confronted with the more difficult task of combatting the abnormally stimulated ingenuity of the drug addicts themselves.

When faced with the terrible prospect of deprivation, plans were invented worthy of a Poe or a Gaboriau. Drugs were brought into the Tombs hidden in the visitors' shoes, "starched" into clean linen, injected into oranges from which the juice had been previously extracted through a minute puncture in the skin.

I have stated that the great majority of drug-users wish nothing so much as to be freed from this slavery, while at the same time they fear nothing so greatly as sudden deprivation of their drug. In the interaction of these two major impulses lies the key to the drug addict's psychology. Failure to appreciate this two-fold and often conflicting state of mind, is responsible for much well intentioned but stupid infliction of useless suffering upon the victims of their own slavery to drugs and society's slavery to ignorance. An efficient remedy for the general condition implies understanding of the nature of drug addiction, both physical and psychological, on the part of doctors and legislators and influential citizens, the passage of proper restrictive legislation, and, supplementary to this, the creation of a system of scientific treatment for drug victims to ensure their reclamation with the minimum of suffering to themselves.

My personal conclusions in the matter of what constitutes "scientific treatment" are the result of fourteen years practical experience in dealing with the victims of drug addiction. And I state them with thousands of letters, case histories and drug histories to support my findings.

To proceed by elimination, I am unalterably opposed to the sanatorium idea, *in toto*. It amounts to a colonization of drug victims, even if it does not go beyond that. And drug victims should not be colonized. If I could devise a way to do so I should propose and fight for a law which would prevent the concentration of drug-users into groups for the piazza discussion of their ailments.

In the special case of the drug-user whose habit can be traced to an initial

alleviation of pain through its use, such patient should be at once examined with the purpose of discovering and diagnosing the underlying cause of that pain. When this is done, treatment should be given to remove the cause of the pain. If that is successful, treatment to eradicate the drug habit may be safely used. Neither of these steps indicates the necessity or desirability of the sanatorium.

There are many sanatoria which are in effect high-priced boarding-houses. As such, their heads are naturally desirous of keeping their boarders as long as possible. It is against human nature for such heads to seek to remove entirely the craving for habit-forming drugs. The man who charges by the week for the care of the sick is unlikely to include cure as a detail of that care. Investigation shows that he does not usually include it.

At a meeting of medical men which I attended some time since, a member of the profession frankly assured me that he could not in his sanatorium adopt my treatment because it would soon depopulate his place! His position and attitude was not at all unique; his candor was.

No physician in private practice should attempt to relieve drug addiction in a manner incidental to the conduct of his practice. It is true that the temptation for the doctor to do this is great. If a patient addicted to the drug habit becomes aware that his physician knows of a treatment which will bring relief, that patient is likely to bring every pressure to bear to induce the physician to administer it. Many sufferers feel a strong aversion to leaving home for treatment. But the home treatment is almost invariably ineffective.

Hospital Treatment

THE HOSPITAL is the place to treat the drug addict. And unless the doctor who has not had experience in this field is brought to a realization of this fact, much time and funds and hope will be wasted, with very probably an accompanying loss of confidence in the doctor on the part of his patient.

If the sanatorium and the inexperienced doctor often fail to benefit the well-to-do drug user, the state, in its treatment of drug addicts which come within the sweep of the law's wide arm, does worse than fail. Especially is the plight of the victim pitiful where restrictive legislation brings to light honest drug-users, *i. e.*, those who have acquired the habit through sickness. To these unfortunates no helping hand is anywhere held out save, at this writing, in New York state.

It is a situation hardest, of course, on the victims, but hard also on society. For illustration, in one of the largest hospitals in America I once came across an old woman crooning and rocking an imaginary baby. She had been formally and legally adjudged insane. As a mat-

ter of fact she was suffering from hallucinations due to sudden deprivation of her drug. I suggested definite medical treatment. In two days the woman had lost her hallucinations and on the third day was dismissed as cured.

It is my belief that insane commitments in the United States might be decreased one-half if in every case where insanity was suspected, but where a drug history or an alcoholic history was also

suspected, the patient should be subjected to the necessary definite medical treatment before final commitment.

In conclusion I want to make clear that the particular things which must be brought about before our drug problem can be considered in any large sense solved, are two: First, the angle of the confirmed drug-user must be understood and appreciated and definite treatment in every case succeed the present emo-

tionalistic helplessness of society towards him. This will mean reclamation. Second, the responsibility for creating and maintaining drug addiction must be put squarely up to the medical profession. This will mean prevention.

These desiderata presuppose education, both of the doctor and of the public; and requisite legislation. What is meant by requisite legislation I will discuss in a succeeding article.

Bridgeport on the Rebound

By Amy Hewes

ONE Sunday last spring Kid, the Soldier of Fortune, came from New York city to Bridgeport, Conn., to spend the day with "the boys." His friends had named him the Soldier of Fortune long before. He was a young fellow who had been working first at one job and then at another, lured on through the city streets by the spirit of youth and adventure; and "the boys" were three of his friends who had left New York to go up to the munition factories in Bridgeport and get the easy work and good pay of which the whole working world was talking.

The four boys walked through the Bridgeport streets looking at the great factories which had sprung up where only marsh land lay a few months before.

"Why don't you stay and try your luck with us, Kid? I'll stump you to walk up to the gate tomorrow and get a job," said one of the boys.

"I'll stay, and I'll take you," said the Kid.

By Monday night he was an oiler in the factory, earning twenty-five cents an hour. A week from the next Saturday night, and for many Saturdays after that, his envelope held \$24.

Kid sent down to New York for his father, who was a machinist by trade. Next day his father went into the factory as a high-paid machinist, and in three weeks he had earned so much money that he knocked off to spend it. When his pockets were empty, he started back to the factory to "roll up some more." Just outside the factory gate a steam-roller was working.

"Hello, boss," said Kid's father, "do you want a guy to run that steam-roller for you?"

"Yes," said the man, "I'll take you for \$25."

"Make it \$35 and I'll run her."

"You're my man," was the answer; and that afternoon Kid's father began to "roll up some more."

With a few modifications the story of Kid, the Soldier of Fortune, is the story of hundreds of the young fellows who

BRIDGEPORT, Conn., is a new city. A year ago it was in a fair way of being smothered by the tremendous prosperity which munition-making had poured in its receptive but unprepared lap. In THE SURVEY for December 4, 1915, Zenas L. Potter told of a lack of houses so great that men earning ordinary wages could not get a home; of its schools all but swamped by the children of its new thousands of workmen; of its congested streets and inadequate recreation. Now a new spirit is at work building a new city. Miss Hewes, former secretary of the Massachusetts Minimum Wage Commission, appraises it in the light of her experience as an investigator for the Russell Sage Foundation, for which she studied conditions affecting women in munitions factories during the past summer. A summary of her full report will be published in a later issue.—EDITOR.

crowd Bridgeport's brilliantly lighted streets on Saturday and Sunday nights, and an epitomized history of the city's industrial expansion. Awakening Bridgeport is just beginning to see the necessities and opportunities which the hordes of incoming working people have brought. The change brought by munition work has been too rapid, the onslaught too vigorous; the city has barely had time to catch its breath and pull itself together. In a little more than a year and a half it has passed through three sharply defined stages of development.

In the winter of 1914-15, it was groaning under a season of unemployment and hardship and poverty such as it had not seen since the bitter days following the panic of 1907. Except for the depression which such a period brings to any city, it was progressing in an orderly

and conventional manner. It had a population of something over 102,000, a transportation system which met its needs, a conservative city government, and was extending its suburbs and caring for its large foreign population in a restrained and gradual fashion by building new schoolhouses and taking steps toward revising its tenement house laws.

Within nine months great munition factories had been built and thousands of men were working night and day under their roofs to turn out the enormous war orders that were making Bridgeport known as "the new world arsenal." Job-hunters were pouring in on every train. At the same time wages kept rising and labor was at a premium. Advertisements for employes, in which the advantages of the proffered work were described almost pleadingly, filled the daily papers. The families of the incoming workers taxed the housing facilities of the city; rents soared; and stories of eviction of families who could not pay the increased rents for their old homes found their way into print. The transportation service proved inadequate and Bridgeport's narrow streets were filled with innumerable honking jitneys. The population rose by the tens of thousands.

Through it all, it seemed to outsiders that the municipality itself was hardly conscious of its responsibilities. The visitor to Bridgeport saw the thronged streets, the halting transportation service, the lack of recreational facilities, the flimsy three-decker tenements for which rents double those of a year before were asked; and marveled at the apparent failure of the city government to take cognizance of the fact that it was no longer a middle-aged, conservative manufacturing city, but a "boom town," young with the youth of its newest citizens, and full of great possibilities for good or harm, for ugliness or beauty, for loyalty or bitterness, in its new industrial army.

The year 1916 has seen the inception of a new spirit in Bridgeport. Even while the city seemed to be asleep, new ideas had been fermenting. Bridgeport had ceased to be a typical American city,

and had become a unique American city. Under the old order, in most American towns, merchants and manufacturers went their several ways intent on making and selling goods, leaving to the mayor and the Board of Aldermen and the party bosses behind them all concern for the city's housekeeping, a concern which too often took the form of a distribution of plums and lemons. When business men formed associations it was to promote some mutual benefit which did not extend beyond the trade in which they were organized.

Bridgeport has cast aside the old tradition. Nothing better illustrates the new spirit that has captured the city than the Minerva-like appearance of a life-size Chamber of Commerce, not yet a year old, which is advancing upon the city's problems with a program for providing houses for working people to live in, terminal and track facilities to accommodate the enormously increased freight traffic, and street extensions for the tangled thoroughfares.

"We've never had any real cooperation among the business men before," said one enthusiastic member. "Before, when we tried to put through any civic enterprise, it has always ended in mere talk. Nobody would go in for public improvements unless you could assure him that they would increase the value of his own back yard. Today a truce is on. Old opponents are working on the same committees, and we're all agreed that we're going to make this town a good town to live in after all."

More Houses Needed

THE CHAMBER'S most vigorous campaign has been a concentrated effort for more houses. Its members believed that the satisfaction of this need was an important key to the city's continued prosperity. As one of her most far-seeing business men expressed it, "We've got to make people comfortable in order to keep them in Bridgeport." The Remington Arms-Union Metallic Cartridge Company had started an extensive system of company houses, but the completion of a number of these was delayed and even the whole number would have been only a fraction of the number of houses required. Hundreds of desirable men, many of them men with families, had come to the city only to go away again because they could not find suitable homes, or because they could not find houses of any kind.

The Chamber of Commerce sent representatives to study housing projects in other cities, and charged them to distinguish paying investments from the "fancy" experiments of semi-philanthropic agencies, for the new Bridgeport means to conduct her municipal business with truly efficient and business-like methods. The services of John Nolen, city planner, were secured, and the Housing Committee of the Chamber of Commerce proceeded to act on the recom-

mendations given in the report on local housing conditions prepared by him, and submitted in August, 1916.

Mr. Nolen stated that the situation in Bridgeport was "desperate," and recommended the organization of a house building company as "the only good solution of the problem." The Bridgeport Housing Company was formed, capitalized at a million dollars, and backed by several of the city's most prominent and public-spirited citizens. This organization, which contemplates one of the most significant housing operations ever undertaken in this country, has its project already under way. The plans call for houses to accommodate 1,000 families, with rents ranging from \$15 to \$25 a month. F. C. Blanchard, formerly manager of one of the large local companies, has been made manager of the housing company and expert advice has been secured by engaging John Ihlder as housing consultant.

Bridgeport's housing awakening found its way into advertisements which appeared in the papers last spring, in the name of the Build for Bridgeport Movement. In one of these the advantages of "getting together" were urged in the following exhortation:

"GET TOGETHER WEEK.

"We are waking up in Bridgeport. Some of us are a little dazzled by seeing what was before our eyes all the time.

"A lot of us are asleep yet, a sort of restless, active, hypnotic sleep, caused by keeping our eyes fixed on the next dollar in front of us.

"Those who are awake are looking ahead to many more dollars than are in sight now, a steady secure stream of them made permanent by stable prosperity governed by intelligence, by fair play, by honest work.

"We are not going to have this gambler's prosperity handed to us on a silver platter indefinitely. And we can't club it out of each other, when there isn't enough to go round, even if we are silly enough to try it.

"Remember always that the value of a dollar isn't measured by the figure 1 with a sign before it. Its measure is what you can get for it, the work you can make it do for you.

"The biggest work a dollar can do for you just now is to build homes that will pay.

"It is going to take many dollars—all we can spare.

"Big men in Bridgeport are giving their brains and knowledge to the problem, and they will lend their money.

"They can't do it all. It isn't fair to Bridgeport nor to us to let them do it all. It's part of our job.

"All of us must join in and DO IT NOW.

"By this time we all know where we stand; if we have two good feet and a head of our own we can balance on top of them.

"Let's agree right now to go into partnership with our own town and work like honest, loyal partners.

"BE FOR BRIDGEPORT."

The incrowding population pressed upon the city's resources not only for houses but for all other public services necessary for community life. It is generally believed that there are about 150,000 people in Bridgeport today, an increase of nearly 50 per cent over the 102,054 reported by the federal census in 1910. With this influx Bridgeport suddenly outgrew her schools, her hospitals and parks, her bridges and sewers. The public purse needed replenishing and the voters, now awake to the need for immediate action, responded in April of this year by approving the largest bond issues in the city's history. These totaled \$2,275,000, and included provisions for streets, bridges, schools, sewers, clinics and parks, and additional equipment for the police and fire departments.

Looking beyond the enlargement of the beautiful park along the sound and smaller parks throughout the city, a municipal commission has undertaken the big problem of all-the-year-round recreation. The crowds of young men and women who loiter along the streets when the working day is done, the lines of people stretching a block in either direction waiting to get into the overtaxed movies, the throngs rushing for cars to the nearby beaches, these make up the audience which watches for better recreational opportunities for the working people.

Behind the appointment of the Recreation Commission lies the report of the Vice Commission, which laid bare some of the secrets of the underworld and strongly urged the appointment of a body to provide opportunities for healthful amusement and exercise. Like the Chamber of Commerce, the Recreation Commission has obtained expert advice and assistance, and secured a representative of the Playground and Recreation Association of America to survey the situation in Bridgeport in the past summer.

Expert Health Advice

THE VITAL ISSUE of public health forced itself upon the attention of the city in the early summer of 1916. Cases of streptococcal infection, attributed to the milk supply, spread alarm throughout the city, and brought forth determined efforts to locate the source of the trouble and to secure clean milk. Closely upon this followed the danger of an epidemic of infantile paralysis, which was rife in New York city. No time was lost in securing the services of an expert. Dr. Abraham Sophian of the Rockefeller Institute was put in charge of the work of the Board of Health in July. Protective measures were at once enforced, and it is believed that the prompt and thorough work of the department saved the lives of many children.

Another far-reaching benefit came from a general clean-up, and from the educational work done by the inspectors and visiting nurses. The daily press reflected the growing appreciation of the

need of adequate protection of the public health and already the sum which was voted last spring for public clinics is considered inadequate for the up-to-date out-service work which is planned to supplement the hospitals.

Bridgeport has good reason to be proud of the accomplishments of the last few months. Faced with emergencies which taxed her resources beyond their limits, she has set herself vigorously and persistently to her tasks. The newly self-conscious city is aware that her future

growth must be an ordered progress. The habit of securing expert advice has been formed. Higher standards for public health, for schools, for recreation, and for housing are being realized. A better coordination of these separate efforts to meet the new social demands is the next step. The masses of human beings from all occupations and all parts of the world who are pouring through the city's gates must not remain alien and unrelated. A new civic consciousness must be generated in the new Bridgeport.

was shown to have had a vital share.

Joseph Lee, of Boston, president of the congress and of the Playground and Recreation Association of America, sent out from Grand Rapids two special letters to friends of the movement. Preceding paragraphs of this review are taken largely from these official letters describing the congress. In conclusion Mr. Lee wrote: "Help us to develop such virile Americanism as shall also be fully in harmony with internationalism and with the spirit of universal brotherhood."

RED MEN IN COUNCIL

FOLKS who can boast a mere two or three centuries of American lineage would do well to consider the superior claims of those whose ancestors were leaving arrowheads as reminders of hunt and warfare in the forests of the western hemisphere while theirs were introducing the deadlier gunpowder and cannon "somewhere in France."

A representative group of these really native Americans, writes Flora Warren Seymour, met at Cedar Rapids, Iowa, September 26-30 for the annual conference of the Society of American Indians. With them convened a group of Anglo-Saxon associate members.

Most divergent views were set forth in vigorous fashion, yet there was no sign of any desire to hinder their free expression. Those who believe the Indian stolid and unemotional should have heard the impassioned and dramatic demand of Dr. Carlos Montezuma, of Chicago, for the immediate abolition of the Indian Bureau, which both by its repression and by its paternalism he believed to be stifling the proper development of the race.

Dr. Montezuma's plea for the elimination of reservation lines and the mingling of red man and white on equal terms was later championed by General Pratt, the venerable founder of the Government Indian School at Carlisle, Pa. He advocated the removal of the Indian from his racial and tribal environment as the only method to compel his adoption of the customs of the dominant race. The success of the "outing system" which General Pratt inaugurated at Carlisle by placing Indian boys and girls at work in the fields and homes of Pennsylvanians, illustrates the working out of this principle, as also do the accomplishments of individual Indians enlisted in the army among white soldiers, when contrasted with the failure of a plan, adopted for a short time by the War Department, to enlist Indians in companies, each made up of the members of a single tribe.

In marked contrast to these views was the appeal of a delegation of Wisconsin Indians for protection against encroachment by the state authorities on their treaty hunting grounds.

One of the most inspiring features of the conference was the account of Gertrude Bonnin, a Sioux Indian, of her first year of community center work among the Utes of the Uintah and Ouray Reservation in Utah. Sewing circles were organized and simple sewing learned in making garments for the aged and needy of the tribe. The spirit of help-

Conferences

PLAY MAKES MEN

“WHAT right have we to hold a recreation congress,” asked one speaker, “when Europe is aflame, when America is struggling through political, economic, social changes of grave moment? Is recreation statesmenlike? Is it one of the great socializing forces of the day? Can play be a nation-builder?”

One answer suggested at the International Recreation Congress at Grand Rapids, Mich., October 2-6, was that the recreation movement represents the greatest unworked mine of power in every community, writes Charles F. Weller, associate secretary of the Playground and Recreation Association of America. Four million hours of leisure every week in Grand Rapids; three billion leisure homes weekly in the United States. Any great advances in civilization must be developed out of this margin, this slack, this unworked mine. Recreation changes leisure hours from liabilities to assets.

For the invigoration of American life this International Recreation Congress united the advocates and the opponents of military training. Nine-tenths of military training nowadays is trench-digging, outdoor life, obedience, hardihood, courage. These essentials are best developed, not by gun drill, but by games, athletics, physical education.

Wellington said: “The battle of Waterloo was won on the playing fields of Eton and Harrow.” “Future wars, we hope, will be fought, not from trenches, but on football fields,” said a speaker at the opening session of the recreation congress. He described the internationalizing, civilizing influences of American games in China, India, the Philippines, South America and among five million dispirited men in the prison war camps of Europe. The congress discussed athletics, games and play as the best means of building character and efficiency—whether for peace or for war.

Any one who thinks of “play” as merely childlike, soft, amusing, unimportant, would have been surprised at the hundreds of powerful, earnest men and women assembled at Grand Rapids, intent upon the invigoration of American

life through wholesome use of leisure hours of all the people.

Never before has there been a recreation congress with so large an attendance. To the 7,500 employed playleaders of America represented came the call to formulate programs which shall stimulate and guide all our colleges and schools, all park forces, libraries, city and town governments, uniting them in effective efforts for the strengthening of American life. These forces are strong enough, if vitalized, to bring about an American renaissance.

“What delays us?” asked one speaker.

“Provincialism,” was the answer. “America does not yet exist as a unified ideal. A tragic war would rouse us into genuine nationalism. Disasters like that at San Francisco show how great groups of people may be lifted out of narrowness into idealism and fraternal action. But ordinarily an American lives only for his own nearby community. He may contribute to playgrounds at home, but not to a national movement, not to the upbuilding of boys and girls outside his own narrow range of vision.”

“To re-create America, playleaders must have such vision, such broad, deep, religious fervor as will lead into united action, in every community, all the wets and dries; the Protestants, Catholics, Lutherans, Jews and Gentiles; all school, park and city forces; the politicians and idealists; and all the fifty-seven varieties of common humanity.”

From Uruguay came the report of \$50,000 appropriated annually for physical education and playgrounds under the leadership of a trained man from Kansas. From the arts related to recreation—from music, dancing, and dramatics—vital contributions were made. Enlistment and training for this “new profession” of playleadership were discussed. Rural problems engaged attention more than ever before. Recreation in industries was one of the newer outlooks emphasized by the presence of business men who are planning playgrounds and recreational activities for factories and stores. Governmental departments and prison reform contributed their quota. In Warden Osborne's work of transforming Sing Sing recreation

fulness thus engendered found further expression in the establishment of a rest room for the Indian women and children who came in great numbers to the agency for the transaction of business. The preparation of the room and the serving of lunch to the visitors gave opportunity for lessons in domestic science and sanitation.

At another meeting, an article in THE SURVEY for May 13 on the Indians' use of peyote, reprinted in the *American Indian Magazine*, the quarterly journal of the society, furnished the text for an animated discussion on the evils caused by the use of this drug. A resolution was finally adopted in support of the Gandy bill designed to prevent the traffic in peyote.

Other resolutions commend the new vocational courses in Indian schools and the health campaign among the reservations which has already resulted in a lowering of the death rate; urge Congress to close the Indian Bureau as soon as trust funds, treaty rights and other obligations are fulfilled; and demand a definition of the legal status of the Indian and the early adjudication of all tribal claims.

IN SHERWOOD FOREST

IN Sherwood Forest, Md., the annual conference of the Intercollegiate Socialist Society, September 19-25, wrangled with the question that has been splitting the solidarity of European Socialists since the war began. In other words, according to the report of Harry W. Laidler, secretary, the general topic for discussion, National and International Social Preparedness, largely resolved itself into a debate on the Socialist attitude toward war.

While J. G. Phelps Stokes and William English Walling argued that wars of defense are justified "where the liberties of the people are deemed to be at stake" and that even aggressive wars are worthy of support "where deemed by the people as essential to the overthrow of tyranny," there were pacifists on hand to maintain both the improbability of foreign invasion of America and such substitutes for armed opposition as economic boycotts, a general strike, arbitration, a league of peace, etc.

George W. Nasmyth of the World Peace Foundation, for example, contended that if peace advocates let it be known that they are willing to join in defensive war, they would place a powerful weapon in the hands of militarists. At the outbreak of any war, he said, it is comparatively easy for a government to convince the mass of the people that the war is one of defense, not of aggression. He emphasized, however, the great difficulty of abolishing warfare until the governments had some international machinery, such as a league of peace, to which they could turn in times of crises.

Less divided was the conference in its view of dealing with immigration after the war, as a part of social preparedness. Although some members prophesied an influx of immigrants and others a decrease, practically all advocated the "open door" policy.

Prof. Jacob H. Hollander of Johns

Hopkins University opposed the restriction of immigration on the ground that "the free admission of competent immigrants wisely distributed would result in increased economic well being and wholesome culture and would contribute definite spiritual elements in the life of the nation." John Spargo made a special plea for the admission of Asiatic peoples, declaring that it had not been proved that they were non-assimilable. "The true Socialist remedy," he said, "is not the exclusion of that race, but the development of an enlightened policy by the political and economic organizations of the working class in this country to the end of securely establishing the standard of living and making it immune against all forms of competition, while preserving the open door which internationalism demands."

Military preparedness, the growth of the cooperative movement, the world wide sweep toward public ownership and trade unionism were other topics to which the conference devoted its attention.

The conference ended with illuminating talks on The Socialist Appeal to the Christian Mind by Prof. Walter Rauschenbusch and Richard W. Hogue. Professor Rauschenbusch declared that Socialism has a distinct appeal to Christians because of its demand for justice, for solidarity, for peace; because of its concern for the common man, and because it offers to the rich the salvation which can come only through participation in wholesome productive labor and a life of simplicity and fellowship.

AMERICAN HOSPITALS

HOW widely ramified is the work of a modern hospital was evident at the convention of the American Hospital Association, just closed in Philadelphia. The central plan and its administration from foundation-stone to cupola, from aesthetics to dietetics, was most thoroughly reviewed by hospital men all the way from Minnesota to Connecticut. Small hospitals and their particular needs; the best means of preventing infection for general institutions; advance in nurses' training, all had their place in the discussion, as a matter of course. But then, the hospital reached out into the community instead of waiting for the community to muster up courage to come to it. Dispensaries, clinics, social service—these familiar ideas were included on the program as part of a unified hospital process.

Among the special topics was that of clinics for treating venereal disease. Dr. W. F. Snow, secretary of the American Social Hygiene Association, urged the need for a larger number of such clinics, and suggested some ways and means of developing them. Speaking of what dispensary work should stand for, Dr. Richard C. Cabot, of Boston, emphasized the value of the "cooperative work of specialists, who together, with a united skill, can make a more accurate diagnosis than any individual. . . . A dispensary, properly organized, represents today this cooperative medicine."

The rapid growth of the dispensary movement, was illustrated by the report which Michael M. Davis, jr., director of

the Boston Dispensary, presented for the committee on dispensary work of the Hospital Association. "The number of dispensaries in this country," Mr. Davis said, "has grown from 200 in 1904 to at least 2,300 at the present time." "About 1,000 of these are dispensaries for the sick poor, treating general diseases, while the remaining 1,300 are public health dispensaries, established to relieve and particularly to prevent tuberculosis, infant mortality, defects of school children, etc."

CATHOLIC CHARITIES

CHILD care was the problem which received the greatest amount of attention at the fourth biennial meeting of the National Conference of Catholic Charities held at Washington, D. C., September 17-20. In particular, reports John O'Grady, this subject was discussed from the standpoint of the Catholic institution in retaining and placing children.

Robert Biggs of Baltimore summed up the results of a canvass of eighty Catholic institutions caring for 20,000 dependent children, on requirements for admission, educational standards, policy and practice in discharging children, and sources of revenue. While he found that the institutional standards were on the whole fairly high, he suggested that more care might be exercised in regard to physical examination, before receiving the children.

Mary Tinney of Brooklyn, who dealt with the placement of 3,000 children by the Catholic Home Bureau of New York, concluded that the best placement age is between one and eight. Between eight and twelve she considered a rather doubtful period. In regard to children over twelve, Miss Tinney thought that it was nothing short of cruelty to put them out into the world unequipped by education and training to compete with the child brought up in normal surroundings. "Let the institutions," she declared, "keep these children until they are at least sixteen and give them along with their ordinary school work the special vocational training for which they have a preference."

One session of the conference, devoted to juvenile delinquency, emphasized the fact that the most dangerous period in the lives of children is when they leave school and go out to work. In this connection, the various efforts of the church to develop social centers where young people may find healthy amusement and recreation were reviewed.

Turning from problems concerning the young to those concerning adults the conference considered such industrial issues as the work of free employment bureaus, the contribution of the church toward the solution of the unemployment problem and the securing of employment for the handicapped. F. E. Kenkel of St. Louis, who spoke on the role of social legislation in the field of relief, made a strong plea for sickness, old age and unemployment insurance as the best means of preventing dependency. A discussion of a paper adverse to minimum wage revealed the fact that the overwhelming sentiment of the conference

was in favor of the legal regulation of wages of women and minors.

The most important new line of endeavor undertaken by the conference is the publication of a monthly review, to appear in January, at the Catholic University, to take the place of the *St. Vin-*

cent De Paul Quarterly. The magazine will be edited by the Rev. John A. Ryan.

The officers for 1917 and 1918 are the Rt. Rev. Thomas J. Shahan, rector of the Catholic University, Washington, D. C., president; the Rev. William J. Kerby, Catholic University, secretary.

value of a clean yard and a clean pair of hands? The book strains out gnats and swallows camels.

Professor Rettger's philology is also occasionally insecure. Apropos of germ-diseases, contrasted with the visible attack of large foes, he says: "We give to the latter attack the name of sickness or disease because the invading enemy is too small to make himself at once known. . . .!"

The teacher who has to use this book should have an adequate reference library at home, and use it fearlessly. It would save time and strength to have a better textbook.

Book Reviews

ENGLISH PUBLIC HEALTH ADMINISTRATION

By B. G. Bannington. P. S. King and Son (London). 338 pp. Price \$1.75; by mail of THE SURVEY \$2.25 (50 cents duty).

ELEMENTS OF PHYSIOLOGY AND SANITATION

By Louis J. Rettger. A. S. Barnes and Company. 389 pp. Price \$.80; by mail of THE SURVEY \$.91.

CONTENT WITH FLIES

By Mary and Jane Findlater. E. P. Dutton Company. 111 pp. Price \$1; by mail of THE SURVEY \$1.07.

THE FIGHT FOR FOOD

By Leon A. Congdon. J. B. Lippincott Company. 207 pp. Price \$1.25; by mail of THE SURVEY \$1.33.

Dr. Bannington, for years a public health officer in the West Ham district, writes out of his own experience, observation and study with a twofold aim. He provides a "survey of its administrative technique" of the British public health department for those who are inter-

ested as students or as electors or elected; and a solid reference book for those officials now in the health service who seek to rise to higher positions.

The result is a masterly handling of a most intricate mass of detail. Dr. Bannington traces the development of the public health movement from the days of Chaucer when towns were commanded by law to clean up "all that would corrupt and infect the air and bring disease;" through the times when Shakespeare's father was twice fined for failing to keep his share of the street clean; on to the very modern developments of food inspection, and the prevention of infectious diseases. Adequate quotation of original laws, valuable tabulations and summaries, take the reader over a great deal of ground. The volume is invaluable for reference; impossible of description.

It is interesting to note that in concluding, Dr. Bannington writes on "the need for reform." Too intricate, too highly organized, the present system seems to him to be. A superabundance of laws of all kinds—the standard legal work on public health fills over 3,000 pages—leaves it inevitable that there should often be "a great difference be-

tween what Parliament meant, what ordinary people believe they meant, and what judges decide they meant." Result: a maximum of cost and effort and a minimum of result. Parts of the field are overworked; others are left untouched.

Significant as Dr. Bannington's study must be as a history and a call to higher efficiency in its definite territory, the volume will also prove illuminating to those in this country who are attentively studying public health administration and standards. It is published as one of the "studies" of the London School of Economics and Political Science.

This textbook is especially noticeable for its interesting illustrations. In his section on sanitation, Professor Rettger shows the various bacteria and their characteristic groupings; the path of a fly thirty-six hours after it walked across a sterile plate and the germs

from its feet have bubbled up into little colonies; so, too, the germs that blossomed along the tracings of a pencil moistened with saliva.

"Now, children, do you see? Those are germs!"

Excellent—clear, dramatic, simple. *Germ is germs*. But what about other germs? "Ware the disease-bringers, of course, and heartily. Why not give credit to those that are not naturally pathogenic, and tell the decidedly exciting story of how they may become so?"

This lack of discrimination, of exactness, is a fault of no small proportion. Says Professor Rettger: "[The fly] spends most of its time feeding upon all forms of garbage and filth. Laden with this infection. . . ." It is laden with infection only if there is infected material there.

Again, the fly is said to haunt out-buildings, "and because of this is particularly dangerous to health inasmuch as it carries germs of intestinal diseases. . . ." It will carry them if they are there.

We have no desire to relieve the fly of any responsibility. We regret the use in a textbook of statements so general as to be positively inaccurate, and we dread reaction against the whole subject when the pupil discovers the inaccuracy. Why not tell the whole interesting truth? Is there no place in class instruction for the aesthetic and moral

Apologies ladies! Immersed in all the orthodox traditions of clean-up campaigns and swatters, we laid prompt and violent hands upon your book with its so unorthodox a title. And lo, we found it a pleasing chronicle of quest for the simple life away from cooks, crowds, streets and "hostile currents of thought." We found some attractive pictures—fine trees by beautiful lake-sides, where only the mosquito was vile. The motive for this quest is found in the biological fact vouched for in the following couplet:

"As cats when they can catch no mice
Content themselves with catching flies"—

Again, apologies, ladies. We have been "interested" and also "cheered" even though we shall not try your experiment. Crowds are too interesting. And so are flies—real flies. But why did not your publisher save you from your title?

The "fight for food" is something on which Mr. Congdon certainly has a right to speak. He is chief of the division of food and drugs in the Kansas State Board of Health, a division which has in the past few years, made inspection of food and drugs a prominent part of its work.

The task is a large one—to pack into a small volume the story of the problems, legal, sanitary, economic and vital, involved in "pure food." Also, to tell this story simply is in itself not easy. Mr. Congdon may meet the charge of superficiality; but he makes no claim to exhaustiveness, seeking only that the "public at large" may know something about their food. His book should definitely contribute towards that end.

GERTRUDE SEYMOUR.

SEX PROBLEMS OF MAN IN HEALTH AND DISEASE

By Dr. Moses Scholts. Stewart and Kidd Company. 168 pp. Price \$1; by mail of THE SURVEY \$1.07.

It is most appropriate that the writer of a treatise on sex problems should in some measure resemble Job; even if only in the matter of multiple personality. In no other way can we explain the authorship of this volume. For the apt and forceful phrase jostles the inversion and the casual ineptitude. Repeated use

of "prostrate" for prostate, and of "embryo" as synonymous for "ovum," and an unequalled grammatical carelessness in the use of the article are matched by really telling phrases in the preface and summary.

The inspiration of this volume is quite as manifold as its syntax. We doubt the ability of the uninitiated to understand the anatomical details or to benefit by the gruesome and somewhat inaccurate descriptions of disease. We see no virtue in the many pages devoted to the treatment of disease other than that of exploiting the author's professional skill. On the other hand the pages dealing with the psychological aspects of the sex problem merit commendation for their tactful and practical, yet high-minded enthusiasm.

The author believes in sexual repression up to the age of "22-25," after which he appears to concede that the sex-impulse can no longer be restrained. We are moved by the strength of the plea for continence earlier in the volume to ask, Why "22-25"?

The effect of this book will doubtless be good rather than harmful. Its inspired psychology should counteract the morbid descriptions of disease.

EDWARD L. KEYES, JR.

THE SOURCE, CHEMISTRY AND USE OF FOOD PRODUCTS.

By E. H. S. Bailey. P. Blakiston's Son and Company. 539 pp. Price \$1.60; by mail of THE SURVEY \$1.77.

Professor Bailey has rendered a definite service to all who are interested in the development of home economics literature. His book is a very happy combination of scientific fact and popular interpretation. It is planned as a textbook for high schools and colleges, but as a

reference book is a valuable addition to the library of any one interested in the subject.

The chapters cover the following subjects: sources of foods; composition and manufacture of cereals, bread, sugars, alcoholic beverages; cultivation and preservation of fruits and vegetables; composition and use of meat products, fish, milk and dairy products; sources of spices and other condiments; a chapter on the importance of water, and finally an appendix that is worth the price of the book to one who has pursued certain tables in elusive pamphlets. This appendix gives tabulations of the composition and food value of most of the common foods.

In these days of popular writing on scientific subjects it is worth while to have a book that is absolutely reliable. There is just enough chemistry to give a proper background to the student and not enough to discourage the layman. The discussions of relative value of certain package foods are very valuable, as are also those on diet fads and adulteration of foods. The book is not a treatise on nutrition, but there are certain para-

graphs of value to students of this subject, notably the one on the nutritive value of potatoes.

The book is one that will surely help to clear up popular confusion on any number of points.

WINIFRED STUART GIBBS.

CHARLES E. HUGHES

By William L. Ransom. E. P. Dutton Company. 353 pp. Price \$1.50; by mail of THE SURVEY \$1.60.

For readers who revere the seclusion of courts of last resort and the withdrawal of judges from the current affairs with which their decisions deal, this book will seem an omen of evil change. For in it a judge presents to the reading public for criticism and as a guide to ac-

tion, selected decisions, excerpts from decisions, and dissenting opinions of a justice of the Supreme Court of the United States.

The period covered opens on April 25, 1910, with the appointment of Justice Hughes to the Supreme Court, and closes on June 12, 1916, with the adoption by the court of the last decision written by him, that of the case of *New York vs. Becker*. It covers, therefore, somewhat more than half of the current decade—1910 to 1920—and could not be more contemporaneous.

No effort has been spared to make easy for the reader an acquaintance with the mind of Justice Hughes as expressed in his work and recorded in print. Appendix A gives a table of opinions written by him for the court. Appendix B a table of dissents by him from the majority opinion, with the reference in every case, and the dates of argument and rendered decision.

An excellent index and a table of cases aid the reader, and among the seventeen chapter heads are found: National power over national interests; safeguards against adulteration and misbranding of foods and drugs; the eight-hour workday and compensation for occupational disabilities arising from trade risks; the paper-box factory girl and the constitution (referring to the Oregon minimum wage case still pending before the Supreme Court after being argued in December, 1914); compelling choice between withdrawal from trades union membership and discharge from employment; the rights and industrial status of women; franchise obligations and vested rights; prejudicial restraint of trade and the need for certainty in the anti-trust acts; the case of *Leo M. Frank* and a puzzling question of national responsibility (dissenting opinion by Justices Holmes and Hughes); the "separate coach" law and the sleeping car; America and the immigrant of today and yesterday; the courts as expert agents of democracy.

Chapters under less popular captions deal with peonage, with the powers of commissions and administrative departments, and with modern interpretations

and enlargements of the police powers.

It is unfortunate that there appears to be no reference to the Danbury hat-ter's case. For although Justice Hughes seems neither to have written any of the decisions relating to it, nor to have dissented from any of them, the case was, at one stage, before the court of which he was a member, and his position in regard to it is a subject of speculation among thousands of citizens.

The following three decisions as to working hours are of poignant interest at the moment, in relation to the recent federal eight-hour law for railway men:

"The length of hours of service has direct relation to the efficiency of the human agencies upon which protection to life and property necessarily depends. This has been repeatedly emphasized in official reports of the Interstate Commerce Commission, and is a matter so plain as to require no elaboration. In its power suitably to provide for the safety of employes and travelers, Congress was not limited to the enactment of laws relating to mechanical appliances, but it was also competent to consider, and to endeavor to reduce, the dangers incident to the strain of excessive hours of duty on the part of engineers, conductors, train despatchers, telegraphers, and other persons embraced within the class defined by the act. And in imposing restrictions having reasonable relation to this end there is no interference with liberty of contract as guaranteed by the Constitution. If then it be assumed, as it must be, that in the furtherance of its purposes Congress can limit the hours of labor of employes engaged in interstate transportation, it follows that this power cannot be defeated either by prolonging the period of service through other requirements of the carriers or by the commingling of duties relating to interstate and intrastate operations. . . ."

Thus spoke Justice Hughes in the case of the Baltimore and Ohio Railroad Company against the Interstate Commerce Commission. In an Ohio case involving the validity of the Ohio statute which limited the working hours of women to 54 in any one week, he was one of a unanimous court. He wrote the opinion of the Supreme Court in *Miller vs. Wilson*, sustaining as reasonable and within the federal constitution the California statute which restricts to 8 hours in one day and 48 hours in one week the work of women in all industries except household service, agriculture, horticulture, viticulture, and the work of graduate nurses and pharmacists in hospitals.

Judge Ransom has performed a substantial service in painstakingly compiling these excerpts and references, and social workers can follow the campaign with more enlightened understanding after reading the volume.

Communications

TWO SUGGESTIONS

To THE EDITOR:—Edith Houghton Hooker's article in the September 2 issue interested me. There are just two things I want to suggest after reading it.

One is that the "single standard" of sexual morality is a matter of moral teaching and not of scientific "information."

The other is that whatever a *Catholic* boy may ultimately do or be, he at least is under no delusion on the point. He knows that the standard for boy and girl is one and the same and if he sins it is not in ignorance. He is taught not that it is "foolish," not that it is "dangerous" but simply that it is *wrong*.

And that is the first and last thing that needs to be taught a boy. Nothing else will be of any use. When woman shall "gain full voice in the teachings of the community's public school" can she teach him *that* so that he will know it to be true? THOMAS F. WOODLOCK.
Mt. Vernon, N. Y.

THE FEDERAL WORKING AGE

To THE EDITOR: In Politics and the New Child Labor Law in your issue for September 30, I regret that you commit an error which is likely to cause more confusion to your readers than the note itself will dispel. You quote me as saying that the law prohibits interstate commerce in goods produced in any establishment in which "within thirty days prior to the removal of such product therefrom children under the age of sixteen years have been employed or permitted to work." The word "sixteen" should read "fourteen," and I suggest that you kindly make the correction in an early issue. The sixteen-year age-limit applies only to mines and quarries.

OWEN R. LOVEJOY.

[Secretary National Child Labor Committee.]
New York.

WITH APOLOGIES

To THE EDITOR: In THE SURVEY for September 23, there is what purports to be a quotation by Justice Greenbaum from my testimony before the Strong commission which was investigating the New York state Board of Charities. It is a little mortifying that the fact that the closing sentence of this paragraph as it stands is absolute nonsense, without subject, predicate or any sort of meaning, did not suggest either to the justice or to the editor of THE SURVEY a doubt of its authenticity.

At any rate I would like to protest as earnestly as possible that neither the paragraph as a whole nor any single sentence in it is a correct record of my statement. Not having had an opportunity to revise the record of my brief testimony on this subject before the

Strong commission, I am unable to say whether the official reporter or some one else is responsible for the travesty of my views.

I am not "prepared to say that the day of private institutions" has "gone past forever," whether "in relation to the civic corporation" or in any other relation. I have never thought so. I could not possibly have said so. I have never in print or in speech referred to a "well organized Catholic interest," without at the same time and in the same connection referring to similarly organized Jewish and Protestant "interests."

I believe and have always believed in the usefulness of and the necessity for private institutions for children and private hospitals. I believe that these private hospitals and private institutions should be supported by voluntary contributions and endowments and not by taxation.

When the private institutions, whether independently or organized in a common body, oppose the normal development of public hospitals and institutions, when they put obstacles in the way of adequate appropriations for municipal departments, when they seek to discredit state and municipal agencies in the interests of maintaining and extending the system of subsidized institutions—or, if it is preferred—in the interest of the system of contract payments to private institutions, then their influence is pernicious and their policy is legitimately open to attack.

To oppose such policies and to advocate state institutions, supported by taxation and managed by public officials, is not in any sense an attack on institutions as such and is no indication even of unfriendliness to them. I have always deprecated attacks on individuals and on institutions. Policies and measures are fair subjects for discussion.

Private "reformatories" for adults are, I think, objectionable on grounds which do not apply to hospitals or children's institutions, and I would be very glad to be able to say that the day of such reformatories, whether subsidized or not, has gone by.

EDWARD T. DEVINE.

New York.

HOME ECONOMICS

To THE EDITOR: I was glad to read in Robert A. Woods' letter in THE SURVEY for September 9, the following expression of opinion which, coming from him, has peculiar significance and is most encouraging to me personally: "For more than a generation there has been a steadily increasing convergence upon the home as the vital focal point at which all sound beginnings of every sort of helpful service should be made."

May I call the attention of the readers of THE SURVEY to a course of twelve

lectures on the Art of Spending to be given under the auspices of the Committee on Home Economics of the National Special Aid Society at its offices, 259 Fifth Avenue New York city? Lectures will be given Mondays and Fridays at 3.30 P.M., beginning October 9.

The committee hopes soon to open a library of home economics free to all. The books are being given through the generosity of the publishers.

New York. ANNIE NATHAN MEYER.

JOTTINGS

The Ohio State Industrial Commission has appointed Charles Arndt, former business agent of the Pattern-Makers' Union, head of the State-City Free Labor Exchange. His city title is commissioner of labor and immigration.

The endowment for an international hospital in Tokio, Japan [See THE SURVEY for March 20, 1915], has been completed. The American Council of St. Luke's Hospital announce a fund of \$500,000 for the hospital and a department of research in Oriental diseases.

President Wilson announced last week his appointments to the board which is to investigate the operation of the eight-hour day on the railroads: Maj.-Gen. George W. Goethals, E. E. Clark of the Interstate Commerce Commission and George Rublee of the federal Trade Commission.

The City Club of Kansas City, Mo., has called upon the governor of the state to institute an investigation of the state prison at Jefferson City by the State Board of Charities and Correction. The conditions disclosed by private investigators and former inmates are alleged to reveal "a situation intolerable to a civilized people." The club's request of the governor calls not only for immediate action, but for the formulation of a permanent policy for prison administration which will bring the penal institutions of the state up to the highest modern standards.

A special edition of the Greenwich, Conn., Press, the Sanitary Supplement, was issued on September 28 by the Health Defense Guard, an organization of women to cooperate with the Health Department during the epidemic of infantile paralysis.

At least five of the supplement's six pages are filled with readable and pointed paragraphs. The weak points in Greenwich's sanitary conditions are specifically indicated; such as the need for a municipal bathing beach with toilet facilities, proper screening against flies,—and above all, the cooperation of citizens in voluntary obedience to the sanitary code.

In response to the proclamation of the President of the United States appointing Saturday and Sunday, October 21 and 22, as days for the relief of the suffering Armenian and Syrian peoples, the Federal Council of the Churches of Christ in America has issued an appeal to all of the Churches of the thirty constituent bodies of the Federal Council, urging that Sunday, October 22, be set apart for intercession in behalf of these races. The Council will send to all the pastors of its constituency material for use in presenting this cause to the people and recommends that contributions at all the services on that day, be secured for distribution through the American Committee for Armenian and Syrian Relief.

New York's Municipal Employment Bureau will be abandoned if the Board of Estimate and Apportionment accepts the recommendation made by a sub-committee of the Committee on Budget. The sub-committee, which consists of representatives of responsible city officials, and upon which there is no member of the Budget Committee itself, recommended the abandonment of the bureau as a measure of economy. Representatives of the mayor and comptroller on the board were in favor of continuing the bureau. One argument in favor of abolishing it was that the state maintains an employment office in the city,—in spite of the fact that the state office is located in Brooklyn and that there is no possibility of the state increasing its facilities for handling employment for another year since its fiscal year begins October 1. The Mayor's Committee on Unemployment is marshalling the opposition to the report of the sub-committee.

COMMON WELFARE

WHERE HEALTH AND RELIEF WORK STRIKE HANDS

SO successful has the experiment of treating tuberculosis as a family problem proved, after a four-year test, that the Home Hospital of the New York Association for Improving the Condition of the Poor has again been enlarged.

The experiment resulted from experience with many families in which patients could not be induced to go to hospitals or sanatoria, and with other families in which there were patients who had returned from hospitals or sanatoria against the advice of physicians. The Home Hospital was accordingly organized. There families with tuberculous patients were placed in model tenements and treated as a unit, with complete medical and nursing supervision. [See THE SURVEY for February 7, 1914.]

Four years ago, the hospital had about twenty families; two years ago, forty families and the present plans of the association will make it possible to care for about eighty families of four hundred individuals. About one-third of the number of individuals admitted are positive cases of tuberculosis and another third are in the suspect class.

The satisfactory experience of thus dealing with these families has led to a careful examination of the treatment of the many families under the association's care outside of the Home Hospital in which there are cases of tuberculosis. It was found there were 338 such families. Included in these families were 696 adults, and 1,077 children, or a total of 1,773 individuals; and among them were known to be 290 tuberculous adults and 248 tuberculous children. Doubtless a more rigid examination would disclose many other suspect cases.

These families have all come to the association for relief. But experience at the Home Hospital has emphasized more than ever the impossibility of considering the relief problem in such families as other than a subordinate part of the more important health problem involved. The association has therefore during the past summer entirely reorganized its method of dealing with these families. Instead

of relying on its regular lay relief visitors, it has placed them all under the care and supervision of nurses who have had training at the Home Hospital or are closely in touch with its methods of work. Upon these nurses, in cooperation with the tuberculosis clinics of the city, is placed the responsibility for dealing with both relief and health in these families.

Arrangements are made for a careful physical examination of every member of each family, and an individual medical record blank is kept in addition to the usual relief record of the family. The nurses are devoting their entire time to this work.

This reorganization has already resulted in more effective cooperation with clinics and in securing more definite results in dealing with the family problem as a whole. Incidentally, it has increased the amount of relief which the association is obliged to spend for families in which there is tuberculosis, but experience has proved that good public health work costs money.

SETTING A MARK IN PUBLIC COOPERATION

THE opening of the Chicago and Cook County School for Boys closes a long struggle to secure the better care and place of detention for delinquent boys.

Before the Juvenile Court was established, the county jail and the city House of Correction, as well as the police stations, constituted more of a schooling in crime than a chance for reformation, despite the good intentions of many of the officials. Although the Juvenile Court probation system has been adequate to deal with the largest proportion of the court's wards, yet there have always been enough of them to overcrowd the detention home, located in the original Juvenile Court building. Until a year or more ago, therefore, it was necessary to continue to send boys needing detention to that department of the House of Correction known as the John Worthy School.

The increasing public agitation over this necessity, four years ago, resulted in one of those successful cooperative efforts for which Chicago is noteworthy. In it participated a City Council committee, headed by the secretary of the Police Department, who proved to be the promoter of the enterprise, the superintendent of the House of Correction, the county judge and board of commissioners, the Board of Education, the Juvenile Court, the Special Park Commission and many private citizens and voluntary agencies.

The Park Commission transferred the "Gage Farm" of 240 acres, which had been conveyed to the city thirty-five years ago by a private citizen. The Board of Education erected the school building by an appropriation of \$75,000. The citizens voted a bond issue of \$60,000 to build a dormitory and superintendent's residence. Cook county assumes the expense of equipping and maintaining the school, which is conducted as a public school with one of the most experienced principals as superintendent.

The opening occasion elicited equally hearty congratulations from the repre-

A MISERABLE CHRISTMAS OR A MERRY CHRISTMAS?

In planning a merry Christmas for your friends, do not let it mean a miserable Christmas to those less fortunate than you.

THOUSANDS of workers in every city have been taught by bitter experience to look forward to Christmas with dread.

Every shop girl knows that the coming Christmas season will mean to her an immense amount of extra work, of nervous strain and exhaustion.

The great army of workers whom you do not see—the bundle wrappers, drivers and errand boys—look forward to Christmas as a hateful time of undeserved effort and hardship.

Is this your conception of the day? A very little unselfishness on your part will greatly lighten the burden of these working people. **Merely do your Christmas shopping early—early in the month, and early in the day.** By so doing, you will not only relieve the shop girls and errand boys of the necessity of serving you at the last moment, but you will escape the annoyance of finding that the very gifts you most desired have already been sold.

Carry this message on to your friends and let them see how much a little prompt action on their part will mean to a great many people less fortunate than they.

When you are making your Christmas plans do not forget the patient workers in the shops. It may help you to help them if you will remember these words:

"Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto Me."

THE EARLY BIRD OF EARLY CHRISTMAS SHOPPING

sentative officials, school men and private citizens, both women and men who shared the joy of inaugurating this beginning of a new era in Chicago's dealings with delinquent boys and who had as much satisfaction in ending the bad old times and evil ways which have persisted so long.

FIRST STUDIES ON THE PARALYSIS EPIDEMIC

THAT the autumn grist of summer studies on poliomyelitis is coming to the mill was proved by the "lessons" discussed at the New York Academy of Medicine on October 12. Reports from students of every aspect of the problem—diagnosis, clinical and laboratory; hospital care; cause of the disease and modes of transmission; treatment and after-care—showed how intense had been the application to the problem, how baffling is the problem still. The topic might have been announced as, what we have set out to learn about poliomyelitis.

Without following strictly the speakers in order, here is, in brief, a summary of the points discussed: Perhaps the most difficult problem is to find a sure means of early diagnosis. When paralysis occurs, the thing is obvious. But when the child is drowsy, has a slight "cold," is irritable when disturbed, how be sure that here are "polio" symptoms, and not the symptoms of several other less serious diseases? One practical test emphasized was, that when a child's discomfort far exceeded any discoverable adequate causes, the case should be suspected.

Experience had taught Dr. DuBois and other workers at Willard Parker Hospital that laboratory analysis alone would not afford a reliable diagnosis. Thus far, through hundreds of tests, it has been impossible to distinguish the spinal fluid in certain conditions of poliomyelitis from that in certain other diseases. But Dr. Draper of Rockefeller Institute believed that if records were kept of the very hour of a lumbar puncture—not of the day only—that the fluids earlier drawn would be found to contain distinctive characteristics in comparison with those taken later.

But more and more the conviction has deepened that the time of spreading infection is the early days or hours of the attack, no matter which form it assumes. Hence the importance of providing for the general practitioner a means of diagnosis in the pre-paralytic stage. Commissioner Emerson emphasized this point also, from the angle of the Department of Health. "You can't compel a man to report a case that he doesn't believe is 'polio,'" he said. "Find these early cases, and diagnose them and report them."

An interesting confirmation of the value of hospital care is afforded by the comparative records of boroughs of New York city in which cases were sent

promptly to hospitals and those in which cases were kept at home. In Richmond, Staten Island and Queens the children were at home. The districts are largely residence sections, with separate houses and open spaces. Yet the incidence rate has been higher here in proportion to the population than in Brooklyn or Manhattan, where hospitals were very generally used. The value of hospitalization is undoubtedly in part the strict isolation of cases.

"There are three communities that have not been touched by the epidemic," said Commissioner Emerson. "One is Governor's Island. Here conditions are excellent. Sanitation is perfect; streets are clean. There have been no cases among the hundred or so children there. Another place is Barren Island. Here is neither water-supply nor sewers. Roads are very bad. Garbage is abundant. Dead animals are sent there. Flies are there in droves. Also smells. But among the 300 children on Barren Island have occurred no poliomyelitis cases. And the third group is the 3,000 and more children in the city's institutions. Among all these are only one or two suspects isolated for observation."

That the present epidemic was not greatly different from other outbreaks, abroad and in this country, except in numbers, is one of the conclusions which the doctors of the federal Public Health Service are reaching. Some of the difficulties and apparent contradictions met in the epidemiological work on "polio" were mentioned by Dr. C. H. Lavinder—why, for instance, does the endemic type of "polio" suddenly become epidemic? New York had about 50 cases last year; why has it 9,000 this year?

Most studies tend to confirm the carrier theory—that through the missed case, or the light case, or even the person who is apparently not ill at all, infection is spread. And yet if spread depends on human contact, why is the "seasonal prevalence" greater in summer time, rather than in winter? Again, in age incidence—is the apparent immunity of some children due to earlier light and unsuspected attacks? And what is the period of infectivity, or the time over which a case may continue to spread infection? The task of collecting all records of possible sources and means of the spread of infection in every case, had not yet been completed, he said. Their interpretation will be published later by the Public Health Service.

How varied are the forms under which paralysis appears, was also emphasized. One group of workers assigned to laboratory analysis duty on Long Island, exclaimed after a fortnight's experience, "But we came down here to study paralytic cases!" Their work focused upon the pre-paralytic stage. One vagary of "polio" was illustrated by Dr. Shaw of the State Board of Health, who told how exclusively among poorer people the outbreak had been in one city, and just as

exclusively among millionaire families in another.

Much of the discussion was technical. But nevertheless, a listener at such a meeting gains a new idea of the magnitude and variety of the doctor's task, and of the determination with which he is attacking it.

HOW THE SALVAGE OF POLIO CASES PROCEEDS

DURING the epidemic of infantile paralysis in New York last summer, more than 9,000 children were sick with that disease, and a large proportion were cared for in various hospitals of the city. When the first few convalescents were discharged, some were taken home; some were provided for in the convalescent home provided by the Henry Street Settlement and the Neustadter Foundation. [See THE SURVEY for July 29.]

But in September, the numbers of children being discharged passed the ability of any one existing society to provide for. More than 2,800 had lived through the attack and had come back to life only to face the possibility of lasting deformity. For, if there is one fact in this disease about which there is no difference of opinion, it is that only the most exact and unremitting after-care will restore the affected muscles to their normal use and save the child from becoming a cripple.

This after-care means abundant food of just the right kind; scientific manipulation of the loosened joints and dropping hands or feet; rest at just the right angle for the weakened back, on the softest of supports. And all this through a period of months surely, perhaps for several years.

The amount of work involved and the costliness of such care are problems at once obvious. But further, granted that gifts to dispensaries and nursing associations would meet the demands for medicines, food and apparatus, how insure that hundreds of mothers know where the nearest dispensary is, or knowing, faithfully use its aid; that each nursing association knows of every case returning to its district; that the parting instructions of the hospital are clearly understood by parents, often foreign, usually unlettered; and finally, how prevent a break in the records of all these cases? A large interruption would render futile the case histories begun, and lose material invaluable for scientific study of the epidemic of 1916.

The crisis has been met by a remarkable clearing-house organization, the New York Committee on After-Care for Cases of Infantile Paralysis, which grips hands with hospitals and with the Department of Health and visiting nurses. Its aim is twofold: to care adequately for every child that has been ill with poliomyelitis; to keep a perfect record of every case as material for

later study. Its method of realizing this aim is, first, through a free information bureau; second, through a complete registry in charge of a trained statistician, and containing every detail of every case from "onset" to cure; third, through active cooperation with the Department of Health and all nursing organizations, as well as with a specially organized group of club women who provide automobiles for transporting children to and from dispensaries for treatment.

At the head of this important and far-extending work are Thomas J. Riley, of the Brooklyn Bureau of Charities, chairman; Oliver H. Bartine, superintendent of the Hospital for Ruptured and Crippled Children; James A. Perkins, of the National City Bank, treasurer, and Dr. Donald E. Baxter, general director. From Dr. Baxter the facts in this account have been received. Here, for example is the daily routine.

As soon as a case is discharged from the hospital or quarantine is terminated, the Department of Health sends to the parents a notice urging the importance of after-care for the child and describing exactly the weakness which in this case must be guarded against. This notice includes a list of orthopedic hospitals and dispensaries in the city. At the same time a notice is sent also to Dr. Baxter, containing full details—date of onset, what treatment was followed in the hospital, the present condition of the child.

This report becomes part of the permanent record at headquarters of the committee for after-care. Word is telephoned to the nursing supervisor of the district in which the child lives, and a nurse goes to verify the address and report on the child's condition. All this within a few hours.

Arrangements are then made by the nurse for the child's further treatment, either at an orthopedic dispensary or in an institution for convalescent hospital care. It was estimated recently that fully 600 children will need this institutional treatment; fully 2,400 the dispensary aid. This is considered a most conservative estimate.

Meantime, until the plans are in actual operation and the after-treatment has been begun, the nurse continues her visits as frequently as possible. To avoid duplicating efforts and wasting energy, the city has been divided into four large districts, and one nursing organization in each is responsible for the work in that section. All cases in Brooklyn, where the scourge was heaviest, are referred to the Brooklyn Committee on Crippled Children; cases in lower Manhattan, to the Association for the Aid of Crippled Children; cases in upper east Manhattan and the Bronx, to the Bureau of Educational Nursing; cases elsewhere in Manhattan and in Richmond and Queens, to the Henry Street (Nurses') Settlement.

The nurse goes to the home again to make sure that instructions are being carried out. Duplicates of all cards of admission to hospital or dispensary and fortnightly reports from these institutions concerning attendance and progress of the case, all go back to the headquarters. So the after-care is begun, a follow-up system started, and data accumulated, which when organized and interpreted later, will doubtless give valuable clues to causes and cures.

Indeed, a distinct feature of the 1916 epidemics has been the strict record-keeping by reports, charts of dot and line, systems of maps that bristled with pins large and small and of all colors—or any other method that might ultimately answer the queries, whence? and how? In 1907, the disease was not even reportable. Cases were not removed to hospitals, there were few records of any kind and all figures of that time are but estimates.

Besides their final significance, these permanent records have, too, an immediate value. At the headquarters is an information bureau, and how it works may be shown concretely.

On one of the first days of the committee's work, a woman telephoned: "My friend's little boy had the 'polio' and it left him blind and deaf. Please see if

you know about the case and can you do something to help him?" The discharge notice of this boy was quickly found, and a nurse notified to take up the case. In about an hour the machinery of after-care was in running order.

Again, a woman called to tell of her little niece, both of whose legs were paralyzed. The clinic to which she had been referred, was about a mile from her home, the child was heavy to carry, and the mother found it impossible to go regularly. The aunt thought the child was being neglected. Could the committee help her to find a nearer place where she could get the proper treatment for the child? A nearer clinic was found and a transfer promptly followed.

A young Italian man, mystified by the instructions given him when his boy was discharged from the hospital, came for advice because he had read in the papers that the committee could help the children. His delighted astonishment to find his boy's name on the records was equalled only by his satisfaction at the assurance that a nurse had been told about him and would visit his boy within twenty-four hours.

Another pathetic case was that of a mother who called, carrying her little boy of five years, whose legs were both paralyzed. She wanted advice as to

DEAF AND BLIND POULTRYMEN

SO-CALLED practical poultry-raisers have little use for the Philo system, but here are eight Philo coops that are making good at the Colorado School for the Deaf and Blind at Colorado Springs, Colo. The plan is said to have distinct advantages for those who must raise poultry in a small back lot. Each coop is designed to accommodate six laying hens. Bessie Sawyer has won the distinction of making the largest profit in one month of all the members of the Poultry Association at the school. She cleared \$3.49 on her coop of six hens. Frank Pierce got a larger number of eggs than Bessie, but Bessie proved herself a better business manager. She obtained a contract with W. K. Argo, superintendent of the school, who was to take all her eggs at 60 cents a dozen until he notified her of a change in the price. Mr. Argo forgot to tell Bessie when the market price had dropped and consequently paid the 60 cents a dozen after the price had gone down to fifty cents

where she could put her child while she went out to work. Her husband was with the army in Mexico and she had been able to support herself and child until he became sick and needed her at home. She had lived in Brooklyn, but thought maybe the nurses could not find her in New York because at the hospital she was frightened and gave her maiden name. She was much pleased when the committee's records were able to identify her and bring a nurse again in touch with her.

Not all parents are so alert for the best good of their little convalescents. One mother whose child, stricken by paralysis, had been long detained in the hospital, uttered the frantic prayer: "O God, let me keep my child! Paralyze both his legs if you want to—do anything you choose—but only let me have my child!" Such passive acceptance of disability makes doubly important a careful following up of the patients, to arouse interest in the further treatment as well as to see that instructions are actually being obeyed.

A problem that soon arose in the committee's experience was this: Very many children who could be treated at dispensaries were so helpless from effects of the paralysis that it was almost impossible to move them to a dispensary and back. And if there were no nearer dispensary, there was danger that the child would be neglected. To provide transportation for these cases and so insure a regular attendance and treatment, a group of one hundred women from many clubs of the city and the state organized the Sick Children's Transfer Society. The society furnishes funds to pay for transportation whenever necessary and some members lend their automobiles. Many other sympathetic citizens also lend their cars for use under the committee's direction.

Still another branch of the committee's work has been the three weeks of special clinics for teaching muscle-training to physicians and nurses who are working with convalescent paralysis cases. The lessons are given by Miriam T. Sweeney, of the Boston Children's Hospital. Miss Sweeney has worked under the direction of Dr. R. W. Lovett.

POLITICS IN MARYLAND'S PENAL BOARD

A PROMISING opportunity to revamp Maryland's whole correctional system may be lost because of the character of appointments made by Governor Harrington. The opportunity was presented by a law which took effect October 1 and which created a new Penal Board to supplant the boards of directors of the House of Correction and the penitentiary.

One of the instructions to the board is to select, if possible, a practicable plan for employing prisoners as an alternative to the contract labor system now in

force, or, failing that, to report its findings to the governor and legislature. It is authorized also to use its discretion in transferring prisoners from the penitentiary to the House of Correction or *vice versa*.

The appointments to the board comprise two Democrats and one Republican. One of these has been connected with the penitentiary as member of its board of trustees, one has a brother interested in prison reform and one is chairman of the Democratic State Central Committee. It is announced that the chairman of the state central committee will resign his political office immediately after election to avoid the impropriety of holding that job and membership on the Penal Board simultaneously. He has also served on the Advisory Board of Parole of the state.

One of the first acts of the new board was to reappoint as superintendent of the House of Correction a man who had been previously discharged and who had no ostensible professional training. The appointment is regarded by social workers in Maryland as purely political. Fortunately Warden Leonard of the penitentiary, who is deemed a valuable officer, was politically acceptable and was retained.

Governor Harrington based his selection of the present incumbents partly on the ground that they "have high ideals in prison reform" and "are not faddists." "I am in full sympathy," he said, "with the movement toward the kind treatment of prisoners and their reform, if possible, and fully believe in the idea of giving convicts, whenever reasonable, a second chance to make good."

THE SPREADING MOVEMENT FOR BIRTH CONTROL

BIRTH control leagues have been organized or are reported in process of formation in Boston, Cleveland, Ann Arbor, Chicago, St. Louis, Los Angeles, San Francisco, Portland, Ore., Seattle, Detroit, Racine, Wis., Milwaukee, St. Paul, Minneapolis, Spokane, Denver, Indianapolis, Washington, D. C., and Pittsburgh. Plans are being formulated for a convention of delegates from these cities for the purpose of forming a national federation, and a national organ, the *Birth Control Review*, with offices at 104 Fifth avenue, New York city, is about to make its appearance with Frederick A. Blossom as managing editor.

Cleveland was one of the first cities in this country to develop a thoroughly organized birth control movement. Two public addresses by Margaret Sanger on her tour across the country last summer, led to the formation of a league which drew into its membership doctors, nurses, social workers, clergymen and others interested in social problems. Mr. Blossom, the business manager of the Cleveland Associated Charities, resigned his

position in order to accept the presidency and give his whole time to it. Four ministers are on its executive committee and one is vice-president of the league.

A weekly public luncheon held during the summer increased in attendance until larger quarters had to be secured. The Cleveland Congress of Mothers, after a discussion of the question of family limitation, unanimously voted its approval of the movement. The mothers' club of one of the most active churches in the city, at a birth control meeting that filled the church, voted to assist the league in every possible way. A favorable hearing was also had before the Cuyahoga county Women's Christian Temperance Union, in the chapel of the Young Women's Christian Association. A score of men and women have volunteered their services and the Federation for Charity and Philanthropy has listed them in its booklet issued to organizations seeking speakers on social topics. Meetings in Cleveland and adjoining towns booked for the coming winter, include church societies, civic and fraternal organizations, the Council of Sociology and women's clubs. Ten thousand copies of a leaflet containing articles by local physicians, social workers and clergymen have been distributed and a second edition is just off the press.

In Portland, Ore., clashes with the authorities led to the arrest of Mrs. Sanger, a local physician and five others for distributing leaflets. Hundreds of letters and telegrams were received protesting against their arrest and when the cases came to trial the accused were let off with a suspended sentence or a nominal fine. Today birth control information is said to be disseminated in Portland more generally than in any other city in the country. A quiet house-to-house canvass is being carried on to reach mothers of the working class.

The center of agitation has now been transferred to Boston, chiefly, perhaps, because of legal prosecution. A young newspaper man, graduate of Columbia University, Van Kleeck Allison, reprinted in his monthly magazine, the *Flame*, an article on birth control by Dr. W. J. Robinson, which had appeared in the latter's *Critic and Guide*. The article argued the case for family limitation without giving any medical instruction whatever. Allison was called upon shortly thereafter by a detective who, posing as a workingman with an invalid wife and a family too large for his means, asked for and obtained a leaflet giving contraceptive advice. Allison was arrested and received a prison sentence of three years.

The case has been appealed and a vigorous agitation in Allison's behalf is being conducted by the Massachusetts Birth Control League. Charles Zeublin is president of the league which numbers among its members several clergymen, professors at Harvard and Massachusetts Institute of Technology and social

workers. A protest meeting addressed by Mrs. Sanger which crowded the Majestic Theater has been followed by a series of minor gatherings, culminating in a mass meeting at Faneuil Hall at which speeches were made by Laura Garrett, Ida Rauh, now under indictment for distributing birth control leaflets in New York city, and Dr. Ira S. Wile of the New York city Board of Education. An effort is now being made to raise a defense fund of five thousand dollars to fight the Allison case through to the Supreme Court, if necessary, and plans are being made to organize the movement throughout the state. An initial meeting for this purpose held in Springfield was attended by over fifty clergymen.

Interest among medical men is indicated by the recent resolution adopted at a meeting of physicians under the jurisdiction of the Iowa State Board of Control and by the fact that the American Public Health Association is to discuss the subject at its forty-fourth annual meeting in Cincinnati next week.

And last week birth control was, for

the first time, made the subject of a judicial opinion. In the Court of General Sessions, New York city, Judge William H. Wadhams suspended sentence upon a woman, mother of six children, who had pleaded guilty to a charge of burglary, her second offense. His investigation showed, the judge declared, that the mother had made a hard but unsuccessful attempt to support her children since the father had been driven from his work in garment making five years ago. Meantime, two of the children had been born. Said Judge Wadhams:

"Her husband is not permitted by the authorities to work because of his being ill with tuberculosis. It would be dangerous for him to work on children's garments. It might spread the consumption to the innocents. There is a law against that. As a result of this law the husband has had no work for four years.

"Nevertheless, he goes on producing children who have very little chance under the conditions to be anything but tubercular, and, themselves growing up, repeat the process with society. There is no law against that.

"But we have not only no birth regu-

lation in such cases, but if information is given with respect to birth regulation people are brought to the bar of justice for it. There is a law they violate. The question is whether we have the most intelligent law on this subject we might have. These matters are regulated better in some of the old countries, particularly in Holland, than they are in this country.

"I believe we are living in an age of ignorance, which at some future time will be looked upon aghast."

Commenting on the decision editorially, the *New York World* said:

"Whether or not one agrees with it, such an opinion from the bench in effect lifts up and dignifies a topic that has mostly come in for surreptitious discussion. It is at best a delicate topic and one needing to be treated with a certain reserve. Yet it is a topic to which society can no longer close its eyes. And in the circumstances it is preferable to have it discussed frankly and without the half-secrecy in which lay its worst element of danger."

The mother of six on whom sentence was suspended is in charge of a charitable society.

The Explosion at Bayonne

By John A. Fitch

THREE people dead, a dozen or so in the city hospital badly wounded, property destroyed, innocent people brutally assaulted—that is the situation in Bayonne, N. J., after two weeks of the strike of the employes of the Standard Oil Company refineries.

The strike had been in effect less than twenty-four hours before there were battles between strikers and the police. Bricks were thrown and shots were fired. The second day of the strike a young woman was killed as she leaned out of an upper window to watch an encounter in the street. The next day a young lawyer, on business in the strike district, was struck by a bullet and killed. Then a workman, whose identity seems rather uncertain, was killed as he walked out of a saloon.

What is it all about? What desperate situation lies back of it all? There are varying opinions, but here seems to be about the only documentary evidence; it is the list of "demands" served on Supt. George B. Hennessey of the Standard Oil Company just before the strike began:

"We your employes of the various departments hereafter named, present the following amicable request, feeling reasonably certain that if you consider the condition under which we are compelled to work, the prices which we now are compelled to pay for the commodities of life, or rather the means of sustenance, you are bound to realize that our demand is fair and reasonable.

"1st. We request an increase in all departments—except in the still cleaning department—in which wages have been raised and are adequate—in the following manner: 30 per cent increase to the men now making less than \$3 a day, and 20 per cent increase to the men making \$3 a day or more.

"2d. We request that an 8-hour day be adopted as a basis throughout.

"3d. That fairness be exercised in discharging men and that men shall not be discharged without just cause.

"4th. We request humane and decent treatment at the hands of foremen and superiors in place of the brutal kicking and punching we now receive without provocation.

"5th. We request twenty minutes time for lunch in the press department.

"We make the above requests in a peaceful and amicable manner, without threats or violence, preferring to obtain what we deem is justly due us in a friendly and peaceful manner. We must, however, state that unless our request is granted within 48 hours, we will be compelled to strike."

There is nothing in all of this suggestive of violence. On the contrary the emphasis is laid upon the peaceful and amicable spirit of the petitioners. It does not have the peremptory tone commonly found in the demands of men who are ready to strike. I learned that it was written in Polish—most of the strikers are Polish—and translated by M. F. Trakimas, a Lithuanian photographer. I strongly suspected that the friendly and

diplomatic language had been inserted by the gentlemanly translator. He insisted to me, however, that he had done nothing of the sort. It is, he asserts, a faithful translation of the original petition.

How then shall we account for the violence? It has been just fifteen months since these same men were on strike. In July, 1915, Bayonne, N. J., attracted to itself the attention of the country by reason of the violence and bloodshed that took place during a strike which was finally ended by the spectacular activity of Eugene F. Kinkead, sheriff of Hudson county. Six men instead of three were killed at that time.

These two strikes within fifteen months seem to suggest that the workers of Bayonne are a particularly turbulent and bloodthirsty lot. And then we find this respectful, courteous petition, the basis for the present outbreak. If we examine it more carefully, however, some explanation of the existing feeling begins to emerge.

The first paragraph calls attention to "the prices which we now are compelled to pay for the commodities of life or rather means of sustenance," and then the first demand is for an increase in wages—30 per cent for those getting less than \$3 a day. Here we begin to get some light upon the situation. There is always dynamite in a low wage with an increased cost of living.

When the men went on strike in 1915, and asked for a 15 per cent advance, un-

skilled labor, which constitutes a large proportion of the 5,000 odd employes of the Standard Oil Company in Bayonne, was receiving \$1.75 a day. A 15 per cent advance would have meant for them \$2.02 a day. They have received, it is said, two increases during the last year, and were getting when the present strike began \$2.20. That is \$688.60 for a year of 313 days, which is a full working year omitting nothing but the 52 Sundays. That is less than the lowest estimate that has been made in recent years as absolutely necessary to support a working-man's family. In the last month, furthermore, the prices of some of the most important necessities of life, such as, meat, eggs, butter, milk and bread have been materially advanced.

"How do you think we can live on \$26 in two weeks?" a wife of a striker wrote to a Bayonne newspaper.

Superintendent Hennessey gave out a statement declaring that the wages paid by the Standard Oil Company were higher than those of any other company in the vicinity of Bayonne, excepting one company which is handling war orders. I have not investigated the truth of this statement, but even if true, it is small comfort to know that there are others worse off than you are, if you have not enough to live on. It may be, also, that the strikers had not failed to note the story prominently featured in all the papers just a few weeks ago, that on account of the advance in the market value of Standard Oil stock, John D. Rockefeller is now a billionaire.

The second request is for an 8-hour day. Some of the men now have an 8-hour day, others work 9 and 10 hours, and some work 12, and there is a certain amount of seven-day labor in the big oil plant.

No comment is necessary on the moderation and restraint of the fourth demand: "We request humane and decent treatment at the hands of foremen and superiors in place of the brutal kicking and punching that we now receive without provocation." Nor can much be added to the fifth: "We request twenty minutes time for lunch in the press department." What is the time for lunch now do you ask—15 minutes, 10 minutes? The men on the street in Bayonne tell you that no time is allowed.

These factors must be taken into consideration in trying to find an answer to the question of why there is violence in Bayonne. But such a suggestion seems to assume that the strikers are the ones who are guilty of violence. With regard to the specific cases mentioned, I have no information. I do not know

who killed the young woman about to be a bride, or the lawyer, or the working-man. But I do know that violence has not been confined to the strikers.

As I looked the situation over in Bayonne, it seemed to me that the issue here is primarily one of Americanism. It is tremendously significant that in the common language of the street there are two classes of people in Bayonne—"white" men and foreigners.

"It's just these low-class foreigners," a newspaper man told me. "It isn't peculiar to Bayonne—it's the way they act everywhere. You know what a terrible time they had in Paterson during the silk strike a few years ago. It is the same class of people and they act the same everywhere." Now, as a matter of fact, although there are Poles in Paterson, and more than 20,000 workers were on strike for three or four months, there was less violence than there would be at a county fair, except as it was engaged in by policemen and detectives.

I asked a group of policemen standing on a Bayonne corner what they thought about the strike.

"You see it's this way," replied a big fellow with a protruding jaw, "it is just a case of these fellows making too much money. When they've got a little money in their pockets, they just have to get out and raise hell."

That was a little too strong for another one in the group, who remarked somewhat apologetically, "No we are not saying that. These people are not getting enough money. It's on account of a lot of agitators coming in here and stirring up trouble among the foreigners."

I asked a business man what he thought about it. "It's a case of the ignorant, low-class foreigner making trouble," he said. "This is an orderly, prosperous and comfortable town. Those fellows live over by themselves and refuse to become Americans. They live in dirt and filth and hoard their money."

"It has been suggested," I said to him, "that that is rather a neglected part of Bayonne where the foreigners live, that unsanitary conditions prevail there, and that the authorities do not trouble themselves about the matter."

"Nothing to it at all," replied the business man, "they live there because they like it—they prefer that sort of thing. Rents are high over there, but they prefer to stay nevertheless. This is the first time that I have said a good word for the Standard Oil Company, but I am with them on this deal."

The morning that I went to Bayonne, "order" was said to have been restored.

The town was alive with men in police uniform. Not nearly all of them were regular policemen. They had been hurriedly sworn in and given uniforms and badges. They had made raid after raid into the strike district. A leader of the foreign people, protesting against what he called the lawlessness of the police, took me into the district where they live to show how they had wrecked the saloons. All of the saloons had been ordered closed, and when some of them in the foreign section had continued to run, despite the order, the police raided them.

I had supposed from the accounts in the papers that they had emptied the stock into the streets. My guide took me into two wrecked saloons. Broken bottles were piled up a foot high in the corners; the walls were scarred with the impact of the bottles that had been thrown against them; floors were soggy with the liquor that had been poured out; there were even pools of it standing here and there; furniture was damaged and electric globes and fixtures had been smashed. It was a scene of wanton destruction of property far exceeding the drastic measures that doubtless were necessary.

Going away from the district, I encountered a moving picture operator. He had gone in at another point with a squad of police on one of the regular raids into strike territory for the purpose of putting respect for authority into the hearts of the strikers.

"That man Cady is a bird," he said. "He led that bunch of cops in there and put everybody off the street. Nobody dared to say a word, or he got smashed over the head. A fellow was standing in a doorway and just made a kind of a face and said, 'This is a fine bunch' or something like that, and Cady laid him out with the butt of his revolver. The man's wife came out to the door and threw her arms around Cady to protect her husband. He just grabbed her and threw her back bodily through the door. I have a peach of a film of the whole thing."

By all means let us have law and order! But I wondered as I looked at the funeral passing up the street of the girl who was shot almost on the eve of her wedding day, as I observed the destruction wrought by the police, and as I noted the sullen faces on the street,—I wondered how much had been contributed toward law and order and a peaceful settlement of Bayonne's next strike.

I am the Master Tyrant, foe of truth,
And freedom—watchwood of the mounting years.
With cunning hand I kindle old men's fears;
Ruthless I take my toll of generous youth.

STRICT NEUTRALITY AT THE RED CROSS PIER

From every corner of America to every corner of warring Europe supplies are sent by the Red Cross.

War Relief and the American Contributor

By Esther E. Baldwin

DIRECTOR BUREAU OF ADVICE AND INFORMATION OF THE NEW YORK CHARITY ORGANIZATION SOCIETY

THE contributor to war relief work is dazed. He is bewildered by the multiplicity of needs that come to his attention by way of letter and newspaper appeals. He reads the exposures of fraudulent organizations, and he grows a little uncertain about all the war relief committees. He does not want to stop giving, and yet he does not want to give blindly.

As one contributor writes: "We feel as if we ought to be sacrificing ourselves to the utmost in order to do what little we can for relief, for reconciliation and toward reconstruction, but in our bewilderment we do not do even all we might."

At the present time the American war relief situation offers for analysis more in the way of variety in human nature than in uniformly available cold facts. There are in it happenings and developments that are splendidly American. There is outstanding a generous spirit of personal service that is forming a new ideal for volunteer social service in this country. There are the fine instances of business organization on a large scale in the work of the Commission for Relief in Belgium, the Red Cross, and the War Relief Clearing House for France and Her Allies. On the other hand there are the personal rivalries, the conflicts in methods between different workers, and even the

vagaries of the contributors to be taken into account in order to understand somewhat the ins and outs of the war relief situation.

From New York city as the organizing center at least 102 central committees have been launched during the first twenty-four months of the war. Uncounted branches have been formed by the energy of these central committees. The War Relief Clearing House for France and Her Allies (which is commonly called the Clearing House) reports that "5,000 relief organizations, societies, schools, churches, clubs, and individuals at the head of small circles in various parts of the United States, Canada, Hawaiian Islands, Cuba, and Bermuda" are using its free facilities for transferring material to France.

If one undertakes to discuss war relief work from the point of view of five thousand small committees, there is no hope of reducing the contributor's bewilderment. If, however, one goes back to the four elements of the relief problem; namely, raising money, purchasing supplies, transferring and distributing material and monetary relief, it becomes easier to approach an understanding of what has been done and what remains to be done by America. It becomes clearer that there exists outside certain bounds, a Topsy-like confusion

that has "just grown." Within these bounds American genius for business organization has gone to work seriously. In fact the cooperation with distributing agencies abroad and the means of transferring relief are so well organized that one wonders why there should be such apparent lack of order connected with the effort to raise money.

No Precedent

UP TO AUGUST, 1914, there may be said to have been one national conception of war relief. This was the idea of medical relief on the field, in temporary hospitals, and in base hospitals. As America expected at the beginning of the war, the Red Cross immediately set in motion its adaptable machinery for military relief.

Then civil want was foreshadowed. Our experience had presented no problem of this type. We had had the cumulative experience of the Red Cross in dealing with single disasters: floods, fires, earthquakes, famine and shipwreck. But they had not resulted from war; and so, finding no existing organization specifically to meet the non-military needs in Europe in August, 1914, there was an outburst of efforts to do something, efforts taking shape in large and small war relief committees.

Need was centered in Belgium. To

SOME OF AMERICA'S MOST FAMOUS MEN ASK AID FOR VERDUN DEFENDERS OF FRANCE

Prominent Bankers, Diplomatist and Educator Appeal for Funds in the Name of the Suffering Soldiers of France...

The National Allied Relief Committee, co-operating with the War Relief Clearing House for France and her Allies, is sending out what perhaps will be the most broadcast appeal yet issued on behalf of the war sufferers of Europe. This appeal is for funds for the relief of the soldiers of France wounded in the fighting around Verdun. What lends additional interest to this appeal is the fact that it is signed by six of the most prominent men in America. Those who signed it are: August Belmont of the banking firm bearing his name; Hon. Jos. H. Choate, Ex-Ambassador to England; Dr. Charles W. Eliot, President Emeritus of Harvard University; A. Barton Hepburn, Chairman of the Board of Directors of the Chase National Bank; Edwin G. Merrill, President of the Union Trust Company, and Henry L. Higginson of the banking firm of Lee, Higginson & Company, Boston. It is anticipated that the contributions received from this wide-spread appeal will be devoted also to relief work among a large number of wounded resulting from the greatly increased activities of the contending armies. The appeal is reproduced herewith.

NATIONAL ALLIED RELIEF COMMITTEE cooperating with the WAR RELIEF CLEARING HOUSE

Honorary President: Charles W. Eliot, President Emeritus Harvard University
President: Norman Hapgood, Editor, Harper's Weekly

Vice-Presidents:

Mrs. William Alexander
President Special Relief Society
Mrs. J. Borden Harriman

Frederick H. Allen
Permanent American Commission
Gilford Pinchot
Formerly United States Forester

August Belmont
Banker
Mrs. Schuyler van Rensselaer

Howard Elliott
President, N. Y. N. H. & H. R. R.
Mrs. Fiske Warwa

Mrs. Barrett Wendell

EXECUTIVE COMMITTEE OFFICERS

Edwin G. Merrill, Chairman
President Union Trust Co. of New York

John Moffat, Vice Chairman and Chairman of Publicity Committee

Secretary: Augustus W. Kelley

Treasurer: James A. Blair, Jr. of Blair & Co.

Deputies: Lee, Higginson & Company

Auditor: James Marwick, Chartered Accountant of Marwick, Mitchell, Peat & Co., New York, Boston, London and Paris

TELEPHONE: 8789 GRAMERCY

200 FIFTH AVENUE, NEW YORK

We are sending you the enclosed emergency bulletin at the request of the War Relief Clearing House. In this great crisis we beg you to help us to relieve the terrible sufferings of these brave French soldiers who have been wounded in the fighting around Verdun.

Won't you fill out the attached subscription blank and send us a donation today.

Yours faithfully,

August Belmont
Charles W. Eliot
Edwin G. Merrill

Joseph H. Choate
Henry L. Higginson
Edwin G. Merrill

To the National Allied Relief Committee
300 Fifth Avenue, New York.

1916

Dear Sirs: In response to your appeal I beg to enclose _____ dollars and hope to make a similar subscription monthly.

Yours very truly

*Write out if no monthly donation is intended.

Checks should be made payable to Lee, Higginson & Co.

AN APPEAL

A single S. O. S. that netted more than \$100,000, including one check for \$40,000, for wounded soldiers.

meet this need, which called the attention of all neutral countries, the Commission for Relief in Belgium was established. But the small committees in America which contributed through the commission remained free to take care of their own problems of raising money.

Money Raising Campaigns

THERE HAS BEGUN to be question about the possibility of organizing the money raising campaign upon a basis as efficient as that of the purchasing, transferring and distributing. The needs of civilians grew greater. Meanwhile the President had issued his proclamation of neutrality. It seemed logical that our nation would be able to express its sympathy for civilians through a single channel, as it had been doing in the matter of military relief and disasters since the establishment of the Red Cross. So the neutral Committee of Mercy was formed under the patronage of the President and under the guidance of active, responsible, well-known American citizens. Within a year the growth of partisan feeling gave rise to the National Allied Relief Committee, organized for the same

task, from the point of view of efficiency, as that of the Committee of Mercy; namely, undertaking to raise the most money with greatest economy.

The war relief committees learned that the average contributor depended upon special appeals for his news about needs abroad. If he received one appeal from each of three committees, he was quite likely to send three contributions. If he received three appeals from one committee, he was not so likely to feel that he should make three responses. It seems strange in these days, when contributors to local charitable work are tending more and more to demand a simplified technique for money raising, that these same people have responded more generously for war relief in measure with the variety of appeals coming to them. Their present feeling of confusion about the endless numbers of appeals they are receiving is to some degree a reaction from a policy they have unknowingly encouraged.

On an average four or five new central committees have been organized during each of the first twenty-four months of the war. The trend of the

war is shown by the successive appearance among these of Austrian, British, Polish, Jewish, Serbian, Persian, Syrian, Armenian and Russian relief. One finds appearing constantly, too, more and more German and French and Belgian committees. This dynamic initiative, which produces on the one hand such splendid volunteer service from committee members, tends to encourage the continuance of many committees rather than of any effort to reduce their number.

Need of Variety

NOT ONLY does one find financial response increasing in proportion to the variety of appeals, but one also finds a greater amount of personal service producible if the people giving it can make their contribution in some way that is peculiarly their own. Hence the continued existence of innumerable committees, each aiming at a specific task of relief and each under the leadership of some strong personality. In a word there is, in New York city, a decided advocacy of variety in methods of work as well as variety in sources of appeal:

"You can work it out by fractions or by simple Rule of Three, But the way of Tweedle-Dum is not the way of Tweedle-Dee. You can twist it, you can turn it, you can plait it till you drop— But the way of Pilly-Winky's not the way of Winkie-Pop."

So at one and the same time we find ourselves appealed to because we are neutral, or because we are partisan; because we like to help in very definite ways or because we really admire the sort of American ability that can systematize matters on a business basis: matters like clothing a nation, for instance. And all this is no reflection upon the relief committees. It is their burden, rather. It means hard work for them, for they know from experience that Americans have been giving in response to the types of appeals that touch them. The response has not been nearly large enough to meet the needs. Therefore, if more money is to be had all kinds of appeals must be used.

I have said that the executive problem of war relief work is fourfold. It will be interesting to see the tendencies toward increased efficiency in the work of the last three—purchasing, transferring and distributing supplies, and to compare with these the situation in regard to the first, money raising.

In the matter of the distribution of relief abroad, Americans can well afford to be guided by a sense of proportion. Distribution is a term that I use to include every form in which aid is being given to war sufferers in Europe. It means attending to the primary wants of food, clothing, and shelter; to hospital and ambulance service both for civilians and for wounded soldiers; to the sort

of personal ministrations to the spirit that one finds in opportunities to reach individuals aboard, orphaned children or soldiers behind the lines in France or in Russian prison camps, or those residents, at the beginning of the war in alien countries, who have been interned with others of their nationality in special camps.

I believe contributors cannot at present discriminate between temporary and permanent, or constructive work, once it is clear that, in carrying both kinds, all possible methods of avoiding wastefulness are observed. After all, when the need for food is greater than the amount supplied, and when a system preventing overlapping of distribution is known to be in force, the question of emergent needs thus naturally receives our hearty response.

We can easily understand that when the war is over these forms of relief will become supplanted by reconstructive efforts. Then, it is true, it may be difficult in some instances to separate the white sheep from the black; for reconstruction will become the slogan of both earnest workers and exploiters. But that has not arrived. We will hope when the countries of Europe are free to turn their attention to reconstruction that they will treat their problems on a national basis, with the effectiveness, with which the Commission for Relief in Belgium is doing its present work of feeding and clothing the Belgians.

Medical Relief

GRANTED THEN that one will do all he can to support the existing forms of relief work abroad. How is he to do it? Medical and surgical relief work can be reached effectively through the American Red Cross. Supplies for hospital use should be prepared after directions which can be obtained upon application to the Red Cross.

Besides the opportunities in connection with the Red Cross and the general relief agencies, there are others, interested in hospital supplies and the purchasing of ambulances, that commend themselves to the interest of Americans. It is difficult to obtain an absolutely complete list of these. The ones that are mentioned here are not selected, but include all of those known to the writer:

- Ambulance Chirurgical Mobile No. 2,
Directress, Mrs. Borden-Turner.
- Depository, Farmers' Loan and Trust
Co., 44 William street, New York
city.
- American Ambulance Hospital in Paris,
14 Wall street, New York city.
Chairman, Mrs. Robert Bacon.
Depository, J. P. Morgan and Com-
pany.
- American Fund for French Wounded,
134 West 42 street, New York city.
Treasurer, Anne Morgan.
- American Hospital and Ambulance in
Russia,
140 Broadway, New York city.
Secretary, Philip M. Lydig, 111
Broadway, New York city.
- American Red Cross,
Washington, D. C.
Treasurer, John Skelton Williams.
- American Physicians Expedition Com-
mittee, Inc.,
P. O. Box 1207, New York city.
Treasurer, Herman A. Metz.
- Armenian Medical Relief Association,
175 Fifth avenue, New York city.
Treasurer, A. H. Tiryakian.
- Australian War Relief Fund,
435 Fifth avenue, New York city.
Treasurer, A. J. Howard.
- Franco-Serbian Field Hospital of
America,
17 West 30 street, New York city.
Secretary-treasurer, Henry B. Britton.
- Friends Ambulance Unit,
121 South Third street, Philadelphia.
Treasurer in America, William T.
Elkinton.

Contributors of food and clothing should apply to the Red Cross and the clearing house and the commission for their bulletins. These bulletins give shipping directions as well as information about the current needs abroad. It is not possible to send food supplies to other countries, including Poland, Armenia, Serbia, and Germany, but money can be sent to each of these countries for the purchase of food by the Armenian Red Cross or by the Polish Victims' Relief Fund, the American Committee for Armenian and Syrian Relief, the Serbian Relief Committee, the American Jewish Relief Committee, or the Relief Committee for War Sufferers (German).

In regard to articles of clothing, there are two or three things to keep in mind at present. Used clothing is no longer accepted by the commission. If it is in

good condition and clean the American Girls' Aid will gladly take it for distribution in France. Such articles should be sent to Pier 57, North River, New York city, addressed to the American Girls' Aid. Free transportation abroad is obtained by this committee. The Committee for Relief of German Prisoners receives donations of clothing which are sent by way of Pacific liners to prisoners in Siberia. New clothing is acceptable to the Commission for Relief in Belgium, the War Relief Clearing House and for refugees and convalescents in England, Switzerland, and Russia.

Clothing

CLOTH READY to be made up into clothing can be sent to the Vacation War Relief Committee which maintains a workroom for this purpose, as well as for the preparation of surgical dressings. During 1915 this committee organized workrooms for the aid of the unemployed. Since that time there has been a call from abroad for unmade materials to supply similar workrooms there, so that cloth for making into clothing can also be sent through the commission and the clearing house. For information about the kinds of clothing that are best to send and the best time for sending them, write to these central agencies. Clothing for hospital use should be sent to the Red Cross, Bush Terminal, Brooklyn.

I have spoken of reconstructive work as being already under way. Almost from the beginning of the war there has been a lighthouse for blinded soldiers in Paris under the experienced leadership of Winifred Holt [see THE SURVEY for October 14]. Her committee is providing in this way an opportunity for blind Frenchmen to become readjusted industrially. There is also in France an American Committee for Training in Suitable Trades Maimed French Soldiers with the same object as the work for the blind. In England plans are under way for similar re-education. For this work contributions can be made through the British, French, Belgian Permanent Blind Fund which until September, at least, was just a collection agency. Later it will establish work for the re-education of ex-soldiers

TWO BENEFITS ROLLED IN ONE

The Vacation War Relief Committee gives work to unemployed women in New York city on bandages and on garments that are sent to sufferers in the war zone.

in the three countries included in its title.

Rebuilding the East

Two STRIKING illustrations of reconstructive work have come to my attention. The American Committee on Armenian and Syrian Relief is responsible for the welfare of Armenians, Syrians, and Persians in Asia Minor and in the refugee districts in Russia. This committee is not the only one working in that field, but is the representative of American effort in this direction. When the Kurds devastated the country of the Nestorians, when the Turks had driven the Armenians away from their homes, the problem of relief in the Near East became twofold: that of the refugee in his camp and that of the native who returned to his home in the districts just swept by the massacres. To meet the needs of this second group the field workers of this committee have organized the returned natives in certain districts for the purpose of taking care of the harvest and of the planting for the following season.

Those who return are given power to rent the lands so that all may be put under cultivation and so that all the orchards and vineyards may be cared for. The plan is so arranged that in case the owners of land appear later they will find their property in good condition and can reclaim it, paying as soon as possible the amount expended upon it in the meanwhile. If the owners do not return, the proceeds of the present season's crops are to be used for further relief work.

The plan for re-establishing the natives is novel. Those who have their own land to go back to may purchase oxen, cows, and buffalos. For each animal a ticket is made out and given to the recipient, a yoke of oxen going to every three families. Widows and families of orphan children are given the preference in the distribution of cows. Each recipient, upon receiving his animal, gives a note in exchange by which he promises to repay the committee in three annual payments beginning in 1917. The price set is the price in normal times, which is from three to six times less than what the committee must pay now. These families are given implements for harvesting and seeds to be sown. In the towns the tailors, carpenters, bakers, and other tradesmen are also being helped through the supply of tools of their trade.

The government is already active in cooperating with this and other committees in similar reconstruction work. It is remarkable that so little time has been lost. This is true, beyond doubt, because the field workers of the committee have been long familiar, through their missionary work, with conditions of the country and the nature of the people. Therefore, they are very well equipped to use their judgment and to

take chances, for they have taken chances, in beginning these undertakings almost before the wave of the massacres has passed.

And yet work of similar value has been done in France by people who have had no previously organized contact with the country and no established basis for confidence. This is the work of English Friends. These pacifists, whose belief has been tested by conscription, have met the rebuke of the majority who saw patriotism only in fighting, by creating an organization entirely new and without precedent in their church, or in any other body, through which they could carry out their faith.

Pacifist Service

THE FOUR BRANCHES of the service are under the direction of separate committees, although the whole work receives the sanction and support of the Friends. There is underneath this method of organization a very human story. The four branches of Friends' service represent four varying points of view of the Friendly idea of practicing Christian principles. There are those who serve under one committee who could not conscientiously give their help under another.

These committees include propaganda work for peace, in England only; the Friends Ambulance Unit at work in France, Belgium, and perhaps by this time, in Russia; the Emergency Committee for Helping Aliens in Distress (convened to aid innocent aliens in Great Britain rendered destitute by the war) and the War Victims Relief Committee. It is to this last committee that I refer as an example of constructive war relief work. It has been so successful that the French government has taken over part of it.

At the opening of the war the War

Victims Relief Committee began its task of following the battle line along the western front, by restoring villages in French territory as soon as it became practical to do so. Small groups of men and women with temporary field headquarters near the battle line go to village after village rebuilding houses, procuring animals and implements and seeds for re-establishing agricultural activities. In carrying out their work they supplement the labor of the remaining villagers. Upon their own initiative the committee began this work in the department of the Marne and, by the invitation of French officials, they have extended it through the Meuse, the Aisne and the Meurthe-et-Moselle.

By April, 1915, the French authorities were providing materials for rebuilding and were giving assistance in obtaining the labor of territorial soldiers. The government was soon able to assume the responsibility of meeting the agricultural needs of the larger districts and thus supplanted the committee. The problems of the cottagers with small plots of land are still left however, to the committee.

Building Huts

A SYSTEMATIC hut-building campaign has also been undertaken by the War Victims Relief Committee in connection with its reconstructive work. By means of local labor and with lumber purchased in France, series of small houses have been built in village after village. These are comfortable simple homes following out uniform models which the committee created, and which the French government has since used. This successful house building is also being carried on for Belgian refugees in Holland where portable houses are being constructed near the Belgian border with the labor of refugees and Belgian soldiers. When the war is over these houses can be taken down and conveyed by the refugees to their former homes where they may serve as comfortable shelters of a fairly permanent nature. [See THE SURVEY for June 26, 1915.]

The transferring of material relief from America is admirably organized. Of all the items of the war relief problem it is in the simplest shape. It amounts to this. There are three chief shipping organizations: the Commission for Relief in Belgium, the Clearing House, and the Red Cross. Practically all the other committees arrange for the transfer of their supplies through these three. The commission has its own boats. The clearing house and the Red Cross are granted space for transferring their supplies, almost always free of charge, by private shipping companies. This contribution to the war relief work is especially generous in the case of French and Italian companies.

Admission of relief into the countries abroad, free of customs charges, is also

secured. The only responsibility that rests with the consignor is to see that his gifts are transferred to the receiving stations of the three shipping committees. Every possible consignor should secure from these committees their printed directions for this end of the transferring. In the case of the Red Cross and the commission, branch assembly depots are maintained in various states to which a consignor or a small committee may send contributions. From these branch stations the supplies are forwarded to the shipping headquarters. Supplies for the clearing house are sent direct to the New York shipping point.

Free Delivery

THE COMMISSION has arranged with the express companies to carry the contributions for its work free of charge. Contributions of supplies for the Red Cross and the clearing house must be sent prepaid by express, parcel post, or freight, in accordance with instructions obtainable from these committees. The principal express companies will accept shipments for both organizations at two-thirds of the regular tariff rates.

On their own account and on account of the thousands of cooperating committees these three shipping committees have done a big bit of work. The commission has sent 279 shiploads of relief for the aid of Belgium and the occupied section of France. The clearing house, which reports in terms of cases of supplies, had forwarded over 41,000 cases up to the end of August. Practically all this huge amount had been contributed by small committees, or was sent on behalf of these committees to designated recipients abroad. The Red Cross had shipped up to September 1, 45,305 packages of supplies. Their total value is put at \$1,428,761.19. Of this amount \$948,760.52 is the value of the supplies donated to and shipped by the Red Cross and \$480,000.67 the value of the supplies purchased and shipped by the Red Cross on its own account.

The thing that stands out in this work of shipping is that a great mass of supplies is being sent abroad by small committees which have learned to use the shipping facilities of the three large committees. These same agencies, and the committees for Germany, Serbia, Armenia, and Poland, and the Jewish people, also serve as central agencies from which money may be forwarded. In cases where this is done, the money is used, if possible, for purchasing supplies within the country to be benefited.

Many committees have also learned to use the purchasing facilities of the larger committees. This is done in two ways. Any committee may purchase at cost, from the clearing house materials which may be made up, by their own workers, into clothing or hospital supplies. Thus, it receives the benefit of

FOR FRANCE AND HER ALLIES

BY express and parcels post, socks and banjos, canned meat and surgical instruments—all sorts of gifts tied up in all sorts of packages—pour into the War Relief Clearing House.

the greatly reduced prices which the clearing house, purchasing in very large quantities, can obtain.

Buying in Bulk

OR THE SECOND way of purchasing may be followed. That is, a small committee may send a designated donation to any one of the three large committees: to the Red Cross for the purchase of hospital supplies, food and clothing; to the commission for food and clothing—this fall chiefly for a special diet for Belgian children; and to the clearing house for supplies of any kind.

But as a general rule the local committees, those that have the interest of small groups of people, and that purchase in variety and in quite small quantities will doubtless find it more economical of time and money to gather up their supplies from their own vicinities.

There are war relief contributors who, before giving to war relief, ask regarding the efficiency with which the money

is being raised. These are the people who have fresh in their minds the financial economy of the federation plan of raising money for philanthropic work. They want to know why such a plan has not yet been applied to raising money for war relief. If fifty-seven philanthropic organizations in Cleveland were able to reduce the cost of raising their money from 15 per cent to 33 per cent to 9.4 per cent in the first year of federated work by how much could one hundred odd war relief committees in New York city reduce through a federation plan the cost of raising their money in the third year of the war? One considers, too, the simplicity with which the hundred and more central committees and their branches do their shipping abroad through the three main gateways. Cannot money, as well as supplies, be drawn together in as intelligible a way?

I have already referred to the two expressions of this feeling, found in the Committee of Mercy and the National

Allied Relief Committee. The Red Cross also stands permanently ready for this service, with accountability to the government for financial operations. Yet it seems doubtful that any comprehensive federation for money raising will be successful, for reasons which I have also given. For persons who wish to contribute by way of the nearest approaches to a federation these three agencies are quite usable. There is no equivalent plan existing among the committees for the aid of the Central Powers alone. German newspapers, such as the New York *Staats-Zeitung* do serve, however, as a receiving agency for designated or undesignated contributions for such committees. This service is performed without deduction of any sort for expenses.

But whether one encourages, by his contributions, these efforts toward federated money raising, or whether he elects to contribute through the transferring agencies, there still remains the question as to the safest means for getting money to headquarters.

In the past year contributors have had to learn all over again the risk of giving money directly to solicitors. By this method abuses occur easily and are detected with difficulty. Most of the leading agencies advertise that contributions should not be given to solicitors but should be made payable to the national treasurer and sent by the contributor to national headquarters.

Fake Schemes

JUST ON the face of things it is impossible to judge whether a benefit is being conducted at a legitimate cost. Machinery to determine this point for the benefit of limited groups of contributors is to be found in the charity investigating committees of chambers of commerce in a goodly number of cities. Examples of abuse incident to the use of dangerous methods of raising money have been whispered about. One of these, a recent effort to launch a new undertaking, gave considerable trouble to a city near New York.

Two men appeared in X. a few months ago. They immediately told of plans to establish a large constructive war relief organization. They sublet a flat in a good residence district, decorating the living room with all manner of war posters and flags of European countries. With a picturesque headquarters installed, they started out to organize their committee. At first they made a big impression. One man displayed a badge said to have been won by him for heroic work in saving the life of a soldier. The man limped and told of losing his leg in a certain campaign. The other man insisted, with dignity, upon the proper use of the military title he said he had earned. His story was of four silver ribs which, he claimed, he carried since wounded in battle.

While the committee was in process

THE RELIEF COMMITTEES

This list of committees includes those mentioned in the accompanying article and those appearing in the representative list issued last summer by the Federal Council of the Churches of Christ in America. The combined list is not exhaustive and does not include all of the committees doing good work.

American Committee for Armenian and Syrian Relief, Charles E. Crane, Treasurer, 70 Fifth avenue, New York city.

American Committee for Training in Suitable Trades the Maimed Soldiers of France, Mrs. Edmond Baylis, Chairman, 54 Wall street, New York city.

American Girls' Aid, A. Seton Post, Treasurer, Pier 57 North River.

American Huguenot Committee, Edmond E. Robert, Treasurer, 105 East 22 street, New York city.

American Jewish Relief Committee for Sufferers from the War, Felix M. Warburg, Treasurer, 174 Second avenue, New York city.

American National Red Cross, Hon. John Skelton Williams, Treasurer, 1624 H street, Washington, D. C. (The Red Cross has a Department of Non-Combatant Relief.)

American Relief Committee in Berlin for Widows and Orphans, John D. Crimmins, Treasurer, 30 East 42 street, New York city.

B. F. B. Permanent Blind Relief War Fund, Frank A. Vanderlip, Treasurer, 590 Fifth avenue, New York city.

British War Relief Association, Inc., Henry Clews, Treasurer, 542 Fifth avenue, New York city.

Commission for Relief in Belgium, Alexander J. Hemphill, Treasurer, 120 Broadway, New York city.

Committee for Men Blinded in Battle, William Forbes Morgan, Jr., Treasurer, 124 West 42 street, New York city.

Committee for Relief of German and Austro-Hungarian Prisoners, William

Knauth, Treasurer, 120 Broadway, New York city.

Committee of Mercy, August Belmont, Treasurer, 200 Fifth avenue, New York city.

East Prussian Relief Fund, Hubert Cillis, Treasurer, 17 Battery place, New York city.

Fund (The) for Starving Children, Frederick Lynch, Treasurer, 70 Fifth avenue, New York city.

National (The) Allied Relief Committee, James A. Blair, Jr., Treasurer, 200 Fifth avenue, New York city.

Polish Victims' Relief Fund, Frank A. Vanderlip, Treasurer, Aeolian building, New York city.

Refugees' Relief Fund, Otto T. Barnard, Treasurer, 30 Church street, New York city.

Relief Committee for War Sufferers (German), Charles Froeb, Treasurer, 531 Broadway, Brooklyn, N. Y.

Serbian Relief Committee, Murray H. Coggeshall, Treasurer, 70 Fifth avenue, New York city.

Secours National, Mrs. Whitney Warren, Treasurer, 16 East 47 street, New York city.

Union Nationale des Eglises Reformees Evangeliques de France, Emergency Relief Fund, Alfred R. Kimball, Treasurer, 105 East 22 street, New York city.

Vacation War Relief Committee, Miss Anne Morgan, Treasurer, 5 East 37 street, New York city.

War Relief Clearing House for France and Her Allies, Thomas W. Lamont, Treasurer, 40 Wall street, New York city.

War Victims' Relief Committee, William R. Elkinton, Treasurer in America, 121 So. Third street, Philadelphia.

THE HANNAH, SHIP OF MERCY

Commission for Relief in Belgium is the sign amidship that insures safe passage for this transatlantic vessel, loaded to the bowsprit with American foodstuffs and good will.

of forming, the Chamber of Commerce reported upon an investigation of the undertaking it had been making. As a result the prominent citizens who had been induced to form the committee withdrew their support and the committee dissolved. The flat was abandoned and rent and stenographer's bills left unpaid. The owner of the four silver ribs left America. The pleasant mannered man with a limp (but with no wooden leg and no *bona fide* badge of honor) left for parts unknown. The city was saved from two of the most plausible men that have undertaken to profit by war relief appeals.

After all, fraudulent war relief undertakings have not been so frequent in New York city as one would expect. Of the fifteen of which I have heard in two years, all but two have been eliminated without great financial loss and without appeal to the machinery of government.

One must frankly admit that there are people who consider every wave of public feeling, every opportunity for publicity as a legitimate means for making money for themselves. When such people add to their business ventures some charitable venture, experience shows that the proportion is likely to vary from 50 to 80 or 90 per cent for business as against 50 to 20 per cent for charity.

Business Before Peace

A LITTLE group of such undertakings sprang up in the first few months of the war for the selling of peace stamps. During the early months of the war, hope for an early peace was in the minds of many Americans. Enterprising individuals realized the extent of this feeling and recognized that it was ready for their harvesting. It is not in accordance with human nature to resist an appeal for a cause that is near to the heart. So peace stamps were sent broad-

cast to mailing lists accumulated in other businesses with the request that the recipient remit at so and so much to the national headquarters. Politically prominent men gave their names to one such cause. The unknown working members of another scheme figured on a letter from that on the surface gave no hint of other than a sincere effort for peace. A third plan was that of a business corporation chartered to market articles quite different from stamps. Returns were evidently satisfactory and the organizers began to extend their work by way of branch committees in other cities. One committee claimed to be sending part of its "net proceeds" to Belgium. Inquiry by cable revealed that a very small donation, enough to keep the promoters within the law, had been sent abroad. But, to the best of my knowl-

edge, in none of the cases was any report of accomplishment published voluntarily by these propagandists. I am inclined to believe that on the whole such efforts were not fruitful financially to their promoters, for it seems to be the experience of legitimate agencies that have used this plan of raising money that it is least successful as a sporadic or local means of raising money and most successful when it can be carried along with the regular work of an existing organization of considerable size.

It is refreshing to turn from the dangers of indirect giving to serious and direct efforts to secure steady contributions for relief work. Many churches and social organizations have urged their members to pledge a certain amount to be sent to national headquarters regularly. This method succeeds if the organizations have some live volunteers to keep reminding the contributors of their pledges. Local branches of various relief committees also encourage this, and sustain the interest of the contributors by sending them regular bulletins showing the progress of their work abroad. There is one instance also, that of the Refugees Relief Fund, of a single agency whose whole purpose is to secure regular contributions for persons wishing to aid the Allies. The regular income so procured is donated largely to the clearing house and the Red Cross.

Committees Permanent

THERE DOES not seem to be any marked tendency on the part of the war relief committees to decrease in number. I know of only ten in New York city aside from the fifteen whose standing has been questioned, that have gone out of existence. These ten, with two exceptions, dropped out as soon as they recognized they were not raising much for the war

A CORNER OF THE HOLD

Thousands of bags of flour made up the gift of Kansas and Iowa to the people of Belgium

relief work, or as soon as their purpose was accomplished.

It is rarely, in the history of the two years, that one finds conscious effort on the part of committees themselves to unite in such a way as to reduce their numbers. Two instances summed up in theoretical terms, present the phenomena of reduced appeals, elimination of separate headquarters, a single process for transferring money (no material relief can be sent in either case). But underneath these terms there is a story of diametrically opposite methods of approach. One of these culminations was successful because, apparently, the simplification was brought about by a non-cooperative type of person; the other was produced by the ideal kind of co-operation.

Joining Hands

IN THE ONE instance two or three small committees were early established for the aid of a certain group of civilians. Gradually one of these became better and better known, probably because of the prominence and activity of committee members. Its relations with the central money raising agencies were established satisfactorily on as good a co-operative basis as conditions permitted. Then one day came the announcement in the papers that another special committee for the aid of this same group of civilians was established. The existing committees, following the accepted ethics, offered to discuss cooperation. But the new committee would have none of it. And it has succeeded in this policy, financially at least, until at present the others have dropped out, leaving the one committee to reach the general contributor, and to send the money raised abroad.

In the other case three causes for appeal were combined. The Committee on Armenian Atrocities had organized its hundred sub-committees in the United States. The Persian War Relief Fund had also been established in order to raise the \$70,000 needed to reimburse the Presbyterian missionaries who aided the 25,000 Nestorian sufferers from the Kurd invasions early in 1915. Evidence of needs among the Syrians called for provision for them. Meanwhile Persian field workers returned to the United States and reported their critical stage passed. They advised doing away with the separate Persian committee. Therefore, in November, 1915, it was decided to re-establish the Committee on Armenian Atrocities as the American Committee for Armenian and Syrian Relief.

By this step strong non-sectarian backing for the financial support of the Near East relief work was provided. At the same time, the plan meant making use of the excellent co-operative spirit among the church field workers in Armenia, Syria, and Persia. This spirit has become traditional since 1870, the

year of the agreement between Congregationalists and Presbyterians whereby the administration of the missionary work in Persia was assigned to Presbyterians and that of Armenia to Congregationalists.

Or one's faith in the ability of people to cooperate is advanced by such instances as that of the work of the Sanitary Commission in Serbia in the spring of 1915. In that undertaking private relief societies abroad and in America, the Red Cross societies of America and of Serbia, the Serbian government and the Rockefeller Foundation came together in an excellent division of labor plan for supplying money, for supervising and conducting the work of fighting the typhus plague, and for rendering material relief.

But the prospect for an earnest effort for the reduction to lowest terms of the machinery for money raising and administration is not bright, even though from the point of view of the confused contributor, it is much needed.

In this country the conspicuous examples of the systematizing of money raising are found in the work of federations of organizations for social work. These efforts have created standards requiring proper incorporation, activity of responsible and representative officers and managers, the preparation

of budgets and the auditing of accounts, the elimination of wasteful methods of raising money, and the production of direct financial support. The result is that in any community where such plans are in operation confidence has been established in the federation's financial efficiency. But such a federation comes as the expression of an effort for such efficiency on the part of a group of subscribers; for instance, a Chamber of Commerce. Or it comes as part of a program for increased efficiency in social work, including the problem of raising money, as in the case of the Alliance of Charitable and Social Agencies of Baltimore.

It stands to reason that the contributors to war relief cannot unite in establishing a central money raising agency for war relief, because those contributors are scattered throughout the country. That would seem to leave open the possibility that the central agencies for war relief may themselves form a plan for the raising of money that will be more simple than the different plans now in existence. Certainly some plan might be forthcoming which would encourage the establishment and maintenance of more and more local volunteer relief efforts rather than of more and more money raising committees in New York city.

Conferences

LEGAL AID

EVERY national gathering of the Legal Aid Societies demonstrates how surely and safely they are extending the reach of their work. The biennial session of their National Alliance at Cincinnati, October 11-12, registered not only many recent, but some long past, achievements in securing better legislation and procedure, as well as more effective enforcement of existing laws.

This extension of their sphere of action, however, involves no diversion from their work of actually dispensing justice. As much if not more than ever these legal aid societies were shown to fulfil the claim of Rudolph Matz, one of the most prominent lawyers guiding their work, that "the legal aid society is itself a self-constituted court, not only of original, but of appellate jurisdiction—in every sense a poor man's, a poor woman's and a poor child's court, whose judgments do settle cases, while not having the recognition or the machinery of law to enforce them."

Indeed in the very fulfillment of this function of counseling those seeking legal aid and informally adjudicating many of their difficulties, these societies

have all along seen the necessity of being more than a legal dispensary for dealing with individual cases. At one point of their experience after another, their executives have come to the conclusion which Reginald H. Smith of the Boston Society reached in dealing with wage assignments.

"It struck me one day," he said, "that I could go on making these petty adjustments day after day and that in the end the situation would be exactly the same, and that for one person to whom I could bring a little relief, a hundred went away without any relief."

Taking up the case for a better statute from the data in the files of this society and other agencies, the enactment of the Massachusetts law dealing with the non-payment of wages was obtained. This better law, as in many other instances, not only protected those who had been victimized for the lack of it, but exempted the society from many claims for its help.

The New York society thus did much to protect seamen and other industrial classes from forms of injustices from which it was difficult to deliver the individual. The Chicago Legal Aid So-

ciety and the agencies which united to constitute it, were the Illinois pioneers in securing the protection of women and children from criminal aggression and exploitation. Largely through their effort the age of consent was raised to sixteen years and over, the penalty for seduction was increased, imprisonment was inflicted for contributing to the delinquency of a child, pawnshops were legally enabled to compete with the loan sharks and help drive them out of business, like societies for loaning money on wage assignments were authorized and organized, and a new law allowing the garnished employe to intervene and set up his rights was enacted.

Among the topics dealing with the more technical points in the conduct of legal aid work were the problem in smaller cities, the participation of law school students, the relation to organized charity, the services to business, particularly to the employers of labor, lessons of the municipal legal aid, now established in Dallas, Dayton, Duluth, Kansas City and St. Louis, and the question "Should Legal Aid Societies Charge Fees for Services?" The opinions elicited by the speaker, Mr. Maude P. Boyes of the Chicago Society, were almost evenly divided for and against fees and commissions.

The registration included representatives of twenty legal aid societies, five municipal legal aid bureaus (Dallas, Dayton, Duluth, Kansas City, St. Louis), nineteen legal agencies of Associated Charities, two law schools, one bar association and one Young Women's Christian Association, located in forty-six cities, from Boston, New Orleans and Dallas to Winnipeg and San Francisco. Albert F. Bigelow of the Boston Society was elected president of the Alliance. The motion to hold the next meeting at the time and place of the National Conference of Charities and Correction failed to pass.

PRISON REFORM

MORE and more the sessions of the American Prison Association are emphasizing the need of the medical and psychological study of law-breakers if our methods of reformation are to succeed. Wardens, judges, chaplains, prison physicians and all who have to do with the prisoner from trial to release are finding agreement on what, a dozen years ago, was one of the novelties of prison study. Whatever the treatment contemplated—self-government, honor system, indeterminate sentence, parole, or what not—it is recognized that, preceding action, there must be detailed knowledge of mental traits and degree of responsibility.

Last week's meeting of the association in Buffalo, though discussing many aspects of prison administration and reform, laid further stress upon this prerequisite of action. The issue was put

graphically by Dr. Paul M. Bowers, medical superintendent of the Indiana State Hospital for Insane Criminals, who said: "Probably 50 per cent of all juridical proceedings are concerned with criminality, and yet our jurists placidly and contentedly continue to study their books instead of men, searching in ponderous and ancient volumes of citations, resurrecting decisions from the legal graveyard of the past; and, with crumbling, moth-eaten and time-worn precedents, they attempt to regulate the anti-social conduct that springs from a disordered mentality."

Over twenty institutions and societies maintaining psychological clinics were represented at the meeting. The extent to which some of those engaged in the work of such clinics are willing to go as a result of their observations was brought out by Dr. William H. Kraemer, who has made a special study of prisoners in the New Castle County Workhouse, Delaware. Dr. Kraemer said: "My observations have led me to believe that a person who is unable to live within the laws of human society, and who has been committed to a prison on two separate, distinct charges and at two different times, is suffering from some

injury or disease, physical or mental, congenital or acquired, which is responsible for his abnormal conduct and behavior."

Dr. Bowers, too, had the results of a personal study to offer. He had studied one hundred recidivists, each of whom had been convicted not fewer than four times, and of these twelve were insane, twenty-three feebleminded, and ten epileptic. In each case, he said, the mental defectiveness bore a direct casual relation to the crime committed. The folly of our usual criminal procedure in such cases was driven home as follows:

"No less than 108 trials have been held for these persons. It is reported by good authority that it costs no less than \$1,000 to convict a prisoner; so at that rate the lowest possible expense to the commonwealth was \$180,000. And, three times, each one of these defective individuals had been released to prey upon society, while no permanent good whatever has been accomplished."

The impossibility of reforming prisoners *en masse*, and the need of individual treatment not unlike that involved in psychoanalysis was strongly put by Dr. Guy G. Fernald, resident physician at the Massachusetts State Reformatory.

BOOKS

SCANDINAVIAN IMMIGRANTS IN NEW YORK (1630-1674)

By John Oluf Evjen. K. C. Holter Publishing Company. Price \$2.50; by mail of THE SURVEY \$2.75.

The problems of New York state and city are essentially an exaggerated form of the great American problem of keeping unity among various racial stocks, without crushing the initiative of any ethnic group, Professor Evjen in this book shows that the Scandinavians were a more important element in New Amsterdam than heretofore realized, and gives biographical particulars of fifty-seven Norwegian, ninety-seven Danish and thirty-four Swedish immigrants. In an appendix he gives an account of some 180 Germanic immigrants.

The Dutch laid the foundation for Americanism by their racial tolerance. They absorbed these early Scandinavians and Germans so completely that many descendants of these settlers are ignorant of the true origin of their family names. This was partly because the sexes were not equally represented among these immigrants, so that marriage outside of

the Scandinavian or German groups was almost necessary. The Germans and Scandinavians were held together by their Lutheranism, but showed a power that is still with them, of being assimilated without losing their national characteristics.

Professor Evjen shows a justifiable pride in the achievements of his kinsmen, but he does not gloss over their failings. For this reason the student of eugenics must be interested in his account of individuals whose germ-plasm has affected our national life and become a part of its fabric for over two centuries and a half. There is something of sociological significance in the fact that Professor Evjen feels no need of apologetics. It shows that the Scandinavians in this country realize that they hold an assured place.

JOSEPH F. GOULD.

POVERTY AND SOCIAL PROGRESS

By Maurice Parmelee. The Macmillan Co. 477 pp. Price \$1.75; by mail of THE SURVEY \$1.87.

One can scarcely imagine a more difficult task than that of bringing into one volume the multitude of facts and theories that the last quarter of a century has contributed to the problem of poverty. Biology, psychology, politics and social work, as well as economics, have all to be

considered together with the many remedial and preventive measures that have been proposed.

This is what Professor Parmelee's book undertakes. Having been written as a textbook, its treatment of many of the problems it discusses is not so exhaustive as the person seeking a reference book upon this subject might desire. Professor Parmelee summarizes the arguments for and against the various social remedies and theories that those who are trying to solve or explain the problem of poverty have developed. It is, however, not always easy to draw for oneself a clear-cut conclusion after reading the discussion of these topics.

Professor Parmelee is a social evolutionist rather than a revolutionist. His ideal is the democratic society, but he does not define the political and social characteristics of the society in such detail as the reader might desire. He accepts as steps toward the realization of his ideal most of the reforms which social workers generally believe will improve working and living conditions. Among the controversial measures which he endorses are the regulation of population through birth control and the restriction of immigration, and the increase of the tax upon land.

The book bears the marks of large and wide reading which has not been sufficiently digested. It is loosely knit together and, as far as style and diction are concerned, could be improved by re-writing.

KARL DE SCHWEINITZ.

or in which a strike has failed as a result of labor's inability to keep its ranks intact. He declares that the use of the boycott has been effective in the past in organizing many trades that would otherwise have been deprived of the advantage of collective bargaining and that there are still a large number of industries in which the organizing function of the boycott might prove of distinct value to society.

The impression left by Dr. Wolman, however, that boycotts will have no further legitimate function to perform when the various trades are well organized is, it seems to the writer, unfortunate. For following thorough organization, the workers will undoubtedly need to continue their struggle for a still higher standard of living if the best interests of society are to be served, and in many industries they are likely to find that they can achieve their ends with the expenditure of far less effort through the employment of the boycott than through that of the strike.

The statement of the author that trade unions, with their loose federations, and, be it said, their endless jurisdictional disputes, are as well adapted to an effective use of the boycott as are industrial unions, seems also of questionable validity.

On the whole, however, Dr. Wolman's dissertation is an admirable complementary study to the literature on this subject and is essential to a proper understanding of the place of the boycott in the American trade union movement.

HARRY W. LAIDLER.

THE BOYCOTT IN AMERICAN TRADE UNIONS

By Leo Wolman. The Johns Hopkins Press. 148 pp. Price \$1; by mail of THE SURVEY \$1.06.

This monograph, in the words of the author, "is designed to make an impartial study of the boycott in its relation to trade unionism; of the circumstances which attend the emergence of the boycott; of its value as an organizing device; of the effect upon trade unionism; of its abandonment as a resource of enforcement; and finally of its legal and ethical aspects."

While it cannot be said that Dr. Wolman has gone exhaustively into all the foregoing phases of the boycott, he has nevertheless contributed a book of marked value to organized labor.

To the social reformer who is seeking to decide whether he should advocate or oppose the legalization of the boycott, the discussion regarding the conditions under which boycotts emerge and the function they perform is particularly important. Dr. Wolman claims that boycotts have arisen in connection with those industries in which it has been found impossible or extremely difficult, without its use, to organize the workers

COMMUNICATIONS

THE DEVIL WITH FIRE

TO THE EDITOR: When the world's congress and the world's supreme court shall have become established facts and the nations of the earth have agreed to abide by the laws of such congress and supreme court, then may it be made a law that if any ruler or government body (be it a congress, parliament, reichstag or any other) declares or begins a war, every ruler or member of a governing body that votes for war shall be executed if the world's army and navy can capture the offenders. And further, may it be enacted that if any public speaker or publisher of any publication incites to war every such speaker, editor or publisher shall be likewise executed. Then we may believe that war ("the sport of kings") will be a matter of history only.

A. N. ROE.

Branchville, N. J.

SABOTAGE FOR GERMS

TO THE EDITOR: The knowledge of the hookworm and its ravages in reducing the efficiency of American citizens are popularly known. The reports of the

bacteriologists, the illustrated pamphlets telling us about the rural conditions, the work of the laboratories, and the cures effected, furnish interesting reading. Already the literature of the subject is large.

Yet, after all, are not the feet, especially the soft parts—notably the tender skin between the toes—the chief gateways of entrance of the deadly parasite into the system? Why not then case the feet in defensive armor? Leather will no more suffice for prevention than will heathen charms or Christian cloth to keep out bullets. Wherever crack or hole, stitch or peg allow water to penetrate, there the hookworm follows.

But there is one sort of foot-gear impervious to the *Necator Americanus*. Wherever the sabot, clomper-klomp, or wooden shoe is worn, this pest must reach man by some other route—from his fellow animals, or by infection through carelessness.

The wooden shoe—dry, comfortable, easy to wear, to put on and off, cheap and durable—is not perhaps fitted for use on pavements nor is it likely to suit American taste in the cities. But for life on farms, gardens, barn yards, ploughed soil, country roads, what better foot-gear?

An ounce of prevention in this line of service is worth a pound, even of scientific, cure. Why does not some enterprising American give a demonstration of the value and economy of the wooden shoe? The money saved annually through the substitution of wood for leather, to be used during working hours would build many schoolhouses and properly equip them. It would beautify and make more comfortable the average home in the devastated regions. Once fashionable or at least made popular, as it is already in Europe among some of the best of the world's citizens, such a change would add largely to human values and efficiency. I speak after seeing the parasite and its awful ravages.

Not on ice, not for a race, not for fashion—silly or sane—but for economy, comfort and the prevention of a scourge that is wasting and deadly, do I hope to see wooden shoes in rural America. Nor do I fear any just reproach of the writer or the courageous innovator if, in the words of the Dutch proverb, "He stands on his word like a farmer in his klomps."

WILLIAM ELLIOTT GRIFFIS.

Ithaca, N. Y.

APPEALS

TO THE EDITOR: I would like to express a word of sympathy with the writer of a short article in your number for August 26 headed Appeals.

There must be many who like myself, are annoyed and at times exasperated by the number, the persistence, the tone, and the unreasonable duplication of appeals for charity of all sorts and kinds.

It is hard to say which are the most objectionable—the ones claiming to represent the only true and dependable society for the relief of this or that (while you have on your table half a dozen others claiming the same thing,) or the ones who will never take *no* for an answer but go on and on, using up your sub-

scription, as your correspondent puts it, over and over again in the effort to get more out of you. Worst of all are the societies or committees who do not methodically divide up their lists of possible donors but who each and all apply to the same people. I could send you a big bundle of their so called "literature" to prove this. The expenditure for stationery and postage, for office time and clerical help must eat up a large part of their receipts.

The whole thing is overdone, and tends to perplex and annoy those who really want to give but to do so judiciously and to the right agents.

E. W. H.

All Chicago extended a hearty welcome to Jane Addams, although she feels only "half at home" while able to spend only part of her time at Hull House during her encouraging convalescence.

Photographs of the bas-relief, the Woman Physician, reproduced on the cover of THE SURVEY for July 22, are for sale at the Woman's Medical College of Philadelphia. They are copyrighted by Clara Hill, the sculptor, 1527 Newton street, Washington, D. C.

A mistake occurred in the description of the Coney Island health exhibit, THE SURVEY for September 30. The advisory service connected with that exhibit was conducted not by the New York Department of Health, but by the genito-urinary department of the Brooklyn Hospital. Dr. Alec Nichol Thomson and his assistants gave time to this work practically every day.

There is no longer any doubt that Mary C. Dunphy cannot be superintendent of the New York city Children's Hospital and Schools for the feeble-minded on Randall's Island. The state Court of Appeals decided October 3 to sustain an earlier decision of the Appellate Division upholding her dismissal by John A. Kingsbury, city commissioner of public charities.

Eugene Cary Foster, for four years assistant superintendent of Lakeside Hospital, Cleveland, on October 1 became superintendent of the Charity Organization Society of Indianapolis, Ind. Mr. Foster, who is a graduate of Oberlin, became assistant to James F. Jackson, superintendent of the Cleveland Associated Charities in 1908. During 1910 and 1911, while Superintendent Jackson was director of charities and corrections for the city, Mr. Foster was acting superintendent of the Associated Charities.

The Rock River Conference of the Methodist Episcopal Church in session at Chicago declined to accept for its charitable institutions any aid from the city, county or state. In doing so it declared the appropriation of \$278,425 of public moneys by the city of Chicago to eleven sectarian institutions and \$15,782 to fifteen institutions in the county outside of the city to be an infringement of "the American doctrine of separation of church and state," to which the allegiance of the conference was pledged by the action taken.

In response to an inquiry, THE SURVEY is glad to make clear that the two-page announcement of the National Hughes Alliance in the issue for October 7 was a paid advertisement, as was an announcement of the Democratic National Committee in the issue for August 26. Both might well have been marked "advertisement," as is required by law in Massachusetts. But that readers were misled as to their character, as our inquirer suggests, seems unlikely in view of the location in the advertising pages and the style of composition, in particular the coupons to be torn off and mailed to the advertiser.

The Birmingham *Age-Herald* was recently in receipt of a letter from F. W. Haselwood of Willetts, California, enclosing a card circulated in that state (presumably by local liquor interests) which distorted an article appearing in THE SURVEY for September 11, 1915 in regard to the relation between prohibition and Birmingham's finances and municipal activities. This whole matter was gone into in THE SURVEY last spring (THE SURVEY for April 8, 1916) when we showed how thoroughly certain publicity agencies were twisting the original SURVEY article and brought out a statement from Commissioner Ward of Birmingham as to the facts.

The savings bank section of the American Bankers Association is following up its observance of the first century of American savings banks [see THE SURVEY for October 7] by preparing an exhaustive bibliography on thrift. It will include not only the banking and commercial aspects of the subject, but such wider aspects as are grouped under the following suggestive classifications: the bank as a means of socializing thrift; family or domestic thrift; economics of thrift, agricultural and industrial; government thrift, conservation, reclamation, reduction of waste from fire and in industrial and municipal administration; international thrift, war-waste and the reduction of friction through uniformity of negotiable instruments, standardization of commercial practice and international banks; sociology of thrift, waste, luxury and extravagance, charity and philanthropy, loan sharks, old age pensions. The suggestion of titles will be welcomed by the librarian of the American Bankers Association at 5 Nassau street, New York city.

The New York Committee on Feeble-mindedness has been organized with the expectation of securing citizens from every section of the state as members of its general committee. The central offices are in the United Charities Building, New York city, in charge of an executive committee composed of Prof. Stephen E. Duggan, Maude E. Miner, Eleanor H. Johnson, Dr. Thomas W. Salmon, R. Bayard Cutting, Homer Folks and Franklin B. Kirkbride. The executive secretary is James P. Heaton who for the past six years has been a member of THE SURVEY staff. The committee announces it will strive through legislation for the early care, training and supervision of all mental defectives in the state; for measures and methods that are free from reasonable objection for preventing a future increase in the number of the subnormal; for the establishment of special classes in the public schools; and for the establishment of a system of guardianship and supervision in the home to supplement institutional and farm colony care. Its immediate goal is to double the number of beds for the feeble-minded and epileptic in New York state institutions.

Classified Advertisements

Advertising rates are: Hotels and Resorts, Apartments, Tours and Travel, Real Estate, twenty cents per line.

"Want" advertisements under the various headings "Situations Wanted," "Help Wanted," etc., five cents each word or initial, including the address, for each insertion. Address Advertising Department, The Survey, 112 East 19th St., New York City.

SITUATIONS WANTED

RESIDENT position wanted by woman of executive ability familiar with all office detail. Now engaged in juvenile probation work. Address 2396, SURVEY.

GRADUATE nurse desires position Tuberculosis Hospital or welfare work. Training and experience in social and hospital work. Best references. Address 2397, SURVEY.

HELP WANTED

WANTED—By social service organization a trained, experienced case worker. Address 2398, SURVEY.

EXECUTIVE secretary for a social agency in an eastern city. Position requires some knowledge of the problems of public health, housing and city planning. State age, training and experience, also salary wanted. Include references Address 2399, SURVEY.

BOOKS

JUST PUBLISHED—THE SOCIAL SURVEY.

By Carol Aronovici, Ph. D., Director Bureau for Social Research, Philadelphia. 268 pages, illustrated. Cloth, \$1.25. A synthesis of ten years experience in the Social Survey field, and embodying a working plan for applying a community efficiency test. With copious bibliography. Sent postpaid. Harper Press, 1016 Chancellor St. Phila., Pa.

THREE VOLUMES

By Edward T. Devine

THE NORMAL LIFE

A careful description, a close-knit argument for the best things to be had—and how to get them—in childhood, in adolescence, in youth, in maturity, in old age. Price \$1; by mail \$1.07.

THE SPIRIT OF SOCIAL WORK

Nine of Mr. Devine's addresses, delivered at various times and places, full of the author's inspiring conviction that "ancient wrongs shall be righted." Price, postpaid, \$1.00.

SOCIAL FORCES

Twenty-five editorials from THE SURVEY in which Mr. Devine focuses on American problems the world-wide experience of social work and theory gathered into the news columns of the magazine from week to week. Price, postpaid, \$1.00.

CALENDAR OF CONFERENCES

Items for the next calendar should reach THE SURVEY before November 8.

OCTOBER AND NOVEMBER

- BLINDNESS**, National Committee for the Prevention of. New York city, November 24. Sec'y, Mrs. Winifred Hathaway, 130 East 22 street, New York city.
- CHAMBER OF COMMERCE**, Western New England. Springfield, Mass., November 22. Sec'y, James P. Taylor, Burlington, Vt.
- CHARITIES AND CORRECTION**, Iowa State Conference of. Ottumwa, Ia., October 22-24. Sec'y, Miss Bessie A. McClenahan, Iowa City, Ia.
- CHARITIES AND CORRECTION**, New York State Conference of. Poughkeepsie, N. Y. November 14-16. Sec'y, Richard W. Wallace, Box 17, The Capitol, Albany, N. Y.
- CHARITIES AND CORRECTION**, Ohio State Conference of. Youngstown, Ohio. November 14-17. Sec'y, H. H. Shirer, 1010 Hartman building, Columbus, O.
- CHARITIES AND CORRECTION**, West Va. State Conference of. Clarksburg, W. Va., November 20-22. Sec'y, A. E. Sinks, 300 Board of Trade bldg., Wheeling, W. Va.
- CHARITIES**, Massachusetts State Conference of. Lowell, Mass., October 25-27. Sec'y, Richard K. Conant, 6 Beacon street, Boston.
- CHILD WELFARE CONFERENCE**, Iowa City, Ia., October 25-27. Further information may be secured from the State University, Iowa City, Ia.
- CITY MANAGERS' ASSOCIATION**, Springfield, Mass., November 20-23. Sec'y, O. E. Carr, Niagara Falls, N. Y.
- CIVIC LEAGUE**, Massachusetts. Springfield, Mass., November 21. Sec'y, Edward T. Hartman, 3 Joy street, Boston, Mass.
- CIVIC SECRETARIES CONFERENCE**, Springfield, Mass., November 23-24. Sec'y, Hornell Hart, Milwaukee, Wis.
- CONGRESS OF MOTHERS AND PARENT-TEACHERS' ASSOCIATION**, Iowa. Biennial meeting. Iowa City, Ia., October 25-27. President Mrs. A. O. Ruste, Charles City, Ia.
- CONSUMERS' LEAGUE**, National. Springfield, Mass., November 15-16. Gen. Sec'y, Mrs. Florence Kelley, 289 Fourth avenue, New York.
- JEWISH FARMERS OF AMERICA**, The Federation of. New York city, November 28-December 2. Sec'y, J. W. Pincus, 174 Second avenue, New York city.
- MUNICIPALITIES**, League of Texas. Hillsboro, Texas, October 26-28. Sec'y, Prot. H. G. James, Austin, Texas.
- MUNICIPAL LEAGUE**, Intercollegiate Division of National. Springfield, November 22-23. Sec'y, Arthur Evans Wood, University of Pennsylvania, Philadelphia.
- MUNICIPAL LEAGUE**, National. Springfield, Mass., November 23-25. Sec'y, Clinton Rogers Woodruff, North American bldg., Philadelphia, Pa.
- MUNICIPAL RESEARCH WORKERS**, Springfield, Mass., November 22-23. Sec'y, L. D. Upson, Detroit, Mich.
- PLANNING BOARDS**, Massachusetts Federation of. Springfield, Mass., November 23-24. Sec'y, Arthur C. Comey, Cambridge, Mass.
- PROBATION OFFICERS**, New York State Conference of. Poughkeepsie, N. Y., November 12-14. Sec'y, Charles L. Chute, State Probation Commission, Albany, N. Y.

Everyone is Interested in Pictures

As the quality of the pictures depends largely upon the quality of the apparatus, you should select for your club the

Bausch and Lomb Balopticon
THE PERFECT STEREOPTICON

The lenses of the Balopticon are of unusually high grade, guaranteeing pictures sharply defined over the entire area, and the mechanical construction has been greatly simplified.

Our new gas-filled Mazda lamp offers convenience of operation and exceptional efficiency per amount of current used, being scientifically adapted by us to utilize the greatest percentage of light.

Four models are fitted with these Mazda lamps—two for lantern slides and two for both opaque objects and lantern slides. Prices range from \$22 to \$120.

Write for illustrated catalog.

NATION PRESS PATRONS
Can Answer "Yes" To These Questions:

Will my booklet, circular or stationery be the work of craftsmen?
 Will it be the product of a fully equipped print shop?
 Will it be "decidedly different" ?
 Will the stock, the engraving, the type and the style be just right?
 Will it be done on time?

If your present printing does not measure up to "Nation Press" standards, we will be glad to show you how to improve it.

The Nation Press, Inc., The Evening Post Building
 20 Vesey Street, New York

THE most ENTERPRISING ENGLISH WEEKLY is the

Cambridge Magazine

Containing every week a comprehensive SURVEY
 (in 10 pages Survey size) of the

WORLD'S PRESS

Contributed by
MRS. C. R. BUXTON. Other contributors include:
 Romain Rolland Vernon Lee Sir Arthur Quiller-Couch
 Dr. A. C. Benson Adelyne More Lady Margaret Sackville
 G. Lowes Dickinson Gilbert Cannan The Hon. Bertrand Russell

In addition to university affairs, current problems in Internationalism Philosophy and Sociology are dealt with by the leading English authorities.

MISS JANE ADDAMS
 has rightly quoted it as representing the attitude of
THE YOUNGER GENERATION

By Mail—Two Dollars per annum.
THE CAMBRIDGE MAGAZINE, Theatre Bldgs., Cambridge, Eng.

INFORMATION DESK

The following national bodies will gladly and freely supply information and advise reading on the subjects named by each and on related subjects. Members are kept closely in touch with the work which each organization is doing, but membership is not required of those seeking information. Correspondence is invited. Nominal charges are sometimes made for publications and pamphlets. *Always enclose postage for reply.*

PUBLIC HEALTH ASSOCIATION, American. Cincinnati, O., October 24-27. Sec'y, Dr. Selskar M. Gunn, 755 Boylston street, Boston.

PUBLIC SERVICE, Training School for. Springfield, Mass., November 22-23. Supervisor Charles A. Beard, 261 Broadway, New York city.

SINGLE TAX LEAGUE, Massachusetts. Springfield, Mass., November 20-24. Pres., Alex MacKendrick, 120 Boylston street, Boston.

SOCIAL HYGIENE ASSOCIATION, American. St. Louis, Mo., November 20-21. Gen. Sec'y, Dr. W. F. Snow, 105 West 40 street, New York city.

SOCIAL WELFARE, Missouri Conference for. Columbia, Mo., November, 1916. Sec'y, J. L. Wagner, Columbia, Mo.

SOCIAL WELFARE, Pennsylvania Conference on. Lancaster, Pa., October 26-28. Sec'y, J. Bruce Byall, 419 So. 15 street, Philadelphia, Pa.

TUBERCULOSIS: Sectional Conference on. Southern States, Jackson, Fla., October 30-31. Held under the auspices of the National Association for the Study and Prevention of Tuberculosis, 105 East 22 street, New York city.

UNIVERSITIES AND PUBLIC SERVICE. Third National Conference. Philadelphia, November 15-16. Sec'y, Edward A. Fitzpatrick, Box 380, Madison, Wis.

WELFARE, EFFICIENCY AND ENGINEERING CONVENTION. Harrisburg, Pa., November 21-23. Further information may be secured by addressing the Engineers' Society of Pennsylvania, 31 So. Front street, Harrisburg, Pa.

WOMEN'S TRADE UNION LEAGUE AND NATIONAL CONSUMERS' LEAGUE (a conference on the eight-hour day for women). Springfield, Mass., November 15. Secretaries, Agnes Nestor, 166 W. Washington street, Chicago. Florence Kelley, 289 Fourth avenue, New York city.

INTERNATIONAL

SEAMEN'S UNION OF AMERICA, International. New York city, December 4. Sec'y, T. A. Hansen, 570 W. Lake street, Chicago.

NATIONAL

CHARITIES AND CORRECTION, National Conference of. Pittsburgh, Pa., June 6-13, 1917. Sec'y, W. T. Cross, 315 Plymouth Court, Chicago.

CHURCHES OF CHRIST IN AMERICA, Federal Council of the. Third quadrennial council. St. Louis, Mo., December 6-13. Gen. Sec'y, Rev. Charles S. MacFarland, 105 East 22 street, New York city.

ECONOMIC ASSOCIATION, American. Columbus, O., December 27-30, 1916. Sec'y, W. G. Leland, 1140 Woodward bldg., Washington, D. C.

MARKETING AND FARM CREDITS, Fourth National Conference on. Chicago, Ill., December 4-9. Sec'y, Charles W. Holman, 230 So. LaSalle street, Chicago.

SCIENCE, American Association for the Advancement of. New York city, December 26-30. Sec'y, L. O. Howard, Smithsonian Institution, Washington, D. C.

SOCIOLOGICAL SOCIETY, American. Columbus, O., December 27-30. Sec'y, Scott E. W. Bedford, University of Chicago, Chicago.

STATISTICAL ASSOCIATION, American. Columbus, O., December 27-30. Sec'y, Carroll W. Doten, 491 Boylston street, Boston.

STATE AND LOCAL

CHARITIES, Texas State Conference of. Austin, Texas. January 18. Sec'y, M. A. Turner, Room 215, City Hall, Houston, Texas.

Health

SEX EDUCATION—New York Social Hygiene Society, Formerly Society of Sanitary and Moral Prophylaxis, 105 West 40th Street, New York City. Maurice A. Bigelow, Secretary. Seven educational pamphlets, 10c each. Four reprints, 5c each. Dues—Active \$2.00; Contributing \$5.00; Sustaining \$10.00. Membership includes current and subsequent literature; selected bibliographies. Maintains lecture bureau and health exhibit.

CANCER—American Society for the Control of Cancer, 25 West 45th St., New York City. Curtis E. Lakeman, Exec. Secy. To disseminate knowledge concerning symptoms, diagnosis, treatment and prevention. Publications free on request. Annual membership dues \$5.

COMMITTEE ON PROVISION FOR THE FEEBLE-MINDED—Objects: To disseminate knowledge concerning the extent and menace of feeble-mindedness and to suggest and initiate methods for its control and ultimate eradication from the American people. General offices Empire Bldg., Phila., Pa. For information, literature, etc., address Joseph P. Byers, Exec. Sec'y.

MENTAL HYGIENE—National Committee for Mental Hygiene, 50 Union Square, New York City, Clifford W. Beers, Secy. Write for pamphlets on mental hygiene, prevention of insanity and mental deficiency, care of insane and feeble-minded, surveys, social service in mental hygiene, State Societies for Mental Hygiene.

NATIONAL HEALTH—Committee of One Hundred on National Health, E. F. Robbins, Exec. Sec., 203 E. 27th St., New York. To unite all government health agencies into a National Department of Health to inform the people how to prevent disease.

TUBERCULOSIS—National Association for the Study and Prevention of Tuberculosis, 105 East 22nd St. New York. Charles J. Hatfield, M.D., Exec. Sec'y. Reports, pamphlets, etc., sent upon request. Annual transactions and other publications free to members.

PUBLIC HEALTH—American Public Health Association. Pres., John F. Anderson, M.D., New Brunswick, N. J.; Sec'y, Prof. S. M. Gunn, Boston. Object "To protect and promote public and personal health." Six Sections: Laboratory, Sanitary Engineering, Vital Statistics, Sociological, Public Health Administration, Industrial Hygiene. Official monthly organ, *American Journal of Public Health*; \$3.00 per year. 3 mos. trial subscription (to Survey readers 4 mos.) 50c. Address 755 Boylston St., Boston, Mass.

NATIONAL ORGANIZATION FOR PUBLIC HEALTH NURSING—Object: to stimulate the extension of public health nursing; to develop standards of technique; to maintain a central bureau of information. Publications: *Pub. Health Nursing Quarterly*, \$1.00 per year, and bulletins. Address Ella Phillips Crandall, R. N. Exec. Sec., 25 West 45th St., New York City.

THE AMERICAN RED CROSS—Through its Town and Country Nursing Service, maintains a staff of specially prepared visiting nurses for appointment to small towns and rural districts. Pamphlets supplied on organization and administration of visiting nurse associations; personal assistance and exhibits available for local use. Apply to Superintendent, Red Cross Town and Country Nursing Service, Washington, D. C.

SOCIAL HYGIENE—The American Social Hygiene Assoc. Inc., 105 West 40th St. N. Y.; Branch Offices: 122 South Michigan Ave., Chicago; Phelan Bldg., San Francisco. To promote sound sex education, the reduction of venereal diseases, and the suppression of commercialized vice. Quarterly magazine "Social Hygiene." Monthly *Bulletin*. Membership, \$5; sustaining, \$10. Information upon request. Pres., Abram W. Harris; Gen. Sec'y, William F. Snow, M.D.; Counsel, James B. Reynolds.

PREVENTION OF BLINDNESS—National Committee for. Objects: To furnish information for Associations, Commissions and persons working to conserve vision; to publish literature of movement; to furnish exhibits, lantern slides, lectures. Printed matter: samples free; quantities at cost. Invites membership. Field, United States. Includes N. Y. State Com. Edward M. Van Cleve, Managing Director; Gordon L. Berry, Field Secretary; Mrs. Winifred Hathaway, Secretary. Address, 130 E. 22d St., N. Y. C.

EUGENICIS REGISTRY—Board of Directors, Chancellor David Starr Jordan, President; Prof. Irving Fisher, Dr. C. B. Davenport, Luther Burbank, Dr. J. H. Kellogg, Secretary. A bureau for the encouragement of interest in eugenics as a means of Race Betterment, established and maintained for the Race Betterment Foundation in co-operation with the Eugenics Record Office. Address, Eugenics Registry Board, Battle Creek, Mich.

Racial Problems

NEGRO YEAR BOOK—Meets the demand for concise information concerning the condition and progress of the Negro Race. Extended bibliographies. Full index. Price 25c. By mail 35c. Negro Year Book Company, Tuskegee Institute, Alabama.

In addition to information in Negro Year Book, Tuskegee Institute will furnish other data on the condition and progress of the Negro race.

HAMPTON INSTITUTE, HAMPTON, VA.—Trains Negro and Indian youth. "Great educational experiment station." Neither a state nor a government school. Supported by voluntary contributions. H. B. Frissell, Principal; F. K. Rogers, Treasurer; W. H. Scoville, Secretary. Free literature on race adjustment, Hampton alms and methods. *Southern Workman*, illustrated monthly, \$1 a year; free to donors.

NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE 70 Fifth Avenue, New York. Publishes *The Crisis*, a monthly magazine, 63 branches and locals. Legal aid, literature, speakers, lantern slides, press material, etc. President, Moorfield Storey; Chairman of the Board of Directors, J. E. Spingarn; Vice President and Treasurer, Oswald Garrison Villard; Director of Publications and Research, W. E. B. DuBois, Acting Secretary, Roy Nash

Social and Economic Problems

AMERICAN ECONOMIC ASSOCIATION—Objects: "the encouragement of economic research," "the issue of publications on economic subjects," "the encouragement of perfect freedom of economic discussion." The membership includes the professional economists of the country together with many others interested in scientific study of economic problems. Publications: *American Economic Review*. Proceedings of Annual Meetings, and *Handbook* Dues \$5.00 a year. Secretary A. A. Young, Ithaca, N. Y.

Remedial Loans

REMEDIAL LOANS—National Federation of Remedial Loan Associations, 130 E. 22nd St., N. Y. Arthur H. Ham. Reports, pamphlets, and forms for societies free. Information regarding organization of remedial loan societies gladly given.

Work With Boys

BOYS' CLUB FEDERATION—National Headquarters, 1 Madison Ave., New York City. Federation includes Boys' Clubs, Boys' Depts. of Recreation Centers, Settlements and Community Houses. A clearing house for information on subjects relating to work with boys. Printed matter distributed; workers furnished; assistance given in organizing. Wm. E. Hall, President; C. J. Atkinson, Executive Secretary.

COMMON WELFARE

FOR AN AMERICAN PEACE PLATFORM

WITH one peace organization working for one thing, another working at cross purposes and some not working at all, it has proved difficult to define the peace movement in America and harder still to gauge its strength.

Certain societies have yielded, since the war began, to intense partisan feeling among their directors and now exist in name only; other societies have been born out of the war or have been revitalized by the chance to practice what they have preached for many years. Everywhere, however, there is confusion, duplication of energy in this direction, hesitancy and sluggishness in that.

The need of finding a substrata of common purpose beneath the efforts of different organizations has led to the calling of a private conference in New York city, October 26-27 by the American branch of the Central Organization for Durable Peace, the American Peace Society and the Church Peace Union. Although the one hundred or more delegates who are coming to the conference will not actually represent peace parties or be authorized to act for certain bodies, they will include the officers, directors and active workers who mould the policies and make the decisions for some twenty peace organizations.

The proceedings of the conference, which will take place at the Broadway Tabernacle Church, Broadway and Fifty-sixth street, New York city, are divided into two parts. On the first day the sessions will be devoted to a consideration of World Problems, laying emphasis on the part that America may play in the settlement of the war. For example, such mooted questions as a league of nations, non-official conferences at the time of the war settlement, the action of neutral nations in years of war, will be discussed by Frederick Lynch of the Church Peace Union, Hamilton Holt of the American Branch of the Central Organization for Durable Peace, and James Brown Scott, secretary of the Carnegie Endowment for International Peace.

On the second day the conference will deal with strictly American Problems, including the question of military training in schools, congressional measures to be promoted, Pan-American problems, and our oriental policy, Americanization of foreign citizens and methods of cooperation between various peace societies.

Whether a permanent council of these diverse agencies, a sort of clearing house for ideas and activities, will result from the conference cannot be foretold. But it is believed that a minimum program which all these societies can endorse and which will be a stepping stone toward concerted action for re-establishing international relations will be adopted.

An appeal for such united preparedness for peace was made by Senator Henry La Fontaine of Belgium in the *Advocate of Peace* and in *THE SURVEY* for August 5.

"Where are those," asked Senator La Fontaine, "who claim that an international mind would prevail in this western hemisphere? Are they ready to combine their forces and to understand that no better opportunity will ever be given to them for such a decisive, necessary and redemptory advance?"

MRS. O'LEARY'S BARN BURNED AGAIN

IN New York 20,000 signs reading "This is Fire Prevention Day. Clean up rubbish," were distributed on Fire Prevention Day, October 9. Fire Commissioner Adamson made a new thing out of the city's fire prevention parade. One float represented the annual fire waste in the form of a pile of gold. Another illustrated the hazard of benzine, gasoline, and naphtha, and a third emphasized the importance and value of fire drills. Pageantry was called in to serve the good cause in quite a number of cities.

Chicago burned Mrs. O'Leary's barn, on the waterfront, as a fearful reminder of the Chicago fire, 55 years ago to the day, starting from the careless hoof of the O'Leary cow. About fifty Chicago clubs and societies were asked to hang out banners and the hotels and restaurants were invited to print a line or two on their menu cards calling attention to the day and its object. A notice was issued to 600 theaters requesting them to display on their screen a slide setting forth a few important precautions that should be taken by good citizens.

In Philadelphia, 3,000 city vehicles were decorated with oblong yellow posters of printed commands and warnings and in Cleveland a striking folder setting out a dozen simple methods of reducing fire waste was issued by the Chamber of Commerce. Reference was made in many pulpits to the ethical and religious aspects of the question and much was done by sympathetic newspaper men to impress upon the public the importance of the movement.

The hopeful sign, however, according to W. T. Colyer of the National Fire Protective Association was the unanimity with which attention in the schools was directed to fire prevention. Mr. Colyer writes:

"A study of the records of fire and accident losses a few months hence may possibly yield evidences of the good work done, but the full effects—particularly as regards fire prevention—will probably not be felt until the children whose minds are now being formed,

come to have votes of their own enabling them to secure improved legislation, and homes of their own in which they can turn to account the lessons they have received upon the dangers incident to neglected furnaces, heaters and chimneys and untidy basements."

FEDERATION OF EMPLOYMENT BUREAUS

ONE of the permanent achievements of the Unemployment Committee appointed by Mayor Mitchel during the crisis of 1914-15 is the formation of a Federation of Non-commercial Employment Agencies of New York city. In a directory of public and other non-commercial employment bureaus in the city issued by the federation, there are listed eighty-five such bureaus, thirty-eight of which, including practically all those of importance, are members of the federation. Two at least of the members are themselves federations of wide scope,—the United Employment Bureau, a recent combination of two of the largest of these agencies; the Alliance and the Vacation War Relief Employment Bureaus; and the Federated Employment Bureau for Jewish Girls, with which are affiliated fifteen different Jewish organizations.

At a recent dinner of the federation, over one hundred superintendents and clerks of placement bureaus and others interested in their work were present and listened to addresses by some of the city's foremost experts on different aspects of this important social service.

The principal needs met by this city-wide organization are the prevention of overlapping, in so far as this seriously affects the efficiency of each bureau, the assistance of the members by distribution of information of common interest, but especially the gradual creation of greater uniformity in methods and the improvement of general standards.

Through the generosity of some of the members, a central bureau of information has been established which will investigate and report on employment conditions and opportunities, upon the request of any individual bureau, and maintain a fact center for the federation, concerning industrial standards observed by particular establishments. The bureau, in the beginning, will specialize on employment opportunities for women and minors, and will pay particular attention to the physical and moral surroundings and to opportunities for advancement and training.

A committee is at work on the elaboration of a standard system of records and report; and though it is not likely that complete uniformity in this matter can immediately be secured, the educational effect of recommendations made by a committee elected by themselves upon the members is bound to be considerable. Another committee is working out the best practice for the vocational guidance and placement of minors. One

of the colleges of the city, at the request of the federation, has placed upon its syllabus for the coming winter a special course of training for officers of employment bureaus. At the monthly meetings of the federation, addresses on various technical aspects of placement work are usually arranged for; and the inspiration from a thorough discussion of difficult or controversial points has been found to raise and maintain intelligent interest in a service which is always apt to become too much one of routine.

MORRIS PLAN DIFFICULTIES IN OHIO

AN interesting incident in connection with the promotion of Morris plan loan companies is an opinion recently rendered by Edward C. Turner, attorney-general of Ohio, holding that the plan has no place in Ohio under the present statutes and that certificates to operate the plan may not be granted legally by the superintendent of banks.

In substance the attorney-general holds that Morris companies, though chartered as banks, are not conducting the business of banking; that the cost to the borrower on loans made under the plan is in excess of the rate allowed by the small loan law of 1915, and that the sale of "instalment certificates" if considered—as contended by the Morris companies—as not involved in the making or paying of loans, is in violation of the law regulating bond investment companies. He concludes: "Without additional legislation here, companies operating under the Morris plan have no legal status in this state."

Up to the present time four Morris companies with an aggregate capital of \$750,000 have been formed in Cleveland, Canton, Springfield and Youngstown.

SENTENCED TO PRISON OR STERILIZATION

ONE of the most respected and experienced judges in the criminal court at Chicago set a precedent, which is said to be the first of its kind, in giving a prisoner the choice between going to prison for a crime of which he was convicted by a jury or of submitting to sterilization. In offering this alternative from the bench, Judge Marcus A. Kavanaugh said to the prisoner, sixty-five years of age and a married man with children:

"If I send you to the penitentiary it means death to you in your present health. At the same time I dare not turn you loose upon the public, for fear this mania with which you seem to be affected may cause you to attempt a similar crime, and then I would be at fault. If you will submit to an operation, with the choice of the best surgeons by next Saturday, I will set aside your sentence. I cannot compel you to submit and you will have a week to think the matter over. If you decide to do this, it will

mean that you do not have to begin your sentence of from one to twenty years in the penitentiary."

The prisoner subsequently decided to be sterilized.

In commenting on the case the judge said he presumed he would be criticized for his proposition to the prisoner, but he wished neither to commit him to what really would be a death sentence, nor to expose the public to a repetition of his heinous offenses against little girls.

"One of my reasons for rendering the decision," he added, "was to draw public attention to a situation which has been disregarded too long. I believe all morons, the criminal insane and habitual criminals, both men and women, should be so treated. To my mind it is a crime against society that this class should be permitted to propagate their kind. As for those who commit outrages against women and female children, I advocate even more drastic measures, which would make repetition of the acts impossible. It is my hope that public interest may be aroused."

ON THE ROAD FROM CAPE COD TO BROADWAY

THE Provincetown Players, newest of experimenters in drama, begin their first New York season early in November at 139 MacDougal street. There are about thirty of them—journalists, novelists, short-story writers, painters, sculptors, socialists, social students, labor agitators, rebels, revolutionists, suffragists and reformers, and some with all these qualities combined.

For several summers they have been collecting on Cape Cod. Since 1915 they have been turning to drama as a means of expressing their ideas. First someone wrote a one-act play, which was given on the balcony of a private house overlooking the sea. Then original plays, all in one act, followed in rapid succession. Then, still in Provincetown, a picturesque little theater, originally a fish-house on an old wharf, was fitted up simply and the enterprise was launched.

Now they have come to New York for one more experiment in cooperation. All the plays are written by members of the group; all the plays are judged by members of the group; all the plays are staged and acted by members of the group; and—which is carrying community drama one step further—all the plays are watched by members of the group. They guard this togetherness with special care. Hutchins Hapgood, who is one of them, says:

"It is up to the members of the Provincetown Players to prevent the gradual usurping of the selection of plays by any person or 'committee' within the group. If such a usurpation takes place, the players will have no special social or artistic meaning, though of course some good plays may be produced."

"This Provincetown impulse," he goes on, "is an expression of what is stir-

ring in many other fields today. . . . The community center movement, demanding the building of social forms from within, is an analogous phenomenon. One might call it an aristocratic democracy. Not so big that a boss must usurp the power in order to be at all effective; not so small as to become sterilized by the mental habits, prejudices, and interests of one or two or three active and executively gifted individuals. . . . All the problems of democracy and of art, at the points where they touch, are latent in this little spontaneous and hopeful group."

According to Mr. Hapgood, the players are holding as far aloof from professionalism as possible. They lay weight neither upon elaborate stage settings nor acting efficiency,—“not even upon the technique of a play except as a means to an end.” That end is not propaganda of any sort, they say, but seems to be “to express a certain modern spirit.” Their plays will be “in the moment of time, vital and spontaneous.” They will be given four times, running for a fortnight, Friday and Saturday evenings.

THREE YEARS OF CHARITY FEDERATION

IN making his report for the third full year of the Cleveland Federation for Charity and Philanthropy, Charles W. Williams announced his resignation as executive secretary to take up the promotion of group and community insurance for the Equitable Life Insurance Company of New York.

Two of the federation's achievements the past year were the increased contributions which it secured from those who were already contributors,—well-to-do men were willing to give more if they could sign one check and have done with it; and in the large number of new contributors secured. Thus 873 who had never previously contributed to any of the federated organizations, gave a total of more than \$5,000. Their awakened interest, more than their money, was reckoned high among the year's assets.

Total contributions for the year, Mr. Williams reported, are about \$410,000, an increase of \$100,000 over the year before, at a cost of 8 per cent. Adding to this the cost to organizations for collections from non-federated givers, made a total cost of about 9 per cent, against a collection cost of 12 to 14 per cent before federation in securing contributions some \$200,000 less.

Following his graduation from Oberlin and theological study at Chicago Theological Seminary and the University of Berlin, Mr. Williams became assistant to the president of Oberlin College, in charge of finance. There he worked out theories and plans for the financing of large educational enterprises which fell in well with the ideas of the Cleveland Chamber of Commerce Committee on Benevolent Institutions.

The social agencies of Cleveland needed an adequate and steady income. The business men in the chamber wanted to be free of the importunities of countless solicitors. The result was the organization in March, 1913, of the Federation for Charity and Philanthropy with Mr. Williams as executive secretary and moving spirit.

The Cleveland federation followed closely the earlier Jewish federations in a number of cities. But it was non-sectarian, and it was city-wide, including 57 organizations, or practically all in the community. And, while it was preoccupied with the raising of funds, it was consciously attempting to promote cooperation among its member societies and education of the public through a highly organized publicity.

THE NEW SWEEP O' THE WORLD

THE *Call*, the Socialist daily in New York, has introduced a new Social Service department to run as a Sunday feature under the charge of A. H. Howland, a recruit from *The Christian Herald*. The purpose of this department is “to record the doings of the people who are trying to push society in the right direction,—the direction of brotherhood, of neighborliness, of helpfulness, who are trying to relieve the distress or right the wrongs of the world, particularly of America, and most particularly of the *Call's* own city, New York.” It was not labor in its fight with capital that achieved the “amazing victory of the railway men at Washington”, but the “present intense movement for social betterment that is gripping America.”

The first department gives a rapid survey of the advancement Socialism owes to the Church. “We hope good Bishop Greer will not begin to conduct or instigate an investigation to find out which half of his clergy are Socialists. But, after all, I remember that a clerical friend, not an Episcopalian, however, told me the other day that as a matter of fact the bishop himself was practically a philosophical anarchist. He did not, I am sure, mean anything more startling by that than that the dear bishop is such a gentle soul that he cannot bear to use force or sanction the use of it in any matters, ecclesiastical, social, or international,” writes Mr. Howland, and goes on: “We see the Federal Council of the Churches of Christ in America, the official body, representing all the Protestant evangelical denominations of the United States, issuing a report on the Colorado strike which was almost as good as Walsh's own, and putting the blame squarely where we Socialists think it belongs.”

The Young Men's Christian Association, Henry Ford, Thomas Mott Osborne, Misha Appelbaum, Jane Addams,

Ben Marsh, the work of the great foundations, the Russell Sage, the Carnegie, and the Rockefeller—for says *The Call*,—“this department will give credit to good work even if it is done by Rockefeller!”—all come in for high praise.

The Sweep O' the World is the name of the department and it wants to “find what is good wherever it may be.”

THE WHY AND THE WHEN OF TUBERCULOSIS

WHEN the 1915 Legislature appropriated \$100,000 to be expended by the State Board of Health in studying the extent of tuberculosis in Michigan, and to devise a remedy, it placed a two year time limit upon the expenditure. Yet through the activity of those in charge of this campaign 22 of the 83 counties of the state have already been surveyed, and nearly a year is left of the period fixed by the appropriation bill in which to complete the study.

Throughout the past year the campaign has included three weeks duration in each county. An organization known as the Health First Party was formed, consisting of Dr. William de Kleine as director; Robert Todd, housing expert; Arnold Mulder, publicity agent, and several physicians and visiting nurses. During the first week in a county, arrangements were made for full publicity, and for the series of free clinics that were to follow during the second week. Newspapers everywhere cooperated generously, printing sometimes two columns of publicity matter. The second week was given over to the free clinics; and during the final week public addresses were given on the disease itself, its causes, its prevention and cure. The nurses visited the homes of those found to be tuberculous, in order to tell them how best to make a fight for health and to protect other members of their family, and the records of that county's work were compiled.

Meantime, after the second week, the publicity section of the party moved on and opened the campaign in the next center.

“These investigations disclosed the fact,” writes Mr. Todd, of the housing section of the campaign, “that a surprisingly large number of dark, unventilated living-rooms are found in the business streets of Michigan cities. One city has 46 houses, which contain 159 interior rooms, 94 of which have no light at all, 66 are too dim to move through safely, and 78 too dim to read in on a cloudy day. This is the accumulation of bad living space through long years of neglect; but even new houses in these cities are still being constructed with dark rooms and unventilated bathrooms and water-closets.”

In view of such findings, the advisability of a state building code is being urged by the State Board of Health.

The Retirement of Thomas Mott Osborne

By Winthrop D. Lane

AT last the genius of Thomas Mott Osborne has caused his retirement from the wardenship of Sing Sing Prison. For two years those who have been close to his work have hoped that this tragedy would not occur. They have known the possibilities of danger, the play of character and temperament behind the curtain of events, the tragic collision between a mood that knew no guidance and the necessities of official submissiveness. They have hoped that in some way the catastrophe might be averted, that wise and friendly councils might keep down suspicion and quick temper, and that the channels of official correspondence might yet be able to carry their heavy load of querulousness, misunderstanding and distrust. They know now that their hope was vain.

Mr. Osborne is the commanding figure in prison reform in his time but official station is not the place for the exercise of his peculiar genius. What fortune the political wheel may bring to him is not yet known; the suggestion has been made that if Judge Samuel Seabury is elected governor, he may again be warden of Sing Sing. Many who are counted his warm friends hope that he will not. They believe that there are fields of greater usefulness for him. His own character is the cause of his present retirement and his character is not likely to change.

That character can be seen clearly displaying itself during the past months. On July 16, Mr. Osborne returned to Sing Sing after one of the bitterest experiences that can happen in this life. He had been lied about, slandered and made the object of a campaign of calumny that has had few parallels in this country. He had fought his detractors in court and out and had won in both places.

Legally cleared of the worst charges against him, he was even higher in the public confidence than he had ever been before. Naturally he wanted peace, peace to do his work in the way that had been denied him long enough. His great fight had served only to increase his fervor for prison reform and he thought that he had earned the right to carry on his task free from molestation, free, at least, from interference by men who ought to be striving for the same high ends as himself.

A new superintendent, James M. Carter, was directing the destinies of state prison administration when he returned. He had already seen one superintendent perish by the wayside because of inability to comprehend the new reforms, and he hoped that the new chief would be open-minded, sympathetic, helpful. Then came the first faint evidence of

disharmony. Mr. Osborne had determined to expose the conspiracy of his enemies and to that end he was presenting evidence to a grand jury. He wanted the testimony of prisoners to be taken in Salem county. These prisoners were confined in various prisons of the state and Mr. Osborne knew that if they were to tell the truth they would have to be protected from the harm that such an act might bring them. So he asked for their transfer to Sing Sing.

Why, he thought, should not such a request be granted? Was he not fighting a righteous fight? Who of the people's servants could be safe so long as lies could be told about a public man with impunity? He wanted no revenge, but he wanted an object lesson taught. He wanted slanderers and those who plot in the dark to learn that no secrecy could hide them, no position, however high, serve them as shield.

His request was refused. To transfer prisoners, he was told, is disturbing to administration; moreover, the department was well prepared to protect its prisoners itself. Mr. Osborne was even asked if he felt certain of the advisability of his court proceedings. Surely, he thought, this was a slap in the face. Moreover, what prospect of harmony could there be with a chief who wrote to the attorney asking for the transfer: "It is not good procedure for this department to keep whipping around the stump endless convicts at the beck and call of anyone who may wish to make this request."

THE second harbinger of ill was even more provoking. On September 14, Superintendent Carter issued "to all agents and wardens" an order condemning the frequent appearance of prison stories in the press. He referred slightly to "the struggle for publicity," and while admitting that some kinds of information might do much good, declared that "the practice of featuring convicts and indiscriminate prison advertising cannot be helpful."

It is easy to see how this order chafed Mr. Osborne's sensibilities. He believes intensely in the pitiless light of publicity. So he wrote an immediate reply. Agreeing to the main doctrine—that publicity can be both excessive and of the wrong kind—he called his chief's attention to the fact that newspapers are not to be controlled in what they print, and asked how the manufacture of sensational stories out of whole cloth is to be stopped. He defined his own policy as having been to tell the truth so that falsehood would not be published. He declared that the prisons belong to the

people and that "every reputable citizen of New York has the right to know what is going on" in them.

Nor could he stop with abstract argument. To his sensitive mind, fresh from warring with grafters, there was something sinister in an order that proposed silence. It savored of deliberate secrecy, and to a policy of that sort he could not lend himself. He must let his superior see that he, for one, could not be duped by such simple means as that. So he added: "Whatever may be the case in other prisons, at Sing Sing we have nothing to conceal. We are not afraid of the truth. We open our doors to the owners of the prisons and say, 'Look inside. See all there is. We want everyone to know the facts.'"

Then came an order that struck still nearer home. Escapes by prisoners had lately been increasing. On September 20, Superintendent Carter urged that greater care be taken in granting liberty to inmates and enumerated recent escapes from each prison: sixteen from Auburn in less than five months, one from Clinton, five from Great Meadow, ten from Sing Sing,—a bad showing for the two prisons where the Mutual Welfare League existed. Mr. Carter did not fail to suggest the inference. "It has been my desire," he said, "to see the experiments tested before submitting a decision, but I have now come to a definite conclusion that either the new ideas are not workable or that lax methods are employed in their development." Hereafter, he warned, unless it could be proved that ample precautions had been taken in the instance of escapes, he would be forced to "decisive action" for the management of the institutions under his control.

There was no escaping, to Mr. Osborne's mind, the meaning of this. It was a wanton and uninformed attack upon his cherished plan of reform. For one thing, the figures, he believed, were not true; there had been four escapes from Clinton instead of one. Doubtless some deliberate purpose lay behind this falsifying of the records; Clinton may not have wanted its full number of escapes to be reported. Moreover, *he* knew, whether others did or not, that the large number of escapes from Sing Sing and Auburn had nothing to do with the Mutual Welfare League. Many of them were made by men engaged in farm work or road-making outside the prisons and Mr. Osborne knew that there had been unwise selection of men to be so trusted.

Moreover, what did his superior mean by suggesting that the new ideas were not workable? Had he not seen them

work? Did he not know that discipline on the whole had been vastly improved and that men were going out of prison determined, as never before, to lead useful, law-abiding lives? What hope of sympathy or of cooperation could be expected from such blindness as this? *

FROM reasoning of this sort Mr. Osborne turned to regard a new and still more sinister order. Two escapes on October 1, both from the Sing Sing farm, were too much for the business-trained man at the head of the department. A new decree read that "all 'lifers' and those having long terms to serve must be confined inside the walls of the institution." To the superintendent this doubtless seemed the most promising way of preventing escapes. To Mr. Osborne it was a cruel and heartbreaking attack upon a vital part of his whole system; and it was unwarranted interference with a prison head.

Consider what the order meant. Mr. Osborne had made large use of inmate services about the prison grounds and building. He had employed prisoners in the stable, in the comptroller's and other offices, in the Bertillon gallery, in the kitchen and laundry of the warden's house, as runners and errand men, in the package and visiting rooms and as "spotters" to prevent the importation of drugs and other contraband. Many of these men worked in places that were not technically "inside the walls" of the prison.

At Sing Sing the walls do not enclose the warden's house and administrative offices, though they run up to them and apparently the whole structure is one. It is easy, therefore, to see what the new order meant. It meant that over fifty of the eighty-four men whom Mr. Osborne was using in these different ways would have to give up their work. They would have to go inside the prison and stay there.

Nor was this the only evil of the new decree. It was to become operative at once. A copy of it had been supplied to the press (strange conduct for a man who disbelieved in publicity!) and it had actually been printed before Mr. Osborne received it. Notice had thereby been served upon every long-term man outside the walls to make good his escape before he could be locked up. To be sure none had done so; but this was only one more tribute to the very system that Mr. Carter was trying to destroy.

Never had there been such blindness and folly. Mr. Osborne's whole administration was being undermined—without his opinion being asked and all because of a little increase in escapes! No man could put up with things like these and retain his self-respect. He would resign at once. He would let the people know what was afoot in their prison system. Not once had the Mutual Welfare League been given a fair trial and he for one was through working with men whose promises seemed to be made only that

they might be broken.

This picture is not presented as a caricature of Mr. Osborne's reasoning. I have been at some pains to study the man and what is here written seems to me a true account of the operations of his mind. His psychology is quite understandable. At the same time I do not believe that he has taken the large or reasonable view.

What matter if a state superintendent does hold opinions differing from those of his wardens on the subject of publicity? Mr. Carter did not say there should be no publicity, he did not forbid his subordinates the right of free utterance through the press; he merely asked that the frequent featuring of convicts and "prison advertising" be stopped. Prison reform does not depend upon newspaper headlines for success; not even so far-reaching and interesting an experiment as that of Mr. Osborne requires its daily or weekly story for advancement.

Mr. Osborne should have realized this. He should have said to himself: "My chief and I differ in regard to the merits and uses of the press. I believe him to be wrong. The matter has not yet gone far enough, however, for me to accuse him of insincere conduct. His judgment, not his motives, may be at fault. I can afford to wait. Meanwhile, there are other things on which agreement between us is essential. If no clash comes on these, the issue of publicity, provided there be no suppression of important facts, may be too small to be pressed farther."

SO, too, he might have reasoned when the order came sending "lifers" and long term men inside the walls. Doubtless this was a particularly vexing regulation under the circumstances. Putting aside the possibility that an adjustment might have been reached amicably, (and such an adjustment has in fact been reached by Calvin Derrick, acting warden since Mr. Osborne's retirement), one fails to see where the question of these fifty helpers went to the heart of Sing Sing's self-government scheme. Doubtless it was an interesting manifestation of that scheme; the selection of these aids was one of the ways in which the Mutual Welfare League expressed itself. But it was only one of the ways. It in no sense involved the fundamental method of prison control that Mr. Osborne was trying out.

That method was the most hopeful experiment in prison regeneration that the world has ever known. Mr. Osborne was taking men too ignorant or too weak to know any law but their own necessity or their own desire, and educating them to a new loyalty. He was making them members of a self-conscious group. To many of them he was giving a strange and thrilling sense of new powers and new modes of self-expression. He was teaching them to govern their own wills,

to exercise judgment, initiative, control in both their individual and their collective lives.

Moreover, he was about to carry forward a new phase of this reform. He was on the eve of regenerating the industries of the prison, so that men could not only learn habits of work and thriftiness but could also be given new means of self-support.

All this should have brought him pause; it should have suggested patience and a willingness to make light of temporary setback and inconvenience. If ever a man needed the enduring spirit it was Thomas Mott Osborne. He did not have it and because he did not his great reforms are left to the chance of finding new leaders and new friends. To see that they do find them is now the high duty of those who have befriended these reforms in the past.

I HAVE said that Mr. Osborne has no place in official life. This is uttered not in hostility but with friendliness both to Mr. Osborne and to Sing Sing. I am well aware that he himself does not share this view; he continues to believe that nothing in the exacting demands of official life need prevent him from being both happy and useful. Yet the past three months are not the only disproof of this.

Ever since Mr. Osborne became warden of Sing Sing in December, 1914, his friends have grown increasingly disheartened at the evidence of his unfitness. He has been tactless, moody, credulous. He has refused to answer, and in some instances even to read, letters from his former chief, Superintendent Riley, because he suspected that those letters would displease him. He has alienated many an earnest worker in prison reform by his frequent changes of mind and inability to remember his own words. He has frequently threatened to resign and thought better of it over night. He has believed one death-house denial of guilt after another, from that of Charles Becker to Thomas Bambrick. Indeed, one form his credulity has taken has been an extreme readiness to accept the statements of convicts, especially friendly convicts. He has, moreover, been easily influenced by praise and blame. Those who know Mr. Osborne best are best aware of all these faults, difficult as they are, of course, to prove in single instances.

He has shown himself to be a poor judge of men. Witness his dismissal of a former deputy, Charles H. Johnson, well nigh universally regarded as an able and upright administrator, who nevertheless was found by Mr. Osborne to be disloyal and self-seeking. Witness also his dismissal of L. C. White, former superintendent of industries, whom close observers at Sing Sing found to be a careful and honest department head.

Mr. Osborne takes most of his advice from persons who either believe wholly

in his genius or are willing to pretend they do. He cannot endure half-hearted loyalty. Allegiance to him knows no middle ground; if you do not believe that he is always right, you are bound, in his eyes, to be plotting for his undoing. Once he has cause to suspect a man, nothing that man can do will wear a friendly aspect. Governor Whitman's dismissal of Mr. Riley, following a promise to Mr. Osborne, was not, in Mr. Osborne's eyes, a keeping of that promise, but the avengement of a personal offense that Mr. Riley had committed against the governor.

This is a strong indictment. It is not

here made lightly. There are few sadder stories than that of Mr. Osborne's slow unveiling of himself. Yet too much importance need not be attached to the indictment. I would not minimize Mr. Osborne's strength, his wonderful appeal to the harassed soul, his genius for personal relationship. He has penetrated the American consciousness with a sense of the importance and hopefulness of prison reform that no man living or dead has ever done. More than that, he has demonstrated the practicability of reforms that may well be epoch-making in penological advance. What reason is there that his work should not go on?

His power of moving utterance is vast; he can make the blemishes of the old prison system—not yet old in many of our states, alas—stand out as needless and barbaric cruelties. It is not for others to mark out his future, but I for one am hopeful that as lecturer, as writer, as leader and inspirer of others,—in short, as that most condemned and most useful of men, an agitator, he will still perform a high and continuing service. His friends may well wish him Godspeed and their only regret need be that his sore disappointment may for a time cloud his mind to the clearness of the call before him.

THE DEAD LABORER

By J. Corson Miller

AS ONE who walks with reverend steps and slow
 Before a king laid low,
 And sees the light of greatness flood the room.
 So I approach thee now.
 Freed from life's bitter doom
 And pitiless array
 Of burdens thou didst shoulder night and day.
 Across thy patient brow
 That soon must greet the tomb,
 No more the snows
 Nor ruthless rains shall stray,
 Stabbing thy face like grim, relentless foes,
 Ah, would the world might come
 To thee here, heedless, dumb,
 And kiss thy faithful hands, sun-browned with toil.

Earth's flowering soil
 That sends its grateful fragrance up to God
 Through the spring-pulsing sod,
 Ne'er gladdened thee; the thrush's vesper song,
 And rapture keen,
 Where evening lingers long,
 Were to thine ears an alien mystery.
 Life crooned for thee
 But songs of sorrow, choked with ruth and wrong.

Ah! let from out my heart some fragrance steal,
 Pure as a lily's breath, to feel
 Of kindly hands commending thee now cold,
 And one with all thy vanished sires of old.
 Would I might lift a song
 To pierce the brooding walls of tragic night,
 Whose roof is gemmed with swinging star-worlds bright.
 That unborn centuries
 Might hear my hymn of praise to thee, a man,
 King of Creations plan!
 That Earth might take and nourish with her breast.
 Thy children, and their children's children best:
 That all the universe might hear my call,
 And in true brotherhood, 'mid work and rest,
 Men might be turned to love the toiler more,
 And on him justice pour,
 In creed of "One for one, and all for all."

The Social Aspect of Thrift

By Graham Taylor

THROUGH most of these hundred years, thrift has been proclaimed the American's private god and Benjamin Franklin his prophet! But during the last half of the century the human situation has so rapidly and radically shifted, that thrift can no longer be regarded only as an individual habit or a personal virtue, but must also be dealt with as a far more complex and public problem. The individual independence of the pioneering and colonial Americans has become more and more impossible, as craft has become dependent upon craft, class upon class, country upon city, nation upon nation, each one of us upon the many, in the inextricable interdependence of modern life.

While, therefore, thrift is still rightly to be considered and encouraged as an individual habit and a personal virtue, yet this hour demands the interpretation of those human situations which complicate and enlarge the single and simple meaning of the term and impose thrift as a public duty upon every group, community and nation.

Thriftless is the thrift that sacrifices the life to the livelihood, the person to possessions, the family to its heritage, the community to personal greed and the national loss of the many to the gain of the few. In encouraging economy and "savings," the individual's own interests should be safeguarded from a foresight which becomes oversight, overlooking the further future in providing for the immediately impending needs and opportunities. For have we not all seen far too much of the waste of life and the stagnation of wealth when thrift degenerates into the consuming habit of hoarding?

The failure of hoarding wealth luridly lighted its own warning beacon in the empty lives and the despairing cries of two rich, old hoarders. One of them despairingly deprecated the approaching end of life by the lament over his burdensome wealth—"It is so hard to let go." The other, lying on his death-bed which was littered with the certificates of his invested "savings," desolately complained of the loss of his children's love and companionship, while admitting that he had never taken time to pick them up in infancy or play with them in childhood.

An individual's thrift is thriftless when it is at the expense of the group. The family has human rights which the thrift of its individual members is morally and economically bound to respect. A father's "savings" often cost the loss of the mother's health, the children's physical and educational equipment, and the success, even the very function, of the home,

JUST one hundred years ago the first American savings bank was opened in Philadelphia. The centennial was observed last month at the annual meeting of the American Bankers' Association in special papers and discussion on thrift. Outstanding among these was the address by Professor Taylor on the newer social aspects of thrift, as contrasted with the conventional ideal of individual savings, which is here published for the first time.

—EDITOR.

are made impossible by the unfitness of the house.

Family thrift is a common feature of home life among the laboring poor. Many a mother receives the unopened pay envelope, not only from the children of working age but from the husband as well, all trusting her to be the spender and the saver for the family. The promotion of thrift by the encouragement of a family savings fund is worthy of our best thought and effort. The vacation and Christmas savings encouraged by savings banks, and still more by "penny savings" agencies, are beginning to help the family to capitalize itself. And yet the discouragement of a boy from withdrawing his penny savings died away from one's lips when the little fellow explained, "Mother needs a new set of false teeth." And the little hero's spendings proved thriftier than his savings.

Society's Stake

THE COMMUNITY is put in many situations in which it is found necessary to regulate and even restrict individual thrift, in order to protect and promote the thrift of the group from that of one of its members, the thrift of the many from the greed of the few, the safety and progress of the town, county, state and nation from the exploitation of thriftless thrifths. Thus laws restricting the hours and conditions of women's work are enacted and declared constitutional on the ground of public welfare, notwithstanding the objection of opponents against interfering with the thrift of the woman who wants to overwork, and that of the employer who profits by overworking her. The very birth-rate and birthright of the nation are thus defended.

Compulsory schooling is now a prevalent public policy, with penalties for parents who seek the earnings of their children at the cost of their growth and education. Child labor laws are firmly

based upon the proven thriftlessness of robbing the child of its schooling, play, strength and efficiency, for the sake of small temporary gains. But it required the recruiting sergeant's rejection of so large a proportion of men as unfit for military service, in order to bear home the wanton waste of child labor as the shame of modern industry and the folly of the nation. But now many of our states are even pensioning dependent mothers, rather than to deprive their children of the mother's care and of their right to free childhood, either by being put away to be cared for by institutions, or by the necessity of earning the livelihood of the home.

The sanitary inspection and condemnation of tenement houses and shops have been found necessary in order to curtail the thriftiness of their owners at the expense of their tenants and employes, as well as at the peril of the public health and safety. The "new law" tenements of New York city let sunlight and fresh air into the living and sleeping rooms of a million people, who otherwise would have lived and died in dark rooms whose only opening toward the light and air was through other apartments. The abuse of property rights in real estate by renting houses for disorderly resorts has become such a menace to the morals of the community and such a danger to its youth, that the extraordinary interference of the law in the injunction and abatement act has been found necessary and declared constitutional on the grounds of public safety and welfare.

The abuse of thrift by the few at the expense of the many and at public cost has led to many legal measures and governmental policies protecting and promoting national thrift. Thus parasitic trades are prevented by minimum wage laws from making their profits at the expense of other trades or of the body politic. Other people in other trades and the taxpayers as well, are thus refusing to bear the cost of eking out the living of those at work for less than a living wage and in seasonal occupations. Sweated industries are also being purged of their blood sweat, both by the revolt of their organized workers and by legal measures for their relief. The sweating of tenant farmers by absentee "retired" landlords as desperately needs to be dealt with. None knows better than the rural banker how the retirement of farmers thwarts the thrift and progress of many retired farmers' towns.

"Safety first" is not only the nation's indignant protest against the wanton waste of life, of which America has been more guilty than any other nation, but it

is the rallying cry of a new national economy, conservation and preparedness. The steadily decreasing railway dangers, the ever lessening casualties in factories and shops, the protection of life and property at sea by Plimssoll's water line on freighters and by our own seamen's act, all show what is being done and can be attempted through private and public measures alike to prove that dangerous economies are wasteful and death-dealing greed is thriftless.

Uniform safety legislation is still required to standardize thrifty conditions, to protect progressive states and industries, especially the mining interests, from the unfair competition of those disregarding life and limb, and to conserve the nation's greatest assets in the lives, the health and the efficiency of its people. Even this fails to protect life from the most dangerous of all occupations. For the death every year of at least 300,000 children under two years of age from preventable causes still rates being a baby as the most dangerous of all occupations. No national thrift is more fundamental than the conservation of child life by the federal Children's Bureau, the American Association for the Prevention of Infant Mortality and the National Child Labor Committee.

The public ownership of some public utilities, and the public control of all others, is now recognized to be the legitimate thrift of every community. The protection of immigrant labor from exploitation is a national safeguard, as well as justice to the immigrant. The tardy recognition of unemployment as a problem far beyond the capacity of the unemployed or of private charity to solve, is at last proving it to be public economy for the city, the state and the nation to assume as the problem of each and all of them—not only the relief, but the prevention of unemployment.

Thrift that Spends

THE PROGRESS of mankind is measured by the multiplication of wants and by increasing the ways and means of satisfying them. As surely as the charity of today is the justice of tomorrow, so surely are the luxuries of today the necessities of tomorrow. This creation of human wants, not their curtailment, is civilization. The thrift that spends as well as saves, is what makes the community a going concern.

Difficult and delicate therefore is the task to define thrift so as to make it apply equally to the personal and public values of the one human life each of us lives and the common life all of us live together. It is a good sign of better times that industrial and commercial, professional and civic, educational and religious groups realize this to be their problem. Associations of commerce are becoming schools of citizenship, training commercial men to trust their best service of the city in the long run to serve

their trade the most.

Lumbermen's associations discuss in their papers and in their conventions their opportunity to be "community builders," especially in country counties, where the lumber yards are the points of contact and distribution for the surrounding countryside. The retail merchants' association is linking up the country store with the country town for the protection and advancement of both. Country ministers recognize and utilize the country store as an exchange, not only for commodities, but for the interchange of intelligence and discussion and the creation of public opinion, so that some of them are using the store to meet the men for religious instruction and appeal. Manufacturers are finding it to be good business to care for the human elements at least as much as for the raw materials and the finished products of their plants. Commercial establishments are becoming like great households, holding employers and employes together best by promoting their community of interests.

Exchange in Human Values

BUT THE QUESTION arising out of these human situations which we have been considering and that is put up to the banks and the bankers to solve, is how to make private thrift and public welfare supplement and serve each other. No one in the community is so well situated to do this service. The bank itself is a clearing house of more common interests than those which we call commercial. It is the exchange where other than money values change hands and through which other values than commercial paper are cleared.

As a community center for the exchange of such values, the bank shares and exceeds the informational and inspirational function and influence of the country store, the village blacksmith shop, the lumber and building material yards, in rural communities; and in town, it supplements the newspaper, the stock and other exchanges, the executor or guardian, and it is often the substitute for one or all of them.

Few have a function to fulfil so vital alike to individuals and to the local community as the banker. He is the trustee of so much confidence. His confidants range all the way from the widow and the orphan to the treasurers of vast trust funds and of great public deposits. The bankers' responsibilities are as serious as his opportunities are inspiring to promote personal and public thrift and make each advance the progress of the other. None so well as he knows, or can know, how necessary the progress of the community is to the prosperity of every one of the people living in it, and how impossible it is for the community to prosper if its citizens are not progressive.

Therefore bankers individually and collectively are more and more inciting

and supporting the promotion of community interests through surveys, by agricultural, mercantile and manufacturing developments, in providing better schools, more time and equipment for recreation, good roads and transportation facilities, more participation in public affairs and greater efficiency in the administration of public institutions, business and local government.

Thrift is the point of contact between the multitude who know you not and you who should know them better. To interpret thrift not only, from your point of view, but to broaden your view of it by sensing the human situations of the greater multitude that are still strangers to banks and bankers, is the appeal and hope of this hour.

By virtue of your double function as the friendly, confidential counselors of so many individuals, and as officials of an institution that is or ought to be under public control, you bankers have a greater obligation and opportunity than any other citizens to protect both the individual and the community from thriftless thrift and to promote the thriftiness of both, by proving that neither can succeed if the other fails.

The State a Guardian

YOURS ALSO is the patriotic trust to conserve the confidence of the people in the government and to safeguard the financial honor of the state and the nation. For you are so much regarded as representing the state's guardian care of its people's interests that you have the right and duty to consider yourselves to be in the semi-official service of your country.

Either the state should have such oversight and control of banking as will safeguard the people's confidence in the banks, or they should at least be prohibited from using the name of the state in the title of the bank, or from posing as a public institution. When the Milwaukee Avenue State Bank in Chicago was looted, my poor foreign-born neighbors, who had entrusted to it the scant savings of their hard toil, could not believe that the state which loaned its name to the bank would not protect them from loss and justify their confidence in the state. Then I realized as never before what treason it is for a banker to play false to the people and what a bulwark of the state and an inspirer of patriotism a bank could and should be.

Out of the appalling thriftlessness of this most destructive of all wars, the banking interests of the nations will be called upon to restore the financial bonds of a new internationalism, and something of its spirit as well. No such world-wide exchanges of international credits have ever been negotiated as in America during the war. Perhaps this necessity to which we have thus ministered may be the mother of invention adequate to establish the thrift of international peace.

THE COUNTY HOTEL AND ITS BARN WERE BOUGHT BY THE PEOPLE AND TURNED INTO A COMMUNITY HOUSE AND A HALL FOR MEETINGS

Community Vision and a Country Hotel

By Edmund de S. Brunner

SECRETARY MORAVIAN COUNTRY CHURCH COMMISSION

BURIED in the heart of the Pocono mountains, thirteen miles from the nearest railroad station and connected with the outside world only by an uncertain stage route, is a rural community, Newfoundland, which has caught the vision of neighborhood efficiency and which in a fine way is realizing that vision day after day.

Newfoundland is in that section of the Poconos near where Wayne, Pike and Monroe counties (Pennsylvania) meet. Originally the land was settled by hardy and industrious Germans and the descendants of these people are still the predominant element in the population. Religiously it was a community ministered to by the Moravians, and in later years by the Methodists also. The soil is mediocre and no superficial observer would pick this locality for a rural demonstration field.

However, such it has become. Just about a year ago the community, acting as a social unit, bought out its country hotel and converted the hostelry into a community house and the barn into a community hall and gymnasium.

The beginnings of this work can be traced to the patient campaign of the W. C. T. U., which even in a locality such as described found that rural people are willing to lend their support to the temperance movement. But there have been other sources of inspiration and leadership. For some years Newfoundland has been blessed with strong pastors whose spiritual leadership concerned itself with the hallowing of all of life. There has also been of more recent years a strong school favored with exceptionally good teachers. In some instances the pastor has also been

the principal or at least one of the small faculty. This has tied together home, school and church in a most advantageous way.

Finally, for the last twenty years there has been a steady increase in the number of city people who have spent their summers in this region, and who have mingled with the residents both in their play and worship. This has been of mutual advantage.

About eighteen months ago the only resident pastor succeeded in bringing into the community Professor and Mrs. Varney, who staged a welfare week which proved a big factor in starting the movement to establish the welfare center, because of the way in which social service was linked up with fundamental spiritual motives.

Thus it was that in the minds of pastor and people there formed and gradually came to fruition the conception of a community house in which would focus all the activities of the region and which would prove a center furnishing recreation through the long winter, binding the people together and holding some of the younger folks to their home. It was decided to form a Community Welfare Association. Any person over fourteen years of age with an interest in the community and a dollar with which to pay the annual dues was allowed to join.

One of the first steps was to have the association incorporated and soon afterward the hotel was purchased for \$3,800 and fitted up as described at a further cash cost of about \$1,200. Over half the money was raised in a short time and it was a big sum for these people. Contributions were not large

measured by the standards of city organizations but measured by the resources of the people they were most generous and proved how deeply interested and thoroughly in earnest the community was. The remainder of the sum was raised by selling shares of stock and a small mortgage was also placed on the property.

The community house contains rooms for all the various church and community organizations, for reading, playing games, etc. There is also a free library. Adequate supervision is secured by having the high school principal and his wife live in the second story which has the added advantage of furnishing a comfortable home for them. Newfoundland is thus one of the very few Pennsylvania communities that has a "teach-erage."

The old barn, now rebuilt and turned into a community hall contains a large dining-room and kitchen on the top floor while the main floor is given over to a gymnasium-auditorium with a raised stage at one end, together with dressing rooms and all accessories necessary for its double purpose.

It is perhaps too soon to record definite results other than a cleaner, better, more progressive community life such as always comes when religion takes on new meanings, and opportunities for service are multiplied. But some idea of the widening scope and influence of the work may be gained by mentioning a union men's bible class which meets every Monday evening in the community house under the leadership of the resident pastor, the Rev. G. Max Shultz of the Moravian church. Even on some of the stormiest evenings of

last winter the attendance did not fall below twenty.

The work is beginning to attract attention and deservedly so. Ex-Mayor Blankenburg of Philadelphia, is an interested contributor who visits the community at times. Governor Brumbaugh made a special trip to the little hamlet and congratulated the people on their progressiveness. Others have also come to gain inspiration from the fine work

being done.

There has been opposition, there always is to such efforts, but it is weakening. The day's meetings in connection with the dedication fused the community into one. As the evening meeting drew to a close the Scoutmaster asked every boy and girl in the community to stand and with considerable emotion said to the adults, "These, your boys and girls, thank you from their

hearts for your splendid generosity." The audience could only rise and sing Praise God from Whom All Blessings Flow, and with bowed heads received a richly deserved benediction. From that time on the work has been gaining in its usefulness and in its grip on the people. It has been a great year. Another experience has been added to the sum total of those which shall some day bring abundant life to rural America.

Where Both Bullets and Ballots are Dangerous

By William E. Leonard

WHITMAN COLLEGE

THE most recent act in the political drama of the Rio Grande has been played in the federal courts at Corpus Christi, Tex. The star performers were old line politicians; the supporting company, ignorant, unnaturalized Mexicans. The former were charged with buying the votes of the latter in the election of 1914. At that time several members of Congress were elected, which fact gave the federal courts jurisdiction.

In July, 1915, forty-two citizens of Nueces county were indicted on the charge of conspiracy to corrupt the ballot box, and this group of men came to be known locally as the "Forty-Two Club." In the trial court about one-half of these men were released. Of the remainder, five have been found guilty as charged. In the case of one, the foremost personage of them all, the jury was unable to agree and he awaits a new trial.

In this case some twenty or thirty witnesses were called to the asserted fact that each of them had been "given a present," ranging from two to five dollars in amount. Before this present was delivered, however, each voter had to bring his poll tax receipt showing that he had voted, and at the same time to give assurances that he had voted "in the proper way."

These Mexican voters constitute a most interesting study. Only one, so far as the writer knows, was able to give his evidence in the English language. Several attempted to do so but failed, and they, like the rest, had to resort to an interpreter. This is significant because all of them had been in the state ten years or more. One man, sixty-six years old, and forty years in the state, spoke no English. Some did not know for a certainty where they were born, whether in Old Mexico or in Texas. None, apparently, had ever declared their intention to become citizens of the United States, while some appeared to think their poll tax receipts constituted such a declaration. No one had any conception of the Democratic or any other ticket.

The only ticket of which they had any notion was the so-called "Old Ticket."

It seems that "the committee" had appropriated \$3,000 to carry "the hill," which is the Mexican quarter of Corpus Christi, and to secure this fund a levy of \$150 was made upon each candidate for office.

The particular charges in this case may or may not be absolutely true. Nevertheless, in southwest Texas there exists the common belief that corruption at the polls is constantly being practised, not only in Neuces county, but more or less generally throughout the whole border country.

Two Race Problems

THIS SUGGESTS a fact not well known. The Southwest, particularly Texas, is the only region which has two distinct race problems, each of sufficient importance to invite attention. States immediately east have their Negro problem; states to the west an asserted oriental problem; the northern states have to deal with a European immigration which is sifted and regulated at the ports of entry.

In contrast, Texas, for instance, has both a Negro problem and a Mexican problem. The Negroes in Texas number 700,000, which is 17 per cent of the whole population. There is an unknown Mexican population conservatively estimated at 400,000, which is 10 per cent of the entire population. It is unknown, because Mexicans may enter the state without effective restraint at almost any point along the 800 miles of inadequately protected Rio Grande border. It is believed that fully 75 per cent of all Mexicans coming to the United States come to Texas.

Society in the Southwest cannot easily adapt itself to the handling of a second race problem. It does well in taking the one it already has and attempting to solve it in some humanly just way. The Negro is accepting the place which has been granted him, and to the credit of both white and black, the latter is slowly lifting his standard of living. But un-

fortunately for Mexican immigrants, there is no congenial social group to welcome them on this side of the frontier. They are not Negroes, and they resent being so classified. They are not accepted as white men, and between the two, the white and the black, there seems to be no midway position. They thus remain strangers in the land.

In admitting them to this country without limitation we are adding a second group of servile people. They are less capable of a vigorous self-defense than even the Negro. This has repeatedly been shown when the two races have come into economic competition. Against injustice, they are, as a class, singularly nonresistant. Their past history makes them such. In all Mexican history these people have never known the meaning of free opportunity, for they have never had any but oppressive governments and barbaric industrial systems. Is it any wonder that they seem to have no aspirations beyond peonage, nor is it strange that they readily drop into conditions equivalent to it upon crossing the Rio Grande into this land of free opportunity?

The Southwest seems to be unwilling to give these people the full chance of white men. They resent taking the place accorded the black man, and yet by force of economic necessity they are compelled to take less. This is due to their ignorance of the law, which might protect their persons and their property; it is due to their ignorance of the language; it is due to an utter lack of guidance and opportunity for education.

I shall not soon forget the tragic appeal made to me by a bright-eyed, wholesome Mexican girl of fifteen as she sought my help that she might be admitted to the white school scarcely a stone's throw beyond the miserable cabin in which she lived. But to her and to all Mexican children in that community the school offered no avenue of escape. They are generally denied admittance to white schools, and exclusively Mexican schools, outside the cities, are few indeed.

Out of the above conditions two clear-cut ill results have already appeared, one economic, the other political. Upon agriculture the coming of large numbers of Mexicans into any community has a most disastrous effect. First there goes the American tenant farmer, for he cannot meet the competition of the low standard Mexican worker. Then the small land-owning farmers, finding the country a less desirable place in which to live because of the small number of neighbors, sell to the larger owners, who most frequently are either nonresidents or live in some adjacent town or city, going out almost daily to oversee laborers working on their farms. The community life loses its natural leaders, and because of this, both churches and schools die a lingering death. In this way whole neighborhoods, once supporting a happy and prosperous life, are slowly passing into decay.

Not less dangerous is the Mexican as a political menace. And of this no better illustration can be found than the Corpus Christi case. These people do not desire or appreciate citizenship. They do, however, retain vestiges of the primitive man's willingness to attach themselves as followers to any one who may have shown them a kindness. In this way they easily become the prey of the politician. Time and again, it is asserted, the Mexican vote has been mobilized against certain questions, notably against prohibition. How often the craftier politicians have gone into office through the influence of the Mexican vote is impossible to say.

The question will assume even greater importance when the Southwest begins to reform its land system, of which there are so many premonitory evidences at the present time. The border country is still in the big ranch stage of agricul-

ture, the workers being largely Mexicans. If progressive land legislation should be proposed it is almost certain that the large land owners, who would undoubtedly suffer most, would not fail to use every possible weapon to defeat it. The most natural weapon to use would be the complete organization of the Mexican vote.

There is a third aspect of this question. As yet, between these two races, the Mexican and the Negro, we have seen only the preliminary skirmishes in economic competition. The Negroes are moving towards the Southwest, but very slowly; the Mexicans are coming northward from the Rio Grande rapidly. In due time they must meet in large numbers. When that time shall have arrived we may expect the real conflict to begin. Then will the Southwest realize the full scope of her complicated race problems.

Drugs: A World Problem

By Charles B. Towns

THERE is prevalent in this country an impression that the conferences on the international drug situation held at Shanghai in 1909 and at The Hague in 1911 and 1913 accomplished something. They accomplished nothing—except to furnish outings for the delegates and their families. The childish discussions and plans of the delegates upon those several occasions revealed a crass ignorance and proved absolutely barren of results, so far as any alleviation of the traffic in and the use of habit-forming drugs is concerned. The identical conditions exist now which existed before the international conferences were held.

There is a second impression, held in some quarters, that the outbreak of the great war halted a well-defined international movement toward a solution of the problem of drug addiction throughout the world; a movement of which the international conferences, even though negligible so far as practical results went, were symbolical, or even representative. Nothing could be more erroneous. The war did not hold up a movement which if unhindered would have succeeded in adequately solving the world's drug problem, because there was no such movement. What purported to be such a movement was rather a distinct and prolonged pause.

First and last, the only real solution of the world's drug problem must come through an understanding between all countries which produce habit-forming drugs that shall in effect regulate foreign import and export of such drugs. The one way in which this can be satisfactorily done is for each country to make the traffic in habit-forming drugs a gov-

THE second of three articles in which Mr. Towns argues for preventive legislation on the basis of his fourteen years' experience with drug-users. The first article was published in THE SURVEY for October 14.—EDITOR.

ernment monopoly and to become the sole purchaser and dispenser of such drugs.

The greatest stumbling-block in the way of executing such a plan is China. This is because Great Britain has always wanted to control the opium situation in the Far East and has heretofore been unwilling to consent to government monopoly in China. And as long as China is thus estopped, other countries will find it impossible to create the sort of strict accounting they should have.

In view of China's importance in the matter, it may not be amiss to outline the history and scope of her drug problem. In China, opium smoking dates back to the middle of the seventeenth century, when the Dutch from Java introduced into Formosa the smoking of tobacco mixed with opium and arsenic as a remedy for malarial fever. So rapid was the growth of the habit that in 1729, the Chinese ruler forbade by imperial edict the sale of opium and the keeping of opium divans.

After the Tai-ping rebellion, revenue was needed. The opium trade, which had proved impossible to suppress, was legalized. Poppy-growing then spread throughout the empire until, by 1906, at a moderate estimate, China numbered among its people fifteen million opium smokers, and was producing six-sevenths

of the drug consumed by them. Opium was the national narcotic, stimulant, and medicine; opium smoking was everywhere openly practised by both men and women—the indulgence of the rich, the luxury of the poor, the pastime of the idle, the solace of the wretched and the necessity of millions.

In 1906, the Empress Dowager, attributing to this vice the increasing weakness and poverty of the nation, issued an edict for the total suppression of the production and consumption of opium throughout the empire, within ten years. The crusade that followed this edict was unique of its kind. Anti-opium societies hunted out divans and destroyed many thousands of pipes. The press, the novel and the drama preached reform. Cartoons held up to ridicule the users of the drug, or portrayed the miserable end that awaited them. Every available means was used to rouse public opinion against opium-smoking as being both disreputable and unpatriotic.

But although progress was made,—a heroic thing in itself under the circumstances,—it was clearly demonstrated that no matter how greatly home production of opium might be curtailed, nor how strictly the prohibition on smoking might be enforced, China would never be able to stamp out the habit until importations were stopped and the sale of the drug made a government monopoly. This is an important thing to remember, because it is morally certain that if that country, with the nation-wide efforts and sacrifices it made, was unable to accomplish its purpose, no other country in similar circumstances could do so.

The first international opium confer-

ence at Shanghai, in 1909, was called by our government with a view to getting Great Britain to concur with China in trying to stamp out opium-using in that country. This Great Britain did but has never consented to a government monopoly in China.

But the Shanghai conference, although of no utility in furthering directly the cause of drug-control, was, it is true, valuable to some extent in making public certain facts concerning the situation which, while well known to those in touch with the subject, received a measure of general publicity through the conference's findings.

Perhaps the most important of these facts is, that while opium smoking in China was greatly diminished by the campaign against the drug, the habit remained in the form of opium eating, or in some use of medicinal opium, or in the use of a host of so-called "anti-opium remedies" all containing the drug. Morphin was coming into common use, for not only was it cheaper than the smoking opium, but it could be more readily obtained, easily concealed, and quickly administered. Cocain and Indian hemp (hashish) were widely used. Cigarettes and alcohol furnished other vicious substitutes.

A Chinese authority, in describing the prevalence of the morphin and cocain habits at this time, offers an interesting analogy to the experience of investigators in the United States by tracing such habits to the use of the hypodermic syringe upon rich patients by well-meaning medical men seeking to relieve their patients' craving for opium. From the master of a household the knowledge of the process quickly spread to the servants and then to the rickshamen and coolies, until morphin and cocain injections became the common resource of all classes. Among the advertisements in Chinese newspapers, at this time, could be read the alluring promise: "Opium smoking cured with a golden needle!"

These new forms of the habit proved far worse for the victims than the original opium smoking. Under the influence of morphin and cocain, or like substitutes, a marked and increasing physical deterioration was manifested. While the first effect of the change from smoking to swallowing the drug was the use of a smaller quantity, that quantity had to be steadily increased. Discontinuance of it, under any treatment then in current use, was practically impossible. For the dealer, the drug-taker was a customer for life.

It was in (1908-9) that I visited China and opened three hospitals for drug addicts at Shanghai, Tientsin and Peking, and I treated many drug victims. Among these patients was one, the governor of a province, who had actually been in the habit of buying his pills by the peck, or its Chinese equivalent.

During this period I was able to observe personally the utter impossibility

of any permanent solution of this drug problem for China, without the sincere cooperation of other countries. Added to the ease of smuggling across the country's immense boundary, there was a simple and sure way to procure such drugs. From the existence of so many foreign concessions and leased territories within her limits, it was useless for China to expect relief through her own laws. All one had to do was to step from Chinese territory into one of the concessions or lease lands, which was to all intents foreign territory and where foreign laws prevailed, and purchase all the drug of one's addiction that was desired. Any promises by the foreigners there not to sell drugs, amounted to nothing.

So Chinese money went to the foreign merchant; and opium, morphin, cocain were forthcoming. The earnest intention of the drastic Chinese edicts issued against the use of habit-forming drugs, has been greatly hindered.

With the case of China compare the case of Japan! In 1858, the very year in which China was forced to consent to the entry of Indian opium, Japan was able by treaty with Great Britain to prohibit its importation. Had China been able then to secure similar conditions with Great Britain, she would have no drug problem today. In subsequent years, repeated enactments laid heavy penalties on opium-smoking in Japan, and all traffic contributing to it. The medicinal use of opium was permitted. As early as 1870, druggists and physicians were ordered to report to the authorities the quantities of the drug sold for such purposes. In 1879, the purchase of all the opium for the country was assumed by the government, which still holds the monopoly.

Still, the local supply being inadequate, the production of opium was all the time being carried on in Japan, and was even encouraged by the government! The climate, however, has never been favorable for poppy-growing, and almost all the opium Japan now uses is imported. What amount of raw opium is produced in Japan, is delivered to the government, examined for quality, and all falling under a fixed standard is destroyed without compensation to the producer. By such measures Japan, in spite of her location in the opium-ridden Far East, has managed so to control the use of the drug in her home territory that its abuse there is practically unknown.

But Japan has had a different experience in Formosa, ceded to her by China in 1895. There the opium habit had been taking root for over two centuries. With the island in open rebellion, it was at first impossible to secure a complete register of the opium users, in order to apply the policy of gradual reduction that had been decreed. By 1900, more than 169,000 smokers had been licensed to purchase the drug in specified amounts from the government, which, as we have

seen, alone had the right of importation and sale. In 1907, about 113,000 remained on the list.

But on the other hand, it was found necessary to register 30,000 new cases in 1904-5, and in 1908, nearly 16,000 more. On the last occasion an inquiry was made into the cause of this increase. It was found that 93 per cent of the number had taken to the drug in sickness or pain, as the traditional remedy for all ailments, rather than go to a physician.

To this tendency of the Formosans, the Japanese attribute most of the difficulty they are having in carrying out their opium policy in the island. Others better apprised think that Japan has found opium so financially profitable, that she is in no hurry to terminate its use. With the strict control of the drug in Formosa, Japan could abolish its unnecessary consumption within three years at most.

The four chief opium-producing nations are Great Britain (principally India), China, Persia and Turkey. The amount produced by the latter two is inconsiderable compared with the former two. In its Bengal monopoly, Great Britain controls directly an opium production which in 1906, amounted to more than seven million pounds. She also has a restrictive power over exports from native states of India not under her governmental control, in which the yield of opium in 1906 amounted to half her own production. It is true that much of the East Indian product is consumed in India. Nevertheless, when Great Britain consents to limit or to withhold exports of the drug at the wish of a receiving country, a large part of the world's opium supply can be safeguarded from misuse.

Great Britain has not yet had this drug problem to deal with at home. France has never before considered the problem. Other European countries have brushed it aside. But the conditions growing out of the existing war will make the drug problem of as vital importance to these nations as we have found it here. And during the last ten years it is a fact that drug habits in this country have grown at such an alarming rate that we are now the worst drug-ridden nation on the face of the earth.

Great Britain realizes her position now. France faces the issue squarely. I have already been invited to try and help that country, as soon as the war is over, to work out a plan for eradicating the evil before it develops overwhelmingly. A similar condition exists in all the other countries at war.

We are not at war. We need to clean house more than any other country in existence. Pending a final international solution through standard laws and real cooperation between nations, there is much that we can set about to do today. In a closing article I am going to show what that is and just why it is of the very greatest importance to have it done.

WHERE GERMAN SAILORS WERE INTERNED IN CHARGE OF THE BRITISH SAILORS' UNION

A British Labor Union's Internment Camp

By F. Havelock Wilson

THE Sailors' and Firemen's Union of Great Britain is to a large extent international in character as a considerable number of alien seamen are employed on British ships, and these men become members of the union with a view to protecting their interests.

At the outbreak of the war there were employed on British ships some 4,000 or 5,000 German and Austrian seamen. These men were thrown out of employment, as it was felt that it was not safe to employ alien enemies on board British ships. This raised a serious problem, as the men who were members of the union could not obtain employment and they soon became destitute.

The Sailors' and Firemen's Union after consideration decided to establish a camp to provide for the German and Austrian seamen food and shelter. At this time aliens were not compulsorily

interned—as a matter of fact, there were no aliens interned. The union approached the government with a view to getting assistance in providing for the unemployed aliens, and ten shillings per man per week for every alien seaman who was interned under the union's care was granted.

The union purchased a small estate at Eastcote, Northamptonshire, which comprised an old-fashioned dwelling house with out-buildings, cottages and about 40 acres of ground. The writer, as president of the union, had full charge of the venture. I arrived at Eastcote on September 14, 1914, and within twelve hours was able to provide for fifty alien seamen.

If the thing was to be a success it was clear that there must be a plentiful supply of food, that every man should be given a job of some kind, and that he should perform a certain amount of

work per day. In addition to food, the men were supplied with tobacco four times a week and an allowance of beer on Sundays. It was wonderful to see what those sailors and firemen were able to do—all kinds of buildings were erected of a permanent and substantial nature, and the cook-house and bakery were models of ingenuity, capable of supplying 3,000 to 4,000 men. Hospitals and lavatories were built, and a large field was taken for growing garden produce. Life at the camp went pretty smooth although at one period there were 850 men to be provided for.

Eventually an order came for the compulsory internment of all aliens, and the government insisted on the erection of a fence around the camp at Eastcote. A police guard of thirteen policemen to keep watch of the 850 men was provided, but their duties were very light and they were not allowed inside the

MINIATURE PORTS AND HARBORS BUILT BY THE MEN ON THE BANKS OF A LITTLE STREAM THAT RAN THROUGH THEIR CAMP. AT THE RIGHT, A CORNER OF THE CAMP

camp. During fourteen months only 5 aliens escaped, and they were captured within a short time after leaving camp.

The men had full liberty to roam about the forty acres of ground. There was a stream running through the estate with sloping banks, and it was a delightful surprise to see how the seamen made miniature ports and harbors on its banks. There was Heligoland Bight, Fort Hindenberg, etc. Many of the Germans erected little wooden huts and kept rabbits and other pets. Generally the men were very happy, that is to say as happy as men can be who are deprived of their liberty.

However, there were in the camp a number of non-unionists and other sailors who, although members of the union, did not like trade union principles. They at once demanded payment for their

work—not only that, but they conspired to stop other men from working. For instance, when the camp was first started the men were under canvas, which was perfectly all right in the summer months, but as the damp and wet weather came it was impossible for the men to remain under canvas. The union purchased wood and erected wooden huts with three tiers of bunks. Very excellent huts they were, fitted with hot water heating pipes, and the whole of this was done by the interned men on the understanding that if the men would do the work the committee would purchase the materials. The non-unionists, however, started revolts and it became necessary to clear some of the trouble makers out of the camp. Some 150 men of this class were sent away. The great body of seamen, however, went at this

land task with spirit, some digging, others building and others painting.

Eventually, the law with regard to interned aliens became more strict, and the military insisted upon more stringent regulations with regard to the guarding of the prisoners. The union then felt that the maintenance of the camp was becoming more than it could reasonably shoulder, and the government decided to take it over and put it under military control. Generally speaking, both the police and military authorities testified to the splendid manner in which the camp had been conducted.

Altogether the men built themselves two excellent halls 100 feet long by 65 feet wide; these buildings were erected inside of twenty-five days. One building had some 40,000 bricks in the foundation.

“WANTED—A PLAYGROUND”

By Mildred Weston

DINGY hills
 No tree, no blade of grass—
 But a tippie rears a gaunt scaffolding
 To proclaim them not barren.
 The coke gas circles heavily and falls
 Wreathing the miners' homes.
 Houses—row on row
 Ugly red shacks
 Rust spots on a grimy earth.

Where the children play
 A sewer feels its unclean way
 And flashes to the sun its iridescent scales of filth.
 In this foul path a pig lies dead
 With its stark legs upstuck.
 A small girl spies it and with shrilling voice
 Calls to the rest—
 “See, see,” she points with outstretched hand,
 “Tony’s peeg what died on heem.”
 And they come running.
 The babies in their dust bath on the road
 Raise small white-lidded faces to the noise.
 Then with black dirt-trains flying in their wake
 They scuttle crab-wise to the sewer’s edge.
 A boy wades out to where the carcass lies
 And ties a string to each upstanding leg.
 Gathering up the reins he scrambles back
 And quick assumes command—
 “Hi, youse two cross to tother side
 Un’ take these reins wid youse.
 Ted un I’ll lead over here.
 Youse other kids kin be th’ band.”
 Ashoving, screeching line
 The band draws up behind the prancing four.
 With both hands to their mouths they play the horn
 And one must be the drum.
 So to the sound of tootle-tootle-toot
 And joyous shrieks and booming of the drum
 They draw the dead pig barge-like through the slime.

BOOKS

A WEEK with WAR BOOKS

By Emily Greene Balch

THE war has naturally—inevitably—brought with it a great output of books and pamphlets dealing with its complex roots, its varied aspects, its vast and uncertain issues. The review copies of war books which have reached THE SURVEY during recent months have not by any means exhausted the list, but they have been fairly representative; and at request of the editors, the writer took advantage of the week on shipboard en route to Stockholm to give them a fairly consecutive reading, and to share with SURVEY readers the impressions which such a bird's-eye view affords.

I

THE SPIRIT OF FRANCE
By Owen Johnson. Little Brown & Co. 256 pp. Price \$1.35; by mail of THE SURVEY \$1.46.

THE LOG OF A NONCOMBATANT
By Horace Green. Houghton Mifflin Co. 243 pp. Price \$1.25; by mail of THE SURVEY \$1.35.

THE UNDYING STORY
By W. Douglas Newton. E. P. Dutton & Co. 383 pp. Price \$1.35; by mail of THE SURVEY \$1.47.

BETWEEN THE LINES
By Boyd Cable. E. P. Dutton & Co. 258 pp. Price \$1.35; by mail of THE SURVEY \$1.43.

FIRST we have the story of the eye-witness, setting forth with greater or less skill his impressions of the events he has seen, whether by chance from a "hilltop on the Marne" or with the feverish effort to be "on the spot" of the professional correspondent.

There is Owen Johnson, like other visitors to France, intoxicated with her tragic bravery; Horace Green who gives a sense of a genuine desire to be fair (borne out by his very reasonable appendix on atrocities); W. Douglas Newton's vivid story of part of the British campaign in France; Boyd Cable's set of newspaper sketches, among which A Hymn of Hate touches almost the depths of moral degradation in war, a degradation above which one must have hoped the English might rise.

II

THE DEVELOPMENT OF THE EUROPEAN NATIONS 1870-1914. By J. Holland Rose. G. P. Putnam's Sons. 410 pp. Price \$2.75; by mail of THE SURVEY \$2.93.

HOW DIPLOMATS MAKE WAR
Anonymous. B. W. Huebsch. 376 pp. Price \$1.50; by mail of THE SURVEY \$1.60.

ECONOMIC ASPECTS OF THE WAR
By Edwin J. Clapp. Yale University Press. 360 pp. Price \$1.50; by mail of THE SURVEY \$1.62.

THE MONROE DOCTRINE: AN INTERPRETATION

By Albert Bushnell Hart. Little Brown & Co. 445 pp. Price \$1.75; by mail of THE SURVEY \$1.93.

MODERNIZING THE MONROE DOCTRINE
By Charles H. Sherrill. Houghton Mifflin Co. 203 pp. Price \$1.25; by mail of THE SURVEY \$1.35.

THE DIPLOMACY OF THE GREAT WAR
By Arthur Bullard. Macmillan Co. 344 pp. Price \$1.50; by mail of THE SURVEY \$1.62.

THE EXPORT OF CAPITAL
By C. K. Hobson. Thesis, University of London, Constable, London. 261 pp. Price \$2; by mail of THE SURVEY \$2.20.

SOCIALISM AND WAR
By Louis B. Boudin. New Review Publishing Association. 267 pp. Price \$1; by mail of THE SURVEY \$1.08.

THE SOCIALISTS AND THE WAR
By William English Walling. Henry Holt & Co. 512 pp. Price \$1.50; by mail of THE SURVEY \$1.62.

BELGIUM, NEUTRAL AND LOYAL
By Emile Waxweiler. G. P. Putnam's Sons. 324 pp. Price \$1.25; by mail of THE SURVEY \$1.35.

ITALY'S FOREIGN AND COLONIAL POLICY
By Senator Tommaso Tittoni. Smith Elder & Co., London. 323 pp. Price \$1.82; by mail of THE SURVEY \$2.

GOVERNMENT AND POLITICS OF THE GERMAN EMPIRE
By Fritz-Konrad Krüger. World Book Co. 340 pp. Price \$1.20; by mail of THE SURVEY \$1.28.

IMPERIAL GERMANY AND THE INDUSTRIAL REVOLUTION
By Thorstein Veblen. Macmillan & Co. 324 pp. Price \$1.50; by mail of THE SURVEY \$1.62.

AT THE other extreme there are the histories general and special. Rose's Development of the European Nations, reissued with chapters bringing it up to date, is a standard work.

How Diplomats Make War is a bitter attack on British foreign politics by an unnamed "British statesman" which does not carry full conviction.

Gibbons' New Map of Europe is readable and full of information, and obviously tries to be impartial.

Edwin J. Clapp's study, Economic Aspects of the War, dealing with international law and the acts of the belligerents as they affect American commerce, should be read by every easy thick-and-thin believer in the doctrine that all the wrongs, especially the wrongs against international law, lie at the door of Germany.

Professor Hart's study of the Monroe Doctrine has preparedness for its moral.

If Charles H. Sherrill in his Modernizing the Monroe Doctrine also advocates a strong navy, his interest, based on diplomatic experience in South America and commercial *exportise*, is primarily enlisted for Pan-Americanism as "the most practical agent for international peace yet devised."

Arthur Bullard, perhaps better known as "Albert Edwards" has given us in The

Diplomacy of the Great War an interesting and well-written book which also finds its moral in a consideration of the problem of constructive internationalism as it confronts America. It is full of good ideas, such as an international conference on the difficult questions involved in naturalization laws, and the last twenty pages on National Defense and The United States and Peace should be widely read and considered. The United States must take its own medicine.

In view of the stress laid by Brailsford and others on the export of capital (as contrasted with export of goods) as a cause of war, special importance attaches to the doctoral thesis by C. K. Hobson in The Export of Capital.

In regard to the intensely interesting question of the war and Socialism—Socialism which its severest critics now appear to have relied on to prevent the war—Mr. Boudin's very general lectures, delivered in 1914 and published under the title Socialism and War, cannot give much material for concrete study. It is just this that is supplied by Mr. Walling's collection of documents, issued without comment—a valuable service. The scope of this volume is indicated by the title, The Socialists and the War. It was published a year ago and it is to be hoped that it will be followed by a continuation on the same lines.

Waxweiler's book, Belgium, Neutral and Loyal, is the Belgian case by a Belgian—sad enough in any telling. Italy's case is represented by a collection of parliamentary addresses delivered by the minister of foreign affairs, Senator Tittoni, during his six years of office from 1903 to 1909.

Dr. Krüger has produced what should be a very useful handbook of facts as to the government and politics of the German Empire, written with no relation to the present war. Contrast with this Veblen's characteristically brilliant study of Imperial Germany and the Industrial Revolution.

III

UKRAINE'S CLAIM TO FREEDOM

THE PROBLEMS OF THE COMING PEACE
By Felix Mlynarski. Polish Book Importing Co., New York. 172 pp. Price \$.75; by mail of THE SURVEY \$.81.

ANOTHER group of studies relates to special questions of nationality. Of these some are pleas for individual

national groups—the Armenians, the Bohemians, the Poles, the Ukrainians—and as such deserve the most patient and candid hearing, the most active sympathy—and also a study of the other side (or sides) of the often very complex circumstances. Consider, for instance, eastern Galicia where the claims of the Polish gentry conflict with those of the Ruthenian (Ukrainian) peasantry, besides the special problems presented by the Jews, to say nothing of the Roumanian minority.

Of these books the widest in scope is Arnold J. Toynbee's extraordinarily useful *Nationality and the War*. Whether his particular solutions prove the most practicable, or even the wisest theoretically, is beside the point. The attempt to work out, on the basis of the actual data and with reference, not alone to nationality but also to natural economic affiliations, to customs-boundaries and other elements of the situation, the rearrangement that one would make, if one could, of the map of Europe from Schleswig to Koweit—this attempt is one that must be made systematically and carefully not by one but by many minds and from many points of view. Such books as this, modest but daring to come to grips with the actual, help to make history.

IV

ARISTOCRACY AND JUSTICE

By Paul Elmer More. Houghton Mifflin Co. 243 pp. Price \$1.25; by mail of THE SURVEY \$1.35.

WAR AND THE BREED

By David Starr Jordan. The Beacon Press, Boston. 265 pp. Price \$1.35; by mail of THE SURVEY \$1.42.

IS WAR DIMINISHING?

By Frederick A. Woods & Alexander Baltzley. Houghton Mifflin Co. 105 pp. Price \$1; by mail of THE SURVEY \$1.08.

SOCIAL PROGRESS AND THE DARWINIAN THEORY

By George Nasmyth. G. P. Putnam's Sons. 417 pp. Price \$1.50; by mail of THE SURVEY \$1.60.

GERMANY VS. CIVILIZATION

By William Roscoe Thayer. Houghton Mifflin Co. 238 pp. Price \$1; by mail of THE SURVEY \$1.08.

IN TIMES LIKE THESE

By Nellie L. McClung. D. Appleton & Co. 218 pp. Price \$1; by mail of THE SURVEY \$1.09.

ANOTHER group of books, hard to define, might be called interpretations of war. Paul Elmer More treats it as a philosopher with little patience for those who are stunned or surprised. In the last two essays of his *Aristocracy and Justice* he criticizes the "new morality" of Jane Addams and advises a middle way of justice between Nietzscheism and "absolute humanitarianism."

Dr. Jordan writes as a biologist in *War and the Breed* of the fateful effects of racial selection through war, killing out the chosen.

Dr. Woods (*Is War Diminishing?*) doubts this thesis, and sets himself as an "historiometer" to a quantitative study of the prevalence of war, with an extraordinary blindness to the unscientific character of his procedure. It is interesting, however, to note that, little as the

fact serves in itself as a basis of judging the future, the fact appears to be that the prevalence of war has been diminishing, and chiefly among the smaller powers.

Dr. Nasmyth in a more substantial volume, *Social Progress and the Darwinian Theory*, considers the whole problem of the role of force in human relations, mutual aid as a factor in social progress, and justice as a prime social need. The superficial appeal to Darwin as though he had taught that evolutionary progress rested on brute amoral struggle needs to be again and again exposed.

The character of Professor Thayer's volume is perhaps sufficiently indicated by its title, *Germany versus Civilization, Notes on the Atrocious War*.

Nellie McClung's *In Times Like These* is a series of essays by a Canadian feminist, with the normal woman's reaction against war.

V

THE A. B. C. OF NATIONAL DEFENSE

By Julius W. Muller. E. P. Dutton & Co. 215 pp. Price \$1; by mail of THE SURVEY \$1.08.

THE INVASION OF AMERICA

By Julius W. Muller. E. P. Dutton & Co. 352 pp. Price \$1.25; by mail of THE SURVEY \$1.37.

WEST POINT IN OUR NEXT WAR

By Maxwell Van Zandt Woodhull. G. P. Putnam's Sons. 266 pp. Price \$1.25; by mail of THE SURVEY \$1.35.

SELECTED ARTICLES ON NATIONAL DEFENSE

Compiled by Corinne Bacon. *Debaters' Handbook Series*. H. W. Wilson Co. 243 pp. Price \$1; by mail of THE SURVEY \$1.08.

MILITARISM, on the other hand, is represented by four books, two by a Mr. Muller (one of which is the counterpart in print of the *Battle Cry of Peace* movie show), one by an army officer, giving his views on *West Point in Our Next War* and including a chapter on the diplomacy of national defense and playing with the ill-omened phrases, "creation of a balance of power in the Pacific" and "a sphere of influence of the United States" to "cover as with a shield [to quote the publisher's note on the cover] the nations facing the Gulf of Mexico and the Caribbean Sea." The fourth is a *Debaters' Handbook on National Defense*, giving selected material on both sides of the preparedness question.

VI

OUTLINE OF INTERNATIONAL LAW

By Arnold Bennett Hall. La Salle Extension University, Chicago. 255 pp. Price \$1.75; by mail of THE SURVEY \$1.87.

Professor Hall's *Outline of International Law* is a boon. In little over a hundred readable pages the main outlines are given, and it is surprising how far the phrases and legal points that have puzzled the layman in his newspaper reading are here made intelligible. No one interested in public affairs and not already posted on international law can afford not to read through this most convenient handbook.

By Bund "Neues Vaterland" (New Fatherland League). Svensks Andelsforlaget, Stockholm. (Reprint.) 64 pp.

WENN ICH WILSON WARE

By Maximilian Harden. *Die Zukunft*, April 22, 1916.

THE most interesting and important books called forth by the war are the forward-looking ones, those that deal with constructive problems. The world is thinking as it never thought before of the questions involved in the relations between nations. Those with the most highly developed social consciousness were, before the war, mainly occupied with problems of social and economic betterment within the country, problems ranging from systematic Socialism to

charity case-work. Politics—foreign policy seemed something rather remote, rather arid. We had been reading history for the sake of the condition-of-the-people question, and found political and diplomatic history a little unreal. Then the storm broke.

In the revulsion, one of our dangers has been that energy and interest would be available only for war relief and war policies, and that we of America, the one great civilized power (besides China) free from the confusion of war, would fail to measure up to our trust of keeping the lamp burning, of forwarding art, scholarship, reform during the European interruption of the works of culture.

It is a case of "this ought ye to have done and not to have left the other undone." The old familiar work should not be neglected for the new, but where choice must be made the emergency call has the right of way. The whole task of constructive internationalism is indeed prior to the social task as we have known it; prior, not only because we are in the throes of a planetary emergency, but because, as we now more fully see, the economic and social conditions of each country are indissolubly bound up with the questions that determine the nature of international relations.

Not only is the whole world thinking of the international problem; the striking thing is how markedly these thoughts converge. This very fact may make it less interesting to read a large number of books dealing with the subject, but the fact is profoundly encouraging. From Holland, from Switzerland, from America, from England, from Belgium, from Germany and from France, come individual voices and concerted programs which have the same hall-mark. For this, the designation "European" is too local, even to call it that of "western civilization" is to limit it too narrowly. It is the voice of the humanity of our age.

The neutral conference now gathered at Stockholm is in some degree the channel for expression of this voice but its work is only just beginning. Dr. Jordan's little book, *Ways to Lasting Peace*, is a convenient compilation of the important proposals hitherto put forth.

Of these the most definite and the one that has secured the greatest momentum is the plan of a league to secure peace initiated by Hamilton Holt and now represented by the powerful League to Enforce Peace, the American branch of which is headed by ex-President Taft. While many pacifists must regret what seems to them an overemphasis on the use (or at least, the threat) of force, the very fact that an international police force represents a middle way is a large part of the undoubted strength of the scheme.

Social, moral and economic pressure brought to bear on any nation which re-

sorts to arms, instead of referring its case to arbitration and conciliation, was the solution offered by the women at The Hague and detailed suggestions for such economic pressure worked out by E. A. Filene may be found in Mrs. Meade's little volume, *The Overthrow of the War System* (pp. 120-2) and brief criticisms of it quoted in Jordan's *Ways to Lasting Peace* (pp. 53-4). Lowes Dickinson's discussion is also there [see pp. 89-90].

Among the most careful and technical studies for international organization after the war are that made for the Fabian Society by Mr. Woolf (published as supplements to the *New Statesman* of July 10 and 17, 1915) and John A. Hobson's *Toward International Government*. They are neither of them easy reading and neither of them has yet received in America anything like the attention it is bound ultimately to command. It is not utopian, it is imperative common sense to think as definitely and painstakingly as possible on this problem, and while we cannot all be architects we all are going to have to live in the new house and we ought to see how we like the rival plans and vote for the specifications that we want.

And while it is true that men cannot be made good (sc. friendly or international-minded) by act of Parliament (or Hague conventions) the complementary fact is that neither does good will alone suffice. The ignorant mother may kill her baby in sheer mistaken love. Five million saints could not govern New York and provide water, sewerage, fire protection and regulate traffic if they had no governmental machinery—not even a town meeting nor a set of rules of order. They would have first to construct an intelligently ordered mechanism for common action. And with such a mechanism, through which good will and enlightened selfishness would both act, the men of ill will and the men of unenlightened selfishness would be neutralized.

All signs point to the hope that the nations are on the threshold of far more effective organization than has been yet achieved. We have had the bloodshed and the moral horror of the war, let us see to it that this travail is not in vain—And his name shall be called Prince of Peace; and the government shall be upon his shoulder.

But these are questions of reconstruction after peace has come. The earlier question, pressing on every feeling, thinking spirit, is When—above all, how—will peace be made? It is, as has been said above, very striking how convergent are the thoughts of men approaching the problem from different points of view. Not, of course, of imperialists, militarists and all their sort, but of those who are trying to think in universal terms. Most striking are the thoughts on peace of members of belligerent coun-

tries, like Vernon Lee, for instance; and, above all, to Americans, because less expected, of Germans like the authors of the pamphlets of the Bund Neues Vaterland and others.

Conspicuous among these others is Maximilian Harden whose magazine *Die Zukunft* for April 22, 1916, contains an essay, *If I Were Wilson*, which honors the German name and reinvigorates our belief in the German capacity for high and impartial thinking. Militarism, he says, must go. World armament is dead. Annexation is no longer compatible with our time. Revenge, punishment, indemnities are out of the question if the revolution that will flame through Europe after the war is not to be a bloody one, if it is to be kept on the spiritual plane.

A truce is possible today, for nothing remains to be fought for that can possibly repay the fighting. But the truce must bring in a peace in which the rights of the weakest are recognized. Hate must be buried quickly and thoroughly.

An international organization should fund the united war debts of Europe and make them the basis of an international credit currency with which the rehabilitation of Europe would be financed and which would also give effective powers of control to the international administration.

It is a document as difficult to reproduce as it is interesting. It is to be hoped that it will soon be available in full for English readers.

VIII

THE HEALING OF NATIONS AND THE HIDDEN SOURCES OF THEIR STRIFE

By Edward Carpenter. Chas. Scribner's Sons. 266 pp. Price \$1; by mail of THE SURVEY \$1.07.

ABOVE THE BATTLE

By Romain Rolland. Open Court Publishing Co. 194 pp. Price \$1; by mail of THE SURVEY \$1.08.

IN CLOSING let me refer to Romain Rolland's *Au Dessus de la Mêlée*, so fine and so tragic, and to Edward Carpenter's *The Healing of the Nations*, tonic, comforting and reassuring. The last part of the book is made up of quotations and anecdotes ranging from Liebknecht's protest in the Reichstag to the story of three officers, a Frenchman, a Scotchman and a German, dying side by side after mutual good offices. The German gave the others an injection of morphia, then, "feeling wonderfully at ease, spoke of the lives we had lived before the war. We all spoke English, and we talked of the women we had left at home." "I wondered, and I suppose the others did, why we had fought at all. I looked at the Highlander who was falling to sleep exhausted. . . . Then I watched the German who had ceased to speak. He had taken a prayer-book from his knapsack, and was trying to read a service for soldiers wounded in battle." The letter was found beside the dead officer.

Carpenter's point of view is that the war is a breaking forth, in overt international strife, of evils long festering within. That is, he stresses its social—economic—moral causes, and he looks forward to radical social regeneration. Besides fine human feeling unclouded and unchilled by war miasmas, he shows an undaunted philosophy recognizing the relativity of the evils and sufferings even of this time. Without idealization of war or callousness to its evils he is not dismayed by it. It is, of course, to his fellow countrymen in war racked England that he is speaking, but his words may be helpful to others as well. He says:

"While these present war-producing conditions last we have to face them candidly and with as much good sense as we can command (which is for the most part only little)! We have to face them and make the best of them, though

by no means to encourage them. Perhaps after all even a war like the present one, monstrous as it is, does not denote so great a deviation of the old earth from its orbit as we are at first inclined to think. Under normal conditions the deaths on our planet (and many of them exceedingly lingering and painful) continue at the rate of rather more than one every second—say 90,000 a day. The worst battles cannot touch such wholesale slaughter as this.

"Life at its normal best is full of agonizings and endless toil and sufferings; what matters, what *it is really there for* is that we should learn to conduct it with dignity, courage, good will—to transmute its dross into gold. If war *has* to continue yet for a time there is still plenty of evidence to show that we can wrest—even from its horrors and insanities—some things that are 'worth while,' and among others the priceless jewel of human love and helpfulness."

study from other angles than that of the lot owner's profit, though even from this angle it has as yet been studied only superficially—the significance of the multiple dwelling. There were other papers of great value, such as that of Lawson Purdy, seconded by Robert H. Whitten and Frank B. Williams, on the districting of cities, which should leave convinced everyone in the audience except the New Yorkers—who were already convinced—and that of James Ford of Harvard on housing and disease, an old subject and a connection in which all housing workers believe, however difficult they may find it to prove. Professor Ford gave them new evidence.

But valuable as these and other contributions were, the beginning of thoughtful discussion of the multiple dwelling, be it a wooden three-decker, an expensive fireproof apartment house or a brick walled tenement house, is of greater significance. For it shows that we are at last awakening to a knowledge that sanitation is only a part of housing, that the type of dwelling has economic and social effects quite aside from whether it has dark rooms or inadequate toilet facilities.

There were differences of opinion, as those who believe the multiple dwelling a menace hoped there would be, to stimulate public opinion to the point of digging out the truth. Bernard J. Newman of Philadelphia painstakingly marshalled all the arguments pro and con, seconded by Prescott F. Hall of Brookline, Mass., but his adverse conclusion failed to carry conviction to James H. Hurley, president of the Providence Real Estate Exchange, who, however, confined his defense to the high priced and well planned apartment house; or to Edwin H. Marble of Worcester, birthplace of the three-decker, who presented figures showing fewer fires originating inside three-deckers than inside two-family houses. But this is only a beginning, and the importance of the event lies in the fact that it is a beginning.

The program of the conference covered a wide field, from such perennial subjects as housing and health, to which Professor Ford and Dr. Frank A. Craige of Philadelphia made real contributions, to the latest methods of securing economy in house building. Grosvenor Atterbury described in detail, illustrating his description with lantern slides, the method of building with concrete slabs that he has employed at Forest Hills Gardens.

Between these extremes there were discussions of garden suburbs, industrial housing, the city and housing, the essentials of good management, focusing community interest and educating the tenant.

Local interest in the conference had been stimulated by a housing survey of Providence made during the preceding five months by John Ihlder, Madge Headley and Udetta D. Brown. The printed reports of this survey were distributed among the delegates and a verbal report was made at one of the sessions, where it was discussed by Dr. Charles V. Chapin, superintendent of health of Providence; Paul N. Colwell.

Conferences

INFANT MORTALITY

THAT economic, educational and medical resources must be yet further drawn upon before the problem of infant mortality can be solved, was the thesis demonstrated by the American Association for Study and Prevention of Infant Mortality at its convention in Milwaukee, October 19-21. A new significance in old facts, a growing alertness to needs that have long awaited remedy, was characteristic of the meeting, rather than any sensational plans for new lines of work. For example, the federal method of protecting against the spread of poliomyelitis was described, but a whole session was given up to measles and whooping cough.

That at least 15,000 women in this country die each year from causes connected with childbirth, was stated by Dr. Grace L. Meigs, of the federal Children's Bureau. The death-rate from these causes has not changed during the past thirteen years.

It is in country districts that conditions are worst, Dr. Meigs said. There the struggle for existence too often means a foregoing of even necessities, to say nothing of conveniences and luxuries. The Children's Bureau will issue shortly a study of some such rural conditions made in Wisconsin and in North Carolina. Dr. Meigs urged a "county unit plan," with a county hospital and proper nursing and medical attendance.

More children die from measles and whooping cough annually than from

scarlet fever; many more than from infantile paralysis, said Dr. Borden S. Veeder of St. Louis. Each of these common diseases kills from 9,000 to 10,000 children annually, and the younger the child the greater the fatality. Hence the widespread idea that it is well for children to have these diseases while they are young "and to be done with it," is most erroneous.

How it has been possible to keep measles from spreading among the hundreds of children housed during every year at Ellis Island, was told by Dr. J. G. Wilson, one of the federal Public Health Service officers at the immigration station. By daily inspection and the prompt isolation of every child having any degree of fever, outbreaks of measles are being successfully prevented, even though new cases are brought in nearly every day. The plan could, Dr. Wilson believed, be easily adapted to a civil community.

Abby L. Marlatt, head of the home economics department of the University of Wisconsin, and Amy L. Daniels, of the same department, discussed some educational aspects of infant mortality. To supply every college woman with intelligent information upon the world problems of eugenics is the ideal which Professor Marlatt holds out.

HOUSING REFORM

THE National Housing Conference at Providence, October 9-11, brought up for discussion on a national stage a question which has had little

secretary of the Insurance Association of Providence, and Prescott O. Clarke, chairman of a committee appointed to draft a housing code in line with its recommendations.

HOURS FOR WOMEN

THE movement for interstate cooperation in the campaign for shorter hours for women wage-earners, initiated in New England in the spring [see THE SURVEY for June 3], is spreading to other parts of the country. The Women's Trade Union Leagues of the Middle West, backed by the central labor bodies of many cities, by branches of the National Consumers' League, women's clubs, suffrage organizations and the Women's Church Federation, held a conference in Chicago on October 6-8 at which the states of Illinois, Missouri, Kansas, Ohio, Kentucky, and Wisconsin were represented by ninety delegates from fifty-one organizations.

It was clear from the talks that it will not be long before Congress is asked to pass a bill for the limitation to eight hours labor a day of all women engaged in the manufacture of goods transported from state to state, exactly on the lines of the new federal child labor law.

At the business sessions the principal speakers were trade union women, who, knowing from experience the value of organization, urged its spread as the indispensable means of ensuring the strict administration of any protective legislation. As to the bill to be endorsed by the conference for presentation in the various states in as nearly as practicable the same form, was an eight-hour law and a forty-eight-hour week, this to be considered the minimum demand of the women, both organized and unorganized. A few pled for the inclusion of the Saturday afternoon as well, but it was decided not to press that point, the all important question being the attainment of the shorter workday.

A dinner at Hull House and a public meeting on Sunday afternoon were addressed by Victor Olander, of the Illinois Federation of Labor, Mrs. Raymond Robins, national president of the Women's Trade Union League; Mary E. McDowell, vice-president of the Chicago league; Agnes Nestor, glove-worker; Julia O'Connor, telephone operator; Sarah Spraggon, shoe-worker, and Sarah Green, waitress, presidents of the leagues at Chicago, Boston, St. Louis, and Kansas City, Mo. Mrs. Green was one of a number of women sent by their central labor bodies.

Mary Anderson, the league's fraternal delegate to the Canada Trades and Labor Council, spoke of the increasing industrial pressure upon women and even little children, as a result of the war conditions in the dominion. Dr. Bayard Holmes touched on the medical side; Myra Richardson of the Ford

Motor Company at Detroit, gave striking evidence on the invigorating effect on girls of reducing work within the limit of an eight-hour day and a forty-five-hour week. Mrs. John R. Commons, of Madison, Wis., represented the Madison Consumers' League, and Mrs. Florence Kelley, secretary of the National Consumers' League made a moving appeal for humane and consistent legislation.

THE third regional conference on the eight-hour day for women, met in Wilmington, Del., October 17, in all day session. The following resolution, unanimously adopted, is the basis of the nationwide campaign for simultaneous legislation in the states and in Congress. It is identical with the resolution adopted in Chicago on October 7, by the regional conference reported above:

"Whereas, the Supreme Court of the United States has upheld as constitutional the California eight-hours law for women; and

"Whereas, the Congress of the United States has established the eight-hours day for women wage-earners of the District of Columbia; and

"Whereas, four states have passed eight-hours laws for women; and

"Whereas, forty legislatures will be in session and can pass similar laws in 1917; therefore

"Resolved, that it is the sense of this meeting that we urge the men and women here present to promote in their own states the passage at the earliest possible date of laws based upon the California statute creating the eight-hours day and forty-eight-hours working week for women; and

"Resolved, that we approve the introduction in Congress of a federal eight-hours bill for women founded on the principles embodied in the federal child labor law."

"So long as mothers work in factories, so long will babes go to their graves," said Dr. Robin of Wilmington, speaking for the physicians, in favor of reducing working hours for all women, and most urgently for mothers of young children.

"If we do not get shorter hours soon for the young girls, there will not be much left to save!" exclaimed a young textile worker from the Kensington region of Philadelphia, describing the ravaged nerves of the mill girls under the present ten-hours law of Pennsylvania.

Mary Van Kleeck, of the Russell Sage Foundation, described the effect of war contracts upon state laws, showing how women in Connecticut have been deprived of all protection against night-work and overtime, and proving from a new angle the need of a federal law.

Prof. Thomas I. Parkinson, of Columbia University, closed the conference with a powerful argument for the constitutionality of an eight-hours law for women, modeled upon the federal child labor law.

Three New Books For Thinking People

POVERTY AND RICHES

By SCOTT NEARING, Ph.D.

Dean of the College of Arts and Sciences,
Toledo University

Scott Nearing tells why the rich are getting richer and the poor poorer. He argues that there is no justice in the present distribution of wealth, and he points out a new regime which he claims will abolish poverty.

Dr. Nearing presents an array of facts and arguments which are worthy of attention and are sure to arouse interest and sympathy. 293 pages. Cloth. \$1.00 Net.

THE CRY FOR JUSTICE

An Anthology of the Literature of
Social Protest

This is one of the most interesting books ever published. The *Review of Reviews* says: "It is a new world's history, and a vision of hope for the world's future." The *Chicago Evening Post* calls it "the book of the year." It is a Gospel of the new hope of the race. 950 pages. Illustrated. Cloth. \$2.00 Net.

THE FACTORIES AND OTHER POEMS

By MARGARET WIDDEMER

Contains the widely-quoted poem of "The Factories," and many other notable poems which mark Miss Widdeemer's gift of spontaneous and haunting music. 128 pages. Cloth. \$1.00 Net.

Go into any bookstore and see these books, or let us send you free, full descriptive circulars and our Book Catalogue.

WHO'S WHO IN THIS ISSUE

OURSELVES AND EUROPE is the first of a series of brief articles by EDWARD T. DEVINE, which crystallize the impressions and strong convictions he brings back from abroad. Mr. Devine went to Russia in March under a special commission from the State Department to assist the American Embassy at Petrograd in connection with matters arising out of the disturbed political conditions in Europe. His mission took him as far east as Vladivostok, and a group of twelve young men are now at work, in association with the American consuls, in the relief of civilian prisoners in the different provinces. His articles have nothing whatever to do with that work, but with the general social aspects of war and settlement, for which his stay in Russia and visits to France and England afford a background. They are a challenge to American thought and action to make themselves felt abroad as well as at home, now as well as at the close of the war.

V. EVERIT MACY is a member of the National Council of Survey Associates. That hasn't stood in the way of our attempt to treat objectively in a staff article (*A Rich Man in The Poorhouse*, by WINTHROP D. LANE) the work of a man who has come to grips with a rejected and haphazard sphere of public service. Westchester county is one of those great outlying flanges of an urban center which, while not lacking in the social and economic needs of the city itself, are proverbially lacking in self-conscious community spirit. This week Mr. Macy is candidate for reelection on the Democratic, Republican and Progressive tickets. During the month, also, he was named to fill the presidency of the National Civic Federation, left vacant by the death of Seth Low; for he is one of the few men of large affairs whose interest in charitable work and the labor problem is equally keen.

"**R**OD AND SERPENT" stories are the author's designation of a group of whimsical papers, some of which have been appearing in the *Medical Pickwick*. The author is WALTER M. BRICKNER, M.D., F.A.C.S., editor-in-chief of the *American Journal of Surgery*, and associate surgeon of Mt. Sinai Hospital; who, in spite of this impressive array of professional distinctions, shows a very human approach to the problems of hospital administration, by helping us see them through the eyes of Ignatius Phelan, patient. This sketch is a mixture of the satire of reform (witness the interminable "laying on of hands" in the wards) and the ripe humor of a medical man (mark his description of anesthesia delirium). It was originally given before the alumni of Mt. Sinai; and we are hopeful that Dr. Brickner will have more like it to give to them—and to us.

ENGLISH army men and Porto Rican public officials, French school teachers and Chinese missionaries, are reading C. M. GOETHE's series on *Exporting the American Playground*. In *Nirman Singh* is described a full-fledged recreation center, just outside Calcutta, matching those of Chicago or Boston. It was set up and maintained by Mr. and Mrs. D. H. Lee of Calcutta and Mr. and Mrs. Goethe—a new type of "infant industry," if you will—in the literature of importing and exporting.

OCTOBER 21 and 22 were the days set aside by proclamation of the President for collections for relief to Armenians and Syrians. The time has been extended for a ten days' campaign. It is both the misery and ministrations in the lands to the east of the Mediterranean that are the subject of this installment (*Red Cross and Red Crescent*) of Mr. BICKNELL's series on the great phases of war relief.

EDWARD A. STEINER, like Jacob A. Riis, has made *The Trail of the Immigrant* stand out in the imagination of Americans with something of the distinction and human appeal of the old wagon roads to the west. Amid the confused outgivings, provoked by the war and its racial antagonisms, his new book—"Nationalizing America"—should strike a clarifying note. It is published this month, and *The Face of the Nation* is an advance chapter.

HEALTHY it is that engineers and psychologists, doctors and manufacturers and bricklayers are all taking a fresh interest in boys and the education of boys. And healthy it is that they disagree. In *The Mind of a Boy*, Dr. WOOLLEY takes issue with a fellow townsman, Dean Schneider, of the College of Engineering of the University of Cincinnati, and describes for the first time the results of the first psychological laboratory in a vocational bureau of a city department of education. Of this bureau, Dr. Woolley is director.

IMPORTANT BOOKS FOR SURVEY READERS

War, Peace and the Future

A Consideration of Nationalism and
Internationalism and of the
Relation of Women to War

By ELLEN KEY

Author of "Love and Marriage," "The Century of the Child," etc. 12°. \$1.50 net. At the end of August, 1914, Ellen Key was asked: "In what way can humanity prevent war?" "Is it, according to your opinion, possible, and if so, by what means?"

This is a detailed answer to that inquiry. The author tackles the problem with characteristic thoroughness and brings it into relation with education and the needed readjustment of traditional viewpoints.

The Home Care of Consumptives

By ROY L. FRENCH

12°. \$1.00.

In understandable language, the author sets forth truthfully and conscientiously that hope and encouragement combined with sound advice which are essential to improvement in all tubercular cases. The instructions are very clear, not only as to how to avoid acquiring tuberculosis, but how to avoid giving it to others.

THE COMMON WELFARE

The Month	- - - -		128
Mr. Strong's Report on State Charities	- - - -		130
Shall Steel-Makers Work Seven Days?	- - - -		131
The Plans for a Peace League	- - - -		134

JUST as we go to press word comes of municipal grants for the fourth and the fifth playgrounds in Calcutta, made possible by the Young India Club, organized at the Ballighata playground, described in this issue. The club conducted a whirlwind campaign in true American style. This first appropriation from tax revenues marks the opening of the second phase in the development of playgrounds in India, and comes directly as a contribution of effort by young Hindu manhood. Page 111.

"PROPOSITION No. 1" and so on down to No. 19, in some states, plague the voter who is impatient to vote for Wilson or Hughes and have done with it. But many of the referendums are of prime social significance. Page 128.

COMMISSIONER STRONG'S report finds that the New York State Board of Charities "lacks vision; it lacks drive. It does not know its real job. It is not doing its real job." He proposes a thorough reorganization, but he would not change to the board-of-control system of some other states. And he rebukes sharply the side issues injected into the controversy by the Farrell and Moree pamphlets. Page 130.

LACKAWANNA STEEL wants to work its men seven days a week because other steel companies are doing it. A hearing on its application brought out sturdy testimony against seven-day work for war-time profits or for any other reason. Page 131.

WAR has not destroyed life alone in Europe, but much of injustice, class hatred and self-love along with the good. Edward T. Devine finds an exaltation of spirit in the trenches that is lacking among those safe at home, who hate their neighbors and pass by suffering. Page 99.

A VERY rich man resigned three years ago from thirty corporations all over the United States to take care of the very poor people in a single county. In his office as superintendent of the poor, V. Everit Macy's "extravagance" has not only saved the taxpayers thousands of dollars, but has changed the almshouse from a "charitable catch-all" to the center of social service in the county. Page 101.

FAMINE, plague and massacre, rather than enemy invasion, cause the problem of war relief in Turkey. Yet while Moslem Turk is persecuting Christian Armenian, Red Crescent and Red Cross are cooperating to send American aid to the Syrians in the empire. Bulgaria, too, must care for war sufferers. Page 118.

CERTAIN kinds of brains succeed in certain kinds of business. While mental tests don't pretend to single out the efficient baker and successful railroad president, they give a boy a clue to type of ability and a reason for his continuing some studies and discarding others. Page 122.

THE melting pot of America blends together the traditions and the standards of life and conduct of myriads of people. Out of it may come a civilization finer and richer than any of its elements, if we cherish the best and throw out the dross. Page 126.

SURVEY ASSOCIATES, INC., is an adventure in cooperative journalism, incorporated under the laws of the state of New York, November, 1912, as a membership organization without shares or stockholders. Membership is open to readers who become contributors of \$10 or more a year. It is this widespread, convinced backing and personal interest which has made THE SURVEY a living thing.

THE SURVEY is a weekly journal of constructive philanthropy, founded in the 90's by the Charity Organization Society of the City of New York. The first weekly issue of each month appears as an enlarged magazine number.

From the start, the magazine and its related activities have been broadly conceived as an educational enterprise, to be employed and developed beyond the limits of advertising and commercial receipts.

PRICE

Single copies of this issue, 25 cents. Cooperating subscriptions \$10 a year. Regular subscriptions weekly edition \$3 a year. Foreign postage \$1.50 extra. Canadian 75 cents. Regular subscription once-a-month edition \$2 a year. Foreign postage 60 cents extra. Canadian 35 cents. Changes of address should be mailed to us ten days in advance. In accordance with a growing practice, when payment is by check a receipt will be sent only upon request. Copyright, 1916, by SURVEY ASSOCIATES, INC. Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the act of March 3, 1879.

ONE WHO CAN'T CONCEIVE THE BEAUTY OF WAR

By Louis Racmaekers

Reproduced from the Fourth
Series of the artist's war drawings

Ourselves and Europe

I

By Edward T. Devine

IN Europe and its dependencies there is still but one subject of thought and speech. If from this one subject, the war, men turn their thoughts at moments to the time after the war, they are brought sternly back. Look after the war, a fighting statesman tells a public meeting in England, and after the war will look after itself. He is wrong, of course, but it is the popular mood. If, on the other hand, with a perceptible effort, men turn their minds to the time before the war, to the abiding interests of our common humanity, it is, whether they will or no, only to rewrite their history, reshape their politics, revise their judgments of men, recast their educational ideals and even re-examine their religious creeds and revalue what they have held dear and what they have rejected as trash, if by any such re-examining, recasting, revising and transvaluation, they can escape defeat and secure victory.

However it may be at the end, or may have been at the beginning, this war at its present stage is not like other wars. The nations are not "conducting a war." They are literally in a death struggle into which they must throw all their national resources. They are fighting for homes and children, for liberty and life. Never have great ideals enlisted such all consuming and unquestioning devotion, transformed so completely ordinary human beings into self-forgetful, willing instruments of the common will, the will to power, the will to remain alive and free—not in the individual life but in the organic life of the nation, of civilized society.

By an unhappy inspiration, a gifted and patriotic French author residing in Switzerland named his new book *Above the Mêlée*. No Frenchman writing while his countrymen are bleeding to death can easily be forgiven for feeling himself to be elsewhere than at the heart of the *mêlée*. Lord Cromer in a weekly review quotes a story of the failure of an English officer to settle a tribal feud in Arabia. In the midst of his appeal, one of the chieftains whispered in his ear that it was quite impossible that he could do otherwise than hate his enemy. "A dog is always a dog, though he wear a collar of gold," said an Arab at another time, and the reply was, "A slave remains a slave, though his turban's fringe be daily lengthened." What Lord Cromer does not point out is that,

as his Arabs reason and feel in their tribal feuds, so after two years of war Europeans, except perhaps Russians, reason and feel about their enemies. Three elderly respectable people in a first class railway carriage in England were discussing their neighbors. One of them told of a workingman in an exempt industry who refused to take advantage any longer of his exemption. "I have made up my mind," he said to his employer, "to go to the front and to kill seventeen Germans before the war ends." Asked why he did not say fifteen or twenty, he only repeated that he had thought it all over and had decided in his mind that seventeen would be just about right. The elderly respectable passengers in the first-class compartment relished and approved his decision, though his employer, who needed his services, did not. Nor have we any reason to condemn him above others. The favorite French explanation—*c'est la guerre*—covers his case as it does the reciprocal case of the similar resolution on the part of each of his seventeen Germans to kill seventeen or more Englishmen. There is much meaning in the French phrase. It is not war in the abstract, but this war, the war beyond all experience and imagination, the war to which we Americans must not become so accustomed that our feelings are dulled to its vast sufferings, its vast heroisms, and its vast consequences to every belligerent nation and to every neutral nation on earth.

THE war is a ghastly fact, Its shell-fire deaths and wounds, its prisoners and homeless refugees, its ambulances and hospitals, its submarines and submarine traps, its zeppelins and anti-air-craft guns, its broken treaties and food blockades, its depreciated currencies and dislocated industries, its harvests of shameful disease and horrible crippings and debts and taxes and widowhood and childless old age and orphanage, are already present actual experiences, not remote possibilities. They cannot be whistled down the wind. They cannot be concealed by war profits of bankers, shippers and munition makers, by high wages or war charities. They are the stubborn reality of more than two years of the twentieth century of our era. Christianity is abashed before the incredible, indisputable facts and will keep another advent season in the

spirit of Lent. Socialism and democracy are downcast, for there has been no salve in their medicine chests for the healing of the wounds of the nations, or if so socialists and democrats have ceased to care about them. Science is dumb while her secrets are rifled to make more devilish the arts of slaughter, scarcely having the heart to point to the healing and protective devices, magnificent in themselves, but insignificant in comparison with the destruction. Physical injuries are not the worst of the war, inconceivably terrible as they are. What Europe is losing of political and civil liberty, of the capacity for seeing things in due proportion, of the power of forming rational judgments of men and measures, no one has yet even tried to tell. Whipped-up hatred of enemies and hot-house affection for allies are deliberately encouraged as military assets. Reasonableness and good-will are for the time being postponed and in the long period of their disuse, children are growing into manhood and men are passing their prime. In this respect compensations, it is true, are not entirely absent. The war is something more than destruction and even in its destruction there is compensation. For a part of what has been destroyed was pernicious. Injustice and domestic class hatred and local tyranny have been partly destroyed along with the good. A fellowship has been created in every army, to safeguard which has been called Europe's first task of peace. A freedom from old prejudices and limitations has been secured, a new liberty of thought, an opportunity for which there was no room in the old days before the war—so long ago—more than two whole years; the crusts of tradition have been broken; the horizons widened; the souls of men shaken to their depths. The most frequent testimony of soldiers visiting at home is that, as never before in their lives, they have felt at the front a serious purpose in life. That the compulsion of war means freedom of the spirit may seem a paradox, but to those of Christian teaching it should not be strange. Acceptance of sacrifice is the escape into liberty. At the moment of offering their lives soldiers may feel themselves to have become the rulers of their destiny. Even those who do not serve in the armies may share this spiritual emancipation. Those who give a son to the common cause are full partakers in its communion. The bad old traditions broken for some are broken for all. The personal and class hatreds and prejudices and misunderstandings blown to pieces by the big guns no longer choke the fellowship whether in the trenches or at home.

THE supreme question remains—and it is a question of after the war—What will citizens and soldiers do with their new freedom? During the war they are believing in something. They may express it as a decision to kill seventeen of the enemy or more characteristically as a mere willingness to do one's bit. They may sing it as they march with the swinging Russian stride, after reverently receiving a blessing from the priest, of whom perhaps in his private character they may not at all approve. They believe this something in common with a conviction so sure that it is positively futile, perhaps even dangerous, to question it. Their views are so pronounced and so unanimous that lynch law and martial law are but alternative aspects of civil law, of the common will. Among them for the time being all the conventional distinctions of despotism, aristocracy and democracy are obliterated. In all lands the best available, who are not necessarily by any means supermen, govern despotically in a democratic spirit by common consent. It is a thrilling experience even as a guest to witness such national unity, such exalted patriotism, such a fellowship of spirit. It would succeed permanently only in hell or in heaven; and Europe in these days is strangely

compounded of the two empires. Of absolute virtue, purged of all selfish elements, there is abundant evidence. The fellowship of the armies, of the hospitals, of the prison camps, prophesies a new and better social order. Will it really come? Will such faith as the soldier now feels in his country and his cause one day inspire the peoples who toil at the tasks of peace and enjoy the fruits of their labor? Will the national unity and the mutual confidence which are now to be seen among allies survive the occasion of their origin and become genuine international respect, understanding and good-will?

It is not a question of one more Utopia. No dreamer or lonely prophet has seen this vision. What has happened is that out of the blackest, most infernal experience through which, as far as we know, the race has ever passed there has seemed to come literally to millions of men a redeeming conviction, a healing and transfiguring assurance, that brotherhood is not a delusion; that life has a meaning; that resolution and courage and discipline and simple faith in fellowmen and loyalty to ideals are now, as they have always been, within that meaning; that these things are, as they will be forever, within man's heritage, to be displayed in war until the better way is found.

It is not betrayal of a peace ideal to hope that this intensity of feeling and thought and action will come again when other motives, comparable with those of war, call forth the best that is in us. Men will be free hereafter to live larger and more beautiful lives than we knew before the war. How will they use that freedom?

Why may not Americans give immediate answer? The freedom which will come in Europe when the war clouds lift is ours now. We are near enough to understand if we have imagination and sympathy. The experience of the war, its human meaning, can be understood and absorbed. It is neither outside our interests nor beyond our comprehension. These men in the trenches are our brothers. They are of our generation, of our race, of our religion, of our fellowship. They cannot if they would deny us a share in their trials, their griefs, their triumphs. The war is not sheer anarchy. It is not all madness. It is tragedy and its end is not yet. The spirit of those whom the war dominates, of those who kill in the trenches, who fly in the air with bombs, who swim in the depths with torpedoes, is better than the spirit of those who, safe at home, hate their neighbors, or pass by suffering, or thank God that they are not like the Germans—or the Cossacks. From these evils of our generation, Europe is for the time being relatively free, though they are paying dearly for that freedom. We who hate war and who labor and hope, and it may be pray, for peace have to discover whether it is true, as we believe, that there are moral substitutes for war, whether by gentler means the good Lord will deliver us from the evils of selfishness, sordidness, slothfulness, pettiness of soul, sectarianism, sectionalism, provincialism, and above all from the conceit of ignorance.

WE ourselves, citizens of the great republic of the West, will have a nation's part to play in this ending of the war, in the reconstruction of shattered homes and industries, in the establishment of an honorable and just peace and the creation of a real if not at first a nominal world federation. We are greatly in danger of underestimating our part. It is not to be played exclusively by the government and the war-relief agencies. In the informed and crystallized public opinion of the neutral countries, finding sober and emphatic expression through responsible channels, lies the best hope of the world's restoration. That obligation is one of the present, not exclusively of the indefinite future.

A Rich Man in the Poorhouse

Behind That Another and Bigger Story—
What Any American County Can Do

By *Winthrop D. Lane*

OF THE SURVEY STAFF

THERE is a fashion in this country to belittle the work of rich men in public office. If the rich man has paid for part of his work out of his own pocket, the disparagement grows stronger. If he has taken on new duties, served new ends, done things for people that other men in like positions have not done, and if any of this has been at his own expense, his work is not regarded as significant. It may be curious and interesting, but it is not instructive. Such a man, it is said, has had advantages; he has had means and opportunities that are unique. No one need study his work; it is too exceptional. There is no object-lesson in it, nothing that other communities can follow, unless they, too, get rich men in public offices.

This criticism has been directed against the work of V. Everit Macy in Westchester county, New York. Three years ago Mr. Macy became Superintendent of the Poor. He overthrew the old conception of the function of that office. He created a new point of view toward problems of dependency and relief. He stretched his position to cover new activities; he strengthened and systematized the work that it had done before. He obtained appropriations undreamed of by his predecessors and has just succeeded in securing not only a new site and new buildings to cost \$2,000,000, but also the passage of an act that will go far to reduce misery and its consequences in that county.

For some of this work he raised money from private funds; for parts of it he paid himself. When families were being needlessly disintegrated and held apart because there were not enough children's visitors to go round, Mr. Macy employed more. When children were being brought up in institutions and paid for by the county, while scores of private homes stood ready to receive them, Mr. Macy employed agents to see that the transfer should be made. When a wealth of material that might throw light on the causes of pauperism was being neglected because there were no investigators and clerks to bring it together, Mr. Macy hired them. All of this he did, not because the county could not, but because it had not yet seen the necessity. The quickest way to show the necessity was to show effective results.

This does not mean that Mr. Macy has not made a valuable demonstration of the way to run an office of Superintendent of the Poor. Many of the experiments that he began have already been taken over by the county; more, unquestionably, will be. He has done the work, or parts of it, faster because of his private means. But he has educated the county as he went along. He has done nothing that the county cannot afford to do and few things, probably, that it will not eventually do. Therein lies his demonstration, not only for his own successors, but for other counties in other states that are willing to bring their own offices up to the same high level of efficiency and service. Not all counties can make such large appropriations as Westchester, but all counties can build in proportion to their needs. They need not employ rich men

to make their demonstrations, for the travail of experimenting has now been done for them.

Mr. Macy will again come before the voters for election

V. EVERIT MACY, SUPERINTENDENT OF THE POOR

on November 7; not this time as Superintendent of the Poor, for that office he has himself abolished, but as County Commissioner of Charities and Corrections, a new post that has grown out of his own work as superintendent. Unless the skies fall, he will be elected, for the Republican, Democratic and Progressive parties have united upon him as their candidate. This is the first time in twenty years, and is said to be the second time in the history of the county, that the two major parties have found themselves in such agreement.

Mr. Macy was already known for his philanthropic activities when he took office January 1, 1914. He had helped to found the New York Provident Loan Society and the National Employment Bureau. He had served as director or trustee of the University Settlement, Teachers' College, the American Association for Labor Legislation, the National Child Labor Committee, the George Junior Republic and other agencies. At the age of seventeen he was teaching wood carving to boys in New York city; from that time on his interest in social enterprises was fixed.

As a business man he has helped to direct the policies of banks, public service corporations and railroads. The basis of the family fortune was laid when Mr. Macy's ancestors discovered a market for whale oil in New England, and from that branched out into a general shipping and commission business. Three years ago Mr. Macy resigned from some thirty corporations, boards and committees, both philanthropic and business, to devote himself to the administration of the poor law in Westchester county.

Mr. Macy's First Campaign

IN THE CAMPAIGN of that year, 1913, he was the candidate of the Democrats and Progressives. Opposed to him was the machine that has always held Westchester county in its grip. The candidate of the machine was a man well identified with his party but possessing no special fitness for the position he was seeking. The fight between them was decent but intense. Mr. Macy was called a theorist; it was said that if elected he would be merely an absentee office-holder. His wealth was, of course, a drawback. What sympathy, it was asked, could a rich man have with the misery and problems of the poor? Moreover, he did not need the salary—always a handicap to a local political aspirant. His opponent, it was argued, had always befriended the party and deserved the job.

For his part, Mr. Macy promised to take the office out of politics and to give it a business-like administration. He said little about his real reason for accepting the nomination, which was the opportunity he hoped he would have to study the causes of dependency and to secure data for social legislation. He soon felt the nature and force of the elements he was fighting. Seventy-five per cent of the press of Westchester county is Republican; Mr. Macy could not buy space for an advertisement in a single Republican newspaper!

His arguments, however, apparently convinced the voters. When the returns were in, the normal Republican majority of 4,000 or 5,000 (the total vote cast was 55,000) had been converted into a victory for Mr. Macy of over 5,000. Two other candidates on the combined Democratic and Progressive ticket had won with him.

The election was the first step. Mr. Macy found himself holding office not only in the most backward unit of American government, the county, but in a county which in spite of recent awakenings had long been fond of being boss-ruled. Westchester is the northern gateway to New York city; thousands of commuters living in it pay no attention to local affairs. It has, on the other hand, a local population ranging all the

way from four teeming cities to nineteen towns and twenty-four villages. Though no part of it is more than fifty miles from New York city, nearly half its area is in farm land and 300 and 400 acre farms abound. The population is 325,000, over a fourth of which is of the first generation of immigrants. The county thus presents in large numbers all gradations of wealth, intelligence and civic interest. Local political power is left for the most part in the hands of machine-made bosses and, though better days are dawning, local offices are still too much run for profit and influence. It is the county in which Sing Sing reached its undisturbed height of graft.

When Mr. Macy became Superintendent of the Poor he found the office not one that the people had held in high esteem. His opponent in the late campaign had been a plumber by trade; his predecessor, who had held the job two terms, was a successful small-town butcher. No sooner had Mr. Macy been elected than upwards of a hundred applications for positions flowed in, each mentioning the names of sponsors who, the applicant seemed to think, would make further recommendation unnecessary. Mr. Macy answered these by asking about the applicants' qualifications. In most instances this closed the correspondence.

The plant that Mr. Macy found was archaic, disjointed, inadequate. The Westchester county almshouse is a descendant from the days when almshouses were the "charitable catch-alls" of the community. The present site has been used for one hundred years. The central building, in which all the inmates eat and where some of them still sleep, was erected eighty-five years ago; it belongs to the period when lunatics, epileptics, feeble-minded, sick people and even children were dumped into a common institution with paupers and sometimes with delinquents. The buildings are unsafe and insanitary. Several rooms still contained, when Mr. Macy arrived, the iron window bars formerly used for restraining the insane and other persons who proved unmanageable.

The prevailing conception of the superintendent's duties was very primitive. By law this officer is charged with the management of the almshouse, the county hospital and the poor farm; he had also been given two agents whose function it was to find family homes for children living at public expense in institutions. In practice these duties had devolved into the merest routine. If the superintendent kept the inmates well fed, made a show at cultivating the farm, and left the hospital to take care of itself, he was sure of approval. He bought supplies where and how he liked; if he changed dealers frequently enough he could keep them all satisfied. He had no budget and paid for his purchases by signing drafts on the county treasurer. Once a year the almshouse committee of the Board of Supervisors visited the institution and compared the amounts of these drafts with the bills themselves; this was the only check on the superintendent's honesty. If the superintendent was persuasive enough, he could induce the supervisors to pay many bills direct, so that the amounts of bills so paid never appeared on the books of his office. This he had habitually done. Mr. Macy found that his predecessor, for example, had estimated the per capita cost of caring for inmates during his last year of office at \$2.41 a week, whereas if he had included all the amounts paid by the supervisors themselves the per capita cost would have been \$3.47.

Graft and Inefficiency in the Almshouse

PETTY GRAFT was considerable. In the almshouse an inmate cobbler, who was given hide and nails with which to repair the inmates' shoes, used a fellow inmate to solicit trade from neighboring workmen and farm hands, and charged them for

his work. The man who hauled ice from the institution's ice house kept a local ice-cream parlor supplied the year round. Sugar and other articles from the almshouse kitchen found willing buyers on the outside.

Graft was less an evil than neglect and inefficiency, however.

The superintendent's staff consisted of the almshouse keeper and one clerk. Inmates were admitted without medical examination of any sort, though the hospital was less than two hundred feet from the administration office. The only evidence that an inmate had left was the little red card, given him on admission, which he was supposed to relinquish when he went away; no count or census was apparently ever taken.

Mr. Macy was not surprised, therefore, to find that thirty inmates were on the records of the institution, charged to their respective towns, who were not in the almshouse at all. Some

built above the furnace in a dust-filled basement. The place was a fire-trap for 180 inmates.

It will be seen that if Mr. Macy intended to make material changes in these things, he had to begin at the beginning. One of his first moves, of course, was to improve his staff. This he has slowly built up until now he has around him a group of competent, trained men and women, many of them college bred, who are as unlike the staff commonly found with a county poor-law officer as the faculty of a university is unlike that of a one-room country school. He systematized the keeping of records, so that accounts with towns are now accurate and complete. He required physical and medical examination of all incoming inmates and segregated those needing treatment. He startled the county as well as the inmates by requiring that all able-bodied men should work.

He weeded out mental defectives and either sent them to

BITS OF THE HUMAN DRIFTWOOD MR. MACY TURNED TO ACCOUNT

of these had died; one had been dead two years and was still being paid for by the town he had lived in. Thirty others, however, were in the institution and not upon the books. Bad methods seemed to carry their own corrective, but unfortunately not all of these mischarges were against the same towns, so that some communities were paying more than their share.

These are only a few of the archaicisms Mr. Macy found. The hospital furnished others. Its X-ray machine was too broken to be of use. It had only one room for confinement cases, so that occasionally mothers and their new-born infants had to be moved about. No record was kept of the effect of food upon inmates; scientific dietaries were, of course, unknown. Inmates cooked for the patients, and retarded rather than advanced their health. Gauze and sponges used in operations were sterilized by being boiled on the kitchen stove and then laid out to dry on the fire escape or on wooden racks

state custodial institutions or put them on the waiting lists. He started competitive bidding and modern business methods in the purchase and accounting of supplies, and though this entailed an annual expenditure of nearly \$1,000 more than before, in one year he had saved \$18,000 to show for it. He reduced the weekly per capita cost of keeping inmates from \$3.47 to \$3.13 the first year, to \$2.78 the next. He accompanied this reduced cost with an improved diet, scientifically arranged, which not only raised the health level of the inmates generally, but decreased the cases of acute Bright's disease by 50 per cent. He put a check, for the first time in the history of the institution, on all foods and supplies given out from the store-room, thereby ending petty thievery and graft. He improved the cultivation of the farm, not only raising \$10,000 worth of produce where \$3,000 worth had been raised before, but also stocking it, out of proceeds, with pigs, cattle and other live-stock.

He gave new purpose to the hospital. Heretofore this institution, inadequately staffed and poorly supervised, had taken care of obvious illness as best it could. Under Mr. Macy it has become not only as efficient as plant and funds allow, but it has drawn to itself functions that affect the whole life of the inmates. Periodic measurements and examinations of individuals afford a basis for adjusting the amounts and variety of food. Work is assigned only in accordance with the doctor's recommendation. For the first time qualified physicians and surgeons visit the institution regularly, charging no fees, and a dentist, oculist, orthopedist and other specialists call when needed. A paid bacteriologist is employed full time. So able has the hospital become to do its work effectively that indigent sick who are not inmates of the almshouse proper are now admitted, and it even cares for a few patients who pay small sums for the treatment they receive.

These reforms laid the groundwork; others have been more far-reaching in effect. When Mr. Macy entered office he found nearly two hundred authorities in the county committing or with power to commit children as public charges to

broke up too many families needlessly. At this point the local justice came in. If an appeal by a family to have its child committed failed before the poor-law authority, the family could usually go round the corner and find a justice who would sign a court commitment on the ground of "incorrigibility." Records found by Mr. Macy's assistants show children of six to have been committed as "ungovernable."

The overseer method of commitment was productive of still another evil. Usually this official is paid by the day, or on a commission basis. In either case, the signing of a commitment order was money in his pocket. If paid by the day, to sign such an order was easily made to constitute a day's work; if five orders were ready to be signed at once, they were quite likely to take their turns on five successive days. If paid on the commission basis, the overseer received so much for every order signed. Nor did his profits end there. Mileage was granted to him for accompanying the child to the institution; the amount nearly always exceeded his actual expenditure. Five children were therefore sure to mean five different trips, though they might all be going to the same place. This

THE ALMSHOUSE—

says Warner, "is the guarantee against starvation which the state offers to all." This one was a fire-trap, as well as the scene of some astounding reforms

private charitable institutions. The commissioners of charity in three cities had that power; all local (township) overseers of the poor had it; four justices of the peace in each of nineteen towns had it; and, finally, police justices and city judges had it.

Many abuses grew out of this scattering of authority. In the first place, it was to the interest of the local commissioner or overseer to commit children whenever he could find excuse. He is the person charged by law with the relief of poor people in their homes. Such relief is paid for from the funds of his department, whereas the county itself pays for children in institutions and the expense is then passed on to the towns in the form of taxes. By putting children into institutions, thereby relieving their families of the burden of supporting them and himself of supporting the families, he could keep down his own expenditures considerably. Hence, he welcomed the opportunity to make commitments.

This, of course, meant nothing more than the break-up of families for the sake of an official's vanity. Nor did the evil stop there. These officials were sometimes watched; private charitable agencies were likely to call them to account if they

beautiful scheme of things is not peculiar to Westchester. It exists throughout the state, and is still followed.

In these commitments of children the superintendent of the poor had no hand; they were made direct to the institutions by the local authorities. Since the county paid the bills, however, it was to its interest to see that the number of children in institutions was kept down. Mr. Macy found when he entered office that two agents were employed to do this. These agents visited the institutions, saw the children who were public charges, and tried to place them in private homes. They were under the authority of the superintendent himself. Their work, of course, though better than leaving the children in the institutions indefinitely, began at the wrong end of the process. Instead of trying to find homes for children before commitment or keeping them in their own homes, the county waited until they had been put into institutions and then virtuously tried to get them out again.

One of the agents visited Catholic institutions exclusively and had about 650 children to look out for. The other visited only Protestant homes and usually had about fifty children on her list. Each had the whole county for her area, so that

one of them, visiting an institution in one end of the county one day, was likely to be followed the next day by the other, visiting a different institution in the same locality. In this way they ate up both money and time in needless travel. Five agents are today traveling for what these two spent.

The first thing that Mr. Macy did was to employ three more agents. The separation of Catholic from Protestant institutions was discarded and the county was divided into four geographical districts. No agent had work outside a given area. A director, Ruth Taylor, formerly assistant superintendent of children's agencies of the State Charities Aid Association, was put in charge, and a stenographer employed to keep records. A next step was to secure cooperation of committing authorities to notify the superintendent before actually committing children to institutions. This was fairly successful. The superintendent's agents then investigated each case and were able in many instances to keep the child in its home, to place it with relatives, or to find another home for it. Two years ago a law was passed, at Mr. Macy's suggestion, providing that no justice of the peace in Westchester county could

were placed in free homes. One hundred and seven were recommended for acceptance as public charges, and the cases of sixteen were pending when the year closed.

Not only were unnecessary commitments prevented. During the year, 311 children ceased to be public charges and left the institutions in which they had been cared for. A few of these were transferred to state institutions, some were placed in foster homes, several of them died, three became self-supporting, and two ran away. By far the greater number, 239, were returned to their own relatives. In all of this the work of the agents played a considerable part. One boy, for example, would probably have stayed in an institution as long as he legally could if an agent had not found an aunt living in Connecticut who was willing to care for him. Two others, whose father had died and whose mother had married again were returned to her and her new husband, who were glad to receive them. The mother had simply not known how to secure their release.

Westchester county was unused to such conservation of child life. At first it could not see the purpose of so many

THE NEW ALMSHOUSE

Note the many corridors looking out on courts. This arrangement is said to secure most of the advantages of the cottage type of institution

commit a child without first notifying the office of the superintendent. The latter is then given five days to investigate the circumstances and report his findings, with recommendations, back to the justice. The use of the law has not been pressed, because the authorities, now that they are being watched, are either making fewer unnecessary commitments, or are notifying the superintendent of their own accord.

Last year, for example, the second of Mr. Macy's term, committing authorities referred no fewer than 435 children to the superintendent's agents for investigation before commitment. In ordinary course, under the old régime, most of these unfortunates would have been whisked off to an institution in short order; both they and the county would have been the losers thereby. But under the new procedure the agents were able to rescue three-fourths of the number from such a fate. In 130 cases the family need was met by an appeal to relatives or by other means that made commitment unnecessary. Eighty families were found to be in no real need. In seventy cases advice or direction was given that induced withdrawal of the application. Twelve children were sent directly to state institutions for defectives and twenty

individuals busying themselves in other people's affairs. Slowly the work began to tell. Imagine the county's surprise when Mr. Macy showed how much money his apparent "extravagance" had saved. For two years prior to his coming the number of dependent children had increased at the rate of 7.7 per cent. During the first year of his superintendency the increase was cut to 2.9 per cent and during the second year to 1.2. If the old rate had continued, seventy-two more dependent children would have been cared for in institutions at public expense than actually were cared for. The average cost per child of the care of committed children is \$237.60; the reduction, therefore, saved the county over \$17,000.

These figures interested the Board of Supervisors. Last year it took over the three agents whom Mr. Macy had hired with private funds. To-day it is paying the salaries of six agents and a stenographer for this work, instead of the two agents it was employing three years ago. Private funds are still doing a large share; one stenographer, one clerk, three agents, a director and assistant director are being supplied outside the budget. Fourteen persons in all are doing the work and a separate department has been organized, with Miss

MORE OF THE OLD

Ramshackle additions to the Westchester County Almshouse

Taylor at the head. Child Welfare, not the mere routine withdrawal of children from this institution and from that, has become the object of the work.

As a direct outgrowth of this work for children, Mr. Macy has taken a step that is revolutionary in public poor relief in New York. In that state, as in nearly a third of the other states, the county superintendent of the poor has no power to grant aid to families in their homes; all authority to do this, so far as public officials are concerned, is centered in the commissioners and overseers of the poor. When Mr. Macy entered office he found these officials, as already explained, breaking up families and sending children to institutions needlessly. He appeared before the Board of Supervisors and said:

"This arrangement is absurd. I can call upon you to pay for maintaining children everywhere but in their own homes. I can be a party to breaking up families but I can not keep them together. Will you grant me an appropriation to maintain poor families in their homes, if I am able to do so at no greater cost than it requires to support the children of those families in institutions?"

Revolutionizing Outdoor Relief

THE board listened, and appropriated \$6,000 for the purpose. A check, at Mr. Macy's suggestion, was placed upon this power by the provision that the local supervisor may, if he desires, object to the granting of this relief to a family in his town. As the matter has worked out in practice, if no objection is made within five days, an agent of the children's department takes the money to the family's home.

Mr. Macy has justified this action, on the legal side, by reference to a provision in the state poor law. Section thirteen of Article Two of that law gives to the board of supervisors of any county the power to "make such rules and regulations as it may deem proper in regard to the manner of furnishing temporary or outdoor relief to the poor in the several towns in said county." If this provision justifies the action taken, Mr. Macy may well claim the credit for discovering that fact. Certain it is that no county superintendent hitherto has made similar use of it, but has left outdoor relief wholly in the hands of the overseers.

The use of the new power did not end at this point. Two years ago New York passed a widow's pension law. Under the provisions of this act boards of child welfare were to be constituted in every county of the state to grant relief to widows with children. The children were to be kept in their own homes and only those widows were eligible who

had resided two years in the county, and whose husbands were residents of the state and citizens of the United States at the time of their death. The act was restricted, therefore, to a definite and relatively small group of persons.

Mr. Macy saw no reason for this duplication of his machinery. He was already granting pensions to families in their homes. Why should a special class of such cases be handled by a separate board, composed of seven members, which would have to establish its own machinery and do its own investigating?

THE NEW PENITENTIARY

Westchester county is putting this, a new almshouse and a general hospital under a single management

The board, however, had actually been appointed. Porter R. Lee, an expert in relief and member of the faculty of the New York School of Philanthropy, had been made chairman; Mr. Macy was *ex-officio* member. Mr. Lee, it turned out, shared Mr. Macy's views. From the first he had hoped to make use of the superintendent's office in carrying out the work of the board.

The amount asked by the board as necessary to provide relief for the widows who would probably require it in 1916 was \$25,000. When the board appeared before the finance committee of the Board of Supervisors to urge this appropriation, it was at once met with the question: "How does the work you are authorized to do differ, in principle, from the work Mr. Macy is doing with the \$6,000 already given to his office?"

Mr. Lee was obliged to answer that, in his opinion, the difference was slight. He pointed out that there was a theoretical advantage in having a board of unpaid, public-spirited citizens performing the function of relief agents in the community, but that this advantage was small when compared with the existing equipment of the superintendent of the poor's office for doing exactly the same work.

The members of the finance committee agreed with him and the money was not granted. Mr. Macy is, therefore, now performing the work intended by act of legislature to be performed by the Board of Child Welfare. No one has questioned his authority and no one seems likely to do so. The Board of Child Welfare has postponed its meetings from month to month, though it still exists as a legal and potentially active body. Its hands are tied, for under the law creating it the Board of Supervisors is not required to give it any money. In many other counties of the state boards of child welfare have received appropriations and are at work.

What the Pensions Have Meant

THIRTY-SIX WIDOWS who would have qualified for relief under the Board of Child Welfare act have been helped by Mr. Macy's office. These, with the mothers being aided from the earlier appropriation of \$6,000, make fifty-four families who were receiving pensions on September 30. The number of children under sixteen in these families is 209. It has cost \$1.46 per child per week to keep these families together. To maintain a child in a boarding home the county now pays, under a regulation of the Board of Supervisors, \$2.50 a week, though this amount is regarded as inadequate, while for institution care the cost is usually \$3. Here again, therefore, humanity and economy have gone hand in hand.

These are some of the ways in which Mr. Macy has used his present opportunities to serve the poor of Westchester county. He has not been content to rest here. Buildings archaic and inadequate, a farm too small, and a state poor law suited possibly to rural districts but unworkable for a county of thriving towns and many people, have not seemed to him efficient instruments of public service.

How Mr. Macy secured appropriations for a new site and new buildings for the almshouse, a general county hospital and a county penitentiary, in a county that three years ago regarded its poor-law administration as a matter of small concern, is one of the promising signs of a new day in local government. He did it largely, of course, by the demonstration of service that has already been described. Formerly when grand juries and investigating bodies visited the almshouse they were shown the institution's best side. Mr. Macy has shown them all sides and has preached valuable lessons on the responsibility of a county to provide suitable surroundings for its helpless and dependent wards. So effective have his lessons been that the only opposition to the purchase of the new site, which cost \$175,000, came from the supervisor in whose township the property lay, and who regretted to see it stricken from his tax list. When the Board of Supervisors agreed to continue the payment of the taxes, however, even this opposition ceased.

A million and three-quarter dollars has already been voted for the new buildings. The farm, comprising four hundred acres, lies close to the old site and actually adjoins it along a strip of two hundred feet. For the almshouse proper \$700,000 has been appropriated, \$300,000 for the hospital, \$500,000 for the penitentiary and workhouse, and \$250,000 for the central heating, lighting and other service plants. A half million more will be needed, Mr. Macy thinks, if the hospital is to perform its maximum service.

The penitentiary is a new institution in Westchester county. It was made necessary by the inability of New York city longer to board county prisoners in its own institutions. It will supplant the county jails as a place for confining convicted prisoners and so will end for Westchester one of the long-continued evils of county jails in this country. Prisoners will be paid wages, the amounts thereof not to exceed their actual earnings.

Criticism might reasonably be directed against congregating such diverse institutions as an almshouse, a general hospital and a penitentiary on one site. This is to be met by a novel device. Two railway lines run close to the new property. For each of the three institutions a different station will be used: for the almshouse, East View; for the hospital, Kensico; for the penitentiary, White Plains. Different entrances will also approach each building. In this way not only will persons coming to one institution be unlikely to encounter those coming to another, but the general public will not associate

the institutions with the same site. Meanwhile the advantages of congregation will be gained by the use of central heating, lighting and sewerage plants. The children's work, comprising a separate department, will be handled from offices in White Plains.

The New Law

WITH A NEW SITE and new buildings provided for, Mr. Macy turned his attention to the organization of new machinery to run them. The law embodying his ideas will take effect January 1; it is limited to Westchester county. Under it the office of Superintendent of the Poor passes out of existence; in place is created a county commissionership of charities and corrections. This officer, who for the next three years will be Mr. Macy, will have, in addition to all the powers now possessed by the Superintendent of the Poor, power to appoint the heads of six separate departments. The need for some of these has already been foreshadowed. They are a superintendent of the almshouse, a superintendent of the general county hospital, a superintendent of the county farm, a director of child welfare, a steward of county institutions, and a warden of the county penitentiary and workhouse.

The new law makes several changes in procedure. It centers the commitment of children in the hands of the commissioner; overseers of the poor and city commissioners may no longer commit except into his custody. The commissioner himself may commit as he sees fit, subject only to the general law of the state. This eliminates at a single stroke the whole range of evils growing out of the scattered power to commit already described. The law furthermore removes all question of illegality from the payment of pensions to families by giving the commissioner power "to make such arrangements for the care of needy children as may be authorized by the Board of Supervisors."

Under the operation of this law the hospital, which heretofore has been only an adjunct of the almshouse and limited for the most part to almshouse patients, will become a general county institution. It will have a capacity of 600 beds and will perform for Westchester county a function similar to that performed for New York city by Bellevue. Patients will be received as sick persons, not as paupers.

Mr. Macy's Study of Causes

WHEN MR. MACY accepted the nomination for Superintendent of the Poor one of the services he hoped to render was to study the causes of dependency. He lost no time in getting started. With the aid of his assistant superintendent, Herbert A. Brown, he has begun inquiries in several directions. One of these deals with all inmates admitted to the almshouse in 1914; when completed this study will include nearly six hundred persons. Two investigators, employed with private funds, have spent two years gathering all available information concerning the habits, work, associations and family connections of these subjects, together with all other matters that might throw light on their ability to be self-supporting. The heredity of one hundred and sixty families has been charted. While the inquiry has not yet reached a final or publishable stage, it is interesting even now as indicating what the office of county superintendent of the poor can be made to do in the way of contributing to an intensive study of social and individual distress.

One conclusion already drawn by Mr. Brown concerns the importance of drink as a cause of pauperism. "It is a conservative estimate," says Edward T. Devine in his *Principles of Relief*, "that one-fourth of all the cases of destitution with

which private relief agencies have to deal are fairly attributable to intemperance." Mr. Brown interprets his own study to mean that among the more sodden and hopeless classes found in a county almshouse this percentage is at least above sixty. As a result of his inquiry a bill has been drafted that will, if enacted, provide in Westchester county a method for the treatment of inebriety similar to the one already in operation in New York city. Courts will be given power to commit inebriates to the custody of the county commissioner and a board of inebriety will advise in the care of these inebriates.

In addition to this study of almshouse inmates Mr. Macy has begun studies of the families of dependent children and those receiving pensions. Prof. Edward L. Thorndike, professor of educational psychology at Teachers' College, New York City, has applied mental tests to great numbers of these children and has already published some of his results in the *Archives of Psychology*.¹

The Heart of Mr. Macy's Conception

I HAVE THUS tried to suggest the more important ways in which Mr. Macy has altered poor law administration in one county. What he has done others may do. By paying an adequate salary any county with large problems and moderate means can attract a trained man to its chief poor law office. Such a man need not be personally rich to accomplish wonders. The heart of Mr. Macy's conception of his office is that it should be the center of social service development in the county at large. Occupying a pivotal relationship to other offices, exercising or coming into con-

tact with nearly every function of public and private charity, and possessing innumerable sources of information, an office of this sort can, he believes, take the lead in social welfare.

Who, for example, is so privileged as the superintendent of the poor to look into hundreds of homes where children are poorly supported, ill-treated and given every encouragement to lives of crime? Who, then, should be in a better position than he to arouse a demand for juvenile courts, where special attention can be paid to the causes of youthful waywardness? A superintendent also comes into daily touch, as head of the almshouse, with men and women whose chief misery is that they have lost the capacity to work. Why should not he take the lead, then, in establishing public employment bureaus, both for such of his own charges as are able-bodied and willing, and also for the county as a whole? Through his acquaintance with the sick and those disabled by disease the superintendent knows, too, the shortcomings of individual and social hygiene. Why should he not lay this experience, also, before the county and so contribute to the establishment of public health bureaus and the development of improved sanitary measures?

These are, indeed, some of the steps that Mr. Macy hopes yet to take. He has already brought about a new era in the administration of poor relief. Why, he asks, should he not be permitted to accomplish a similar service in the raising of social service standards and the development and unification of social service agencies?

By returning him to office November 7, that is what the people of Westchester county will give him an opportunity to do.

HOSPITAL STAFF AND NURSES UNDER MR. MACY'S RÉGIME

¹ See *Archives of Psychology*, No. 33, Sept. 1915.

WELL, here Oi am at the horshpittle, Finnegan, wid an iccavation in me shtomach sproutin' iodoform gauze loike a yellow chrysanthe-mum, and a chist protictor, that they call an abdominal boinder, decorated wid diaper pins and floatin' around in me arrmpits. Wan av the young docs has just tucked a frish loinin' into me an Oi've nathin' to do till tomorrow. "Pretty saft an' aisy," I can hear ye sayin'. Whisht till ye hear the whoul shtory.

Whin Oi got to the horshpittle, Finnegan, they took me into a rayciption ward, where Oi hild a rayciption wid a big bruiser who put me into bed and rran aff wid all me clothes an' thin come back an' nearly tuk the hoide aff o' me wid a shcrub brush an' sapolio. Afther he shcrubbed me roight leg he says, "Now put out yer ither leg;" but Oi fooled him be givin' him the roight leg agin, thus praysarvin' the lift wan in a natural condition.

In a few minutes in comes a young feller in a whoite suit—

IGNATIUS PHELAN AT THE HOSPITAL

A "ROD AND SERPENT" STORY

By Walter M. Brickner, M. D.

the chef come to take me orrder for dinner, thinks Oi, "Phwat do yez complain of?" says he. "Oi complain," Oi says, "mostly av that big spalpeen that shtole me clothes and terbacker an' thin shcraped me carcass wid the rough soide of a currycomb," Oi says. "No," says the young whitewing,

"Oi mane, phwy did ye come to the horshpittle?" "Me boss sent me here," Oi says, "Oi'm his butler," Oi says, "Oi used to be his coachman till he—" "Nivver moind about all that," says flippy whitewing, "tell me, phwat's the matter wid ye?" "Oi came here to foind out," Oi says. "Whin do ye think Oi'll see a docthor?" Oi could see that riled him, Finnegan. Thin he came back at me wid "Have ye anny pain?" Think av it, Finnegan, me up foive morrtal noights wid the shcramps an' this young ballyhoo askin' me did Oi have anny pain! "No, young man," Oi says, "Oi haven't anny pain, at all, at all, an' Oi never fild better in me loife. Oi just dhrapped in to look the place over and wroite it up in the *Ladies' Home Jarnal*."

An thin blisht if he didn't sit down an' ask me a thousand quistions about me anchisters an' me family. "Did me faather doie in infancy or in Oireland? How many childer had me mither, an' how many would she have had—undher other carcumstances?" Oi thought he wouldn't bother much about me whin he got so intrhisted in me family. But no such luck! "How arre ye bowels?" he says, quite suddint-loike. "Pretty well, Oi thank ye, an' send ye their koind raygaards." "Do ye dhrink?" he says. "Thank ye virry koindly, Oi'll have a little Shcotch." Afther some more irrilivant quistions he pulls a tillyphone out av his pocket an' begins to thry me on arithmetic. "Count wan, two, three," he says. Thin he begins foive-finger ixercoises and punchin'-bag practice on me shtomach. "Hould on there," Oi yells, "hould on. If Oi can't jine yer sacyety widout bein' inishiated that way, Oi'll widdraw me application fer mimbbership." An' thin he walks aff widout a wurrd av axplanation lavin' me sore an' dishgusted an' considerable in doubt whither Oi'd been blackballed or axcepted be the rayception committee.

The next minute Oi was dumped onto a whoite wheelbarrow-loike an' caarted upsstairs to a big ward wid twenty-foive ither min, mosht av thim furriners. Oi was just settlin' down in bed to injye a good cramp whin in walks a chisty young feller, also in a whoite suit. Oi'm sure Oi've seen him dhrivin' a Tip-Top bread wagon. They call him the "house," but be the airrs av him ye'd think he was a house an' lot. He walked roight up to me. "Phwat's ailin' ye?" he says, an' thin, before Oi had a chance to answer him, he began pummelin' me in the shtomach. Prisintly a flock av young fellers dayscinded upon me. The "house" musht have whispered to thim, "Come on in, the wather's foine," fer aich wan av thim took aim at me shtomach. Wan av thim punched me so long Oi thought he'd nivver get through. "Which soide hurrts whin Oi shquaze?" he says. "The insoide," Oi says, "an' furthermore, young man, Oi have a prissin' engagement wid J. Pierpont Rockefeller fer foive o'clock; an' if ye'll quit fer a whoile Oi'll be willin' to cartify to the prisident av the club that yer inishiasun has been ontoirely satisfacthry—or Oi'll give ye a rain-chick an' ye can come back agin to-morrow."

There was ounly wan more cirrimony that day, Finnegan; wan av the young fellers shtuck me in the finger till the blood rran. Oi guiss they didn't think he'd done it roight, for he comes back in an hour an' tuk some more blood from me ilbow-jint.

THE nixt marnin' the "house" comes waltzin' in wid a doctor an' throts him up to me bed. "Here's a new mumber," he says, or worrds to that effect; an' he rades him me pedigree. Wid that doc makes shtraight fer me shtomach wid both fists. Lookin' up from me wid a plased shmoile, "Do yez ramimber the lasht case loike this?" he says. "Sure," says the "house," "'twas a virry interesthin' ortopsy." An' wid that cheerin' raymark they wint on to the nixt bed, widout givin' me a wurrd av axplanation.

From that minute, Finnegan, Oi losht me name an' me individjality. Oi became a mere daysease betune bed-sheets, wid whoite an' blue paapers, loike Seidlitz powders, at the fut av me bed, on which the nurses an' docthors made raymarks about me—some av thim thru.

In half an hour the "house" comes back agin wid the head docthor an' rades him me conthtract an' spifications all over agin. Doc had an absent-moinded ixpression an' Oi could see he didn't think Oi was iligible. He didn't even same intrhisted in me complaints. He jist wint through the rigular

cirrimony wid me shtomach an' thin he says, "Sind wurrd to the midical man." "Sind wurrd to the midical man," says the "house" to the head chambermaid, who shcribbled it down in her marketin' book. An' aff they walks.

Well, in about foive days the midical man rayceived the litter an' comes up to wilcome me, bringin' his ounw sicrity, who also tuk a fale av me poor "abdomen," as they calls it. An' thin he wroites down the imprissions av the doc. "Afther a careful inishiasun we baylieve that the case is one av neoplasm av the protoplasm; on the ither hand, it may be ounly a spasm av the digistion, or a neurosis av the metabolic injuced be daygination av the corpuscles." That was a foine docthor, Finnegan; he didn't nade to rade about me grandmother an' the rist av the family, an' he had two koinds av tillyphone.

BUT don't think that the foive days Oi was waitin' fer him Oi was bein' supported in oidleness an' aise. Ivry day they gave me some new thrick to tist me thorough acciptibility. They didn't bother wid me complaints; indade, Oi'd almost forgotten thim meself in the new an' amusin' stunts they put me through. The siccond avenin' they gave me a dose av castor oil. 'Twas a loively toime Oi had thot noight, Finnegan; but the noight nurse wanted to give me a good character, Finnegan, for she wrote on me application "shlept well." Maybe she did; Oi didn't see much av her.

In the marnin' they took me to be photographed in a room fixed up fer wireless telegraphy. I hadn't had anny brikfist, but they poured a quart of milk into me interior in a way that Oi nivver would have thought av. Six pictures they took, Finnegan, wid a large green loight, an' me in various poses. Oi thought they'd give me proofs to saylict the wan Oi loiked bist, but all Oi saw were six panes av glass showin' a suspicion av me backbone supportin' a quart av milk in sival stages of currdlin'.

The same day they looked in me oies wid electric loights, pumped the blood prissure out av me arrms, hammered me knees, and wrote down the impartent observation that me roight foot was much paler than me lift. That was the noight an' the marnin' av the third day, as it says in the Bible.

The nixt marnin' Oi was given an elabrate brikfist av tea an' toast. It tashted good, but there was somethin' wrong wid it, Finnegan, fer in half an hour wan av the young docs rushes in an' pumps it all out av me shtomach wid a piece av gaarden hose. Thank the saints he saved me from death be poisonin'. But wuddent ye think, Finnegan, they'd be more careful-loike about the food? I was jist gittin' over that excitement an' quietin' down a little, whin along comes the whoite wheelbarrow agin, an' they caarts me away to be sisterschooped. Finnegan, me lad, *there's* somethin' in shtore fer ye!

Whin Oi got back to me bed a doc was writin' in me biography. "Phwat is it now?" Oi asked him. "'Tis yer blood rayport. 'Tis four plus," he says. "Will, thank the saints fer those pluses!" says Oi, fer up till thin ivrything on me shcoreboard seemed to be goin' agin me. Things were comin' thick an' fast thin, Finnegan, fer thot very afternoon, d'ye moind, Oi was sint to anither room, where two docs were shtrugglin' haard wid a yellow-colored dhrink which they were shakin' up an' down loike a cocktail. 'Twas a cross, Finnegan, betune a crame de mint an' an orangeade, an' to me ounw way av thinkin' 'twas haardly worth all they were sayin'. Oi cuddent fer the loife av me see phwat Oi had to do wid it at all till Oi was tould to roll up me shleeve an' loie down on the table forninst the bar. An' thin, Finnegan, wad ye belave it, they poured that shtuff into a decanter hangin'

on a pole and dhripped the whoul business into the shkin av me arm. 'Twas a sayvare tist they thought up fer me thot toime, Finnegan, runnin' orange-juice into a man from Killarney; but Oi shtood me ground bravely, fer Oi didn't want to be blackballed afther Oi'd gone through all the other shtunts.

ON the sixth day another throop av docthors marched into the ward in open formation. They were the nerrve docthors, Finnegan, an' they had it wid them all roight. Does it hurrt to shtick a pin in yer shkin, Finnegan? Sure it does. You know it does, an' Oi know it does an' Oi thought ivrybody knew it does. But these here ignoranamuses seemed to be in doubt about it an' daycoided to thry it on someone; but phwy did they pick on me Oi don't know? Afther they had shcratched me wid the pin, an' tickled the soles av me feet, aich wan av them made the custhomary salute on me shtomach. Thot was noineteen toimes thot cirimony had been performed, Finnegan; but Oi didn't moind it anny more. In fact, Finnegan, ivry toime a docthor intered the ward me shtomach just rose up to rayceive him!

The nixt day me wake was up, an' Oi knew the house committee was gittin' ready to rayport on me. The prosecution had finished, there was no dayfinse, an' the jury had raytoired to considher the daygree av me guilt. Sure enough I overheard the orrder "Praypare Bed 6 fer operation." There was no "Wouldn't ye loike to thry a little operation, Mr. Phelan?" or "Have ye seen the cuttin' room yet?" Nathin'! But then, Finnegan, in these days av warr 'tis not fer anny man to saylict the toime or the manner in which he is to doie. Annyhow, thot noight Oi had me second sound shlape wid castor oil. In the marnin' they put me in a whoite flannel shirt, which is worn be ivry patient on the day av his ixecution. Thin the man nurse wint at me shtomach wid phwat Oi praysume was the narrow soide av a razor. Whin enough blood had been dhrawn, Oi was toid up in cheese-cloth. Thin the man nurse brought in a rubber bag wid a hose poipe, me brikfist av soapsuds.

THIN Oi waited an' Oi waited. All marnin' Oi waited. All afthernoone Oi waited fer the orrder to get into action. Oi saw thim bring the wounded to the rear, wan by wan, an' shtill Oi was kipt back wid the raysarves. Finally, wurrd came from the front: "Bed 6, advance in single column." So up we wint, me an' me biography, in charge av an orderly, me shpirits risin' wid the illivator which was managed be a gallant young lieutenant in blue uniform. On the top flure me command was changed an' Oi rayported in a sicind loine trinch where they kape the cans of poisonous gases. Here again Oi waited an' Oi waited. "The inimy must be in force," Oi thought, fer blood-shtained skirmishers were runnin' back an' forth in gra-ate confusion. "Oi hope Oi'm the nixt," says Oi to meself; an' thin, as I see somewan ilse wheeled out, "No, thank Hivvin, Oi'm not the nixt." Finally wan av the docs in field uniform, wid a gas mask ouver his face, busts into me trinch. "Shtaart this dope," he yells. 'Twas a foine thing to call me! They pinned me arrms up in me shirt an' tied up me head. An' thin Oi saw agin me

young frind av the raycaption ward committee. He hild a big black futball loike over me head. "Count wan, two, three," he says. "No, you don't," says Oi. "Oi passed yer arithmetic examination a wake ago." "Well, take a dape brith," he says, an' he jams the futball down over me mouth. I tuk a dape brith. "'Tis no good at all," says Oi, "Oi can fale ivrything." "Take anither brith." "'Tis no good, Oi'm tellin' yez." Thin Oi hearrd a loud "pf-s-s-s-s." "The domned thing's exshploded, take it aff o' me, take it aff, take it a-f-f." Oi thried to axshplain to him, but me lips were gettin' thick an' somehow or other me mouth was full av cotton. Me ears got shtuffy an' I heard the docthors talkin' further an' further off. Samwan three moiles away comes into the room an' says: "Is he undher yet?" Oi thried to answer him only the futball was fair chokin' me. "Oi'm undher nothin', ixcipt the shtrong imprission that ye're turrnin' me head round an' round an' round, an' me neck is thwistin' up so Oi can't brathe at all. Shtop it," Oi cried, "shtop me head turnin' an' turnin' an' shwellin', hould it, Oi tell yez or 'twill twist aff me neck ontoirely." An' thin, sure enough, aff wint me head, rollin' out av the room an' down the hall. Wid a tirrible iffort up Oi jumps afther it an' down the corridor Oi rran in me little shirt, chasin' me ouwn head moile afther moile, till Oi comes to the ilivator shaft, an' down we go, me an' me head, fallin', fallin', fallin', firrst fasht, an' thin shlow, an' thin fasht agin, till Oi landed at the bottom wid a tirrible thump. "Shtop it, shtop it, me head, me head!" an' the nurse said: "Loie down in bed; ye're makin' too much nise." An' wid that she ups an' gives me a sharp jab in the arm. Thin Oi fell ashlape. Oi dramed that Mayor Mitchel an' the Boarrd av Aldermin were in me shtomach, raymovin' the firrst shovelful fer a new subway. 'Twas a tirrible noightmare!

Phwat happened the nixt few days Oi don't know at all, Finnegan. Oi losht all thrack av toime ontoirely. About the fourth day Oi was falin' pretty good again till in comes the head docthor an' suddinly shows a gra-ate intherest in the bundle av cloth around me belly. Oi had thought a grate dale av that docthor, Finnegan, ontill he separated me from the shtickin' plaster that held me toghether. But that was nathin' to phwat was comin'. The horshpittle, Finnegan, has a large supply av linen, undhershtand, an' Oi guess there was some complaint that mosht av this had been shtuck insoide av me. Three sheets, a dozen towels, foive yaards av unbleached muslin an' six feet av gaarden hose he pulled out, Finnegan. Oi'll shware to it! An' me all the toime schramin' an' yellin' loike the banshee was afther me. Oi'm fond av praties, Finnegan, an' corned bafe an' cabbage; but niver did Oi think me shtomach would git so attached to a bunch of rags.

WILL, Oi'm out av bed now, Finnegan, an' goin' home soon, glory be. An' whin Oi git home, Finnegan, me frind, there's a favor Oi want to ask av ye. Oi want ye to fale all over me shtomach, Finnegan, an' tell me is it a golden egg or the grate ruby Oi've got in there. An' moind ye, Finnegan, Oi want to be put on the intertainment committee av the butlers' union. Oi have some grate oideas in me moind fer some new forrms av initiashun.

DOLORES, VENDOR OF
SNAILS

If Trafalgar and Waterloo were really won on the fields of Eton and Rugby, we can as reasonably assert that Buenos Ayres and Lima, Manila and Santiago were lost at the bull-ring, at the cock-pit, and at the dulce-wheels.

THE SURVEY, October 7.

NIRMAN SINGH'S caste lived on such pickings as lizards. Lizards are not particularly inviting food, but Nirman Singh's was a low caste. His touch was defilement, his shadow—pollution. Nirman Singh was a Sudra, and therefore unclean—not the uncleanliness of the leper, but worse. It was the paralyzing uncleanliness of low birth.

Nirman Singh had never heard about its being self-evident that all men were created equal. He knew nothing about enjoying life, liberty and the pursuit of happiness. Nirman Singh did know that his father tanned the hides of dead monkeys for temple drumheads. He did know that, even as a baby, he was avoided by other children. He sometimes wondered, as he grew a little older, why he might not drink from the village well, why they said he was pollution. The sacred bull, painted pink and purple, with a garland of yellow roses of India around its neck, might drink there, might even munch lettuce at the bazaara woman's stand. More than that, she would give him rice from her coconut-shell, so happy was she at a visit from the holy one, she who had black looks if Nirman Singh's shadow but fell across her greens. This day Nirman Singh was hungry, very hungry. A raw lizard would have been a feast. Five days, ten days, his father and mother had camped under that neem tree. It was hot, terribly hot—hot, as only India knows the heat. The rain had not come for a long time; the roads were very dry, very dusty, and the sandstorm, racing down upon them, increased their misery.

A punkah coolie had stopped across the road to rest in the shade of another neem tree. He had pulled the punkah rope all night long that the white man might sleep. To another pausing wayfarer, the punkah coolies complained from beneath his turban that even long after midnight it was hot and dry. Yet all the misery of heat, sandstorm, famine made no fellowship between the punkah coolie and Nirman Singh's father. His father was unclean; one to be avoided. He tanned monkey hides for drums to call those who worshipped Hanuman, the monkey god.

Nirman Singh, lying limp beneath the neem tree, yearned for food, even a single lizard. But they had camped under the neem tree more than a week, and one by one the lizards had been caught. Nirman Singh was sick; his mother was sick; his father was sick. That is why they had tarried so long. Today the father stirred. He measured his waning strength and spoke:

"We will all die if we stay here. The lad cannot walk. Let us put him in the spreading forks of the tree. Let us pray the great Shiv, the creator, that he preserve."

But the mother cried: "Not Shiv the pitying. Think of one-eyed, hating Kali. We have done nothing to appease her. We have had nothing we could offer as a sacrifice. Perhaps she has brought all the misery."

To stay, meant that they all must die. So the parents

reluctantly placed starving Nirman Singh in the broad forks of the tree. Almost staggering, they went down the burning road, hoping somehow to find aid.

After a while Nirman Singh grew faint. His tree, and the tree across the road, seemed to swim together in the blue of the sky above him. Then the blue sky grew gray, then black. Then he forgot everything.

He awoke in a house. Outside, he could see the yard of the compound. A kite had swooped upon a morsel of food. It was better food than Nirman Singh dared eat, for he was unclean. Across the yard of the compound a water-carrier was passing, his pig-skin distended with water. In the room was a Sahib, a really pale-faced Sahib. His wife, the Mem-sahib, was there too. Nirman Singh knew he had brought pollution to this home, for he was of unclean birth; yet he could not remember how he came. He tried to raise himself to salaam and leave the room. He shuddered to think what his parents would say when they knew he had been actually inside a Sahib's bungalow. But he was too weak to rise.

Just then the Memsahib seemed to notice him. She exclaimed, "Why, at last he is awake!" and brought him milk in a queer glassy white cup. It was not at all like the rough red pottery of his village where one of the castes broke their cups after each meal. This cup was smooth and felt good to the lips. Nirman Singh did not know that a French inventor in the long ago had burned even the furniture of his

home, learning to make the first porcelain cup. Nirman Singh knew only that the Sahib and the Memsahib were in the room. Still nobody complained. Nobody made black looks at him. They were giving him real food, so much better than half-raw lizards. Then they brought him something that did not taste quite so good. They called it "medicine." Then he fell asleep again.

No dreams had Nirman Singh of a land where men were free and equal. He knew nothing of famine funds, of the money collected for stricken boys. He did not know that American workers were hunting for just such as he, and had found him fainting in the neem tree. Even that he should be nursed back to health in the home of a Sahib, was something he could not understand. He heard them say that the way his ribs showed through his skin made him look like the Famine Buddha at Lahore—Lahore, where the many-colored turbans are like a field of wild flowers waving in the breeze. He knew something about the Buddha. He was a god. Folks never bothered much about the Buddha; it was the revengeful gods and goddesses they feared, like one-eyed Kali. But perhaps it was the gentle Buddha that had sent him this good fortune.

Before many weeks he was playing like other children. He heard no more of his parents. Perhaps they went down in the famine that killed, as it always killed, in the old way of the unchanging East. That one must accept the famine, even

REPEATING IN CALCUTTA THE MANILA EXPERIENCE

This is the second Calcutta playground at Lee Memorial, Wellington Square. A third has been commenced. The Orient has learned a lesson that America might heed—that apparatus is, after all, not absolutely necessary; that supervision is the great essential. A broomstick with a good imagination has always made a prancing steed

SWIMMING POOL AT BALLIGHATA PLAYGROUND

The opportunity for a dip is nowhere more welcome than in the steaming tropics

he had learned; for this was before the pith-helmeted Saxon engineer had built canals and railroads in his part of teeming Hindustan.

Singh's new friends were Americans. They were both teachers at a school where all the teachers were Americans. He heard them say that the money to conduct the school came from a land across the seas. Out in the school compound were continual surprises. One

teacher was a play leader who knew no caste, and under whose leadership the boys in their play were learning to forget caste. Only he was "low caste" who cheated in play. This might be a Brahmin as well as a Sudra. Singh was learning the democracy which is modeling the New India.

Thus he grew much like boys on an American playground. He won high honors at this American school. He went to Lucknow College and won athletic honors there, and a fellowship. Then came an examination in which he competed with sons of the priests, the intellectual aristocrats. He, a low caste, a Sudra, whose very shadow was pollution, won the medal and a fellowship in a European University! Here again came more honors.

Thus it came about that one day Nirman Singh, Ph.D., was sailing homeward toward Bombay, a serious, thoughtful man. He returned to the school, to the home that had received him as a famine outcast. Today he is the head master over a large group of boys in the same school to which he first came, and from which there goes out each year a graduating class upon whose impressionable minds are stamped

high purposes—a class of the lads who are making a New India.

He says the old days, the days when he ate snakes and lizards, when he dared not drink from the village well, belong to one life; another life began for him when he awoke in the bungalow of the blue-eyed Sahib—a life that he could not but give to his own people and to the ideal of a New India.

To this great future, the playground movement is contributing its share, and the story of how it all came about must now be told.

The Ballighata playground story begins at a California orphanage. Here was story-telling after office-hours on Wednesdays; playing games on Saturday afternoons and nature-study field excursions on Sundays. Conducting these classes

was like taking a course in laboratory work — they tested out the possibilities of education through play, but also play as one natural way of imparting knowledge, particularly useful in inculcating moral ideas.

Meantime, the work grew. It became too heavy for one person already busy with office duties, so a university graduate who had studied in similar specialized courses was employed. Supervision and study of her efforts only deepened the conviction as to the value of such work. Among the children on the playground were juvenile court cases, including abnormal and sub-normal children. Thus there was a wide variety of material for observation.

When the orphanage work seemed running by its own momentum, there arose the question of interesting the municipality to undertake playgrounds, as others elsewhere had

THE war has extended to the Ballighata playground. In the picture below the two groups of boys represent the Allies and the Teutons in a skirmish under two native play leaders. Certain castes in India follow war as a profession, and the war game is very popular. Through Calcutta have come the little Gurkas, or knife men from the Himalayas, whose peculiar warfare has been turned to account in the trenches in France. The basketball game at the right shows war-play carried a further remove from embroilment,—in the direction of clean competition.

The American women can be distinguished by their pith helmets—the fixed millinery of the workers. Hence the necessity of m

done in trying to solve similar problems. Soon it became evident that by a persistent educational campaign, a whole municipality might be induced to make recreation a city function.

In doing this various methods were employed. Usually there was a preliminary campaign of publicity, seizing every opportunity to obtain short newspaper stories upon playground work. There were also talks before all kinds of civic bodies, lantern slide lectures. Matters widened into banding together these investigators in various California cities into a state playground association. Then came the time when this California Playground Association was invited to merge itself into the national organization.

Now it happened very fortunately that one of the visitors to these playgrounds had been the niece of a Mr. Lee, a friend of ours living in Calcutta. So when on our trip we

mother feared. For a long while it was the headquarters of the thugs. These thugs, selected in childhood by the priests from the most promising of the young folk, were trained at the temple as robbers. Arrived at manhood, they were sent forth to rob and slay, a percentage of their booty going to the priesthood. It is said that formerly children were sacrificed at the Kalighat of these thugs; now the sacrifices are limited to young goats.

Such is the background of our word "thug."

Approaching this temple, we noticed that most of the visitors were women with children, many of them sick. The entrances were through long lines of stalls devoted to the sale of various votive offerings which had been blessed by the Brahmin priests. In front of the shrine itself was a mob of women, each struggling with the others for an opportunity

A GLIMPSE OF THE INDUSTRIAL REVOLUTION IN INDIA

Learning at the Ballighata playground to use corrugated iron where palm thatch and mud walls have been the building materials since history dawned. Most playground efforts in the Orient include manual training and vocational education. Children of artisans who still use the methods of the third century before Christ are being taught to adapt themselves to the new industrialism that is upon them. Efforts are made to intelligently preserve the beauty of the old handicraft—not to ruthlessly destroy it

reached Calcutta and visited the Lees, we had a strong supporter for our plea that Wellington Square in front of the memorial will be an excellent location for a public playground. Mr. Lee became still more interested as we recalled the achievements in America and discussed possibilities of similar plans for India.

Finally he said, "Will you go to the Kalighat? Many years' experience among the Bengalese has convinced me there is no place where the stranger can more quickly obtain an insight into real conditions among the children of India. When pictures of the worship of Kali are stamped on your brain, we can then discuss the future." So we went to the Kalighat.

The Kalighat is a temple devoted to the worship of the one-eyed goddess of hate, Kali, whom Nirman Singh's

to raise her child to the view of the dread goddess, for they believed the sickness of children was incurred through Kali's displeasure at lack of attention and sacrifice. At the entrance to the courtyard across from the shrine, lounged a group of loafers. One of these cried to his fellows, "Come! Quick! Sahib and Memsahib want to see Kali, one-eyed goddess!" These men formed what might be termed a flying wedge to open a way for the white man, they mercilessly "bucked" the struggling mob of women in front of the image.

After each woman of this squirming mass gained a place where she might for an instant hold up her child to the gaze of the hideous one-eyed idol, she turned to pass down a double line of almost naked priests who sold holy ashes, flowers or trinkets. At the end of this double line was the place of sacrifice. The stone floor was slippery with blood.

"SEE-SAW, MARJORY DAW"

The old English refrain in girlish trebles sounds just as sweet in this alien environment as with us. And these English words mean just as much to our young Bengalis as do "Ency mency mincy mo" to our bairns

Young goats, each with all four feet tied, were stacked in a pile like cord-wood. One priest selected a goat and held it to the block, a second collected the cost of the goat, a third was ax-man. The sick child was held close to the descending ax, so that the blood spurting from the decapitated trunk might cover its face before reaching the ground. The virtue of the sacrifice was lost if the blood should strike the pavement before the child was baptized in it. In the event of such pollution, it was necessary then to purchase another goat. Where a farm coolie's wage for a day's labor is not as much as a carfare,—the eagerness of these poverty-stricken mothers to save a second fee may be imagined.

The gloomy surroundings, the screams of children at the sight of blood, the moanings of the very sick, the distress of the mothers, contrasted with the gloating of those almost naked priests over their steadily increasing gains,—it was almost too horrible to endure.

We knew now what Mr. Lee meant when he said, "Go to the Kalighat." Lest our conclusions might be hasty, we verified them by other investigations. We visited zenanas, made studies of child marriages, and—most pathetic of all—of child-widows. And our impressions deepened.

Then came Mr. Lee's offer. He said, "I believe the time is ripe for an actual demonstration playground in Calcutta. A square in Ballighata will be ready. We will reach the children. Perhaps in another generation there will be no Kalighat. We will make Ballighata a social center as well as a playground, and through recreation reach grown-ups as well as children. We will raise part of the salaries for two trained American supervisors, one man and one woman, providing you furnish the balance."

And so, eventually, two workers, Massachusetts folk, sailed through the Golden Gate for India. In a suburb of Calcutta, with a population about one-half of San Francisco, the playground was planted.

There is the hope of inducing the government to enter this work ultimately. The authorities have showed a deep interest in the experiment, though, of course, thus far war has prevented any new expenditures. Still, a second playground has been opened in Calcutta itself; then a third. There have been beginnings elsewhere in India and letters of inquiry are

coming from native leaders in social service asking for literature and guidance.

What then are the opportunities for playground extension? Take Bombay as an example. It is a great center of Parsees, sun-worshippers, we call them. They are brainy folk; keen in their grasp of our methods, wise in the use of their own. They control many lines of Hindustani commerce. Certain Bombay suburbs, under their keen management, might be taken for English factory towns. They have applied Saxon industrialism where many coolies earn but four cents, gold, daily.

Where life is cheap and a downtrodden crushed people dare not complain, exploiters are not always careful of their fellowmen. Yet the Parsee is quick to grasp Western ideas. This is proved by his assimilation of one kind of constructive recreation,—the children's nature field excursion. He has by far the lowest per cent of illiteracy of any class in India. He is benevolent at heart, even though perhaps not always in ways that we should consider most wise. Some of his generosity could be undoubtedly guided into recreation channels by a demonstration American playground and social center. With Bombay influence, under shrewd Parsee guidance, spreading to meet Calcutta influence, radiating from Ballighata, much time would be gained—an important consideration, for no one knows how long India will continue to offer her present welcome.

Broad Hindustan contains many races, as widely different as the Finlander is from the half-Moorish Spaniard of southern Andalusia. In the hill-country are blue-eyed men, and women as fair as any from the Caucasus, whom wealthy Turks claim for their harems. In the south are sooty Tamil folk. In all Hind, live four hundred million people, speaking as many tongues as Europe does. About eighty million speak Bengali, the language of Nirman Singh.

As any Indian playground must, Ballighata draws children who are outwardly very different from American wee folk, and the situation presents many delicate problems. The fathers of some children look like the man in the picture, who is harvesting palm juice to be fermented for "toddy"—another word we have inherited from the Hindustani. Some of the girls, "black-eyed pansies," they have been called, are

widows at six or seven, bearing all the disgrace of the Indian idea of the widowed state.

The mingling of the castes has brought yet other difficulties. Food, for example, or native sweetmeats, cooked by another caste, is always refused. Curiously enough, American candy is permissible, for no one has yet found, in the numberless caste rules, any saying of ancient wisdom concerning the sticks of barber-pole colored sweets from beyond the seas.

Such problems, together with the need of the supervisors to learn Bengali, have been some of the first year's obstacles. Much could

be written of similar incidents,—amusing, were they not so serious; but not, after all, insurmountable.

Although social conditions are so different from those in America; although in place of democracy there has ruled for centuries a system of caste, iron-clad, crushing,—yet even caste has recently begun to bend before better things. The missionary movement, the introduction of English and American schools, Red Cross work in famine times in the Orient, the return of native students from foreign universities and medical schools, and latest of all, the playground movement, all these are influences tending to dissolve that because of which Nirman Singh perforce became an eater of lizards.

A Bengali game. No apparatus, but "lots of fun" nevertheless

Red Cross and Red Crescent

By Ernest P. Bicknell

DIRECTOR OF CIVILIAN RELIEF, AMERICAN RED CROSS

WHERE East meets West fundamental differences in religion, philosophy, and appraisal of spiritual, human, and material values come into the sharpest contrast. It is the firing-line of differing systems of civilization engaged in endless contest for supremacy. At such a point of contact, lack of mutual understanding always threatens the peace and prosperity of the people.

At the Dardanelles, the East thrusts forward her westernmost frontier. When Turkey entered the war a myriad of racial, religious, and political doubts and suspicions flamed into convictions and stimulated hostile action. The lives and property of foreign residents in the empire were endangered, and as many as possible fled. Some were arrested and imprisoned; and for a time there existed a degree of panic. The Turks did not always clearly distinguish between the English and American residents. There was fear that Americans might be attacked and that American property might be destroyed. Robert College and The Woman's College, with their splendid buildings and equipment, were believed to be in hourly danger of injury or destruction. Many American residents of Constantinople, some of whom were connected with the schools, lived within the precincts of these institutions, and it was feared that their lives would also be endangered?

How could this danger be averted? An official proclamation calling upon the people to respect the rights of Americans would be ineffective, because the danger lay not in enmity to

Americans, but in the inability of the people to distinguish between the status of Americans and English. The problem was solved by a bit of typical oriental diplomacy. The American Ambassador, Henry Morgenthau, left the Embassy and went to live for a time on the premises of one of the colleges mentioned. While there he was called upon in a friendly way by Enver Bey, the most powerful personality in the Turkish government. This call, the news of which was widely circulated among the people, was all that was necessary to settle the status of the American colony and educational institutions. It proved that the Turkish government had those institutions and their inhabitants under its protection and held them in friendly regard.

To the Westerner the Turkish character is a mystery. The average Turk is said to be kindly, hospitable, peaceful, tolerant, and industrious. From the days of the Crusades stories have been prevalent of Turkish chivalry and courage. Religious freedom has long characterized the Turkish government. Turkey has been a haven for Jews fleeing from persecution at the hands of the Christian nations of Europe.

If this picture of the Turk be accepted, how explain the frightful persecutions of the Armenians, the Nestorians, and others. A wholly satisfactory answer has never been found. Just as the problem is complex, the answer must include many elements. For one thing, the population of the Turkish Empire is composed of a great many nationalities and tribes, ranging from high civilization, in the cities, to lawless and savage nomads in the mountains and deserts of the remote

provinces. The hold of the government upon the nomadic tribes has never been sufficient to prevent outbreaks of violence.

Another element of the answer is to be found in the natural business capacity of the Armenians, which, guided by an aggressive intelligence, has tended in many communities to concentrate wealth and commercial control in Armenian hands. For analogy, turn to Russia and other countries in which the Jewish population is hated because of its commercial superiority. The ignorant and simple-minded peasantry, observing the steadily increasing wealth of the thrifty Armenians as compared with their own penury, long ago became possessed of a vague but deep-seated sense of injury and injustice, and are ready, on slight provocation or under cunning leadership, to burst into a fury of destruction.

The Armenians

THE HISTORIC MASSACRES and persecutions of the Armenians have been more than paralleled since the great war began. Yet they are scarcely less comprehensible than the amazing persistence with which that race has clung to the country which it occupies. The West can scarcely understand the strength of the bond which holds ancient peoples to the lands of their forefathers. It does not seem even to occur to the Armenians that they might migrate to other countries where opportunities would be greater and where life and property would be safe.

Ever now reports are coming through reliable channels from the remote desert wilderness to which many thousand Armenians have been deported, after indescribable sufferings en route, showing that the exiles are looking forward with eager impatience to the time when they can start back to the homes and communities from which they were driven forth. This, notwithstanding the fact that it must be plain to them that they were exiled for the purpose of permanently disrupting and partially annihilating their race, and that in returning they will place themselves again in the power of the old forces which are bent upon their destruction.

Readers of war news will recall the story of five thousand Armenians, threatened with massacre and deportation, who fled into a mountain and there, suffering terrible hardship, defended themselves successfully against the attacks of the enemy until a French warship, cruising off the shore, saw the Red Cross flag which the starving refugees had hoisted upon the mountain top, and sent a force of sailors to the rescue. It will be remembered that the French ship carried these five thousand Armenian refugees in safety to Egypt. In a large camp of huts and tents on the plain near Alexandria they are living in comfort, supported chiefly by the British government, while an American Red Cross committee provides special diet for the children and the sick. Already this group is becoming restive, and has sent word to the Red Cross that before long it will wish to have help from America to enable it to meet the cost of returning to its own land and to the community which a few months ago was barely prevented from massacring its entire number.

It is no wonder that with so many strange and contradictory elements, the situation is hopelessly perplexing to the American people who are trying to help the war sufferers in Turkey. To attempt to analyze this situation and to shape our policy and conduct in exact accordance with the rights and wrongs involved, would result only in inaction and defeat. It has, therefore, seemed to those organizations and individuals most actively and closely interested that their wisest course of action lies in the direction of doing what is possible for the relief of the victims, without waiting to ascertain motives, to determine where the fault lies, or to fix the logical responsibility for providing the help required.

In pursuance of this policy, no opportunity has been omitted by American agencies to extend relief to the sufferers in Turkey, although the obstacles have been very great, and at times insurmountable. The Turkish government has not permitted foreigners to travel in Asia Minor for the investigation of conditions or the distribution of relief supplies. Turkish railways are few, in poor condition, and their facilities are constantly overtaxed by the transportation of troops and military supplies. The blockade maintained by the Entente Allies has prevented the importation of relief supplies. Scarcity of food in Turkey, together with the inadequate means of transportation, have greatly diminished the value of cash relief sent into the country. Money cannot bring succor unless supplies of food and clothing are available for purchase.

Relief work has gone steadily forward, nevertheless, with as much efficiency as the conditions have permitted. It is estimated that over 150,000 Armenians fled from Turkey into northern Persia, and are now living in territory under Russian control. It is possible to purchase certain kinds of food supplies and clothing in Russia and Persia for the help of these Armenian refugees, and several hundred thousand dollars have been expended for this purpose within the past year. The purchase and distribution of relief in this section is in the hands of a group of American missionaries and physicians, who have been organized into a committee of the American Red Cross. Money has been sent to this group chiefly through the American Committee for Armenian and Syrian Relief, which has concentrated the energies of a wide circle of generous people upon the single purpose of providing help for Armenians and Syrians. The committee in Persia has recently estimated that its work of relief will require approximately three hundred thousand dollars during the coming winter months.

Money has also been sent through missionaries and American diplomatic and consular agents into the interior of Asia Minor, and by them has been distributed among the destitute civilian population. The total expenditures for relief in Turkey to date have been approximately one and one-half million dollars, of which, roughly, three-fourths have been contributed through the Committee for Armenian and Syrian Relief and one-fourth through the American Red Cross. Yet these enormous expenditures can never meet the need, while hundreds of thousands of Armenians are starving or dying from disease in the remote desert places to which they have been driven.

While the people of certain parts of Syria have not been subjected to the persecutions from which the Armenians have suffered, they are in a condition of starvation, in part because of the removal of food supplies from that country by the Turkish military authorities, in part because of inability to import food supplies, and in part because of a plague of locusts which last summer swept the country, destroying every green thing within its path. The stories of the clouds of locusts which darkened the sky for days at a time, of the great area of territory covered, and of the absolute completeness of the work of destruction, are reminders of the ancient stories of plagues of locusts in the same region, known then, as now, as the country of Mt. Lebanon.

Destitution Among the Turks

TURKEY is an agricultural country; at least 80 per cent of its population cultivates the soil. Constantinople, Smyrna, Damascus, Bagdad, Beirut, and Aleppo are the only cities of any considerable size in the empire. Of the total population of about twenty-eight million, approximately seven million are non-Moslems. The business in the cities is largely in the hands of Armenians, Greeks, and Jews, while the Turks constitute most of the agricultural element.

As a rule the farms are small, are not efficiently cultivated, and produce scarcely more than is necessary to support the families which occupy them. The agricultural class lives very simply, its diet consisting chiefly of bread, with dried vegetables, olives, beans, and rice. The cost of living is low; so low, in fact, that it is said that a family of five may be supported at an expense of from three to four piasters (twelve to sixteen cents) a day. The people have little opportunity to accumulate property, and a bad season or any other interruption of their usual routine plunges them at once into destitution. Taxes exacted from the farmers are extremely high, and are said to have a direct relation to the lack of ambition on the part of the people to accumulate wealth. The tax-gatherer has the reputation of always being on the alert for evidences of prosperity.

The present war has had a serious effect upon the civil population in the country. It has been estimated that about one million men have been called into military service, these being taken chiefly from among the farmers. Furthermore, a large number of farm animals has been taken for the army, as well as much of the harvests. Because of the narrow margin between the normal production of foodstuffs and a condition of want, the war has made the economic condition of great numbers of people precarious.

Agriculture has this last year been largely carried on by old men, women, and children. The continued demands of the military forces for both men and supplies press the burden ever more heavily upon the common people. Adding to the difficulties of the situation is the Allies' blockade, which precludes the importation of supplies of food, and by stopping imports and exports has caused stagnation in business and brought about considerable unemployment. Small shopkeepers are in distress, as well as the poorer classes in the cities.

In the past, many women in cities and villages have made rugs, carpets, lace and embroidery, and a cheap sort of cotton cloth. The missionaries have encouraged this work in the homes, and have utilized their funds in purchasing looms and material, getting the work started, assisting in the sale of products, and in other ways putting the industry upon a permanent and self-supporting basis. All of this work has been stopped by the war, partly because the women are obliged to work in the fields and partly because the blockade again, has prevented the export of manufactured goods.

A New Stage in War Relief

IT WILL BE SEEN, therefore, that while the suffering is greatest on the part of the Armenians, who have been driven from their homes and left in remote places without resources or opportunity for self-support, and among the Syrians, who have suffered from famine brought on by a combination of causes, of which the culmination was a plague of locusts, a general condition of want exists in all parts of the Turkish Empire. The government and certain private philanthropic agencies have attempted to make some provision for the families of soldiers, but this work has been confined chiefly to the cities, and is, at best, inadequate.

In the latter part of the summer (1916) President Wilson communicated to the Turkish government the desire of the American people to be of assistance to the Armenian and Syrian populations of Turkey. In reply to this request the Turkish government granted the President's request in part, agreeing to allow the distribution of relief supplies among the starving population of Syria, but did not concede the privilege of sending relief supplies to the Armenians. It is, in fact, a question whether it would have been possible to carry relief supplies to the scattered Armenian groups in their dis-

tant and almost inaccessible locations, even had the government given its consent.

In yielding to the President's request in so far as Syria is concerned, the Turkish government made it a condition that the administration of relief should be in charge jointly of the American Red Cross and the Turkish Red Crescent. Fortunately, the American Red Cross has two active chapters in Turkey, one situated at Constantinople, the other at Beirut. These chapters, consisting entirely of Americans, will represent the Red Cross in the joint arrangement.

The cross, as an emblem of Christianity, is obnoxious to those of the Moslem faith. This fact for many years prevented the Turkish Empire from becoming an adherent of the Treaty of Geneva and establishing a society of the Red Cross. When the International Conference of the Red Cross was held in London in 1907, a petition was presented from the Turkish government requesting that a special concession be made to that government which would enable it to substitute the emblem of the crescent for that of the cross, while otherwise accepting the principles and meeting the requirements necessary to compliance with the Treaty of Geneva and the establishment of a society of the Red Cross. This petition was granted, and the Turkish government thereupon created the Red Crescent Society, which, with the exception of its name, is identical with the societies of the Red Cross.

Immediately upon receipt of Turkey's consent for America to send relief into Syria, President Wilson proclaimed October 21 and 22 as Armenian and Syrian days, and called upon the people of the United States to take advantage of the opportunity now given, to show American sympathy for the Armenians and Syrians in a substantial manner. Assurance was obtained that the Allies will permit the shipment of relief supplies through the blockade, and thus every obstacle in the way of the plan was removed.

The American Committee for Armenian and Syrian Relief at once set about arousing interest and creating an organization of national scope for the purpose of taking the largest possible advantage of the Armenian and Syrian days. The American Red Cross, which will have charge, for America, of the distribution of the supplies, also participated actively through its two hundred and thirty chapters throughout the country, in the collection of the relief fund.

Because of the extremely heavy charges for ocean transportation and the high cost of insurance, it was feared for a time that the enterprise would be seriously handicapped by the almost prohibitive cost of sending the supplies to their destination. This question was taken up with the President and the Secretary of the Navy, with the very gratifying result that the latter placed at the disposal of the Armenian and Syrian Relief Committee and the Red Cross the use of a large part of the cargo capacity of a naval collier which is soon to sail for the Mediterranean carrying a supply of fuel to the battleship *Des Moines*, which is in eastern Mediterranean waters.

This generous act of cooperation on the part of our government immediately assured the success of the undertaking. It is hoped to send into the harbor at Beirut a cargo of approximately four thousand tons of flour, rice, sugar, and other articles of food, as well as a large quantity of clothing. From Beirut as a center, the Red Cross and Red Crescent societies will make the distribution according to the greatest needs of the people. It is stated in reliable reports that the most widespread and acute suffering is in the Mt. Lebanon district, where three hundred thousand persons or more are reported to be suffering actual starvation. Many thousands are said already to have died from lack of food.

Here, it seems, as in the case of Belgium,¹ is to be formed

¹ See A Nation on Strike, by Mr. Bicknell, THE SURVEY for September 2.

a cooperative triangle, in which enemy countries will step aside and open the way through their hostile lines for the purpose of permitting a neutral nation to perform an important work of humanity.

It remains to describe the situation in still another area, historically within the sphere of Turkish dominion.

Bulgaria, Turkey's Enemy and Ally

OF ALL the puzzling twists and turns and involutions of Balkan politics, no manifestation within recent historical times has been more surprising than the spectacle of Turkey and Bulgaria fighting side by side as allies. For four hundred years Bulgaria, as a down-trodden and oppressed vassal of Turkey, strove for liberty. Repeatedly crushed in her struggles, her aspirations were never abandoned. In 1878 freedom came as a result of the war between Russia and Turkey, in which the Bulgarian army fought with the Russians. Even then the Turks did not yield entirely, but retained an ostensible suzerainty over the Bulgarians; a weak bond, which later was thrown off without serious opposition from Turkey.

During all the four centuries of subjection the Bulgarians looked upon Turkey as their arch-enemy. Their aspirations for an expansion of commerce, for education, for just and reasonable taxation, for political freedom during this period were ruthlessly suppressed. After freedom was obtained Bulgaria was not satisfied, but sought additional territory, still held by Turkey, but largely peopled by a Bulgar population. Finally, in 1911, came the Balkan War, in which, by the combination of the forces of Bulgaria, Serbia, and Greece, the greater part of Turkey's remaining dominions in Europe was wrested from the Empire and divided among her Balkan enemies.

Now, within five years of that last great conflict, Bulgaria is found fighting sturdily shoulder to shoulder with Turkey and providing a broad highway of communication by which Turkey may keep in free communication with her Teutonic allies.

It is easy to condemn the Balkan States for their internal troubles and their shifting policies. It is common to speak of these small countries as moved by sordid ambitions. While selfish leaders doubtless have exerted a malign influence in many instances, I believe that, on the whole, the Balkan conflicts and realignments have been the result of the aspirations of primitive but brave peoples struggling upward toward better things. The machinations and subterranean influences of great neighbors, opposed to growing strength and unity in the Balkans, have served to obscure and, at times, to divert the real purposes and hopes of these small nations.

An open-minded observer cannot visit Bulgaria, for example, without being favorably impressed by her people and her institutions. When Bulgaria obtained her freedom from Turkey, less than forty years ago, her people were poor, ignorant, and unfamiliar with self-government. Her progress since that time has been amazing. She is a true constitutional monarchy. All her male inhabitants who have reached the age of twenty-one have the right of suffrage, without property, educational, or religious limitations. The country is governed by an elective *Sobranie*, or Congress.

Soon after her acquirement of freedom, Bulgaria established a system of peasant-land proprietorship which has given a basic equality to the entire population, such as few European nations possess. She has few large land-owners, most of her lands being divided into small peasant holdings. The government has established a Rural Credit Bank, which will lend to a peasant, without delay or irksome conditions, as much as one thousand dollars, which may be repaid on easy terms extending through a long series of years. If the borrower is not able to repay his debt to the bank, the government will take

possession of the land and cultivate it properly until the profits from the operation have repaid the debt. The property is then returned to the peasant. The chief requirement for the safeguarding of these loans is that the money must be used by the borrower for stocking or improving his land.

Possession of full political rights, the protection afforded every citizen by the laws of the country, and the almost universal ownership of land, have given the average Bulgarian a sense of security and independence which is manifested in a spirit of democracy almost, or quite, equal to that observed in the United States.

In Bulgaria I heard numerous anecdotes illustrative of this democratic spirit. For example, the story is told that the Bulgarian king, Ferdinand, whose tastes are said to be undemocratic, was urged by his advisers to cultivate closer and less formal relations with his people. As a means of exhibiting his sympathy with his subjects, so the story goes, it was suggested that he visit the great public market in Sofia on the day when the place was thronged with people from the country. This he consented to do, and at the appointed time appeared with a small retinue in the market place. Instead of standing back respectfully and deferentially, the sturdy farmers, in their sheepskin jackets, crowded forward cordially to shake the King's hand. His Majesty is said to have endured this ordeal with the best grace possible, but never to have repeated the experiment. Can anyone imagine the common people of any other European country participating in such a reception to their monarch?

In a small mountain town near the Serbian border, where we were compelled to wait for some time for our train, we fell in with a regiment of Bulgarian reservists who had just completed their annual encampment of fifteen days and were ready to entrain for home. The men were gay and happy, and spent their waiting-time in singing and dancing. The movements of some of their national dances were of particular interest. I specially remember one in which about a hundred soldiers participated. They formed a circle, grasped hands, and to the time of a song which they roared forth with great gusto the circle slowly revolved. The men would move several steps to the right and one step back; several steps to the right and one back, and so on. At certain points in the dance the circle would break and the line of men, still grasping hands, would perform various complex evolutions. Other dances were lively and marked by vigorous and varied movements and genuflections. It was noticeable that the officers participated with the men on terms of equality and entire good fellowship.

Educational Progress in Forty Years

IT IS highly noteworthy that no sooner had Bulgaria achieved her independence than she turned her attention vigorously toward education. The result is seen in the fact that Bulgaria has today, as the foundation of her democracy, a free public school system and a compulsory education law. In 1912, her population was four and a half millions. At that time the country possessed 5,400 educational establishments, including national schools, intermediate schools, high schools and private schools. In these schools were 13,500 teachers and 520,000 pupils. Of the pupils, over two-fifths were girls, a remarkable fact when one considers the usual attitude toward the education of women in southeastern Europe. The fact is the more astonishing when it is recalled that Bulgaria has had less than forty years of freedom, after four hundred years of Turkish rule. The schools are supported by the government, which in 1911 expended more than five million dollars for their maintenance.

The results of this education policy are shown by the statis-

tics relating to the literacy of recruits. Universal compulsory military service is required. In 1898, 48.7 per cent. of all recruits were illiterate; in 1909, only 20.6 per cent. In 1915, when I spent a short time in Bulgaria, I was assured that illiteracy had been reduced to less than 10 per cent.

It was my privilege to be accorded two audiences with Queen Eleanore, whose active and sympathetic efforts toward improving conditions of life in the kingdom have endeared her to the people. Herself a nurse, she participated in the care of sick and wounded Russian soldiers in the Manchurian campaign during the Russian-Japanese War. She feels keenly the lack of skilled nurses in Bulgaria. For several years she has cherished a project for establishing a training school for nurses in Sofia, patterned after similar schools in the United States.

Perhaps three years ago she wrote to the American Red Cross of this plan, with the result that an arrangement was made by which the Red Cross agreed to send two American nurses to Sofia to take charge of a training school which the Queen proposed to establish in the great Alexandria Hospital in Sofia. At the same time it was arranged that the Queen should send a number of young Bulgarian women to the United States to take a course in nursing in one of the great schools of this country. Unfortunately, the outbreak of the war prevented the execution of this project. Helen Scott Hay, a well-known American nurse, who had been selected to go to Bulgaria to take charge of the Queen's school, was sent instead by the Red Cross to Russia, where she took charge of the nurses in the American Red Cross hospital at Kiev.

In my interviews, the Queen spoke of her great disappointment at the temporary failure of her plan, but expressed the hope that it might be successfully revived at the close of the war. I suggested that if Miss Hay were on the ground she

might be of material help in hastening the opening of the school. The upshot was that Miss Hay was released by the Red Cross from her hospital work in Russia, and proceeded to Sofia, where she still remains. However, since Bulgaria, which had not entered the war at the time of my visit, came in a few months afterward, this compelled a still further postponement of the establishment of the school.

Why Bulgarians Admire America

WITH GREAT ENTHUSIASM the Queen spoke of the admiration everywhere felt in Bulgaria for America and our American institutions. She assured me that in the development of the Bulgarian political and educational systems the effort had been always to follow as closely as possible the American model. Explaining this universal feeling toward the United States, the Queen said that it grew chiefly out of the fact that a great many young Bulgarian men and women had attended the American schools in Turkey and Bulgaria. The chief credit, she gave to the influence of Robert College in Constantinople. She made the astonishing statement that there are today in Bulgaria no fewer than one thousand graduates and former students of these great American schools. All the students learn the English language and study American history and American institutions in American textbooks. On returning to Bulgaria they have become leaders in the professions and in business, many of them attaining high places in the government service.

So it is that the war has come to choke and stamp down the slow processes of self-realization which were making headway among the peoples of the Near East. But beneath the travail and misery, we get glimpses in our work of relief in Serbia and Bulgaria, in Armenia and Syria and Turkey of reserves of strength and purpose which will count in the period of reconstruction.

The Mind of a Boy

The Future of Experimental Psychology in Vocational Guidance

By Helen Thompson Woolley

EXPERIMENTAL psychology, if you believe its critics, pretends to be able by means of laboratory tests alone to decide minutely just what occupation each child should follow—to select with a high degree of infallibility “the butcher, the baker and the candlestick maker.”

It is no great tax on the intellectual powers to demolish this “man of straw” set up by the critics. But meanwhile the process of presenting him to the public and destroying him for its delectation throws a stumbling-block in the way of psychologists who are performing a much more modest and plodding, but very real, service to society.

Since the Psychological Laboratory of the Vocational Bureau in Cincinnati is the only one at present which is an integral part of a vocation bureau in a public-school system, the task of justifying the existence of such an institution seems to fall very heavily upon it. Even here, however, it is distinctly recognized that the application of experimental psychology to vocational guidance is in a research phase.

When the Cincinnati bureau was organized, over five years ago, the problem uppermost in planning the work was that of child labor, rather than that of vocational guidance, but

it soon became evident that the two were in many phases one.

The humanitarian wishes to know what scientific proof can be brought forward to show that child labor is injurious, mentally or physically. The educator is interested to know in scientific terms just how the children who drop out of school as early as they are allowed differ from those who remain in school. Some of the most radical critics of modern public-school education are inclined to believe that many of those who drop out early are superior children who are intelligent enough to be thoroughly dissatisfied with the sort of education the school offers, and independent enough to refuse to submit to it. Others of the school men believe that those who leave early are almost exclusively the inferior children, while many think that elimination is based not on ability, but on the economic status of the family. Business men, particularly the self-made ones, are inclined to think that boys who leave early are just as able as those who remain in school, and that experience at work has as much educational value of a vital kind as experience in school—a point of view which may be merely a generalization of their own very exceptional careers.

During the last few years careful statistics of the school

grade of children who drop out early have been kept in many cities. They all demonstrate that the children who leave as soon as they are allowed constitute a very retarded group. In Cincinnati, when the age for leaving school was fourteen years, only from 15 to 22 per cent of those who left school under sixteen years during the years 1910-1913 had completed the eighth grade. The percentage of retardation was 66 among those who left school under sixteen years, but only 30 per cent for those who remained in school. Under the law of 1913, whereby boys are required to be fifteen years and girls sixteen before they leave school, the proportion of those who have completed the eighth grade is still only 40 per cent, and the percentage of retardation has risen to over 80 per cent. However, not everyone is ready to accept the evidence of retardation in school as a proof of inferior mental ability. Retardation in school, it is argued, may be due to poor health, to bad home conditions, or to a kind of teaching which is not suited to certain types of mind. Those who drop out early may be not the inferior ones, but the unfortunates, or the misfits.

Laboratory tests, everyone agrees, measure native ability to a greater extent than they do school training. The specific problem before the Cincinnati bureau was to determine whether the difference in mental calibre between children who left school and those who remained persisted year after year. Accordingly, two groups of about 800 children each were tested in the psychological laboratory in the years 1911-1912. Both groups were native-born white children fourteen years of age. One was composed of children who were just taking out employment certificates, and the other of children who were intending to remain in school. To make the two groups as comparable as possible, the school children were taken from the schools in industrial districts which were furnishing the greatest number of working children. Each of these groups is being retested from year to year up to nineteen years of age.

Although the laboratory is now finishing the fifth annual test of the working group and the third and fourth of the school group, only the tests for the first two years (at fourteen and at fifteen years) are all evaluated and summed up so that a comparison of the groups can be made. The differences are very striking, and very uniform. The school group is superior to the working group in every mental and physical capacity measured. This is true at fourteen years, when both groups are really school children. The difference holds for both sexes, though it is more striking for the boys than for the girls. The superiority of the school group is greater at fifteen years than it was at fourteen.

In addition to the marked differences in grade of mental ability between working children and school children, we are demonstrating that there are measurable differences within the group of working children between those entering different types of occupations. Between department-store workers and factory workers, for example, there is a measurable difference in mental ability even among these beginners, and under the present haphazard methods of choosing employment. The former group is superior, and the difference becomes more marked with the successive years out of school.

We have used one other method of measuring the intelligence of our working children—the form of the Binet test known as the Yerkes-Bridges point scale. When our own series of tests was begun, we thought there would be no point in giving Binet tests, since they were supposed to be useful above the age of twelve years only in measuring degrees of mental deficiency. Since our fourteen-year-old children had completed at least the fifth grade in school, it seemed safe to assume that they were not feeble-minded. However, in con-

tinuing the tests, we became convinced that some, at least, of the children with whom we were dealing were limited enough in intelligence to rank as feeble-minded on the Binet system. We collected, therefore, 237 records of our group of eighteen-year-old industrial workers who had left school at fourteen years, distributed in such a way as to be representative of the original group of 800 working children.

We adopted the Yerkes-Bridges point scale because it is so much better standardized than any of the previous forms of the Binet test. The point scale record is stated first in terms of the number of points of credit received out of a possible 100. The score can then be interpreted in terms of years by reference to a table of the average scores made by children of each age. One who ranks twelve years in the older form of Binet scale ranks about thirteen and one-half on the point scale. Accordingly, to find the percentage of our series who would rank as feeble-minded in the older standard, the one which is still most widely used, one must find how many of our group fell below thirteen and one-half years (or 80 points) on the Yerkes-Bridges point scale. That percentage is 40.5 for boys and 42.5 per cent for girls. None of these cases rank as imbeciles (below eight years), but about 10 per cent are low-grade morons (eight to ten years Binet) and the remaining 30 per cent high-grade morons.

If one adopts the tentative limit for feeble-mindedness among adults suggested by Professor Yerkes (those who fall below 75 points, which is about twelve years in the Yerkes-Bridges point scale), the percentage of the feeble-minded in our group is more conservative, but still startlingly high. It is 25.5 per cent.

This body of facts which has cost so much labor has a decided bearing from the educational standpoint, from the vocational standpoint, and from the point of view of legal procedure and legislation.

Types of Ability

WE DOUBTLESS all agree that if a child is to be helped to make the most of himself, he should be helped to discover for what type of occupation he ought to prepare himself while there is yet time to prepare. Since so large a proportion of children leave school as early as they are allowed, fourteen to sixteen years in various states, such advice should be given not later than twelve years and, whenever it proves possible, earlier. The facts which we have presented show that inferior mental ability is one cause, and probably the most important cause, for early elimination from school. A difference so marked at fourteen years could certainly be demonstrated earlier. The experimental method promises to furnish us with a more accurate and a more objective method than we have ever had before for selecting two or more years ahead of time the children who are quite certain to drop out of school early because of inferior mental ability.

It is evident that these children who lack the ability for the very skilled trades, for office work, or for salesmanship are destined to perform some sort of simple, mechanical work. For them the school could certainly do something better than to let them struggle unsuccessfully year after year with academic subjects beyond their capacity. Their presence in the same classes with children who are bright tends to lower the standards and lessen the amount of training that brilliant children receive. Some school systems in despair have made a rule that a child who has failed twice in a grade shall be promoted to the next one. The result is the presence in the fifth to the seventh grades of well-behaved and docile feeble-minded or backward individuals who tend to vitiate the teacher's judgment as to what can fairly be required of the children

in the grade. The procedure is no more fair to the deficient child than it is to the brilliant one.

While the tests at present are better able to select those of inferior ability than those of exceptionally good ability, we are rapidly developing a technique for the latter purpose also. Indeed, Professor Whipple, of the University of Illinois, has for the coming year a special grant for developing tests for very superior children. It is even more important for society to educate the promising children to the limit of their capacity than it is to keep from wasting time in making the deficiencies still more worthless. When it can be demonstrated that we have an objective means of selecting early those individuals who have a good chance of success in the higher professions and business careers, then it will be possible to secure the necessary funds for providing scholarships for brilliant children who would otherwise be forced to leave school early.

The task of sorting children into large groups with reference to general ability, finding out approximately what degrees of ability are required for success in various grades of occupation—unskilled labor, skilled labor, salesmanship, office work, business management, and the various professions—and basing advice upon such findings, may seem a very modest one. It certainly falls far short of the requirement that vocational advice shall state just what phase of any occupation a given individual shall enter.

The psychologist is as ready as the proverbial man of common sense to admit that mental ability is only one element to be considered in giving vocational advice, but he insists that it is a very important one; that within certain limits it is decisive, and that it is the only one at present open to scientific measurement. There is no use in advising a child of inferior mental ability to take the academic training leading to one of the higher professions. He will not be able to succeed, no matter how good his disposition, how great his ambition, nor how much money and influence his father may possess.

It may seem that sorting children with regard to general levels of ability is a task for which the school is already equipped, and in a general way it is. But it is not so well equipped that it needs no assistance. Oftentimes failure due to lack of ability is confused with failure due to physical, social and economic factors.

Among a group of failures in first-year high school we found by laboratory examination variations in mental ability from the upper to the lower end of the scale. At the upper end was a brilliant boy whose family atmosphere and influence was all opposed to high school. His family actively contributed to his failure in school as much as possible, in order to persuade him to leave and go to work. At the lower end was a girl not far above the border-line of feeble-mindedness, whose family were determined to keep her in school and were spending hours every day helping her with her lessons.

By the school these children were all grouped together as failures, but the correct diagnosis of the cause of failure would evidently be a decisive factor in the vocational advice offered by the school. Such advice would help to avoid many of the misfits in business and industry. Cases like the following, for instance, could be duplicated in many an establishment. An unusually intelligent and kindly employer sent us a boy of eighteen who had been for two years a regular apprentice in a high-grade machine-shop. The boy was good-natured and willing. He had been tried in every department of the shop, and had succeeded in none, though the foremen all liked him and had done their best to help him. He had spoiled several hundred dollars' worth of material in the course of his various failures. The boy proved to be very close to the

border-line of feeble-mindedness. He could never have made a skilled mechanic if he had been trained for the rest of his days, and the employer might just as well have known it several years earlier. When his apprenticeship was prematurely ended and he was given employment as a day laborer in the same establishment, he gave good satisfaction and seemed much happier.

Levels of Ability

THE APPLICATIONS of experimental psychology thus far discussed all have reference to the problems of childhood and early adolescence. How useful the method will be when applied to older individuals, who have already gone through the sifting process of school and society up to the age of seventeen or more, remains to be seen. Dean Schneider [see the SURVEY for June 24] has decided that experimental psychology can be of no assistance to vocational guidance because our present supply of tests, when applied to students in engineering in the university, prove to be of little or no help in deciding just what kind of an engineer each student should become and which of the group will be the most successful engineers.

The conclusion is scarcely justified. Students in engineering are already a highly selected class in the community. They have been selected first by the elementary school as capable of finishing the eighth grade; second, by the high school as capable of finishing the high school. This process locates them roughly as belonging to the best 5 to 10 per cent of the population. In the third place the class in question has been selected by Dean Schneider himself from a far larger number of applicants. If Dean Schneider were displaying his customary scientific caution in drawing conclusions his verdict would read not that experimental psychology can make no contribution to vocational guidance, but that the present technique of experimental psychology can be of little or no assistance in sorting into finer subdivisions a group of students already carefully selected for engineering.

That even our present technique might have been of a little assistance, however, in selecting the original group of engineers, we have some proof. One of the staff of the laboratory of the Vocation Bureau happened to be acquainted with a number of the students of engineering. He told me of one of them who was, he felt sure, failing, and said he thought it very probable that our series of tests for adolescents would show him to be a person of inferior ability, even as compared with boys who usually leave school early to go to work. He succeeded in persuading the student to come to the laboratory to be tested, and found his suspicion correct. The laboratory could have prophesied with a high degree of certainty before he entered the College of Engineering that he would not succeed. The boy was dropped at the end of the first semester. Doubtless the case is exceptional, but experimental psychology could have demonstrated in less than five hours what it took the faculty of the College of Engineering four months to decide.

Experimental psychology has as yet been of much less service in distinguishing types of ability than it has in distinguishing levels of ability. In fact, it is still an open question to what extent ability is general and to what extent it is specific.

What experimental evidence there is at present tends to show that it is general rather than specific.¹ One of the supposed differences in types of mind which has recently been much emphasized is that between the so-called mental and

¹ See Webb—Character and Intelligence, British Journal of Psychology, Monograph Supplement, Vol. 1, No. 3, 1915.

manual types, between the type of mind whose thinking is carried out chiefly in terms of abstract symbols and the kind whose thinking is carried out in terms of manipulations.

The present investigation of the psychological laboratory throws some light on this distinction. The tests of manual ability and the tests of mental ability have been estimated separately and the relations between the two worked out. There is a small positive correlation. That is to say, as a class those who stand high in the mental tests are also those who stand high in the manual tests, but there are many exceptions—individuals who rank high in mental tests and low in manual tests, and vice versa. It seems probable, therefore, that experimental psychology can furnish a method of picking out those individuals who have a decided bent in one or the other of these directions, and also those who fail or excel in both of them. In studying the extreme cases of one series, highest and lowest, we find a number of individuals who excel in both manual and mental tests, and a number who fail in both. We find a few who rank very low mentally, but excel in manual tests, but none who rank very high mentally but are among the worst failures manually. Apparently the possession of exceptionally good mental ability implies a manual ability which is at least not of the poorest grade.

Evidently these distinctions are of importance in vocational guidance. There are certain professions, such as the very skilled trades, engineering, and medicine, which demand a high degree of manual ability as well as a given level of mental ability while others, such as salesmanship, the purely academic subjects, and many branches of business and finance, make almost no demand upon manual ability, but require given levels of mental ability.

As an illustration of the use of this distinction, let me cite the case of a high-school boy who came to the laboratory to be tested last year. He ranked exceptionally high in the mental tests, but rather poorly in the manual tests. He was particularly defective in the steadiness of his hand. The boy was taking the cooperative course in machine-shop work. When questioned about it, he said that he did not like the work and had no intention whatever of becoming a skilled mechanic, though he was keeping up with his classes. Literary and academic subjects appealed to him far more. A note to the high school procured a change of course for the boy.

In addition to these contributions, experimental psychology can furnish special sets of tests for types of artistic ability, such as singing, painting or modeling. Professor Seashore, of the University of Iowa, has already developed a set of tests for musical ability which are of great service in deciding the degree of talent a child possesses.

The Limits of Feeble-mindedness

LET ME TURN now to the question of the limits of feeble-mindedness and its bearing on court procedure and legislation. I have stated that the application of the Yerkes-Bridges point scale to an unselected group of native-born industrial workers, eighteen years of age, shows that by the most widely used standard 40 per cent of them rank as feeble-minded, and by a newer and more conservative standard, 25 per cent. These results are not alone in showing that the standards now in use to detect feeble-mindedness among delinquents would gather in a large number of supposedly normal individuals if generally applied.²

It may be argued from one point of view that it is immaterial just what percentage of the most poorly endowed mem-

bers of the community shall be included under the term "feeble-minded." There are all gradations, from the wise man to the fool. But when one considers that the usual connotation of the term "feeble-minded" is a person who is of so low a grade mentally that he is a menace to society and needs institutional care, and that the term is often made the basis of legal decisions, the fixing of the percentage of the population to be included under it ceases to be a mere matter of convention.

The average judge does not know enough psychology to interpret findings stated merely in terms of psychological tests. A very public-spirited and conscientious judge of a juvenile court once showed me a report of a psychological examination which read as follows: "Age 16 years, Binet age 10 years, diagnosis, low-grade imbecile." When I told him that no psychologist would regard the final diagnosis of low-grade imbecile as possible in the case of an individual who could pass a ten-year Binet test, he said that was a fine point for the psychologists to decide. Meanwhile his procedure was being determined by the idea that he was dealing with a low-grade imbecile. A diagnosis of "feeble-minded" in the case of an adult who had passed a twelve-year Binet test was also allowed to pass unchallenged. If the judge could be told not that a person is feeble-minded or not feeble-minded, but that he is as low-grade mentally as the poorest 3 or 5 or 25 per cent of persons of his age in the community, he would have a safer though less dramatic basis of action.

The extent to which legal procedure should be modified according to the mental status of the criminal is by no means a simple question. Suppose, for instance, a youth of eighteen, whose Binet age is eleven, commits a murder. On the ground that he is "feeble-minded" the judge might decide that he should not pay the usual penalty for his crime. But if the judge knew that a large percentage of the rank and file of the laboring population showed the same degree of feeble-mindedness, he might feel far less certain that the case should receive treatment different from that given to other criminals.

Perhaps what most needs to be modified is not so much the disposition of a limited number of criminals who are feeble-minded as the whole theory and method of dealing with criminals. When we know more accurately the proportion of criminals who are as low grade mentally as the poorest 3, 5, 10 and 25 per cents of the population at large, we shall have a far more rational basis for readjusting legal procedure with reference to mental status than we now have. The laboratory of the Vocation Bureau is making a very real and definite contribution toward a percentile scale of experimental results which will make such a formulation possible.

There is one other point of view from which it becomes important to fix more closely and accurately the limits of the term "feeble-minded." That is with reference to securing legislation. There is no question but that one of the most urgently needed reforms in social legislation is provision for the permanent and compulsory segregation of all the feeble-minded who are either dependent or delinquent. It has been abundantly demonstrated both that the percentage of feeble-mindedness is higher among criminals than among the population at large, and that feeble-mindedness is a very serious menace from the point of view of heredity. But if we go before a legislature to secure such laws with a definition of feeble-mindedness which would, if generally applied, include 25 or even 10 per cent of our industrial population, there would be slight hope of success. We must begin with a percentage low enough so that the individuals so selected might conceivably be provided for in institutions.

The Face of the Nation

By *Edward A. Steiner*

AUTHOR OF "ON THE TRAIL OF THE IMMIGRANT," "NATIONALIZING AMERICA," ETC.

MANY of us who have looked into the face of America are wondering how the future will shape it. We are listening to the confusing sounds that strike our ears, anxious as to which shall predominate. Still more are we perplexed when we look beneath the surface, and see and hear that which escapes the superficial observer. Then we are anxious because those who come to us bring not only racial inheritance and the language their mothers taught them, but tradition-laden memories, standards of living and conduct, hopes and ideals. Upon our ability to blend their historic inheritance with ours depends our success or failure in the task of unifying, solidifying and enriching our national life.

American history is, after all, a chapter in the history of the whole human race and you can not dig into America's immediate past without striking roots branching in all directions. Neither can you think of her future, without finding her profoundly affecting the people of the world.

We are sovereign over this land of ours, we are being moulded into something which will have physical kinship or likeness; but have we a common history, that powerful element in the welding of a nation, and indispensable to it? Our splendid isolation, which, in the past, has done so much to keep us from entangling alliances and has kept us from becoming the inheritor of Europe's political ills, has also made it possible for us to develop our own history and to teach it as if it were another Genesis.

Of our British past we are now being reminded more and more emphatically: what we owe to Spain, France, Holland and Sweden we are beginning to learn; the contribution of the German people we shall not be permitted to forget, and what the latter day immigrant has thus far given and what he may give must, of course, be appraised in the future.

It was, after all, a good thing that American history so soon became the history of one people, that the colonies so quickly forgot their historic background, and that the states, carved out of these vast territories, came in one by one, or two by two, as the animals went into the ark. The historic deluge followed, all but blotting out the past. On the extreme edges of what was once the domain of France the French speech still lingers; of Spain and Spanish, less is left. From ocean to ocean and from the lakes to the gulf it is all America, with its history written upon a new page.

It is really not difficult for the immigrant to accept this new history as his own; it is easy because it is so new, and because its beginning is marked by a great discovery rather than by a great conquest. The story of the discovery of America is known to every European child who goes to school. It belongs to its earliest impressions and frequently antedates the fairy tale.

The winning of the land from the British and the establishment of a republic were events which made their impression everywhere and found an echo in the hearts of all those who, feeling themselves oppressed, yearned for freedom. While we may say that freedom was established here as a political principle, it is an idle conceit in which we indulge ourselves if we believe that there was no striving for it and no understanding of it elsewhere.

German, French and Polish generals played not an incon-

siderable part in the Revolutionary War, whereas common soldiers who were not of native or of English blood were so numerous as to make it impossible to maintain the idea that none but Anglo-Saxons can love freedom. That passion is, after all, a very common, human quality among people everywhere, and there is a response to those who struggle for it which is limited only by the endeavor of rulers to suppress it.

We are fortunate in having written upon that first page of our history the name of George Washington, who is no stranger to freedom-loving people anywhere. His monument is found in many foreign capitals, and he may be, so far as I know, the only foreign ruler thus honored. The Hungarian child before it is old enough to have read the historic page has seen his monument in Budapest, close to those of Kossuth, of Deak and Petoefy, his own national heroes. Even if he comes into the consciousness of the immigrant long after he has left the school of his native country, or even if he has never gone to school, the character of Washington makes its immediate appeal unlike any whom he knows. Of royal nature, though not of royal blood, this hero accepted no recompense for serving his country, making service itself the only reward he asked, so that republican principles might be firmly established in this land.

THE period between the War of the Revolution and the Civil War is the history of the migration of a people; it marks the winning of the West and the making of great commonwealths upon those far-stretching prairies, a task, too, in which the immigrant had an honorable part. The border struggle was never under the leadership of one man or one people, and while the Scotch-Irish predominated, the Germans, Scandinavians, Poles and Bohemians made up a fair share of that ever-moving frontier line.

The racial strains which went into the making of the frontiersman are hard to trace, for it is an elemental personality which emerged out of that early melting pot—coarse, but strong, keen and inquisitive, powerful and materialistic, restless and individualistic, buoyant and exuberant, shrewd as Jacob and hardy as Esau.

The immigrant readily enters into the highly accentuated record of conflict with the Indians, even though his particular race had no share in the winning of the West. Long before I read Cooper's Indian tales I played Indian in a village among the Carpathians and scalped the luckless palefaces whom I had captured. The names of Sitting Bull and Buffalo Bill have been carried through the capitals of Europe, and from towns and villages many a lad's eyes were turned westward, yearning to have a share in fighting the Indians.

The year 1848 marks an epoch in the history of the European peoples, and the immigrants who at that time came to the United States, driven by their despots, repaid this country richly for the asylum they found. They made valuable contributions to our culture and our politics, refining our social life and purifying our ideals of liberty and democracy. Eighteen hundred and forty-eight is a date which serves to accentuate the common passion for liberty and the common traits which mark all noble men, of whatever race they be.

The Civil War, in spite of the fact that it was an internecine conflict, found a universal echo. It seemed of little

concern to the people of Europe whether the Union was preserved or not, and England's commercial policy dictated her sympathy with the South; but upon the question of slavery there was no division.

Just as the escape of the children of Israel out of Egypt has become sacred history, the story of the black man's gain of freedom has entered the universal consciousness. It marks the death of slavery, and in that, all human beings have cause to rejoice. It is not difficult to arouse enthusiasm for the soldier heroes who died in that conflict. Many were men of all the racial strains which had drifted into the United States. The outstanding figures of U. S. Grant, of Sherman and Sheridan make their heart-stirring and picturesque appeal, while Stonewall Jackson and Robert E. Lee are gradually becoming sympathetic figures to all American people, native and foreign born.

There is, however, no person in American history, if in any history, who like Abraham Lincoln instantly captures the imagination of every normal human being.

I doubt that the saints and martyrs upon the church's calendar or many sacred names in Holy Writ are so vitally compelling as the name of this man, born in a log cabin, reared amidst poverty and ignorance, who made his way from the backwoods to the White House and into the immortality of history.

The sadly solemn face portrayed upon our commonest coin, the penny, received its smile from the skilled fingers of an immigrant sculptor, who modeled it "so that he may smile upon every immigrant's child, his first welcome." That was the stroke of a genius who understood Lincoln and knew the common people's appreciation of the great martyr President. I wish there might be erected in every industrial center a statue of Abraham Lincoln for masters and men to see and reverence, thus being reminded of their duty toward each other and toward their common country. What a people we could become if the immortal words he spoke were graven upon the pedestal of such a statue, to greet our eyes and challenge our conduct daily: "With malice toward none, with charity toward all."

THE history of the United States since the war has not yet been written, for it is the story of an epoch just closing. It marks the sudden leaping of a people into wealth, if not into power, the fabulous growth of cities, the end of the pioneer stage, the beginning of an industrial period, and the pressure of social and economic problems toward their solution.

At least twenty million people have come full grown into our national life from the steerage, the womb out of which so many of us were born into this new world. Most of us came to build and not to destroy; we came as helpers and not as exploiters; we brought virtues and vices, much good and ill, not because we belonged to this or the other national or racial group, but because we were human. It is as easy to prove that our coming meant the ill of the nation as that it meant its well-being. To make full appraisal it is much too early; it is a task which must be left to our children's children, who will be as far removed from today's scant sympathies as from its overwhelming prejudices.

The great war has swung us into the current of world events, and it ought to bring us a larger vision of the forces and processes which shape the destinies of nations and their peoples. But as yet we are thinking hysterically rather than historically. The indications are that we may not learn anything, nor yet unlearn, of which we have perchance the greater need. Thus far we have become narrower rather than broader, for the feeling toward our alien population is

growing daily less generous and our treatment of it less wise.

Nor am I sure in what wisdom consists, the situation is so complex. For we are the Balkans, with its national, religious and racial contentions; we are Russia, with its Polish and Finnish problem; we are Austria and Hungary, with their linguistic and dynastic difficulties; we are Africa and Asia; we are Jew and Gentile; we are Protestant and Greek and Roman Catholic—we are everything out of which to shape the one thing, the one nation, the one people.

Yet I am sure that we cannot teach these strangers the history of their adopted country unless we teach them that our history is theirs as well; that, on the other hand, their traditions are ours, at least so far as they touch humanity generally and convey to all men the blessings which come from the struggle against oppression and superstition. It is in their inherited national prejudices, in their racial hates, in their tribal quarrels that we wish to have no share, except as we want to help them forget the old-world hates in the new world's love.

None of us who have caught a vision of what America may mean to the world wish to perpetuate here any one phase of Europe's civilization or any one national ideal.

Although our institutions are rooted in English history, though we speak England's language and share her rich heritage of spiritual and cultural wealth, we do not desire to be again a part of England or nourish here her ideals of an aristocratic society.

In spite of the fact that for nearly three hundred years a large part of our population has been German and that our richest cultural values have come from Germany, in spite of her marvelous resources in science, commerce and government, we do not care to become German, and I am sure that Americans of German blood or birth would be the first to repudiate it, should Germany's civilization threaten to fasten itself upon us.

We do not wish to be Russian, in spite of certain values inherent in the Slavic character, nor do we desire to be French.

We do crave to be an American people, to cultivate here an American civilization, and if we are true to the manifold genius of our varied peoples we may develop here a civilization richer and freer than any one of these, because it will be based upon all of them, truly international.

HISTORIANS tell us that the history of the United States illumines and illustrates the historic processes of all ages and all peoples. To this they add the disconcerting prophecy that we are drifting toward the common goal of destruction, and that our doleful future can be readily foretold. We have had our hopeful morning, our swift and brilliant noon, and now the dark and gruesome end threatens us.

I will not believe this till I must.

I will not, dare not, lose the hope that we can make this country to endure firmly, to weather the storm, or at least put off the senility of old age to the last inevitable moment.

When, however, the end comes, as perchance it must, I pray that we may project our hopes and ideals upon the last page of our history, so that it may read thus:

"This was a state, the first to grow by the conquest of nature and not of nations. Here was developed a commerce based upon service and not upon selfishness, a religion centering in humanity and not in a church.

"Here was maintained sovereignty without a sovereign and here the people of all nations grew into one nation, held together by mutual regard, not by the force of law. Here the state was not maintained by battleships and armaments, but by the justice, confidence and loyalty of its people."

COMMON WELFARE

THE MONTH

NEXT Tuesday, being the famous Tuesday following the first Monday in November, will be widely marked by the legal "X," which is the outward and visible sign of having made a citizen's choice. But in few states will the voter get off so easily as to mark only one ballot. In nearly all he will be faced with the demand for "yes" or "no" on a number of constitutional amendments, many of them of prime social significance.

In Massachusetts, New Hampshire and New York he must decide whether or not the fundamental law itself shall be overhauled through proposals for constitutional conventions. In South Dakota and West Virginia he will have the opportunity of giving votes to women. This is in striking contrast to a district in Washington, where Anna Louise Strong, secretary of the Seattle Central Council of Social Agencies and known in the East through her work for the federal Children's Bureau and in child-welfare exhibits, is running for the legislature. A contrast, also, to Denver, where Judge Ben B. Lindsey is appealing to the women voters to re-elect him judge of the Juvenile Court. This is Judge Lindsey's twelfth campaign in sixteen years, due to conflicting judicial decisions as to whether his is a state, county or city office. Some years he has run both spring and fall.

By all odds the greatest number of measures have to do with one form or another of prohibition. The liquor question is never settled. Defeat of a prohibition measure is sure to be followed by its resubmission; and enactment, particularly in a state possessed of the initiative, sprouts a hardy perennial of proposed repeal.

There are six states in which the prohibition issue has been raised this fall by the dry forces. One of these, Idaho, is already dry by statute and the present vote is on the question of putting prohibition into the state constitution. The five states which are now wet and in which prohibition is an issue are Cali-

fornia, Montana, South Dakota, Nebraska and Michigan.

In California the voters are facing two prohibitory propositions, one for the closing of saloons and prohibiting the sale of liquor in clubs, cafés and restaurants to take effect in 1918; the other prohibiting, also, the manufacture of alcoholic liquors. The latter would go into effect in 1920, giving time for the grape-growing interests of the state to adjust themselves to a change. The friends of the latter measure hold that the fears of the grape-growers—a large class in California—are unfounded, as it is in table grapes and raisins, rather than in wine grapes, that the state's profits lie. The other amendment, the chief effect of which would be to close the saloons, is said to have a much wider following than the more drastic measure.

Montana is voting on a referendum which, if adopted, is to become effective December 31, 1918. South Dakota, which has 400 dry towns to 92 wet ones, is voting on statewide prohibition.

And Nebraska, also under local option, is voting on a statewide measure.

Michigan, which is being watched with much interest because of its automobile and other large manufacturing interests, is facing two constitutional amendments. One, designed to prohibit the manufacture and sale of liquor, makes no reference to importations from other states and is being attacked by the wets as a measure not intended to prevent the well-to-do from importing liquor, while it would deprive the poor man of his glass of beer. The second, initiated by the wets as a backfire, would change the basis of the present local-option law, under which 44 out of the 83 counties of the state are dry, from county to township.

Perhaps the liveliest campaign of all is on in the dry state of Washington, where two initiative measures, one known as the hotel-men's bill, the other as the brewers' bill, are up. The first provides that any hotel with more than fifty rooms may get liquor in any quantities and supply it to its guests, and to their guests, with meals or in their rooms. The second bill allows the manufacture of beer and the conduct of a mail-order business and house-to-house delivery. Under it Washington would be a state without a saloon, yet without a legally dry spot from end to end.

In Alabama widespread efforts are being made to secure the adoption of a constitutional amendment permitting counties to levy upon themselves an additional tax for school purposes. The city of Birmingham, in particular, is in grievous need of larger school funds, not only to supplement present inadequate amounts but to make possible the real enforcement of the state compulsory education law. Another amendment has for its purpose the establishment of biennial sessions of the legislature in place of the present quadrennial sessions.

Arizona voters, besides an amendment drafted to restore the state prohibition law to the intent of its drafters, now partially defeated by judicial decisions, will act on an elaborate workmen's compensation measure. It is modeled on the

Donahy in Cleveland Plain Dealer

GOING UP!

Montana law, establishing an industrial accident board and a state insurance fund, but the payments proposed are about 10 per cent higher. Initiative measures propose to abolish capital punishment, substituting life imprisonment; to add to the grounds on which divorces may be granted, and to establish a state department of labor in charge of a commissioner at \$3,000 a year, to be elected for a two-year term.

Arkansas must vote on an amendment which proposes to substitute county option for the present statewide prohibition. Should it pass, it is expected to lead to the legal reopening of saloons in the cities. Another local-option amendment would permit counties to increase their present tax rate of five mills to any amount up to twelve mills, the increase to be used only for schools. The success of the measure would, it is said, greatly improve the schools, especially in country districts where the school year is short, in some cases being only two or three months out of the twelve. A third amendment is designed to stiffen a weak spot in the initiative and referendum—the emergency clause—through which the state child-labor law was all but lost last year.

In California, whose liquor proposals have been mentioned above, a drastic single-tax amendment will come up by initiative. The measure provides for a complete revolution in taxation in less than two months, as, if adopted, it will become operative January 1. Its intention is said to be the breaking up of the big land holdings, but among those opposing it are representatives of some small land-holders who believe that the sudden shifting of the burden of taxation would lead to confiscation of property, especially of those small parcels of land which many Californians have made practically their savings banks.

ALL Illinois will vote on a constitutional amendment authorizing the legislature to equalize taxes, now said to be scandalously unjust under a law nearly a century old. In Chicago a referendum consolidating the many city park boards is being opposed by friends of the measure on the ground that the city administration is pushing for a decision at the national instead of the city election in order that it may add thousands of appointments to Mayor Thompson's patronage.

The City Council is submitting a bond issue of \$2,450,000 for the purchase and development of bathing beaches and pools, playgrounds, indoor gymnasiums, assembly halls, reading-rooms and small parks. The passage of the issue, which is widely hoped for, recognizes the needs of the great groups which surged to the shores of Lake Michigan all through the hot summer just past, and even fought for a place

in the line of bathers. And it makes definite the long struggle of Chicago civic agencies and the Chicago Plan Commission to reclaim the lake front for the healthful and recreative use of the people.

Louisiana voters must pass on nineteen proposed amendments to the state constitution, the most important, perhaps, being the one permitting women to serve on educational and charitable boards, submitted for the third time. Now a woman may be appointed only to the office of state factory inspector, an exception secured through a special vote at the time, several years ago, when Jean M. Gordon offered her services to the city of New Orleans as factory inspector. The entire state had to vote on the matter, at a cost of \$3,000, before Miss Gordon's offer could be accepted. In the vote of New Orleans property owners on the measure authorizing a refunding of the municipal debt depends a bond issue of \$9,000,000, and on that, in turn, hangs the continuing of the city school system on its present basis.

IN Maryland there is a lively educational campaign on to secure the adoption of an amendment, approved by both political parties, for the creation of a state budget system. Increased assessments and high tax rates have failed to check the state's mounting deficit, due to appropriations made with little regard to sources of income. Finally, two years ago, the whole thing "blew up," as a writer in the *Baltimore Sun* puts it, and \$2,000,000 worth of bonds had to be issued to pay current expenses, a part of them being the generous subsidies to state-aided institutions for which Maryland is widely known.

The proposed budget system was drawn by the so-called Goodnow Commission, appointed for the purpose, and has been widely approved by budget experts.

In Massachusetts fourteen cities and towns will have to decide local questions, such as charter revision, preferential voting in municipal elections and pensioning certain classes of officials. In three of these cities simplified charters are proposed. In Lynn there is the question of establishing a public industrial shoemaking school to supply a need which several private schools are now attempting to meet in an unsatisfactory way.

The initiative and referendum will be placed in issue in thirty-seven of the 224 districts of the state. This question, whether the representative shall be instructed to support the initiative and referendum, is placed on the ballot under the provisions of the limited initiative law of 1913, which provides for the initiation of questions which the secretary of the commonwealth shall determine to be questions of public policy.

Under this limited initiative, also, the question of non-contributory old-age pensions will be submitted to the voters of four districts: "Shall the representative from this district be instructed to advocate legislation for non-contributory old-age pensions?"

Four general referendums will be submitted to the voters of all cities and towns. One is the acceptance of an act to make January 1 a legal holiday. Another is the question of holding a constitutional convention. Another is the acceptance of an act in regard to party enrollment at primary elections.

The fourth general referendum is upon an act to authorize cities to maintain schools of agriculture and horticulture. Each city in the state may choose whether or not it will adopt the proposal put forward by the Massachusetts Homestead Commission as a back-to-the-land measure. This provides for the teaching of families in horticulture and agriculture and the temporary housing of those attending the school who have not access to the land. In its campaign for the measure, the Homestead Commission has put forward the plan to relieve unemployment and congestion of population in the cities, to check the flow of people from country to city against which there is no counterbalancing stream of people returning to the land. It is cheap and easy to move to the city and get work; it is difficult and expensive for a family to establish itself outside of the city.

Missouri voters will be called to vote upon prohibition, state pensions for the blind and the establishment of the so-called "farmers' land bank," a form of rural credits. All three are constitutional amendments. Prohibition and the land-bank bill were submitted by initiative petition; the amendment for pensions for the blind by the legislature.

This is the first time since the initiative and referendum was adopted, in 1908, that it has been so little used. This is due, perhaps, largely to the fact that there is a strong movement on in Missouri at the present time for complete constitutional revision, and advocates of changes are putting all their energy into getting the legislature to submit the question of calling a constitutional convention. The farmers' land bank is a political issue, being the chief plank in the platform of the Democratic candidate for governor. Both political parties have pledged themselves to the amendment for the blind, as well as to the calling of the constitutional convention.

IN St. Louis the voters will be called upon to vote on a sweeping amendment to the city charter, providing for an entirely new system of nominating and electing city officers. With the usual ballot reform, cutting party labels off

the ballots and nominating only by petition, go proposals to elect the legislative body by proportional representation, so that every big group in the city, instead of one political party, will be represented in the board of aldermen; and also to elect the three administrative officers of the city by a majority instead of a minority choice, through preferential voting.

New Yorkers are asked to authorize a bond issue of \$10,000,000 for Bear Mountain Park, a notable playground near city-dwellers, which combines the unusual features of primeval forest and the Palisades of the Hudson River. Private gifts of \$2,500,000 depend upon the appropriation, which, moreover, will obligate the state of New Jersey to cooperate in the project. Three counties, Rensselaer, Warren and Livingston, are asked to vote the money for county tuberculosis sanatoria.

In North Dakota, while no specific social measures are before the people, intense interest attaches to the election as marking what is described as nothing less than an industrial revolution. The farmers of the state have organized politically, have captured the organization of the Republican party, and it is said they will undoubtedly elect their entire state ticket.

In Oregon the secretary of state's list of proposed amendments and measures is largely taken up with the text and arguments over a single-tax bill. This has been defeated several times in different forms, and comes up this year by initiative under the name of "full rental value land tax and homemakers' loan fund amendment." There is considerable interest in the proposal to repeal a provision of the constitution which provides that "no Negro, Chinaman or mulatto shall have the right of suffrage." The article applies now only to the native-born, and is said to be a dead letter. Another initiative petition would prohibit compulsory vaccination. Still another repeals an unenforced Sunday closing law for stores and other business places.

An interesting initiative is that proposing a state rural-credits act, to be based on a state bond issue of not more than 2 per cent of the total assessed valuation of all property in the state. It resembles the recent federal act. The farmers' organizations, which support the measure, point out the interest rate on farm mortgages in Oregon is 8.25 per cent, which, with renewal costs and commissions, brings the rural interest rate up to a little less than 9.25 per cent. The rate proposed under the bill is 5 per cent.

In Washington, state issues have a social significance which to some minds quite dwarfs the national election. As one social worker puts it, the initiative, referendum and recall, the prohibition

laws, the municipal utilities, the port commission and even the right of the average citizen to vote are all at stake in two initiatives, seven referendums and one constitutional amendment. The prohibition measures have been mentioned above.

The franchise measure proposes to limit all voting on matters pertaining to finance and allied subjects to persons whose names are on the tax roll. This, it is believed, would disfranchise 75 per cent of the women and half of the men when it comes to voting on municipal utilities and school bonds. The port commission bill proposes to add to the three members now elected on a non-partisan ticket four county and city officials elected on party tickets for other jobs, a measure which is said to have for its prime object the partisan control of the port and its patronage.

The anti-picketing bill is so sweeping that it is believed its enactment would make it unlawful to carry a newspaper in which is printed a statement of the cause of any strike. The budget bill is said to be not a bill which would prohibit each city department from increasing its prearranged budget—that would still be allowed in emergency—but a measure which would require that such money be borrowed from the banks and not temporarily transferred from other city funds; a bill, in other words, which would keep city moneys on deposit in the banks at 2 per cent, while the city borrowed from the same banks at 6 per cent.

Certain interests in the state are said to be working for the enactment of these and other measures on the ground that Washington has been injured by "freak laws" and that this year's proposals are in line with a general tendency in the last legislature to return to a different sort of law-making. The charges made on the other side are that the last legislature, although thoroughly reactionary, lacked the courage to enact the program which it really desired, and put the matter up to the people in a series of cunningly devised initiative measures.

MR. STRONG'S REPORT ON STATE CHARITIES

ON Friday of last week Governor Whitman made public the report of Charles H. Strong, his special commissioner appointed a year ago to examine into the management and affairs of the New York State Board of Charities, of several related boards and commissions, and also into the charges brought by the city Department of Public Charities against the inspections by the state board of private institutions receiving money from New York city.

Mr. Strong upholds the charges of the city and recommends a thorough reorganization of the State Board of Charities, as well as the abolition of

several boards and commissions. A critical estimate of his conclusions will appear later in the SURVEY. Only a summary of his major findings will be given here.

The city proved its case, Mr. Strong finds, "out of the pages of the state board's own inspection reports." Private institutions receiving money from New York city and subject to the inspection of the state board care for more than 25,000 dependent children. The charge that many of these institutions were "unfit for human habitation" Mr. Strong declares untrue. This was made in the testimony before him of John A. Kingsbury, city commissioner of public charities. On the other hand, the charge that conditions in many of these institutions bearing the certificate of approval of the state board were "such as to be little less than public scandal and disgrace," Mr. Strong finds to be true. This was made in Mr. Kingsbury's report to Mayor Mitchel, which was forwarded to the governor and formed the basis for including this phase of the inquiry in Mr. Strong's commission. Seven, at least, of the twenty-four institutions on the city's controverted list must be thus described, says Mr. Strong.

For permitting such conditions to grow up and to continue Mr. Strong finds the state board responsible. He refers with appreciation to the "devoted, unselfish and uncompensated service of many of its members over long periods of years," and declares that he has not regarded his own commission as "an engagement to enter into a man-hunt" for the removal of any individual or board. He finds, however, that "at the time of appointment only a minor fraction of the state board had special qualifications for the post" and that "very few of the members possess what would seem to be reasonable familiarity with the state charities law, even in respect of the powers and duties of the board itself."

He finds, furthermore, many illustrations in the board's conduct of a "policy of aloofness," a "failure to drive hard enough." Sufficient power to enforce its own rules and standards with respect to private institutions exists, he believes, in the board's power to withhold its certificate of compliance, to issue a certificate of non-compliance, and to apply for a court order directing an institution to correct specified abuses in its care of inmates. Yet he finds that the board has all too infrequently withheld the first certificate, only once in twenty years issued the second certificate, and never applied for a court order. Its aversion to publicity as a means of enforcing its recommendations is another weakness in its policy, he declares. "Publicity," he says, "in the relation between a state department and a private institution holding any religious faith is essential."

"The State Board of Charities lacks power," he declares; "it lacks vision; it lacks drive. It does not know its real job. It is not doing its real job. It is ailing and it shows no sign that it knows what is the matter with it."

To the animosities that grew out of the city's investigation of private institutions and out of his own inquiry, Mr. Strong refers only incidentally. "I do desire to say," he declares, "that some widespread public animosities might have been avoided if the so-called 'Farrell-Potter pamphlets,' on the one hand, and the so-called 'Moree anonymous pamphlets,' on the other, had never been issued. All these were deplorable from every point of view."

The city's inspection, he finds, "galvanized the institutions into doing some things recommended and urged by the state board for years." "The objects of the city's investigation have been variously stated—to destroy the institutions; to convert the private institutions into public institutions; to place out all the children in private families; to secularize the institutions; to take God out of the hearts of the children; to found charity upon morals and not upon religion; to attack particularly the institutions of one religious faith; to destroy the State Board of Charities. There is no evidence before me that would remotely justify any such conclusion."

In the section dealing with infant mortality in private foundling asylums, Mr. Strong declares that the city Department of Public Charities "has a great duty to perform in this field." Complete utilization of the resources of the city, he says, would lead to a reduction in the number of commitments of children, and much can be done, he believes, that is not being done to keep mothers and infants together.

In urging his recommendations for a reorganization of the state supervisory system, Mr. Strong makes it clear that the State Board of Charities is guaranteed by the constitution and that he would not abolish it if he could. His desire is "to convert a weak board into a strong board, a board with inadequate power into a board with real power." "I do not mean," he says, "a board of control such as exists in many states, and usually not with advantage, but a strong, authoritative advisory and supervisory board, with sufficient administrative power to carry it through, and at the same time to cut out the vicious circle of interference by other administrators." Local institutional boards of managers must remain, he says, and must continue to exercise the "primary and fundamental administrative control."

The state board that he recommends would comprise, instead of twelve unpaid members appointed by the governor from districts, nine members appointed from the state at large, of whom

three would be paid and six not paid. At least one member would be a woman. Individual members, instead of serving eight years, would serve during good behavior and be removable by the governor for cause. At present the law specifies no qualifications for membership on the board; Mr. Strong would have special qualifications described in the law, "to the end that all the functional activities of the board should be discharged by persons with special training therefor."

Many of the new administrative and executive functions that he recommends should, he says, "be imposed upon the president of the board in the belief that efficiency in matters administrative calls for a one-man service."

Two new bureaus within the board are recommended; namely, a bureau for dependent children and a bureau for mental deficiency. The first of these would, among other things, develop new and reasonable standards of child care in the institutions, promote the placing out of certain classes of children in family homes, and stimulate an increase in financial support for the institutions, both from public and private sources. The second would address itself to the great problem of the care of the feeble-minded and might, when the constitution is suitably amended, be superseded by an independent state department covering this field.

Other recommendations call for an express grant of power to the state board to adopt rules and regulations for the reception and retention of inmates in state charitable institutions, such extension as there may be under the existing constitution of the visitational power of the board over private charitable institutions, and careful revision of the state charities law and the poor law. A state institution for defective delinquents is urged, as is also the care of adult female delinquents in public institutions exclusively.

The abolition of five offices and commissions is recommended. These are the fiscal supervisor of state charities, the Salary Classification Commission, the Building Improvement Commission, the Commission on Sites, Grounds and Buildings, and the Board of Examiners of Feeble-minded, Criminals and Other Defectives.

SHALL STEEL-MAKERS WORK SEVEN DAYS?

THE Lackawanna Steel Company, of Buffalo, has been for several months violating the New York state law providing that each of its employes shall have one day of rest in seven. That was admitted by the counsel for the company and by the superintendent of the plant at the hearing in Buffalo, last Saturday, before the New York State Industrial Commission, on the com-

pany's application for relief from the requirements of the law. Only second in interest was the fact, as developed at the hearing, that the company has not definitely formulated what sort of relief it wants.

Nevertheless, the whole burden of the argument in the brief submitted by the company and in the argument of its counsel was for total exemption from the provisions of the law. The chief grounds given were the difficulty of competition with steel companies in other states which do not come under the New York law, the prevailing scarcity of labor and the poor financial condition of the company.

It was contended that none of the leading steel companies of the United States, not even the United States Steel Corporation, now observes the principle of one day of rest in seven. Mr. Babcock, attorney for the Lackawanna company, stated that, with one or two exceptions, none of the competitors of the Lackawanna Steel Company are giving their men one day of rest in seven. He argued that on account of the scarcity of labor the men have become very independent and do not take the day of rest assigned to them, but take a day off whenever they feel like it. It was urged, further, that on account of great present activity in the steel business it is impossible to get men enough to provide the day of rest for all. The financial condition of the company was discussed in order to show that up to September only one dividend, which amounted to 1 per cent on the common stock, had been paid within the last ten years. It was stated that the men themselves prefer to work the seventh day in order to make seven days' pay every week.

In opposition to the application there appeared representatives of the Buffalo Central Labor Council, social workers and ministers' associations of Buffalo and of the state, the state and city Consumers' Leagues, and the American Association for Labor Legislation.

In a brief submitted by the last, it was pointed out that the steel company's arguments were inconsistent, in that they had shown no burden due to competition. The steel company's brief declared, on the contrary, that its practice and that of its competitors are substantially the same; thereby undermining its own arguments of discriminatory conditions. At the same time the company, in declaring that the men preferred to work seven days, proved that no expense whatever is attached to granting one day of rest in seven—the men and not the company pay the bill.

In the third place, it was pointed out that the company's weakened financial condition in the past was due to early mismanagement, and ought not to be charged against the employes. Further-

Longer Hours

—for Watches!

A watch has been invented that tells time *twenty-four hours a day*—tells time at night—in the dark—as well as in the noonday sunshine.

And the secret of it is—*radium*.

On the hands and figures of this watch is a new substance called "RADIOLITE," whose light-giving property comes from radium in minute quantities. It shines brightly in the dark, and retains its brilliancy for six to eight years.

Genuine "RADIOLITE" is found *only* on Ingersoll "RADIOLITE" watches.

*The Man Behind
the Counter*

There are four models of Ingersoll "RADIOLITES"—\$2.00 to \$4.00. For the pocket, for the wrist, and to stand on the desk or dresser. The one here shown is the "RADIOLITE" Strap Watch.

And I still carry the famous Triumph, \$1.25, the Midget, for women, \$2.50, and the Eclipse, for men, \$2.00. Also the Ingersoll Waterbury and the Ingersoll Reliance, the handsomest watches ever sold for \$3.00, and the first jeweled ones to sell for anything like that price.

more, it was shown that, although only 1 per cent had been paid prior to September 1, the earnings for the first six months of 1916 amounted to over 15 per cent, and a 6 per cent dividend was declared in September. It is currently stated in financial circles that the company now, in the second six months of the year, is earning at the rate of more than 30 per cent on its stock.

It was pointed out, further, that the company has never applied to the Public Employment office in Buffalo for aid in securing labor, and that its application is made just at a time when workmen engaged in seasonal occupations, which close down at the beginning of cold weather, will very soon make their presence felt in the cities, especially in Buffalo, where several thousand men will be released about December 1 by the closing of lake navigation.

Clear-cut and vigorous was the opposition from the Buffalo citizens. Adelbert Moot, a prominent attorney and formerly president of the New York Bar Association, told the commission that it had no power to grant such relief as the company evidently desires. The law gives the commission power to make such variations as will not violate the spirit of the law in the case of "practical difficulties" or "unnecessary hardships." Mr. Moot said that the company's brief failed to give any adequate statement of the existence of either practical difficulties or unnecessary hardships. The matters complained of, he said, were matters with which the legislature was cognizant when it passed the law, and it could not have intended that the commission should grant a variation upon such grounds. He said that either the company has been obeying the law in the past, and thus given proof that no serious obstacle stands in the way, or it appears before the commission as a violator of the law.

William E. McLennan, of Welcome Hall, Buffalo, said that it is of no moment in this case whether the company has made 10 per cent, 2 per cent or nothing. Doubtless it went into business in order to make money, but it has no business to do so at the expense of other people. "It is a species of wage-slavery," said Mr. McLennan, "to work men eighty-four hours a week! Men are more important than steel. It is the business of society to make men healthy and happy; no man can be either and work twelve hours a day—seven days a week."

The Rev. Charles Stelzle, representing the Federal Council of Churches of Christ in America, with a million and a half members in New York, told of having spent a day in Lackawanna last week in talking with business men, householders and many steel workers. The testimony of workingmen was that, although there has been no modifica-

tion in the law, the hands in every department are required to work seven days a week. As a machinist of eight years' practical experience and as a minister dealing with labor men and labor problems for a number of years, Mr. Stelzle denounced the seven-day week.

Perhaps the most striking testimony of all was that of the Rev. James J. Coale, pastor of the Presbyterian Church of Lackawanna—the only English-speaking clergyman in the city. Mr. Coale stated that he was reluctant to appear against the officials of the company, because "in spite of what has just been said, and what they are asking for, they have often lent their influence in the direction of better conditions." He said that these officials were asking for something they did not believe in, because they had frequently told him of their desire to see not only a six-day week, but an eight-hour day for the steel workers. He said that he could only conclude that they were making their present application as representatives of the stockholders, and felt obliged by reason of their position to do it.

Mr. Coale said that he did not know anything about steel-making, but that he did know something about men, women and children—he lived among them, worked with them, they are members of his parish, and he knew the social significance of the seven-day week, and that the consequences are unqualifiedly evil. The effect of such continuous labor can only be degrading. He stated that with a population of 16,000, Lackawanna has anywhere from 138 to 162 saloons. Nineteen of them stand opposite the gate where the men come from the mill. After weeks of overstrain without a day of rest, it is a natural tendency, he said, for men to get beastly drunk, and sometimes they go straight from the pay-window to the saloon and spend their entire wages before leaving.

Mr. Coale ridiculed the statement of the company regarding the desire of the men to work seven days a week. He showed that a great many men are feverishly working and hoarding their money in order that they may go back to Europe when the war is over and buy little farms or take charge of the farms on which they were born and live in comfort for the rest of their lives. "These men will go back," said Mr. Coale, "and spread abroad the tale of their twelve-hour day and their seven-day week in America. I am enough of a patriot to rebel against that being the reputation that America is to build for herself among the people of Europe."

The hearing ended with a dispassionate criticism of the steel company's brief by H. E. Hoagland, statistician to the commission. After pointing out several errors in statistical tables, Mr. Hoagland told the attorney for the company that

A New OPPORTUNITY

TEN DAYS' FREE EXAMINATION
RETURN IT IF YOU WISH

The time has come when everybody needs a typewriter. That's the reason we have built a typewriter for everybody. It is the

REMINGTON JUNIOR

The Junior is "Remington" in everything—in name, in manufacture, in quality, in the work it does, in the guarantee that backs it. It is just a boiled down Remington, smaller, lighter and so simple that any one can operate it. No lessons needed.

And it sells for \$50—absolutely the first high-grade typewriter at a medium price. You can buy it on easy terms—\$5 down and \$5 a month

Here is our offer. We are so sure that the Remington Junior is just the typewriter

that you need that we will send it on ten days' free examination to any address within the first and second parcel post zones of any Remington branch office.

When you get it, look it over—make sure for yourself that it is everything we say it is—the typewriter you have always needed.

But the first thing to do is to

MAIL THE COUPON TODAY

Remington Typewriter Company,
(Incorporated)
327 Broadway, New York.

Send me a Remington Junior Typewriter, price \$50, on free examination. It is understood that I may return the machine, if I choose, within ten days. If I decide to purchase it, I agree to pay for it in 10 monthly payments of \$5 each.

A
Loose-Leaf
BINDER
for
5 cents

The L. E. B. Binder Clip will instantly make a book of any papers

WITH TITLE ON ITS BACK You can instantly remove any paper therefrom or add any paper thereto. With it letter files are kept on shelves just the same as books. After the Binder Clip is applied, the arms may be reversed and snapped against the documents or papers, and thus kept out of the way.

Send 50 cents for dozen prepaid Money back if not suited AT ALL STATIONERS CUSHMAN & DENISON MFG. CO. 240 West 23d St., Dept 9, New York City

his figures showing "average" time taken off by the men as evidence that they take off one day in seven were worthless. He pointed out that if some of the men lost more than one day in a week, other men could work the full seven days and still the average would indicate a day of rest for all.

THE PLANS FOR A PEACE LEAGUE

CONSERVATIVE but none the less hopeful evidence that nations are seeking out a substitute for war is found in the gradual acceptance of the idea of a league to enforce peace [see the SURVEY, November 20, 1915] by prominent men in England and the United States.

Thus Lord Grey, British secretary for foreign affairs, in a speech before the Foreign Press Association on October 23, held that the best thing neutrals can do for civilization at the present time is to work up sentiment for a mutual agreement to prevent wars in the future. He added that such a league must be prepared to uphold its decisions by force, if necessary, when a critical time came.

During the present presidential campaign both Mr. Wilson and Mr. Hughes have stated that America can no longer maintain her old policy of isolation. Both have described in clear and strong terms the interest the American people have in the prevention of war and the duty which lies upon them, as a peace-loving nation, to do their utmost for securing the safety of the world by a permanent combination for the restraint of aggression and the preservation of a general peace.

Both Lord Grey and Viscount Bryce, who comments on Lord Grey's speech in a letter to the London Times, welcome the fact that distinguished statesmen in America are considering how a league of peace should be formed and what its functions should be.

"If the risks of war," declared Viscount Bryce, "and the preparations for war are to be in Europe for the next thirty years what they have been for the last thirty—dark, indeed, is the prospect for mankind. In the establishment of such a peace league as Lord Grey agrees with Mr. Wilson and Mr. Hughes in desiring, lies the best hope that some permanent good for the future may come out of the suffering and horrors of the present."

On the other hand, Louis P. Lochner, American delegate to the Ford Neutral Conference who has been in the United States on a brief business trip, finds a possible danger in the plan of a league to enforce peace. Mr. Lochner believes that European diplomats refer to such a league when what they really contemplate is an alliance from which their present enemies are excluded.

SPREAD OF SURVEY ASSOCIATES AS A MEMBERSHIP ORGANIZATION 1,000 COOPERATING SUBSCRIBERS IN FORTY-TWO STATES

Perhaps you will recall that last year we began our annual report with a paragraph about Job and his ash heap—as the shrine of too many cooperative enterprises. There was a reason. We had had tribulations and were in for more—unpremeditated and bigger than ever in the months ahead.

But this year!—we should like to begin straight off with a private chant to the prophet in his deliverance, if you will; or better, to Father Abraham. For Survey Associates are coming into it a thousand strong!

[See Annual Report Section.]

The GIST of IT

DOCTORS in the United States are not holding back from the health insurance movement as they did in England. Indeed, they are helping measurably toward the day when agitation shall give way to legislation. But the discussions at the national public health conference brought out some lively differences among physicians, insurance men and laymen who are interested in labor legislation. Page 135.

THE author of "Publicans and Sinners" chides the pride of jobs among some social workers and makes confession of her experience as government investigator, charity visitor and welfare secretary for a large corporation. Page 138.

MR. PORTER would gather the workshops, homes, stores, schools, recreation places, union and employers' headquarters of the garment workers all in one part of New York city. And similarly with the millinery, fur and other trades—industrial units making up the industrial city of this machinery century as the old geographical units of Chelsea, Harlem, Greenwich and New York made up the leisurely town of yesteryear. Page 140.

LAND overcrowding, the curse of modern cities, may be caught at its beginning in Providence, if this old American city acts on the findings of its housing survey. Page 143.

ST. LOUIS must vote a big bond issue this week or risk all the newer developments of its schools. Page 145.

SOME light on nickel, nickel, who's got the nickel, when a strike-breaking agency mans the trolleys. Page 145.

THE five-dollar minimum wage has quite changed the relative importance of pay-day and wedding-day for Henry Ford's stenographers. Page 146.

THE principle involved in the Danbury hatters' case is being tried out on a million-dollar scale in a suit against the United Mine Workers. Page 146.

LOOKING into the use of drugs and the effectiveness of drug legislation, a committee of Philadelphians has discovered some astonishing social habits among victims. Page 147.

ENTIRE staffs of the social agencies of Milwaukee joined in making a day's sickness census under the auspices of the City Club. Page 147.

BOYS of an East Side neighborhood in New York have financed a new settlement house, thus passing on to a younger generation the settlement leadership which came to them at Madison House. Page 148.

CONVENTIONS galore. All of the leading peace societies got together to begin drafting an American peace plan. The submerged nations of Europe gathered to put forward their common plea. California city planners reported on the working out of zoning systems. Illinois charity workers are writing an epitaph for their county jails. Public health workers discussed long hours, alcohol and other factors in efficiency. Page 149.

Health and Labor

Fatigue, Efficiency and Insurance Discussed by the American Public Health Association

By *Alice Hamilton, M. D.*

TWO subjects that always claim the interest of SURVEY readers were considered from many angles at the convention of the American Public Health Association just closed in Cincinnati. These were the physiological basis for the present move for a shorter work-day, and the effect of modern efficiency methods in industrial life on the health of the workers.

The speakers on the program representing the scientific point of view were C-E. A. Winslow, now of Yale, and F. S. Lee, of Columbia. Representing the practical men were John P. Frey, of the International Molders' Union, and Richard A. Feiss, owner of the Clothcraft Shops in Cleveland.

The scientists had their innings first. Dr. Winslow outlined concisely the conclusions of the Commission on Ventilation whose work is now known all over the scientific world. Fatigue, he said, was largely dependent on certain conditions of the air and, therefore, efficiency was dependent on air conditions. He quoted the studies of Prof. Ellsworth S. Huntington, of Yale, which have shown that the high points in the curve of output, both among piece-workers and students, come during spring and fall, for excessive heat and cold are both inhibiting to effort. A temperature of about 60° to 65° F. seems to be best.

In examining the factors which make air bad, Dr. Winslow dismissed the old superstitions about "lack of oxygen," "accumulation of carbon dioxide," "pollution by animal emanations," and laid the blame upon heat, humidity and stagnation.

The experiments of the commission had shown that actual physical changes of an abnormal character occurred when the temperature rose from 68° to 86° F. The effect on efficiency showed itself not in a diminished power but in a loss of desire to perform work, and if the inducement to overcome this disinclination were strong enough—as in the case of an exciting game or a piece of absorbing work—the will could bring about sufficient concentration. But under the slighter inducement, such as is furnished by ordinary school or factory work, the falling off in production at the higher temperature was

marked. Fully 37 per cent more work was done at 68° F. than at 86° F.

Dr. Lee chose for the title of his paper, *Is the Eight-hour Day Rational?* This, he said, was not really an economic or a political problem, but one of physiology, and all arguments based on social or other grounds were of slight importance compared to this; for if the physiological effects of any sort of work are bad, it should be changed on that ground alone. Fatigue is really a condition in which the stored-up substances of the body have been exhausted and in their place are waste products. If after this point has been reached, work continues to be performed, it is done only at the expense of an excessive nervous effort, with the result of chronic fatigue, physical and sometimes moral breakdown.

Now if the work demanded of a man is beyond his physiological powers, in Dr. Lee's opinion, it should be shortened, for a man has a right to demand that his physiological equilibrium be preserved. But this equilibrium is difficult to determine. The feeling of fatigue is notoriously a poor guide, for it may come on prematurely or it may fail to appear as soon as it should. We all know the sudden feeling of utter exhaustion which may come over us at the completion of an absorbing piece of work.

In industry, continued Dr. Lee, some occupations are fatiguing; others, much less so. How are we to determine that eight hours is the proper length for a working day? Certainly we have as yet no scientific basis for it. Yet probably, as was decided by that very careful observer, Professor Abbe, of Jena, it is the best rule we can follow in our present state of knowledge. We must have far more observation on workers themselves, workers of both sexes, of different ages, and in different occupations, before we can pronounce on the question. Certainly the length of the working day should not be the same for all. It seems difficult but it is not impossible to regulate work according to the industry and even to the capacity of the individual.

In the discussion, Dr. Hayhurst, who has had a wide ex-

perience in factory investigation, said he believed that in occupations involving much hazard, such as the very dusty trades, six hours should be the maximum. Dr. J. W. Schereschewsky, of the federal Public Health Service, had found that in the case of women, the eight-hour day was economically advisable. Piece work records showed that if the day were one of nine hours, one hour would be practically lost and if it were of ten hours, two would be.

Mr. Richard O. Feiss, who is reputed to have a model factory, described the welfare work carried on in it and spoke also of the introduction of an efficiency system, which he characterized as a conservation measure and, therefore, also a measure for conserving human effort. In his shop it had resulted in a great reduction of the labor turnover, so that what was once a department for hiring and firing was now one for hiring and keeping.

Speed is not injurious if properly controlled, Mr. Feiss held. Scientific management and motion studies lead to the formation of habit with all its saving of fatigue, and results, too, in the saving of time—and time is life. Another great advantage is the elimination of the boss with his nagging, and the introduction of the functional foreman with his close, intimate cooperation. There is an increase under scientific management of health, happiness, good spirits. His labor turnover now is only 48 per cent and over one-third of his force has been with him for five years or more.

John P. Frey was supposed to take up the question from the wage-earner's point of view, but throughout his short address there was no touch of a partisan bias. He discussed the actual application of efficiency in American industry with a detachment and impartiality worthy of a scientific assemblage and not by any means always attained in such an assemblage. He began by saying that wages determine life itself; on wages depend housing, food, recreation, every detail of daily living; and also the value which a man is to the community and even the length of time he will live.

This last assertion Mr. Frey backed up by figures from the records of the cigarmakers' union and the typographical union, showing the lengthening of the expectation of life in these trades since wages have been increased and hours shortened. He spoke of the need of knowing the point where work becomes excessive. In the case of steel, we can calculate the breaking-point, but much more important is the point, about half way to breaking, when the limit of elasticity is passed. This, not the breaking-point, is what we need to determine for man as well as for steel, and it is a very difficult matter. The experiments will have to be continued over long periods of time, for the effects of over-strain show themselves slowly.

Scientific Efficiency in Theory and Practice

THE SUBJECT of scientific efficiency Mr. Frey refused to discuss in theory. As well expect the practice of Christianity to conform to the theory expounded by its Founder as expect efficiency as practiced in our factories to be what the theoretical devotees of scientific management have claimed it would be. All reports from establishments using this system must be rigidly examined, for in actual practice some element will be found which does not appear on the surface. For instance, one such plant which reported remarkable results was found to have a system of physical examination for new employes so strict that 75 per cent of all applicants were rejected. This meant a picked force of athletes, who could not in any fairness be made a standard for an average group of men.

In other cases the apparent rise of wages following the in-

stitution of efficiency systems was found to be due to the substitution of low-grade labor on machines for high-grade labor. The unskilled probably did make more wages than under the old system, but it would be unfair to call this a general rise in wages.

The serious evils of modern industry, when the human element is considered, are the increasing intensity of speed and the increasing monotony. Both of these are fostered by the efficiency system. Though theoretically it may prevent fatigue, actually as now carried on, it increases fatigue. The "task and bonus" method is not the only one. In all sorts of ways psychological stimuli to increased and constantly increasing effort are devised by foremen who are themselves pushed on in the same way. The workers are divided into groups and raced against each other all day long, by foremen who also race with each other. The system advocated by Taylor has developed into an elaborately planned speeding-up system with all its consequent fatigue.

Dr. Lee closed the meeting by confirming Mr. Frey's statement. Scientific management was supposed to be based on physiological principles, but it bade fair to be pathological in practice.

The Doctors on Health Insurance

ANOTHER IMPORTANT DISCUSSION was that of health insurance—literally a discussion, for through a series of mishaps, not one of the speakers announced on the program arrived in time to read his paper. However, the interest in the subject among public health men is great and since most of them are familiar not only with the arguments in favor of health insurance but with the details of the measure now being put forward by the American Association for Labor Legislation, the meeting decided to assume that the papers had been read and proceeded to discuss what the speakers would have said.

Some thirteen or fourteen members spoke, chiefly officials of some public health department or men in charge of the health work of large industrial establishments. The principle of health insurance, or some kind of provision against the losses caused by sickness among wage-earners, was on the whole accepted, at least provisionally, for the purposes of debate; and attention was devoted to certain points in the bill proposed as a model legislative measure. The points dwelt on were the need of emphasizing preventive medicine; of providing some way of "jacking up" negligent communities or negligent employers; and the importance of so planning the medical features of the bill as to include in it all present agencies; for if not, the insured sick man might actually get poorer service than he does now.

Dr. Wm. C. Woodward, of the District of Columbia Department of Health, thought the selection and supervision of the physicians who are to form the panel of each insurance unit, a matter of first importance. This must not be done in such a way as to lower the medical profession in its own eyes, for that would mean driving away from the profession the most desirable young men and, therefore, in the end an actual lowering of its personnel. On the other hand, there must be some way of securing competence in the men selected, not only at the time of their selection but during their term of service. This, he thought, could best be effected through supervision by public health authorities, probably state, since there were constitutional difficulties in the way of utilizing the federal health service.

These health officials, he thought, should be the ones to pass on claims for disability and on the duration of disability, for thus impartiality of judgment would be secured and the at-

tending physician would also be relieved of the unpleasantness of forcing a man back to work before he felt able to go. Dr. Woodward felt that the increased force in the state medical service which this would make necessary, would be a great gain. These state supervisors would be in reality district health officers, of whom there are not nearly enough under the present system.

Dr. Otto P. Geier, of Cincinnati, declared that if we were to have health insurance it was a great pity to rush into it without first working out a system which would avoid the mistakes of the German and the British systems. Let us wait, he said, till such bodies as the American Medical Association, the National Safety Council, and the American Public Health Association have had time to formulate their ideas on the details.

Dr. Sidney McCurdy, of Youngstown, Ohio, is a convinced advocate of compulsory health insurance, largely because of his experience among working men, for he finds that under present conditions they are not getting proper medical care. They are sent back to work after illness with all sorts of physical defects which hamper them through the remainder of their lives. In examining men for employment nowadays he has found about 10 per cent with weak or defective heart, 4 per cent with hernia and 20 per cent with over-high blood pressure. Many of these defects could have been corrected by proper care during and just after an illness.

He thought that just as workmen's compensation has fostered accident prevention, so health insurance should greatly favor preventive medicine, but some central controlling body must be devised; it would never do to leave it to tyros.

The preventive features seemed to Dr. J. W. Schereschewsky to be poorly provided for in the model bill proposed, as is true also of the British system of insurance. He found nothing in the measure which would make the negligent employer feel the effects of his neglect. Nor did he believe that prevention of sickness would automatically follow the enactment of this measure as now drafted. That would come only after a long period of excessive expense for sickness claims had forced the community to institute reforms.

An Insurance Man on Health Insurance

DR. LEE K. FRANKEL, of the Metropolitan Life Insurance Company, tried to make clear some of the problems of insurance as they bore upon this measure. Insurance, he said, was, strictly speaking, the coverage of hazards, indemnity for loss. Only incidentally and secondarily did preventive work come in. The most important point to remember in health insurance was that the functions of the attending physician are absolutely distinct from those of the "claim agent," the man who passes upon the compensation. No one man could do these two things any more than he could be at once advocate for the plaintiff and for the defendant. The patient's claim must be passed on by a physician who has had no personal relation to him. Other physicians should undertake the actual care of the sick.

This, Dr. Frankel believed to mean that we are bound to see the advent of the salaried medical man devoting all his time to preventive work and health insurance and not dependent on practice. The situation in Germany, where there is no such division of function, has given rise to endless trouble and has grown worse all the time; so that inevitably after the war they must change to two sets of doctors, those engaged in the work of administering the Krankenkassen and those who are actual practitioners. This model bill he

thought too much like the German, since it, too, placed these two distinct functions in the same hands. Health insurance would, he thought, probably prove far more expensive than anyone now expected. In Germany it has amounted to 4 per cent of wages and no American working man has ever as yet submitted to such a tax as that.

Dr. George M. Kober, of Washington, rose to the defense of the German insurance system, dwelling on the admirable way in which the funds are invested in sanatoria for the tuberculous and in convalescent homes where the latest devices are used to restore function to injured parts. Dr. Kober recognized, however, the constant friction and difficulty of which Dr. Frankel spoke, and believed, too, that it could be avoided over here only by placing the decision as to compensation in the hands of a physician who was not dependent on his popularity for his living. He should be a man employed for his full time.

Dr. E. R. Hayhurst, of the Ohio State Board of Health, was also in favor of placing the medical service connected with health insurance in the hands of salaried men who ought to work in close connection with the institutions now existing, the hospitals and dispensaries. If this was not done, we might end in providing the wage-earner with poorer medical service than he now obtains, for we should be taking him away from the modern dispensary with its specialists and its diagnostic laboratories and throwing him back into the hands of the mediocre practitioner.

Labor Legislation Men on Health Insurance

AT THIS POINT in the discussion, John B. Andrews, of the American Association for Labor Legislation, and Michael M. Davis, Jr., of Boston, arrived from their delayed train. Dr. Andrews had been on the list of speakers and he at once essayed the very difficult task of answering a discussion which he had not heard. The argument revolved chiefly about two points: first, whether there was anything in the model bill which would bring the careless employer into line. Dr. Schereschewsky insisted that there was not; Dr. Andrews, that the indirect effect of the measure would be just that very thing. In this he was backed up by Royal Meeker, of the federal bureau of Labor Statistics, who thought that under the group system provided for, an employer who had an excessive amount of sickness in his establishment would be dealt with by the other members of his group whose insurance rate was being increased by the excessive claims from his plant.

The other point was that of supervision of the medical work by public health officials, and here there was a decided difference of opinion between Dr. Andrews and Dr. Davis, and the meeting in general. The former were inclined to dismiss the question with the statement that it had been submitted to physicians and they were utterly opposed to such "outside interference," and that they themselves believed all medical matters must be under the control of men directly responsible to those who disburse the funds. This met with very lively opposition along the lines of the discussion before Dr. Andrews' arrival, and the meeting adjourned without agreement on this point.

The impression left was that in some way the participation of the present health agencies of the state and of the federal government must be made use of if we were to have a health insurance measure which would be free from the defects of the British and German systems, and that in its present form the model bill did not provide for this satisfactorily.

“Publicans and Sinners”

By Edith S. Reider

ZACCHEUS, the publican, has always had my sympathy. I have often wondered whether he was “up a tree” really because he was too little to see over the shoulders of the crowd, or whether it was because he wanted to avoid being pestered by the people who disliked his business. For, after all, Zaccheus was really in the same fix with many of us who are doing our work under a certain amount of opprobrium, deserved or undeserved; for instance, agents of charity organizations, capitalists, lawyers, labor leaders, industrial welfare workers, clergymen, socialists, and especially “reformers” of all types.

Perhaps the underlying cause of this sympathy for Zaccheus is due to experience in several widely different lines of social service, each bringing association with men and women of large caliber, as well as the inevitable contact with those who love to air their prejudices, and each change bringing the feeling of having gone over to the “publicans and sinners”; or, to use another figure, of having left the sheep to join the goats. Thus came the opportunity to “see oursel’s as ithers see us,” which is so illuminating to the mind, so broadening to the soul, and so stimulating to the sense of humor.

First, in the federal department of labor, investigating the conditions of wage-earning women, there was the ordeal of facing those who thought we were “snooping,” as well as the more distressing experience of having certain persons, including some social workers, tacitly suggest that government investigations were not meant to bring results, save in the easy berths and fat salaries to those who were making the investigation. Meanwhile we spent much time and effort in trying to discover, among other things, to what extent wage-earning women were being worked overtime. This, of course, was our duty, and many an indignation meeting was held when a new case was discovered in which girls had been worked unmercifully. But if anyone could have found a more over-worked lot of girls than we were, at various times, he deserves a prize. Sundays, nights, rain or snow or summer’s heat, in sickness and in health, found us in the field, working intensely and under pressure—girls whose physique and experience had not prepared us for this strain as does the physique and experience of many a sturdy wage-earning girl of the factory.

The Gossip About Charity Workers

WHILE ENGAGED in this work we sometimes heard dubious reports of the ways of “charity workers”; how, for instance, a well-known man had gone into a house and refused to help a poor woman because she had good carpets and a phonograph! And we almost came to share the opinion that charity workers spent their time sitting around in elegant, comfortable offices, refusing the appeals of distress and drawing large salaries “in the name of a cold, statistical Christ.”

The government work completed, the next step was to find work that would go right into the lives and problems of people, a grateful change after the endless statistics, long reports and interminable questionnaires. Personal, helpful touch with suffering humanity was what was wanted, and what was found—as a visitor in the charity organization society of a great city! For the sinister imputations about “charity workers” had been forgotten and only the fact remembered that

families—nice, big families with babies, weary mothers in need of encouragement, confused young girls in need of a confidant, wayward boys in need of a “pal”—all these and many more would be turned over to one for advice and assistance if one went into “charity work.”

Three years of this, first as a visitor, then as an executive, brought out many a lesson of the patience and dignity, of the bravery and sweet humor of some of these families. Likewise it brought the realization that the handsome offices and large salaries of “charity workers” are few and far between. Many a night found these workers almost too tired to sit up long enough to eat dinner, while the memory of one early experience plunging through storm and wind and snow with a cold that ought to have kept one in bed for three days causes wonder that there aren’t investigators going about studying the “working conditions of social workers.”

From time to time, during these two phases of social service, sinister things were heard about “capitalists” and “big business.” To be sure, some work at a university had included an unprejudiced analysis of “big business”; and one could not help realizing the value of organization as well as the brilliant gifts of mentality and courage which are required to guide a great industry through a successful career. The personal friendship of a real live capitalist had revealed generous, lovable and many high ethical qualities, together with powerful mentality, which made one suspect there were other “exceptions” to the rule laid down by zealous labor agitators and radical friends who flared up with hatred at the very mention of capitalists. Moreover, many of those who imputed sinister motives to every policy that emanated from industrial organizations or capitalists, especially industrial welfare work, were themselves drawing every cent they earned from the contributions of these same capitalists.

About the time that the futility of trying to get some families to “stay on their feet” was striking in discouragingly, the call came out of a clear sky to study the conditions of the women employes of a great industry and to report the “truth, the whole truth, and nothing but the truth” to the president, a man of recognized sincerity, justice, and humanitarian ideals. The offer was accepted unhesitatingly, and when, several months later, changes which had been recommended were made, involving extensive reorganization in some instances and increased operating expenses in others, there came the deepened conviction that “big business,” like “charity work,” should not be given the wholesale condemnation we hear so often; that those who sweepingly characterize organized charity as done “in the name of a cold, statistical Christ” are no more fair than those who sweepingly characterize big business as the exploitation of the entire community.

So it was that this first position led the way into the field of industrial social service, carrying with it the chance to work with a normal group instead of the many subnormal families who were pulled out of one hole only to slip into another, and giving, more than ever, the opportunity to “see oursel’s as ithers see us.” The silent disapproval of certain associates was like the unspoken censure of friends to a man who has decided to take upon himself a wife who is “beneath him”; or the disappointment of a poor congregation when its

minister leaves it for a larger salary; or the shock of a religious sect when one of the faithful turns aside to embrace a heterodox belief.

To put it simply, the mental attitude of some workers toward industrial social service is very much like that of an old lady who went to the bond department of one of the most conservative banks in Chicago to invest a hundred dollars—a very precious and important sum to her. The banking men talked it over with her very carefully and patiently, and finally she decided to buy a first mortgage bond on a new building located on a prominent corner in the loop district. The transaction completed, she hurried out of the building with her bond. Half an hour later, to the surprise of the bankers, clerks, and customers in the quiet, dignified room, she came rushing back in tears and with angry ejaculations, exclaiming: "There ain't no such building; it's a vacant lot!"

The poor woman had hurried over to see the building in which she had invested her hundred dollars, had stood directly in front of it, and looked across the street at the aforesaid vacant lot! No explanations were attempted. The banker quietly gave her back her hundred dollars and took the bond. There was no use in pointing out to her that no reputable bank would dare stoop to such trickery. She had neither the intelligence nor the background of experience which would make her realize the truth.

Some of the letters of inquiry which come into the welfare departments of industrial establishments indicate a similar condition of mind. Yet it is often the same type of worker who will ask an industrial establishment to undertake a line of action which would carry it far into the field of philanthropy, perhaps establishing a paternalism which is quite opposed to the principles of democracy in which most of us believe.

This is not an effort to deny that there is exploitation in industry, any more than it is an effort to prove that social workers are never guilty of some of the harsh and unlovely things that have been reported. It is unfortunate that both in business and social service there are individuals who should not be trusted at all with the responsibility of dealing with other human beings. The fairest policy in philanthropy or business can be distorted until it is unrecognizable if interpreted by a harsh, dogmatic mind. And it is probably true that in connection with the activities of most of us social workers, things often happen which we would not permit if we knew of and could change. Is this not a reason, then, why social workers, of all persons, should be tolerant? Indeed, if anyone in the world has reason to be tolerant, social workers have, for they have more opportunity than almost anyone else to know all kinds of people—the poor and the rich, the weak and the strong, the ignorant and the intelligent, the unjust and the just. Even clergymen and physicians, to whom so much is confided, are not as likely to discover the weakness, the temptation to deceive, the tendency to exaggerate.

At a recent meeting in which socialism was discussed superficially, some ardent young social workers urged all to vote the Socialist ticket as a protest vote, seeming to think the world could not be quite free from the capitalistic taint unless everybody was thus willing to line up squarely with the Socialist party.

Social Service for Those Not Dependent

SHORTLY AFTERWARD, an equally enthusiastic worker (while discussing a strike in which the employers were meeting in daily conference with the representatives of employes to learn the grievances and arrive at an agreement) said very posi-

tively: "Well, I am willing to say that I think labor is *always* in the right." Again, a group of workers were analyzing the various phases of social service. When social service in industrial establishments was mentioned, one of those present whose broad sympathies, great executive ability, and keen mentality have won the deserved admiration of all associates, said: "I never considered industrial welfare work as social service. Why, I always think of social service as being done for people who can't support themselves."

Long years of administering relief to the very poor had established this point of view, though, in this case, there was no intentional criticism nor petty suspicion as there is in many others. It would be unfortunate, indeed, if social service had to be confined to the sub-normal, for many a self-supporting family is in need of constructive social service, and sometimes even temporary relief.

Pioneers and Bachelors of Art

WE CAN ALL afford to smile (and let it go at that) when the self-complacent young girl, with a year or two of training in a small college, thinks that this academic training gives her greatly superior advantages over some one in another line whose training is less academic but more technical, such as that of a visiting nurse, for instance. This naïve conceit is so much like that of the traditional sophomore that we can't afford to lose our patience any more than did one of the leaders and pioneers in charity organization work of whom the following story has been passed along. Upon being asked by a young college graduate, "Where did you get your training?" the mature woman to whom all look for wisdom and guidance replied kindly that she had had to get her training in the work itself (there being no schools of philanthropy or college sociological departments in those days). The young worker replied: "Oh, we require that all our force shall have special college training."

What we have to be careful to avoid is the danger of encouraging this feeling of superiority in our own colleagues. One of the most disturbing memories of social-service experience is that of having to hear the story of a leader who, in the expressive vernacular, "bawled out" a worker in another cooperating agency in the presence of a number of applicants. Perhaps more than one of us has had the disconcerting experience of learning from one of our families of bits of contemptuous conversation about other organizations, overheard "in the office," of a worker whose enthusiasm or temper outruns his or her discretion. When such things happen, the situation is too serious and humiliating to "let it go with a smile."

After all, so many of us live in glass houses that it is hardly safe to throw stones. We smile at the jealousies that are constantly cropping out in the professions; we wonder what the Master of us all must think when the churches squabble, and the clergyman of one sect considers his pulpit too holy for the presence of another follower of the Galilean who sat among His lowly congregation and, without form or litany, gave the world that most wonderful "sermon on the mount." We labor to get Germans and Scandinavians, Poles and Italians, Russian Jews and Irish Catholics to live together in peace and forget their differences of creed and nativity. But, after all, most of us continue in our own little groove, to be like the little girl who came home from her Presbyterian Sunday school and said to her mother in a shocked voice: "Why, mother, did you know that Jesus was a Jew?" "Yes, dear; didn't you?" "Why, no. I knew that God was a Presbyterian, and, of course, I didn't suppose Jesus was a Jew."

It seems, then, that no matter into which pew we get, we are pretty certain to be classed among the "publicans and sinners" by some of the brethren. But, after all, "publicans and sinners" are usually pleasant to work with; and we are all strong for "cooperation," that watchword of effective social service.

A prominent member of the faculty of the University of Chicago used to tell us the following incident in regard to the late President Harper. This faculty member found it difficult to work with a certain colleague and one day expressed himself to Dr. Harper to that effect. Whereupon Dr. Harper replied: "Why is it that you insist upon emphasizing the 95 per cent in that man that is hard to work with? Why don't you try harder to work with the 5 per cent that is good?"

Most of us have much more than 5 per cent that is good

to work with; but even 5 per cent is too valuable to waste in a world that stands so greatly in need of human service. To some of us the knowledge of human burdens, the "acquaintance with grief" that becomes a part of our lives if we engage seriously in social service, would be almost more than we could bear with the poise, and hopefulness and good cheer that is so essential to human helpfulness if there were not the happy association with other workers whose faith and hope and charity are too big to be held back by the little stumbling-blocks of human weakness that we all share. When a group of such workers get together and combine their sincere enthusiasm, their keen mentality, and their disciplined wills in the service of humanity, the inspiration is something that can never be lost. It is not only for the sake of social service itself, but also because we covet this inspiration for all workers, that this little "preachment" has been written.

Garment-Town: A City Within a City

Mr. Porter's Proposal for Industrial Sub-Communities Industrially Controlled

THE clothing industry is being knocked from pillar to post. The Save New York Committee made up of merchants on Fifth avenue has announced in full-page newspaper advertisements that the industry, within a few months, will have disappeared from the shopping district; buyers will again be able to come out at noon, go from limousine to shop door with ease, and look in at store windows without having to elbow their way through a crowd of tailors.

But the Save New York Committee neglects to mention the destination of the clothing industry. They promise to restore to Fifth avenue a sense of aristocratic leisure, and that seems to be as far as their purpose extends. Therefore it is upon the clothing industry, through its Joint Board of Sanitary Control, that the task rests of installing in a new place the manufacturers who are leaving their present quarters at the request of the committee.

This offending trade, with innumerable internal difficulties

FIFTH AVENUE AT THIRTY-SEVENTH STREET

Merchants of today are seeking to restore New York's main shopping thoroughfare to the aristocratic leisure of the days when it was a street of detached homes.

of its own to settle, established its joint board in 1913, at the time of the first protocol. When all other machinery of adjustment was abolished after the strike last spring, this board, representing the employers, the employes and the public, with its director, Dr. George M. Price, remained as a body useful to all sides. And it was a lucky thing for the hundreds of employers and the thousands of employes and the community at large that it did remain—it seems to be the sole interested party in the present homeless state of the business.

The board is now doing its best to find sanitary lofts away from Fifth avenue for the manufacturers who have promised not to renew their present leases in 1917 and later. An endeavor is being made to locate them in the section of which Union Square is the center. Here they would be not far from the present locations, while the offices of the International Ladies' Garment Workers' Union, the Cloak, Suit and Skirt Manufacturers' Protective Association, and the Joint Board of Sanitary Control would be near at hand. But there are indications that they are not wanted here—that, again, they may be hounded to another quarter.

This is not the first time that pressure of circumstance has made the position of the clothiers precarious and unstable. A year ago it was proposed that they should move from the section above Thirty-third street to the section below it beginning at Twenty-third street, and the Save New York Committee was originally formed with this object in view. Then it was suggested that they go farther down to the section below Twenty-third street, ending at Fourteenth street, and the Central Fifth Avenue Association promised to chaperone that trip. Now there are intimations from the Central Mercantile Association that, while they are about it, they should go to the section below Fourteenth street—and there they meet the objections of the Washington Square Association!

To H. F. J. Porter, an industrial engineer who has been interested in the civic questions involved in this movement, the present impetuosity (coercion through threat of boycott) of the Save New York Committee can be attributed to this *laissez-faire* attitude of the city in planning its growth, and to the futility of past efforts to thin out the crowds of workers in this industry, who at noon-time and at night trample over

FIFTH AVENUE AS IT IS NOWADAYS

A sluggish stream of workers from the garment factories on the cross-streets. At noontime traffic is blocked and shoppers impatiently elbow their way through the ranks of leisured tailors.

the "best foot" of the city just as she tries to put it forward.

Obviously the industry must go somewhere. It is already on the march. But Mr. Porter wants a more radical move than that planned by any of the committees, admittedly interested in their own sections only. As far as the factories are concerned it will make little difference to them whether they move ten blocks or twenty. And if they now move twenty, Mr. Porter points out, they will be where they came from only a few years ago. By this migration to the section of the city bounded on the north by a line joining Washington Square and Tompkins Square, and on the south by Grand street, and the east and west by the rivers, the great wholesale district depopulated only a few years ago by the uptown movement of trade would be rehabilitated. Moreover, scores of buildings of the older type of construction are scattered through that section into which Mr. Porter would immediately conduct the industry. These buildings have been waiting for the dawn of a better

day before complying with the requirements for safety and sanitation laid down by the new laws. As it now stands the neighborhood is dilapidated, unused and an unhealthy spot.

In recent articles in the *New York Evening Post*, Mr. Porter has outlined his scheme in detail. The clothing industry is claimed to possess some 60,000 workers, 80 per cent of them men. They work in some 1,500 shops, located principally in the Fifth Avenue section, although some are situated in Brooklyn. Their continuity of employment is uncertain, and so they shift from factory to factory. Some who live in Brooklyn work on the west side of Manhattan, others who live in the Chelsea section of Manhattan work in the Brownsville section of Brooklyn, and these streams of workers pass each other twice a day on the Brooklyn bridges and in the tunnels.

Evidently, in order that the worker in this industry may walk to his work, someone will have to collect its factories together and bring the homes of the workers near by or the

workers' walk will be a long one. First, then, we must estimate how much area this industry would cover if brought together. Sixty thousand workers represent 60,000 families. With an average of three members to a family and with their dependents, they make up a community of over 200,000 people—as many as there are in Providence or Indianapolis by the last census.

Now Mr. Porter figures that if this community were to be segregated in the section of the city below the line referred to above, there could be housed under the sanitary conditions required by the Tenement House Department, 2,500 people to a block, which would mean that eighty blocks would be required.

Then an area would be needed equivalent to twenty blocks for the 1,500 factories and twenty more blocks for storekeepers and their families, other institutions and warehouses, so that the industry would just about fill the section from that line down to Grand street. Such a mingling of residences and factories has not been contemplated, and yet if such a segregation could be accomplished all the advantages of an isolated and self-dependent community would be theirs.

It will be said that such an arrangement would be impractical of accomplishment; that the factories and homes of an industry would not so move. Mr. Porter's answer is that such a movement is actually in process, since the Joint Board of Sanitary Control has established a registry bureau through which manufacturers and employes may learn where in the lower section they may locate in safe and sanitary lofts and tenements respectively. By selective arrangement the board could bring the factory and home contiguous to each other.

Mr. Porter believes that the inhabitants would gradually rearrange their section so that in time an administrative building would be located centrally; parks would be developed with residences facing them and factories behind; warehouses would be established on the waterfront with a belt-line railroad between them and the piers for the receiving and shipping of raw material and finished products—for it should be realized that 85 per cent of this industry is located in New York city. Around the administrative building would be grouped registration offices, employment bureau and such other community offices and institutions as would be required. When so centrally administered, Mr. Porter believes the seasonal fluctuations of the industry would necessarily be taken in hand and controlled. For at present nearly a quarter of a million low-paid workers are twice a year thrown upon the streets of the city.

It was in the early 90's that the steel skeleton type of building construction was introduced into New York city, obtaining a foothold in Fifth avenue, north of Fourteenth street, through a simultaneous evacuation of that section by the fashionable element, which, with sudden caprice, determined to move uptown. Superimposing tenants presented the only way to secure rentals which would pay interest on the capital invested in Fifth avenue property. So the speculative builder found his opportunity realized in the combination of the demand for quarters by the rapidly growing clothing industry and the chance to meet it by supplying the multi-storied loft building then made possible.

The cloak, suit and skirt industry, which employed principally men, soon realized the attractive features of the then isolated high buildings with good light and air and the advantages of a Fifth avenue address on letterheads. So it invaded these buildings and soon Fifth avenue from Fourteenth street to Twenty-third street became the main street of a mill-town. Nearly a thousand factories, each with an average of some forty employes, occupied the loft buildings of lower Fifth

avenue and its cross streets. At noon the employes, flowing out on the sidewalks, so congested them that their normal use by pedestrians was prevented and access to the stores was precluded.

Conditions finally became so bad that the owners of real estate on the avenue and the tenants of the stores came together and formed the Fifth Avenue Association. At first their efforts were directed to appeals to the proprietors to establish lunchrooms in their lofts and to workmen to walk down the side streets. But when the workmen perversely still preferred Fifth to Sixth avenue, the aid of the police was invoked to convert stagnant crowds into moving streams. This resulted only in altercations and arrests.

At this juncture the president of the Fifth Avenue Association asked Mr. Porter to make a study of the problem and submit his recommendations. Mr. Porter already possessed thorough knowledge of the danger to life from fire in crowded factories, due to the inadequacy of exits. He, therefore, reported to the Fifth Avenue Association that a law which would reduce the number of people on each floor of these loft buildings to those who could safely escape by the exits in case of fire would so lessen the numbers on the sidewalks that the street congestion problem would be solved. This law, known as the occupancy law, was enacted, and the last report of the Fifth Avenue Association states that during 1915 its enforcement reduced the number of people in the lofts, and on the sidewalks over 40,000.

Then the sprinkler interests entered the arena. They induced the factory owners and manufacturers to favor the passage of a law that doubled the number of employes, provided a sprinkler system was installed. That action so nullified Mr. Porter's work that the congestion on the avenue was restored. Whereupon the Save New York Committee went to work to drive manufacturing from the district altogether.

Meanwhile, the Fifth Avenue Association had had its attention attracted to the financial loss of loft buildings placed so close together as to cut off each other's light and air. The association, therefore, secured legislation to regulate the heights of buildings and the appointment of a Commission on Building Heights and Restrictions, which subdivided the city into manufacturing, residential and unrestricted areas. Out of this grew the Committee on City Plan to pass on all physical changes in the city's development.

To Mr. Porter's mind these bodies, which aimed to foster community life by zoning the city into more manageable units, missed their mark because certain factors outside their control entered into the solution of the problem. They failed to notice the extent to which this zoning has already taken place. They failed, moreover, to recognize the industrial character of these zones. The herding together of the clothing factories under present discussion is typical in a somewhat more marked and violent form of every industry in the city. Mr. Porter has suggested a community life within the reach of one industry, and from this he visualizes a scheme for the development of the whole city.

Like the world itself, since the coming of machinery, New York has added to its trading and shipping facilities big producing plants until it is a manufacturing and industrial center. Within this whole, also, single industries have almost explosively expanded like the clothing industry—until it has become a mathematical and engineering problem to fit these parts together with harmony. But out of this tangle of varying industries, some sort of pattern has already formed. Movements totally unplanned and undirected have brought into existence parts of the city known as the leather dis-

trict, the machinery district, the jewelers' district, the silk district, the fur district, the cloak and suit district, the financial district, the wholesale district, and the retail-shopping district.

At the mercy of this segregating impulse and the driving power of industry are the real-estater and the homesteader. Values in property are constantly upset because a prominent firm in an industry becomes dissatisfied with its environment, is off uptown, and is shortly followed by all the little industries of its kith and kin.

Residential sections are never at peace. "Because the murky stream of industry as it swept over the city encountered obstructions at Washington Square, at Stuyvesant Square, at Gramercy Park, at Murray Hill, at Central Park, and swirling past instead of over them left residential mezas there, it by no means follows that the latter will stay there," says Mr. Porter.

"Sentiment has no quality of cohesiveness sufficient to withstand the forces of self-interest. Consequently these localities become honeycombed, disintegrated, and finally depopulated and a process of rehabilitation has to be imposed upon them. Or, as in the Save New York movement, a contest between two rival interests for possession develops and one or the other has to give way."

But why cannot the city take advantage of the automatic grouping of industries and help each of them to secure a separate and permanent place on the map? The pattern that Mr. Porter sees in his mind's eye is a circle of industrial communities all over the island of Manhattan. Workers and factories should, he thinks, form complete industrial villages, as isolated in the midst of New York as the industrial villages of Gary, Indiana; Essen, Germany; or Bourneville, England—villages controlled by the mutual interest of employer, of employe, and the public. And the clothing industry, lost and straying, would be the first of these to become settled in his proposed layout.

"A political democracy was suitable for the nation three-quarters of a century ago; an industrial democracy is needed now," writes Mr. Porter.

"With each industry in the city so segregated," he con-

tinues, "the community interest and the demand for efficiency would effectually govern and minimize unhealthy conditions. There is no reason, logical or otherwise, why there should have to be institutions private or public to care for the people affected by their occupational processes. The industry responsible for the causes should be held to account for the effects. Moreover, no progressive factory that wants to be efficient will have among its employes men and women who are habitués of the saloon and the brothel, and hence the industry made responsible for its section of the city would eliminate these evils from it."

Although transportation has been a vital issue for years in the city and was foremost in the minds of the two commissions in reaching their conclusions, yet the president of one of the principal rapid transit corporations says he still sees no amelioration of it. In fact, the division of the city into residence, business and unrestricted districts as now laid down would seem to separate these three closely related interests of the individual so as to entail upon the latter more traveling than ever.

But were a chain of industrial towns to encircle the city, each self-contained and self-administered, yet all supervised by the municipal administration, Mr. Porter believes the present and future rapid transit facilities would be more than ample to transport the comparatively few who would travel from town to town. And local transit facilities would develop to meet the internal requirements of each. The elevated roads, the eye-sore, ear-rack and nerve-shock of the multitudes, and the destroyers of property values, could then be dispensed with.

By boulevarding the streets connecting the various parks on which the industrial administration centers would be established, there would be developed a park highway such as is the delight of the people of Chicago, Cleveland and other western cities.

So, with the clothing industry as a text, Mr. Porter calls upon the city authorities to awaken to a realization of the opportunity which is now knocking at the door, and may never come again; to settle for all time many questions of vital moment to ever-spreading, ever-mounting New York.

The Houses of Providence

By John Ihlder

OUR war-boom towns are spectacular. They throw into sharp relief the social and economic problems with which we are trying to grapple and so make clear to even the most indifferent how far we are failing. But more nearly typical of American cities is Providence, with 247,000 population, the metropolis of Rhode Island. Providence is not and never has been a boom city. It has had a long and steady growth as a manufacturing center. Its industries are varied, its prosperity substantial. The changes that have come to it have come gradually. In that has lain its chief difficulty. In a boom town changes are so violent that everyone feels them; in Providence they have been so insidious that the community has adjusted itself to them almost subconsciously.

This does not mean that Providence has met and solved its problems, but merely that it has almost accustomed itself to them. When the industrial era began it began with water-power and an American-born population. So, instead of

being concentrated in the heart of the city, the industrial plants of Providence were scattered along the valleys that radiate from it like fingers from a hand; instead of depending upon cheap alien labor, the builders of new enterprises employed their fellow townspeople and people from the surrounding districts. So Providence has been a city of yards and gardens, of houses well up to American standards of their time.

But gradually the city and its satellite villages began to change. Population not only increased, but became of a different character. The textile mills, needing more operatives, drew workers from England and Scotland, then from French Canada. The Irish famine sent them thousands of another race. But all of these accepted the Providence they found, a city of widely-spaced small houses. Then began the new migration, Italians, Poles, Germans, and Scandinavians, Russian Jews, white Portuguese from Europe, Negro Portuguese from the Atlantic islands, Armenians, Lithuanians.

Some of these fitted into the old environment, but others changed the environment, so that those who had a pride in their city, and the Americans of Providence have a great pride in and love for it, grew uneasy.

Several years ago the Society for Organizing Charity began to discuss housing and called in the field secretary of the National Housing Association. Next, the Chamber of Commerce felt the need for action, and sent delegates to the National Housing Conference. Finally, representatives of all the social service organizations formed a general committee on improved housing. This committee partook of the spirit of the city. Instead of rushing into its work and seeking to achieve results over-night, it moved carefully before undertaking constructive work. First it called in John Ihlder, Madge Headley and Udetta D. Brown to make a study of existing conditions and tendencies. Then it planned so that the results of this study were printed and discussed at length by the National Housing Conference October 9-11.

The investigators found Providence an unusually spacious city. Thanks to a site whose hills and bays and valleys prevented the building of a geometrical city, thanks to a tradition of widely spaced houses supplemented by a development that drew population away from the center, Providence came through the period of unregulated growth with space within and without that has permitted the present generation to establish a park and playground system fitted to its needs and that will permit it to keep its yards and gardens and its small houses.

The first attempt to regulate the city's growth was by the adoption of a building code in 1878, during a decade when the increase of population was unusually rapid and when the wooden three-decker, imported from Worcester, began to multiply. This code, revised in 1909, is still the most important safeguard against permanently bad conditions. But with the tendency to land over-crowding that has begun in the Italian and Jewish districts and the building of large tenement and apartment houses by and for the American-born the present restrictions are entirely inadequate. As an illustration, it requires that windows shall be three feet distant from the lot line. Builders have interpreted this to mean that windows on a narrow court three feet deep meet the requirement. The result is gloomy rooms in new buildings and dark rooms in old buildings, which the new buildings blank.

Fortunately such land over-crowding has appeared in only a few places, and its appearance there has been enough to show the city what it may expect unless the building code is supplemented by a housing code. Providence has been predominantly a city of wooden dwellings, it has been a city in which the individual was unusually tenacious of his rights and privileges as against the community. So with the growth of population, wooden-sided, shingle-roofed dwellings have multiplied and crowded closer together, streets that should have been carefully planned by municipal authorities have been laid out and lined with dwellings by the private owner.

Against the increasing fire hazard the insurance companies are fighting vigorously and with prospect of success. But the unaccepted streets, unpaved, unsewered, many of them near the heart of the city and bordered by rows of three- and four-story tenement houses are a problem, with which the community has not seriously attempted to grapple.

Less important than these, because it is a condition that can be removed whenever the people determine that it shall be, and because considerable progress has already been made under the able leadership of Dr. Charles V. Chapin, superintendent of health, is the lack of proper toilet facilities. In spite of the requirement that there shall be proper closets

inside all new tenement and apartment houses and that all dwellings shall be connected whenever sewers become available, there are still 1807 privies in the city. On the other hand there is scarcely a house, scarcely an apartment in the city that has not running water.

With all these problems the report of the investigators deals at length, but it lays greatest emphasis upon the housing provided for immigrant groups and that which some of them are now providing for themselves. In this lies the chief value of the study for other cities.

Two of these groups, the Italians and the Jews, are notable for their eagerness to acquire real estate, and both are builders as well as buyers. With their almost passionate thrift and their habit of close living they have followed the worst American precedents. The three-decker they at once adopted, and, the Italians especially, progressed rapidly from the single three-decker to the double three-decker or six-family house. They added another story, making it a four-decker. They planted new dwellings in their rear yards. Now they are beginning to build large brick tenement blocks. So the districts in which they live have become notable for land over-crowding. In these districts are found the largest and the most rapidly increasing proportion of gloomy rooms.

This is the more remarkable when one sees how the Italian craves not only sunlight, but gardens. Already the over-intensive development of the Italian districts has driven many of their people to the outskirts of the city, where they cultivate little patches, or to the open country, where they are superseding the American farmers. Even within the city they have gardens so long as there is earth still open to the sun.

It is said by real-estate operators that the three-decker in Providence is a poor investment except for the Italians and the Jews. Newcomers, strangers in a strange land, naturally wish to live among their relatives and former fellow villagers. Also they wish to live cheaply. The earlier comers, the same relatives and former fellow villagers, find a profit in taking them in. But here, as nearly always, the advantage lies with those first on the ground. The immigrant rents from a compatriot an apartment in the crowded district to be near former friends. Theoretically, he pays less rent than he would for a small house in another part of the city. Actually he pays more. Wonderful tales are told of the speed with which an Italian pays for the three-decker or tenement which he has bought with borrowed money. Already there are Italians who have become landowners of no inconsiderable importance.

It has long been maintained that rents are higher in a tenement house city than in one of small houses. In Providence rents are higher in sections where multiple dwellings are most numerous than in sections inhabited by people of the same economic status where small houses predominate. The removal from the congested areas of those who have become somewhat acclimated might in time remedy the present condition, leaving Providence with but a few small blighted districts, were it not for the constant stream of fresh arrivals, who not only take the places of those who move away, but require more.

So a new crisis is upon the city, a more serious crisis than that which led to the enactment of the building code of 1878. Flimsy construction is a menace, yet if a building falls down a better one may be erected in its place. But once the land is overcrowded nothing will ever ease it of its burden except wholesale demolition at public expense, a process involving so great a deficit that few cities can undertake it. If Providence now sets good standards it can check the evil and keep it a manageable size. And that it proposes to do through the enactment of a housing code.

COMMON WELFARE

"PUNCH IN THE PRESENCE OF THE PASSENGER"

THE other day a man and his wife got onto a pay-as-you-enter street car in New York city. The man handed a quarter to the conductor, who returned fifteen cents in change.

"Why don't you give me the other ten cents, so I can drop it in the box?" inquired the passenger. "Oh, that's all right," said the conductor, "I'll drop it in."

The car went on, but the conductor didn't drop the dime into the box. The passenger watched him and discovered that whenever he made change he invariably put the money in his pocket. When passengers had their nickels ready and dropped them in the box themselves the conductor didn't ring them up. Finally the passenger moved back to the rear of the car and said to the conductor, "When are you going to drop my dime in the box?"

"What business is it of yours?" asked the conductor.

"Not much, perhaps," replied the passenger, "I was just sort of interested."

"Well, don't you worry," said the conductor. "You ought to be glad you're riding. The box is out of order anyway."

There was a policeman on the car, put there by the city to protect crew and passengers against attack by strikers. To him the passenger remarked, "I guess I'll go to the end of the line and find out if the box is really out of order. Meanwhile I suggest that you notice the conductor isn't ringing up any fares." So the policeman sat down where he could watch the conductor.

At the end of the line an inspector came aboard. At the request of the passenger he tested the box and the registering device and found them in order. "All right," said the passenger, "I want this man arrested." The car, with only the crew, the policeman, and the passenger aboard, was thereupon run to a point near a police station. There a big man got aboard. "What is all the trouble?" he demanded.

"Who are you?" asked the passenger. "I'm from the Asher detective agency. This man works for us and he doesn't have to register fares."

"Well, we'll find out," said the passenger.

Arriving at the police station the big man ran in ahead and drew the captain at the desk back into another room. When the captain emerged he said to the passenger: "Of course you are making this arrest."

"Oh, no I'm not," said the passenger. "The policeman here is making the arrest."

"No," said the captain. "Knocking down fares is a misdemeanor and it wasn't committed in the presence of the policeman. He didn't see it."

"Then he's blind," said the passenger as he made for a telephone booth, where he looked up the number of Frederick W. Whitridge, president of the Third Avenue Railway Company. Calling Mr. Whitridge out of bed, he explained the situation to him and asked him to have someone appear against the man in Night Court. Mr. Whitridge promised to try.

No one appeared in Night Court to press the charge, however, and the conductor was dismissed.

There was just one further step that the passenger could take. He reported the matter to the Public Service Commission, for, he said, "I thought the people of New York ought to know it if they are paying their money, when they ride on the cars, to the Asher detective agency."

In a few days came back a report substantially as follows: "The employment of detectives on the Third avenue cars was discontinued October 9."

The passenger looked at his calendar. October 9 was the day of his ride.

THE FUTURE OF ST. LOUIS SCHOOLS AT STAKE

THE St. Louis Public Schools are facing the most serious crisis in their history. For the first time the voters of St. Louis are called upon to issue

bonds for financing the construction of new school buildings. If the three million dollars bonds are voted down at the special election on November 11, all the newer activities of the schools—hygiene and attendance departments, manual training, summer and night schools, school centers, and other features—may be discontinued. Thousands of children would be compelled to go to school in portable wooden buildings, and some districts would run on half-time sessions.

In order to determine whether economies or changes in the methods of operation might not make the issue of these bonds unnecessary, the Board of Education has had made an exhaustive survey of all its educational and fiscal operations by a staff of experts under the direction of Prof. Charles H. Judd of the University of Chicago. The survey showed conclusively that no economies were possible to get the funds for new buildings from revenue. It demonstrated that the St. Louis school system in organization and efficiency is among the best in the country. The criticisms and suggestions made are of a minor character, and while they are numerous, they do not attack any fundamentals. The indications are that practically all the recommendations made will be adopted if the bonds are passed.

The survey staff studied and discussed the relation of the Gary plan to the St. Louis situation, but came to the conclusion that it offered no satisfactory solution of present difficulties.

MINERS' COOPERATIVE STORES IN ILLINOIS

IT was refreshing to hear Duncan McDonald tell the Illinois State Conference of Charities and Correction that trade unions were more and more aware that they had other objects to attain than to secure from employers a larger share of the profits for higher wages. The United Mine Workers of Illinois, whose secretary-treasurer he has long been, were reported by him to be attaining this further purpose in the establishment of cooperative stores. Although this move-

ment is only in its infancy, thirty-one stores started by the miners are owned and operated by the cooperators, who include others than miners. Buildings for some of these stores have been erected. The stores are operated on the Rochedale plan and yield from 6 to 10 per cent dividends every three months in proportion to the purchases of each stockholder, no one of whom can own more or less than five shares of stock at five dollars a share. A few such stores have failed because they failed to observe the conditions of success laid down in the regulations for running them. Cooperative medical service has been organized by some of these groups, and one of them has erected a hospital at a cost of \$50,000.

Not so much for what this cooperative movement has yet accomplished in America, did Mr. McDonald estimate its value, but because it is giving the working classes, by whom it is inaugurated, "strength and consciousness to consider labor as a service and no more a subjection and the world as a cooperative commonwealth."

LABOR AGAIN TESTING THE CLAYTON ACT

ANOTHER Danbury hatters' case, and upon a larger scale, appears to be involved in *Dowd vs. the United Mine Workers*, recently decided by the United States Court of Appeals of the eighth circuit. Damages to the amount of \$1,250,000 are sought under the Sherman anti-trust law on account of an alleged conspiracy involving a strike accompanied by destruction of property. The sum sued for is more than five times as great as in the hatters' case.

The plaintiff is Dowd, the receiver of nine coal companies of the Hartford Valley in western Arkansas, which were controlled by the Bache-Denam interests. In 1914, these companies became involved in a struggle with the United Mine Workers, which culminated in the almost complete destruction of one of their coal mines by a mob. In answer to the suit the United Mine Workers filed a demurrer, which was held to be good by the Federal District court. The Circuit Court of Appeals, however, reversed the decision. It holds that interstate commerce has been interfered with and that the plaintiff's bill states a proper cause of action.

Now the United Mine Workers have taken an appeal to the Supreme Court of the United States.

According to Edwin E. Witte, instructor in economics at the University of Wisconsin, this case shows much more clearly than ever before the extent to which the Sherman act goes in its application to labor disputes.

"The principal allegation in the plaintiff's bill," he writes to the SURVEY, "is

the same as that made by D. E. Loewe & Company in the Danbury hatters' case. This is to the effect that the defendants conspired to prevent the plaintiff from engaging in interstate commerce. The means used to carry out this conspiracy, however, were different, since no boycott was involved. Yet the Circuit Court of Appeals unanimously held that there had been interference with interstate commerce."

It is this interference which is emphasized by the court. It is not the strike itself, but the strike as a means for carrying out a conspiracy to restrict interstate commerce in coal that comes under the ban. Here the court follows the Supreme Court's decision in the hatters' case, which, contrary to general belief, does not rest upon the fact that Loewe's hats were boycotted. There, too, the grievance was the interference with interstate commerce. The boycott was only one of the several means employed to carry out the conspiracy.

"The present case," writes Mr. Witte, "is one which merits the closest attention of all those who are interested in the labor movement. The question whether organized labor has been exempted from the anti-trust laws does not arise, since the occurrences upon which this suit was premised antedate by several months the final adoption of the Clayton act. But the case does emphasize the vital need for such exemption. Whether this has been secured by the Clayton act is still an open question. This act declares that 'the labor of a human being is not a commodity or article of commerce.' But neither the Danbury hatters' case nor this proceeds upon the theory that the labor of a human being is a commodity. The bills allege restraint, not of the market for hatters and coal-miners, but of the market for hats and coal."

THE WAY OF A GIRL AT \$5 A DAY

SINCE October 10, the minimum for women over 21 years of age employed by the Ford Motor Company has been five dollars a day—the minimum established for men throughout the Ford plants in 1913. As yet there is no report of a long procession of women, babies, younger brothers and sisters and mothers across the continent to Detroit, similar to the stampede of men three years ago. About 1,500 are affected, the majority of them clerks and stenographers. The actual collective economic gain, therefore, is negligible. But wide publicity has been given the principle of equal pay for equal work.

Those semi-skilled workers, something under 900, in Detroit, who cut leather for the chassis upholstery and who do a more delicate work on the fine wires inside the magneto, gain a substantial

increase, as some of them have been paid only three dollars a day. The minimum for apprentices under 21 remains at twenty-six cents an hour. The minimum for apprentices over 21 is thirty-four cents, but the minimum for the trained worker under 21 is raised to forty-three cents an hour and for the trained worker over 21 to sixty-two and one-half cents an hour. Women with dependents have heretofore been getting pretty generally five dollars a day, and all have worked the eight hours as have the men.

At the Long Island City assembling plant in Greater New York, the stenographers are apparently not startled by the raise. "How do I like it?" said one of them. "Well, we girls have watched each morning the porter polishing up the handle of the big front door as we came to work, and we have wondered why we didn't buy a rag and polish brass for Mr. Ford—it paid so much better than typewriting. This money has been coming to us.

"But, of course, Mr. Ford doesn't really like to employ women. He says he can't build up an organization with them—they marry and quit work. I'll think twice before I get married now, though. I like my job too well to lose it. And I certainly wouldn't marry a man making only thirty dollars a week. I can hardly support myself on that," and she laughed, since her standard of living had been raised to that amount only two weeks before.

Mechanics about the shop thought, "Sure the girls should have the money if they could get it." There seemed a doubt in their minds, however, as to whether women were worth quite so much. The fly in the ointment seems to be the general leveling of wages. The head stenographer and the master mechanic, for example, are both a little disgruntled that their subordinates are now their equals in pay. "But you can't afford to kick," they say.

The announcement of the five dollars a day for women was made in the papers on October 26. On October 27, fifteen girls applied for work at the plant in Long Island City. Scarcely that many positions are being held there by women now, and seldom do they have women applicants for work. On October 28 none applied. But the stream of men, with the hope of five dollars a day, still flows past the employment desk, though with less of a rush.

A PREACHER'S VACATION IN A STEEL MILL

AN Indiana clergyman reports the novel experiment of taking his six weeks' summer vacation as a laborer in the steel mills at Gary. In an open letter to the Illinois Steel Company the Rev. John W. Newsom, pastor of the First Baptist Church of Valparaiso,

Ind., narrates his experience as an employe in the coke plant.

His purpose is stated to have been "to replete my purse, to reduce heft and girth, to make a new circle of friends and acquaintances, to gain first-hand knowledge of a concrete industrial situation." The mild prejudices which he entertained against the corporation were "considerably dissipated." He was pleasantly surprised by "the cheery good will" with which he was greeted by the men and the minor officials. "Kindness first" seemed to him even more prevalent upon the hearts of the men who were "rough in their words and unpolished in their manners" than the "safety first" signs which were painted everywhere.

The provision for comfort, cleanliness and safety, the absence of arbitrariness or driving to the performance of duty, and the encouragement to profit by educational advantages, were marked evidences of consideration. For a "green hand like himself" he thought \$3 a day to be good wages. But he considered the long hours a cause of genuine complaint. While some men have an eight- and ten-hour day, many are on duty twelve hours, and, with the coming and going, are held from home on an average of fourteen hours a day.

"With time deducted for sleep, they are left with two hours to be men, to cultivate human interests, to make love to wife and sweetheart, to play with their children, to learn to be good citizens and to take part in public affairs and to know something of the fun and interests of the big world beyond."

He concludes his interesting letter with this direct appeal to the management of the Illinois Steel Company: "You can fix this matter of the hours, if you will, and I trust that they will not stay fixed as they are. The consideration shown in other ways convinces me that after no long time these men will be granted right hours of service."

SOME CHILDREN STILL IN THE POORHOUSE

THE child care which satisfies public sentiment in many of the counties of Illinois is disclosed in a report giving the replies of forty-five county judges to the questionnaire sent them by Amelia Sears, acting for the Committee on Children of the State Conference of Charities and Correction. Her questions were sent to the judges in all the 102 counties of the state, but less than half of them responded. Of these forty-five, eight only reported detention homes provided by the county. Others wrote that the county pays a woman to take care of children in her own home.

An emphatic "no" was returned by thirty-five judges to the question whether children were placed in the poorhouse, although ten admitted that they

were temporarily lodged there. Thirty-three counties reported that no children are boarded in institutions, and in twenty-three counties children are temporarily boarded in private families, with more or less careful selection and supervision. In two instances the children were said to be placed with the sheriff but "never to be held in the jail."

The commitment of the feeble-minded to the state institutions under the new law is already being done in forty counties, which have had from one to sixteen feeble-minded persons committed to the state school at Lincoln. Regarding the compliance with the law for the registration of births, only thirteen of the forty-five counties reporting definitely stated that the new law is satisfactorily enforced. Twenty-three judges stated that it was not enforced, and nine either made no reply or wrote that they were not informed. The provision of facilities for recreation at private initiative and expense was reported in twenty counties. Thirty counties reported parks and playgrounds in some of their towns. In fifteen counties no parks or playgrounds exist in any of their localities. Pageants and public entertainments were reported in twenty counties and some form of school extension in fourteen.

PUTTING A QUIETUS UPON "C PARTIES"

THE group of Philadelphia citizens, doctors, lawyers, and business men, who some time ago organized into a "narcotic drugs committee" [see the SURVEY for April 8] and made a careful study of the drug situation throughout Pennsylvania, have reported on their year's experience in a brief pamphlet just published.

They found from conversation with 86 drug-users how easily and subtly the habit may be formed. Sixty of the drug-users, who had always lived in Philadelphia, gave these reasons: curiosity, 58, associating with fellow-workmen in poolrooms or saloons, they saw these men using and enjoying the "happy dust," and "wanted to see how it felt"; 2 began to use it during weakness that followed operations; 6 traced the habit to physicians' prescriptions; 1 used it deliberately, hoping to ward off tuberculosis, of which he was in fear.

The committee learned of "C parties" and "H" and "M" ditto, for which several persons pool their funds, buy sometimes 300 grains of cocain, heroin or morphin, and then spend 18 or 20 hours in some room till their common supply is gone.

They found that in the year of the enforcement of the Harrison law, 244 men and women had been admitted for treatment to hospitals for the insane, compared with 33 in the year preceding. These 244 came from 47 towns in Penn-

sylvania, and not from tenderloin districts only. Even in residence sections the drug-user need not go far for his supply.

These figures represent the replies of state, private and county case hospitals, only 56 per cent of which replied to the committee's inquiry. Questions addressed to health boards and charitable organizations in every state and many large cities brought replies indicating "a notable increase" in the number of applications for treatment.

That all these facts constitute "a grave source of danger to the social and economic well-being of Philadelphia and Pennsylvania" is the conclusion voiced by the committee. They recommend, first, state provision for adequate and efficient treatment of habitués; and, second, a state act supplementing the federal law and insuring more strict control over the manufacture, sale and use of narcotic drugs. The draft of a proposed act is included in the report, that time for consideration of its provisions may be allowed before the opening of the legislature. The pamphlet may be had from Dr. H. W. Rhein, 1732 Pine street, Philadelphia.

Another evidence of Pennsylvania's growing interest in the drug question is the recent presentment by the federal grand jury for eastern Pennsylvania, recommending that both federal and state laws be made stricter. Testimony in several Harrison-law cases submitted to the jury showed that the federal law at present was not broad enough to meet the problem. The state law of Pennsylvania applies only to cocain; the grand jury recommended that it be extended to include also morphin and heroin, which seem to be used even more than cocain.

Concerning the recent decision of the federal Supreme Court in the Jin Fuey Moy case, that the Harrison law applied to dealer, not to user, the presentment says: "Moreover, as practical men, we can see why the mere user or taker of drugs should not be punished. He is fit for the hospital rather than the prison, unless he has himself sold or peddled drugs and thus made money out of the business. We believe that the distinction made by the Supreme Court between the mere user and the dealer is a good and sensible one. We only wish that the law could be enforced more effectively as against the illicit dealer."

A COOPERATIVE CENSUS OF SICKNESS

THROUGH the cooperation of the social workers of Milwaukee, a sickness census was taken on October 26, to ascertain what proportion of the people in the city are sick at a given time, whether or not they have proper medical care, the number of sick who are wage-earners, and the extent to which

these sick wage-earners receive some sort of sick benefit or insurance. Inasmuch as a health-insurance bill will be introduced into the Wisconsin legislature this winter, the survey was designed also to ascertain approximately how many persons in Milwaukee will come under the provisions of such a law.

The items covered by the census are: the sex, age, and occupation of every member of each family canvassed, together with whether the wage-earners of the family earned more or less than \$1,200 during the twelve months preceding the census, and for every sick member of the family the nature of the sickness, the length of the sickness up to the date of the inquiry, whether the patient is at work, at home or at the hospital, whether the patient is under a doctor's care, how long the patient was sick before the doctor was called, and the amount and source of sick benefit where any is being received.

The Health Department, the Associated Charities, the Visiting Nurses' Association, the school nurses and a large number of smaller organizations donated one day's time of their field staff, while clubs, dispensaries, settlements, and other organizations provided additional volunteers. Students from the biology and civics departments of one of the high schools cooperated. Altogether more than 125 persons took part under the supervision of the Public Health Committee of the City Club.

It was not possible, even with this force of workers, to cover the entire city in one day, inasmuch as Milwaukee has more than 90,000 families. For this reason the sampling method was used. The territories assigned to workers were scattered throughout the city roughly in proportion to the population. Both rich and poor, native and foreign districts were covered. Data was secured from families where all the members were in good health, as well as from families where there was illness. Thus a representative sample of the whole city was secured.

It is believed by the Milwaukee City Club that this method of conducting a social survey on a particular problem has very distinct advantages. By virtue of its concentration into one day it is possible to secure the services of volunteers and social workers who otherwise would be unable to take part. A vigorous publicity program helped to concentrate the attention of the entire city upon the problem in hand.

A NEIGHBORHOOD GIFT FROM SETTLEMENT BOYS

"I WANT to do something for the neighborhood that helped me," said the director of the educational work of the new Arnold Toynbee House at 257 Division street, New York city.

This young man was trying to ex-

plain away surprise at the fact that he was planning to give up his afternoons and evenings after a hard day's work elsewhere. He was giving the chief reason why a group of young men, all of them settlement boys, former members of the Stevenson Club of Madison House, have undertaken to found a new house of inspiration, as they call it, on the lower East Side.

There are about twenty-five of these fellows between twenty and twenty-five years old, most of them still living in the neighborhood. Among themselves they have collected over a thousand dollars, taxing each other from fifty to one hundred dollars apiece, to pay the rent of the house on Division street. Of course, all service is voluntary, even that of the director, who is somewhat older than the rest of the group, and who has made his mark since his Madison House days.

It is not that they may make a name for themselves that they have branched out to found a new settlement, but because they see a real need for expansion,

because they have some new ideas and ideals of their own, and because they believe that from their own experience they are peculiarly able to understand the needs of the neighborhood.

Their plan of work is two-fold: work with children in charge of Rose Gruening, an experienced social worker who also conducts a training class for her club workers, and work with adults. For the former fifteen clubs have already begun lively existences. Besides, there is a class for clay-modeling, a game room, an evening study room for children and a bank.

The educational work for adults consists of classes in Americanization for those who need it; for the others, cultural courses, the kind, it was explained, that would not tend directly to an increase in earning capacity so much as those that will open up the beauties of living to people who have the material side of life sufficiently in mind. In other words, these young trustees want to have courses in art, literature and music, in science, perhaps, and history.

THE LIGHTHOUSE

Thomas Mott Osborne

Anne P. L. Field in the New York Tribune

I WATCHED the lighthouse yonder all the night
During the storm. It loomed out in its height
Like some great giant conscious of his might,
Awhile the lashing furies of the sea
Strove to tear down his calm security,
Twining their windy fingers in his hair,
And in defeat and impotent despair
To bow his head.
Instead
The light flashed forth fresh courage to the sail
Struggling against the gale,
And mariners who sighted its clear spark
Feared not the dark,
But set their course anew and kept their way
Until the day.

And as I crouched within my safe retreat
Hearing the raindrops beat
Upon my window-pane,
I saw in mind again
Another lighthouse brace his mighty form
Against the storm.
Firm-footed on his rock of faith he stood,
While evil elements did all they could
To break his will,
But still
He towered there steadfast,
Flinging his light broadcast
To every mast
Down in that whirling tide
Where men have died—
Guiding the drifting souls
To happy harbors and victorious goals.
A man whose heart is Heaven's own beacon sent
Into imprisonment,
For God called him to be
His lighthouse for a lost humanity.

Conventions

JOINT PEACE EFFORT

SENATOR La Fontaine's challenge to American peace forces to get into effectual touch with one another has been answered. On October 26-27, at the invitation of the American branch of the Central Organization for a Durable Peace, the American Peace Society, and the Church Peace Union, there was held in New York city a private conference of leading members of the chief peace movements of the United States.

The meeting was inevitably and intentionally tentative. The peace movement, like all broad and vital movements, embraces extremely divergent types of temperament and policy. Thus as one delegate reports, "to find a common basis by the process of cancelling out, eliminating all that does not command general assent, would be to stultify the group by reducing its common program to a mere truism. To attempt to force on all the views and policy of one or another wing would be only less disastrous."

This conference ran on neither of these rocks. Its main achievements were two. The last and most important of these was the appointment of a continuing committee of nine to arrange for a second and fuller conference and for further cooperation. The other was the working out of a questionnaire to be answered, in their purely individual capacity, by those invited to the conference.

Outstanding contributions to the discussions included an effective address by Lucia Ames Mead (which she was asked to prepare for print) on the question of military training with especial reference to the New York situation, and an earnest speech by Hamilton Holt. At the latter's suggestion and urging the conference voted to "recommend to the peace societies of the United States that they endorse and support the efforts of the American Neutral Conference Committee and others to induce our government to call or cooperate in a conference of neutral states to offer joint mediation to the belligerents by proposals calculated to form the basis of a permanent peace."

A storm center of discussion was the proposal of the League to Enforce Peace, the military enforcement features of which were assailed both from the practical point of view and on grounds of principle in speeches by Prof. William I. Hull and Anna Garlin Spencer.

Lively argument also dealt with the danger to peace involved in immigration laws discriminating on racial grounds, Dr. Sidney L. Gulick favoring a plan of percentual admission which Grace Abbott of the Chicago Immigrants' Protective League opposed.

The death of that veteran fighter for peace, Dr. Benjamin F. Trueblood, occurred while the conference was in session and brought an added sense of the length and strenuousness of effort that has been and must yet be devoted without stint to the many-sided work for peace.

In view of the some twenty organizations represented at the conference, the delegate quoted above points out the need of an endeavor to bring these scattered and probably often overlapping efforts together.

"But," she adds, "peace is by no means a simple proposition and many different kinds of work and workers are needed. These may be said to be of two main types. The work of research and education stands over against the work aiming at accomplishing direct results.

"In the first group we have the 'old line pacifists' proceeding in a leisurely way along lines of investigation and publication in regard to principles and methods. At its best this is scholarly, authoritative and fruitful, at its worst it tends to be passive and remote. Its great opportunity, at least on the educational side, is in war time when, for once, peace issues command thrilled attention, and efforts to keep internationalism are peculiarly needed.

"A newcomer in this field is the Central Organization for a Durable Peace, an outgrowth of the Dutch Anti-War Council (Anti-Orlog Raad), which is carefully working out a concrete program of constructive international policy. Others, particularly in the field of education and moral and intellectual conversion from the crudities of the philosophy of violence, are the School Peace League, the Federation of International Polity Clubs, the great peace societies organized for work among the churches and, contributing the deepest and most revolutionary note, The Fellowship of Reconciliation and the Society of Friends.

"Of the second group of peace societies, those endeavoring to attain objective results directly, three are perhaps most conspicuous. The American Union Against Militarism devotes its clever and untiring efforts to keeping

this country in the paths of sanity and peace. The League to Enforce (in red letters) Peace, probably the most powerful peace society in the world today, is in the field with a concrete political program, the main purpose of which is finding the most gratifying reception, not only from the President and Mr. Hughes, but from English and even German statesmen and leaders.

"Finally, the newest and most radical of this group is the American Neutral Conference Committee, which is seeking to mobilize American opinion, by petition and otherwise, in favor of a just and early close to the present war. It holds that America has a deep responsibility for this, that she is 'not negligible but negligent,' that much of the best opinion in Europe looks to see her move and back up the demand for negotiation now making itself heard in all the warring countries.

"That such various and such vigorous peace endeavors could be discussed in common and the next step taken toward further mutual understanding and assistance is, to the American peace movement, a vastly important event."

SEVEN IN ONE

NOT one convention, but really seven opened in Cincinnati when the American Public Health Association assembled there on October 24. All six departments of the association met simultaneously or gathered into one general session to discuss industrial hygiene, administration, research in laboratory and in vital statistics, sanitary engineering, sociology, and industrial hygiene to say nothing of a new group interested especially in foods and drugs, and that most valuable peripatetic session continuous in hall, dining-room and the city's thoroughfares. The 171 topics listed for these sessions, general and sectional, plus several new papers added upon discovery at the last minute, prove how far the health movement is ramifying into essentials of modern life, how ample is the development of any one section to tax the natural gifts and added training of the best health officer. There should be more of his ilk.

The semi-professional interest of SURVEY readers would perhaps have focused first on the papers from men in the field of mental hygiene. An important extension of school service, urged by Dr. J. T. MacCurdy, consulting psychiatrist at Randall's Island, New York city, was the opening of psychiatric clinics in schools. And, further, for such "different" people, children and adults, too, Dr. C. Macfie Campbell of Phipps Clinic, Johns Hopkins Hospital, urged community action. Adequate recreation and the intellectual stimulus that will help toward recovery should be given those whose mental de-

fect a specialist discerns in a lack of adjustment, or a lack of emotional balance.

That alcoholism is a mighty public health problem was the thesis of Dr. Haven Emerson's paper. From laboratory and factory Dr. Emerson brought proof of lowered resistance to disease where alcohol was habitually used. This was the only discernible point at which the convention broke down. Perhaps there was a rather wide gap between patella reflexes and a concrete, feasible program against alcoholism; but that in a scientific meeting the only "discussion" following this scholarly and earnest appeal should consist of jocose allusions to visits in New York in ante-anti-alcohol days and reminiscences of ancient whiskey headaches, only re-emphasized Dr. Emerson's emphasis on alcoholism as the next big problem to be dealt with.

A study of patients in hospitals of several states, offered by Dr. F. E. Williams of the Massachusetts Mental Hygiene Society, reversed the usually accepted relation of cause and effect and declared that mental defect lead both to alcoholism and to syphilis. The topic syphilis as a public health responsibility, and the methods whereby dispensary and hospital might avail, gathered one of the largest meetings of the convention.

The papers read will appear in the *American Journal of Public Health*. Some will be noted again in the SURVEY and a review of the health insurance discussion is printed on another page of this issue.

This very brief summary must close with the warning given in the vital statistics section against the crooked logic and unjustifiable deductions from statistics that too often characterize very well-intentioned "surveys," social and sanitary. Franz Schneider, Jr., of the Russell Sage Foundation, and Louis I. Dublin of the Metropolitan Life Insurance Company, especially, indicated some of the hasty generalizations, the lack of plan, the incorrect tabulations and worse analyses that go far to explain the failure of many "surveys" to win recognition.

There were 600 and more delegates attending from every section of the country. Next year they will meet in New Orleans. The new president of the association is Dr. W. A. Evans of Chicago. Prof. Selskar M. Gunn of Massachusetts Institute of Technology continues as secretary.

ABNORMAL AND NORMAL

FOR a year, a committee has been studying, by conference and actual field surveys, the problem of the mental defective in the state of Indiana. How its work, culminated in a conference held October 16-17 at Indianapolis for the purpose of presenting the problem of

the mental defective with relation to the home, the school and the community, and from the viewpoint of the medical and the legal profession is told by Arthur H. Estabrook of the Eugenics Record Office.

Mrs. Albion Fellows Bacon, he writes, made a plea for better homes, describing in her characteristic, forceful way how a gloomy, unsanitary house in an unpleasant neighborhood, on a noisy street, would increase the physical and mental strain in even a normal person, to say nothing of the delicate, nervous and highly strung. Then, too, she brought out how in such homes as these where there is no seclusion or privacy, and no bar to vice, the feeble-minded girl is unprotected, an easy prey.

For the mental defective in school, special classes were advocated, with small numbers in each class, where hand work replaces book work, where there is freedom from physical and moral control and where good habits may be taught. It was emphasized again and again, however, that the proper place for these children is in a state institution with one normal employe for every five feeble-minded children, instead of from three to five normal persons giving their energy for every five feeble-minded children, as is true in home care.

Both Prof. E. R. Johnstone of the Training School, Vineland, N. J., and Adelaide Steele Baylor, Department of Public Education, Indianapolis, mentioned the recent survey of the rural schools in one Indiana county by the United States Health Service which had demonstrated that there were nine feeble-minded children in every thousand attending school.

The medical men at the conference, according to Mr. Estabrook, brought out that now a stigma is attached to a legal commitment to a hospital for the insane, and that too often the member suffering from mental disease is committed by the family only as a last resort and too late for the full benefit of the treatment. They declared there is need of the development of a wholesome public opinion on that subject which will comprehend the fact that a mental disease is not a criminal condition, but a disease of the most delicate organ of the human body, in need of wise, scientific treatment, sympathetic interest, and humane nursing. It must be taught, also, they said, that the four causes—heredity, syphilis, habit-forming drugs and alcoholism—responsible for not less than 90 per cent. of mental defectiveness in all its forms, are controllable in a large degree, and will be controlled when public opinion so decrees it.

The usual discussion of custodial care versus sterilization for the feeble-minded was talked over, but no uniformity of

opinion appeared, and it was apparent that many of the physicians were opposed to sterilization on the ground that it would increase venereal disease and prostitution.

The result of the conference was the formation of the Indiana Society for Mental Hygiene, whose chief purpose, as outlined in the constitution, "will be to work for the conservation of mental health, for the prevention of mental diseases and mental deficiency, and for improvement in the care and treatment of those suffering from nervous and mental diseases or mental deficiency." The officers are, president, Prof. E. H. Lindley, Indiana University, Bloomington; and secretary, Mr. Frank D. Loomis, Children's Aid Society, Indianapolis.

That Indiana has now, without further legislation, a system of laws and agencies sufficient to properly furnish relief to mothers with dependent children, was the fact brought out by the sixth annual conference of the Children's Bureau of Indiana, held immediately following the meeting on mental defectives.

It developed, states Mr. Estabrook, that many township trustees and boards of children's guardians are now keeping many children, who would ordinarily be sent to orphans' homes, in their own homes with their mothers, by means of outdoor relief, the per diem amount being allowed by law to the mother to board her own children instead of to the home. In these latter cases the children become wards of the boards of children's guardians.

A special committee of the State Conference of Charities and Correction has held fourteen county social welfare conferences during the past year with the idea of educating the local community to its possibilities in the social line. Reports from different counties read at the meeting indicated that these conferences had stimulated the community and that the public had cooperated with the existing agencies much better than before. Further, it brought to the people an entirely different idea of the purposes and ideals of the different state institutions and of the present laws which the community can use in correcting local conditions.

TO ABOLISH JAILS

PROMPTED by the Committee on the Prevention of Crime, whose report was presented by Edith Abbott and supported by the Illinois Association of Probation Officers, a movement was launched at the Illinois Conference of Charities and Correction held at Alton October 19-22, to abolish the county jail system of mistreating misdemeanants and to substitute for it a state penal farm. Strong impetus was given by

Amos W. Butler's effective recital of Indiana's experience with her new state farm and by Warden T. J. Gilmour's moving story of Toronto's farm colony and its social salvage.

The demand for increased and efficient probation of misdemeanants and the parole of prisoners added urgency to the plea and plans for preventive measures in rural communities, through a children's program, and the better functioning of county agencies, especially through county boards of welfare. Some encouragement to this effort, but more need for it, was disclosed by the responses made by county judges to inquiries as to the care of children officially taken by their courts and in their communities.

The charity workers rallied for an additional day's conference, in order to effect the organization of the Illinois Charity Organization Society, which includes representatives of the sixteen towns and cities of the state in which relief agencies are organized. The proposal that the State Charities Commission should issue a monthly bulletin, especially helpful to county agents and officials of county institutions, was favored by all the official and voluntary charity workers.

"Labor compensation" called forth fresh statements of fact regarding the continued success of the cooperation between Hart, Schaffner and Marx and their thousands of employes in settling the differences constantly arising in the complicated manufacture of clothing; regarding the cooperative stores being established by the United Mine Workers of Illinois; and the necessity of municipal, state and national cooperation for the prevention and relief of unemployment.

The next program on rural social service is to include recreation and the committee on labor is to deal also with immigration. Wilfred S. Reynolds was chosen president of the conference for 1917, and Joliet was selected as the place of the next annual meeting.

WHEN CITIES GROW

ZONING or districting was the question in the foreground at the third California Conference on City Planning just concluded at Visalia. There was evident a much wider interest and understanding, according to Charles Henry Cheney, secretary of the conference, of districting as a means of protecting homes from the intrusion of apartment houses, flats, business, nuisances and industries, while many recent decisions were quoted which seemed plainly to show that the higher courts are becoming more and more liberal in their recognition of community versus individual rights.

Chester H. Rowell, of Fresno,

summed up as the methods for effective city planning attacks, first, proper public acquisition power or what is sometimes called the right of excessive condemnation, for which in California a constitutional amendment is required; second, early adoption of a comprehensive zone or districting system; and, third, a plan for future growth in some such way as the Germans do by restricting farm lands from city use.

As most of the eighteen planning boards in California have been established within the last few months, they are still trying to find themselves, and many of them seem to be floundering without any constructive program.

Discussion brought out that such commissions should first determine and list the vital problems of their communities as to street plan and improvement, transportation, park system, zoning, civic centers, etc., then select two or three of the most urgent and confine investigations to them. It was agreed that if the need of change was pressing there would be no difficulty in securing appropriations from the city council or funds from a group of citizens. Duncan McDuffie, of the Berkeley Civic Art Commission, pointed out that city planning commissioners generally have knowledge of conditions but are not experts and that the bodies which are accomplishing definite and constructive things are those which call in a consulting expert.

At another meeting the negative function of a city planning commission in California (to pass on plans for new subdivisions, with the veto power) was contrasted with the great positive functions of these boards—to initiate and present well-thought-out plans and suggestions for orderly civic improvement. It was also brought out how the motor traffic of the state has doubled in the past three years, pushing the city far out into the country, and thereby increasing enormously the demands for city planning and the extension of city conveniences to a heretofore undreamed-of distance.

"A home-made city planning exhibit and its results," explained by Dean George A. Damon Throop, College of Technology, Pasadena, provoked great interest by reason of Mr. Throop's graphic charts of where the tax money goes, where the assessed valuations are high and the blighting influence upon them of most of the railroad-owned property in the city. The fact that 7 per cent of the taxpayers paid over half the annual taxes and that half of all the taxpayers in his city paid less than twenty-five dollars each for the city's support annually gave an interesting sidelight on who pays the bills for improvements and whom to educate.

The conference voted to recommend

certain legislation, including extension of the state housing laws to a more comprehensive and stringent tenement house act, and the establishment of a bureau similar to the Massachusetts Homestead Commission, to supply information and encouragement to all the city planning commissions of the state.

The officers elected for the ensuing year are F. C. Wheeler, of Los Angeles, president, and Charles H. Cheney, of San Francisco, secretary and treasurer.

FOR THE OPPRESSED

THE Union of Nationalities, formed in Paris, in 1912, to take up the difficult problem of the treatment of the small nationalities, held its third congress June 27-29 at Lausanne, Switzerland.

News of the congress has just been brought to America by Aino Malmberg, a Finnish delegate, who has come here in the hope of forming a committee of influential Americans to make known the cause of the oppressed nationalities and exercise an influence upon those to whom the conduct of peace negotiations may be entrusted.

At this third congress of nationalities twenty-three different races were represented, among them Jews, Finns, Poles, Ukrainians, Lithuanians, Irish, Belgians, Egyptians, Albanians, Armenians, etc. M. Paul Otlet, director of the Bibliographic Institute of Brussels, acted as president, and M. J. Gabrys, a Lithuanian, as general secretary of the congress.

The first task, that of defining what was meant by the rights of the nations, was done by the delegates with a most remarkable unanimity and mutual understanding. No individual, they agreed, should have to suffer because of his race, language, or religion. Nationalities founded on communities of the same origin and traditions, or resulting from a voluntary association of ethnographically different groups, should have the right to decide their own fate and no annexation or transfer of territory should take place against the will of the population. The legitimate foundation of a state, they held, should be the will of the people. Nationalities living in their original territories, inside a state, should be given autonomy. An international court of arbitration should be established to settle all disputes between nations.

Later the sad tales told by representatives of the different nationalities about the situation in their respective countries made it clear to everybody, says Madame Malmberg, what it meant to be an oppressed nation.

Thus, the first speaker, the Lithuanian representative, Baron von Ropp, related the history of Lithuania from the

time of its strength in the Middle Ages until it came under Russian rule, when, though the Czar had sworn to respect its autonomy, in 1795, its rights were gradually withdrawn. In 1840, the last remnants of its constitution were abolished and Russian administration was introduced throughout the country, while the Lithuanian university was closed.

Finally, after an unsuccessful revolt in 1863, General Muraviev, "the hangman of Vilna," soaked the region in blood. It was attempted to wipe out everything reminiscent of the Lithuanian nationality. The geographical names were altered into Russian, books in Lithuanian were not allowed to be printed, the Lithuanian language and the Catholic creed were persecuted everywhere, and the private property of Lithuanians was confiscated. In 1905 the revolution brought some relief to Lithuania, but the rights gained at this time were afterwards withdrawn.

And what was the result?

Madame Malmberg's answer is that in spite of all persecution, the country was not denationalized, and the Russians are today complaining that there are no Russians in Lithuania.

This report of the Lithuanian representative practically repeated, according to Madame Malmberg, the same history told by the Finns, the Ukrainians, the Caucasians.

After Baron von Ropp, speeches were heard for Albania, for Armenia, for Egypt, for Belgium, and for Poland, all more or less recent history and therefore comparatively well known. As for the Jews, who, Madame Malmberg believes, have suffered more than any of the nations mentioned, M. Aberson described how a mediæval persecution of the Jew has been in full swing, even in peaceful times, in Russia, Rumania, Galicia, while the so-called Christians have tolerated it calmly.

Until now, the little nations have fought their hopeless fight separately, each in its own quarters, but now they have united their forces, struggling all for one and one for all, for freedom.

They are looking forward with hope to the coming peace negotiations, and, in Madame Malmberg's opinion, if the world could be persuaded that no peace will last so long as there are oppressed nations, this hope would be justified. She found a sad sign of the time, however, in the way the press of the belligerent countries treated the congress. The press of the Allies called it pro-German, "a result of German intrigue," while the German press, of course, called the meeting pro-Ally. Thus it appeared that, although in Premier Asquith's words, the nations went to war "for the freedom of the small nations"—as soon as the small nations uttered a hope of their own, the great powers were unanimous in condemning them.

Book Reviews

COMMENT RECONSTRUIRE NOS CITÉS DÉTRUITES

Notions d'Urbanisme s'Appliquant aux Villes, Bourgs et Villages.

MM. Agache, Architecte du Musée Social; Auburtin, Architecte du Gouvernement; Redont, Architecte Paysagiste, Librairie Armand Colin, Paris.

Almost before the fire-swept ruins of the devastated cities of Northern France are cold, plans are under way for their reconstruction after the war. The planning will not be for one city or one village, but for dozens of cities and hundreds of villages. Modern city planning has never had such a field. Cities are partly or totally destroyed and villages only heaps of bricks and stones. Not only will the rebuilding of these places be necessary, but also the reorganization of their economic, commercial and social life.

For the guidance of those who will have the replanning and reorganizing of these cities and small towns, a comprehensive volume has just been issued in Paris. It is only one of the many books, pamphlets and lectures now appearing in France on the subject, and is significant of the new attitude toward modern living conditions.

In the replanning, stress has been laid on the restoration of the beautiful and historic aspects of the destroyed cities—not as a modern imitation of the old, but rather as a new design which would partake of the spirit of the ancient monuments, parks and boulevards. There is still much to build on, for the open spaces, the great squares, boulevards and "places" remain in the cities and the quaint market squares in the tiny villages. "It is certain that the Place d'Arras has not disappeared," say the authors—"the place which has been destroyed three times in the course of the ages and which will rise more beautiful and more noble than ever after the war, in a style recalling its origins and history."

While the ancient and historic centers are an excellent base from which to plan the city beautiful, unfortunately they are a poor foundation for the city hygienic and sanitary. Sixteenth-century villages and the older portions of French cities, although picturesque, are abominable

places of habitation. The very solidity of the house construction, while resisting the wear of centuries and preserving for us architectural beauties, makes it almost impossible, except at great expense, to install modern conveniences and necessities, such as plumbing, gas, electricity, ventilation and light. The narrow streets, wide enough for the slow traffic and low houses of two hundred years ago, are now dangerous and unhealthy and a hindrance to the growth of a city.

There is in this fact a sad consolation for the destruction of the great monuments of art which have fallen with every city. For every cathedral destroyed, a thousand airless and deadly habitations have been destroyed also, and for every beautiful tree-bordered boulevard and ancient "place" razed by shells, a hundred hoary, fetid alleys have disappeared never to be seen again.

The sanitary regeneration of the devastated region is indeed the greatest task of French city planning for a generation to come. There is the old beauty to build on, but air, light and drainage must be incorporated. The story of the invading Germans who compelled the inhabitants of a certain captured town to use garbage cans—a modern method for taking care of refuse which they had successfully resisted for years—throws a droll light on hygiene in small French communities.

The great point made in the book under review, however, is that before a single stone of the ruins is moved, it proposes a comprehensive survey of each city and village and the adoption of a working program and plan, as though an entirely new place of habitation were to be raised. It is advised that documents concerning the topographic and climatic conditions be gathered, that the evolution of the city plan in the course of the centuries be studied together with the dominant characteristics, economic, social, etc., of the city, that data on the traffic needs for the immediate and more distant future be collected. A complete knowledge of the building and labor resources of the region, a survey of general health and sanitary conditions, and statistics on the former density of population are suggested as necessary for intelligent reorganization and reconstruction.

Mention is made several times in the volume of the American community center. It urges that these be established near the playgrounds in the cities and

large villages. Among other things, the center is endorsed as an active force in combating the evils of alcoholism, steps for the reduction of which have already been taken, as is well known, by the French government.

CHARLES J. STOREY.

THE SINGLE TAX MOVEMENT IN THE UNITED STATES

By Arthur Nichols Young. Princeton University Press. 340 pp. Price \$1.50; by mail of the SURVEY \$1.65.

The preface of this volume states that the author "has undertaken to give a complete historical account of the single-tax movement in the United States, together with a discussion of the tactics of the single-taxers, their program, the present status of the move-

ment, and its influence upon economic thought and upon fiscal and social reform." In an absolutely impartial and most scholarly spirit, Dr. Young has achieved his object by long and patient research which carried him from coast to coast.

For nearly twenty-five years, the author points out, single-taxers have advocated the initiative and referendum as a means of getting their measures before the people for discussion. Separate assessment of land and improvements, brought about in many places by the activity of the single-taxers, furnishes them with a wealth of arguments and statistics. In their political relationships most single-taxers have adhered to the Democratic party because of its advocacy of state's rights and tariff reform. Many were in the Populist movement, and many followed Bryan. Recently, conspicuous single-taxers were attached to the Progressive party.

Although the author gives some attention to the agitation carried on in New York city since 1908 for the exemption of buildings and other improvements from taxation, he has failed to point out, as he might have done, that for tactical reasons an attempt has been made to disguise this single-tax drive as a movement to lower rents. Neither does he point out the increasing use of the single-tax propaganda under the banner of land-value taxation, the term single-tax being sedulously avoided.

It appears that although a prodigious amount of ability, self-sacrifice, and enthusiasm have gone into the single-tax movement, little has been accomplished in the form of legislation or the number of adherents gained for its essential principles. The number of convinced single-taxers in the entire country is probably not over 40,000.

Nevertheless, the movement has had an important influence on public opinion and on other social movements. Single-taxers have played a prominent part in securing various reforms in the general property tax system, and they have inculcated the idea of using the taxing power as a means of social reform. *Progress and Poverty* did more than anything else to shake the self-satisfied economists of the eighties out of their rut. Henry George-ism has played in this country the rôle of Marxism and socialism in Europe.

The single-tax movement has insistently directed attention to the problem of poverty and has rendered a valuable service through its persistent advocacy of conservation of the country's natural resources. Single-taxers were among the first to raise the alarm against permitting our land, forests and mineral wealth to fall into the hands of the fortunate and favored few.

C. C. WILLIAMSON.

THE OPERATION OF THE INITIATIVE, REFERENDUM, AND RECALL IN OREGON

By James D. Barnett. The Macmillan Co. 295 pp. Price \$2; by mail of the SURVEY, \$2.12.

Since the adoption of the initiative and referendum in Oregon by constitutional amendment in 1902, Mr. Barnett's book shows that the people of that state have voted on 60 constitutional amendments and 76 statutes, a total of 136 measures.

Of these 27 were referred to the people by the legislative assembly, 95 were initiated by petition, and 14 were referred by petition. As a result, 51 of the total of 136 measures were adopted by the people. About the same proportion of statutes and constitutional amendments have been adopted, 28 of 75 statutes, and 23 of 61 amendments. Of the referred measures, whether by petition or by the legislature, 16 out of 41 were adopted; and of the initiative measures 35 out of 95 were adopted, showing that the initiators were sustained in about the same proportion of cases as the legislators.

Many of the measures have been laden with technicalities beyond the grasp of the voters; some have contained actual deceptions; others have conflicted, or have been "omnibus" bills; while still others have been badly drawn. Much criticism is directed against the practice of circulating petitions for financial profit, and against the tendency to overload the ballot. It is pointed out that in Portland, Oregon, in the November, 1912, election, the voter had to pass upon no less than 238 separate matters,

including candidates and measures, state and municipal.

Surely, man is a political animal; and so is woman, in Oregon! Nevertheless, there is consolation in the fact that acquired habits are not transmitted to offspring, and Oregonians are now trying to devise ways by which their children will not have to resort to the billboards which now pass as ballots. Otherwise, there will be an even greater shortage of paper.

A chapter is devoted to the "education of the vote," by which is meant, presumably, the education of the voter. Organizations of all sorts have been formed to represent the interests of those favoring or opposing measures. The fire-eaters of the People's Power League and their descendants are offset by the safe-and-saners in the Taxpayers' League. Between these two organizations at the extremes of radicalism and conservatism are many others representing multifarious interests and different political views. The state helps out by publishing and circulating a pamphlet on the measures, giving arguments pro and con.

Though the most radical measures have been rejected—notably all single-tax measures—still the direct primary, local option, prohibition, women's suffrage, employers' liability, corrupt practice law, popular election of senators (virtually), abolition of capital punishment, eight-hour day on public works, presidential primary, recall, home rule for cities, and abolition of convict labor have all been secured by the initiative. On the other hand, one wickedly successful use of the referendum petition was in the holding up of the university appropriation in 1912.

Discussing the coordination of the initiative with the other organs of government, legislative, executive, and judicial, the author reports a determination on the part of the people to guard the initiative from legislative or executive interference. Candidates for public office are often required to give pledge that they will keep the faith of the people in their new instrument. The conclusion is drawn, however, that "the absolute prohibition of interference with the people's laws by the legislative assembly, in view of emergencies which are likely to occur, would be unwise."

However justified this conclusion, one wishes that the author would give his own reasons for it, instead of referring us to an article in the *Oregonian* (Portland), September 14, 1911. With respect to the relation of the initiative to the courts, it is observed that, inasmuch as it is as easy to pass a constitutional amendment as a statute, the fear of the courts is removed, and there is little interest in the movement for "the recall of judicial decisions."

Regarding the operation of the recall, conclusion is drawn that this feature of

the Oregon system has been greatly abused, though it is yet too soon to make concerning it any inductions of permanent value.

Appendices of value are added to the general discussion, including a complete list of measures proposed, and the vote upon each. The volume is undoubtedly a contribution to our knowledge of the initiative and referendum in action. However, it has the appearance of having been put together with the aid of scissors and library paste; and one wishes that less attention had been given to what the newspaper editors thought about things, and more to a scientific analysis of the measures and the votes upon them.

ARTHUR EVANS WOOD.

COMPARATIVE FREE GOVERNMENT

By Jesse Macy and John W. Gannaway. The Macmillan Company. 754 pp. Price \$2.25; by mail of the SURVEY, \$2.43.

This book is one of the series of social science text-books edited by Professor Ely, of the University of Wisconsin. The authors declare their purpose to be "not primarily a comparative study of existing governments, but a study of the various processes and institu-

tions by which free government is being attained." Naturally, the government of the United States is chosen as the basis for this study, but "a knowledge of free government in America involves an understanding of the rise of democracy in England," and for that reason they give England the second place.

France is assigned the next place in order of importance, because it is "developing a democracy under the normal condition of close proximity to rival states," and because in the French democracy high centralization prevails and through France modern free governments "are most notably linked to the ancient Roman republic through the system of Roman law." Germany is selected for special study because it exhibits "the early stages of transition from autocracy to democracy," and Switzerland because it exhibits "an advanced stage of assured democracy." The positive ground taken by the authors at the end of the volume is that federation is the means through which a world democracy must be worked out.

For those who are promoting the organization of an international league to enforce peace, this is a good book to study. While it appears to have been written without any reference to the present world war, its prophecy is completely at variance with the predictions

rife at the present moment that the cessation of military hostilities among the nations of the Old World will forthwith be followed by commercial struggles equally intense. It is noteworthy that the United States, as the primary example of a successful federation, gives the central government control over interstate commerce and thus prevents economic hostilities among its members almost as effectually as military hostilities.

DELOS F. WILCOX.

JOSEPH FELS; HIS LIFE WORK

By Mary Fels. B. W. Huesch. 271 pp. Price \$1; by mail of the SURVEY \$1.12.

"A simple story of one who had the true faith: of the brotherhood of man and the worth of men. One who, seeing clearly the possibilities inherent in life on this earth, longed to open them up to all mankind." This statement from a publisher's note on the wrapper fits admirably.

Joseph Fels started out in life as a business man who had an inherent sense that the world was not as it should be and that ways of real reform were available. He was a man with strong social instincts, who found himself "by rediscovering the obvious." He thus missed the too commonly unhappy ending of a life spent upon "no thoroughfare."

Joseph Fels tried farm colonies, small holdings, and vacant-lot gardening. He also tried charity. But he soon came to believe that to join the ranks of the philanthropists is simply to follow the lines of least resistance. He said: "I hate to give, and most men are ashamed to receive as long as charity allows them to remain men." In explanation of this Mrs. Fels points out that "Charity cuts at the root of that personal initiative and independence which constitute the very essence of manhood."

Mr. Fels came to believe with Henry George that "this association of poverty and progress is the great enigma of our times. It is the riddle which the sphinx of fate puts to our civilization, and which not to answer is to be destroyed."

But this did not discourage him. What he came to see is presented with wonderful clearness by Mrs. Fels. So plainly did he see it that he all but abandoned his business to spread his propaganda and establish a juster order of things. That he had faith is evidenced by the fact that he matched every cent raised for the work in the United States, Canada, Norway, Sweden, Denmark, Australia, New Zealand, and Germany. He made direct contribu-

tions to the work in England, France, Spain, and China.

There are two remarkable things about this book—Fels and his biographer. His biography, as here presented, is short. But no one will seriously try to supplant it; although its subject stands out in many minds as one of the truly great men of his age. To see what he saw in the way he saw it can't mean less.

EDWARD T. HARTMAN.

FIFTY MILLION STRONG

By Ernest Irving Antrim. The Pioneer Press. 152 pp. Price \$.75; by mail of the SURVEY \$.79.

This is one of those little books, happily multiplying, that deal with social conditions and forces, that are big in the facts they state, yet compact and readable, and that in a suggestive and inspiring way promote interest and prompt action. In these one hundred and fifty small pages much is effectively done to make rural life and work interesting and attractive and to rate the influence and resource of rural America as the nation's chief asset.

In the effort to make his points, however, the author somewhat idealizes the country at the expense of the city, and lays less emphasis than the facts demand upon the woeful neglect of local government, especially that of the rural county, which is as ring-ridden and spoils-cursed as the urban county. But the better side of the rural home, work-a-day life, recreation, school and church is so helpfully and hopefully presented as to constitute both a protest against rural deterioration and a powerful prompting toward redeeming every such loss.

The sub-title, Our Rural Reserve, far better designates the volume than the non-descript Fifty Million Strong.

GRAHAM TAYLOR.

THE SLAVERY OF PROSTITUTION

By Maude E. Miner. The Macmillan Company. Price \$1.50.

This is an admirable book. It strikes exactly the right note. It deals with a subject on which every intelligent citizen and especially every voluntary or professional social worker should read one book—and be grateful that he need not read many.

This book is not a compilation of disagreeable revelations, as reports of vice commissions and inves-

tigations must inevitably be. It is not sentimental, nor salacious. There is real experience in it, but the experience has been assimilated and its lessons are presented in a way which meets both literary and scientific standards. It is full of human interest, but the stories are skillfully used as a part of the argument. There is definite information, but it is illuminated by a sympathetic understanding of what the general reader requires to know and what may be left for official reports. For this book is intended for the general reader, and on this subject there are few who would claim to be specialists.

The author justifies the title, which may at first raise some question. There is in it neither sensationalism nor exaggeration. The slavery is not that of physical force, but the moral enslavement which literally means loss of freedom of will and action. Miss Miner is interested both in helping to free those who are enmeshed in this slavery and in preventing others from entering it. She has done both. How she and her associates have done this work, in such a way as to win the respect of judges and district attorneys and police departments and in such a way as to win the affection of the girls and women whom they have helped, is told in this book—well told and simply, but with dramatic appeal. There are far-reaching relations between prostitution and industry, education, recreation, police and courts, family life and religion, and these are accurately and clearly described.

The book sets forth a program, but it does not read like the partisan plea of a propagandist. It is hopeful without being crudely optimistic. It has an air of actuality without being pessimistic. It is serious without being unduly solemn. It is readable and reasonably complete, touching on causes, legislative remedies, and individual treatment, but emphasizing in every chapter the ultimate reliance on education, economic reform, and the whole network of social measures which affect prostitution only as they affect health, income and character. It is at the same time a manual of its subject and an illuminating discussion of a problem which no thoughtful person can ignore.

Have You Made a Will?

Do you realize that if you do not dispose of your property *by will* your estate may be disposed of very differently from the way you would wish? Unless a will is made, the law can take no account of the special personal needs of any heir.

When you make your will, why not insure efficient and economical management by appointing the Bankers Trust Company as executor and trustee?

This Company will scrupulously guard the interests of your heirs, and will give your estate the benefit of experience gained in the management of many estates, of large and of only moderate size.

Our officers will be glad to correspond with you regarding any trust or banking business.

Doing "the Impossible"

The Gordian knot is the ages-old symbol of the seemingly impossible. Alexander the Great gave it a place in legendary history when, unable to untie it, he cut it in twain with his sword.

This famous incident of antiquity has its modern counterpart in the real work of the men whose vision and unrestricted initiative brought forth the great Bell System.

In the development of the telephone, one Gordian knot after another has been met with. Yet each new obstacle yielded to the enterprise of the telephone pioneers. Every difficulty was handled with a will and a courage which knew not failure.

Man's words have been given wings and carried wherever his will directs. Electrical handicaps have been overcome one by one.

The feeble current of telephone speech has had a way hewn for its passage through all physical impediments, until the entire country, from the Atlantic to the Pacific, is within hearing of a child's faint cry.

This record of the Bell System for past achievements is an earnest of future accomplishment. New problems are being met with the same indomitable spirit, which guarantees a more comprehensive as well as a more perfect service.

Auto-Intoxication—Dangers and Relief

A hazy feeling—dullness—half headaches—inability to think—these come from stupefaction, or partial paralysis of your brain by poisons generated by food waste, fermenting in your colon—the lower part of your digestive tract. This is called "auto-intoxication"—that is, intoxication from poisons generated inside the body. Indigestion and constipation are its symptoms. It may lead to nervous exhaustion, high blood pressure, liver and kidney disorders and sometimes malignant growths. A clean colon, doing its work thoroughly and well, is easy to have, however. Dr. Kellogg tells you about this in his new book—"Colon Hygiene." It teaches natural methods only—diet, exercise, rest, sleep and regulation of working hours. No drugs. Following its teachings will give you permanent relief from indigestion, constipation and their attendant ills. Thus you may regain bodily comfort and have a keen mind, renewed energy, a clear eye, and abiding health. Send the coupon for a FREE examination of this book. Over four hundred pages—many illustrations—substantially bound—only \$2. Get this book and rid yourself for all time of the dangers of indigestion, constipation and auto-intoxication. Examine it, FREE first.

Ourselves and Europe

II. Enduring Peace

By Edward T. Devine

IF we are to take our natural and legitimate part in the reconstruction of a devastated world we must rid our minds completely of the false notion that on the earth's surface there are two worlds: our own and Europe's. Our affairs do not lie entirely within our own boundaries. Even if the contrary were the case it would still be evident that the war is our concern. Our immigration has ceased because of it. Our finance devotes its energies to the war. Our industrial prosperity rests upon it, with the instability of an inverted pyramid. Our national election all but turns upon the issues which it creates.

Good citizens, however, do not limit their responsibilities to their domestic establishments, and no civilized nation can do so. When Lloyd George warns neutrals not to concern themselves at present about ending the war he opens rather than closes a discussion. Independent neutrals, in perfectly good temper, in a spirit of entire good will, in the light of reason and common-sense, claim the privilege of talking about peace as desirable and possible. The government will, of course, not proffer its good offices unless and until they are desired; but it is desirable for private individuals to speak out their sympathy for such measures as may help to end the war and to do their utmost to keep clearly and uncompromisingly to the front war's savage bestiality, its childishness, its pettiness, its futility and its wickedness. Even this war is not redeemed by the vastness of its operations or by the heroism of individual soldiers. To condemn the war, and to seek to give aid and comfort to those who in any land are trying to make an end of the war possible, is not to cast a slur on the belligerents. They cannot be blamed for acting rather than reasoning. They are in the fight, and it is so that men in mortal combat have always behaved. They have in front of them, in some cases on all sides of them, an enemy to vanquish. It is horribly simple.

Any misgivings as to whether the issues may not be complex and whether on some of them the enemy may be right would be a source of fatal weakness. For a soldier or a citizen to doubt in any essential particular the righteousness of his country's cause is to invite the fate of a "copperhead," at least to be taken for a suspicious person, probably in the pay of the enemy. There are neutrals who are so swept away by their

sympathies that they reason like the belligerents in the camp of their friends; or rather, they love and hate like belligerents and do not reason at all. To feel thus intensely the appeal of one side and the iniquity of the other may be for an individual an ennobling experience. It has led some Americans to a heroic death in the present war, and it has led many more to throw into the caldron the most precious gifts of clear vision and power of just dealing.

Better for most of us than this blind enthusiasm for either side, more in accord with the fundamental interests of civilization, is that passionate union of reason with good will which for the belligerent is all but impossible. His heart is hardened that he may fight; but why should we harden ours when the very thing which the world needs is that we may keep our hearts tender for all human suffering? His eyes are bloodshot and fixed upon a single goal, the throat of his foe, the very devil incarnate; but why should not our eyes remain open to the truth that the foe is no devil incarnate at all, but another man, whose eyes also are fixed and bloodshot as military tactics and the rules of warfare require? The judgments of the belligerent are distorted. He willingly allows himself to be deceived and is deliberately deceived by his leaders; but why should not we who remain free pronounce a more honest judgment and continue to exercise the power of frank and unprejudiced speech?

Neutrality in its etymological sense means indifference and suggests a sterile incompleteness; but neutrality in the sense in which it should be understood in America today does not mean indifference. It means a deliberate and well-considered judgment that the best interests of humanity and of America demand that the people of this country should remain in genuine friendship with the nations on both sides of the conflict, that we should retain the advantage which men at peace always have over those at war, the power to discriminate, to throw our influence where the welfare of mankind, as we see it, requires—loyalty and patriotism reinforcing our duty rather than coming between us and the ideals of our common humanity.

This positive relation with the nations at war is wholly incompatible with aloofness or indifference. We have an intellectual and moral obligation to follow the events of the

war, to form clear judgments concerning its causes and conduct, to appreciate its heroic aspects and its tragic aspects, and to put ourselves in position to support by voice and, if necessary, by vote, or even, in some conceivable situations, by force, those policies which the highest and best interests of mankind demand. In this world's crisis we shall play our part not by holding aloof, but by making the most of our unique position; not by ignoring the problems of the war, but by thinking them through, reaching independent and clear judgments, and striving by all appropriate means to carry those convictions into effect.

It is especially appropriate that social workers, who in their daily lives have to do with various aspects of social pathology, should realize that war is only an abnormal community convulsion. It brings tasks of relief, bigger and more difficult than others, but with a family resemblance. It destroys life and limb, but so do industrial accidents. It makes brothers hate one another, just as unfair competition and inherited prejudices have always done. It creates heroes, just as economic conflicts do, but it kills them in a remorseless tragedy only to be matched in the unrecognized, slowly moving tragedies of commerce and industry.

Who else but social workers have such a background of experience and such an acquaintance with human character under adversity as will enable them to understand the misery and to keep their poise in the sickening realities of war and its aftermath? Not because they are wiser or more humane than others, but because these are phenomena of their own calling, scenes from a life familiar to them in microcosm, they have a standing in the councils of those who would try to find a way out of the darkness.

From this standpoint the first demand is, of course, for peace. The greatest calamity which it is possible to contemplate is the continuance of the war for an indefinite period, as a war of attrition, a war of exhaustion. Only less calamitous would be such an overwhelming victory as few now on either side who have followed the events of the war really expect, although it is still proclaimed on both sides as the reason for going on.

The overwhelming majority of the peoples of all nations certainly desire peace. Not a premature or patched-up peace, say the official spokesmen of the allies. But what are the conditions and guarantees of an enduring peace? Not by the mouth of president or ambassador, but by unofficial voice and pen neutrals should begin to demand from those who decry an immediate peace some clear statements as to what they now consider the conditions of an honorable and lasting peace.

Strange phrases appear in the newspapers now and then, which, if taken literally, would mean that the war has degenerated into a war of plunder, revenge, and conquest. Irresponsible militarists are talking now and then as if England desired nothing less than to reduce Germany to the present position of Belgium. If this should ever come to be the temper of liberty-loving England, her friends in America will have a more terrible argument against war than all the literature of pacifism has furnished. If the allies desire that German militarism shall be destroyed, in the only place on earth where it ever can be destroyed, namely, in the hearts of the German people, they will not too long delay in giving expression to the desires of their own hearts. They will make it clear, even at the risk of what they may think needless repetition, that they do still stand for freedom, for the rights of large nations as well as of small nations to life and liberty, and above all that the childish and devilish doctrine of a war after the war has not seriously entered into their calculations.

Do they accept Lord Bryce or Lord Northcliffe as their spokesman?

The aims of the Entente allies, with the exception of England, are fairly definite and clear. Russia wants the outlet of the Dardanelles, and to be mistress in her own house, free of insidious German influences at court, in the bureaucracy and in business. France wants her lost provinces, and to be free of the invader.

But what does England desire? Her enemies say that she wants commercial expansion, freedom from German competition, the chance to replace Germany as best friend and exploiter in Russia, and possession of the German colonies. Some Englishmen—but these are clergymen and not soldiers—say that the main thing is to make sure that at the end the Germans acknowledge themselves to be criminals and that they should be so regarded by others. There must be no "saving the face." Hilaire Belloc, a very brilliant historian and critical writer, says: "There is but one obvious public policy—the maintenance of a continual drain of wealth from a Germany conquered and compelled to export to our advantage. It is a policy the victor can impose most simply by life-long indemnity, most drastically by the confiscation of mortgage and scrip, with garrisons to maintain the treaty."

Belloc adds that the whole history of Ireland has been nothing else but the taking of tribute from occupied and subject territory; that the whole history of modern Egypt is nothing else. He cites these examples not to condemn the policy, but as precedents to be followed in the case of Germany and Austria. "You can always," he insists, "so arrange matters that the vanquished have to produce wealth, indeed, but, instead of retaining that wealth, shall regularly pass it over to the victors."

It will not do to put off these questions until the war is over. The stubbornness of the fighting, the number of deaths, the amount of human suffering to be endured, the length of the war, all depend upon the changing aims of the countries at war. The attitude of neutrals depends upon them. The very direction of the thoughts and the intensity of the feelings of both neutrals and belligerents, and therefore the prospects of peace, are closely dependent upon these national aims.

With any aggressive military ambitions of the central powers there has never been any sympathy in America. There could not be. That those aims have already been thwarted, notwithstanding the present position of the actual fighting lines, seems certain. It is altogether probable that they would be repudiated by the German and Austro-Hungarian people themselves if military pressure were removed and the popular will could be ascertained. There might not be political revolution. That is probably quite as likely to occur in Russia or in England as in Germany.

Emancipation from the obsession of the military ideal might, however, come by a speedy, peaceful evolution. Such an evolution was actually in progress before the war. The balance of power was shifting from the agrarian and military caste to the industrial centers, from the ruling families to the democracy. One thing only may totally reverse this wholesome evolution, viz., for the allies to wage against them a ruthless war of conquest, of extermination. Perhaps Germany may be led into such a war on her part if her invasion of France or of Russia ever proves successful. That danger seems to be past. Probably neither France nor Russia can be occupied permanently by German armies, and it is well for civilization that it is so. What is not so clearly seen is that an equally fatal blow to civilization may be struck by those whom we have been accustomed to acclaim as its defenders.

That those who have died in defense of liberty and humanity may not have died in vain, it is above all essential that their armies shall not become the instruments of a perverted lust for victory at all costs, even at the price of the death of the very spirit in whose name they went forth to battle. The costs of the war are grievously heavy already, but unless the possibility of an early and lasting peace can be kept alive those costs will mount beyond all calculation. Agnes Repplier in the November *Atlantic* makes a stirring plea for the reading of the history of these current years, for remaining alive to the wonderful events which "are being written on indestructible scrolls for coming ages to read. Not with sorrow and shame only will they be read, but with elation, with the thrill of pride, with humble reverence of soul."

That depends upon the outcome. Miss Repplier feels aggrieved because a writer in the *SURVEY* alludes brutally to the cockpit of Verdun. But unless the soldiers of France remain citizens as well as soldiers it is a cockpit. Unless Englishmen carry themselves as torchbearers of civilization, rather than as commercial travelers, it is a dog fight that we are witnessing, as Lloyd George himself "brutally" calls it, and there may be nothing for it but that bystanders shall part the "game

dogs" if they can. If Kipling were right in his worse than brutal description of the Russian as the "bear that walks like a man," there could be no pride and no reverence in the story of his coming and going.

But the fact is that Russians are men and not bears. The French are citizens as well as soldiers, and the English are freemen and not slaves, even in war time. They will save themselves from their own worst enemies—those among themselves who, in their rage, would transform a defensible war into an ignoble war of extermination and exploitation. They will not summarily put aside the possibility of a peace by negotiation, with guarantees such as the nations of the future must rely upon.

American participation in the creation of the new order of things should be taken for granted. As between the present belligerents we are impartial, whatever our individual sympathies, but as between any future disturber of the peace and the peacemakers we shall not be impartial, and in the establishment of a secure and lasting peace we have a decided interest backed by a reasonable measure of moral force, capable of expression in terms of physical force if that should prove to be necessary and appropriate.

College Men and the Alcohol Question

By Rockwell D. Hunt

UNIVERSITY OF SOUTHERN CALIFORNIA

THE pre-eminence of the college man in America was never more pronounced than today; that it will be increasingly conspicuous in days to come is indicated by every present tendency. Therefore the attitude of the typical college man on the great questions of the day is a matter of genuine concern.

Indubitably the alcohol question is one of these. While hoary with age, it was never so forward-looking. More than two decades ago my social science instructor at Johns Hopkins, E. R. L. Gould—now of revered memory—pronounced the liquor problem the greatest of sociological questions. It has certainly got itself to the very forefront in our day as never before in all its long and sinuous history.

The ubiquitous investigator has been getting in his work. As the problem itself is all-pervasive, it must submit to the scrutiny of all who would make inquisition. There are biologist, chemist, bacteriologist, pathologist, neurologist, alienist, criminologist, actuary, sociologist, economist, explorer, captain on land and captain on sea, politician, moralist, religionist, labor leader, business man, legislator, jurist, administrator. The returns are coming in hourly; the sinister indictment is virtually completed.

What is to be the attitude of our pre-eminent college man when confronted with the conclusions deduced by such scientific minds as Gould, and Welch, and Fisher, and Kneeland, and Howard, and Kraepelin, and Farnum? Is it possible that the university professor, who should be *par excellence* the leader of leaders, is in danger of losing the most outstanding opportunity of his generation for virile and consequential leadership by maintaining a spirit of aloofness instead of assuming his rightful place in the glorious world-war against alcohol? Great is the force of hoary but vicious tradition, touching the use of liquor, that clings to the classic halls of learning. Will the scholar in the Republic be willing to shatter the vicious tradition?

Signs of the times are not wanting. In January, 1914, a

press dispatch to the effect that many Yale students were signing a pledge to refrain absolutely from drinking and gambling attracted my notice. Desiring accurate information, I addressed a letter to Prof. Irving Fisher, in which I said:

"In view of the fresh and very vigorous interest now displayed in the American liquor problem, politically as well as economically and morally, is not the moment auspicious for the economists and sociologists to inaugurate a serious campaign of education looking toward the total elimination of the drink traffic by 1920? In the presence of this great issue, can we longer justify ourselves in devoting major attention to matters of relatively less importance, while virtually ignoring this question of first magnitude?"

In his reply, dated February 2, 1914, Professor Fisher said:

"I am glad to know that you are treating the alcohol problem in a course. It seems to me inexcusable for us not to put these facts before young men in a scientific, dispassionate manner. As to a campaign on the subject, I shall be glad to cooperate in any way possible. My most active work for temperance and total abstinence will be as chairman of the Hygiene Reference Board of the Life Extension Institute."

Shortly afterwards, as a teacher of economics and member of the American Economic Association, I addressed the following letter to a select list of foremost American economists and sociologists:

"Has not the time arrived when American economists and sociologists should unitedly and purposefully grapple with the alcohol question, especially in its relation to the college and university?"

"In addressing this question to yourself and a small group of men, I recognize your deep interest in every great movement that makes for the general welfare, and I am not unmindful of the exceptionally favorable vantage-ground you occupy with reference to sound leadership among men of our brotherhood.

"As a slight beginning towards what may possibly expand into a most vital movement among the great body of our American college men, I have made bold to request an ex-

pression from you as to the wisdom and timeliness of entering upon a serious and dignified campaign for the elimination of alcohol from college life and functions as a part of the larger educational campaign for temperance or prohibition now stirring our land.

"As teachers of social science, should we not undertake to give systematic and adequate attention to this grave problem? Should not full recognition of the subject be accorded in the standard journals of economics and sociology? Should not regular courses in the study of the liquor problem be introduced in a very large number of our colleges and universities? Prof. Irving Fisher writes, 'It seems to me inexcusable for us not to put these facts before young men in a scientific, dispassionate manner.' Some expression of your judgment with reference to this whole matter, or any special phase of it, will be sincerely appreciated. Any constructive suggestion will be welcomed. . . ."

A few extracts from letters received in reply must suffice at this point. Prof. T. N. Carver, of Harvard University, now president of the American Economic Association, wrote:

"The problem which you raise is one that has long interested me. I think it important that the whole question of the liquor habit should be discussed in a thoroughly scientific manner."

Edward T. Devine, of the New York School of Philanthropy and Columbia University, reported:

"From the beginning of my work at Columbia eight years ago I have included the subject of alcoholism among the social problems of vice, crime, poverty and disease. I have been in sympathy with the suggestion that Robert Woods made at the National Conference of Charities and Correction a few years ago that a committee on the prevention of alcoholism should be formed somewhat on the analogy with the Committees on the Prevention of Tuberculosis with special, although, of course, not exclusive, emphasis on the medical aspects of the subject."

Prof. Frank Fetter of Princeton said:

"I can but express cordial sympathy with the end you have in view, the reduction and, if possible, the extinction of the alcohol habit in American colleges and universities. . . . I am a member of the American section of the International Committee for the Study of Alcohol, which no doubt will treat the matter in a more scientific way than it has ever been done before. I will be very happy to be kept informed of any movement undertaken or extended by you to deal with this subject."

Richard T. Ely of Wisconsin:

"My attention has been given in the last few years entirely to other problems than those which you mention. Am glad to know what you are doing and I am interested in your work."

Jeremiah W. Jenks of New York University School of Commerce and Finance expressed himself thus conservatively:

"I quite agree with you that the facts regarding the use and effects of alcohol, and tobacco, too, for that matter, should be placed before students in our colleges and universities in a thoroughly scientific and dispassionate manner. . . . Any teaching on the subject should, in my judgment, be scientific, and care should be taken that it should not become any kind of political propaganda, prohibitionist, high license, or otherwise. That is always a danger whenever any question that has a political side is introduced into the college curriculum, and it is an evil that should be carefully guarded against."

Prof. Albion W. Small of Chicago:

"Our students use the university somewhat as the subscribers to the Chicago telephone system use its different exchanges. They are in touch with the institution in either case simply when they are using it and this in both cases is a

very intermittent program. . . . As a matter of academic instruction, I do not think it would be the best use of our resources to undertake anything very different from the incidental references to the relations of intemperance and to the liquor traffic, which occur with great frequency in a large number of our courses. . . . This reply should not be interpreted as indicating coldness or lack of sympathy; the contrary is the case. . . ."

The virile, forward-looking letter from Prof. George Elliott Howard of Nebraska must be given without abridgment. It deserves to be recognized as a classic in the literature of prohibition. It bears the date of April 14, 1914, and is as follows:

"The belief is pervasive in our country that public opinion is now ready to sustain the decisive forward step in the movement against the liquor interest, and especially against the 'organized American saloon.' Already the movement has become national. Thus far the public school, the college and the university have signally failed to take their rightful place in the movement. Individually many courageous teachers have done their duty; but there has not yet been an earnest, thought-out, organized effort of all the educational forces as such. In the place of boldness, there has been timidity. Indeed the example set by professors and other leaders in college life has often been harmful. There exists an academic cynicism on the drink habit, as on some other great moral issues, that is very menacing and disheartening. College men are largely responsible for the excessive drinking and smoking habits of students. It is high time, as you suggest, for the economists and the sociologists to take the lead in an organized campaign against the alcohol traffic in all its many sinister aspects. Science has spoken. No safe refuge is left for the liquor interest. Nothing short of nation-wide prohibition of the manufacture and sale of alcoholic drinks is adequate. College and university men and women should come forward, at whatever risk or sacrifice, to claim the leadership in this great battle for social righteousness."

Dr. Howard's letter renders special pleading unnecessary. Since it was written immense strides have been taken. Fisher has come clear over to Howard's position, as an extract from his letter of February 24, 1916, to one invited to become a member of the Committee of Sixty on National Prohibition, will indicate:

"Personally, I have only recently and almost reluctantly come to the conclusion that national prohibition is the proper method of solving this great problem. I still believe that the general education of the public is of the utmost importance. But the two go hand in hand."

The Yale professor is not alone in his new stand. Professors Loeb, Stockard, Jordan, O'Shea, Ross, and W. S. Hall are among those enrolled on the Committee of Sixty. This Committee is but one of a number of forces which seem really to have entered upon "a serious campaign of education looking toward the total elimination of the drink traffic by 1920."

As a young professor of political science, Woodrow Wilson once said, "It has never been natural, it has seldom been possible in this country, for learning to seek a place apart and hold aloof from affairs." We are coming more clearly to perceive that the "academic attitude" not only weighs and balances with scientific impartiality, but accepts conclusions that have been definitely reached and prompts to virile action. All science is for the benefit of the race; pre-eminent college men—economists, sociologists, and all the rest—are beginning to apprehend the bigness of their opportunity to advance human welfare by heeding the social demand for the elimination of alcoholism.

Birth Control¹

Its Medical, Social, Economic and Moral Aspects

By *S. Adolphus Knopf, M.D.*

PROFESSOR OF MEDICINE, DEPARTMENT OF PHTHISIOThERAPY, AT THE NEW YORK POST-GRADUATE MEDICAL SCHOOL AND HOSPITAL; VISITING PHYSICIAN TO THE RIVERSIDE HOSPITAL-SANATORIUM FOR THE CONSUMPTIVE POOR OF THE HEALTH DEPARTMENT OF THE CITY OF NEW YORK

WHEN at this very moment across the sea in Europe the best blood of the nations which were heretofore considered the most enlightened, cultured and civilized, is daily being shed and hundreds of thousands of young men in the prime of life sacrificed to the Moloch of war, it must seem a hazardous undertaking to talk of birth control, which means artificial birth limitation and by some superficial observers is designated as race suicide.

But my appeal is not a plea for reducing the population but for increasing its vigor by reducing the number physically, mentally and morally unfit and adding to the number of physically strong, mentally sound, and higher morally developed men and women.

I deal first with the medical and sanitary aspects of the subject. No one will deny that we occasionally come across a well-to-do and intelligent family where by reason of unusual vigor, and particularly by reason of the physical strength of the mother, the parents have been able to rear a large number of children. In some instances all have survived and have grown up to be healthy and vigorous. But these instances are rare and are becoming more and more so every day. On the other hand, large families, that is to say, numerous children as the issue of one couple, are an every-day spectacle among the ignorant, the poor, the underfed and badly housed, the tuberculous, the degenerate, the alcoholics, the vicious and even the mentally defective.

It is well known to every general practitioner whose field of activity lies among the poor and the above-mentioned classes, that the infant mortality among these is very great. The same holds true of the mortality of school children coming from large families in these classes of the population.

Concerning tuberculosis, which, by reason of many years' experience, I am perhaps more familiar with than with other medical and social diseases, let me relate the interesting fact that a carefully taken history of many, many cases has revealed to me: that with surprising regularity the tuberculous individual, when he or she comes from a large family, is one of the latter-born children—the fifth, sixth, seventh, eighth, ninth, etc. The explanation for this phenomenon is obvious. When parents are older, and particularly when the mother is worn out by frequent pregnancies and often weakened because obliged to work in mill, factory or workshop up to the very day of confinement, the child will come into the world with lessened vitality, its main inheritance being a physiological poverty. This systemic poverty will leave it less resistant, not only to tuberculosis but to all other diseases of infancy and childhood as well.

The morbidity and mortality among these children is greatest when the children are most numerous in one family. In a publication of the Infant Mortality Series, Emma Duke gives the result of a field study in Johnstown, Pa., based

on the births of one calendar year, 1911. The inspection was made of the 1911 babies in 1913 so that even the last born baby included had reached its first birthday—or rather has had a chance to reach its first birthday; many of them were dead long before that day. The following is Miss Duke's table showing the infant mortality rate for all children born of married mothers in Johnstown during that year:

Deaths per 1,000 births in	
Families of 1 and 2 children.....	108.5
Families of 3 and 4 children.....	126.0
Families of 5 and 6 children.....	152.8
Families of 7 and 8 children.....	176.4
Families of 9 and more children.....	191.9

Dr. Alice Hamilton, of the Memorial Institute for Infectious Diseases, Chicago, made a study of 1,600 families in the neighborhood of Hull House. The following is the table of the child mortality rate of the 1,600 families as published by Dr. Hamilton:

Deaths per 1,000 births in	
Families of 4 children and less.....	118
Families of 6 children.....	267
Families of 7 children.....	280
Families of 8 children.....	291
Families of 9 children and more.....	303

Many families were found of thirteen, fourteen and even sixteen members. The largest of all was that of an Italian woman who had borne twenty-two children—and raised two. The small families of every nationality had a lower mortality rate than the large families of the same nationality. The Jewish families of four and less had the astonishingly low mortality rate of 81 per 1,000, while in families of eight and more the rate rose to 260 per 1,000.

The larger the family, the more congested will be the quarters they live in and the more unsanitary will be the environment. Last, but not least, with the increase of the family there is by no means a corresponding increase of the earning capacity of the father or mother, and as a result malnutrition and insufficient clothing enter as factors to predispose to tuberculosis or cause an already existing latent tuberculosis to become active.

The Part Played by Tuberculosis

WHAT is the result of this condition in relation to tuberculosis—one single disease? Out of the 200,000 individuals who die annually of tuberculosis in the United States, 50,000 are children. According to some authors 65 per cent of women afflicted with tuberculosis, even when afflicted only in the relatively early and curable stages, die as a result of pregnancy which could have been avoided and their lives been saved had they but known the means of prevention. Some times we succeed in saving such a mother by a timely and careful emptying of the uterus. But an abortion even scientifically carried out and only resorted to with the view of sav-

¹ Address delivered by invitation at the forty-fourth annual meeting of the American Public Health Association, Cincinnati, Oct. 27, 1916. Thanks to the courtesy of the editors of the *New York Medical Journal* we have been able to have the above appear simultaneously with the publication of Dr. Knopf's article in that periodical.

ing the life of the mother is never desirable, either for the consultant to advise, or for the gynecologist or obstetrician to perform; and who will dare to say even under the best conditions that this operation is devoid of danger?

What is the explanation and what are the consequences from the point of view of sanitation of the death of 50,000 tuberculous children? They have mostly become infected from tuberculous parents or tuberculous boarders who had to be taken into the family to help pay the rent. In the crowded homes of the poor there was neither sunlight nor air nor food enough to cure the sufferers and before they died they became disseminators of the disease. Nearly all of the infectious and communicable diseases are more prevalent in the congested, overcrowded homes of the poor, and particularly of those with large families. The propagation of syphilis and gonorrhœa by contact infection, other than sexual, can sometimes be avoided in the homes of the well-to-do by enlightenment and the conscientiousness of the afflicted. It is almost invariably communicated to the innocent in the homes of the ignorant and poor. Gonorrhœal infection from parent to child or from one infected member of the family to the other is responsible more than anything else for the 57,272 blind persons in the United States.

The great syphilographer Fournier left us the following irrefutable statistical evidences of the seriousness of syphilitic transmission: As a result of paternal transmission there is a morbidity of 37 per cent and a mortality of 28 per cent; maternal transmission resulted in 84 per cent morbidity and 60 per cent mortality; and the combined transmissions are no less than 90 per cent of morbidity and 68.5 per cent mortality.

I venture to say right here that would or could a syphilitic or gonorrhœic parent be taught how to prevent conception during the acute and infectious stages of his or her disease there would certainly be less inherited syphilis, less blindness from gonorrhœal infection, in other words, fewer unfortunate children in this world handicapped for life and a burden to the community.

Mental Defect and Alcohol

THAT INSANITY, idiocy, epilepsy and alcoholic predisposition are often transmitted from parent to child is now universally admitted and corroborated by every-day experience and by an abundance of statistics. Countless are the millions of dollars expended for the maintenance of these mentally unfit. The state of New York alone spends \$2,000,000 annually for the care of its insane. Whether sterilization of these individuals would be the best remedy is a question still open for discussion. The constitutionality of the procedure is doubted by some of our legal authorities. Segregation is resorted to in the meantime with more or less rigor according to state laws. Every year, however, many of the individuals who had been committed to institutions for the treatment of mental disorders are discharged as cured. They are allowed to procreate their kind. Would it not be an economic saving if at least the individuals whose intelligence has been restored were instructed in the prevention of bringing into the world children who are most likely to be mentally tainted and to become a burden to the community?

The economic loss to our commonwealth from bringing into this world thousands of children mentally and physically crippled for life is beyond calculation, for who will dare to calculate in dollars and cents the loss which has accrued to the community because so many mothers died of tuberculosis when an avoidable pregnancy was added to a slight tuber-

culous ailment in a curable stage? Who will dare to estimate the cost of the loss of an equally large or perhaps larger number of mothers afflicted with serious cardiac or renal diseases, or frail or ill from other causes, whose lives could have been prolonged had an additional pregnancy not aggravated their condition?

Of the many mothers, married and unmarried, who have become chronic invalids and even lost their lives as a result of having resorted to abortive measures in order to rid themselves of an unwelcome child, no statistics are available. If there were, they would be an appalling evidence of the great danger of such criminal procedures and would certainly show the advantage of a more enlightened attitude regarding the means of contraception, at least for the married women who are enfeebled or diseased.

The many diseases I have mentioned whereby children in large families and mothers because of too frequent pregnancies are carried off to an early grave are not limited to the poor. In regard to economies, the middle class suffers also. Thus, if even a relatively well-to-do family begins to increase all out of proportion to the earnings of the father, the family will soon be in want and approaching poverty. Less and less good food, less sanitary housing, less care of the children and more sickness will almost inevitably result. Every sickness or death of child or adult has increased the expenses of the family. There is the doctor's bill, the druggist's bill and, last but not least, that of the undertaker. A grave has to be purchased. If there have been savings, they are gradually swallowed up and debts are often contracted for the sake of a decent funeral.

Next to the medical and sanitary comes the physiological aspect of birth control, which can be summarized in a very few sentences. The average mother with two, three or four children, not in too rapid succession, but with two or three years' interval, is physiologically, that is to say, physically and mentally, stronger and better equipped to cope with life's problems than the mothers worn out and weakened by frequent and numerous pregnancies.

What is the physiological effect of voluntary artificial restriction of the birth-rate of the offspring? In Holland, where the medical and legal professions have openly approved and helped to extend artificial restriction of the birth-rate, the health of the people at large, as shown by its general death-rate, has improved faster than in any other country in the world. At the recent Eugenics Congress it was stated that the stature of the Dutch people was increasing more rapidly than that of any other country—the increase being no less than four inches within the last fifty years. According to the Official Statistical Year Book of the Netherlands, the proportion of young men drawn for the army over 5 feet 7 inches in height has increased from 24½ to 47½ per cent since 1865; while the proportion below 5 feet 2½ inches in height has fallen from 25 per cent to under 8 per cent.²

The Dutch Medical Profession

IN THAT ENLIGHTENED COUNTRY, the teaching by the medical profession of the most hygienic methods of birth limitation has enabled the poor to have small families which they could raise to be physically and morally better equipped than formerly, and what is most interesting to observe is that, whether as a result of this or for some other reason, the families among the well-to-do are not nearly as small as in other countries.

In Australia and New Zealand, the means of artificial restriction are in free circulation and the restriction of families

² The Small Family System; Is It Injurious or Immoral? By Dr. C. V. Drysdale. Published by B. W. Huebsch, New York.

is almost universal. Yet these two English colonies have furnished to their mother country in these hours of struggle the most efficient, and physically and mentally best equipped regiments. The soldiers of Australia and New Zealand have shown themselves brave and fearless fighters and certainly equal, if not superior, as far as physical endurance is concerned, to their English brethren. In the latter country it is well known birth control is frowned upon by the legal and nearly all the ecclesiastical authorities.

And what of France? Before the present war Drysdale, in his book, *The Small Family System*, very aptly said:

"It has become the fashion to speak of the depravity of France, of her alcoholism, of her disregard for law and order, and of her terrible *crimes passionels*, and to ascribe them to the falling birth-rate. If this were the case, it is obvious that these evils would be most intense where the process had gone furthest, i.e., in the cantons of the lowest birth-rate (the French islands of Re and Oleron)."

The passions of the inhabitants of these islands are very innocent.

"They are reading and dancing. The dancing, always decent, is the preparation for marriage; illegitimate births are very rare. One could not imagine manners more pleasant or more honorable. Nevertheless the birth-rate in these islands is among the lowest. It is because everyone there is more or less of a proprietor. Each person has some property to protect; each is ambitious for his children."

But we have the authority of Dr. Bertillon, the French statistician, that it is just in the cantons of these islands in which the greatest moral improvement has taken place, and that where the French have obeyed the command to increase and multiply there alcoholism and crime abound.

Let me quote briefly from an editorial on contraception which appeared in the *Medical Times* of April, 1916:

"France today is presenting her splendid spectacle of utter efficiency to the world because only the fittest of her people have survived, and the chief factor there has admittedly been contraception. Surely we have heard the last of the croakers about decadent France. Holland would give an equally good account of herself if the need should arise and for the same reason."

Economic and Sociological Factors

BECAUSE of a high birth-rate concomitant with a high infant and child mortality rate, we have already touched in part on the economic cost growing into the millions which accrues annually to the nation. Well may we ask the question whether disease and the deaths of thousands of women and children can not be prevented by an enlightened attitude toward the question of birth control. Why is it not done? If the millions of dollars expended uselessly reverted to the nation's wealth, would they not add immeasurably to the health and economic happiness of the nation at large?

The social or sociological aspects of our topic are closely interwoven with the economic. That the social and moral life of a smaller family, where the father earns enough to support wife and children and where the mother can devote her time to the care of them, and where neither she nor the children must go out and help in the support of the family, is superior to that of a family with a large number of children where the mother and often the older children must slave, does not permit discussion. The larger the family of the poor, the more child labor, the more there is disruption and irregularity, and the more frequently one finds a lower standard of life and morals in general.

The records of charities and benevolent societies amply prove that as a rule the larger the families are that apply for relief the greater is their distress.

That judicious birth control does not mean race suicide, but, on the contrary, race preservation, may best be shown from the reports from Holland. The average birth-rate in the three principal cities of Holland was 33.7 per 1,000 in 1881, when birth-control clinics were started. In 1912, it had fallen to 25.3 per 1,000. The general death-rate, however, had dropped in the same period from 24.2 to 11.1 per 1,000, or less than half, while the two-thirds reduction in the mortality of children under one year of age—from 209 to 70 per 1,000 living births—is even more significant. (*Birth Control News*, published by Birth Control League of Ohio, Cleveland.)

As a final evidence of the social and economic value of imparting information concerning family limitation, permit me to quote from a personal letter from the great pioneer of this humanitarian movement, Dr. J. Rutgers, honorable secretary of the Neo-Malthusian League of The Hague. The league has been in existence since 1888 and received its legal sanction by a royal decree January 30, 1895. It has 6,000 contributing members; all information is given gratuitously. As a result of this league in Holland one does not see any more children dressed in rags as in former years prior to the starting of the movement. To use the venerable secretary's own words:

Testimony from Holland

"ALL CHILDREN you now see are suitably dressed, they look now as neat as formerly only the children of the village clergyman did. In the families of the laborers there is now a better personal and general hygiene, a finer moral and intellectual development. All this has become possible by limitation in the number of children in these families. It may be that now and then this preventive teaching has caused illicit intercourse, but on the whole morality is now on a much higher level, and mercenary prostitution with its demoralizing consequences and propagation of contagious diseases is on the decline.

"The best test (the only possible mathematical test) of our moral, physiological and financial progress is the constant increase in longevity of our population. In 1890 to 1899 it was 46.20; in 1900 to 1909 it was 51 years. Such rise cannot be equalled in any other country except in Scandinavia where birth limitation was preached long before it was in Holland. None of the dreadful consequences anticipated by the advocates of clericalism, militarism and conservatism have occurred. In spite of our low birth-rate the population in our country is rising faster than ever before, simply because it is concomitant with a greater economic improvement and better child hygiene."

The good doctor closes his letter by saying: "One must have been a family physician for twenty-five years like myself in a large city [Rotterdam] to appreciate the blessings of conscious motherhood resulting in the better care of children, the higher moral standard. And all these blessings are taken away from you by your government's peculiar laws, made to please the Puritans."

To these latter well-meaning people and those similarly minded who fear race suicide, particularly a decline of the American stock, I strongly recommend the reading of that splendid address of Dr. Charles A. L. Reed, former president of the American Medical Association, entitled *The American Family*. In the chapter on *The Outlook of the American Family*, he very pertinently says: "We see in a declining

birth-rate only a natural and evolutionary adjustment of race to environment—an adjustment that insures rather than menaces the perpetuation of our kind under favoring conditions.” And concerning under-population in general, this distinguished writer says in the same address: “It seems, indeed, to the careful student that the danger to the American family today and still more in the future lies in the direction of over-population rather than under-population.”

I may say in passing that in the state of New York we have observed the alarming phenomenon that the proportional increase among the insane is double that among the sane population.

And now I approach the last and most important phase of my subject, namely, the moral, which to me means no less than the religious phase of this great problem. Let me say that I approach it with awe and reverence, for I believe I fully understand the import of it. A quarter of a century of practice among the tuberculous, the rich and the poor, in palatial homes, humble cottages, dark and dreary tenements, and in overcrowded hospitals, has shown me enough to bring to my mind the utter immorality of thoughtless procreation, and my experience has been limited to this one disease of the masses. The tears and sufferings I have witnessed when I have had to decline help because it was too late to prevent, the despair of the poor, frail mother at the prospect of another inevitable confinement and later the sight of a puny babe destined to disease, poverty and misery has made me take the stand I am taking today. I am doing it after profound reflection and fully aware of the opposition I am bound to meet. But in my early career as an anti-tuberculosis crusader I became accustomed to the fate of those who venture on new and heretofore untrodden paths of progress.

The Moral Outcome

WHAT WOULD BE the moral outcome of birth control, or, let us rather say, rational family limitation, should it be judiciously taught to those seeking and needing the advice? Millions of unborn children would be saved by contraception from the curse of a handicapped existence as members of a family struggling with poverty or disease.

There are hundreds of young men and women, physically and morally strong, who gladly would enter wedlock if they knew that they could restrict their families to such an extent as to raise a few children well. But their fear of a large family retards, if it does not prevent, their happiness and, *ipso facto*, the procreation of a better and stronger man and womanhood. The woman withers away in sorrowful maidenhood and the man, whose sexual instincts are often so strong that he cannot refrain, seeks relief in association with unfortunate and often diseased prostitutes. The result is a propagation of venereal diseases with all its dire consequences.

Physicians, sanitarians and social workers know what these consequences are. They involve sterility, physical and mental suffering in the man, or sterility in both man and woman, and according to the severity of the infection—abortion, premature labor, a dead child, or one lastingly tainted with disease.

At times disease does not enter as a factor in the tragedy, but the result is a girl-mother, a blasted life—for our double standard of morality recognizes the “sin” only in our sisters, not in ourselves. Of her, compassionate tongues only say she loved not wisely but too well; of him nothing is said at all. He is spotless and virtuous in the eyes of the world and can go through life as if he had never sinned and been responsible for a wrecked life or two.

Even our moralists must acknowledge that by an early mar-

riage with a man of her choice, enabled by understanding to limit the number of children, many a girl would be saved from so-called dishonor and in many instances from prostitution.

One of the strongest arguments of our moralists and purists is that the knowledge of contraception would lead the young to enter forbidden sexual relations and degrade them morally. Granted that this may happen in a number of instances, the benefit derived from a diminution of venereal diseases form a greater number of happy and successful marriages among the younger people, fewer but better and healthier offsprings instead of an unrestricted procreation of the underfed, the tuberculous, the alcoholics, the degenerate, the feeble-minded and insane would more than outweigh the isolated instances of sexual intercourse prior to marriage.

In view of all the facts, I feel impelled to plead with all earnestness for the abolishment of the state and federal laws which make the imparting of knowledge for contraception a criminal offense. I plead for the establishment of gratuitous clinics, directed by regular physicians of high repute, remunerated by city or state, who are competent to give information as to birth limitation in such cases where they deem the giving of such instructions advisable.

As to the urgency and the wisdom of efforts to change these laws,³ I am sure that you will be willing to listen to the words of two of our greatest American physicians; first, to those of the venerable nestor of the medical profession, Dr. Abraham Jacobi, of New York, ex-president of the American Medical Association; secondly, to Dr. Hermann M. Biggs, of the New York State Board of Health, distinguished sanitarian and pioneer in the modern warfare against tuberculosis.

In his preface to Dr. William J. Robinson's book, *The Limitation of Offspring*, Dr. Jacobi says: “Our federal and state laws on the subject of prevention of conception are grievously wrong and unjust. It is important that these laws be repealed at the earliest possible moment; it is important that useful teaching be not crippled, that personal freedom be not interfered with, that the independence of married couples be protected, that families be safeguarded in regard to health and comfort, and that the future children of the nation be prepared for competent and comfortable citizenship.”

The Present Restrictive Laws

DR. BIGGS, prior to the recent dismissing of the case by Judge Dayton, of the federal court against Margaret Sanger for sending information about birth control through the mails, gave to the press the following statement: “I am strongly of the opinion that the present laws in regard to the giving out of information in relation to the governing of infant control are unwise and should be revised. There can be no question in the mind of any one familiar with the facts that the unrestricted propagation of the mentally and physically unfit as legally encouraged at the present time is coming to be a serious menace to civilization and constitutes a great drain on our economic resources. This is my personal view.”

To the foregoing expressions of opinions let me add what

³ United States Criminal Code, Section 211 (Act of March 4, 1909, Chapter 321, Section 211, U. S. Statutes at Large, Vol. 35, art. 1, page 1088 et seq.). New York Statute Book (Section 1142 of the Penal Law). The federal law prescribed a fine of \$5,000 or imprisonment of not more than five years, or both, for any one using the mails to give advice for producing abortion or preventing conception. The New York state law, above mentioned, makes the giving of a recipe, drug or medicine for the prevention of conception or for causing unlawful abortion a misdemeanor, punishable with no less than ten days nor more than one year imprisonment, or a fine of not less than \$50 nor more than \$1,000, or both fine and imprisonment, for each offense.

It will be noticed that both laws make the giving of advice for the prevention of conception as great an offense as producing abortion. According to the New York state law, a “lawful” abortion is permitted and not punishable, but to prevent such abortion, always more or less dangerous to life, is not permitted and punishable by law. In all medical colleges careful instruction is given how to perform the “lawful” abortion. All good textbooks on gynecology describe the operation as carefully as an amputation of the cervix or hysterectomy; but concerning the advice to give, for example, to the poor tuberculous mother who has had her uterus emptied once so that she may not be obliged to submit to such a “lawful” operation again, our teachers of gynecology and our textbooks dare not say a word.

Judge William H. Wadhams, of the Court of General Sessions, wrote me concerning these laws: "In order to save the state from the burden of large families, where there is no possibility of their being supported and where the neglect which follows often results in their becoming state charges not only because they are mentally but often physically unfit to bear the burden of life, I am of the opinion that there should be some proper birth regulation after a certain number of children have been born, and that, therefore, there should also be some modification of the laws with respect to the giving of information upon this subject. I think the sanitary, medical, social, economic and moral status of the population would be improved by proper and more general information upon this subject."

Some of Those Who Believe in Birth Control

BESIDES THE LETTER from this eminent judicial authority and the strong expressions of opinion of Drs. Jacobi and Biggs, I have been the recipient of communications from many leading physicians, divines, political economists and sociologists, all agreeing with me that judicious birth control, under the highest ethical medical guidance, is a national necessity and that our present laws on the subject need urgent revision. For want of space I will only mention the following: Dr. John N. Hurty, secretary Indiana State Board of Health; Dr. Godfrey R. Pisek, professor of diseases and children at the New York Post-Graduate Medical School and Hospital; Dr. J. W. Trask, Public Health Bureau, Washington, D. C.; Dr. Lydia Allen De Vilbis, Kansas State Board of Health; Dr. Ira S. Wile, editor *Medical Review of Reviews*, New York; Dr. John A. Wyeth, professor of surgery and president of the New York Polyclinic Medical School and Hospital, ex-president of the American Medical Association and the New York Academy of Medicine; the Rev. Frank Crane, formerly pastor of the Union Congregational Church of Worcester, Mass., editorial writer; the Rev. Percy S. Grant, rector Church of the Ascension of New York; the Rev. Frank Oliver Hall, minister of the Church of the Divine Paternity, New York; the Rev. John Haynes Holmes, Unitarian Church of the Messiah, New York; the Rev. Stephen S. Wise, of the Free Synagogue, New York; Melvil Dewey, LL.D., educator, president of National Society for Efficiency; Prof. James A. Field, of the University of Chicago; Irving Fisher, professor of political economy of Yale University and chairman of the hygiene reference board of the Life Extension Institute; Franklin H. Giddings, professor of political science, Columbia University; William H. Allen, director of the Institute for Public Science of New York; Homer Folks, former commissioner of Public Charities of New York, now secretary of the State Charities Aid Association of New York; Lillian D. Wald, founder of the Henry Street Settlement and originator of the work of the school nurse in New York.

I must not fail to say a word about our Catholic friends and those of other faiths who are so strongly opposed to any

teaching or making public the means of contraception and limiting family increase. Let us have no word of bitterness or reproach because millions of devout Catholics hold these views. Let us not antagonize either priest or Catholic laymen who have a right to their conviction as much as we have to ours. If an enlightened government will at last permit contraception to be taught where it is likely to be productive of the most good, when in years to come we can show our Catholic brethren that because of birth control, resulting in a rational family limitation, we have decreased poverty, disease and crime and have produced a better generation of men and women, better equipped physically, mentally and morally for life's mission, in short, men worthy to be called true citizens of a great republic, then I am sure our Catholic friends will see that we after all have been not so wrong.

Without claiming the gift of prophecy, I venture, nevertheless, to foretell that as a result of wise, broad-minded and practical legislation concerning birth control the American nation will become the leader toward a finer, better manhood and womanhood, an example to be followed by the peoples of this and other continents. My esteemed friend, the Rev. John Haynes Holmes, of the Unitarian Church of the Messiah, New York, wrote me recently:

"Birth control is one more step forward in that full ordering and directing of his conscious life which is one of the most noble distinctions of the human as contrasted with the animal."

Dr. William L. Holt, writing on birth control as a social necessity and duty, says:

"Conscious and limited procreation is dictated by love and intelligence; it improves the race. Unconscious, irresponsible procreation produces domestic misery and half-starved children. Conscious procreation of human lives elevates man to the gods. Unconscious procreation degrades man to the level of brutes."

"Images of Their Creator"

TO QUALIFY the words of both, those of the divine as well as those of the physician, may I be permitted to close with what I am free to confess is my innermost conviction?

I believe in birth control, that is to say, birth limitation, based on medical, sanitary, ethical, moral and economic reasons. I believe in it because with the aid of it man and woman can decide when to have a child, work and prepare for its arrival, welcome it as the fulfilment of their heart's desire, watch over it, tenderly care for and educate it, and raise it to be what every child should be destined to be—a being happy, healthy, strong in mind, body and soul.

If we but use our God-given sense to regulate the affairs of government and family wisely and economically, this great world of ours will be one of plenty and beauty where the good will predominate over the evil and the children born in it will become men and women only a little lower than the angels—images of their Creator.

THE RAG PICKER

By Hilda W. Smith

THREE bells a-jangle down the long street,
Pushing his cart he goes, shuffling his feet.

Up a street, down a street, streets without end.
"Rags and old clothes! Umbrellas to mend!"

Are your dreams fashioned of tatters and shreds,
Faded old patches of yellows and reds?

Fabric of visions ragged and worn,
Hopes long forgotten, love turned to scorn?

Crying his trade he goes down the long street,
Shabby, round-shouldered, shuffling his feet:

Three bells a-jangle on top of his cart,
And maybe a tattered old dream in his heart.

The New Public Health

I

By *Alice Hamilton, M.D., and Gertrude Seymour*

PUBLIC health activities are claiming more and more the attention of all classes of people and especially of those whom for want of a better name we call social workers. The SURVEY has long wished to make a study of the actual status of public health work in this country; of the federal, the state and the municipal health departments, their organization, their ideals and their actual achievements. We are emboldened to begin this critical survey now because of the appearance of two very detailed studies in this field, both of which should be given as wide publicity as possible. Dr. C. V. Chapin, of Providence, has lately reported to the American Medical Association the results of an inquiry into the health departments of the different states; Franz Schneider, Jr., of the Russell Sage Foundation, has made a similar study of municipal health departments.

We have based our studies largely on the principles laid down by Dr. Chapin and by Mr. Schneider, and have supplemented the data contained in their reports by all the first-hand information we could gather from local health officials.

In the forthcoming series we shall try to give a clear picture of the ideals of modern public health work, and of the actual accomplishment at the present moment of the various state departments. In order to do the latter we shall have to pass in review the list of activities undertaken by these bodies and rate them according to their importance. We shall try to show which are indispensable and must be undertaken at once; which are desirable but of secondary importance, so that they may well be left to other agencies till the department is better equipped. We shall also look into an even more important feature—the constitution of the department, the selection of health officials, the degree to which the medical profession dominates the board's activities, the powers of the executive officer; and last, but most vital of all, the influence of politics in public health work, for, of course, nothing is proof against that subtle evil; the ablest officer and the wisest program are of little value if politics controls.

The Public's Share in Public Health

BEFORE beginning this critical study, it may be well to recall just what is the task of a state board of health—what share in "public health" must be the public's. The theory of the organization needs no justification at this day; but the board itself too often seems a remote entity, a "bureaucracy" related only in a vague way to actual processes of living and working. Whereas quite the contrary is the fact.

Says Prof. Milton J. Rosenau in the preface of his new *Preventive Medicine and Hygiene*:

"Exact knowledge has taken the place of fads and fancies in hygiene and sanitation; the capable health officer now possesses facts concerning infections which permit their prevention and even their suppression in some instances. Many of these problems are complicated with economic and social difficulties . . . preventive medicine has become a basic factor in sociology."

The doctor might have added "political" to his list of difficulties. But here, briefly suggested, is the task of the health officer: within the limits of his state and in cooperation with other states to make effective what is known about hygiene for the people of his charge; what

is known about sanitation for their external living conditions.

Such an attempt will touch a state's life, progress and activity at practically every point. How can a state be taught the scientific truth about health and disease? Is its transportation of commerce and of passengers also a transportation of disease? Is the water supply of its various communities satisfactory? What is the relation between that case of scarlet fever down in the southeast corner to an outbreak of the disease in the next state? Why are there seven more cases of typhoid in this county than its yearly average allows? Why, indeed, are there any cases there at all? Are births promptly reported? and sickness? and deaths? And of what use are these accumulating records? What special provisions are there for the industrial population, or for the rural, according to the character of the state? And what can a man do about it all, anyway?

Dr. Hill's Brilliant Book

THE MOST BRILLIANT as well as concrete reply to such questions is an account of just this new method of health work given in a fascinating little volume written by Dr. Hibbert Winslow Hill. Dr. Hill worked out his theory and proved its worth in the State Board of Health of Minnesota. In the following abstract of his *New Public Health* (Macmillan), all that is of interest belongs to the author; any error must be charged to the interpreters.

In new public health work the stress falls, says Dr. Hill, on the individual. In former days it was upon environment. Sources of infection and routes over which infection traveled were sought for—when sought at all—in garbage, backyards, damp cellars, bad ventilation, "sewer-gas" and everywhere else where they were not. The unventilated front parlor was blamed for tuberculosis. "The slum dwellers lived like pigs, thereby invoking the coming of smallpox . . . diphtheria, etc.," said an erstwhile report. But to the query, "Why do these diseases invade the porcelain-tubbed dwellings of the rich?" the only explanation was, "A visitation of Providence."

Children sat next to an unrecognized case of measles in school—therefore, "Oh, all children have to have measles anyway, and the younger they can have it the better!" In a book, which twenty-five years ago was standard, it is seriously stated that bubonic plague in Egypt was cured by better ventilation. Since then a million rats, pickled in alcohol, combed, dissected, have made a very different history. Human lives have been risked to compel the mosquito to give up his secret of yellow fever. Diphtheria has been traced to a human carrier instead of to sewer-gas. Nowadays, if people white-wash outhouses or "clean up" backyards, they also watch to see that the milkman does not leave infected milk.

Another goddess formerly set up and worshipped was "high health." "Keep in good condition—that's the best guard against infection," it was said. But general health has not proved a guaranty against specific infection. The one-fifth of the applicants for army positions who succeed in passing the physical examination, and are exercised, disciplined and fed at the highest known level of hygiene, succumb readily to infection; and every means of specific protection, such as anti-typhoid vaccination, is eagerly welcomed.

The truth is only this, in Dr. Hill's words: "The value of

high health, of hygiene, lies in the physical efficiency and bodily comfort which it bestows; in the sense of well-being, in the energy, alertness and keenness which result from it."

Health, in other words, is much more than the absence of disease, though it demands such measures of hygiene as shall make for the best internal workings of the human frame; of sanitation, as shall eliminate external conditions leading to disease or injury.

Is, then, environment become of none effect? Doesn't it matter whether the cellar is damp, the drain-pipe leaks, or garbage builds up a paradise for flies?

The issue here is one rather of self-respect and æsthetic and moral values than of sanitary legislation. The new public health does not encourage dirt; it does discriminate between general cleanliness and specific protection against infection. For if any part of the environment becomes infected by discharges from an infected person, the situation is immediately changed, and dust, garbage and flies assume a dangerous rôle. Unequivocally, no environment should be tolerated that "facilitates the exchange of human excreta," whether via the common drinking-cup, the roller-towel, the unprotected cough, or bad toilets into which infected discharge is poured without disinfection, to be brought back into the house and inmates on hands, by flies or other means.

The garbage-can is a place where flies feed and perhaps breed. But flies cannot carry infection if there is no infection to carry. Employes in various garbage plants average as well in health as do other men of similar status; so, too, employes in sewage systems, even those who work in city sewers.

Dr. Hill is not unaware of the claim, often insisted upon, that environments taxing the body forces beyond their powers of "compensatory adjustment" may contribute to the development of an existing infection—especially that of tuberculosis or pneumonia. But again discrimination is necessary. To induce infection, neither starvation or fatigue, nor unsuitable temperature, nor alcoholism—nor all together, will avail; nor will converse conditions offset the effects when a dose of infection is large, frequent, or highly virulent.

The Infected Person the Source

THE CENTRAL THESIS, then, of Dr. Hill's book is, that the infected person is the source and the *sine qua non* of infection. Therefore, when an outbreak of some communicable disease occurs, the new type of health officer will look first for the infected person; then for the routes over which infection could reach this individual; then for those from which it could spread from him; and, further, for those well-beaten paths from one individual to another in the same sociological group over which infection, once introduced, will promptly travel. Find the established routes of transfer, and the occasional bizarre mode may be considered later or ignored.

One example "of transfer in sociological groups" is the exchange of mouth-spray in talking, laughing or coughing, possible in groups working near one another; children at school; children playing together; church sociables; all the various "get-together" schemes of the modern neighborhood tendency.

The "established routes of transfer" Dr. Hill indicates thus:

THE CHIEF ROUTES OF INFECTION

<i>Diseases</i>	<i>Route</i>
Typhoid fever and other intestinal infections.....	water, food, flies, milk, contact
Tuberculosis (human).....	flies, milk, contact
Diphtheria, scarlet fever, measles, smallpox, etc.....	milk, contact
Syphilis, gonorrhœa, trachoma, leprosy.....	contact

These routes of disease, as well as the characteristics of the diseases themselves, are included in the study of epidemiology, the science of epidemics. Just how epidemiology works in practical life is suggested by an incident which Dr. Hill generalizes from many a particular case and locates at "Anybodyville."

Tommy Anybody and His "Rash"

MRS. ANYBODY keeps Tommy at home from school today because, as she says, he has a "scarlet rash." She hurries the other children off to school, often interrupted in putting up their lunches by the necessities of the nauseated Tommy. Her anxiety increasing, she asks a neighbor to come in and watch the child while she herself goes to the corner to telephone, not to Dr. A, who is fussy about reporting things and would tell the health department and have the house placarded, but to nice, easy-going Dr. B. Presently Tommy is seriously sick and the other children are packed off to a cousin's "in case they should get it." Then one of them develops a "sore throat" at the cousin's, is attended by Dr. B, has no rash and is soon better; but the little cousin whom the sore-throat child slept with presently has sore throat, too, and her chum develops unmistakable scarlet fever.

The chum is attended by Dr. A, who, recognizing the disease, reports to the health officer, placards the house, keeps the children from school and father from business, until the whole village eyes that family and talks of "surface water" in the well and the heavy shade-trees near the house. Then there's the mayor's statement "to allay excitement," all about a sporadic case that originated no one knows how.

Meanwhile, Tommy is popular at school, distributing "peelings" that are harmless), and scattering spray (that is by no means harmless) from his still sore throat as he tells how awfully sick he's been. And so on, until twenty or thirty cases have occurred, and even Dr. B recognizes that this is scarlet fever. The woman's club insists that the schools be closed and disinfected—Sunday schools and moving pictures are not interfered with.

The health department's record begins only with the case that Dr. A reported—the cousin's little girl's chum; has all Dr. A's cases and those of Dr. B after he "was sure." Later, it has reports of death from "acute Bright's disease," or meningitis.

Suppose there had been an epidemiologist in the local health department or that Dr. B had recognized Tommy's case, reported it and the report had promptly reached the state department—in either case, we have an epidemiologist on the scene of action. Posted on scarlet fever, he knows what the condition of the children's tongues and tonsils means, even if there is no rash. He isolates the sick child promptly and completely. He keeps the schools open, inspecting every child's throat daily for a week; sends home at once any child that shows signs of recent or developing fever, and his brothers and sisters with him; traces Tommy's infection to his recent visit to a slightly infected town in the next state, so freeing the milkman from suspicion, and insuring an accurate record of vital statistics in the local health department. He insures a lower death-rate, too, by calling the attention of local doctors to consequences as well as symptoms of scarlet fever, and to the means of guarding against them.

The epidemiologist has outlined a course of necessary procedure. Doctor, nurse, bacteriologist, sanitarian and citizen must cooperate in its administration.

"So long as governments permit infection to go unchecked," writes Dr. Hill emphatically, "the persons who unwittingly become infected should have rights in suits of damage against

such governments." The only sane and scientific procedure is a health administration that is in its personnel, of high-grade to command public respect; in its organization, simple to prevent duplicated effort; in its provision, adequate for the work to be done in its field. Adequate organization is the theme of later papers in this series. Just a word as to the personnel.

The New Profession of Public Health

PERHAPS it need hardly be said that here is the work of a new profession. The doctor alone cannot meet the situation—our already overburdened medical curriculum cannot take on in addition hygiene, sanitation, vital statistics, epidemiology and all the rest. The applied science of preventive medicine has come to have a training of its own, recognized by special degrees—the C.P.H., or certificate in public health; and the D.P.H., doctor of public health. The object of this special training is a specific service—the prevention of disease. But evidently it is impossible to prevent disease without a knowledge of disease. Therefore the higher degree in public health presupposes some medical training, often the regular medical degree.

But there is a distinction in point of view between medical practitioner and public health official. As Dr. Rosenau says, the doctor diagnoses and treats with a view to curing. His relation to the patient is personal. The health officer's interest is in the modes of spread of disease, and in methods of preventing that spread. His attitude is impersonal. His relation is to the community, large or small, not to the individual.

In this country there are at least twelve schools at which this special training is offered. These are, according to replies to the SURVEY's direct inquiry, last spring, Harvard-Technology School for Health Officers; the state universities of California, Colorado, Michigan, New York, Pennsylvania and Wisconsin; the Detroit College of Medicine; and Johns Hopkins, Tulane and Yale Universities. A plan for such a course has been adopted at Columbia, but has not yet been put into operation. Some of these are more brilliant in announcement than in achievement; but several have made a most valuable beginning.

Fully thirty courses are given, all bearing directly upon problems of disease prevention—from microscopic water-life to drainage construction. Ten of these training centers select their courses from the university's medical school, department of social science, laboratories. Two, the Harvard-Technology School for Health Officers and the new foundation at Johns Hopkins, are distinct units in the university organization, although drawing upon the faculties of law, dentistry, engineering or medicine for a part of the teaching staff.

Several schools have the cooperation of municipal and state health departments or industrial establishments, by means of which students in public health courses may visit factories of all kinds, gather vital statistics, inspect schools and do practical field work under the instructor's supervision. In Colorado, factory and department-store inspection form part of the course in sanitary surveys; and volunteer work in some health organizations is part of the requirement for both certificate and degree. Harvard-Technology students directly observe methods of medical inspection of immigrants at the port of Boston, and also the technique of quarantine. Several schools arrange to combine the last year of the medical course with public health specialization; Wisconsin requires two years of special study subsequent to the regular medical course.

But this fundamental fact is evident everywhere: that the D.P.H. degree is, like the Ph.D., not given upon a computation of time or number of courses, but rather represents long study and high attainment.

The certificate usually given for one year's work sometimes marks a milestone on the way to the doctorate in public health; sometimes it means that health officers have come in to "polish up" and to keep in touch with the newer methods; sometimes it suffices for the position to be filled—assistantships in non-official organizations. It is not considered an equivalent of the D.P.H. or a substitute for it, nor does it always lead to the doctorate.

And further, that public health is not only a distinct profession, but a profession of high order, is evident from replies to the SURVEY's question on this point.

"We are getting a very good class of students who are dedicating themselves to public health work with a zest and are quite willing to take the longer courses and subject themselves to severe examinations, in order to enter the new profession," writes Dr. Rosenau of Harvard-Technology. "Some of our graduates have obtained places at \$4,000 a year; others have accepted positions as health officers in small communities at \$1,200 or \$1,500 a year; others have accepted assistantships in teaching and research in departments of preventive medicine in medical schools; others have taken charge of public health laboratories; one occupied the chair of preventive medicine in the Harvard Medical School of China; one is epidemiologist to the state board of health, and so it goes."

"With very few exceptions (two were advised because of temperamental unsuitability not to continue), our students have been of high grade," says Dr. Abbott of Pennsylvania. "All have received satisfactory appointments. I can say that they were the 'pick' of the younger graduates in medicine."

That there is already a wide recognition of this training is shown by the fact that students are called to positions even before they finish the course. "We do not seem to have much trouble placing our graduates," writes one school. "In fact, it is hard to have them stay with us until the degree is reached. The large hospitals, the city laboratory and the state laboratory absorb our output."

The Part of the Public Health Nurse

UPON NURSING SERVICE, too, the influence of the new movement has been felt. The value of the public health nurse is evident to make the actual individual demonstration to the mass of people who must be reached in their own homes. The work that began as "district" or "visiting" nursing has been broadened by study of distinctive public health problems in cities and in rural communities; of the structure of prevention, relief and philanthropy; of methods of progressive health departments, and all experiments for bringing the expert help of those eager to give it in contact with those not always eager to receive it.

Such training must as a rule be acquired outside hospital walls. It is offered in the Department of Nursing, Teachers' College, Columbia University, in affiliation with Henry Street Settlement; by Simmons College and the Boston District Nurses' Association; in the School of Applied Social Sciences of Western Reserve; in the University of Ohio; by the College of Medicine in the University of Cincinnati; and by the Philadelphia Visiting Nurses' Association in connection with Phipps Institute.

The recognized value of these post-graduate courses is proved by the demand for the graduates, a demand greatly exceeding the supply.

Here, then, is offered an all-too-brief résumé of some aims

and methods of this remarkable "new public health" and the training requisite for their accomplishment; and some assurance of the high grade of student attracted by this specialization. And be it noted, the highest accomplishment, as well as the hindrances to the highest accomplishment, are quite within the control of public opinion and action in every state. Health administration is a large, practical business proposition.

"Call the population of the United States a hundred millions. . . . Every member of every generation suffers from at least one infectious disease, often from two, three or four . . . it is clear that every generation has from one to three hundred million attacks of infections. Each generation pays out at least ten billions of dollars and has the diseases, too. Why not pay one-tenth of that sum and rid ourselves of them forever?"

The National Drug Problem

III

By Charles B. Towns

PEOPLE are too apt to imagine that when a law is passed to remedy a certain evil, the evil is thereby automatically done away with. It is no secret, on the contrary, that laws are as fallible as their creators. There is no way to tell beforehand how a law will work out in practice. Experience here as elsewhere is the great teacher.

The drastic Boylan law, passed in New York state three years ago, and the federal Harrison law, have been found in practice to affect only certain sources of traffic in specified drugs; for they are confined to drugs legally prescribed by the medical profession. This has resulted in an increase of illicit traffic in those drugs of which the laws take cognizance. Moreover, the traffickers have been given, in effect, a monopoly in such drugs. They are able to exact for them practically any prices they see fit. A curious phase of the resultant situation has been an advance in price for all such drugs, even those destined for medical use. We are now paying from four to five times as much as formerly for the drugs in question.

It is a simple matter to check up the ways and means by which the illicit drug traffic is carried on. It would be possible to ship drugs direct from Europe and elsewhere and bring them in here billed as some other class of merchandise. But dealers do not even have to resort to that method. They ship into Canada or Mexico any quantity of drugs they wish and promptly smuggle them across the border. When one reflects that a man could bring enough of such drugs into the country in a handbag to poison every man, woman and child on Manhattan Island, it is easy to see that the work for the smuggler is not hard.

Individual instances of drug smuggling that have come to my personal attention are practically without end. Nor does it seem possible to do anything at the present time to stop the traffic. In New Hampshire, for example, there is a druggist who has one store on the Canadian line and another on the New Hampshire line. It is known that he has built up an enormous trade in habit-forming drugs in his New Hampshire store. It is obvious where the drugs come from. Yet to date no means has been devised to wipe out the wholesale smuggling carried on so brazenly here.

\$300,000 Worth of Morphine Found

AGAIN, the federal government recently found on a Japanese boat in San Francisco harbor a quantity of morphine valued at over \$300,000. Government agents wanted to confiscate the cargo, but the owners asserted that it was destined for Vera Cruz, and nothing whatever was done about it. Even if this contention were true, which is open to doubt, we should

probably have received most of the cargo in the end. I know for a fact that enormous quantities of habit-forming drugs are at this minute concentrated at Jaurez, Mexico, just south of our boundary, and that as much as from five hundred to a thousand dollars' worth a day is being purchased and brought over into our country for distribution.

In the face of these facts, what can the most stringent local laws accomplish as long as they concern themselves solely with drugs sold under a physician's order? We are not making the progress or showing the results we hoped for when the Boylan law and the Harrison law were passed. Nor shall we be able to attain the degree of control desired until there is an international understanding with those countries which produce habit-forming drugs, in order to bring about a strict accounting for all drugs dispensed by foreign governments.

An international understanding on this matter is not practicable at this time. But we should in the interim do the next best thing. We should have some frank understanding with Canada, Mexico, Porto Rico and other nearby countries. We should adopt measures through cooperation with them, to minimize the illicit traffic in drugs. Some such step is imperative. And at the same time our methods of handling the drug at home should be reorganized and perfected in the light of recent experience.

A Government Monopoly of Drugs

MY CONCLUSION as to the manner of bringing about this last suggestion is this: The only means of solving our internal problem satisfactorily is for the federal government to make either the handling of habit-forming drugs a government monopoly, or to require an accurate accounting of all such drugs, imported, manufactured and dispensed.

Furthermore, if it is difficult to bring about a government drug monopoly, there is consolation in the thought that it would be much more difficult—impossible, practically—to get the various states (with legal, political and other interests working against the idea) to pass adequate and similar legislation which would properly restrict traffic in habit-forming drugs to legitimate medical needs. If it be within the province of the federal government to do this, and I believe it is, I am going to try and see that the federal government is the one and only vehicle by which it is done.

I am going to propose this at the next session of Congress. I shall propose, also, that the general class of drugs known as hypnotics, openly prescribed by druggists and sold over drug counters for insomnia, headaches, etc., be incorporated into the bill as well. I shall further ask in this federal legislation to have incorporated the hypodermic syringe, as I have already

done in New York state. We have got to disregard the business interest of the druggist here and make way for the greater interest of the commonwealth.

We must exactly define the responsibility of the physician. He must prescribe and administer all drugs of a habit-forming nature. The matter must be put up to him so definitely that he will not be blamed, as he often is at present, for abuses arising from other sources; so that, at the same time, he will not be able to evade the blame for whatever evils are traceable to his occasional cupidity or weak-minded amiability.

Moreover, those who are afflicted with the drug habit now must be taken account of and provided for. Those who are eligible for treatment but are without means must have proper medical attention from state and municipal authorities the country over. And those unfortunates who on account of physical disability are dependent upon drugs to alleviate pain must receive from time to time the necessary amount of drug without being subjected to unnecessary expense or undue humiliation.

To sum up, these, then, are the steps to be taken, if we are to solve the drug problem as it exists to-day:

First, beginning at home, a federal monopoly in habit-forming drugs, which will include a strict accounting of all drugs used and will put the responsibility for their abuse upon the doctor by whose prescription alone they may be obtained.

Second, reciprocal agreements with nearby nations to be undertaken with a view to eradicating the wholesale illicit export and import of drugs which now obtains.

Third, an international arrangement, based on the assumption that each country will by that time have created a government monopoly of habit-forming drugs; such arrangement to limit production to an amount not greater than that necessary for the legitimate needs of mankind, and to include an accounting of import and export corresponding to each nation's legitimate needs.

The time has come when this problem, both national and international, must be squarely faced. The time is right and ripe. In the fight to come the human race must either win or lose greatly. There can be no compromise.

PENITENTIAL HYMN

(For a World in Arms)

By John Haynes Holmes

O God of field and city,
O Lord of shore and sea,
Behold us, in thy pity,
Lift naked hands to thee.
Our swords and spears are shattered,
Our walls of stone down thrust,
Our reeking altars scattered
And trodden in the dust.

O God of law unbroken,
O Lord of justice done,
Thine awful word is spoken
From sun to flaming sun—
We hate, and we are hated,
We slay, and lo, are slain,
We feed, and still unsated
We hunt our prey again.

O God of mercy tender,
O Lord of love most free,
Forgive, as we surrender
Our wayward wills to thee.
Absolve our fell allegiance
To captain and to king;
Receive in full obedience,
The chastened hearts we bring.

COMMON WELFARE

SOME RESULTS OF THE ELECTION

WITH the reelection of President Wilson in doubt until Saturday, and still later uncertainty over Congress (which will consist of a Democratic Senate and a Republican House), returns on constitutional amendments and other referendum measures are still in doubt.

The anti-alcohol forces lost, so far as the national Prohibition ticket goes, and they failed to carry amendments in California and Missouri through the adverse city votes of San Francisco and St. Louis. But their gains were so great that they claim the net result as a smashing victory.

Four states went dry—Michigan, Montana, Nebraska and South Dakota. Every proposal in a dry state to return to license was defeated—in Washington every county voted to stay dry. In Utah and Florida, the governors-elect and the new legislatures are strongly prohibitionist, so that dry legislation is assured. In Florida, indeed, prohibition was the chief issue, for when Sidney J. Catts failed of the Democratic nomination, he went it alone to victory as an independent Democrat. Alaska went overwhelmingly dry. There are to date, therefore, twenty-three dry states and one territory, with two more in prospect—"half the Union dry."

As a result of the vote a year ago, 600 saloons have just been closed in New York state—more than all the saloons closed by the state-wide measure in South Dakota. In New York, local option is confined to towns, and cities may not vote on it if they want to.

Of the eleven political units of Maryland which voted on prohibition, four, including Havre de Grace, went dry. The other seven, including Annapolis, Baltimore and Baltimore county, voted wet. Baltimore county was expected to go dry by about 5,000. Instead of that, it went wet by nearly 8,000. Baltimore city was expected to go wet, but no one, not even the liquor dealers, imagined

the wet majority would be more than 43,000, as it was.

There is, moreover, the liveliest expectation over the national prohibition measure. The South and the West are dry. These are the sections that swung the election, and the predictions of the anti-alcohol groups are reinforced by the Washington correspondent of the *New York Times*, who writes: "The prohibition wave is now so strong as to make it reasonably certain that a prohibition federal amendment will be passed by the session of Congress which will begin on December 4."

So far as direct effect on the House is concerned, the single Prohibitionist member, Charles H. Randall, of California, was reelected.

The first woman to be elected to Con-

gress, Representative Jeannette Rankin of Wyoming, is interested in many aspects of social advance and is a graduate, '09, of the New York School of Philanthropy. She has worked for woman suffrage in almost every state where a referendum has been taken in recent years. Running at large, she was elected as a Republican in a state which went for President Wilson. Her place at Washington is some consolation to the suffragists for the failure of their referendums in South Dakota and West Virginia.

George R. Lunn, ex-minister, twice Socialist mayor of Schenectady, N. Y., who was dropped by the Socialist Party because of his non-partisan appointments, goes to Congress as a Democrat. Congressman Meyer London of New York city will be the only party Socialist in the House, Victor F. Berger of Wisconsin failing to regain seat. Congressman Lewis, "father of the parcels post," lost out for United States senator as a result of a factional fight among the Democrats of Maryland. His defeat is widely deplored.

While the American Union Against Militarism did not endorse candidates on one side or the other, it has issued a statement pointing out the defeat of Senator duPont of Delaware, "the man reputed to be the head of the regular army coterie in the Senate," and of Congressman William S. Bennet, of New York, "who ran on a platform including universal military service." It was Congressman Bennet who attacked Frederic C. Howe's administration of Ellis Island and Mr. Howe's personal character.

The union explains the defeat of Congressman Tavenner and Bailey, leaders in the fight against preparedness, as due to the fact that they are Democrats running in districts normally Republican. It emphasizes the failure of the defense leagues to defeat Congressmen Sherwood, Gordon and Crosser of Ohio, "who have been most outspoken in their opposition to militarism"; and the reelection of Senators LaFollette of Wisconsin and Poindexter of Washington, both strongly anti-militaristic.

FOR THE PEOPLE

Vote YES on Proposition No. 1

50,000 hard-working men and women spent their vacations in the Adirondacks on the land comprised in Proposition No. 1.

No worker, no business man, no professional man, no father of children will have any more important duty on election day than to vote YES on Proposition No. 1.

A few men have agreed to give outright \$2,500,000 for the Palisades Park if Proposition No. 1 passes.

Vote YES on Proposition No. 1

PROPOSITION No. 1
 YES NO
 Shall chapter five hundred and sixty-nine of the laws of nineteen hundred and sixteen, entitled "An act relating provision for issuing bonds to the amount of eight hundred and ten million dollars for the acquisition of lands for state park purposes, and providing for the submission of the same to the people to be voted upon at the general election to be held in the year nineteen hundred and sixteen," be approved?

NEW YORK BOARD OF TRADE AND TRANSPORTATION
 WAMP FIRE CLUB OF AMERICA
 ASSOCIATION FOR THE PROTECTION OF THE ADIRONDACKS
 ADIRONDACK LEAGUE CLUB
 NEW YORK STATE FISH GAME AND FOREST LEAGUE

AMERICAN SCENIC AND HISTORIC PRESERVATION SOCIETY
 NEW YORK STATE FORESTRY ASSOCIATION
 NATIONAL ASSOCIATION OF AUDUBON SOCIETIES
 LONG ISLAND GAME PROTECTIVE ASSOCIATION

ELECTION ADVERTISING

Nine civic organizations joined in thus urging a referendum appropriation of ten million dollars for a state park in New York. At the time of going to press the result was not yet known

The Socialists gained in their total vote, running over one million, and probably have gained in the number of Socialist members of state legislatures. Assemblyman A. I. Shiplacoff in New York has another Brooklyn associate, Mr. Whitehorn. Organized labor failed to vote as a unit. All of the great industrial states, except Ohio, went for Mr. Hughes. Congressman Frank Buchanan of Illinois, a labor leader, was defeated.

Governor Hunt of Arizona, widely known for his fight against capital punishment, and Governor Capper of Kansas, who is profoundly interested in social legislation, are both reelected. Governor Hiram Johnson of California goes to the federal Senate.

For the twelfth time, Ben B. Lindsey has been elected judge of the Denver Juvenile Court.

That voters can be aroused to issues presented without the glamor of a personality was shown in the overwhelming affirmative vote in favor of a state budget for Maryland. The budget carried by more than 30,000, while President Wilson's majority was only 20,000. All the counties but one were for it and it carried every ward in Baltimore. The four Baltimore city propositions calling for loans were carried. One provides a million dollars for new school buildings.

In registering another repudiation of Mayor Thompson and his administration of the Chicago city government at the recent election, the big majority of voters were in the sorry plight of being obliged to defeat the sorely needed measures for which many of them had long worked. Afraid to trust either the \$4,450,000 of the proposed bond issues, or the management of any of the interests involved, they voted down the referendum proposals for the consolidation of the parks, for additional bathing beaches, and for better waste-disposal equipment. And they rounded out their vote of lack of confidence by defeating the mayor's candidate for state's attorney by a great majority.

The proposed amendment to the state constitution enabling the legislature to enact an equitable taxing system in accordance with modern standards seems to have a bare majority of the men's votes as required by law, but an official count may be necessary to confirm the first returns of the election. Its passage has been endangered by the failure of many voters to vote on the proposition at all, by the active work of railroad tax agents against it, and by the opposition of organized labor due to the fact that a similar measure was submitted by the legislature for an advisory vote of the people instead of a proposal to establish the initiative and referendum, which was then preferred by the unions and many others.

All three constitutional amendments

proposed in Missouri went down to defeat with prohibition. Although over three-fourths of the counties of Missouri are dry, the heavy wet vote in St. Louis offset any majority that the proposition might have in the rest of the state. Present returns indicate that the majority outside of St. Louis was very slight, Kansas City, however, voted dry, due, leaders say, to Billy Sunday's revival meetings. The Farmers' Land Bank amendment, a form of rural credits, was defeated, although late returns indicate that its originator, a St. Louis business man, has been elected governor. In St. Louis the charter amendment for non-partisan city elections was defeated.

The issuance of \$2,000,000 in bonds for the construction of new school buildings was authorized by popular vote in Cleveland. A strong publicity campaign, in which the findings of the Cleveland Foundation school survey were used and which made the city fairly sizzle with interest in the schools, had made it clear that several thousand children were attending school in basement rooms, portable buildings or going only part time because of congestion.

Massachusetts has apparently carried all four of the general referendum measures submitted. These are for holding a constitutional convention; authorizing cities to maintain schools of agriculture and horticulture as proposed by the Massachusetts Homestead Commission; revising the method of party enrollment at primary elections; and making January 1 a legal holiday.

Rensselaer, Warren and Livingston counties, New York, all voted favorably on the proposal to establish county tuberculosis sanatoria. Out of the fifty-seven counties in the state thirty-three have now either established county sanatoria or voted the funds.

ONE DAY OF REST REQUIRED OF THE LACKAWANNA

THE application of the Lackawanna Steel Company for exemption from the provisions of the New York rest-day law (see the SURVEY for November 4, page 131) has been denied. The New York State Industrial Commission voted on November 10 that the steel company must keep within the "spirit of the law" and gave it three weeks to show the commission that it has found some way of insuring the principle of one day's rest in seven.

This means that the commission has ruled against the theory that interstate competition should be a basis for the modification of protective legislation. The Lackawanna Steel Company had argued that few of its competitors in other states make provision for one rest day each week. It named most of the leading steel companies of the United States as working their men without regard to the principle laid down five

years ago by the American Iron and Steel Institute.

In order to check up this statement the SURVEY made inquiry of eight of the largest steel companies in the country. Only two companies, the Youngstown Sheet and Tube Company and the Colorado Fuel and Iron Company, replied officially. President Welborn, of the latter company, stated that every man in his employ gets one day of rest every week. The assistant to the president of the Youngstown Sheet and Tube Company stated that no rule is in effect; that the men take a day off as they please and average one day in seven.

A DEMONSTRATION IN TOWN HEALTH

FRAMINGHAM, MASS., a town of 16,000 population, has been selected as the site for the health and tuberculosis demonstration to be carried out under the direction of the National Association for the Study and Prevention of Tuberculosis with a fund of \$100,000 furnished by the Metropolitan Life Insurance Company. Framingham seemed to the committee to present average industrial, social and health conditions, and to furnish a real tuberculosis and health problem, with a fair prospect of a successful demonstration in preventing disease and promoting health.

The plan, briefly stated, includes the discovery of all open, active cases of tuberculosis in the community at the earliest possible moment, and the thorough examination of all people who are willing to cooperate with the committee in order to detect incipient cases. The medical work is to be carried out with the assistance of the local physicians, whose diagnostic activities will be standardized through a preliminary post-graduate course of lectures and demonstrations. Public health education and hygienic control in school, factory and home are essential factors of the program from the constructive health side.

The success of the experiment will depend upon the degree of local co-operation secured. In this regard, Framingham has given assurance of its willingness to meet its own obligations. The result hoped for is a health program of significance to the whole United States, not only in anti-tuberculosis work, but in health work generally.

The chairman of the Community Health and Tuberculosis Control Committee, representing the national association in charge of the Framingham demonstration, is Dr. Edward R. Baldwin, of Saranac Lake, N. Y., president of the National Association for the Study and Prevention of Tuberculosis. The executive officer in charge is Dr. Donald B. Armstrong, recently of the New York Association for Improving the Condition of the Poor.

WARDEN OSBORNE TO STUMP THE COUNTRY

A NATION-WIDE campaign for a prison reform, to be begun immediately, was announced last week by the National Committee on Prisons and Prison Labor. One of the features of the campaign will be a speaking tour including many states by Thomas Mott Osborne, until recently warden of Sing Sing, who is honorary president of the committee.

The object of the campaign, it is announced, will be to put before the people information about prison conditions in their own and other localities. Prison contract labor, the convict-lease system prevalent in the South, brutal methods of discipline and other outstanding evils of present-day penology will be attacked. Mr. Osborne will carry word about his self-government reforms at Sing Sing.

Several states have urged the committee to aid them in local efforts for improvement, said E. Stagg Whitin, chairman of the executive committee. Alabama wants help in putting an end to the barbarous conditions in some of her turpentine and lumber camps, where leased convicts work. Missouri is said to be fighting a prison political reign. California is declared to be ready to begin self-government. Rhode Island and Connecticut need enlightenment about their contract labor systems. In Wisconsin a report made four years ago suggesting modern improvements is said to have been entirely ignored.

The committee believes the present to be an opportune time for the beginning of such a campaign. Forty states have legislative sessions, governors are to be elected in some thirty states, and Mr. Osborne's work at Sing Sing has awakened a new interest in prison reform everywhere.

ILLINOIS' ABATEMENT LAW HELD CONSTITUTIONAL

THE Committee of Fifteen in Chicago was organized to follow up the work of the Chicago Vice Commission and specifically "to aid public authorities in the enforcement of laws against pandering and to take measures calculated to prevent traffic in women." Perhaps its farthest-reaching public service lay in securing the enactment and enforcement of the Illinois injunction and abatement law.

That this has proved a formidable weapon for the suppression of disorderly resorts is due thus far exclusively to the activity of this committee, for neither the police, the city prosecuting attorney nor the state's attorney have as yet seen fit to initiate proceedings under it against the owners of property used for illicit purposes.

The law authorizes any citizens to petition any judge to issue a temporary

A PITTSBURGH POSTER WITH THE AMBITIOUS PLAN TO ABATE SMOKE THROUGH PRINTER'S INK

injunction against such proven illicit use of any building. To have the injunction made permanent the owner must be proved to have received the complaint against the illicit use of his property and to have failed to abate the abuse of it. In that event the court may order the property closed to any use whatsoever for one year, unless the owner's bond is accepted as safeguarding the continuance of the nuisance.

The 294 informal notices of complaint to property owners have proved so effective, their responses have been so prompt and satisfactory as to make it necessary to send but forty-two of the formal notices required by law. These in turn have been so scrupulously observed that only ten injunctions have been applied for and only two proceedings for contempt of court have been instituted.

A suit to set aside the law as unconstitutional was recently carried up to the Supreme Court by appellants who contended that it is unconstitutional in being class legislation and in depriving owners of their property without due process of law. In handing down its decision denying this contention and affirming the constitutionality of the injunction and abatement law, the Illinois Supreme Court declares the act to be "an exercise of the police power of the state passed in the interests of the public welfare for the preservation of good order and public morals."

The court denies that the statute confiscates or destroys property, and holds that deprivation of the use of the property for one year is not unreasonable as "security against the continuance or renewal of the nuisance," and further because "no injunction can issue and no order to close the place can be enforced

against an owner who has in good faith endeavored to prevent the nuisance."

"These results," the court declares, "may all be easily avoided by not keeping a house of prostitution or permitting one to be kept, and it cannot be regarded as unduly oppressive upon one who has wilfully kept or permitted such a house, to require him, after a judicial determination of that fact, to give security for the discontinuance of the nuisance long enough to assure the permanence of its abatement before he shall be permitted to again occupy and use the property within a year."

Under the vigorous superintendency of Samuel P. Thrasher, well known for years of similar service in Connecticut, the Committee of Fifteen has secured public confidence and financial support. Its successful defense of this law, which secured the settlement of its constitutionality once for all, not only reinforces the war of law against vice in Illinois, but prompts similar legislation and encourages the enforcement of law everywhere.

Another achievement of the committee is the putting into operation of the so-called "Kate Adams law," authorizing the commitment of the inmates and keepers of disorderly resorts, both male and female, to terms of imprisonment instead of fines. Public prosecutors have failed to take advantage of this law also and have even been rebuked by judges as acting more for the defense of those arraigned than for their prosecution. But now Judge Fisher of the Morals Court, supported by Chief Justice Olson, has taken the initiative from the bench in imposing prison sentences upon such offenders, averaging five months in the House of Correction.

MONEY LENDERS UPHOLDING LOAN LAWS

SMALL loan brokers who opposed the passage of remedial legislation designed to protect small borrowers from extortion are beginning to realize that such laws do not destroy the loan business, but, instead, raise it to a higher plane, decrease the losses and expenses of operation, permit a fair return on invested capital and make the business a much cleaner and more attractive one in which to engage.

In the states of Indiana, Iowa, Maryland, Michigan, New Jersey, Ohio, Pennsylvania and Rhode Island associations have been formed by loan brokers and companies licensed under and observing the small-loan laws. These state associations in turn have formed the American Association of Small Loan Brokers for the purpose of "uplifting and dignifying the small-loan business and assisting state associations in securing legislation, fixing terms fair to the borrower and rates that will yield a fair return to the lender."

Evidence has been given that this

new organization intends to live up to its declaration of principles, that it will "police the business," discipline its own members who in any way fail to observe the laws, regulate the character and extent of their advertising, seek to discourage the practices of unlawful lenders, and, if unsuccessful in this, aid prosecuting officials in convicting them.

The bitterest opponents of remedial loan legislation have now become its strongest adherents, and it is believed that the organization, made up of profit-making concerns not eligible for membership in the National Federation of Remedial Loan Associations, will become a powerful agency in improving small-loan conditions. To those who have been active in promoting the remedial loan movement this development seems epochal.

THE HARD LOT OF THE WAITRESSES

"SORE feet and a devilish mean disposition" instead of health, wealth and wisdom is the reward of many thousands of girls, in spite of their practice of "early to bed and early to rise"—so the Consumers' League of New York city has discovered in studying the work of women employed in restaurants and tea rooms.

When every day means up at 6, away at 6:30, home at 8 o'clock at night, worn by twelve hours' toil, the league investigators were not surprised that time after time in answer to the question, "What do you do in the evening?" came the reply, "Oh, I go right to bed."

Indeed, in Behind the Scenes in a Restaurant, as the Consumers' League calls the report of its enquiry just published, the darkest scene of all is the long grinding day of walking back and forth from kitchen to table, of carrying heavily loaded trays and remembering a multitude of orders. More than half (58 per cent) of the 1,017 employes who were interviewed exceed the fifty-four-hour limit for women in factories and mercantile establishments, while 20 per cent work twelve hours a day. A small number, 4 per cent, are employed at night. One-third do not have one day of rest in seven, and the majority are not allowed time off for their meals, but, as one girl put it, "must grab 'em anyway you can." All the laws designed to protect women from industrial strain leave the waitress unsheltered.

Nor is the restaurant worker repaid for her heavy burden by a high wage. Although "boarding-in" and tipping make a reckoning of the wage scale difficult, the Consumers' League estimates that without tips 87 per cent of the women workers are being paid less than the \$9 a week fixed as the minimum amount on which a girl can live independently in New York city. Even with food and tips added, the proportion re-

A MOVIE OF THE RESTAURANT WORKER

HER PROGRAM FOR **ELEVEN HOURS A DAY!**
SEVEN DAYS A WEEK!

FROM THE CONSUMERS' LEAGUE EXHIBIT

ceiving less than a living wage is 31 per cent. One-third of the kitchen and pantry hands, who make up 28 per cent of all workers, receive less than \$6 a week, and three-fourths less than \$7.

Nor is the income of a restaurant worker clear gain. A special dress is often required of waitresses, fines for lateness are customary, and in almost every place mistakes and breakages are charged to the girls.

The custom of tipping is condemned by the league report as a drag upon wages, because the employer takes advantage of the purchaser's contribution; as an unreliable source of income which makes a girl "take a chance" about getting into debt; and finally, as a temptation that leads girls to adopt an intimate personal tone toward men customers.

This willingness to accept money from men in the guise of tips as well as the freedom of talking with strangers which the trade furnishes, make restaurant work of peculiar moral danger to the young and inexperienced. Yet the league found one-fourth of all workers under 21 and two-thirds under 30 years of age, while less than one-third of the number are American born. Indeed, employers rely upon this very youth and ignorance for exploitation in the trade.

The final indictment of restaurant work with its present unregulated conditions lies in the fact that it is an absolute "blind alley." Peasant girls from Europe, country girls from upstate, come into the work strong and rosy-cheeked; within a few months they grow sallow and worn. And at the same time, according to the league's statistics, 65 per cent of those at work less than a year get \$6 or more a week, while only 55

per cent of those working over ten years receive as much.

"These facts," sums up the report, "point directly to the crying need for the limitation of hours for women [restaurant employes] in that the individual worker may be protected from overstrain, that the community may be guarded from the spread of contagious disease by people predisposed to infection through fatigue, and that the children of these women may be strong and capable of becoming useful citizens."

TWO SCHOOLS OF CIVICS IN TEXAS

THE Texas School of Civics and Philanthropy, a new training-school for volunteer and professional workers in the social and civic field, opened last month. The Houston Council of Social Agencies is announced to be its founder, under the supervision of the Houston Foundation—a municipal board of public welfare, "expending all city charity funds, receiving benevolent bequests and providing for organized work." With the help of interested citizens the foundation furnishes the support of the school for this first year, so that no tuition or registration fees will be charged its initial classes. Headquarters are in the City Hall of Houston. Its advisory council includes representatives of the University of Texas, Rice Institute and several other educational institutions, together with officials of the State Conference of Social Welfare, the Federated Jewish Charities, and the Congress of Mothers and Parent-Teachers Association.

The course leading to the certificate covers two years of class-room and field work. The entrance requirements exact an equivalent of a good secondary school and two years of university work. Students without certificates or degrees will be required to pass entrance examinations. M. A. Turner is director and Martha Gano registrar.

The school is incorporated as "a benevolent, charitable, educational and missionary undertaking—for the fitting of men and women for the public social service, for professional positions in voluntary, civic and social agencies, and for effective work as directors, members of committees, friendly visitors, contributors, or in the independent use of time and money for charitable purposes."

Nearby the Department of Public Welfare of the city of Dallas opens on November 24 a three-months course in applied philanthropy under the auspices of the United Charities of the city. Flora Saylor, who has been for eighteen years superintendent of the United Charities, will, as associate director, assume personal supervision of the school, and Elmer L. Scott, head of the Department of Public Welfare, will act as director. City officials, teachers, physicians, clergy-

men and professors in the Southern Methodist University are announced as lecturers. The inauguration of a hospital social service, it is hoped, will lead the Department of Health to encourage the attendance of student nurses. The promoters of this local training expect that it may enroll many who might not go elsewhere to seek further training.

CHINA'S PACE IN PUBLIC HEALTH A QUICK STEP

SO many copies were printed of the tuberculosis story calendar, reproduced in the SURVEY for November 6, 1915, that fully spread out, they would cover eight and one-half square miles, writes Dr. W. W. Peter of the Public Health Council of China. Under the joint leadership of the National Medical Association, the China Medical Missionary Association and the Y. M. C. A. in China, a brilliant public health campaign has been carried out in some of the leading cities of the empire.

Forty-eight meetings in one week, last May, was the record in Peking, with an attendance of 18,000. After the last meeting some of the principal ministers of the central government spent several hours at a luncheon discussing the relationship of national health and national strength. Five of the most powerful men in China were said to be present. In Changsha, thirty-six meet-

FIRST AID DRILL BY CHINESE BOY SCOUTS

ings in one week had an attendance of over 30,000.

These health weeks with their exhibits and lectures are planned to focus attention on some definite need or problem of the place in which they are kept. A special clean city campaign; a vaccination crusade, or in one case, a tuberculosis hospital, are among the results. Officials, gentry, educators, military, missionaries, police and merchants—all join in this public health movement.

CHICAGO'S \$11,000,000 MEDICAL SCHOOL

"YOU have no traditions," said Harvard to Chicago. "We're making them, fast," replied the mid-western university.

A new tradition is founded at the University of Chicago by the establishment of its own school of medicine. This new department is endowed by the General Education Board and the Rockefeller Foundation with \$11,000,000. For years the Rush Medical College has represented the medical depart-

OFFICIALS, POLICEMEN AND CITIZENS AT A MEETING IN THE CHINESE PUBLIC HEALTH CAMPAIGN

ment of the university, keeping its record high in Class A even with its limited funds and equipment. The disbanding of the Rush faculty will be followed, it is announced, by the reappointment of several members to the new department of the university.

Full-time teaching is perhaps the most important detail of the new plan. It is the system characteristic of Chicago's other departments as well. The necessity for such an arrangement, long since proved abroad, has been demonstrated also in this country, especially at Johns Hopkins university, as the only satisfactory basis of research work of enduring value.

The opportunity for medical research in the heterogeneous human conditions of the city of Chicago is limitless. And the university has by its brilliant beginnings in such work proved itself deserving of the new honor. It was Dr. Ricketts, of Chicago, who discovered the cause of Rocky Mountain spotted fever—paying his own life as the price of his discovery.

YALE DEPARTMENT OF UNIVERSITY HEALTH

YALE has appointed a university department of health, charged not only with the sanitary safety of students' surroundings but with furnishing them individual health supervision and advice. The department will make a careful and complete medical examination of all students engaging in organized athletics, all competitors for the editorial staff of the *Yale News*, student workers at the university dining-hall, and all freshmen.

Any member of the university may consult the staff; vaccination against smallpox and anti-typhoid inoculation are offered free and those unable to afford a physician may be cared for by the department staff at the office of the department or the Yale Infirmary.

A permanent endowment fund of \$300,000 will be needed for this work, but so confident are the university officers of the support of alumni and friends that they have authorized the immediate beginning of the work.

Dr. J. C. Greenway, director of the new department, served on the staff of the New York Hospital for several years, and also at Seton Hospital for Tuberculosis, New York city. His assistants are Dr. Orville F. Rogers, Jr., and Dr. Leonard C. Sanford, consulting surgeon for the football season.

SYPHILIS YESTERDAY, TODAY AND TOMORROW

THAT the early syphilis of today may be depended upon to furnish the family syphilis of tomorrow is dramatically shown by a study of thirty families from the Boston Dispensary skin clinic, reported in a recent issue of

the *Boston Medical and Surgical Journal*. Dr. J. H. Blaisdell, physician of the clinic, instead of depending on mass statistics for his arguments, gives a detailed report of each family that shows in tragic monotony the tell-tale "head-aches," "mucous patches," "vague symptoms."

Two women had married a second time, so that the 30 families showed record of 62 parents. There had been 132 possible children, but only 23 were alive and healthy. These were born before the parents' infection. Of the 109 others, 79 were dead, either before birth or from diseases intercurrent with syphilis; 24 live on as syphilitics; 6, living, are "unclassed"—that is, a final judgment is not yet pronounced on their cases.

The menace of such conditions, says Dr. Blaisdell, is both immediate and remote. Innocent children of the next generation are handicapped. Present clean-living people are endangered—one of the women of this group was a waitress for a time at one of the Wellesley College halls.

The movement spreading through many cities to require examination of food-handlers, is one important step toward safety. There is an economic hold through the license that helps to insure proper treatment; whereas the experience of clinics is that voluntary patients make little effort to follow up treatment. Only 28 per cent of the patients for one year in the Boston Dispensary clinic returned after the first visit.

As to the type, age and marital status of consecutive adult cases at the clinic, Dr. Blaisdell shows that of 500 cases,

236, or 47 per cent, were single men; 35 were single women.

"Where," he asks, "do the single women proportionate to the number of single men go for treatment? . . . Statements from many doctors are all in agreement that the number of single women among their patients is proportionately small. The bringing under medical supervision of the relatively large number of single women now apparently under no control, would go a long way towards removing active foci of infection and minimizing the danger to their future husbands and children."

THE AUTOMOBILE THEORY OF POLIO

ON the day following a special meeting of the American Public Health Association in Cincinnati, newspapers in many parts of the country had startling announcements of a supposed action of the association. The cause of infantile paralysis, these papers said, had been announced by the Public Health Association to be the fumes from gasoline given out by motor cars.

It seems worth while to state the facts from which this statement grew before it has time to spread further.

The theory that poliomyelitis is due to "the gases and fumes given off into the atmosphere by the combustion of oils and fluids used as fuel in automobiles" was propounded by Dr. T. H. Harrington of the Massachusetts State Board of Labor and Industries, at the close of a paper given in the section on industrial hygiene and dealing with industrial poisoning from various gases. It was not even discussed by the meeting.

On the following day a committee appointed by the association formulated through Dr. Haven Emerson the present state of knowledge concerning the cause of poliomyelitis: that it is a human disease, conveyed from one human being to another; that it is caused by a virus which cannot be cultivated directly from the human victims, but can be sometimes conveyed to monkeys, in whom it sets up a similar disease, and from this second host it has been cultivated on artificial media. This seems to be the present extent of knowledge concerning the cause of poliomyelitis.

The special meeting referred to was a round-table, at which the health officers, called together a few weeks ago by the surgeon-general of the Public Health Service in Washington, practically held a second session. This gathering was concerned primarily with ways and means of avoiding a possible epidemic in the middle and western states another season. Several of the state boards of health are holding similar meetings and issuing instructions to local health officers to quicken their attention and enable them to report promptly.

BURNING UP DISEASE

Book Reviews

THE INSTITUTIONAL CARE OF THE INSANE IN THE UNITED STATES AND CANADA (Volume I)
By Henry M. Hurd. Johns Hopkins Press.
497 pp. Price \$2.50; by mail of the SURVEY \$2.72.

Treatment of Insanity

To write the history of the many institutions that care for the insane in Canada and the United States would be too large a task for one man. The obvious course has therefore been followed of getting contributions on each topic from those best qualified to discuss

them. As there is no biological boundary between the United States and Canada, it is a very fine idea to combine the institutional histories of these sister countries with their similar problems. The work is so well edited that it escapes the patchwork effect usually resulting from divided authorship.

The account which this volume gives of the improvements in the care of the insane is interesting, profitable, and inspiring. The first section describes the Organized Activities of Alienists and the foundation and work of the Association of Medical Superintendents of American Institutions for the Insane, the American Medico-Psychological Association, and the *American Journal of Insanity*. Here the joint authorship is particularly valuable, as it allows the editors to tell the story of achievements in which they themselves have played a conspicuous part without any of that embarrassment or omission which a private individual might feel necessary in speaking of his own life-work.

The second section, dealing with the early care for the insane and the slow growth of legislation which curbed its many evils, serves as an introduction for the life of Dorothea Lynde Dix, who was the central figure of the struggle for better conditions. Her history shows the need of individual initiative in medical reform as in all other spheres of activity.

In the thirteen sections and fifty-seven chapters of the book no phase of the work is neglected. Institutional construction and care, the treatment and study of insanity, training nurses, private care, and the law of insanity, all are thoroughly discussed. One regrets the omission of any mention of the Eugenics Records Office at Cold Spring Harbor, Long Island, whose field workers are gathering data in so many states of the

Union, and whose studies of heredity ought not to be neglected.

The racial side of insanity is well presented here in so far as it has been studied. There are chapters on insanity among Negroes, North American Indians, and Mongolians, which summarize such information as we have. It is regrettable that we have so little, as the increase or decrease of insanity among the Negroes, for example, would prove much as to their power of adjustment. The same is, of course, true of Indian insanity.

The chapters on immigration are significant, and point to the eugenic peril of haphazard immigration. More ought to have been said, of course, but asylum statistics of race are worse than medieval. Once, at a clinic in one of the largest insane asylums in New York state, I asked an assistant surgeon what language a foreign-born woman spoke. He answered, "She speaks the Austrian language." This was as absurd as though he had spoken of a European or African language, or of a Heinz product without mentioning which of the fifty-seven varieties.

It is no fault of the editors that there is little data on the forms of insanity usually associated with any given race. Irish alcoholism and Scandinavian melancholy are dimly shadowed in the statistics, but there is not even a hint of French-Canadian proneness to epilepsy or of certain special problems of Jewish insanity, let alone less startling tendencies of other races.

THE INSTITUTIONAL CARE OF THE INSANE IN THE UNITED STATES AND CANADA. (Volume II.)

By Henry M. Hurd. Johns Hopkins Press.
397 pp. Price \$2.50; by mail of the SURVEY \$2.80.

The second volume of the Institutional Care of the Insane in the United States and Canada is as noteworthy an achievement as the first as regards co-operation, but is naturally not as unified in treatment, for it contains the history of a hundred and thirty-five institutions in twenty-five different states, and several authors have contributed to it.

The material is arranged according to the alphabetic order of the states, from Alabama to Missouri. It is a pity that it could not have been arranged chronologically, but the editorial duties would have been almost insuperable. The most noteworthy sections are those dealing with the Hartford Retreat in Connecticut; the Kankakee State Hospital

in Illinois; the Spring Grove State Hospital in Maryland; Modern Hospital in Massachusetts and the Kalamazoo State Hospital in Michigan. The problems touched upon in these sketches, such as sanitation, construction, administration and the elimination of politics from institutional work are very interesting.

The book is a mine of valuable information. The short résumés of the cure of the insane in each separate state are exceptionally useful.

JOSEPH GOULD.

A MANUAL OF FIRE PREVENTION AND FIRE PROTECTION

By Otto R. Eichel. John Wiley & Sons.
69 pp. Price \$1; by mail of the SURVEY \$1.06.

Medicine for Fire Hazard

This unpretentious booklet by a doctor of medicine pretends "to supply a need" which many a larger volume by experts in this special field has failed to furnish. The author's "personal observation and study" during his practice in the hospitals of New York state have led

him, as they have led many others similarly placed, to a realization that conditions there are "hardly less than criminal." Therefore, he proceeds to offer recommendations for use not only "by superintendents and boards of managers, but also by inspectors, architects, builders, and others who have occasion to consider the fire problem in hospitals."

The doctor of medicine finds that "the hospital is virtually a large residence," and advocates a private fire association having a constitution, by-laws, regular meetings, etc., to establish a fire drill with a two-fold object: (1) "to train the employes and others to effectively man the fire apparatus, and (2) to prevent panic by teaching the patients and employes self-control and by training them in orderly and rapid methods of exit."

How effective the first of these objects, the fire-fighting force, would become is questionable, if, as he says, "efficiency and speed do not require the water to be turned on." As for the second proposition, its futility is stated without the author's realizing it. Neither a private residence nor a factory is filled with helpless patients, many of whom cannot be moved by others without endangering their lives. Yet he says, "the stretcher men and guards will report to rooms and wards containing bed patients and children, to remove them under the direction of the nurse who acts as floor captain."

It would have been interesting to have had a description of how these patients are to be taken down the fire-escapes, which, the doctor urges, must be kept in good condition. Instead, he concludes

his argument with the words, "after all have been presumably removed!"

There is too much presumption here; the doctor has too vivid an imagination to be practical. He is just playing with fire. The proportion of attendants to patients is so small that even if the latter could be moved and the former could be persuaded to risk their own lives, the bulk of the patients would have slight chance of being saved.

The facts are that we have had to wait for fire-proof materials and fire-proof methods of construction to be developed before safe hospitals could be built. All new hospitals are so constructed, and need no fire-drill, for the inmates do not have to be removed. Old hospitals are fire-traps, with only one practical way of being made safe; namely, being divided into sections by vertical fire-walls, thus reducing the area and at the same time the number of patients who would be endangered by a fire. The doctor does not realize the importance of this method sufficiently to describe it, but he acknowledges it has been adopted by the hospitals of New York city and is coming into general use.

The book is another case of the application of the adages: "A little knowledge is a dangerous thing"; and "A shoemaker should stick to his last."

H. F. J. PORTER.

MORTALITY FROM CANCER THROUGHOUT THE WORLD

By Frederick L. Hoffman, LL.D. Prudential Press, Newark, N. J. 826 pp. Free distribution.

This book is another example of an increasing and laudable tendency on the part of the great insurance companies to interest themselves in matters of public health. The first 221 pages, devoted to a general discussion of the problem of malignant disease, contain

a brief consideration of such questions as cancer houses and villages, *cancer à deux*, parasitic hypotheses, and so on. Through this maze the author moves with a tread remarkably sure in one who disclaims any special knowledge of medicine. His chief interest is reserved, naturally enough, however, for the statistical investigation of cancer, which, he contends, demonstrates a constant increase in the occurrence of this disease. Perhaps it does. At any rate, no one can confute his assertion that the public should be aroused to the necessity for early diagnosis and treatment, a proper enough procedure in any case, in view of the fact that even now approximately one woman in eight over the age of thirty-five and one man in ten die of cancer.

The remainder of the book is taken

up by mortality tables, charts, question forms, and a bibliography which includes articles on life insurance and cancer.

Dr. Hoffman's book should be in the possession of all who are interested in the investigation of malignant disease.

WILLIAM H. WOGLOM, M. D.

SIDE-STEPPING ILL HEALTH

By Edwin F. Bowers. Little, Brown & Co. 343 pp. Price \$1.35; by mail of the SURVEY \$1.45.

BREATHE AND BE WELL

By William Lee Howard. Edward Clode & Co. 150 pp. Price \$1; by mail of the SURVEY \$1.07.

Occasionally we meet an individual who is bright, witty, a most charming conversationalist. We listen with pleasure. Suddenly the individual makes a remark that startles us. We weigh the statement carefully, and decide that the individual is mentally a

little "off"—if not actually insane. The book *Side-Stepping Ill Health*, is well described by this reference to a brilliant but insane individual. As casual readers, we might enjoy the clever things of the book. As critics, we cannot overlook the erratic and inaccurate statements that fill these pages.

We cannot, for instance, indorse his advice as to how to get drunk. We do not believe that plump people have a better chance of recovery from fever than lean folk; nor that every additional ounce in the consumptive's weight lifts a load from his heart and enhances his prospects of recovery. We do not believe that a displaced vertebra can be mistaken for lumbago. As to sleeplessness and its cure by sleeping with one's head to the north—unless one sleeps better with head toward the south: why not have our beds on pivots? Then we shall be able to while away our wakeful hours revolving.

The chapter on the quest of beauty is, in the language of the street, a "scream."

The book entitled *Breathe and Be Well* belongs in nearly the same category though it is less clever in its misstatements. Hardening arteries in women are said to be due to tight lacing and rich food—but what about men who have hardening of the arteries? I never before heard a "stitch in the side" attributed to unused lung cells; nor that a man without a sense of humor can never utilize his full lung power; nor that New England nasal tones are all due to catarrh. Dr. Howard says, "Let me hear an adult snore and I will tell you what that person has been, is, and will be." How interesting! He should advertise himself as a fortune-teller.

I have read enough of this book to pick up the specimens of amusing state-

ment referred to above. Can you excuse me for not reading the rest?

H. M. BRACKEN, M. D.

HOME CARE OF CONSUMPTIVES

By Roy L. French. G. P. Putnam's Sons. 224 pp. Price \$1; by mail of the SURVEY \$1.10.

Among the many helpful books that have been written for the public as an aid in the campaign against tuberculosis this new one by Roy L. French is distinctive in that it is not only written for laymen, but written by a layman. Mr. French's book has one

message, namely, to show the family in which there is a case of tuberculosis how to take care of the patient at home. No matter what one may think about home treatment of tuberculosis, its inadequacy or its dangers, it is certain that for a number of years to come the hospital beds in the United States will not be sufficient to meet the real needs, and that home treatment must, therefore, be employed in hundreds of thousands of cases.

It is not in any sense an original book. Mr. French, out of his years of experience in an executive capacity in the anti-tuberculosis movement, has culled the best that the literature issued by various individuals and organizations has produced, and has compiled it in a readable, compact and easily accessible form. As compared with such an original production along the same lines as Dr. Lawrason Brown's *Rules for Recovery from Tuberculosis*, Mr. French's book cannot be considered.

Mr. French has tried to dodge moot points and to give what is generally considered the consensus of information on the various topics considered. The aim of the entire book is to inform, not to entertain. Dealing as it does, however, with almost every situation arising in the course of treatment for tuberculosis, this handbook will be valuable in any family where the disease is present.

PHILIP P. JACOBS.

DIET FOR CHILDREN

By Louis E. Hogan. The Bobbs-Merrill Company. 160 pp. Price \$.75; by mail of the SURVEY \$.80.

Newly awakened interest in the relation of food to nutrition and growth makes welcome contributions purporting to apply the results of recent investigations to the diet of children. Within the last few years much has been written concerning the feeding of infants, but for the child over one

year the mother has been able to get but little definite information. The title of this book, *Diet for Children*, suggests that the much-sought information is at last available.

The book, however, is a great disappointment, for it not only fails to take cognizance of recent investigations, but many of the statements are incorrect and misleading, as for example, when fats are classified as hydrocarbons. The author appreciates that when milk is heated some chemical change takes place, but believes that the mother can correct this by consultation with a careful physician, or by studying for herself how to supply what is lost by heating and replacing it with other food. We wish Mrs. Hogan would tell us just what is lost by heating.

In the section dealing with the place of fruit in the nursery, the following statement is made: "They [fruits] contain very large proportions of water, but their food value lies in the sugar, acid, and salts they contain, which cool the blood, aid digestion, tend to promote intestinal action, correct tendencies to constipation. They are especially adapted to the nourishment of the brain and nervous system."

Considerable space is devoted to suggestive menus for children over one year. These are taken from various more or less reputable authorities, for which credit is given. Many of these are exceedingly helpful. However, few if any pediatricists now believe that eggs should be eliminated from the diet until the child is nineteen months old, although there are still some who would withhold meat until after five.

Approximately one-third of the book is devoted to recipes for making the various dishes which the author believes are suitable for children. In most cases the amount of material used indicates that family portions are to be prepared.

AMY L. DANIELS.

NURSING PROBLEMS AND OBLIGATIONS

By Sara E. Parsons, R. N. Whitcomb & Barrows. 149 pp. Price \$1; by mail of the SURVEY \$1.08.

This little book embodies the substance, in a somewhat condensed form, of a series of informal talks given annually by Miss Parsons to the students of her school. In a simple, intimate, and straightforward way, she discusses the conditions inherent in hospital and training-school life and work, presenting the various situations and problems which the incoming student must inevitably meet. The change from life in an ordinary home to the highly ordered and complex life of the modern hospital is a sharp one, and the

adjustments which the student-nurse is called upon to make in attitude and in conduct are hard both to comprehend and to carry out. They tax heavily her powers of adaptation. During these critical and difficult months of training, the wise and friendly advice and counsel which this little book provides should prove helpful in many ways.

Miss Parsons makes no pretense of dealing with the subject of ethics in a broad way. No special attempt is made to establish or set forth ethical principles and apply them to the peculiar relationships of nursing. The writer has simply tried instead to deal with the concrete every-day affairs of hospital and training-school life and apply to them the results won through years of experience in the management of a wide variety of nursing institutions.

The book is full of practical good sense and breathes the kindly, generous spirit of the writer. It is pleasant to look upon the picture of the busy head of a great school of nursing, heavily burdened with the cares and responsibilities of the day, finding a quiet hour for these friendly talks and endeavoring to throw about such safeguards and protections as can be supplied in this way. Student and graduate alike will find much that is wise and helpful in Miss Parsons' book, and will be grateful to her.

Communications

SEVEN-DAY LABOR

TO THE EDITOR: I wish could have been in Buffalo for the hearing on the request of the Lackawanna Steel Company to be let out of the one day's rest in seven law, which is reported in the SURVEY for November 4, but on that day I was at the Pennsylvania State Conference of Charities. I did not even know of the hearing until I returned to Buffalo.

Perhaps it was a kind fate which kept me away, for the head of the Lackawanna Steel Company is a trustee of the society of which I am secretary, but the question discussed is part of my social religion, and if I had been in Buffalo I should have been there. Fortunately, some of the best social workers and social-minded citizens of Buffalo and Lackawanna were on hand to protest.

As president this year of the National Conference of Charities and Correction, I wrote to the State Industrial Commis-

sion that in my opinion no exemption should be allowed, especially in times of prosperity, for exhausted men make poor citizens and what is profitable to the employer is not always profitable to the state. I felt sure that in the national conference support of this law would be practically unanimous.

A private protest does not look well, however, in a matter which is public, and it is for this reason that I am writing to you also.

FREDERIC ALMY.

[Secretary Charity Organization Society] Buffalo.

THE CHARITY FILM

TO THE EDITOR: Permit me to express the disgust that I feel at your treatment of the Charity Film in your issues of October 7 and October 14. You are strangely tolerant, even indulgent, towards what you know to be a shameful libel upon the child-caring in-

stitutions, even though you recognize in it an "attempt to portray typical conditions" in these institutions.

Would you have been quite so austere detached if the film had "portrayed typical conditions" in an East Side settlement with equal fidelity to truth? I hardly think so!

THE SURVEY has been very unfair in its treatment of this "Charities" affair.

THOMAS F. WOODLOCK.

Mt. Vernon, N. Y.

HEALTH INSURANCE

To the Editor: I am astounded to find in the SURVEY of November 11 a report relating to the model bill for workmen's health insurance which must give to SURVEY readers throughout the country a grossly misleading impression. The bill was attacked, the SURVEY reports, by "an insurance man," Lee K. Frankel, who "tried to make clear some of the problems of insurance as they bear upon this measure." How far he and the SURVEY have failed to make it "clear" may be imagined when it is now made known to your readers that the very thing which Dr. Frankel complained had been overlooked is, in fact, *in the model bill!*

"The most important point to remember in health insurance," says the SURVEY account of Dr. Frankel's argument, "was that the functions of the attending physician are absolutely distinct from those of the 'claim agent,' the man who passes upon the compensation. No one man could do these two things any more than he could be at once advocate for the plaintiff and for the defendant. The patient's claim must be passed on by a physician who has had no personal relation to him. Other physicians should undertake the actual care of the sick. . . . The model bill is, he thought, too much like the German, since it, too, placed these two distinct functions in the same hands."

All of the above, and much more, according to the SURVEY account, was stated before any of the regular speakers arrived from a delayed train. It was pointed out, however, before the session adjourned, but the SURVEY fails to mention this, that the longed-for "separation of function" is specifically provided for in the model bill. Section 17 reads as follows:

"Each carrier shall employ medical officers to examine patients who claim cash benefit, to provide a certificate of disability, and to supervise the character of the medical service in the interests of insured patients, physicians and carriers."

Knowing Dr. Frankel, I feel confident that even as "an insurance man," he will wish to plead that he was ignorant of this provision, and that he will now be glad to congratulate the

committee which drafted the model health insurance bill for having, in reference to this "the most important point to remember in health insurance," made so marked an improvement upon the famous German system!

JOHN B. ANDREWS.

[Secretary American Association
for Labor Legislation]
New York.

To the Editor: In his letter, Dr. Andrews states as follows: "The bill was *attacked*, the SURVEY reports. . . ." I fail to find any statement such as this in the article in the SURVEY of November 11. In the discussion at the Cincinnati meeting, I tried to elaborate the necessity for a complete separation of the carrier which is to pay sick benefits from the organization which is to administer medical care. This separation is not a phase of the German system nor can I find it in the so-called "model bill."

I am acquainted with section 11 of the model bill referred to in Dr. Andrews' letter. He quotes this section in his letter as follows: "Each carrier shall employ medical officers to examine patients who claim cash benefit, to provide a certificate of disability *and* to supervise the character of the medical service in the interests of insured patients, physicians and carriers." The separation of the two functions, to which I have above referred to, is to my mind not covered by this section.

LEE K. FRANKEL.

[Sixth Vice-President Metropolitan
Life Insurance Company]
New York.

[In Dr. Hamilton's absence, I would say that Dr. Frankel's remarks at the health insurance session gave the impression of anything but an "attack." In fact, they were addressed exclusively to the meeting itself, which at this point was in danger of becoming absorbed in the medical aspect of health insurance and of forgetting the insurance technique involved. He spoke out of experience, not as an antagonist, and only at the close of his remarks referred to the model bill. The effect of his words was to clarify thinking—G. S.]

THE RETIREMENT OF OSBORNE

To the Editor: I was much interested in reading the instructive analytical article entitled The Retirement of Thomas Mott Osborne in the SURVEY for October 28. The writer speaks of the Osborne method of prison control as the "most hopeful experiment in prison regeneration that the world has ever known." He also states that the practicability of these reforms has been dem-

onstrated and that these reforms will be epoch-marking in penological advance.

The public, mindful of the unsavory history of the old Sing Sing management and also of the complete legal vindication of Mr. Osborne after "one of the bitterest experiences which can happen in this life," would suppose that the one important thing to do would be to retain him as Warden of Sing Sing Prison. That seems the natural conclusion.

Strangely enough the magazine article seeks to evade that conclusion. The writer has discovered certain temperamental defects in Mr. Osborne's character and, therefore, the state of New York should have another warden who is more pliable in his relations with his "superiors."

Thomas Osborne on the lecture platform would be an inspiring influence in shaping public opinion regarding prison reform, but the one cutting criticism of his gospel there would be "He can't make it work!" Surely the political governor and his other appointees are not altogether free from temperamental defects.

The logical conclusion, in view of the former warden's actual accomplishments, and the conclusion prompted by the public interest is to retain the warden who has made himself an expert in a chosen department and to retire officials who hamper and obstruct his work.

A. N. FOSTER.

[Minister First Unitarian Church]
Uxbridge, Mass.

To the Editor: I want to tell you how very much interested I was in Mr. Lane's article in the SURVEY for October 28. I think you deserve much praise for such a fine, careful and searching analysis of Mr. Osborne. Through friends who have approached the Sing Sing situation from various angles I gathered an impression which fits in exactly with the picture Mr. Lane draws. I think it is helpful to have said to social workers and the general public some of the things he has said, because an unbroken and indiscriminate approval of all that Mr. Osborne has done would mean losing the support of many people whose interest should be held for prison reform. It was a necessary thing to do and Mr. Lane has done it with tact and kindness. He is right in saying that Mr. Osborne is needed in the work of prison reform. As an "agitator" he can be of incomparable value, and the friends of prison reform devoutly hope that he has before him many years of usefulness.

J. PRENTICE MURPHY.

[General secretary,
Boston Children's Aid Society]
Boston.

JOTTINGS

WILLIAM BELL WAIT, principal emeritus of the New York Institute for the Education of the Blind, died October 26, at the age of 78 years. Mr. Wait was the originator of the New York point alphabet for the blind and was the inventor of a number of mechanical devices for using it in print.

As evidence that it is making an earnest fight against the mob spirit, the Southern Sociological Congress announces that it has issued an edition of 50,000 copies of the address on Removing the Causes of Lynching, given by W. D. Weatherford at the meeting of the Congress in New Orleans last April. Copies may be had of the secretary, J. E. McCulloch, Nashville, Tenn., at \$5 per hundred.

SIDNEY A. TELLER, director of Stanford Park, Chicago, has been appointed head resident of the Irene Kaufmann Settlement of Pittsburgh, Pa. Stanford Park recreation center has become widely known as the spot which had only "one bath-tub in the block" at the time the site was condemned as a recreation center. Since 1910, when it was opened under Mr. Teller's direction, nearly two million shower baths and swims have been given in the same block.

A NEW investigation bearing on the high cost of living in the United States is to be undertaken by the federal Bureau of the Census. The inquiry will be directed toward determining how far the cost of cartage in cities is responsible for the increasing retail prices of commodities in common use. Experts of the Census Bureau, it is said, believe that the city delivery system even more than railroad freight rates figures largely in the high cost of living. Provision for the expense of the investigation has already been made and work will be commenced as soon as Secretary of Commerce Redfield gives formal authorization for it.

There are many uses in connection with the activities of settlement work for the

ROBERT G. VALENTINE, who made a unique position for himself as "industrial counselor," died suddenly of heart disease at a hotel in New York city, November 13. Mr. Valentine's work was based on the idea that "industrial audits," as he called them, are as necessary to the healthy operation of a business as financial audits. He was instrumental in establishing machinery for better relations between employer and employes at Filene's, in Boston, at the Plimpton Press, and elsewhere. For nearly a year he had been director of the Joint Board of Standards in the dress and waist industry in New York city.

THE Woman's City Club of Cleveland, with a membership of over 1,000, has opened sumptuous quarters in the Hotel Statler, with weekly luncheon meetings at which speakers discuss civic affairs. The secretary is Isabel Simeral. The Men's City Club, now four years old, with 1,200 members and growing steadily, has occupied new quarters in the Hollenden Hotel. Its open forum continues to offer a rostrum for some of the leading speakers of the entire country.

BEGINNING with the December issue, the *American Red Cross Magazine* will be enlarged, and will be produced by Doubleday, Page & Company, of Garden City, N. Y., instead of being issued from Washington, D. C., by the society itself. All profits from the magazine, it is announced, will continue to go to the society. An effort will be made to make it "more diverse in interest" and "to add to its usefulness and attractiveness." At the next meeting of the General Board the proposal will be made that members be asked on renewal of their memberships to pay \$2 annually, one-half of this to go to the magazine. The annual membership fee of \$1 will not be raised.

In sending out its program of lecturers for 1916-17, which includes H. G. Wells, Rabindranath Tagore and other "unusuals," the league for Political Education, New York city, reports that its endowment fund for the purpose of a new building has reached \$35,000. A much larger sum is desired to erect an auditorium which will be centrally located and available for lectures and public meetings in New York. Every available auditorium is described as too small or, as in the case of the Carnegie Music Hall, too large for such purposes; and the proposed auditorium would, it is held, be a genuine town meeting hall and civic center.

THE effect of war conditions upon the health of the poorer classes is noted by Dr. L. A. Davies, medical officer of Woolwich, England, in his annual report. Improved working conditions in that munitions region count to some degree favorably, but the emotional strain of grief and fear more than overbalance clean floors and good ven-

Table Linens for festal occasions

Reg. Trade Mark

Every housewife rejoices in one or two extra-fine and perhaps extra-large Table Cloths, to be used on those special occasions when it is desired to have the home appear at its very best.

Whether your best is to be a plain high-grade Satin Damask or an elaborate Filet Lace Cloth, the place to buy it is where there is the widest possible range of designs and where quality and value are assured.

504. "Fine Stripe. Vase Border."

Usually the finer and better the Linen, the simpler and more severe are the designs, for such designs reveal the fullest beauty of the fabric.

It is because of this that perfectly plain Cloths with no ornament except a Satin band are so much in favor. Others of this class have various smart stripe designs and simple borders.

Next in order comes this same character of goods with scalloped edges. And finally, the infinite varieties of Lace-decorated and embroidered goods in exquisite elaboration of design.

Such Cloths, glistening under the candlelight on your Thanksgiving table, impart a subtle sense of good cheer of which every guest will be conscious.

He was nearly killed one year ago, and his nise body is damaged for all his life, that is what make him nervous he suffert terrible. Yours your high respecting and tankfully
A M

300 East St., first floor bak."

A BRAND new flag on a shiny flagpole proclaims that Esmond, R. I., has been judged the most spick and span mill village in the state. Last spring the Consumers' League of Rhode Island conceived a plan to beautify the rather gray and ugly factory towns. Through the cooperation of Governor Beekman prizes were offered—one (the flag and pole) for the greatest improvement in community appearance; two (first prize of a silver cup and \$10, second prize of seeds or shrubs to the value of \$5) for the greatest improvement of home grounds by a mill operative; and two (first prize of a silver cup and \$10, second prize fruit-trees to the value of \$5) for the best vegetable garden developed by a mill-worker. The prize garden committee which has just made awards, reports that the contest aroused civic pride throughout the state.

A COOPERATIVE store is operated by the Hotpoint Electrical Heating Company of Ontario, Calif., and its five hundred employees. The company furnishes space, equipment, light, heat and janitor service, and the business is conducted by a club, to which both employes and firm members belong. Goods are sold at 10 per cent above their wholesale price; overhead expense consumes about 7 per cent, leaving 3 per cent net profit. It is estimated that the average employe saves

Neurasthenia Symptom — NOT Disease

Neurasthenia is due largely to habits which may be corrected by giving attention to causes of the ailment

This is fully explained by Dr. John Harvey Kellogg, who gives you in his new book—"Neurasthenia"—results of his experience with thousands of cases treated during the forty years he has been Chief Medical Director of the great Battle Creek Sanitarium. Dr. Kellogg's book is not a dry book—nor couched in technical terms. On the contrary, Dr. Kellogg has the happy faculty of making his writings easily understood and intensely interesting. If you suffer from nervousness—exhaustion—sleeplessness—or any other form of Neurasthenia, you need this book. It shows the way out—teaches you how to obtain relief from the dread fangs of nervousness.

FREE Examination Mail the coupon and we will send you "Neurasthenia," charges prepaid, for FREE examination. Judge for yourself if this book can help you. There are nearly 350 pages, many illustrations, complete diet tables and full instructions for exercise, rest and sleep. This free examination offer is limited, so send the coupon now before it is withdrawn.

about 15 per cent on his grocery bills. "The method by which goods are ordered by the employes and delivered to them illustrates the degree of efficiency which has been attained," writes Lowell C. Pratt. "Order blanks, properly filled out in the homes of the employes, are dropped in boxes near the time-clocks when the workers arrive at the factory in the morning. These orders are collected by the storekeeper and filled before the employes return to their homes, either at noon or at the end of the day's work. A delivery service is maintained for those who wish to pay an additional charge of five or ten cents, according to the distance."

THADDEUS SLESZYNSKI of Chicago, who organized the American Committee of Polish Social Workers, which met with the National Conference of Charities and Correction at Indianapolis last spring, has issued a questionnaire for the study of the second generation of Polish immigrants. It is intended to be used as a basis for interviews with American-born young men and women of Polish parents. The questionnaire is being sent out not only to Polish social workers, but to those who are working with the Poles throughout the country, in order to aid the Americanizing of the Polish people in America by efforts which have proved most successful and which are found to be in line with the preferences and appreciation of the Poles who have most benefited by them. The questionnaire itself is of special interest in suggesting some of the lines along which both the second generation and the first may be expected to cooperate most freely and effectively. Copies may be obtained by applying to Mr. Sleszynski, 2026 Haddon avenue, Chicago, who will welcome the cooperation of all interested.

NABISCO

Sugar Wafers

In many homes a box of Nabisco Sugar Wafers is always kept where all may partake.

These fairy confections are beloved by old and young alike. Delightful in flavor, fragile in texture, Nabisco Sugar Wafers are dessert accompaniments appropriate for any time and any occasion. In ten-cent and twenty-five-cent tins.

FESTINÖ—Shaped like an almond, these little dessert confections delight all who try them. The kernel is almond-flavored creamy goodness.

NATIONAL BISCUIT COMPANY

MAKE A NOTE ON YOUR CALENDAR

FOR

THE FIRST WEEK IN DECEMBER

About December 1, we will mail to every SURVEY subscriber our special combination offer for new subscriptions to THE SURVEY and the most interesting, worth while and timely books of the year on social and civic topics—including the most significant new fiction, biography and travel.

When you get our list all you have to do is to sit down in an easy chair and put a mark opposite the titles of each book you wish, write out the names and addresses of the friends to whom the books and SURVEY subscriptions are to be sent, and mail the whole order to us—with a simple two-cent stamp.

In this way, you will not only rid yourself of cars, crowds, germs and fatigue, but also will have done your Christmas shopping **EARLY, EASILY and WELL.**

HADASSAH

American Zionist Medical Unit for Palestine

Physicians and nurses desiring to join the American Zionist Medical Unit for Palestine about to be formed by the Women's Zionist Organization Hadassah, will please address MISS HENRIETTA SZOLD, Chairman, 2 Pinchurst Avenue, New York City.

BASKETRY For Schools and Craft Workers MATERIALS

Send for free catalog!

"Everything for Basket Making"

Reeds, willow, chaircane (95c), flat rush, raffia, Indian ash splints, braided rush and straw, dyes and finishes. Wooden bases. Any amount of reeds sold from a half pound up. Also tools and books of instruction. Louis Sloughton Drake, Inc., 994 Waterlown St., W. Newton, Mass.

Pan-American reciprocity in child-welfare work is not the least of the international relations open to us. South America invites; North America lags. An article on just where and how the opportunity presents in the Survey next week.

INFORMATION DESK

The following national bodies will gladly and freely supply information and advise reading on the subjects named by each and on related subjects. Members are kept closely in touch with the work which each organization is doing, but membership is not required of those seeking information. Correspondence is invited. Nominal charges are sometimes made for publications and pamphlets. Always enclose postage for reply.

Health

SEX EDUCATION—New York Social Hygiene Society, Formerly Society of Sanitary and Moral Prophylaxis, 105 West 40th Street, New York City. Maurice A. Bigelow, Secretary. Seven educational pamphlets, 10c. each. Four reprints, 5c each. Dues—Active \$2.00; Contributing \$5.00; Sustaining \$10.00. Membership includes current and subsequent literature; selected bibliographies. Maintains lecture bureau and health exhibit.

CANCER—American Society for the Control of Cancer, 25 West 45th St., New York City. Curtis E. Lakeman, Exec. Sec'y. To disseminate knowledge concerning symptoms, diagnosis, treatment and prevention. Publications free on request. Annual membership dues \$5.

COMMITTEE ON PROVISION FOR THE FEEBLE-MINDED—Objects: To disseminate knowledge concerning the extent and menace of feeble-mindedness and to suggest and initiate methods for its control and ultimate eradication from the American people. General Offices, Empire Bldg., Phila., Pa. For information, literature, etc., address Joseph P. Byers, Exec. Sec'y.

MENTAL HYGIENE—National Committee for Mental Hygiene, 50 Union Square, New York City, Clifford W. Beers, Sec'y. Write for pamphlets on mental hygiene, prevention of insanity and mental deficiency, care of insane and feeble-minded, surveys, social service in mental hygiene, State Societies for Mental Hygiene.

NATIONAL HEALTH—Committee of One Hundred on National Health. E. F. Robbins, Exec. Sec'y., 203 E. 27th St., New York. To unite all government health agencies into a National Department of Health to inform the people how to prevent disease.

TUBERCULOSIS—National Association for the Study and Prevention of Tuberculosis, 105 East 22nd St., New York. Charles J. Hatfield, M. D., Exec. Sec'y. Reports, pamphlets, etc., sent upon request. Annual transactions and other publications free to members.

PUBLIC HEALTH—American Public Health Association. Pres., John F. Anderson, M. D., New Brunswick, N. J.; Sec'y, Prof. S. M. Gunn, Boston. Object: "To protect and promote public and personal health." Six Sections: Laboratory, Sanitary, Engineering, Vital Statistics, Sociological, Public Health Administration, Industrial Hygiene. Official monthly organ, *American Journal of Public Health*: \$3.00 per year. 3 mos. trial subscription (to Survey readers 4 mos.) 50c. Address 755 Boylston St., Boston, Mass.

NATIONAL ORGANIZATION FOR PUBLIC HEALTH NURSING. Object: to stimulate the extension of public health nursing; to develop standards of technique; to maintain a central bureau of information. Publications: *Public Health Nurse Quarterly*, \$1.00 per year; bulletins sent to members. Address Ella Phillips Crandall, R. N., Executive Secretary, 600 Lexington Ave., New York City.

THE AMERICAN RED CROSS—Through its Town and Country Nursing Service, maintains a staff of specially prepared visiting nurses for appointment to small towns and rural districts. Pamphlets supplied on organization and administration of visiting nurse associations; personal assistance and exhibits available for local use. Apply to Superintendent, Red Cross Town and Country Nursing Service, Washington, D. C.

SOCIAL HYGIENE—The American Social Hygiene Assoc., Inc., 105 West 40th St. N. Y.; Branch Offices: 122 South Michigan Ave., Chicago; Phelan Bldg., San Francisco. To promote sound sex education, the reduction of venereal diseases, and the suppression of commercialized vice. Quarterly magazine, "Social Hygiene." Monthly *Bulletin*. Membership, \$5; sustaining, \$10. Information upon request. Pres., Abram W. Harris; Gen. Sec'y, William F. Snow, M. D., Counsel, James B. Reynolds.

EUGENICS REGISTRY—Board of Directors, Chancellor David Starr Jordan, President; Prof. Irving Fisher, Dr. C. B. Davenport, Luther Burbank, Dr. J. H. Kellogg, Secretary. A bureau for the encouragement of interest in eugenics as a means of Race Betterment, established and maintained for the Race Betterment Foundation in co-operation with the Eugenics Record Office. Address, Eugenics Registry Board, Battle Creek, Mich.

Racial Problems

NEGRO YEAR BOOK—Meets the demand for concise information concerning the condition and progress of the Negro Race. Extended bibliographies. Full index. Price, 25c. By mail, 35c. Negro Year Book Company, Tuskegee Institute, Alabama.

In addition to information in Negro Year Book, Tuskegee Institute will furnish other data on the conditions and progress of the Negro race.

HAMPTON INSTITUTE, HAMPTON, VA.—Trains Negro and Indian youth. "Great educational experiment station." Neither a State nor a Government school. Supported by voluntary contributions. H. B. Frissell, Principal; F. K. Rogers, Treasurer; W. H. Scoville, Secretary. Free literature on race adjustment, Hampton aims and methods. *Southern Workman*, illustrated monthly, \$1 a year; free to donors.

NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE, 70 Fifth Avenue, New York. Publishes *The Crisis*, a monthly magazine, 63 branches and locals. Legal aid, literature, speakers, lantern slides, press material, etc. President, Moorfield Storey; Chairman of the Board of Directors, J. E. Spingarn; Vice-President and Treasurer, Oswald Garrison Villard; Director of Publications and Research, W. E. B. DuBois; Acting Secretary, Roy Nash.

Work With Boys

BOYS' CLUB FEDERATION—National Headquarters, 1 Madison Ave., New York City. Federation includes Boys' Clubs, Boys' Depts. of Recreation Centers, Settlements and Community Houses. A clearing house for information on subjects relating to work with boys. Printed matter distributed; workers furnished; assistance given in organizing. Wm. E. Hall, President; C. J. Atkinson, Executive Secretary.

Libraries

AMERICAN LIBRARY ASSOCIATION—Furnishes information about organizing libraries, planning library buildings, training librarians, cataloging libraries, etc. *A. L. A. Booklist*, a monthly annotated magazine on book selection, is a valuable guide to the best new books. List of publications on request. George B. Utley, Executive Secretary, 78 E. Washington St., Chicago.

Recreation

RECREATION—Hundreds of able men and women gave their experience in neighborhood playground and recreation centers at the Recreation Congress held at Grand Rapids, Michigan. Many of the addresses will be published only in *The Playground*, published monthly, \$2.00 a year. Subscribe now. Playground and Recreation Association of America, 1 Madison Avenue, New York City.

Settlements

SETTLEMENTS—National Federation of Settlements. Develops broad forms of comparative study and concerted action in city, state, and nation, for meeting the fundamental problems disclosed by settlement work; seeks the higher and more democratic organization of neighborhood life. Robert A. Woods, Sec'y, 20 Union Park, Boston, Mass.

INDUSTRIAL SAFETY CONGRESS, New York State. Syracuse, N. Y., December 11-14. Sec'y, Henry D. Sayer, 230 Fifth avenue, New York city.

INDUSTRIAL WELFARE AND EFFICIENCY CONFERENCE, Fourth Annual. Harrisburg, Pa., November 21-23. Further information may be secured by addressing the Pennsylvania Department of Labor and Industry, Harrisburg, Pa.

JEWISH FARMERS OF AMERICA, The Federation of. New York city, November 28-December 2. Sec'y, J. W. Pincus, 174 Second avenue, New York city.

LABOR LEGISLATION, American Association for. Columbus, O., December 27-29, and Cincinnati, December 30. Sec'y, John B. Andrews, 131 East 23 street, New York city.

MARKETING AND FARM CREDITS, Fourth National Conference on. Chicago, Ill., December 4-9. Sec'y, Charles W. Holman, 230 South LaSalle street, Chicago.

MUNICIPAL LEAGUE, Intercollegiate Division of National. Springfield, November 22-23. Sec'y, Arthur Evans Wood, University of Pennsylvania, Philadelphia.

MUNICIPAL LEAGUE, National. Springfield, Mass., November 23-25. Sec'y, Clinton Rogers Woodruff, North American bldg., Philadelphia, Pa.

MUNICIPAL RESEARCH WORKERS. Springfield, Mass., November 22-23. Sec'y, L. D. Upson, Detroit, Mich.

PLANNING BOARDS, Massachusetts Federation of. Springfield, Mass., November 23-24. Sec'y, Arthur C. Comey, Cambridge, Mass.

POLITICAL SCIENCE, Academy of. New York city, November 22-23. Sec'y, Henry R. Mussey, Columbia University, New York city.

POLITICAL SCIENCE ASSOCIATION, American. Cincinnati, O., December 28-31. Sec'y, Mr. Chester L. Jones, University of Wisconsin, Madison, Wis.

PUBLIC SERVICE, Training School for. Springfield, Mass., November 22-23. Supervisor Charles A. Beard, 261 Broadway, New York city.

SEAMEN'S UNION OF AMERICA, International. New York city, December 4. Sec'y, T. A. Hansen, 570 West Lake street, Chicago.

SCIENCE, American Association for the Advancement of. New York city, December 26-30. Sec'y, L. O. Howard, Smithsonian Institution, Washington, D. C.

SINGLE TAX LEAGUE, Massachusetts. Springfield, Mass., November 20-24. Pres., Alex MacKendrick, 120 Boylston street, Boston.

SOCIAL HYGIENE ASSOCIATION, American. St. Louis, Mo., November 19-21. Gen. Sec'y, Dr. W. F. Snow, 105 West 40 street, New York city.

SOCIAL INSURANCE, Conference on. Called by International Association of Industrial Accident Boards and Commissions. Washington, D. C., December 5-9. Chairman, Royal Meeker, U. S. Commissioner of Labor Statistics, Washington, D. C.

SOCIOLOGICAL SOCIETY, American. Columbus, O., December 27-30. Sec'y, Scott E. W. Bedford, University of Chicago, Chicago.

STATISTICAL ASSOCIATION, American. Columbus, O., December 27-30. Sec'y, Carroll W. Doten, 491 Boylston street, Boston.

NATIONAL

CHARITIES AND CORRECTION, National Conference of. Pittsburgh, Pa., June 6-13, 1917. Sec'y, W. T. Cross, 315 Plymouth Court, Chicago.

RELIGIOUS EDUCATION ASSOCIATION. Boston, Mass., February 27-March 1, 1917. Sec'y, H. F. Cope, 332 South Michigan avenue, Chicago.

STATE AND LOCAL

CHARITIES, Texas State Conference of. Austin, Texas. January 18. Sec'y, M. A. Turner, Room 215, City Hall, Houston, Texas.

Single copies of this issue, 10 cents. Cooperating subscriptions \$10 a year. Regular subscriptions weekly edition \$3 a year. Foreign postage \$1.50 extra. Canadian 75 cents. Regular subscription once-a-month edition \$2 a year. Foreign postage 60 cents extra. Canadian 35 cents. Changes of address should be mailed to us ten days in advance. In accordance with a growing practice, when payment is by check a receipt will be sent only upon request. Copyright, 1916, by SURVEY ASSOCIATES, INC. Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the act of March 3, 1879.

Special Announcement

The SURVEY Christmas Book Offer will be mailed to every SURVEY subscriber on November 28 as part and parcel of the December once-a-month issue—next week. This Christmas list is full of exceptionally attractive books and magazines at the best combination rates the SURVEY has ever offered. We hope it will save you time, effort and money, and by using it you will do the SURVEY a friendly turn.

The GIST of IT

A PACIFIST secretary of war sounds like an anomaly. Nevertheless, Newton D. Baker made a speech before the Cleveland Advertising Club in which there was more talk of national ideals of peace than of munitions and gunboats. Secretary Baker believes that we in America have found a true basis of internationalism in liberty of speech and action. And he counts the first step in that direction the first step of our forefathers onto Plymouth Rock—a timely point at this Thanksgiving season. Page 187.

FROM one who has demonstrated the principles of scientific management in his own plant comes sincere testimony of the value of the profession in which Robert G. Valentine was engaged at the time of his death. Henry P. Kendall, head of the Plimpton Press, Norwood, Mass., tells how Mr. Valentine devoted his life to reconciling the clear-eyed spirit of science with the blind spirit of democracy. Page 189.

BECAUSE legislation had been too busy abating hog cholera, instead of tuberculosis among children, the General Convention of the Episcopal Church at St. Louis set aside discussion of canons and prayer-book for a time to consider the rights of human beings. The Rev. George Craig Stewart, pastor of St. Luke's Protestant Episcopal Church in Evanston, Ill., who has tried a partnership between religion and social service in his own parish, reports how social service was one of the trinity of subjects that dominated the convention. Page 190.

THE doors of the closed shop are being battered down by the Chamber of Commerce in San Francisco. But Harry F. Grady, a San Francisco business man now studying at Columbia University, who knows intimately many men on both sides of the door, finds that under the sobriquet of law and order the business interests are employing the same methods of coercion and boycott which they decry in the unions. Page 192.

CHARLES J. STRONG, who conducted the charities investigation in New York, came at his task in the light of a long experience of civic work, including the presidency of the City Club. His report goes to the fundamentals of charity work as an essential function of government. He would abolish five overlapping and under-working offices and commissions and set up a supervisory board broadly equipped to do its work. Page 195. The State Conference of Charities, with only a few members present, passed a resolution opposing his plan. Page 207.

GEORGE FOSTER PEABODY, distinguished for many years as a champion of all good causes, differs with Mr. Lane's interpretation of Mr. Osborne's occupancy of the thorny warden's seat at Sing Sing. Pages 198 and 210.

CHAMBER OF COMMERCE men are for making railroad labor compulsory pending arbitration; the American Federation of Labor is unanimously against compulsion. The *Congressional Record* please copy. Page 201.

THE government's theory and practice in disbursing \$2,000,000 to the families of needy guardsmen. Page 204.

FOOD prices have led a New York association to increase its budget of charitable relief by 25 per cent. Page 201.

National Ideals

By *Newton D. Baker*

SECRETARY OF WAR

EVERY now and then some orator who catches the public ear points to the fact that, as he sees it, America is becoming industrially splendid, but ethically or idealistically infirm. Now, I am one of those persons who do not believe that, and I want, if I can, to analyze this question of national ideals; to find out what they are, and why there are people who imagine them in danger because of the changed character of our civilization.

In the first place, it is difficult to catalog ideals. We are too busy about our bank accounts; we are busy over the affairs of our clients; we are busy about our children's schooling and about our wives' pickling and preserving; we are busy in our hours of occupation with our professions and in our hours of leisure with our diversions. It is a rare thing for a man to take a seat by himself in a corner and say, "How is it with my ideals?" "Where are they and what are they?"

Yet we all have ideals. They are fundamental to us. Every now and then some course of conduct, some incident arises which runs up against one of them. The touchstone of our innate and fundamental ideals rubs against this new proposition and we discover either that it is antagonistic or that it is virtually in harmony, and we have, if it is antagonistic, a revulsion of feeling, and if it is in harmony, we have a feeling that all is well with the world.

Likewise, as a nation, we have these deep-lying ideals buried out of casual sight; not lost, but put away for safe keeping; not made a matter of constant discussion and exhibition, but still a standard squaring our national life with our national conduct. These national ideals, not in themselves different from individual ones, are far more complex and, as years go by, of constant change in their application and in their range.

For example, we find Miss Agnes Repplier, brilliant and charming essayist as she is, continually writing about the ideals of our Pilgrim fathers. She talks about Plymouth Rock (when it was in its pristine glory and fame) as though there were some kind of virtue loose in the community that has ebbed away; just as Bob Aker's courage dropped out at his fingertips when he stood shaking and limp in the face of his adversary's pistol.

The dream of our Pilgrim fathers was to establish over

here a free government, of free men. Since that time, nobody has proposed anything to the contrary. But freedom today is a different thing from the freedom of the good old days. The adversaries of it have changed their countenances entirely. In olden times the ideal lover of freedom was pictured as a tall, broad-shouldered man, wearing a wide-brimmed hat, and carrying a forbidding looking gun on his shoulder, taking his family to church. His job was to make perfectly certain that his family would not be molested by red Indians. Likewise he had to protect them against frivolity in various forms. The Puritan set his face sternly against pleasure and realized quite truly that in the making of a new nation, conduct was anti-social which allowed a people to divert themselves by drinking and dancing and wasting the hours that ought to have been given to the serious task of the conquest of a new continent.

Nowadays we have still to fight savagery, but a savagery far more subtle, no longer stalking about with the tomahawk in its hand. And it is less easily discernible because the old degrees of intimacy among people no longer exist.

Miles Standish doubtless knew everybody who lived in the village where he lived. It was quite impossible for harm to happen to anybody without it being his personal loss. People attended weekly meetings and town meetings with one another. They called one another by their first name. They knew one another. We do not.

Bergson, the philosopher, once went into a French church and found a preacher holding forth with tremendous and moving eloquence. Everybody in the audience was in tears except one man who seemed unconcerned by anything. The minister wove his story and rose in his height of passionate appeal, from one level to another, the audience following him almost breathlessly. Finally when the service was over, Bergson, noticing this one man still perfectly untouched, followed him out of the church, and said to him, "I noticed that when this congregation was profoundly moved and everybody was in tears, or deeply stirred, you were entirely unmoved. How do you explain it?" The man replied, "Well, you see, sir, I don't live in this parish."

In the same way we (in modern society) are inclined to be parochial. We have our range of friends and business asso-

ciates. We have a lack of those old-fashioned contacts that brought men into close relation with the whole country.

It is unavoidable, therefore, if there be difficulty in tracing national ideals in the civilization that has succeeded that of our Pilgrim forefathers. Those fundamental virtues which we would amplify into national ideals used to be immediately reflected from individual to individual. The boundaries of the nation were within the periphery of a man's acquaintance. In this modern time when it is not possible to know your brother by sight or shake hands with the man whose destiny you may immediately affect, we have still to think of the consequences of national virtues, applied to the welfare of the entire human race.

And, although the effort is great and the result often hard to perceive, national ideals are just as robust; just as vigorous; just as honestly entertained and as stalwartly fought for as they were in the days of Miles Standish. They have, however, grown in their application until they are now splendid and worldwide. Those who look for a catalog of small virtues in some statute-book which prohibited certain acts on Sunday, down to the kissing of your own wife, as an offense of public propriety, those who look to that form of national ideals, will fail to recognize the extended and ennobled thing that now takes its place.

Among these national characteristics one of the most conspicuous is the preservation of the ideal of a free people in a free country. We have opened our arms wide and invited the downtrodden from all the world to participate in our new civilization. We have shown our adherence to this view. We have not fallen into any of the errors that so many of the old governments have fallen into. We have proscribed no language; we have leveled against no religious convictions; we have preserved freedom of speech, freedom of conscience, the utmost freedom of individual election in the matter of loyalty to ideals. In other words, we have made America a free place where men may come and live, work and make so long as they are not at variance with the common welfare, the highest ideal of all.

"Progressivism," Grandchild of Machinery

IN RECENT YEARS we have, in this country, seen the last of a series of changes in the adaptation of this highest ideal—the aim for common good. From a simple group of individuals as we were in Miles Standish's time, or George Washington's time, or John Quincy Adams's, we have suddenly awakened to find that we have become an exceedingly intricate and complicated social mass, our relations depending largely upon mechanical inventions. Whenever a machine is substituted to do the work previously done by two men, that machine creates relations between those men and makes them dependent upon one another. Meanwhile, we had supposed that we could have exactly the kind of government, exactly the kind of institutions under this changed form of civilization that we had under the simpler and less integrated form, and we were amazed that with the invention of machinery there grew up unconsciously, without contriving or design, a dozen situations calling for redress. Each by its inevitable working created injustice and inequalities. We found that while we had gained enormously in the art of production and had multiplied the forces that were available as aids in production, we had failed to attend to the processes of distribution. Thus there were raised amongst us great inequalities in distribution, far beyond those ordained by nature. Then it was that there sprang up in America the thing called "progressivism." And one great national party adopted a program which perhaps

was more forward looking than any social program ever adopted in the history of politics.

Much of this progressive platform consisted in unsettling things which had been settled; in disturbing a lot of situations which were heavy on some shoulders and comfortable on others. The platform called for readjustment, and no readjustment takes place with equal pleasure to all involved. It caused many pains in the body politic. The ultimate triumph of these social readjustments is, however, necessary and inevitable, because they are sane, balanced and not revolutionary, but evolutionary. They are the inevitable amplification of the original ideals which took a raw continent like this, uninhabited except by savages, and turned it into a great continent of welcome and opportunity.

Peace With a Heroic Drive in It

SO FOR century after century these ideals of freedom and justice have extended, growing more established, growing larger. And they are now no less easily defined, if people look for them, in their new home and new attire, and new habits.

But we Americans have another ideal. And it is upon that that I want to indict the human race. We in this country have the ideal of peace. We have come to the conclusion in this modern world of ours, and in America particularly, that peace is the normal relation of life.

The melancholy conclusion that peace and corruption are ordinarily brothers; that heroism is the natural consequence of war, is bred of a wrong ideal of peace. We cannot, of course, have peace without having something heroic in it. We must have a strenuous peace; a peace with an upward drive in it; a peace that engages the dominant appetite of mankind. Perhaps because we are descendants from savage ancestors and because of our struggle for survival there is away down in all of us a something forcing us to have an heroic opportunity. Therefore, unless we can get into peace something heroic, unless we can engage our mind and faculties upon a problem that promises to produce a result in the world, we can have no peace at all.

All Americans are desirous of connecting peace with those heroic opportunities. We have a great surging of emotions and sentiment toward bettering the lives of men, women and children. It has taken the social form of reducing the hours of labor of women and children in workshops, and insisting upon proper sanitation around the factory; it has increased the recreational opportunities of men and women, and of children, improved their educational opportunities, and raised to a higher level the whole plane of human life.

But in addition we in America want world peace. We have been struggling for a long time to secure it, and now, when the old world is disillusioned with war, comes our most opportune moment. Thoughts of the killed, wounded and injured, of the stricken faces of the mothers of the world as they walk the streets of their various countries in mourning for those who are already gone, and for those who will yet be dedicated to this awful slaughter, such thoughts will modify men's view and war will lose some of its heroism, some of its former splendor when it was physical combat between selected individuals.

Yet, first, we must have justice in the world. Our propaganda, world peace, must be founded, both here and abroad, on justice among men. And that means the abolition of the separatist tendencies that are in men, centuries old.

In 1815, when Napoleon had been finally overcome and the Congress of Vienna met to reestablish the map of the world,

the Russian Czar proposed that there should be a perpetual peace through the creation of what was called "The Holy Alliance." This was an arrangement by which the collective powers of all the nations represented would be used against any one nation, should it undertake to disturb the peace of the world. It was very much like the proposition of the present league for universal peace. Although Castlereagh, England's representative, was rather inclined to the plan, Metternich said the Czar was a silly fool and the only thing to do, because he was the Czar of Russia, was to humor him, write it down on paper, and go through the formality of signing it. After returning to their respective countries, they would see that nobody lived up to it.

At any rate, the Treaty of Vienna went to pieces. Many people think Prince Metternich intended it so. They contend that he surrounded the Russian Czar with spies in his employ, who whispered dreadful things to him, and made him believe that his life was in danger, until it affected his mind, turning him from a mild, benevolent and gracious man into a terribly despotic, cruel king.

But whatever people may have said, whatever may have been the cause of the change in the Czar, the peace of Vienna failed because it was not a just peace. It stood upon the pleasure of a half-dozen gentlemen, interested in the pretensions of princes and the destiny of dynasties, who sat around the table with a map of Europe and some lead pencils, and drew lines all over it, saying, "You take that." "We will take that." "His Majesty can have this."

The net result was an artificial peace, a peace based on force or power which recognized neither nationality nor ancient and traditional loyalty. Houses were divided against themselves; Poland was divided into three parts and each one was left struggling to reestablish the Poland in which it

believed and which it loved. The Austro-Hungarian Empire was made a polyglot empire, to whose difficulties, since the great revolution of 1848, are traceable the Balkan wars, and the serious troubles between Turkey and Europe.

Now, some time the present terrible war will cease and a peace will come in Europe. We Americans are vitally concerned in this peace, because today there cannot be a war even between Korea and Cochin-China without its affecting us. We ought, I think, to begin now to cultivate an amplification of our national ideals. So that, as the one great neutral nation, unengaged in the present controversy, friend to all those of both sides, the concerted, consolidated influence of America can help insure that the new peace will not be a peace of an artificial kind; that less attention may be paid to princes and kings and emperors than to the fate of peoples. We should try to impress upon Europe the excellence of our own experiment, allowing to people liberty of conscience, liberty of minds, liberty of speech, liberty to choose their national associations. Thus the balance of power in Europe may be preserved not by artificial boundaries, and among potentates and princes, but by the contentment of the people who live in the several nations, with their own sovereignty, their own territory, and under conditions of justice.

All this has happened to our ideals, since the days of the Pilgrim fathers and the Plymouth Rock. They are still alive and vigorous and potential among us, and if we but adhere to them with enough firmness and belief they may be a medicine for the diseases affecting the rest of the civilized world. Perhaps with our example, our influence, and our help, Europe may adopt them and employ them for her own good. Thus America will make a precious gift to the world apart from the satisfaction and happiness she has derived for herself in the pursuit of these ideals.

The First Industrial Counselor— Robert G. Valentine, 1871-1916

By Henry P. Kendall

THE death of Robert G. Valentine is more of a loss to this country than any can know who were not closely associated with him and with his work, plans and accomplishment in the profession of industrial counselor, which profession he created.

Mr. Valentine graduated from Harvard University in the class of '96 and afterwards taught English at the Massachusetts Institute of Technology. He gave up teaching to enter business life as secretary to Mr. Stillman, at that time president of the National City Bank of New York. He had to give up this position on account of his health, to regain which he spent several months in the South. He declined a tempting offer of the vice-presidency of a trust company in New York because he felt that he could be of greater service in other lines of work. He became connected with the Department of Indian Affairs under Commissioner Francis E. Leupp and was shortly after appointed assistant commissioner of Indian affairs by President Roosevelt and commissioner of Indian affairs by President Taft. His work in this department was conspicuous, first, for the unusual grasp of the whole Indian situation; second, for the selection and training

of the right type of men; and third, for the courage and independence shown in curbing the graft, the exploitation of the Indians and their lands, and the demoralizing activities of the liquor interests. Feeling that the department was organized in such a way that his policies would be continued, he resigned in 1912 to take an active part in the Progressive campaign for Roosevelt. In December of that year, he opened an office in Boston and established himself as the first in a new profession, that of industrial counselor.

His death occurred from heart failure while in New York, where he had been for several months jointly employed by the employers and the labor unions in the dress and waist industry. He had also been called in by Mayor Mitchel for advice in reference to the traction strike and as a result was engaged in making an industrial audit of the conditions affecting it. In both of these positions he was respected and trusted by employers and employes alike.

Mr. Valentine developed the technic of the industrial audit, which was one branch of his professional work. He believed it was just as necessary for an industry to be socially sound as it was for it to be financially sound and he didn't believe that

it could be regarded as financially sound if it were not socially sound. In making an industrial audit of a company, he thoroughly investigated and reported with practical recommendations on such matters as fire risk, safety, cleanliness and sanitation, ventilation, illumination, wages, fatigue, training and education of employes, means for venting grievances and little troubles which always cause greater troubles in a mill or factory, and the development of the personnel side of industry, which gives to the worker at least as great care as to the mechanical and production side of the business. There are few industries which he touched but he left better for workers and employers alike.

He believed in the people. He wished to spend the remainder of his life in serving their interests. He believed thoroughly in democracy and at the same time he had the scientific spirit. He used to say that he wished to leave after him a profession with the technic thoroughly established which would be perhaps the most potent factor in the study of America's greatest problem, that of industrial relations. He believed that the great struggle was that of democracy in its certain but slow and apparently blind progress. He believed in the spirit of science and of scientific management as the spirit leading to the one best way of doing a thing. He was devoting his life to reconciling the scientific spirit with the spirit of democracy. He believed that the reconciliation of these was the great problem of today and the task which he had undertaken.

Mr. Valentine decided questions on a basis of evidence. He was brought up in a very religious atmosphere. Later in life, many of the claims of dogmatic religion he could not justify by reason. He said that one of the keen losses and regrets in his life was the fact that he could not justify by reason the belief in a future life. Because of this, he especially wished to leave some form of service so organized that it would go on after his death. It was very largely this motive that impelled him to work so hard to organize and master the technic of a profession he hoped others would go into, which he believed was aimed more than any other line of activity to help make industrial relations sounder and

better. What finer spirit can be found anywhere in the ranks of the organized church than this?

Mr. Valentine was a well-read man and a deep thinker, with a distinctly philosophical mind, to which was added a keen sense of humor. He revealed great tact in handling difficult situations and at the same time he had the courage of his convictions. His sincerity and honesty, which were always apparent, won him the respect and confidence of employers, employes and their organizations. In spite of restrictions imposed upon him by a far from rugged constitution, together with the wear and nervous tension added by the several years' illness of his only child, his wonderful courage and buoyancy of temperament never permitted him to disclose the strain which he was under. He was very loyal to his wide circle of friends and gave to them without stint. His loss will be felt keenly by many in all walks of life with whom he came in contact. To know Mr. Valentine was to respect and admire him, and one could not commune with him long without getting a wider vision of our industrial and social life.

He leaves a widow and a little girl of six. His wife enjoyed the most intimate knowledge of his work and her remarkable sympathy and comprehension of it were a constant source of inspiration and help for him.

His work has already affected department stores, printing and bookbinding establishments, textile-finishing and cotton-manufacturing companies, public utilities, the needle trades and many others. The work he has started is too valuable not to be allowed to go forward with even greater power. It is the most effective kind of work, not only for better industrial relations and conditions, but also for greater efficiency in its broadest aspect. It aims to foster the right industrial and social relations in industry by a thorough-going study of the underlying influences, laws and effects.

A few months ago, he took into partnership with him his two chief associates, Ordway Tead and Richard Gregg. It is hoped that his firm will continue in their work and that other men of vision, whose dominant idea is service in this field, will enter it.

Social Service in Hall and Tent

By George Craig Stewart

“**M**R. CHAIRMAN!” As the chair recognized the reverend deputy from Minnesota (a bishop-elect he was besides) the whole House of Deputies turned to listen, for there was challenge and even combat in that voice.

The question before the house was a resolution of the Committee on Despatch of Business, designed to exclude the consideration of social service and religious education at a joint session of both the upper and lower houses of the recent General Convention of the Episcopal Church at St. Louis. There wasn't time, they said, to give to any other joint sessions than those arranged for the consideration of missions.

“Mr. Chairman,” shouted the voice from the Northwest, “up our way we have little difficulty in securing legislation to abate hog-cholera, but we have the greatest difficulty in getting legislation to check tuberculosis among children. In general conventions I have noted that we have plenty of time for tinkering canons and revising the phraseology of the

prayer book and I submit that we could profitably take some of that time to consider the great modern problems of social and industrial life which are pressing upon us. I move to amend the resolution so as to provide a joint session on social service and religious education!”

And the amendment went through with a roar of “Ayes.” Social service, religious education, missions—three phases of the one great central purpose of the church, the salvation of men through Jesus Christ! A trinity of interest, none afore or after the other, none greater or less than another, but coeternal together and co-equal! They dominated the convention, these three subjects, uplifted imagination, vitalized debate, determined legislation.

At this joint session of the convention notable addresses were made, a few of the high notes of which are quoted to show the trend of the discussion. Bishop Brewster of Connecticut: “The increasing emphasis upon social service is to be ascribed to the insistent pressure of the finger of God,

the work of the spirit. It is really a return to a more primitive conception of Christianity, not individualistic, but essentially collective and social. There must be increasing recognition that the value of human life is to take precedence over the value and interests of property. It is essential to the Catholic Church that it be a true democracy—manifestly, before men's eyes, a spiritual republic, the commonwealth of man."

Bishop Lines of Newark: "There are practical questions which every one must ask. What can I do in the particular parish in which I live? Well, you can look into the living conditions of the great majority of the people in your community and see wherein they need to be changed for their good. We must not bind the church entirely with the privileged people, but must remember that the unprivileged have as much right to the church as have the privileged."

Bishop Guerry of South Carolina: "We are endeavoring through social service to save souls. We need to deal with these brethren who are the champions of social righteousness and social justice in the church with great consideration and sympathy. They are the pioneers of a great movement which means much to the church of the future. They are the connecting links between the church and the great masses of the laboring people, who have become estranged from the church and who are seeking to find a remedy for the evils that surround them, in Socialism or in some other scheme for the reconstruction of the present social order. It is such men as these who are in a position to go to these estranged and separated brethren and say to them in the name of Christ, 'What you are striving to accomplish is included in Christ's great conception of the Kingdom of God.' It will be through some such movement as this represented here on this platform, and by the social forum tent, outside this building, that we are going ultimately to win back to the church the estranged and separated classes. I say then that the church accept this program of a kingdom of righteousness on earth as the one paramount issue, the one supreme end for which she was sent into the world."

For the Joint Commission on Social Service, its general secretary, the Rev. F. M. Crouch, reported social service commissions to have been established in all the eight provinces and in eighty-one dioceses, thus recognizing social service as on the safe dignified footing with missions and religious education. The commission itself, which includes in addition to distinguished bishops and clergymen such well-known leaders of the social movement as Robert A. Woods, Mrs. V. G. Simkhovitch, John M. Glenn, Vida D. Scudder of Wellesley, H. D. W. English of Pittsburgh, Jeffrey R. Brackett and Clinton Rogers Woodruff, registered in its triennial report the same advanced positions in the policy of the church as were taken in these platform expressions.

Thus it was stated that "the church must work not in duplication of the secular social agencies, which must result in a waste of time, energy and resources, but to cooperate to the fullest possible extent, not only with other congregations of whatsoever communion, but with recognized secular agencies operating in its own community." And further, "it is not the aim of the church's efforts in social service to train experts to take the place of those already trained by secular schools of philanthropy and practical experience in secular social work, but to make clear the meaning and bearing of these efforts and to educate its members to cooperation." "Religion must be the driving power in social service, the end and aim of which should be the cultivation or develop-

ment of a spiritual manhood and womanhood in an age when social technique is perhaps beginning to obscure the original spirit and motive of social endeavor."

Conceding that those desiring something more rigorous and vigorous than the mere amelioration of individual and social ills have discredited the church because it has too exclusively interpreted Christian love as "charity," the report insists that justice is but another phrase for love. This would seem to mean that the church has, and must have, something to say with regard to the right to labor and to livelihood; the right of all workers to adequate wages, reasonable hours and decent conditions of employment, without being subjected to needless overstrain, physical, mental or moral; the right of women workers to due consideration and protection, the abolition or effective regulation of child labor; the right of all workers to organize in self-defense, so long as their collective action does not constitute a distinct aggression upon the rights of the public; the right of all men who are reasonably industrious and conscientious in daily toil to wholesome living conditions, necessary recreation, education which will fit them and their children to improve their condition and their right to expect these things of employers and government, even if that means decrease of profits.

Social Service Tent and Socialist Mission

NEVER in the history of the Episcopal Church has there been so manifest an interest in all that social service stands for. Next to the convention hall was a social service tent, where an open forum was conducted daily. Across the street in the Jewish synagogue was a Socialist mission.

The subjects discussed in the forum and the speakers were as follows: What is Social Service? the Very Rev. Bernard I. Bell, dean of the Cathedral, Fond du Lac, Wis.; The Church and the Workers, the Rev. J. Howard Melish, rector of Holy Trinity Church, Brooklyn; Commercialized Vice, the Very Rev. Robert K. Massie, dean of the Cathedral, Lexington, Ky.; Social Service in a Suburban Parish, the Rev. George Craig Stewart, rector of St. Luke's Church, Evanston, Ill.; The Church's Responsibility to the Foreign-born in Rural Districts, the Rev. John N. Lewis, rector of St. John's Church, Waterbury, Conn.; Christianity and Force, the Rt. Rev. Paul Jones, bishop of Utah; The Church's Duty to the Unemployed and Poor of the Community, the Rev. Richard L. MacCready, rector of St. Mark's Church, Louisville, Ky.; Patriotism and the Kingdom of God, the Rev. W. Russell Bowie, rector of St. Paul's Church, Richmond, Va.; Some Practical Agenda, the Rt. Rev. Charles D. Williams, bishop of Michigan; The Problem of the Unemployable, the Rev. Ernest M. Stires, rector of St. Thomas' Church, New York; A White List of Investors, the Rt. Rev. Benjamin Brewster, bishop of Maine; The Deepening of the Social Conscience in the Individual, the Rev. William Mercer Green, rector of St. Andrew's Church, Jackson, Miss.; The Problem of Heredity, the Rev. John H. Griffith, rector of St. Mary's Church, Kinston, N. C.; Exodus from Poverty, How? the Rev. William H. Talmage, Flandreau, S. D.

But social service at the general convention is not to be measured by mass meetings and sermons and speeches, for social service is not a program but a spirit, not a new gospel but a fresh emphasis, not an abandonment of the cross but a return to the central principle of Christianity that even "the Son of Man came not to be ministered unto, but to minister and to give His life a ransom for many." That note was the preeminent one from first to last in the general convention.

The Open Shop in San Francisco

By *Harry F. Grady*

ORGANIZED labor is being assailed in its greatest stronghold. San Francisco, long the home of closed-shop unionism is the scene of a conflict, with the Chamber of Commerce and its affiliations on one side and the organized labor movement on the other.

The Chamber of Commerce opened the campaign in July with the statement that the people are determined to rid themselves of the "tyranny" of organized labor. It declared that it has no quarrel with unionism in itself, that it stands for the principle of organization among workers, that it is not opposed to collective bargaining, but that it is determined to establish the principle of the open shop and the supremacy of law and order, using every power at its command against the use of violence, intimidation and coercion (including picketing) in strikes.

An executive committee of five, known as the Law and Order Committee, has been appointed and a fund of one million dollars raised to prosecute all cases of law-breaking on the part of strikers, and to provide armed protection for the non-union men who are "asserting their right to work without being forced to join the union."

Spokesmen for the chamber maintain that collective bargaining is not dependent upon the closed shop, that if the unions are properly conducted they can build up a strength of organization and morale among their members which will make it possible for them to secure higher wages and shorter hours simply by depriving or threatening to deprive the employer of their services. It insists that labor politicians and officious and arbitrary business agents are obstacles not only in the way of industrial development, but of the true progress of the workers' cause.

The significance of such assertions is clear to trade unionists. Despite the protestations of no antagonism to "legitimate unionism" the labor men understand the open shop desired by the Chamber of Commerce to be the kind that is open only to men who do not carry union cards. They are sceptical, too, about the law and order planks. At the very meeting where this issue was raised, Captain Robert Dollar, steamship owner and leading opponent of the Seamen's Union, told his hearers, according to a San Francisco paper, that in previous experiences of his own, "quietness had been secured in a few days when union men went to the hospital in ambulances."

Another paper ascribed the following remarks to Captain Dollar: "'Let's fight,' he urged. 'If a peaceful workingman is beaten up by strikers, then beat up two strikers in turn.'"

A Campaign Dating Back to 1914

ALTHOUGH the occasion for launching this drive against organized labor was a strike on the water front in June, everyone familiar with the situation knows that it was planned long before that. A union-shop fight waged in Stockton early in 1914 was the opening wedge, but the real clash was to come in San Francisco, labor's stronghold. First the European war, and then the exposition of 1915 postponed the beginning of hostilities until this year.

Three events, up to the present time, have had a notable bearing upon the campaign. First, the strike of the longshore-

men offered a propitious beginning for the movement. It was accompanied by just the elements most suited to the alienation of public sentiment. There was violence, intimidation, and what is even more serious, the breaking of contracts with the employers. The situation is one that could not be justified by any true friend of labor, and indeed the Riggers' and Stevedores' Union has been severely criticized by the Water-Front Workers' Federation and by Secretary of Labor William B. Wilson. Part of the wage increase demanded was finally conceded, but much loss came to the workers and to the business interests of the city because of a strike that could have been averted if it had been intelligently and fairly managed.

Just as the open-shop movement, stimulated by the bad tactics of the longshoremen, was getting under way, there came a lockout and strike of the culinary workers, following a refusal of their demand for an eight-hour day. Coming, right on the heels of the big "law and order" meeting, it gave the Chamber of Commerce an opportunity at a single blow to weaken organized labor and to strengthen the spirit of solidarity among employers.

Letting the Restaurants Bear the Brunt

THE LAW AND ORDER COMMITTEE became active in inducing the restaurants to bear the brunt of the struggle for the open shop. Although, at first, there was a disposition on the part of a number of proprietors in the Restaurant Owners' Association, even some of the large ones, to concede the eight-hour day, to force these unwilling owners into the fight, the club of credit was used. The large wholesalers cooperated to bring pressure to bear on the restaurant man who would not put the open-shop card in his window. On the other hand, financial aid was promised from the war fund to any restaurant which might be injured by the open-shop fight, and property owners pledged two months' free rent to restaurants which might need it. Coupon books good in all open-shop restaurants were sold to business men and their employes, the former leaving their clubs in groups to patronize open-shop restaurants. Thus in every way restaurant owners were forced into and kept in the Restaurant Owners' Association.

The third event that fitted into the campaign of the Chamber of Commerce was the bomb explosion of July 22. The "Preparedness Parade" was passing down Market street when the explosion occurred, killing nine people. Organized labor had been hostile to the parade and had advised its members not to march. The crime, therefore, whatever be the true explanation of it, lent itself very effectively to the plan of the Chamber of Commerce to discredit the labor forces of San Francisco and to impress upon the city at large the necessity for its law and order program.

The community was terrified. A mass meeting of indignation was called and great determination expressed to find the guilty parties. A number of labor people were arrested and five finally indicted, one a woman.

Upon the indictment, the Chamber of Commerce made the charge that this crime was of a piece with the violence that had gone on in the water-front strike. It acted on the assumption that any such crime must have been committed by labor people

and declared that it was this sort of violence in the labor movement that it was seeking to eliminate.

Largely because of the zeal of the enemies of organized labor, the first suspect, Warren K. Billings, has been convicted and sentenced to life imprisonment. So scanty was the evidence that the district attorney, in summing up, asked for a verdict of guilty, not because guilt was proven, but on the ground that the convicted man might turn state's evidence in the hope of securing a pardon. In other words, it was the third degree on an unprecedented scale.

These, then, are the outstanding facts in the situation to date. As to the justification for the action of the Chamber of Commerce, it must be granted readily that labor has made mistakes. There is no doubt that in some of the labor unions of San Francisco injustices to members and to employers occur. There is no doubt also that the boycott is a form of coercion. Irrespective of their interest in the cause of the strikers, people do not like to patronize a picketed restaurant.

But the abuses of unionism can be summed up in terms of inefficiency of organization and leadership. Criticism cannot be carried to the principle on which it is founded, nor can it be traced to the closed shop and the unwillingness of a union man to work with one who does not share the responsibilities, financial and moral, of the organization.

The weakness of the position of the Chamber of Commerce lies in the fact that its move is not disinterested, as its leaders would have you believe. Whatever sentiments the employer may express about the welfare of the worker, there is always implied a welfare which does not encroach upon profits, or his complete control of his business. He fears the power of organized labor and resents the demands which it makes. Concessions of wages and hours are as nothing to the power to enforce those demands which labor has shown. Hence, the San Francisco Chamber of Commerce will theoretically concede anything in the matter of improved conditions for labor, if only labor will not show its teeth and fight.

If the clash is thus understood we will see that the issue is one of ultimate aims, and not, as the Chamber of Commerce insists, one of methods. That body is either knowingly or unknowingly clouding the issue. As a matter of fact, the same accusations which the Chamber of Commerce makes against unionism can be made against the Chamber of Commerce. It is using violence, coercion and the boycott. If unionism is offending against any fundamental principles of right and justice, the Chamber of Commerce, in its law and order committee, is offending in turn against those same principles.

In the water-front strike, for instance, two union men were murdered by gun-men. Neither of these murders was provoked. When the gun-men were brought to trial, Chamber of Commerce lawyers were there to defend them. The labor man sees no essential difference between the violence which he may use to protect his right to work under the conditions which he deems fair, and the violence of an armed guard who is paid to oppose him.

Chamber of Commerce Lawyers Active

IN THE CULINARY WORKERS' STRIKE, a dozen or so pickets were charged with disturbing the peace. These charges were usually based on trivial acts, such as shouting their admonitions too loud. But in this same strike a number of other arrests were made at the instigation of the unions for reasons more serious than disturbing the peace. There are three cases of private detectives in the employ of the Restaurant Owners' Association charged with assaulting pickets on their way home. Weapons were found on all of these detectives.

Indeed, the Chamber of Commerce lawyers have appeared as special prosecutors in all cases of arrest of pickets in both the water-front strike and the culinary workers' strike, and as defenders of the law-violators employed by their own members. These attorneys have on the one hand helped to secure the conviction of a picket for calling the cashier in a non-union restaurant a prostitute, and on the other have defended a non-union restaurant employer for calling a woman picket the same name. The conclusion is forced on an observer in San Francisco that law and order means Chamber of Commerce law and order.

Credit and Publicity Forces Mobilized

IN A LESS flagrant way the mobilization by that body of the economic, credit and publicity forces of the community represents a spirit of coercion and boycott of which it would be difficult to find a parallel. No non-union man was ever more directly coerced into the joining of a union than are the restaurants which, desiring to be independent and grant the demand for the shorter day, have been forced into the Restaurant Owners' Association.

To get control of the stevedores and teamsters, coercion is again being used. The Lumbermen's Association is pledged to get men from the American Stevedoring Company, a recent Chamber of Commerce creation, run on the open-shop basis. The Hardy Lumber Company, which is outside the association and employing only union men, is being subjected to every kind of pressure that the association and the Chamber of Commerce can bring to bear upon it. Though no strike is threatened by the teamsters, the Chamber of Commerce is securing from business houses power of attorney to make or cancel draying contracts, so that all draymen will have to accept the open shop or go out of business should a strike occur. Some of the large draying firms have not even been consulted about the matter. But if the Law and Order Committee gets the complete control of draying that it seeks, an individual drayman's constitutional right to employ union men if he so desires will receive scant consideration. Coercion in these associations under the leadership of the Chamber of Commerce is upheld in the name of the ultimate welfare of the members. That is precisely the union man's justification for forcing his fellow workers into the union.

The control of the press by the Chamber of Commerce since the beginning of its campaign has been absolute. This power it holds through the medium of the big department stores, who threaten the withdrawal of their advertising should the papers not acquiesce in the open-shop campaign. Even the *Bulletin* and the *Daily News*, which have always been strongly pro-labor, have published nothing pertaining to the present labor situation that could be objectionable to the Chamber of Commerce.

If one will read the history of the Ludlow massacre and of the events immediately preceding, he will find that same appeal made by the business interests for law and order, the same protestations about the wrongs committed by labor, the same violation of all those principles and rights on the part of the employer himself. Yet there can be no solution of the labor problem, there can be no organization of our economic life among lines that will eliminate destructive strife, until there is an understanding, a sympathy and a generosity on the part of the employer toward labor that will make possible the creation of an industrial commonwealth that will be a credit to the business genius of America.

The present open-shop fight in San Francisco cannot be successful. If the employers were friendly to the unions, anxious to work toward their upbuilding as in England, the

closed shop might not be necessary. But as long as their spirit continues as it is now, the unions will be forced to fight. The Chamber of Commerce has consistently gone on record as opposed to legislation for remedying the condition of the workers. Its whole labor policy has made very clear to the unions that they must remain militant if they are not to be crushed.

A splendid opportunity exists for the Chamber of Commerce to recognize the legitimate claims of labor, to further

those claims by aiding necessary legislation and to work for the correction of abuses by whole-hearted cooperation with the best leaders—in a word, to adopt the policy that the most enlightened business men are putting into practice in their individual plants. But instead it has chosen the course of trying to break the strength of organization by establishing the principle of the open shop, which destroys the basic principle upon which trade unionism is organized—the power of collective bargaining.

Charity Patchwork and a Program

A Review of Commissioner Strong's Report

By Winthrop D. Lane

OF THE SURVEY STAFF

THE real meaning and purpose of Charles H. Strong's special inquiry, at the request of Governor Whitman, into the theory and practice of New York's state administration of charities has never, probably, been as widely understood as it deserves. The newspapers, if they grasped its meaning, eschewed it as not news. Succulent stories of institution misrule, charges of cruelty and neglect against children, rancor between individuals, imputations of perjury and criminal libel—these were the aspects of the affair that caught their nostrils.

The truth is, of course, that Mr. Strong has helped to solve one of the most important and vexing problems of government. Civilization is in some degree measured by a people's care of its unfortunate wards. In New York one-third of the total state appropriations is spent on the three great institutional services—the prisons, the hospitals and the charities. The last of these were the subject of Mr. Strong's inquiry. He had before him a field involving the welfare, if we include all who in any way come under the inspection of the state, of 90,000 needy and defenceless persons. He has produced a report and a series of constructive recommendations that may well serve as a guide to the legislature for years to come. Its analysis of many current social ills applies to other states as well as to New York.

Mr. Strong was interested mainly in two things: Whether the present system of administering the eighteen state charitable institutions was the best that could be devised, and whether the chief supervisory agency, the State Board of Charities, was efficient in supervising private charitable institutions that care for public wards, especially those that receive money for the support of 25,000 dependent children.

Many difficult matters thus pressed upon him for consideration. Was the general system of administration that has grown up since the creation of the state board in 1867, and especially since the adoption of the constitution in 1894, good or bad? Was the state securing as administrators of this system men who were informed and alert in the things they had to do? Was an enlightened public opinion and a developing science of mental deficiency being followed in the care of the feeble-minded? Was the state adhering to the best practice in its protection of dependent children? Was it aware of the special difficulties presented by the lawbreaker who is mentally irresponsible? Was it combining humanity and economy in a way to secure the maximum of both?

The SURVEY has already published, in its issue for November 4, Mr. Strong's conclusions on the controversy between the New York city Department of Public Charities and the State Board of Charities. That he found conditions in several private child-caring institutions "little less than public scandal and disgrace," though he did not find any institutions "unfit for human habitation," and that he found the state board responsible for permitting such conditions to grow up and continue, must be regarded as a judgment in favor of the city as complainant. At the same time, he did no more than justice to President Stewart's long and devoted, even if somewhat timid, services on the board, and to those of several other members.

This, however, is now the least interesting part of his report. It is more important to consider his program for the future.

Mr. Strong has built middle ground between the advocates of a state board of management and control for state charitable institutions, and the advocates of a board limited to inspection and supervision. For years the controversy over these two forms of administration has been acute. Amos G. Warner pointed out in his American Charities twenty years ago that the dispute seemed likely to settle itself by a gradual modification of both forms. A tendency was noticeable, he said, "to ingraft certain executive duties . . . upon advisory boards without changing their general character." This tendency Mr. Strong has furthered. He found the existing State Board of Charities in New York ineffective in form and inept in personnel. He has proposed changes that will, if adopted, give it direction, a greater degree of expertness in membership, and more drive in its recommendations.

The story of what has happened to the state administration of charities in New York belongs to the field of dramatic tragedy. The boundaries of visitational powers over the three departments of institutional service already mentioned were marked out explicitly by the constitution of 1894. With respect to the charities, the management of each institution was left in a local unpaid board of managers. The State Board of Charities visited and inspected them. The comptroller audited their accounts.

Bit by bit this arrangement has been interfered with, confused, tied into one complexity after another. The power of the boards of managers has been whittled away. The state board has been shifted from this duty and that, until there has

sprung up a multiplied control and division of responsibility that has well-nigh driven institution superintendents mad. From the adoption of the constitution to the legislative session of 1915, says Mr. Strong, "there was enacted such a mass of legislation . . . that it defies my powers to tell just where the responsibilities for the discharge of many important functions lies. . . . It seems to have been a process of placing one layer upon another layer, until the patchwork has grown thick. Institutional heads in bewilderment turn not to the law, but render obedience unto any and all who make demand."

Consider some of the absurdities of this process. In 1902 the legislature created the office of fiscal supervisor of state charities. It imposed upon him the revision of detailed estimates of institutional expenses prepared by the institution heads. This power had for several years been exercised by the comptroller. The state board, however, had been consulted about institutional expenditures and this advisory function now ceased. The fiscal supervisor became, in effect, the fiscal dictator. No part of any appropriation could be spent until he had approved the estimates in detail. Increasingly he became a factor in the actual policies and development of the institutions.

This arrangement has not worked out well. The estimates come from the institutions quarterly. They state not only the amount required for the salary of every employe, but the supplies and equipment needed for the ensuing quarter. The supervisor may grant or refuse any or all of these items and increase or decrease the amount or price and alter the quality or kind. How intelligently he has exercised this power Mr. Strong illustrates as follows:

"One institution estimated in June for a barrel of hominy. The fiscal supervisor disallowed it, for the all-sufficient reason that 'there was no purchase last year in June.' Another estimated for a bottle of ink. The item was suspended because 'the size of the bottle was not stated.' One institution estimated for the usual quantity of typewriter paper. Item suspended without explanation. An estimate for a much-needed forty-five-cent ruler was made three times, and every time disallowed without explanation. An estimate for seventy-five cents' worth of knives was reduced to fifty cents, and the delay caused an express charge upon these knives of thirty-three cents. . . . These illustrations might be multiplied indefinitely."

Institutions in the Grip of a System

NOT ONLY in trivial matters did the arrangement break down. By means of this estimate system, says Mr. Strong, "the institution is gripped tight. It is in this way that the fiscal supervisor determines the dress and diet of the inmates, the books they shall read or study, the number of teachers they shall have, the extent and kind of the hospital equipment; in short, in the last analysis, administers the institution and checkmates, if he desires, the State Board of Charities as to any recommendation it may make for institutional management."

The power to control expenditures is the power to control policies. This power was, of course, intended to be vested in the local boards of managers, under the supervision of the State Board of Charities. Yet the annual reports of the supervisor have contained many recommendations concerning the discipline, training and entertainment of inmates and the desirability of closing Bedford Reformatory, and have even declared that, after all, the fiscal supervisor should be more concerned with the welfare of the wards of the state than with the cost of the institutions.

The office of supervisor has not done the things for which it was established. It has not equalized per capita costs of maintenance among the institutions. It has not put an end to unbusinesslike and extravagant requests for improvements by local boards. But it has done the mischief that was foreseen. From the hour of its creation, says Mr. Strong, "the power, dignity and influence of the State Board of Charities began to wane."

An Inefficient Commission

THIS IS but one of the layers placed by the legislature upon the administrative patchwork. Another was the Salary Classification Commission. Created in 1899 to classify into grades the officers and employes of institutions and to determine salaries and wages, this body, Mr. Strong finds, has done a bad job. It was composed of the comptroller and the president of the State Board of Charities, two busy men. Lack of staff, infrequency of meetings and sheer delay have characterized its work. Institutions requesting new positions have been put off for months and in one case for years; competent employes, unable to wait for the commission's decisions, have accepted better places elsewhere; salaries have remained, on the whole, not only poorly graded, but lower than the kind of work demanded.

Moreover, the legislature, this year, constituted itself a salary classification commission. Ignoring the schedules of the commission proper, it adopted its own titles, maximum rates of compensation, and even fixed the number of positions under each title in the institutional service. It created a new budget-making agency. Nothing is left, says Mr. Strong, to justify the continued existence of a commission that has few important duties left to it.

Not content with putting into the hands of the fiscal supervisor, in 1902, power that detracted from the state board, the legislature in that year created also a Building Improvement Commission. It took away from the state board power to approve plans and specifications for new buildings and improvements and vested it in this commission. The governor was made a member and was called upon to give his time to the careful consideration of such trivial matters as a shack over a root cellar, plastering in a toilet room, the resetting of register frames for eight dollars, one extra drop light, a pig-gery and a hen house.

The commission seems to have met first in 1905, although created in 1902. Building that went on during the interim must have been *extra* legal, says Mr. Strong. It has met only irregularly since. The president of the state board characterized it as a "useless commission" and Mr. Strong agrees with him.

Another bit of patchwork was the creation in 1913 of the Commission of Sites, Grounds and Buildings. Here again, ineptness has accompanied apparent laziness. In its first year the commission did little, in its second and third almost nothing. "Meanwhile," says Mr. Strong, "local boards of managers have gone on selecting sites for new buildings. The work could not stop; the commission has not met; the commission has been ignored." All of its original appropriation, amounting to \$80,000, lapsed, except \$572.33.

In 1912 a Board of Examiners of Feebleminded, Criminals and Other Defectives was established. (This is the only instance in the law known to Mr. Strong where criminals, as a class, are called defectives.) The purpose of the board was to go among the hospitals for the insane, the prisons and the state charitable institutions, and decide whether operations for the prevention of procreation on any of the inmates were

desirable. If so, a member of the board was to perform the operation. The board was composed of a surgeon, a neurologist and a physician.

Little Work Done But Expense Continues

NOT A SINGLE OPERATION has been performed. The board has examined 200 inmates, about one-half of whom are women, and has listed all of them as proper subjects for the operation. Actual performance awaits a test case brought to determine the constitutionality of the law. Meanwhile the work is proceeding daily at the rate of \$10 per diem and expenses for each member of the board. Mr. Strong found that \$16,700 had already been spent. The board had not examined a single case in any other state where the operation had been performed. That it should recommend for operation all whom it had examined Mr. Strong thinks amazing, in view of the limitations of the statute upon those upon whom the board is permitted to operate.

All this cumbersome piling up of one piece of machinery after another Mr. Strong finds and condemns. How he solves the riddle we shall see in a moment. Let us now turn to his analysis of the earliest and still the most important agency in the state's charitable administration, the State Board of Charities.

The SURVEY has already published his conclusion that this board "lacks power; it lacks vision; it lacks drive. It does not know its real job. It is not doing its real job." He found a board composed of twelve members, serving without pay for eight-year terms. The law requires them to be appointed from each of nine judicial districts, with three from New York city. No specifications of their qualifications are mentioned in the law; it is not surprising, therefore, that Mr. Strong found many of them unqualified. Here is part of the record on this subject:

"With a very few exceptions, the members failed to remember the particular committees of which they are members, probably because so many of the committees never meet. One member thought there were 48 state institutions in his judicial district alone. (There are only 18 in the entire state.) One did not know that the state board cannot visit such private institutions as are not in receipt of public aid. . . . Many of the members have no idea of the cost of the board to the state; one would not like to say it was as much as \$25,000 a year; another, who was on the committee on finance, put it at considerably less than \$30,000. (For salaries and traveling expenses alone it was, in fact, over \$97,000 in 1915.) One could not say whether the board had anything to do with appropriations for state institutions. (This is one of the most important duties of the board under the state charities law.) One who had been a member of the board for four years was not sure of the names of some of the other members of the board. Two did not know that the board had anything to do with the Indian poor. (This subject is dealt with at length in every annual report.) One never had visited any one of the eighteen state institutions, although a member for four years. One thought the duties of the fiscal supervisor should be discharged by the attorney-general. (The duties of the fiscal supervisor are set forth in the state charities law and it is a matter of common knowledge that they relate to fiscal affairs only and that the chief law officer would probably be the last in the state who should be called upon for this.) Many of the members did not know that the board possessed any power with respect to transfers of inmates from one state institution to another state institution. (A grant of this power was recommended to the legislature by Governor Higgins, and when it was given it was regarded as of large importance.) Most of the members thought that the state board

still possessed the power to approve or disapprove plans and specifications for state institution buildings."

There is three or four times as much more of this in the report.

Inside the board the prevailing conception of the board's duties is found to be an easy-going one. As one member put it: "It is not the habit of the board to take aggressive action in following out its recommendations." The board's consideration of reports on private institutions and its fixing of ratings for the institutions were so rapid as to make clear that these important matters were left almost entirely to subordinates.

How far this looseness of thought and procedure is inevitable in a board with only supervisory powers and having no measure of actual management of institutions is a difficult question. Indiana, with a board of supervision, has achieved a much stronger and more serviceable policy. So also has Massachusetts. Mr. Strong is convinced, nevertheless, that radical changes are necessary in the character and method of appointing the New York board. In this most students of the New York situation, outside of the personnel of the present board, agree with him.

The Board Mr. Strong Recommends

HE DOES NOT WANT, however, a board of control like the Iowa board. His desire is "to convert a weak board into a strong board," to create an "authoritative advisory and supervisory board, with sufficient administrative power to carry it through, and at the same time to cut out the vicious circle of interference by other administrators." The board should become, he believes,

"a board of nine, of whom at least one should be a woman, and of whom three should be paid and six should not be paid, appointed by the governor from the state at large, to serve during good behavior and removable by the governor on notice for cause; special qualifications for membership to be described in the law, to the end that all the functional activities of the board should be discharged by persons with special training therefor; the three paid members to be the president of the board and the chairman of the two new bureaus within the board, namely, the Bureau for Mental Deficiency and the Bureau for Dependent Children, these three members to be designated as president and bureau chairman, respectively, at time of appointment by the governor. The duties to be imposed upon these three members will require that they give all their time to the service.

"I recommend specification in the statute of specific qualifications for certain members of the State Board of Charities, with special reference to the several classes of state institutions supervised by the board, such as a penologist, or one skilled in the reformation of the delinquent; an educationist; a physician with special knowledge of tubercular diseases; a physician who is a general practitioner, with special reference to hospitals and dispensaries; a lawyer; a physician with special training in psychiatry, to serve as chairman of the new Bureau for Mental Deficiency; a specialist in the care of children in private institutions and in foster homes, to serve as chairman of the new Bureau for Dependent Children; and one generally conversant with dependency and the several forms of poor relief."

The administrative duties of the board should be imposed, Mr. Strong believes, upon the president, in the belief that efficiency in such matters "calls for a one-man service."

As steps toward giving the board real power Mr. Strong would expressly grant it authority to adopt rules and regulations for the reception and retention of inmates in state charitable institutions. This power it already has with re-

spect to private institutions receiving public aid. He recommends, also, that the board be compelled by statute to issue, when warranted, its own affirmative certificates of compliance that private institutions have lived up to its rules and regulations; these certificates should become, he thinks, a prerequisite to payments to the institutions by the local disbursing officers.

He recommends other revisions in the state charities law and the poor law and is "much impressed" with the suggestion that the town overseers of the poor should be abolished and that both outdoor relief and institutional control should be vested in one superintendent of the poor in each county.

In recommending a new Bureau of Mental Deficiency within the board, Mr. Strong declares that "mental deficiency is today perhaps the greatest social problem that confronts the state." He quotes Dr. Walter E. Fernald, of Massachusetts, that "there are reasons for believing that feeble-mindedness is on the increase, that it has leaped its barriers." He would prefer an independent department in the state government for the visitation and supervision of the feeble-minded, but says that it is beyond the power of the legislature to establish such a department. The duty of the new bureau would be to assume leadership in providing adequate state care for the feeble-minded until a separate department can be created.

To round out the care of the feeble-minded, he urges that an institution for defective delinquents be built without delay. The state has no such institution at present.

Mr. Strong makes no recommendation that would look to the elimination of public aid for the partial support and training of dependent children in private institutions. He is, of course, aware of the controversy that still rages over this question. The system of such grants, he says, "was regarded as entrenched by the leaders of the constitutional convention of 1894. It certainly is not less so today. . . . The friendly would have it remain always; the unfriendly—at least, the thinking unfriendly—find no practical way to be rid of it." Some children, he believes, could not and should not be cared for outside of good institutions.

Normal Children Belong in Families

NEVERTHELESS, he is cordial to the sentiment that "after all has been said in favor of the good institution that can be said, normal children should not be deprived of a wholesome family life except for reasons that are compelling." This means, first, the preservation, wherever possible, of the natural home of the child; secondly, the transfer of a normal young child from the natural home to a good foster home instead of to an institution; and, thirdly, the prompt placing-out of such child in a good foster home, either free or boarding, where it has first entered an institution.

It is partly this belief in the placing out of dependent children that leads him to recommend within the reorganized state board a new Bureau for Dependent Children. The chairman of this bureau should be one of the paid members of the board with special qualifications, he thinks. The functions of the bureau would be, subject to the approval of the board, to "develop new and reasonable standards of child care in the institutions; promote the placing-out of certain classes of chil-

dren in the family home; make uniform the institution methods of placing-out; adopt measures to lessen the mortality rate in founding asylums, such as to reduce the number of surrenders of infants to the asylums by mothers who could be aided to care for their children in their own homes; create and advance new measures of outdoor relief, in order to preserve for children their natural home; persistently stimulate, by publicity and otherwise, an increase in financial support for the institutions, both from the public treasury and the private benefactor, to enable the institutions to conform to reasonable standards of child care; and the chairman of this bureau will aid the president of the board in obtaining appropriations needed to meet the imperative demand for enlargement of the inspectorial staff of the board."

To Abolish Five Officers and Commissions

THE FIVE OFFICERS and commissions described at the outset as having hampered or confused the work of charitable administration Mr. Strong would abolish entirely. He would give to the state board the fiscal control of the eighteen state charitable institutions and the other duties now performed by the fiscal supervisor, leaving the power of audit to the comptroller, and he would entrust the discharge of these duties to the president of the board. He would modify the vicious estimate system, requiring less detail in allotments and allowing some latitude of action to the institution. He would secure the benefits of joint purchasing for the institutions, and of salary classification, by a standing conference committee consisting of the chairman of the state hospital commission, the superintendent of prisons and the president of the State Board of Charities.

The duties of the Commission of Sites, Ground and Buildings and of the Building Improvement Commission he would transfer to the state board. If the work of the Salary Classification Commission is not adequately met in some other way, he would entrust it to the standing conference committee already mentioned. If operations for the prevention of procreation are desirable, they can safely be entrusted, he believes, to the several institution authorities and their expert staffs.

Mr. Strong would restore to the state board the power to visit and inspect private charitable institutions not in receipt of public funds. This power was exercised by the board up to 1900. In that year the Court of Appeals declared that it did not have such power. Mr. Strong believes that "a private charity is a public trust and should be amenable to reasonable state supervision." He would include in this new grant of power all charitable institutions and societies making public appeals for funds.

These, in essence, are Mr. Strong's major recommendations. He has seen clearly and stated with courage many of the fundamental lacks in New York's administration of charities. He has risen above the animosities that seemed for a time likely to rob his investigation of usefulness if not to stop it altogether. His constructive program has already commanded the respect of those who are most familiar with his field of inquiry, and it will command their assistance. Meanwhile, parts of it may well serve as a text-book for more than one state with large numbers of helpless and dependent wards to care for.

“The Truth About Thomas Mott Osborne”

A Reply to Mr. Lane

By *George Foster Peabody*

NOT so very long ago, two honorable and estimable gentlemen gathered from every quarter of the United States facts as to how the election was going. Each believed he had every fact that bore upon the situation. Then each announced that his candidate was certain to be elected. Each was sure that he was right, and yet subsequent events seem to prove that one of them guessed wrong—or drew wrong deductions, if you prefer it that way. The facts were all right, as far as they went, but, unfortunately, neither of these honorable gentlemen had all the facts before him, nor did he interpret correctly the facts he had in hand.

All of which is by way of introduction to what might be called “The facts in the case of Thomas Mott Osborne, and proper deductions therefrom.”

First for the facts; and this is important, for while everybody knows the facts, so many people “know them wrong.” And since so many have been, and still are, wrong as to both the facts and the deductions from the facts, it was scarcely to be expected that the young and apparently inexperienced—and at times positively thoughtless—person who took it upon himself to settle the whole matter for the readers of the *SURVEY* should have been even approximately right. Unfortunately, Winthrop D. Lane, who wrote *The Retirement of Thomas Mott Osborne* for the *SURVEY* of October 28, started out by knowing a lot of things that weren’t true; added to that he knew a lot of things that were only half true, and still other things he didn’t know at all. Still he was able to write an article that would have been an important addition to literature on the subject of prison reform, but for the minor defects enumerated above.

I have known Thomas Mott Osborne for upwards of thirty years. I have had close association with him during that time in the very many relations developed by his extraordinary versatility and exceptional devotion to human welfare. I have made it my business, during past months, to make a careful study respecting the actual conditions of his administration as warden of Sing Sing prison, and I, therefore, feel obligated to throw some light into the dark corners of the *SURVEY*.

“His Friends Caused Him to Resign”

THE “genius of Thomas Mott Osborne” did not cause him to resign, as Mr. Lane says, nor have “those close to his work hoped that this tragedy would not occur.” On the contrary, his friends caused him to resign, and they urged him to resign for months before he finally accepted their advice. “Those close to his work” saw the impossibility of his position long before he realized it. They saw every effort of his superiors to discredit his work, to ruin him in the eyes of the public, to make “prison reform” a joke and a by-word, and they saw that the load was too heavy for one man to carry

alone. They told him so, and they told him that he could do better work outside of Sing Sing prison than he could as warden. He didn’t want to quit. He refused to quit under fire.

Then, when the attempt to besmirch his private character was defeated, and he came through victorious and vindicated, they told him that he should shift the burden. He believed that, with a new superintendent in office, he could accomplish the task he had set for himself. But it required the acts of the new superintendent himself to convince Mr. Osborne that, after all, his friends were right and that it was not for him then to push through the reforms that he had started.

But he had paved the way. There could be no permanent stopping of the forward march, and the friends of prison reform knew it. Even with strong elements of the administration opposed to prison reform, without human sympathy for the under dog, believing in “iron discipline,” and refusing to believe the reform of a man once a criminal was possible, the powers that hounded Thomas Mott Osborne and that were anxious to throttle his system and make the prison the football of politics didn’t dare go far against public opinion—to which even they are not entirely blind—and revert to the old system which they loved.

Mr. Lane quotes extracts from some of Superintendent Carter’s letters to Mr. Osborne. Perhaps he got them and his “deductions” also from Mr. Carter. One letter refused to allow the transfer of prisoners wanted as witnesses in Mr. Osborne’s behalf “to Salem county.” The proceedings were in Washington country—there is no Salem county in New York—but that little inaccuracy is immaterial when the others are considered. It has been the custom to transfer prisoners from one prison to another whenever a request came from an official for such transfer. The request, so far as I can learn, was never refused except in the case of Mr. Osborne. Only recently, at the request of the district-attorney of New York county, two men in the Tombs prison, under sentence to Sing Sing prison, and witnesses in the Rofrano murder case, were transferred to Clinton prison so that they would not come in contact with two other men, prisoners at Sing Sing, and also Rofrano case witnesses.

As for Mr. Carter asking Mr. Osborne “if he felt certain of the advisability of his court proceedings,” since when has the superintendent of prisons been authorized to stop the investigation of crime? and what interest had Mr. Osborne’s superiors in any efforts to prevent the punishment of his traducers if they could be found? Does Mr. Carter—and Mr. Lane—know that it is the duty of every citizen, whether holding an official position or not, to inform the district-attorney if he believes a crime has been committed? And if Mr. Carter did make such an intimation to Mr. Osborne—his subordinate—was he working for the best interests of the state, or under orders from some one who had a motive that wouldn’t bear close inspection? However, Mr. Lane may

have misquoted Mr. Carter, or may have misunderstood, as he has misunderstood in other things.

Next we find Mr. Lane all wrought up over the matter of publicity. Does he remember what happened to Mr. Osborne and Sing Sing prison and the state administration in the early days of Mr. Osborne's régime, when the then warden also was very much opposed to publicity? The newspapers of New York city had many a good story that never happened, or if there was a story, the details were distorted, not because the papers did not seek the truth, but because they got their information from the wrong source. The warden refused to give out stories of happenings within the prison, and the local correspondent for the majority of the New York city papers informed him that he didn't care as he had a "pipe line" into the prison and could get all the information he needed.

Distorted stories appeared so often and so regularly that Mr. Osborne, for the protection of himself, the prison, and the state administration, accepted the advice of friends and told the facts whenever a reporter called upon him for information. As a result, the newspapers quit printing the distorted and exaggerated stories that came through the "pipe line" and they soon had a better understanding of the warden and his work. Naturally, not only Mr. Osborne, but also all his friends who knew the situation, felt that the order of the superintendent was not for the best interests of the prison administration, and anyhow it appeared that the superintendent was not averse to a little pleasant publicity for himself. The newspapers had just come to see the real inside of Sing Sing prison, and if they were to be denied access to the news to which they were entitled, they were certain to accept the misinformation that would have to come through the "pipe line" from disloyal guards and others who had axes of their own to grind.

Now we come to the terrible record of escape from Sing Sing prison that has been worrying a lot of people—including certain persons styling themselves friends of the warden. There had been ten of them. Admitted. Prisoners say that Sing Sing is the easiest prison to get out of in the country. It's a wonder more don't escape. There had been as many as twelve escapes in one year before the coming of Warden Osborne and the Mutual Welfare League. And included in the ten escapes that bothered Superintendent Carter so much were "Tough Tony" Mareno and "Pete" Cullen, both of whom "saw the error of their ways" and returned alone and unshackled to take their medicine. Also included was a man who got as far as the roof of the bakery, was caught by a member of the Mutual Welfare League and brought back, and another who "stowed away" for three days and was caught by a guard as he was about to leap into the river. Then there was the man Shillitani, who was in the death house, which is run under the old system and was never taken over by the Mutual Welfare League. He shot two keepers, escaped as far as the Ossining hospital, and was back in the prison in the course of a couple of hours.

The Long-Term Men Who Were Trusties

THE DECREE that long-termers should not be made trusties is another point on which the friends of Mr. Osborne and the clever young man from the SURVEY differ materially. As a matter of fact, the whole administration of Sing Sing prison was at least momentarily upset by this order. It meant that the warden would have to depend upon the petty offenders, the short-term men, incompetents for the most part,

to do his work in the offices and elsewhere where competent men were most needed.

Everyone who knows anything at all about criminology knows that, as a rule, the long-term men are of a higher type than the short-term men. They are more likely to be normal, to be loyal, to understand and appreciate decent treatment, and therefore less likely to try to escape. The records, I venture to guess, will show that more short-term men try to escape than long-term men. The short-term men usually are of the lower grade, pickpockets, sneak thieves and the like. Of course, Mr. Carter, being a "business trained man," as Mr. Lane says, had never made a study of crime and criminals, and he didn't know this. But men who have devoted years to this subject do know it, and they would rather trust the average long-term man than the average short-term man.

Mr. Osborne a Business Man

THE "business-trained man" quotation recalls the fact that all through his story, Mr. Lane indicates his belief that Mr. Osborne is not a business man and never has been. He is described as a sort of dreamer with no executive ability, and "official station is not the place for the exercise of his peculiar genius," quoting from Mr. Lane again. Of course, the fact that for some twenty years Mr. Osborne was president of the D. M. Osborne Company, which he finally sold to the International Harvester Company for some millions of dollars—making a good deal with such a man as my friend George W. Perkins—is no indication that he is a good business man and executive. As a matter of course he was requested to serve as a director in various banks, another evidence of his want of business ability, and added to that he served a couple of most successful terms as mayor of Auburn. To be sure, that isn't much of a record, but I would like to ask what large business my young, self-confident and satirical friend, Mr. Lane, was ever connected with, even in a minor capacity, that he should be so good a judge of executive ability? However, when one becomes a carping critic, it doesn't require much for him to carp over, and mere details of fact can be brushed aside as of no material value. On the other hand, Henry Ford, after a visit to the prison, remarked:

"Mr. Osborne, you must have had some business experience before becoming a prison reformer."

And Mr. Ford was less surprised at the administrative efficiency of Sing Sing after being told of the warden's business career of twenty years. Perhaps the readers of the SURVEY will credit Mr. Ford with a fair-to-middling notion of what business efficiency means and allow his opinion to offset that of Mr. Lane.

Here comes a point where friends of Mr. Osborne are compelled sorrowfully to plead guilty to one count. "He has shown himself to be a poor judge of men," says Mr. Lane and then he cites the case of Charles H. Johnson, former deputy. Guilty! If Mr. Lane had known just a little bit about Sing Sing prison, Thomas Mott Osborne and his former deputy, he would have left Mr. Johnson's name out of it. Mr. Osborne did make a mistake when he made Mr. Johnson his deputy; he was a poor judge of men in this instance—he gave too much weight to recommendations—and his friends found it out long before Mr. Osborne was willing to admit his mistake.

When Mr. Osborne was told first by a newspaper reporter that Mr. Johnson—who was paid by the warden personally, not by the state—was not loyal to him, he refused to believe

it. That was after Mr. Osborne had recommended Mr. Johnson to Kent Hubbard to be head of the Cheshire, Conn., reformatory. Mr. Hubbard accepted Mr. Johnson on Mr. Osborne's recommendation. He was to carry the Osborne system to the boys at Cheshire. But he failed. Mr. Hubbard, who has had large business experience, proved to be a better judge of men than Mr. Osborne was, and as soon as Mr. Johnson's contract expired Mr. Hubbard pushed him out, back upon New York, where he has been given an official position for his "loyalty"—but it wasn't loyalty to the man who gave him his first big opportunity.

Much more might be said on this feature of the case, but I shall refrain. Let the trained investigator of the SURVEY go into it a little deeper and see what a colossal burden of ignorance he has been toting around with him.

The former superintendent of industries, L. C. White, is hardly worthy of passing mention. Mr. Osborne did dismiss him. Mr. Osborne, despite Mr. Lane's estimate of him, is a business man, and he had a right to feel assured of loyalty from his subordinates. No business man can succeed without confidence in his associates. No real business man will try to. Naturally, Mr. White had to go for the good of the administration.

I almost forgot to mention the dismissal of Superintendent Riley, "following a promise to Mr. Osborne," quoting Mr. Lane again. It was such a long, long time following that promise. And then it didn't come as a result of any such promise at all, but at the demand of Prof. George W. Kirchwey, who was then acting warden, while Mr. Osborne was fighting a gang of enemies that would put most of the men in Sing Sing to shame for the littleness of their crimes. The most casual reader of the newspapers should know more about that affair than Mr. Lane seems to know.

Mr. Riley ordered the removal of the leading spirits of the Mutual Welfare League from Sing Sing to Clinton. Dean Kirchwey took a train for Albany and Mr. Riley went to Sing Sing to see that his order was obeyed. What Dean Kirchwey said to the governor has never been recorded in the public prints, but it was enough. The governor at last took the action at the demand of Dean Kirchwey that he refused to take or neglected to take at the request of Mr. Osborne's friends prior to that time, and I have no doubt that Dean Kirchwey was among those who had advised the governor long before that prison reform was impossible with Mr. Riley as superintendent.

Some Achievements at Sing Sing

THE "indictment" of Mr. Osborne by his "good friend" Mr. Lane, I have tried to answer to the best of my ability, though I admit that I am not a trained investigator who can ferret out things that do not exist. Now, I would like to call attention to some of the things Mr. Osborne has done for Sing Sing prison, despite the fact that "official station is not the place for the exercise of his peculiar genius," according to the SURVEY's clever young man.

Mr. Osborne has given Sing Sing prison the best administration it ever had. From having the worst hospital in the country—or one of the worst—Sing Sing now has one of the best. The hospital was in a hopeless state when Mr. Osborne became warden. It was in the hands of persons so incompetent or so negligent of their high calling that the prisoners

refused to accept treatment except in the most urgent cases. Men with loathsome communicable diseases were not separated from other men free from those diseases. There were no reports of cases of assault, no examination as to the mental condition of the prisoners, in fact, nothing that is considered really important in modern medicine. Mr. Osborne reorganized the whole system and made it a model for other prisons to copy.

He reformed the purchasing department, sought bids in the purchase of supplies instead of giving the contracts to favored political friends as had been done theretofore. He reformed the accounting department so that there could be some real understanding of the finances of the institution. He put the guards on an eight-hour day instead of working them twelve hours daily. He reduced the per capita cost of the guards. He gave the prisoners three meals per day, instead of two. He increased the gross sales of the prison-made goods 11 per cent and the profits 100 per cent.

Unfriendly and Hostile Superiors

ONE OFFICIAL was forced out because he trafficked in drugs, another for being "irregular in his accounts," and another on charges of incompetency. He turned the whole institution upside down, and rottenness dripped from it. He didn't do all he could have done had he had decent and honest co-operation. He couldn't reform Sing Sing and at the same time reform the hearts of men who belong to an age that is past and gone. But he did more than any other man in the world could have done under the handicap of unfriendly and even hostile superiors, who tried to block every good deed he aimed to do.

Moreover, Mr. Osborne does not believe the men in Sing Sing are innocent lambs who should be turned loose upon a trusting community. He believes they belong right where they are until they are cured. He is no sentimentalist, though he thoroughly believes in honest sentiment as a moving power. He did say that Thomas Bambrick was innocent, and some pretty hard-headed men believe he was right when he said it. And the people who believed Charles Becker was innocent are almost without number.

There are many things that I would like to tell, as a friend of Thomas Mott Osborne and his system of prison reform, but perhaps I have said enough to convince the readers of the SURVEY that Mr. Osborne had good reason to be at least slightly annoyed at times by what he has had to put up with from his enemies—also from so-called "staunch friends"—both in and out of official life. Perhaps at times he did show a little evidence of "temperament." Perhaps "his psychology is quite understandable," once more quoting from the erudite Mr. Lane, but I am inclined to think that most of us would expose our "temperament" under such circumstances, quite as much as Mr. Osborne has.

I am a humane man, I hope, and yet if I were forced into the position of having to put the "brand of Cain" upon the forehead of a known enemy or upon the forehead of a so-called friend who exposed to the world his mistaken and ignorant idea of what he thought was my innermost character, under the guise of friendly admonition and honest analysis, I am afraid I would have to allow the enemy to go unscathed to leave his trail in the open, where all would see and understand, and call the "friend" forth to the branding.

COMMON WELFARE

COST OF LIVING AND COST OF GIVING

THE enormous increase in the prices of food is creating many pressing problems for relief and other philanthropic organizations. The New York Association for Improving the Condition of the Poor has been making a study of what this increase in the cost of food means to the poor families of the city. From a comparison of actual purchases of food made by families in November, 1915, and in November, 1916, it appears that the increase in these twelve months alone has been approximately 30 per cent; and prices of food had already increased in November, 1915, very greatly as compared with the period preceding that.

A typical family order with the actual retail prices and the percentage of increase in each food as given by the association is reproduced at the bottom of this page.

There has not been a decrease in the price of any item of food. The increase in price ranges from 11 per cent for milk to 20 per cent for bread, and 114 per cent for potatoes. As a result of the study, the Relief Bureau of the association has decided to increase by 25 per cent the daily allowance for food in the families which are given assistance.

Based on the studies of W. O. Atwater, Robert C. Chapin and others, with needed corrections for increases in prices which took place after these studies were made, the association in 1913 established 27 cents a day per unit as the basis for the relief which it allowed for food purchases. On the unit system, a workingman would be allowed the full 27 cents; a woman, eight-tenths of that; the children, fractions representing food needs at various ages. The per diem allowance for each unit has now been changed by the association to 34 cents. It has been the practice of the association in families in which there is tuberculosis to allow 30 cents per unit instead of 27 cents. This has now been changed from 30 cents to 38 cents, which will mean an added cost of ap-

proximately \$2,000 a month. The association estimates that the increase in the cost of food to all of its activities, including institutions, will be at least \$35,000 for the current year.

CAPITAL AND LABOR ON ARBITRATION

BALTIMORE and Washington, D. C., according to the railway time-tables, are just forty miles apart, but last week the distance between them was exactly equal to the mileage between the North and South Poles.

On Friday the National Council of the Chamber of Commerce of the United States met in Washington to consider the relations between the railroads and the public. The discussion came finally to the best methods of dealing with industrial disputes and reached its climax when Alexander W. Smith, of Atlanta, declared that compulsory service on the railways would not come under the prohibition of involuntary servitude in the federal constitution. Mr. Smith was applauded with enthusiasm when he said, "Involuntary servitude as a punishment for crime is not forbidden. Make it a crime to strike on public utilities, and the labor unions will have to go out of business, so far as public-service corporations are concerned."

On the same day, delegates to the convention of the American Federation

of Labor, meeting in Baltimore as representatives of more than two million organized workingmen, without debate and without a dissenting vote, declared themselves "unequivocally opposed" to any proposition for the settlement of disputes that involves the element of compulsion.

The Chamber of Commerce meeting was called to determine what recommendations should be made to Congress regarding changes in the existing laws affecting the railroads. This week the Newlands committee, which is to inquire into all phases of the railway question, began its hearings. The Chamber of Commerce wishes to take a referendum vote of its constituent members—the local chambers of the whole country—in order to determine what suggestions it should lay before the Newlands committee.

Congressman William C. Adamson, one of the chief speakers, defended the eight-hour law and denied that it is unconstitutional. He conceded that the railroads had a right to have it tested in the courts, however, and he expressed the opinion that the employes ought to be willing to wait until it is so tested before asking to have it put into operation. With regard to the future, he was opposed to government ownership and did not believe it offered any solution of the railroad question. Legislation to pre-

vent strikes, he believed, will come very shortly. He denounced strikes on public utilities as outrages, and said that Congress will probably take action to make them impossible without waiting for any report from the Newlands committee.

President Charles R. Van Hise, of the University of Wisconsin, who was chairman of the arbitration board in the case of the engineers in the eastern territory in 1912, denounced the Adamson law and the attitude of Congress in passing it. He held that Congress ought to provide for the regulation of wages by some public authority, just as rates are now controlled by the Interstate Commerce Commission. When that is done, he believes, strikes should be prohibited.

This was a view to which Charles Nagel, who was an arbitrator in the case of the engineers and firemen in western territory in 1914, was opposed. It is time to consider where we are going, said Mr. Nagel. "If the government fixes rates and wages there's only one other thing to fix and that's the dividends"; that will mean government ownership, and he doubted whether we have sufficiently weighed the consequences of such a move. "I'm not troubled with constitutional questions," he said, "but with political."

Speaking of the eight-hour question, Mr. Nagel declared that it has "never been arbitrated, never been investigated, nobody knows how it will work—and the law was put over in twelve hours."

Henry R. Towne laid before the meeting a plan, endorsed by the Merchants' Association of New York, which would require men employed on public utilities to sign individual contracts binding them to perform service for a stated period. This is a scheme similar to the one that has made trouble on the Interborough in New York city. It was endorsed by Arthur Jordan, of Indianapolis, who said that a threatened strike on the street-car lines of that city was made impossible by just such contracts. The union could not get the men out.

These remarks were made in the course of an informal discussion. Mr. Jordan spoke after Alexander W. Smith, of Atlanta, had made the remark quoted above about involuntary servitude, and after another speaker had declared that while it is legal for a man to quit work it may be illegal for two or more to conspire to do so. Mr. Jordan said that he felt reassured to hear lawyers so express themselves. "We know very well," he said, "that the prohibition against involuntary servitude never was intended to apply to this sort of thing."

There was a good deal of condemnation of the railway unions for their activities last summer and sarcastic reference to the helplessness of business organizations. "If our 300,000 members would let it be known that they would

vote against a demagogue we might accomplish something," said one delegate. Robert Garland, of Pittsburgh, said that there ought to be a million members in the United States Chamber of Commerce. "Then," he said, "Congress and the legislatures would listen."

There were just two delegates who had a good word to say for the labor organizations. One, from Council Bluffs, Iowa, reminded the meeting that unions have "sprung out of the abuse of power." He expressed himself as "sympathetic with the idea of preventing strikes, but you must be very careful to put something else in its place to safeguard the workers' rights." The other, from Massachusetts, said he had heard of capital making threats, too, when it didn't get what it wanted. Their remarks were not received with utmost enthusiasm. Two men coming down the aisle together as the meeting broke up summed it up to their own satisfaction. "Trade-union lawyers," said one. The other shrugged his shoulders.

LABOR BRIDGING THE PACIFIC

ON the second day of the thirty-sixth annual convention of the American Federation of Labor, now sitting in Baltimore, there was introduced into that gathering a resolution signed by all of the delegates coming from California. It is a historic document. It reads:

"Whereas, the recognized menace of unrestricted Asiatic immigration has resulted in the passage of the Chinese exclusion act and the subsequent adoption of the so-called gentlemen's agreement between this country and Japan, and

"Whereas, in the spirit alone of imperative necessity and self-protection, organized labor of America has favored and urged the passage of such exclusion laws, but has at all times been ready to aid and encourage the workers of every country and of every color and creed to emancipate themselves from exploitation; and

"Whereas, we have recently learned, with interest and gratification, that the working people of Japan are organizing into industrial unions, and have formally invited the organized workers of California and the organized workers of America to send delegates to the fifth anniversary of the Laborers' Friendly Society of Japan, to be held at Tokio next spring, and

"Whereas, the California State Federation of Labor, without receding one step from its well-known attitude upon Asiatic exclusion, has already accepted the invitation and has given to the delegate from Japan an expression of good will and a message of hope and encouragement for a brighter future to the workers in his country; therefore be it

"Resolved, by the American Federation of Labor in annual convention as-

sembled at Baltimore, that for the sake of a better understanding and permanent friendly relations between the workers in Japan and America we, too, accept the invitation of the Laborers' Friendly Society of Japan and hereby authorize the Executive Council to select a suitable person to carry a message of good will and encouragement to the working people of Japan."

The convention will adopt this resolution. Samuel Gompers, president of the American Federation of Labor, will go to Tokio with Paul Scharrenberg, secretary of the California State Federation of Labor. They will speak in all of the principal industrial towns of the empire before they return. Their coming is expected to mark a new period in the modern development of Nippon. Trade unionism will have become identified with the cementing of international peace and the erasure of old suspicion.

Back of this miracle—for to the Californians who signed the resolution it is a miracle—are a picture and a man. The picture is that of a trade union hall at Oxnard, in southern California, in the year 1906. Fifteen hundred workers in the sugar-beet fields had gone on strike. Half were Mexicans, hastily formed into a union. The other half were Japanese, likewise organized by themselves. Attempts had been made to drive them back to work. One striker had been shot dead and others wounded. Their ranks held, and the weeds in the beet fields grew.

The hall was arranged with a platform for officers at each end, and a desk in the middle for the American who had been called in to act as their spokesman. Japanese workers at one end of the hall handed him translations in English from the records of their proceedings. Mexicans handed him translations from Spanish, to show what action they had taken.

Both unions had applied for charters in the American Federation of Labor. Meanwhile they fought on as one body of workers, and they won their fight for a living wage. Word came from the East that the Mexicans might affiliate, but that the Japanese were refused, owing to the hostile feeling toward Japanese laborers by the unions in California.

The man back of the miracle is Bunji Suzuki. He started to organize the first group of trade unionists in Japan five years ago. Last year it had 10,000 members. This year it has 30,000. Suzuki came to America last year and appealed for friendly understanding between the labor movement here and the workers of Japan. Last summer he won the support of practically every man of influence in the trade union world of the Pacific Coast. He had not only made good his promise that the Japanese labor movement was to take deep root and

grow, but he had formed the Japanese laborers in California into a federation of trade unions. When the cooks and waiters in San Francisco struck, the Japanese culinary workers refused to take their jobs.

At the time of the Oxnard strike the Union Labor Party in San Francisco had just brought the United States and Japan to the verge of war by discriminating against Japanese in the schools. Ten years have passed—years in which the threat of Japanese attack has seemed to sections of the American public to have constantly hung over our Pacific states. Jingoism has played upon this fear and huge appropriations have been made for the navy.

Now comes Suzuki with his handful of Japanese trade unionists at home and his still smaller band of organized workers in this country, and appeals for an entente of organized labor. The Californians have not forgotten the Japanese of Oxnard, and they have come to hate the whole scheme of militarism. They are speaking out for fraternity across the Pacific.

EMPLOYERS' ORGANIZATION STIFFENS UNIONS

TWELVE of the most important employers' associations in the United States announced on November 15 the formation of a National Conference Board. The associations comprise over 15,000 employers, having a combined labor force of 7,000,000 wage-earners—over 75 per cent of all workers in the country.

The conference board will be a clearing house of information, and through publicity and education attempt to enlist the sympathetic support of the public and the cooperation of the government. A statement of its purpose has been given to the press by Magnus W. Alexander, manager of the board. Misunderstandings have occurred previously because of a "lack of publicity"; henceforth, "there will be nothing concealed or suppressed, and there will be no presentation of arguments except in the full light of day and for the benefit of the whole people."

The board intends to begin its campaign, it says, among its own members. Every manufacturer must have a "broad patriotic purpose" in order that increased prosperity may bring greater prestige to the country. Apparently this is the main purpose of the new organization.

But this cannot be brought about without the cooperation of labor. Therefore "one of our great industrial problems is the satisfactory adjustment of labor troubles," reads the board's statement. Again, cooperation can be brought about through education alone. "It is unfortunate," continues the state-

November in the Beet Fields

By Edward N. Clopper

NATIONAL CHILD LABOR COMMITTEE

Photos by Hine

IN COLORADO WHERE PARENTS AND CHILDREN ALL WORK

THE harvest season in the sugar-beet fields is at its height, and child labor is flourishing in the process of pulling and topping. After several rows of beets have been pulled, the workers take their long knives and begin to cut off the tops. These tops are fed to the cattle and are very nourishing.

In the picture above the girl is just beginning, and the boy is just ending the topping stroke. The girl is holding the beet against her knee, and with one vigorous stroke cuts off the top. The top that the boy has just cut off can be seen falling just below his knee in the picture. The father and mother and two children are shown, while in the shack where they make their home for the season, two babies are left. This family cleared about \$300 last season, having begun in May and finished in the middle of November, when the children were finally allowed to enter school.

In the other picture two girls are shown—nine-year-old Amelia and twelve-year-old Mary, who are working at topping, while their father is hauling the beets to the mill. The mother also was at work in the field and said, "Amelia, she not work all time—she wash dishes and tend baby." There are seven children in the family. They attend school only after the beet work has been done.

The amount of energy put forth by the boys and girls in these harvesting processes is much greater than it appears to be upon casual observation; indeed, the owner of one farm declared that the ten-year-old daughter of his contractor topped five tons of beets daily, besides the weight of the tops and the clinging soil.

AMELIA, NINE, AND MARY, TWELVE YEARS OLD, TOPPING BEETS

ment, "that employers in the past have not taken a direct and intelligent interest in all of the vital problems involved in the industries with which they are identified." The National Industrial Conference Board insists, however, "that it will represent fully the progressive industrial movement throughout the country." It hopes "to stimulate the employer to maintain good conditions of work; to provide fair treatment for his workers and to take a personal interest in them." It hopes, what is more, "to develop among the employes a reasonable attitude towards manufacture and other industry, to inspire a sense of fair play, efficiency, and loyalty." In short, to bring about "complete understanding."

The New York *Tribune* announces the conference board as a "union formed by employers against labor." It also reports their cooperation in a drastic effort of the National Founders' Association, a member of the board, to repeal the Adamson eight-hour law. This the conference board later denied.

The formation and purpose of the new organization was made public by William H. Barr, president of the National Founders' Association, at the twentieth annual meeting of that body in New York on November 15.

He detailed the purpose of the National Industrial Conference Board, as explained by Mr. Alexander, and on the very heels of this made a caustic attack on labor. "Labor organizers are truculent and aggressive," said Mr. Barr. "Organized labor is never satisfied, and it is eternally bent on wrecking that structure of industry which has been erected through the patience, persistence, and patriotism of business men in this country, and which is the support and livelihood of labor itself."

LABOR made immediate and vigorous answer, for the action of the big employers led to a solidifying of labor sentiment to a degree hitherto unknown; and the addition of 400,000 members to the American Federation of Labor emerged as a clear possibility this week, as a result of conferences and the exchange of expressions of sympathy and support, between chiefs of the four railroad brotherhoods and officials of the American Federation of Labor.

At a meeting in Washington November 19, a defensive alliance was entered into between the Railway Department of the American Federation of Labor, with 350,000 members working in the shops, yards and telegraph offices of the railroads, and the brotherhoods, with 400,000 members in train service.

The spirit of unity thus engendered between the federation and the four big unions who have so long stood aloof from it was brought to a point still

more intense by a visit of the brotherhood chiefs on Tuesday to the convention of the federation, in session at Baltimore. Warren S. Stone, of the engineers; L. E. Sheppard, acting president of the conductors; W. C. Carter, of the firemen, and W. G. Lee, of the trainmen, addressed the convention and were greeted with great enthusiasm.

Grand Chief Stone declared that the only reason there had not been affiliation long ago is the fact that trouble would arise over questions of jurisdiction, between the brotherhoods and some of the unions now in the federation. But, he said, "there is a better understanding today than ever before." In private conversation with a representative of the *SURVEY*, none of the chiefs would say that affiliation is going to come. "It would have to be taken up in our conventions," said Mr. Stone, "and it probably will come up when they meet again."

CHICAGO'S JUVENILE COURT TESTIMONIAL

THE recent withdrawal of Judge Merritt W. Pinckney from the bench of the Juvenile Court of Chicago on account of illness and after seven years of service called forth tributes of public appreciation which attest the hold which both he and the court have upon the heart of the big city. As soon as the judge was able to meet his court associates, the police and county probation officers gathered around him as their guest at dinner and vied with each other in expressing their affectionate regard for him and regret at his withdrawal.

To the good fellowship among the probation officers, largely promoted by the attachment each one of them feels for the judge, is due the continued success of this Juvenile Court.

The more public testimonial took the form of a banquet, November 11, of 500 guests, widely representative of the bench and bar, many callings and classes. The after-dinner speaking took the form of a legal hearing, with Judge Pinckney as defendant. "Some facts in the case" were presented by Mrs. Joseph T. Bowen, president of the Juvenile Protective League, and Judge Harry Olson, chief justice of the Municipal Court.

The appointment of probation officers by test of their merit, the establishment of the first psychopathic laboratory, the service of a woman assistant to the judge of the court, the successful establishment and administration of the funds for parents and the harmonious and vital cooperation of the official and voluntary agencies in dealing with juvenile delinquency and dependency, were the outstanding facts which were emphasized not only by word of mouth,

but, more still, by the deeds achieved.

Judge Pinckney's "defense" was a characteristically modest and sympathetic expression of the deep experience he had shared with others for seven years in dealing with the 11,819 delinquent boys and the 4,089 delinquent girls, besides all the dependents, and the parents of both.

"The judge may forget," he said, "but the juveniles never. They hail him on the streets, call him on the telephone, write him letters, the great majority of them bearing glad tidings of their making good." "The Juvenile Court," he said, "is a vision, which the judge must keep splendid."

Judge Victor Arnold, who succeeds Judge Pinckney on the Juvenile Court bench, followed with the declaration that "after all was said and done, nothing remained for him to be and do but to be and do like Judge Pinckney."

"RELIEF" OR "SUPPORT" FOR THE GUARDSMEN?

VOLUNTARY associations which have been giving relief to the needy families of members of the National Guard called to the federal service in June are now gradually closing their books. One by one they are checking off the lists of dependents who have been allowed payments from the \$2,000,000 appropriated by Congress for the purpose.

Many of these agencies have been impatient at the delay in getting funds distributed—the first payments were made in October; at the wholesale distribution of relief without investigation; at the large lump payments, leading to extravagant expenditures; and at the difficulty many women had in cashing the unfamiliar checks in which payment is made.

In Washington, the situation is seen from a somewhat different angle. As to the time element, it is pointed out that Congress made the appropriation on August 29, and by October 1—a bare month later—actual payments had been made. During October some 5,000 claimants were paid \$422,000 and new applications were being approved at the rate of 400 a day. The War Department estimates that the entire appropriation will be exhausted before the end of January.

Congress appropriated the money for the "support" of families of guardsmen; it was not paying the guardsmen a living wage. No private in the ranks could support a wife on his \$15 a month; no corporal on his \$21; nor a sergeant at \$30, or even a first sergeant at \$45. They answered the President's call in high spirits. They left their families to what might come.

Whether it was because some of the European nations in their present war

have placed the families of soldiers on the nation's payroll, or whether because they expected the United States to set an enlightened example, none of the guardsmen seem to have doubted that Congress would provide. They were resentful, some of them, that their families had for the first time to ask for charity during the time which elapsed from their federal enlistment on June 18 and the first government payments on October 1. And they welcomed the change from reliance upon charity to something akin to a government pension.

So that, when Congress did provide as they had expected it would, the guardsmen asked for as large a monthly allowance as their captains and their friends were willing to certify that they needed. They felt themselves underpaid in the military service; many of them had earned less than a comfortable living wage before joining the colors. Now they have bid for some of the arrears.

In the service there is a broad human sympathy with this feeling. The guardsman believes that the payment of \$20 to \$50 a month, based on the contribution of the enlisted man to his family before leaving home, is rightly his. At the War Department, where the depot quartermaster handles the applications as they pour in, the point of view of the enlisted guardsmen is understood. No investigation of the need of the family is made after the organization commander has passed upon it, and the commander almost uniformly approves the application. Now that the government has begun to carry the burden of "support," there are, as compared with the voluntary relief workers, no questions asked. Support for the family is the thing wanted, and support is furnished.

How clearly divergent are the paths of the government in its issuance of these sums to the families of the guardsmen, and the voluntary committees which looked after the families during July, August and September, is illustrated in

THE LATEST INVADERS OF MEXICO

Trucks run by the Army Department of the Y. M. C. A. have traveled the entire length of the international border. The ones shown here followed the line of General Pershing's command into Mexico to provide recreational features for his men.

the District of Columbia. The Citizens' Welfare Association, organized on July 3, gave relief to 200 families before it closed its work on October 5. John Dolph, the president, in his final report, dwelt upon the fact that all applicants had secured assistance, where personal investigation by a volunteer committee had established the fact of need. He told, among others, the story of a mother with five children, forced to go to work only six weeks before she was to give birth to another.

Thousands of guardsmen left their families in almost as dire need, as the records of charitable associations from coast to coast will bear witness. They were typical American wage-earners of the unskilled crafts. The call to service at once disclosed that, whether through unemployment or through working at less than a living wage, they fell into immediate want.

The fact that the government saw and met the need of a living wage while he was away rings in the brain of many a guardsman and many a guardsman's wife. And he is bringing home with him, as the regiments are mustered out, a question as to who may see that need when he is not away.

Y. M. C. A. CIRCUIT RIDERS ON THE BORDER

THOUSANDS of young men, some little more than big boys, were suddenly transplanted last June from home-life to military camps along the Mexican border. When loneliness, discontent and homesickness swept over these lads, one institution provided a measure of home environment and social intercourse that eased adjustment and prevented dissipation.

This institution was the Young Men's Christian Association, whose machinery was started in operation the moment that the call came for mobilization of the National Guard. Experienced secretaries of the Army and Navy Department of the association, equipment and supplies were hurried to San Antonio and El Paso, which were selected as field headquarters. As troops arrived at camping places, the erection of the association buildings was rushed to completion, sometimes by hired carpenters, in other cases by the troops themselves, military commanders giving full cooperation.

By October 1 forty buildings had been erected in camps extending from

COMPETING FOR THE BOYS ON THE BORDER

At the right a house of prostitution at Laredo, Tex. At the left typical Army Y. M. C. A. building, quickly and inexpensively erected, with open sides and equipped within for games, reading, meetings, motion pictures and other wholesome social uses. One of the features has been a clean-living campaign, through which the Y. M. C. A. secretaries have combated the influence of the red light districts.

Brownsville on the Gulf of Mexico to San Diego on the Pacific Ocean. Most of these are of simple frame construction, 40 by 80 feet in dimensions, with high roofs and sides that open, carefully screened against insects, and so well ventilated that they proved the coolest places in camp during the hot summer. They are the best-lighted and most cheerful spots on the border. Each center has a staff of from two to five secretaries.

At first the writing tables and the free writing materials were the most popular offering. As many as 2,500 letters a day were dropped in the letter-box; there are still few buildings where the present output of correspondence is less than 1,000 letters a day.

Among newer features, such as entertainments given by the troops themselves, music, lectures and reading-room facilities, the greatest attraction is the motion-pictures. One or more structures in every camp possess a "movie" equipment and in many where the buildings will not accommodate the crowds the screen is set up out-of-doors. Along with social activities, there are church services on Sunday and at mid-week, and Bible classes.

The temptation of prostitution, common to all military camps, is present on the Mexican border. To counteract this the Y. M. C. A. has conducted a clean-living campaign with a series of effective addresses, supplemented by the organization of committees and personal interviews. Thousands of men have signed what is known as the clean-living card of the Army Y. M. C. A.

No men appreciate the work of the Y. M. C. A. more than some 40,000 soldiers, most of them regulars, on patrol duty in the Big Bend District of Texas, where some troops are 80 miles from the nearest railroad station. Two traveling secretaries with an automobile truck of supplies, a portable electric-light plant and a motion-picture machine are continually visiting from camp to camp. Visits of two or three days are made at each camp; motion-pictures shown, phonograph concerts given. There are helpful talks to the men, and stationery, magazines and books are left behind for their use.

In September a Y. M. C. A. expedition of three motor-trucks went down the line of General Pershing's communications in Mexico, leaving large quantities of writing materials, magazines and other supplies at each camp of his command.

The results accomplished, the often-expressed appreciation of the men and the favorable comments of their officers have convinced the committee in charge that an expenditure which will be not less than \$300,000 by January 1, will in every way be justified.

FURTHER REFERENDUM ELECTION RESULTS

RETURNS from constitutional amendments and other referendum measures continue to dribble in. New York quite probably has voted the \$10,000,000 for the Bear Mountain state park, the big favorable majority in New York city overcoming the opposition vote up-state. The single-tax measure in California is reported badly defeated.

Later returns from Washington indicate that the two initiatives prepared by the liquor interests, which would have put Washington in the anomalous position of being a prohibition state without a single legally dry spot, were defeated even more decisively than at first appeared. One of these measures, providing for the licensing of hotels to sell liquor, was beaten three to one even in King county, which went wet at the prohibition election two years ago, and the same county voted three to one against the measure permitting beer. So decisive was the outcome that there is talk now of reinforcing the present law by prohibiting even the importation of liquor in small quantities for personal use.

The seven laws passed by the last Washington legislature and referred to the people by petition were all snowed under. These measures, if carried, would have destroyed the effectiveness of the initiative, referendum, recall and the direct primary, and would have made an increase in municipally-owned utilities almost impossible. The constitutional amendment providing that only taxpayers be allowed to vote on bonds and matters of public finance was also defeated.

Anna Louise Strong, running for the state legislature in King county (Seattle), in a district which has hitherto been three to one Republican, came within one hundred votes of winning her seat. Dr. Strong, together with other Democrats, lays her defeat to premature news of the election of Mr. Hughes, which was displayed throughout Seattle for three hours before the close of the polls.

Oregon adopted the proposed system of rural credits, modeled after the federal measure, which will bring the rate of interest on farm loans down to 5 per cent in place of the present rate of a little less than 9.25 per cent. The old discriminatory Sunday closing law was repealed. Both of the anti-prohibition bills were defeated, as was the single-tax measure.

Alabama triumphantly passed its school-tax amendment to the constitution—a measure which opens great possibilities to progressive parts of the state in building up a modern school system. Another successful measure was that safeguarding savings depositors in banks,

who hitherto have not been on an equal footing with checking depositors, in case of a bank failure. The proposal to substitute biennial instead of quadrennial sessions of the legislature was defeated, as were the amendments permitting Montgomery county (Birmingham) to pay her county officials salaries instead of the present fees.

Judge Ben B. Lindsey's reelection to the Denver Juvenile Court appears, on later returns, to have been won by a 10,000 majority, with a total vote of nearly 36,000, whereas the other candidates on the Democratic ticket for county offices won by about 3,000 in a total vote of 27,000. As usual, Judge Lindsey was bitterly opposed by a number of strong interests and had the support of only one of the Denver newspapers.

At a special election on November 11, St. Louis voted \$3,000,000 in the first school-bond issue of her history. They were approved by an overwhelming majority. The bonds are to be used exclusively for the construction of new school buildings to replace scores of portables in which over 6,000 children now go to school, and to relieve half-time sessions in a few districts.

All expenses of the St. Louis schools, including buildings, have in the past been paid out of current revenue. The increasing activities of the schools in the past decade have made it impossible to meet all maintenance expenses and to finance new buildings. Last year the board felt obliged to eliminate summer schools, cut down the night schools, and put some schools on half sessions in order to keep up any building program whatever. The bond issue will, it is expected, enable the schools to catch up with its building program by the construction of twenty grade schools and one high school.

A MILLION-DOLLAR FUND HALF RAISED

ABOUT \$500,000 of a much-needed endowment has been secured for the Henry Street Settlement of New York by its campaign committee. During the past few months the committee has worked steadily toward a million-dollar endowment, which must be followed by several other million-dollar funds if the settlement is to realize to the full its opportunities.

Special demands have been made this summer upon the settlement's nursing service to meet the infantile paralysis epidemic emergency. How fully the settlement met these opportunities, as far as its equipment allowed, has already been told in the SURVEY for June 3 and August 12. And these demands continue in the long period of after-care necessary to restore crippled children to health, in which the settlement is closely associated with the Central Committee

on After-Care, described in the SURVEY for October 21.

But the epidemic and after-care work are only a portion of the need in Greater New York for skilled visiting nurses. Each year of the settlement's work reveals greater opportunities, especially for education in matters of health that spells prevention and social progress. The committee on endowment is emphasizing the necessity of freeing from financial anxiety those in charge of its work. The first million has not yet been reached, but the returns for so short a campaign are considered remarkable.

SOCIAL INSURANCE URGED IN MASSACHUSETTS

SOCIAL insurance has got its head above the surface in the old Bay State; whether it will sink or swim remains to be seen. The Social Insurance Commission, constituted by act of the last legislature, has completed a series of hearings, taking up the three phases of social insurance which were referred to it—health, unemployment, and old age.

Unemployment, acute a year and a half ago, is now at such a low ebb that public interest in it has waned. The need of dealing with unemployment according to some far-reaching and permanent plan was, however, forcibly brought out at the hearing by labor leaders and members of the State Committee on Unemployment. There seems to be general agreement that an extension of the system of labor exchanges throughout the state is desirable and that some step of this sort must take precedence over any such plan as unemployment insurance.

Old-age pensions, investigated in Massachusetts by a state commission in 1910 and since by other public and private bodies, drew large numbers to a hearing and is in fact a semi-political issue. Widely varying views have been exchanged, although there is little contention against the need for better provision for the aged. The differences lie chiefly between those who favor a non-contributory system of old-age pensions after the British plan, and those who insist that if old-age pensions must be, a contributory system is the only one compatible with sound public finance and individual self-respect. Organized labor is definitely committed to the non-contributory plan and will urge it vigorously. Many other groups in the community are opposed. On this issue there is likely to be a sharp locking of horns.

The recent impressive hearing on health insurance has already been reported in the SURVEY for October 14. The commission comprises six legislators and three governor's appointees, and naturally includes widely divergent opinions. Whether from such a group any unanimous report will come forth on

the controversial details of old-age pensions, is very much of a question; whether the looming but not yet trenchant demand for health insurance will carve out clear-cut recommendations for legislation, is a moot point also.

The State Department of Health was directed by the legislature to cooperate with the commission, and has assigned Dr. W. W. Walcott to the study of health insurance. His report, especially as to existing arrangements for the care of the health of workers in large industries, will be awaited with interest. Here, too, should be mentioned the valuable report, signed by Dr. E. R. Hayhurst, of the two years' investigation of occupational health hazard in Ohio, made by the State Board of Health, for which the state appropriated \$14,000. The report strongly urges compulsory health insurance, and was commented upon widely and favorably throughout Ohio and in other states. The California Social Insurance Commission, with Dr. I. M. Rubinow as secretary, will also, undoubtedly, make a contribution to this subject.

When the time comes for practical action, will Massachusetts lead California as it once was accustomed to do, or will the Far West show that it has an incurably progressive habit?

STATE CONFERENCE AGAINST THE STRONG PLAN

FEW members of the New York State Conference of Charities and Correction know that their organization has been officially placed in opposition to Commissioner Strong's plan for the reorganization of the State Board of Charities. At the final meeting of the conference, November 16, at Poughkeepsie, after many of the delegates had gone home, and before more than a few of those present had reached the hall, the following resolution was passed:

"Resolved, that this State Conference of Charities and Correction deprecates any change in the composition of the State Board of Charities whereby its membership would cease to be unpaid or the term of service would become subject to the mutations of politics. In the opinion of the conference, a slowly changing, unpaid membership, serving for long terms, representing the city of New York and the several judicial districts of the state, will best safeguard public interests and promote the charitable ideals of the commonwealth.

"Resolved, that copies of this resolution be sent to the governor and presiding officers of both branches of the legislature by the president of the conference."

The resolution follows a preamble of considerable length. In this the most pertinent "whereas" recites that "the conference has always been animated by

a sincere desire to conserve forms, methods and statutory requirements which have proven well adapted to the needs of the state and the development of its institutions."

Commissioner Strong's report, reviewed at length on page 194 of this issue, proposes fundamental changes in state charity administration. Only a few copies of it have as yet been distributed or even printed. As members of the conference learned of the resolution there were outspoken expressions of opinion against it. The feeling was that, however innocent in appearance, the resolution was intended as a slap at Mr. Strong and an endorsement of the present state board and its work. This feeling was enhanced when the statement was made that the resolution had been drawn up by an employe of the board.

ONE-THIRD OF A BILLION CHRISTMAS SEALS

START now. Start before November 30, says the National Association for the Study and Prevention of Tuberculosis, so that business men may have the Christmas seals to put on December bills and circulars.

Practically all of the 325,000,000 seals printed by the American Red Cross and the National Association for the Study and Prevention of Tuberculosis have already gone out to the local tuberculosis associations, which sell them. Instructions are ready telling just how to begin the campaign and push it through. More than \$3,000,000 has resulted for tuberculosis work in the nine years since Jacob A. Riis imported the Red Cross seal idea, and a little tuberculosis society in Delaware started the ball a-rolling in this country.

Several important new features are introduced. Last year came the mail-sales letters. To such direct personal letters, not asking for charity but giving opportunity to take part in the fight against consumption, enclosing a number of stamps, thousands of friendly notes and checks for thousands of dollars have come in. In Colorado, 21,000 of these mail-sales letters were sent out in 1915, and only twelve replies criticized this method of sale.

Last year, too, the pennant competition opened. Cities and towns were grouped according to population. Kimballton, Ia., stood victor in class 1, its 300 residents taking 18,333 seals; Brooklyn, in class 10, showed a per capita sale of 2.037. In the state competition, Rhode Island, class A, showing a per capita sale of 2.293, bore off the pennant; Minnesota took the class B pennant, with her per capita record of 1.340; and New York in class C, with 1.820 as the per capita record. Total sales last year netted \$760,000.

Book Reviews

THE RESTORATION OF EUROPE

By Alfred H. Fried. The Macmillan Company. 155 pp. Price \$1; by mail of the SURVEY \$1.08.

Pacifism
via
Germany

The importance of this short volume lies in its authorship rather than in the originality of its proposals. Dr. Fried, for many years the recognized leader of German pacifists, in a series of essays refreshingly free from technicalities and worn historical paral-

els, sets forth a program of European reconstruction which is eminently sane and inspired by a truly international outlook. His discussion of the causes of the war, concerning itself with broad social and political currents rather than with diplomacy and political conflicts, brings the author into line with the best thought of English and neutral writers.

He shows that the international disorganization beneath a merely superficial state of "peace" was a condition which, with the increased sensitiveness given to military effectiveness by competitive armament, could end only in one of two ways: a world-catastrophe, such as has actually happened; or a reorientation of foreign policy in every European state on the lines of international economic co-operation.

We are not sure whether Dr. Fried sufficiently realizes the difficulties in the way of economic cooperation of commercially competitive powers when the political *status quo* is so preponderatingly in favor of one of the competing parties as it has been. It is not easy to see how a great nation which in some way or other has obtained possession of the best markets or the best instruments of commerce may inaggressively be persuaded to let in a newcomer whose growth in population and industrial productivity calls for an expanded sales territory and participation in the most lucrative branches of trade. Only full partnership would seem to offer an adequate solution; and for this, the author admits, the nations of Europe have not been ripe.

Dr. Fried is most illuminating in the lessons which he draws from the progress of the war (to April, 1915, when this book was published in the original). He shows conclusively that the excessive armaments of the principal powers

themselves inhibited rational means of adjustment.

"It can no longer be said that it was armament that kept Germany at peace for forty-four years. It is not a question of armament alone, but of *competition* in armament. It did indeed postpone open war, but it only postponed it, and never for a single hour did it give us any real security."

We do not agree with the second conclusion drawn by the author from the progress of the war; namely, that it is impossible to humanize and regulate warfare. Such evidence as has been received in this country would seem to show that, isolated instances apart—though some of these are on a desperately large scale—the campaign on both sides is waged with greater sensitiveness to innocent suffering and with a stricter adherence to established moral codes than any previous great war.

The comparison which the author uses in illustration shows him to be wrong on this point. For, in the case of shipwreck, the regulations made for the conduct of crew and passengers are, so far as our testimony goes, followed more nearly now than they were in the past with its lesser development of social responsibility.

On the other hand, Dr. Fried seems to indulge an undue optimism on other points. Thus, when he says that "the catch-phrase of a 'fresh and merry' (*frisch und froehlich*) war is at last dead forever." It is remarkable how, with patriotic celebrations, perverted history in schoolbooks, with monuments and museums devoted to the alluring phases of warfare, with fiction which suppresses ugly facts, and with an unscrupulous press—which, by the way, comes in for some telling comment by the author—the sham glory of militarism returns again and again.

Again, though he speaks of the necessity of an energetic movement for connecting the many international ties which have been broken, a movement in which he assigns a large share to the United States as the leading neutral power, the author does not perhaps sufficiently realize how deep is the hatred which, in several of the belligerent countries, has been engendered by the war. The task will not only be a difficult one, but it is almost inconceivable that it will be successfully accomplished, as he hopes, within a few years.

"The task," he says, "will surely be lighter than after the last great Euro-

pean war. The aftermath of this war will be too awful; and we better understand why great nations are so stiff-necked in their antagonisms."

It is more likely that economic necessity will bring about the European co-operative union which will ensure world peace and for which Dr. Fried makes an eloquent plea, than a memory of the war's awfulness. The fear of future wars, unless modified by active participation in a great constructive plan of political and economic re-organization, is apt to revive the hysterical cry for national "preparedness" with its old calamitous results. B. LASKER.

AMERICAN LABOR YEAR BOOK (1916)

Rand School of Social Science. 382 pp. Price \$.50 paper; by mail of the SURVEY, \$.58.

Progress
of
Labor

Here is an attempt to put together in compact form the most important facts concerning labor and allied movements. In the section devoted to conditions in the United States, the essential characteristics of the principal national labor bodies are explained; the leading strikes of the year are reviewed; the cases of Quinlan, Lawson and other labor defendants are outlined; recent legislation is considered and the "protocol" is discussed by Morris Hillquit. In another chapter, the history of the growth of socialism in the United States is briefly reviewed and the differences between the Socialist Party and the Socialist Labor Party explained. The introduction of matter beyond the scope suggested by the chapter headings is indicated by the treatment of Mexico under the heading International Socialist and Labor Movements. Here a brief account of the Mexican revolution is given.

Despite the fact that the book is, for the most part, admirably detached and unbiased in its statement of fact, there is evidence here and there of a spirit not strictly scientific. For example, the Manly report of the United States Commission on Industrial Relations, signed by four of the nine commissioners, is designated the "main" report, while the Commons report, signed by five commissioners, is referred to as the "minority" report. More than three pages are devoted to a review of the former, while the latter is dismissed in ten lines. Regardless of which was the "main" report, the fact that two important reports were made would seem to require a review of both.

There are few such lapses as these, however, and the names of Florence Kelley, George M. Price, Harry Laidler, William English Walling, Helen L.

Sumner, I. M. Rubinow, Scott Nearing and others of similar standing are sufficient to indicate the high character of the work as a whole. The book will be very valuable for reference and will answer many questions for the student of labor and reform movements.

JOHN A. FITCH.

REACHING THE CHILDREN

By Henry C. Krebs. A. S. Barnes Company. 127 pp. Price \$\$.54; by mail of the SURVEY \$.60.

The man who wrote this book "has been there," he knows what he is talking about. He writes especially for the teachers of village and country schools. To some the many quotations with which he begins his chapters will be repellent and they will close the

book in fear of dry, didactic pages to follow. Such will miss the first-hand illustrations and pointed application of them to real work by real teachers among real children.

If, with Lincoln, we agree that a man's legs are of right length when they reach the ground, we must also approve of most of the homely, sympathetic suggestions to teachers in this little book, for they have proved a thousand times that they reach actual children. Happy are the children whether in country or in city, whose teachers have so caught the spirit of this book, that they can radiate it like an atmosphere—in personal control, in class, on the playground, in the shop, at home, and in the world of imagination and ideals.

HENRY W. THURSTON.

FIFTY YEARS OF ASSOCIATION WORK AMONG YOUNG WOMEN

By Elizabeth Wilson. National Board of Young Women's Christian Association. 402 pp. Price \$1.35; by mail of the SURVEY \$1.50.

It is fitting that a movement of as far-reaching international importance as the Young Women's Christian Association should have a written history, and it is fortunate that Elizabeth Wilson was selected as the historian, since she has produced a book of real value,

not only to the association clientèle, but also to all those interested in work for young women.

Miss Wilson has sifted her material carefully, with the result that she has given a vigorous and stimulating story of a half-century of effort. When one realizes how easy it seems to be to drop

into mawkish sentiment in regard to religious work for young women, the book must be regarded as a triumph.

The book is divided into three parts:

I. Preliminary organizations in Great Britain and America before 1866;

II. Local and national organizations in the United States;

III. 1906-1916. The Young Women's Christian Associations of the United States of America.

It is a fascinating story, in spite of its 400 pages, of work for and with young girls and older girls, in city and country, in school, college, shop and factory, and would prove instructive reading for those who think the Y. W. C. A.'s activities are limited to prayer meetings and homes for young women. They are as wide as the needs, and work for immigrants rubs elbows with athletics and Bible study. But I am giving away the story. You must let Miss Wilson tell it to you.

ANNIE MARION McLEAN.

ONE HUNDRED CARTOONS

By Cesare. Small, Maynard & Co. 200 pp. Price \$3; by mail of the SURVEY, \$3.20.

In the early weeks of the war it was widely recognized that American cartoonists had struck the true note. While editors and writers floundered for something to say or even a point of view, cartoonists in every part of the United States showed the misery and horror of it all; blood but not glory; women, children and dumb men chained to the wheels of a 42-centimeter chariot.

The collected cartoons of this volume printed, even in these times, on durable paper, will preserve this point of view far beyond the life of the flimsier pages of the New York *Sun* and *Harper's Weekly*, for which they were drawn. In a way, they do Cesare an injustice, for they are all on war and include none of those later drawings on various current topics, many of which have been reproduced in the SURVEY, which he has done in the congenial atmosphere of the *Evening Post*.

Cesare may not be neutral, but he sees more than one side. There is red wrath in every stroke of his pen for those who sank the Lusitania, and scorn for Ferdinand for selling Bulgaria on the auction block. Yet nothing could be more contemptuous than the picture of John Bull, caught like a thief rifling a United States mail-pouch. Italy and Greece, opera bouffe figures, are hiding in a cyclone cellar the ancient statues and paintings they have risked.

Only two of the drawings have much

hint of the future. One is the look in the eyes of France, a young woman in liberty cap and sabots, as she calls her boys of eighteen to the colors. The other, the face of a gigantic Slav, gun in hand, as he catches sight of the minarets of Stamboul.

Cesare's publishers do not lead, but follow, in declaring him artist as well as cartoonist. His book is bound to be compared with that of the other great neutral cartoonist, the Dutchman Raemaekers.

ARTHUR P. KELLOGG.

BOOKS RECEIVED

ABRAHAM LINCOLN. By Brand Whitlock. Small, Maynard & Co. 210 pp. Price \$1; by mail of the SURVEY \$1.08.

AGRICULTURAL ECONOMICS. By Edwin G. Norse, University of Chicago Press. 896 pp. Price \$2.75; by mail of the SURVEY \$3.

AN APPROACH TO BUSINESS PROBLEMS. By A. W. Shaw. Harvard University Press. 332 pp. Price \$2; by mail of the SURVEY \$2.16.

A CHRISTMAS MEDITATION. By Lawrence Gilman. E. P. Dutton & Co. 16 pp. Price 25 cents; by mail of the SURVEY 27 cents.

COMMUNITY HYGIENE. By Woods Hutchinson. Houghton Mifflin Co. 310 pp. Price 60 cents; by mail of the SURVEY 70 cents.

A COURSE IN CITIZENSHIP. By Ella Lyman Cabot. Houghton Mifflin Co. 386 pp. Price \$1.25; by mail of the SURVEY \$1.38.

THE DEATH OF A NATION. By Abraham Yohannan. G. P. Putnam's Sons. 170 pp. Price \$2; by mail of the SURVEY \$2.10.

EVERY AMERICAN'S BUSINESS. By John Calvin Brown. Mitchell Kennerley. 313 pp. Price \$1.50 paper; by mail of the SURVEY \$1.58.

FOCAL INFECTION. By Dr. Frank Billings. (Lane Medical Lectures) D. Appleton & Co. 166 pp. Price \$2; by mail of the SURVEY \$2.08.

HOW THE WORLD MAKES ITS LIVING. By Logan Grant McPherson. The Century Co. 435 pp. Price \$2; by mail of the SURVEY \$2.15.

THE KNOW ABOUT LIBRARY. Toy book of useful information interesting to young folks. E. P. Dutton & Co. 20 volumes; 10 cents per volume.

THE MEASUREMENT OF INTELLIGENCE. By Lewis M. Terman. Houghton Mifflin Co. 362 pp. Price \$1.50; by mail of the SURVEY \$1.62.

THE NEW RESERVATION OF TIME. By William Jewett Tucker. Houghton Mifflin Co. 213 pp. Price \$1.50; by mail of the SURVEY \$1.60.

THE OWLET LIBRARY. Picture Paster Publishing Co. 10 volumes. Price \$1 per set.

PRACTICAL ENGLISH FOR HIGH SCHOOLS. By William D. Lewis and James Fleming Hosc. American Book Co. 415 pp. Price \$1; by mail of the SURVEY \$1.10.

THE PROMISE OF COUNTRY LIFE. Edited by James Cloyd Bowman. D. C. Heath & Co. 303 pp. Price \$1; by mail of the SURVEY \$1.09.

SMOKY ROSES. By Lyman Bryson. G. P. Putnam's Sons. 104 pp. Price \$1.25; by mail of the SURVEY \$1.31.

THE SOCIAL CRITICISM OF LITERATURE. By Gertrude Buck. Yale University Press. 60 pp. Price \$1; by mail of the SURVEY \$1.04.

A STUDY OF FAIRY TALES. By Laura F. Keady. Houghton Mifflin Co. 313 pp. Price \$1.40; by mail of the SURVEY \$1.50.

TALES OF THE LABRADOR. By Wilfred T. Grenfell. Houghton Mifflin Co. 240 pp. Price \$1.25; by mail of the SURVEY \$1.35.

TEN BOYS' FARCES. By Eustace M. Peixotto. Walter H. Baker & Co. 107 pp. Price 25 cents; by mail of the SURVEY 28 cents.

UNDERSTANDING GERMANY. By Max Eastman. Mitchell Kennerley. 169 pp. Price \$1.25; by mail of the SURVEY \$1.33.

WITTE ARRIVES. By Elias Tobenkin. Frederick A. Stokes Co. 304 pp. Price \$1.25; by mail of the SURVEY \$1.35.

THE WORN DOORSTEP. By Margaret Sherwood. Little, Brown & Co. 196 pp. Price \$1.25; by mail of the SURVEY \$1.33.

ARE YOU HUMAN? By Wm. DeWitt Hyde. The Macmillan Co. 65 pp. Price, \$0.50; by mail of the SURVEY, \$0.54.

RHYMES OF A RED CROSS MAN. By Robert W. Service. Barse & Hopkins. 192 pp. Price, \$1; by mail of the SURVEY, \$1.07.

WOMEN WORKERS AND SOCIETY. By Annie M. MacLean. A. C. McClurg & Co. 135 pp. Price, \$0.50; by mail of the SURVEY, \$0.55.

THE VAMPIRE OF THE CONTINENT. By Count E. zu Reventlow. The Jackson Press. 225 pp. Price, \$1.25; by mail of the SURVEY, \$1.34.

TUBERCULOSIS DISPENSARY METHOD AND PROCEDURE. By F. Elisabeth Crowell. The National Association for the Study and Prevention of Tuberculosis. 119 pp. Price, \$0.25; by mail of the SURVEY, \$0.29.

In Reply to Mr. Peabody

[See page 198 of this issue]

By *Winthrop D. Lane*

MR. PEABODY has presented the case for Mr. Osborne with honest conviction. He occupies a high place in the community and his words should receive generous attention.

Unfortunately, he is right in saying that he is not a trained investigator. Like others of Mr. Osborne's passionate friends, he has read into my article an avalanche of things that are not there. He lumps me with Mr. Osborne's conscienceless enemies and is apparently unaware that his own recital of the things Mr. Osborne has accomplished reads as if it were made up from pages of the SURVEY—pages, moreover, that were composed by me.

I go with him fully in his admirable indignation at "the powers that hounded Thomas Mott Osborne." I have expressed similar indignation in previous writings in the SURVEY.

Nothing in my article takes the side of Superintendent Carter or of Governor Whitman in the events that led up to Mr. Osborne's resignation. Mr. Peabody's intimation that it was from Mr. Carter himself that I got the extracts from Mr. Carter's letters and my own "deductions" is groundless. I read this correspondence in Mr. Osborne's office at Mr. Osborne's request.

Mr. Peabody somehow supposes me to be ignorant of former Superintendent Riley's mischievous interference at Sing Sing, and to be inclined to excuse Governor Whitman's tardiness in removing Riley. I did not excuse it and can only say that again Mr. Peabody ignores what I have written in the SURVEY on this subject. Neither would I excuse Mr. Carter's long-distance and dictatorial attitude toward Sing Sing, which lacked both insight and grasp and was a disservice to the state.

If Mr. Peabody had read with less passion he would not have failed to see that my analysis of the reasoning by which Mr. Osborne became convinced that he ought to resign was entirely sympathetic. It was intended to make clear to persons having no detailed acquaintance with the situation how he could honestly and logically reach that conclusion. I am not at all convinced that I should not have reached the same conclusion if I had been in Mr. Osborne's place. That does not prevent me, however, from questioning the necessity of that conclusion.

Mr. Peabody is at great pains to offset what he seems to think is the intent, or the effect, of my remarks about publicity, escapes from Sing Sing, and sending long-term men inside the walls. It is labor lost. He has simply missed my

point. I was trying to show the effect that the superintendent's orders in regard to these matters had upon Mr. Osborne. I cannot hope that anybody will re-read my article in the light of Mr. Peabody's eloquence, but I can thank him for having expressed so well so much of my own feeling about these orders.

The major point of my article was not that Mr. Osborne's resignation was injudicious. It was that Mr. Osborne could be of greater service to prison reform and to his own ideas unofficially, outside prison, than officially, within. For this view I gave two reasons: first, an appreciation of Mr. Osborne's vast powers as interpreter and leader of public sentiment—with this all of his friends agree; second, a recognition that Mr. Osborne is in certain definite ways unfitted for administrative work—with this, despite Mr. Peabody's denial, at least some of his staunchest friends agree. One of these friends has described the article as accurate, another as "judicial and discriminating."

With the opinion that Mr. Osborne can be of greater service outside prison than within Mr. Peabody expresses complete agreement. We differ, of course, in regard to Mr. Osborne's fitness for administrative work. On that issue my article must speak for itself. The statements of fact on which I based my opinion do not enjoy the attention that Mr. Peabody has bestowed upon other parts of what I wrote. I can only point out that he fails to refute any one of those statements of fact.

The crime of being a young man I cannot deny. On the other hand, it is not within the province of Mr. Peabody to deny my fundamental admiration for Mr. Osborne or for his ideas. It seems a little strange that one who has known Mr. Osborne for "upwards of thirty years" and who professes boundless admiration for his teachings, should still be able to talk of "branding" as a proper punishment for what he considers crime. Mr. Peabody is right in saying that there is no Salem county in New York—it was the town of Salem in Washington county that I should have named—but he seems to have slipped back in his thinking to the days and reactions of another Salem, remote from the enlightened ideas that he has been at such labor to defend.

Conventions

CITY AND CAMPUS

AS the public is awakening to the value of expert knowledge, so the universities, private, municipal, and state, are realizing more than ever before their duty to train men and women for service to their communities. To stimulate this sense of duty the Association of Urban Universities met in New York city, November 15-17.

The conference was welcomed by William A. Prendergast on behalf of the city, and by Henry Moskovitz, president of the Civil Service Commission. How widely the student should wander into extramural activities, into general field work connected with courses along civic lines; and how far the work of the city administration should be studied on the campus were questions variously handled.

Frank B. Williams, speaking at the City Club meeting of November 16 on College Courses in City Planning, explained the extreme pressure on the educator of the new subjects along social lines, all seeking a place in the curriculum. Mr. Williams, aware of the danger to the student of too great a variety of subjects, nevertheless made a

plea that more emphasis be laid on city planning in a number of courses of which it was a possible corollary—in history, in civics, in sociology, in engineering, in architecture, and in civil law. In graduate work, he urged more specific courses. "Of all problems which we in this country have been called upon to solve," said Mr. Williams, "with municipal government we have had the least success."

Officers elected for the ensuing year are: president, Samuel Black McCormick, chancellor of Pittsburgh University; secretary, Prof. Frederick B. Robinson, of the College of the City of New York.

TRAINING CITY OFFICIALS

AT the invitation of the University of Pennsylvania the Society for the Promotion of Training for Public Service held the third annual Conference of Universities and the Public Service in Philadelphia on November 15-16. On a subject so comparatively new, it was inevitable, reports Nina R. Dear-dorff, of the Philadelphia Bureau of Municipal Research, that there should be a wide divergence of views.

Representatives of the universities had many interesting and concrete questions to ask, the advocates of special training for public service had interesting answers to give.

One feature, according to Miss Dardorff, that formerly occupied a large place in discussions of civil service reform, was conspicuously absent. The conference did not devote a minute to finding out how to keep incompetent people out of office. The constructive suggestions on how to prepare men to perform efficient public service left no time for the older ideas.

The more conventional educators wanted to know what assurance they could give the students who equipped themselves for a public career that they would be given an opportunity to enter such a career. Those who have been in the thick of the fight answered that the supply created the demand.

It was generally recognized that before the civil servants can reach their highest usefulness to the public, they must be able to rely on a widespread and sustained and intelligent citizen opinion. And to obtain this, Charles McCarthy, of the Wisconsin Legislative Reference Bureau, made a powerful appeal that the well-springs of knowledge, our universities and colleges, be free from the subtle and insidious forces that tend to prevent the research and teaching staffs from applying their talents directly to the solution of society's hard problems. W. D. Lewis, principal of the William Penn High School for Girls of Philadelphia, pointed out that the one big, first duty of all public schools is to give the children a specific knowledge of citizenship and to develop a social conscience. Louis B. Wehle, of Louisville, stressed the need for socializing the lawyer's education.

Field work, actual direct contacts with the world just as it is, gives something—"an emotion, a grip on the subject"—to young men and women, it was emphasized, that formal lectures, reading or other classroom instructions could not possibly bring to their preparation.

WAYS TO LESSEN POVERTY

TO a delegate new at charity meetings, the Massachusetts State Conference of Charities, held at Lowell, seemed "a three days' discussion of the non-economic present distribution of wealth with some methods of temporary relief of conditions resulting therefrom."

At its first session the conference tackled no less ambitious a subject than the Abolition of Poverty with an address by Bolton Hall, the New York single-taxer and promoter of vacant-lot gardens. The very fact that in the past Mr. Hall has been an outspoken critic of organized charity gave greater interest and significance to what he said. While

many differed from him, they recognized clearly that he was preaching the gospel of preparedness against the evil results of extremes of wealth and poverty. He was preceded by a forceful introductory analysis of the situation by Edward T. Hartman, the president of the conference, who is secretary of the Massachusetts Civic League. The prevailing thought of the conference, traced easily through the entire program, was toward prevention of, or better, toward forestalling, dangers to social progress lurking in an unknown future lying around the next turn.

A cordial spirit of mutual good will and cooperation prevailed. The new president is Robert A. Woods, of South End House, Boston; and the secretary, Richard K. Conant, of the Massachusetts Child Labor Committee, 6 Beacon street, Boston.

SOCIETY'S CHILDREN

A DEFINITE effort to make the influence of the Iowa State Conference of Charities and Corrections, held at Ottumwa, October 22-24, felt throughout Iowa communities, gave special importance to that convention this year, according to Bessie A. McClenahan.

The subject around which the discussion of the conference centered was child-welfare, as made possible through a larger use of the juvenile court, a pre-school period of attention to child health, stricter child labor laws, vocational training, and increased opportunity for recreation. Juvenile delinquency and dependency in a certain "Juke" family of Iowa was the subject of a paper showing the menace of lack of social control.

The conference appointed a legislative committee of seven to cooperate if possible with similar committees from other state organizations in bringing about certain social legislation. Particularly, the conference endorsed a law limiting the hours of work for women, a law establishing a child-welfare research station at the state university, and providing for the codification of all laws relating to children.

The officers elected for the coming year are: president, Paul S. Pierce, Iowa City; secretary-treasurer, Bessie A. McClenahan, Iowa City.

The children of Iowa received still further attention at the Conference on Child Welfare called at Iowa City October 25-27 by the state university. The university, reports Miss McClenahan, invited the Mothers' Congress and Parent-Teachers' Association to hold their biennial at the same time, thereby making the conference a cooperative one. Methods of developing county child-welfare and parent-teacher associations were outlined, community bet-

terment was discussed in relation to the social worker, the visiting nurse and the consolidated school, and suggestions were made for remedying the lack of suitable recreation and amusement in Iowa communities. Resolutions were adopted endorsing temperance legislation, woman suffrage, and the movement to secure the child-welfare research station.

The following officers were elected by the Congress of Mothers and Parent-Teachers' Association: president, Mrs. Allen O. Ruste, Charles City; secretary, Pamela Fluent, Charles City.

NEW YORK CHARITIES

IT was fitting that the seventeenth New York State Conference of Charities and Correction should hold its first meeting in the students' building at Vassar, the college of Katherine B. Davis and Julia C. Lathrop. The papers read were important and interesting, but the whole conference was marked by absence of discussion from the floor. At the first session, for instance in his paper on The Social and Public Health Aspects of the Venereal Disease Problem, Dr. Edward L. Keyes, Jr., deliberately threw down the gauntlet to those who advocate birth control, in the expectation that animated discussion would follow. Not one delegate present took it up.

The liveliest meeting was that at which Thomas Mott Osborne, speaking on the Mutual Welfare League, drew forth some discussion and a rejoinder from State Superintendent of Prisons Carter.

In a paper on The Relation between Trade Unions and Social Workers, John A. Fitch pointed out a distinct feeling of distrust between trade unionists and social workers, particularly on the part of the former, which he held must be recognized and should be bridged. Interesting comments were made by Peter Brady, secretary of the Allied Printing Trades Council; Ann Hogan, a member of the Women's Trade Union League; W. E. McLennan, headworker of Welcome Hall, Buffalo, and Mary Van Kleeck, of the Russell Sage Foundation.

Lee K. Frankel, of New York city, was elected president of the next conference, to be held at Binghamton.

AGAIN THE FEEBLEMINDED

IF consciousness of an evil is the first step toward its eradication, the spread of feeble-mindedness bids fair to be checked, as measured by attention given it at this year's state conferences of charities and corrections. The last conference to devote practically all its sessions to this problem, according to T. L. Gillen, of the University of Wisconsin, was that of Wisconsin, held in Sheboygan, October 17-19.

The fact, writes Mr. Gillen, that the report of the standing committee of the conference on feeble-mindedness, presented by Mrs. George A. Chamberlain, of Milwaukee, estimated some 14,000 feeble-minded of all grades in Wisconsin, led, quite naturally, to a discussion of whether the state as a whole, the Board of Control, and the various municipal and school authorities are awake to the gravity of the situation. It was pointed out that the one state institution for the feeble-minded has a waiting list constantly of between three and four hundred, while the new institution for epileptics and feeble-minded, which the Board of Control is building at Union Grove, will not be completed, according to the present plans, for twenty years, and even then will only care for 1,500 inmates.

The inter-relation of feeble-mindedness with blindness, disease, and crime was analyzed. Dr. W. F. Lorenz, director of the Wisconsin Psychiatric Institute, declared that "of the various causes that can seriously undermine the health of either parent, resulting in either malnutrition of the germ cell previous to conception or interfering with normal development after conception, in addition infecting the child with a serious disease, syphilis is unquestionably the most frequent factor."

Because every court must occasionally deal with criminals who are not normal mentally, and because feeble-mindedness can now be diagnosed rather certainly, Judge Albert H. Schmidt of Manitowoc urged the necessity of a psychiatrist to assist every judge in the determination of mental status.

Besides the reports and papers bearing upon feeble-mindedness, Mr. Gillen reports that methods were recommended to improve out-door relief in Wisconsin through systematic records and reports to a central authority, through education of public relief officials by means of gatherings, conventions, literature and, above all, by the incorporation into the law of standards of relief, and through supervision by specially qualified persons. He also writes that the

committee on probation urged that the system in Wisconsin be revised so that juvenile probation work now handled in various ways by individual courts be placed under state control with both juvenile and adult probation handled by a state probation board or commission.

JOTTINGS

CHLOE OWINGS, formerly general secretary of the Associated Charities of Poughkeepsie, N. Y., is serving as private secretary to H. O. Beatty, director-general of the American Relief Clearing House at 5 rue de François, Paris.

AMY WOODS, former secretary of the Associated Charities, of Newburgh, N. Y., is the new secretary of the League for Preventive Work, Boston, succeeding Isabelle Kendig Gill, who resigned in order to study law at the Cambridge Law School for Women.

CIRCULATORS

A new membership class of SURVEY ASSOCIATES

IT has been through the generous mustering of cooperating subscribers at \$10 that the most marked gains have been made in securing funds to carry on the non-commercial work of the SURVEY, and to invest in its circulation and growth as an educational enterprise.

This mustering of support does not, we believe, exhaust the reserves of interest and good-will which are to be enlisted if a way can be found.

Many SURVEY readers who have not \$10 to contribute stand ready to give time and effort to the venture. Many of them secure for us new readers. This cooperation we shall endeavor to systematize, recognizing it as a basis for membership. Readers of the SURVEY who send in eight new \$2 once-a-month subscriptions within the fiscal year, or four new \$3 weekly subscriptions (in addition in each case to their own renewals), will be eligible for election as annual members of SURVEY ASSOCIATES. The cost of filling these subscriptions should leave a margin in each case equivalent to that left from a \$10 cooperating subscription after deducting the cost of sending 52 issues to the cooperating subscriber.

EDUATIONALLY this new cooperative membership should be doubly effective—widening the group of readers and at the same time helping to bring SURVEY ASSOCIATES to a new level of self-dependence.

From the current annual report of Survey Associates, Inc.

PRESIDENT WILSON has amended the civil-service rules so as to permit paroled prisoners in federal penitentiaries to fill civil-service positions when recommended by the federal Parole Board and the Department of Justice. Such persons have heretofore been ineligible. The order will apply to 300 paroled prisoners.

THAT social service is not all statistics and visits on needy families is shown by the Cleveland Associated Charities, which has quarterly parties of its eighty or more workers to arouse enthusiasm, acquaintance-ship and esprit de corps. The invitation to the last party, on Hallowe'en, took the shape of a dried corn husk, on which was inked a poetic invitation.

A COMMISSION from the American College of Surgeons has been appointed to visit South America and meet fraternally with the medical societies of different countries. The commission includes Dr. Edward Martin, Philadelphia; Dr. A. J. Ochsner, Chicago; Dr. F. S. Simpson, Pittsburgh; Dr. C. H. Mayo, Rochester, Minn.

A SUMMARY of the nineteen-volume report on the condition of women and child wage-earners in the United States has been recently published by the federal Bureau of Labor Statistics. The demand for the full report has been greater than the bureau could fill, and no appropriation has

We Are Trying for 100.

SURVEY CIRCULATORS

FROM A LONG ISLAND Y. M. C. A. SECRETARY:

"I am enrolling hereby as one of the new class of cooperating subscribers, and this is the first of the four or more subscriptions I will send you as fast as I can get them."

FROM A SOUTH DAKOTA MINISTER:

"In reply to yours of the 9th, let me say that I am one of those whose interest in the SURVEY outruns my financial ability. I regret that I cannot send in ten dollars and thus become an associate. But I think I can get four new subscribers; at least I am ready to try it, and shall be doing my community a service in the effort. Please send me whatever materials you are using for the purpose of getting new subscribers."

FROM AN IOWA RABBI:

"I am in receipt of your letter of November 9, and take pleasure in enclosing card pledging myself to become a 'Survey Circulator.' I have regretted for a long time that the heavy demands upon me in every direction have prevented my assisting the SURVEY financially, and I am glad of the opportunity to serve the SURVEY in this way. I will do my best to carry out my pledge."

FROM A MINNESOTA WOMAN:

"Enclosed you will find the card signifying my intention to enlist as a Survey Circulator. Will you send me one or two copies of the last two issues of the SURVEY? I think they are particularly interesting and will undoubtedly help to secure new subscribers."

LET us go back ten years. That was when the SURVEY (Charities, it was then called) first set out to enlist "cooperating subscribers," at \$10 each, to develop the journal as an *educational enterprise*, "beyond the limits of meager commercial receipts." Something like eighty-nine readers enrolled the first year as "cop's."

By 1912 the muster had reached a point where we were warranted in launching Survey Associates as an adventure in cooperative journalism. In the four years since it has reached the thousand mark; and we are creating a new membership class of Survey Associates, based on service.

THESE are SURVEY CIRCULATORS, and we want to enroll one hundred of them this initial year.

TO explain: If we can get 100 regular \$3 subscribers of the SURVEY, each to enlist four new \$3 subscribers, that will add 400 new readers—fill a good-sized lecture hall, if you accept the comparison, fifty-two times, with friends of those present readers who may be assumed, like them, to be more than ordinarily concerned in social questions. There could not be a truer process of natural selection by which to extend the SURVEY's audience where it will count for most.

MORE, these 400 new \$3 subscribers will bring in \$1,200. Now, the cost of running off additional impressions, on this issue of November 25, for example, is on the press, is much less than the cost per subscriber of printing our regular "run." Let us set the cost of filling these 400 extra subscriptions at, roughly, \$600 a year. This leaves an equal amount free for that work of journalistic development so sorely needed to lift the standard of service which the SURVEY can render to all readers.

MAY we enlist you as one of the initial group of 100 SURVEY CIRCULATORS who will help us demonstrate this new phase of that free co-operation which in gifts of time, money, manuscripts and active work has made the SURVEY not only possible, but a living thing!

been made for printing a new edition. The summary covers the more important results of the investigation.

A HEALTH information bureau is the latest development in the work of the American Public Health Association, 755 Boylston street, Boston. It will endeavor to answer queries from all health workers, whether members of the association or not, on policy, ascertained fact, methods, work of others, authorities, or similar subjects.

A BIBLIOGRAPHY of child labor just published by the federal Children's Bureau covers all the speeches made in Congress since the first federal bill was introduced in 1906; material on practical experiments in training children for industry and in vocational guidance; state laws and their enforcement, and uniform legislation. It may be obtained free of the Children's Bureau, Washington, D. C.

A PLAN for a garment town similar to the one designed by H. F. J. Porter (see the SURVEY for November 11) was suggested in the *New York Times* of November 5 by the Degnon Terminal Company. A site within a five-cent fare from Manhattan, adjacent to Queensboro Bridge in Long Island City, has been chosen. As in Mr. Porter's plan, a complete community life would be provided for, with factories, homes and amusement parks of the workers brought together. An outlay of \$50,000,000 is believed necessary.

WITH Germany, England, Ireland, Russia and France taking control of their food supplies, and with the International Institute of Agriculture at Rome, of which Simon Lubin, a Californian, is the active head, calling upon the whole world to conserve its food supply because of short crops, particular interest attaches to the National Conference on Marketing and Farm Credits to be held December 4-9 at Chicago. Discussion will range over a wide field, including the rise in the cost of living and the distribution of immigration. Programs and information may be had of the secretary, Charles W. Holman, 230 South La Salle street, Chicago.

GIRLS who have not been reached by infant hygiene and personal hygiene classes, which now are a part of the curriculum in the seventh and eighth grades of the Cleveland public schools, are being reorganized in Junior Mothers' Corps at the fifteen prophylactic or preventive dispensaries maintained by the city Division of Child Hygiene in co-operation with the Babies' Dispensary and Hospital. The girls are in large part those who, through work in factories or stores or through taking their grammar

I wish to enlist as a Survey Circulator for the publication year 1916-17—as my piece of co-operation in carrying forward the educational work of Survey Associates, Inc.

Name.....

.....

Note:—A Survey Circulator, in addition to the renewal of his own subscription, undertakes to secure four new \$3 weekly subscribers, or eight new \$2 once-a-month subscribers (or their equivalent). A Survey Circulator is eligible for election as a member of Survey Associates for the current year, but assumes no financial liability, nor promises renewal another year.

(The fiscal year ends September 30)

Classified Advertisements

Advertising rates are: Hotels and Resorts, Apartments, Tours and Travel, Real Estate, twenty cents per line.

"Want" advertisements under the various headings "Situations Wanted," "Help Wanted," etc., five cents each word or initial, including the address, for each insertion. Address Advertising Department, The Survey, 112 East 19 St., New York City.

HELP WANTED

WANTED—At once, a trained worker to be General Secretary of a Charity Organization Society in a middle-sized city of Eastern Pennsylvania. Address, with references, 2416 SURVEY.

WANTED—Housekeeper, Jewish, with institutional experience. Address 2418, SURVEY.

WANTED—Manager, Housekeeper with institutional experience. Reference required. Address 2419, SURVEY.

A MAN as supervisor of boys; also a woman as supervisor of the younger boys in Jewish Orphanage. State experience, former employment and salary expected. Absolutely permanent positions for right parties. Address 2422 SURVEY.

WANTED—An experienced institutional boys' supervisor, to take charge of boys from 10 to 15 years of age. Address, 2423 SURVEY.

SITUATIONS WANTED

YOUNG WOMAN, several years' experience in charity work, desires position with organization as visitor, investigator, or agent for dependent children. Address 2415 SURVEY.

A NEW YORK GENTLEMAN, FORTY YEARS OF AGE, PROGRESSIVE, EFFICIENT AND EXPERIENCED AS SUPERINTENDENT OF ORPHANAGE DESIRES A SIMILAR POSITION, WHERE AGGRESSIVE RELIGIOUS AND INDUSTRIAL TRAINING IS DESIRED. ADDRESS 2417 SURVEY.

UNIVERSITY GRADUATE, experienced in teaching business and social work, desires position among children. Address 2420, SURVEY.

REFINED, EDUCATED WOMAN with niece of ten years, wishes position in Ohio or Illinois. Twenty years institutional experience. Address 2421, SURVEY.

BIND YOUR ISSUES

The Survey May be kept for permanent, ready reference in a special loose leaf binder, made with board sides. It is covered with stout buckram, THE SURVEY stamped in gold letters both on the back and on the side. Put in each issue as received. It does not mutilate issues, which may easily be removed and reinserted. At the end of each six months an index will be sent to you and the volume will then be ready for a permanent place in your library.

Price Postpaid \$1.

school work before the infant hygiene classes were organized (within the last two years), have missed this training. Members of the Women's Board of the Babies' Dispensary and Hospital act as chairmen of the groups in the different dispensaries, and nurses from the staff give lessons in the care of the baby and personal and home hygiene.

FRANK P. WALSH, formerly chairman of the United States Commission on Industrial Relations; C. E. S. Wood, a lawyer of Portland, Ore.; Edward P. Costigan of Denver, counsel for John Lawson, the Colorado strike leader; Austin Lewis of San Francisco, and Amos Pinchot of New York, have joined what is to be known as a National Labor Defense Council, for the purpose of offering legal assistance to workers who do not belong to strong labor organizations, which are able to employ counsel for them. The organization has been promoted by a committee consisting of Fremont Older, editor of the San Francisco *Bulletin*; Helen Marot of the Women's Trade Union League; Dante Barton of the Industrial Relations Committee; Lincoln Steffens and Ida Rauh, chairman. An effort is being made to raise a fund of \$5,000 to maintain the field work. It is stated that the counselors are giving their services without compensation.

A CONFERENCE of Oppressed or Dependent Nationalities has been called at Washington, December 10-11, by a committee of which Grace Abbott, chairman of the Immigrants' Protective League of Chicago, is chairman. Miss Abbott's committee was appointed by the executive committee of the American Delegation to the Congress-After-the-War of the International Committee of Women for Permanent Peace, of which Jane Addams is chairman. The call for the conference points out the great need for formulating public opinion with regard to the rights of submerged nationalities, and that the United States is the appropriate nation to open such discussion because of its traditional position in the leadership of those who believe in self-government and because it contains in its population representatives of all of the oppressed, as well as of the dominant nations. Discussion, it is expected, will be forthcoming from American representatives of the Poles, Ruthenians, Finns, Letts, Lithuanians, Russian and Rumanian Jews, Bohemians, Slovaks, Croatians, Irish, Syrians, and Armenians. Fuller information may be had of Miss Abbott at 1140 South Michigan avenue, Chicago.

CHICAGO is beginning to react against the multiplicity of tag-days and the laxity of the City Council in granting its permission to agencies to solicit donations on the streets. For several years a single tag-day was permitted in the interests of thirty-six children's charities, whose standards were vouched for and whose tag-day management was supervised by a federation formed for the purpose, known as the Children's Benefit League. About \$55,000 was thus collected, each organization taking the amounts gathered by their respective taggers. This year, however, the City Council set aside November 1 as another tag-day, naming ten agencies, with very varied purposes, as beneficiaries. There seems to be no way of ascertaining the total amount collected, as there has been in the case of the Children's Benefit tag-day. The criticism of this laxity has prompted an investigation by the city commissioner of public welfare, the report of which is still pending. Meanwhile the Association of Commerce Subscriptions Investigating Committee is itemizing its action in regard to each of the agencies soliciting funds on the street, because the City Council ruled that all agencies seeking tag-day privileges must have the endorsement of this committee, which some of them are said not to have secured.

IT has been estimated that every case of human plague costs the municipality in which it occurs at least \$7,500. This does not include the commercial loss from panic and extreme quarantines. The only safety is freedom from rats, thus checking the spread among land rats from ship-borne foreign rodents; and the only sure freedom from rats is absence of food for them—i. e., municipal cleanliness. New Orleans has rat-proofed 122,281 buildings since the report of a case of human plague there two years ago, and has caught nearly 800,000 rats. The reward of "keeping everlastingly at it" was again shown when in September two rodent cases were confirmed in the Public Health Service laboratory at New Orleans.

"SINCE August, 1914, we have been saying that the world has gone mad," wrote Dr. William Graham of Belfast, in a recent issue of the Manchester *Guardian*. "Yet the fact is that insanity, like crime, has lessened during the period of the war." Dr. Graham, a recognized authority on mental diseases, finds the reason for the fewer admissions of women, especially, to insane hospitals in the fact that so many women have thrown off benumbing conventions and gone out to do hard, healthful work in the open air, and they have found a new interest in existence. So, too, the daring of a march to the front has freed many men from neurasthenic weakness and fear to which they had been in bondage for years.

SURVEY ASSOCIATES, INC., is an adventure in cooperative journalism, incorporated under the laws of the state of New York, November, 1912, as a membership organization without shares or stockholders. Membership is open to readers who become contributors of \$10 or more a year. It is this widespread, convinced backing and personal interest which has made THE SURVEY a living thing.

THE SURVEY is a weekly journal of constructive philanthropy, founded in the 90's by the Charity Organization Society of the City of New York. The first weekly issue of each month appears as an enlarged magazine number.

From the start, the magazine and its related activities have been broadly conceived as an educational enterprise, to be employed and developed beyond the limits of advertising and commercial receipts.

PRICE

Single copies of this issue, 25 cents. Cooperating subscriptions \$10 a year. Regular subscriptions weekly edition \$3 a year. Foreign postage \$1.50 extra. Canadian 75 cents. Regular subscription once-a-month edition \$2 a year. Foreign postage 60 cents extra. Canadian 35 cents. Changes of address should be mailed to us ten days in advance. In accordance with a growing practice, when payment is by check a receipt will be sent only upon request. Copyright, 1916, by SURVEY ASSOCIATES, INC. Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the act of March 3, 1879.

DREAMS do come true sometimes. In 1516 Sir Thomas More dreamed of an island of Utopia, where society was ordered ideally. Now, in 1916, after 400 years, Mary Breeze Fuller, of the department of history at Smith College, has discovered he was not such a visionary after all. Page 223.

THE United States has remained a unit and yet encouraged variety of customs and manners in its states. So Edward T. Devine, in the third of his series, Ourselves and Europe, believes that after the war the larger countries should be independent and all small nations freed from home-rule from oppressive domination. Page 217.

FOR a century Poland has served three masters. Now that these masters are at war her tragedy of vassaldom is complete. Her kinsmen are fighting each other, her children are starving, her country is devastated by hostile armies surging back and forth. Ernest P. Bicknell, director of Civilian Relief, American Red Cross, describes the desolation he saw while traveling through Poland. Page 231.

IF a child grew to a man in a year could his parents train him in the way he should go? When houses spring up from a plain over night and grow into a city within eighteen months, can the city be planned as it should? John Ihlder, housing expert, says the war-boom town of Hopewell, Va., guided so far by the Du Ponts, must rely for its future on democracy. Page 226.

DELEGATED to carry a message from the unorganized armed workers of the United States of Mexico to the organized unarmed workers of the United States of North America," John Murray, a member of the Typographical Union, returned in 1915 from Mexico to interpret labor's part in the revolution and to promote a Pan-American labor alliance, which gathered head at the recent Baltimore convention of the American Federation of Labor. The federation's Committee on International Relations reported efforts already made to secure revocation of the Carranza decree of last August outlawing strikes. Page 237.

LAY ON, MACDUFF!" was the keynote of the inwardly harmonious but outwardly aggressive convention of the American Federation of Labor in Baltimore last week. With radicals and conservatives putting aside their differences and with the 400,000 members of the railway brotherhoods lining up with the federation, the employers' new board seems to have its work cut out. Page 219.

UNCLE SAM, master American, has his engagement book full up. He's to be asked to look into the high cost of living (page 246), and perhaps to set a fair price for coal (page 247). When Congress meets next week his admiring constituents will press for a program of social legislation (page 249) and the pacifists, particularly on the Pacific coast, believe he has a good chance to press for intervention by neutrals. Page 258.

WITHIN the week California dispatches have told of the death of two young Americans—a man and a woman—who summed up the fire, the revolt, the impetuosity and the idealism which have marked the spirit of youth in this generation: Jack London and Inez Milholland Boissevain.

Portrait of
**MARGARET
DONEGAN**

By
Wm. Starkweather

EXHIBITED at the Folsom Galleries in New York city, this portrait of a studio scrubwoman aroused much interest by its introduction of a present-day democratic subject into the traditionally formal and ecclesiastical "vision picture" of early Italian and Spanish art. In place of a biblical character or Spanish grandee, Mr. Starkweather substitutes no other than Margaret Donegan, studio scrubwoman, mother of a boy who has been killed in a mill. Unnoticed by the artist or his model, she stands before us, arrested at her mop and pail by a vision of her son being received into heaven.

The central color is the faded blue of the work-a-day dress and apron. The smock of the unperceiving artist is ochre, balanced by the gold-and-yellow robe of his model on the other side. These colors are reflected in the vision above the clouds, while the rear of the studio is a red-brown, deepening into black.

Ourselves and Europe

III. Home-Rule

By Edward T. Devine

WITH all the nation's moral influence and with entire readiness to accept the consequences of a more active participation in international affairs, America should stand for the hastening of a permanent peace. Without offensive officiousness we should still have a peace program, one which will be in accord with justice, will square with facts as they are, and above all, will anticipate the needs of the living populations of the nations that are and are to be in the period after the war.

America should stand for the principle of humanity's undivided obligation to rebuild on a more secure basis what has been destroyed by the war. This means in the political field not merely villages, but nations; not merely groups, but a world state. In this no belligerent nation can easily make the start. No small state can easily undertake it.

If ever the phrase "manifest destiny" had any meaning, it applies here and now to the task of our own nation in its obligation to act as a mediator between the nations of the earth and the new order of which we are all the integral factors. It is not a closet philosopher's task nor a poet's; but poets and philosophers as well as lawyers and diplomats and business men and labor leaders have their part in it. It is a democratic job, for thinkers and workers and philanthropists.

What we in America have to do first is to overhaul our stock of ideas and experiences and see what keys there are among them which may fit the locks now to be opened. Self-government, home-rule, and indissoluble union are certainly among the principles with the practical working of which we are very familiar and concerning which we have a right to speak with some confidence. There has been in this country in the past as much superficial talk about states' rights as there is in the world today about small nations. No one disputes now that Napoleon, whatever his crimes, rendered a service to central Europe by greatly reducing the number of small German nations, and that in carrying this process further Bismarck followed the larger patriotism.

If there is any one act of the present war which neutral American opinion unanimously condemns, and with reason, it is the invasion of Belgium. But to set up, even under the stress of this indignation, the principle that under all cir-

cumstances America will favor the independence of small nations rather than their incorporation into larger political units would be inconsistent both with our own history and with the best interests of civilization.

America stands for home-rule, for local autonomy and for the protection of minorities, not necessarily for the political independence of small nations. The civil war settled adversely the question of independence for the southern confederacy against the all but unanimous desire of its people. But the civil war did not destroy home-rule in southern states. Irish home-rule appeals to the enthusiasm of Americans, but Irishmen who lately conspired for the independence of Ireland were disloyal not only in a legal and political sense, but also from the standpoint of the economic, social, cultural and religious interests of Ireland. An independent Ireland is impossible not because it would be a thorn in the side of England, but because it would fail to satisfy the hopes of patriotic Irishmen. The real Ireland, largely transferred to other lands because of the lack of home-rule, will live again on Irish soil if the zealous enemies of England in Ireland and in America do not make home-rule impossible.

The home-rule principle, as it has been applied in the states of the American union, as it is now demanded for American cities, as it has been developed in the self-governing colonies of the British Empire, and as it is to be tried in Ireland, is one which, in still greater variety, fits many of the vexed problems of Europe after the war. America will, of course, have no reason to favor the loss of independence of any now sovereign state. For the most part our instinctive sympathies will be with Poles and Serbians and with any other struggling peoples who, having at any time enjoyed independent national existence, desire to regain it. If, however, we want our sympathies to have any definite effect in the face of actualities, if we mean that our words shall carry weight in international councils, we shall carefully consider whether the policy of larger political and economic units, with home-rule all around, will not be more advantageous than the carving of existing empires into petty and economically dependent nations or the bolstering up of artificial states for purely sentimental reasons.

Home-rule implies freedom of religious worship, cultural

ideas and local institutions, freedom of language and of educational systems, freedom to shape courts and administrative systems to meet local needs as locally interpreted, freedom from oppressive taxation levied for other than legitimate social needs.

The federal principle, first tried out among us on a large scale and under conditions which are at all analogous to those which will have to be faced in Europe after the war, secures these advantages of home-rule while recognizing that there are other matters with which the government of the larger, inclusive unit must deal. As to what those matters are, American experience has also something to say.

Federal Functions and Powers

THAT THERE MAY be no vexatious tariffs, separating one local community from another within the same imperial or federal system, the adjustment of tariffs should be left to the general government. Trunk railway systems and other great highways are for the larger rule, streets and police systems for home rule. There should be no harassing obstacles to freedom of movement, of changing legal residence from one locality to another, those who move retaining whatever rights may have been obtained through payment of taxes, military service or otherwise. Hopes had been aroused before the war that such obstacles might soon be removed even as between nations; but it is possible that progress in this direction will now have to be made first within definite political systems or international groups rather than by the adoption of universal internationalism. A common citizenship and equal protection of the laws should be a matter of course within each of the larger units, and they would be entrusted with international relations.

There need be no fear that the central governments after the war will lack essential powers. American experience immediately after the Revolution is not likely to be repeated. Diplomats and soldiers and bureaucrats will be keen to see the need for safeguarding the powers of the great empires or the imperial democracies which will face one another after the war. The danger is in the opposite direction. America and the neutral nations generally must stand for the utmost application of the principle of local autonomy, of home-rule. We believe in assimilation through the dissolving influence of ideas. We have faith in the survival of the best ideals where there is freedom for discussion, comparison and spontaneous growth. We believe in the process of give and take. We still insist that no man is good enough to govern another, and that self-government is the ultimate political principle among men. Political independence for a small nation may be but a sham, inviting speedy disaster. Home-rule is the reality. Safeguarded by protection in fundamental rights for minorities, it embodies the vital principle which in one case may be expressed by political independence and in another by local autonomy within a federation.

Applied to states and territories home-rule is the great fact of American history. Purchased Louisiana and Florida, annexed Texas, occupied California, Porto Rico and the Philippines are joint witnesses with the original states that this is permanent American policy. As applied to cities by the states, it is a later but already vital principle of our domestic policies.

In the world after the war home-rule will be no mere academic question. Upon the acceptance of it in the internal relations of the great states, the possibility of a permanent peace largely depends. England must find the way to its application in India and Egypt as well as in Ireland; Russia

and Germany in other places than Poland, if these empires are to be as secure after the war as before. To Austro-Hungary the necessity will be nothing new. America, in one sense, has no concern whatever with such domestic affairs of her neighbors, but in a deeper sense the principle of home-rule is of such universal application, and its part in making possible any larger synthesis is so important, that it cannot be ignored in the discussion of international relations.

The oppression of any people is of universal concern. The destruction of any distinctive national life is a loss to humanity. By frank speech, eye to eye, and hand in hand, such wrongs in each land should be righted by international cooperation. It has been said that the two best books on the problem of the American Negro have been written by Europeans. The subject is one on which the best thought and the closest observation of the world may well be brought to bear. We believe in the principle of home-rule, and not even to prevent the possibility of a lynching can that principle be set aside; but citizens will be found in all of the states in which lynchings have occurred whose minds are open for any sound advice as to how to prevent them.

Home-rule implies something akin to the bill of rights. The eighteenth century formulæ may not fully satisfy us, but they are not obsolete. Life, liberty, property, freedom of speech, freedom of worship, freedom of assemblage, a speedy trial, the equal protection of the laws, are all very desirable and they are by no means everywhere enjoyed. France and England may need neutral friends at the peace to help put them back in their rightful place as the corner-stone of the new civilization. But we shall want other things in the same place of honor, things which our fathers left to private initiative or did not think of as fundamentals of the state. Life means with us more than not being killed. It means health, a low death rate, full nourishment, freedom from infection and physical injury. It has meant that even during the war, for soldiers must be in good physical condition to kill instead of being killed. Home-rule will, therefore, have to include the right to protect the public health, the right to sanitation and a decent standard of life.

Some Rights Under Home-Rule

PROPERTY is at bottom the protection against poverty. The right to property meant formerly security in the possession of property already accumulated. It must mean that still, but it must mean more. Property is secured through efficient industry. Efficiency in industry implies training and intelligence. Such security against poverty as can be provided by a good mental and physical education, by protection of the weak against exploitation, and the development of the capable to the utmost of their individual capacities comes within that conception of rights which home-rule is intended to secure.

Health and education in the new world-state will depend, as they have always depended in the past, on the individual himself, but they are now known, quite as certainly as any other scientific fact is known, to depend largely on the local community organization. If it is efficient, they are within individual reach. If it is inefficient, they may not be. If we conceive home-rule in these terms as freedom to secure the wisest and most beneficial ordering of the local community, as opportunity to seek the common welfare by all the most direct and the most diverse routes, with every encouragement to judicious experiment and every facility for comparing experiences, it will be evident that it is not an empty formula.

Reformers and imperialists have one tendency in common, that of impatience with deviations from type. Factory and

housing reform, organized charity, the movement for the emancipation of women, pacifism, and militaristic imperialism are all alike in that they seek to impose by one means or another a particular set of ideas on all the world. The small nations have been a buffer against this tendency, while they have on the other hand often facilitated the early stages of reforms—or reactions. Home-rule, with its insistence on variety, on local independence of judgment, on the responsibility which goes with freedom, and on the freedom which is a condition of responsibility, is an even better guarantee that deadly grey monotony shall not overwhelm the world.

Music, architecture, painting, sculpture and drama thrive best where there is freedom and spontaneity. War and industrial exploitation thrive where huge territories and populations can be subjected to identical pressure. Economic prosperity and social welfare are to be sought in the same directions as the fine arts. Industry may be conceived in either way. There may be a huge industrial development which does not mean economic prosperity, much less social welfare. That form of socialism which has been popular in France and is known as syndicalism has the advantage over Marxian socialism that at least it offers the possibility of infinite variety and a chance for experiment. Freed of its violence and dishonesty, which are apparently all that make it attractive to some ardent spirits, the syndicalist program becomes an extreme and interesting proposal for the application of home-

rule to the field of industry. It does not follow that it would be desirable. Cooperative industry is quite possible without it.

Variety is desirable in customs and manners as well as in police regulations and occupations. Criminality is not a mere deviation from type. If it were, a society of criminals might be founded with some hope of a successful home-rule experiment, but colonies for criminals are successful only as far as the colonists cease to be criminals and become law-abiding citizens, however great their variety of tastes, customs, manners and habits.

America stands, then, in the councils of the world for toleration of creeds, of institutions, of social and industrial relations. This principle has been slowly developed under the conditions of our own national life. It was not brought by the colonists from England. Many of our early colonists were persecuting zealots. Our mother country, even in the colonial days, was not England, but Europe.

America still has much to learn from other countries as to how to apply the home-rule principle, especially to cities. The principle itself America has learned through her evolution of three centuries from a weak handful of isolated colonies to a compact nation of a hundred million people to which every strain of the old-world population has contributed. This has been the preparation for the difficult and not inglorious task to which we are now called.

The Solid Front of Labor

By *John A. Fitch*

OF THE SURVEY STAFF

“**L**AY on, Macduff, and damned be he who first cries ‘Hold! Enough!’” Thus spoke Samuel Gompers, with a dramatic intensity impossible to convey in cold type, as last week he hurled the defiance of organized labor into the teeth of the newly organized association of hostile employers. That it was labor’s defiance and not alone the utterance of the president of the American Federation of Labor was shown by the storm of applause with which the delegates to the thirty-sixth annual convention of the federation greeted it.

Thus, to a marked degree, was the temper of the convention which adjourned last Saturday in Baltimore, made manifest. Very much to the fore in the convention were such subjects as the rise in the cost of living, the fight of the railroads against the eight-hour day and the organization of the new National Conference Board, made up of employers representing, it was alleged on the convention floor, a capitalization of eight billions of dollars and employing seven million men; organized, it was stated, to fight the labor unions. Whether because of these matters, about which everyone was thinking, or because of other factors, the outstanding feature of the convention was its belligerency.

One of the first and most striking evidences of this militant spirit appeared in connection with the injunction question. The Executive Council had reported on a recent decision of the Supreme Court of Massachusetts declaring unconstitutional the “model” anti-injunction law of that state. The committee on the executive council report, therefore, brought in a recommendation as follows:

“Your committee would further recommend that it be the

sense of this convention that it seems to be the settled purpose of interests antagonistic to the freedom of men and women who labor, to persuade and then use the judiciary to misconstrue constitutional guaranties, and thereby nullify legislative enactments so as to leave but one remedy; and we, therefore, recommend that any injunctions dealing with the relationship of employer and employe, and based upon the dictum, ‘Labor Is Property,’ be wholly and absolutely treated as usurpation and disregarded, let the consequences be what they may.”

This recommendation was adopted by a unanimous vote of the convention.

There was less discussion of arbitration and compulsory service in the convention than had been anticipated by outsiders. At the last term of Congress, President Wilson recommended the enactment of a law similar to the Canadian industrial disputes act. This law, if enacted, would forbid the calling of a strike, on public utilities at any rate, until a government body had had opportunity to investigate the causes and the merits of the controversy. It is reported that the President will again make such a recommendation on the reconvening of Congress this month.

Perhaps it was because organized labor is so completely a unit in opposition to any law that will modify in the slightest degree the right to strike at any time that extended discussion of the subject was not deemed necessary. The convention, nevertheless, left the public in no doubt as to its stand on that question. In the report of the Executive Council, there was extended reference to the demands of the railroad brotherhoods and the legislative proposals of the President.

After considerable discussion of the element of compulsion in connection with strikes the report stated that "the wage-earners of the United States will oppose any proposition to impose upon them compulsory institutions which disguise involuntary servitude." Its recommendation that "this convention take an unequivocal position against compulsory institutions and in favor of the maintenance of institutions and opportunities for freedom" was unanimously endorsed. Later on a resolution was adopted with equal unanimity which declared "that men individually or collectively have a right to stop work any day or any time in a free democracy, and that their right is natural, legal, inalienable and never should be surrendered; and that laws that violate this right are hereby denounced as reactionary, unconstitutional and dangerous to the stability of democratic government."

At another time the convention cheered when W. G. Lee, president of the Brotherhood of Railway Trainmen, said: "I don't believe Congress will pass a compulsory arbitration law. We will fight it as long as we have breath to fight anything."

One of the biggest days of the convention was the day of the visit of the chiefs of the four railroad brotherhoods. The addresses of these men were significant of a changed attitude. As reported last week in the SURVEY, their utterances made it very clear that there is to be a community of action between these great bodies of organized labor. That means, whether the brotherhoods eventually affiliate with the federation or not that organized labor, two and one-half millions strong, is hereafter on all important matters to present a united instead of a divided front.

In another way the visit was important. It came just after a conference between the brotherhoods, and the Railway Department of the American Federation of Labor, which represents various classes of labor on the railroads toward whose interests the brotherhoods have been charged with being indifferent. The fact that there should have been effected a defensive alliance between these two bodies is highly significant. But it is no more so than the declaration of W. G. Lee, president of the Brotherhood of Railway Trainmen, who told the convention that cooperation is necessary in order to organize the "shopmen, carmen and other crafts" who have not been permitted to organize.

If anything further were needed to show that labor is ready to meet any new aggressions on the part of the organized employers with a united front and a fighting spirit, it appeared in two characteristic speeches made by Samuel Gompers. The first was in reply to the addresses of the brotherhood chiefs, from which the Shakespearean utterance at the beginning of this article is quoted.

The other speech came a few days later and was in answer to an editorial appearing in one of the Baltimore papers. Again Mr. Gompers reverted to the new line-up of capital against labor.

"If these men who control billions throw down the gauntlet, we will accept the challenge," he said. "It is not we who make the attack. We are going to act on the defensive, where we can, whenever it may be politic to act on the defensive. But if the fight is to be made to take from the men, women and children of our time the advantages which we have secured, then these employers and corporations had better look out. We are not going to be forced back. The men and the women of labor are not going to be forced back! We will resist, and resist to the utmost."

The first speech was received with great enthusiasm. The second aroused the convention as nothing else had done. After

applauding with unexampled vigor for a few moments, the delegates rose as by a common impulse and shouted, cheered and stamped their feet. It was a great demonstration, not only of loyalty to their chief but of a spirit of united aggressive opposition to a threatening foe.

Harmony—Ready to Fight

WITHOUT doubt the dominant note of this convention was pugnacity. Paradoxical as it may seem the next most impressive thing was its harmony. It was a convention all ready to fight—somebody else. The old issues that have, in past conventions, separated radicals and conservatives into distinct groups were either lacking altogether or were handled in such a way as to avoid a break. Not a single vote was taken that could be regarded as a test of the strength of one or the other of the old contending groups. The radicals were less militant than usual and the conservatives more so. Thus moving each toward the other, the two groups came so near to meeting that it can be called a united labor movement, the representatives of which gathered in Baltimore and took counsel against a common foe.

It is not to be inferred that there were no differences of opinion in the convention. On the contrary, the inevitable jurisdictional disputes took the usual amount of time. There was one rather bitter discussion of a quarrel between the United Garment Workers and the Amalgamated Clothing Workers, a seceding body. In this discussion Alexander Schlesinger, president of the Ladies' Garment Workers, denounced as "outrageous" a reference to the Amalgamated Clothing Workers as a "strike breaking agency."

There was sharp debate, too, over the question of militarism. A resolution had been introduced by the Brotherhood of Painters, Decorators and Paperhangers which stated that Secretary of War Baker has offered in behalf of the War Department to furnish instructors and equipment to public schools which are willing to introduce military training. The resolution condemned this action, declared the American Federation of Labor "utterly opposed to militarism" and directed the Executive Council to file a protest with President Wilson. The committee to which this resolution was referred, of which Andrew Furuseth, of the seamen, was chairman, and Matthew Woll, of the photo-engravers' secretary,—both "conservatives" or "administration men"—recommended non-concurrence in the resolution.

In the spirited debate on this question radicals like Max Hayes, of the Typographical Union, and Joseph D. Cannon, of the Western Federation of Miners, found themselves on the same side of the question with conservatives like James Duncan, of the granite cutters, and Sara Conboy, of the textile workers. In spite of the fact that a similar resolution was defeated in last year's convention at San Francisco, no one spoke against it this year except the chairman and the secretary of the committee which brought in the unfavorable report. Max Hayes, who lives in Cleveland, said that he was shocked at Secretary Baker's apparent conversion to militarism. James Duncan, member of the Executive Council of the American Federation of Labor, said that he had come away from the San Francisco convention "broken hearted" over the action of that convention and he pleaded with the delegates to support the resolution. When the vote was taken the recommendation of the committee was rejected by a unanimous vote and the resolution adopted.

In the two conventions previous to this one the eight-hour day has been a bone of contention. At Philadelphia and at San Francisco the debate was sharp between those who favored the use of either legislation or trade-union activity as

a means of securing the eight-hour day, and those who favored union action alone. Several resolutions were introduced at Baltimore, designed to commit the federation to the legislative method. A general canvass of the delegates seemed to indicate that there was an even chance that if it came to a vote the "radicals" could win.

Here, more than at any other point, the underlying harmony of this convention was made evident. There are deep and honest convictions on both sides of this question. If a vote had been proposed on any of these resolutions an acrimonious debate would have been inevitable. It was feared by radical and conservative alike that such a debate would have a bad effect on the present struggle of the railroad brotherhoods for an eight-hour day. Therefore, despite the belief of many radicals that this time they could win, despite even the joy they might have experienced in heckling Samuel Gompers, traditional foe of eight-hour legislation, for his stand on the Adamson law, it was agreed to sidestep the issue in this convention. The committee on resolutions proposed that the whole matter be referred to a committee of five who are to confer with the brotherhoods and report not later than four weeks before the date of the next convention. This substitute resolution was adopted without opposition.

Not all the time of the convention was given up to denouncing open-shop employers or to Socialists and reactionaries falling into each other's arms. There was enough discord to show that the war is still on, even if the strategy of a larger warfare requires harmonious action for the present. There was a vast deal of business done on all sorts of matters of interest to union men and women. A resolution was adopted favoring the organization of "Erickson Jr." clubs—a non-military boy-scout and trade-union propaganda organization, named for its founder, a union painter in Wyoming. Old-age pensions were favored both for government workers and those in private employ; the restriction of immigration by means of the literacy test was advocated; the Gary school plan is to be investigated and a report made to the next convention.

Several matters of great importance were acted upon without receiving the attention of delegates who were opposed to the action taken. The first controversial subject that found delegates "asleep at the switch" was the immigration question. The action favoring restriction went through without a dissenting vote. Next day the delegates of the Ladies' Garment Workers told the convention that they had been unaware of what was happening when the vote was taken and they wished to be recorded in the negative.

Another such occurrence was the action on a resolution to create a women's bureau in the United States Department of Labor. The National Woman's Trade Union League had taken action favoring the creation of such a bureau. The committee to which the resolution was referred, however, reported that the necessary machinery now exists in the Department of Labor, and it recommended non-concurrence in the resolution. The report of the committee was adopted without debate. Next day Andrew Furuseth, who favored the resolution, moved to have the matter reconsidered. Neither he nor any of the other supporters of the plan had been aware of what the convention was doing when the adverse action of the day before had been taken. Mr. Furuseth showed that the machinery in question does not exist and he stated that Secretary of Labor Wilson favors the establishment of such a bureau. He asked the convention not to "turn down" Secretary Wilson. The delegates, nevertheless, refused to reconsider the matter.

The action on social insurance went through in the same way, without the friends of the measure realizing what was happening. The Executive Council report denounced the promoters of compulsory health insurance as "barnacles" upon the labor movement, and stated that before the "model bill" of the American Association for Labor Legislation—though it did not mention the association by name—was drawn up there had been no consultation with representatives of labor. It also condemned the London bill for the investigation of the question by a federal commission. The council recommended that social insurance, "if established at all, shall be voluntary and not compulsory."

This recommendation was adopted without a dissenting vote, although it put every Socialist in the convention on record as opposed to the action of Meyer London, Socialist member of Congress. Another resolution, introduced by George W. Perkins, of the Cigar Makers' Union, and adopted by the convention, was so sweeping in its condemnation of compulsory and private insurance of all kinds that Mr. Perkins arose later to explain that he hadn't intended to oppose the compulsory insurance of injured workmen.

It happens that many of the delegates, including non-socialists like the representatives of the Typographical Union, were in favor of compulsory health insurance. About forty such delegates signed a paper stating that they were in favor of it and opposed to the action of the convention.

Pan-American Relations

PROMINENT among the acts of the convention that met with no opposition was the attention given to the cost of living. It was evident that whatever wage increases there may have been during the year, the delegates were smarting under the rise in prices of the necessities of life that has gone far toward and in many cases has altogether wiped out the effect of the increased pay. A resolution introduced by William Green, of the United Mine Workers, which was adopted by the convention, demands the appointment of a federal commission to investigate the causes of the increase in prices. Three resolutions called for an embargo on foodstuffs.

Such, in brief, was the thirty-sixth convention of the American Federation of Labor. An account of it would be woefully incomplete, however, that did not take into account a factor that has received almost no publicity, but which may be looked upon, in later years, as far the most important feature of the convention. There were present as delegates to the convention representatives of the labor movement in no less than four foreign countries. These were Great Britain, Canada, Japan and Mexico. How much sentiment for international peace may be created by the reception of such delegates no one may know. The American Federation of Labor sends delegates every year to England and Canada. Next year it will be represented in Japan.

But the movement is far more than a matter of sentiment. Carlos Loveria, of Mexico, came to the convention after an extended trip through Central and South America in the interest of a Pan-American Federation of Labor. He was able to report more than the favorable reception which was everywhere accorded him. He found the practical beginnings of such a movement in the interest of peace in South America. Chile and Peru had a war ten years ago in which Peru lost two provinces. Since the war diplomatic relations have not been renewed and each is in a state of constant "preparedness" against the other. The labor organizations of the two countries, however, have arranged to exchange ambassadors. In the capital of each country, therefore, there is an accredited representative of the working people of the other.

For All the Children of the Americas

By *Edward N. Clopper*

SECRETARY FOR NORTHERN STATES, NATIONAL CHILD LABOR COMMITTEE

IN a Georgia public school report, referring to the advisability of increasing the taxes so as to secure a longer school term, a county superintendent says: "For several consecutive weeks the local editor and myself, by hard effort, succeeded in arousing little or no enthusiasm on the question." He does not say just what he means, but his words sound a plaintive note.

One is tempted to write in the same vein about the participation of the social workers of the United States in the first American Child Welfare Congress held last July in Buenos Aires. The National Child Labor Committee, in cooperation with other agencies, tried its best, through the press, the platform and the mails, to persuade social workers in this country to attend or at least to join the congress, but it "succeeded in arousing little or no enthusiasm on the question." It was another demonstration of our provincialism. There will be another chance in 1918 when the second congress will convene in Montevideo.

Last spring, while there was still hope, a man who had been urged to go asked what the round trip to Buenos Aires would cost. When told, he exclaimed, "Why, I could go to Europe and return for that?" Others felt the same way. It was a sad commentary on either his memory or his geography teacher. And it did not help the situation to remind him that the distance from New York to Buenos Aires is fifty-eight miles greater than that between New York and Constantinople, and 856 miles more than from New York to Moscow, for when he overcame his incredulity he said he couldn't afford it. But he would have gone to Europe last summer if it had not been for the war!

It will be a long time, unfortunately, before we really think of South America as our neighbor. Patagonia is our synonym for the unattainable. Perhaps the trouble is that we look on South America as our neighbor. After the modern way of people who live in apartment houses—a neighbor is somebody or something more or less intangible that it would be embarrassing to meet in the hall.

Even in a commercial way we hold aloof. One would think personal contact essential to establishing and promoting relations between buyers and sellers so much unlike as the South American merchants and the North American manufacturers. But many of our business men think otherwise. Some confine their efforts to correspondence; others send representatives who speak neither Spanish nor Portuguese and are obliged to set forth the virtues of their wares through interpreters. They innocently believe the words, "Made in U. S. A.," hold some magic power and that goods bearing them will almost sell themselves. But it is amusing to see salesmen trying to market a certain make of automobile whose name, formed by putting together the initials of its manufacturer, makes a Spanish word that is applied to a murderer.

Too often our products are stamped "Made in America." From the Latin-American's viewpoint this is unpardonable. That we should arrogate to our own land the name of the whole western hemisphere is to them both impudent and sinister. They insist upon calling us North Americans. But we have never stood upon ceremony in such matters. When

we took over the island of Puerto Rico in 1898 we didn't like the spelling of the first word and promptly changed it to Porto. Now *puerto* is a perfectly good word in Spanish, but its successor has no place in any tongue. And so we go blundering blithely on our way and cannot understand why so many foreigners fail to appreciate us.

We are altogether introspective even when we go abroad. So it seems part of the eternal fitness of things to hear the people of Venezuela, Bolivia, Paraguay and Tierra del Fuego discussing, as they very intelligently do, the merits of the Republican and Democratic candidates for the presidency of the United States and remarking about the prosperity of the Mormons in Utah. But what an eloquent silence ensues on our part when the conversation shifts to local questions. They know far more about our affairs than we know of theirs. The "world's series" of baseball games for "the championship of the world" has recently been played. Why "world"? The series must be between two teams, one the winner in the National League and the other the winner in the American League, both organizations being of the United States, the whole United States and nothing but the United States. The rest of the world has nothing to do with it. Perhaps, after all, this is truly "American." But is it any wonder that Latin-Americans have occasional doubts about us and look askance at assurances of disinterestedness from what their newspapers call "the colossus of the north"?

The Latin-American peoples are continually holding out to us opportunities to get acquainted and to cooperate with them. They have taken the initiative now in the realm of social welfare work and have established a Child-welfare Congress for all the Americas, to meet biennially and bring together the socially minded of the New World. There could be no finer spirit than the Argentinians have shown in doing this. The social workers of Brazil, Chile, Uruguay, Peru and other countries promptly entered into this effort to cultivate international friendships and to establish ideals of American childhood. But so far it has met with but scant attention in our country—we have not yet caught this spirit, we have not yet seen this vision. When we do, the story will be different.

Here we have problems of immigration, labor, illegitimacy, disease, delinquency and a host of others. They have the same problems, and knowledge of this fact makes at once for a kindlier feeling between us. Our common lot of social ills will make the Americas kin.

At the request of the committee on organization of the second American Child-welfare Congress, a committee for the United States is being formed to represent the congress in this country and to promote its interests here. Among those who have accepted membership on this committee are Jane Addams, Julia C. Lathrop, Samuel McCune Lindsay, Wilfred D. Reynolds, C. C. Carstens, Homer Folks and Rabbi Stephen S. Wise. With the cooperation of equally representative and earnest committees in the other American republics, and under the leadership of Dra. Paulina Luisi, a prominent physician of Montevideo who has been elected president of the second congress, the success of this movement to unite the social workers of the two continents in a common effort in behalf of children seems assured.

IS SIR THOMAS MORE UTOPIAN?

By

Mary Breese Fuller

REDUCED FACSIMILES OF THE TITLE PAGE OF THE UTOPIA OF MARCH, 1518, AND OF THE ISLAND OF UTOPIA

DECEMBER 1916 marks the four-hundredth anniversary of the publication of Sir Thomas More's Utopia—and in the old world and in the new we are just bringing into sight the central faith of More's vision. By far the most remarkable realization of More's ideals has come in the last generation. What has been accomplished in socialized living as More conceived it during the last decade, what is to be accomplished in the very near future brings amazement at the prophetic insight of that extraordinary mind of the sixteenth century. In the process of time, his idealism has been in a great part fulfilled—to such an extent that More himself, even after four hundred years, might be astonished.

The Utopia was printed in Louvain, in 1516, under the superintendence of More's friends, the cosmopolitan Erasmus and the French scholar, Peter Giles. Written in Latin, the book soon had a wide circulation among scholars, running through three editions in a year. It was translated into English by Ralph Robinson in 1551, nearly twenty years after More's death. Once in the vernacular, it rapidly became a classic, but of late years it has shared the fate of many classics; it has been handled without being read.

There are two books, or divisions, of the Utopia. The first book, written last, merges the imaginary nation of Utopia with the events and ideas of the period in which it was written.

The early sixteenth century, like the early twentieth century, was a time of peculiar expansion, material and spiritual. The daring voyages of Portuguese, Spanish and English sailors into unknown western waters gave More the opportunity of placing his story in regions teeming with imaginative suggestion. The account of the island and state of Utopia is made the story of a traveller, Hythloday, who was with Americus Vespucius on his fourth voyage, and who found this island somewhere between Brazil and India. A touch in the tale vivid with the discoveries of current explorers, is the clothing of the Utopian priests—robes of bird feathers, like those worn by the Aztec priests of Mexico.

In More's time the knowledge of Greek coming from Italy through travelers hungry after new truth broadened and stimulated education at the universities. The Utopians coming to lectures at dawn and praying in their temples that God would let them find a better government and a better religion than theirs, if such things were, reflects

the mental awakening in all Europe. The revival of Greek and its appeal to More is shown in lesser detail by the nomenclature of the Utopia. "Utopia" is Greek for "no place"; the name of its discoverer is Greek for "nonsense"; the origin of the settlement is made Greek; the names of its towns are Greek—Amaurot meaning "shadowy" or "unknown."

With the widening of the world's knowledge of territory and of ancient learning with its rich revelation of humanity, came also the poignant realization among a few thinkers that the old bottles were rotten into which the new wine was being poured. Vast stores of money ground out by unjust taxation and hoarded up by Henry VII in the belief that the wealth of the nation consisted of the actual amount of gold and silver in its treasury, had been wasted in futile wars by Henry VIII. Parliaments were still bodies of nobles and upper-class merchants, meeting to grant money on the king's demand. Representation and legislation for the benefit of the mass of the people were yet far in the future.

Social and economic distress stood out blackly against the freshness of new worlds. In England the turning of vast quantities of "plough land" into pasture land drove thousands of men out of work and their families from the soil.

The streets of the cities were narrow and filthy; the houses were crowded together and lighted by few windows, mostly containing oil paper. Offsetting this squalidness were vulgar displays on the part of king and nobles of luxury, of silk, gold and jewels, such as took place at the famous meeting of Henry VIII and of Francis of France at the Field of the Cloth of Gold. Leagues were made and broken and war waged by popes and kings as another kind of game or display. Religion offered scholars a theology of mummified sayings by church fathers, a Bible mutilated and overshadowed by ancient commentaries. It offered the common people the privilege of kissing the relics of the saints and of buying pardons for their sins.

In criticism and comment on the historical situation, the Utopia reflects the thought not of More alone, but of the group of scholars called the Oxford reformers—Colet, Erasmus, and More. The lofty spiritual vision, the historical sense and the original educational ideals of Colet, the iconoclastic satire, the detached view of national and international weaknesses and the passion for scholarship of Erasmus, are united in the Utopia with the gentle wit, the detailed practical

understanding of political and social life and the humanitarian zeal of More himself.

More, like all political idealists, is strongly influenced by the community ideas of Plato's Republic, but his social suggestions are less abstract and more practical than those of Plato.

The first of these suggestions to be acted upon was that the government should be responsible for giving employment to the poor. Statesmen of the later Tudor period, particularly Somerset, in the reign of Edward the Sixth, had struggled with the problem of idleness and crime coming from the enclosures. Prohibitive legislation was ineffectual. The necessary new method of living was furnished incidentally in Elizabeth's reign by the exiled Flemish and Dutch weavers, who taught their trade to the idle husbandmen.

And finally the famous Elizabethan Poor Law of 1601 did make the state responsible for the care of the infirm and old and, to a certain degree, for finding work for able-bodied poor. This is the law on which all later Poor Laws have been founded.

There came also in Elizabethan times the doing away of the financial policy of hoarding gold and silver and the substitution for it of the practice of credit and "the free circulation of money" advocated by the Utopia. This policy made taxation less oppressive and "commerce and exchange" more possible.

More's own office of Commissioner of Sewers made him especially critical of the condition of London houses and streets, but not until after the great fire of 1665 did conditions in his own city approach the Utopian picture of "streets twenty feet broad and houses faced with stone, plastering, or brick." The windows "glazed in glass" were just beginning to be used in private houses, and were rare as late as the time of the younger Pitt and the French Revolution.

In 1793, a tax on windows as a luxury showed perhaps a beginning of the redistribution of property toward the ultimate goal of the Utopian state.

Political and Religious Toleration

POLITICAL REFORMS, approaching now more nearly the Utopian standard than economic reforms, were nevertheless slower in getting under way. Not until the nineteenth century did genuinely representative government, primaries in election—"the syphogrants choose the prince out of the list of four who are named by the people of the four divisions of the city"—and the secret ballot in election, come.

Religious toleration such as the Utopians enjoyed was very slow in coming. A Utopian "might be of what religion he pleased and might endeavor to draw others to it by force of argument—but without bitterness against those of other opinions." More himself was executed in 1532, a martyr to his conviction that the English church should not cut off its allegiance to the Pope. Not until one hundred and fifty-seven years later was the Toleration Act passed, giving freedom of worship to all Protestants except Unitarians. One hundred years more passed before Catholics in England had freedom of worship, and not until the middle of the nineteenth century were religious disabilities removed from office-holding.

Beauty in the lines and space of the temple buildings, in incense, in music, in the colors of the birds' feathers on the priests' garments, exalt the imagination of the Utopian worshippers. Their prayers are largely praise. "Their spacious temples gather all in worship of the Divine Essence." There

is a hint of Protestantism in that their priests are married, and that they wonder whether (in the Christian sect) a "priest might not be chosen without referring to the authority of the Pope." These latter were Lutheran ideas.

In spite of all the sect divisions which still exist in Protestantism, are we not coming now into a larger place, approaching the Utopian idea of religious union amid theological differences? The Young Men's and Young Women's Christian Association, the World's Christian Student Federation, the Panama Congress, and other federations of churches show a growing fundamental unity in religion.

Toleration, a dream four hundred years old, is becoming reality, not only in the churches, but in the courts and prisons. Of the likeness between Thomas Mott Osborne's ideals and those of More, I wrote in the SURVEY of October 30, 1915:

"More protests against capital punishment 'for a little money,' i. e., theft. Osborne protests against capital punishment for any offense. More was interested in reforming the society which produces thieves; Osborne is interested chiefly in reforming the individual criminal. Both, however, attack the institutions of the state which propagate the criminal and the laws which maltreat him. Both reformers advocate fundamentally the same attitude of mind on the part of judge and warden toward the wrong-doer—the attitude of the educator, not the punisher. Both More and Osborne advocate similar methods of training the criminal into an upright and useful citizen by giving him healthy conditions for body and mind, and responsibility in action, while he has about him an atmosphere of increasing trust, as he warrants that trust."

In Thomas Mott Osborne's prison are criminals of many sorts; in the prisons of England were mostly thieves saddled upon the state because of the economic conditions. In the Utopia, as More in England saw all crime being caused by a desire to rob, private property was abolished. Consequently there is no pay, except his livelihood, coming to the working man, and the question of wages does not enter into his life. Of next importance, however, in the life of the working man or woman comes the question of the number of hours of labor. The Utopian community had only six hours in its working day. We have not reached that standard. We may in America never wish to reach it. But slowly modern labor legislation has been approaching the eight-hour day.

Working hours for men are regulated mostly by the trade unions; for women and children by state laws. The report of the Bureau of Labor statistics of the United States Department of Labor, issued in December, 1915, and covering the period from 1908 to 1915, gives some idea of the growth of recent state legislation. "We find within this period the number of states prohibiting factory employment under 14 years of age increasing from 30 on January 1, 1908, to 41 in 1915, the number requiring medical examination or a certificate of physical fitness preliminary to the issue of work permits from 8 to 35, the number prohibiting night work under 16 years from 18 to 36, and the number limiting hours of work under 16 years to eight a day from 3 to 31. The number of states prohibiting night work for women have increased from 3 to 6, the number limiting the hours of work in factories to eight per day increasing from none to 4, the number limiting hours of work to ten a day increasing from 15 to 34, while two classes of laws not known in New York state in January, 1908, namely, minimum wage and mothers' pension laws, have been enacted, the former in 11 states, the latter in 39 states."

The chief occupation in the Utopia, however, is not manufacturing, but agriculture, the most necessary type of employment in community life. "No person, neither man nor

woman, is ignorant of it." With these "husbandmen" More shows the working of his practical mind. He picks up the ancient custom of using incubators. "They breed an infinite multitude of chickens in a very curious manner; for the hens do not sit and hatch them, but a vast number of eggs are laid in a gentle and equal heat in order to be hatched." Only recently have we used incubators first for chickens and then for babies.

Besides this knowledge of agriculture, each Utopian has a peculiar trade for which he has been trained. The slowly growing emphasis on vocational and technical training is another important fulfilment of a Utopian ideal.

But work is secondary in the Utopian state to self-improvement of mind and body. Lectures are given in the early morning to such as are disposed to attend. The increase of university extension lectures and classes arranged by our state and municipal boards of education in the last few years carries out that idea of educational opportunity. Moreover, in the Utopian intellectual life, "learning was in its own tongue." Though English literature came richly to its own in the later Tudor period, it is rather pathetic that More did not live to see his Utopia in the vernacular.

Because the Renaissance had renewed for More the Greek idea of full development of body as well as of mind, the Utopian takes no pleasure in asceticism, and much of his leisure is spent in play. We, only lately awakening from our Puritan one-sidedness, are opening playgrounds and writing books on "play and education."

And how the allegorical plays of the Utopians, battles between virtues and vices, so popular in the Elizabethan period, are being renewed in our wave of masks and pageants! Imagination such as that of Percy Mackaye and his followers is stimulating municipal school and settlement pageants of the symbolic type. We are slow indeed in the new world to give to music the place in popular recreation that the continental people give it or that the Utopians give it in their evening diversions. But the continental leaven is working in us more hopefully of late through such agencies as the music settlements, community choruses, and municipal orchestras.

For making the whole community life a healthy one, the Utopians insist on eugenic marriage, the definite method of which seems to have been taken from Plutarch's "Lycurgus." With us laws on state regulation of marriage have come only within recent years. In the United States the report of the Eugenic Record Office for 1913 (the latest available report), sums up the facts in this way: "The principle that the state may and should control marriage matings is, as we have seen, recognized by all states." In detail marriage is limited in three ways, (1) by limiting the physical and mental condition of the consorts, (2) limiting consanguinity, (3) limiting mixture of races.

The Utopians, like ourselves, aim for the healthy state, but take, also, great care of their sick. They have public hospitals provided "so furnished and stored with all things that are convenient for the ease and recovery of the sick and those that are put in them are looked after with such tender care that there is scarce one who does not choose to go thither than to lie sick at home." Contagious wards are furnished far from the rest." The first real separation of the contagious wards in the United States did not come until after the Civil War, and the plan of More's Hospital City, "four hospitals built without their walls so large they may pass for little towns," is only being approached by the hospital planned by the College of Physicians and Surgeons in alliance with the Presbyterian hospital, in New York city. The use of hos-

pitals is still meager compared to their possibilities, as Dr. Richard Cabot has brought out in his articles in the April and May *American Magazine*, advocating a pay clinic. The experiment in the pay clinic in the Massachusetts General Hospital is the latest step in hospital progress. But social service work of the last ten years, the movement for industrial medicine imposed in such labor legislation as the Working Men's Compensation Act, and the reporting of industrial diseases, have been potent agencies in connecting the hospital with the people.

Future Fulfillments

IT IS IMPOSSIBLE to dwell on the present-day fulfillments of the Utopians without perceiving how close we are to future fulfillments of its prophecy. The whole social scheme of the Utopians, the hatred of war, the emphasis on internationalism are the ideas now being emphasized and urged under the shadow of the great war. More's satire is nowhere bitterer than on the subject of leagues, reminiscent of the behavior of Pope and sovereign in the shifting and selfish political arrangements of the early years of Henry VIII.

The Utopians shrink from all forms of treaty making. "They judge that the partnership of kindness and good nature unite men more effectually and with greater strength than any agreements whatsoever. . . . They detest war as a very brutal thing, although they prepare themselves in readiness for fighting, should it be absolutely necessary. They go to war in their own behalf only if bodily harm is done any of their citizens and the offending individuals are not surrendered for reparation." They help out their friends sometimes in trade wars, "but in no victory do they glory so much as in that that is gained by dexterity and good conduct without bloodshed." "They reckon that a man acts suitably to his neighbor when he conquers an enemy in such a way as that no other but a man could be capable of, and that is by the strength of his understanding."

"If war is declared they try first to kill the leaders responsible for the war. They think it an act of mercy and love to mankind to prevent the slaughter of those that must otherwise be killed in the progress on their own side and on that of their enemies by the death of a few that are most guilty." One's mind instantly flashes to the words of Lowes Dickinson in his article in the *Atlantic Monthly* for December, 1914, on the responsibility of the governing few in Europe for instigating the great war. One is also reminded of the plank in the platform of the English Union for Democratic control declaring the necessity of genuine parliamentary control over foreign affairs.

And yet from a dozen current writings might be culled such quotations as: "It has nothing Utopian about it," "he refuses to be carried away into any Utopia," "he indignantly combats the idea that there is anything Utopian about himself," and "More, who in spite of his Utopia, was in many things an eminently practical man." I wonder as I read these earnest repudiators of Utopianism, if they have ever read the tiny book from whose ideals they shrink. Have they any conception of the number of Utopian ideals, political, social, religious, which have been carried into actual fulfillment?

Sometimes More played fantastically with his mind. He imaged a state where fashions never changed, where jewels were valued as playthings for children, and gold as chains for slaves, where laws were few and lawyers never needed. But, since time has made 1516, 1916, these things are about all that is left actually chimerical in the Utopia.

BRAGGING LIKE A BOY

In twenty months, Hopewell, Va., grew from a sandy plateau to a city of 35,000 people. This reprint from "A History of Hopewell" shows two actual scenes in the oval pictures and a modest prediction in the skyscrapers borrowed from an older community.

Hopewell

A City Eighteen Months Old

By John Ihlder

INTO the brief year and a half of Hopewell's existence has been crowded experience which even Oklahoma has not duplicated in a generation. In April, 1915, this new Virginia war town was merely a sandy plateau. In December it was a turbulent ungoverned frontier community; five hours later a waste of smoking ashes; ten months later a fully organized municipality dealing with wracking social problems. And along with and causing these sudden changes was the overnight growth of a small dynamite factory at the confluence of the James and Appomattox rivers into the enormous Du Pont powder mills.

Three years ago, the Civil War, the landing of Grant's army, the fall of Petersburg and the surrender at Appomattox were still matters of current interest to this part of Virginia. For perspective it looked back to the founding of Jamestown, whose ruins lie a few miles down the river. Here American history was born. Here began the frontier that decade after decade crept steadily westward until, with the ending of the past century, it disappeared.

Then came a new war, greater even than that in which the valley of the James had played its part, and suddenly the

frontier seemed to revive for a moment on the spot where it had started.

This new frontier community was typically American, typical no less in its differences from Leadville and Tombstone, than in its likenesses to them. For the American frontier was never for two decades the same except in its zest, its tumult and lawlessness, its optimism for the future and its privations of the present. These Hopewell shared with its predecessors. Hastily and flimsily built, ugly as only that which is cheap and shoddy can be ugly, pretentious with wooden false fronts on its buildings as all aspiring frontier towns have been, dreaming of a magnificent future amid the mire and grime of the present, it proved that the old American spirit had not died, but has simply lacked recent opportunity for expression.

Then came the great fire of December 9, 1915, and in less than five hours Hopewell had gone. But where there is work and wages there will be a town. More rapidly than before Hopewell rose from its ashes. To-day, with its suburbs and company villages, it is supposed to have a population of 38,000.

RUBBEROID COTTAGE, ATTRACTIVE AND COMFORTABLE, BUT COLD IN WINTER

But even before the fire times had begun to change. The old frontier had before it the wilderness, behind it a country scarcely more settled and orderly than itself. Hopewell is in the midst of our oldest commonwealth. Only half an hour away is staid, conservative Petersburg; a little further away is Richmond. Frontier lawlessness may be picturesque in history or romance, but it is uncomfortable in a civilized, twentieth-century neighborhood.

The helplessness of the officials of Prince George county in their attempts to deal with drunkenness, vice and murder

became a scandal in the eyes of Virginians. The fact that the coroner was called upon to investigate six murders in one night might make interesting stories for the newspapers of New York and Chicago, but it did not stimulate the pride of the people of Richmond. So, backed by that better element which seems to have existed in every city except Sodom and Gomorrah, Governor Stuart took charge.

The legislature gave Hopewell a city charter of the regulation Virginia kind—mayor, aldermen and councilmen; and the governor appointed city officials and a chief of police.

THE BEST CLASS OF DURABLE COTTAGE BUILT BY THE COMPANY

With a sanitary office at the left and a jail and police headquarters at the right, law and order are being established in Hopewell.

The town became technically "dry," vice sought cover, tumult and disorder diminished. Death Valley and Slaughter Lane became interesting souvenirs. A fire department was established. Most recently a building code has been enacted. Hopewell ceased to be of the frontier. It even ceased to be a boom town.

During its first year Hopewell ignored loss. The Eppes family, who owned much of the surrounding—and far from fertile—territory, did not realize fully what the powder factory might have meant to them. They were not only modest in their expectations, but they actually spent money on development. Where sparse crops had grown, they marked out a series of rectangular streets on a level tract between the railroad and the river, built a sewer system and laid water mains supplied by a pump in a ravine. They expected lots to sell for about \$50 each.

The price of lots, however, at once jumped to \$105. Then from nearby cities, from Washington, New York, and, as always, from Los Angeles came the real estate operators. Property changed hands every day. Prices mounted with every sale, until some 25-foot lots sold for as much as \$4,000 each. I have been told by an engineer who platted the city that he knows of lots selling for \$25,000 each. Soon the original Hopewell, shut in by the railroad and powder plant on one side, the Appomattox river on the other and the Du Pont village developments at the two ends, became too small for the activities of these boosters. They leaped across the larger of the Du Pont villages and began to buy and plat farms far beyond the old Eppes plantation. A retired minister who had bought 100 acres at \$10 an acre as a refuge in his old age, sold 80 acres for \$80,000.

The Plight of Those Who Bought

THIS is the bright side, the side of those who sold. The other is the side of those who bought. For miles along the tracks of the railroad and the trolley line to Petersburg are rows of neat little street signs proclaiming the existence—on paper—of Bellevue and Hillcrest and Wildwood avenues.

At intervals are station platforms and real estate offices bearing euphonious real estate names familiar in every American suburb. Behind some of these are one or two or three widely scattered, newly built houses. And further back, so far back as to be out of sight of all except the persistent enquirer, are the investments of Virginia school teachers and ministers and small salaried clerks who spent their savings in the hope of large and quick returns.

Nor are these the only ones who have lost or stand to lose. Some of the real estate operators themselves were caught when last spring the Du Pont company finished construction work on its plant and discharged 11,000 workers. That was Hopewell's first great shock. Up to that time it had persuaded itself that there was no limit but the sky. Prices dropped like lead. One man told me he had built a dozen houses in the outside district. The lots had cost him \$200, the houses \$400 each. At first he had rented them for \$35 a month, then for \$25, now he rents for \$12 and \$15. He has gotten half his money back and hopes that he may come out even by inducing some of the 4,500 to 5,000 men who daily commute from Petersburg and Richmond to move their families. But it is hope rather than expectation, for what Hopewell now looks forward to is contraction rather than expansion of the powder mills. The only section where rents re-

The only hospital is maintained by a doctor who is in constant hot water for lack of a license to practice in Virginia. He has made a notable fight against vice.

main as high as \$45 a month for five rooms in a board "apartment house" is in the original Hopewell, where property owners are still sure of the drawing power of the "white lights" before the stores and movies.

Meanwhile, during these vicissitudes of the city and its widespreading suburbs, the Du Pont company has pursued a steady, consistent policy in the housing of a considerable proportion of its 15,000 employees. Although, as at Penn's Grove (see the SURVEY for February 5), its provision has not been enough to meet more than a fraction of the need, in this as in other ways it has been more foresighted than has the unorganized population of Hopewell. It has looked forward to a near future when its force would be materially reduced by the departure of the construction gangs and has not attempted to provide for the peak of the load. Even for the rest of its employes its plans did not contemplate a future much beyond the duration of the war. Recently, however, it has announced that when war orders fail it will convert its plant to the making of dyestuffs and other products for which the present equipment is partially fitted. If this program is to be followed the company will soon be faced with new problems in its villages.

But granting the premise upon which the housing work was undertaken, that after a few years the plant would shrink to approximately its original size, there is much to be said for and little to be said against what the company has done. It could and should have bought up all the land upon which the city of Hopewell stands—provided Mr. Eppes would have

sold. Then it could have controlled land prices and the methods of building. It could have installed as good a sewer and water system for the whole community as it now has for its own villages. Yet it should be added that many of those who thronged Hopewell have been neither employes of the company nor legitimate purveyors to their needs.

Early in its expansion the company built Davisville, or, as it is now known, Shacktown. Here the men engaged in construction work were sheltered in long, one-story wooden, rubberoid-covered barracks. Shacktown is inside the barbed-wire fence that completely surrounds the plant and it may be entered only by those who have tickets or are in the company of an official. The long buildings are divided into rooms around the walls of which are ranged solid lines of three-decker iron bedsteads. Each room has sheltered as many as thirty men, but the number is now reduced to eight or ten. Between the rows of barracks are wash-houses and sewer-connected water-closets. At one side of the enclosure is a commissary, where the men may buy their meals at cost.

Since the departure of the construction gangs, Shacktown has been populated by single men employed in the mills. On one side are negroes, in the middle immigrants of all nationalities, on the other side Americans. The last has significance. On the far side of its plant, along the James river, the company built a village for American bachelors. The 100 or more houses here are steam-heated, while the situation in an old pine wood above the river, where the acid fumes seldom come, is the pleasantest of all.

A room in one of these new, clean houses rents for fifty cents a week. But the men and boys found the situation too

The single men for whom these cottages were built by the company deserted for the white lights of the city. They are now occupied by families at \$5 a month.

quiet, too far removed from the life of the business streets. So when the construction gangs left, many of them moved to Shacktown and took up their quarters in the vacated barracks that are already becoming dilapidated. Barren and ugly, the air filled with acid fumes and with frequent showers of soot, Shacktown offers but two attractions: men live there rent free and are just across the railroad from the "city."

Meanwhile the James river villages are being populated with families, the old bachelor quarters converted into three-room apartments that rent for \$5 a month.

When it was too late to prevent the disorderly development of Hopewell, the company bought large areas at both ends of the city and began there the erection of "rubberoid" cottages like those at its Penn's Grove plant.

In the northern development, named A village, live the

chief officials, the supervisors, chemists and other higher salaried employes. Most of the 143 houses are of fairly substantial construction, clapboard or shingle outer walls and plastered within. A considerable proportion of them are of the "ready-built" variety made in Michigan. This village already has a settled, permanent appearance. Most of its streets are well paved, trees have been planted, the yards are well sodded, and about the houses are bushes and flowers. Here, too, is a large clubhouse or hotel where some four hundred bachelors live.

B village, at the other end of Hopewell, is of much less permanent construction. All of its 1,086 houses are of boards covered with "rubberoid." But they are attractively designed, widely spaced and surrounded by well-kept lawns and flowerbeds. The streets, however, are not paved and the sidewalks are of wood.

The chief complaint against the B village houses is that their light construction makes them cold in winter. But the Virginia winter is comparatively mild, so mild that by the simple though expensive expedient of letting the water run all night, there were only two or three times last winter when the plumbers could not keep up with the bursting pipes.

Sunshine and Bath-Rooms

IN ALL the company's houses, except the converted quarters of the James river villages, there is a fully equipped bathroom in every family dwelling. Moreover, except in the James river villages and part of B village, where houses are built in groups of six or eight, all are so widely spaced that the sun reaches every part of them. In the James river villages the converted houses contain three rooms; in B village the detached houses contain six rooms and rent for from \$7.50 to \$8.00 a month; in A village they range from six to eight rooms and rent for from \$12 to \$15 a month.

The total monthly rental from all the company's houses is \$10,500. This is said to be based on a 10 per cent gross return upon the cost, and one official optimistically declared that the houses will have paid for themselves "in fifteen years anyway."

There are several faults with this reasoning, aside from the obvious one that gross return is very different from net return. Flimsily built houses, such as those of B village, will not last fifteen years unless they have been practically rebuilt in the meantime. Already the cost of maintenance is beginning to make serious inroads upon the gross return. The cost of streets, sewers, water mains, pumping station and filter-

"Shacktown," bachelor quarters built of short-lived rubberoid, furnishes separate sections for Negroes, native whites and foreign-born workmen.

ing plant are not figured in. To be sure, part of the water system cost should be charged to the mills, which use them also, but part belongs to the houses.

Then there is the cost of garbage collection and of cleaning, for the company keeps all its houses and their surroundings in the most sanitary condition. A part of the work of its sanitary squad is the draining of marshes and the oiling of stagnant pools. Were all these costs figured in, it is doubtful if the 10 per cent gross would show any per cent net.

There is no intimation in this that the company is of a philanthropic bent. What it has done, it has done because it is good business. The wife of one of its employes who lives in B village said that her family had never been so well in their lives as during the year they have lived here. Light and air, space for the children to play, abundant and pure water, sanitary and convenient toilets, malaria and typhoid banished. These things mean not only steadier and more efficient but also more zealous employes. And the Du Pont company realizes it.

If peace is to change the powder mills into dye works and there is to be here a permanent city, there arise at once new problems, first among them the old question of democracy or autocracy. Should the company which has owned and maintained a remarkably good camp own and manage a permanent town? Even with the camp it has difficulties. Around its holdings are private developments that it cannot control.

A Neighboring Menace

A SHORT DISTANCE outside of B village is a Negro settlement, the inhabitants of which get their water from a polluted well. The week before I was in town there were several cases of typhoid in this settlement, a menace to thousands of company employes, for whose protection the company has taken every precaution on its own property. In a little ravine below A village is a collection of shacks and tents inhabited by men and horses. The surroundings are filthy. Flies swarm. The people get their water from a spring that may be polluted at any time. A drain from the hill above discharges a constant stream of dirty water into a scum-covered pool. The company officials have no authority there. But company houses stand on the edge of the ravine.

The city of Hopewell, itself surrounded by company property, has an inadequate sewer system, while its water comes from a well in a ravine, along the banks of which stand several privies. Though the company houses are widely spaced and covered with a non-inflammable material to reduce the fire hazard, the city nearer to the mills is a tinder-box. During a recent week it had two fires.

But while these matters are bad enough in a temporary development, and become worse if the development is to be permanent, there are other difficulties, even more serious, sure to arise if the company attempts to control all the surrounding territory. Had there been no free city of Hopewell, it is safe to assume that already there would have developed an antagonism between the company and its employes. Had there been no choice between living in an expensive, flimsy apartment or in a tent in Hopewell or in a sanitary, attractive and comparatively comfortable cottage in B village, there would have been from the cottage dwellers complaints now not even thought of. To-day, when a considerable number of employes are forced to put up with the expensive inconveniences of Hopewell or make the daily trip to Petersburg or Richmond while awaiting their turn to get a company cottage, those who are installed have a lively sense of their advantage.

Besides affording a contrast, Hopewell has been a safety

valve through which has escaped energy that more closely confined might have produced an explosion. And still more important, it has given this shifting throng from every quarter of the globe a chance to find itself. Pressure from outside, from state officials, has played its part; but also there has been good yeast working within.

No one knows yet the exact proportion of the many elements in Hopewell's population. And if he did know to-day his knowledge would be antiquated to-morrow, for during the past few months the company, instead of employing everyone who applies, has been able to pick and choose. It is weeding out. One result, according to the superintendent of schools, is that there are now only six or eight nationalities represented, while last winter there were twenty. Another result is the disappearance of the more turbulent spirits.

The impression one gets of the population is as if there had been a sort of sub-marine volcanic eruption that has thrown to the surface in inextricable confusion all forms of life that had existed between the surface and the lowest ooze. At first there was nothing but a welter, a blind, confused struggling. Now, slowly, those who possess character and purpose are beginning to establish themselves. In spite of the handicap imposed by the widespread feeling that Hopewell may be only a temporary bubble, in spite of the still constant shifting of the population, here today and gone tomorrow, there are leaders who came with the first rush and who have stayed. Not least interesting is it to find that among them are some who are finding an opportunity to redeem past mistakes by present service, and at last about these leaders has begun to crystallize a public opinion that gives something to work with.

The question now is whether this new social and civic consciousness will grow rapidly enough to save Hopewell—always assuming that the war-time powder mills are to become peace-time dye works? In spite of the rush and vim of Hopewell's building, only a fraction of the city's area is covered. And of that fraction most is covered with flimsy board structures that must soon be replaced. Although substantial brick and concrete business blocks are being erected on some of the chief business streets, they are still few in number.

Hopewell as a permanent city is just at its beginning, and it is beginning badly. Its street system is poorly planned. Its lot units were designed to get the most money for the least land. The new business blocks are more substantial than the old, but they fill their lots, borrow light and air for their offices from neighboring lots. Even the best hotel in town gets light for most of its rooms from a narrow court.

The Chance for Democracy

Now that the frenzy of speculation is over, Hopewell has its opportunity to build in such a way that its future will be assured. Within a few years the thousands who live in the surrounding company villages must find new homes. Hopewell can have them if it makes itself fit for them. Foresight, such planning as the present street layout permits, proper regulation of buildings with an eye to future use instead of to past speculative land prices, a safe water supply, an extension of the sewer system, public schools in place of those now maintained by the company; with these both Hopewell and the company might watch with equanimity the rapid disintegration of Shacktown, the James river and B villages.

Autocracy, at least partially prepared for the emergency, knowing definitely what it proposed to do, has to date produced much better results on a temporary basis than unprepared, uninformed democracy. But democracy's chance to work on a permanent basis has now come.

EXTREMES OF WAR SERVICE

General Von Hindenburg, directing the German campaign on the East Front, and Ernest P. Bicknell, director Civilian Relief, American Red Cross, conferring on relief in Poland. Von Hindenburg stands in the center Mr. Bicknell at his left

The Battlefield of Poland

By Ernest P. Bicknell

DIRECTOR OF CIVILIAN RELIEF, AMERICAN RED CROSS

THE story is told of a regiment of Polish infantry in the Russian army who charged a body of the enemy with fixed bayonets. Just before the shock of contact, each side discovered that the other was shouting a Polish battle-cry. In an instant, so the story goes, every bayonet was lowered and the men on both sides, inspired by a common impulse, fell upon their knees.

I do not know whether this incident is true, but it well illustrates the spirit among the conscripts of the country which has been compelled to bear the brunt of the eastern campaign. Forced into a struggle not of her own making and in which she had little interest, compelled to divide a million of her sons between the two great contending armies, and, finally, to see her own land selected as the battleground, its peaceful and helpless people driven into exile, its towns and villages destroyed, its farm lands devastated, its mills silenced, its commerce paralyzed, the horrors of pestilence and famine let loose; this is the tragic fate of Poland. Belgium and Serbia fought for life and for liberty, with powerful friends as allies.

Poland fought as a vassal state, without heart, without hope, her own land the inevitable victim, no matter which side won the victory.

To fully appreciate the depth of Poland's tragedy it is necessary to recall that sad day in her history, more than a century ago, when her country was seized by Russia, Prussia and Austria and parcelled out among them. Although this division of territory compelled allegiance to three different masters, it did not divide the unity of the Polish people, who from that day have continued to regard themselves as one nation in spirit, sympathy and mutuality of interest.

And yet in this war none of the contending armies which have destroyed Poland has felt hostile toward her. As a matter of fact, every one of the three principals in the eastern war zone has desired her favor. An official of the German government said to me, with a cynical smile, that Germany, Austria and Russia were trying to convince Poland that each was her only true friend. While such a statement as this must have seemed a grim jest to the scattered, broken and

perishing Polish people, in fairness it should be said that the devastation in Poland was not a deliberate policy, but the result chiefly of the gigantic military operations carried on in Polish territory, as the huge armies surged back and forth alternately winning and losing.

Caught Between Two Armies

THE SAME REASONS, however, which led these great countries to seek Poland's favor led them to suspect her friendship and aroused a sense of jealousy and distrust. Instead of laying court to her by means of conciliatory and sympathetic measures, these conflicting sentiments led each of the aspirants to adopt an attitude of sternness even while professing friendship.

When the Russian armies were forced backward out of Poland they drove before them many hundreds of thousands of Polish noncombatants, fearing that they would prove friendly and helpful to the German and Austrian invaders. On the other hand, the German and Austrian armies upon occupying Poland dealt harshly with the Poles, because the latter were subjects of an enemy country, and were, therefore, suspected of hostility. Thus, amid professions of good will, Poland suffered as though she were the enemy of all three of the great nations which fought across her territory.

As early as January, 1915, when the Teutonic forces had occupied only half of the territory of Russian Poland, and before the city of Warsaw was lost to Russia, the Central Citizens' Committee of Warsaw, composed of a group of intelligent and public-spirited Poles, had made a study, at the suggestion of the American ambassador in Petrograd, of the losses which Poland had suffered within the territory at that time occupied by the German and Austrian armies. This estimate, prepared with much labor, showed that of the twenty-seven thousand villages included in the occupied section, more than five thousand had been damaged by the fighting, and that of this number, about one thousand had been completely destroyed.

Losses in the open farming country were proportionately as great as in the villages. Items in the damage wrought by military operations consist in the injury caused by the digging of trenches and the tearing up of the ground by the explosion of shells. Through this cause alone the committee estimated that the farm lands upon which actual fighting occurred lost 25 per cent of their value. The Russian armies were said to be no less responsible than the invading forces for this huge devastation.

Without minutely analyzing the elaborate report of this committee, its estimate of losses in the occupied part of Poland up to January 1, 1915, was 698,767,000 roubles. Since a rouble is the equivalent, roughly, of fifty cents in United States currency, the loss thus reached a total of three hundred million dollars. If the finding of the central committee may be taken as approximately correct at the time it was made, now, almost two years later since Warsaw and many other large cities, as well as the entire remainder of Polish territory, have been conquered by the central powers, after many months of titanic military operations, the aggregate of losses must reach billions of roubles.

But the property losses, huge and crushing as they are, do not constitute Poland's chief appeal to the sympathy of the world. That lies in the story of the shattering of a peaceful and industrious people, its young men forced to engage in a fratricidal war, its old men, its women and children homeless, starving, dying, scattered to the four winds, huddling among the ruins of their villages, trailing in pathetic thousands along the country roads, their way marked by the graves of those who succumbed, moving in a vast and hopeless migration into

the far distances of Russia, the prey of disease and despair. Of all the helpless, unearned suffering, of lonely uncounted death, of the pitiless clutch of circumstance which this war has produced, no desolation, unless it be that of the Armenians, equals that of Poland.

Moved by a desire to alleviate this suffering of the Polish people, the Rockefeller Foundation War Relief Commission traveled from Holland to Berlin early in January, 1915. The commission at that time consisted of Dr. Wickliffe Rose, director-general of the International Health Commission of the Rockefeller Foundation; Henry James, Jr., manager of the Rockefeller Institute for Medical Research, and myself, as national director of the American Red Cross. Colin Herrle, of the staff of the Red Cross, was secretary of the commission.

At Berlin the American ambassador, James W. Gerard, who was of invaluable assistance in all the negotiations that followed, brought us promptly into communication with representatives of the German government, where our desire to be of some help to the Poles brought an immediate and hearty response. In order to simplify preliminaries, Dr. Theodor Lewald, a permanent under-secretary of the Department of the Interior, was authorized to represent the German government in all its relations to our undertaking. Dr. Lewald had made several visits to America and as the German representative at the St. Louis exposition had remained in the United States for more than a year. His excellent command of the English language and his knowledge of and friendship for the United States enabled him to give us most efficient and intelligent help.

It was obvious that the first preparatory step must consist in a journey into Poland for personal observation of the condition of the Polish people, the means of transportation, communication and distribution. Because of the lack of railway facilities, it was necessary that travel in Poland should be by automobile. The trip was begun about the middle of January, the party consisting of the members of the commission, Dr. Lewald and two military officers, who accompanied us as guides and interpreters.

A Journey Through Poland

WE FIRST VISITED southern Poland, where agriculture is of secondary importance and where the population is chiefly engaged in mining and manufacture. No fighting had occurred in this region, but all the mining machinery had been destroyed as a military measure, and all manufacturing had been stopped for lack of raw material. Local relief committees had been formed in the chief centers of population, and thousands of unemployed workmen and their families were receiving food daily from soup kitchens and other relief distribution centers. The absence of food supplies was due largely to the fact that the normal agricultural crops were insufficient to meet the usual demands of the people, and lack of transportation facilities prevented the bringing in of supplies from other parts of the country. Small amounts of flour and meat were permitted to be sent in from Germany for distribution.

From this part of Poland we traveled northward and eastward, zigzagging backward and forward in order to obtain a comprehensive idea of the needs of the country.

In the city of Czenstochowa we found a population of ninety thousand, half fed, idle and depressed. Mill owners were allowing their employes six kopecks per day, equivalent to about three cents in United States currency, for each member of a family. Such supplies as were to be purchased commanded abnormally high prices. Great misery existed throughout the community, and it was clear that unless some

systematic provision for relief was made, actual starvation would result, with its inevitable accompaniment of disease. Mortality among the children and the aged was reported to have reached an alarming rate, although no statistical information was available.

But in order to fully appreciate the conditions prevailing in Czenstochowa and other cities of Poland, with the exception of Warsaw and a few of the more important places, it is necessary to have in mind a picture of the civic characteristics which prevailed in those communities even in normal times.

Russian Poland for more than a century has had no vestige of self-government. All her government officials, in both provinces and municipalities, were Russians (not Poles) appointed by the Imperial government at Petrograd, to which these appointees owed their first allegiance always. Taxes were levied primarily for the benefit of the Imperial government, the needs of the taxpayer and of the local community being always of secondary importance. Although the mayor of a city was assisted by an appointed advisory council of citizens, they possessed little power. Authority to expend money for the benefit of the city had first to be obtained from Petrograd. Applications for such authority usually waited long for an answer, and were often refused. For example, the mayor and council of the city of Lodz, with more than a half million population, were not permitted to expend more than \$150 for municipal purposes without special authority from the Imperial government.

The result of this system of rule from the outside by outsiders was everywhere obvious in Czenstochowa, as well as in the other Polish cities which we visited. Czenstochowa had no paved streets. At the time of our visit the streets were deep with black semi-liquid mud. Sidewalks were narrow, broken, uneven or absent. There were no street lights at night, save from a few scattering lamps in the central square fronting the public buildings. The city possessed no public water supply, no sewers, no street railways, no telephone system, no fire department, and no public schools. The use of the Polish tongue was forbidden in private and parochial schools.

Censorship of Religion

SUBSTANTIALLY 80 per cent of the Poles are Roman Catholics, and a constant source of friction and repression was to be found in the fact that the Russian government, of which the state church is the Greek Catholic, exercised complete control over the Roman Catholic priesthood. A priest might not go from one community to another without a special pass from a government official. A Pole could not study for the priesthood without government consent, and was dependent for appointment to service and to promotion upon governmental approval. This rigid control of the Roman Catholic church in Poland by a government which is anti-Roman Catholic in sentiment has been an obstacle to the development of that church along the lines of greatest helpfulness to the people.

Add to this picture of the physical and civic backwardness normally existing in Czenstochowa the complete idleness of its 45,000 industrial operatives, and reduce the food consumption of the entire city to 50 per cent of its normal amount, and you have a combination of conditions which can but crush the spirit of a people and lead inevitably to a breaking down of vitality and to a mortality which must swiftly carry off the weaker members of the population.

The city of Kalish, close to the German boundary, had been one of the more substantial and prosperous cities of Poland. When the conquering German army entered Kalish it was

charged that some of the citizens fired upon the troops from windows and cellars, and, pursuant to its policy of inflicting swift and drastic punishment for this offense, the Germans had burned a large part of the central business section. This was the only instance of this character which we encountered in Poland, a fact which may be taken as an indication that the Polish people did not so strongly resent the incoming of the Germans as did the people of Belgium.

Of the many cities and towns visited, Lodz was the largest and most important. This city is the site of a vast textile industry, which, like the industries of all other Polish cities, was brought to a complete halt by the war. Food supplies were brought into Lodz from the surrounding country and from Germany. Great distress was apparent among the population. Stories were told of instances of starvation, and it was related that a small child had been found dead of starvation in the street a few days before our arrival.

A Diet of Potatoes

LODZ, with its greater population and concentration of wealth, possessed a few paved streets and street-car lines, but lacked sewers and had no public fire department. Here, as in other cities, the large employers of labor had united in a system of very small payments to their idle employes. In addition to this means of assistance, food distribution centers had been established in which many thousand persons were fed daily. A short time prior to our visit to Lodz the bread supply had entirely failed, and for a period of ten days not a loaf was to be had. Fortunately, a supply of potatoes was available, and this vegetable was for several months the principal, and at times the only, article of food to be obtained.

The important part which Poland's potato crop had in maintaining the population, and the circumstances which made this crop available, form an interesting chapter in the war story of the eastern front.

In the spring of 1914, the usual large acreage of potatoes, from which vodka is distilled, had been planted in Poland. After the outbreak of the war, the Czar issued his decree prohibiting the manufacture and sale of alcoholic spirits in the Russian empire. This decree put an immediate stop to the vodka industry. Later in the autumn, when the invading German army had established itself in Poland, the people who still remained harvested the potato crop, which, many times greater than would normally have been consumed for food, provided not only what was needed in the country districts and what was used by the occupying army, but a sufficient quantity to permit large shipments to the cities. It thus came about that the Czar's edict, which at first had seemed to promise the ruin of a flourishing industry, saved, in fact, many thousand lives.

When we traveled through Poland in the month of January, huge piles of potatoes still remained untouched in the fields, where they had been thrown up into heaps and covered with earth to prevent freezing.

While in Lodz we were the guests at dinner one evening of General Von Mackensen, who had command at that time of the German armies in central Poland. The general, with his staff, had taken possession of the one modern hotel in the city. Von Mackensen is tall, rather thin and angular, with a long, drooping mustache, an aquiline nose and a piercing eye. He impressed us as being a man of extremely alert mind, keen, shrewd and incisive. He was affable, manifested much interest in our errand to Poland, and heartily promised to promote our objects in every way possible. On the following day he arranged a conference for us with a large group of citizens of

Lodz, who represented the business and professional life of the city.

The Duke of Saxe-Coburg, whose intimate kinship with the royal house of Great Britain must have made his position in this war most difficult, was an officer on General Von Mackensen's staff and was also much interested in the plans for helping the Poles. It was he who presided over the conference on the following day, when arrangements were made for the creation of a General Citizens' Committee to look after all classes of citizens, without regard to race or religious belief.

That the German military authorities were not always gentle, however, in dealing with the people of Lodz may be illustrated by the following story, told me by a prominent resident of that city.

To provide for additional German troops a demand was made on the mayor for one thousand mattresses, to be delivered to the military authorities on a certain date. When the day fixed came round the mattresses were not delivered. The mayor explained that no mattresses were to be had in the city. The municipality was thereupon fined twenty thousand rubles, and the mayor was again ordered to provide one thousand mattresses not later than another specified date.

Again the time limit expired without the mattresses. Again the mayor explained the impossibility of obtaining them. Then late one night a military guard seized the mayor, with two or three other leading citizens, and forced them to go from house to house, routing people out of their beds and dumping the mattresses out of the windows. Before morning the requisite number was obtained.

While in the hotel at Lodz one day I came face to face with a young man who suddenly put out his hand and said heartily:

"You look like an American."

"I am," I replied. "And what are you?"

"An American," he said. "My name's Wilkins. My wife and baby are at home in Philadelphia."

"What are you doing here? And why the uniform?"

"I am in the Flying Corps," he said. "I had been flying in the States for several years, and when the war broke out it seemed to me a good chance to get some valuable experience, so I came over and entered the German service. I was born in Germany, and have always liked the German people."

"What sort of service can you give up here in the interior of Poland?" I inquired.

"Well," he said, with a laugh, "just now I am engaged in flying over Warsaw and dropping a bomb every day at two o'clock."

I expressed my surprise and horror at this statement, and called Wilkins' attention to the fact that he was destroying the lives and property of innocent and helpless people who were not taking part in the war, and were in no sense to blame for existing conditions.

"Well, you see," he said apologetically, "I fly very high and cannot really see what happens, but I don't suppose my bombs do much damage. All I want to do is to throw a scare into 'em."

The Sequel in Warsaw

TO COMPLETE THIS STORY, I must carry the reader forward three months, when, by traveling into Russia, we visited the city of Warsaw, which lies about sixty-five miles northeast of Lodz, and which at that time was still in possession of the Russians.

The day after our arrival we called upon the American consul in that city, Hernando De Soto. We found Mr. De

Soto in a much disturbed state of mind. He said with great vigor that he was strongly dissatisfied with conditions in Warsaw.

"The thing I most object to," he said, "is the fact that every few days a German aviator flies over Warsaw and tries to drop a bomb on the American consulate."

"But, Mr. Consul, you don't really mean that?" we inquired with some incredulity.

"I do mean it—every word of it," he said, with emphasis. "Here, come with me."

He led us from his office to a front room, and pointed to a large hole in the street in front of the building.

"Now, you see that hole down there? An aviator dropped a bomb there the other day and broke every window in the front of my house. Come back this way."

We followed him back to a window in the rear of the house, where he pointed into a great court or open space, and again said:

"Do you see that hole and those scars on the walls? Well, an aviator dropped a bomb *there* the other day and broke every window out of the back of my house."

Later inquiry showed that many of the bombs which had been dropped by German aviators on Warsaw had actually fallen within a few blocks of the American consulate, not of course intentionally, but because the consulate was near the railway station, from which departed trains carrying troops and munitions to the front, some twenty-five miles west of Warsaw.

Warfare Behind the Trenches

BUT TO RETURN TO LODZ. As we traveled eastward from here we came one night to the little town of Lowicz, which had been partly burned. The towering church on the square had been pierced by shells, and the entire scene was one of desolation. Five or six miles to the eastward the German and Russian armies were engaged in constant battle, so that the steady roar of the distant guns could be heard distinctly.

Toiling through roads deep in mud, an endless procession of heavily laden wagons wound through the streets of Lowicz, carrying munitions and food supplies to the troops at the front. Other endless processions of returning wagons moved in the opposite direction. Every road was choked. As the densely dark night came on, drivers equipped themselves with torches, or men on foot carrying torches walked beside the horses to show the way. The shouts of the men, the creaking and clanking of the wagons, the intermittent glitter of the lights upon the guns or helmets of the soldiers who marched beside the wagons, the impenetrable blackness of the night on either side, save where the moving torches gave momentary glimpses of burned and shattered houses, left upon my mind an indelible picture of warfare immediately behind the trenches.

No place could be found in Lowicz in which we could eat or sleep. The German commander at Lowicz, nervous and overworked, told us of his difficulties. Supplies were not coming through promptly; conflicting orders were causing confusion; not enough teams and wagons were to be had; his superiors were unreasonable in expecting him to do more than was possible with his facilities.

When he had relieved his mind in this manner and was feeling somewhat better, we discussed the condition of the Polish people who still clung to their homes in Lowicz. He expressed great sympathy, and said that he had made a special effort to provide employment for them, as otherwise they would be in danger of starvation. Finally he used his military telephone to call up the headquarters of the commander of the forces which were fighting in that sector of the battle

line, to inquire whether he could give us accommodations for the night. On receiving a favorable reply, the officer gave us a guide, and we departed. As we slowly groped our way along the winding, muddy road the horizon ahead of us was continually lit up by flashes from bursting shells, like heat-lightning in summer.

At ten o'clock we reached the military headquarters of General Von Morgen, a splendid chateau of gray stone in the midst of a forest, which had formerly been the country place of a Polish prince who had fled into Russia as the German army advanced. Immediately upon our arrival we were conducted to the great state dining-room, where General Von Morgen and his staff were at dinner.

In looking about the dining-room, in which were fifty or more officers in uniform, I observed that without exception every one wore an iron cross. Most of these decorations were the iron cross of the first order, worn from a ribbon in the buttonhole in the coat, although those worn by General Von Morgen and several of his officers were of the second order, which is pinned upon the left breast and denotes a much greater service or higher display of courage. No one may be decorated with the iron cross of the second order until after he has received the cross of the first order. It has been stated that since the beginning of the war the Kaiser has bestowed the decoration of the iron cross in more than four hundred thousand instances.

On the following morning General Von Morgen invited our party to visit "the front," where very heavy fighting had occurred a few days before, in the course of which the German army had made a slight advance and pushed a part of the Russian line eastward in such a manner as to form a fighting line semi-circular in shape, with a radius of about two miles. In the center of the semi-circle stood the Polish village of Bolimow, which had fallen into German hands in the course of the preceding week.

We were provided with horses and an escort, and rode away over the frozen ground, in the brilliant sunshine of a perfect winter day. The roar of the firing gradually changed from the continuous monotonous sound which reached the chateau until, as we approached the village of Bolimow and passed through the line of batteries, the detonations of the larger and smaller cannon and the sharp and rapid rattle of the field guns and rifles became clearly distinguishable. Finally we entered the semi-circle of trenches, with the firing on all sides of us. Our guides took us directly to a church, in whose steeple, at an elevation of perhaps one hundred feet, had been established a military observation post. From this point we were able to obtain a view of the entire battle-field.

The Pageantry of War

TO THE WEST were ranged the German batteries, thundering away in turn, each gun emitting a slight wreath of whitish smoke as it discharged its shell. To the north, east and south the shells from the German batteries were exploding above the Russian lines. We could note the discharge of the guns of a battery to the rear, and then, turning quickly, could see the shells explode above the trenches.

Although the sun was dazzling, each shell as it exploded gave an instantaneous, brilliant flash, like a miniature bolt of lightning. Following that, a small, compact ball of smoke slowly unfolded into a tiny, snow-white cloud, which drifted away on the breeze and vanished. In the distant trenches the movements of the German soldiers were clearly visible. Little could be seen of the Russians, who were behind the embankments of their trenches. High in the heavens a huge observation balloon hung almost motionless, the sun glistening

upon its sides. Presently above the roar of the guns could be heard the high, rapid note of the discharge of an engine, and an aeroplane sailed above the lines.

The scene was stirring, vivid, impressive. It was the pageantry, the romance of war. While observing it, we scarcely thought of the tragedy which underlay it.

Leaving the tower, we descended and went around a corner of the church. There a group of soldiers was busily engaged in digging graves, which were perhaps six feet wide and five feet deep. The bodies of four men were laid side by side upon the earthen floor of each grave. There were no coffins, no winding sheets. Each poor fellow was laid to rest in the same soiled and tattered uniform which he had worn when he fell. Attempt was made only to compose his limbs. When the grave had received its occupants, a strip of cotton cloth was quickly spread across the four upturned faces, and the grave was filled. We thought of the folks back home praying with straining hearts for the safety and happy return of those young men.

The Dead and Wounded

WE WALKED about the little village, and found that every house was a hospital. Ambulances were constantly arriving from the trenches, bearing the wounded. Men whose injuries permitted made their way back to the village on foot. As we walked the road from the village toward the trenches we met many soldiers, dragging themselves back for treatment. Some had shattered arms, others wounded shoulders, and many had been wounded about the head.

Steadily the shells continued to flash against the sky and to unfurl their snowy banners in the sunlight, but the romance and the pageantry had vanished for us.

Leaving the village of Bolimow, we rode for some time along the edge of a forest. Presently our road led in among the trees, and we discovered, to our surprise, that a great army camp, containing thousands of men and horses, was so cleverly concealed among the foliage that we had not suspected its presence, though we had been skirting along its very edge for perhaps half a mile.

The army in the forest was not under tents, but had erected shelters of wood, which had been covered with earth, and the earth in turn with the boughs of trees and with dead leaves gathered up from the ground. Several soldiers occupied each of these shelters or dugouts, while larger structures, concealed in the same manner, were used for officers' quarters and such gathering places as were necessary. The horses were protected in the same manner. Moreover, as we went farther through the forest we came upon huge Austrian guns, so cleverly hidden that we should not have noticed them had not our attention been called to their hiding places.

Later in the day, upon our return to headquarters the German officer who rode beside me suggested that we look at the bulletin board posted at the entrance of the chateau, where the latest official bulletins from all the belligerent countries were posted. At my expression of wonder, the officer pointed to a slender pole standing among the trees, scarcely noticeable—a wireless station from which were obtained direct all the official announcements given out by the belligerents.

He explained further that by tacit agreement the warring nations on both sides have set aside a certain hour of the night for each of the countries to give out its wireless statement to the world. When the hour comes for Germany to issue her nightly official bulletin, all the other countries keep out of the way and allow Germany the uninterrupted use of the atmosphere of the world until her time is up. Then the next

country in turn sends out her message, and so on until all have had their chance.

In the far interior of Poland, in the midst of a great forest, that modest wireless station reached its long arm up into the air and drew down one by one the messages which told the progress of the war, as they swept across the night, from the Eiffel Tower, from England, from Italy, from Germany, from Austria, from Russia. The quiet German soldier who sat in his little office in the wireless station knew exactly the moment at which he would begin to receive the message from each of these countries. The officers in this remote spot discussed at the breakfast table exactly the same news which the people of New York read in their morning papers.

This incident brought vividly to mind the significance of wireless telegraphy. The censor may prevent unwelcome messages from entering his country by telegraph line, by cable, by post, or by messenger, but he cannot prevent wireless messages from coming freely across his frontier, to be read by any who care to intercept them. Here is an instrument for the dissemination of information which cannot be restricted by frontiers, destroyed by armies or suppressed by statute. There is challenge and hope in the fact.

In our travel through central and northern Poland we came upon many destroyed villages, whose sites were marked only by tottering chimneys. Many wretched groups of refugees were seen tramping through the country, carrying upon their shoulders their small belongings. Some were camping about meager fires, built beside the roads.

I shall not soon forget one group which we passed on a stormy afternoon. We were traveling westward on a broad highway, our car caught fast in a slow-moving procession consisting of miles of army transport wagons returning from the front for additional loads of supplies. The other half of the roadway was occupied by a similar procession, miles in length, of loaded army wagons, traveling toward the front. In the irregular and bumpy depression which skirted the roadway we came upon a little group of refugees, an elderly woman and four or five young children. The group had paused beside a crude, low wagon, and while one of the children held the head of the half-starved horse, the woman had climbed upon the wagon and was laboriously endeavoring to replace the lid of a small coffin which had evidently been jolted off by the uneven character of the road. As we passed on out of sight, the woman was still working clumsily at the lid of the coffin, while the shivering, half-clad children endeavored to shield themselves from the cutting wind by huddling close together behind the scant protection of the open framework of the wagon.

In all the cities and towns of Poland we discovered an almost total absence of money. The banking institutions were all branches of great mother banks in Petrograd. When the German invasion began, therefore, the bankers gathered

together all the money and securities at their command and fled with them to Petrograd. The Polish cities were thus left in a peculiarly helpless plight. In substantially every city an attempt was made to create a medium of exchange by issuing notes of various denominations, guaranteed in each case by the city which issued them. These notes, which in America would probably be called scrip, were ordinarily referred to as "bonds."

For purely local business transactions these bonds served their purpose very well, but a great disadvantage lay in the fact that they had no purchasing power outside the limits of the city which issued them. When arrangements were considered for sending food supplies from Germany into Poland to be sold, the plan had to be abandoned because the money which the people of the Polish towns could pay for such supplies had no value in Germany.

This situation became the subject of many conferences and extended negotiations between representatives of Polish cities and German bankers, the attempt being to establish some system by which the bankers might be given such guarantees by the Polish municipalities as would justify them in accepting bonds issued by those municipalities. The introduction of German and Austrian currency into Poland went on slowly through the occupying armies, and this gradually had a tendency to provide Poland with a suitable medium of exchange.

On leaving Poland we stopped a day in the city of Posen, which was at that time the headquarters of Field Marshal Von Hindenburg, who was established in the Kaiser's great stone palace, one of the most imposing buildings of the city. In dress and in manner the field marshal was simplicity itself. There was not visible a trace of pomp or ceremony. The massive frame of this man, who, next to the Emperor, is the most conspicuous personage in the empire, his rugged features and piercing eye, all spoke of power and driving force. But his voice was low and his words few.

Our conversation was not extended, but was as free and direct as might be expected in a call upon an American business man. General Von Hindenburg assured us that we might rely upon his interest and active promotion of our project for helping the Polish people. We had previously been informed that permission to undertake this work in Poland would have to be obtained from him, and his very prompt and hearty promises of sympathetic co-operation were most encouraging.

From Posen we returned to Berlin and entered upon a series of conferences with the representatives of the German and Austrian governments in an attempt to prepare a plan for the relief of Poland which would be acceptable to those governments and practicable of execution by a relief organization which we were to form, bearing the name of "The International Commission for Relief in Poland."

[Mr. Bicknell's next installment will tell of subsequent developments in the history of war relief on the Eastern front.]

POLISH REFUGEES WHOSE HOMES ARE SHATTERED AND COUNTRY INVADIED

UNION OF STONEMASONS READY TO MARCH IN THE COMMUNE CELEBRATION OF ORIZABA

Behind the Drums of Revolution

The Labor Movement in Mexico as
Seen by an American Trade Unionist

By John Murray

AROUND the long room with their backs to the wall sat some fifty men of every type bred in Mexico, the Mexico that mixes its fraction of Spanish blood with a hundred Indian strains. I had been escorted into the assembly room by a committee made up of Saviñon, the printer; Sonoqui, the railroad conductor; Magaña, the salesman; Fernandez, the fireman, and Roa, the carpenter. My International Typographical Union card was duly inspected and by a vote of the Comité Revolucionario de la Casa del Obrero Mundial I became a member of the revolutionary committee of Mexico's largest and most militant labor organization.

The Casa del Obrero Mundial (the House of the Workers) with its fifty thousand members scattered throughout the various cities of the Republic had given its adherence to the Constitutionalist government and so when, in 1915, Obregon went north and Zapata entered Mexico City, the leaders of the organized labor movement of Mexico, their

wives and children, were hurried on board trains and given shelter in the Carranza-governed city of Orizaba, 80-odd miles inland from Vera Cruz. In all there were some six thousand of them, the cream of Mexico's skilled mechanics and their families. If Zapata had caught them they would have been shot.

For a week I sat in the daily sessions of the Comité Revolucionario listening to speeches and the passage of resolutions that had but one historical counterpart, namely, the Paris commune.

Carranza sent his military representative, Colonel Ignacio C. Enriquez (now governor of the state of Chihuahua) to the comité to ask for the quick enrollment of the unions in the army of General Treviño and in a few hours I saw the mustering in of the *gremio* (union) of stonemasons, the same union that I afterwards visited while they were fighting in the trenches at Ebana, in the heart of the oil fields of Tampico.

THE CHURCHES OF ORIZABA

The Revolutionists have turned them into schools, printing offices and union headquarters

The drums of the union, lettered with puzzling black figures, attracted my attention when the red-bannered organization stood in line at the station of the Ferrocarril Mexicano ready to entrain for Vera Cruz, and so I questioned one of the drummers about them.

He pulled the sleeve of his companion, turned up his drum and began to laugh. "This North American comrade," he commented with twinkling eyes, "lacks religious education. He does not recognize the chants of the church." Then explaining to me: "This parchment on our drums came from the cathedral in Mexico, parchment on which the clericals had painted their chants. Now"—he played a tattoo with his fingers on the drum-bottom—"it sings the song of the revolution."

Years before I had visited Orizaba, in the days of Porfirio Diaz, the dictator, just after the big strike in the Rio Blanco cotton mills, when hundreds of workers, men, women and children, were shot down in front of the mill gates. The English superintendent took me through the great plant, with its eleven acres of machinery, under the impression that I was an American capitalist seeking fields for investment, and carefully explained that there was no such equipped mill in the round world. "Besides," he explained, "the labor market here is attractive; we pay men sixty cents, women twenty-five, and children fifteen cents a day." Then he added, "They are artists, too, these people, as you can see by the designs and colorings, which are all done by the natives."

The great strike with its bloody ending under the gunfire of troops took place in 1906, and now, March 11, 1915, Orizaba was celebrating its anniversary. To commemorate the death of the strike-martyrs, four thousand of us, led by the comité, marched to the little plaza in front of the mill gates and held a meeting with the mill hands, three thousand of whom afterwards joined the Casa del Obrero Mundial. It was a strange scene to one who had just come from the strike fields of Colorado, where a soldier in uniform had come to mean an enemy in the minds of the workers. I could hardly trust my eyesight, for there, before the gates of the Rio Blanco mill, were many soldiers and officers in the uniform of the Constitutionalist government mingling with the crowd and standing upon the speakers' platform, even at the very time when the workers were denouncing as "the three great enemies of the people, capitalism, clericalism and militarism." These men in uniforms listened and applauded, while I rubbed my eyes to prove that I was awake and not dreaming.

Afterwards, we marched in a long line to the little graveyard that rests at the foot of the snow-capped peak after which the town is named, Orizaba. On the grave of the

dead strike leader, Moreno, we planted a small tree, enticing some children to pat the earth down with their little brown hands so that the next generation might remember the place. Three great wreaths were placed on the small mound, one tied with red ribbons with gold lettering which read: *Los Obreros Norteamericanos a sus Hermanos Mexicanos—Rio Blanco 11 de Marzo de 1915.*

The Mexican printer, Juan Saviñon, called the stonemason, Hernandez, to his side and pointed out to me a red ribbon encircling his arm, on which was lettered *Grupo Francisco Ferrer Guardia—Fundadores de la Casa del Obrero Mundial de Mexico—Canteros y Albaniles.*

"The *Canteros* (stonemasons)," explained Saviñon, "are very proud of being the founders of the Casa del Obrero Mundial in Mexico City. Active organization began in May, 1911, and two years later headquarters were established at the Calle del Estanco de Hombres, 44, where we were joined by the union of shoemakers, the unions of tailors, carpenters, printers, and many others, making a membership of some four thousand.

"Under de la Barra we had a hard time, under Huerta it was worse, many went to jail, some were shot, a strike of the motormen was lost. Huerta closed the headquarters of the Casa del Obrero Mundial at the time of the taking of Torreon by Villa, and he also killed three of our comrades when we celebrated the first of May, in 1914, the day on which the Socialist Party was founded in Mexico City. We asked permission of the police to meet in the Alameda; we were told 'no', but we met just the same, the great crowd packing all in front of the monument of Juarez. Then cannon and soldiers were ordered out to overawe us.

"Even under Madero it was not always safe, for then our first paper, *La Luz* (The Light), was suppressed after being published three months. Then we printed *La Lucha* (The Struggle), and it ran for less than a year. Afterwards came *El Sindicalista* (The Syndicalist) and *Emancipacion Obrero* (The Workers' Emancipation), official organ of the General Confederation of Workers.

"When Carranza took Mexico City we moved to San Juan de Latron, No. 11. This was a big building that had belonged to the Jesuits. Carranza gave us typewriters, furniture, a big printing press, and also another headquarters for the women of the Casa del Obrero Mundial at Calle de 57. We had a fine library of over 12,000 volumes—not clerical reading, either, but all of the best Russian, French, Italian and Spanish authors and some German and English.

BELENE PRISON UNDER DIAZ RULE

Many political prisoners were here starved to death

"Then came the strike of the motormen and conductors in August. They won with a raise of 25 per cent and the right to buy their own uniforms wherever they pleased. The cars stopped running for five days. It was then that the government took possession of the lines and made Ramos director and employed none but union men. When the telephone operators struck the government also took over the plants and granted the men a 50 per cent raise in pay.

"It was the Casa del Obrero Mundial that stopped the people of Mexico City from flocking to the banner of Huerta when Vera Cruz was invaded by American troops. We printed a little pamphlet headed, 'People, Don't Be Fooled,' and scattered it all through the city's streets—it stopped Huerta's game and killed his last chance of rallying the people to his support.

"Obregon was wise. When the rich merchants and clericals refused to provide food for the starving people he decided to leave the city and let the aristocrats stew in their own juice."

In this fashion did the printer Saviñon make a terse, running story, as he saw them, of the high-lights of the revolution in Mexico City.

After Felix Diaz ran away, after Huerta fled, General Obregon held Mexico City for the Constitutionalist government. Meanwhile, Zapata was blowing up trains and generally demoralizing traffic in and out of the City of Mexico, so that bread was scarce and the people threatened with starvation.

The mills which ground corn for the public entirely failed to provide *masa* for the people, and women were making long trips into the country to get the wherewithal to make bread. Bakeries had notices posted in front of their shops stating that they had no flour. Only English biscuits sold in a few of the shops catering to the rich and were purchasable at a rate of from four to eight dollars a kilo.

Then it was that General Alvara Obregon, commanding the Constitutionalist troops in the City of Mexico, made a declaration that "the merchants did not accept the invitation which was made to them to assist the people in their dire need, and thus prevent violence." "The time has come," he added, "when the people may make use of a right (the right of revolution), which in other circumstances would be prohibited to them, and which any authority would have to oppose. Authority can never be the authority of anybody, but of justice only, and should dispense justice to persons or collectivities if they deserve it, but when one part of the

THE COTTON MILL AT RIO BLANCO

In the old days hundreds of strikers were shot here by Diaz soldiery

community turns away from justice and uprightness, the government should not defend it against a sacred right which it has placed in the people's hands."

Soon after, the Casa del Obrero Mundial met with Rafael Zubaran Capmany, minister of Gobernacion, and signed an agreement in which the Constitutionalist government officially recognized their mutuality of aims. Thousands of workingmen paraded through the streets of Mexico headed by the red flag and were saluted by the staff officers of General Obregon as they passed his headquarters in the St. Francis Hotel.

The following pact was signed between organized labor and the Constitutionalist government, the first time in history, as far as I am aware, that a national government ever entered into a working agreement with a labor organization:

It is plain why organized labor supported the Constitutionalist government in Mexico; food, guns in the workers' hands, opportunity to organize, to strike and raise the standard of living, all this was reason enough. But what inducement was it that persuaded middle-class Mexicans to become upholders of a governmental program that called for land nationalization and all the preliminary steps that led to a socialization of industry? I found scores of men like the Constitutionalist Secretary of State Cabrera; Secretary of Gobernacion Zubaran; the general who practically snatched Mexico from the reaction, Obregon; men educated in Paris and Berlin, like Atl and Rolland—all of that class which in every other country under the sun shys at the nationalization of anything and constitutes the most bitter enemy of militant labor organizations, here, in Mexico, falling over one another to propose new steps whereby the resources of Mexico could be put into the hands of the government.

Even during the reactionary government of Huerta his Minister of Foreign Affairs, Moheno, introduced a bill which called for the acquisition, by the Mexican government, of all the oil lands of Mexico and their exploitation as a government monopoly. Reason for this is not far to seek as, at the present writing, Mexicans have lost to foreign ownership more than nine-tenths of their country's oil fields. The total oil fields now operated in the whole of the United States amount to some 8,300,000 acres, whereas the oil fields of the Tampico district alone contain 5,000,000 acres. The Mexican Year-Book gives the total amount of capital employed in Mexican mining industry as \$647,000,000. Of this, \$500,000,000 is said to be American, \$87,000,000 English and \$29,000,000 Mexican. It is true that the Mexican government owns 51 per cent of the capital stock in the national railroads, but foreign capitalists own practically all

THE FATE OF STRIKERS

Six unarmed peons in the Cananea strike were hung in this fashion

COMMUNE CELEBRATION AT ORIZABA

In the little plaza under the monument of Juarez four thousand workmen held a meeting, which soldiers wearing the Constitutional uniform attended and applauded. Three thousand men joined the Casa del Obrero Mundial after the meeting

of the bonds. American investments in Mexico are estimated at from \$800,000,000 to \$1,000,000,000. With this understanding of how things stand, it is easy to grasp the Mexican middle-class viewpoint and the conclusion freely expressed throughout Mexico: "Better, government ownership than foreign ownership."

Even from the mouths of judges, judges that sit on what is Mexico's supreme bench, issue in a most unfamiliar strain dictums that show that their minds, too, are filled with the revolution. Said Roque Estrada, minister of justice in Mexico City, in speaking to the magistrates for the federal district of Mexico upon their taking the oath of office under the Constitutionalist government:

"You will say to me that there are articles to be adhered to contained in a book called 'Law'; but I must remind you that we are condemning and rejecting all that has previously taken place and that there exist no laws or regulations which bind us to any definite procedure, and so it becomes necessary to apply a strictly revolutionary spirit in order that the administration of justice may answer its purpose in fulfilling the aspirations of the revolution, which has now materialized into a government.

"You know that all social movement is represented by action and reaction; and it may be that in your work and in your broad judgment you may find at every step the criticism of public opinion, criticism which often represents a true social movement. I must say that these forces of action and reaction are strong and far-reaching because that which is known as 'established rights' is in opposition to revolution and against what we may call 'revolutionary justice.' We have the people hungering for justice.

"What is needed to attain the aims of the revolution, what the government expects of you, is reform, reform and reform, and never forget that in order to be consistent it is necessary for you to have at all times a settled conviction as to the foundation of justice."

Mexicans and Americans Strike Hands

THE INTERNATIONAL conference held in July in Washington between representatives of the labor movements of the two republics was not a mere utopian expression of fraternalism nor was it held solely for the purpose of averting war, although it was a deciding factor for peace, but grew from interlocking labor interests demanding organization along the entire border.

Great blocks of American capital invested in mines have become international investments, with holdings so colossal that they straddle the border, one foot in Arizona and the other in Sonora. Copper knows no boundary line and the mines and smelters of Bisbee, Douglas, Cananea and Nacozari ignore races and nations in their conquest of mineral wealth. Likewise, following the organization of mining capital, mine labor organized. Naturally followed the Washington conference, and naturally will come, sometime, complete international organization.

The mines employing the largest number of Mexicans in Arizona are those of the Clifton-Morenci-Metcalf district, where 5,500 Mexicans and about 2,500 Spaniards, Italians and Americans work. On September 10 of the year 1915 the entire 8,000 went on strike under the organization of the Western Federation of Miners. The demands of the miners were, to the mind of the state's governor, so plainly just that he practically took the side of the strikers and in a proclamation called for public donations of food to be made to the

families of the workers. With absolute unanimity the Mexicans struck and proved again that their spirit of solidarity is comparable with that of any nationality in the world.

It was on the border between Sonora and Arizona that the labor movement of North America and Mexico first joined hands, and for a most material reason, as was explained to me by a member of the Western Federation of Miners in Bisbee. He spoke frankly, and, as he is still organizing in that district, I withhold his name:

"In Butte the copper lays deep in the ground, much deeper than in Arizona, where it is nearer the surface; for this reason the copper industry is drifting south and will eventually reach its greatest production in Mexico. American mining interests know this and are hot after all the Mexican concessions that they can lay hands on. Cananea is the proof of what I am saying and the bloody Cananea strike of 1906 was really the first reaching over the border of the North American labor movement. Here is what happened:

"Before this strike, I had been collecting the dues of some of our Western Federation of Miners' boys who were working in Cananea and when I went over the border the Mexican miners would ask me, 'Why can't we get the same wages you Americans get?' I told them they could if they'd organize. So they went to it. The appointed day came and they threw down their tools; organized in a procession and in the course of their march through the town passed a lumber yard owned by Americans. At work among the lumber were several Mexicans and the procession halted and its leaders called to their fellow workers to come out. At this the lumber dealers turned a hose on the marching Mexicans, and when the enraged crowd made a dash for the yard the Americans answered with shots from their Winchesters. The end was the death of several Mexicans and the death of the lumber dealers. The strikers were unarmed, but in their rage at the shooting of their comrades used their miner's iron-pointed candle-sticks as daggers. Then the manager of the mines, who had been waiting for the opportunity called his cowboys into play and Winchesters mowed down Mexicans at every street corner.

"It was at this time that one American mining company got in its work and posted notices outside of its store at Bisbee stating that the Mexicans were killing the American women and children in Cananea. At the same time this company-store offered guns and ammunition to every one who would go across the line and fight. It looked like the first step in the annexation of Mexico. Many good miners in Bisbee, who now know better, fell for the bait, and, thinking they were out to help the women and children, marched on Cananea. When they arrived it was only dead Mexicans that littered the streets, for the cowboys had been given a free hand."

But there's another story that is really a piece of the same tale, although it happened years afterwards in the days when Madero triumphantly entered the City of Mexico as president. Here it is just as Joe Cannon, of the Western Federation of Miners, told it to me:

AN ELEVEN-YEAR-OLD LAD OF THE RED BATTALION, COMPOSED OF MEMBERS OF THE CASA DEL OBRERO MUNICIPAL

"In the month of September of 1911, the three of us went down into Mexico to see Madero. Mother Jones, Frank J. Hayes, vice-president of the United Mine Workers of America, and myself. First we saw de la Barra—he was the stop-gap president at the time when Diaz had fled and Madero was on his way to take possession of the presidency. But de la Barra gave us a mouthful of words and nothing more. Then we saw the Minister of Justice Calero, and he did better, promised that our organizers should have the protection of law if any *jefe politico* took it into his head to stick our union miners in jail. Finally Jesus Magon took us to see Madero, who had just entered the city for the first time after his election to the president's chair.

"Our mission was to get the consent and protection of the Mexican government to organize all the miners of Mexico. As you know, the labor movement is international and to organize Mexican workers is as necessary for our end as is the organizing of the workers in the United States.

"Mother with her white hair had, single-handed, commenced the fight for the imprisoned Mexican political refugees in the time of Diaz. Thousands of dollars contributed by the miners' organizations in the United States for the legal defense of these prisoners was the result of Mother Jones' pleadings to 'her boys' in the mines for 'her boys' in prison.

"Madero spoke good English and commenced with this question: 'What is your interest in the Mexican miner?' We told him that we were compelled to either fight to raise the standard of living of the Mexican miner or fight the Mexican worker that lowered our wage scale, and we preferred the first to the last. At this Madero warmed up and said: 'Not only will I pledge you my word that no objection will be made by the government to your organizing our miners, but I assure you that we want them organized; we want labor

IN THE
CHURCH AND
CONVENT OF
SAN JOSÉ THE
FAMILIES OF
THE CASA
DEL OBRERO
MUNDIAL
HAD LODG-
INGS GIVEN BY
CONSTITU-
TIONALISTS

AGREEMENT BETWEEN THE CONSTITUTIONALIST
GOVERNMENT AND THE CASA DEL
OBRERO MUNDIAL

As the workers of the Casa del Obrero Mundial are supporting the Constitutionalist government headed by Citizen V. Carranza, we hereby declare that the following terms are to govern the relations between the said government and the workers and between them and it bearing on the manner in which the workers shall collaborate with the Constitutionalist cause. . . .

1. The Constitutionalist government reiterates its decree of November 4 of last year in reference to the improvement of the workers by the means of appropriate laws, enacting, during the struggle, every necessary law to carry out the said resolution.

2. The workers of the Casa del Obrero Mundial, with the object of hastening the triumph of the Constitutionlists, of the revolution and of disseminating its ideals touching social reform and avoiding unnecessary bloodshed wherever possible, hereby declare again the resolutions they have taken to collaborate in an effective and practical manner toward the triumph of the revolution, taking up arms both to garrison the towns in possession of the Constitutionalist government and to combat the reaction.

3. In order to carry out the proposed undertakings set forth in the two former clauses, the Constitutionalist government will attend, with all the solicitude it has used up to date, to the workers' just claims arising from their labor contracts with their employers.

4. In towns occupied by the Constitutionalist army, and, in order that it may be free to attend to the needs of carrying on the campaign, the workers will organize in accordance with the military commander of each place, to hold it and preserve order. In case of the evacuation of towns the Constitutionalist government, through the respective military commander, will advise the workers of its intention, giving them every facility to reconcentrate in the places occupied by the Constitutionalist forces. The Constitutionalist government in case of reconcentration will help the workers either by remunerating them for work actually done, or, under the caption of "solidarity," aid whenever work cannot be provided, so that they may attend to their principal means of subsistence.

to act collectively; we do not want blind revolt. Come down from the United States and organize all the workers in Mexico—you will be welcomed.' . . .

"Mother told him of the difference in wages paid the Mexican and American miners in Cananea—a matter of compulsion under Diaz—and Madero said: 'That's a condition that will not be tolerated as long as I am connected with the government.' The death of Madero was all that brought this international alliance of the labor in the two countries to a halt. But the halt is only temporary. Just as the American copper interests are forced to enter Mexico to keep step with the demands of the copper market, so the Western Federation of Miners and the United Mine Workers of America will be forced, likewise, to follow the mineral leads wherever they may run and organize the miners irrespective of national boundaries."

The Pan-American Movement

AS WILL BE SEEN by the text, the data relating to the condition of the Mexican labor movement was gathered by the

5. The workers of the Casa del Obrero Mundial will draw up lists in every town where they are organized, and immediately in the City of Mexico, which lists shall include the names of all their comrades who agree to comply with the undertakings stated in clause 2; these lists, immediately upon completion, shall be sent to the first court of the Constitutionalist government, so that this court may know the number of workers ready to take up arms.

6. The workers of the Casa del Obrero Mundial shall carry on an active propaganda to win sympathy for the Constitutionalist government among all the workers throughout the republic and the working-class world, pointing out to Mexican workingmen the advantages of joining the revolution, inasmuch as it will bring about the improvement the working class is seeking through its unions.

7. The workers shall establish centers of revolutionary committees in every place they deem it convenient to do so; these committees, besides doing propaganda work, will look after the organization of labor groups and toward their collaboration with the Constitutionalist cause.

8. The Constitutionalist government will establish, in case of necessity, labor colonies in the zones it may control to serve as places of refuge for the families of the workers who may have taken up arms or who may have in any other practical form shown their adherence to the Constitutionalist cause.

9. The workers who take up arms in the Constitutionalist government, and also the female workers who perform service in aiding or attending the wounded, or other similar service, will be known under the one denomination; whether organized in companies, battalions, regiments, brigades or divisions, all will be designated as "reds."

VERA CRUZ, February 17, 1915.

BEFORE DOLORES CHURCH, NOW OCCUPIED AS A PRINTING OFFICE BY DR. ATL, IS GROUPED A CORPS OF WOMEN TRADE UNIONISTS

free assemblage and free speech. With this belief the executive council of the American Federation of Labor had, at a critical juncture, asked for the recognition, by the United States, of the Constitutionalist government of Mexico.

Since the Washington conference a decree has been issued by Venustiano Carranza in Mexico which has shaken the freedom of that country to its foundations, and increased internal revolution in the southern republic. This decree was issued on August 1 last and contains the following clause:

"Article 1st. The DEATH PENALTY shall be applied, not only to disturbers of the peace mentioned in the Law of January 25th, 1862, but also to: First: Those who may incite workmen to strike in factories and concerns devoted to public service, or who may engage in propaganda to that end; to those who may preside at meetings where such strikes are proposed, discussed or approved; to those who may defend or uphold the same; to those who may approve or subscribe thereto; to those who may attend said meetings, or may not withdraw from the same as soon as they learn their purpose; and to those who strive to render the strike effective after it once has been declared."

As soon as the news of this decree came to the United States, President Gompers, of the American Federation of Labor, went to Atlantic City and made protest to the American-Mexican Joint Commission against this edict of General Carranza.

Whatever the course of the governments may be, the course of the Pan-American labor movement is clear; its aims and ideals are thoroughly understood by the organized workers of both Americas.

With the agreement reached at the Washington conference last July, this international organization became a living thing. The next and crowning act will be the Pan-American Federation of Labor. Whatever the developments at Mexico

author in Mexico during the summer of 1915. Complete report was made to President Gompers, of the American Federation of Labor, by the author in the fall of the same year, and on July 3, 1916, in Washington, D. C., there was drawn up and signed by members of the executive council of the American Federation of Labor and delegates from the organized workers of Mexico a compact, the first clause of which reads:

"The undersigned, the executive council of the American Federation of Labor, and the representatives of the organized labor movement of Mexico express our deep gratification in the consummation of this conference which we hope and believe has laid the basis for better understanding and has welded ties that shall bind together the workers of our respective countries."

It was the belief of all the participants in this historic conference in Washington that the pact signed in Vera Cruz, the year before, by representatives of Mexican organized labor and the Constitutionalist government would be the means of dealing out even-handed justice and protect the Mexican labor movement in its inherent rights of organization,

COMITÉ REVOLUCIONARIO

This body makes the rules and resolutions for fifty thousand Mexican trade unionists

City the Mexican labor movement is a factor in organizing the Latin-American countries in this labor league of the western hemisphere. The following letter of credentials from Alvarado, the governor of Yucatan, was brought to the conference in Washington last July:

To Diplomatic Representatives and Consuls of Mexico in the United States and South America:

The bearers of this letter-credential are the citizens Carlos Loviera, chief of the Department of Labor of this government, and Baltazar Pages, editor-in-chief of the daily, *Merida, La Vos de la Revolucion*, who are going, first, to the United States to confer with the labor leaders Gompers, Debs, Murray, Wright, and others, in order to obtain credentials which, united to those credentials that they already have from the labor organizations of this state, will accredit them as representing the Mexican workers in an excursion of Constitutionalist propaganda throughout the Republics of Brazil, Argentine, Chile and Uruguay.

The object of this excursion is to facilitate the formation of a Pan-American Federation of Labor, which has been the project of the North American labor leaders referred to, and, at the same time, to move public opinion in favor of our

cause, which in the opinion of our laborers, and the one that signs this, is the cause of international Socialism.

It is certain that if the Mexican revolution does not receive the support that can be given to it by the radical elements abroad, socialists, free-thinkers, syndicalists, etc., it is because its true program and revolutionary character is unknown. The citizens Loviera and Pages sustain relations with the most important elements of the Spanish-American labor movements, they are trained writers and speakers who know our problems and have appreciation of the great politico-social crisis, and are therefore armed to carry out a work of this kind.

Therefore I beg of you, that in the manner expressed, the citizens Carlos Loviera and Baltazar Pages receive from you the moral and material support necessary for their mission, and in granting this you may rest assured that you are serving the interest of the Constitutionalist cause.

The latest reports from these delegates commissioned to travel through the Latin-American nations is that they have been received everywhere with enthusiasm. In all the countries of South and Central America their propaganda for the ideals of the Pan-American Federation of Labor has been welcomed by the working people.

COMMON WELFARE

THE MONTH

RUTH LAW, a mere feather even in the "lighter sex," broke all American records and all records for women on November 19 by flying a biplane 590 miles without coming down. She has only one serious competitor—the cost of living. The latter is suspected of being a craft lighter than air, a high-flier free of the attraction of gravitation and rapidly mounting to a place among Professor Lowell's inhabitants of Mars.

A homely measure of the altitude of the cost of living, more understandable than the technical "index numbers" of wholesale prices usually quoted, was furnished last week by the New York Association for Improving the Condition of the Poor. The association gave out a comparison of the cost of a typical food order for a workingman's family in November, 1915, and in the same month of 1916. The total increase was almost 30 per cent. Some common articles in the list had doubled—potatoes increased 114 per cent. The association, which luckily for the poor is not bound to live on a salary, must raise \$35,000 extra this year to pay the food bill for the families in its care and the inmates of its institutions.

As to causes, there has been more or less general understanding that cheap

money meant dear goods; that war increased consumption, trampled grain fields and took the best of the young men of Europe out of agriculture. But beyond that, the International Institute of Agriculture at Rome, founded by David Lubin, of California [see the SURVEY for January 16, 1915] has issued a report showing that short crops of cereals are common to almost the whole world. Russia, which alone has a sizable surplus, is unable to get her wheat to market. There is, moreover, the difficulty of transportation, due to the heavy shipments of munitions for export and back of that to the curtailed car-building program of the railroads during their hard times preceding the war. These make for a real local shortage in some commodities, such as coal in and about New York city, where there is the further ugly charge of an attempt to corral the supply and boost prices. And New York has also the extra cent a quart for milk, which the recent milk strike added to the price paid by dealers to farmers—a penny which the milk companies promptly added to the retail price.

So it is that in England and France there is talk of following Germany's example in taking charge of the food supply and issuing bread-cards. While in New York the three-pound rye loaf of the East Side, which still sells for eight cents, weighs only a pound and a quarter now and the grocer will cut it for you into halves or even quarters. Grade B milk is ten cents a bottle. A rise of fifty cents or one dollar a ton in coal at the mine is the excuse for adding a nickel to coal by the bucket—which adds up to five dollars a ton.

The poor are feeling it keenly and many families ordinarily unafraid of charity are believed to have been forced down close to the poverty line. A few cents more on bread and meat and they must seek relief. But so great a rise makes itself felt far up in the economic scale, as provident loan societies, some savings banks and the loan departments of life-insurance companies can testify. The clerks, bookkeepers, stenographers,

salesmen, small shopkeepers, many skilled workmen, have not generally shared in the great profits and the increased wages which have come in some industries.

Thus there has been a great increase in cost of living, but no recent increase in the pay of the large classes represented by the man who wrote this piece, the girl who typed it, the man who set it on a linotype, the man who printed it, the girl who bound and wrapped it, the postman who delivered it, nor those others who contributed indirectly to its making, through securing and recording and accounting for each reader's subscription, through stoking the furnaces which heat office and print-shop, or operating elevators which lift them or street cars which carry them home—no, nor for the woman who cleans up nightly in their careless wake and scrubs the floor they have tracked over. Old Mother Hubbard had nothing on her.

On the other hand is the big new crop of millionaires, dealing in munitions and other articles of export, who have swelled deposits and resources of the nation's banks to the greatest in their history. And with their fortunes have gone unprecedented increases in wages in certain industries. In Massachusetts 40,000 operatives of the Amer-

ican Woolen Company and the Arlington Mills have a 10 per cent increase. In New Bedford 33,000 cotton workers recently received their third advance this year, amounting to 27½ per cent increase over former earnings. In Augusta, Ga., 1,400 in the cotton mills will earn 10 per cent more. The Glove Manufacturers Association, of Gloversville, N. Y., is willing to pay \$250,000 or \$300,000 more a year to retain its daily output of thumbs up.

On November 22, the United States Steel Corporation announced its third raise within the year, totalling 33 per cent and costing the company \$28,000,000 a year. Immediately the Colorado Fuel and Iron Company followed with its third increase, giving to the 5,000 men of the Pueblo plant an additional 10 per cent. The Republic Iron and Steel Company, and the Brier Hill Steel Company raised 11,000 men 10 per cent, and the Youngstown Sheet and Tube Company was expected to grant a similar advance. In Wilmington, Del., 3,000 employes of the Atlas Powder Company received a bonus of 10 per cent of their year's wages. Further south in Lexington, Ky., 3,500 coal miners laughed the wolf from the door with another 10 per cent increase. In Milwaukee, in Racine, in San Francisco and in Kansas City gains have been coming to lumbermen, box makers and railroad men.

And some few have noticed that their office forces must pay for bread what the coal miner pays. The Consolidated Gas Company in New York city has declared a 7 per cent bonus for 17,000 workers earning \$3,000 yearly or less. The Eastman Kodak Company, of Rochester, N. Y., has provided for clerks earning up to \$50 a week; and 3,000 to 4,000 office men of the Westinghouse Electric Company have been given a boost.

GOVERNMENT INTERVEN- TION IN PRICES

IN SPITE of these increases, however, for the general public there is a sense of crisis in the air.

In the face of such need there has been a scurrying about to propose remedies—"something must be done and done quick"—much as in the first weeks of an unemployment crisis. The most pretentious plan is that of Congressman John J. Fitzgerald, of New York city, who announces he will press for the passage of a food embargo act immediately after the opening of Congress next week. Quite at the other end of the scale from such a national scheme are the tests now being made in Chicago, through which the health commissioner proposes to disclose how little food will suffice to keep body and soul together.

Most of the proposals strike at the cost of distributing food, which the experience of cooperative associations here

and abroad has shown to be a major factor in retail prices. Thus Commissioner John J. Dillon, of the New York State Department of Foods and Markets, who made a study in Europe of marketing and cooperative agencies, recommends for New York city adequate and convenient terminal facilities for food and provision for auctioning farm products. Another has proposed that food be brought down the long stretch of Manhattan Island by night freight trains on the subway instead of by plodding wagons. And Mayor Mitchel has made public a letter in which he tells the coal companies that, unless he is convinced they are doing their utmost to get coal to bucketful buyers at a fair price, he will set the city's ash-carts at delivering it. Private citizens have offered to supply a fund for selling coal at cost, he says; carts dump at the waterfront, where the coal arrives, and go back empty to collect ashes in the very tenements where the coal is grievously needed.

The trend of all these plans, it will be noted, and of many others, is toward government interference in the high cost of food. In previous crises it has tended more toward urging the formation of private cooperative enterprises and of enabling consumers to deal directly with producers, through parcels post deliveries or the famous public markets established by Mayor Shanks in Indianapolis four years ago.

New York got an illuminating idea of the cost of hauling and delivering food when the recent milk strike brought out that the milk farmers get only 40 per cent of the retail price; in household terms, 4 cents on a 10-cent bottle of milk. Mr. Dillon has arranged, through his state department, for a real contribution to cooperative experience. After January 1, he has announced, the neighborhood butcher shops of New York city will sell grade B milk, shipped in by the Dairymen's League, at eight cents a quart. The theory is that tenement mothers will take home their milk along with the chuck-steak, and thus save the expense of the wasteful competition of carts from all the milk companies traveling the same routes.

WHAT IS A FAIR PRICE FOR COAL?

THE most far-reaching plan of all is that of the federal Trade Commission which has under way a study of the whole vast industry of mining and marketing coal. The purpose is to find answers to two questions: What is a fair price for a ton of anthracite coal? What steps, if any, should Congress take to secure the delivery of coal at this fair price?

Never before has the national government sought to determine what should be paid for a given commodity

Loyal to the Service

They Uphold Each Other's Hands

The public *must* be served. This is the dominating thought of the entire Bell organization from the president down. Every employe feels the sense of responsibility that this working principle implies. The public must be served—efficiently, uninterruptedly.

In the fulfilment of this policy, the management of the Bell System realizes that every individual employe must give undivided and undistracted effort and interest to his work.

To assure this, every worker receives adequate remuneration, ample protection in case of illness and provision for old age. All these personal matters are cared for so that the employe has the least possi-

ble worry regarding his own welfare. His whole-hearted attention can be devoted to serving the public.

While each employe realizes that he is but a single factor, he understands that not only is supreme personal effort expected of him, but also a loyal support to every other telephone worker.

There is something in the telephone organization which imbues every employe with a spirit of loyalty to the public. All feel a direct responsibility for each other because each recognizes that only by mutual endeavor can they render the high standard of service which is expected of them. They uphold each other's hands so that the public may be served.

Auto-Intoxication—Dangers and Relief

A hazy feeling—dullness—half headaches—inability to think—these come from stupefaction, or partial paralysis of your brain by poisons generated by food waste, fermenting in your colon—the lower part of your digestive tract. This is called "auto-intoxication"—that is, intoxication from poisons generated inside the body. Indigestion and constipation are its symptoms. It may lead to nervous exhaustion, high blood pressure, liver and kidney disorders and sometimes malignant growths. A clean colon, doing its work thoroughly and well, is easy to have, however. Dr. Kellogg tells you about this in his new book—"Colon Hygiene." It teaches natural methods only—diet, exercise, rest, sleep and regulation of working hours. No drugs. Following its teachings will give you permanent relief from indigestion, constipation and their attendant ills. Thus you may regain bodily comfort and have a keen mind, renewed energy, a clear eye, and abiding health. Send the coupon for a *FREE* examination of this book. Over four hundred pages—many illustrations—substantially bound—only \$2. Get this book and rid yourself for all time of the dangers of indigestion, constipation and auto-intoxication. Examine it, *FREE* first.

by the consumer, upon a basis of the actual cost of production. The nearest analogy is the treatment of the franchise-holding public utilities, such as gas, electricity, water and street-railway service, by municipal and state governments. In these cases the public assumes the right to regulate the selling price after a full inquiry into the cost of production.

While the federal Trade Commission has not yet formally decided upon the details of its procedure in the coal inquiry, it appears to be determined upon one principle of action—that the coal industry differs from most of the productive industries in its primary character. It considers that coal, petroleum, timber and hydro-electric power are natural resources, and that the industries built upon the marketing of these natural resources must be treated differently than are industries built upon mechanical or chemical processes in which raw materials are not so great a factor. While the coal industry is not yet declared to be a public utility, it is at least in a "twilight zone" which may be changed at any time into public control.

Anthracite goes by the hodful into the homes of the people. Bituminous coal goes by the carload into power-plants. Any stoppage of either supply of fuel becomes a public calamity, whether it be due to famine prices or to shortage at the mines. Hence the commission will devote a year to studying anthracite in eastern Pennsylvania, where 94 per cent of it is produced, and bituminous in half a dozen states. In both cases the task is undertaken in the belief that social and industrial welfare will be served by public regulation of the nation's fuel supply. Whether regulation shall be exerted through an enlightened public opinion, a legal control of prices, or through the purchase of the business itself by the public, will be left to Congress to decide.

But the commission is not primarily interested in demonstrating that the increase in prices established last summer was out of proportion to the wage increase. That was but one of many steps in the upward path of retail prices and stock market quotations. The government now is undertaking to find out what the service performed by the coal companies in getting the fuel from the earth into the hands of the consumer is actually worth.

Attorney-General Gregory is chiefly responsible for the inquiry. On May 6 he sent to the federal Trade Commission a letter urging that the then proposed raise in the price of anthracite be scrutinized in the public interest. He cited the three general advances in wages since January 1, 1900, with accompanying increases in the price of coal. And he suggested that, in the event of another increase, the commis-

sion "institute a searching investigation into the operations and accounts of the great producing companies for the purpose of ascertaining all the facts upon which such increase in price may be based, including the relation between any increase in the cost of production due to advance of wages and the increase of profits caused by the increase in price."

The commission promised to look into the situation if the price of coal should actually be advanced. Now the advance has taken place and the inquiry is on. A petition to similar effect from the annual convention of the Pennsylvania Federation of Labor made little impression on Congress. But when Senator Hitchcock of Nebraska offered in the Senate on June 22 a brief resolution asking the federal Trade Commission to make an inquiry such as had been suggested by the attorney-general, the resolution was adopted.

How far the commission will probe into wages of the million employes in the coal industry has yet to be developed. Facts as to wages and hours of miners and transportation workers will be presented, both from an inquiry into the history of the business year by year, and from public hearings in the mining and marketing centers. The relation of wages to prices will be made the subject of a special section of the report. It was because the coal companies raised the price of anthracite last summer following a grant of higher wages that the investigation is being made.

For more than a year past the commission has been at work on timber. It has brought forward the exhaustive study of the timber and lumber industry made by the former Bureau of Corporations, and has cooperated with the Bureau of Forestry in seeking to determine a fair price for lumber. At the same time it has been working on petroleum—the cost of pipe-line transportation, of oil production and of distribution. And the Bureau of Forestry has compiled a report upon the recent concentration of ownership of hydro-electric power throughout the country in the hands of a few corporate groups. This is in line with a report on water power made by the Bureau of Corporations in 1912. In each instance the investigations have endeavored to show the actual relation of the operating companies to the public. In each report has been an implication that the public must exert a better control over the industry, or must itself compete in the development of natural resources.

it will clinch a reputation for enacting important social legislation. Among the measures are several especially endorsed by labor. The vocational trade training bill, urged since 1910, received a unanimous vote in the Senate during the last session, which adjourned in mid-summer, but was blocked by Representative Mann of Illinois in the House. It proposes a federal board of vocational education, to help states in providing vocational education. It carries graded appropriations reaching \$7,200,000 annually the ninth year after it becomes effective, \$4,000,000 of which will be used for salaries of teachers in agricultural, industrial and trade subjects. The bill aims to stimulate rather than support vocational education by providing that to avail themselves of federal grants, states must appropriate sums equal to the aid from Washington.

The convict labor (Hughes-Booher) bill occupies a favorable place on the calendar in both houses, while the bill for a bureau of labor safety has already passed the House. The former prohibits interstate commerce in convict-made goods, thereby striking a blow at the system of contract labor in prisons. The latter creates a division of labor safety in the Department of Labor under a commissioner at a salary of \$5,000 a year. Its purpose will be the study of labor safety plans and devices not covered by the Bureau of Mines or the Interstate Commerce Commission. An attempt will be made by the American Federation of Labor and the American Association for Labor Legislation to have restored a clause stricken out in the House last session, which would extend the function of the bureau to studying and reporting on vocational diseases.

At least four health bills will come up again in this new session. A notable one is that adding divisions of mental hygiene and rural sanitation to the United States Public Health Service. With about 250,000 insane persons and 300,000 mental defectives in this country and with rural health conditions affecting over 50 per cent of the population, the need is obvious for a central health bureau where systematic studies into these and related subjects may be conducted.

Another bill to promote efficiency in the public health service provides for the appointment of a surgeon-general who has been trained in national health administration as well as in hygiene and in disease prevention; secures a permanent position for this chief officer in the service at the expiration of his term of office; simplifies the promotion of assistant surgeons and makes possible the appointment of five additional professors. As at first drafted, the bill put Public Health Service officers on the same basis as officers of the Army Medical Corps and the Army Board by providing commutation for these officers

when traveling on such assignments as poliomyelitis duty in New York and quarantine duty in New Orleans. This section, however, was dropped in the bill passed by the House and reported in the Senate.

The Gandy bill, prohibiting traffic in peyote among the Indians, and the Thompson bill amending the Harrison drug law to include peyote, are both scheduled for consideration. Likewise is included a bill providing for a national leprosarium to take care of persons afflicted with leprosy and to prevent the spread of the disease.

The immigration bill, which passed the House last session and is among the unfinished business of the Senate, again promises to be the center of vigorous opposition. It would provide that an alien must be able to read in his own language, raise the head tax from six dollars to eight dollars, and tax children under sixteen years who come with their parents. Most important of all, it not only requires steamship companies to deport aliens who come in violation of the law, but to refund passage money to such immigrants.

The American Union Against Militarism and other peace organizations will attempt to have repealed the "joker" in the national defense act, passed at the last session, empowering the president in time of war to set going conscription of American citizens between 18 and 45 years of age.

TO MEET THE DIRE NEED OF WAR PRISONERS

IN her interesting book, *Under the Red Cross Flag*, Mabel Boardman recalls that Prince Demidoff, a Russian delegate to the first Red Cross conference in Geneva, held while the American Civil War was going on, spoke an appealing word in behalf of those whom he regarded as the worst victims of the cruelties of war, namely, prisoners held in military captivity. Many of them are sick and wounded, but whether disabled or not they are, under the most favorable circumstances, objects of compassion. Homesickness, loneliness, compulsory idleness are a sorry exchange, even for the hardships and privation of the fighting front.

Their fate depends upon a thousand circumstances over which they have themselves absolutely no control. The least competent of the military officers are apt to be assigned to look out for them. They may be overcrowded, underfed, subjected to danger of infection, arbitrarily moved from one place to another, left in complete uncertainty as to where they are to be taken next and what is to happen to them. Their own country can defend them only in a very slight degree. Information as to whether complaints are well founded may be refused, and there is no right of inspection or redress except by grace of those who may be the very people of

whose conduct complaint has been made.

Fortunately no country makes the most of its evil opportunities. Fortunately in every country there is a public opinion to which appeal may be made, even in behalf of hostile subjects who are prisoners of war. Fortunately many of the officers detailed to command the camps are both intelligent and humane. Fortunately in every country neutral diplomats who are entrusted with the care of the interests of the enemy belligerent are more or less successful in correcting some of the worst abuses that creep in. Fortunately, in the fear of reprisals, there is a restraining influence which operates, even under the most unfavorable conditions, to put a limit to inexcusable hardships and cruelties.

Never have these restraining and beneficent influences found greater scope than in the present European war, because never have the numbers of war prisoners approximated those of the present conflict.

Each country has a profound stake in its able-bodied prisoners in the hands of the enemy, and, for that matter, an all but equal stake in its sick and wounded prisoners, who, although maimed in body, will be none the less welcomed when they return. If the frightful killing continues, some countries may find themselves before the end in the anomalous position of welcoming home their very best and strongest sons from the camp of the enemy.

In theory at least, prisoners of war should be as safe from injury as the non-combatants of a neutral country. From the standpoint of social conservation, the argument is made that they should be properly nourished, protected from disease, and given suitable occupation and recreation; that they should even, if conditions permit it, be receiving some education, and should have whatever benefit there is from the physical training of the military régime. Many neutral agencies, such as special assistants sent to inspect prison camps from the neutral legations, special agents of the Red Cross, and perhaps more conspicuously than any others, the secretaries of the Young Men's Christian Association, have been working to bring about these results.

All their efforts, however, are inadequate to the unprecedented needs. The numbers are so huge, the difficulties with which the prison authorities have to contend, even when their intentions are of the best, are so enormous, and the importance of the care of the prisoners has been for the most part so little appreciated, that the combined efforts of all relief agencies seem but a drop in the bucket.

In the Russian prison camps the chief need of the German and Austro-Hungarian prisoners is for clothing, special diet, and medicines, and for money to supplement allowances made to officers,

especially on their first arrival. In Germany the chief need is for food (in excess of the meager rations), which is sent in parcels for individual prisoners through neutral countries. For the former purpose, the relief of German prisoners in Russia, an agency, known as the Prisoners of War Relief Committee, has headquarters at 24 North Moore street, New York city. For the latter, the New York Relief Committee of Russian War Prisoners, can be addressed at 31 East Seventh street, care of *Russkoie Slovo*, New York city; the Chicago Relief Committee of Russian Prisoners in Germany and Austria-Hungary, at 1301 North Hoyne avenue, Chicago; the Detroit Relief Committee of War Sufferers and War Prisoners, 1195 Shein street, care of *Russian Life*, Detroit; and the Boston Relief Society for Russian War Prisoners, 350 Old South Building, Boston. K. Oberucheff, 588 Fox street, Bronx, New York city, will forward contributions directly to the relief societies in Switzerland, which are in direct touch with the prisoners' camps and are providing the prisoners with the necessary articles.

HOW CONSCIENTIOUS OBJECTORS FARE

"HOOFED out of his church for talking peace," as he expresses it, the Rev. Leyton Richards, a Congregational minister of Manchester, England, is here in America for a few weeks speaking in behalf of the conscientious objectors. He was one of the charter members of their organization, the Non-Conscription Fellowship.

In only two countries of the world have the conscientious objectors to war an actual movement under way—in England and in Norway. And since Norway is not at present involved, it is the organization of the former country which has so far proved of greatest strength.

Two years ago, a few months after the declarations of war, the no-conscriptionists felt a foreboding, and about 2,000 of them joined in the fellowship. They advertised, freely, for members at that time. When at last conscription fell upon England, every man of fighting age was asked to declare himself before a certain date. During this period of confession the fellowship lay quiet. Later, in the face of imprisonment and worse, 25,000 men declared themselves to the government of England as conscientiously opposed to war. And the fellowship knew it had a membership of conviction and no vacillation. Besides these 25,000 possible soldiers, the associate membership of women and men above fighting age numbers another 25,000.

Mr. Richards insists that the conscientious objector is not a non-resistant necessarily. Personally, he objects to the term, because he believes in such

A List for Christmas Buyers

THE BLUE CHINA BOOK

By Ada Walker Camehl Net, \$5.00

makes a specialty of the Pottery which was decorated with pictures of American historical events; landscapes, views of towns, etc., in the early days of our Country's history. There is an account of all the important Blue China Series, a supplementary chapter describing the celebrated Collection of Presidential China in the White House, as well as a complete checking list, included by the courtesy of Dr. Edwin Atlee Barber. The book is splendidly illustrated with over two hundred fine half-tone engravings, many of them in color.

THE MOOSE BOOK

By Samuel Merrill Net, \$3.50

Mr. Merrill's book treats of every possible aspect of the Moose, his history, his habitat, his traits and habits, methods of hunting (ancient and modern), arms, how to preserve the heads and horns, with a list of the most famous ones known. Then the natural history claims attention, as well as the position that this noble animal plays in tribal myths. Mr. Merrill also discusses the Moose's connection with the European Elk. This book is excellently illustrated with over sixty pictures, some of which are from the paintings of the well-known Sportsman and Artist, Mr. Carl Rungius.

MEMORIES

By Lord Redesdale, 2 vols. Net, \$10.00

The *New York Sun* says: "A feast of anecdotes, character sketches, diplomatic imbroglia, political, literary, and artistic reminiscence, of as delightful an autobiography as has appeared in many a long year."

The *Public Ledger* says: "There have been published few books of personal reminiscence as delightfully entertaining as well as informing as *Lord Redesdale's Memories*."

THE CHEVALIER DE BOUFFLERS

By Nesta H. Webster Net, \$4.00

The *Boston Transcript* says: "No romance of fiction ever written is so picturesque and dramatic as those of 'sober history.' In this case an added interest is given by the study it presents of two more than ordinarily attractive personalities against the background of a tragic splendor never surpassed. The story is one of absorbing interest."

THE VOICES OF SONG

Introduction by Theodore Roosevelt

By James W. Foley Net, \$1.50

Since the death of Riley, Mr. Foley has been acclaimed the representative poet of the West, but he is more than that, as this volume proves. In this collection of verse we hear not merely the voice of the West, not even merely the voice of our entire land, but the voice of all humanity; in these songs are heard the tears and daughter of the world.

EL SUPREMO

By Edward Lucas White Net, \$1.90

The *New York Globe* says—"It is a fascinating book, and comes nearer to being a great historical romance than anything that has yet been written about our own romantic half of the world."

THE WHIRLPOOL

By Victoria Morton Net, \$1.50

The ennobling power of love, and the brutal foolishness of our penal system—these are the strands from which the author has woven a story full of meaning and movement.

THE TAMING OF CALINGA

By C. L. Carlsen Net, \$1.35

A new novel by a new author in a new field. With its scene laid in the Philippine Islands, here is a tale of the jungle in which the white man has no part. The author's wonderful style is difficult to characterize—it is subtle and at the same time bold, apparently simple and yet conveying the singularly elusive charm of his exotic setting.

JAUNTY IN CHARGE

By Mrs. George Wemyss Net, \$1.35

A delightful, lovable tale, full of original characters, irradiated with gentle humor, and fragrant with romance. How Jaunty—confidential butler—was nurse, governess, and matchmaker.

THE WAY OF ALL FLESH

By Samuel Butler Net, \$1.50

Introduction by William Lyon Phelps, Lampson Professor of English Literature at Yale

Arnold Bennett says: "It is one of the great novels of the world."

THE PURPLE LAND

By W. H. Hudson Net, \$1.50

Introduction by Theodore Roosevelt

James M. Barrie says: "It is one of the choicest things of our latter day literature."

BELLE JONES (A Story of Fulfillment)

By Allen Meacham Net, \$0.50

Mr. H. F. Laflamme, Secretary Laymen's Missionary Movement of the United States and Canada, says: "*Belle Jones* is an altogether sweet and beautiful little sketch. No book in twenty years has touched me so tenderly. The very simplicity of the style throws the strong beauty of the homely heroine into striking relief. Her life is a springing fountain on a rocky mountain side. She was a root out of the dry ground. With her stripes others were healed. In her Christ dwelt richly. I must have the book for my friends."

TREASURE FLOWER, A Child of Japan

By Ruth Gaines Net, \$1.25

THE LITTLE SCHOOLMATES SERIES edited by Florence Converse

A delightful book that any child will enjoy. Fragrant with the scented beauty of Japan, through which moves the little poor-girl-who-became-a-princess, the tale is filled with legends of the heroes of old time.

GRANNY'S WONDERFUL CHAIR

The Katharine Pyle Edition \$2.50

Written by that genius, Frances Browne, this wonderful book of fairy tales never grows old. For this edition Miss Katharine Pyle has made six full-page pictures in colors and a large number of pen-and-ink drawings. In this beautiful book Miss Pyle has caught all the dainty, airy charm of the text and created something that will be a source of delight equally to the artist and to the child. Also containing a special introduction by Katharine Pyle.

DR. CROTHERS'

THE PLEASURES OF AN ABSENTEE LANDLORD

A new volume of wit and playful wisdom. There have been few books published in America that will yield so much enjoyment to the cultured mind. \$1.25 net.

Send for Illustrated Holiday and Juvenile Bulletins.

HOUGHTON MIFFLIN CO., 4 Park Street, BOSTON

force as is redemptive to the individual. War, however, is destructive to the individual. Political objectors are not accepted as members of the fellowship. Industrial radicals, who would shoot a "bloody capitalist," even though they refuse to sanction the present conflict, are ruled out. Sein Feiners are not members. But all those who hate war as the means to an end of any conflict—they are the conscientious objectors.

Various fates are allotted the objectors as they are tried before military tribunals. Military duty, making ammunition, or partisan ambulance work, the defendant always refuses. Civil duty he will accept. According to Mr. Richards, the tribunals in any case feel that some sacrifice is necessary. Hence the lightest decree sends the man and his conscience at least twenty-five miles from home. If he happens to be an excellent school teacher, they make him a gardener, and many a good gardener has become a bad school teacher. He is forbidden to address public meetings or to write the newspapers; he is given a shilling a day and no pension; he is not allowed to leave his position nor is he allowed to strike. Some are sent to work in Holland, others are rebuilding France, and many are in the Friends' ambulance corps, which picks up wounded German soldiers as well as the French and English.

A group of fellowship members were assigned to road building, on the supposition that the road was for civil use. Upon discovering that it was purely for military purposes, the men struck and were of course imprisoned.

Two thousand of them, according to Mr. Richards, are suffering all manner of torture in prison for refusing various kinds of work. Today their treatment is cruel to the last degree, he says. They are put in military straight-jackets, whipped, and sometimes scrubbed with a stiff brush until the skin peels. Some are given sentences for ten years. Not long ago, he charges, thirty-six were sent to France, sentenced to be shot. This sentence, however, was revoked.

Though the influence of the 50,000 conscientious objectors may be of little power now, Mr. Richards believes their present attitude will be a nucleus of great force in the reconstruction to come. They are proving day by day the strength of their hatred of war, and their hatred of "that attitude of mind which insists upon treating nations as persons, and which at the same time by order and drill and slaughter, stamps out the personality of individuals."

COMPULSION IN AUSTRALIA AND CANADA

COMPULSION as a factor in American life seems to be the text this year of the New York Academy of Political Science. Their spring meeting hinged on the question of compulsory military service; the meeting this

fall on compulsory arbitration, bringing together last week the testimony of men who have played an outstanding part in industrial mediation and conciliation in this country.

The representatives of labor who spoke left no doubt as to the trend of union sentiment. Peter Brady, secretary of the Allied Printing Trades Council of New York, told the university men to get it out of their heads that any law could successfully interfere with giving "of labor where you please, when you please and under what conditions you please." W. S. Carter, president of the Brotherhood of Locomotive Firemen and Enginemen, said that the brotherhoods would never submit to compulsory arbitration as long as arbitration boards were constituted as in the past in railroading.

There was marked divergence in the counsel from Commissioner William Lee Chambers, of the federal Board of Mediation and Conciliation, and Oscar S. Straus, chairman of the Public Service Commission of the first district of New York. In summing up his views, Commissioner Chambers said: "From the experience of the United States Board of Mediation and Conciliation, it may fairly be deduced that the time and occasion have not yet arrived when the principles of compulsory arbitration should be attempted by legislative enactment." Mr. Straus, on the other hand, held that while the tendency has been to increase government supervision over railroad operators, the tendency had been in the opposite direction with respect to railroad operatives. This he characterized as retrogressive.

The academy was fortunate in bringing together two men who have carried out the most exhaustive inquiries as to the experiments in industrial government in Canada and Australasia—Victor S. Clark, of the Carnegie Institution at Washington, formerly of the federal Department of Labor; and Prof. Matthew B. Hammond, member of the Ohio State Industrial Commission. The statements of both tended to explode notions which—the wish fathering the thought—have gained fresh currency.

Thus, Professor Hammond, who spent a year in Australia and New Zealand, made short shrift of the notion yearned after by employers, that compulsory arbitration puts an end to strikes. It acts as a deterrent, but has by no means eliminated them; and indeed the record in those states where the compulsory feature is absent, is, if anything, better on this point than in those where it is employed.

Professor Hammond stated that it is an open question whether the compulsory feature, the legal power to enforce, through fines and imprisonment, will remain a permanent part of the Australian system of trade boards. If he must choose between the anarchy which

exists in certain industries in this country and compulsory arbitration, he would choose the latter; but he does not regard it as the most important or suggestive factor of the Australian trade board system. The essential factor has been the principle of extending government regulation over industry—an extension which, from the trade-union standpoint, has shortened hours and improved conditions; and from the employers' standpoint has created standards which have prevented undercutting by ruthless competitors.

Professor Hammond pointed out that the Australian labor leaders cannot understand why American labor is opposed to their system; and Dr. Clark discounted the notion, current in labor circles, that the rank and file of Canadian workers are against the industrial disputes act which requires a period of waiting while public inquiry is in process, before either strike or lock-out can take place in the public service. In contrast to the Australian system, either the union or the employer can reject the findings, and resort to strike or lock-out thereafter.

The Canadian Federation of Labor has come out against the act, but the trades represented are, with few exceptions, not those involved in the public service. Similarly, the various international railroad labor organizations with headquarters in the United States and branches in Canada are naturally disposed to resent the Canadian act, which may hamper simultaneous activity by the Canadian members of their organizations. While both employers and employes have in given instances resented the act when a decision in a particular trade dispute went against them, Dr. Clark believes that the majority of both employers and employes in the public service are in favor of it. There is no specific movement for its repeal; the legislative program is to clarify and strengthen it at the close of the war. A tentative revision of the law has been drafted.

A LEAGUE TO ENFORCE INDUSTRIAL PEACE

FROM another angle—experience in the voluntary agreements and protocols of the garment trades—Julius Henry Cohen, who has represented various groups of employers and who represented the Public Service Commission in the recent traction strike, came forward at the meeting of the New York Academy of Political Science with a proposal for a league to enforce industrial peace. We could well follow the example of Cavour, he argued, who in the time of Italy's greatest crisis, cast aside petty demands for changes in detail, compressed the needs of Piedmont and Italy into a single sentence, and insisted that the king be asked "to transfer the discussion from the perilous arena of irregular commotions to the

arena of legal, pacific, solemn deliberation."

Mr. Cohen would have this league to enforce industrial peace made up of all the elements of society—the consumer, the neutral, the worker and the employer, founded upon the following propositions:

"1. The clear recognition of the moral and legal right of men to organize.

"2. The establishment of tribunals sanctioned by law, whose membership shall be representative of all three parties (employees, employer and the public).

"3. The creation of fact-gathering machinery to enable such tribunals to determine what is in any given case a 'fair and reasonable wage' and what are 'fair and reasonable working conditions.'

"4. The clear recognition of the necessity for efficiency and discipline in all industrial organizations.

"5. Opportunity to every worker to secure just redress from arbitrary or oppressive exercise of the employer's functions.

"6. Opportunity to every employer to secure just redress from arbitrary or oppressive exercise of power by the men.

"7. The right to appear by his chosen organization or spokesman before all sanctioned tribunals and in all dealings between employers and employees.

"8. The registration of all collective agreements.

"9. A national council, without whose sanction there shall be no concerted cessation of work or closing down of plants, to which any interested party may apply for relief, as it may in public service matters to the Interstate Commerce Commission or the Public Service Commissions, or, in trade matters, to the federal Trade Commission.

"10. Such national council to be constituted of members elected from groups of employers and groups of workers and representatives of the public.

"11. In public utilities, clear recognition of the function of the state, as part of the regulation of the service and the rates, to determine what is a reasonable wage and what are reasonable working conditions.

"12. Clear acceptance of the proposition that, adequate machinery being established for the redress of all just grievances, the right to *coerce* by concerted stoppage of work in all service affecting the public health, safety or convenience shall be made as obsolete as the duel or as illegal as lynching. (This principle to be applied if and when such machinery is established.)"

"The basis of the great industrial compromise is here," said Mr. Cohen. "The trades unionist *must* yield in his opposition to governmental regulation of his organization; the employer *must* yield in his opposition to the organiza-

Reformers Good Readers

PEOPLE interested in meeting the problems of the day usually appreciate the value of good literature and are interested to know of new books of real merit, even though they have little time to hunt them out themselves. As a suggestion to readers of this type, the Yale University Press has selected the following books as appropriate gifts, as well as "worth-while" reading:—

THE GREAT WHITE WALL, a narrative poem of ancient Tartary and Cathay by William Rose Benét. The book is full of bold Chinese warriors and trappings in delightful pen and ink sketches by Douglas Duer. (\$1.25 net, postpaid.)

JORDAN FARMS: An Epic in Homespun by Frederick E. Pierce, reflecting in a remarkable way the life of a New England farmer. (\$1.00 net, postpaid.)

"Let him who loves a stern
and rural tale,
Told simply of stern, simple
lives, give ear."

THE TESTAMENT OF WILLIAM WINDUNE, AND OTHER POEMS, a first volume of verse by J. H. Wallis, described by William Stanley Braithwaite as "an individual and new note in contemporary American poetry." (\$1.00 net, postpaid.)

THE SOCIAL CRITICISM OF LITERATURE, an excellent short summary by Miss Gertrude Buck of the function of criticism, providing at the same time a new and attractive exposition of the opportunities of the critical reader. (\$1.00 net, postpaid.)

And for those interested in Yale:—

THE BEGINNINGS OF YALE, 1701-1726, "easy-going" chronicles by Edwin Oviatt, supplemented by 105 charming pen and ink sketches by Theodore Diedricksen, Jr. (\$3.50 net, postpaid.)

Descriptive announcements of these and other books suitable for gifts will be sent upon request.

Selling to the Million Mark

WHEN A MAN'S A MAN

By Harold Bell Wright

A Real Western Novel

Illustrations and Decorations by the Author

Cloth \$1.35 Leather \$1.85

Wholesome and Clean and Uplifting—The spirit of the story—for man or woman—the beauty of binding, the author's illustrations and decorations combine to make "When a Man's a Man" supreme for Christmas giving.

What the Critics Are Saying

Boston Globe: Redolent of the open and the clean, wholesome life of the West.

San Francisco Chronicle: The persons in the narrative are flesh and blood.

Philadelphia Press: Mr. Wright's West is as real as reality can be.

Chicago Examiner: Deserves to become one of the widest-read books of the year.

Spokane Chronicle: He never has written a better or cleaner story.

Utica Observer: He has given in "When a Man's a Man" full measure, pressed down, heaped up and running over of his best thought and best work.

tion of trades unions; the public *must* yield in its indifference to the conditions under which human work is done; the business man *must* yield in his opposition to 'social uplift' in industry; and the social reformer *must* yield in his indifference to efficiency and discipline in modern production.

"Upon such a compromise can be founded a program of preparedness for peace. Without it, we shall have neither industrial efficiency nor industrial justice. Without legal sanctions, there can be no real progress. But the legal sanctions must be of a kind to which a modern democratic society founded upon a philosophy of reason—not of force—is ready and willing to give whole-hearted and devoted support. The lawyer's duty is big—the educator's duty is bigger—more immediate and more pressing."

AMERICA'S CHANCE TO SPEAK FOR PEACE

REPORTS from California indicate that, as in the case of domestic politics, public sentiment on the Pacific Coast is taking the bit in its teeth with respect to immediate action by American people and government looking toward the end of the war. Edward Krehbiel, Alvin H. Johnson, Austin Lewis, David Starr Jordan, Prof. Arthur Upham Pope and others have organized a California branch of the American Neutral Conference Committee, the chief object of which is "to support our government in any effort it may make towards a joint and lasting peace."

Mass meetings have been held, organizations addressed and stirring accounts of the agitation have crowded into the war news on the front pages of the newspapers. Favorable action has been taken by the central labor bodies which practically committed the labor movement to the cause; Archbishop Hanna has given it his endorsement, the women's clubs are reported as taking it up; and the Neutral Conference Committee's petitions are being circulated in everything from mass meetings to barber shops.

Austin Lewis made report of the campaign at a meeting of the central organization, American Neutral Conference Committee, held in New York last Saturday. Dr. Jordan, Jacob H. Schiff, Hamilton Holt, James J. Walsh, Mrs. Henry Villard, Charles L. Bernheimer and Rebecca Shelley were among the speakers; and steps were taken looking towards the organization of a New York branch.

Letters were read from former members of the British Parliament which challenged America to action. They revealed the existence of a growing movement among English people calling for an exact statement by the British

THE EVERYDAY LIFE SERIES

Consists of four books a year, of thirteen chapters each, in which daily Scripture readings and keen, helpful comment are grouped about a weekly theme. Written by men of acknowledged power such as John T. Faris, Cleland B. McAfee, Philip E. Howard, Ozora Davis, and W. Douglas Mackenzie.

The first book of the series, "The Christian According to Paul," by JOHN T. FARIS, is now on sale.

If subscribed for together the price of the four books for the year is \$1.50; purchased separately they are 50 cents each.

A year's subscription makes an excellent Christmas gift.

PSALMS OF THE SOCIAL LIFE

Cleland B. McAfee

The second volume of the Series. A book of originality and power, which shows how the Psalms came out of the actual lives of their authors, and how they bear on personal and social problems today.

Send for catalog describing several hundred books on the Christian life, Bible study, social service, and similar topics.

RUSSELL SAGE FOUNDATION

COMPLETE LIST OF BOOKS NOW IN STOCK. ALL PRICES POSTPAID

LIST OF PAMPHLET PUBLICATIONS SENT ON REQUEST

- The Almshouse**..... \$1.25
By ALEXANDER JOHNSON.
A thoroughly practical manual for all who have any interest in the management of charitable institutions.
- Artificial Flower Makers**..... \$1.50
By MARY VAN KLEECK
The work and living conditions of a great group of women wage-earners in New York City.
- Care and Education of Crippled Children**..... \$2.00
By EDITH REEVES.
Describes 37 hospitals, homes and asylums for the care and education of crippled children.
- Carrying Out the City Plan**..... \$2.00
By FLAVEL SHURTLEFF and FREDERICK LAW OLMSTED
The practical application of city-planning by the two foremost authorities in this country.
- Child Welfare Work in California**..... \$1.50
By WILLIAM H. SLINGERLAND.
A study and analysis of child-helping agencies and institutions and their relations to the public.
- Child Welfare Work in Pennsylvania**..... \$2.00
By WILLIAM H. SLINGERLAND.
Reports a study which has been widely used by the social agencies of the state.
- Civic Bibliography for Greater New York**..... \$1.50
Edited by JAMES BRONSON REYNOLDS.
A handbook giving ready access to all material in print at the time of its publication in 1911.
- Co-operation in New England**..... \$1.50
By JAMES FORD.
An illuminating discussion of the co-operative associations of work- ingmen and of the grange.
- Prison Reform and Criminal Law**..... \$2.66
By F. H. WINES, F. B. SANBORN, Z. R. BROCKWAY and others.
The story of prison reform told by the men whose lives were closely linked with its early days.
- Criminal Law in the United States**..... \$1.10
By EUGENE SMITH.
Part II of the above, separately bound. Written by a lifelong student of the subject.
- Penal and Reformatory Institutions**..... \$2.70
By RICHARD SYLVESTER, WARREN F. SPALDING and others.
Thirteen contributors write authoritative chapters under the editor- ship of Charles R. Henderson.
- Preventive Agencies and Methods**..... \$2.68
By CHARLES R. HENDERSON.
Assisted by experts in research, Prof. Henderson here sets forth the results of his long studies in penology.
- The Delinquent Child and the Home**..... \$2.00
By SOPHONISBA P. BRECKINRIDGE and EDITH ABBOTT.
A study of 14,000 children who came under the influence of the Chicago Juvenile Court during ten years.
- Elements of Record-Keeping for Child-Helping Or- ganizations**..... \$1.50
By GEORGIA G. RALPH.
A readable treatment of a naturally dry subject, marking a great step forward in child-caring work.
- Fatigue and Efficiency**..... \$2.00
By JOSEPHINE GOLDMARK.
Presents, as a new basis for labor legislation, the results of the modern scientific study of fatigue.
- Fifty Years of Prison Service**..... \$2.00
By ZEBULON R. BROCKWAY.
The absorbing autobiography of the man who, for twenty years, was superintendent of Elmira Reformatory.
- Handbook of Settlements**..... \$1.50
By ROBERT A. WOODS and ALBERT J. KENNEDY.
A descriptive directory and a concise review of social settlement experience throughout the country.
- Laggards in Our Schools**..... \$1.50
By LEONARD P. AYRES.
A constructively critical study of retardation and elimination in city school systems.
- The Longshoremen**..... \$2.00
By CHARLES B. BARNES.
A survey both scientific and intensely human of the men on the wharves of the port of New York.
- Medical Inspection of Schools**..... \$1.50
By LUTHER H. GULICK and LEONARD P. AYRES.
The first, and still the foremost, American book on a practical and important aspect of public health.
- Housing Reform**..... \$1.25
By LAWRENCE VEILLER.
A volume on social reform which achieves the unique distinction of being witty as well as practical.
- Model Housing Law**..... \$2.00
By LAWRENCE VEILLER.
The provisions for a state law or city ordinance given section by section with explanatory text.
- One Thousand Homeless Men**..... \$1.25
By ALICE WILLARD SOLENBERGER.
Based on personal knowledge of applicants to the Chicago Bureau of Charities.
- Outdoor Relief in Missouri**..... (paper) \$1.00
By GEORGE A. WARFIELD.
Written from first-hand facts gathered by field workers in the rural districts of the state.
- Saleswomen in Mercantile Stores**..... \$1.08
By ELIZABETH B. BUTLER.
The hours, wages, seasons of work and social problems of the retail shop-girls of Baltimore.
- San Francisco Relief Survey**..... \$3.50
By FRANCIS McLEAN, CHARLES J. O'CONNOR and others.
The administration of Red Cross relief and the rehabilitation of the city following the earthquake.

Social Work in Hospitals..... \$1.50

By IDA M. CANNON.
A new field of service connecting the world of heal- ing and the world of social advance.

Visiting Nursing in the United States... \$1.25

By YSSABELLA WATERS.
A descriptive directory by a resident of the Henry Street (Nurses') Settlement in New York.

The Middle West Side; Mothers Who

Must Earn..... \$2.00
By OTHO G. CARTWRIGHT and KATHARINE ANTHONY.

Two studies, under one cover, of a New York neighborhood and of its wage-earning women.

Boyhood and Lawlessness; The Neg- lected Girl..... \$2.00

The latter by RUTH S. TRUE.
The childhood and youth of the neglected streets of the same West Side neighborhood.

Women in the Bookbinding Trade..... \$1.50

By MARY VAN KLEECK.
First-hand, personal information by the secretary of the Foundation's Committee on Women's Work.

Working Girls in Evening Schools..... \$1.50

By MARY VAN KLEECK.
A study of wage-earning women in many trades in the night schools which they eagerly attend.

Workmen's Insurance in Europe... \$2.70

By LEE K. FRANKEL and MILES M. DAWSON.
The pioneer American book on a subject now con- stantly before Congress, legislatures and the public.

WITTE ARRIVES

By ELIAS TOBENKIN

Professor William Lyon Phelps of Yale compares "Witte Arrives" with Mary Antin's brilliant book, "The Promised Land," and says: "We Americans ought to be heartily grateful for both books."

An immigrant's picture of America, of which every American should be proud, and a portrayal of the fine side of Jewish family life as has seldom been done in fiction.

"The picture of this ardent young alien becoming, in a brief score of years, a loyal and thorough-going American, is of a sort to stiffen our faith in the melting-pot."—The Bookman.

Government of what the nation is fighting for and a conference to secure "a just and lasting peace." This last was recently made the subject of a widespread peace negotiations petition signed by 150,000 English citizens.

The sentiment was repeatedly expressed at the meeting that the war is becoming one of attrition, and that when, in these winter months, the German people come fully to realize what Verdun has meant, when the people of England and France come fully to realize what the Somme campaign has meant, a recoil is bound to come.

As Dr. Walsh expressed it, there is no chance of affecting the winter's campaign; but in the next three months, before the spring campaigns are launched, with the same promises as those held out a year ago, and with the same stupendous wastage of human beings, we have an opportunity during which the American people and the American Government should dare to act. The general hope was expressed that with the political campaign showing the lay of public opinion, President Wilson would at last feel that he could approach the European situation from a new angle and employ other methods than the ordinary channels of formal diplomacy.

CHARLES BOOTH, FIRST SOCIAL SURVEYOR

CHARLES BOOTH, who died last week in London, enjoyed a world-wide reputation as compiler and student of social statistics. His work in many ways was a foretaste of the modern social survey. In days when the accurate study of poverty was a novelty and the poor were almost universally regarded as incompetent and nothing more, Mr. Booth set out to tell the world the truth about life and labor in London's great unknown areas.

Beginning in 1886, he collected facts from school board visitors, relief officers and agents of the Charity Organisation Society, and directed systematic inquiries of his own. The mass of absorbing data so gathered was brought out, between 1891 and 1903, in a monumental study of ten volumes entitled, Life and Labour of the People of London. A striking series of maps, showing varying degrees of poverty, street by street, by shades of color, was one of the features of this work, which at once won him fame among scientists and students of economics. Though less comprehensive than the finished survey of today, Mr. Booth's study covered such aspects of the life of the poor as housing, trades, religious influences and wages, and included every part of London from the East to the West Side, as well as the inner ring of the city itself.

Mr. Booth took an active part also in the agitation for old-age pensions, and wrote several books on the subject.

CHARLES P. TREVELYAN is in the English House of Commons. When the war broke out he resigned from the government, and became one of the founders of the Union for Democratic Control. Mr. Trevelyan has addressed an open letter to the American public, which he has sent by hand messenger to the American Neutral Conference Committee. Through the secretary of that organization, Rebecca Shelly, it has come to the SURVEY. Page 261.

BY day a shipowner and man of affairs, by night a workman in the slums of Whitechapel, Charles Booth managed to be an explorer and student of sociology, an administrator and a charming companion all his life. Page 267.

BETWEEN the months of July and November, Boston lightened the sentence of Van Kleecck Allison, guilty of distributing contraceptive literature, from three years to sixty days—so fast did birth-control propaganda lose its horror in that New England town. Page 266.

WHETHER or not the child be given culture in vocational schools; whether or not the student be urged to join a union, the radical movement in education is a movement toward truer democracy. Page 273.

PRESIDENT WILSON presses in his message for the enactment of his full program of the eight-hour day and enforced arbitration of railroad disputes. Page 274.

CITIZENS will become live wires if dynamite civics is taught in the schools. The teacher can start the current by bringing the children into contact with police, street cleaners, and the city hall, rather than with too many text-books. Page 270.

LED on by two militant organizations of women—workers and consumers—a country-wide movement is heading up for an eight-hour workday for all women. Page 275.

REAL cooperation between masters and men is the fruit of the Joint Board of Control in New York city. Page 277.

THE prison honor system has arrived—it's the subject of a movie. Page 278.

ASAND pile for grown-ups is something new in recreations. But along Lake Michigan there are twenty miles of sand in which both father and mother and all the children can dig wells or study the evolution of the earth's surface. Chicago citizens are urging the government to buy this sand-dune region for a national playground. Page 263.

CITY housekeeping, from sweeping out unemployment and poverty to pensioning civil servants, was discussed during Municipal Week at Springfield, Mass. Some dozen civic organizations met together and thrashed out common problems. Page 264.

PROVIDE for vagrants when there aren't any vagrants is the paradoxical advice of Alexander Cleland, secretary of the Joint Committee on Prison Reform. Mr. Cleland, who once hit the road himself as a volunteer hobo, thinks tramps should be redeemed while jobs are abundant. Page 268.

Hands Across the Sea

An Open Letter to Americans

By *Charles P. Trevelyan, M. P.*

IN the week when Europe was rushing down into war, before I believed that my own country would become involved in it, I spoke at a dinner of the Mayflower Club in London. I said that, if the catastrophe did come to Europe, the Mayflower would become a name of even greater meaning to the world. For the one hope for the preservation of our western civilization would be the United States. And now as the war months lengthen into years I know my prophecy to be true. The relative strength of America grows as the vitality of Europe is ebbing away. It is not the loss of money and of credit. It is not only the waste and desolation of provinces during the war and the economic catastrophes and political upheavals which will everywhere follow in its wake. It is not only the millions of dead and maimed among the young men. But it is the complete collapse of the old national standards.

Three years ago no Englishman would have believed that even the stress of a great war would make it impossible to know the truth about the failure or success of military or diplomatic efforts of the government; that news would be officially suppressed and garbled; that newspapers would print just what government censors told them and no more. Nor would anyone here have believed three years ago that nearly two thousand Englishmen would have been imprisoned for conscientious refusal of military service, some of them condemned to death, and only respited at the last moment, and many bullied and tortured by the military. These things and many others are the price of a war like this.

After the war tyranny and militarism may possibly be burnt up in the wrath of instinctive popular reaction in Germany and Great Britain. But in Germany they will cling with fierce tenacity to their old strongholds and in Britain to their new-found opportunity. It is in this struggle that the profound effect of America may be felt with its unbroken tradition of liberty, its existing democratic success, its faith in peace. If in these things it remains faithful, it will not only secure its own immense destiny, but remain a beacon to the old nations in the hour of their agony and despair.

But there is practical and immediate help which America can be giving to the world, beyond the ultimate force of its example. It is that about which I chiefly wish to write. Americans must by this time be chary of believing the press

of the belligerent countries. But there is nothing about which less truth is told than about the real feelings of the belligerent peoples. The newspapers only represent what they would like them to be and the more imaginative section of the ruling class still think they are. But that picture bears not the slightest relation to the truth. Probably the people of Great Britain are the least weary of the war. We started the richest of the warring nations. So we are still. Owing to the prodigious credit there is a fictitious prosperity created by high wages which prevents the positive want which in Germany and Austria accentuates the other catastrophes of war.

Until the battle began on the Somme the idea of the wholesale slaughter of the British youth had not entered into the ordinary calculations of Englishmen. But even so, the war weariness is rapidly becoming universal in Great Britain. It is not that a movement for peace at any price either has existed or has begun to exist. Those who, like myself and Messrs. Snowden, Ponsonby and Ramsay Macdonald, have for months been pressing in the House of Commons and out of it for an early effort at negotiations, have no more desire than the wildest warmonger that the war should end before Germany is ready to evacuate France and Belgium and by acts acknowledge the abandonment of all designs at aggression or aggrandizement. Meetings such as we hold to discuss what line a reasonable peace should follow are now attended by increasing multitudes of attentive people. In the great industrial centers—Yorkshire, Wales and Glasgow—there is never any disturbance. There is simply a clearly increasing desire for the government to negotiate a peace if it can. And there is nothing which has given such a stimulus to this feeling as the interview of Lloyd George.

For the first time a responsible British statesman openly avowed his belief in a prolonged war of attrition. Coming immediately after the gravity of the British losses on the Somme had begun to give the British public some notion of what a war of attrition meant to them, many moderate supporters of the war have begun to think seriously whether it is not time for the government to formulate its real objective and see how nearly the Germans are prepared to meet them.

If I were asked to briefly define the attitude of the mass of my countrymen I would say that they are heartily sick of the war; that they are not aware of the weariness of the Ger-

mans and the willingness of the German government to negotiate, and that consequently they regard peace as hopeless and therefore are not yet prepared to advocate it. But if once it were brought to the consciousness of ordinary Englishmen that Germany were ready for a reasonable peace, to abjure her conquests and above all to evacuate and help to compensate Belgium, a rapid and radical change would appear in popular opinion. At the moment it is clear that the belligerent governments will not have mediation.

But what I have said suggests that there is another possible function for neutral governments besides trying behind the diplomatic scenes to bring the proud governments together. Those governments all eventually watch and fear public opinion. The art of forming, deluding, changing and enraging public opinion has been cultivated during the war by the authorities of every belligerent country as a principal department of their activity. The hatreds of the peoples have been cultivated by the exaggeration of every wrong act and the suppression of every decent act of the enemy. For, in the last resort, the continuance of the war depends on hate. If, however, some voice so loud that it reverberated across the seas, so important that the censorship could not exclude it, *spoke not to the governments but to the peoples*, a change would begin to come. Suppose that to the British people, for instance, an American president were to be able to say in quite simple and direct language that Germany was ready to give up Belgium and France if the British government would negotiate. First would come a roar of indignation from the reactionary British press. The government circles would shudder at the lack of diplomatic reserve. There might be no open response at once. But from the day of the utterance public opinion would begin to form on the irrefutable knowledge that a peace could be obtained satisfactorily on the question which was most vital to the British people. This indeed asks the American president to risk his possible value as a backstair diplomat. But American presidents are apt to believe that the common-sense of common men can make better judgments on vast issues than even well-meaning rulers. They apply that faith in their own political crises. Perhaps they might help our poor European world by trusting the soul of our common folk.

It is possible that it might be said in objection to my view that President Wilson has already tried and failed to obtain response from European opinion. In May he announced the willingness of America to abandon the old policy of isolation and to cooperate in ensuring the peace of the world. It is true that this great historic utterance was treated with strange neglect by the belligerent governments. Its meaning was distorted by the European press. It seemed to be seed falling on hard ground. Only those of us who in these dark days had our eyes on the international picture are fully grateful yet for that pronouncement which at once gave us hope. We know

that the better desires of our own British statesmen had presented international cooperation as the hope of the world at the end of the war. Mr. Asquith and Lord Grey of Falloden had mentioned it. It had been left to us to preach it incessantly in these war days. No member of the government or of those busy only with the war ever spoke of it again. But to us all it was a great beacon of hope that the American government had officially declared itself for the creation of an international system and announced its willingness to cooperate. We regretted that there was no immediate recognition of this policy by the British government. But they are laboring in heavy waters. And while half the Cabinet is talking about continuing the war by economic means as soon as the military operations cease, it is hard for the more rational half of the Cabinet to talk about the League to Enforce Peace. But Lloyd George's declaration in his interview against the mediation of America or any other neutral nation was so direct a rejection (perhaps unintended) of the American offer that discussion began. Lloyd George was forced by myself in the House of Commons to give a tardy recognition of the value of the President's offer. And a few days later Lord Grey made a franker and more hearty acknowledgment of the possibilities opening out after the war, as a result of the new policy.

Great Britain is now aware of the hope offered to the world by the President's speech and by the acceptance of the policy by both parties in the presidential struggle. But our people do not yet fully see its bearing on the conclusion of the war.

What is it that we seek, what does saner opinion seek in France, Germany and elsewhere? It is security—security for which the nations are crying. They fear to sheathe their swords if they do not see security looming in the near distance. But what offers security except this very league of the nations which European statesmen will only think of as an expedient to be considered after the war is over. My countrymen do not yet see—but they will if you are persistent—that your approval of the League of Peace amounts to American cooperation in the objects for which they profess to be fighting—a secure civilization. Sooner or later your espousal of that plan will affect the course of the war. It will shorten it. They do not yet see that your plan ought to be the first of the terms of peace.

Is it altogether impossible that, as the war drags on wearily for the next few months, the newly elected president should be insisting more and more on the value of the new American policy until it becomes the plain hope of salvation for Europe? It needs to be repeated. For in these days the essence of a democratic appeal is that it should be incessant until it is fully understood. If this message is heard in loud and ever louder tones across the Atlantic it will end by being the policy of the world. It will take the place of the fury of war denunciation, of the threats of annihilation and of the ravings of revenge, of which we are all so weary here.

Surcease

By Ernest M. Hunt

WHENCE goes the army of the liberated souls
Released by shock of cannon?

If I call them,
Will they leap back to this war wracked world and smite
their deceitful chiefs?

But each soul answers mine: "I am at peace."

SAVING THE DUNES

The Plan to Establish a New National Playground on the Shores of Lake Michigan

A LONG the shores of Lake Michigan in Indiana lies a narrow strip of rolling, sand country, about twenty miles in length and from one to one and a half miles in depth. It is the region traveled over by La Salle and Marquette. It was the home of the Pottawattamie Indians, who still put in their claim of ownership based on a peace treaty of 1783. Now it stretches away uninhabited, a tempting area for land speculation and industrial enterprise, near to such commercial and manufacturing centers as Chicago, Illinois, and Gary, Indiana.

For more than a decade the sand-dune district has been the resort of the scientist, the student, the wanderer seeking solitude, and the lover of the austere. The beauty of the dunes is mysterious, whether they lie under the blazing sun of summer or are swept by the boisterous winds of winter.

Within recent years social workers have realized the present—and far greater future—value of the region as a breathing spot and playground for the millions of people dwelling along its fringe.

Foreseeing the absorption of the dunes by industrialism, all these lovers of nature and of man joined together several years ago to urge the purchase of this tract by the nation as a playground. At first they demurred against public agitation, fearing that publicity would enhance the value of the land by calling the attention of owners to their properties.

In 1915, however, at a small meeting held at Henry Booth House, Chicago, the "still hunt" method was discarded as futile and public agitation for a national park was advocated. The newly formed Conservation Council of the nature and walking clubs of Chicago and vicinity was utilized as a medium for "saving the dunes."

Soon after, the committee became aware of a similar movement started in Indiana radiating from Gary to South Bend and even to Indianapolis. The two groups cooperated and planned a mass meeting in July near Mount Tom in the heart of the dunes.

Notwithstanding the terrific heat many hundreds attended this meeting. Messages of encouragement were received from the East and West. A provisional council was appointed to prepare a tentative organization which, after numerous meetings at Gary, materialized into the National Dunes Park Association, "to secure, establish, improve and perpetuate a public national park or parks along the southerly shore of Lake Michigan in the state of Indiana."

Through Senator Taggart, of Indiana, chairman of the National Parks Committee of the United States Senate, a resolution was passed by the Senate on September 7, 1916, directing the Secretary of the Interior to investigate and report to Congress at its next session the advisability and cost of securing, by purchase or otherwise, the sand-dune district.

The last achievement of this vigorous movement was a pub-

lic hearing recently held in Chicago before Stephen T. Mather, assistant to the Secretary of the Interior in charge of the national parks. The breadth of interest which the dunes project has encountered was shown by the great variety of organizations represented at the hearing, including such different types as the Chicago Association of Commerce, the Geographical Society, the American Civic Association, the Federation of Woman's Clubs. Teachers, artists, business men, research scientists, authors, social workers, joined in the plea that the United States save this unique piece of land from being commercialized and destroyed by "people who only have dollars for eyes to see with" and who, to save a few pennies a carload, are removing thousands of tons of sand from a region all too accessible for their purpose, but impossible to duplicate in educational and recreational value.

Great scientists of Europe have ranked the sand dunes of Indiana with the Grand Canyon and the Yosemite in scientific importance. At the hearing Prof. T. C. Chamberlain, of the geology department of the University of Chicago, emphasized the chance to see in the dunes the "assorting, selecting and rearranging processes" which control the evolution of the earth's surface, and which, usually consuming slow centuries in small changes, here work swiftly before our very eyes.

The action of wind and water upon soil, the spectacular moving, year by year, of sand hills until they have covered whole forests, the adaptation of vegetation to this shifting anchorage are all to be seen on the dunes. They are a picturesque "battleground between plant life and the elements." They are also a common meeting-ground, because of peculiar climatic conditions, for trees and flowers from all directions: desert cactus and arctic bear-berry, swamp, forest and prairie plants. The vegetation attracts a great variety of birds,

NOT SNOW-SHOEING, BUT SAND-SLIDING

which, if the region were owned by the government and protected by the national preserve laws, would take refuge there in vast numbers. It is invaluable, for these reasons, as a science laboratory, and is in wide use by hundreds of student groups.

Zonia Barber of the University of Chicago, and Dr. Otis W. Caldwell of the Geographical Society showed how the dunes can likewise supply that most necessary side of elementary education, so meagerly offered in the machinery of a great city school system and too often put in the category of a fad: the opportunity for the free normal use of the five senses, for "objectified concrete situations out of which we may train our children."

Organized education is not alone, however, in its need of the dunes. Chicago, which is within two hours' railway journey of them, ranks thirty-eighth among American cities in park area per capita. Boston has twelve thousand acres in parks. Chicago, with nearly three times Boston's population, has less than five thousand acres. Gary, with its 50,000 inhabitants, with its seven miles of lake front completely cut off from the use of the people by commercial interests, is at the very margin of the dunes.

A. M. Knott, former mayor of Gary, with others, urged the need for accessible and interesting forms of recreation. The dunes, he said, are available the year round for excursions and week-end trips. They have no "closed season." The long beach, the high sand hills, the wealth of beautiful wild flowers and trees, make them a playground for the people that is full of resources and charm.

The city of Chicago has already accomplished a good deal in weaving its varied types of people together into one fabric through its recreation center system. The tangible means of contact with the national government, which federal ownership of the dunes would give, led Abraham Flexner to insist,

in the hearing, that the saving of the dunes would be a great unifier of the heterogeneous nationalities in our industrial centers. And reaching out even beyond this present influence was the significant statement of Lorado Taft, the sculptor: "We owe much to the next generation. If art stands for anything, or if beauty stands for anything, it is simply because it binds generations of men together."

To convey the stirring spirit of this meeting will be the difficult task confronting those who plead the cause before Congress at its next session. Hitherto the national preserves have been carved out of land already owned by the government, except in the case of the forest of great trees in California, which William Kent, when the government failed to take initiative in the matter, gave to the nation. Other small tracts have been secured by executive purchase and gift as "national monuments."

All of the sixteen national parks, except the one at Hot Springs, Arkansas, are west of the Rockies. As Professor Cowles said, in commenting on this fact, "the name of the department controlling parks may have to be changed from the Department of the Interior to the Department of the Exterior, if it continues to place its parks on the fringes of the country only."

The department now has, in the National Park Service, created by Congress August 25, 1916, the first definite organization through which the parks can be administered and the interests of the people in regard to them promoted. The country is fortunate in having a man of such ability and vision as Secretary Mather at the head of this service. But before he or the Department of the Interior can do anything to keep for public use this wonderfully interesting section of Lake Michigan's shore, Congress itself must be made to understand the need for the saving of the dunes and must act on the question of its purchase.

Municipal Week at Springfield

By John Ihlder

THE tendency toward the amalgamation, coordination or cooperation of hitherto independent agencies which has been so notable in other fields, as that of the public health agencies, was perhaps the most significant feature of Municipal Week at Springfield, Mass., November 20-25. The National Municipal League and such more or less closely affiliated organizations as the Intercollegiate Division and the Civic Secretaries' Committee of the league, and the City Managers' Association, joined conference forces with the Municipal Research Conference, the Training School for Public Service and such local bodies as the Massachusetts Federation of Planning Boards, the Massachusetts Civic League, the Massachusetts Single Tax League and the Western New England Chamber of Commerce.

There can be no question as to the great interest that this coming together of civic forces aroused. As one indication, the newspapers of Springfield devoted more space to most of the organizations individually than they were likely to get when meeting by themselves, and the total publicity was almost overwhelming.

Neither is there question that the delegates, distracted though they were by the necessity of choosing between two or three meetings, found the conferences more interesting than usual. Discussions were more spirited because of the presence

of distinguished men who would not have come except for some particular meeting in which they took part. Opportunity was thereby afforded to meet people whom ordinarily one could see only by attending many conferences in widely separated cities. Parenthetically it should be said that the word "expert" was publicly denounced at one of the sessions and the word "specialist" acclaimed as its successor.

So strong was the sentiment in favor of an even closer coordination of the different agencies that at one of the sessions of the National Municipal League it was resolved to appoint a committee to consider the feasibility and practicability of closer cooperation. This resolution was adopted after H. S. Gilbert, of the national Short Ballot Association, had warmly advocated a plan of amalgamation and Raymond B. Fosdick, of the Rockefeller Foundation, in discussing the plan, had committed himself to an advocacy of combining at least to get better publicity.

At a later meeting where the activities of the league and ways to improve them were discussed, Richard S. Childs proposed that the league extend the scope of its activities, either with or without a change of name, to include county, state and even national as well as municipal governmental questions. There was, of course, division of opinion, but after a spirited discussion the whole question was referred to the executive

committee with instructions to present a report at the next conference.

Quite as significant as this expression of a desire to extend the league's activities to new governmental fields while at the same time coordinating them with those of other organizations, was the tangible evidence offered by the program that the always rather indistinct line between civic and social work is becoming more indistinct.

Cities as Social Workers

LAWSON PURDY, president of the New York city Department of Taxes and Assessments, in his opening address as president of the league, dealt with three subjects that during the past year have received much attention from municipalities: municipal bonds, pension systems for employes, and the New York districting ordinance. He closed by saying that these subjects might seem dry were it not that they bear so directly upon the lives and welfare of men and women.

His pension proposal, he indicated, might be extended far beyond the ranks of city employes. After calling attention to the inadequacy of most of our present pension arrangements and to the burden of pension payments in Europe—"the present proportion of the active payroll paid in pensions in the French National Civil Service is 17 per cent, in the Austrian 33 per cent, in that of Berlin, 37 per cent"—Mr. Purdy proposed a new plan. He would create a capital fund, the principal of which shall never be spent, by making a contribution on behalf of every employe to this capital fund annually. The essence of the plan is the preservation of the capital fund intact forever and its constant increase.

When an employe reaches 70 years he is entitled to retire and draw a pension. His pension would be the earnings of his own contributions, plus his share of the earnings of persons of the same age who had died before him. He would also be entitled to a per capita share, together with all other pensioners, of the income of the general endowment which would be created by the death of all persons of a year-class.

An actuary has calculated that on the basis of a \$100 annual contribution for each employe this would yield the pensioner at 70 years, \$1,228 a year; at 75 years, \$1,678; at 80 years, \$2,191; at 90 years, more than \$15,000. After the fund had been in operation some time the annual increase would not only pay pensions, but the annual contributions as well. If this is not done, but the whole amount available is paid out in pensions, then after the fund has been in operation 100 years the pensioner who lives to be 90 may receive an annual pension of \$41,568.

Mr. Purdy suggested that if it is deemed undesirable to pay pensions of \$40,000, the amount might be regulated in accordance with contracts made with employes on entering the service.

The last evening meeting of the week had even more of a social slant than any of the preceding sessions. Allen T. Burns, of the Cleveland Foundation Survey, dwelt at length upon the relations between private and public welfare activities, and Mary K. Simkhovitch, of New York, advocated a reorganization of municipal charity departments so that they might fight poverty instead of merely alleviating its effects. As the health department does preventive work, so should the charities department, she held.

The first duty of a charities department would be to know the extent to which poverty exists, the second to establish a bureau of prevention. This would include the study and furtherance of social insurance, the removal of unemployment, especially seasonal employment, and include an industrial report in which would be a public statement of wages paid in

the industries of the community. Such publicity, Mrs. Simkhovitch said, would tend to reduce the most shameful inadequacies of wage payment and draw public attention to the fact that where wages are inadequate the community has to make up the deficit in the care of those who are broken down by an inadequate standard of living.

The officers elected for the coming year were Lawson Purdy, president; Clinton Rogers Woodruff, secretary, and George Burnham, Jr., treasurer.

The City Managers' Conference was a disappointment to those who attended, hoping to gain definite and new knowledge as to the government of cities. Though not so academic as last year's conference, it did not produce much of value and the city managers themselves, with one or two exceptions, did not show to advantage in comparison with such a group as that of the Municipal Research Conference.

City managing is, however, still a new profession. Most of the cities which have adopted it are small and a considerable proportion of the managers are young engineers who are just beginning to make the acquaintance of their administrative problems. So in their discussions they showed an inability to grasp such distinctions as that between a budget and piecemeal appropriations. One of those who attended their meetings said that they showed an inclination to follow the example of the conference of governors, which apparently felt that only a governor was qualified to address it and which consequently died of dry rot. The city managers, however, did a little better than this. On their way to Springfield they visited New York, where they were given some plain and simple talks by Lawson Purdy and others, and on their last evening in Springfield they held a banquet, after which they were addressed by two local officials and Morris L. Cooke, former director of public works in Philadelphia.

The Conference on Municipal Research developed a spirited debate between William H. Allen, of the Institute for Public Service, and E. P. Goodrich, of the New York Bureau of Municipal Research, on the question whether a citizen agency should issue a report of activities. Dr. Allen was of the opinion that the bureau has information regarding the Riverside Drive improvement which it should have made public. At the succeeding evening meeting a resolution was adopted holding that "as citizens' agencies, municipal-research organizations can not consistently make the publication of facts contingent upon confidential relationship with public officials, or upon questions of political expediency."

Value of Publicity

THE DEBATE began when Mr. Goodrich said that personal contact with public officials was more to be desired than publicity. He was asked if, in case a public official were investigated and mended his ways, the report should be published. He believed not. He was then asked what should be done if the official refused to mend his ways. Mr. Goodrich was inclined to think he would still refrain from publishing the report and so antagonizing the official. He said that Chamberlain Bruère of New York had told him that three borough presidents in New York who were investigated by the research bureau, had been impeached on the information so secured. Dr. Allen thereupon gave vigorous expression to his opinion of the bureau's policy and declared that "not since we started, fifteen years ago in New York, has the public been so helpless as to facts."

The conference decided to organize on a permanent basis under the title, the National Federation of Governmental Research Agencies, and elected L. D. Upson, of Dayton, president; P. O. Dustin of Springfield, Mass., secretary.

Aside from this debate on publicity, the liveliest meeting of the week was that of the National Municipal League on Political Parties in City Government: A Reconsideration of Old Viewpoints. Prof. Charles A. Beard of Columbia University began the reconsideration by declaring not only that non-partisanship in city politics is out of place, but that it is non-existent. To prove his point he went over the records of so-called non-partisan campaigns and listed the party names, ranging from Citizens' Party and Good Government League to Fusion tickets. This was bad enough, but he then went on to say that our political morality now is no higher than it was fifty years ago and declared that if no band of forty thieves is now disposing of New York street car franchises it is merely because 95 per cent of the franchises have been granted and made perpetual.

Prof. A. R. Hatton of Cleveland at once challenged this statement and pointed out the great-difference in the terms

upon which franchises are granted now in cities other than New York from those when the forty thieves gave away the Broadway franchise.

Housing and city planning occupied a considerable proportion of the delegates' attention. The Massachusetts Civic League held a meeting devoted entirely to housing and the Massachusetts Federation of Planning Boards held its fourth annual conference. While in both of these conferences stress was laid upon the situation in Massachusetts, a good deal of it was of general application. New York's districting ordinance appeared and reappeared at session after session, not only at the meetings of these organizations, but at those of others, until even the New Yorkers began to feel that it was receiving too much attention and time after time declared that what has been done in New York must not be imitated; the underlying principles are universal, their application will not fit.

The Allison Case

By J. Prentice Murphy

GENERAL SECRETARY BOSTON CHILDREN'S A D SOCIETY

IN July of this year Boston had the subject of birth control presented to it for serious and also sensational consideration because of the arrest of Van Kleeck Allison, recently a student at Columbia University, who had published in the *Flame*, a periodical of which he was co-editor, an extract from one of Dr. William J. Robinson's books dealing with a phase of birth control. This issue of the *Flame* attracted the attention of the district attorney of Suffolk county and also of the police who arrested Mr. Allison, charging him with disseminating birth-control literature contrary to a Massachusetts statute. Later this charge was supplemented by further charges to the effect that he had given birth-control information to certain people who had called at his office; and still later the district attorney charged that he had distributed pamphlets dealing with the subject of birth control to factory girls in different parts of the city.

Mr. Allison freely admitted that the first two indictments were true. The first excited much comment because the quotation from Dr. Robinson's book is very well known to medical men and to social students. The second was based on the fact that he gave a pamphlet, containing contraceptive information, to a detective in disguise who claimed that he needed this information because of a very critical home situation. Mr. Allison also admitted that he had given pamphlets to two or three other people who came to him when he thought, after careful conversation with them, that they should have such information. The third charge, concerning factory girls, Mr. Allison has absolutely denied, and all of his friends, including many very influential people in Boston, fully believe his statement.

The trial in the Municipal Court was sensational. The district attorney, Joseph C. Pelletier, in summing up the case for the commonwealth, declared that this was one of the most far-reaching cases that had ever been brought to the attention of a Boston judge. In the estimation of many who attended the trial, Mr. Allison was not given a full opportunity to explain his side of the case. He was found guilty and sentenced to three years at Deer Island, which is the House of Correction for Boston.

An appeal to the Superior Court was taken by the attorney for the defendant, George E. Roewer, Jr., a very careful and sane man, who was counsel for Giovannitti and Ettor in the trial that took place in the old Massachusetts town of Salem growing out of the famous I. W. W. strike. The hearing of the appeal in the Superior Court was scheduled for November 20, and a great many people, holding various opinions as to birth control, awaited it with interest.

Subsequent to Mr. Allison's arrest and conviction in the lower court, there was organized in Boston a Birth Control League. The object of the league was not necessarily to defend Mr. Allison, but to make clear to the citizens of Boston and also to the state at large the real meaning of birth control, and to refute in every possible way the district attorney's repeated statements that birth control was a filthy subject and that no clean-minded person could possibly believe in or follow its teachings. The league, in spite of a very marked spirit of conservatism on the part of Bostonians and in spite of great hesitancy on the part of many who are actively engaged in social work and allied professions, has grown and won the interest and support of a very influential and respected group of ministers, college professors, lawyers, teachers, doctors, social workers, business men and others.

Instead of a long and sensational trial in the Superior Court, the district attorney compromised with Mr. Roewer, *nolle prosequing* some of the charges against Mr. Allison and agreeing to a sentence of sixty days in the House of Correction. This is, of course, tantamount to a complete vindication of Mr. Allison on the third and more serious charge, which he has always denied. It does mean that he is held technically guilty for the distribution of information of which a great group of intelligent and socially-minded people in Massachusetts and other states have knowledge and consider it ethical to follow. The sixty-day sentence has now been appealed to the Supreme Court, so that within a very short time the full Supreme Bench of the state will be given the opportunity of passing on the question of birth control.

The principle of free speech has been involved in the trial and has had many staunch and fearless defenders. Special

credit should be given to a small group of educated women coming from several professional groups, who refused to be daunted by the threat of unfavorable publicity in their efforts to see that the subject of birth control was presented to the community as something that serious and clean-minded people could consider without contamination, although they might in the end be opposed.

The Massachusetts statutes concerning the giving of contraceptive information differ from the New York statutes. It is possible, according to the judgment of certain reputable lawyers, for a physician to give contraceptive information to a patient when he deems this a necessary thing. It must be given by word of mouth. Anything appearing in writing or

the giving of any article that would tend to prevent conception is forbidden by statute.

The newly organized league is planning an active and dignified campaign of publicity for the coming winter. Mrs. Oakes Ames is to be president of the league, and Mrs. Southard, the wife of Dr. E. E. Southard, director of the Boston Psychopathic Hospital, is to be vice-president. The league has had offices for some time at 36 Bromfield street, Boston.

The league immediately after the trial issued a statement to the effect that it has established that the abstract discussion of birth control is not an actionable offense. Hereafter, it contends, birth control may be discussed by anybody in the state and no criminal action taken.

Charles Booth

An Appreciation

THE student impressed by the scope and extent of the work of Charles Booth as recorded in his epoch-making volumes *Life and Labour of the People in London*¹, finds it hard to realize that this labor of love, which to most men would have sufficed for a life career, was performed by a busy shipowner and man of affairs, handicapped by lack of physical strength.

Charles Booth, whose death in London has just been announced, possessed qualities which marked him not only as a born leader, but as a pioneer. It is to men of his type that Great Britain owes her lead in the commerce of the world and her intellectual greatness. His indomitable energy, the keenness of his intellect, the extent of his knowledge, his versatility, which shone out in flashes of wit and sarcasm, could not fail to impress all who came in contact with his many-sided mind.

I well remember a trip in his company to Dundee some ten years ago, to see the launching of the *Lanfranc*, built for the steamship company which bears his name. At the station hotel in Edinburgh breakfast on a dull morning was made a thing of lasting memory by his scintillating fun on no weightier topic than that the American was eating a light continental meal while the third member of the party, British to the core, was enjoying a heavy American breakfast. He was the chief figure on the stage as the great steamer, the largest product of the local busy ship-building industry, left the ways. At the following lunch in the sail-loft his address, graceful, modestly delivered and full of interest, held the strict attention of one and all, from the humblest shipwright to the officers of the municipality. Afterwards the homeward trip when he discussed American politics, economics, finance and home problems of government, seeking as well as giving information and expressing judgments founded on intimate experience and study, made the afternoon one long to be remembered.

It is rare that the man who achieves great success in his vocation can turn to other pursuits and maintain the same high standard of endeavor. But of Charles Booth it can be said that the variety of his interests and the breadth of his outlook made it possible for him to excel in many fields.

Early in their business career, the late Alfred Booth, his older brother, created with him, through their combined

energy and vision, the Booth Steamship Company, towards whose upbuilding each contributed his special gifts.

More than a generation before the great European conflict had waked the United States to the commercial possibilities of South America, the Booth Steamship Company was carrying on a profitable commerce with the Amazon ports. Manaos, a thousand miles from the coast, and Iquitos, the Atlantic port of Peru, in their harbor works as well as in their shipping, bear witness to this pioneer enterprise.

As one of the heads of Alfred Booth and Company of Liverpool, bankers and shipowners, Charles Booth helped to control not only a wide carrying trade, but large and varied manufacturing and commercial enterprises, which brought him in

CHARLES BOOTH, 1840-1916

¹Life and Labour of the People in London, by the Rt. Hon. Charles Booth, Macmillan, 1889-1903; First Series: Poverty, in 4 volumes; Second Series: Industry, in 5 volumes; Third Series: Religious Influences, in 7 volumes.

close contact with the two Americas, India, China, Australia and other parts of the world. The well-deserved reputation of the Booth Line, the loyalty of its men, and the high credit of the firm are evidences of the success of the business founded by Alfred and Charles Booth.

To the student and social worker Charles Booth is best known by his study of life and labor in London. To this monumental work, while engrossed with business cares, he for long years devoted his surplus energy. Shipowner by day, he became by night the student and investigator in the clothes of a working man at his rented room in the slums of Whitechapel. Gradually he employed a large corps of investigators who worked under his supervision and carried out his plans.

Of this phase of his life the *New York Evening Post* says: "He was eager not to understate the ghastly facts that lay beneath the surface of his general conclusion that over 30 per cent of the people of London were in too great poverty to allow the maintenance of normal physical efficiency; and yet he was esteemed for the caution and weight of his utterances. He avoided exaggeration and hysteria as carefully as he sought

the truth. His data were derived in part from the minute records of school-board 'visitors,' in part from relieving officers and the Charity Organization Society, and in part from systematic researches directed by Booth himself. His volumes contain as documentary evidence specimen pages of the notebooks in which, family by family, street by street, industry by industry, his corps set down the information found. He tried to bind himself to describe and not to teach, to chronicle and leave the remedy to others."

Public honors came to him in recognition of his work. He was appointed Privy Councillor and was a member of the Tariff Commission of 1904. He received honorary degrees from Cambridge, Oxford and Liverpool, was a fellow of the Royal Society and belonged to many other learned bodies.

Charles Booth was an explorer, a student, an administrator, a charming companion, a keen and successful business man—whose achievements justified his confidence in his own views and policies. He was one who shone not less in public than in a family circle whose devotion completed the good fortune of a full and rounded life.

F. B. K.

The Time to Deal With Vagrancy

By Alexander Cleland

SECRETARY JOINT COMMITTEE ON PRISON REFORM

THE time to mend a road is when the traffic is lightest; the time to repair a roof, when it does not rain. The same wisdom makes the present the time to establish industrial farm colonies for tramps and vagrants in the populous states of this union. The reason is the simple one that there are no tramps or vagrants, or very few, who could now be sent to such colonies.

So few men are out of work today that the ranks of the vagrants are greatly thinned. The hobo is having a good time. A million or so of industrial drifters, odd-job men and part-time workers are benefiting from prosperity and have been reabsorbed into the industrial army. Men who have been tramping from city to city and state to state, looking for work, who have hung around municipal lodging houses waiting, often in vain, for an hour's labor at twenty cents, are now sought for, advertised for, given steady work at \$3 a day.

This situation will last only until the end of the war, or until a year or so after, for even when war orders stop it will take some time to fill up shops and warehouses with merchandise. Within a year, however, our domestic stocks will be filled up again, immigration will likely be under way, and we shall be back to the old predicament of having more men than are needed.

Shall we wait for that day to come before we provide for it? If we get our farm colonies into operation now, when the number of applicants will be small, we can try out various methods of conducting them and select the most desirable. We shall then be ready when the number of applicants rises. It will be better to get the plan into running order while the situation is manageable than to wait until the old confusion and congestion are upon us again, demanding hit or miss methods for remedying them.

The fundamental principle in dealing with vagrants is to deal with them according to their different characters and needs. They fall, roughly, into three groups.

The real hobo is the first group. He is the man who goes

about hunting for work. He has not been able to fit himself securely into our industrial mechanism and he drifts about over the country wherever he thinks he may be able to find a job. He may look for apple-picking in New York, orange-picking in California, harvesting wheat in Kansas, or cutting ice or working on the railroad here, there and anywhere. He forms a great, silent army—so great that he has established definite routes for travel. He may enter and leave New York city, for instance, mainly over the Lehigh and Lackawanna roads, getting off or on at Newark; or over the New York Central, getting on at 125th street. He has developed a freemasonry of the road; he knows and passes on to his fellows all imaginable information about wages, chances for work, cities it is not safe to ride through, what roads must be watched for detectives, what ones have friendly trainmen. Hobos are men of all trades, all ages, all degrees of skill, but they actually want to work.

The tramp makes up the second class. He is the man who wants to wander, not to work. He might be called the idle poor, for except for his poverty he has some of the characteristics of the idle tourist. He wants just to roam around, and in this fat, careless country he finds it quite possible to do so.

The third group comprises those vagrants who are physically or mentally incompetent. The first five or ten men one might find belonging to this group may have got into it for as many different reasons. The reason may be drink, or drugs, or tuberculosis; it may be sheer constitutional inferiority, either mental or physical—the result of generations of overwork and undernourishment. The man may be simply burned out by the work he has done, possibly at an early age. One of the most completely used up men I ever saw was twenty-nine years old; he had been working since nine in a Pennsylvania glass house, overheated and then chilled, with long hours.

It is easy to see that the same work, offered to these three classes of vagrants, would be differently received. Suppose

Photo by Hine

NIGHT BREADLINE (INTERIOR) AT THE BOWERY MISSION, DURING HARD TIMES

a citizen, moved by newspaper accounts of the misery of the unemployed, offered the next vagrant he saw fifty cents and his dinner to shovel the snow on his walk. If the man were a tramp, he would shovel for a few minutes and then stick the shovel in the snow bank and move on to look for a dinner with no shovel attached—and the citizen would say that it was clearly no use trying to help such men. If he were an incompetent vagrant, he would shovel fiercely for an hour and then either faint or stagger away exhausted—and the citizen would say that he could find work if he were fit to do it. The hobo would put the job through and then hunt for another yard to clean.

Vagrancy is a hole that cannot be mended when the weather is bad. Emergency relief is almost always unsatisfactory. We expect waste in dealing with a Johnstown flood or a Baltimore fire or a San Francisco earthquake. It is not possible on such occasions to ask many questions if people are to be kept alive. Just so, a community faced suddenly with ten or twenty thousand homeless, starving men cannot be particular about the work it gives them or the conditions it attaches to its succor. There is no help for it if all sorts and conditions of men are lumped together in emergency lodging houses and elsewhere, if men who loathe charity and men who loathe work are treated exactly alike. But a crisis that can be foreseen can be guarded against, and does not justify waste and inefficiency.

Our past methods of dealing with vagrancy have been hideously expensive, largely futile, and even cruel in their blindness. Take New York alone, for example. The State Board of Charities estimates the annual loss to the state from vagrants at \$2,000,000. This includes the railroad accidents of which they are the victims, the petty thefts they commit from chicken-coops and clothes-lines, the larceny or even burglary from houses and barns and boxcars and railroad stations, and the cost of caring for them in jails and lockups. The vagrants constitute a terrific drag on the progress of the state both in the charitable and penal cost they entail and in other results that cannot be counted up in figures—the drink habit, the drug habit, the disease that is caught here and passed on there, and, worst of all, the deadening of initiative and the paralysis of will that comes from endless failure and loss of self-respect.

In spite of all this, and in spite of numerous European examples, Massachusetts is the only American state that has established a state institution for tramps and vagrants, at Bridgewater. Agitation for colonies has reached varying acuteness in a number of states. Illinois has discussed the matter. New York actually has a law authorizing the building of a colony and defining the persons who shall be sent to it and how they shall be committed, but the colony itself awaits establishment.

Now is New York's opportunity. As a result of the legislative authorization in 1911, 820 acres were bought in Dutchess county. Four legislatures have since been asked to make appropriations for starting the colony, but they have failed to do so.

The New York act provides that any person over twenty-one who is adjudged a vagrant or tramp may be committed to the colony. "Reputable workmen temporarily out of work and seeking employment" may not be committed. No one can be sent for a definite term. Eighteen months is the maximum for those who have not served previous prison sentences, two years for those who have. Anyone may be paroled or discharged at any time during his sentence.

The benefit to the tramp and the incompetent of such a farm would be large. The tramp would not only be obliged to work; he would be kept (within the maximum sentence) until he gives evidence that he has acquired a working habit. He would also be built up physically. At first there would be ground to be cleared and buildings to be erected; after that, farm work to be done. For the physically and mentally incompetent (and there are many paranoiacs among vagrants) the steady outdoor work, regular diet and regular sleep would rebuild many. Others could be sifted out and sent to proper state custodial institutions. For the hobo the farm would do nothing, except make the public understand the difference between him and the tramp, and make it easier for him to get work.

A concerted effort ought to be made to obtain funds for this colony from the next session of the legislature. The Joint Committee on Prison Reform, the Prison Association of New York, the City Club of New York, and other civic bodies agree that it is desirable. Now is the time to start it. Will New York take the lead?

Dynamic Civics

How the Child in Our Schools May Be Taught Power in Citizenship

By *Edward E. Hill*

DEPARTMENT OF HISTORY AND SOCIAL SCIENCE, CHICAGO NORMAL COLLEGE

THE reader of this article will not find in it any new ideas of an explosive nature, as its label might seem to indicate. Dynamic civics is here used as a term better adapted than the more familiar "community civics" to express a method in the study and teaching of social conditions and activities, especially political activities, that is calculated to generate power in citizenship. The teaching of civics consciously to this end is a growing feature of school practice and is bringing a needed enrichment to the curriculum.

Dynamic civics lays emphasis upon the work of government rather than the details of its machinery. This is its first principle. Why do we have this thing that we call government? What brought it into existence? Without going into its origin, its continued existence can be explained and justified only upon these grounds, that it serves human needs and promotes human progress. It may have originated in a brute force or crafty cunning that enabled one individual to gain a mastery over his fellows, in the family instinct where the exercise of authority is tempered by a sense of paternal responsibility and softened by some feeling of filial obligation and gratitude, or in a sort of half-conscious realization on the part of a number of individuals that they might work together to advantage to promote their common good. But whatever its origin—the essential question that we are now concerned with is how it acts to enlarge human happiness. Any fruitful study of civics must be based upon an understanding and experience of social and individual needs.

This does not mean, of course, that the teaching of civics is to begin with a scientific analysis of human wants. Such a method is possible only with mature and advanced students. But the civic training of the child should begin with the everyday experiences of home-life before school age is reached. In his home-life the child may become aware of the fact that his parents are doing things for him and that he in turn owes them obedience and certain little services. In his relations with brothers and sisters and playmates he also learns his lessons of mutual dependence and helpfulness. The dawning consciousness of these reciprocal relations and his active participation in them is the beginning of civic knowledge and training.

When he enters the school world the circle of these relations widens. It includes now not only the members of his family and the few playmates of his home-life, but teachers, principal, janitor, classmates and others. And so the circle of his civic experiences continues to enlarge. He comes to know the function of the policeman, garbage man, fireman, postman and other public officials, and something about the work of the milkman, carpenter, shoemaker and other tradesmen who are ministering to his daily wants. By the time he reaches the fourth or fifth grades he becomes interested in the organization of activities such as the postal system, the life-saving service, the fire and police departments, and two or three years later he is able to comprehend

to a considerable extent the organization and workings of the different units of government of which he is a member, local, state and federal.

But throughout the process the emphasis has been upon the work of government rather than the details of its machinery. Not that a knowledge of the organization and machinery of government is unimportant, but, like any other machinery, its real value can be estimated only by the work that it turns out. It cannot be judged properly as an abstract thing, as an end in itself.

In the second place dynamic civics seeks to find as many points of actual contact with social activities as is possible, to substitute whenever practicable first-hand knowledge and experience for the text-book, lectures and outlines. Its tools are experiences, observations, reports, discussions and actual practice. It also gathers its substance from the daily papers, official reports and current magazines. Not that the text-book has no place in this subject as it has in other fields of educational work.

Next to the teacher the text-book is, without question, the most important agent in the educational process, but its function is frequently unduly magnified. It is placed before the awe-struck student as the sum and substance of all that has been said or can be said upon the given subject—the final authority upon the matter. It is fed out to him, perhaps I should use the more pedagogical expression, "assigned," in regular and measured quantities and if the given text-book happens to be, as is too frequently the case, only a collection of dried-out material designed primarily to fatten the pocketbook of an enterprising publisher or tickle the vanity of a painstaking compiler, whose name appears on the cover and title-page as its "author," the weary student is likely to finish the course in the given subject with a feeling that he has been stuffed with sawdust.

In the study of civics, at any rate, the text-book should be used as a means of suggestion and direction rather than as a catechism, as a cold-storage plant, to be drawn upon only for material which is not convenient elsewhere in fresh supplies. A face-to-face talk with a policeman, garbage man, shoemaker or carpenter is far more interesting than second-hand statements found in text-books, or pamphlets, or made by the teacher. The inside of an engine-house, a life-saving station, or a blacksmith shop is far more impressive than lessons learned from books. Visits to headquarters of political activities, such as the town or city hall, village, city, county and, whenever possible, state and national institutions, courts, legislative bodies, conventions, polling places and other political gatherings, tend to make civic life a real thing to the minds of students. Moreover, knowing how and where to get fresh material on a subject and the habit of going after it is more important even than a knowledge of the material itself.

It is not contemplated, of course, that all the students of all the civic classes in a city shall visit all of these places. Such

a thing is manifestly impossible. It would be an unwarrantable encroachment upon the school program, the time and strength of teachers and pupils and an intolerable nuisance to those engaged in doing our civic work. A few trips planned for each class or committees from the class are sufficient to stimulate the appetite for this sort of thing and to start the young citizens in the right direction. Nor will these visits, if properly distributed and timed, prove any hardship to the selected hosts. The writer has taken classes upon scores, if not hundreds, of these trips and has yet to meet with the first act of discourtesy or the first symptoms of impatience or unwillingness to "tell us all about it."

Joint-Ownership of Property

A THIRD PRINCIPLE involved in the dynamic teaching of civics is the aim to impress upon the mind of the pupil something of a sense of joint-ownership in public property. He is a joint-heir to a vast estate and a partner in big undertakings. Streets, boulevards and bridges, public buildings, parks, museums and libraries are a part of this estate. He is a part owner also of great natural resources, although a large share of this portion of his birthright has been sold by the trustees of his estate for a mess of pottage. Inventories of these properties and a study of their management, the expense of maintaining them and the returns from them, social and individual, help to give a sense of dignity to citizenship and a feeling of responsibility which can hardly be secured in any other way.

As an instance of this may be cited a case where a gang of boys had long been making itself a nuisance in their neighborhood by breaking the globes in the street-lamps. This seemed for some reason to be a favorite amusement. The boys were finally brought together by a well-disposed gentleman for a heart-to-heart talk. A discussion of such questions as the following: Why do we have street-lamps? Who pays for putting in these lamps? Who is injured if these lamps are broken and whose business is it to help to protect them? seemed to bring these boys to their senses, and public property in that vicinity was found to be much safer.

Another fruitful line of study under this same head is the question of the enlargement of some of the plants that are a part of our common estate. The city, for instance, owns the streets, paying for their construction and maintenance usually out of a general tax levy. Why should the city not own and run the street-car lines on the same basis? The city owns and operates a public plant to supply water to all of its citizens. Why should its inhabitants not supply themselves in the same way with gas and electricity? As a nation we have a great plant for handling our letters, papers, magazines and even merchandise to a limited extent. Why should the government not also handle our telegrams and operate the telephone system? Why should we not, as a people, own and operate our great public thoroughfares—the railroads? Would it not be possible and profitable for us in many ways to enlarge our plants for furnishing public service? The function of the teacher is not, of course, to stuff pupils' minds with dogmatic conclusions, but to stimulate interest in these questions and lay a foundation for intelligent investigation.

A historical background is of fundamental importance in dynamic civics. Political institutions, laws and governmental machinery are not static in their nature. They were not handed down to man written upon tables of stone, the final and unchangeable fiat of an omniscient and omnipotent creator. As we have them today they are the product of human experience, the fruits of an evolutionary process whose dynamic force

is to be found in man's struggle to satisfy his desires and to realize his ideals. They are still in the process of making.

That over-conservative attitude of mind which looks upon the constitution of the United States as the offspring of some supernatural wisdom and regards such time-honored institutions as trial by jury, forms of court procedure and laws guarding the "rights" of private property, freedom of contract, etc., as too sacred to be tampered with by present-day criticism, has seriously retarded our progress. It has made us complacent and self-satisfied with the political achievements of our ancestors, while other nations have outstripped us in the realization of some of the very ideals which our forefathers first conceived of and left to us as a heritage and a responsibility.

The cure for this excessive conservatism, perhaps we might diagnose it as a type of political locomotor ataxia, is the historical treatment of civic study. The student of civics should know something of the origin and development of customs, laws, institutions and social problems as we have them today. He must have a longitudinal as well as a cross-sectional view of his subject. A simple comparison may help to bring out more clearly this idea.

A man of ordinary intelligence can jump aboard one of our great modern locomotives and in a few minutes' time learn to manipulate certain handles so that he may send the engine forward or backward at his will. For a time he may get along all right, but let anything happen to the mechanism and he is helpless. The services of the skilled engineer now become indispensable because he knows not only what levers and buttons to manipulate, but he knows every part and connection of the engine. If an expected result does not follow the movement of a given lever he understands just where to look for the trouble and how to remedy it.

But even the skilled engineer, if his knowledge has been gained entirely from a study of his own engine and a mastery of its parts is bound to have a very narrow notion of the possibilities of steam engines. If we are looking for a really progressive engineer we must find the man who is acquainted with all the fundamental principles upon which steam engines are built and is familiar with the history of their development. To him the engine that he may happen to be running, no matter how wonderful in its mechanism or how efficient in its workings, is by no means the final product along this line. It is only the latest step in the long evolution of locomotives and is likely itself to become junk in a few short years in competition with never-ending improvements. As perfect as it may seem to others he knows that it still has certain limitations and is thinking, always thinking, how he may overcome them.

The Practical Politician

THESE THREE CHARACTERS typify three characters in political life. The first is the average voter. He goes to the polls, marks his ballot, places it in the ballot-box and comes away with a cheery impression that he is helping to run the ship of state. But the practical politician knows better. He can scarcely hide a sarcastic smile at the conceit and ignorance of the man who seems to think that levers and buttons in the form of tickets and ballot-boxes are all that there is to political machinery. Like the skilled engineer, our practical politician knows well every detail in the political organism that he is working. Not the smallest screw, or wire, or bolt, or rod in the caucus, the primary, the convention, the election or any other part of the political machinery ever escapes his attention. If anything goes wrong, if his faction is beaten at

the primaries, or his party at the polls, he can lay his finger on the exact spot where the trouble lies. His engine is soon fixed up and he is off on his trip.

But, like the skilled engineer, too, his ideas of government are likely to be very narrow if his experience and vision are limited to that particular political machine which he happens to be running. If we are to have a progressive politician—a statesman, we must have a man who knows not only political institutions as they are today, but one who is also acquainted with the principles that lie back of these institutions and the history of their development. Dynamic civics must be civics with a historical background.

Closely connected with this principle is another upon which American schools must lay stress, the cultivation of an understanding and an appreciation of American ideals. It is not enough that the citizen acquire a knowledge of his social environment as it now is and a habit of acting helpfully within that environment. It is not enough even that he know how political institutions about him came to be what they are, social progress demands yet more than this, it calls for a power to set up ideals, a power to conceive something better, nobler, higher than that which now exists. A vision of certain ideals and a determination to realize them are the forces that must work in our national life to cause civic growth.

And what are these ideals? They have become such commonplaces upon our tongues that they have almost become rubbish in our minds. Freedom of thought, freedom of speech, freedom of religion, freedom of action and of opportunity, how ordinary these expressions sound to most of us today! But how full of meaning were they to the brave souls who saw them at first only as beautiful human dreams and commenced the long struggle to give those dreams reality! Certainly one of the first duties of the civics teacher is to find some way to impress upon the mind of his pupil something of the meaning of these great blessings which as yet are fully enjoyed by only a part of us and only partly enjoyed by most of us, and to inspire in him a determination to work without ceasing to the end that all of these blessings shall be enjoyed by all of us.

To secure and insure these blessings our forefathers laid the foundations of two great institutions, democratic government and a free public school system. A long record of political history had impressed the lesson that it is not safe to commit the reins of governmental control unreservedly into the hands of the few. To secure equal rights and equal opportunities for all we must have a government that is responsible to and under the control of all. That we have not yet realized our ideal of democratic government needs hardly to be stated.

We seem to have escaped kings and lords only to fall a prey to conscienceless political bosses and piratical captains of industry. This pessimistic view, however, may be dispelled by a brief survey of our political history, which reveals the fact that democratic government, not only in form but as a force in protecting and serving the masses, has made steady progress in our country from the time when it first began to take root in the soil of Virginia and New England.

Democratic government alone, however, is not sufficient to secure the blessings of liberty and that equality of which our forefathers dreamed. The ignorant man, no matter under what form of government he may live, is restricted in his thought and speech. He is hampered in all his activities and social relations by his lack of knowledge and inability to think constructively.

Real freedom can come to the individual only through a knowledge of truth—through education. In order that this might be within the reach of every one, the fathers of our republic, with rare vision, when they laid the foundations of a democratic state also laid the foundation of a great free public school system. The free public school is our best guarantee of equal opportunity, efficiency and democracy. Any civic instruction that fails to impress upon the minds of young Americans the importance of these national ideals and the work of these two great agencies through which we are coming to realize them, falls far short in its function.

To sum up briefly, then, the aim of dynamic civics is to bring the student into direct contact with civic realities, to impress upon him the sense of dignity and responsibility that comes with a consciousness of joint partnership in great enterprises, to cultivate in him an open mind and progressive spirit toward civic questions, and to inspire him with a vision of our civic ideals.

These principles are not anything new. They have been embodied more or less in the work of all progressive teachers of civics and to some extent in our better text-books on this subject. Recently they are finding a fuller expression in what is known as "community civics," of which Henry W. Thurston of the New York School of Philanthropy and Arthur W. Dunn of the United States Bureau of Education have been perhaps the chief exponents. Mr. Thurston's *Outlines for the Teaching of Civics*, published by the Chicago Normal College, and Mr. Dunn's little text-book, *The Community and the Citizen*, as well as his pamphlets, *Civic Education in Elementary Schools as Illustrated in Indianapolis* and *The Teaching of Community Civics*, issued as *Bulletins 642 and 650* of the United States Bureau of Education, show how the principle of dynamic civics may be effectively employed from first grade to college.

The Radical Movement in Education

By Max Loeb

MEMBER CHICAGO BOARD OF EDUCATION

INDUSTRIAL education is now having its day at court. The German idea of specific training for specific occupation has been taken up with enthusiasm by American educators. There is now hardly a city of any considerable size which has not vocational courses and the accompanying equipment in the public schools. Vocational guidance is not yet so firmly established, but beginnings have been made.

Bureaus of vocational guidance are in existence in Chicago, New York, Boston, Omaha and other of the large cities.

Vocational education suffers from the danger of over-emphasis. It is difficult to maintain the proper balance between the vocational and cultural studies. One is apt to overshadow the other. Hence the insistence of labor leaders that the cultural studies be not neglected in schools giving

vocational courses. Clear-sightedly, they want the child of working parents not only to be trained for a practical occupation, but also fitted to raise himself above the economic level of that occupation.

The teacher of vocational courses can not escape the assumption of a definite attitude toward the boy's work and work-associations after he leaves school. How shall the twig be bent? The decision is an important one. Shall the boy or girl be encouraged to accept worshipfully conditions as they are, or shall he be encouraged to explore, to criticize, to lay aside reverence for authority and deal mercilessly with facts?

The Teacher's Influence

TAKE A CONCRETE CASE: Shall the teacher advise the boy to join a union, or shall he advise him against it? Or shall he say nothing? Even if he states no definite opinion, on what side shall his influence lie? The attitude of the teacher is apt to have a lasting effect upon the intellectual processes of the boy or girl, particularly in the formative adolescent period when he is particularly amenable to the suggestions, spoken or otherwise, of an elder, clothed with authority.

Complaint is made that our modern schools are turning out radicals. The complaint is amply justified, and thanks be for it. It is a blind teacher, indeed, who, in preparing a boy or girl to be an efficient worker, does not also train him to insist upon the collection of a proper reward for his work. "Not only to serve more efficiently, but to collect justly for his services." This is the unspoken, but the underlying message which reaches the youngster who goes through a course of vocational training in our public schools.

Vocational training is exceedingly practical. Preparation for a particular job and the job itself are not far apart. The scholastic and the practical almost meet. The boy and girl, therefore, unless of very limited intelligence, can not escape the industrial problem. It is all about them. Realization comes that soon they must take some stand—either be with the union movement or against it—and not indifferently let the torrents sweep past them.

As intelligence increases, so does discontent with things as they are. The child, when he comes to realize the existence of poverty, of crime, of disease, of social maladjustment generally, awakens to the fact that civilization is not far from its swaddling clothes, and has still a considerable distance to travel. His enthusiasm for practical reform, when once it is borne in upon him that thousands of people live poorly, and eat inadequately, and are sometimes even without employment, is far greater than that of the adult who knows by experience how slow are the steps in progress.

Increased intelligence, however, means more than comprehension. It involves new taking-account of one's self—determination to live fully, not only life's enjoyments, but also its duties and responsibilities. It involves in equal measure, appreciation of that in our social organism which is good, that which is just, that which is well done.

Our public schools are the chief agencies in increasing the child-intelligence. They do this not only by imparting information, by disciplining the mind, by opening new areas hitherto hidden, but also by thrusting the individual into a crowd and thereby awakening his powers of observation and giving him eagerness for competitive effort. They make him inclined to think for himself, to search out motives, to insist upon his rights, to be self-reliant, and, above all, reluctant to make up his mind on a given issue until both sides have been

heard. If his training seems to give him a tendency toward cynicism and toward suspicion of motives, it should be remembered that this is the obverse of a virtue—namely, the desire to get at the bottom of a matter even if it be necessary to question long-established conditions in the search for truth.

Vocational guidance bureaus are excellent institutions if they do not degenerate into mere employment agencies. They must have the courage to speak out against an employment when conditions are hopeless so far as promotion, a decent wage, or the ordinary canons of health are concerned. The radical movement in education is toward the fearless, outspoken expression of unbiased opinion. That vocational course is a failure which turns out a boy or girl who is servile or a toady, no matter how efficient he may be. The instruction has been poorly given if the working boy or girl in the trades does not see the advantage to himself and to society in association with his fellows in labor unions—in order that he may get from industry that reward which can only be wrung from it by collective bargaining. Some employers who have interested themselves in vocational training are unaware of its real significance. Many, however, far-sighted and fair-minded, are encouraging industrial education without deceiving themselves as to its true content. They are those who are satisfied to give to employes the same right of cooperative action which they have insisted upon for themselves.

Within the last few months a national organization of teachers, affiliated with the American Federation of Labor, has come into being. Local branches are being established. The compelling force which is causing this association is the need for cooperative thought and action, and the enormous advantages, as a practical strength-giving agency, of affiliation with labor unions. "The shabby skirts of gentility" are no longer drawn away at the thought of affiliation with the plumber or the carpenter. Both are wage-earners, although in different fields. It has been truly said that teaching is a profession and not a trade. Yet even professions must organize, if without such organization they find themselves thwarted and repulsed in the effort to improve the conditions under which they must practice their professions. The actors have seen this truth, and their strongest association, in point of numbers, has formally affiliated with the national labor organization. In some cities, like Chicago, the teachers' unions are active factors in the life of the community.

Modern Education

THE RADICAL MOVEMENT in education is a movement toward truer democracy. It uncovers the intellectual snob who sneers at business; it bows the head of the man of affairs in respect to the scholar. It takes the academician into practical life. It makes him sought for by men who formerly dismissed him with the phrase "impractical." It trains the youngster, not aimlessly, but with definite aims and purposes. It makes him self-respecting and determined to insist upon his rights, not only in private life, but as an economic factor in industry. Suffrage, and the agitation for it, are aiding this modern voice in education to gain a steadily larger hearing. Women, it may be said, less often allow motives of commercial expediency, or irritation at individual cases of privilege abused, to obscure their vision of simple, elemental truths. Reciprocally the movement is helping suffrage, for under its influence the young mind becomes impatient of opinions founded only upon tradition, and bases its acceptance or rejection of a theory or principle upon readily understood facts of everyday life.

COMMON WELFARE

THE PRESIDENT ON LABOR DISPUTES

THAT President Wilson is fully aware of organized labor's opposition to any plan designed to curtail its right to strike is shown by the language used in his annual message to Congress, delivered on Tuesday. That he has made up his mind to disregard that opposition is equally evident. The message is devoted chiefly to the questions raised by the railway strike crisis of last August, and on which no action was taken by Congress.

The message calls attention to the six recommendations made at that time. These included the enlargement of the Interstate Commerce Commission, the establishment of the eight-hour day "as the legal basis alike of work and of wages," the creation of a commission to study the effect of the eight-hour day in railway transportation, the approval by Congress of the consideration by the Interstate Commerce Commission of an increase in freight rates, the prohibition of strikes on the railways until after an investigation of the controversy has been made and giving the President power in case of military necessity to take over and operate the railroads and to draft employes into service for that purpose.

The President stated that the second and third of these recommendations have been acted on, and the fourth he did not care to urge. The other recommendations, however, were "very earnestly" renewed.

It is the fifth recommendation that has aroused the opposition of all classes of organized labor. This reads as follows:

"An amendment of the existing federal statute which provides for the mediation, conciliation and arbitration of such controversies as the present by adding to it a provision that, in case the methods of accommodation now provided for should fail, a full public investigation of the merits of every such dispute shall be instituted and completed before a strike or lockout may lawfully be attempted."

In renewing this recommendation the President apparently took cognizance of the objections, raised by spokesmen for labor, to "involuntary servitude," for he said:

"I would hesitate to recommend, and I dare say the Congress would hesitate to act upon the suggestion should I make it, that any man in any occupation should be obliged by law to continue in an employment which he desired to leave.

"To pass a law which forbade or prevented the individual workman to leave his work before receiving the approval of society in doing so would be to adopt a new principle into our jurisprudence which I take it for granted we are not prepared to introduce. But the proposal that the operation of the railways of the country shall not be stopped or interrupted by the concerted action of organized bodies of men until a public investigation shall have been instituted which shall make the whole question at issue plain for the judgment of the opinion of the nation is not to propose any such principle.

"It is based upon the very different principle that the concerted action of powerful bodies of men shall not be permitted to stop the industrial processes of the nation, at any rate before the nation shall have had an opportunity to acquaint itself with the merits of the case as between employe and employer, time to form its opinion upon an impartial statement of the merits, and opportunity to consider all practicable means of conciliation or arbitration."

Whether this recommendation and the other one, also opposed by labor, to give the President power to draft men into railway service in case of military necessity will cause a rupture between the President and the organized labor movement of the country is one of the interesting questions that will be answered when the new session gets under way.

The message favors the passage by the House of the vocational education bill which succeeded last session in the Senate.

SOME EFFICIENCY PLANS FOR CONGRESS

ALONG with the return of almost equal numbers of Democrats and of Republicans, with a few spokesmen of lesser parties, the recent election is believed to have assured a revision of the rules of the national House of Representatives for the new Congress which meets a year hence. Political engineers call the machinery of the House efficient from the point of view of the small group of committee chairmen of the party in control, but from any other viewpoint inefficient and socially dangerous.

How Congress muddled along with its appropriation bills and its political speeches, all unmindful of the railroad situation, until there came the threat of a nation-wide strike, is history. There is a very real and immediate connection between House rules and the breakings-away from "orderly procedure" which marked the adoption of the Adamson law. The rules permit a handful of men to block public business. Until the rules are changed and Congress is set free to do its work, the slowly gathered forces outside Congress will resort of necessity to their own means to gain expression.

Between twenty-five and thirty members—Democratic, Republican, Progressive, Independent, Socialist, Prohibitionist—are counted on by the National Voters' League as being ready to join in the rules fight. Their demands will include: That hereafter, every proposed change in the rules sent to the Rules Committee of the House shall be reported back within a limited number of days, abolishing the autocratic control by the Rules Committee over the business of the House; that every committee shall choose its own chairman, instead of having him appointed by the majority members of the Ways and Means Committee; that all committee meetings shall be public, taking away the power of chairmen to misrepresent the attitude of themselves and the other members as to bills coming before them, thus assuring that humane legislation, long

made the football of congressional politics, will be heard on its merits and in the open; that unnecessary committees be abolished, including the familiar instance of the Senate Committee on Rail Routes to the Atlantic Seaboard, which has had no meeting in thirty-seven years but has three clerks.

The National Voters' League, which has conducted a campaign against spoils control of Congress for the past four years, is this week holding its annual meeting in Washington. It proposes to get into touch, during the coming months, not only with the members of the next House who are willing to demand rules reform, but also with the organizations that may affect the policy of the regular leaders of the parties in Congress. If the organized farmers, organized shippers, organized workers, organized professional and other groups who want an efficient Congress can be marshaled in support of a definite program of House rules, not even a coalition of the spoils beneficiaries in both parties can stay the new order.

The league will tackle, also, the lack of a responsible budget system. Congress will spend most of the session begun this week in the discussion of appropriation bills. In this discussion, original work of value to the country will be comparatively slight. Heads of executive departments could have prepared the estimates, defended them before the fiscal representative of the Cabinet, and he in turn could have presented the whole schedule to Congress in such a way as to save weeks of discussion. At the same time, the adoption of a budget system would take away most of the present power of committee chairmen to control appropriations, and hence to exercise the influence that radiates from the "pork-barrel."

Lynn Haines, executive secretary of the league, examined the subject matter of the 6,848 bills introduced in the House in the first seven days of its session last December. Of the whole number, 758 were public bills and 6,090 were "political" bills; that is, there were 4,144 devoted to pension matters, 191 to the changing of military records as a means to securing pensions, 1,037 to claims, 453 to local improvement projects, and 265 to miscellaneous local matters. The proportion of local bills increased slightly during the session, for which the total number of bills introduced reached 20,000.

If Congress is to study the railroad problem before the country is paralyzed by a strike, and if laws are to be passed dealing with all of the complex details of vocational education, immigration, arbitration of industrial disputes, prohibition, woman suffrage and a score of other social issues in orderly fashion, then someone else must argue those 4,144 pension claims and the 453 local

THE MAN WHO IS OUT IN THE WET

demands for dredging rivers and building postoffices.

During the past summer the teachers of government in most of the high schools of the country have been kept informed by the National Voters' League of the development of the movement for a more responsive Congress. Professors from some forty universities and colleges have signified their interest. Clubs and public forum groups have made the House rules the topic of discussions, from Maine to California. Mr. Haines' book showing the workings of Your Congress under the committee system has been taken into the colleges as a text. Editors in most of the large cities have given their endorsement to his *Searchlight on Congress*, a monthly analysis of the work of Congress.

It was in the *Searchlight* that the word "mawsh," made from the initial letters of the words, "Might as well stay home," was first used. Richard S. Childs of the league's executive committee coined the word to describe the 90 per cent of the members of the House under the present scheme of control. The remaining 10 per cent were the machine leaders on the one hand and the little group of independents on the other.

"The only direct condemnation implied in 'mawsh,'" says Mr. Haines, "is that the member meriting that characterization acquiesced in the conditions

which made him a figurehead, that he did not rebel and demand his independence."

A list of the members of the present House, state by state, was published in October, giving to each man the estimate placed upon him under this standard of judgment. It was effectively used by the opponents of men in both the "machine" and the "mawsh" categories. Among the men who will join in the movement next session to change the rules, and thereby permit Congress to rid itself of spoils control, will be some of these very members in the "mawsh" class. They were unwilling to rebel against organization rule, but they will vote to prevent the renewal of the old impossible condition.

A NATION-WIDE DRIVE FOR THE EIGHT-HOUR DAY

"I DON'T think anybody's got a home any more," said Bella Donna, a waitress, testifying of the need of an eight-hour day for women. "You all come into the restaurants for your meals. Then for twelve hours and more we're cleaning, and scrubbing, and digging for you and feeding you, all for the measly sum of \$5 a week.

"I have an arch in my foot now that cost me twenty dollars, and all of us girls suffer from varicose veins. It's the constant tramp, tramp, tramp and

the hett of the trays we carry. The girls say to each other over and over again—why isn't there a law? The sales girl and the factory girl have laws. Why are we classed as domestics? Aren't we selling food the same as the girl sells ribbons over the counter? Why ain't there a law?"

This was at the opening meeting of the eight-hour conference for women, held in New York last week. It is one of a series of interstate conferences in which the Woman's Trade Union League and the National Consumers' League are cooperating to induce the women of the nation to press for the eight-hour day for working women. Forty-two legislatures will be bombarded and Congress will be faced with the question of a national amendment.

Besides the waitress, Mary Thompson, a textile worker, talked of her twenty years in the mills. At the age of eighteen she came from Scotland, full of enthusiasm at entering a free land. She saw the stars overhead as she entered the harbor on that first night, she said, and the lights moving to and fro, and went to sleep thinking, "All is well."

But in Ludlow, Mass., where she began to work in the spinning department of a jute mill, "the eye-openers came." "I was sick 'way down into myself," she said. Women whose job it was to lift heavy materials all day long left one day before to give birth to a child and were back at work within a week. "Why should they not have time to help form the character of a child as well as having to slave for it?"

More impersonal talks were given at the Saturday morning session. Mrs. Florence Kelley, general secretary of the National Consumers' League, said in part: "Graded by our enforcement, we in New York state stand close to the bottom of the list of the states having such laws. The non-enforcement of the fifty-four-hour law is notorious. The 5 o'clock closing hour for the children below the age of sixteen years is in parts of this city almost a mockery of their need of rest and play and further education. Few employers pay fines; no employer is in any jail or penitentiary for any offense against this law. Suits are either not begun, or are so ill prepared that they are lost, in spite of the disposition of the courts in recent years to sustain these laws, following the Supreme Court of the United States and the Court of Appeals of New York.

"For this there is at present one sole remedy—publicity. It must be known to every wage-earner in New York that this state pays a million dollars a year for the administration and enforcement of its labor laws. It must be known that the executive head of the Labor Department under the Industrial Commission, who receives a salary of \$10,000 a year, is named James Lynch; that

the head of the legal division of the Department of Labor is named Edward P. Lyon; and the attorney whose duty it is to carry on prosecutions in the courts is named Frederick H. Cunningham.

"Laggard servants of a negligent public can be made to do their duty, to fulfill their oaths of office, only when the public exchanges negligence for vigilance."

Lee K. Frankel, treating the eight-hour day from the employer's point of view, urged a more flexible standard—for some industries eight hours was too long, for some too short. Melinda Scott, president of the Woman's Trade Union League of New York, returned: "I think eight hours is long enough for anybody to work. We're goin' in for eight hours now, but when we get eight hours we're goin' in for six, and when we get six we're goin' in for four."

"What has been the effect of shortening the working day?" asked Prof. Frederick S. Lee, of Columbia University. "That it has eliminated the effects of extreme fatigue seems to be proved by the facts that the shortening of the day has resulted in improved health of the workers and marked moral and social improvement, such as is shown by decrease in intemperance and crime, better living conditions, greater efforts toward education, greater intelligence and greater industrial efficiency."

This is the moment, the delegates feel, for a drive upon the various state legislatures and a drive upon Congress, simultaneously. The government and the country generally have sanctioned the eight-hour day for men and have recognized the rights of the child. "It would be an amazing inconsistency if Congress should say that it can do for men and children that which it is unable to do for women," said Mrs. Kelley.

CLEVELAND'S MERGER OF SOCIAL FEDERATIONS

THE Cleveland Welfare Council voted on Tuesday to merge with the Cleveland Federation for Charity and Philanthropy in a new, all-comprehensive organization entitled the Cleveland Welfare Federation. The merger already had been ratified by the federation's trustees.

To the fifty-seven federated organizations, including most of the voluntary philanthropies of Cleveland making a general appeal for funds, thus have been added practically all agencies, public and private, philanthropic, charitable, civic or semi-civic, interested in the common welfare. Among the organizations thus added to those already federated are the Federated Churches, the Catholic diocese, the Federation of Women's Clubs, the Federation of Labor, the Chamber of Commerce, the Cleveland Foundation, the city departments of Public

Welfare and Public Safety, Western Reserve University, Case School of Applied Science, the public schools, the public libraries, the Y. M. C. A. and the Single Tax Club.

In addition to keeping up the central collection of funds as before, the new federation will stress the elimination of duplicated social effort, the common education of the public in social matters, and the unification of social endeavor. Possible friction between the aims of the old federation and of the welfare council is thus eliminated and possible duplication of effort between the two prevented, it is believed.

The new body will be governed by a board of twenty-one trustees, elected by representatives of the federated agencies. Not more than one-third of these trustees will be professional social workers, and no social workers will be on the auxiliary financial board which will raise and distribute the joint funds.

The Cleveland Welfare Federation will correspond in many respects with the Council of Social Agencies of Cincinnati. The Cincinnati council, however, adopted financial activities after being organized on a social basis, while the Cleveland federation is the direct outcome of financial organization.

THE NEW HEAD OF THE ROCKEFELLER FUND

JOHN D. ROCKEFELLER, JR., will soon retire from the presidency of the Rockefeller Foundation and George E. Vincent, president of the University of Minnesota, will take his place, according to announcements made at the offices of the foundation within the past fortnight. Jerome D. Greene, secretary of the foundation since 1913, will withdraw from that position for reasons that are described as personal, and Mr. Vincent will become the chief executive officer of the foundation. Mr. Rockefeller will assume the new title of chairman, and will continue to be chairman of the executive committee.

These changes, it is declared, do not in any way foreshadow changes of policy of the foundation. The retirement of Mr. Rockefeller is said to be due to his desire to be relieved of some of the work that, as president, he has been called upon to do. Both he and the board of trustees further desire that the presidency shall be the chief executive office of the foundation, and it was with this in view that Mr. Vincent was chosen. The latter will, therefore, assume portions of the work hitherto done by both Mr. Rockefeller and Mr. Greene. Mr. Greene has not resigned his membership in the board of trustees, and continues, also, to be a trustee of both the Rockefeller Institute for Medical Research and the General Education Board.

Mr. Vincent will give a share of his

time to his new duties after January 1 and will devote full attention to the foundation's work from the middle of May on.

As president of the University of Minnesota since 1911, Mr. Vincent attracted national attention to his work in the field of educational administration. This is one of the largest and most progressive state universities. Prior to 1911 he was for four years dean of the faculties of arts, literature and science at the University of Chicago. His father, Bishop John Heyl Vincent, was one of the founders of the Chautauqua Assembly in 1874 and the son also has been active in Chautauqua work. He was editor of the Chautauqua Press for one year, and has been vice-principal of the Chautauqua System since 1888 and president of the Chautauqua Institution since 1907.

He received an early training in sociology, having held successively the positions of fellow, assistant, instructor, assistant professor, associate professor and professor in that subject. Mr. Vincent is fifty-two years old. He is the author of *Social Mind and Education*, and with Prof. Albion W. Small wrote *An Introduction to the Study of Society*.

The Rockefeller Foundation is the most wealthy of the three independent philanthropic boards established by John D. Rockefeller. Its funds and reserves in 1915 were placed at over \$101,000,000. In that year it spent \$1,360,000 itself and appropriated \$3,354,000 to other organizations. The purpose of the foundation, in the words of its charter, is "to promote the well-being of mankind throughout the world," and it was established "in order to provide an agency, not dependent upon the life of any individual, which should deal with the problems of philanthropy in accordance with the principles and methods most approved in each generation."

ENGLISH QUAKERS IN WAR TIMES

THE Society of Friends in England is just now stirred in matters both of international relations and, even more, the relations between capital and labor. The special yearly meeting called to discuss the military service bill is described as one of the most impressive gatherings held under shadow of the war. Without any particular summons there arrived in London from all over England about four hundred men of military age. A sympathetic account of what followed reached America in a letter recently received from an English Quaker.

"Many of them seemed mere boys. They sat patiently there, quite unanimous in their intention to go to any lengths to preserve the religious free-

dom of this nation in the crisis that had come to it. They were extraordinarily simple, quiet and unemotional, but all that one had heard of the early days of Christianity—of its unheard-of position in relation to the powers that be—became irresistibly vivid in one's mind. That primitive Christianity in its essence was intensely alive today was borne in on one.

"My mind is a skeptical one, desperately inclined to see both sides and find action difficult, but one could hardly have such an experience and remain skeptical. Those boys are now scattered—in prison, in non-combatant camps, digging potatoes in remote corners of the country, cried down and scorned—but they are, I feel sure, only growing stronger and stronger, taking their sacrifice as simply as the best of the soldiers at the front, and the future is with them. I wish that you could have seen it.

"Do you know Meredith's poem?

I am in the deep woods
Between two twilights,
I know that the dawn is before me
And behind me many days
Not what is o'er me."

"And do you remember the last four verses where the meter changes and he flings out the brave man into the future? I have thought so often of that poem in the two years of this war. Nothing expresses better the spirit of those with 'the forward view.'

"It is very difficult to gauge the temper of England. One would have far more confidence if one had more trust in the leaders. But Lloyd George, who is incomparably our greatest man, is more Welsh than the Welsh! Where he will be standing when disarmament comes is quite beyond the wit of man to imagine—quite beyond his own power to divine for himself, I fancy. I often wonder if all his leadership and brilliant organizing power will be found then on the side of the high Tories, with conscription and protection as his war cries!

"I have been desperately busy . . . and then working in London on a committee for the better training of social workers, and on one of the innumerable government committees—on the position of women in industry. Just about one-quarter million more are in industry than there were two years ago. The issues raised on the side of capital and labor are very thrilling to consider.

"The Society of Friends has sent their newest venture in war relief to Russia. I think that international peace relations may be indirectly but surely helped by this exodus of young Friends to help in foreign countries, France and Holland, Corsica and Serbia, and now Russia. We suffer more absurdly than you people across the Atlantic can really realize

from insularity, and I think that these men will insensibly learn much by this intimate contact with peoples of different nationalities at a time like this, when intercourse is very real."

WHERE UNION AND EMPLOYERS COOPERATE

SIX Years' Work and Progress of the Joint Board of Sanitary Control is the title of a recent pamphlet history of the remarkable experiment in cooperation between strong employers' associations and a militant union in the clothing trades of New York city, that has been going on since the great strike of 1910. The achievement recorded is the more remarkable because of the friction between the two parties over nearly everything else.

The board withstood the long strike of 1913 and many smaller brushes between employer and employed. It functioned even through the stormy time of last spring. And at the end of that long struggle, when all else of a friendly nature between the two sides went to pot, the joint board remained.

The report is written by Dr. George M. Price, director, who has characterized the board as "an experiment in industrial self-control." It is the only one of its kind in all American industry, and it is made possible by the high degree of organization in the trade.

During the strike of 1910 Benjamin Schlesinger, president of the International Ladies' Garment Workers' Union, said: "Thousands and tens of thousands of people employed in our trade are working under the most unsanitary conditions."

The report itself says regarding the earlier days: "With the exception of a few of the larger and more pretentious cloak shops in the Fifth avenue district, the large majority of the shops were in a bad sanitary condition. The press frequently had descriptions of the bad conditions, the workers complained of these conditions, and most of the manufacturers admitted that the complaints were justified. The number of small shops on the East Side was very large; the safety of buildings was entirely neglected; the meager inspection of the state was a farce; the shops were dirty and neglected; of fire protection there was hardly any; home work was the order of the day, many cloakmakers were in the habit of taking a lot of garments with them to be finished at their homes; the East Side was full of so-called sweatshops."

The board set to work to bring air and light, greater cleanliness and more health in general into the factories.

It had, of course, no legal status and no power of entry into the lofts. "The detective method of inspection had to give way to the more rational preventive method of investigation," says the re-

port. The inspectors, therefore, "were instructed that their status was purely educational and advisory, that they were sent to the shop to point out to the owner and to report to the board such defects and neglects in safety and sanitation as must be readily remedied by personal effort either of the employers or of the employes, or by the cooperation of both." The employer is persuaded by letter or by personal interview to make improvements, and as a final means he is disciplined by the association; the workers are taught by dodgers and noon-time lectures. A "sanitary certificate" is the apex of reward for a spotless shop, and very nearly 50 per cent of the factories can now boast one.

The fire hazard is the greatest evil against which the board must struggle. The terrible tragedies which have occurred, and the agitation by the joint board have resulted in some improvements. The appointment of the State Factory Investigating Commission of 1912 was instigated by the board. It is continually bringing illegalities before the eyes of the labor department of the state and the fire department of the city. An inspection of 928 buildings in 1915, however, showed conditions still to be ominously unsafe. But about 56 per cent of the workers in the two trades are given fire drills, and the board has recently formed its Loft Certification Division. As leases expire and the trade is driven from Fifth avenue by the Save New York Committee, this division will guide the employers to safer quarters.

"With the strenuous work of the Joint Board of Sanitary Control during its six years of existence," says the report, "we have not as yet been able to reach the ideal and to make all in the shops of the two industries perfect in safety and sanitation. . . . The standards were intended to be just a few steps in advance of the legal rules and regulations, just as far as an enlightened industry, in its own pride and determination for improvement has been willing to advance and progress. . . . The progress already made must be followed up and greater progress achieved in the same lines of endeavor."

THE PRACTICE OF DISTRICT NURSING

THROUGH cooperation between municipal Health Department, Woman's Club and Infant Welfare Society, of Jacksonville, Fla., needed sanitary legislation has been passed and seven public health nurses have been secured, with twelve hoped for by January 1.

The plan of work, as described by Dr. C. E. Terry, health officer, is to district the city, assigning one nurse to a district, colored women working in the Negro sections. Excellent Negro nurses have come from Freedman's and Lincoln hospitals and from the Henry

Street Settlement in New York city. Dr. Terry believes that "four calls from one nurse will accomplish far more than one call from four nurses." The mother of a family will talk more frankly to one nurse as she becomes better acquainted than she will to several. And responsibility for all aspects of the family's health has, he believes, an excellent effect on the work of public health nursing. It demands a broadly trained nurse, gives her wide experience, adds variety to her work and extends the scope of her opportunity.

"Our nurses do practically all our epidemiological work," said Dr. Terry. "A case of diphtheria is reported. The nurse calls at once, even before the inspector, takes cultures from every member of the household, except the case already determined. She explains to the family why everything is being done and shows them the importance of every precaution. When the sick child has recovered, before quarantine is lifted, the nurse again takes cultures to make sure that no one has become a 'carrier.'"

"The country has hardly begun to perceive the importance of the nurse in public health work," continued Dr. Terry. "The supervisor should supervise. No man can successfully supervise nursing work. That's a woman's task. The supervising nurse must be in close accord with the objects of the department and in direct conference with the health officer. But she should have the responsibility for the nurses under her."

THE SOCIETY TO PREVENT HEART DISEASE

FACING, in New York city, a higher death-rate from heart disease in all its various forms than even from tuberculosis, the Society for the Prevention and Relief of Heart Disease was organized last week by physicians, teachers, members of the health and education departments of the city, and many interested citizens. Its work will be directed at first especially to schools and workshops. Hundreds of workers suffering from organic heart disease could continue at work without injury if arrangements were made by employers to reserve for them the tasks to which their condition leaves them suited. This is already being done in a number of instances.

That nearly 20,000 school children with weak hearts should have to climb four or five flights of stairs several times daily to reach their class-rooms, obviously should not be allowed. But whether they are to be spared by the installation of elevators or by the reassignment of class-rooms, leaving the first and second stories for the handicapped children, is one of the problems the society has set itself to solve.

In connection with several hospitals, classes have been opened. That at Belle-

vue, for example, has been organized for some time. Those at Postgraduate, Roosevelt, St. Luke's, and Lebanon, are only of recent establishment, and other hospitals are planning them. The purpose is to teach cardiac workers how to keep in proper condition. It is believed that the work of the society will rapidly extend to provide for hospital care for little children, and playgrounds with complete supervision.

The new society has as its president, Dr. Louis A. Connor. The executive secretary is Miss M. L. Woughter.

INDIANA'S THREE-PLY SCHOOL SURVEY

THE vocational surveyor is abroad in Indiana. In city, town and rural district unusual questions are being asked about the training that workers can get in their jobs, about the extent and uses of apprenticeship, about part-time courses and evening schools, about the real value of the much-vaunted "school of experience" and that other school sometimes coupled with the black term "academic."

This inquiry is two-edged. From it Indiana is expected to reap great gains, to enlarge the opportunities she gives her youths for industrial training and to make that training more effective. From it, also, the National Society for the Promotion of Industrial Education is expected to get material and inspiration for its meeting in Indianapolis next February. Two years ago the society met in Richmond, Va., after an intensive study of that city, and last year in Minneapolis after a similar study there.

Three kinds of surveys are being made in Indiana: one of a large industrial community like Indianapolis, one of a small community like Richmond, and one of rural communities like Jefferson county, which includes a town of 10,000 population.

The survey is being made under the direction of the State Board of Education. Its purpose is stated to be "to find to what extent the worker can get on in his job, to what extent the industries may give special training which they do not now provide and to what extent the schools can be a factor in providing that training."

"Out of the findings," says Charles A. Greathouse, state superintendent of public instruction, "Indiana expects to develop a program of vocational education that will take several years to work out completely, but that will put Indiana in the forefront of American states."

TRADE TRAINING PLANS FOR ENLISTED MEN

TUCKED away in the army bill passed last May is an unostentatious paragraph providing that in addition to military training, soldiers while in active service "shall hereafter be given the

PRISON REFORM MADE REALISTIC

A new motion picture film contrasts sharply the old way, with its men in stripes in charge of armed guards, and the honor system, which permits the men wholesome recreation. The film stops short of the latest development—self-government—most conspicuously carried out by Warden Osborne at Sing Sing

opportunity to study and receive instruction upon educational lines of such character as to increase their military efficiency and enable them to return to civil life better equipped for industrial, commercial and general business occupations."

For several years proposals have been made that a greater measure of vocational education be given to soldiers in the army. Several of these proposals have had as their avowed object the increasing of enlistments. Members of the general staff of the army have been among those who saw in such education an argument for the recruiting stations.

Others who have made such proposals have put the matter on another ground. They have contended that the government ought to prepare men in military service for more effective wage-earning when they return to civil life.

Senator Hoke Smith introduced an amendment to the present army law that was based largely on this second argument. It contained no plan for carrying the proposal into effect, however. His amendment was superseded by the present provision, which was drawn by Secretary of War Baker after conference with representatives of the National Society for the Promotion of Industrial Education.

Relations with Mexico have made it impossible since the passage of the law, says the War Department, to put the provision into effect. Meanwhile the National Society for the Promotion of Industrial Education has suggested that before definite steps be taken a commission should be appointed to formulate the best plan for supplying this training. Several questions should be considered by such a commission, says the society: how far can army posts be used as schools? To what extent can old soldiers' homes, now rapidly becoming vacant, and existing trade schools

and other educational institutions be utilized? How many civilian instructors shall be employed? Should vocational training follow military instruction or be given simultaneously with it? What are suitable subjects for instruction, and what shall be done with the products of these industrial classes of soldiers?

The commission, in the society's opinion, ought to consist of seven members: a progressive employer, a representative of organized skilled labor, an educator "constructively inclined toward vocational education," three representatives of the army, and a representative of agricultural interests.

THE PRISON HONOR SYSTEM IN A MOVIE

"**H**OW an Official Should Do His Duty" might be the title of a movie film that is shortly to be presented by the Fox Film Corporation under the name, *The Honor System*. The play deals with old and new prison conditions, and in the course of it a large and decisive-looking gentleman, whose make-up strongly suggests Arizona's big-hearted, prison-reforming governor, George W. P. Hunt, walks into a prison where the inmates are treated brutally and threatens to "turn it upside down" if an inmate for whom he has asked isn't produced immediately.

The crafty warden tries to substitute another prisoner for the one desired, but makes the mistake of picking a lusty black, whereas the man asked for is at least several shades paler in hue. The governor, who has never seen the prisoner he is seeking, clinches the error by pointing to the number on the prisoner's back, which is not the number of the man he is after.

The right prisoner is finally led forth from the dungeon where he has been confined for punishment. From this

dungeon no prisoner has ever come out alive. In it a snake is shown crawling in and out of a skull, which is all that is left of a former inmate. Another inmate, half-crazy, dies in the dungeon, and his body is left, without burial, to rot.

The meeting between the governor and the prisoner, who falls weeping on the governor's breast, is the beginning of the change. A new warden is put in charge and the honor system installed. The governor has to carry his fight for the new system to the legislature, and makes a speech in which his final argument is the introduction of the prisoner whom he found in the dungeon, and whose body, marked with lashes, astonishes the legislators.

With the honor system, the successful workings of which are shown, come also better conditions generally. The men have more freedom and are given wholesome work. The scene of most of the film is in Arizona, and the two prisons shown are in that state.

Some of the conditions under the old system may be put down as hardly typical. One of these is the dungeon with snakes, skull and a perfect death rate, and another is the warden who treats his prisoners cruelly from preference. The more likely explanation of the brutalities of the old system is that they resulted from fear, that warden and keepers alike believed they had to beat subjection into their charges in order to save their own lives. On the whole, however, the film shows many true things, and should go far toward educating those who seek a realization of what prison reform means.

The play was shown before the recent meeting of the American Prison Association in Buffalo and has been privately exhibited a few times. It will go upon the road, according to announcement, in a few weeks.

Book Reviews

SOCIETY AND PRISONS

By Thomas Mott Osborne. Yale University Press. 246 pp. Price \$1.35; by mail of the SURVEY, \$1.45.

Self-government for Criminals

While Mr. Osborne was preparing his Dodge lectures at Yale this year, he was turning over in his mind a novel experiment. He was planning to present to his audience two groups of young men, one a group of men recently graduated from college, the other a group of men who had served several terms in prison. His purpose was to ask his audience to pick one group from the other. The idea was never carried out, but if it had been, while it would have accomplished little perhaps of scientific value, it would have had one desirable result. It would have brought home to many in the audience, if not for the first time, at any rate with a sharpness that they would not soon have forgotten, the discovery that a so-called criminal can look very much like any respectable member of society, and that to suppose there are necessarily stigmata of crime, easily detectable by observation, is open to grave doubt.

Mr. Osborne himself in these lectures, now published in book form, is wholly at odds with the entire Lombroso theory of a criminal type, and quotes Goring, the English investigator, effectively in opposition. He goes further than personal appearance, and ridicules one after another many notions, nonsensical and otherwise, put forward to explain crime and criminals. One of these is: "The disease of criminality has one absolutely unailing, positive symptom, which is crime." Similar unhelpful statements could be made about diphtheria, typhoid fever and tuberculosis. We get about as far with this sort of statement, as Mr. Osborne truly points out, as we do with Mr. Crothers' illuminating discovery, when he asked several learned persons what is a "tuffet," after reminding them that

"Little Miss Muffet
Sat on a tuffet"

—that a "tuffet" is precisely "the kind of thing that Miss Muffet sat on."

Mr. Osborne's own conception of crime is familiar enough. He is not sure there is any better way to express it than in the words of the book of Job: "an iniquity to be punished by the

judges." And as for criminals, they are merely human beings who have committed such iniquities. He pleads for a little common sense in the matter, and says:

"These men have more than their share of the weaknesses, follies and vices of humanity; but they are by no means lacking in the virtues. Some have low ideals and coarse habits; some are passionate; some are brutal; some are selfish and inconsiderate; some are diseased; some are mentally defective; but all men with these evil characteristics are not in prison. In the world outside we revere simple goodness; we honor truthfulness and sincerity; we love loyalty and the glorious capacity to live and, if necessary, to die for a friend. All these virtues in their intensest form we find inside the prison."

It is doubtful if there is any more exciting story anywhere than that of the beginning of the Mutual Welfare League in Auburn Prison. Suggested by a prisoner in the first place, formed with the help of prisoners, shaped by their counsel and subjected finally to their ratification, the league was born, as all democracies are born, in the midst of fear, hopefulness and misgiving. Inmates who took part in its formation felt themselves to be pioneers of new democratic institutions. They argued its powers and merits as the constitution of the United States was once argued, and there were flashes of eloquence that would not have seemed out of place in the convention that discussed that historic document.

Feel, if you will, what Mr. Osborne and others must have felt after the first meeting of the league, when an unexpected test was made. The men had been back in their cells about an hour when—but let Mr. Osborne tell it:

"As I am about to leave the prison and stand chatting with Richards at his desk in the back office, the electric lights begin to flicker and die down.

"Richards and I have just been talking of the great success of the league's first meeting and the good conduct of the men. 'Now you will have the other side of it,' says Richards. 'Listen and you will hear the shouts and disorder that always come when the lights go out.'

"Dimmer and dimmer grow the lights, while Richards and I listen intently at the window in the great iron door which opens onto the gallery of the north wing.

"Not a sound.

"The lights go entirely out, and still

not a sound. Not even a cough comes from the cells to disturb the perfect silence.

"We remain about half a minute in the dark, listening at the door. Then the lights begin to show color, waver, grow lighter, go out altogether for a second, and then burn with a steady brightness.

"I look at Richards. He is paler than usual, but there is a bright gleam in his eyes. 'I would not have believed it possible,' he says impressively; 'such a thing has never happened in this prison before. The men always yell when the lights go out. In all my experience I have never known anything equal to that. I don't understand it.'

The league, with its courts, inmate control of minor discipline and self-government features, Mr. Osborne points out, is not identical with the "honor system." The essence of the latter is the replacement of a brutal autocrat with a benevolent autocrat. Even at its best, the honor system, he says, "is one in which the head of a prison establishes directly, with each individual prisoner, relations of selfish mutual advantage. The warden makes an agreement with John Doe, convict, by which the warden agrees to allow John certain privileges or favors and expects favors in return." If we omit the word "selfish," this may stand as a true statement. The relationship under the honor system is wholly a personal one between two individuals. There is no self-government, no training in the duties and activities of citizenship.

Traditional methods of punishment, the stupidities of the old penology, the infelicities of courts and criminal trials, are described by Mr. Osborne with much humor and pathos, with a great deal of wisdom and penetrating exposition of the new penology. Until a more scientific treatise on the new reforms can be written, his book will fill a needed place in the developing literature of the subject, and will always be an absorbing story of the beginnings of those reforms by the man who played the largest part in getting them started.

WINTHROP D. LANE.

VOCATIONAL PSYCHOLOGY

By Harry L. Hollingworth. D. Appleton and Company. 308 pp. Price \$2; by mail of the SURVEY, \$2.13.

Brains and Business

A summary of studies in educational and experimental psychology with a bearing on vocational problems forms the basis of this book, which is both very readable and sufficiently technical. The general reader will find the experimental and statistical methods so simply and clearly explained that the technical summaries

can be easily followed, while at the same time results are presented in sufficient detail for the specialist on the subject.

The attempt to control events by means of a knowledge of personality is traced from the primitive phases of magic through the somewhat less primitive aspects of phrenology and physiognomy to the various methods now used in trying to furnish a more scientific basis for the vocational analysis of the individual. Psychographic methods are presented such as that of Toulouse, in which a very careful and complete study—medical, experimental, and social—is made of men of genius in various fields; that of Seashore, in which a complete experimental study of a given ability (in this case musical ability) is carried out, and the much less satisfactory attempts at a general analysis of occupations on the part of psychologists and educators.

Of the small beginnings made in the direct application of experimental tests to vocational problems, Professor Hollingworth considers most promising that of the somewhat random application of varied tests to large numbers of individuals, with a view to deriving a scientific basis for judgment as to how useful tests will be. A warning, particularly needed, is that "it is undesirable that public expectation should be strenuously directed toward the laboratory until it has done more than the outlining of a series of problems and the initiation of preliminary efforts toward their solution."

An interesting portion of the book is that dealing with the significance of school marks. Various statistical studies of school marks, from the elementary school on through college, are summarized, which all go to show that superior mental ability as indicated in school marks displays itself early in the elementary grades, tends to remain constant throughout the high school and college, and is a real prophecy of success in future careers.

In conclusion, the author points out that while the level of mental ability required for various types of work is gradually being established in experimental terms, there still remains the larger task of deciding, on the basis of such factors as social ability, moral qualities, opportunity, and interest, just which of the multitudinous possibilities in occupation an individual shall select. Moral and social abilities can still be graded only according to someone's judgment. They are not as yet open to experimental investigation.

Mrs. Hollingworth contributes to the book a chapter on the vocational aptitudes of women, which is a vigorous protest against the point of view that women are, by virtue of sex, vocationally fit for but one occupation.

The bibliography in the appendix is very well selected, but shows signs of

haste in preparation, since some references are incomplete and others are inaccurately stated.

HELEN T. WOOLLEY.

THE AMERICAN SCHOOL
By Walter S. Hinchman. Doubleday, Page & Company. 232 pp. Price \$1; by mail of the SURVEY, \$1.07.

This volume belongs to the American Book Series—a library of good citizenship. The theme is that parents and teachers must learn to cooperate sympathetically and scientifically in order to achieve "productive education" for the boys and girls in the schools. Through ignorance, vague contempt, or lazy overconfidence, parents often thwart the efforts of the teachers. On the other hand, teachers lose their grip on human realities, and so fail to win the cooperation of the individual parent and of the voting, tax-paying public. The faultily educated pupil pays the penalty for the mistakes of both; the American public pays the largest educational budget in the world, and the teachers complain justly of being underpaid.

The great error, Mr. Hinchman feels, is the failure to recognize the basic principle that all true education is growth, and that all growth is, and by nature must be, productive. The child is not a passive bit of intellectual clay to be molded by the teacher's hand; he is a creative intelligence that must give out as much as he receives.

Mr. Hinchman declares that every subject in the curriculum should be so taught as to have some cultural and some disciplinary value. Schools should be conducted to provide the practical training formerly given by home "chores"; to transform alien spirits into true Americans; and to give exceptional advantages to those gifted children who should become the leaders in the next generation.

Of the teachers who must accomplish all this, Mr. Hinchman says: "Except for a handful of glorified exceptions, we have among our teachers fewer really first-class men, men of outstanding ability, than are to be found in such professions as law or medicine." The prevailing mediocrity is caused by the unfavorable conditions of the work, he thinks. The salary scale should be lengthened, the hours of teaching should be cut down, a higher quality of work should be required, and the teacher should be encouraged—even forced—to adopt productive avocations.

Since Mr. Hinchman has written, and probably will write, a number of volumes, one wishes that he would arrange his material more logically, improve his

diction and sentence structure, and avoid such lapses in common sense as this solemn query, addressed to parents: "What sort of English do they (the children) talk during the 144 hours each week (out of 168) when they are not in school?" Are the poor things supposed to "talk" good English even in their sleep?

The author offers insufficient defense for some of his most radical ideas, like his prophecy that the sexes will soon be segregated, and the suggestion that beginning teachers be paid only \$300 a year, in order to pay \$5,000 to the men at the top. On the whole, the book deserves the attention of those teachers and parents who have recently begun to study the school problem, for the central idea is excellent.

ELIZABETH HODGSON.

SOME PROBLEMS IN CITY SCHOOL ADMINISTRATION

By George D. Strayer. The World Book Co. 234 pp. Price \$1.50; by mail of the SURVEY, \$1.62.

THE PORTLAND SURVEY

By Ellwood P. Cubberley. The World Book Co. 441 pp. Price \$1.50; by mail of the SURVEY, \$1.62.

If you are a writer and you come upon a criticism of another writer's style, you are quite likely to be interested. If you are an engineer and the bridges of a fellow engineer are praised or blamed, you study the matter carefully. If you are neither, but merely one who loves a clash of wits, you may look on from mere general interest in an intellectual combat.

If you are a teacher, ought you not, by the same token, to be interested in the report of a school survey, and if you are a layman ought you not to care what is going on in the schools? Such, at any rate, seems to be the assumption of the World Book Company in publishing these reports of school surveys in Butte, Mont., and Salt Lake City. Why, they seem to ask, shouldn't a teacher in Chicago or a superintendent in Alabama be concerned to learn that Butte shows an extraordinarily large number of non-promotions among its children, and that this seems due to the emphasis laid on memorizing facts rather than on "capacity to undertake the work of the next grade"? Why, too, shouldn't a layman in Detroit be glad to learn that the superintendent of schools in Salt Lake City has pauperized instruction by over-emphasizing "the so-called fundamental school subjects" to the neglect of other important things? Such discoveries may arouse new interest in similar questions at home.

These volumes do more, however, than to present the measured conclusions of educational experts on two city school systems. They suggest, throughout, the light in which educational affairs ought to be viewed and some of the standards that ought to be universally applied. They deal with administration, finance, school building and teaching efficiency; they point out the good as well as the bad. The Salt Lake City study discusses tests for measuring the value of instruction and explains the methods and use of such tests.

Both studies present the views of outside critics called in by the school authorities of the cities studied, the modern method of finding out what is wrong with the work you are doing.

WINTHROP D. LANE.

AMERICAN CIVILIZATION AND THE NEGRO

By C. V. Roman. F. A. Davis Company. 434 pp. Price \$2.50; by mail of the SURVEY \$2.66.

I feel somehow as though Cotton Mather would write such a book as this were he a present-day American Negro. There is the same tendency toward unusual words, the same rhetorical treatment, the same discursiveness. Perhaps the same basic psychology was back of the pedantry of both authors. In his desire to show that an American scholar could produce as good a book as an Englishman, Cotton Mather may have cultivated his pedantic vein in the same spirit in which Dr. Roman manipulates unwieldy words to show that the Negro in America may attain as large a vocabulary as his white brother. From the literary point of view the result is not unfortunate, as Dr. Roman never becomes ridiculous, and there is a quaintness of phraseology which tempts one to quote extensively, especially since common sense continually gleams through the exotic wording.

On the whole, the book contains much matter of permanent value and presents the case for the Negro with fairness. Its chief value is documentary, as showing certain present-day tendencies. Of these the most important discussed is the growing race pride of the Negro. The author summarizes his conclusions thus: "The Negro will continue to grow in ethnic consciousness, and teach race pride until he produces a racial scholarship that will bring him that positive assurance of a respectable seat in the hierarchy of civilization as a distinct racial entity, and not as the tolerated contamination of some nobler race."

Dr. Roman has an interesting chapter on the adjustment of the Negro to new conditions, in which he illustrates the

obvious truth that a transition period is unpleasant in its outward effect on racial as on individual life. He says: "There are distinctive slave virtues that are not virtues in freedom. All observers see that the Negro is throwing off the former; only those associated with the best of the Negro race know that he is putting on a glorious substitute, the virtues of a free man."

I once heard a learned professor at a sociological conference prove that race had nothing to do with the prejudice against the Jew. He proved that the Jewish race had such exceptional talents that prejudice against it was impossible and that ethnologically there was no such thing as a Jewish race. Dr. Roman has therefore sinned in good company in proving too much by the anatomical method.

"Anatomy," he writes, "discloses no distinctively human structure that is not common to the species wherever found, neither does it discover a single structural characteristic peculiar to any one variety." Later comes the italicized statement: "The Negroes, whom it is desired to place at the bottom of the human scale, are in many respects much more removed from monkeys than the purest whites." JOSEPH GOULD.

THE SCHOOL AND SOCIETY

By John Dewey. University of Chicago Press. 164 pp. Price \$1; by mail of the SURVEY \$1.10.

No other American work on education has had greater influence upon parents and others outside the school than Dewey's *The School and Society*, originally published in 1900. The experiment at the University of Chicago which this book has represented and reported was the inspiration and source of Mr. Wirt's Gary System, so that a new edition is especially timely when the ideas it presents are under consideration in the reconstructing of the educational forces of our largest city.

In addition to the original sections—among which is that early discussion of "waste in education"—there are five chapters taken from the records of the experimental school. These have long been out of print in America and are available only in an English edition. Taken together they furnish the best statement available of the practical workings of democratic elementary education. They deal with "the psychology of elementary education," "Froebel's educational principles," "the psychology of occupations," "the development of attention," and "the aim of history in elementary education."

As the author states in a foreword:

"The educational point of view presented in this book is not so novel as it was fifteen years ago." The pioneer stage is passing and the social forces of American communities seem more ready than ever before to adopt the experimental basis in education—the only basis compatible with progress in democracy. FRANK A. MANNY.

WOMANKIND. By Wilfrid Wilson Gibson. The Macmillan Co. 39 pp. Price, \$1; by mail of the SURVEY, \$1.04.

Conventions

FOR BETTER HOUSING

MAYOR JAMES H. PRESTON of Baltimore celebrated the meeting of the twelfth Maryland Conference of Charities and Correction in his city by announcing the appointment of a housing commission to draft a housing chapter to be incorporated into the present building code.

The state conference itself, writes J. W. Magruder of the Baltimore Federated Charities, was one of the most successful ever held, both in point of attendance and of enthusiasm.

Unusual interest attached to a discussion of cooperative vocational training at the great Sparrows Point steel plant just outside of Baltimore in view of the recent purchase of this plant by Charles M. Schwab and the \$50,000,000 enlargement already begun there. A wage-earning community of more than 15,000 people is to be created within about two years, making a new center in the state second only to Baltimore city in size.

Despite a declining morbidity and mortality rate in tuberculosis, it was pointed out that there is no corresponding reduction among the Negro population, due to the congested and unsanitary conditions in the segregated areas given over to them. If benefits in the way of water, sewerage, light, sanitation, cleanliness and the like that the white community enjoys for the taxes it pays were allowed the black population, the speakers prophesied a noticeable improvement in health conditions among Negroes.

Warden William H. Whittaker of the District of Columbia Workhouse, and Warden John F. Leonard of the Maryland Penitentiary, had a friendly tilt, the latter drawing the line on the almost unlimited abandonment of bolts and bars, which has been accepted at Occoquan; though it was recognized by Warden Whittaker that bolts and bars can not be thrown into the scrap-heap so long as a prison is located in the heart of a great city, as is the Maryland Penitentiary. A part of the plan, it was agreed, must be a prison colony out in the open country.

At a conference on infantile paralysis, according to Dr. Magruder, it was brought out that in Baltimore there had been less than 200 clearly defined cases of poliomyelitis, and that of this number those left in a dependent condition were so relatively few that no general relief fund for the purchase of braces and other supplies would be necessary, as in

large cities like New York. As a result of this discussion, the health commissioner had withdrawn his recommendation to the Board of Estimates for a \$5,000 appropriation for special needs of infantile paralysis patients.

George S. Wilson of the Children's Board of Guardians of the District of Columbia was elected president of the next conference, to be held in Wilmington, Delaware.

A significant change is in the name of the conference itself. It is now called the Conference on Social Work, and includes Maryland, Delaware and the District of Columbia.

ALLIES OF LABOR

THE growth of the National Consumers' League from initial days when its function was "teaching and preaching brotherhoods and sisterhoods" to its present position of country-wide power was traced by Newton D. Baker, president of the league, at the seventeenth annual meeting of the organization in Springfield, Mass., November 15. Mr. Baker dwelt upon the importance of the legal defense of labor laws before the United States Supreme Court after that significant day in the year 1908 when, upon the invitation of the Attorney General of the State of Oregon, Louis D. Brandeis appeared before our highest national tribunal and created a new method—that which we have come to call the "atmospheric" method of trying cases.

For the coming year, reports Mrs. Florence Kelley, secretary of the national league, a new feature of work is indicated by the resolution that was passed in the conference, suggesting to President Wilson that he include in his legislative program a bill modeled on the federal child-labor law, to establish the eight hours day for women who work on goods subject to interstate commerce. A second resolution pledged the league to support any bill appropriate to this purpose which may be introduced. A third resolution recommended to the hundred consumers' leagues in many states that they continue the efforts begun in 1910 to promote laws for the shorter working day, during the coming winter, when forty legislatures will be in session.

A joint session held in cooperation with the New England Conference on the Shorter Working Day gave an opportunity for women and girls employed in the textile trades and the telephone service to make vivid and appealing pleas

for legislation shortening working hours at the earliest possible date, as well as for the organization of women in industry.

Mrs. Davis R. Dewey, woman member of the Massachusetts State Board of Labor and Industry, called the attention of both organizations to a vice common to many laws limiting the working hours of women. This consists in bestowing upon a state commission power to extend the working day, in the case of seasonal trades, beyond the limit specified in the statute.

Candy, glass eyes, baby carriages, traps for wild beasts, costly jewels, Easter bonnets, and many other objects are put forth as seasonal products whose makers should be granted exemptions, according to Mrs. Dewey. Granting and refusing them, she continued, is a difficult task for state commissions, because the opponents of lengthening the working day are always in danger that at the expiration of their first term of office they must give way to more pliant officials. Mrs. Dewey therefore besought the advocates of the eight hours law to oppose all exemptions, and to urge that if any are provided, the responsibility for them be shouldered by legislatures and the terms clearly placed in the statutes. The National Consumers' League endorsed Mrs. Dewey's position.

The recent action of the Supreme Court of the United States in ordering a reargument of the Oregon minimum-wage case reminded the league, writes Mrs. Kelley, that this is the third annual meeting at which it has been necessary to provide for the nation-wide, active work which will follow a favorable decision. In case of adverse action by the court, a still greater effort would ensue, for it would then be necessary to amend the federal constitution.

The reason for the reopening of the Oregon case, which was argued by Justice Brandeis in 1914, is the presence on the supreme court of two justices to whom the case is new—Charles Evans Hughes, who was then sitting, being now succeeded by Justice Clarke, and Justice Day, who was then absent by reason of illness, having now recovered. Justice Brandeis cannot take part, because he appeared in behalf of the law, both supervising the preparation of the brief and making the oral argument. By invitation of Attorney-General Brown, of Oregon, Felix Frankfurter, of the Harvard Law School faculty, will assist in the reargument of the case.

INDIAN WELFARE

"SUFFICIENT to say that if the government were as active in the protection of Indian citizens, full-bloods and minors, as it is in the suppression of liquor, in pushing its health propaganda and enforcement of school attendance, the millennium in Indian affairs would certainly be here."

This was the opinion expressed by Warren K. Moorehead, of the Board of Indian Commissioners, in an address at the Lake Mohonk conference this fall. Mr. Moorehead gave instances of regrettable opposition to measures which would make for Indian citizenship and progress, especially in Minnesota and Oklahoma.

A report from Dr. L. W. White, superintendent of the Indian school at Lac du Flambeau, Wis., developed the theme that the "Indians are no longer a vanishing race." The campaign started by the energetic Commissioner of Indian Affairs to save the babies and send the children to school was bringing a new era of vitality to the Indian—a campaign doubly necessary, while nearly three-fifths of the Indian infants were dying before the age of five years.

With the frankness that characterizes most of the discussions at Lake Mohonk, the need of a more settled policy in the administration of Indian affairs was definitely pointed out. It was stated that the government made promises which it did not keep; that there were needless delays in the administration—due perhaps to excessive routine—due also to unsettled policies.

In summarizing the aim of the conference, a platform was adopted recommending the following courses of action for Indian betterment: First, improvement of sanitary conditions; second, a closer degree of cooperation among the various missionary bodies; third, a definite legal status for the Indians; fourth, adequate academic, industrial and moral education for all Indians, together with the privileges and duties of citizenship; fifth, a reorganization of the administration of Indian affairs and the revision of Indian law.

The conference also urged that necessary aids to the welfare of the Filipinos—sanitary, social and economic—be not abandoned with the withdrawal of American administration from the Philippine Islands.

THE UNNECESSARY EVIL

THE annual meeting and conference of the American Social Hygiene Association was held jointly with the St. Louis Social Hygiene Society and the Committee of One Hundred in St. Louis, November 19, 20 and 21, the first meeting of the American Association to be held west of the Alleghany mountains.

The public meetings were crowded and eager men and women listened for hours or frankly discussed what a few years ago would have been considered a subject to be shunned. Prostitution was condemned from the point of view of medicine, morals and religion, and the methods of attacking its ravages were explained by those most competent to speak.

Education, public-health measures, better living and working conditions and the constant repression of commercialized vice can and will prevent or reduce prostitution, it was said again and again. The policy of segregation was most vigorously protested by every speaker.

Addresses at each of the four public meetings considered definite aspects of social hygiene. These were the "new public conscience," "health aspects of social hygiene," "ways and means of public education," and "the repression of commercialized vice."

Out of the meetings came the formation of the Missouri State Social Hygiene Association, organized to coordinate the efforts of the several local societies in Missouri and to cooperate with the American association.

At the business meeting, Charles W. Eliot was reelected honorary president; Abram W. Harris, president; David Starr Jordan and Bishop Walter T. Sumner, former active vice-presidents, were made honorary vice-presidents.

TRACHOMA AND TRADITION

A LARGE gathering of people, not only from New York city, but from nine different states, met in the New York Academy of Medicine, November 24, at the annual meeting of the National Committee for the Prevention of Blindness.

Dr. John McMullen, who made the main address, told how the little hospital for trachoma patients at Hindman, in eastern Kentucky [see the SURVEY for March 18, 1916], has outgrown its facilities and has reproduced itself in six other centers—three in Kentucky, one each in Tennessee, West Virginia, and Virginia. In a year's routine examination of 18,000 persons, said Dr. McMullen, 1,280 cases of trachoma were found, chiefly school children who had been infected from the old people at home—long-standing cases, many of them now hopelessly blind. The more

than 19,000 people who came to these hospitals last year were given 112,000 treatments, and 1,687 were operated on.

Out into the districts the nursing service has spread, finding new cases, following up old ones, teaching hygiene in many matters. One nurse rode on horseback more than 4,000 miles when weather made passable roads. Confidence of the people was won by such visits, yet slowly won. The mountain tradition still is that "if you go up to the hospital, doctors put you to sleep, and only one person in a hundred ever wakes up again." This tradition Dr. McMullen learned from a young man whose first words on coming out from the anesthetic were, "Well, I did wake up, after all." He had taken the supposed one chance in a hundred, not caring whether he "woke up again" or not, so wretched was he, and blind, and "on the county" as a pauper.

Some idea of the energy of the national committee may be gathered from the brief statement by Edward Van Cleve of the year's work:

During the year the committee has published 300,000 pieces of literature, contributed to magazines and newspapers a score of articles (most of which have been copied many times), sent its exhibits into 46 cities and towns in 21 states, added about 150 subjects to its list of lantern slides, delivered or arranged for the delivery of more than 100 lectures, visited and served in person 10 states, corresponded with every state in the Union and with European countries, South America, the Philippines, China, South Africa, India and Australia. The committee has also studied the results of constant attendance at the movies in producing eye-strain; made an intensive examination of eye hazards in industries; built two five-panel exhibits, one on trachoma, another on industrial eye hazards; and published much information on the subject of the conservation of vision.

"BEETERS" AND SUFFRAGE

To the Editor: Some of your anti-suffrage subscribers have been patiently waiting for comments on Florence Kelley's unfortunate editorial of July 1 on the little Colorado "beeters," and it was a pleasure to find in your issue of September 9, so courteous and satisfactory a letter as the one signed Marian M. Whitney. Mrs. Kelley's reply, which follows, however, is neither satisfactory nor convincing. Her great work entitles her to generous considera-

tion, but it does not justify her in her attitude toward a great body of earnest women whose convictions differ from hers.

Anti-suffragists do not find "solace" in the suffering of little children, nor in any evil condition in equal-suffrage states; but they do rightly rejoice over every good law in a man-suffrage state which their non-partisan power has helped to bring about; and they do rightly resist every attempt to wrest that power from them. There is no proba-

bility, arguing from any known fact, that woman suffrage would have improved any condition in New Hampshire. All signs point to a contrary conclusion.

I do not think that any anti-suffragist will cancel his or her subscription to the SURVEY because of its bias, as some suffragists did when you courageously published John Martin's articles; but we do want fair play. After all, we are all wishing for the same ultimate good—on Consumers' League boards, Civic Leagues, Child Labor committees and scores of others; and even Mrs. Kelley, I hope, welcomes the good accomplished without the ballot.

CARRIE E. B. NEILL.

(Mrs. Albert B. Neill)

Saxton's River, Vt.

COMMUNITY CHRISTMAS

To the Editor: Will you please insert in the SURVEY a paragraph about the community Christmas tree, saying that detailed information as to how to have one in your town will be gladly sent, if the request, accompanied by a stamped and addressed envelope, is addressed to the Tree of Light Committee, P. O. Station G, New York city. Letters in response to last year's notice in the SURVEY are still coming in.

THE TREE OF LIGHT COMMITTEE.

New York.

MONTANA IT WAS

To the Editor: May I call your attention to an error on page 171 of the SURVEY for November 18? You say that Rep. Jeannette Rankin is from Wyoming. She is a resident of Missoula, Mont., and has been elected a representative-at-large from that state to Congress. In 1912 Miss Rankin did most effective work as the representative of the suffrage forces of New York state at Albany. She won the respect of even our bitterest opponents in the legislature by her devotion and tact, while she was working for the passage of the suffrage amendment. I believe this was Miss Rankin's first practical political work. With her experience to help her and her splendid enthusiasm she went back to her home in Montana and led the forces there to victory in 1914. It will be a great advantage to Congress, as well as to Montana and the whole country, to have so able and fine a woman in the councils of a national legislative body.

HARRIET MAY MILLS.

Syracuse.

HEALTH INSURANCE

To the Editor: Mr. Andrews tells me that my report (the SURVEY for November 11) of the discussion on health insurance held in Cincinnati during the recent session of the American Public Health Association has caused confusion in the minds of readers of the

SURVEY on one very important point, the question of the separation of function between the medical men who take care of the insured sick and those who pass upon claims for sickness and also act as supervisors over the medical service given. Mr. Andrews says that that is provided for in the "model bill" and that had he been present at the first part of the meeting in Cincinnati he would have made this clear. I am sorry if my report of the discussion resulted in obscuring the issue and I should like to make it plain now.

The important point in my mind, and in the minds of many of the physicians who spoke, was this: that in some way, not provided for by any measure as yet formulated, the work of the one we may call the referee—who passes on claims—should be linked up to the existing public health agencies. In the "model bill," both attending doctor and referee are paid by the carrier. If it were possible to have the referee paid by the state and officially connected with the public health group, there would be a surer guarantee of disinterested and efficient medical service and a greater emphasis on preventive work.

ALICE HAMILTON.

(Hull House)

Chicago.

WITH APOLOGIES

To the Editor: May I ask you to correct a statement in your issue of November 18? On page 168 a list of the institutions giving courses in public health nursing is given in a form likely to impress the reader as exhaustive. The Chicago School of Civics is not included in the list, although it offers two courses, one lasting a year and one a four months' course beginning March 5. In fact, in the issues of August 5, 19 and September 2 appeared an advertisement containing the following statement: "Special Course for Public Health Nurses," and in the issue of November 4 one containing this statement: "Special Course for Public Health Nurses, March 5 to June 23." The former advertisement referred to the one-year course, and the latter to the short course.

S. P. BRECKINRIDGE.

and Philanthropy)

Chicago.

WARDEN OSBORNE

To the Editor: After having read Mr. Lane's article in the SURVEY for October 28 and Mr. Peabody's statement and Mr. Lane's reply in the issue for November 25, I feel constrained to enter a protest. This protest, by the way, registers the opinion I have heard expressed more than once by gentlemen whose opinions we are bound to respect.

The substance of my protest is that many readers (myself included) find

neither pleasure, interest nor profit in the exchange of personalities that occasionally find a place in the columns of the SURVEY. Such readers object to the sort of long-drawn controversy that arose between Frank P. Walsh and the editor of the SURVEY, and again this present exchange of animus on the part of Mr. Peabody and Mr. Lane.

Can we not have the facts in full, without having to suffer the rather presumptuous interpretation of a man's psychology? Many of your readers and loyal friends must object to the tone of both Mr. Lane's and Mr. Peabody's articles. It would, I think, be safe to place the data of important situations and events before the subscribers of SURVEY, and permit us to interpret them for ourselves. For this sort of service we depend on the SURVEY.

WALTER CLARKE.

(Hull House)

Chicago.

To the Editor: It seems to me that Mr. Lane's article upon the subject of Thomas Mott Osborne's resignation from Sing Sing is the height of bad taste, besides being a menace to a great movement. I do not agree with the estimate of Mr. Osborne which is put before the reader. But, if I did, I should not consider the present the time in which to make public such statements, nor the SURVEY the proper medium for them.

In almost every case Mr. Osborne's accomplishment is in itself a refutation of the charges which the account put upon him—but I am writing, not to prove Mr. Lane in the wrong, but to register a vigorous protest against such an attitude in the SURVEY. Mr. Osborne has left Sing Sing prison. He will carry on his great work by lectures and by writing. Everyone who is interested in prisons is eager to help him, and it seems to me a doubtful help to point out what errors we think he has made in the past. There is a mean spirit in that, whether or not our assertions are true, and it seems peculiarly unkind in dealing with Mr. Osborne, whose genius consists in knowing how to let bygones be bygones. I am hoping to see a more friendly treatment of Mr. Osborne in an early SURVEY.

LOUISE BURLEIGH.

Cambridge, Mass.

To the Editor: In regard to the article in the SURVEY, The Retirement of Thomas Mott Osborne, by Winthrop D. Lane, I will say in a general way that I do not agree with the impression which, in the minds of many of Mr. Osborne's friends, this article conveys to the public. I consider Mr. Osborne's work a most important reform in a direction where it is particularly needed. Mr. Osborne has devoted at least five

years of his life to this work without remuneration or personal advantage.

A few years ago the conditions in Sing Sing were very bad, and while the physical conditions are necessarily still much below what they ought to be, the condition of the men in every respect has been vastly improved. I paid a short visit about a week ago to Sing Sing and, although Mr. Osborne has been away from there for a few weeks, the conditions are first class, which speaks particularly well for his work and system, showing that it does not depend upon his presence or upon the action of any one man.

No one, of course, can be expected to be ideal and not make some mistakes, especially under such trying circumstances as Mr. Osborne experienced. There have been various elements working against him and this is not only in his imagination, as intimated in the article. He has been unjustly accused and indicted. He, together with his friends, have fought it out and shown him to be in the right. It is not to be wondered at, perhaps, that he should be somewhat over-suspicious, that this difficult problem cannot be worked out very well with half-hearted support, but his good side overbalances any slight errors which he may have made.

As I expressed some time ago, I do not consider his work any further an experiment but it has proven a great success. It is fortunate that he has undertaken the wardenship of Sing Sing even under the difficult conditions, as that was the only way in which the matter could have been carried out as it has. I hope he will continue his activity in this splendid and important work and that he will go out to all parts of the United States to proclaim this great reform.

ADOLPH LEWISOHN.

New York.

To the Editor: I was astounded at your printing in full the article on Osborne by Mr. Lane. Its brilliancy as a piece of literary work makes one shrink all the more from certain parts of its indictment. True his facts may be, but a decent sense of reticence before naked truth, a magnanimity in the face of reverence—producing genius such as Mr. Osborne's—is what most of us expect from the SURVEY. Every thoughtful reader of the newspapers has perceived gradually that, like many men of prophetic vision and profound sympathies throughout history, Mr. Osborne has lacked the executive ability to work into harmony with existing conditions the ideals which he has blazoned into being. He has executed enough, however, to give courage and faith to other wardens who can carry out the work Mr. Osborne has not only planned but truly begun. One

does not expect the moon to be an electric street-lamp.

What social worker could go on with his or her work if such an indictment should be served publicly on the faults which everyone has? One strong worker is notorious in her circle for never finishing anything she undertakes; another for sapping like a sponge the best of everyone who works with him and then throwing each worker aside with no regard for the individual. All who work with these people mourn their faults, but speak very low of them. Time brings perspective; why not wait a bit to let it before issuing such crass proclamation of Mr. Osborne's sins?

MARY B. FULLER.

Fredonia, N. Y.

To the Editor: I want to thank and congratulate Mr. Lane on the Osborne article. I am an old friend of his and have, like you, a high opinion of him and his work. But I think Mr. Lane has written one of those really judicial and discriminating articles that so rarely get into print and so seldom please the partisan of either side. Never mind. You have given truth.

RICHARD C. CABOT.

Boston.

To the Editor: Into the prison problem there stepped a few years ago a man destined to exert a great and abiding influence throughout the whole wide prison field. This man was not a dreamer but a man of affairs who dreamed great dreams, not a sentimentalist save as a man is a sentimentalist who suffers himself to be touched to love and pity for his fellowmen. Into this work he stepped with the prestige of high character and the authority that ever clothes the unafraid soul.

He saw a great evil and promptly set out to destroy it, and it, in turn, set out to destroy him. He saw that nothing could be done for the men in prison as long as the prison was managed chiefly in the interests of political parties and their hangers-on. He set out to destroy this profitable but foul partnership. And he was denied—denied by those who should have supported him loyally, and by the meaner, lesser breeds who fought for their imperiled revenues. It has been a sordid, sorry spectacle from which he has emerged unscathed and undishonored.

On the larger side of his work, the constructive side, he has been fought less, but even here he has not been wholly understood and therefore little furthered. Herein is revealed what I call the "crime of prisons"—the crime of enduring things because they fit into our preconception or because they profit us materially. As long as it was merely urged to remove the stripes from men's uniforms, men lightly assented to the

change, but when it is proposed, as some years ago it was proposed by prison experts gathered in the International Congress at Washington, to do away with the half-old and half-new superstition that there is such a thing as a criminal type, even they who are willing to let the stripes go insist upon the retention of the criminal type. Men acquiesce in the passing of the lock-step, but when Thomas Mott Osborne proposed that men shall be helped not only to drop out of the lock-step but to step back into the march of normal life, then suspicion and fear paralyzed the souls of men. The solitary cell might go because it was revolting to men's sense of decency, but when he urged that the cell block go—then came the rub, for the cell block represented capital and investment of money which must not be touched under any circumstances. The foundations of society must not be assailed whatsoever wrongs they shelter. Public welfare may never demand the sacrifice of private interest. This it was that lay back of much of the response to Thomas Mott Osborne.

For two things Thomas Mott Osborne has stood in our generation in the treatment of the prisoner—the meeting of certain needs in the lives of men, their inner life and their outer life. He has worked at both ends. He has sought on the one hand to resocialize the ways of men within the prison, to rehumanize their outlook. On the other hand, he has sought to re-energize men's will—their will to do the right. In other words, Osborne has faced the problem at both ends, seeking as far as it is possible to give to men even within prison a right environment, and, on the other hand, to help men to rightness of will.

No man can hope to be of service in dealing with the problem of prisons unless he follow the example of Osborne. He may seem for a moment to pass beyond the range of the prison problem, but a generation hence, when the newest age for the prison shall have dawned, men will understand that the largest contribution to the solution of the problem was made by a man who gave himself with wisdom, with statesmanship, with dedication to the twofold work of saving men for themselves and of saving the world from the crime of prisons that are prisons and nothing more.

STEPHEN S. WISE.

(Free Synagogue)
New York.

[It is entirely natural that some of those who have stood shoulder to shoulder with Warden Osborne against attack from one quarter and another should lump any appraisal of his work from a disinterested standpoint, with the manipulations of those political, personal and self-interested forces which from

the first have striven to undermine his regime at Sing Sing.

It is perhaps inevitable that others should be pained and hurt, and this, especially if it be true of Mr. Osborne himself, we very deeply regret.

It is understandable that some should feel that the old punitive system is so entrenched in custom, public opinion and law that the champion of the new order should be underwritten in his every act—regardless of the fact that in prison reform, as in municipal reform, durable progress can come only through welding the newer ideals to sustained execution.

It is understandable that others should feel that the bulk of inertia and skepticism, the repressive and reactionary dead weight in our social life, is so great that anyone is disloyal to democracy who by open discussion gives currency to its shortcomings as well as its promise—regardless of the fact that to give over discussion of such a creative experiment in self-government as that at Sing Sing, solely to its unquestioning friends and its sinister enemies, is to invite disaster.

A larger faith in democracy, both in its methods and in the ability of people to judge of them, relies upon intelligent and informed discussion by growing bodies of men and women—upon the constructive criticism, the convinced backing, of just such people as make up the rank and file of SURVEY readers. When we turn from principles to their application, the characteristics of Mr. Osborne's wardenship described by Mr. Lane were in evidence a year ago. Their discussion then would merely have played into the hands of those who were charging him, for reasons best known to themselves, with felony and misdemeanor. There was prospect that with these charges disposed of, a new execution of the Osborne program, either at his own or at friendly hands, would render these questions of application obsolete.

His resignation in October, whatever the provocation (and the provocation was real if not compelling), called for stock-taking by those who were following the movement. The agitation of some of his friends for his reinstatement in administrative position made such stock-taking of practical concern to those who might break with them in practical judgment, but who as seriously wished to conserve the foundations he had laid. We felt that it was a service due SURVEY readers to interpret the situation as we saw it, and any discussion of results was in this case inevitably bound up with the factor of personality. Mr. Lane's analysis, grounded on first-hand observation, was a sincere, accurate and courageous piece of reportorial work and has the endorsement of the editor of the SURVEY.

There is no occasion to go into this

analysis more fully, or even to disentangle certain false impressions drawn from it. There is every occasion to spread the things Mr. Osborne has stood for, to stand out against any crippling of the remarkable program which he launched at Sing Sing, to interpret the message and leadership of the man. As one correspondent puts it, "The general public interest in Mr. Osborne is one of the finest things in American life today." The positions taken do not discount our earlier estimates of his powers, or the practicability of his program, any more than it is necessary to boom Mr. Edison for municipal lighting commissioner to prove that electricity is revolutionizing the world or giving light for a man's eyes.

Our prisons are the last strongholds of political exploitation of state institutions. Sing Sing has been a mighty fortress of reaction, despair, bitterness, misery, hatred. Mr. Osborne drove a great wedge of hope through its outer walls. As his associate, Warden Derrick, on leave of absence for a year from the Ione Reformatory of California, was, last August, brought in by Mr. Osborne and his friends to organize in this old prison of the East that transformation which he had wrought in California and which had won the backing of Governor Johnson and the people of the most progressive state in the Union. As former superintendent of the prison school at Auburn, later as an active lieutenant of Mr. George and Mr. Osborne at Freeville, Mr. Derrick proved at Ione that the self-government principle can be worked out in a state institution, hitherto wracked by food riots, brutal repression and political manipulation. It is up to the people and the state administration of New York to see that he is given as free a hand in wrestling with the larger situation at Sing Sing.—EDITOR.]

"MAGDALEN"

TO THE EDITOR: I am often impressed with the fact that we would-be reformers rarely are able to see more than one side of a condition—the side with which we sympathize. Having just read "Magdalen" in your issue for October 7, I am deeply but sadly impressed by the story of Violet's experience of life; and yet, with all my sympathy for her fate, the appeal being so presented as to condemn "vain, sinful man" indiscriminately is unjust. Violet's case is weakened by such wholesale condemnation of all mankind, because she assails men for doing just what she has made a business of inviting them to do. And her beguilings must have been persistent, as she claims to have "made" as much as \$125 in a week.

To accomplish this wholesale result, how many boys and men must she have "solicited"? She must have prostituted

herself constantly and by preference—and then in a torrent of abuse she says that all men are alike, all base, all prostitutes like herself. There is no decency among men and conditions are wholly the fault of men. This is the tone of nearly all articles that take up sex problems. The girl or woman is invariably the one wronged.

But is not there another side to the story? Can any man look backward and not recall times when he has been tempted by advances from the other sex? Not long since a young man from a country town came to Boston to live. He confided to me his perplexity as to women he met socially. Within the month three young wives—very happily married, so he supposed—had offered themselves to him at different times; had secretly solicited his sexual attentions. Had he consented, he would have become "a villain" and the women would be "wronged."

Look about among gatherings of young folk. Are not the girls dressed to suggest and invite immoral thoughts and sex attentions? Are not many of them, and of older women, constantly on the alert to win the attention of men, and to almost any length? And if the boys or men yield to these more or less open invitations to familiarity—or worse—the men are reviled by the very women whose invitations they accepted, as in the case of Violet.

Men often merit condemnation—too often. But in stating a case it is wiser and more helpful to consider "both sides" of the sex problem. It is wiser and more helpful to start with the "wronged" sex and inspire in it a finer self-respect, self-reverence, self-control, and an abhorrence of all dress and conduct that invite the very wrongs of which the other sex is so indiscriminately accused.

W.
Framingham, Mass.

TO THE EDITOR: Our correspondent "W" has apparently failed to realize that "Violet" was depicting the morality of men as impressed upon her in her degradation. She was not blaming men in her remarks, she was merely describing them as she found them. When we realize that prostitution is a regular paying profession with a certain class we must admit that it comes under the law of supply and demand. Surely it is men and not women that create the demand and make of it a trade that pays. Prostitution would be unimaginable if it were not subsidized by men. Possibly it is because we have only during the past few years come to recognize prostitution as dependent upon men's rather than women's morality, that only during that time has progress been made toward the solution of the social evil.

EDITH HOUGHTON HOOKER.
Baltimore.

JOTTINGS

USING the dragging trolley strike as a timely illustration, the League for Municipal Ownership and Operation in New York city, of which Frederic C. Howe is president, announces a campaign to secure municipal ownership and operation of public utility corporations.

EVERY United States soldier in Mexico and every marine stationed throughout Haiti and San Domingo will receive a Christmas box, if plans of the American Red Cross do not miscarry. General Pershing has said that pipes, tobacco, cigars, pocketknives, stick candy, writing material, handkerchiefs and "light novels" would make suitable gifts. Each Red Cross chapter has been asked to aid in collecting such articles.

THE bill "to promote the efficiency of the federal Public Health Service," mentioned in the SURVEY for December 2, provides for the appointment of the surgeon-general "from among officers of the corps not below the grade of surgeon." At present, so far as the law is concerned, the President may appoint any physician in the United States. It has been the practice, however, for several years to select the surgeon-general from among the higher officers of the service, and to make this practice permanent is one aim of the bill to come before the Senate this session.

SOCIAL legislation for the year 1916 forms the major part of Bulletin No. 76 of the National Conference of Charities and Correction (15c a copy, 50c a year, 315 Plymouth Court, Chicago). This summary of the work of the eleven legislatures which were in session this year takes the place of the reports from states formerly given verbally at the conference itself. It makes no reference to the broad program of social legislation enacted by Congress and it appears in the eleventh month of the year. But it is nonetheless a concise and useful summary.

THE Washington State Conference of Social Welfare, through its secretary, the Rev. Sydney Strong, of Seattle, has arranged a state-wide series of local meetings to recommend a legislative program or platform, for discussion at the meeting of the conference in January. At that time the conference will recommend to the legislature for the united social workers of the state, a definite series of measures with the backing of the organization. This is thought to be far superior to the present system of placing social welfare measures before the legislature through local bodies from various parts of the state.

ATLANTA UNIVERSITY, a school for Negroes in the metropolis of the only state having over a million Negro population, is celebrating this year its semi-centennial anniversary. Chartered "for the Christian education of youth," the university has been unsectarian in its influence and has advocated the liberal education of Negro youth "for service among their people, chiefly as teachers." It has over 500 pupils and thirty-eight teachers and officers, graduates of Yale, Harvard, Columbia and other colleges. The school is largely dependent upon contributions and an endowment of \$110,000 which it is trying to in-

crease to a half million. Many prominent educators and others, North and South, have endorsed its work.

LAST week, at a meeting of the Dress and Waist Manufacturers' Association of New York city, it was voted to demand the resignation of Belle Israels Moskowitz as chief clerk representing the manufacturers in their relations with the union, and of Julius Henry Cohen, counsel. The charge against both was apparently that they have been too liberal in their views, and not sufficiently devoted to the sole interests of the manufacturers. As a result, the president, vice-president, treasurer, secretary and several members of the executive committee resigned and the outcome may be two new organizations, one of dress, the other of waist manufacturers. So far the occurrence has had no effect upon the workers, for the protocol in all of its terms is binding as heretofore.

THE St. Louis Society for the Relief and Prevention of Tuberculosis is using in the Christmas Seal Campaign this year, a poem written by Jerry, a ten-year-old boy in the open-air school:

"Now, if there's a present goin' round,
There's just one thing for me,
Ask Santee for one new lung,
A right one—mine's T. B.

"T. B. is what skinny folks has,
It kills us poor, weak boys.
So, in your prayers remember me.
I wish you a thousan' joys.

"A Merry Christmas to you all,
A song I've often sung—
But don't forget dis skinny kid,
And pay for his new lung."

"THE thing," as it is called, was found posted at a mine in the South, copied and taken to Boston. There social workers have shared in the three private printings which are distributing it. Under the title, "Booze," "the thing" reads as follows: "Start a saloon in your own house. Be the only customer (you'll have no license to pay). Go to your wife and give her two dollars to buy a gallon of whiskey (this looks cheap, but it often costs the dealer less) and remember there are sixty-nine drinks in a gallon. Buy your drinks from no one but your wife, and by the time the first gallon is gone she will have eight dollars to put into the bank and two dollars to start business again. Should you live ten years and continue to buy booze from her and then die with snakes in your boots, she will have enough money to bury you decently, educate your children, buy a house and lot, marry a decent man and quit thinking about you entirely."

ANOTHER step in the development of the work of the superintendent of the poor of Westchester county, New York [see the SURVEY for November 4], will be taken January 1 when John R. Shillady will be added to Supt. V. Everit Macy's staff as "director of outside activities." On that day also Mr. Macy will cease to be known as superintendent, and will become county commissioner of charities and corrections. One of Mr. Shillady's first undertakings will be to develop greater cooperation among the social and business organizations in the county with the county almshouse, hospital and penitentiary. He will also aid in the follow-up work with dependents and delinquents, and in the study of causes of destitution already begun, and will do publicity work. Mr. Shillady has been secretary of the Mayor's Committee on Unemployment in New York city since its start in 1913, fol-

lowing his earlier social work in Buffalo and as secretary of the former Industrial Board of the State Department of Labor.

A CHANCE to buy luncheon and afternoon tea and do your Christmas shopping early, not to mention being waited on by real girl college graduates, was presented to the inhabitants of New York city throughout "College Settlement Week." The occasion was a benefit sale by the various college clubs belonging to the College Settlements Association, on behalf of the New York College Settlement. Twelve colleges now have membership in the association. In Bryn Mawr 53 per cent of the student body belong to the club, at Mt. Holyoke 500 out of a student body of 800, three-fourths of the student body at Elmira, and at Wells practically the entire college has joined. The other colleges having chapters are Wellesley, Smith, Vassar, Radcliffe, Goucher, Swarthmore, Adelphi and Barnard. Four cities have college settlements, Philadelphia, Boston, New York and Baltimore. An exhibit of the work of these settlements, presided over by Dorothy Baldwin, the new organizing secretary of the association, was a feature of the "week" in New York.

INDUSTRIAL tension in Everett, Wash., where the sheriff and a posse of citizens had a battle with a force of I. W. W. men, has been relieved by the calling off of the strike of shingle-weavers. These men, who saw and pack shingles, belong to a union affiliated with the American Federation of Labor, and the coming of the I. W. W. men was entirely independent of their plan of campaign. When the shipload of industrial workers from Seattle approached the wharf at Everett two weeks ago, and were driven off after men both on the wharf and on the boat had been killed, it was feared that rioting would break out if picketing were kept up during the trials, about to begin, of some of the I. W. W. men. It was in recognition of this situation, and "for the good of the community and the moral advancement of unionism," the Rev. Edgar M. Rogers, of Everett, writes the SURVEY, that the strike was called off. A group of clergymen of Everett joined with some business men and with the president of the Washington State Federation of Labor and the president of the International Union of Timber Workers in advising the men to declare the strike at an end.

THE experimental program for community organization of the National Social Unit Organization will be tried out in Cincinnati. This program, described in the SURVEY for April 22, is based on the district idea in social work and makes its approach through public health, with the child as the point of attack. Cincinnati was desirous to be the scene of the experiment and possesses many of the qualifications wanted by the organization. Its municipal hospital and municipal university bear organic relation to the city government. The medical members of the Board of Health are elected by the Academy of Medicine and the school system shows a genuine tendency toward community action. Over thirty social agencies are federalized for budgetary purposes, and the Council of Social Agencies is one of the foremost bodies of this kind in the country. Many Cincinnati social agencies have expressed themselves as eager to see the experiment carried out there. A special committee of the Municipal Committee on Tuberculosis has already gone far toward educating the community to the desirability of health centers, a vital element in the program of the social-unit organization. The work will be started January 1, under Wilbur C. Phillips and Elsie La G. C. Phillips, secretaries.

KOBBER & HANSON

The Diseases of Occupation and Vocational Hygiene

A Modern, Illustrated Guide to the diseases prevalent in the industries and professions, including the most approved methods of investigation, prevention and treatment. With valuable contributions on governmental study and legislation; Investigations by Public Health Authorities, Labor and Factory Inspectors, etc.; Statistics, Reference Tables; Occupational Mortality and Morbidity. The material is arranged in three main parts, divided into sections and subdivided into groups according to a most logical and convenient system. Prepared by collaboration of thirty-one specialists—authorities at home and abroad. The editors are George M. Kober, M.D., LL.D., Washington, D. C., and William C. Hanson, M.D., Belmont, Massachusetts.

It is a valuable book for social worker, teacher, lawyer, physician, nurse, health and factory inspectors, manufacturer, and indispensable for the Reference Library.

Octavo. Illustrated. Cloth \$8.00 Postpaid.

Distinctive Table Linens

at **McCutcheon's**

When you begin to explore the field of Table Linens in search of things that are more beautiful and elaborate than the common run of goods, you must inevitably come to "The Greatest Treasure House of Linens in America".

515. Scalloped
Damask, Breakfast,
Luncheon and Dinner
Cloth with Napkins
to Match.

Our stock of high quality goods in all their infinite variety far eclipses the ordinary resources of stores that do not specialize in Linens. Repeatedly we hear the comment made that "the only place in New York to get Linens is at McCutcheon's".

French and Italian Lace, in Filet, Crepon, etc., combined with hand embroidery; handsome and attractive hand embroidery from Madeira; marvelous plain, fine Damask whose quality causes it to shine with satin-like sheen.

We have many special kinds of Linen wares not to be found elsewhere. In our search for original styles we ransack the corners of the earth. From China, India, Sicily, Mexico, Spain, Porto Rico, Russia, etc., we import odd handiwork on Linen for the housewife who wants novel and distinctive things to give a touch of originality to her table.

Orders by Mail Given Special Attention.

WARDEN MOYER, the new man at Sing Sing, is rated an open-minded conservative. The governor and superintendent of prisons who put him in power, are believed to be hostile to self-government of prisoners. Friends of the Mutual Welfare League, therefore, are engaged in watchful waiting. Page 291.

SOcial insurance, until recently the poor relation of labor legislation and social service, showed a great body of enthusiastic friends at the conference held last week. Page 295.

THE Woman's Peace Party, with Jane Addams once more able to be in the chair, has charted its course for the new year. Page 307.

HENSLEY, M. C., defeated for his pacifism, left his mark in a clause of the naval appropriations bill that opens the door for disarmament after the war. Page 308.

LABOR has apparently scored in the first round with the President over compulsory arbitration of strikes. Page 309.

HOW Mary Goode, a brothel keeper, became a worker in the Night Court for Women. Page 310.

SCHOOLMASTERS have a big job ahead when the federal child labor bill turns some laborers back into children. Page 311.

PROBATION is really reducing the prison population in New York. Page 311.

THE geography of infantile paralysis is as puzzling as the causes. Page 312.

POOLOOMS, a rough-house room, a gymnasium, and a dance hall, take the bitterness out of staying after school for the boys and girls of Milwaukee. Such attractions have even tempted year-old babies into classrooms. Indeed, Harold O. Berg, supervisor of the extension department, has made the whole family comfortable in a schoolhouse. Page 298.

OUT of the frying pan into the fire of politics will be a hard jump for women unless they get into training early in the game. The Minneapolis Bureau of Municipal Research is fitting women to compile budgets and administer city departments. Page 300.

WITH a drum corps, Roman candles, and a parade, social work may cease to be the self-imposed task of the few, and become community expression. John Melpolder suggests that religious and political fervor be infused into civic activities. Page 303.

"TRY it on the dog" is a maxim social workers have put into practice. The health records they recommend keeping in the industrial world have proved practicable when adopted by their own organizations. Page 305.

Sing Sing's New Warden

By Winthrop D. Lane

OF THE SURVEY STAFF

IF William H. Moyer, ex-warden of the federal penitentiary at Atlanta, had been made warden of Sing Sing ten years ago or any time before the advent of Thomas Mott Osborne, he would, in all probability, have been regarded as an advance over the customary type of administration of that prison. His appointment last week puts into his hands the most hopeful, most delicate, most far-sighted experiment in reforming law-breakers that has been given to this generation to try out. With an instinct that is itself evidence of the spread of new prison ideas, the people of New York have sharply challenged the intent back of this appointment. The new warden and the state administrators will be judged not by the surface smoothness they may give to prison routine, not by the number of escapes they may cut down or the orderliness of prison life, not even by other and half-way measures of reform, but by their conservation of the self-government program that is already producing not only good prisoners but good citizens at Sing Sing.

I

Mr. Moyer starts out with the handicap that his record at Atlanta has been gone over and various charges relating to his treatment of prisoners have been exhumed by the press. These, whatever their truth, can but render more difficult the establishment of normal relations with the men in his charge.

William H. Moyer became warden of the Atlanta penitentiary in 1903 and resigned on request of the Department of Justice in March, 1915. Eighteen months earlier—or after a full decade of service—his administration had been sweepingly attacked in a series of newspaper articles by Julian Hawthorne, who served a term there for misusing the mails. Hawthorne charged that the food furnished the prisoners was inadequate, that punishments were out of proportion to the offenses committed, that favoritism was practiced among employes and prisoners, that medical attention was inferior and that there had been waste and inefficiency in the construction of the prison, in much of which Mr. Moyer had employed inmate labor.

An investigation was ordered by Attorney-General James C. McReynolds and was conducted by A. J. McKelway, southern representative of the National Child Labor Committee, who was appointed a special agent for the purpose.

Mr. McKelway completely exonerated Warden Moyer. A hearing was held before Mr. McReynolds and Mr. Moyer was retained.

Some time later seven guards who intimated that they had been discharged by Mr. Moyer because they discouraged a petition asking for his retention framed a series of questions in which they cited a number of instances of alleged brutality and neglect of prisoners during his administration. These charges have been published in the newspapers since Mr. Moyer's appointment to Sing Sing. The truth of their accusations has been denied by Mr. Moyer's friends and so far as is known they were not cited as the reason for his subsequent removal in 1915.

Two explanations of the latter have been given. One is that the change was a political one. This is the version given out by the New York State Department of Prisons at the time of Mr. Moyer's appointment to Sing Sing. The other is that he had lost his grip on the prison and prisoners at Atlanta and that although his resignation was not the result of any specific charges against him, a new administration was believed necessary for the good of the institution.

II

A review of Mr. Moyer's record shows that he was not a stand-pat warden. He was never a leader of reform, but he seems to have been a slow adapter of whatever methods he thought had been tried and found good. One of his chief objects during the first half dozen years of his wardenship was to reduce the cost of food per prisoner, and he took an evident pride in accomplishing this result. Yet he had not been in the prison two years before he asked for a school teacher to relieve the chaplain and educated prisoners from the whole burden of teaching inmates, and a few years later he declared:

"It has never seemed to me to be either wise or prudent to receive ignorant citizens here, obtain from them a maximum of manual labor, and then return them to their former homes just as ignorant as when they left there, and I have tried, with some success, to remedy this condition."

As late as 1908, Mr. Moyer believed that the letter-writing privileges were "entirely too liberal," and he recommended that first-grade men be restricted to one letter every four

weeks and second-grade men to one every eight. The next year he urged the enactment of a law that would provide "a sufficient number of rifles and pistols of the latest approved pattern, together with a sufficient amount of serviceable ammunition to thoroughly equip each United States penitentiary."

Beginning in 1910, Mr. Moyer persistently advocated the payment of small wages to prisoners and their dependents and declared that the harm done by the government in shutting up the bread-winners of families, without providing for the support of those families, quite offset the good it did by protecting society from the criminals themselves. He urged the extension of parole to life prisoners two years before this was authorized by Congress, and claims to have assisted in drafting the amendment for that purpose. Prisoners at Atlanta were accustomed to regard Mr. Moyer as the member of the parole board most likely to deny their applications, but Mr. McKelway found that this was not true.

In 1913 Mr. Moyer became an advocate of the indeterminate sentence and in 1914 added probation to the reformatory mechanism that he had come to believe in. He had previously introduced a great number of minor changes into the life of Atlanta prisoners that had for their object the break-up of deadening routine, the better physical care of the inmates, and the humanizing of personal relationships. Stripes gave way under his régime to a uniform of light blue, and the practice of sewing a man's number into the back of his shirt, like a brand of fire, was discarded. Weekly interviews with the warden were allowed, and plain paper instead of that bearing the name of the prison was supplied for correspondence with friends and relatives. Conversation during meals was introduced, Mr. Moyer believing that Atlanta was the "first institution of its kind to grant this privilege."

A Saturday half-holiday, with baseball in the yard, was accorded, and later on a mid-week half-holiday was added. The publication of a prison newspaper by inmates was begun and a prison orchestra was built up, which played to the prisoners during their midday meal. Mr. Moyer seems to have believed strongly in the uplifting influence of music, for he instituted the custom of allowing all prisoners who owned instruments to play for an hour in their cells each evening, and the resulting "harmony of sweet sounds" is said to have been audible half a mile away. A library was another of the humane influences he fostered. He added the services of an oculist and a dentist to those of the prison physician, and seems to have taken great interest in improving the care of tuberculous patients.

One of the chief reasons given by Superintendent Carter for the appointment of Mr. Moyer to Sing Sing is the experience he gained at Atlanta in applying the labor of inmates to prison construction. Mr. Moyer has himself described the concrete wall enclosing the penitentiary grounds, which was built by prisoners, as one of the largest solid pieces of concrete construction in the world. He used inmate labor also in erecting the main cell building, the entrance gateways and in grading the prison grounds. As a result of a suggestion from Mr. McKelway he developed a prison farm outside the walls of the penitentiary and employed several hundred inmates there substantially upon their honor.

In 1914, as president of the Wardens' Association, which is affiliated with the American Prison Association, Mr. Moyer said concerning the causes of crime:

"Looking at the problem fairly and squarely, and with an open mind, it is impossible to escape the conclusion that social conditions are either directly or indirectly blamable for most

of the blasted lives that make the criminal history of any country."

He has not, however, shown any particular grasp of the psychopathic factor in penology, which is yearly assuming greater importance. In the same year he wrote:
