Henderson's Giant Darwin Tulips —the Aristocrats of Tulipdom

Darwin Tulips are exceedingly effective when grown in groups of a dozen or more bulbs of one variety in the garden or herbaceous border with a background of greenery. As cut flowers they are unsurpassable. They can be successfully flowered in pots or pans in the house in winter if grown cool and not forced into bloom before March. The varieties marked * are especially good for that purpose.

LA TRISTESSE

We have indicated their relative time of flowering by the letters E, F, G, H and I. The E's being the earliest to bloom. The height is also given, but may vary. The bulbs should be spaced about 5 inches apart and base of the bulbs should be 5 to 6 inches deep on heavy soils and 6 to 7 inches deep on light soils.

COTTAGE TULIPS

Cottage Tulips are late flowering, blooming just before the Darwin and Breeder types. They have the widest range of color and form of flowers of any of the Tulip classes. The graceful flowers are borne on long stems and are ideal for cutting and bedding. The relative time of flowering is indicated by the letters E, F, G, H and I. Those marked E being the earliest. Those marked I are the latest to bloom. The normal height is also given in inches. In planting the bulbs should be placed 5 inches apart and the bottom of the bulb should be 6 to 7 inches below the surface in light soils and 5 to 6 inches deep in heavy soils. If planted too shallow some may come blind. The varieties marked * are especially good for winter flowering and forcing.

SINGLE EARLY TULIPS

Henderson's Superior Named Varieties

The Single and Double Early Flowering Tulips described below, are the gayest of our early spring garden flowers, blooming the latter part of April and early in May. They are largely used for design bedding, and as they are through blooming by the middle of May, they can be taken up to make room for summer flowering plants. The letters A, B, C, etc., following the varieties indicate their earliness of bloom, the A's flower together and are the earliest, B's follow before the A's are out of bloom. The height is indicated in inches to aid in arranging flower beds. When bedded it is generally advisable to use only one variety to a bed for best effect. The bulbs are planted 5 to 6 inches apart—and the depth should be according to the soil, in heavy soils 3 to 4 inches to the base of the bulbs and in light soils an inch or so deeper. Instructions for forcing in pots for Winter blooming will be found in our leaflet "How to Grow Bulbs".
