

- 5 -

elect a chairman by secret ballot to serve during the existence of the group. Full publicity through discussion, radio, and the press should be given the work of each group and its recommendations to the proper officials regarding organization of any part of the secondary schools.

### 3. The Temporary Gun Conference Group

Although the local community through an elected school board should ultimately determine the type and number of its schools and should have control of them so far as administration is concerned, no community can live isolated from other communities. Communities need to cooperate with other communities. Some important educational problems such as transportation of pupils, securing materials for school buildings, in-service training of teachers, developing associations of principals, of teachers, of parents and teachers, of students, and many other aspects of a good educational program need the support and cooperative efforts of a larger group than the local community. The gun might serve as such a unit.

To be able to function in the interest of all the communities in the gun, the temporary gun conference group should be composed of representatives from each local conference group - perhaps two in number, one a professional educator and the other a lay member who is not a teacher or a principal. It is desirable that the gun group membership be composed of both men and women. The gun conference group should make recommendations to the proper gun official concerning problems on the gun level having to do with organization of the lower secondary schools. The individual members should be responsible to the local groups appointing them for their activities and recommendations, and full publicity should be given to group recommendations through discussion, radio, and the press.

As soon as possible, the proper gun official should call together

- 6 -

the representatives elected by the local conference groups, at which meeting a permanent chairman should be elected by secret ballot. The temporary gun conference group should serve as needed until the new school law provides machinery for decentralization of educational control.

#### 4. The Temporary Prefectural Conference Group

Most of the educational problems listed as needing cooperation between the localities also need cooperation between the guns, and this can be provided by establishing temporary conference groups on the prefectural level which are composed of members elected by the gun conference groups. In addition, there is the problem of financial aid which is probably best considered on the prefectural level. Since the members of the prefectural conference group are among those originally elected by the local conference groups to form the gun conference groups, they are directly in a position to understand the problems and needs of their local communities and to help formulate wise recommendations on all problems of organization of the lower secondary schools of concern at the prefectural level, including the allocation of funds. The group, which should be composed of both men and women, could consider and make recommendations concerning all school problems in the organization of the lower secondary schools which touch the area larger than the local or gun levels.

As soon as possible the proper prefectural education official should call a meeting of the members of prefectural conference group chosen by the gun conference groups, at which time a permanent chairman should be elected. Members should be responsible to the gun conference group which they represent. The prefectural conference group should serve until the new school law provides machinery for permanent decentralization of educational control, and should make recommendations to the proper prefectural

- 7 -

official concerning prefectural problems of organization of the lower secondary schools. All recommendations of the prefectural conference group should be discussed publicly and by the radio and the press.

#### 5. Community Responsibility

Complete reorganization of the secondary schools will proceed year by year until completed and it is desirable for different schools and communities to make many necessary changes according to their own abilities rather than according to any fixed rate of speed. All of these suggested local, gun, and prefectural conference study groups should serve as interim advisory groups only until the new school law has provided a permanent system of decentralization of control of education. But it is desirable that communities begin to feel responsibility for developing their schools in line with their own particular needs, and to assume initiative in providing leadership for necessary changes.

For the use of local, gun, and prefectural conference groups, information and recommendations follow concerning problems connected with changing from the present system to the 6-3-3 educational pattern. It is suggested that the initial task of the local conference groups should be to plan practical ways of distributing the present graduates of the 6th grade among the available 7th grade classes when the new school year opens. This is the first step in creating the new lower secondary school according to the 6-3-3 pattern. Some communities may be able to establish the three grades of the lower secondary school during the school year 1947-48 and provide 8th and 9th grade training for all pupils desiring to attend. In that case the conference group would need to consider many community problems involved in the project. In the following study of the 6-3-3 pattern, and its relation to the present system, the upper secondary school is brought

- 8 -

in only in its relationship to organization of the lower secondary school. It is assumed that in providing 7th grade education for all pupils, sufficient facilities will be made available without disturbing the present facilities of the 6-year elementary school.

Part II Pupil Promotion in the School Year 1947 - 1948

## Part II. Pupil Promotion in the School Year 1947-48

The new lower secondary school will be established in the 1947-48 school year as part of the long-time plan of reorganization of the education system on the democratic principle that all youth are entitled to attend school through the secondary level. It is recognized that all pupils throughout the elementary and the secondary schools who complete the requirements of the curriculum for one grade are eligible to be admitted to the grade next higher.

All pupils now enrolled in boys' middle, girls' high, or vocational schools who wish to continue through the upper secondary school should be allowed to do so automatically upon completion of the work of each grade.

For the school year 1947-48, compulsory attendance in the lower secondary school will apply only to the 7th grade. It is planned to extend compulsory education to the 8th grade in 1948-49, and to the 9th grade in 1949-50.

Promotion into different grades of the lower secondary school during the coming school year will be based on the following points:

### 1. The 7th Grade

Some pupils will attend 7th grade located in present elementary school buildings, some in boys' middle school buildings, some in girls' high school buildings, and some in vocational school buildings; but wherever located, the 7th grade will be part of the new lower secondary school system. All 7th grades will use the new curriculum and will receive the same quality of instruction as far as possible through retraining of teachers.

It is recommended that in each community methods of distribution of 7th grade pupils among different schools by district or some other method,

- 10 -

be studied by local conference groups to be organized in every mura, machi, shi, and ku in larger cities, as described in Part I of this Handbook.

Since compulsory education will extend through the 7th grade next year, the problem for this grade is not one of selection of pupils who may continue in school, but of distribution of all pupils completing the 6th grade this March among available 7th grades. Therefore, selection methods such as written or oral examinations, or any other method similar to these should not be used.

### 2. The 8th Grade

Although attendance in the 8th grade will not be compulsory during 1947, the majority of pupils completing this spring the work of the 7th grade in elementary schools, girls' high schools, boys' middle schools, vocational schools, and youth schools will likely wish to continue in school as in the past. Pupils in the 8th grade, whether located in upper elementary schools or in the boys' middle, girls' high, or vocational schools, will use the same curriculum. At the 8th grade level there will be no problem of distribution or of selection as pupils will likely continue in the same school attended this year.

### 3. The 9th Grade

On the 9th grade level, because of limited facilities, those girls' high schools, vocational schools, and night schools which require graduation from the 8th grade of upper elementary school for admission may have to select from among many applicants the number of pupils who can be accommodated by their facilities. All students enrolled in the 9th grade will use the same curriculum.

It should be made clear to students applying that in the re-organized school system all who have completed the work of the 8th grade

- 11 -

are eligible to admittance into the 9th; and that if they cannot enter 9th grade now, it is because of lack of facilities rather than because of failure on their own part.

#### 4. The School Record

Whenever a pupil transfers from one school to another, a comprehensive record covering his academic work, his personality development, and his physical condition throughout his entire school attendance period should be transferred with him.

This record should be considered as a guidance tool to be continuously used by all teachers in helping pupils develop according to their abilities and interests. To be of guidance value in a democratic educational system, the pupil record should be based solely on evidence of the pupils ability, achievement, personality, and health. Family, social, or financial standing in the community will have no influence with teachers and principal of a professionally ethical educational institution in preparing a pupil's school record.

The record should represent the combined independent judgment of principal and teachers and should reflect the highest impartial professional and ethical standards.

As elementary schools insist on a high standard of academic work, all-round individual development of abilities of each child, accurate judgment of teachers and principal in evaluating a pupil's character and his work, they will win the confidence and respect of secondary schools to which their pupils go. Relationships between the two types of schools will be improved, and usefulness of the school record as a tool for pupil guidance will be greatly increased.

- 12 -

##### 5. Pupil Selection

As mentioned earlier, there will be no selection of pupils entering 7th grade in 1947-48, but only a matter of distribution of pupils among schools offering 7th grade work.

The only grade this year where because of limited facilities there will need to be selection of pupils from among many applicants will be the 9th grade of girls' high schools, vocational schools, and night schools, requiring for entrance graduation from the 8th grade of upper elementary school.

The fairest way for such selection to be made would be to accept all applications as they are received from pupils who have completed the 8th grade work and who have a good health record, until the number who can be accommodated by the school has been reached.

Such written examinations and oral examinations as have been used in previous years are not recommended for either public or private schools in the new educational program. If a school which must select pupils entering the 9th grade this year is not willing to accept them in order of application received, then the school record and a personal interview might be used for ranking applicants for admission. All students whose rank places them within the number which can be accommodated could automatically be accepted. Both the school record and the personal interview have been utilized to some extent by many schools, so that the procedure is familiar to many educators.

- 13 -

In using the elementary school report compiled from the pupil's school record, the following information should be considered:

- (a) Attendance record
- (b) Elementary school evaluation of work in school subjects
- (c) Personality traits and habits such as cooperation with others, honesty, responsibility, leadership, efficiency, industry, orderliness, punctuality, respect for others, unselfishness, ingenuity.
- (d) Special abilities shown through school work in science, art, music, business, farming, etc.
- (e) Rank of applicant in his elementary school class determined by combined judgment of principal and teachers. The entire class should be divided into six groups according to personality, habits, and quality of work in school subjects. The groups should be labeled as group 1, group 2, group 3, group 4, group 5, group 6, rather than superior, inferior, etc. Group 1 could include the most able students, and group 6, the least able. The number of pupils falling within each of the six groups would not be the same, but would vary considerably. Generally in an average class, larger numbers of

- 14 -

pupils would fall in group 3 and in group 4 than in the other groups. The number of the pupils in each group should be given at the end of the list with the number of pupils in the whole class. The report of the entire class might be given as in the past.

The aim of the personal interview is to observe expressions of character and personality of the applicant as revealed in discussion between staff members of the secondary school and the pupil.

The interview should be a friendly conference in one room only, between the pupil and the school principal and a small number of teachers. Such an interview cannot be successful if the staff group is large. The attitude of the staff should put the pupil at ease so that his reactions will be natural.

Questions or subjects for discussion should be chosen to reveal the pupil's character, his reaction to subjects discussed rather than his knowledge of facts, his maturity as revealed by his evaluation of matters discussed in comparison with maturity to be expected in a boy or girl of this grade. Discussion with different pupils should be developed along various lines rather than allowing it to become uniform for the group of applicants.

The personal interview for all applicants should not be limited to one day, but different pupils could be interviewed over a period of several days or weeks.

#### 6. The Physical Inspection

The physical inspection should be made by a physician representing the school which the applicant wishes to enter. It is useful only in

Part III Reorganizing the School System by the 6-3-3 Pattern

-15 -

eliminating students not physically able to carry the work of the grade, and should not be included in factors by which pupils applying to enter are ranked for admittance. The inspection should aim mainly to reveal sickness or physical abnormality.

- 16 -

### III. Reorganizing the School System by the 6-3-3 Pattern

#### 1. Introduction

During the past few months a great deal has been published about the 6-3-3-4 plan of school reorganization. The adoption of this plan was recommended on December 27, 1946 by the Japanese Education Reform Council, and it is endorsed by the Ministry of Education. This plan provides that each child shall receive his first six years of formal education in the elementary school (except where he attends kindergarten, in which case six years are spent in the elementary school in addition to training in kindergarten). After completing the 6th year of elementary school, the pupil is eligible to enter a 3-year lower secondary school. According to the provisions of the school law which likely will be presented to the Diet during the current session, by 1949-50 attendance through the 9 years of these two schools will be compulsory for all children in the nation. Beyond the lower secondary school there will be a 3-year upper secondary school which each pupil completing the work of the lower secondary is eligible to enter; and beyond that a 4-year daigaku.

The public upper secondary schools which have attached lower secondary schools should not admit the graduates of the attached lower secondary schools in preference to the graduates of other schools. This principle does not apply to private schools which have both upper and lower secondary schools under the same management. This recommendation does not apply to pupils attending middle schools during the school year 1946-47 but it does apply to students entering the 7th grade at the beginning of the school year 1947-48.

Perhaps the most important single advantage this plan of

- 17 -

organization has over the present system is that it provides for continuous progress through school for all children through the 9th grade, and through the upper secondary school and the university for those who choose to attend. The present system of maintaining middle and high schools for only approximately twenty percent of the children of the nation and terminal elementary and youth schools for the remaining eighty percent is undemocratic, wasteful of potential talent needed in the reconstruction of the nation, and unsound educationally.

This study is concerned with bringing into existence only the two levels of secondary schools. Reorganization under the 6-3-3 pattern involves the elementary school only to the extent that its 7th and 8th grades become a part of the lower secondary school.

## 2. Description of the Lower Secondary School

### (a) Definition and Purposes

The lower secondary school receives all pupils after they complete the 6th and final year of the elementary school. The same curriculum is available to all boys and girls with some opportunity for adjustments as desired to meet individual needs, interests, and aptitudes. The principal aim of the school is to help the nation's young people to become healthy, responsible, thinking citizens, eager to develop their innate abilities. The curriculum places emphasis on development of individuality and personality, and the ability to participate effectively in community life, with provision for guidance and some training in vocations. Its work is based on educational principles drawn from psychology, sociology, and other sources which have been established as necessary for the wholesome growth of boys and girls from twelve to sixteen years of age.

- 18 -

## (b) Length of Course

The course of the three-year lower secondary school comprises grades 7, 8, and 9. In case additional years are added to a community school system beyond the 9th grade, they should be considered work on the upper secondary school level and become part of an upper secondary school. No terminal courses should be added to the lower secondary school.

## (c) Contiguous to the Elementary School

The lower secondary school should be the only school contiguous to the elementary school and should become an independent school as soon as possible. This means that all pupils will enter the lower secondary school upon completion of the 6th grade of the elementary school. This principle is basic to democratic educational opportunity. The same curriculum will be recommended for all 7th, 8th, and 9th grade classes in the school year 1947-48, regardless of the present type of school in which such work is offered.

## (d) Location

Because education will be compulsory and without entrance examinations through grades 7-9, every village, city, and town should provide local lower secondary educational opportunities for the entire school population in grades 7-9. Larger villages should establish at least one such school, but smaller villages might combine with other nearby villages to maintain a lower secondary school. Cities and towns may need a number of such schools.

## (e) Free Compulsory Attendance

Attendance through the 3 grades of the lower secondary school should be free and compulsory by 1949-50. The draft of a law to provide for

- 19 -

this will likely be presented to the Diet during the present session. This draft provides for extending compulsory attendance to the 7th grade during the school year 1947-48; to the 8th grade during the school year 1948-49; and to the 9th grade during the school year 1949-50. This does not mean that construction of the entire lower secondary school needs to wait for compulsory attendance through its 3 years. Communities are urged to go ahead and build their lower secondary schools as rapidly as possible in order to extend educational opportunities for those who desire to enter the 8th and 9th grades. The national government proposes to make education free and compulsory on the 7th grade level during 1947-48 by eliminating tuition at this level in the government and public schools, assuming the obligation to pay tuition in non-public schools which desire to cooperate on this basis, and by making some provision for additional teachers and additional classrooms. Private schools which do not enter into the government compulsory system are free to continue to charge tuition. If, with their present facilities and such facilities as they can add, some local communities can provide 8th and 9th grade education for those who wish to attend, they are encouraged to go ahead and organize the complete lower secondary school, or as much as is possible, during the 1947-48 school year.

(f) Coeducation

It is recommended that all public schools and government schools should become coeducational but the matter should be determined by citizens of the community. Coeducation is recommended for greater economy, more effective use of teachers, and extension of the educational

- 20 -

areas in which boys and girls in grades 7-9 learn to associate normally, and thus form a nucleus of students who can become leaders in developing more nearly equal relationships between the sexes. The final decision as to whether a school is to become coeducational should be made by the citizens of the community which the school serves. Private schools are also free to make their own decisions regarding coeducation.

(g) Full-day System

In its completed form the lower secondary school should be a full-day school, and night school work should not be recognized on this level. For this year, students should have opportunity to complete the 9th grade of the curriculum by either full-time or night school attendance. The part-time system should offer the same curriculum and require the same standards of work as the full-day system, and often, but not necessarily always, be under the same administration.

(h) Separate Buildings, Full-time Principals and Teachers

It is desirable for elementary, lower secondary, and upper secondary schools to be housed in their own separate buildings. Throughout the country, grades 7 and 8 of the present elementary schools will form the nucleus of the lower secondary school. For the present, where grades 7 and 8 are housed in the same building with grades 1-6, it may be necessary, in most cases, for them to continue in the same classrooms used at present. In many cases, a few new classrooms will be needed to house the new 9th grade. Although housed in rooms adjacent to the elementary school, grades 7-9 should be organized as a lower secondary school, administered if possible by its own principal. Since the first three years of the present middle school become grades 7, 8, and 9 of the lower secondary school, it

- 21 -

is likely that at first these grades and the 10th and 11th grades of the upper secondary school will need to exist in the same building. As soon as possible each type of secondary school should have its own principal and separate teachers. In all matters, the lower secondary school should be developed in close relation with other nearby lower and upper secondary schools, rather than with the elementary school, as it is designed to serve the special needs of adolescent youth. This basis, rather than the external fact that the elementary and lower secondary schools are considered the compulsory attendance units, should determine the relationships among the three schools.

The lower secondary school should be staffed by principals and teachers who are especially qualified on the basis of practical experience, background, and ability to guide the development of early adolescent youth. In cases where teachers qualified according to this definition are not found, measures should be taken for the re-education of available teachers. If necessary, in small lower secondary schools, one principal might administer more than one secondary unit or combine teaching with administration. It is desirable for the lower secondary school to employ full-time teachers rather than for teachers to divide their time with either the elementary grades or upper secondary grades.

(i) Curriculum

The curriculum for 1947-48, given in Appendix I, which will be published in the course of study, will apply to all 7th, 8th, and 9th grade students, regardless of the present type of school in which the

~~work is offered.~~ Table I below will be helpful in determining the curriculum for each different type of school.

TABLE I.

The New Lower Secondary School Curriculum	Higher Elementary School	Secondary Schools Requiring Completion of 6th Grade of Elementary School for Entrance			Secondary Schools Requiring Completion of 8th Grade of Elementary School for Entrance		
		Boys' Middle Schools	Girls' High Schools	Vocational Middle Schools	Boys' Night Middle Schools	Girls' Night Middle Schools	Vocational Middle Schools
New Curriculum for 7th grade applies to....	1st yr.	1st yr.	1st yr.	1st yr.	--	--	--
New Curriculum for 8th grade applies to ...	2d yr.	2d yr.	2d yr.	2d yr.	--	--	--
New Curriculum for 9th grade applies to ...	Special Course	3d yr.	3d yr.	3d yr.	1st yr.	1st yr.	1st yr.

(j) Time of Implementation

The lower secondary school will come into existence on April 1, 1947. This does not mean that it can exist in its completed form on that date, but grades 7, 8, and 9 in existing schools will correspond to grades 7, 8, and 9 of the lower secondary school. The table above shows the position which grades 7, 8, and 9 of existing schools should occupy in the new lower secondary school. Full development will be achieved year by year and communities will vary in their rate of development.

### 3. Description of the Upper Secondary School

#### (a) Definition and Purposes

It has been noted that one of the purposes of the lower secondary school is to explore vocation and general education aptitudes and interests. The upper secondary school, which completes secondary education, makes provision for a more or less complete training in the fields chosen as a result of work in the lower secondary school, whether the pupil wishes to prepare to enter university or to enter a vocation. It provides diversified curricula by means of which a pupil, once his decision is reached, is able to pursue work systematically planned with reference to his cultural and vocational needs as an individual and as a member of society. Such curricula should be arrived at through analyses of present and probable future demands of industrial, business, professional and social life. In many localities the same upper secondary should prepare pupils to enter university or to enter a vocation. In metropolitan and in some other particular localities specialized schools on the upper secondary level should be established. The curriculum for upper secondary schools provides for both types of schools - those with a comprehensive program and those which specialize in training pupils for a definite specialized vocation.

#### (b) Length of Course

The fundamental course of the upper secondary school should be three years in length, and comprise grades 10, 11, and 12. This school should be prepared to receive all students who desire to continue their formal schooling after completing the 9th year of the lower secondary school. Any work offered in the regular upper secondary school and any additional work offered in a particular field or vocation should be on the

- 24 -

secondary level, and not on the (aigaku level.

(c) Location

Upper secondary schools should exist in sufficient number and in such locations that all who desire may attend. New upper secondary schools should be planned on the basis of school population surveys. Eventually each prefecture should be divided into permanent school districts, with one or more upper secondary schools serving each district. Cities should establish as many upper secondary schools as needed for those who desire to attend. Larger towns may be able to establish one or more such schools, but in general, it will be necessary for villages to combine to maintain an upper secondary school.

(d) Non-Compulsory Attendance

The present aim should be to make attendance through the three grades of the upper secondary school free but not compulsory. Although the goal of providing free education in the upper secondary school should be realized as soon as possible, it is planned that the national government will assume the obligation for elimination of tuition in the public schools and payment of tuition in such private schools as wish to cooperate in this way only on the seventh grade level during the school year 1947-48.

(e) Coeducation

Many schools on this level and particularly vocational schools now serving only boys should be encouraged to become coeducational. One fundamental principle of the new system of education is that there shall be equal educational opportunity for both boys and girls, and it

- 25 -

likely will not be possible to establish girls' vocational schools with standards equal to boys' vocational schools at the present time. The matter should be determined by the community for each school. Economy of teaching staff, finance, building space, and the preference of the community served should all be considered in making a decision. Coeducation is not achieved merely by boys and girls being housed in the same school or in the same classroom; but it implies joint planning and carrying out of school work and life by boys and girls together.

(f) Full-time and Part-time System

All curricular offerings of the upper secondary school should be available to full-time, night school, and part-time students. Present youth schools of all levels should be discontinued by 1948-49. New part-time schools should maintain the same standards of teacher preparation and of student work as required by full-time schools, of which they may be a part. Although students should be required to perform the same standard of work and the same amount in part-time as in full-time schools, they should be allowed a longer period in the part-time school in which to complete it. Upon completion of the required curriculum, part-time students should receive the same type of graduation certificate as awarded full-time students.

(g) Separate Buildings, Full-time Principals and Teachers

The upper secondary school eventually should have a plant of its own. Buildings for new schools should be designed to meet the needs of the pupils who are to occupy them, and should be planned around the curriculum. The comprehensive upper secondary school, as defined in paragraph 3 (a) will prepare students to enter a university or to enter a vocation. Planning of buildings and equipment should be preceded by a thorough study

- 27 -

## (i) Time of Implementation

It is planned that the upper secondary school will be established in the school year 1948-49. This does not mean that in all communities it will have three years of work at first; but the 4th and 5th years of boys' middle schools, girls' high schools, and vocational middle schools, which require for entrance completion of the 6th grade of elementary school will become the 10th and 11th grades of the upper secondary school wherever they exist. This applies in the same manner to the 2nd and 3rd years of vocational middle schools which require for entrance completion of the 8th grade of the present higher elementary school. All of these schools should plan to expand to include the full three upper secondary years. Local communities are encouraged to add additional years to the present course of one or two years as rapidly as they are able.

## 4. Implementing the 6-3-3 Organization

## (a) Step-by-Step Process

The plan described above may seem overly ambitious, but only so when it is assumed that complete and separate lower and upper secondary schools must be constructed before the system can be adopted. There are many practical problems which must be solved before it can be placed into effect over the entire nation. The efforts of all people are needed for the solution of these problems, and it is important to begin with the concept that putting this plan into action must be a step-by-step procedure. A constant attempt should be made during the first year (1947-48) by pupils, teachers, parents, school administrators, and the general public to work out reorganization problems. Between April 1, 1948 and April 1, 1949, problems still left unsolved should be dealt with. Each school year should

- 28 -

be a period during which the utmost efforts of each community are directed at the solution of educational problems.

(b) Local Schools and the 6-3-3 Pattern

In order to illustrate the manner in which the existing schools fit into the 6-3-3 pattern, the school system of a typical small city is analyzed in Table III below. This city has six 8-year elementary schools, one 6-year elementary school, one boys' middle school, one girls' high school, one vocational school beginning at the 7th grade (having as a requirement for entrance completion of the 6th grade of the elementary school), one vocational school beginning at the 9th grade (having as a requirement for entrance completion of the 8th grade or higher course of the higher elementary school), and a youth school with the ordinary course, regular course, and post-graduate course. Located at the right-hand side of Table III is the typical 6-3-3 ladder.

TABLE III

							14	The 6-3-3 Ladder
							13	
Upper Secondary School Area							12	12
							11	11
							10	10
Lower Secondary School Area							9	9
							8	8
							7	7
							6	6
							5	5
							4	4
							3	3
							2	2
							1	1
							11	11
							10	10
							9	9
							8	8
							7	7
							6	6
							5	5
							4	4
							3	3
							2	2
							1	1

29

(1) Present Youth School Grades indicate a minimum of 210 hours of school work each year.

- 30 -

From this illustration, it can be seen that the schools which fall into the area of the lower secondary school are:

(a) The first and second years of the higher course of the elementary schools (7th and 8th grades).

(b) The first, second, and third years of the secondary schools having as requirement for entrance the completion of the 6th grade of the elementary school (7th, 8th, and 9th grades).

(c) The first year of secondary schools having as the requirement for entrance completion of the 8th year of the elementary school (9th grade).

(d) The two years of the ordinary course and the first year of the regular course of the youth school.

The schools which fall into the area of the upper secondary school section of the 6-3-3 pattern are:

(a) The 4th and 5th years of the secondary schools having as the requirement for entrance completion of the 6th year of the elementary school (10th and 11th grades).

(b) The 2nd and 3rd years of the secondary school having as the requirement for entrance completion of the 8th year of the elementary school (10th and 11th grades and the 12th grade of night school).

(c) The 2nd year and upward of the regular course of the youth school.

##### 5. Creating the Lower Secondary School

###### (a) A Separate School Plant during 1947-48

Initially a survey should be made by each community to determine whether, during the 1947-48 school year, it will be possible to achieve the aim of providing separate buildings for the new lower secondary school.

- 31 -

Persons responsible for reorganization should determine whether:

- (1) A building or buildings can be constructed.
- (2) There exist within the community buildings which may be utilized for this purpose.

In the event a separate building can be procured or constructed and equipped, reorganization becomes the process of transferring the 7th and 8th grades from the elementary schools to the new building and adding a 9th grade.

(b) Converting the Separate Higher Elementary School into a Lower Secondary School.

Where a higher elementary school, consisting of grades 7 and 8, exists separately from the 6-grade elementary school, its conversion into a lower secondary school simply means the addition of another year of school work and the use of the new curriculum for the 7th, 8th, and 9th grades.

Where the 9th grade is added, provision of suitable equipment and facilities will be made as a matter of course. Table IV below shows the increase in teachers and classrooms which would be necessary in the case of expansion of a typical higher elementary school into a 3-year lower secondary school.

Table IV Converting a Higher Elementary School into a Lower Secondary School

(a) Present Higher Elementary School showing number of pupils, classes, classrooms, and teachers during the school year (1946-47).

Grade	Enroll- ment	Classes	Classrooms			Teachers		
			Ordinary Classrooms	Special Classrooms	Total	Those in Charge of Classes	Special	Total
7th	424	8	8			8		
8th	384	7	7			7		
Total	808	15	15	4	19	15	4	19

(b) The Same School with ninth grade added showing number of pupils, classes, classrooms, and teachers of the lower secondary school (1947-48).

Grade	Enrollment	Classes	Classrooms			Teachers			
			Ordinary Class-rooms	Special Class-Rooms	Total	Based on the pupil-teacher ratio of the higher elem. school		Total	Based on the pupil-teacher ratio of the new lower secondary school
						Those in Charge of Classes	Special		
7th Grade	(1) 551	11	11			11			(4) 22
8th Grade	424	8	8			8			(4) 16
9th Grade	(2) 324	7	7			7			(4) 14
Total	1299	26	26	7	33	26	(3) 6	32	(4) 52

Footnotes:

- (1) The number 551 is an estimate of the enrollment in the 7th grade next year calculated on the supposition that the number of pupils who enter the 7th grade on April 1, 1947, will be greater than the present number enrolled in the 7th grade (424) by 30%.
- (2) The estimated number of students who will enroll for the 9th grade next year (324) is based on the supposition that the present number enrolled in the 8th grade (384) will be decreased by those who enter middle schools which require completion of the 8th grade as a qualification for entrance, and those who enter a vocation on completion of the 8th grade. The total number of these two groups, based on studies of school graduates is estimated at 60.
- (3) Six special-subject teachers would be required to supplement the work of the 26 teachers in charge of classes in case the higher elementary school pupil-teacher ratio is used.
- (4) The number of teachers required for the new lower secondary school is calculated on the desirable pupil-teacher ratio of two teachers per class. This ratio should be accomplished as soon as possible, but where necessary any lower secondary school may have a higher ratio of pupils per teacher.

- 33 -

(c) Sharing Facilities of the 8-Year Elementary School with the Lower Secondary School

Where the 2-year higher elementary school does not exist separately but is an integral part of an 8-year elementary school, the problem of bringing the lower secondary school into existence is substantially the same. The ideal solution is to find another site for the lower secondary school, transfer the 7th and 8th grades to the new building, and add a 9th year. It is realized that in many cases it will be necessary for the time being to expand the present building or buildings to provide room for 9th grade. Tables V, VI, VII and VIII which follow illustrate what this expansion would mean to a typical community which now has an 8-year elementary school. Table V gives information on the enrollment, number of classes, number of classrooms and number of teachers during the present school year (1946-47). Tables VI, VII, and VIII illustrate the increased enrollment and the expanded needs for classrooms and teachers if a lower secondary school is established on the same campus.

TABLE V

An 8-year Elementary School Before Adjusting to 6-3 Pattern (1946-47)

(d) Establishing a Lower Secondary School in an Area Where Several Elementary Schools Exist

Hitherto we have considered how the 6-3 school system might be established when a solitary elementary school exists in a community. Where there are several elementary schools they should not be considered separately. Rather than for each school to expand separately, it might be a better plan in many cases to establish the lower secondary school in one of the elementary schools situated in the center of the town, after a study has been made of the number of pupils eligible to attend the lower secondary school and the accessibility of the school to all of the eligible children. All pupils entitled to attend the lower secondary school might be admitted into this central school or schools, and the other schools remain as six-year elementary schools. Parts (a) and (b) of Table IX below show a comparison of the two methods of bringing the lower secondary school into existence:

- (1) Building several small lower secondary schools, one on the campus of each 8-year elementary school.
- (2) Designating some schools as elementary schools and others as lower secondary schools.

Although this illustration is limited to present elementary schools, middle grade schools or youth schools in the community should become a part of the over-all plan. Where practicable, the plan outlined in Table IX (b) is preferred to the plan in Table IX (a).

TABLE IX

Part IV. Correlating the Present Educational System with the 6-3-3 Pattern during the School Year 1947-48

Although during 1947-48 the present secondary school system cannot be fully reorganized into separate lower and upper secondary schools, each having its own teachers, buildings, and equipment, grades 7, 8, and 9 will form units of the new lower secondary school regardless of the buildings in which they may be housed. These grades of the new lower secondary school and the remaining grades of the present boys' middle schools, girls' high schools, and vocational middle schools will all use the new curriculum during the coming year. Grades of the regular course of the youth school will also use the new curriculum.

Attendance in grade 7 only will be compulsory in the school year 1947-48. It is planned that grade 8 will become compulsory in the school year 1948-49, and grade 9 in 1949-50.

The following suggestions are made to help clarify the relationship between the various school years of the present system and the grades of the new secondary schools during 1947-48.

1. The New Lower Secondary School

The new lower secondary school will include grades 7, 8, and 9 wherever they are located.

(a) The 7th Grade

All boys and girls who have completed the work of the 6th year of the lower course of the present elementary school will automatically enter the 7th grade of the new lower secondary school, which will be free and compulsory.

Part IV Correlating the Present Educational System with the 6-3-3

- 41 -

During the reorganization period, most of these 7th grade pupils will continue their work in the same building, where they attended elementary school. However, some will attend 7th grade which is housed in boys' middle schools, some in girls' high schools, and some in vocational middle schools. Insofar as possible, all 7th grades will offer work of equal quality.

(b) The 8th Grade

Pupils of the 1st grade of the common course of youth school and also of the higher elementary school will be promoted automatically to the 8th grade of the new lower secondary school, but attendance is not compulsory in 1947-48.

Pupils of the 1st grade of boys' middle school, girls' high school, and vocational school whose entrance qualification is graduation from 6th grade elementary school will automatically be promoted to the 8th grade of the new lower secondary school, but attendance is not compulsory in 1947-48.

(c) The 9th Grade

Pupils who graduate from the 2nd year of the higher elementary school, the special course of the higher elementary school, the 2nd year of the common course of the youth school, or the 1st year of the regular course of the youth school will automatically be promoted to the 9th grade of the new lower secondary school. Attendance in the 9th grade is not compulsory in the school year 1947-48.

Pupils who have graduated from the 2nd year of the higher elementary school, if they desire, may enter vocational school, night middle

- 42 -

school, or girls' high school whose requirement is graduation from higher elementary school. The 3rd grade of these schools will be the 9th grade of the new lower secondary school.

Pupils completing in 1946-47 the 2nd year of boys' middle school, girls' high school, and vocational school whose requirement for entrance is graduation from the 6th grade elementary school will automatically be promoted to the 3rd year of these schools, which becomes the 9th grade of the new lower secondary school.

(c) Graduation from New Lower Secondary School

Students now in the 1st and 2nd years of the present secondary schools, corresponding to the 7th and 8th grades of the new lower secondary school, will graduate under the new lower secondary school system upon completion of the new 9th grade curriculum.

Those who enter vocational, girls' high, or night secondary schools at the 9th grade level shall be allowed to graduate on completing the curriculum of this grade.

2. The New Upper Secondary Grades During 1947-48.

According to present planning, the full three-year new upper secondary school will not be established until the school year 1948-49. However, during the coming year the administration of these grades now offered will be affected by the establishment of the new lower secondary school.

(a) The 10th Grade

Students completing in 1946-47 the 3rd year of the boys' middle, girls' high, and vocational schools which require for entrance the

-43-

completion of the 6th grade of the present elementary school will automatically be promoted into the 1st year (10th grade) of the new upper secondary school curriculum in accordance with the present system.

Students completing in 1946-47 the first year of the present secondary schools which require completion of the 8th grade of the present elementary school for entrance will be promoted to the 1st year (10th grade) of the new upper secondary school curriculum in accordance with the present system.

(b) The 11th Grade

Students completing in 1946-47 the 4th year of boys' middle, girls' high, and vocational schools which require for entrance the completion of the 6th grade of the present elementary school will automatically be promoted into the 2nd year (11th grade) of the new upper secondary school curriculum in accordance with the present system.

Students completing the 2nd year of the present secondary schools which require for entrance completion of the 8th grade of the present elementary school will automatically be promoted to the 2nd year (11th grade) of the new upper secondary school curriculum in accordance with the present system.

Students completing in 1946-47 the 3rd year of the present night secondary schools will automatically be promoted to the 4th year of night secondary school corresponding to the 11th grade of the new upper secondary school curriculum.

(c) Graduation

Those students in 3rd, 4th or 5th years during 1946-47 of the present secondary schools which require completion of the 6th grade of

elementary school for entrance may graduate under the present system of their respective schools, if they choose.

Those students in 1st and 2nd years during 1946-47 of the present secondary schools which require completion of the 8th grade of the present elementary school for entrance may graduate under the present system of their respective schools if they desire.

This means that students now in those grades of the present secondary schools may if they desire graduate upon completion of the highest year now offered by the schools they are attending.

In case a particular school adds the 2nd and 3rd years (11th and 12th grades) of the new upper secondary school curriculum, then the present 3rd, 4th, and 5th year students who do not desire to graduate under the present system may continue to attend and will be promoted to these new grades upon completion of the preceding work.

Students entering in 1947-48 the 1st year of a vocational school, girls' high school, or night secondary school requiring for entrance completion of the 8th year of the present higher elementary course may graduate at the time they normally would graduate under the old system, if they desire.

### 3. Changes in the Present Youth School in 1947-48

The common 2-year course of the youth school will be discontinued at the beginning of the 1947-48 school year.

Work in the regular course of the youth school will be continued until part-time work is offered in the grades of the new upper secondary school. It is planned to establish part-time work in each grade of the upper secondary school at the beginning of the school year 1948-49, at which

- 45 -

time the regular course of the youth school will also be discontinued.

During 1947-48 it will be necessary for the regular course of the youth school to use the new course of study and textbooks prepared for the upper secondary school, since no special textbooks for youth schools will be available.

Students who transfer from the ordinary course of the youth school into the new lower secondary school should be assisted by their teachers as needed to be able to do satisfactory work and to adjust with as little difficulty as possible from the youth school to the full-time school standards.

(a) Students now in the 1st grade of the ordinary course of the youth school (corresponding to the 7th grade) will be promoted automatically to the 8th grade of the new lower secondary school in 1947-48, although attendance is not compulsory in 1947-48.

(b) Students now in the 2nd grade of the ordinary course of the youth school may be admitted into the 9th grade of the new lower secondary school in 1947-48, or if they desire, may continue part-time work in the regular course of the youth school.

(c) Students at present in the 1st year of the regular course of the youth school may be admitted into the 9th year of the new lower secondary school in 1947-48, or may continue to work part-time in the regular course of the youth school.

#### 4. Establishing New Upper Secondary Part-time School System

The role of working youth in the community is very important, and they are eager to study to help build a cultural nation and establish a standard of morals. It is urgently important to provide working youth educational opportunities in accordance with their abilities.

Reorganization of the educational system should be accomplished

- 46 -

along this line, and the community and the nation should endeavor to develop an adequate part-time education program to replace the youth school, which is to be eliminated because it is inadequate. A part-time system of the upper secondary school is very important for education of working boys and girls.

(a) Characteristics of Part-time System

- (1) Admit students who have completed at least the 9th grade of the new lower secondary school.
- (2) Curriculum, preparation of teachers, and equipment equal to that of regular system, and adapted to needs of locality.
- (3) Offer work of the 3-year upper secondary curriculum arranged so that students are permitted a longer time to complete it through a part-time schedule.

(b) Management of Part-time System

- (1) As much as possible, secondary school buildings and equipment should be used for the part-time system.
- (2) The part-time system generally should be administered in connection with the regular school system.
- (3) Teachers in the part-time and in the regular system should be of equal ability and preparation and should receive equal consideration.
- (4) Teachers of each course should be adequately trained for teaching that material, and where competent teachers are not available present teachers should be retrained for that work.

(5) If needed in a local situation, an independent, part-time upper secondary school may be established but should be affiliated with a regular school. As shown in figure X, one upper secondary school which is well equipped could establish cooperative relationships with several part-time schools. Students in the part-time school taking physics, chemistry, vocational courses, etc., which require special equipment available in the regular school but not in the part-time school could thus take that part of their work in the regular school.

The central regular school could also serve all cooperating part-time schools through in-service training of teachers.

TABLE X

"Mura" Part-time Upper Secondary Schools Organized Around a "Machi" Full-time Secondary School

\* Village part-time upper secondary school

⊛ Town full-time upper secondary school

- 48 -

Communities will inevitably have to overcome many difficulties in developing a part-time upper secondary school as well as in providing regular upper and lower secondary schools. In some communities which cannot at present establish independent lower and upper part-time secondary schools, it may be necessary for them to arrange to utilize the elementary school facilities, being careful not to hinder the work of the elementary school. It is desirable to construct independent buildings as soon as possible.

#### 5. Private Schools

It is recognized that private schools should offer a curriculum which satisfies the minimum requirements established by law for schools of the same grade levels. Beyond this, they are free to develop according to their particular aims. They may determine whether they will maintain both the lower and the upper secondary schools, or whether they prefer to develop only the upper secondary school.

Private schools which wish to cooperate with the government in providing compulsory education through the lower secondary grades can do so according to financial and other arrangements which are satisfactory to both the private school and the government.

However, private schools which prefer not to make arrangements with the Government to provide compulsory education, may continue to offer work of the lower secondary school and will not be affected by a district plan if used for public schools.

#### 6. Community Cooperation Necessary

In realizing the complete new 6-3-3 school pattern, and especially the lower secondary school during the school year 1947-48, many problems will unavoidably arise. Educators, students, parents, parent-associations,

- 49 -

groups concerned with education, and all people generally are asked to cooperate with each other and with government officials in studying the school reorganization plans and in helping develop a school system adequate for the new society.

Further matters not cleared in this statement will gradually be clarified as problems are solved, and modifications of Mombusho articles will be made public immediately.

APPENDIX I

The schedule of the lower secondary school curriculum is based on 34 hours of instruction per week for all lower secondary school students. Each period should be 60 minutes in length, including the time for changing classes. Schools may increase the weekly hours of instruction to 36 if they so desire.

Compulsory subjects are listed which will require 30 of the 34 hours per week in the case of students on all three grade levels. Students may use these four hours in taking a foreign language, in taking additional vocational subjects, or in free study. The four hours of foreign language may be broken down into two 2-hour subjects and the four hours of additional vocational subjects into two 2-hour subjects, in order that students may take a foreign language subject and an additional vocational subject if they choose to do so.

Individual schools may offer as many different vocational subjects as they desire. Each school should offer a sufficient number of vocational subjects to allow each student to spend 8 hours (4 compulsory and 4 elective) in vocational training. These 8 hours may be devoted to two subjects, such as home economics and agriculture, or they may be distributed among several vocational fields. Some schools may wish to offer a great variety of vocational subjects, in order that students, especially in the 8th and 9th grades, may have a wide choice among fields. The specific courses to be offered by the individual school are not indicated in this table. The subjects recommended for the lower elementary school for which textbooks are available are listed in the section of this Course of Study which is devoted to Vocational Education. Principals and teachers should select from this list suitable courses which will meet the vocational needs of children in the school, and which the school is equipped to teach effectively. Selection of courses should be preceded by a careful study of the jobs to which students are likely to go after completion of the course of study of the lower secondary school.

Because of the general absence of special study halls and libraries in which students can utilize to the maximum advantage a number of periods devoted to free study time, no periods were set aside for this purpose. However, there is a provision that students may use the four to six hours above the compulsory course for free study if they choose to do so.

Where individual schools initially can offer only two years of this three-year curriculum, no change in the lists of subjects for the 7th and 8th grades is necessary, except that the two-year course in Japanese History may be offered in the 7th and 8th grades instead of the 8th and 9th grades.

The Lower Secondary School Curriculum

The table below lists the subjects for the lower secondary school that have been adopted by the General Curriculum Committee of the Ministry of Education and gives a suggested minimum allotment of weekly hours for each subject.

Compulsory Subjects	7th Grade	8th Grade	9th Grade
Japanese Language	Course I - 5 hours	Course II - 5 hours	Course III - 5 hours

HATSU GAKU #81

1 March 1948

From: Director of School Education Bureau, E. M.

To : Every Prefectural Governor.

Subject: Concerning the Treatment of Miscellaneous Schools.

As the Article 84 of the School Education Law has some ambiguity in its application, causing the establishment of many unauthorized miscellaneous-schools, with not a little undesirable influence upon the educational field, the following notification is issued concerning the treatment of them, which, it is hoped, is to be put into effect without fail.

1. All educational institutions that teach a certain subject or skill or both, and having two (2) or more instructors and twenty (20) students or more are regarded as those conducting miscellaneous-school education as stipulated in Article 84 of the School Education Law. Therefore, they must make authorization application in accordance with Article 4, which is to be applied here by Article 83 of the same law. (But the schools designated in Article 1 of the School Education Law and the miscellaneous-schools which have been authorized hitherto are excepted). Prefectural governor has the power of designating them as miscellaneous-schools in case that they do not make application for authorization.
2. The above-mentioned educational institutions are not allowed to operate until granted a permit issued by the prefectural governor.
3. Conferences, meetings and similar activities do not fall within the purview of the above two articles.
4. The director, or the representative who are managing the affairs, of the educational institution which falls under the application of Article 1, must present an authorization application to the prefectural governor within two (2) months of the date of issue of this notification.

## Translation of HATSU GAKU

HATSU GAKU No. 117

DATE: 27 March 1948

FROM: Chief of the Bureau of School Education, Ministry of Education

TO : Metropolitan, Hokkaido, and Prefectural Governors

Subject: Enforcement of the New Upper Secondary School Education

We have notified you in detail of our policy as to the enforcement of the new upper secondary school education in Notification HATSU GAKU No. 534, dated 27 December 1947, concerning a "Guide for the Enforcement of the New Upper Secondary School Education."

According to the recent reports of Metropolitan, Hokkaido, and various prefectural governments, we have noticed that, in formulating plans for the enforcement of the new upper secondary school education, due consideration is not always paid to the educational necessity of the districts concerned with respect to the new lower and upper secondary schools. You are hereby requested to call the attention of the Council on the Preparation for the Enforcement of the New School System and the competent Metropolitan, Hokkaido, and prefectural authorities to the following points:

1. A well-balanced plan for both the new lower and upper secondary schools must be formulated. Taking into consideration the fact that the new lower secondary school education is compulsory and is a foundation for the new upper secondary school education, it is considered proper that the former be given preference over the latter in consolidating their establishment. At present emphasis is placed on the new upper secondary schools, while only enough attention is given to the lower ones to obtain buildings or substitute buildings and nothing more. Such an attitude or policy should be reexamined and as much emphasis placed on the new lower secondary schools as is now being given the new upper secondary schools. (See Item 3 in Page 2 of a "Guide for the Enforcement of the New Upper Secondary School Education.")
2. It is desirable that new upper secondary schools be adequately prepared in number and accomodation to admit all the applicants to said schools. However, this is a target at which we can aim. It is not compulsory that it be accomplished at present.
3. If so much emphasis is put on the perfect enforcement of the new lower secondary school education that the enforcement of the new upper secondary school education is unfavorably affected, such a policy cannot be a well-balanced effectuation of the plan.

4. Whether the new upper secondary school adopts the co-education system or not should not be decided by the competent authorities, but be determined by the opinion of the people in the district where the school is located. Due attention should be given to securing equal educational opportunities for boys and girls. If the metropolitan, Hokkaido, and prefectural government should carry out experiments on co-education in some schools, it would be very useful for the future of education.
5. The number of the new upper secondary schools with comprehensive curricula which are to be set up should not be determined as to uniformity throughout the country, but their establishment should be decided in each case with a view to satisfying fully the demand of the young people in the district. The establishment of new upper secondary schools with comprehensive curricula might be realized by formulating a long term plan. But in districts where this type of school activity can be carried out, after proper measures have been taken, it is requested that you proceed to enforce the plan immediately beginning with the new school year.
6. Whether a private old secondary school should be a new lower or upper secondary school is to be determined freely by the school concerned. If such a school desires to be a new upper secondary school and meets the requirements, it should be authorized.
7. Those students who were, in the 1947 school year, in the second year grade of an old secondary school of which the entrance requirement is the completion of the lower course of an elementary school, may be enrolled, as you have been notified, in the secondary school juxtaposed with the said school which has been converted into a new upper secondary school. Even though those students were admitted to a lower secondary school in the 1946 school year or before, they are authorized to enter new upper secondary schools preferentially.

HATSU-GAKU #117

FROM: Chief of the School Education Bureau

TO: Prefectural Governors

SUBJECT: On the Reorganization of the New Upper Secondary Schools

Detailed directions for the reorganization of new upper secondary schools were indicated by Hatsu-gaku #534, "Handbook on Organization of New Upper Secondary Schools", published on 27 December 1947. Recent reports from several prefectures indicate that in many cases the educational needs of both the new upper and the new lower secondary schools have not always been sufficiently considered. Therefore, for caution's sake, I notify here again to every temporary conference group and prefectural competent authority to take care particularly of the following matters:

1. The program of establishment of secondary schools should be well-balanced, recognizing the necessity for both the new lower and new upper secondary schools. For this purpose, the completion of the new lower secondary school program should be given priority, because the education of the school is compulsory and moreover it is the basic process of the new upper secondary school education. The assumption ought to be reconsidered that so long as the new lower secondary school pupils are housed, in any sort of school building or some substitute, full attention can be paid to the organization of the new upper secondary school.

2. Although it is most desirable to prepare the available new upper secondary schools and facilities enough to provide for all pupils desiring to attend the school, it is a goal to be aimed at for the time being and is not compulsory.

3. However, it could not but be an unbalanced program to hinder unjustly the new upper secondary school program, emphasizing the completion of the new lower secondary school program to an unreasonable degree. The goal is to work out a balanced program between the lower and upper secondary schools.

4. Whether each upper secondary school should adopt co-education should not be decided by the prefectural authorities arbitrarily, but the decision should be left up to the people of the community where each school is located. In that case, the necessity of the guarantee of equal educational opportunity for both boys and girls of the community should be fully taken into consideration. It would be a service to the future of education if there are at least some schools in each prefecture which will experiment with co-education in the upper secondary school this year.

5. At the national level it is impossible to determine what percentage of schools should be comprehensive-type, but it should be decided according to the situation in the case of each prefecture, so that it will fully meet the needs of the young people of the district. The plan for comprehensive-type schools should be set up as a relatively long-range program, but in such a community where under some device it might be carried into realization, the execution of the program should be started at once.

6. A private old-type secondary school should be free to decide whether it will become a new upper secondary school or a new lower secondary school. If it decides to become a new upper secondary school, the application is to be approved as a matter of course if it meets the provided standards.

7. It is reiterated that students who were enrolled in the 2nd grade of the old-type secondary schools during the school year 1947-48 should be allowed to remain in the lower secondary school attached to those schools, even when the school becomes a new upper secondary school. This is provided for in Hatsu-Gaku '63, published 21 February 1947. Such students, if they were enrolled in an old-type secondary school during the school year 1946-47 or before, have a right to go automatically into the upper secondary school when their old-type secondary school becomes a new-type upper secondary school.

CURRICULUM OF THE  
NEW KOTO GAKKO

SUPPLEMENT TO VOLUME I  
THE 1947-48 COURSES OF STUDY

*Part I*

Published by the Ministry  
of Education  
7 April, 1947  
Hatsu Gaku # 156

*Line 4*

The new koto gakko is scheduled to open at the beginning of the school year 1948-49, but grades in existing boys middle schools (old chu gakko), girls high schools (old koto jogakko), and vocational middle schools (jitsugyo gakko) which correspond to grades 10, 11 and 12 of the new koto gakko should offer the subjects listed for grades 10, 11 12 in the new curriculum beginning with the 1947-48 school year.

With a view to meeting the needs of pupils the new koto gakko aims at providing complete curricula for those pupils who want to enter a university and those who want to pursue a vocation after completion of the course of the koto gakko. It is desirable that in the future, schools of this comprehensive type should be established in every district. In cities where a large number of koto gakko exist, the school of this level which provides special courses to meet specific needs of pupils may exist, but in a district where there is only one koto gakko, it is essential that it should offer a diversified curriculum. The curricula of the new koto gakko can be divided into two parts: (1) Some schools will give first consideration to liberal education, with vocational courses provided for those who need them and desire to take them; (2) other schools will base their program of studies on specialized vocations in the fields of Agriculture, Commerce, Fishing, etc. The curriculum of the comprehensive type is discussed in Part I and the curricula of the specialized vocational type of schools in Part II.

PART I

CURRICULUM OF THE COMPREHENSIVE, LIBERAL KOTO GAKKO

1. Program of Studies and Hours of Instruction

The 1947-48 program of studies of the koto gakko with a comprehensive curriculum and the suggested number of hours assigned to each subject is given in the table below.

TABLE I OF SUBJECTS

The new Comprehensive Type Koto Gakko school year 1955-56, but there is existing in existing middle schools.

Subjects	Total Number of Hours For 3 Years	Assignment of Hours According to Grades			
		1st Year (10th Grade)	2nd Year (11th Grade)	3rd Year (12th Grade)	
Japanese Language	315 (9)	105 (3)	105 (3)	105 (3)	
General Social Studies	175 (5)	175 (5)			
Physical Education	315 (9)	105 (3)	105 (3)	105 (3)	
<b>Total</b>	<b>805 (23)</b>	<b>385 (11)</b>	<b>210 (6)</b>	<b>210 (6)</b>	
Japanese Language	210 (6)	70 (2)	70 (2)	70 (2)	
Calligraphy	210 (6)	70 (2)	70 (2)	70 (2)	
Chinese Classics	210 (6)	70 (2)	70 (2)	70 (2)	
Social Studies	History of the West	175 (5)		175 (5)*	
	History of the Orient	175 (5)		175 (5)*	
	Human Geography	175 (5)		175 (5)*	
	Current Problems	175 (5)		175 (5)*	
Arithmetic	Algebra (1)	175 (5)		175 (5)**	
	Geometry	175 (5)		175 (5)**	
	Algebra (2)	175 (5)		175 (5)**	
	Calculus	175 (5)		175 (5)**	
Science	Biology	175 (5)		175 (5)**	
	Chemistry	175 (5)		175 (5)**	
	Physics	175 (5)		175 (5)**	
	Physical Geography	175 (5)		175 (5)**	
Music	210 (6)	70 (2)	70 (2)	70 (2)	
Drawing	210 (6)	70 (2)	70 (2)	70 (2)	
Handicrafts	210 (6)	70 (2)	70 (2)	70 (2)	
Foreign Language	525 (5)	175 (5)	175 (5)	175 (5)	
Vocational Subjects	Industry				
	Commerce	1400 (40)	350 (10)	525 (15)	525 (15)
	Fishing				
	Household Arts				
<b>Total number of hours for study</b>	<b>3150-3570 (90)-(102)</b>	<b>1050-1190 (30)-(34)</b>	<b>1050-1190 (30)-(30)</b>	<b>1050-1190 (30)-(34)</b>	

One subject should be selected from each of the fields of Social Studies, Mathematics and Science and made compulsory.

The above-mentioned schedule of hours is based on the assumption of a 35-week school year.

The suggested allotment of hours for the optional subjects can be increased to a reasonable degree at the discretion of the principal.

\* One-year subjects to be offered in either Grade 11 or Grade 12.  
 \*\* One-year courses to be offered either in Grade 10, Grade 11, or Grade 12.

Notes on the Table of Subjects

- (1) This table of subjects is made out on the basis of the 6:3:3:4 system.
- (2) The allotment of hours for subjects is worked out on the basis of the total number of hours for the three years and the total for each of the three years. The figures in parentheses indicate the average number of hours per week. Instruction in each subject covers 35 weeks, or the entire school year. One period equals 60 minutes; this 60 minute period includes the time necessary for changing classes.
- (3) 30 to 34 hours of instruction should be given per week.
- (4) When mapping out a guidance plan for the year or for each week, refer to that part of the 1947-48 "Courses of Study" which refers to guidance, and to the separate volumes which refer to the different subjects.

2. The Use of the Table of Subjects--Unit Credit System

Looking at the above table of subjects it will be noticed that it includes many optional courses. It is necessary for schools to deliberate on how they can give appropriate education so as to meet the needs and desires of pupils.

a. Unit Credit System

In carrying out the above program of studies it is desirable that each koto gakko should establish during the year 1947-48 a unit credit system. This is a means of keeping an account of the work accomplished by a pupil. Pupils should select subjects which they wish to study and in which they are interested and when they have satisfactorily completed their work, unit credit should be given for it. When the number of units reaches a definite amount, this means that the pupil has completed his work and is ready for promotion or graduation.

The basis of calculation of unit credits is as follows:

In case of the study of a subject for an average of one hour per week through one completed school year.....1 unit

In case of the study of a subject for an average of two hours per week through one completed school year.....2 units

In case of the study of a subject for an average of five hours per week through one completed school year.....5 units

The subjects listed in the Table of Subjects for the comprehensive koto gakko are translated into terms of unit credit in Table II below:

TABLE II

Units of Credit Offered by Comprehensive Koto Gakko

National Language.....	15 units
Social Studies.....	25 units
Physical Education.....	9 units
Calligraphy.....	6 units
Chinese Classics.....	6 units
Mathematics.....	15 units
Science.....	20 units
Music.....	6 units
Art.....	6 units
Handicrafts.....	6 units
Foreign Language.....	15 units
Vocational Subjects.....	40 units
<b>Total.....</b>	<b>169 units</b>

It is desirable that the koto gakko which aims at giving the comprehensive curriculum should install equipment in a sufficient amount and employ a sufficient number of teachers to offer these units of credit.

b. Selection of Daigaku Preparatory Course or the Vocational Course

Following the table in (a) above, pupils should select the subjects and acquire unit credits in accordance with their needs and desires. Since the National Language, Physical Education, and General Social Studies are subjects required for all pupils, regardless of type of school, pupils must acquire credit for these subjects under any circumstances. It is expected that among the pupils of the comprehensive koto gakko, some will desire to enter a university and some will wish to enter occupations. Table III below shows the unit credits which should be accumulated by each group, divided into the (1) Daigaku Preparatory Course and (2) the Vocational Course.

TABLE III

Daigaku Preparatory Course

Japanese Language.....	15 units
Social Studies.....	15 units
Physical Education.....	9 units
Mathematics.....	10 units
Science.....	10 units
Foreign Language(one language)	10 units
Free electives.....	16 units
<b>Total.....</b>	<b>85 units</b>

Vocational Course

Vocational Subjects.....	25 units
National Language.....	9 units
Social Studies.....	10 units
Physical Education.....	9 units
Mathematics (related to vocational subjects).....	5 units
Science (related to vocational subjects).....	5 units
<u>Free electives.....</u>	<u>22 units</u>
<b>Total.....</b>	<b>85 units</b>

It is necessary to schedule subjects in accordance with the needs and desires of pupils in such a way that they can acquire each year the credits needed for completion of the course which they are following (Daigaku Preparatory or Vocational). It is easily possible for a pupil to transfer from the Daigaku Preparatory Course to the Vocational Course, or from the latter to the former, so long as the requirements of each course are met. In any case, regardless of the course which may be chosen, the subjects listed in Table IV should be taken by all pupils as a means of gaining the culture necessary to all citizens;

TABLE IV

Minimum Standard Curriculum for All Koto Gakko Pupils

National Language.....	9 units
Social Studies.....	10 units
Physical Education.....	9 units
Mathematics.....	5 units
<u>Science.....</u>	<u>5 units</u>
<b>Total.....</b>	<b>38 units</b>

Considering the pupils' future and individuality, the basic course listed above and the choice between the Daigaku Preparatory Course and Vocational Course are believed to be adapted to those who attend the koto gakko. Guidance by teachers in the selection of courses is very important. The chu gakko gives vocational guidance in order that the pupils may think of their future. It is possible to obtain many references to the interests and aptitudes of pupils from the shogakko (elementary school) and chu gakko (lower secondary school) records; information can also be gained from close contact with pupils. Thus, clarifying the pupils' needs, desires and individuality, it will be of great help to give guidance in the choice of subjects. In order to accomplish this, it will be necessary to spend a few days at the beginning of the year in helping pupils select their courses; after help and guidance are given, pupils must select the courses suited to their individuality and desires on their own responsibility. Given below in Table V, examples of choices of subjects which might be made by pupils choosing the Daigaku Preparatory Course and the Vocational Course.

TABLE V

Sample Courses In Koto Gakko

<u>Daigaku Preparatory Course</u>		<u>Vocational Preparatory Course</u>	
First Year		First Year	
National Language	5 units	Vocational Subjects	8 units
General Social Studies	5 units	National Language	3 units
Physical Education	3 units	General Social Studies	5 units
Algebra & Calculus	5 units	Physical Education	3 units
Foreign Language	5 units	Mathematics	5 units
Music	2 units	(related to vocation)	
Art	2 units	Music	2 units
		Art	2 units
<b>Total</b>	<b>27 units</b>	<b>Total</b>	<b>28 units</b>
Second Year		Second Year	
National Language	5 units	Vocational Subjects	8 units
Western History	5 units	National Language	3 units
Physical Education	3 units	Physical Education	3 units
Physics	5 units	Science (related to vocational training)	5 units
Foreign Language	5 units	Social Studies	5 units
Music	2 units	Handicrafts	2 units
Art	2 units	Music	2 units
Handicrafts	2 units		
<b>Total</b>	<b>29 units</b>	<b>Total</b>	<b>28 units</b>
Third Year		Third Year	
National Language	5 units	National Language	3 units
Human Geography	5 units	Vocational Subjects	9 units
Geometry	5 units	Physical Education	3 units
Physical Education	3 units	Social Studies	5 units
Science	5 units	Mathematics	5 units
Calligraphy	2 units	(related to vocation)	
Music	2 units	Chinese Classics	2 units
Art	2 units	Handicrafts	2 units
<b>Total</b>	<b>29 units</b>	<b>Total</b>	<b>29 units</b>
<b>Grand Total</b>	<b>85 units</b>	<b>Grand Total</b>	<b>85 units</b>

It is reiterated that the selection of subjects shown above merely serves as an example. Many variations and combinations of subjects are possible.

### c. Graduation and Promotion

Regarding the unit credit system it is necessary to consider the principles of graduation and promotion. The acquisition of 85 units of credit has been set up as the requirement for graduation; this includes the 38 units established as the minimum courses for all pupils. The minimum course is included in the 85 units required for graduation from both the Daigaku Preparatory Course and the Vocational Course. The unit credits needed above 38 (85 minus 38) can be gained by the study of various subjects in accordance with the desires of the pupils and the requirements of the two courses. It is desirable to cut the total of units to be accumulated in Chinese Classics, Art, Handicrafts, Music and Physical Education to less than 20, because too many units in these subjects would cause other necessary subjects to be neglected. Pupils desiring more credit in these subjects can add such credit to the 85 required for graduation. While accumulating the 85 units of credit required for graduation, it is desirable that they be balanced rather evenly among the three grades.

Below are given the number of unit credits required for promotion:

The pupil who acquires more than 25 units in the first year (10th grade) can be promoted to the second year (11th grade).

The pupil who has acquired a total of more than 50 units in the first two years can be promoted to the third year (12th grade).

### 3. The Transition Period

All of the subjects mentioned in the table of subjects (Table I) can be taken when the new koto gakko system is completely established. In the meantime, it is necessary to deliberate on many points in applying the curriculum of the new koto gakko to the existing chu gakko and koto jogakko. For instance, the chu gakko and koto jogakko provide no school year to correspond to the third year (12th grade) of the new koto gakko. Unless the third year (12th grade) is established, the courses for the first and second years (10th and 11th grades) only will be given in the school.

Regarding the subjects listed for the first, second and third years of the new koto gakko, if we compare them with subjects offered

in the old chu gakko and koto jogakko, we cannot say that it will be necessarily appropriate in every case to follow the table of subjects rigidly. During the transition period it will be necessary to adjust subjects to some extent. It is necessary in the case of such subjects as Social Studies to offer them in each of the years, but subjects which pupils have already taken in the old chu gakko and koto jogakko need not necessarily be given in all cases; subjects with new contents may be substituted. However, subjects should not be discontinued merely because the name of the new subject is the same as one which pupils have already had in the old chu gakko and koto jogakko without first looking into them in detail and endeavoring to make the contents of koto gakko education conform with the purport of the new education. Although some of the names of subjects in the new curriculum correspond to those of the old, the contents are in many cases not the same.

In regard to the unit credit system, it is desirable to carry it out from the school year 1947-48, but it is considered necessary that further study be given to such questions as figuring the number of units to be given for subjects already completed prior to the beginning of school year 1947-48. In the meantime, while this question is under study, schools should start using the unit credit system this year for subjects completed during the school year 1947-48.

P. 1027

No-1119  
2 min

All of the subjects mentioned in the table of subjects (Table I) can be taken when the new koto gakko system is completely established. In the meantime, it is necessary to deliberate on some points in applying the curriculum of the new koto gakko to the existing curriculum of koto jogakko. For instance, the chu gakko and koto jogakko provide no special year to correspond to the third year (15th grade) of the new koto gakko. Unless the third year (15th grade) is established, the courses for the first and second years (10th and 11th grades) only will be given in the school.

Regarding the subject listed for the first, second and third years of the new koto gakko, if we compare them with subjects offered

## PART II

CURRICULA OF THE SPECIALIZED VOCATIONAL  
KOTO GAKKO

The courses of the different types of koto gakko offering training in Agriculture, Industry, Commerce, Fishing, etc. which will be offered from 1947 are 29 in number, as follows:

Industry .....	15 courses
Agriculture .....	9 courses
Fishing .....	3 courses
Commerce .....	1 course
Clothing .....	1 course

In addition to these, other courses can be added to meet specific needs for vocational training.

The tables below show the subjects recommended for each course. The number of hours for each subject is given as a total for the three years, the total for each of the three years, and the average per week (in parentheses). The common course of study listed in Part I for all pupils is listed also for these specialized koto gakko, continuing liberal education for those enrolled. It is desirable that pupils be given as much choice as possible among the vocational courses and subjects. The term "Related Subjects" refers to the subjects which are related closely to practical training. The hours for "Free Study" are allotted to meet the needs of pupils for individual study.

The courses listed here, as well as those listed in Part I, apply to night koto gakko; but the school year in which to complete them may exceed three. The curriculum for the part-time koto gakko will be published at a later date.

To: Prefectural Governor Sept. 26

(15) What has been affected by the Labor Education Meeting held on the 23rd under the auspices of the Kagawa Prefectural Education and Welfare Department.

Transact the personnel... the speeches by Mr. Deverral and Mr. Harold of Labor Section, GHQ which were held on the 23rd at the Takamatsu Prefectural Girl's High School and opinion of Mr. Kelen, chief of Labor Section GHQ. "All labor union members arise and exterminate blackmarketing" gave great hints in the future ways of movement and management to the entire labor unions and employers throughout the prefecture. The intentions of a laborer and a employer are as follows:

a. Opinion from the side of the workers.

Various suggestions were given to the labor unions' movement. The enlightening organs should be set up by the government," said... Labor Union. The ways of democratic management of labor union were definitely explained and it gave us quite an advice in deciding the direction of labor union in the future. We especially want to consider the points as follow; We recognize that it is unreasonable to divide the organization into youth's dept, and women's dept. However at present, even in the National Railway where the young workers occupy 60% of the entire workers, their intentions cannot be fully announced. Also their announcements are still apt to be ignored. Especially these feudalistic colors can be seen strongly among the girls. To eliminate these, we desire to have these departments exist. For a while not as activity, departments but as a counter-measure. We recognized that enlightenment education is especially necessary for the positive actions of the members of the union and we will exert great efforts in attaining it. However due to the especially small amount of union funds we would like to have the labor library and enlightenment organs set up by national funds. We were taught to have patience in collective bargaining. We must greatly reconsider this point so as to prevent childish fights which occur frequently due to the impatient Japanese character. As for exterminating blackmarketing we staffs of National Railway are already practising it. We will strictly follow the rules of certification system in transportation and will cooperate in exterminating blackmarketing. Also we will inspect whether this certification system is carried out impartially and fairly. The Kagawa-ken Traffic Labor Conference which was previously held is also taking up a method to perish blackmarket transportation as one of its movements. The Package Transportation Union, Harbor Labor Union and National Railroad Labor Union will get together and cooperate in it. The definite plans are now under consideration.

19 March 1947

From: Vice Minister of Education

To : Each Prefectural Governor

NOTICE

Transact the personnel affairs of the 2nd grade teachers, in the new secondary schools, according to the under-mentioned account for a while.

The Account

1. Concerning the appointment of principals and teachers of new secondary schools, do it by yourself and report me as quickly as possible.
2. Those, who can be appointed from the 2nd grade principal of the middle school, the youth school or the national school to the same grade one of the new secondary school must have been engaged in following post for 8 years at least; that is, principal, teacher, or assistant teacher of the middle school and youth school:  
Principal or teacher of national school: Holder of national school teacher's license; or the 2nd or 3rd grade teacher.  
Those, who can be appointed from the 2nd grade teacher of the middle school, the youth school or the national school to the same grade one of new secondary school must have been engaged in following post for 8 years at least, that is, teacher or assistant teacher of the middle school or the youth school, teacher of the national school, holder of national school teacher's license; or 3rd grade teacher.
