The next issue of the *Wheat Situation* will be published in February, 1971.

Sharply increased wheat exports and the potential for further expansion in wheat feeding point to gains in total use this season, and a reduced carryover next June.

Exports of 725-750 million bushels are likely, compared with 606 million in 1969/70. Feeding of wheat in July-September totaled about 140 million bushels, slightly above the same period of 1969. The season's total likely will exceed the 216 million bushels of 1969/70.

These gains will draw from a supply that is slightly smaller than last season's, trimming the prospective carryover next summer some 200 million bushels below the 883 million of last summer.

The rapid pickup in wheat exports and high corn prices, brought on by the reduced 1970 corn crop, have pulled wheat prices up sharply. The farm price of wheat in October at \$1.43 per bushel was up 2 cents from September and 20 cents above July. Even with corn prices off from the high levels of September, wheat prices are likely to continue strong, reflecting the high levels of wheat disappearance and relatively small supply held privately.

The increase in U.S. wheat exports stems from an expansion in world trade. World wheat trade rose to almost 2 billion bushels in 1969/70 after hitting a modern low of 1.7 billion in 1968/69. It will likely rise further this season. Canada and Australia are both increasing their exports with Canada making another large sale to Mainland China. Each is limiting production through domestic control programs. Canada's 1970 crop is only half as large as the 684 million bushels of 1969. But large stocks in both Canada and Australia keep supplies at a high level. The 1970 world wheat crop is a hefty 10.3 billion bushels, only a billion below the 1968 record and the fourth largest.

The increase in world trade results from reduced harvests in Europe. U.S. exports to Western Europe during July-September 1970 more than doubled the low rates of a year earlier. Romania, an exporter in recent years, has bought U.S. wheat this fall.

Hard red winter wheat will account for the bulk of the increase in U.S. wheat exports in 1970/71. Exports of hard spring and durum may equal or exceed last year's outgo. Soft red exports may approach last year's total. White wheat exports may fall somewhat due to the reduced supply.

Carryovers of all classes of wheat will likely be reduced next summer. For soft wheats, both red and

white, stocks may be somewhat smaller than the 23 million bushels and 30 million respectively of June 1970. Stocks of hard spring will be off sharply from the

93 million bushels of June 1970, as will durum stocks. Hard winter wheat stocks may drop 100 million bushels, reflecting heavy exports and expanded feeding.

THE CURRENT SITUATION AND OUTLOOK FOR WHEAT

Supply Off Slightly

Wheat supplies in 1970/71 are off slightly from a year earlier. A record yield per acre at 31.2 bushels kept production at a high level of 1,360 million bushels. The 1970 acreage allotment was 12% smaller than that of 1969 and harvested acreage was down 4 million to 43.6 million acres. The July 1970 carryover of 883 million bushels was up some 60 million from July 1969 but total supply at 2,244 million bushels was off about 40 million from 1969/70 (table 1).

U.S. Exports Up Sharply; World Trade Picks Up

U.S. exports of wheat in 1970/71 are likely to climb sharply from the 606 million bushels of 1969/70. They may total 725 to 750 million bushels with the final outcome depending largely on the level of food aid shipments and possible overseas demand for imported wheat for feeding purposes. They have started off at a rapid rate with the increase principally in commercial business. Exports (grain only) totaled 154 million bushels during July-September 1970, up sharply from the 108 million during the same period in 1969. While all components of commercial exports gained, the biggest gain occurred in dollar sales. Shipments under food aid also advanced but not as dramatically (table 5).

The principal markets for U.S. wheat this crop year have been Japan, Western Europe, Korea, and India.

U.S. exports to Japan in 1969/70 totaled 87.5 million bushels. Through September this year Japan had received 31.5 million bushels. Almost half of this was hard red spring wheat. Japan's wheat imports from all sources may be up moderately this year.

Shipments to Korea have also been running well ahead of the same period a year earlier with white wheat accounting for over 60% of the total. Imports from the United States last year totaled over 40 million bushels, down somewhat from the previous year.

India has often been a large customer for U.S. wheat but in the last 2 years the total has fallen sharply. Imports from the United States totaled 85.1 million bushels in 1969/70; for the first quarter of 1970/71 they were slightly over 13 million bushels.

Inspections for export to Western Europe for July-September were running more than double the year earlier rate. Shipments were substantially larger to all but a few countries. For the crop year Western Europe's

imports from the United States are expected to be well above a year ago.

Shipments to the 2 major recipients of U.S. wheat in South America, Brazil and Venezuela, have been lagging. Last year these countries accounted for a total of almost 60 million bushels of wheat and flour.

A sharp expansion in exports is taking place in Canada and Australia. It is unlikely that Argentina with short supplies will be able to share in this year's growth in world requirements. Argentine 1969 production was up from the low level of 211 million bushels in 1968. In 1970, production is expected to fall to the lowest level in 10 years as a result of adverse weather. Production in Canada in 1970 was halved due to an innovative production control program (table 24). Australia's 1969 production tapered to 398 million bushels after 1968's record of 544 million. This resulted from less favorable growing conditions and from governmental programs to restrict production. In 1970, Australia will have an even smaller crop, but like Canada it continues to have large stocks.

The pickup in world trade, which increased in 1969/70 after faltering for several years, is largely due to smaller crops in many importing areas. While the world crop is off slightly from the 10.6 billion bushel harvest of 1969 it is still large. At 10.3 billion bushels it is a billion below the record set in 1968 but still the fourth biggest on record.

Both Western and Eastern Europe had somewhat smaller harvests. The harvest in Eastern Europe is believed to be the poorest since 1966. Romania has already contracted to buy 18 million bushels of U.S. wheat. In 1969 Romania was an exporter. The Soviet Union presently indicates a substantially larger crop than the 2.3 billion bushels of 1969. The 1970 crop, estimated at 2.7 billion bushels, could even reach or exceed the 2.9 billion record of 1966 if harvest conditions were satisfactory. China has also experienced a sizable crop along with other Asian countries. Above normal rainfall in North China and increased acreage in the South more than offset the effects of winterkill in the North and spring drought in the East. Even with a large crop China has purchased 98 million bushels of wheat from Canada for shipment through 1971. India's crop of 735 million bushels represents its largest output and is 50 million greater than in 1969.

Wheat stocks in Canada on July 1, 1970, totaled over 1 billion bushels, largest of record, and equivalent to

41% of the total in the 5 major exporting countries on that date. Australia's and Argentina's stocks were also up from a year earlier, but the increases from July 1969 were not as great. Stocks of the 5 exporters (United States, Canada, Australia, Argentina, and France) at 2.6 billion bushels set a new record high, some 180 million over the previous record of 2,392 million set back in July 1961.

The expanded world trade has stabilized and even boosted world prices. Though well below the high levels of 1966, they are up from 1969/70. Any further rise will depend on the availability of selected types of wheat in world markets and the possible needs of wheat for animal feed in the months ahead.

U.S. Food and Seed Usage Steady

Wheat used for food is placed at 525 million bushels in 1970/71 and seed usage is estimated at 60 million, putting the basic domestic market at 585 million.

Total use of wheat for food in the United States during 1969/70 was 520 million bushels, virtually the same as the 2 preceding years. This contrasts with the upward trend in earlier years when declining per capita consumption was more than offset by a rising population. In 1970/71 total use of wheat for food could renew its upward movement. July-September 1970 usage was slightly larger than that of a year earlier. Per capita consumption of wheat flour in calendar year 1969 was 112 pounds, virtually the same as the 2 preceding years.

Use of wheat for seed totaled 55 million bushels in 1969/70 when the national wheat acreage allotment was 45.5 million acres. Seeding in the fall of 1970 will be reported in late December but planted acreage probably was not substantially different from that of a year ago. Proposed changes in the agricultural program for 1971 could enlarge the spring wheat seedings and increase the quantity used for seed, but this would not significantly affect the 1970/71 total.

The referendum, scheduled under the Food and Agricultural Act of 1962, has been postponed until 30 days after Congress convenes on January 15, 1971, whichever comes first.

Loan Activity Declines

Producers used the loan program heavily in July and August but the pace slackened in September. The total quantity of wheat placed under loan through that month at 194 million bushels was 100 million less than that of a year earlier. Redemptions through September totaled 42 million bushels, leaving 152 million under loan. A year earlier 294 million bushels were outstanding under loan at the end of September.

CCC sold about 30 million bushels of wheat in the July-September period. This is more than CCC put into

the market during the entire 1969/70 marketing year and represents its first sizable early-season sales in several years. These sales have been made at the market or statutory minimum, whichever is higher.

Prices Up With Heavy Disappearance

A number of market factors have combined to bring exceptional strength in prices early in the year. Heavy export movement, smaller feed grain supply, and extensive use of the loan program have all assisted the wheat market. Total disappearance during July-September at 461 million bushels was record large for any quarter. Disappearance, with food and seed estimated, was as follows:

Item	July-September	
	1969	1970
	<i>Million bushels</i>	
Total supply, July 1	2,278	2,243
Exports	124	167
Food	131	135
Seed	22	22
Feed	130	137
Total disappearance	407	461
October 1 stocks	1,871	1,782

Earlier in the current season wheat derived much of its price strength from the firm tone of the corn market. But in recent weeks as corn prices subsided wheat remained consistently high relative to the loan and to prices a year ago. This independent stance has resulted from the continuing strong export demand and the relatively low "free" supply. October 1 "free" stocks were below those of a year ago and short of anticipated requirements for the remainder of the year (table 7). Thus, the market will have to turn to the wheat remaining under loan and resale as well as CCC stocks to meet expected needs.

The season average price for 1970/71 is likely to be 10 to 15 cents per bushel over the \$1.25 national average loan rate. The last time the season average price was above the loan was in 1967/68 when it averaged 14 cents over the loan. Prices averaged fractionally below the loan during the 2 years prior to the current year as carryover increased in the face of large world supplies and smaller U.S. exports.

Wheat Feeding To Increase

With the extremely competitive price relationship of wheat and corn during July-September 1970, wheat feeding totaled around 140 million bushels. This was only slightly above that of July-September 1969 when

wheat and corn prices favored the feeding of wheat particularly during July and August.

Month	1969		1970	
	Wheat	Corn	Wheat	Corn
<i>Dollars per cwt.</i>				
June	2.03	2.11	2.05	2.16
July	1.92	2.11	2.05	2.21
Aug.	1.98	2.11	2.18	2.27
Sept.	2.07	2.05	2.35	2.46
Oct.	2.13	2.00	2.38	2.39

The rate of feeding declined after September 1969, but for the entire 1969/70 marketing year feeding totaled 216 million bushels. This was the heaviest use since World War II when wheat was moved into feed

channels with government subsidy. Even though feed grain prices eased some in October while wheat prices held firm, the spread between the two is likely to remain narrow, continuing to make wheat an attractive feed item. As a result, wheat feeding in 1970/71 could total 235 million bushels.

Gain in Use To Bring Sharp Cut in Carryover

With gains in exports and feed use, total disappearance in 1970/71 is expected to be around 1.5 to 1.6 billion bushels. This would be some 140 to 170 million over 1969/70 and the most since 1965. As a result, the carryover on June 30, 1971, will fall around 200 million bushels from the 883 million of last June 30. A carryover of some 685 million bushels would be the smallest since June 30, 1968.

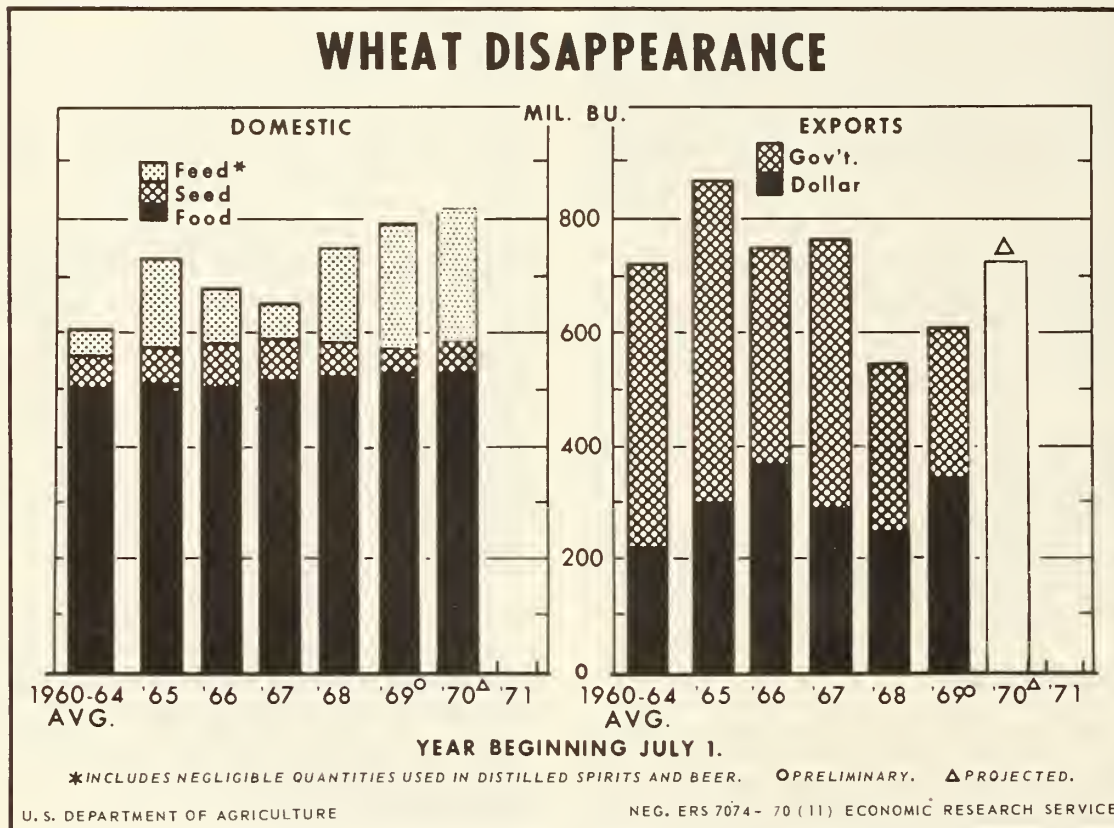

FIGURE 1

OUTLOOK BY CLASSES OF WHEAT

Hard Winter Exports Surge

The supply of hard winter wheat in 1970/71 stands at 1.4 billion bushels, the most since 1963/64. Exports of grain during July-September 1970 were up sharply from a year earlier and for the entire year are likely to reach a high level. The increase in hard winter exports will account for the bulk of the increase anticipated in total wheat exports in 1970/71. In addition, hard winter may be the biggest factor in increased wheat feeding since it is in large supply.

With an anticipated heavy total disappearance of this wheat, prices are likely to remain strong for the entire 1970/71 marketing year. However, at their current level (some 20 cents over the effective loan and 15 cents over early November 1969) they may not appreciate by more than storage charges during the remainder of 1970/71.

Soft Red Prices Up Sharply

Soft red wheat prices are some 35 cents per bushel above the current loan and last year's market prices (table 4). Export inspections during July-September were unchanged from a year earlier (table 5). And for the entire year, exports may not be much different from the 28 million bushels of 1969/70. The relationship between red wheat prices and corn prices during the early months of this wheat marketing year, was such that feeding of wheat may have been stimulated sharply, resulting in an early-season tightening of supplies. The July 1971 carryover of soft red is likely to be off sharply from last summer's 23 million bushels but still above the small carryovers of the mid-1960's.

Hard Spring Exports Running Ahead of Year Ago

Exports of hard spring wheat (based on grain inspections) during July-September 1970 were some 24 percent ahead of the same months in 1969 (table 5). In 1969/70, they totaled 91 million bushels, second only to the 120 million bushels shipped in 1966/67. In that year they were an important part of the food aid program. Since then, sales of hard spring have been almost entirely

under commercial terms. With domestic use of hard spring at about the level of earlier years and a continued heavy export movement, carryover stocks in July 1971 could fall to a low level. Last July's estimated 93 million bushel carryover was the smallest since July 1949.

Prices of hard spring, responding to the heavy demand and the relatively small supply, have consistently remained well above the loan. Given a continuation of heavy utilization, prices may remain firm, although any further price appreciation will depend on the availability of resale stocks.

Durum Exports Little Changed

The 1970 durum crop of 50 million bushels was less than half that of 1969, bringing supply and demand in 1970/71 into much better balance. In 1969/70, exports of durum wheat totaled 34 million bushels, well below the record 47 million of 1966/67. During July-September 1970, exports rose only fractionally from a year earlier (table 5). Domestic use in 1970/71 may about hold its own. Even if exports only match last season's total, the carryover in 1971 may be off sharply from the 77 million bushels of July 1970 due to the reduced supply. The high level of hard spring wheat prices in recent years coupled with large premiums for high-protein spring wheat encouraged producers to shift away from durum.

White Wheat Carryover May Drop Further

The supply of white wheat in 1970/71 is off some 10 percent from the 239 million bushels of 1969/70. Carryover stocks last season were reduced sharply (table 3). In 1970/71 continued heavy utilization may again reduce stocks. Exports during July-September 1970 were up from a year earlier, but for the entire year may have difficulty reaching 1969/70's 119 million bushels. This anticipated decline in both exports and domestic use stems from the smaller supply this year.

Prices, up sharply from a year earlier, may limit the feeding of wheat in the important Pacific Northwest region.

CHART SLIDES AVAILABLE

A slide set depicting the 1970 agricultural situation in 150 full-color charts is available complete for \$19. Based on the 1970 Handbook of Agricultural Charts, just released, the charts cover general economy, farm output and marketing, agricultural trade. Write Photography Division, Office of Information, USDA, Washington, D.C. 20250. State institutions may use purchase orders, others make checks payable to Office of Information, USDA.

THE RYE SITUATION

Supply Up Sharply

The supply of rye for 1970/71 is estimated at 58.4 million bushels, largest since 1943/44. Supplies have been buoyed by a 55% jump in production over the last 2 years. Beginning stocks, largest since 1944, aggravated the situation. CCC either owned or controlled the majority of stocks. "Free" supplies of rye at nearly 40 million bushels are substantially larger than anticipated needs for the year.

First Quarter Use Up

Rye stocks on October 1 totaled 47.7 million bushels, 25% more than a year earlier and 50% above October 1, 1968. Disappearance during July-September 1970 at 9.9 million bushels was up 7% from a year ago. An increase in rye fed more than offset a sharp decline in exports (table 2).

Stocks To Soar

Total disappearance of rye this year may be the largest since 1966/67. Domestic use at 28.3 million bushels will be the most since the early 1940's. Food use

is placed at 5.7 million bushels, with attainment of this higher level depending on a continuation of the wide spread between wheat and rye prices. Seed requirements are expected to approximate last year's level. Industrial demand was slow in the July-September quarter and for the year may total no more than last year's 4.3 million bushels.

Rye feeding is the largest single disappearance item, and this year possibly the most volatile. First quarter rye feeding of 4.6 million bushels was up substantially from comparable periods in other recent years. If prices stay favorable for feeding, second quarter feeding may also be strong. The estimate of 12 million bushels for the entire year will hinge on developments in the feed grain situation. Expected tightness in feed supplies this year could encourage additional rye feeding.

Rye exports have been minor, and for the crop year may total no more than a million bushels. During 1969/70 they totaled slightly over 500,000 bushels, the smallest in almost 2 decades.

Unless there is a sharp expansion in demand, carryover by the summer of 1971 may soar to over 29 million bushels, equivalent to an average year's demand.

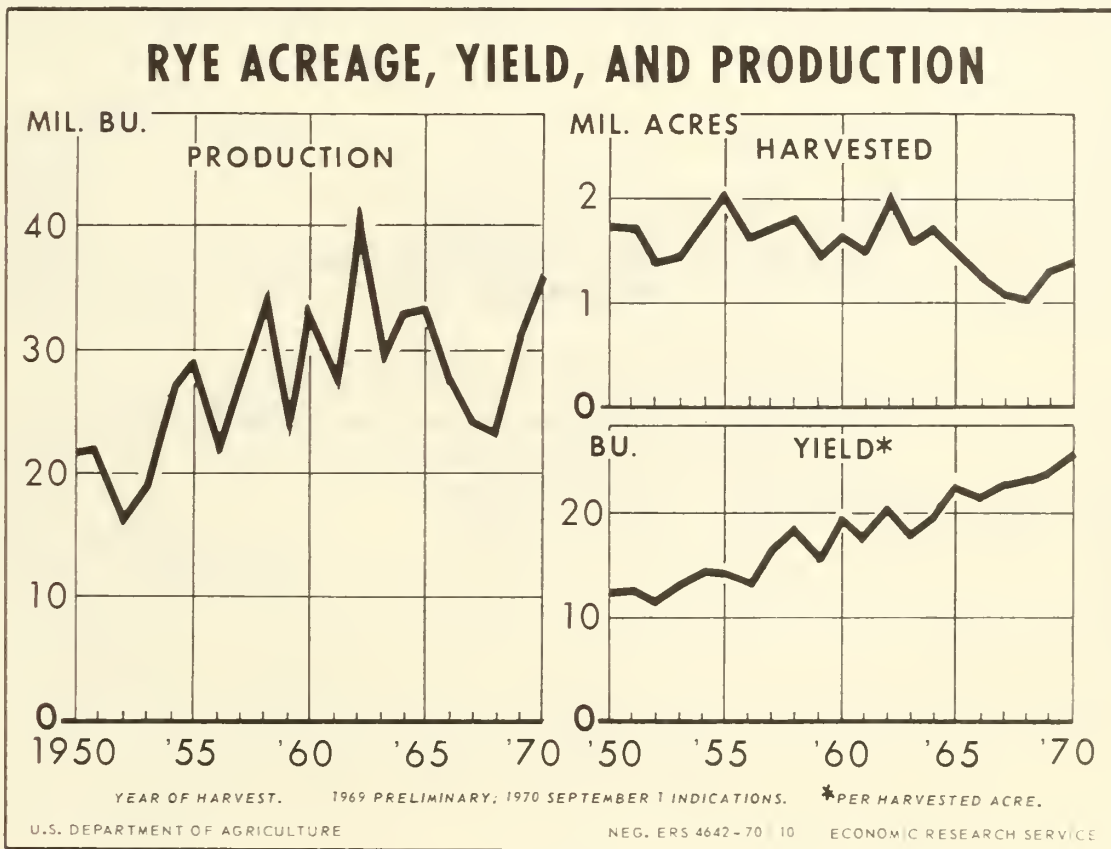

FIGURE 3

This would be a 37% increase from this past summer's carryover and 82% above the 1968 level.

Rye Prices Recover

Prices received by farmers during the first 4 months of 1970/71 averaged 94 cents compared with 98 cents a year ago. Farm prices have recovered sharply since the August low of 87 cents. A more than seasonal advance in rye prices this year will depend on developments in the feed grain sector. If the feed situation worsens, more rye might be fed. These supplies would probably have to come from grain currently under loan or from CCC stocks. Thus, later in the year the loan rate could provide an effective floor for rye prices.

The price of No. 2 rye at Minneapolis averaged \$1.07 for the first quarter of 1970/71. Market prices have shown little fluctuation this year, generally averaging \$1.05 to \$1.10 per bushel.

Loan Activity Heavy

Rye put under loan through September totaled 6.4 million bushels compared with 3.5 million a year earlier. This was only slightly below the total loan entry for the 1969/70 crop year. By the end of the loan period,

entries may be substantially larger than last year's total. A strengthening in rye prices would curtail loan entries and might result in some loan redemptions. CCC sales and dispositions of rye have been negligible to date, totaling only around 100,000 bushels.

World Crop Down

The 1970/71 world rye crop is estimated at 1,074 million bushels, down 3% from last season and possibly the smallest of record. The USSR is anticipating a crop of 453 million bushels, up 17% from last year's small harvest. Production in North America is up 24%, reflecting acreage expansions in both Canada and the United States.

Production continues to fall in the major rye producing and consuming areas of Europe. In Eastern Europe, rye acreage is down over a million acres from the 1964-68 average. The 1970 crop was off 23% from the average. Poland's rye crop at 240 million bushels was off 26% from last year as a result of severe weather. Production has also been trending downward in Western Europe, where the 1970 crop at 181 million bushels was down 15% from the 1964-68 average. West Germany, the West's leading producer, had a crop of 105 million bushels, down 8% from a year ago.

ANNUAL OUTLOOK CONFERENCE SCHEDULED FOR FEBRUARY 1971

The National Agricultural Outlook Conference is scheduled for February 23 to 26, 1971. The Conference will give emphasis to the general domestic and international economic situation with time also devoted to the Commodity Sessions.

1/ Cash grain prices are on-track cash prices established at the close of the market. The effective support price is the established terminal support less the storage charges to the maturity date of the price support loan. Export prices are basis prompt or 30-day shipment. Net export prices are derived by subtracting export payment rates or adding the certificate cost whichever is applicable. Wheat used for domestic food must be accompanied by a domestic marketing certificate which is not included in the domestic prices shown.

2/ Not applicable if market is not an established price support terminal or if the price is an export price.

3/ Effective price support loan is the computed terminal loan rate minus a deduction for storage as of the date shown.

* Preliminary.

1/ Adjusted for transshipments of U.S. wheat through Canada.

2/ Includes bulgar, rolled wheat, semolina and macaroni; totals adjusted for bulgar and rolled wheat under Title II and IV, which are not reported on a monthly basis.

3/ Assumed to roughly approximate total amount used for feed, including amount used in mixed and processed feed, also includes negligible quantities used in distilled spirits and beer. When seed allocation results in a negative feed residual, feed use is not shown by quarter.

4/ Partly estimated.

1/ All off-farm storages not otherwise designated, including flour mills, terminal elevators and processing plants.

2/ Wheat owned by CCC and stored in bins or other storage owned or controlled by CCC. Other wheat owned by CCC as well as wheat outstanding under loan is included in other positions.

3/ Preliminary.

1/ Years shown refer to years of harvest in the Northern Hemisphere. Harvests of Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow. 2/ Harvested acreage as far as possible. 3/ Yield per acre calculated from acreage and production data shown. 4/ Preliminary. 5/ Estimated totals, include allowances for other producing countries not shown.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source materials, reports of U.S. Agricultural Attaches and Foreign Service Officers, results of office research, and related information.

1/ Excludes the wheat equivalent of exports of flour milled in bond.

2/ Includes wheat to the United States which was milled in bond and later exported by the United States.

3/ Includes U.S.S.R. Beginning 1956, includes additional estimates of intra-Communist Bloc exports not fully accounted for in previous years.

4/ Preliminary.

1/ From Bureau of the Census.

2/ Residual item; roughly approximates total feed use. When seed allocation results in a negative feed residual, feed use is not shown by quarter.

3/ Partly estimated.

1/ Years shown refer to years of harvest in the Northern Hemisphere. Harvest of Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow. 2/ Harvested acreage as far as possible. 3/ Yield per acre calculated from acreage and production shown. 4/ Preliminary. 5/ Estimated totals, include allowances for other producing countries not shown.
Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign government, other foreign source material, reports of U.S. Agricultural Attaches and Foreign Service Officers, results of office research and related information.

LIST OF TABLES

<i>Table</i>	<i>Title</i>	<i>Page</i>
WHEAT		
Acreage, Yield and Production: Control Programs		
24	World acreage, yield and production, average 1964-68, annual 1968-1970	30
CCC: Price Support Operations and Stocks		
11	Quantities remaining under resale loan, 1964-69 crops, as of September 30, 1970	19
9	Crop loan activity, by months, 1966-70	17
7	Activity, stock ownership, sales and dispositions, specified dates 1969 and 1970	15
16	Quantities of wheat, under loan, deliveries to CCC, stocks owned by CCC, loans outstanding and privately held stocks, 1964-69	23
12	Redemptions of resale loans by months, and crops 1967-69	20
13	Stocks, by classes, States, and regions September 30, 1970	21
10	Extended warehouse loans by classes and States, as of September 30, 1970	18
Exports, Including Flour		
United States:		
5	Current indicators of export movement, July-September 1970 with comparison	13
8	Exports under Government programs, annual 1965-69	16
6	Inspections for export, by program and country of destination, July-September 1969 and 1970	14
21	Wheat and flour: Exports by country of destination, fiscal years, 1969-70	27
World:		
26	Exports by principal countries, bushels and percentage of total world, averages 1945-64, annual 1960-69	32
Prices		
4	Farm, cash, export and support, major markets and ports, 1969 and 1970	12
20	Export prices and net cost to buyer, by ports and months, 1969-70	26
18	Wheat and flour price relationships, annual 1963-69, quarterly 1967-70	25
19	Flour and bread retail prices, annual and by quarters, 1964-70	25
17	Wheat-feed grain price relationships, July-September 1970 with comparisons	24
22	Wheat: Rotterdam, c.i.f. quotations, by months, 1966-70	28
25	Stocks, July 1 Stocks in five major exporting countries, average 1940-64, annual 1960-70	31
15	Stocks, total, by positions, and quarters, United States, 1967-70	23
Supply and Distribution		
Wheat:		
United States:		
3	By classes, average 1964-68, annual 1968-70	11
