VISHŃU PURÁŃA.

BOOK I. (continued).

CHAPTER XV.

The world overrun with trees: they are destroyed by the Prachetasas. Soma pacifies them, and gives them Márishá to wife: her story: the daughter of the nymph Pramlochá. Legend of Kaúdu. Márishá's former history. Daksha the son of the Prachetasas: his different characters: his sons: his daughters: their marriages and progeny: allusion to Prahláda, his descendant.

Whilst the Prachetasas were thus absorbed in their devotions, the trees spread, and overshadowed the unprotected earth; and the people perished. The winds could not blow; the sky was shut out by the forests; and mankind was unable to labour for ten thousand years. When the sages, coming forth from the deep, beheld this, they were angry, and, being incensed, wind and flame issued from their mouths. The strong wind tore up the trees by their roots, and left them sear and dry; and the fierce fire consumed them; and the forests were cleared away. When Soma (the moon), the sovereign of the vegetable world, beheld all except a few of the trees destroyed, he went to the patriarchs, the Prachetasas, and said: "Restrain your indignation, princes, and listen to me. I will form an alliance between you and the trees. Prescient of futurity, I have

nourished, with my rays, this precious maiden, the daughter of the woods. She is called Márishá, and is, assuredly, the offspring of the trees. She shall be your bride, and the multiplier of the race of Dhruva. From a portion of your lustre and a portion of mine, O mighty sages, the patriarch Daksha shall be born of her, who, endowed with a part of me, and composed of your vigour, shall be as resplendent as fire, and shall multiply the human race.

"There was formerly (said Soma) a sage named Kańdu, eminent in holy wisdom, who practised pious austerities on the lovely borders of the Gomatí river. The king of the gods sent the nymph Pramlochá to disturb his penance; and the sweet-smiling damsel diverted the sage from his devotions. They lived together, in the valley of Mandara, for a hundred and fifty years, during which the mind of the Muni was wholly given up to enjoyment. At the expiration of this period, the nymph requested his permission to return to heaven; but the Muni, still fondly attached to her, prevailed upon her to remain for some time longer; and the graceful damsel continued to reside for another hundred years, and delight the great sage by her fascinations. Then again she preferred her suit to be allowed to return to the abodes of the gods; and again the Muni desired her to remain. At the expiration of more than a century, the nymph once more said to him, with a smiling countenance: 'Brahman, I depart.' But the Muni, detaining the fine-eyed damsel, replied: 'Nay, stay yet a little; you will go hence for a long period.' Afraid of incurring an imprecation, the graceful nymph continued with the sage for nearly

two hundred years more, repeatedly asking his permission to go to the region of the king of the gods, but as often desired, by him, to remain. Dreading to be cursed by him, and excelling in amiable manners, well knowing, also, the pain that is inflicted by separation from an object of affection, she did not quit the Muni, whose mind, wholly subdued by love, became, every day, more strongly attached to her.

"On one occasion the sage was going forth from their cottage in a great hurry. The nymph asked him where he was going. 'The day', he replied, 'is drawing fast to a close. I must perform the Sandhyá worship; or a duty will be neglected.' The nymph smiled mirthfully, as she rejoined: 'Why do you talk, grave sir, of this day drawing to a close? Your day is a day of many years, -a day that must be a marvel to all. Explain what this means.' The Muni said: 'Fair damsel, you came to the river-side at dawn. I beheld you then; and you then entered my hermitage. It is now the revolution of evening; and the day is gone. What is the meaning of this laughter? Tell me the truth.' Pramlochá answered: 'You say rightly, venerable Brahman, that I came hither at morning dawn. But several hundred years have passed since the time of my arrival. This is the truth.' The Muni, on hearing this, was seized with astonishment, and asked her how long he had enjoyed her society. To which the nymph replied, that they had lived together nine hundred and seven years, six months, and three days. The Muni asked her if she spoke the truth, or if she was in jest; for it appeared to him that they had spent but one day together. To which Pramlochá replied, that she

should not dare, at any time, to tell him who lived in the path of piety an untruth, but, particularly, when she had been enjoined, by him, to inform him what

had passed.

"When the Muni, princes, had heard these words, and knew that it was the truth, he began to reproach himself bitterly, exclaiming: 'Fie, fie upon me! My penance has been interrupted; the treasure of the learned and the pious has been stolen from me; my judgment has been blinded. This woman has been created, by some one, to beguile me. Brahma is beyond the reach of those agitated by the waves of infirmity.1 I had subdued my passions, and was about to attain divine knowledge. This was foreseen by him by whom this girl has been sent hither. Fie on the passion that has obstructed my devotions! All the austerities that would have led to acquisition of the wisdom of the Vedas have been rendered of no avail by passion that is the road to hell.' The pious sage, having thus reviled himself, turned to the nymph, who was sitting nigh, and said to her: 'Go, deceitful girl, whither thou wilt. Thou hast performed the office assigned thee by · the monarch of the gods, - of disturbing my penance by thy fascinations. I will not reduce thee to ashes by the fire of my wrath. Seven paces together is sufficient for the friendship of the virtuous: but thou and I have dwelt together.* And, in truth, what fault hast

thou committed? Why should I be wroth with thee? The sin is wholly mine; in that I could not subdue my passions. Yet fie upon thee, who, to gain favour with Indra, hast disturbed my devotions,—vile bundle of delusion!'

"Thus spoken to by the Muni, Pramlochá stood trembling, whilst big drops of perspiration started from every pore; till he angrily cried to her: 'Depart, begone.' She then, reproached by him, went forth from his dwelling, and, passing through the air, wiped the perspiration from her person with the leaves of the trees. The nymph went from tree to tree, and, as, with the dusky shoots that crowned their summits, she dried her limbs, which were covered with moisture, the child she had conceived by the Rishi came forth from the pores of her skin, in drops of perspiration. The trees received the living dews; and the winds collected them into one mass. This", said Soma, "I matured by my rays; and gradually it increased in size, till the exhalation that had rested on the tree-tops became the lovely girl named Márishá. The trees will give her to you, Prachetasas. Let your indignation be appeased. She is the progeny of Kańdu, the child of Pramlochá, the nursling of the trees, the daughter of the wind and the moon. The holy Kańdu, after the interruption of his pious exercises, went, excellent princes, * to the region of Vishnu, termed Purushottama,

[&]quot;The word "princes" is here supplied by the translator; and, for its epithet, "excellent", all the MSS. I have seen give सत्तम:, an adjective in the singular number, and belonging to Kandu.

where, Maitreya,¹ with his whole mind, he devoted himself to the adoration of Hari; standing fixed, with uplifted arms, and repeating the prayers that comprehend the essence of divine truth."²

¹ There is some confusion, here, in regard to the person addressed: but the context shows that the insertion of Maitreya's name is an inadvertence, and that the passage is a continuation of Soma's speech to the Prachetasas.

² The phrase is ज्ञापार्सयं * * जपम् । 'made up of the further boundary of Brahma'; implying either 'comprehending the Supreme or Brahma, and transcendental wisdom, Pára'; or 'consisting of the furthest limits (Pára) or truths of the Vedas or Brahma'; that is, being the essence of the Vedánta philosophy. The hymn that follows is, in fact, a mantra or mystical prayer, commencing with the reiteration of the word Para and Pára; as:

पारं प्रं विष्णुरपार्पारः परं परेभाः परमार्थरूपी। स ब्रह्मपारः परपार्भृतः परः पराणामपि पारपारः॥

Para means 'supreme, infinite'; and Pára, 'the further bank or limit', the point that is to be attained by crossing a river or sea, or, figuratively, the world or existence. Visháu, then, is Paraán, that which nothing surpasses; and Páraán, the end or object of existence: he is Apárapáral', the furthest bound of that which is illimitable, or space and time: he is Paraán parebhyah, above or beyond the highest, being beyond or superior to all the elements: he is Paramártharúpí, or identical with final truth, or knowledge of soul: he is Brahmapárah, the object or essence of spiritual wisdom. Parapárabhútah is said to imply the further limit (Pára) of rudimental matter (Para). He is Parah, or chief, Paránám, ot those objects which are beyond the senses: and he is Párapárah, or the boundary of boundaries; that is, he is the comprehensive

The MSS, which I have examined exhibit, without exception, ut:

The Prachetasas said: "We are desirous to hear the transcendental prayers by inaudibly reciting which the pious Kańdu propitiated Kesáva." On which Soma repeated as follows: "'Vishnu is beyond the boundary of all things; he is the infinite; he is beyond that which is boundless; he is above all that is above; he exists as finite truth; he is the object of the Veda; the limit of elemental being; unappreciable by the senses; possessed of illimitable might. He is the cause of cause: the cause of the cause of cause; the cause of finite cause; and, in effects, he, both as every object and agent, preserves the universe. He is Brahma the lord: Brahma all beings; Brahma the progenitor of all beings; the imperishable. He is the undecaying, eternal, unborn Brahma, incapable of increase or diminution. Purushottama is the everlasting, uncreated, immutable, Brahma. May the imperfections of my nature be annihilated (through his favour).' Reciting this eulogium, the essence of divine truth, and propitiating Kesáva, Kańdu obtained final emancipation.*

"Who Márishá was of old, I will also relate to you; as the recital of her meritorious acts will be beneficial to you. She was the widow of a prince, and left childless at her husband's death. She, therefore, zealously worshipped Vishóu; who, being gratified by her adoration, appeared to her, and desired her to demand a

investure of, and exterior to, those limits by which soul is confined; he is free from all incumbrance or impediment. The passage may be interpreted in different ways, according to the ingenuity with which the riddle is read.

boon; on which she revealed to him the wishes of her 'I have been a widow, lord', she exclaimed, 'even from my infancy; and my birth has been in vain. Unfortunate have I been, and of little use, O sovereign of the world. Now, therefore, I pray thee, that, in succeeding births, I may have honourable husbands, and a son equal to a patriarch (amongst men). May I be possessed of affluence and beauty; may I be pleasing in the sight of all; and may I be born out of the ordinary course. Grant these prayers, O thou who art propitious to the devout." Hrishíkesa, the god of gods, the supreme giver of all blessings, thus prayed to, raised her from her prostrate attitude, and said: "In another life you shall have ten husbands of mighty prowess, and renowned for glorious acts. And you shall have a son, magnanimous and valiant, distinguished by the rank of a patriarch, + from whom the various races of men shall multiply, and by whose posterity the universe shall be filled. You, virtuous lady, shall be of marvellous birth;; and you shall be endowed with grace and loveliness, delighting the hearts of men.' Thus having spoken, the deity disappeared; and the princess was, accordingly, afterwards born as Márishá, who is given to you for a wife."1

¹ This part of the legend is peculiar to our text; and the

Soma having concluded, the Prachetasas took Márishá, as he had enjoined them, righteously to wife, relinquishing their indignation against the trees; and upon her they begot the eminent patriarch Daksha, who had (in a former life) been born as the son of Brahmá.

whole story of Márishá's birth is nowhere else so fully detailed. The penance of the Prachetasas, and its consequences, are related in the Agni, Bhágavata, Matsya, Padma, Váyu, and Brahma Puráńas; and allusion is briefly made to Márishá's birth. Her origin from Kańdu and Pramlochá is narrated in a different place in the Brahma Puráńa, where the austerities of Kańdu, and the necessity for their interruption, are described. The story, from that authority, was translated by the late Professor Chézy, and is published in the first number of the Journal Asiatique.

The second birth of Daksha, and his share in the peopling of the earth, is narrated in most of the Puránas in a similar manner. It is, perhaps, the original legend; for Daksha seems to be an irregular adjunct to the Prajapatis or mind-born sons of Brahmá (see Vol. I., p. 100, note 2); and the allegorical nature of his posterity in that character (Vol. I., p. 109) intimates a more recent origin. Nor does that series of descendants apparently occur in the Mahábhárata; although the existence of two Dakshas is especially remarked there (Moksha Dharma):

तसाहे नामनी लोके दवः क इति चोच्यते।"

In the Adi Parvan, which seems to be the freest from subsequent improvements, the Daksha noticed is the son of the Prachetasas. The incompatibility of the two accounts is reconciled by referring the two Dakshas to different Manwantaras; the Daksha who proceeded from Brahmá as a Prajápati being born in the first, or Swáyambhuva, and the son of the Prachetasas, in the Chákshusha, Manwantara. The latter, however, as descended from Uttánapáda, should belong to the first period also. It is evident that great confusion has been made, by the Puránas, in Daksha's history.

^{*} Mahabharata, Santi-parvan, 7573.

This great sage, for the furtherance of creation, and the increase of mankind, created progeny. Obeying the command of Brahmá, he made movable and immovable things, * bipeds and quadrupeds, + and, subsequently, by his will, gave birth to females, ten of whom he bestowed on Dharma, thirteen on Kasyapa, and twenty-seven, who regulate the course of time, on the Moon. Of these, the gods, the Titans, the snakegods, cattle, and birds, the singers and dancers of the courts of heaven, the spirits of evil, & and other beings, were born. From that period forwards, living creatures were engendered by sexual intercourse. Before the time of Daksha, they were variously propagated,-by the will, by sight, by touch, and by the influence of religious austerities practised by devout sages and holy saints.

MAITREYA.—Daksha, as I have formerly heard, was born from the right thumb of Brahmá. Tell me, great Muni, how he was regenerate as the son of the Prachetasas. Considerable perplexity also arises in my mind, how he, who, as the son of Márishá, was the grandson of Soma, could be also his father-in-law.

PARASARA.—Birth and death are constant in all creatures. Rishis and sages, possessing divine vision,

are not perplexed by this. Daksha and the other eminent Munis are present in every age, and, in the interval of destruction, cease to be. Of this the wise man entertains no doubt. Amongst them of old there

1 'They are removed' (जिन्ह्या), which the commentator explains by सुमूल्लीयने। 'are absorbed, as if they were fast asleep.' But, in every age or Yuga, according to the text,—in every Manwantara, according to the comment—the Rishis reappear; the circumstances of their origin only being varied. Daksha, therefore, as remarked in the preceding note, is the son of Brahmá, in one period, the son of the Prachetasas, in another. So Soma, in the Swáyambhuva Manwantara, was born as the son of Atri; in the Chákshusha, he was produced by churning the ocean. The words of our text occur in the Hari Vamsa, "with an unimportant variation:

उत्पत्तिस निरोधस नित्धं भूतेषु पार्थिन। सृषयोऽत न मुद्यान्ति विद्वाससीन ये जनाः॥

'Birth and obstruction are constant in all beings. But Rishis, and those men who are wise, are not perplexed by this'; that is, not, as rendered above, by the alternation of life and death, but, according to the commentator on the Hari Vamsa, by a very different matter, the prohibition of unlawful marriages. Utpatti, 'birth of progeny', is the result of their will; Nirodha, 'obstruction', is the law prohibiting the intermarriage of persons connected by the offering of the funeral cake: निरोधो निखमसपिण्डामुद्रहेति जियम: I to which Rishis and sages are not subject, either from their matrimonial unions being merely Platonic, or from the bad example set by Brahmá, who, according to the Vedas, approached his own daughter: प्रजापतिर्वे खदहितरमभ्यध्यायदिति श्रुति:। a mystery we have already had occasion to advert to (Vol. I., p. 104, note 2). The explanation of the text, however, given by the commentator appears forced, and less natural than the interpretation preferred above.

was neither senior nor junior. Rigorous penance and acquired power were the sole causes of any difference of degree amongst these more than human beings.*

MAITREYA.—Narrate to me, venerable Brahman, at length, the birth of the gods, Titans,† Gandharvas, serpents, and goblins.;

Parasara.—In what manner Daksha created living creatures, as commanded by Brahmá, you shall hear. In the first place, he willed into existence the deities, the Rishis, the quiristers of heaven, \$\\$ the Titans, and the snake-gods. Finding that his will-born progeny did not multiply themselves, he determined, in order to secure their increase, to establish sexual intercourse as the means of multiplication. For this purpose he espoused Asikní, the daughter of the patriarch Vírana, a damsel addicted to devout practices, the eminent

¹ This is the usual account of Daksha's marriage, and is that of the Mahábhárata, Ádi Parvan (p. 113), and of the Brahma Puráńa, which the Hari Vamsa, in the first part, repeats. In another portion, the Pushkara Mahátmya, however, Daksha, it is said, converts half himself into a female, by whom he begets the daughters presently to be noticed:

supportress of the world. By her the great father of mankind begot five thousand mighty sons, through whom he expected the world should be peopled. Nárada, the divine Rishi, observing them desirous to multiply posterity, approached them, and addressed them in a friendly tone: "Illustrious Haryaśwas, it is evident that your intention is to beget posterity. But first consider this—why should you, who, like fools, know not the middle, the height, and depth of the world, propagate offspring? When your intellect is no more obstructed by interval, height, or depth, then how, fools, shall ye not all behold the term of the universe?"* Having heard the words of Nárada, the sons

of Daksha dispersed themselves through the regions, and, to the present day, have not returned; as rivers (that lose themselves) in the ocean (come back no

The Haryaśwas having disappeared, the patriarch Daksha begot, by the daughter of Vírańa, a thousand other sons. They, who were named Śabaláśwas, were desirous of engendering posterity, but were dissuaded, by Nárada, in a similar manner. They said to one another: "What the Muni has observed is perfectly just. We must follow the path that our brothers have travelled; and, when we have ascertained the extent of the universe, we will multiply our race." Accordingly, they scattered themselves through the regions; and, like rivers (flowing) into the sea, they returned not again. Henceforth brother seeking for brother dis-

¹ Nárada's interference, and the fruitless generation of the first progeny of Daksha, is an old legend. The Mahábhárata (Ádi Parvan p. 113) notices only one set of sons, who, it is said, obtained Moksha or liberation through Náreda's teaching them the Sánkhya philosophy. The Brahma, Matsya, Váyn, Linga, Padma, Agni, and Bhágavata Puránas tell the story much as in the text, and, not unfrequently, in the same words. In general, they merely refer to the imprecation denounced upon Nárada, as above. The Bhágavata specifics the imprecation to be perpetual peripateticism. Daksha says to him: 'There shall not be a resting-place for thee in all these regions:'

"Çuka dit: Le puissant Pradjâpati, dont la Mâyâ de Vichúu augmentait les forces, eut de sa femme, fille de Pantchadjana, dix mille fils, nommés

les Haryaçvas.

"Ces fils de Dakcha, qui étaient tous unis par les mêmes devoirs et les mêmes vertus, invités par leur père à se livrer à la création des êtres, se retirèrent du côté de l'occident.

"La, au confluent du Sindhu et de l'océan, est le vaste étang de Nârâyanasaras, qui est fréquenté par les solitaires et par les Siddhas.

"Se livrèrent, conformément aux ordres de leur père, à de rudes mortifications; le Richi des Dêvas les vit, pendant qu'ils faisaient tous leurs efforts pour multiplier les créatures.

"Et il leur dit: O Haryaçvas, comment pourrez-vous créer les êtres, sans avoir vu les bornes de la terre? Certes, quoique vous soyez les souverains [du monde], vous êtes des insensés.

"Vous ne connaissez ni le royaume où il n'y a qu'un homme, ni la caverne dont on ne voit pas l'issue, ni la femme aux nombreuses formes,

"Fils de Dakcha, leur dit-il, écoutez les conseils que je vous donne; suivez, vous qui avez de l'affection pour vos frères, la voie où ils ont

marché.

"Le frère qui connaissant la loi, suit la route que lui ont tracée ses frères, est un ami de la vertu qui obtient de jouir du bonbeur avec les Maruts.

"Ayant ainsi parlé, Narada dont le regard est infaillible se retira; et les fils de Dakcha, ô roi respecté, entrèrent dans la voie qu'avaient suivie leurs frères.

"Marchant, comme leurs aînés, d'une manière régulière dans la voie qui ramenant l'homme au dedans de lui, le conduit à l'Être suprême, ils ne revinrent pus plus que ne reviendront les nuits déjà écoulées.

"En ce temps-là le Pradjapati voyant de nombreux prodiges, apprit que la mort de ses enfants était, comme celle de leurs aînés, l'œuvre de Narada.

"Désolé de la perte de ses enfants, il se mit en fureur contre Narada, et la lèvre tremblante de colère, il parla ainsi au Richi.

"Dakcha dit: Ah! méchant, avec ton extérieur qui est celui des gens de bien, tu m'as fait du mal en enseignant à mes fils vertueux la voie des ascètes qui mendient.

"[En leur donnant ce conseil] avant qu'ils eussent acquitté les trois dettes [de la vie] et qu'ils eussent accompli des œuvres, tu as détruit leur bonheur pour ce monde et pour l'autre.

II.

VISHNU PURÁNA.

Then, Maitreya, the wise patriarch, it is handed

pensities. But the Bhágavata, VI., 7, has the reverse of this legend, and makes him, first, a Gandharva, then a Śúdra, then the son of Brahmá. The Brahma Puráńa, and, after it, the Hari Vamsá, and the Váyu Puráńa, have a different, and not very intelligible, story. Daksha, being about to pronounce an imprecation upon Nárada, was appeased by Brahmá and the Řishis; and it was agreed, between them, that Nárada should be again born, as the son of Kasyapa, by one of Daksha's daughters. This seems to be the gist of the legend: but it is very confusedly told. The version of the Brahma Puráńa, which is the same as that of the Hari Vamsa,* may be thus rendered: "The smooth-speaking

"Et cependant, homme sans pitié, toi qui te plais à troubler l'esprit des enfants, tu te montres avec impudence au milieu des serviteurs de Hari dont tu détruis la gloire.

"Certes ils éprouvent une constante sollicitude pour tous les êtres, les serviteurs de Bhagavat, toi excepté, toi l'ennemi de la bienveillance,

qui fais du mal à ceux qui ne t'en veulent pas.

"Non, quoique tu penses de la quiétude qui tranche le lien de l'affection, tes conseils, ô toi qui n'as que l'apparence trompeuse du sage, ne conduiront jamais les hommes au détachement.

"Il ne sait rien, l'homme qui n'a pas éprouvé l'impression cuisante des objets; mais une fois qu'il la ressentie, il se dégoûte lui-même du monde, bien mieux que celui dont des êtres supérieurs rompent les desseins.

"Quoique tu nous aies fait un mal intolérable, à nous qui sommes voués aux œuvres et qui vivons en maîtres de maison vertueux, nous savons supporter ta mauvaise action.

"Mais parce qu'en interrompant ma descendance tu m'as fait du mal à deux reprises, à cause de cela, ô insensé, je te condamne à errer à

travers les mondes, sans pouvoir t'arrêter nulle part.

"Çuka dit: Ainsi soit-il, répondit Nârada qui est estimé des gens de bien; car le langage de Dakcha était si sage, qu' Îçvara lui-même l'eût enduré."

The account there given—122-129—is, as edited, in these words:

देवार्षः प्रियसंवादो नारदः प्रात्रवीदिदम् ॥ नागाय वचनं तेषां भाषायेवासनस्या। यं कश्चपः सुतं वीरं परमेष्ठी वजीजनत्॥

down to us, being anxious to people the world, created

Nárada addressed the sons of Daksha, for their destruction and his own: for the Muni Kasyapa begot him as a son, who was the son of Brahmá, on the daughter of Daksha, through fear of the latter's imprecation. He was formerly the son of Parameshthin (Brahma): and the excellent sage Kasyapa next begot him, as if he were his father, on Asikní, the daughter of Vírana. Whilst he was engaged in beguiling the sons of the patriarch, Daksha, of resistless power, determined on his destruction. But he was solicited, by Brahma, in the presence of the great sages; and it was agreed, between them, that Nárada, the son of Brahmá, should be born of a daughter of Daksha. Consequently, Daksha gave his daughter to Parameshíhin; and, by her, was Nárada born." Now, several difficulties occur here. Asikni is the wife, not the daughter, of Daksha. But this may be a blunder of the compiler; for, in the parallel passage of the Váyu, no name occurs. In the next place, who is this daughter? For, as we shall see, the progeny of all Daksha's daughters are fully detailed; and in no authority consulted is Nárada mentioned as the son of either of them, or as the son of Kasyapa. Daksha, too, gives his daughter, not to Kaśyapa, but to Parameshihin or Brahmá. The commentator on the Hari Vamsa solves this by saying he gives

द्वस वे दुहितरि द्वशापभयासुनिः।
पूर्वे स हि समुत्पन्नी नारदः परमेष्ठिना॥
असिक्वामण वेरक्यां भूयो देविधसत्तमः।

sixty daughters of the daughter of Vírana; ten of whom he gave to Dharma, thirteen to Kasyapa, and

her to Brahmá, for Kaśyapa. The same bargain is noticed in the Váyu; but Nárada is also said, there, to be adopted by Kaśyapa: स निप्र: कश्चपद्यति क्राचिम:। Again, however, it gives Daksha's imprecation in the same words as the Hari Vainsa; a passage, by the way, omitted in the Brahma:

नारद नाश्मेहीति गर्भवासं वसेति च।

'Nárada, perish (in your present form); and take up your abode in the womb.' Whatever may be the original of this legend, it is, evidently, imperfectly given by the authorities here cited. The French translation of the passage in the Hari Vamsa† can scarcely be admitted as correct. Assuredly

असिक्यामय वैरखां भूयो देविषसत्तमः। तं भूयो जनयामास पितेव सुनिपुङ्गवम्॥

is not 'le Dévarchi Dakcha, époux d'Asiknî, fille de Vîrana, fut l'aïeul de cet illustre Mouni, ainsi régénéré.': देविषसत्त्र is, more consistently, said, by the commentator, to mean Kasyapa. The Váyu Purána, in another part,—a description of the different orders of Rishis,—states that the Devarshis Parvata and Nárada were sons of Kasyapa:

पर्वती नार्द्यैन कश्चपस्यात्मजानुशी।
In the account of Kártavírya, in the Brahma Purána and Hari
Vamsa, Nárada is introduced as a Gandharva, the son of Varidása; being the same, according to the commentator on the latter,
as the Gandharva elsewhere called Upabarhana.

The prior specification (p. 10) was fifty. The Mahábhárata, (Ádi Parvan, 113, aud, again, Moksha Dharma), has the same number. The Bhágavata, Kúrma, Padma, Linga, and Váyu Puránas state sixty. The former is, perhaps, the original; as the fullest and most consistent details relate to them and their posterity.

twenty-seven to Soma, four to Arishtanemi, two to Bahuputra, two to Angiras, and two to Krisáśwa.* I will tell you their names. Arundhatí, Vasu, Yámí,† Lambá, Bhánu, Marutwatí, Sankalpá, Muhúrtá, Sádhyá, and Viśwá were the ten wives of Dharma,¹ and bore him the following progeny. The sons of Viśwá were

¹ This is the usual list of Dharma's wives. The Bhágavata‡ substitutes Kakubh for Arundhatí. The Padma Purána, Matsya Purána, and Hari Vamsa contain two different accounts of Daksha's descendants. The first agrees with our text: the second, which is supposed to occur in the Padma Kalpa, is somewhat varied, particularly as to the wives of Dharma, who are said to be five. The nomenclature varies, or:

Padma.	Hari Vamsa.	Matsya.
Lakshmí	Lakshmi	Lakshmi
Saraswatí	Kirtti	Saraswati
Gangá	Sádhyá	Sádhyá
Viśweśá	Viśwá	Viśweśá
Sávitrí	Marutwati	Úrjaswatí

There is evident inaccuracy in all the copies; and the names may, in some instances, be erroneous. From the succeeding enumeration of their descendants, it appears that Káma was the son of Lakshmí; the Sádhyas, of Sádhyá; the Viśwadevas, of Viśwá; the Maruts, § of Marutwatí; and the Vasus, of Deví, who may be either the Saraswatí, or Sávitrí, of the previous enumeration.

^{*} According to the Bhágavata-puráña, VI., 6, 2, these sixty daughters were bestowed away as follows: Dharma had ten; Prajápati, twolve; Indu, twenty-seven; Bhúta, Angiras, and Křišáśwa, two euch; and Tárksha, the rest, namely, five. By Prajápati and Tárksha are meant Kaśyapa, who, thus, had seventeen. Indu is the same as Soma.

the Viśwadevas; and the Sádhyas, those of Sádhya. The Marutwats were the children of Marutwatí; the Vasus, of Vasu; the Bhánus (or suns), of Bhánu; and the deities presiding over moments, of Muhúrtá. Ghosha was the son of Lambá (an arc of the heavens); Nágavíthí (the milky-way!), the daughter

¹ The Viśwadevas are a class of gods to whom sacrifices should be offered daily. Manu, III., 121.§ They are named in some of the Puráńas, as the Váyu and Matsya: the former specifying ten; the latter, twelve.∥

² The Sádhyas, according to the Váyu, are the personified rites and prayers of the Vedas, born of the metres, and partakers

of the sacrifices:

साध्या नाम महाभागा छन्द्जा यज्ञभागिनः। सर्वे मन्त्रप्ररीराः॥

The same work names twelve, which are, all, names of sacrifices and formulæ; as: Darśa, Paurńamása, Bŕihadaśwa, Rathantara, &c. The Matsya Puráńa, Padma Puráńa, and Hari Vańsa have a different set of seventeen appellations, apparently of arbitrary selection, as Bhava, Prabhava, Íśa, Aruńi, &c.¶

* Professor Wilson had "Maruts or winds". The Marutwats, "attended by the winds", are the Indras. The mother of the Maruts was Diti. See Chapter XXI. ad finem.

The Markandeya-purana, 1., 7, 62, speaks of only five.

¶ "It would seem that, in Sáyana's day, the purport of the designation Sádhya had become uncertain. They are named amongst the minor divinities, in the Amara-kosa; and from Bharatamalla we learn that they were twelve in number, but no other peculiarity is specified." The deities called Vasus, - because, preceded by fire, they abound in splendour and might, 1-are, severally, named Apa, Dhruva, Soma, Dhara† (fire:), Anila (wind), Anala (fire), Pratvúsha (dav-break), and Prabhása (light). The four sons of Apa were Vaitandya, Śrama (weariness), Śránta (fatigue), and Dhur § (burthen). Kála (time), the cherisher of the world, was the son of Dhruva. The son of Soma was Varchas (light), who was the father of Varchaswin (radiance). Dhara had, by his wife Manohará (loveliness), Dravina, Hutahavyavaha, Śiśira, Práńa, and Ramańa. The two sons of Anila (wind), by his wife Sivá, were Manojava (swift as thought) and Avijnátagati (untraceable motion). The son of Agni (fire), Kumára, was born in a clump of Sara reeds: his sons were Śákha, Viśákha, Naigameya, and Prishthaja. The offspring of the Krittikas was named Kárttikeya. The son of Pratyúsha was the Rishi named Devala, who had two philosophic and

intelligent sons. The sister of Váchaspati, lovely and virtuous, Yógasiddhá, who pervades the whole world, without being devoted to it, was the wife of Prabhása, the eighth of the Vasus, and bore to him the patriarch Viśwakarman, the author of a thousand arts, the mechanist of the gods, the fabricator of all ornaments, the chief of artists, the constructor of the (self-moving) chariots of the deities, and by whose skill men obtain subsistence. Ajaikapád, Ahirvradhna, and the wise Rudra Twashtri, were born; and the self-born son of Twashtri was also the celebrated Viśwarúpa. There are eleven well-known Rudras, lords of the three worlds, or Hara, Bahurúpa, Tryambaka, Aparájita, Vrishákapi, Sambhu, Kapardin, Raivata, Mrigavyádha, Sarva, and Kapálin. But there are

a hundred appellations of the immeasurably mighty Rudras.¹

मध्य लष्ट्रवंशयुक्ता बद्धसंख्यासमापनमपराजित इति व्यक्षकिविश्वक्तम् । Accordingly, the three last names in all the other copies of the text are omitted in these two; their places being supplied by the three first, two of whom are always named in the lists of the Rudras. According to the Váyu and Brahma Puránas, the Rudras are the children of Kaśyapa by Surabhi: the Bhágavata makes them the progeny of Bhúta and Sarúpá: the Matsya, Padma, and Hari Vamsa, in the second series, the offspring of Surabhi by Brahmá. The names, in three of the Pauránik authorities, run thus:

Váyu.	Matsya.	Bhágavata.*
Ajaikapád	Ajaikapád	Ajaikapád
Ahirvradhna	Ahirvradhna	Ahirvradhna
Hara	Hara	Ugra
Nirrita	Nirriti	Bhíma
Íśwara	Pingala	Váma
Bhuvana	Dahana	Mahat
Angáraka	Aparájita	Bahurúpa.
Ardhaketu	Mŕigavyádha	Vřishákapi
Mřityu	Senání	Aja
Sarpa	Sajja	Bhava.
Kapálin	Kapálin	Raivata.

The Brahma (or Hari Vamsa), the Padma, the Linga, &c., have other varieties. And the lexicons have a different reading from all; as, in that of Jaíadhara, they are Ajaikapad, Ahivradhna, Virúpáksha, Sureśwara, Jayanta, Bahurúpaka, Tryambaka, Aparájita, Vaivaswata, Sávitra, and Hara. The variety seems to proceed from the writers applying to the Rudras, as they may legitimately do, different appellations of the common prototype, or synonyms of Rudra or Śiva, selected at will from his thousand and eight names, according to the Linga Purána.

VISHNU PURÁNA.

The daughters of Daksha who were married to Kaśyapa were Aditi, Diti, Danu,* Arishtá, Surasá, Khasá,† Surabhi, Vinatá, Támrá, Krodhavasá, Idá,‡ Kadrú, and Muni;¹ whose progeny I will describe to you. There were twelve celebrated deities in a former Manwantara, called Tushitas,² who, upon the approach of the present

allegorical personifications, chiefly of two classes, one consisting of astronomical phenomena, and the other, of portions or subjects of the ritual of the Vedas.

¹ There is some, though not much, variation, in these names, in different Puráńas. The Bhágavata§ has Saramá, Káshíhá, and Timi, the parents, severally, of canine animals, beasts with uncloven hoofs, and fishes, in place of Vinatá, Khāsá, and Kādrúj disposing of the first and last differently. The Váyu has Pravá, in place of Arishtá, and Anáyus (or Danáyus) for Surasá. The Padma Puráńa, second series, substitutes Kála, Anáyus, Simhiká, Piśáchá, Vách, for Arishíá, Surasá, Surabhi, Támrá, and Muni; and omits Idá and Khasá. In the Uttara Khańda of the same, Kaśyapa's wives are said to be but four: Aditi, Diti, Kadrú, and Vinatá.

² In the sixth reign, or that of Chákshusha Manu, according to the text: but, in book III., chapter 1, the Tushitas are the gods of the second or Swárochisha Manwantara. The Váyu has a much more complete legend than any other Purána, on this subject. In the beginning of the Kalpa, twelve gods, named Jayas, were created, by Brahmá, as his deputies and assistants in the creation. They, lost in meditation, neglected his commands; on which he cursed them to be repeatedly born in each Manwantara, till the seventh. They were, accordingly, in the several successive Manwantaras, Ajitas, Tushitas, Satyas, Haris, Vai-

period, or in the reign of the last Manu, Chákshusha, assembled, and said to one another: "Come, let us quickly enter into the womb of Aditi, that we may be born in the next Manwantara; for, thereby, we shall again enjoy the rank of gods." And, accordingly, they were born the sons of Kaśyapa, the son of Maríchi, by Aditi, the daughter of Daksha; thence named the twelve Ádityas; whose appellations were, respectively, Vishńu, Śakra, Aryaman, Dhátíi* Twashíti, Púshan, Vivaswat, Savitíi, Mitra, Varuńa, Amśa,† and Bhaga.¹ These, who, in the Chákshusha Manwantara, were the gods called Tushitas, were called the twelve Ádityas,‡ in the Manwantara of Vaivaswata.

kunthas, Sadhyas, and Adityas. Our authority, and some others, as the Brahma, have, apparently, intended to refer to this account, but have confused the order of the series.

¹ The Puránas that contain this genealogy agree tolerably well in these names. The Bhágavata adds many details regarding some of the Ádityas and their descendants.

^{*} The first edition had "Dhuti", an error of the press.

⁺ One MS. has Amsu.

[?] Professor Wilson appends the following note to the mention, in the Rig-veda, II., 27, 1, of five Ádityas, namely, Mitra, Aryaman, Bhaga, Varuna, and Amsa: "The Ádityas, or sons of Aditi, here enumerated are only five. The scholiast quotes the Taittiriya for eight; adding Dhatri, Indra, and Vivaswat to those in the text, and adding Amsa for Amsa. The Pauranik enumeration is, universally, twelve; Vishnu, Pńshan, Twashffi, and Savitri being added to the eight of the Taittiriya." Translation of the Rig-veda, Vol. II., p. 274.

The passage of the Rig-veda thus annotated may be taken, on one construction, to speak of a sixth Aditys, Daksha.

For a full discussion of the Adityas, see Original Sanskrit Texts, Part. IV., pp. 10-13 and 101-106.

The twenty-seven (daughters of the patriarch) who became the virtuous wives of the moon were all known as the nymphs of the lunar constellations, which were called by their names, and had children who were brilliant through their great splendour. The Nakshatra Yoginis, or chief stars of the lunar mansions, or asterisms in the moon's path.

² None of the authorities are more specific on the subject of Arishtanemi's progeny. In the Mahábhárata, this is said to be another name of Kasyapa:

मरीचेः कम्मपः पुचलस्य दे नामनी सृते। अरिष्टनेमिरियेकं कम्मपेयपरं विदुः॥

The Bhágavata* substitutes Tárksha for this personage, said, by the commentator, to be, likewise, another name of Kaśyapa. His wives are Kadrú, Vinatá, Patangi, and Yáminí, mothers of snakes, birds, grasshoppers, and locusts.

³ Enumerated, in astrological works, as brown, red, yellow, and white; portending, severally, wind, heat, rain, famine.

Burnouf translates these verses as follows:

"Târkcha eut pour femmes Vinatâ, Kadrû, Patangî et Yâminî; Patangî donna le jour aux Patagas (les oiseaux), et Yâminî aux Çalabhas (les sauterelles).

"Suparna (Vinata aux belles ailes) mit au monde Garuda, celui qui est connu pour être la monture du Dieu chef du sacrifice; et Kadru donna le jour à Anuru (Aruna qui est privé de jambes) le cocher du soleil, ainsi qu'à la multitude des Nagas."

giras, descended from the holy sage; and the deified weapons of the gods were the progeny of Kriśáśwa.

These classes of thirty-three divinities³ are born again at the end of a thousand ages, according to their own pleasure; and their appearance and disappearance is here spoken of as birth and death. But, Maitreya, these divine personages exists age after age, in the same manner as the sun sets and rises again.

¹ The Richas or verses, thirty-five in number; addressed to presiding divinities, denominated Pratyangirasas. The Bhágavata* calls the wives of Angiras, Swadhá and Satí, and makes them the mothers of the Pitris and the Atharva-veda, severally.

² The Śastradevatas, 'gods of the divine weapons'. A hundred are enumerated in the Rámáyańa; and they are there termed the sons of Křiśáśwa by Jayá and Vijayá, daughters of the Prajápati, that is, of Daksha. The Bhágavata† terms the two wives of Křišáśwa, Archis (flame) and Dhishańá. The former is the mother of Dhúmrakeśa‡ (comet); the latter, of four sages; Vedaśira, Devala, Vayuna, and Manu. The allegorical origin of the weapons is, undoubtedly, the more ancient.

³ This number is founded upon a text of the Vedas, which, to the eight Vasus, eleven Rudras, and twelve Adityas, adds Prajápati (either Brahmá or Daksha) and Vashaíkára, § 'deified oblation:' अधी वसन एकादश कद्रा द्वादशादिखाः प्रजापतिनेष-द्वारचित सुखुकाः। They have the epithet Chhandaja, as born, in different Manwantaras, of their own will: क्ट्र इस्ता जा-

It has been related to us that Diti had two sons, by Kaśyapa, named Hirańyakaśipu and the invincible Hirańyáksha. She had also a daughter, Simhiká, the wife of Viprachitti. Hiranyakasipu was the father of four mighty sons: Anuhláda, Hláda, the wise Prahláda, and the heroic Samhlada,* the augmentors of the Daitya race. 1 Amongst these, the illustrious Prahláda, looking on all things with indifference, devoted his whole faith to Janárdana. The flames that were lighted by the king of the Daityas consumed not him, in whose heart Vásudeva was cherished; and all the earth trembled, when, bound with bonds, he moved amidst the waters of the ocean. His firm body, fortified by a mind engrossed by Achyuta, was unwounded by the weapons hurled on him by order of the Daitya monarch; and the serpents sent to destroy him breathed their venomous flames upon him in vain. Overwhelmed with rocks, he yet remained unhurt; for he never forgot Vishnu; and the recollection of the deity was his armour of proof. Hurled from on high by the king of the Daityas, residing in Swarga, earth received him

The Puránas generally concur in this genealogy, reading, sometimes, Anuhráda, Hráda, &c., for Anuhláda and the rest. Although placed second in the order of Kaśyapa's descendants, the Daityas are, in fact, the elder branch. Thus, the Mahábhárata, Moksha Dharma, calls Diti the senior wife of Kaśyapa: artifica: I and the Váyu terms Hirańyakaśipu and Hirańyaksha the eldest of all the sons of that patriarch:

कश्चपखाताजी ती वे सर्वेश्वः पूर्वजी सृती। So "Titan and his enormous brood" were "heaven's first born."

unharmed. The wind, sent into his body to wither him up, was, itself, annihilated by him, in whom Madhusúdana was present. The fierce elephants of the spheres broke their tusks, and vailed their pride, against the firm breast which the lord of the Daityas had ordered them to assault. The ministrant priests of the monarch were baffled in all their rites for the destruction of one so steadily attached to Govinda; and the thousand delusions of the fraudulent Sambara, counteracted by the discus of Krishna, were practised without success. The deadly poison administered by his father's officers he partook of unhesitatingly, and without its working any visible change. For he looked upon the world with mind undisturbed, and, full of benignity, regarded all things with equal affection, and as identical with himself. He was righteous, an inex-

haustible mine of purity and truth, and an unfailing

model for all pious men.

CHAPTER XVI.

Inquiries of Maitreya respecting the history of Prahláda.

MAITREYA.—Venerable Muni, you have described to me the races of human beings, and the eternal Vishnu, the cause of this world. But who was this mighty Prahláda, of whom you have last spoken; whom fire could not burn; who died not, when pierced by weapons; at whose presence in the waters earth trembled, shaken by his movements, even though in bonds; and who, overwhelmed with rocks, remained unhurt? I am desirous to hear an account of the unequalled might of that sage worshipper of Vishnu, to whose marvellous history you have alluded. Why was he assailed by the weapons of the sons of Diti? Why was so righteous a person thrown into the sea? Wherefore was he overwhelmed with rocks? Why bitten by venomous snakes? Why hurled from the mountain-crest? Why cast into the flames? Why was he made a mark for the tusks of the elephants of the spheres? Wherefore was the blast of death directed against him by the enemies of the gods? Why did the priests of the Daityas practise ceremonies for his destruction? Why were the thousand illusions of Sambara exercised upon him? And for what purpose was deadly poison administered to him by the servants of the king, but which was innocuous as food to his sagacious son? All this I am anxious to hear: the history of the magnanimous Prahláda, a legend of great marvels. Not that it is a wonder that he should have been uninjured by

the Daityas: for who can injure the man that fixes his whole heart on Vishnu? But it is strange that such inveterate hatred should have been shown, by his own kin, to one so virtuous, so unweariedly occupied in worshipping Vishnu. You can explain to me for what reason the sons of Diti offered violence to one so pious, so illustrious, so attached to Vishnu, so free from guile. Generous enemies wage no war with such as he was, full of sanctity and every excellence. How should his own father thus behave towards him? Tell me, therefore, most illustrious Muni, the whole story in detail. I wish to hear the entire narrative of the sovereign of the Daitya race.

CHAPTER XVII.

Legend of Prahláda. Hirańyakaśipu the sovereign of the universe: the gods dispersed, or in servitude to him: Prahláda, his son, remains devoted to Vishúu: questioned by his father, he praises Vishúu: Hirańyakaśipu orders him to be put to death, but in vain: his repeated deliverance: he teaches his companions to adore Vishúu.

PARASARA.—Listen, Maitreya, to the story of the wise and magnanimous Prahláda, whose adventures are ever interesting and instructive. Hirańyakaśipu, the son of Diti, had formerly brought the three worlds under his authority; confiding in a boon bestowed upon him by Brahmá.1 He had usurped the sovereignty of Indra, and exercised, of himself, the functions of the sun, of air, of the lord of waters, of fire, and of the moon. He himself was the god of riches; he was the judge of the dead;* and he appropriated to himself, without reserve, all that was offered, in sacrifice, to the gods. The deities, therefore, flying from their seats in heaven, wandered, through fear of the Daitya, upon the earth, disguised in mortal shapes. Having conquered the three worlds, he was inflated with pride, and, eulogized by the Gandharvas, enjoyed whatever

¹ The boon, according to the Váyu Purána, was, that he should not be slain by any created being: the Kúrma adds, except by Vishnu. The Bhágavata has a similar boon as the Váyu, and, therefore, says the commentator, Vishnu assumed the form of the Nrisimha, as being that of neither a man nor an animal.

he desired. The Siddhas, the Gandharvas, and the snake-gods all attended upon the mighty Hirańyaka-śipu, as he sat at the banquet. The Siddhas, delighted, stood before him; some playing on musical instruments, some singing songs in his praise, and others shouting cries of victory; whilst the nymphs of heaven danced gracefully in the crystal palace where the Asura with

pleasure quaffed the inebriating cup. .

The illustrious son of the Daitya king, Prahláda, being yet a boy, resided in the dwelling of his preceptor, where he read such writings as are studied in early years. On one occasion he came, accompanied by his teacher, to the court of his father, and bowed before his feet, as he was drinking. Hiranyakasipu desired his prostrate son to rise, and said to him: "Repeat, boy, in substance, and agreeably, what, during the period of your studies, you have acquired." "Hear, sire", replied Prahláda, what, in obedience to your commands, I will repeat,—the substance of all I have learned. Listen attentively to that which wholly occupies my thoughts. I have learned to adore him who is without beginning, middle, or end, increase or diminution; the imperishable lord of the world, the universal cause of causes." On hearing these words, the sovereign of the Daityas, his eyes red with wrath, and lip swollen with indignation, turned to the preceptor of his son, and said: "Vile Brahman, what is this preposterous commendation of my foe, that, in disrespect to me, you have taught this boy to utter?" "King of the Daityas", replied the Guru, "it is not worthy of you to give way to passion. That which your son has uttered, he has not been taught by me."

"By whom, then", said Hiranyakasipu to the lad, "by whom has this lesson, boy, been taught you? Your teacher denies that it proceeds from him." "Vishńu, father", answered Prahláda, "is the instructor of the whole world. What else should any one teach, or learn, save him, the supreme spirit?" "Blockhead", exclaimed the king, "who is this Vishnu, whose name you thus reiterate so impertinently before me, who am the sovereign of the three worlds?" "The glory of Vishńu", replied Prahláda, "is to be meditated upon by the devout: it cannot be described. He is the supreme lord, who is all things, and from whom all things proceed." To this the king rejoined: "Are you desirous of death, fool, that you give the title of supreme lord to any one, whilst I survive?" "Vishnu, who is Brahma", said Prahláda, "is the creator and protector, not of me alone, but of all human beings, and even, father, of you. He is the supreme lord of all. Why should you, sire, be offended?" Hiranyakasipu then exclaimed: "What evil spirit has entered into the breast of this silly boy, that thus, like one possessed, he utters such profanity?" "Not into my heart alone", said Prahláda, "has Vishnu entered, but he pervades all the regions of the universe, and, by his omnipresence, influences the conduct of all beings, mine, father, and thine."1 "Away with the wretch", cried the king:

¹ The Puranas teach, constantly, incompatible doctrines. According to this passage, the supreme being is not the inert cause of creation only, but exercises the functions of an active providence. The commentator quotes a text of the Veda in support of this view: अन: प्रविद्य: गासा जनानां सनाता। 'Universal soul, entering into men, governs their conduct.' Incongruities,

"take him to his preceptor's mansion. By whom could he have been instigated to repeat the lying praises of

my foe?

According to the commands of his father, Prahláda was conducted, by the Daityas, back to the house of his Guru, where, assiduous in attendance on his preceptor, he constantly improved in wisdom. After a considerable time had elapsed, the sovereign of the Asuras sent for him again, and, on his arrival in his presence, desired him to recite some poetical composition. Prahláda immediately began: "May he from whom matter and soul* originate, from whom all that moves or is unconscious proceeds, he who is the cause of all this creation, Vishnu, be favourable unto us!" On hearing which, Hirańyakaśipu exclaimed: "Kill the wretch. He is not fit to live, who is a traitor to his friends, a burning brand to his own race." And his attendants, obedient to his orders, snatched up their weapons, and rushed, in crowds, upon Prahláda, to destroy him. The prince calmly looked upon them, and said: "Daityas, as truly as Vishnu is present in your weapons, and in my body, so truly shall those weapons fail to harm me." And, accordingly, although struck, heavily and repeatedly, by hundreds of the Daityas, the prince felt not the least pain; and his strength was ever renewed. His father then endeavoured to

persuade him to refrain from glorifying his enemy, and promised him immunity, if he would not be so foolish as to persevere. But Prahlada replied, that he felt no fear, as long as his immortal guardian against all dangers was present in his mind, the recollection of whom was, alone, sufficient to dissipate all the perils consequent upon birth or human infirmities.

Hirańyakaśipu, highly exasperated, commanded the serpents to fall upon his disobedient and insane son, and bite him to death with their envenomed fangs. And, thereupon, the great snakes, Kuhaka, Takshaka, and Andhaka, charged with fatal poison, bit the prince in every part of his body. But he, with thoughts immovably fixed on Krishna, felt no pain from their wounds; being immersed in rapturous recollections of that divinity. Then the snakes cried to the king, and said: "Our fangs are broken; our jewelled crests are burst; there is fever in our hoods, and fear in our hearts: but the skin of the youth is still unscathed. Have recourse, monarch of the Daityas, to some other expedient." "Ho, elephants of the skies!" exclaimed the demon, "unite your tusks, and destroy this (deserter from his father, and) conspirer with my foes. Is is thus that often our progeny are our destruction; as fire consumes the wood (from which it springs)." The young prince was then assailed by the elephants of the skies, as vast as mountain-peaks, cast down upon the earth, and trampled on, and gored by their tusks. But he continued to call to mind Govinda; and the tusks of the elephants were blunted against his breast. "Behold", he said to his father, "the tusks of the elephants, as hard as adamant, are blunted. But

this is not by any strength of mine. Calling upon Janárdana is my defence against such fearful affliction."

Then said the king to his attendants: "Dismiss the elephants; and let fire consume him. And do thou, deity of the winds, blow up the fire; that this wicked wretch may be consumed." And the Dánavas piled a mighty heap of wood around the prince, and kindled a fire, to burn him, as their master had commanded. But Prahláda cried: "Father, this fire, though blown up by the winds, burneth me not; and all around I behold the face of the skies, cool and fragrant, with beds of lotos-flowers."

Then the Brahmans who were the sons of Bhargava, illustrious priests, and reciters of the Sama-veda, said to the king of the Daityas: "Sire, restrain your wrath against your own son. How should anger succeed in finding a place in heavenly mansions? As for this lad, we will be his instructors, and teach him obediently to labour for the destruction of your foes. Youth is the season, king, of many errors; and you should not, therefore, be relentlessly offended with a child. If he will not listen to us, and abandon the cause of Hari, we will adopt infallible measures to work his death." The king of the Daityas, thus solicited by the priests, commanded the prince to be liberated from the midst of the flames.

Again established in the dwelling of his preceptor, Prahlada gave lessons, himself, to the sons of the demons, in the intervals of his leisure. "Sons of the offspring of Diti", he was accustomed to say to them, "hear from me the supreme truth." Nothing else is fit

to be regarded; nothing else, here, is an object to be coveted. Birth, infancy, and youth are the portion of all creatures; and then succeeds gradual and inevitable decay, terminating, with all beings, children of the Daityas, in death. This is manifestly visible to all; to you, as it is to me. That the dead are born again, and that it cannot be otherwise, the sacred texts are warrant. But production cannot be without a material cause; and, as long as conception and parturition are the material causes of repeated birth, so long, be sure, is pain inseparable from every period of existence. The simpleton, in his inexperience, fancies that the alleviation of hunger, thirst, cold, and the like is pleasure. But, of a truth, it is pain. For suffering gives delight to those whose vision is darkened by delusion; as fatigue would be enjoyment to limbs that are incapable of motion.1 This vile body is a compound of

¹ This is the purport of the sentence, apparently, and is that which the comment in part confirms.* Literally it is: 'A blow is the pleasure of those whose eyes are darkened by ignorance, whose limbs, exceedingly benumbed, desire pleasure by exercise.' The commentator divides the sentence, however, and reads it: 'As fatigue would be like pleasure to paralysed limbs; and a blow is enjoyment to those who are blinded by delusion, that is, by love: for, to them, a slap, or even a kick, from a mistress would be a favour.' It is, not improbably, an allusion to some such venerable pastime as blindman's buff. This interpretation,

The remarks of the larger commentary are subjoined: खळालं खिनिनाङ्गानां खब्याङ्गानाम् । खायामेन मझश्रमादिना । सुखमिक्तां प्रहारी मुख्यादियातः । सुखायते सुखमिन भवति । तथा धानिज्ञानानृताजाणां मीइपिहितवृष्टीनां प्रहारः प्रण्यकुपितर्मणीचरणान्यातोऽपि सुखायते ।

phlegm and other humours. Where are its beauty, grace, fragrance, or other estimable qualities? The fool that is fond of a body composed of flesh, blood, matter, ordure, urine, membrane, marrow, and bones, will be enamoured of hell.* The agreeableness of fire is caused by cold; of water, by thirst; of food, by hunger. By other circumstances their contraries are equally agreeable. The child of the Daitya who takes to himself a wife introduces only so much misery into his bosom. For, as many as are the cherished affections of a living creature, so many are the thorns of anxiety implanted in his heart; and he who has large

however, leaves the construction of the first half of the sentence imperfect, unless the nominative and verb apply to both portions:

They are so far from being sources of pleasure in themselves, that, under different contrasts, they become sources of pain. Heat is agreeable in cold weather; cold is agreeable in hot weather. Heat would then be disagreeable. Drink is pleasant to a thirsty man; thirst is agreeable to one who has drunk too much: and more drink would be painful. So of food, and of other contrasts.

possessions in his house is haunted, wherever he goes, with the apprehension that they may be lost, or burnt, or stolen. Thus, there is great pain in being born. For the dying man there are the tortures of the judge of the deceased, and of passing again into the womb. If you conclude that there is little enjoyment in the embryo state, you must, then, admit that the world is made up of pain. Verily I say unto you, that, in this ocean of the world, this sea of many sorrows, Vishnu is your only hope. If ye say, you know nothing of this: 'We are children; embodied spirit in bodies is eternal; birth, youth, decay are the properties of the body, not of the soul." But it is in this way that we deceive ourselves. † 'I am yet a child; but it is my purpose to exert myself when I am a youth. I am yet a youth; but, when I become old, I will do what is

^{1 &#}x27;Divine knowledge is the province only of those who can separate soul from body, that is, who live independent of bodily infirmities and passions. We have not overcome corporeal vicissitudes, and have, therefore, no concern with such abstruse inquiries.' This is the commentator's explanation of the passage. ;

needful for the good of my soul. I am now old; and all my duties are to be fulfilled. How shall I, now that my faculties fail me, do what was left undone when my strength was unimpaired?' In this manner do men, whilst their minds are distracted by sensual pleasures, ever propose, and never attain final beatitude. They die thirsting.1 Devoted, in childhood, to play, and, in youth, to pleasure, ignorant and impotent, they find that old age is come upon them. Therefore, even in childhood let the embodied soul acquire discriminative wisdom, and, independent of the conditions of infancy, youth, or age, strive, incessantly, to be freed. This, then, is what I declare unto you; and, since you know that it is not untrue, do you, out of regard to me, call to your minds Vishnu, the liberator from all bondage. What difficulty is there in thinking upon him, who, when remembered, bestows prosperity; and by recalling whom to memory, day and night, all sin is cleansed away? Let all your thoughts and affections be fixed on him, who is present in all beings; and you shall laugh at every care. The whole world is suffering under a triple affliction.2 What wise man would feel

¹ पिपासित: | Alluding, says the commentator, to the fable of a washerman, who, whilst washing his clothes in the Ganges, proposed, daily, to drink of its waters, but forgot his purpose in his occupation; or of a boy, who proposed the same, as he pursued fish after fish, and never accomplished his intention, being engrossed by his sport. Both died without drinking.

hatred towards beings who are objects of compassion? If fortune be propitious to them, and I am unable to partake of the like enjoyments, yet wherefore should I cherish malignity towards those who are more prosperous than myself? I should, rather, sympathize with their happiness: for the suppression of malignant feelings is, of itself, a reward.1 If beings are hostile, and indulge in hatred, they are objects of pity, to the wise, as encompassed by profound delusion. These are the reasons (for repressing hate, which are adapted to the capacities) of those who see (the deity) distinct (from his creatures). Hear, briefly, what influences those who have approached the truth.* This whole world is but a manifestation of Vishnu, who is identical with all things; and it is, therefore, to be regarded, by the wise, as not differing from, but as the same with, themselves. Let us, therefore, lay aside the angry passions of our race, and so strive that we obtain that perfect, pure, and eternal happiness which shall be beyond the power of the elements, or their deities, of fire, of the sun, of the moon, of wind, of Indra, t of the regent of the sea;; which shall be unmolested by spirits of air

Verily I say unto you, that you shall have no satisfaction in various revolutions through this treacherous world, but that you will obtain placidity for ever by propitiating Vishńu, whose adoration is perfect calm. What, here, is difficult of attainment, when he is pleased? Wealth, pleasure, virtue are things of little moment. Precious is the fruit that you shall gather, be assured, from the exhaustless store of the tree of true wisdom."

CHAPTER XVIII.

Hirańyakaśipu's reiterated attempts to destroy his son: their being always frustrated.

THE Dánavas, observing the conduct of Prahláda, reported it to the king, lest they should incur his displeasure. He sent for his cooks, and said to them: "My vile and unprincipled son is now teaching others his impious doctrines. Be quick; and put an end to him. Let deadly poison be mixed up with all his viands, without his knowledge. Hesitate not; but destroy the wretch without delay." Accordingly they did so, and administered poison to the virtuous Prahláda, as his father had commanded them. Prahláda, repeating the name of the imperishable, ate and digested the food in which the deadly poison had been infused, and suffered no harm from it, either in body or mind; for it had been rendered innocuous by the name of the eternal. Beholding the strong poison digested, those who had prepared the food were filled with dismay, and hastened to the king, and fell down before him, and said: "King of the Daityas, the fearful poison given, by us, to your son has been digested, by him, along with his food, as if it were innocent. Hirańyakaśipu, on hearing this, exclaimed: "Hasten, hasten, ministrant priests of the Daitya race. Instantly perform the rites that will effect his destruction." Then the priests went to Prahláda, and, having repeated the hymns of the Sáma-veda, said to him, as he respectfully hearkened: "Thou hast been born, prince, in the

family of Brahmá, celebrated in the three worlds, the son of Hirańyakaśipu, the king of the Daityas. Why shouldest thou acknowledge dependance upon the gods? Why upon the eternal? Thy father is the stay of all the worlds; as thou thyself, in turn, shalt be. Desist, then, from celebrating the praises of an enemy; and remember, that, of all venerable preceptors, a father is most venerable." Prahláda replied to them: "Illustrious Brahmans, it is true that the family of Marichi is renowned in the three worlds: this cannot be denied. And I also admit, what is equally indisputable, that my father is mighty over the universe. There is no error, not the the least, in what you have said, 'that a father is the most venerable of all holy teachers.' He is a venerable instructor, no doubt, and is ever to be devoutly reverenced. To all these things I have nothing to object: they find a ready assent in my mind. But, when you say: 'Why should I depend upon the eternal?' who can give assent to this, as right? The words are void of meaning." Having said thus much, he was silent a while, being restrained by respect to their sacred functions. But he was unable to repress his smiles, and again said: "What need is there of the eternal? Excellent! What need of the eternal? Admirable! Most worthy of you who are my venerable preceptors! Hear what need there is of the eternal; if to hearken will not give you pain. The fourfold objects of men are said to be virtue, desire, wealth, final emancipation. Is he who is the source of all these of no avail? Virtue was derived from the eternal by Daksha, Maríchi, and other patriarchs; wealth has been obtained from him by others, and, by others, the

enjoyment of their desires; whilst those who, through true wisdom and holy contemplation, have come to know his essence, have been released from their bondage, and have attained freedom from existence for ever. The glorification of Hari, attainable by unity, is the root of all riches, dignity, renown, wisdom, progeny, righteousness, and liberation. Virtue, wealth, desire, and even final freedom, Brahmans, are fruits bestowed by him. How, then, can it be said, What need is there of the eternal?' But enough of this. What occasion is there to say more? You are my venerable preceptors; and, speak ye good or evil, it is not for my weak judgment to decide." The priests said to him: "We preserved you, boy, when you were about to be consumed by fire; confiding that you would no longer eulogize your father's foes. We knew not how unwise you were. But, if you will not desist from this infatuation, at our advice, we shall even proceed to perform the rites that will inevitably destroy you." To this menace, Prahláda answered: "What living creature slays, or is slain? What living creature preserves, or is preserved? Each is his own destroyer, or preserver, as he follows evil, or good."1*

¹ This is not the doctrine of the impassibility of soul, taught in the Vedas:

Thus spoken to by the youth, the priests of the Daitya sovereign were incensed, and instantly had recourse to magic incantations, by which a female form, enwreathed with fiery flame, was engendered. She was of fearful aspect; and the earth was parched beneath her tread, as she approached Prahláda, and smote him, with a fiery trident,* on the breast. In vain; for the weapon fell, broken into a hundred pieces, upon the ground. Against the breast in which the imperishable Hari resides the thunderbolt would be shivered: much more should such a weapon be split in pieces. The magic being, then directed against the virtuous prince by the wicked priests, turned upon them, and, having quickly destroyed them, disappeared. But Prahláda, beholding them perish, hastily appealed to

to slay, or the slain to be killed: this (spiritual existence) neither kills nor is killed.' The same is inculcated, at great length, and with great beauty, in the Bhagavad Gítá:†

'Weapons wound it not; fire doth not consume it; water cannot drown it; nor doth it wither before the winds'; or, as rendered by Schlegel: 'Non illum penetrant tela; non illum comburit flamma; neque illum perfundant aque; nec ventus exsiccat.' P. 17, new edition. But, in the passage of our text, all that the Hindus understand of Fate is referred to. Deather immunity, prosperity or adversity, are, in this life, the inevitable consequences of conduct in a prior existence. No man can suffer a penalty which his vices in a preceding state of being have not incurred; nor can he avoid it, if they have.

VISHNU PURÁNA.

Kŕishna, the eternal, for succour, and said: "O Janárdana, who art everywhere, the creator and substance of the world, preserve these Brahmans from this magical and insupportable fire. As thou art Vishnu, present in all creatures, and the protector of the world, so let these priests be restored to life. If, whilst devoted to the omnipresent Vishnu, I think no sinful resentment against my foes, let these priests be restored to life. If those who have come to slay me, those by whom poison was given me, the fire that would have burned, the elephants that would have crushed, and snakes that would have stung me, have been regarded by me as friends; if I have been unshaken in soul, and am without fault, in thy sight; then, I implore thee, let these, the priests of the Asuras, be now restored to life." Thus having prayed, the Brahmans immediately rose up, uninjured and rejoicing; and, bowing respectfully to Prahláda, they blessed him, and said: "Excellent prince, may thy days be many; irresistible be thy prowess; and power, and wealth, and posterity be thine." Having thus spoken, they withdrew, and went and told the king of the Daityas all that had passed.

CHAPTER XIX.

Dialogue between Prahláda and his father: he is cast from the top of the palace, unhurt: baffles the incantations of Śambara: he is thrown, fettered, into the sea: he praises Viśhńu.

WHEN Hiranyakasipu heard that the powerful incantations of his priests had been defeated, he sent for his son, and demanded of him the secret of his extraordinary might. "Prahláda", he said, "thou art possessed of marvellous powers. Whence are they derived? Are they the result of magic rites? Or have they accompanied thee from birth?" Prahláda, thus interrogated, bowed down to his father's feet, and replied: "Whatever power I possess, father, is neither the result of magic rites, nor is it inseparable from my nature. It is no more than that which is possessed by all in whose hearts Achyuta abides. He who meditates not of wrong to others, but considers them as himself, is free from the effects of sin; inasmuch as the cause does not exist. But he who inflicts pain upon others, in act, thought, or speech, sows the seed of future birth; and the fruit that awaits him after birth is pain. I wish no evil to any, and do and speak no offence: for I behold Keśava in all beings, as in my own soul. Whence should corporeal or mental suffering, or pain inflicted by elements or the gods, affect me, whose heart is thoroughly purified by him? Love, then, for all creatures will be assiduously cherished by all those who are wise in the knowledge that Hari is all things."

When he had thus spoken, the Daitya monarch, his face darkened with fury, commanded his attendants to

cast his son from the summit of the palace where he was sitting, and which was many Yojanas in height, down upon the tops of the mountains, where his body should be dashed to pieces against the rocks. Accordingly, the Daityas hurled the boy down: and he fell, cherishing Hari in his heart; and Earth, the nurse of all creatures, received him gently on her lap, thus entirely devoted to Keśava, the protector of the world.

Beholding him uninjured by the fall, and sound in every bone, Hirańyakaśipu addressed himself to Sambara, the mightiest of enchanters, and said to him: "This perverse boy is not to be destroyed by us. Do you, who are potent in the arts of delusion, contrive some device for his destruction." Sambara replied: "I will destroy him. You shall behold, king of the Daityas, the power of delusion, the thousand and the myriad artifices that it can employ." Then the ignorant Asura Sambara practised subtile wiles for the extermination of the firm-minded Prahláda. But he, with a tranquil heart, and void of malice towards Sambara, directed his thoughts, uninterruptedly, to the destroyer of Madhu; by whom the excellent discus, the flaming Sudarsana, was dispatched to defend the youth; and the thousand devices of the evil-destinied Sambara were, every one, foiled by this defender of the prince. The king of the Daityas then commanded the withering wind to breathe its blighting blast upon his son; and, thus commanded, the wind immediately penetrated into his frame, cold, cutting, drying, and insufferable. Knowing that the wind had entered into his body, the Daitya boy applied his whole heart to the mighty upholder of the earth. And Janárdana, seated in his

SL

heart, waxed wroth, and drank up the fearful wind, which had thus hastened to its own annihilation.

When the devices of Sambara were all frustrated, and the blighting wind had perished, the prudent prince repaired to the residence of his preceptor. His teacher instructed him daily in the science of polity, as essential to the administration of government, and invented, by Usanas, for the benefit of kings; and, when he thought that the modest prince was well grounded in the principles of the science, he told the king that Prahláda was thoroughly conversant with the rules of government, as laid down by the descendant of Bhrigu. Hiranyakasipu therefore summoned the prince to his presence, and desired him to repeat what he had learned; how a king should conduct himself towards friends or foes; what measures he should adopt at the three periods (of advance, retrogression, or stagnation); how he should treat his councillors, his ministers, the officers of his government and of his household, his emissaries, his subjects, those of doubtful allegiance, and his foes; with whom should he contract alliance; with whom engage in war; what sort of fortress he should construct; how forest and mountain tribes should be reduced; how internal grievances should be rooted out. All this, and what else he had studied, the youth was commanded, by his father, to explain. To this, Prahlada, having bowed affectionately and reverentially to the feet of the king, touched his forehead, and thus replied:

"It is true that I have been instructed, in all these matters, by my venerable preceptor; and I have learnt them. But I cannot, in all, approve them. It is said

that conciliation, gifts, punishment, and sowing dissension are the means of securing friends (or overcoming foes). But I, father—be not angry—know neither friends nor foes; and where no object is to be accomplished, the means of effecting it are superfluous. It were idle to talk of friend or foe in Govinda, who is the supreme soul, lord of the world, consisting of the world, and who is identical with all beings. The divine Vishnu is in thee, father, in me, and in all everywhere else: and, hence, how can I speak of friend or foe, as distinct from myself? It is, therefore, waste of time to cultivate such tedious and unprofitable sciences, which are but false knowledge; and all our energies should be dedicated to the acquirement of true wisdom. The notion that ignorance is knowledge arises, father, from ignorance. Does not the child, king of the Asuras, imagine the fire-fly to be a spark of fire?" That is active duty, which is not for our bondage; that is knowledge, which is for our liberation. All other duty is good only unto weariness: all other knowledge is only the cleverness of an artist. Knowing this, I look upon all such acquirement as profitless. That which is really profitable, hear me, O mighty monarch, thus prostrate before thee, proclaim. He who cares not for dominion, he who cares not for

wealth, shall, assuredly, obtain both in a life to come.* All men, illustrious prince, are toiling to be great. But the destinies of men, and not their own exertions, are the cause of greatness. Kingdoms are the gifts of fate, and are bestowed upon the stupid, the ignorant, the cowardly, and those to whom the science of government is unknown. Let him, therefore, who covets the goods of fortune be assiduous in the practice of virtue. Let him who hopes for final liberation learn to look upon all things as equal and the same. Gods, men, animals, birds, reptiles, ; all are but forms of one eternal Vishńu, existing, as it were, detached from himself. By him who knows this, all the existing world, fixed or movable, is to be regarded as identical with himself, as proceeding alike from Vishnu, assuming a universal form .: When this is known, the glorious god of all, who is without beginning or end, is pleased; and, when he is pleased, there is an end of affliction."

On hearing this, Hiranyakasipu started up from his throne, in a fury, and spurned his son, on the breast, with his foot. Burning with rage, he wrung his hands, and exclaimed: "Ho Viprachitti! ho Ráhu! ho Bali!"

¹ Celebrated Daityas. Viprachitti is one of the chief Dánavas, or sons of Danu, and appointed king over them by Brahmá. Ráhu was the son of Simhiká, more known as the dragon's head, or ascending node; being a chief agent in eclipses. Bali was

Repeatedly prohibited by us, he still persists in the praise of our enemies. Death is the just retribution of the disobedient." The Daityas accordingly bound the prince with strong bands," as their lord had commanded, and threw him into the sea. As he floated on the waters, the ocean was convulsed throughout its whole extent, and rose in mighty undulations, threatening to submerge the earth. This when Hirańyakaśipu observed, he commanded the Daityas to hurl rocks into the sea, and pile them closely on one another, burying beneath their incumbent mass him whom fire would not burn, nor weapons pierce, nor serpents bite; whom the pestilential gale could not blast, nor poison, nor magic spirits, nor incantations destroy; who fell from the loftiest heights, unhurt; who foiled the elephants of the spheres; -a son of depraved heart, whose life was a perpetual curse. CHAPTER XX.

Vishnu appears to Prahlada. Hiranyakasipu relents, and is reconciled to his son: he is put to death by Vishnu as the Nrisimha. Prahlada becomes king of the Daityas: his posterity: fruit of hearing his story.

Thus meditating upon Vishnu, as identical with his own spirit, Prahláda became as one with him, and finally regarded himself as the divinity. He forgot entirely his own individuality, and was conscious of nothing else than his being the inexhaustible, eternal, supreme soul; and, in consequence of the efficacy of this conviction of identity, the imperishable Vishnu, whose essence is wisdom, became present in his heart, which was wholly purified from sin. As soon as, through the force of his contemplation,* Prahláda had become one with Vishnu, the bonds t with which he was bound burst instantly asunder; the ocean was violently uplifted; and the monsters of the deep were alarmed; earth, with all her forests and mountains, trembled; and the prince, putting aside the rocks which the demons had piled upon him, came forth from out the main. When he beheld the (outer) world again, and contemplated earth and heaven, he remembered who he was, and recognized himself to be Prahláda. And again he hymned Purushottama, who is without beginning or end; his mind being steadily and undeviatingly addressed to the object of his prayers, and his speech, thoughts, and acts being firmly under con-

O thou who art large and small; manifest and hidden; who art all beings, and art not all beings; and from whom, although disdinct from universal cause, the universe proceeds: to thee, Purushottama, be all glory!"+

Whilst, with mind intent on Vishnu, he thus pronounced his praises, the divinity, clad in yellow robes,

suddenly appeared before him. Startled at the sight, with hesitating speech, Prahlada pronounced repeated salutations to Vishnu, and said: "O thou who removest all worldly grief, Keśava, be propitious unto me! Again sanctify me, Achyuta, by thy sight." The deity replied: "I am pleased with the faithful attachment thou hast shown to me. Demand from me, Prahláda, whatever thou desirest." Prahláda replied: "In all the thousand births through which I may be doomed to pass, may my faith in thee, Achyuta, never know decay.* May passion, as fixed as that which the worldly-minded feel for sensual pleasures, ever animate my heart, always devoted unto thee." Bhagavat answered: "Thou hast, already, devotion unto me, and ever shalt have it. Now choose some boon, whatever is in thy wish." Prahláda then said: "I have been hated for that I assiduously proclaimed thy praise. Do thou, O lord, pardon, in my father, this sin that he hath committed. Weapons have been hurled against me; I have been thrown into the flames; I have been bitten by venomous snakes; and poison has been mixed with my food; I have been bound and cast into the sea; and heavy rocks have been heaped upon me. But all this, and whatever ill, beside, has been wrought against me; whatever wickedness has been done to me, because I put my faith in thee; all, through thy mercy, has been suffered by me unharmed. thou, therefore, free my father from this iniquity." To this application Vishnu replied: "All this shall be unto thee, through my favour. But I give thee another boon. Demand it, son of the Asura." Prahláda answered and said: "All my desires, O lord, have been fulfilled by the boon that thou hast granted, that my faith in thee shall never know decay. Wealth, virtue, love are as nothing: for even liberation is in his reach whose faith is firm in thee, root of the universal world." Vishnu said: "Since thy heart is filled, immovably, with trust in me, thou shalt, through my blessing, attain freedom from existence." Thus saying, Vishnu vanished from his sight; and Prahláda repaired to his father, and bowed down before him. His father kissed him on the forehead, and embraced him, and shed tears, and said: "Dost thou live, my son?" And the great Asura repented of his former cruelty, and treated him with kindness. And Prahláda, fulfilling his duties like any other youth, continued diligent in the service of his preceptor and his father. After his father had been put to death by Vishnu, in the form of the manlion,2 Prahláda became the sovereign of the Daityas;

¹ Literally, 'having smelt his forehead.' I have elsewhere had occasion to observe this practice: Hindu Theatre, Vol. II., p. 45.

² Here is another instance of that brief reference to popular and prior legends, which is frequent in this Purána. The manlion Avatára is referred to in several of the Puránas; but I have met with the story in detail only in the Bhágavata. It is there said that Hiranyakasipu asks his son, why, if Vishnu is everywhere, he is not visible in a pillar in the hall where they are assembled. He then rises, and strikes the column with his fist;

and, possessing the splendours of royalty consequent

on which, Vishńu, in a form which is neither wholly a lion nor a man, issues from it, and a conflict ensues, which ends in Hirańyakaśipu's being torn to pieces. Even this account,* therefore, is not, in all particulars, the same as the popular version of the story.

* Bhágavata-purána, VII., 8, 12-30. Burnouf's translation of it is as follows:

"Hirańyakacipu dit: Oui, tu veux certainement mourir, toi qui te vantes ainsi outre mesure; car il est confus, ô insensé, le langage de ceux qui touchent au moment de leur mort.

"Et celui que tu nommes le souverain du monde, ô misérable, comme s'il y avait un autre souverain que moi, où est-il? et s'il est partout, pourquoi ne paraît il pas dans cette colonne?

"Orgueilleux, je te séparerai la tête du corps: qu'il te protège donc

en ce jour ce Hari qui est ton appui désiré.

"Nârada dit: Après avoir insulté ainsi plusieurs fois par de dures paroles son fils, ce grand serviteur de Bhagavat, l'Asura furieux, tirant son poignard, s'élança du haut de son siège, et usant de toute sa force, il frappa la colonne du poing.

"Au même instant il en sortit un rugissement terrible, qui fit éclater l'enveloppe de l'œuf du monde, et qui s'élevant jusqu'au séjour d'Adja et des autres Dieux, leur fit croire à l'anéantissement de leurs palais.

"Au moment où fier de sa vigueur, l'Asura, qui voulait tuer son fils, entendit ce rugissement inou", merveilleux, au bruit duquel avaient tremblé les che's des Asuras, il en chercha, mais en vain, la cause dans l'assemblée.

"Alors, pour justifier ce qu'avait dit son serviteur et prouver qu'il résidait en réalité au sein de tous les êtres, le Dieu apparut dans l'assemblée au centre de la colonne, sous une forme merveilleuse, qui n'était ni celle d'un homme, ni celle d'un animal.

"Regardant de tous les côtés cet être qui sortait du milieu de la colonne, Ce n'est ni un animal, ni un homme [se dit-il]; ah! que peut être cette étonnante forme d'homme et de lion?

"Pendant qu'il réfléchissait, le Dieu à la forme d'homme et de lion s'élança devant lui, terrible, ayant des yeux rouges comme l'or bruni au feu, un visage dont une crinière épaisse et hérissée augmentait l'ampleur,

"De larges défenses, une langue tranchante qui s'agitait comme un poignard, des sourcils froncés qui rendaient son visage effrayant, des

oreilles raides et dressées, une bouche d'une profondeur merveilleuse et semblable à une caverne, des narines élargies et des mâchoires qui s'entr'ouvraient d'une manière horrible.

"Il touchait au ciel; son col était gros et court, sa poitrine large, sa taille ramassée, son corps parsemé de poils, jaunes comme les rayons de la lune; ses bras nombreux se développaient autour de lui comme cent bataillons; ses ongles étaient de véritables armes.

"Tel se montrait le Dieu, inabordable et chassant devant lui les Dâityas et les Dânavas avec toutes les armes irrésistibles qu'il possédait ou qu'il avait empruntées, quand l'Asura se dit: Sans doute c'est Hari, c'est ce grand magicien qui croit ainsi pouvoir me tuer; mais ses efforts seront vains.

"Et aussitôt, poussant un cri, le héros des Dâityas armé de sa massue s'élança contre Néisinha; mais semblable à l'insecte qui tombe dans le feu, l'Asura disparut absorbé par la splendeur de son ennemi.

"Comment s'étonner qu'il ait disparu auprès du Dieu dont la Bontéest la forme, qui dissipa jadis par sa splendeur les Ténèbres [primitives]? Cependant le grand Asura, irrité, assaillit Nrisimha en le frappant des coups répétés de sa massue.

"Pendant qu'il combattait en brave avec sa massue, le Dieu qui porte aussi cette arme le saisit comme l'oiseau fils de Târkcha ferait d'un grand serpent; mais l'Asura lui échappa des mains, pareil au reptile glissant entre [les serres de] Garuda qui se joue.

"Tous les immortels habitants des cieux, chassés de leurs demeures et cachés derrière les nuages, désapprouvèrent cette action; mais le grand Asura s'imaginant que Nrihari, aux mains duquel il venait d'échapper, redoutait sa vigueur, saisit son bouclier et son poignard, et l'attaqua de nouveau avec une activité infatigable.

"Au moment où, impétueux comme le vautour, il s'élançait dans les voies du glaive, frappant sans relâche en haut, en bas, Hari, poussant un violent et terrible éclat de rire, saisit avec une irrésistible rapidité son ennemi qui fermait les yeux.

"Semblable au reptile qui saisit un rat, Hari s'empara de son adversaire, qui s'agitait en tous sens dans les douleurs de cette étreinte; et le renversant sur sa cuisse à la porte [du palais], il déchira en se jouant avec ses ongles cette pesu impénétrable à la foudre, comme Garuda déchire un serpent venimeux.

"Roulant des yeux dont la fureur qui l'animait rendait l'aspect intolérable, léchant de sa langue les coins de sa large bouche, Hari, avec sa tête entourée d'une crinière rougie par le sang qui en dégouttait, semblable au lion qui après avoir égorgé un éléphant, s'est fait une guirlande de ses entrailles.

blessed with a numerous progeny.* At the expiration of an authority which was the reward of his meritorious acts,† he was freed from the consequences of moral merit or demerit, and obtained, through meditation on the deity, final exemption from existence.

¹ The days of full and new moon are sacred with all sects of Hindus. The eighth and twelfth days of the lunar half-month were considered holy by the Vaishúavas, as appears from the text. The eighth maintains its character, in a great degree, from the eighth of Bhádra being the birth-day of Kŕishúa; but the eleventh, in more recent Vaishúava works, as the Brahma Vailvarta Puráúa, has taken the place of the twelfth, and is even more sacred than the eighth.

The sons of Samhrada,* (the son of Hiranyakasipu), were Ayushmat, Sibi, and Bashkala. † Prahlada had a son named Virochana; whose son was Bali; who had a hundred sons, of whom Bana was the eldest. 2

Hiranyáksha also had many sons, all of whom were Daityas of great prowess: Jharjhara, § Śakuni, Bhú-

The Padma Purána makes these the sons of Prahláda. The Bhágavata says there were five sons, but does not give the names. It also inserts the sons of Hláda; making them the celebrated demons Ilvala and Vátápi. The Váyu refers to Hláda other Daityas, famous in Pauránik legend; making his son, Nisunda, and his sons, Sunda and Upasunda: the former, the father of Marícha and Táraká; the latter, of Múka.

The Padma Purána and Váyu name several of these: but they are not of any note. The latter gives the names of two daughters, who are more celebrated, Pútaná and Śakuni.

Vaiśwánara¹ had two daughters, Pulomá and Kálaká;* who were both married to Kaśyapa,† and bore him sixty thousand distinguished Dánavas, called Paulomas and Kálakanjas,² who were powerful, ferocious, and cruel.

The sons of Viprachitti, by Simhiká, (the sister of Hiranyakasipu), were Vyamsa, Salya the strong, Nabha the powerful, Vátápi, Namuchi, Ilvala, Khasrima, Anjaka, Naraka, and Kálanábha, the valiant Swar-

were the daughters of Vaiśwánara; and the Bhagavata has: "The four lovely daughters of Vaiśwánara were Upadánaví, Hayaśira, Puloma, and Kalaka." The Padma substitutes Vajra and Sundari for the two former names. The Váyu specifies only Puloma and Kalaka as the daughters of Vaiśwánara, as does our text. Upadánaví, according to the Bhagavata, ** is the wife of Hiranyáksha; and Hayaśira, of Kratu.

Though not specified, by the text, as one of the Dánavas, he is included in the catalogue of the Váyu: and the commentator

on the Bhágavata calls him a son of Danu.

² The word is also read Kúlakas and Kálakeyas. †† The Mahabhárata, I., 643, has Kálakanjas.

Variants are Ilvana, Ilbana, and Itthana.

§ It appears that this name is as often written Anjika.

[|] It is scarcely so, if I may confide in my MSS.; the text being as follows:

bhánu, and the mighty Vaktrayodhin. ** These were the most eminent Dánavas, ** through whom the race of Danu was multiplied, by hundreds and thousands, through succeeding generations.

In the family of the Daitya Prahláda, the Nivátakavachas were born, whose spirits were purified by rigid austerity.³

Támrá (the wife of Kaśyapa) had six illustrious

¹ The text omits the two most celebrated of the Saimhikeyas or sons of Simhiká, Ráhu (see Vol. I., p. 148, note) and Ketu, who are specified both in the Bhágavata† and the Váyu; the former, as the eldest son. Of the other sons it is said, by the Váyu, that they were all killed by Paraśuráma.

² Two names of note, found in the Váyu, are omitted by the Vishňu; that of Puloman, the father of Śachí, the wife of Indra, and mother of Jayanta; and Maya, the father of Vajrakámá and Mahodarí.

The Bhágavata says the Paulomas were killed by Arjuna, who, therefore, the commentator observes, were the same as the Nivátakavachas. But the Mahábhárata describes the destruction of the Nivátakavachas, and of the Paulomas and Kálakeyas, as the successive exploits of Arjuna. Vana Parvan, 8: I., 633. The story is narrated in detail only in the Mahábhárata, which is, consequently, prior to all the Puránas in which the allusion occurs. According to that work, the Nivátakavachas were Dánavas, to the number of thirty millions, residing in the depths of the sea; and the Paulomas and Kálakanjas were the children of two Daitya dames, Pulomá and Kálaká, inhabiting Hirańyapura, the golden city, floating in the air.

^{*} Vakrayodhin occurs in three MSS, that I have seen.

⁺ The Bhágavata-purána, VI., 6, 35, speaks of Ráhu as being the eldest-born of the Ketus, who were a hundred in number:

daughters, named Śukí, Śyení, Bhásí, Sugríví, Śuchi, and Gridhriká. Šukí gave birth to parrots, owls, and crows; 1 Syení, to hawks; Bhásí, to kites; Gridhrí, * to vultures; Śuchi, to water-fowl; Sugrivi, to horses, camels, and asses. Such were the progeny of Támrá.

Vinatá bore to Kaśyapa two celebrated sons, Garuda and Aruńa. The former, also called Suparńa, was the king of the feathered tribes, and the remorseless enemy of the serpent race.2

The children of Surasá were a thousand mighty

many-headed serpents, traversing the sky.

1 All the copies read

But Ulúkí is nowhere named as one of the daughters of Tamra: and the reading may be उल्लाप्यल्ककान् ।† 'Owls and birds opposed to owls', i. e., crows. The authorities generally concur with our text. But the Vayu has a somewhat different account, or: Śuki, married to Garuda, the mother of parrots; Syeni, married to Aruna, mother of Sampáti and Jatayu; Bhási, the mother of jays, owls, crows, peacocks, pigeons, and fowls; Kraunchi, the parent of curlews, herons, cranes; and Dhritaráshírí, the mother of geese, ducks, teal, and other water-fowl. The three last are also called the wives of Garuda.

² Most of the Puránas agree in this account. But the Bhágavata makes Vinatá the wife of Tárksha, and, in this place, substitutes Saramá, the mother of wild animals. The Váyu adds the metres of the Vedas, as the daughters of Vinata; and the

Padma gives her one daughter, Saudámini.

^{*} Professor Wilson put "Gridhrika".

[†] This reading actually occurs in two MSS, that I have examined.

Tarksha is a name of Kasyapa; and Garuda is said - in the Bhdgavata-purana, VI., 6, 22-to be his son by Suparna. Vide supra, p. 28, note 2, and my extract, there given, from the Bhagavata-purana.

The progeny of Kadrú were a thousand powerful many-headed serpents, of immeasurable might, subject to Garuda: * the chief amongst whom were Sesha, Vásuki, Takshaka, Sankha, Sweta, Mahapadma, Kambala, Aśwatara, Elápatra, Nága, Karkotaka, Dhananjaya, and many other fierce and venomous serpents.1

The family of Krodhavaśá were, all, sharp-toothed monsters,2 whether on the earth, amongst the birds, or in the waters, that were devourers of flesh. 3+

substituted for Surasá, in the Váyu, and in one of the accounts of the Padma. The Bhagavata says & Rakshasas were her offspring. The Matsya has both Surasá and Anáyus; making the former the parent of all quadrupeds, except cows; the latter, the mother of diseases.

- 1 The Vavu names forty: the most noted amongst whom, in addition to those of the text, are Airávata, Dhritaráshíra, Mahánila, Baláhaka, Anjana, Pushpadamshíra, Durmukha, Káliya, Puńdarika, Kapila, Náhusha, and Mańi.
- 2 By Damshfrin (दंदिन) some understand serpents; some, Rákshasas: but, by the context, carnivorous animals, birds, and fishes seem intended. The Váyu makes Krodhavasá the mother of twelve daughters, Mrigi and others, from whom all wild animals, deer, elephants, monkeys, tigers, lions, dogs, also fishes, reptiles, and Bhútas and Piśáchas, or goblins, sprang.
 - 3 One copy only inserts a half-stanza here: "Krodhá was

⁺ All the MSS, accessible to me read as follows:

It is Kadru that is referred to; and there is no mention of "Krodhavaśa". * Vide supra, p. 26, note 1.

[§] It says-VI., 6, 28-Yatudhanas. These are a sort of goblins (?). According to the Bhagavata-purana, VI., 6, 27, the serpents and

other reptiles were offspring of Krodhavaśa,

Surabhi was the mother of cows and buffaloes; ¹ Irá, * of trees, and creeping plants, and shrubs, and every kind of grass; Khasá, of the Yakshas ² and Rákshasas; Muni, of the Apsarasas; ³ and Arishtá, of the illustrious Gandharyas.

the mother of the Piśáchas"; † which is an interpolation, apparently, from the Matsya or Hari Vamsa. The Padma Purána, second legend, makes Krodhá the mother of the Bhútas; and Pisáchá, of the Pisáchas.

¹ The Bhágavata‡ says, of animals with cloven hoofs. The Váyu has, of the eleven Rudras, of the bull of Śiva, and of two daughters, Rohińí and Gandharví; from the former of whom descended horned cattle, and, from the latter, horses.

² According to the Váyu, Khasá had two sons, Yaksha and

Rákshas, severally the progenitors of those beings.

The Padma, second series, makes Vách the mother of both Apsarasas and Gandharvas. The Váyu has long lists of the names of both classes, as well as of Vidyádharas and Kimnaras. The Apsarasas are distinguished as of two kinds, Laukika, 'worldly', of whom thirty-four are specified; and Daivika or 'divine', ten in number. The latter furnish the individuals most frequently engaged in the interruption of the penances of holy sages, such as Menaká, Sahajanyá, Ghřitáchí, Pramlochá, Viśwáchí, and Púrvachitti. Urvasí is of a different order to both, being the daughter of Náráyana. Rambhá, Tilottamá, Miśrakeśí, are included amongst the Laukika nymphs. There are also fourteen Ganas or troops of Apsarasas, bearing peculiar designations, as Áhútas, Šobhayantís, Vegavatis, &c. §

These were the children of Kaśyapa, whether movable or stationary, whose descendants multiplied infinitely through successive generations. This creation, O Brahman, took place in the (second or) Swárochisha Manwantara. In the (present or) Vaivaswata Manwantara, Brahmá being engaged at the great sacrifice instituted by Varuńa, the creation of progeny, as it is called, occurred. For he begot, as his sons, the seven Rishis, who were, formerly, mind-engendered, and was, himself, the grandsire of the Gandharvas, serpents, gods, and Dánavas. 2

¹ The Kurma, Matsya, Brahma, Linga, Agni, Padma, and Vayu Puranas agree, generally, with our text, in the description of Kasyapa's wives and progeny. The Vayu enters most into details, and contains very long catalogues of the names of the different characters descended from the sage. The Padma and Matsya, and the Hari Vamsa, repeat the story, but admit several variations, some of which have been adverted to in the preceding notes.

We have a considerable variation, here, in the commentary; and it may be doubted if the allusion in the text is accurately explained by either of the versions. In one it is said that Brahmá, the grandsire of the Gandharvas, &c., appointed the seven Rishis, who were born in a former Manwantara, to be his sons, or to be the intermediate agents in creation. He created no other beings himself, being engrossed by the sacrificial ceremony: ' unitability actual and any actual actual and actual and actual and actual actual actual and actual ac

The latter member of the passage is separated altogether from the foregoing, and carried on to what follows; thus: "In the war of the Gandharvas, serpents, gods, and demons, Diti having lost her children", &c.; the word 'virodha' being understood, it is said: विरोध इति ग्रेथ। This is defended by the authority of the Hari Vaínsa, where the passage occurs, word for word, except in the last half-stanza, which, instead of

and the best of ascetics, being pleased with her, promised her a boon; on which she prayed for a son of irresistible prowess and valour, who should destroy Indra. The excellent Muni granted his wife the great gift she had solicited, but with one condition. "You shall bear a son", he said, "who shall slay Indra; " if, with thoughts wholly pious, and person entirely pure, you carefully carry the babe in your womb for a hundred years." Having thus said, Kasyapa departed. And the dame conceived, and, during gestation, assiduously observed the rules of mental and personal purity. When't the king of the immortals learnt that Diti bore a son destined for his destruction, he came to her, and attended upon her with the utmost humility, watching for an opportunity to disappoint her intention. At last, in the last year of the century, the opportunity occurred. Diti retired, one night, to rest, without performing the prescribed ablution of her feet, and fell asleep; on which the thunderer divided, with his thunderbolt, the embryo in her womb into seven portions.: The child, thus mutilated, cried bitterly;

Manou Swârotchicha avait cessé de régner, quand cette création eut lieu: c'était sous l'empire du Manou Vêvaswata, le sacrifice de Varouna avait commencé. La première création fut celle de Brahmâ, quand il jugea qu'il était temps de procéder à son sacrifice, et que, souverain aïeul du monde, il forma lui-même dans sa pensée et enfanta les sept Brahmarchis.'

and Indra* repeatedly attempted to console and silence it, but in vain. On which the god, being incensed, again divided each of the seven portions into seven, and thus formed the swift-moving deities called Maruts (winds). They derived this appellation from the words with which Indra† had addressed them (má rodílí, 'weep not'); and they became forty-nine subordinate divinities, the associates of the wielder of the thunder-bolt. 1;

¹ This legend occurs in all those Puránas in which the account of Kaśyapa's family is related.

- * Sakra, in the Sanskrit.
- † The original has Maghavat.

* Since the publication of his Vishiu-purina, Professor Wilson has dwelt at length on the Maruts, repeating, besides, from Hindu authorities, the various etymologies of the word that have been proposed.

"The text of the Veda, in one remarkable passage in the first book, recognizes a difference of degree in the relative dignity of the gods, and even in their age; enunciating veneration to the great gods, to the lesser, to the young, and to the old. Among the lesser gods, an important share of adoration is enjoyed by a group avowedly subordinate to Indra, -involving an obvious allegory, - the Maruts, or Winds, who are naturally associated with the firmament. We have, indeed, a god of the wind, in Vayu; but little is said of him, and that chiefly in association with Indra, with whom he is identified by scholiasts on the Veda. The Maruts, on the contrary, are frequently addressed as the attendants and allies of Indra, confederated with him in the battle with Vitra, and aiding and encouraging his exertions. They are called the sons of Prisni, or the earth, and also Rudras, or sons of Rudra: the meaning of which affiliations is not very clear, although, no doubt, it is allegorical. They are also associated, on some occasions, with Agni; an obvious metaphor, expressing the action of wind upon fire. It is also intimated that they were, originally, mortal, and became immortal in consequence of worshipping Agni, which is also easy of explanation. Their share in the production of rain, and their fierce and impetuous nature, are figurative representations of physical phenomena. The scholiast endeavours to connect the history of their origin with that narrated in the Puranas,

but without success; and the latter, absurd as it is, seems to have no better foundation than one proposed etymology of the name,—'Do not (má) weep (rodik)',—which is merely fanciful, although it is not much worse than other explanations of the name which commentators have suggested." Translation of the Kiy-veda, Vol. I., Introduction, pp. XXXII and XXXIII.

"The scholiast here proposes various etymologies of the name Marut, some of which are borrowed from Yaska, Nir., 11, 13. They sound (ruvanti, from ru), having attained mid-heaven (mitam); or, They sound without measure (amitam); or, They shine (from ruch) in the clouds made (mitam) by themselves; or, They hasten (dravanti) in the sky. All the minor divinities that people the mid-air are said, in the Vedas, to be styled Maruts, as in the text: 'All females whose station is the middle heaven, the all-pervading masculine Váyu, and all the troops (of demigods), are Maruts'. Sáyana also cites the Pauranik tradition of the birth of the forty-nine Maruts, in seven troops, as the sons of Kasyapa." Ibid., Vol. I., p. 225, note.

"The paternity of Rudra, with respect to the Maruts, is thus accounted for by the scholiast: 'After their birth from Diti, under the circumstances told in the Puranas, they were beheld in deep affliction by Siva and Parvati, as they were passing sportively along. The latter said to the former: If you love me, transform these lumps of flesh into boys. Mahesa accordingly made them boys of like form, like age, and similarly accounted, and gave them to Parvati, as her sons; whence they are called the sons of Rudra.' The Niti-manjari adds other legends; one, that Parvati, hearing the lamentations of Diti, entreated Siva to give the shapeless births forms; telling them not to weep (ma rodik): another, that he actually begot them, in the form of a bull, on Prithivi, the earth, as a cow. These stories are, evidently, fictions of a much later era than that of the Vedas; being borrowed, if not fabricated, from the Tantras, and may be set aside, without hesitation, as utterly failing to explain the meaning of those passagas in the Vedas which call the Maruts the sons of Rudra." Ibid., Vol. I., p. 302, fourth note.

"According to another text, there are seven troops of the Maruts, each consisting of seven, making up the usual number of forty-nine; suggesting, most probably, rather than suggested by, the absurd legend given in the Puraúas." *Ibid.*, Vol. III., p. 328, second note.

Note referred to at p. 75, supra.

The following account of the Apsarases is taken from Goldstücker's Sanekrit Dictionary, pp. 222 and 223:

"The Sama-veda makes no mention of them; the Rig-veda names, as such, Urvasi, (the Anukram. of the Rig-v., two Apsarasas Sikhandini, as

authoresses of a hymn); in the Vajasan.-s. of the Yajur-veda there occur five pairs of Apsarases,- Punjikasthala and Kratusthala, Menaka and Sahajanya, Pramlochantí and Anumlochantí, Viśwachí and Ghritachí, Urvasí and Púrvachitti; in the Śatapatha-br., Śakuntala and Urvasí; in the Atharva-veda, Ugrampaśya, Ugrajit, and Rashfrabhrit. In the Adiparvan of the Mahábhárata, several of these divinities are enumerated under two heads, the first comprising Anúcháná (v. l. Anúná, another MS., Anfina), Anavadya, Gunamukhya (v. l. Priyamukhya), Gunavara (v. l. Ganavara), Adrika (v. l. Attika), Soma (v. l. Sáchi), Miśrakeśi, Alambusha, Marichi, Śuchiká (v. l. Ishuka), Vidyutparna, Tilottama (v. l. Tulá and Anaghá), Ambiká, Lakshaná, Kshemá, Deví, Rambhá, Manoramá Iv. l. Manchara: or devi 'divine' and manorama (or manchara) 'beautiful' are, perhaps, epithets of Rambhá], Asitá, Subáhú, Supriyá, Vapus (v. l. Suvapus), Puúdaríká, Sugandhá, Surasá (v. l. Surathá), Pramáthiní, Kamya, and Saradwati; the second comprising the following eleven: Menaka, Sahajanya, Karnika (v. l. Parnini), Punjikasthala, Ritusthala (v. l. Kratusthalá), Ghritáchí, Viswáchí, Púrvachitti (v. l. Viprachitti), Umlochá, Pramlochá (v. l. Pramlá), and Urvasi. (Hemachandra mentions two Apsarases, Saudamini and Chitra. Other names, too, will occur in the following.)

"As regards their origin, the Rámáyana makes them arise from the Ocean, when it was churned, by the gods, for obtaining the Amrita; Manu represents them as one of the creations of the seven Manus, themselves created by the seven Prajapatis, Marichi, Atri, &c.; in the later mythology, they are daughters of Kasyapa by Muni (e. g., according to the Vishhu and Bhagav.-pur.), or by Vach (according to the Padma-p.), or some by Muni, some by Pradha; while a third class is created by the mere will of Kaśyapa. Thus, according to the Harivainsa, the daughters of K. and Prádhá are Anavadyá, Anúká, Anúná (v. l. Aruhá), Aruhapriyá, Anuga, Subhaga, (two names seem omitted); of K. and Muni, Alambusha, Miśrakeśi, Puńdarika, Tilottama, Surupa, Lakshmańa, Kshema, Rambhá, Manoramá (er 'the beautiful Rambhá'), Asítá, Subahú, Suvritta, Sumukhi, Supriya, Sugandha, Surasa (v. l. Surama), Pramathini, Kamya (v. l. Kásya), and Saradwati. Those created by the will of the Prajápati, and called the Vaidik Apsarases, are Menaka, Sahajanya, Parnini (v. L. Parńika), Punjikasthala, Ghritasthala, Ghritachi, Viśwachi, Urvaśi, Anumlocha, Pramlocha, and Manovati. The two Sikhandinis of the Ander. of the Rig-v. are also daughters of K.). Another and more elaborate list is that of the Vayu-purana. IIt is omitted in two E. I. H. MSS. of this P., and very incorrect in four other MSS, that I consulted, belonging, severally, to the E. I. H., the R. A. S., and the R. S. In some instances, as Misrakesi instead of Mitrakesi, Punjikasthala for Punjakastana, Kratusthala for Vritastana, &c., the correction appeared safe; in others, it was preferable to give the doubtful reading.] This Purana mentions, in the first place,

thirty-four Apsarases, called the Gandharva-Apsarases, or wives of the Gandharvas, and daughters of Kasyapa by Muni (but the MSS, in question give only twenty-nine, or, if Devi and Manorama are proper names, thirty-one, names): Antachárá, Daśavadyá (?), Priyaśishyá, Surottamá, Miśrakeśi, Sáchi, Pińdini (v. l. Parńini), Alambusha, Marichi, Śuchika, Vidyudwarna, Tilottama, Adrika, Lakshana (?), Devi, Rambha, Manorama (or, the divine, beautiful Rambhá), Suchará, Subáhú, Súráitá (?, Súnfitá?), Supratishfhitá, Pundaríká, Akshagandhá (v. l. Sugandhá), Sudantá, Surasá, Hemá, Sáradwatí, Suvřittá, Kamaláchayá, Subhujá, Hamsapádá; these are called the laukiki or worldly Apsarases; then six daughters of Gandharvas: Suyaśa, Gandharvi, Vidyavati, Aswavati, Sumukhi, Varanana; and four daughters of Snyasa, also called Apsarases: Lauheyi, Bharata, Kříšángí (v. l. Křishnángi), and Višálá; then eight daughters of Kašyapa, by Arishfa: Anavadya, Anavasa, Atyantamadanapriya, Surupa, Subhaga, Bhásí, Manovati, and Sukeśi: then the daivati or divine Apsarases: Vedaká (sic, but v. l. Menaká), Sahajanyá, Páráiní, Punjikasthalá, Kratusthalá, Ghřitáchí, Viśwáchí, Púrvachitti, Pramlochá, Anumlochantí, to whom are added Urvasi, born from the thigh of Narayana, and Menaka, the daughter of Brahma. Besides these, the Vayu-p. mentions fourteen ganas or classes of Apsarases: 1. The Sobhayantyas, produced by the mind (manas) of Brahmá, 2. the Vegavatyas, born in heaven (7 the MSS. खरिष्टा:), 3. the Úryás (?, perhaps Úrjas, cf. Vájas., 18, 41), produced by Agni (cf. Vájas., 18, 38), 4. the Ayuvatyas, by the Sun (cf. Vajas., 18, 39), 5. the Subhancharas, by Wind (cf. Vajas., 18, 41), 6. the Kuravas (?), by the Moon (MSS.: सोमख जेयाने करव: मुभा:; perhaps their name is Bhekurayas, as occurring also in another passage of one MS.; cf. Vájas., 18, 40), 7. the Subhás (?), by Sacrifice (? their name is, perhaps, Stavas, cf. Vájas., 18, 42), 8. the Vahnayas (? perhaps, Eshfayas, cf. Vajas., 18, 43), by the Rich and Saman-verses, 9, the Amritas, by Amrita, 10, the Mudas, by Water; (three MSS, have वायत्पद्धाः, and one MS., वायत्पद्धाः, which, however, must be corrected to वायत्पना:, since वायवा: occurs under 5; cf. Vájas., 18, 38), 11. the Bhavas (?), by the Earth, 12. the Ruchas, by Lightning, 13. the Bhairavás, by Death (cf. Vájas., 24, 37), and 14. the Soshayantyas, by Love: (this list is, probably, meant by the author of the Kadambari, who-ed. Calc., p. 122-professes to give fourteen classes of Apsarases, but, in fact, names only thirteen; fathering, moreover, one class on Daksha). The Harivainsa (v. 6798) speaks of seven ganas of Apsarases, but without naming them. Vyadi, as quoted in a comm. on Hemachandra, mentions an Apsaras Prabhavati, as born from a hole in the ground for receiving the fire consecrated to Brahmá, Vedavatí, as born from an altar-ground, Sulochana, from Yama, Urvasi, from the left thigh of Vishau, Rambha, from the mouth of Brahma, Chitralekha, from his hand, and, from his head, Mahachitta, Kakalika, Marichi, Suchika, Vi-

dyutparóa, Tilottama, Adrika, Lakshańa, Kshema, the divine and beautiful Ráma (or Divya, Ráma, Manorama), Hema, Sugandha, Suvasu, Subáhu, Suvrata, Asita, Śaradwati, Puńdarika, Surasa, Suniita, Suvata, Kamala, Hamsapadi, Sumukhi, Menaka, Sahajanya, Parńini, Punjikasthala, Ritusthala, Ghiitachi, and Viśwachi.

"Originally, these divinities seem to have been personifications of the vapours which are attracted by the Sun, and form into mist or clouds. Their character may be thus interpreted in the few hymns of the Rig-veda where mention is made of them. At a subsequent period, when the Gandharva of the Kig-veda, - who personifies, there, especially the Fire of the Sun,-expanded into the Fire of Lightning, the rays of the Moon, and other attributes of the elementary life of heaven, as well as into pious acts referring to it, the Apsarases become divinities which represent phenomena, or objects both of a physical and ethical kind, closely associated with that life. Thus, in the Yajur-veda, Sunbeams are called the Apsarases associated with the Gandharva who is the Sun; Plants are termed the Apsarases associated with the Gandharva Fire; Constellations are the Apsarases of the Gandharva Moon; Waters, the A. of the G. Wind; Sacrificial gifts, the A. of the G. Sacrifice; Rich and Saman hymns, the A. of the G. Manas (creating will). In another passage of the Vájas., Fire is connected (Mahidhara, in the two months of Vasanta or spring) with the two Apsarases, Punjikasthala and Kratusthala (considered, by the comm., as personifications of a principal and an intermediate point of the compass), Wind (Viśwakarman), with Menaká and Sahajanyá (comm., in the two months of Grishma or the hot season), Sun (Viśwavyachas), with Pramlochanti and Anumlochanti (comm., in the two months of Varshá or the rainy season), Sacrifice (Samyadwasu), with Viśwáchí and Ghritachí (comm., in the two months of Sarad or the sultry season), Parjanya (Arvagwasu), with Urvasi and Purvachitti (comm., in the two months of Hemanta or the cold season). This latter idea becomes, then, more systematized in the Puranas, where a description is given of the genii that attend the chariot of the Sun in its yearly course. Thus, the Bhágavata-p. mentions that, besides the Rishis, Gandharvas, &c., also one gana or troop of Apsarases pays adoration to the Sun every month; and the Vishiu-p., that, among the genii who preside each in every month over the chariot of the Sun, Kratusthala performs this function in the month Madhu, Punjikasthala, in the month Madhava, Mena, in Suchi, Sahajanya, in Sukra, Pramlocha, in Nabhas, Anumlocha, in Bhádrapada, Ghritáchi, in Áświna, Viśwachi, in Karttika, Urvaśi, in Agrahavana, Purvachitti, in Pausha, Tilottama, in Magha, Rambha, in Phalguna, An analogous description is given in the Vayu-p., with the only difference that Viprachitti takes the place of Purvachitti, apparently with less correctness; as this account is a strict development of the quoted passage of the Vajur-veda (Vajas., 15, 15-19). In the last mythological epoch,

when the Gandharvas have saved from their elementary nature merely so much as to be the musicians in the paradise of Indra, the Apsarases appear, amongst other subordinate deities which share in the merry life of Indra's heaven, as the wives of the Gandharvas, but, more especially, as wives of a licentious sort; and they are promised, too, as a reward to heroes fallen in battle, when they are received into the paradise of Indra: and, while, in the Rig-veda, they assist Soma to pour down his floods, they descend, in the epic literature, on earth, merely to shake the virtue of penitent sages, and to deprive them of the power they would have, otherwise, acquired through unbroken austerities. To this association of the ethical with the physical element, in the character of the Apsarases, belongs, also, that view expressed by Manu, according to which the soul, in its transmigrations, is reborn as an Apsaras, when it was, in its previous existence, under the influence of raias or passion; and probably, too, the circumstance, that, in the Atharva-veda, they are fond of dice: and three Apsarases, whose names are given above, are supposed to have the power of removing faults committed at gambling with dice."

CHAPTER XXII.

Dominion over different provinces of creation assigned to different beings. Universality of Vishúu. Four varieties of spiritual contemplation. Two conditions of spirit. The perceptible attributes of Vishúu types of his imperceptible properties. Vishúu everything. Merit of hearing the first book of the Vishúu Puráúa.

PARASARA.—When Prithu was installed in the government of the earth, the great father of the spheres established sovereignties in other parts of the creation.* Soma was appointed monarch of the stars and planets, of Brahmans and of plants, + of sacrifices and of penance. Vaiśravańa was made king over kings, and Varuńa, over the waters. Vishnu was the chief of the Adityas; Pávaka, of the Vasus: Daksha, of the patriarchs; Vásava, of the winds.: To Prahláda was assigned dominion over the Daityas and Dánavas; and Yama, the king of justice, was appointed the monarch of the Manes (Pitris). Airávata was made the king of elephants; Garuda, of birds; Indra, \$ of the gods. Uchchailisravas was the chief of horses; Vrishabha, of kine. Sesha became the snake-king; the lion, the monarch of the beasts: and the sovereign of the trees was the

holy fig-tree. Having thus fixed the limits of each authority, the great progenitor Brahmá stationed rulers, for the protection of the different quarters of the world. He made Sudhanwan, the son of the patriarch Vairája, the regent of the east; Śankhapada, the son of the patriarch Kardama, of the south; the immortal Ketumat, the son of Rajas, regent of the west; and Hirańyaroman, the son of the patriarch Parjanya, regent of the north. By these the whole earth, with its seven continents and its cities, is, to the present day, vigilantly protected, according to their several limits.

All these monarchs, and whatever others may be invested with authority, by the mighty Vishnu, as instruments for the preservation of the world;; all the

¹ These are similarly enumerated in the Váyu, Brahma, Padma, Bhágavata, &c., § with some additions; as, Agni, king of the Pitris; Váyu, of the Gandharvas; Śúlapáńi (Śiva), of the Bhútas; Kubera, of riches and of the Yakshas; Vásuki, of the Nágas; Takshaka, of serpents; Chitraratha, of the Gandharvas; Kámadeva, of the Apsarasas; Viprachitti, of the Dánavas; Ráhu, of meteors; Parjanya, of clouds; Samvatsara, of times and seasons; Samudra, of rivers; Himavat, of mountains, &c.

We have already had occasion to notice the descent of these Lokapálas, as specified in the Váyu Purána; and it is evident, although the Vishnu does not supply a connected series of generations, yet that both accounts are derived from a common source.

kings who have been, and all who shall be; are all, most worthy Brahman, but portions of the universal Vishnu. The rulers of the gods, the rulers of the Daityas, the rulers of the Dánavas, and the rulers of all malignant spirits: * the chief amongst beasts, amongst birds, amongst men, amongst serpents; the best of trees, of mountains, of planets; either those that now are, or that shall hereafter be, the most exalted of their kind, are but portions of the universal Vishnu. The power of protecting created things, the preservation of the world, resides with no other than Hari, the lord of all. He is the creator, who creates the world; he, the eternal, preserves it in its existence; and he, the destroyer, destroys it; invested, severally, with the attributes of foulness, goodness, and gloom. † By a fourfold manifestation does Janárdana operate in creation, preservation, and destruction. In one portion, as Brahmá, the invisible assumes a visible form; in another portion, he, as Marichi and the rest, is the progenitor of all creatures; ! his third portion is time; his fourth is all beings. And thus he becomes quadruple in creation, invested with the quality of passion. In the preservation of the world, he is, in one portion, Vishnu; in another portion, he is Manu and the other patriarchs: he is time, in a third; and all beings, in a fourth portion. And thus, endowed with the property of goodness, Purushottama preserves the world. When he assumes the property of darkness, at the end of all

things, the unborn deity becomes, in one portion, Rudra; in another, the destroying fire; in a third, time; and, in a fourth, all beings. And thus, in a quadruple form, he is the destroyer of the world. This, Brahman, is the fourfold condition of the deity at all seasons.*

Brahmá, Daksha, † time, and all creatures are the four energies of Hari which are the causes of creation. Vishnu, Manu and the rest, time, and all creatures are the four energies of Vishnu which are the causes of duration. Rudra, the destroying fire, time, and all creatures are the four energies of Janárdana that are exerted for universal dissolution. In the beginning and the duration of the world, until the period of its end, creation is the work of Brahmá, the patriarchs, § and living animals. Brahmá creates, in the beginning. Then the patriarchs beget progeny; and then animals incessantly multiply their kinds. But Brahmá is not the active agent, in creation, independent of time: neither are the patriarchs, nor living animals. So, in the periods of creation and of dissolution, the four portions of the god of gods are equally essential. Whatever, O Brahman, is engendered by any living being, the body of Hari is cooperative in the birth of that being. So, whatever destroys any existing thing, movable or stationary, at any time, is the destroying form of Janárdana, as Rudra. Thus, Janárdana is the creator, the preserver, and the destroyer of the whole

world—being threefold—in the several seasons of creation, preservation, and destruction; according to his assumption of the three qualities. But his highest glory is detached from all qualities. For the fourfold essence of the supreme spirit is composed of true wisdom, pervades all things, is only to be appreciated by itself, and admits of no similitude.

MAITREYA.—But, Muni, describe to me, fully, the four varieties of the condition of Brahma, and what is the supreme condition.²

Parasara.—That, Maitreya, which is the cause of a thing is called the means of effecting it; and that which it is the desire of the soul to accomplish is the thing to be effected. The operations of the Yogin who is desirous of liberation, as suppression of breath* and the like, are his means. The end is the supreme Brahma, whence he returns to the world no more. Essentially connected with, and dependant upon, the means employed, for emancipation, by the Yogin, is discriminative knowledge: and this is the first variety of the condition of Brahma.³ The second sort is the

¹ Vibhúti, † superhuman or divine power or dignity.

² The question, according to the commentator, implies a doubt how the supreme being, who is without qualities, can be subject to specific variety, or to existence in divided and different conditions.

³ Of Brahmabhuta (त्राभूत); of him who, or that which, becomes identified with the supreme spirit, which is the same, respectively, with absolute wisdom, Juána (ज्ञान), and discriminative

knowledge that is to be acquired by the Yogin, whose end is escape from suffering, or eternal felicity.* The third kind is the ascertainment of the identity of the end and the means, the rejection of the notion of duality. The last kind is the removal of whatever differences may have been conceived by the three first varieties of knowledge, and the consequent contemplation of the true essence of soul. The supreme condition of Vishnu, who is one with wisdom, is the knowledge of truth; which requires no exercise; which is not to be taught; which is internally diffused; which is unequalled; the object of which is self-illumination; which is simply existent, and is not to be defined; which is tranquil, fearless, pure; which is not the theme of reasoning; which stands in need of no support.¹

wisdom, Vijnána (विज्ञान); leading to felicity, or the condition of Brahma, expressed by the words Sach chid ánandam (यान्द्राजन्म),† 'entire tranquillity of mind,' or 'internal enjoyment'; the same, also, with the combination of wisdom and tranquillity, which the devotee believes to exist in Adwaita, 'non-duality', or unity of god and himself; and, finally, the same with the aggregate of these three processes, or the conviction that spirit is one, universal, and the same.

¹ The epithets of Jnána, 'wisdom', here employed, are taken from the Yoga philosophy. 'Requires ne exercise', Nirvyápára

Those Yogins who, by the annihilation of ignorance, are resolved (into this fourfold Brahma), lose the seminal property, and can no longer germinate in the ploughed field of worldly existence. This is the supreme condition that is called Vishńu,—perfect, perpetual, universal, undecaying, entire, and uniform.* And the Yogin who attains this supreme spirit (Brahma) returns not to life again. For there he is freed from

(जिर्बापर), is explained, 'without the practice of abstract contemplation', &c. (ध्यानादिश्रन्थ). 'Not to be taught', Anákhyeya (अनाखेय); 'not capable of being enjoined' (निर्देशानही). 'Internally diffused', Vyáptimátra (वाजिसान), means 'mental identification of individual with universal spirit' (सनसा ब्रह्माकार-तामाच्यम्). The phrase ग्रात्सस्वोधविषय। translated 'the object of which is self-illumination', is explained स्त्रकाश 'Simply existent' (सतासात्र) is said to mean, 'being unmodified by the accidents of happiness', &c. (आनन्दादिविश्रेषशन्य): consequently it is not to be defined (अल्च्या). So the Yoga Pradipa explains Samadhi or contemplation to be the entire occupation of the thoughts by the idea of Brahma, without any effort of the mind. It is the entire abandonment of the faculties to one allengrossing notion (मनोवत्तिशन्यस ब्रह्माकारतया स्थितिया संप्रज्ञा-तनामासी समाधिरभिधीयते). 'Tranquil', Prasanta (प्रशानत), is 'being void of passion', &c., (रागादिश्व). 'Fearless'; not dreading agitation or perplexity by ideas of duality (देतसातरभयम). 'Pure'; undisturbed by external objects (निविषय). 'Not the theme of reasoning' (दविभाख); that is, 'not to be ascertained by logical deduction' (अवितक). 'Stands in no need of support' (असंशित); not resting or depending upon perceptible objects (निर्विषयलादाश्रयशुन्यम्)

the distinction of vice and virtue, from suffering, and from soil.

There are two states of this Brahma; one with, and one without, shape; one perishable, and one imperishable; which are inherent in all beings. The imperishable is the supreme being;* the perishable is all the world. The blaze of fire burning on one spot diffuses light and heat around. So the world is nothing more than the (manifested) energy of the supreme Brahma. And, inasmuch, Maitreva, as the light and heat are stronger, or feebler, as we are near to the fire, or far off from it, so the energy of the supreme is more or less intense, in the beings that are less or more remote from him. Brahmá, Vishúu, and Śiva are the most powerful energies of god. Next to them are the inferior deities; then, the attendant spirits; then, men; then, animals,; birds, insects, § vegetables: | each becoming more and more feeble, as they are further from their primitive source. In this way, illustrious Brahman, this whole world, although (in essence) imperishable and eternal, appears and disappears, as if it was subject to birth and death.

The supreme condition of Brahma, which is meditated by the Yogins, in the commencement of their abstraction, as invested with form, is Vishńu, composed of all the divine energies, and the essence of Brahma, with whom the mystic union that is sought, and which

is accompanied by suitable elements, is effected by the devotee whose whole mind is addressed to that object. This Hari, who is the most immediate of all the energies of Brahma, is his embodied shape, composed entirely of his essence: and in him, therefore, is the whole world interwoven; and from him, and in him, is the universe; and he, the supreme lord of all, comprising all that is perishable and imperishable, bears upon him all material and spiritual existence, identified, in nature, with his ornaments and weapons.*

MAITREYA.—Tell me in what manner Vishnu bears the whole world, abiding in his nature, characterized by ornaments and weapons.

Parasara.—Having offered salutation to the mighty and indescribable Vishnu, I repeat to you what was formerly related to me by Vasishtha. The glorious

Hari wears the pure soul of the world, undefiled and void of qualities, as the Kaustubha gem. The chief principle of things (Pradhána) is seated on the eternal, as the Śrívasta mark. Intellect abides in Mádhava, in the form of his mace. The lord (Íswara) supports egotism (Ahańkára) in its twofold division into elements and organs of sense, in the emblems of his conch-shell and his bow. In his hand Vishnu holds, in the form of his discus, the mind, whose thoughts (like the weapon), fly swifter than the winds. The necklace of the deity, Vaijayantí, composed of five precious gems,1 is the aggregate of the five elemental rudiments.* Janárdana bears, in his numerous shafts, the faculties both of action and of perception. The bright sword + of Achyuta is (holy) wisdom, concealed, at some seasons, in the scabbard of ignorance. In this manner, soul, nature, intellect, egotism, the elements, mind, the senses, ignorance, and wisdom are, all, assembled in the person of Hrishíkesa. Hari, in a delusive form, embodies the shapeless elements of the world, as his weapons and his ornaments, for the salvation of mankind.2: Puńdarikáksha, the lord of all, assumes

nature, with all its products, soul, and all the world. All that is wisdom, all that is ignorance, all that is, all that is not, all that is everlasting, is centred in the destroyer of Madhu, the lord of all creatures. The supreme eternal Hari is time, with its divisions of seconds, minutes, days, months, seasons, and years. He is the seven worlds, the earth, the sky, heaven, the world of patriarchs, of sages, of saints, of truth;* whose form is all worlds; first-born before all the firstborn; the supporter of all beings, himself self-sustained; who exists in manifold forms, as gods, men, and animals, and is, thence, the sovereign lord of all, eternal; whose shape is all visible things; who is without shape or form; who is celebrated, in the Vedánta, as the Rich, Yajus, Sáman, and Atharva Vedas, inspired history, and sacred science. The Vedas, and their divisions; the institutes of Manu and other lawgivers; traditional scriptures, and religious manuals; 1 poems, and all that

or in which, at least, the thoughts are more readily concentrated by being addressed to a sensible emblem, instead of an abstract truth. Thus, the Yogin here says to himself: "I meditate upon the jewel on Vishúu's brow, as the soul of the world; upon the gem on his breast, as the first principle of things"; and so on; and thus, through a perceptible substance, proceeds to an imperceptible idea.

BOOK II.

CHAPTER I.

Descendants of Priyavrata, the eldest son of Swayambhuva Manu: his ten sons: three adopt a religious life; the others become kings of the seven Dwipas or isles of the earth. Agnidhra, king of Jambu-dwipa, divides it into nine portions, which he distributes amongst his sons. Nabhi, king of the south, succeeded by Rishabha, and he, by Bharata: India named, after him, Bharata: his descendants reign during the Swayambhuva Manwantara.

Maitreya.—You have related to me, venerable preceptor, most fully, all that I was curious to hear respecting the creation of the world. But there is a part of the subject which I am desirous again to have described. You stated that Priyavrata and Uttánapáda were the sons of Swáyambhuva (Manu); and you repeated the story of Dhruva, the son of Uttánapáda. You made no mention of the descendants of Priyavrata: and it is an account of his family that I beg you will kindly communicate to me.

Parasara.—Priyavrata married Kamya, the daughter of the patriarch Kardama, and had, by her, two

वर्दमस्यातानां वन्यामुपयेमे प्रियवतः।

and the commentator has: 'He married the daughter of Kardama.

The text reads Kanya:

daughters, Samráj and Kukshí, and ten sons, wise, valiant, modest, and dutiful,* named Agnídhra, Agnibáhu, Vapushmat, Dyutimat, Medhas, Medhátithi, Bhavya, Savana,† Putra: and the tenth was Jyotishmat,¹ illustrious by nature, as by name. These were

whose name was Kanyá': क्रन्यां क्रन्यासंज्ञामिति । The copies agree in the reading; and the Váyu has the same name, Kanyá. But the Márkańdeya, which is the same, in other respects, as our text, has Kámyá. Kámyá also is the name elsewhere given, by the Váyu, to the daughter of Kardama (Vol. I., p. 155, note 1). Kámyá, as has been noticed, appears, in the Brahma and Hari Vamsa (Vol. I., p. 108, note 1), as the mother of Priyavrata, but erroneously: and the same authorities specify a Kámyá as the wife of that sovereign. So the commentator on the Hari Vamsa states: 'Another Kámyá is mentioned (in the text), the daughter of Kardama, the wife of Priyavrata:' 'प्रयावाद । The name Kanyá is, therefore, most probably, an error of the copyists. The Bhágavata § calls the wife of Priyavrata, Barhishmatí, the daughter of Viśwakarman.

¹ These names nearly agree in the authorities which specify the descendants of Priyavrata, except in the Bhágavata. That has an almost entirely different series of names, or: Ágnídhra, Idhmajihwa, Yajnabáhu, Mahávíra, Hirańyaretas, Ghŕitapŕishíha, Savana, Medhátithi, Vítihotra, and Kavi; with one daughter, Úrjaswatí. It also calls the Manus, Uttama, Támasa, and Raivata, the sons of Priyavrata, by another wife.

^{*} In my MSS., daiyta, "cherished".

[†] This is the reading of all the MSS. accessible to me; and it is that of the *Bhágavata* also. Professor Wilson had "Savala", — probably the corruption of a Bengal pandit, or of a fly.

this is from the smaller commentary, the unabridged words of which are: आत्मानार्थी कन्यान्। कन्यानं किया । The first place is, therefore, accorded to the view that kanyá is not intended as a proper name, but signifies "daughter". And herein concurs the larger commentary: आत्मानार्थी कन्यान्। कन्यानार्थीत वा।

the sons of Priyavrata,—famous for strength and prowess. Of these, three, or Medha,* Agnibáhu, and Putra, adopted a religious life. Remembering the occurrences of a prior existence, they did not covet dominion, but diligently practised the rites of devotion in due season, wholly disinterested, and looking for no reward.

Priyavrata, having divided the earth into seven continents, gave them, respectively, to his other seven sons. † To Agnídhra: he gave Jambu-dwípa; to Medhátithi he gave Plaksha-dwípa; he installed Vapushmat in the sovereignty over the Dwípa of Sálmali, § and made Jyotishmat king of Kuśa-dwípa; he appointed Dyutimat to rule over Krauncha-dwípa, Bhavya, to reign over Śáka-dwípa; and Savana he nominated the monarch of the Dwípa of Pushkara.

Agnídhra, the king of Jambu-dwípa, had nine sons,

Hear next, Maitreya, in what manner Agnídhra apportioned Jambu-dwípa amongst his nine sons. He gave to Nábhi the country" called Hima, south (of the Himavat, or snowy mountains). The country of Hemakúťa he gave to Kimpurusha, and, to Harivarsha, the country of Nishadha. The region in the centre of which mount Meru is situated he conferred on Ilávŕita, and, to Ramya, the countries lying between it and the Níla mountain. To Hiranvat his father gave the country lying to the north of it, called Sweta; and, on the north of the Sweta mountains, the country bounded by the Śringavat range he gave to Kuru. The countries on the east of Meru he assigned to Bhadráśwa: and Gandhamádana, (which lay west of it), he gave to Ketumála.2 Having installed his sons sovereigns in these several regions, the pious king Agnidhra retired to a life of penance at the holy place of pilgrimage, Sálagráma.3

The eight Varshas or countries, Kimpurusha and the rest, are places of perfect enjoyment, where happiness is spontaneous and uninterrupted. In them there is no vicissitude, nor the dread of decrepitude or death: there is no distinction of virtue or vice; nor difference of degree, as better or worse; nor any of the effects produced, in this region, by the revolutions of ages."

Nábhi, who had (for his portion) the country of Hima, + had, by his queen Meru, the magnanimous Rishabha; and he had a hundred sons, the eldest of whom was Bharata. Rishabha, having ruled with equity and wisdom, and celebrated many sacrificial rites, resigned the sovereignty of the earth to the heroic Bharata, and, retiring to the hermitage of Pulastya,: adopted the life of an anchoret, practising religious penance, and performing all prescribed ceremonies, until, emaciated by his austerities, so as to be but a

As these stones are found chiefly in the Gandak river, the Salagráma Tírtha was, probably, at the source of that stream, or at its confluence with the Ganges. Its sanctity, and that of the stone, are, probably, of comparatively modern origin.

Thus, it is said: "A king of the Konkas, Venkatas, § and Kutakas, named Arhat, having heard the tradition of Rishabha's practices (or his wandering about naked, and desisting from religious rites), being infatuated by necessity, under the evil influence of the Kali age, will become needlessly alarmed, and abandon his own religious duty, and will foolishly enter upon an unrighteous and heretical path. Misled by him, and bewildered by the iniquitous operation of the Kali age, disturbed, also, by the delusions of the deity, wicked men will, in great numbers, desert the institutes and purifications of their own ritual; will observe vows injurious and disrespectful to the gods; will desist

Besides the import of the term Arhat, or Jaina, Říshabha is the name of the first, and Sumati, of the fifth, Tírthakara or Jaina saint of the present era. There can be no doubt, therefore, that the Bhágavata intends this sect; and, as the Jaina system was not matured until a comparatively modern date, this composition is determined to be also recent. Bharata, having religiously discharged (the duties of his station), consigned the kingdom to his son Sumati, a most virtuous prince, and, engaging in devout practices, abandoned his life at the holy place Sálagráma.* He was afterwards born again, as a Brahman, in a distinguished family of ascetics. allusions to the extension of the Jaina faith in the western parts of the Peninsula may serve to fix the limit of its probable antiquity to the eleventh or twelfth century, when the Jainas seem to have been flourishing in Gujerat and the Konkan. As. Res., Vol. XVII., p. 282.;

which the earth was peopled, when he presided over the first Manwantara, in the Kalpa of Varáha.

¹ The descendants of Priyavrata were the kings of the earth in the first or Swáyambhuva Manwantara. Those of Uttánapáda, his brother, are placed, rather incongruously, in the second or Swárochisha Manwantara; whilst, with still more palpable inconsistency, Daksha, a descendant of Uttánapáda, gives his daughter to Kasyapa in the seventh or Vaivaswata Manwantara. It seems probable that the patriarchal genealogies are older than the chronological system of Manwantaras and Kalpas, and have been rather clumsily distributed amongst the different periods.

CHAPTER II.

Description of the earth. The seven Dwipas and seven seas. Jambu-dwipa. Mount Meru: its extent and boundaries. Extent of Ilávíita. Groves, lakes, and branches, of Meru. Cities of the gods. Rivers. The forms of Vishńu worshipped in different Varshas.

MATTREYA.—You have related to me, Brahman, the creation of Swáyambhuva. I am now desirous to hear from you a description of the earth;—how many are its oceans and islands, its kingdoms and its mountains, its forests and rivers, and the cities of the gods, its dimensions, its contents, its nature, and its form.

Parasara.—You shall hear, Maitreya, a brief account of the earth from me. A full detail I could not give you in a century.

The seven great insular continents are Jambu, Plaksha, Śálmali,* Kuśa, Krauncha, Śáka, and Pushkara; and they are surrounded, severally, by seven great seas, the sea of salt water (Lavańa), of sugar-cane juice (Ikshu), of wine (Surá), of clarified butter (Sarpis), of curds (Dadhi), of milk (Dugdha), and of fresh water (Jala).¹

¹ The geography of the Puránas occurs in most of these works, and, in all the main features,—the seven Dwípas, seven seas, the divisions of Jambu-dwípa, the situation and extend of Meru, and the subdivisions of Bhárata,—is the same. The Agni and Brahma are, word for word, the same with our text; and the Kúrma, Linga, Matsya, Márkańdeya, and Váyu present many

passages common to them and the Vishnu, or to one another. The Váyu, as usual, enters most fully into particulars. The Bhágavata differs, in its nomenclature of the subordinate details, from all, and is followed by the Padma. The others either omit the subject, or advert to it but briefly. The Mahábhárata, Bhíshma Parvan, has an account essentially the same; and many of the stanzas are common to it and different Puránas. It does not follow the same order, and has some peculiarities; one of which is, calling Jambu-dwípa Sudarána; such being the name of the Jambu-tree. It is said, also, to consist of two portions, called Pippala and Śaśa, which are reflected in the lunar orb, as in a mirror.*

Bháskara Áchárya, writing in the middle of the eleventh century, gives an abstract, avowedly drawn from the Puráúas, of some of the matters treated of in the present chapter. It would be curious to know what authority he followed; since many of the particulars enumerated by him are deviations from ordinary Pauráńik statements. His words are as follows:

"Venerable teachers have stated that Jambudwipa embraces the whole northern hemisphere lying to the north of the salt sea, and that the other six Dwipas, and the [seven] Seas, viz., those of salt, milk, &c., are all situated in the southern hemisphere.

"To the south of the equator lies the salt sea, and, to the south of it, the sea of milk, whence sprang the nectar, the moon, and [the goddess] Sri, and where the omnipresent Vásudeva, to whose lotos-feet Brahmá and all the gods bow in reverence, holds his favourite residence.

"Beyond the sea of milk lie, in succession, the seas of curds, clarified butter, sugar-cane juice, and wine, and, last of all, that of sweet water, which surrounds Vadavánala. The Pátálalokas [or infernal regions] form the concave strata of the earth.

"In those lower regions dwell the race of serpents [who live] in the light shed by the rays issuing from the multitude of the brilliant jewels of their crests, together with the multitude of Asuras; and there the Siddhas enjoy themselves with the pleasing persons of beautiful females, resembling the finest gold in purity.

"The Sáka, Sálmala, Kansa, Krauncha, Gomedaka, and Pushkara [Dwipas] are situated [in the intervals of the above-mentioned seas] in

regular alternation; each Dwipa lying, it is said, between two of these seas.

"To the north of Lanka lies the Himagiri [mountain], and, beyond that, the Hemakuta [mountain], and, beyond that, again, the Nishadha [mountain]. These [three mountains] stretch from sea to sea. In like manner, to the north of Siddha-[pura] lie, in succession, the Śringavat, Śukla, and Nila [mountains]. To the valleys lying between these mountains the wise have given the name of Varshas.

"This valley [which we inhabit] is called Bharatavarsha. To the north of it lies Kimnaravarsha, and, beyond it, again, Harivarsha. And know that to the north of Siddhapura in like manner are situated the Kuru,

Hiranmaya, and Ramyaka Varshas.

"To the north of Yamakofi-pattana lies the Malyavat [mountain], and, to the north of Romaka-[pattana], the Gandhamadana [mountain]. These two mountains are terminated by the Nila and Nishadha mountains; and the space between these two is called Ilavrita-[varsha].

"The country lying between the Malyavat [mountain] and the sea is called Bhadraturaga by the learned; and geographers have denominated the country between the Gandha mountain and the sea, Ketumá-

laka.

"Havrita, which is bounded by the Nishadba, Nila, Sugandha, and Sumályaka [mountains], is distinguished by a peculiar splendour. It is a land rendered brilliant by its shining gold, and thickly covered with the bowers of the immertals.

"In the middle [of Ilavrita] stands the mountain Meru, which is composed of gold and of precious stones, the abode of the gods. Expounders of the Puranas have further described this [Meru] to be the pericarp of the earth-lotos, whence Brahma had his birth.

"The four mountains, Mandara, Sugandba, Vipula, and Suparswa, serve as buttresses to support this [Maru]; and upon these four hills grow, severally, the Kadamba, Jambu, Vafa, and Pippala trees, which are as banners on those four hills.

"From the clear juice which flows from the fruit of the Jambu springs the Jambunada. From contact with this juice, earth becomes gold; and it is from this fact that gold is called jambunada. [This juice is of so exquisite a flavour that] the multitude of the Suras and Siddhas, turning with distaste from nectar, delight to quaff this delicious beverage.

"And it is well known that upon those four hills [the buttresses of Meru,] are four gardens: Chaitraraths, of varied brilliancy [sacred to

"Meru divided itself into three peaks, upon which are situated the three cities sacred to Murári, Ka, and Purári [denominated Vaikuńtha, Brahmapura, and Kailásal; and beneath them are the eight cities sacred to Satamakha, Iwalana, Antaka, Rakshas, Ambupá, Anila, Śaśin, and Iśa [i. e., the regents of the eight dises (or directions), viz., the east, sacred to Indra, the south-east, sacred to Agni, the south, sacred to Yama, the south-west, sacred to Nairrita, the west, sacred to Varuna, the northwest, sacred to Váyu, the north, sacred to Kubera, and the north-east, sacred to Sival.

"The sacred Ganges, springing from the foot of Vishnu, falls upon [mount] Meru, and, thence separating itself into four streams, descends, through the heavens, down upon the four vishkambhas [or buttress-hills], and thus falls into the four reservoirs [above described].

"[Of the four streams above mentioned], the first, called Sita, went to Bhadraswa, the second, called Alakananda, to Bharatavarsha, the third, called Chakshu, to Ketumala, and the fourth, called Bhadra, to Uttarakuru [or North Kuru].

"And this sacred river has so rare an efficacy, that, if her name be listened to, if she be sought to be seen, if seen, touched, or bathed in, if her waters be tasted, if her name be uttered, or brought to mind, and her virtues be celebrated, she purifies, in many ways, thousands of sinful men [from their sins].

"And if a man makes a pilgrimage to this sacred stream, the whole line of his progenitors, bursting the bands [imposed on them by Yama], bound away in liberty, and dance with joy; nay, even by a man's approach to its banks, they repulse the slaves of Antaka, [who keep guard over them], and, escaping from Niraya [the infernal regions], secure an abode in the happy regions of Heaven.

"Here in this Bharatavarsha are embraced the following nine khandas [portions], viz., Aindra, Kaśeru, Tamraparna, Gabhastimat, Kumarika,

Naga, Saumya, Varuna, and, lastly, Gandharva.

"In the Kumarika alone is found the subdivision of men into castes. In the remaining khandas are found all the tribes of antyajas for outcaste tribes of men]. In this region [Bharatavarsha] are also seven

thousand; so that this mountain is like the seed-cup of the lotos of the earth.

The shape of Meru, according to this description, is that of an inverted cone; and, by the comparison to the seed-cup, its form should be circular. But there seems to be some uncertainty, upon this subject, amongst the Pauráńiks. The Padma compares its form to the bell-shaped flower of the Datura. The Váyu represents it as having four sides of different colours, or, white on the east, yellow on the south, black on the west, and red on the north; but notices, also, various opinions of the outline of the mountain, which, according to Atri, had a hundred angles; to Bhrigu, a thousand. Sávarni calls it octangular; Bhaguri, quadrangular; and Varsháyani says it has a thousand angles. Gálava makes it saucer-shaped; Garga, twisted, like braided hair; and others maintain that it is circular. The Linga makes its eastern face of the colour of the ruby; its southern, that of the lotos; its western, golden; and its northern, coral. The Matsya has the same colours as the Váyu, and both contain this line;

. चतुर्वर्णसु सीवर्णसतुरसः समुच्छितः। 'Four-coloured, golden, four-cornered, lofty!' But the Váyu

kuláchalas, viz., the Máhondra, Śukti, Malaya, Ítikshaka, Páriyátra, Sahya, and Vindhya hills.

"The country to the south of the equator is called the bhir-loka, that to the north, the bhuva-[loka]; and Meru [the third] is called the swar-[loka]. Next is the mahar-[loka]: in the heavens beyond this is the jana-[loka]; then, the tapo-[loka], and, last of all, the satya-[loka]. These lokas are gradually attained by increasing religious merits.

See, further, the editor's last note on the fourth chapter of the present book.

The boundary mountains (of the earth) are Himavat, Hemakúta, and Nishadha, which lie south (of Meru); and Níla, Śweta, and Śringin, which are situated to the north (of it). The two central ranges (those next to Meru, or Nishadha and Níla) extend for a hundred thousand (Yojanas, running east and west). Each of the others diminishes ten thousand (Yojanas, as it lies more remote from the centre). They are two thousand (Yojanas) in height, and as many in breadth. The Varshas (or countries between these ranges) are: Bhárata (India), south of the Himavat mountains; next, Kimpurusha, between Himavat and Hemakúta; north of the latter, and south of Nishadha, is Harivarsha; north of Meru is Ramyaka, extending from the Níla

compares its summit, in one place, to a saucer, and observes that its circumference must be thrice its diameter:

विसाराचिगुणसास परिणाहः समनातः।

The Matsya, also, rather incompatibly, says the measurement is that of a circular form, but it is considered quadrangular:

वृत्ताकृतिप्रनाणस चतुरसः समाहितः।

According to the Buddhists of Ceylon, Meru is said to be of the same diameter throughout. Those of Nepal conceive it to be shaped like a drum. A translation of the description of Meru and its surrounding mountains, contained in the Brahmánída, which is the same, exactly, as that in the Váyu, occurs in the As. Researches, Vol. VIII., pp. 343, et seq. There are some differences in Colonel Wilford's version from that which my MSS. would authorize; but they are not, in general, of much importance. Some, no doubt, depend upon variations in the readings of the different copies; of others I must question the accuracy.

Each of these is nine thousand (Yojanas) in extent. Ilávŕita is of similar dimensions; but in the centre of it is the golden mountain Meru: and the country extends nine thousand (Yojanas) in each direction from the four sides of the mountain. There are four mountains in this Varsha, formed as buttresses to Meru, each ten thousand Yojanas in elevation. That on the east is called Mandara; that on the south, Gandhamádana; that on the west, Vipula; and that on the north, Supárśwa. On each of

¹ These, being the two outer Varshas, are said to take the form of a bow; that is, they are, exteriorly, convex, being segments of the circle.

 $^{^2}$ The whole diameter of Jambu-dwípa has been said to be 100000 Yojanas. This is thus divided from north to south: Hávíta, in the centre, extends, each way, 9000, making 18000; Meru itself, at the base, is 16000; the six Varshas, at 9000 each, are equal to 54000; and the six ranges, at 2000 each, are 12000: and 18+16+54+12=100. From east to west, the Varshas are of the extent necessary to occupy the space of the circle.

³ The Bhágavata † and Padma call these Mandara, Merumandara, Supárśwa, and Kumuda.

these stands, severally, a Kadamba-tree, a Jambu-tree, a Pippala, and a Vata; 1 each spreading over eleven hundred (Yojanas, and towering aloft like) banners on the mountains. From the Jambu-tree the insular continent Jambu-dwipa derives its appellation. The apples* of that tree are as large as elephants. When they are rotten, they fall upon the crest of the mountain; and from their expressed juice is formed the Jambu river, † the waters of which are drunk by the inhabitants: and, in consequence of drinking of that stream, they pass their days in content and health, being subject neither to perspiration, to foul odours, to decrepitude, nor organic decay. The soil on the banks of the river, absorbing the Jambu juice, and being dried by gentle breezes, becomes the gold termed Jámbunada, (of which) the ornaments of the Siddhas (are fabricated).

The country of Bhadráśwa lies on the east of Meru; and Ketumála, on the west: and between these two is the region of Ilávŕita. On the east (of the same) is the forest Chaitraratha; the Gandhamádana (wood) is on the south; (the forest of) Vaibhrája is on the west; and (the grove of Indra, or) Nandana is on the north. There are also four great lakes, the waters of which

The Bhagavata¶ substitutes Sarvatobhadra for the Gandhamadana forest, and calls the lakes lakes of milk, honey, treacle, and sweet water.

² The Váyu gives these names and many more, and describes, at great length, forests, lakes, and cities of gods and demigods, upon these fabulous mountains, or in the valleys between them. (As. Res., Vol. VIII., pp. 354, et seq.)

^{*} Professor Wilson had "Sitoda". In all the MSS, within my reach, the four lakes are enumerated as follows:

[‡] Kurara is in one of my MSS. It is the reading of the Bhagavata-purana, V., 16, 27.

[§] One of my MSS, reads Sankha and Kúťa. The Bhágavata-purána, V., 16, 27, has Sankha.

^{||} In my MSS., the original of this passage follows immediately the mention of the Járudhi, and is as follows:

On the summit of Meru is the vast city of Brahmá, extending fourteen thousand leagues, and renowned in heaven; and around it, in the cardinal points and the intermediate quarters, are situated the stately cities of Indra and the other regents of the spheres.¹ The

1 The Lokapálas, or eight deities in that character: Indra, Yama, Varuńa, Kubera, Vivaswat, Soma, Agni, and Váyu.* Other cities of the gods are placed upon the spurs, or filamentmountains, by the Váyu; or that of Brahmá on Hemaśringa, of Śankara, on Kálanjara, of Garuda, on Vaikanka, and of Kubera, on Kailása. Himavat is also specified, by the same work, as the scene of Siva's penance, and marriage with Umá; of his assuming the form of a Kiráta or forester; of the birth of Kárttikeva, in the Sara forest; and of his dividing the mountain Krauncha with his spear. This latter legend, having been somewhat misunderstood by Colonel Wilford, is made the theme of one of his fanciful verifications. "Here, says he", [the author of the Váyu+], in the forest of Sankha, was born Shadanana, or Karttikeya, Mars with six faces. Here he wished or formed the resolution of going to the mountains of Krauncha, Germany, part of Poland, &c., to rest and recreate himself after his fatigues in the wars of the gods with the giants. There, in the skirts of the mountains of Krauncha, he flung his sword; the very same which Attila, in the fifth century, asserted he had found under a clod of earth. It was placed in his tomb, where it is, probably, to be found." As. Res. Vol. VIII., p. 364. The text of which this is, in part, a representation is:

तच ग्र्वणं नाम यच जातः घडाननः। यच चैव क्रतीत्साहः क्रीब्रग्रेजवरं प्रति॥ चिचपुष्पनिनुज्ञस्य क्रीब्रस्य च गिरेस्तटे। देवारिस्कन्टनः स्कन्टो यच ग्रातिविमुक्तवान्॥

^{*} See note at the feet of p. 112, supra.

capital of Brahmá is enclosed by the river Ganges, which, issuing from the foot of Vishnu, and washing the lunar orb, falls, here, from the skies, and, after

The legend here alluded to is told, at length, in the Vámana Puráúa. Mahishásura, flying from the battle in which Táraka had been slain by Kárttikeya, took refuge in a cave in the Krauncha mountain. A dispute arising between Kárttikeya and Indra, as to their respective prowess, they determined to decide the question by circumambulating the mountain; the palm to be given to him who should first go round it. Disagreeing about the result, they appealed to the mountain, who untruly decided in favour of Indra. Kárttikeya, to punish his injustice, hurled his lance at the mountain Krauncha, and pierced, at once, it and the demon Mahisha:

एवं व्रवनं कीश्चं सः (कार्त्तिकेयः) क्रीधात्रस्पुरिताधरः। विभेट प्रात्त्वा क्रीटिन्यान्यहिषेण समं तथा॥

Another division of Krauncha is ascribed to Parasurama. Megha Duta, v. 59.* Krauncha is, also, sometimes considered to be the name of an Asura killed by Karttikeya. But this is, perhaps, some misapprehension of the Pauranik legend by the grammarians, springing out of the synonyms of Karttikeya, Kraunchari, Kraunchadarana, &c., implying the foe or destroyer of Krauncha, occurring in the Amara and other Kosas.

The Bhágavata† is more circumstantial. The river flowed over the great toe of Vishňu's left foot, which had, previously, as he lifted it up, made a fissure in the shell of the mundane egg, and thus gave entrance to the heavenly stream. The Váyu merely brings it from the lunar orb, and takes no notice of Vishňu's interposition. In a different passage, it describes the detention of Gangá amidst the tresses of Siva, in order to correct her arrogance, until the divinity was moved, by the penance and prayers of king Bhagiratha, to set her free. The Mahábhárata represents Siva's bearing the river for a hundred years on his head, merely to prevent its falling too suddenly on the mountains.

encircling the city, divides into four mighty rivers, flowing in opposite directions.* These rivers are the Sítá,† the Alakanandá, the Chakshu,‡ and the Bhadrá. The first, falling upon the tops of the inferior mountains, on the east side of Meru, flows over their crests, and passes through the country of Bhadráśwa, to the ocean.§ The Alakanandá flows south, to (the country of) Bhárata, and, dividing into seven rivers on the way, falls into the sea. The Chakshu falls into the sea, after traversing all the western mountains, and passing through the country of Ketumála. And the Bhadrá washes the country of the Uttarakurus, and empties itself into the northern ocean.¹

† Nearly all the MSS. examined by me have Sita; and this is the reading of the *Bhūgavata-purāna*, V., 17, 6. In both the commentaries, however, Sita seems to be preferred.

¹ Although the Váyu has this account, it subsequently inserts another, which is that also of the Matsya and Padma. In this, the Ganges, after escaping from Śiva, is said to have formed seven streams: the Nalini, Hládini, and Pávani, going to the east; the Chakshu, Sitá, and Sindhu, to the west; and the Bhágirathi, to the south.

* The Bhishma-parvan, 243, is, I presume, the passage referred to:

वस्वोकसारा निवनी पावनी च सरस्वती। जस्वनदी च सीता च गंगा सिन्ध सप्तसी॥

Apparently, eight rivers are here named; the fourth being the Saraswati. The commentator Nilakantha, who adopts the reading until at the end of the second verse, asserts that Pavani and Saraswati are one name only, i. e., the purifying Saraswati. His words are: पावनी संस्थानिका

The commentator Arjuna Miśra, who is silent on this point, adopts the reading सप्तम:, in place of सप्तमी, and explains it as denoting that the Sindhu is "the seventh division", namely, of the Ganges: एवसपि सिन्ध: सप्तम:। सप्तमी भेद:।

I have changed, in the note to which these remarks are appended, the order in which Professor Wilson named the rivers in question. That order will be seen in the quotation which I make immediately below.

† Professor Wilson has since written as follows: "According to one Pauráńik legend, the Ganges divided, on its descent, into seven streams, termed the Nalini, Pávani, and Hládini, going to the east; the Chakshu, Sitá, and Sindhu, to the west; and the Bhágirathi or Ganges proper, to the south. In one place in the Mahábhárata, the seven rivers are termed Vaswokasárá, Nalini, Pávani, Gangá, Sítá, Sindhu, and Jambúnadi; in another, Gangá, Yamuná, Plakshagá, Rathasthá, Saryu, Gomati, and Gandaki. In a text quoted and commented on by Yáska, we have ten rivers, named Gangá, Yamuná, Saraswati, Šntudri, Parushúi, Asikni, Marudvíidhá, Vitastá, Árjíkíyá, and Sushomá. Of these, the Parushúi is identified with the Irávati, the Árjíkíyá, with the Vipás, and the Sushomá, with the Sindbu. Nir., III., 26. The original enumeration of seven appears to be that which has given rise to the specifications of the Puráňas." Translation of the Rig-veda, Vol. I., p. 88, note.

and Nishadha (on the north and south), and between Mályavat and Gandhamádana¹ (on the west and east).

Faber, indeed, thinks that Meru, with the surrounding Varsha of Ilávíita, and its four rivers, is a representation of the garden of Eden. (Pagan Idolatry, Vol. I., p. 315.) However this may be, it seems not unlikely to have originated in some imperfect account of four great rivers flowing from the Himálaya, and the high lands north of that range, towards the cardinal points: the Bhadrá, to the north, representing the Oby of Siberia; and the Śitá, the river of China, or Hoangho. The Alakanandá is well known as a main branch of the Ganges, near its source; and the Chakshu is, very possibly, as Major Wilford supposed, the Oxus. (As. Res., Vol. VIII., p. 309.) The printed copy of the Bhágavata, and the MS. Padma, read Vankshu: but the former is the more usual reading. It is said, in the Váyu, of Ketumála, through which this river runs, that it is peopled by various races of barbarians:

केतुमालं महाद्वीपं नानाम्बेक्कगगीर्युतम्।

The text applies the latter name so variously as to cause confusion. It is given to one of the four buttresses of Meru, that on the south; to one of the filament mountains, on the west; to a range of boundary mountains, on the south; and to the Varsha of Ketumála. Here another mountain range is intended; or a chain running north and south, upon the east of Ilávrita, connecting the Níla and Nishadha ranges. Accordingly, the Váyu states it to be 34000 Yojanas in extent, that is, the diameter of Meru, 16000, and the breadth of Ilávrita on each side of it, or, together, 18000. A similar range, that of Mályavat, bounds Ilávrita on the west. It was, probably, to avoid the confusion arising from similarity of nomenclature, that the author of the Bhágavata substituted different names for Gandhamádana in the other instances; calling the buttress, as we have seen, Merumandara,* the southern forest, Sarvatobhadra, † and the filament-

It lies between them, like the pericarp of a lotos. The countries of Bhárata, Ketumála, Bhadráśwa, and Uttarakuru* lie, like leaves of the lotos of the world, exterior to the boundary mountains. Jathara and Devakúta are two mountain ranges, † running north and south, and connecting the two chains of Níla and Nishadha. Gandhamádana and Kailása extend, east and west, eighty Yojanas in breadth, from sea to sea. Nishadha and Páriyátra; are the limitative mountains on the west, stretching, like those on the east, between the Níla and Nishadha ranges. And the mountains Tri-śringa and Járudhi are the northern limits (of Meru), extending, east and west, between the two seas. Thus

रं सर्वादापनंत, which, four lines lower, is rendered "limitative mountains", and, further on, "boundary mountains".

[.] Paripatra appears to be the more usual reading.

[§] It is not altogether evident that the Bhágavata-puráña, V., 16, 27, though it omits Gandhamádana, intends to substitute Hamsa in its stead.

^{||} This is from the smaller commentary on the Vishin-puraita.

I have repeated to you the mountains described, by great sages, as the boundary mountains, situated, in pairs, on each of the four sides of Meru. Those, also, which have been mentioned as the filament mountains (or spurs), Sítánta and the rest, are exceedingly delightful. The valleys embosomed amongst them are the favourite resorts of the Siddhas and Cháranas. And there are situated, upon them, agreeable forests, and pleasant cities, embellished with the palaces of Lakshmí, Vishníu, Agni, Súrya, and other deities, and peopled by celestial spirits; whilst the Yakshas, Rákshasas, Daityas, and Dánavas pursue their pastimes

of the central mountain, and being 2000 high, and as many broad. They may be understood to be the exterior barriers of Meru, separating it from Ilávrita. The names of these mountains, according to the Bhágavata, ; are Jaíhara and Devakúťa on the east, Pavana and Páriyátra on the west, Triśŕinga and Makara on the north, and Kailása and Karavíra on the south. Without believing it possible to verify the position of these different creations of the legendary geography of the Hindus, it can scarcely admit of doubt that the scheme was suggested by imperfect acquaintance with the actual character of the country, by the four great ranges, the Altai, Muztag or Thian-shan, Ku-en-lun, and Himálaya, which traverse central Asia in a direction from east to west, with a greater or less inclination from north to south, which are connected or divided by many lofty transverse ridges, which enclose several large lakes, and which give rise to the great rivers that water Siberia, China, Tartary, and Hindusthán. in the vales. These, in short, are the regions of (Paradise, or) Swarga, the seats of the righteous, and where the wicked do not arrive even after a hundred births.

In (the country of) Bhadráśwa, Vishńu resides as Hayasíras (the horse-headed); in Ketumála, as Varáha (the boar); in Bhárata, as the tortoise (Kúrma); in Kuru, as the fish (Matsya); in his universal form, everywhere: for Hari pervades all places. He, Maitreya, is the supporter of all things: he is all things. In the eight realms, of Kimpurusha and rest, (or all exclusive of Bhárata), there is no sorrow, nor weariness, nor anxiety, nor hunger, nor apprehension: their inhabitants are exempt from all infirmity and pain, and live (in uninterrupted enjoyment) for ten or twelve thousand years. Indra* never sends rain upon them: for the earth abounds with water. In those places there is no distinction of Krita, Tretá, or any succession of ages. † In each of these Varshas there are, respectively, seven principal ranges of mountains,: from which, O best of Brahmans, hundreds of rivers take their rise.1

¹ More ample details of the Varshas are given in the Mahábhárata, Bhágavata, Padma, Váyu, Kúrma, Linga, Matsya, and Márkaúdeya Puráñas: but they are of an entirely fanciful nature. Thus, of the Ketumála-varsha it is said, in the Váyu, the men are black, the women of the complexion of the lotos; the people subsist upon the fruit of the Panasa or jack-tree, and live for ten thousand years, exempt from sorrow or sickness. Seven Kula or main ranges of mountains in it are named; and a long list of countries and rivers is added, none of which can be identified

with any actually existing, except, perhaps, the great river the Suchakshu, the Amu or Oxus. According to the Bhágavata, "Vishńu is worshipped as Kámadeva, in Ketumála. The Váyu says the object of adoration there is Íswara, the son of Brahmá. Similar circumstances are asserted of the other Varshas. See, also, As. Res., Vol. VIII., p. 354.†

In Kutumála, or Europe, he resides in the shape of a varáha, or boar; and he is described as the chief of a numerous offspring, or followers in that shape. He is, then, in Ketumála, varáhapa, or the chief of the varáhas, or boars; a word to be pronounced, according to the idiom of the spoken dialects, wárápá. In Kuru, he has the countenance of a matsya, or fish; and, of course, he is, there, širo-matsya, or with the head or countenance of a fish."

CHAPTER III.

Description of Bhárata-varsha: extent: chief mountains: nine divisions: principal rivers and mountains of Bhárata proper: principal nations: superiority over other Varshas, especially as the seat of religious acts. (Topographical lists.)

Parasara.—The country that lies north of the ocean, and south of the snowy mountains,* is called Bharata: for there dwelt the descendants of Bharata. It is nine thousand leagues in extent,¹ and is the land of works, in consequence of which men go to heaven, or obtain emancipation.

The seven main chains of mountains in Bhárata are Mahendra, Malaya, Sahya, Śuktimat, Riksha, Vindhya, and Páripátra. †

¹ As Bhárata-varsha means India, a nearer approach to the truth, with regard to its extent, might have been expected; and the Váyu has another measurement, which is not much above twice the actual extent, or 1000 Yojanas from Kumárí (Comoria) to the source of the Ganges.

² These are called the Kulaparvatas, family mountains, or mountain ranges or systems. They are similarly enumerated in all the authorities; and their situation may be determined, with some confidence, by the rivers which flow from them. Mahendra; is the chain of hills that extends from Orissa and the northern Circars to Gondwana, part of which, near Ganjam, is still called Mahindra Malei, or hills of Mahindra. Malaya is the southern

^{*} Himádri, i. e., the Himálaya.

[†] This mountain-range is not to be confounded with that named in connexion with the Nishadha, at p. 123, supra.

The Malardyos of Ptolemy, unless he has altogether misplaced it, cannot represent the Mahendra of the text. See Professor Wilson's Essays on Sanskrit Literature, Vol. I., pp. 240 and 241.

From this region heaven is obtained, or even, in some cases, liberation from existence; or men pass, from hence, into the condition of brutes, or fall into hell. Heaven, emancipation, a state in mid-air, or in the subterraneous realms, succeeds to existence here: and the world of acts is not the title of any other portion of the universe.*

portion of the Western Ghats. Suktimat is doubtful; for none of its streams can be identified with any certainty. Sahya is the northern portion of the Western Ghats, the mountains of the Konkan. Riksha is the mountains of Gondwana. Vindhya is the general name of the chain that stretches across Central India; but it is here restricted to the eastern division. According to the Váyu, it is the part south of the Narmada, or the Sátpudá range. Páripátra (as frequently written Párivátra) is the northern and western portion of the Vindhya. The name, indeed, is still given to a range of mountains in Guzerat (see Colonel Tod's map of •Rájasthán); but the Chambal and other rivers of Málwá, which are said to flow from the Pariyatra mountains, do not rise in that province. All these mountains, therefore, belong to one system, and are connected together. The classification seems to have been known to Ptolemy; as he specifies seven ranges of mountains, although his names do not correspond, with exception of the Vindius Mons. Of the others, the Adisathrus and Uxentus agree, nearly, in position with the Parivatra and Riksha. The Apocope, Sardonyx, Bittigo, + and Orudii must be left for consideration. The Bhágavata, Váyu, Padma, and Márkańdeya add a list of inferior mountains to these seven.

> जतः संप्राप्ति खर्गी मुक्तिमकात्प्रयानि वै। तिर्यत्कं नरकं चापि यान्यतः पुरुषा मुने॥ इतः खर्गञ्च मोचञ्च मध्यं चानाञ्च गम्यते। न खल्लस्य मर्त्यानां कर्म भूमी विधीयते॥

The Varsha of Bhárata is divided into nine portions, which I will name to you. They are Indra-dwípa, Kaśerumat,* Támravarńa,† Gabhastimat, Nága-dwípa, Saumya, Gándharva, and Váruńa. The last or ninth Dwípa is surrounded by the ocean, and is a thousand Yojanas from north to south.

On the east of Bhárata dwell the Kirátas (the barbarians); on the west, the Yavanas; in the centre reside Brahmans, Kshatriyas, Vaisyas, and Śúdras, occupied

This last is similarly left without a name, in all the works. It is the most southerly, that on the borders of the sea, and, no doubt, intends India proper. Wilford places here a division called Kumáriká. § No description is anywhere attempted of the other divisions. To these the Vávu adds six minor Dwípas, which are situated beyond sea, and are islands: Anga-dwipa, Yama-dwipa, Matsya-dwipa, Kumuda or Kuśa-dwipa, Varáha-dwipa, and Sankha-dwipa; peopled, for the most part, by Mlechchhas, but who worship Hindu divinities. The Bhagavata and Padma name eight such islands: Swarnaprastha, Chandrasukla, Avatrana, Ramańaka, Mandahára, Pánchajanya, Simhala, and Lanká. Colonel Wilford has endeavoured to verify the first series of Upadwipas, making Varáha, Europe; Kuśa, Asia Minor, &c.; Sankha, Africa; Malaya, Malacca: Yama is undetermined; and, by Anga, he says, they understand China. How all this may be is more than doubtful; for, in the three Puranas in which mention is made of them, very little more is said upon the subject.

^{*} Variants are Kaśeru and Kasetu.

The Śatadrú, Chandrabhágá, and other rivers flow from the foot of Himálaya; the Vedasmriti and others, from the Páripátra mountains; the Narmadá and Surasá, from the Vindhya hills; the Tápí, Payoshńí, and Nirvindhyá, from the Řiksha mountains; the Godávarí, Bhímarathí, Krishńaveńí, § and others, from the Sahya mountains; the Kritamálá, Támraparní, and others, from the Malaya hills; the Trisámá, Řishikulyá,

The same passage, slightly varied, occurs in the Mahábhárata. It is said especially of the mountainous districts, and may allude, therefore, to the Gonds and Bhils of Central India, as well as to the Mohammedans of the north-west. The specification implies that infidels and outcasts had not yet descended on the plains of Hindusthán.

¹ By Kirátas, foresters and mountaineers are intended,—the inhabitants, to the present day, of the mountains east of Hindusthán. The Yavanas, on the west, may be either the Greeks of Bactria and the Punjab—to whom there can be little doubt the term was applied by the Hindus—or the Mohammedans, who succeeded them in a later period, and to whom it is now applied. The Váyu calls them both Mlechchhas, and also notices the admixture of barbarians with Hindus, in India proper:

¹ This is a very meagre list, compared with those given in other Puránas. That of the Váyu is translated by Colonel Wilford, As. Res., Vol. VIII.; and much curious illustration of many of the places, by the same writer, occurs As. Res., Vol. XIV. The lists of the Mahábhárata, Bhágavata, and Padma are given without any arrangement: those of the Váyu, Matsya, Márkańdeya, and Kurma are classed as in the text. Their lists are too long for insertion in this place. Of the rivers named in the text, most are capable of verification. The Satadrú, 'the hundred-channelled', -the Zaradrust of Ptolemy, Hesidrus of Pliny-is the Sutlej. The Chandrabhaga, Sandabalis, & or Acesines, is the Chinab. The Vedasmítti. I in the Váyu and Kúrma, is classed with the Vetravatí or Betwa, the Charmanwati or Chambal, and Siprá, and Párá, rivers of Malwa, and may be the same with the Beos of the maps. The Narmada (or Nerbudda), the Namadus of Ptolemy, is well known. According to the Váyu, it rises, not in the Vindhya, but in the Riksha mountains; taking its origin,

in fact, in Gondwana. The Surasᆠis uncertain. The Tápí is the Taptee, rising also in Gondwana: the other two are not identified. The Godávarí: preserves its name: in the other two we have the Beemah and the Krishna. For Kritamala the Kurma reads Ritumálá: but neither is verified. The Támraparní is in Tinivelly, and rises at the southern extremity of the Western Ghats. The Rishikulya that rises in the Mahendra mountain is the Rasikulia or Rasikoila, which flows into the sea near Ganjam. The Trisama is undetermined. The text assigns another Rishikulyá to the Śuktimat mountains; but, in all the other authorities, the word is Rishíka. The Kumárí might suggest some connexion with Cape Comorin, but that the Malaya mountains seem to extend to the extreme south. A Rishikulyá river is mentioned (Vana Parvan, v. 3026) as a Tírtha, in the Mahábhárata, in connexion, apparently, with the hermitage of Vasishtha, which, in another passage (v. 4096), is said to be on mount Arbuda or Ábú. In that case, and if the reading of the text be admitted for the name of the river, the Suktimat range would be the mountains of Gujerat. But this is doubtful. See Book IV., Chapter XII., note. In the Mahábhárata, Ádi Parvan, the Śuktimatí§ river is said to flow by the capital of Chedi.

¹ The list of nations is as scanty as that of the rivers. It is, however, omitted altogether in the Bhágavata. The Padma has a long catalogue, but without arrangement: so has the Mahábhárata. The lists of the Váyu, Matsya, and Márkańdeya class the nations as central, northern, eastern, southern, and western. The names are much the same in all, and are given in the eighth volume of the As. Res., from the Brahmáńda, or (for it is the same account) the Váyu. The Márkańdeya has a second classification, and, comparing Bhárata-varsha to a tortoise, with its head to the east, enumerates the countries in the head, tail, flanks, and feet, of the animal. It will be sufficient, here, to attempt an identification of the names in the text: but some further illustration is offered at the end of the chapter. Delhi. The Pánchálas, it appears from the Mahábhárata, occupied the lower part of the Doab, extending across the Jumna to the Chambal. Kullúka Bhaffa, in his commentary on Manu, II., 19, places them at Kanoj. Kámarúpa is the north-eastern part of Bengal, and western portion of Assam. Pundra is Bengal proper, with part of South Behar and the Jungle Mahals. Kalinga is the sea-coast west of the mouths of the Ganges, with the upper part of the Coromandel coast. Magadha is Behar. The Sauráshtras are the people of Surat, the Syrastrene of Ptolemy. The Śúras and Bhíras, in the same direction, may be the Suri and Phauni or Phruni of Strabo. * The Arbudas must be the people about mount Ábú, or the natives of Mewar. The Kárúshas and Málavas are, of course, the people of Malwa. The Sauviras and Saindhavas are usually conjoined as the Sindhu-Sauviras, and must be the nations of Sindh and western Rájputáná. By the Húńas we are to understand the white Huns or Indo-Scythians,† who were established in the Punjab and along the Indus, at the commencement of our era; as we know from Arrian, Strabo, and Ptolemy, confirmed by recent discoveries of their coins. The Salwas

^{*} The "Bhiras" have already been disposed of. See my first note in the last page. As to the reading Suri, Seri is thought to be preferable. See M. V. de Saint-Martin's Étude sur la Géog. Grecque, &c., pp. 422 and 423.

[†] I am not prepared to deny that the ancient Hindus, when they spoke of the Húńas, intended the Huns. In the middle ages, however, it is certain that a race called Húńa was understood, by the learned of India, to form a division of the Kshatriyas. See Mallinatha on the Raghuvańsa, IV., 68. We have, further, the attestation of inscriptions to the fact that, in medieval times, Kshatriyas married Húńa wives. Venkata Adhwarin, in his Viśwaguńadarśa, pretty evidently means the Portuguese, where he gives an estimate of the Húńas; and the pandits of the present day, as I know from having heard them, very often employ Húńa as synonymous with Faringi, or Frank. See Journal of the American Oriental Society, Vol. VI., pp. 528 and 529: Journal of the As. Soc. of Bengal, 1862, pp. 3, 117, and 118.

In the Bhárata-varsha it is that the succession of four Yugas or ages, the Krita, the Tretá, the Dwápara,

(or, as also read, Śalyas) are placed, by the Vayu and Matsya, amongst the central nations, and seem to have occupied part of Rajasthán; a Śalwa Raja being elsewhere described as engaging in hostilities with the people of Dwaraka in Gujerat. Śakala, as I have elsewhere noticed, is a city in the Punjab (As. Res., Vol. XV., p. 108), the Sagala of Ptolemy (Ibid., p. 107). The Mahabharata makes it the capital of the Madras, the Mardi of the ancients: but they are separately named, in the text, and were situated something more to the south-east. The Ramas and Ambashthas* are not named in the other Puranas: but the

Professor Wilson himself, further on in this work, where mention is again made of the Hunas, adverting to the Hun or Turk tribes that figure in Chinese history, suggests, inasmuch as those tribes did not appear until several centuries after the beginning of the Christian era, and inasmuch as the theatre of their recorded exploits is remote from India, that the coincidence of appellation may be merely accidental.

See Book IV., Chapter XI., concluding note.

* Ambashtha is "the name of a military people, and its country, situated in the middle of the Punjab (probably the 'Ausagras of Ptolemy)". Goldstücker, whom I here quote, remarks as follows-Sanskrit Dictionary, p. 401-on the name by which this people is found to be called, and concludes that its older denomination was, probably, Ambashtha: "In the Aitareya-brahmana, Alessa is met with as the name of a king: and this word, alledged by the Kaśika, would, according to Panini, IV., 1, 171, come from TIGE; the latter designating a Kshatriya or military man of a country bearing the same name (comp. IV., 1, 168). Now, if the instance " area :", which is given by the Kášiká, on Panini, IV., 2, 69, were derived from 3138, taddh, aff. 310, its plural, meaning the people of the country so named, would be ways; according to Pánini, IV., 2, 81, and I., 2, 51. But Pánini himself, when teaching, VIII., 3, 97, that w, as the latter part of certain compounds, becomes T, gives, amongst others, as first part of such compounds, and with; thus expressly denying that, in his opinion, with is a derivative of stag: for, had he considered stags to be such, the alleging the word itself would have been superfluous; as the change of I to I, in such a derivative, would have been implied by that in its

In Jambu-dwípa, Vishňu, consisting of sacrifice, is worshipped, as the male of sacrificial rites, with sacrificial ceremonies. He is adored under other forms elsewhere. Bhárata is, therefore, the best of the divisions of Jambu-dwípa, because it is the land of works. The others are places of enjoyment alone. The Párasíkas carry us into Persia, or that part of it adjoining to the Indus. As far as the enumeration of the text extends, it seems applicable to the political and geographical divisions of India about the era of Christianity.

base, NAY. The necessary inference, however, to be deduced from this analysis of NIAR (into NIAR and W) is, then, that the plural of the word could not have been NAY:—like UNIAR: of UNIAR:, &c.—but, at the time of Páńini, was NIARY:. Since, on the other hand, however, no military people of the name of NIARY: occurs in the literature—so far as it is known to me—subsequent to Páńini, it seems to follow, that the older name of the people was NIARY:, and that, by a wrong grammatical analogy, it became, at a later period, NIARY:."

MOUNTAINS AND RIVERS. 1*

Sanjava speaks to Dhritarashtra.—Hear me, monarch, in reply to your inquiries, detail to you the particulars of the country of Bharata.

1 In attempting to verify the places or people specified in the text, various difficulties are to be encountered, which must serve to apologize for but partial success. Some are inherent in the subject, such as the changes which have taken place in the topography of India since the lists were compiled, and the imperfectness of the specification itself. States, and tribes, and cities have disappeared, even from recollection; and some of the natural features of the country, especially the rivers, have undergone a total alteration. Buchanan (Description of Eastern Hindustan), following Rennell over the same ground, at an interval of some thirty or forty years, remarks that many of the streams laid down in the Bengal Atlas (the only series of maps of India, yet published, that can be regarded as of authority) are no longer to be traced. Then the lists which are given are such mere catalogues, that they afford no clue to verification, beyond names; and names have been either changed, or so corrupted as to be no longer recognizable. On the other hand, much of the difficulty arises from our own want of knowledge. Scattered through the Puranas and other works, the names given in the topographical lists recur with circumstances which fix their locality: but these means of verification have not yet been sufficiently investigated. There are, also, geographical treatises in Sanskrit, which, there is reason to

believe, afford much accurate and interesting information: they are not common. Colonel Wilford speaks of having received a number from Jaypur: but, upon his death, they disappeared. After a considerable interval, some of his MSS. were purchased for the Calcutta Sanskrit College: but by far the larger portion of his collection had been dispersed. A few leaves only on geographical subjects were found, from which I translated and published a chapter on the geography of some of the districts of Bengal (Calcutta Quarterly Magazine, December, 1824). The details were accurate and valuable, though the compilation was modern.

Notwithstanding these impediments, however, we should be able to identify at least mountains and rivers, to a much greater extent than is now practicable, if our maps were not so miserably defective in their nomenclature. None of our surveyors or geographers have been oriental scholars. It may be doubted if any of them have been conversant with the spoken language of the country. They have, consequently, put down names at random, according to their own inaccurate appreciation of sounds carelessly, vulgarly, and corruptly uttered; and their maps of India are crowded with appellations which bear no similitude whatever either to past or present denominations. We need not wonder that we cannot discover Sanskrit names in English maps, when, in the immediate vicinity of Calcutta, Barnagore represents Baráhanagar, Dakshińeśwar is metamorphosed into Duckinsore, and Ulubaria is Anglicized into Willoughbury. Going a little further off, we have Dalkisore for Darikeśwari, Midnapore for Medinipur, and a most unnecessary accumulation of consonants in Caughmahry for Kakamari. There is scarcely a name in our Indian maps that does not afford proof of extreme indifference to accuracy in nomenclature, and of an incorrectness in estimating sounds, which is, in some degree, perhaps, a national defect.

! The printed edition reads Saktimat, which is also found in some MSS.: but the more usual reading is that of the text. I

The Báhudá is elsewhere said to rise in the Himálaya. Wilford considers it to be the Mahánada, which falls into the Ganges below Malda. The Mahábhárata** has, amongst the Tírthas or places of pilgrimage, two rivers of this name, one, apparently, near the Saraswatí, one, more to the east. Hemachandra†† gives, as synonyms, Arjuní and Saitaváhiní; both implying the 'white river'. A main feeder of the Mahánada is called Dhavalí, or Dhaulí, which has the same meaning.

exist. According to Manu, * it is one boundary of the district called Brahmávarta, in which the institution of castes, and their several duties, had for ever existed; implying, that, in other places, they were of more recent origin. This holy land, 'made by the gods', was of very limited extent. Its other boundary was the Saraswati. That the Drishadwati was not far off, we learn from Manu; as Kurukshetra, Matsya, Panchála, and Śurasena, or the upper part of the Doab, and country to the east, were not included in Brahmávarta: they constituted Brahmarshideśa, contiguous to it: ब्रह्मवतादननार:। Kullúka Bhaita explains Anantara, 'something less or inferior'; a sail But it, more probably, means 'not divided from', 'immediately contiguous'. We must look for the Drishadwati, therefore, west of the Jumna. In the Tirtha Yatra of the Malfabharata + we find it forming one of the boundaries of Kurukshetra. It is there said: 'Those who dwell on the south of the Saraswati, and north of the Drishadwati, or in Kurukshetra, dwell in heaven':

> द्विणेन सर्खताः दृषद्दुत्तरेण च। ये वसनि कुर्वचेने ते वसनि निविष्टणे॥

In the same place, the confluence of the Drishadwati with a stream of Kurukshetra, called the Kausiki, is said to be of peculiar sanctity. Kurukshetra is the country about Thanesur or Sthańwiśwara, where a spot called Kurukshet still exists, and is visited in pilgrimage. The Kurukshetra of Manu may be intended for the country of the Kurus, in the more immediate vicinity of

Delhi. According to Wilford, the Drishadwati is the Caggur; in which case our maps have taken the liberty of transposing the names of the rivers, as the Caggur now is the northern stream, and the Sursooty the southern; both rising in the Himálaya, and uniting to form one river, called Guggur or Caggur, in the maps, (but, more correctly, Sarsútí or Saraswatí), which then runs southwest, and is lost in the desert. There have, no doubt, been considerable changes here, both in the nomenclature and in the courses of the rivers.

¹ The Vipásá is the Beas, Hyphasis, or Bibasis. The Irávatí is the Ráví, or Hydraotes, or Adris.

² The Jhelum, but still called, in Kashmir, the Vitastá: the Bidaspes or Hydaspes.*

3 This river, according to the Vishúu Puráńa,† rises from the Riksha mountains: but the Váyu and Kúrma bring it from the Vindhya or Sátpudá range. There are several indications of its position in the Mahábhárata, but none very precise. Its source appears to be near that of the Kŕishúá. It flows near the beginning of the Daúdaka forest, which should place it rather near to the sources of the Godávarí: it passes through Vidarbha or Berar; and, Yudhishíhira, having bathed in it, comes to the Vaidúrya mountain and the Narmadá river. These circumstances make it likely that the Páín Gangá is the river in question.‡

⁴ The Devá or Goggra.

According to the Revandhatmya, XL., the Payoshai, or Payoshaika, rises in the Vindhya mountains, and falls into the Tapi—the Tapati, or Taptee. It is, further, there stated that the tract of country included between the source of the Payoshai and Varaha is called Somayarta.

^{*} From a modern geographical treatise in Hindi it appears that the Chandrabhágá, Irávatí, Satadrú, Vipásá, and Vitastá are now called, in that language, Chenáb, Rávi, Satlaj, Byásá, and Jhelam.

From the very meanings of Tapí—a corrupt Sanskrit word, but of evident etymology—and Payoshńi, one might infer some connexion between these two rivers. As is stated at p. 130, supra, they both originate from the Riksha mountains; and the latter flows into the former. At Chandway a stream now called Poorna joins the Taptee. Whether the Poorna represents the Payoshńi, or whether the Taptee above Chandway does so, is uncertain: but it seems that we must choose between the two.

The Painganga falls into the Wurda, fatally to Professor Wilson's opinion that we may find the Payoshii in it. Equally untenable, of course, is the view that the Payoshii is the Wurda itself: see Journal of the Archwological Society of Delhi, Jan., 1853, pp. 44, 45. Professor Lassen—Indische Alterthumskunde, Vol. I., pp. 572, 573, foot-note—is led to the conclusion that the Payoshii is the Taptee in its entirety, partially by the assumption that the Tapi is not mentioned in the Mahabharata; on which point see Professor Wilson's fourth foot-note at p. 148, infra. He misinterprets, likewise, the passage from that poem, Vana-parvan, 2317—2319, where he supposes the Payoshii to be called "ein in das Meer strömender Fluss". The passage in question—to which I shall have occasion to recur—I subjoin and translate:

एते गच्छन्ति वहवः पन्यानो द्विणापथम्।
स्वन्तीमृष्वननं च समतिक्रम्य पर्वतम्॥
एष विन्ध्यो महाश्वः पयोण्णी च समुद्रगा।

Erdkunde, V., 496.

I do not undertake to prove that, in early times, the name of Payoshni may not have been applied to the whole of the modern Taptee. But the case was otherwise in the Pauranik period, as we see from the Vishnu-purana, and as appears from the Markandeya-purana, LVII., 24, the Bhagavata-purana, V., 19, 18, &c.

cension of the Ramayana, Kishkindha-kanda, XL., 21,

† The Tridivá and Álayá-or, perhaps, Tridiválayá-are mentioned in a list of rivers cited, apparently from some Purána, in the Niti-mayúkha.

As. Res., Vol. VIII., p. 335. And see my first note at p. 155, infra.

§ Hodgson—Journal As. Soc. Beng., 1849, p. 766—states that the Gunduk has seven affluents,—the Barigar, Narayanii, Swetigańdaki, Marsyangdi, Daramdi, Gańdi, and Trisul.

The Coosy, also, is made up, he says, of seven streams,—the Milamchi, Bhotia Cosi, Tamba Cosi, Likhu Cosi, Dud Cosi, Aran, and Tamor. Journal As. Soc. Beng., 1848, Part II., pp. 646—649; 1849, p. 766.

Nichitá, Lohatárińí, 1 Rahasyá, Śatakumbhá, and also the Śarayú,² the Charmańwatí,* Chandrabhágá,³ Hastisomá, Diś, Śarávatí, 4 Payoshńí, Pará, 5 and Bhímara-

Also Lohatáraní and Lohacháriní.

² The Śarayú or Surjoo is commonly identified with the Devá. Wilford says it is so by the Paurániks: but we have, here, proof to the contrary. † They are also distinguished by the people of the country. Although identical through great part of their course, they rise as different streams, and again divide, and enter the Ganges by distinct branches.

³ The recurrence of the same name, in this as in several similar subsequent instances, is, possibly, an error of the copyist: but it is, also, sometimes likely that one name is applied to different rivers. In one MS. we have, in place of this word, Chai-

travatí, and, in another, Vetravatí.;

4 Read, also, Śatávarí. According to Wilford, § the Śarávatí is the Bángangá.

⁵ The Váyu has Párá, which is a river in Malwa, the Párvati. MSS, read Vání and Vená.

* The Chumbul. Vide p. 131, supra.

† See Asiatic Researches, Vol. XIV., p. 411. That the Devika is not one with the Sarayú is, again, pretty clear from the Mahabharata, Anusásana-parvan, where, in a list of rivers, the former is mentioned in sl. 7645, and the latter in St. 7647. The Devika and the Sarayú are also clearly distinguished from each other in the Amara-kośa, I., 2, 3, 35. In the Bengal recension of the Ramayana, Kishkindha-kanda, XII., 13, a Devika river is placed in the south.

. The Raja-nighantu thus dilates, metrically, on the river Tapani:

तचाचा इधते जलं सुमध्रं कान्तिप्रदं पृष्टिद्म्। वृष्यं दीपनपाचनं बलकरं वेचावती तापनी।

The Tapani is here made one with the Vetravati. In the Sabda-kalpadruma-which reads tapini-the Vetravati is asserted to be the same as the Vetravati, or Betwa: see p. 131, supra, foot-note. Further, that dictionary, professing to follow the Raja-nighantu, identifies the Tapini with the Tapi. § Isiatic Researches, Vol. XIV., pp. 409, 456, 457.

|| As. Res., Vol. XIV., p. 408. I question their identity. See, for the Pára, Mahábhárata, Ádi-parvan, 2926; Márkahdeyá-puráha, LVII., 20.

Further, there is a feeder of the Godavery called Para.

- ¹ According to the Váyu,* this rises in the Sahya mountain, and flows towards the south. It is, therefore, the Beema of Aurungabad.
- ² The Káverí† is well known, and has always borne the same appellation; being the Chaberis of Ptolemy.
 - 3 Read Chuluká.
 - 4 Read, also, Tápí; the Taptee river of the Deccan. ‡
 - 5 Read Ahitá and Sahitá.
 - 6 Rises in the Sahya mountain, and flows southwards: Váyu, &c.
 - 7 Read Vichitrá.
 - 8 Several rivers are called by this name, as well as the Indus. There is one of some note, the Kalee Sindh, in Malwa.
 - ⁹ Also Vájiní.
 - This agrees best, in name, with the Beema. It is also mentioned, as a Tirtha, in the Mahábhárata.§
 - ¹¹ From Suktimat: Kúrma and Váyu. There is a Balásan from the eastern portion of the Himálaya, a feeder of the Mahánada, which may be the Paláśiní, if the mountain be in this direction.
 - ¹² Also Pippalávatí. The Váyu has a Pippalá, from the Řiksha mountain.

* And according to the Vishnu. Vide p. 130, supra.

† The Kaveri of the text may be—and, I strongly suspect, is—the so-called river which, according to the Revá-máhátmya, Chap. XL., falls into the Nerbudda.

The Haima-kośa, IV., 100, gives Ardhajáhnaví as a name of the Káverí; and the Trikdrida-śesha, I., 2, 32, gives Ardhagangá. These terms signify Half-Ganges.

Compare a name of the Godávari in my third note at p. 132, supra. See my foot-note at pp. 144, 145, supra. In the Trikáúda-šesha, I, 2, 31, Tápí is a synonym of Yamuná.

The Amara-kośa, I., 2, 3, 32, and the Haima-kośa, IV., 151, make Sadánírá and Karatoyá to be names of one and the same stream. But there appear to have been more than one Sadánírá. Thus, a second seems to be located, by the Mahábhárata, Sabhá-parvan, 793, et seg., between the Gandaki and the Śarayu. See Original Sanskrit Texts, Part II., p. 423; and M. V. de Saint-Martin's Mémoire Analytique sur la Carte, &c., p. 95.

Professor Wilson—Ariana Antiqua, pp. 183, 190, 194—considered the Soastus and Garreas of Arrian as denoting but one river.

§ This stream is named again in the Mahábhárata, to-wit, in the Anusásana-parvan, 7651.

 - 3 Three MSS. agree in reading this Ambuváhiní. §
 - ⁴ Also Vainadí.
- ⁵ Also Kuveńá. It is, possibly, meant for the Tungabhadrá or Toombudra.
- ⁶ A river in Malwa, so called from the city of the same name, which I have elsewhere conjectured to be Bhilsa. Megha Dúta, 31. There is a 'Bess' river in the maps, which joins the Betwa at Bhilsa, and is, probably, the river of the text.

^{*} The tirtha of Viśwamitra is mentioned in the Mahabharata, Vanaparvan, 7009.

[†] According to the Padma-purána, there is a river Veni, and it falls into the Krishna. See Professor Wilson's Essays, Analytical, &c., Vol. I., p. 68.

[‡] For the Krishnavena or Krishnaveni, see pp. 130 and 132, supra. The Krishnaveni is ranked among the rivers of the south in the Ramayana, Kishkindha-kanda, XII., 9. On the Vena, Tungavena, Krishnavena, and Upavena, consult Indische Alterthumskunde, Vol. I., p. 576, third foot-note. For the Krishna, see p. 152, infra, fourth foot-note.

[§] This river is commemorated in the Mahábhárata, Amisásana-parvan, 7646.

I have discovered that, in the middle ages, the sun was worshipped, in Central India, under the designation of Bhailla,—from bhá, 'light', and the Prakrit termination illa, denoting possession. There was a temple to Bhailla at or near Bhilsa, which name I take to be a corruption of bhailla + isa, or bhaillesa. See Journal As. Soc. Beng., 1862, p. 112.

Reasoning from such data as are now known to me, it would be equally riskful to assert and to deny the identity of the sites of Vidiśä and Bhilsa.

- 3 Also Kuchchhilá.
- ⁴ The Sone river, rising in Maináka[†] or Amarkantak, and flowing east to the Ganges.
- ⁵ This and the preceding both rise from the Vindhya mountain. The latter is also read Antahsilá, 'the river flowing within or amidst rocks'.
 - 6 Also Parokshá.
- We have a Surańá in the Váyu; and Surasá, in the Kúrma and Matsya; flowing from the Riksha mountain.
 - ⁸ The Tamasá or Tonse, from Řiksha.

* It is said, in the thirty-fifth chapter of the Revå-måhåtmya, that the Kapila originated from the water used by King Vasudana in performing a sacrifice. In the fourth chapter of the same work, the Kapila is described as flowing from the north, and as joining the Narmada at Siddhimanwantara.

I should mention that the Revá-máhátmya to which I refer in these notes purports to be a part of the Skanda-purána, and differs, most essentially, almost from the beginning, from the much more voluminous Revá-máhátmya—professedly from the Rudra-samhítá, Raudri samhítá, or Siva-samhítá, an appendage to the Váyu-purána—known in Europe. There is an excellent copy of the larger work in the I. O. Library. See, for an account of it, Dr. Aufrecht's Catalog. Cod. Manuscript., &c., pp. 64, et seq.

The Padma purana places Bhrigukshetra at the confluence of the Kapila with the Narmada. See Professor Wilson's Essays, Analytical, &c., Vol. I., p. 38.

† Asiatic Researches, Vol. XIV., p. 410.

‡ See p. 141, second foot-note, supra. Mount Mekala—not Mainaka—is given as the source of the Sone in the Bengal recension of the Ramayana, Kishkindhá-kánda, XL., 20.

† The text, from "Brahmabodhyá" to "Vŕishabhá", both names included, has, to me, the air of an interpolation. Some MSS. emit it;

and in the Calcutta edition there is Varuna for "Varana".

* Sic in orig. See the Vámana-purána, Chap. XV. The prototypes of 'Benares' given in Professor Wilson's Sanskrit Dictionary are Varanasi, Varanasi, and Varanasi. The second of these three forms is the most usual, and is as old as the Mahabhashya, II., 1, 16, for instance; but only the first can possibly come from Varaná+Asi. The Asi, pace M. de Saint-Martin, is a real brook, and not a fiction, if I may trust my own senses. I have often crossed the bridge over it.

The essayist just named, - Étude sur la Géog. Grecque et Latine de l'Inde, p. 286, - referring to the 'Egénneaus or 'Equnéaus, writes: "Cette rivière, la dernière de la liste d'Arrien, se reconnaît sans difficulté dans la Varánasi, petite rivière qui se jette dans la ganche du Gange à Bé-

narès, qui en a pris son nom (en sanscrit Varanasi)."

On what authority, one may inquire, besides Hiouen Thsang wrested, does this geographer place a river Varanasi near the city of Benares? See his Memoire Analytique, &c., pp. 95, 110, 111.

§ Sec, for a river thus denominated, Mahabharata, Anusasana-parvan, 7647. Varnása = Bannás, the name of two Indian rivers.

Vide p. 150, supra, text and notes.

¹ This and the preceding scarcely merit a place amongst the rivers; being two small streams which fall into the Ganges east and west of Benares, which is, thence, denominated Varanási.

² Parńáśá § or Varńáśá, from the Páripátra mountain.

³ Also Mánaví.

⁴ The Křishňá of the Deccan is, probably, here intended; although its more ordinary designation seems to be that already specified, Křishňaveňá or Křishňaveňí. The meaning is much the same; the one being the 'dark river', the other, simply the 'dark', the Niger.

^{*} In the Calcutta edition of the Mahabharata, this stream, and two others named before, the Panchami and the Tungaveńa, have the epithet of 'great river', which is omitted by the Translator.

† The original is ATRUSTENT:, Madreyajangalas, the meaning of which is, not "Madreyas and dwellers in thickets", but 'dwellers in the Madra thickets'. Similarly we have the Kurujangalas. That there was, however, a tribe called Jangalas, is clear from the Mahabharata, Udyoga-parvan, 2127. Also see pp. 161, 163, and 176, infra.

§ In the Mahábhárata, Sabhá-parvan, 1105 and 1108, notice is taken of the king of Matsya and of the Aparamatsyas; and, at 1082, the Matsyas figure as an eastern people. They are placed among the nations of the south in the Rámáyańa, Kishkindhá-káńda, XLI., 11; while the Bengal recension, Kishkindhá-káńda, XLIV., 12, locates them in the north.

The passage referred to is the Mahabharata, Sabha-parvan, 1192, where, however, no people called Matsyas is intended.

At a later period, Bhoja, the Rájá of Dhar, preserves an indication of this people; and from him the Bhojpuris, a tribe still living in Western Behar, profess to be descended. They are, not improbably, relics of the older tribe. Bhoja is also used sometimes as a synonym of Bhojakata, ** a city near the Narmadá, founded by Rukmin, brother-in-

It is now ascertained, from inscriptions and other sources, that there have been several Hindu celebrities, some of whom dwelt remote from Central India, denominated Bhoja. Of Kanauj alone there were two Rájás so named; and it was, probably, from one of them that Bhojpoor, near Farrukhabad, derived its designation. Jaina traditions have even preserved the memory of a Bhoja, king of Ujjayini. See Journal As. Soc. Beng., 1862, pp. 5, 6; and the Vásavadatlá, Preface, pp. 7, 8.

The locality is confirmed by mythological personations; for Mekala is said to be a Ŕishi, the father of the river Narmadá; thence called Mekalá and Mekalakanyá. The mountain where it rises is also called Mekaládri. The Rámáyana places the Mekalas amongst the southern tribes.

The only Chhattisgarh known is that in the old territory of Nagpoor, and of which the capital was Ruttunpoor. It is divided by a long interval, not to speak of the Vindhyas and the Nerbudda, from what may more reasonably be conjectured to have been the site of Daśarńa, namely, the neighbourhood of the Daśarńa river. The oral traditions of the vicinity to this day assign the name of Daśarńa to a region lying to the east of the District of Chundeyree. This I learnt on the spot.

† M. V. de Saint-Martin-Etude sur la Géog. Grecque, &c., pp. 324, 357-sees Ahikshatra in Ptolemy's 'Adiadaga; and he locates the Adisathri to the south of the Vindhya mountains. And see As. Res., Vol. XIV., p. 394.

A kingdom so called is spoken of in the Mahabharata, Adi-parvan, 5515; and the city of Ahichchhatra is named in the stanza next following.

§ In his note to Selections from the Mahabharata, p. 34, Professor Wilson writes as follows: "Ahichchhatra, in the country of Ahichchhatra, is a city of some importance in Hindu tradition; as the Brahmans who introduced their religion into the Deccan are said to have come from thence. We have no indication more precise of its position than as is here stated-north of the Ganges."

For Ahikshatra, etc., also see the Translator's Essays, Analytical, &c.,

That there were two regions-not two cities-called Ahichchhatra, one of which was not far from the Vindhyas, I have suggested in the Journal As. Soc. Beng., 1861, pp. 197, 198.

The spirit of the nomenclature is shown by these tribes being associated with Kirátas, 'barbarians,' and Yavanas, either Greeks or Mohammedans.

Here we have, named with the Kirátas, the Karńaprávarańas, Oshfhakarńakas, Lohamukhas, and Ekapádakas.

According to the commentator, the Karńaprávarańas had ear-flaps as wide as a sheet; the Oshíhakarńakas were furnished with ears that reached to their lips; the Lohamukhas presented faces of a harsh iron-like black colour; and the Ekapádakas were one-footed, and yet fleet—javana.

Professor Wilson's Yavanas—an inferior reading—thus disappear; and his Kakamukhas become Lohamukhas. The Bengal recension of the Rama-

yana here has Kalamukhas, 'black-faced'.

Ushfrakarńikas, or the 'Camel-eared'. Captain Fell—Calcutta Annual Register for 1822, Chapter V., p. 50—reads "Oshfhakarnakas"; and upon this word Professor Wilson there remarks: "The Oshfhakarńakas, or people whose lips and ears join, remind us of some of the marvels of Ctesias; if allusion is not intended to the thick-lipped race of the Eastern

Archipelago."

* For a rationalization of sundry of the Indian monstrosities and monsters vouched for by the Greeks, see Professor Wilson's Notes on the Indica of Ctesias, pp. 19—38. In that tract, at p. 29, the author writes: "Even Herodotus is not free from incredible fictions; but Megasthenes and Deimachus seem especially to have been authorities for such marvels as men wrapped up in their ears, destitute of mouths and noses, one-eyed, long-legged, and having the fingers bent backwards, satyrs with square heads, serpents swallowing oxen, horns and all, pigmies, and gold-making ants. That of Nurwur is, probably, thereby intended: but what Nala was he of Nalapura? See Journal of the Archaelogical Society of Delhi, Jan., 1853, pp. 42—46.

² Also Kuśajas and Kośalas. The latter is, probably, correct; as the name does not occur in any other form than that of Káśikośala above.† Kośala‡ is a name variously applied. Its earliest and most celebrated application is to the country on the banks of the Śarayú, the kingdom of Ráma, of which Ayodhyá§ was the capital. Rámáyańa, I., S. 5. In the Mahábhárata we have one Kośalá¶ in the east, and another in the south, besides the Prák-kośalas** and Uttara-kośalas†† in the east and north. The Puráńas place the Kośalas amongst the people 'on the back of Vindhya;' and it would appear, from the Váyu, that Kuśa, the son of Ráma, transferred his kingdom to a more central position; he ruled over Kośala at his capital of Kuśasthali or Kuśavati,‡‡ built upon the Vindhyan precipices: [चन्ध्यप्रवेतसानुष्ठ] The same is alluded to in the Pátála Khanda of the Padma Puráńa, and in the Raghu Vańśa, §§ for the purpose of explaining

the return of Kuśa to Ayodhyá. Certainly in later times, the country of Kośala lay south of Oude; for, in the Ratnávalí, the general of Vatsa+ surrounds the king of Kośala in the Vindhya mountains (Hindu Theatre, Vol. II., p. 305): and, as noticed in the same work, (p. 267,) we have, in the Puránas, Sapta Kośalas, or seven Kośalas.‡ An inscription found at Ratnapur in Chhattisgarh, of which I have an unpublished translation, states that Śri-deva, the governor of Malahari Mańdala, having obtained the favour of Prithwideva, king of Kośala, was enabled to build temples, and dig tanks, &c.; indicating the extension of the power of Kośala across the Ganges in that direction. The inscription is dated Samvat 915, or A. D. 858. The Kośala of the Puranas and of the dramatic and poetic writers was, however, more to the west, along a part of the Vindhya range. § Ptolemy has a Kontakossula in the south; probably one of the Kośalas of the Hindus.

But the word Odra—like Dravida, ibid., XLI., 18—does not seem to be of much antiquity; whereas the Udras are repeatedly spoken of in the Mahabharata, and once, at least—Sabha-parvan, 1174—in association with the Keralas. According to the Haima-kośa, IV., 27, the Udras and the Keralas were the same.

The Greeks were known, throughout Western Asia, by the term ; Yavan; or Ion, 'lécoves; the Yavana, युवन, of the Hindus; or, as it occurs in its Prakrit form, in the very curious inscription deciphered by Mr. Prinsep, (Journal As. tary, are named in the Rámáyana† and Manu,‡ as well as in the Puránas.§ If the designation China was derived from the Tsin dynasty, which commenced B. C. 260, this forms a limit of antiquity for the works in question. The same word, however, or Tsin, was the ancient appellation of the northern province of Shen-sy; and it may have reached the Hindus, from thence, at an earlier period.

¹ These Wilford T regards as the people of Arachosia. They are always mentioned together with the north-western tribes, Yavanas, Śakas, and the like.** They are also famous for their horses; †† and, in the Rámáyańa, ‡‡ they are said to be covered with golden lotoses:

काञ्चनैः कमलेशापि कास्वीजानपि संवृतान्।

What is meant is doubtful; probably, some ornament or embellishment of their dress. We have part of the name, or Kambi, in the Cambistholi of Arrian. The last two syllables, no doubt, represent the Sanskrit Sthala, 'place,' 'district;' and the word denotes the dwellers in the Kamba or Kambis country. So Kámboja may be explained those born in Kamba or Kambas, §§

The latter pada is the same in all: the former, in a fourth copy, is चिर्यापरिकेशास। In two copies of the Vayu, it is चिर्याचिक्यास। None of these are intelligible; and the Markandeya furnishes the reading followed, चिर्यापनिकेशस। Modern geographers have supposed the Cathæi, Cathæi, and Chatriæi of the ancients, in the lower parts of the Punjab, to mean a people of Kshattriyas; but no such people occur directly named in our lists. Considering that the text is speaking of barbarous and foreign tribes, perhaps no particular nation is here meant; and it may be intended as an epithet of those which follow, or of Vaisya (agricultural) and Śúdra (servile or low) tribes, living either near to, or after the manner of, Kshattriyas. In that case, a better reading would be:

चियोपनिवेशानि वैश्वशुद्धकानि च।

According to Manu, various northern tribes, the Kámbojas, Śakas, Páradas, Pahlavas, Kirátas, Daradas, and Khaśas, and even the Chinas and Yavanas,† are degraded Kshattriyas, in consequence of neglecting religious rites: X., 43, 44.‡ According to the Pauráńik legend, they were overcome in war by Sagara, and degraded from their original caste. See Book IV.§

Here we have a people called Śúdras by all the authorities, and placed in the west or north-west, towards the Indus. They have been, ingeniously and with probability, conjectured, by Mr. Lassen, T to be the Oxydracæ; for Śúdraka is equally correct with

* Some idea of the real state of the case may be formed from my first foot-note at p. 133, supra. To what is there remarked it may be added that, while we find the Ábbíras mentioned, in the Mahábhárata, as in the Sabhá-parvan, 1192, along with the Śúdras, we see them named between the Páradas and the Kitavas, Sabhá-parvan, 1832; in company with the Śúras, Vana-parvan, 12840; and between the Dravidas and the Puńdras, Áśwamedhika-parvan, 832.

The term arithment: of the Bengal recension of the Rámá-yana, Kishkindha-kánda, XLIII., 19,—where the southern tribes are enumerated—is rendered, by Signor Gorresio, "le sedi dei Sûrâbhîri". Or it has been thought that they may be referred to the situation of Kashgar. Two copies have, in place of this, Tukháras; and the same occurs in the Rámáyańa. The Váyu has Tusháras; but the Márkańdeya, Tukháras. These are, probably, the Tochari, Tachari, or Thogari; a tribe of the Śakas, by whom Bactria was taken from the Greeks, and from whom Tocharestan derives the name it still bears. **

** For the annexed observations I am indebted to my learned friend Professor Goldstücker:

"In sutras IV., 1, 168-173, Pánini teaches how, from nominal bases implying at the same time a man of the Kshattriya caste and the name

GL

from the lists referred to, in the Váyu, Matsya, and Márkańdeya

of a country, patronymic bases-and, as Kátyáyana, IV., 1, 168, vártt. 2, adds, bases meaning a king of such countries-are derived. This is done by means of the so-called तद्वाज affixes,-(IV., 1, 174) ज (technically, अञ्, असा), य (techn., ज्यङ, स्व), and इ (techn., इञ), which require vriddhi in the first syllable of the base. Thus, from Panchala-the name of a Kshattriya, being also that of a country-would come, in the sense of an individual belonging to, or of a king of, that country, Panchala, &c. (IV., I, 168); and, in the same sense, from Gándhári, Gándhára, &c. (IV., 1, 169); from Magadha, Magadha, &c. (IV., 1, 170); from Kosala, Kausalya, &c. (IV., 1, 171); from Kuru, Kauravya, &c. (IV., 1, 172); from Pratyagratha, Prátyagrathi, &c. (IV., 1, 173). - In sútra II., 4, 62, however, Pánini says that, if such names are used in the plural, except in the plural of the feminine, the affixes taught in IV., 1, 168-173together with the effect they would have on the base-are dropped. Thus, though an individual, or king, of the country Anga is, in the sing. (nom.), Angah, the Kshattriyas-or the people-of this country are, in the plur. (nom.), Angah; and, similarly, the people of Kalinga are called Kalingah, though one individual belonging to it would be Kalingah. (According to the restriction named, women of those countries, however, would be called Angyah, Kalingyah. Several várttikas are appended to this rule by Katyayana; but some of them have no bearing on the formation of bases implying names of individuals, or kings, of countries, whereas others appear superfluous. Thus, it scarcely required an additional rule to teach that, for instance, many people to whom one individual of the Vanga country is dear - प्रियो वाङ्ग एषाम - are called प्रियवाङ्गा: -not furage:-, or, on the other hand, that, for instance, 'one man who has passed beyond the people of Anga' - अतिकान्तो ६ जान is called war: - not wars: -; for, in the former case, the base Vánga implies the singular, and, in the latter, the base Anga, the plural, number.)-In sútra IV., 2, 67, Pánini teaches that names of places (31) may be derived from nominal bases in the sense that the object expressed by the latter exists, or may be found, in such a place; e. g., that, from udumbara, 'fig-tree', may be derived audumbara, in the sense of a country in which there are such trees; in IV., 2, 68, that other such names may be formed in the sense that the place was founded by the person implied by the original base, a. g., Kausambi, the city so

Puránas, as well as several capable of verification, from the Rámáyana and other passages of the Mahábhárata. This is not

called, from Kuśamba, the name of its founder; in IV., 2, 69, that other such names may be derived from bases in the sense that the object expressed by the latter lives in the place; e. g., aushtra, 'a place where camels live', from ushtra; and, in IV., 2, 70, that such names may be likewise formed in the sense that the place is not far from that which is expressed by the original base; e. g., haimavata, 'the country not far from Himavat'. Again, in IV., 2, 81, Panini teaches that, if, however, such a name, formed to yield any of the four meanings just mentioned, is that of a country (जनपट), there is a loss (लप) of the affix which would be required to effect the formation of any of these bases, -together with the effect which that affix would have on the base; and, in I., 2, 51, he says that, if such a loss () of the affix has occurred, the gender and number of the word whose base has undergone such a loss would be the same as those of the word containing the original base. Hence, according to these last rules-IV., 1, 82, and I., 2, 51 combined-, the country inhabited by Panchalas is called usimilarly, the country of the Kurus, Matsyas, &c., न्रान:, मत्याः, जङ्गाः, वङ्गाः, मगधाः, सद्धाः, पुण्डाः, &c. The Káśiká, which supplies these instances, adds that the loss of the affix-and the consequent use of the plural—does not apply to expressions like आंदुम्बरो जनपदः, वैदिशो जनपद:; since these are not names of countries: इह कखान अवति। उड्यवरा अस्तिन्सन्ति। औड्यवरो जनपदः। वैदिशो जनपद इति। तन्नासीति (IV., 2, 67) वर्तते। न चाच जबनां देशनामधेयं भवति।

"In the foregoing references, deśa is to be understood as denoting space in general, as, for instance, a village, town, district, country;

whereas janapada is the strict term for country."

The inference to be drawn from these remarks is, that, as many Hindu compositions ordinarily reputed to be of great age, as the Mahábhárata, Rámáyana, Mánava-dharma-sástra, &c., deviate, in their mode of naming the inhabitants of countries, from the criterion accepted even by Kátyáyana, a grammarian so much later than Pánini, they must appertain, at least in the form in which we know them, to a stage of the Sanskrit language with which, being subsequent to his time, he was unacquainted.

As to the age of Katyayana, it is the opinion of Professor Goldstücker, as expressed in an essay read before the Royal Asiatic Society in 1864, but not yet published, that, as contemporary with Patanjali, he flourished about B. C. 140—120. See, on the time of Patanjali, Panini: His Place in Sanskrit Literature, p. 234.

the place, however, to exhaust the subject; and it has been prosecuted too far, perhaps, already. It is evident that a very considerable proportion of the names recorded can be verified, and that many of them may be traced in the geographical notices of India left by the historians of Alexander's expedition. That more cannot be identified is owing, in a great measure, to incomplete research; and a more extensive examination of the authorities would, no doubt, discover passages where circumstances as well as names are given by which the places would be recognized. It is evident, however, that much embarrassment also arises from the inaccuracy of manuscripts, which vary widely and irrecon-I have given instances from four different copies of the text; one in my own possession, three in the library of the East India Company; * all very excellent copies, but, manifestly, erroneous, in many respects, in their nomenclature of places, and, particularly, of those which are least known. No assistance is to be had from any commentary; as the subject is one of little interest in native estimation.

^{*} Professor Wilson should seem, however, to have followed the readings in the Calcutta edition of the Mahábhárata very closely. A noticeably different result of text has been elicited in that constructed, from a collation of the Paris and London MSS., by Mr. B. Rosen. See his post-humous contribution to the Monatsberichte über die Verhandlungen der Gesellschaft für Erdkunde zu Berlin, New Series, Vol. V., (1848), pp. 38—42.

My annotations on the episode here concluded, far from professing to be exhaustive, are but a meagre indication that the subject of ancient Indian geography is one which admits of much more thorough treatment than it has yet received. But, as indispensably preliminary to the feasibility of such treatment, we must possess critical editions, specifying and discussing various readings, of—not to name other works—the chief Puranas and of the entire Mahábhárata and Rámáyana. To what extent the true Rámáyana, as contrasted with the modern depravation of that poem, published and translated by Signor Gorresio, deserves reliance, for geographical purposes, must be sufficiently palpable from my numerous comparative references. As to the Brihat-sanhitá of Varahamihira, if I have declined to make use of it in my notes, the reason is, that I wanted access to Dr. Kern's edition, and was unwilling to reproduce the unauthoritative extracts to be found in the pages of Colonel Wilford and elsewhere.

§ I find, in one MS., Sangati.

| All my MSS, but one - which has विद्युद्धणा - here read as follows: विद्युद्धभा मही चान्या सर्वपापहरास्त्विमाः।

Professor Wilson put "Vidyudambha", which is not impossible, but for which it is safe to substitute, as above, Vidyudambhas. The meaning of the word is 'possessing water like lightning', for swiftness, brilliancy, or heat.

In one of the MSS. I have consulted, and which was used by the Translator, the words मही चान्या are so written, save as to the second long vowel,—for there is plainly -10—that it is not singular they should have been mistaken for "Mahavanya".

The original expression which answers to "Sarvapapahara" is an epithet—one of the commonest occurrence in the Puranas—in the plural. It imports 'purging away all sin', and refers to the rivers just before enumerated.

These rivers are said to be seven. How, then, is this number to be brought out? Vidyut, 'lightning', may, just possibly, be the designation of a stream; but then Ambhas, or Ambhá, is, on so many grounds, scarcely to be thought of, that we may much more securely accept the compound, Vidyudambhas. As I have pointed out above, one of my copies of the text allows us to read, optionally, Vidyudushúá, 'hot as lightning', or Vidyut and Ushúá.

Whether it be, or not, that we are to look, in what next follows, for two rivers, one, at least, is mentioned there; and that is, undoubtedly, the Mahi: a name for which see p. 155, supra. If there be a second, and if it be the Anya, the name, in respect of its signification, is strangely colourless. As \(\frac{1}{2} \) and \(\frac{1}{2} \) are, in many old MSS., the same as in inscriptions, scarcely distinguishable, it is obvious to suggest that the ancient reading may have been Vanya, a word which yields a sense, though none intelligibly apt in this place. Better still, \(\frac{1}{2} \) any have been corrupted from \(\frac{1}{2} \) and we should then have the Alpa.

The seven boundary mountains, pleasing to gods and celestial spirits, are Krauncha, Vámana, Andhakaraka, Devávřit, Puńdaríkavat, Dundubhi, and Maháśaila; each of which is, in succession, twice as lofty as the series that precedes it, in the same manner as each Dwipa is twice as extensive as the one before it. The inhabitants reside there without apprehension, associating with the bands of divinities. † The Bhágavata-puráňa, V, XX., 25—28, states that the sovereign of Śákadwipa was Medhátithi, son of Priyavrata. His sons, and so their kingdoms, are denominated Purojava, Manojava, Pavamána, Dhúmráníka, Chitrarepha, Bahurúpa, and Viśwadhára. The mountains are Ísána, Uru-śringa, Balabhadra, Śatakesara, Sahasrasrotas, Devapála, Mahánasa; and the rivers are Anaghá, Áyurdá, Ubhayasprishti, Aparájitá, Panchapadi, Sahasrastuti, Nijadhriti. The world in question is peopled by Ritavratas, Satyavratas, Dánavratas, and Anuvratas; and their divinity is the Wind.

"In the northern parts of the Toyámbudhi, or sea of fresh water, in Śweta-dwipa, the Sanakadikas went to see Bhagavat or Vishnu. Their names are Sanaka, Sananda, Sanatana, Sanatkumara, Jata, Vodhu, Panchaśikha, all children of Brahma; and these, with many others, reside there, near Hari. The White Island is like the subbrainsu, or mild beams of a thousand moons; like shining jewels. Many mahayogins, or great penitents, reside there, without fear or molestation. There is a beautiful garden of Parijata and Chandana trees. There is the city Vairavati or Vairamati, beautiful and full of jewels. The consorts of the gods reside there, in houses shining like the morning sun. Its greatest ornament is a divine mandapa, or house, made of precious stones and amber (karpura), and adorned with flowers. The Apsarasas reside there; and there is a throne, supported by lions and resplendent like fire, brilliant like the sun, &c. It consists of eight portions, like so many moons, placed like the petals of a flower. In the centre, within the calix, Janardana, or the devourer of souls, is seated, with his insignia in human shapes.

The Kshira ocean (or sea of milk) is encompassed by (the seventh Dwipa, or) Pushkara, which is twice the size of Śaka-dwipa. Savana, who was made its sovereign, had but two sons, Mahávíra* and Dhátaki, † after whom the two Varshas of Pushkara were so named. These are divided by one mighty range of mountains, called Mánasottara, which runs in a circular direction (forming an outer and an inner circle). This mountain is fifty thousand Yojanas in height, and as many in its breadth; dividing the Dwipa in the middle, as if with a bracelet, into two divisions, which are also of a circular form, like the mountain that separates them. Of these two, the Mahávíra-varsha is exterior to the circumference of Mánasottara, and Dhátakí lies within the circle; and both are frequented by heavenly spirits: and gods. There are no other mountains in Pushkara, neither are there any rivers. 1 Men in this

* Here again the translation is an abridgment; the original naming the sons of Savana, and then the names of their varshas. A large proportion of my MSS .- all but three-call the first son Mahavita, and so bis dominion; in the three just referred to, both are termed Mahavira; and, according to two, the former is Mahavira, and the latter, Mahavita.

† But for the abridging mentioned in the last note, it would have been seen, at once, that Dhataki ruled over Dhataki, as appears a little further on. Professor Wilson put "Dhátaki", i. c., Dhátakin, for the ruler.

Dwipa live a thousand* years, free from sickness and sorrow, and unruffled by anger or affection. There is neither virtue nor vice, killer nor slain; there is no jealousy, envy, fear, hatred, covetousness, nor any moral defect: neither is there truth or falsehood. Food is spontaneously produced there; and all the inhabitants feed upon viands of every + flavour. ! Men there are, indeed, of the same nature with gods, and of the same form and habits. There is no distinction of caste or order; there are no fixed institutes; nor are rites performed for the sake of advantage. The three Vedas, the Puránas, & ethics and polity, and the laws of service, are unknown. Pushkara is, in fact, in both its divisions, a terrestrial paradise, where time yields happiness to all its inhabitants, who are exempt from sickness and decay. A Nyagrodha-tree (ficus Indica) grows on this Dwípa, which is the especial abode of Brahmá; and he resides in it, adored by the gods and demons. ** Pushara is surrounded by the sea of fresh water, which is of equal extent with the continent it invests. 1++

Linga, and Matsya contain no details. The Bhagavata and Padma follow the same order as the Vishnu, &c., but alter all the names and many of the measurements. The account of the Mahábhárata t is very irregular and confused. The variations throw no additional light upon the geographical system of the Puránas. Some traces of this appear discoverable in the west; and the seven Dwipas, with their surrounding seas, may have some connexion with the notion of the seven climates, as Colonel Wilford has supposed. That learned but fanciful writer bestowed great pains upon the verification of these fictions, and imagined the different Dwipas to represent actual divisions of the globe: Jambu being India; Kuśa, the Kush of Scripture, or the countries between Mesopotamia and India; Plaksha being Asia Minor; Salmala, Eastern Europe; Krauncha, Germany: Śaka, the British Isles; and Pushkara, Iceland. The white or silver island, or island of the moon, was, also, according to him, the island of Great Britain. Whatever may be thought of his conclusions, his essays on these subjects, particularly in the eighth, tenth, and eleventh volumes of the Asiatic Researches, contain much curious and interesting matter.

karadwipa originally had Vitihotra, son of Priyavrata, to govern it. His sons are Ramańaka and Dhátaki; but the names of their kingdoms are not specified. The height of Mount Manasottara is only ten thousand yojanas; and its breadth is the same. In Pushkaradwipa, devotion is paid to Brahmá.

thus describes these portions of the world: "Beyond the sea of fresh water is the mountain-belt called Lokáloka, the circular boundary between the world and void space. The interval between Meru and Mánasottara is the land of living beings. Beyond the fresh-water sea is the region of gold, which shines like the bright surface of a mirror, but from which no sensible object presented to it is ever reflected; and, consequently, it is avoided by living creatures. The mountain-range by which it is encircled is termed Lokáloka, because the world is separated, by it, from that which is not world; for which purpose it was placed, by Iśwara, on the limit of the three worlds; and its height and breadth are such that the rays of the heavenly luminaries, from the sun to the polar star, which spread over the regions within the mountain, cannot penetrate beyond it." Burnouf translates this passage in these words:

"Au delà de la mer d'esu donce est la montagne nommée Lokaloka, qui s'étend en cercle entre les régions éclairées par le soleil et celles qui ne le sont pas.

"Là est une autre terre toute d'or, qui ressemble à la surface d'un miroir, et dont l'étendue égale celle de l'espace compris entre le Meru et le Mânasottara. Tout objet quelconque qu'on y dépose ne se revoit plus; aussi n'a-t-elle jamais eu aucun habitant.

crores (five hundred millions) of Yojanas in extent. 1*
It is the mother and nurse of all creatures, the foundation of all worlds, and the chief of the elements. †

Wilford, however, there is a chasm in the belt, and a sea beyond it, where Vishńu abides: but he has not given his authorities for this. (As. Res., Vol. XI., p. 14.‡) The Mohammedan legends of Koh Káf, 'the stony girdle that surrounds the world,' are, evidently, connected with the Lokáloka of the Hindus. According to the Śiva Tantra, the El Dorado at the foot of the Lokáloka mountains is the play-ground of the gods: इसमयो भूमिद्वां क्रीडनार्थाय.

This comprises the planetary spheres; for the diameter of the seven zones and oceans—each ocean being of the same diameter as the continent it encloses, and each successive continent being twice the diameter of that which precedes it—amounts to but two crores and fifty-four lakhs. The golden land is twice the diameter of Pushkara, or two crores and fifty-six lakhs; and the Lokáloka is but ten thousand Yojanas. So that the whole is five crores, ten lakhs, and ten thousand (5.10.10.000). According to the Siva Tantra, the golden land is ten crores of Yojanas; making, with the seven continents, one fourth of the whole measurement. Other calculations occur, the incompatibility of which is said, by the commentators on our text, and on that of the Bhágavata, to arise from reference being made to different Kalpas; and they quote the same stanza to this effect:

क्रचित्क्रचित्पुराणेषु विरोधो यदि नच्चते । कच्चभेदादिभिन्नच व्यवस्था सिक्करियते॥

* Vistara, 'diameter'.

the chasm in the mountains surrounding the world, with the abode of the great spirit beyond them, among waters, is, also, a singular feature in this delineation of the countries toward the north-west quarter of the old continent, and which will be fully illustrated hereafter."

"Whenever any contradictions in different Puranas are observed, they are ascribed, by the pious, to differences of Kalpas and the like."

* The Súrya-siddhánta, with some pretensions to scientific sobriety, wisely refuses to travel out of this world. The following passage is extracted from the American translation of that work, XII., 30—14:

"A circle within the Brahma-egg is styled the orbit of the ether (vyoman): within that is the revolution of the asterisms (bha); and likewise, in

order, one below the other,

"Revolve Saturn, Jupiter, Mars, the Sun, Venus, Mercury, and the Moon; below, in succession, the Perfected (siddha), the Possessors of Knowledge (vidyadhara), and the clouds.

"Quite in the middle of the egg, the earth-globe (bhúgola) stands in the ether, bearing the supreme might of Brahma, which is of the nature

of self-supporting force.

"Seven cavities within it, the abodes of serpents (nága) and demons (asura), endowed with the savour of heavenly plants, delightful, are the interterranean (pátála) earths.

"A collection of manifold jewels, a mountain of gold, is Meru, passing through the middle of the earth-globe, and protruding on either side.

"At its upper end are stationed, along with Indra, the gods, and the Great Sages (maharshi); at its lower end, in like manner, the demons (asura) have their place—each the enemy of the other.

"Surrounding it on every side is fixed, next, this great ocean, like a girdle about the earth, dividing the two hemispheres of the gods and of the demons.

"And on all sides of the midst of Meru, in equal divisions of the ocean, upon islands (dwipa), in the different directions, are the eastern and other cities, fashioned by the gods.

"At a quadrant of the earth's circumference eastward, in the clime (varsha) Bhadraswa, is the city famed as Yamakofi, having walls and gateways of gold.

"To the southward, in the clime Bharata, is, in like manner, the great city Lanka: to the west, in the clime called Ke'umala, is declared to be the city named Romaka.

"Northward, in the clime Kuru, is declared to be the city called that of the Perfected (siddha): in it dwell the magnanimous Perfected, free from trouble.

"These are situated also at a distance from one another of a quadrant of the earth's circumference: to the north of them, at the same distance, is Meru, the abode of the gods (sura).

208

VISHNU PURÁNA.

"Above them goes the sun when situated at the equinoxes: they have neither equinoctial shadow nor elevation of the pole (akshonnati).

"In both directions from Meru are two pole-stars (dhruvatárá), fixed in the midst of the sky: to those who are situated in places of no latitude (niraksha), both these have their place in the horizon.

"Hence there is, in those cities, no elevation of the pole, the two pole-stars being situated in their horizon; but their degrees of co-latitude (lambaka) are ninety: at Meru the degrees of latitude (aksha) are of the same number."

Professor Whitney appends to this an interesting comment, in the course of which he observes: "In these verses we have so much of geography as the author of the chapter has seen fit to connect with his astronomical explanations. For a Hindu account of the earth, it is wonderfully moderate and free from falsehood. The absurd fictions which the Puranas put forth as geography are here, for the most part, ignored; only two or three of the features of their description being retained, and those in an altered form." And again: "The pátálas, or interterranean cavities, spoken of, ** are, also, an important feature of the Puranic geography. If our author has not had the good sense to reject them, along with the insular continents, he at least passes them by with the briefest possible notice. In the Puranas they are declared to be, each of them, 10,000 yojanas in depth; and their divisions, inhabitants, and productions are described with the same ridiculous detail as those of the continents on the earth's surface."

CHAPTER V.

Of the seven regions of Pátála, below the earth. Nárada's praises of Pátála. Account of the serpent Sesha. First teacher of astronomy and astrology.

Parasara.—The extent of (the surface of) the earth has been thus described to you, Maitreya. Its depth below the surface is said to be seventy thousand Yojanas; each of the seven regions of Pátála extending downwards ten thousand. These seven, worthy Muni, are called Atala, "Vitala, Nitala, Gabhastimat, Mahátala, Sutala, and Pátála. Their soil is, severally, white, black, purple,† yellow, sandy, stony, and of gold. They are embellished with magnificent palaces, in which dwell numerous Dánavas, Daityas, Yakshas, and great snake-gods. The Muni Nárada, after his return from those regions to the skies, declared,

¹ In the Bhágavata § and Padma Puránas, ∥ they are named Atala, Vitala, Sutala, Talátala, Mahátala, Rasátala, and Pátála. The Váyu has Rasátala, Sutala, Vitala, Gabhastala, Mahátala, Śrítala, and Pátála. There are other varieties.

² Allusion is here made, perhaps, to the description given in the Mahábhárata, Udyoga Parvan, p. 218, of Nárada's and Mátali's visit to Pátála. Several of the particulars there given are not noticed in the Puránas.

^{*} Two of my MSS. read Vyatala.

amongst the celestials, that Pátála was much more delightful than Indra's heaven. "What," exclaimed the sage, "can be compared to Pátála, where the Nágas are decorated with brilliant, and beautiful, and pleasureshedding jewels?* Who will not delight in Pátála, where the lovely daughters of the Daityas and Dánavas wander about, fascinating even the most austere; where the rays of the sun diffuse light, and not heat, by day; and where the moon shines, by night, for illumination, not for cold; where the sons of Danu, happy in the enjoyment of delicious yiands and strong wines, know not how time passes? There are beautiful groves, and streams, and lakes where the lotos blows: and the skies are resonant with the Kokila's song. Splendid ornaments, fragrant perfumes, rich unguents, the blended music of the lute, and pipe, and tabor; † these and many other enjoyments are the common portion of the Dánavas, Daityas, and snake-gods, who inhabit the regions of Pátála."1

There is no very copious description of Pátála in any of the Puránas. The most circumstantial are those of the Váyu and Bhágavata. The latter has been repeated, with some additions, in the first chapters of the Pátála Khanda of the Padma Purána. The Mahábhárata and these two Puránas assign different divisions to the Dánavas, Daityas, and Nágas; placing Vásuki and the other Nága chiefs in the lowest. But the Váyu has

Below the seven Pátálas is the form of Vishňu, proceeding from the quality of darkness, which is called Śesha, the excellencies of which neither Daityas nor Dánavas can (fully) enumerate. This being is called Ananta by the spirits of heaven, and is worshipped by sages and by gods. He has a thousand heads, which are embellished with the pure and visible mystic sign;

the cities of the principal Daityas and Nágas in each; as, in the first, those of the Daitya Namuchi and serpent Kálíya; in the second, of Hayagríva and Takshaka; in the third, of Prahláda and Hemaka; in the fourth, of Kálanemi and Vainateya; in the fifth, of Hirańyáksha and Kirmíra; and, in the sixth, of Pulomat and Vásuki; besides others. Bali the Daitya is the sovereign of Pátála, according to this authority. The Mahábhárata† places Vásuki in Rasátala, and calls his capital Bhogavatí. The regions of Pátála, and their inhabitants, are oftener the subjects of profane, than of sacred, fiction, in consequence of the frequent intercourse between mortal heroes and the Nága-kanyás or serpentnymphs. A considerable section of the Břihat Kathá, the Súryaprabha Lambaka,‡ consists of adventures and events in this subterraneous world.

¹ Śesha is commonly described as being in this situation. He is the great serpent on which Vishńu sleeps during the intervals of creation, and upon whose numerous heads the world is supported. The Puráńas, making him one with Balaráma or Sankarshańa, who is an impersonation or incarnation of Śesha, blend the attributes of the serpent and the demigod in their description.

and the thousand jewels in his crests* give light to all the regions. For the benefit of the world, he deprives the Asuras of their strength. He rolls his eyes fiercely, as if intoxicated. He wears a single ear-ring, a diadem, and wreath (upon each brow), and shines like the white mountains topped with flame. He is clothed in purple; raiment, and ornamented with a white necklace, and looks like another Kailása, with the heavenly Gangá flowing down its precipices. In one hand he holds a plough, and, in the other, a pestle; and he is attended by Váruní (the goddess of wine), who is his own embodied radiance. From his mouths, at the end of the Kalpa, proceeds the venomed fire that, impersonated as Rudra, who is one with Balaráma, § devours the three worlds.

Sesha bears the entire world, like a diadem, upon his head; and he is the foundation on which the seven Pátálas rest. His power, his glory, his nature, his form cannot be described, cannot be comprehended by the gods themselves. Who shall recount his might who wears this whole earth, like a garland of flowers, tinged of a purple I dye by the radiance of the jewels of his crests? When Ananta, his eyes rolling with intoxication, yawns, then earth, with all her woods, and

mountains, and seas, and rivers, trembles. Gandharvas, Apsarasas, Siddhas, Kimnaras, Uragas, and Cháranas are unequal to hymn his praises; and, therefore, he is called the infinite (Ananta), the imperishable. The sandal-paste that is ground by the wives of the snakegods is scattered abroad by his breath, and sheds perfume around the skies.

The ancient sage Garga, having propitiated Sesha, acquired from him a knowledge of the principles of astronomical science, of the planets, and of the good and evil denoted by the aspects of the heavens.*

The earth, sustained upon the head of this sovereign serpent, supports, in its turn, the garland of the spheres, along with (their inhabitants,) men, demons, and gods.

Knowledge of the heavenly luminaries is here meant to connote both astronomy and astrology; and the omenology referred to takes cognizance of tokens afforded by the planets, by birds, beasts, palpitation of various parts of the body, &c.

Parasara.—I will now, great Muni, give you an account of the hells which are situated beneath the earth and beneath the waters, and into which sinners are finally sent.

The names of the different Narakas are as follows: Raurava, Śukara,* Rodha,† Tála, Viśasana,‡ Mahájwála, Taptakumbha, Lavańa,§ Vimohana, Rudhirándha,¶ Vaitarańí, Krimíśa,** Krimibhojana, Asipatravana, Kri-

¹ The Bhágavata †† places the Narakas above the waters. ⁺ In two MSS. I find Bodha.

One MS, has Viśamana.

Wilohita closely competes, for frequency, with this reading.

[¶] A single MS. has Rudhirámbhas.

[&]quot;It imports 'lord of worms'. Krimisa occurs in several of my MSS, and seems to be preferable, as yielding a more appropriate meaning, namely,—after the analogy of the explanations given of Girisa—'possessing worms', or 'lying on worms'

¹ Some of these names are the same that are given by Manu, b. IV., v. 88—90. Kullúka Bhafía refers to the Márkaúdeya Purána for a description of the twenty-one divisions of hell: but the account there given is not more ample than that of our text. The Bhágavata enumerates twenty-eight; but many of the names differ from the above. In the last instance, the term Avíchi is either inaccurately repeated, or the adjective Apara (अविचित्रा-पापर:) is intended to distinguish it from the previous Avíchi. In Manu, Mahávíchi occurs.

* This is, perhaps, an epithet of Lalabhaksha. See the original: असिपचवनं क्रणो लालाभवस्य टाइणः।

† The original edition has "Puyavaha", for which I find no authority.

Corrected from "Adhosiras", which is impossible.

§ All my MSS, but three have Krishnasútra.

The hells there mentioned are Tamisra, Andhatamisra, Maharaurava, Raurava, Naraka, Kalasútra, Mahanaraka, Sanjivana, Mahavichi, Tapana, Sampratapana, Sambata, Sakakola, Kudmala, Pútimfittika, Lohasanku, Rijisha, Panthana, Salmali, Asipatravana, Lohadaraka.

Instead of these, the Yajnavalkya-dhorma-śastra, III., 222—224, gives the following: Tamisra, Lohaśanku, Mahaniraya, Śalmali, Raurava, Kudmala, Pútimŕittika, Kalasútraka, Sangháta, Lohitoda, Savisha, Sampratapana, Mahanaraka, Kakola, Sanjívana, Mahapatha, Avichi, Andhatamisra,

Kumbhípáka, Asipatravana, and Tápana.

¶ At V, XXVI., 7. Their names are Tamisra, Andhatamisra, Raurava, Maharaurava, Kumbhipaka, Kalasutra, Asipatravana, Sukaramukha, Audhakupa, Krimibhojana, Sandamsa, Taptasurmi, Vajrakantakasalmali, Vaitarani, Puyoda, Pranarodha, Visasana, Lalabhaksha, Sarameyadana, Avichi, Ayahpana, Ksharakardama, Rakshoganabhojana, Sulaprota, Dandasuka, Avatanirodhana, Paryayartana, Suchimukha.

The Karttika-mahatmyo of the Padma-purana makes mention of the following hells: Taptabaluka, Andhatamisra, Krakacha, Argala, Kutasalmali, Raktapuya, Kumbhipaka. See Dr. Aufrecht's Catalogus Cod.

He who causes abortion, plunders a town,* kills a cow, or strangles a man, goes to the Rodha† hell (or that of obstruction). The murderer of a Brahman, stealer of gold,‡ or drinker of wine, goes to the Śúkara (swine) hell; as does any one who associates with them. The murderer of a man of the second or third castes, and one who is guilty of adultery with the wife of his spiritual teacher, is sentenced to the Tála§ (padlock) hell; and one who holds incestuous

¹ The Padma Purána (Kriyá Yoga Sára) and the Śiva Dharma, which appears to be a section of the Skanda Purána, contain a number of interesting circumstances previous to the infliction of punishment. It appears, also, from them, that Yama fulfils the office of judge of the dead, as well as sovereign of the damned; all that die appearing before him, and being confronted with Chitragupta, the recorder, by whom their actions have been registered. The virtuous are thence conveyed to Swarga or Elysium, whilst the wicked are driven to the different regions of Naraka or Tartarus.

^{*} Some MSS. have putrahantri, implying one that kills his son.

[†] Three of my MSS., instead of naming this hell, qualify it as ghora, 'dreadful.'

^{*} Suvarna: not vaguely gold, according to the larger commentary, but the amount of eighty raktis thereof, likewise known as suvarna. Moreover, to incur the penalty denounced, the thief must steal the suvarna from a Brahman. The maker of arrows is sentenced to the Vedhaka (piercing) hell; and the maker of lances, * swords, and other weapons, to the dreadful hell called Visasana (murderous). He who takes unlawful gifts goes to the Adhomukha (or head-inverted) hell; as does one who offers sacrifices to improper objects, and an observer of the stars † (for the prediction of events). [§] In some MSS., including that which contains the smaller commentary, this hell is here called Krimipuyavaha, 'flowing with worms and pus'; in one other, Vegipuyavaha, 'carrying on pus impetuous as a torrent.'

Kundásin. Several commentaries give two explanations of this word. The first is 'one who eats the quantity of a kunda'; this being

an informer, one who lives by his wife's prostitution,¹ one who attends to secular affairs on the days of the Parvans (or full and new moon, &c.),² an incendiary, a treacherous friend, a soothsayer,* one who performs religious ceremonies for rustics, and those who sell the acid Asclepias (used in sacrifices), go to the Rudhirándha hell (whose wells are of blood). He who destroys a bee-hive,† or pillages a hamlet, is condemned to the Vaitaraní hell. He who causes impotence,‡ trespasses on others' lands, is impure, or who lives by fraud, § is punished in the hell called (black, or) Krishna. He who wantonly cuts down trees goes to the Asipatravana hell (the leaves of whose trees are swords); and a tender on sheep, and hunter of deer, to the hell term-

defined as a measure of capacity equal to four prasthas. The second explanation is 'one who eats the food of a person born of an adulteress': पत्यो जीवति जार्ज: कुण्डस्तद्वाभी.

† Madhuhan = संध्वावासघातक, according to the larger commentary.

रत:पानादिकतीर: in all my MSS.

§ Kuhakajivin.

The smaller commentary says that this hell is the same as the Kalasutra.

¶ In both the commentaries, and primarily, 'one who lives by buffaloes' is propounded as the interpretation here of mahishaka.

"The author of the larger commentary writes: पर्वगामीति पाउँ पर्वमु

The term in the text is Máhishaka, which might mean a feeder of buffaloes. But the commentator quotes a text, from the Smíti, authorizing the sense above followed.

² This is the interpretation of Parvakárin. It is also read Parvagámin, 'he who cohabits with his wife on prohibited days.'**

^{*} Sakuni. The commentators give the second place to 'ornithomancer' as the signification of this word. Their first explanation is 'one that gets his living by birds',—pakshi-jivin.

ed Vahnijwála (or fiery flame); as do those who apply fire to unbaked vessels (potters). The violator of a yow, and one who breaks the rules of his order, falls into the Sandamsa (or hell of pincers); and the religious student who sleeps in the day, and is (though unconsciously) defiled; and they who (though mature) are instructed in sacred literature by their children, receive punishment in the hell called Swabhojana (where they feed upon dogs). These hells, and hundreds and thousands of others, are the places in which sinners pay the penalty of their crimes. As numerous as are the offences that men commit, so many are the hells in which they are punished;* and all who deviate from the duties imposed upon them by their caste and condition, whether in thought, word, or deed, are sentenced to punishment in the regions of the damned.1 +

goes to Naraka who neglects the due expiation of his guilt.

For, Maitreya, suitable acts of expiation have been enjoined, by the great sages, for every kind of crime. Arduous penances for great sins, trifling ones for minor offences, have been propounded by Swáyambhuva and others. But reliance upon Krishna is far better than any such expiatory acts as religious austerity or the like. Let any one who repents of the sin of which he may have been culpable have recourse to this best of all expiations, remembrance of Hari. By addressing

he must be born again, as a stone, or plant, and gradually migrate through the several inferior conditions, until he is once more born a man. His future state is then in his own power.

¹ Manu is here especially intended, as the commentator observes.

This remembrance (title) of Vishnu is the frequent reiteration of any or all of his names. Hence the lower orders of Hindus procure a starling, or parrot, that, in the act of teaching it to cry Ráma, or Krishna, or Rádba, they may themselves repeat these appellations; the simple recitation of which, even if accidentally, irreverently, or reluctantly performed, is meritorious. Thus, according to the Vishnu Dharma Tantra:†

his thoughts to Náráyańa at dawn, at night, at sunset, and midday, a man shall be quickly cleansed from all guilt. The whole heap of worldly sorrows is dispersed by meditating on Hari; and his worshipper, looking upon heavenly fruition as an impediment (to felicity), obtains final emancipation. He whose mind is devoted to Hari in silent prayer, burnt offering, or adoration, is impatient even of the glory of the king of the gods.* Of what avail is ascent to the summit of heaven; if it is necessary to return from thence to earth? How different is the meditation on Vásudeva, which is the seed of eternal freedom! Hence, Muni, the man who thinks of Vishńu day and night, goes not to Naraka, after death; for all his sins are atoned for.

Heaven (or Swarga) is that which delights the mind; hell (or Naraka) is that which gives it pain. Hence, vice is called hell; virtue is called heaven. The self-same thing is applicable to the production of pleasure,

pure, is a means of purification. Hari removes all sins, even when invoked by evil-minded persons; as fire burns one by whom it is unwillingly approached.'

¹ The object of the text, according to the commentator, is to show that the common notions of heaven and hell are erroneous; that they are only temporal pleasure and temporal pain; and virtue and vice, being the origin of transient and, therefore, unreal effects, are, themselves, unrealities. There is nothing real but faith in Vishnu.

वासुदेवे मनो यख जपहोमार्चनादिषु। तखानराथो मैनेय देवेन्द्रतादिनं फलम॥

or pain, of malice, or of anger. Whence, then, can it be considered as essentially the same with either? That which at one time is a source of enjoyment becomes, at another, the cause of suffering; and the same thing may, at different seasons, excite wrath or conciliate favour. It follows, then, that nothing is, in itself, either pleasurable or painful; and pleasure and pain, and the like, are merely definitions of various states of mind. That which alone is truth* is wisdom. But wisdom may be the cause of confinement to existence: for all this universe is wisdom; there is nothing different from it; and, consequently, Maitreya, you are to conclude that both knowledge and ignorance are comprised in wisdom.¹

I have thus described to you the orb of the earth; the (regions below its surface, or) Pátálas; and the Narakas (or hells); and have briefly enumerated its oceans, mountains, continents, regions, and rivers. What else do you wish to hear?

¹ Text and comment are, here, somewhat obscure: but the purport of the former seems to be the explanation of the existence of Jnána, wisdom, both as a genus and a species. In the former case, it is all that is; and, in the latter, it may be either true or false wisdom: the latter being influenced by notions of self or individuality, and, therefore, the cause of confinement to existence; the former dissipating the belief of self, and being, therefore, the cause of liberation from bodily being: अविद्याहे-कार्राट्रियण प्रतीतं जानं बन्धायेथते विद्यातिक्रासेन जानं सो-

CHAPTER VII.

Extent and situation of the seven spheres, viz., earth, sky, planets, Mahar-loka, Jana-loka, Tapo-loka, and Satya-loka. Of the egg of Brahmá, and its elementary envelopes. Of the influence of the energy of Vishúu.

MAITREYA.—The sphere of the whole earth has been described to me, by you, excellent Brahman; and I am now desirous to hear an account of the other spheres (above the world),—the Bhuvar-loka and the rest,—and the situation and the dimensions of the celestial luminaries.

Parasara.—The sphere of the earth (or Bhúrloka), comprehending its oceans, mountains, and rivers, extends as far as it is illuminated by the rays of the sun and moon; and to the same extent, both in diameter and circumference, the sphere of the sky (Bhuvar-loka) spreads above it (as far upwards as to the planetary sphere, or Swar-loka). The solar orb is situated a hundred thousand leagues from the earth; and that of the moon, an equal distance from the sun. At the same interval above the moon occurs the orbit of all the lunar constellations. The planet Budha (Mercury) is two hundred thousand leagues above the lunar mansions; Śukra* (Venus) is at the same distance from

¹ Bhúr-loka, the terrestrial sphere, is earth and the lower regions; from thence to the sun is the Bhuvar-loka or atmospheric sphere; and from the sun to Dhruva is the Swar-loka or heaven: as subsequently explained in the text, and in other Puránas.

Mercury; Angáraka (Mars) is as far above Venus; and the priest of the gods (Brihaspati, or Jupiter), as far from Mars; whilst Saturn (Śani*) is two hundred and fifty thousand leagues beyond Jupiter.† The sphere of the seven Rishis (Ursa Major) is a hundred thousand leagues above Saturn; and, at a similar height above the seven Rishis, is Dhruva (the pole-star), the pivot or axis of the whole planetary circle. Such, Maitreya, is the elevation of the three spheres (Bhúr, Bhuvar, Swar) which form the region of the consequences of works.‡ The region of works is here (or in the land of Bharata).¹

Above Dhruva, at the distance of ten million leagues, lies the sphere of saints (or Mahar-loka), the inhabitants of which dwell in it throughout a Kalpa (or day of Brahmá). At twice that distance is situated Jano-loka, where Sanandana and other pure-minded sons of Brahmá

¹ A similar account of the situations and distances of the planets occurs in the Padma, Kúrma, and Váyu Puránas. The Bhágavata§ has one or two varieties; but they are of no great importance.

So, to every purpose of this note, read all the MSS. to which I have access; and we are thus told that Saturn is only two hundred thousand yojanas beyond Jupiter. Professor Wilson must have read again.

reside. At four times the distance between the two last lies the Tapo-loka* (the sphere of penance), inhabited by the deities called Vairajas, who are unconsumable by fire. At six times the distance (or twelve Crores,—a hundred and twenty millions of leagues†) is situated Satya-loka, (the sphere of truth), the inhabitants of which never again know death¹.:

¹ An account of these Lokas is met with only in a few of the Puránas, and is not much more detailed, in them, than in our text. The Váyu§ is most circumstantial. According to that authority, Mahar, which is so called from a mystical term, Maha, is the abode of the Ganadevas—the Yámas and others,—who are the

The height of Tapoloka above Dhruya is nighty million noignas

The height of Tapoloka above Dhruva is eighty million yojanas.

† The commentaries have it that the distance is forty-eight kotis or 480.000.000 of yojanas; i. e., six times as far as Tapoloka lies from Janaloka. Subjoined are the words of the smaller commentary: जनजो-कार्यचयेव पहुण्न दाद्शकोव्युक्त्रचेण त्योकोकाद्नन्तरं सत्यकोकः। ननु त्योकोकार्यचयेति मन्त्यम्। तथा सत्यष्टचलारिश्चलोव्युक्त्य-लेन ब्रह्माण्डे तस्यावकाशाभावात्।

The probability is, that, by a common Pauranik and Epic licence,—which, for instance, converts स इति into सति, &c. &c.,— महित, in the first of the preceding lices, represents महद्ति, i.e., महद्ति, where मह: would be the nominative of महस, 'a festival', 'a solemnity'.

The other statements from the Vayu-purana given in the note here annotated occur not far below the foregoing extracts.

^{* &#}x27;And beyond Janaloka, at fourfold the aforesaid altitude, is the world known as Tapas':

regents or rulers of the Kalpa, the Kalpadhikarins. They are so designated also in the Kúrma.* The Kásí Khanda + refers the name to Mahas, 'light'; the sphere being invested with radiance (महसावत). Its inhabitants are also called lords of the Kalpa. But the commentator explains this to denote Bhrigu and the other patriarchs, whose lives endure for a day of Brahmá. The different accounts agree in stating, that, when the three lower spheres are consumed by fire, Mahar-loka is deserted by its tenants, who repair to the next sphere, or Jana-loka. Jana-loka, according to the Váyu, is the residence of the Rishis and demigods during the night of Brahmá, and is termed Jana, because the patriarchs are the progenitors of mankind. The Kásí Khańda § agrees with the Vishńu in peopling it with Sanandana and the other ascetic sons of Brahmá, and with Yogins like themselves. These are placed, by the Váyu, in the Tapo-loka; and they, and the other sages, and the demigods, after repeated appearances in the world, become, at last, Vairájas in the Brahma or Satya-loka. After many divine ages of residence there with Brahmá, they are, along with him, absorbed, at the end of his existence, into the indiscrete:

The commentator on the Kásí Khanda explains Vairája to mean 'relating to, or derived from, Brahmá or Viráj': * [[[]]] The Vairájas are, there, as in the Vishnu Purána, placed in the Tapo-loka, and are explained to be ascetics, mendicants, anchorets, and penitents, who have completed a course of rigorous austerities:

इत्यादिसुतपः ज्ञिष्टकर्माणो ये तपोधनाः। ब्रह्मायपन्तपो जोके ते वसन्यकृतोभयाः॥

It may be doubted, however, if the Pauraniks have very precise notions regarding these spheres and their inhabitants. The Puranas of a decidedly sectarial character add other and higher worlds to the series. Thus, the Kúrma § identifies Brahma-loka

† Rámanátha, in his commentary on the Kášikhańda, the Kášikhańda-dipiká, explains the Vairajas to be those who are freed from rajoguńa: विदाया स्वान्तागुणा:. This explanation has no scientific value.

These are, all, evidently, additions to the original system of seven worlds, in which we have, probably, some relation to the seven climates of the ancients, the seven stages or degrees of the earth of the Arabs, and the seven heavens of the Mohammedans, if not to the seven Amshaspands; of

by those who are acquainted with the system of the universe, the heavenly sphere.* These three spheres are termed transitory. The three highest,—Janas, Tapas, and Satya,—are styled durable.¹ Mahar-loka, as situated between the two, has, also, a mixed character; for, although it is deserted at the end of the Kalpa, it is not destroyed.† These seven spheres, together with the Pátálas, forming the extent of the whole world,‡ I have, thus, Maitreya, explained to you.

The world is encompassed on every side, and above, and below, by the shell of the egg \$ (of Brahmá), in the same manner as the seed of the wood-apple 2 is

the Pársis. Seven-suggested, originally, perhaps, by the seven planets, - seems to have been a favourite number with various nations of antiquity. Amongst the Hindus, it was applied to a variety of sacred or mythological objects, which are enumerated in a verse in the Hanuman Nátaka. Ráma is described, there, as piercing seven palm-trees with an arrow, on which other groups of seven take fright; as the seven steeds of the sun, the seven spheres, Munis, seas, continents, and mothers of the gods:

अश्वाः सप्त जगन्ति सप्त मुनयः सप्ताब्धयः सप्तगाः। सत्यं सप्त च मातरो भयभृतः संख्वा न साम्यादिहः॥॥

invested (by its rind).* Around (the outer surface of) the shell flows water, for a space equal to ten times (the diameter of the world). The waters, again, are encompassed, exteriorly, by fire; fire, by air; and air, by ether; ether, by the origin of the elements: (Ahamkara); and that, by Intellect. Each of these extends ten times the breadth of that which it encloses; and the last is encircled by (the chief Principle,) Pradhána, which is infinite, and its extent cannot be enumerated. It is, therefore, called the boundless and illimitable cause of all existing things, supreme (nature, or) Prakriti; the cause of all mundane eggs, of which there are thousands and tens of thousands, and millions and thousands of millions, such as has been described. §

¹ See before the order in which the elements are evolved (Vol. I., pp. 29, &c.)

² The followers of Anaximander and Democritus taught "an ἀπειρία κόσμων, 'an infinity of worlds;' and that not only successive, in that space which this world of ours is conceived now to occupy, in respect of the infinity of past and future time, but also a contemporary infinity of coexistent worlds, at all times, throughout endless and unbounded space." [†] Nabhas. Professor Wilson had "Mind" in the text, which I have changed, unhesitatingly, as above. In taking nabhas to mean ákása, ordinarily rendered "ether", I have assumed that the Vishiu-purána, as to its cosmogony, is at unity with itself. See Vol. I., p. 84.

^{*} Bhútádi, here rendered rightly. See Vol. I., pp. 33, 34, and 169, where the term is interpreted "radimental", "elementary", and "the first element". Ahainkára as stagnant-támasa-is bere intended.

Within Pradhána resides Soul, diffusive, conscious, and self-irradiating; as fire (is inherent) in flint¹, or sesamum oil in its seed. Nature (Pradhána) and soul (Puíns) are, both, of the character of dependants, and are encompassed by the energy of Vishňu, which is one with the soul of the world, and which is the cause of the separation of those two (soul and nature, at the period of dissolution), of their aggregation (in the continuance of things), and of their combination at the season of creation.^{2*} In the same manner as the wind

Literally, 'in wood'; the attrition of two pieces of which does not create, but developes, their latent heat and flame.

² Thus, in Scipio's Dream, the divinity is made the external limit of the universe: "Novem tibi orbibus vel potius globis connexa sunt omnia, quorum unus est cœlestis extimus, qui reliquos complectitur omnis, summus ipse deus arcens et continens ceteros:"

And this energy is the cause of their becoming separated, and of their resorting to one another; and it is the cause, great Sage, of their commotion at the time of creation.'

On these stanzas the smaller commentary remarks as follows: तथो-रिए परमेश्वराधिष्ठितलमाह। प्रधानं चिति द्वास्थाम् विष्णोः सञ्च्यभू-तथा चिन्छत्या वृती अधिष्ठिती। संश्रयधर्मिणी नियम्य नियनुभा-वेन स्थिती। सेव कालात्मना स्थिता सती तथोः प्रजयकाने पृथामाने कारणं स्थितिकाने संश्रयस्य च कारणं सर्गकाने चोभकारणभूता चेलार्थः।

ruffles the surface of the water in a hundred bubbles, * (which, of themselves, are inert), so the energy of Vishńu influences the world, consisting of (inert) nature and soul. Again, as a tree, consisting of root, stem, and branches, springs from a primitive seed, and produces other seeds, whence grow other trees, analogous to the first in species, product, and origin, so from the first unexpanded germ (of nature or Pradhána) spring Mahat (Intellect) and the other rudiments of things. From them proceed the grosser elements, and, from them, men and gods, who are succeeded by sons and the sons of sons.† In the growth

which Macrobius explains as to be understood of the Supreme First Cause of all things, only in respect of his supremacy over all, and from his comprehending, as well as creating, all things, and being regarded as the soul of the world: "Quod virtutes omnes, quæ illam primæ omnipotentiam summitatis sequuntur, aut ipse faciat, aut ipse contineat. of a tree from the seed, no detriment occurs to the parent plant; neither is there any waste of beings by the generation of others. In like manner as space,* and time, and the rest are the cause of the tree (through the materiality of the seed), so the divine Hari is the cause of all things by successive developments (through the materiality of nature).1 As all the parts of the future plant, existing in the seed of rice,-or the root, the culm, the leaf, the shoot, the stem, the bud, the fruit, the milk, the grain, the chaff, the ear,-spontaneously evolve, when they are in approximation with the subsidiary means of growth (or earth and water), so gods, men, and other beings, involved in many actions (or necessarily existing in those states which are the consequences of good or evil acts;), become manifested only in their full growth, through the influence of the energy of Vishnu.

The two passages in parentheses are the additions of the commentator, intended to explain how the deity is the material cause of the world. He is not so of his own essence, not so immediately, but through the interposition of Pradhána: उपादान-लगा हर: प्रकृतिहारित न स्वरूपेणित भावः १६ 'As, however, he is the source of Prakfiti, he must be considered the material as well as immaterial cause of being.'

^{&#}x27;Thus, from the unmanifested first spring mahat and the like, inclusive of the elements; then from these originate the demons, &c.; and, from them, sons; and of these sons there are other sons.'

^{*} This is to render àkàśa, on which term see my first note at p. 34 of Vol. I.

[†] Add 'in consequence of proximity', संनिधानात .

This ellipsis was supplied by the Translator.

[§] This is from the smaller commentary, and means: 'Hari's material causativity is through the instrumentality of prakriti, and is not in his own essence. Such is the import.'

This Vishnu is the supreme spirit (Brahma), from whence all this world proceeds, who is the world, by whom the world subsists,* and in whom it will be resolved. That spirit (or Brahma) is the supreme state of Vishnu, which is the essence of all that is visible or invisible, with which all that is is identical, and whence all animate and inanimate existence is derived.† He is primary nature; he, in a perceptible form, is the world; and in him all finally melts: through him all things endure. He is the performer of the rites of devotion; he is the rite; he is the fruit which it bestows; he is the implements by which it is performed. There is nothing besides the illimitable Hari.

We are to understand, here, both in the axle and yoke, two levers, one horizontal, the other, perpendicular. The horizontal arm of the axle has a wheel at one end; the other extremity is connected with the perpendicular arm. To the horizontal arm of the yoke are harnessed the horses; and its inner or right extremity is secured to the perpendicular. The upper ends of both perpendiculars are supposed to be attached to Dhruva, the polestar, by two aerial cords, which are lengthened in the sun's southern course, and shortened in his northern; and, retained by which to Dhruva, as to a pivot, the wheel of the car traverses the summit of the Manasottara mountain, on Pushkara-dwipa, which runs, like a ring, round the several continents and oceans. The contrivance is commonly compared to an oil-mill, and was, probably, suggested by that machine, as constructed in India. As the Mánasottara mountain is but 50.000 leagues high, and Meru, 84.000. whilst Dhruva is 1.500.000, both levers are inclined at obtuse angles to the nave of the wheel and each other. In images of the sun, two equal and semi-circular axles connect a central wheel with the sides of the car.

In the sequel to these verses, Vibhavari is also called Vibha; and some MSS. consulted by me give, there, Amaravati as convertible with Vaswaukasara. Mukhya is, further, interchanged, in several MSS., with

Sukhá, the city of Varuna.

In the Matsya-purána there is a passage differing by scarcely a word from that just cited, beginning at its second stanza. In this Purána, also, we find Vibhávari and Vibhá,—synonymous terms, importing 'bright',—and likewise both Vaswaukasárá and Amarávati.

§ The Bhágavata-purána, V., XXI., 7, calls the city of Indra, Devadhání, and that of Varuna, Nimlochaní. As to Yama's and Soma's cities,

it agrees with our text.

The glorious sun, Maitreya, darts, like an arrow, on his southern course, attended by the constellations of the Zodiac. He causes the difference between day and night, and is the divine vehicle and path of the sages who have overcome the inflictions of the world. Whilst the sun, who is the discriminator of all hours, shines, in one continent, in midday, in the opposite Dwípas, Maitreya, it will be midnight. Rising and setting are at all seasons, and are always (relatively) opposed in the different cardinal and intermediate points of the horizon. When the sun becomes visible to any people, to them he is said to rise; when he disappears from their view, that is called his setting. There is, in truth, of neither rising nor setting of the sun; for he is always: and these terms merely imply his presence and his disappearance. +

'The sun is stationed, for all time, in the middle of the day, and over against midnight in all the dwipas, Maitreya. But, the rising and the setting of the sun being perpetually opposite to each other, -and, in the same way, all the cardinal points, and so the cross-points,-Maitreya, people speak of the rising of the sun where they see it; and, where the sun disappears, there, to them, is his setting. Of the sun, which is always in one and the same place, there is neither setting nor rising; for what are called rising and setting are only the seeing and the not

242

When the sun (at midday) passes over either of the cities of the gods (on the Manasottara mountain-at the cardinal points), his light extends to three cities and two intermediate points:* when situated in an intermediate point, he illuminates two of the cities and three intermediate points + (in either case, one hemisphere). From the period of his rise, the sun moves with increasing rays until noon, when he proceeds towards his setting with rays diminishing (that is, his heat increases or diminishes in proportion as he advances to, or recedes from, the meridian of any place). The east and west quarters are so called from the sun's rising and setting there.1 As far as the sun shines in front, so far he shines behind and on either hand, illuminating all places except the summit of Meru, the mountain of the immortals: for, when his rays reach the court of Brahmá, which is there situated, they are repelled and driven back by the overpowering radiance which there prevails. Consequently, there is always

The terms Púrva and Apara mean, properly, 'before' and 'behind;' but 'before' naturally denotes the east, either because men, according to a text of the Vedas, spontaneously face, as if to welcome, the rising sun, or because they are enjoined by the laws so to do. When they face the rising sun, the west is, of course, behind them. The same circumstance determines the application of the term Dakshińa, properly 'right,' deśtos, or 'dexter,' to the south. Uttara, 'other' or 'last,' necessarily implies the north.

the alternation of day and night, according as the divisions of the continent lie in the northern (or southern) quarter, or inasmuch as they are situated north (or south) of Meru.^{1*}

¹ This is rather obscure; but it is made out clearly enough in the commentary and in the parallel passages in the Váyu, Matsya, Linga, Kúrma, and Bhágavata. † The sun travels round the world, keeping Meru always on his right. To the spectator who fronts him, therefore, as he rises, Meru must be always on the north; and, as the sun's rays do not penetrate beyond the centre of the mountain, the regions beyond, or to the north of it, must be in darkness, whilst those on the south of it must be in light: north and south being relative, not absolute, terms, depending upon the position of the spectator with regard to the sun and to Meru. So the commentator: मेर् पद्चिणीकुर्वनं सूर्य ये यच पञ्चान्त सा च तेषां प्राची तेषां च वासभाग एव मेर:। यत: सर्वेषां सर्वेदा मेर्ट्यारत: एव। द्विण्यां च सदा दिनस । ‡ It was,

'To the north of Meru there is, therefore, always night during day in

other regions; for Meru is north of all the dwipas and varshas.'

† It may be enough to refer to the Bhigavata-purina, V., XXII., 2, where it is said, according to Burnous's translation: "Le sage dit: Tout comme les sourmis et autres insectes, placés sur une roue de potier qui tourne, tournent avec elle et suivent en même temps des directions qui leur sont propres, puisqu'on les trouve sur divers points; ainsi le soleil et les autres planètes, placés sur la roue du Temps qui a pour attributs les signes et les Nakchatras, tournent avec elle autour de Dhruva et de Mêru, en les laissant à leur droite, et marchent d'un mouvement qui leur est propre, puisqu'on les voit dans un Nakchatra ou dans un signe différent."

‡ This is from the smaller commentary, which adds, by way of a second explanation: भारताद्विष्णानां संमुखे सूर्यमुखनां प्राप्ता-मृत्तरसां दिशि वासभागे सेरोरिकतः सदा दिनस्यतस सदा रा-विद्विणसागे तु सदा दिनसेवित्वर्थादुकं भवति।

VISHNU PURÁNA.

The radiance of the solar orb, when the sun has set, is accumulated in fire; and hence fire is visible at a greater distance by night (than by day). During the latter, a fourth of the rays of fire blend with those of the sun; and, from their union, the sun shines with greater intensity by day. Elemental light, and heat derived from the sun or from fire, blending with each other, mutually prevail in various proportions, both by day and night.* When the sun is present either in the southern or the northern hemisphere, day or night retires into the waters, according as they are invaded by darkness or light.† It is from this cause that the

probably, through some misapprehension of this doctrine, that Major Wilford asserted: "By Meru they"—the Pauráńiks—"understand, in general, the north pole; but the context of the Puráńas is against this supposition." Asiatic Researches, Vol. VIII., p. 286. There is no inconsistency, however, in Meru's being absolutely in the centre of the world, and relatively north to the inhabitants of the several portions, to all of whom the east is that quarter where the sun first appears, and the other quarters are thereby regulated.

* All my MSS. read thus:

तेजसी भारकरापेचे प्रकाशोष्णसङ्पिणी। परसारानुप्रविशादाष्याचेते दिवानिश्रम्॥

The two lustres,—that of the sun and that of fire,—consisting of light and heat, owing to mutual penetration, become intensified during the day and during the night, respectively.

rius, thence to Pisces; going successively from one sign of the Zodiac to another. After he has passed through these, the sun attains his equinoctial movement (the vernal equinox), when he makes the day and night of equal duration. Thenceforward the length of the night decreases, and the day becomes longer, until the sun reaches the end of Gemini, when he pursues a different direction, and, entering Cancer, begins his declension to the south. As the circumference of a potter's wheel revolves most rapidly, so the sun travels rapidly on his southern journey: he flies along his path with the velocity of wind, and traverses a

great distance in a short time.* In twelve Muhurtas he passes through thirteen lunar asterisms and a half during the day; and, during the night, he passes through the same distance, only in eighteen Muhúrtas.† As the centre of the potter's wheel revolves more slowly (than the circumference), so the sun, in his northern path, again revolves with less rapidity, and moves over a less space of the earth in a longer time; until, at the end of his northern route, the day is again eighteen Muhurtas, and the night, twelve; the sun passing through half the lunar mansions, by day and by night, in those periods, respectively.: As the lump of clay on the centre of the potter's wheel moves most slowly, so the polar-star, which is in the centre of the zodiacal wheel, revolves very tardily, and ever remains in the centre, as the clay continues in the centre of the wheel of the potter.

stance of these verses, rather than a close rendering of them,

VISHNU PURÁNA.

The relative length of the day or night depends upon the greater or less velocity with which the sun revolves through the degrees between the two points of the horizon.* In the solstitial period, in which his diurnal path is quickest, his nocturnal is slowest; and, in that in which he moves quick by night, he travels slowly by day.† The extent of his journey is, in either case, the same; for, in the course of the day and night, he passes through all the signs of the Zodiac, or six by night, and the same number by day. The length and shortness of the day are measured by the extent of the signs; and the duration of day and night, by the period which the sun takes to pass through them.¹

¹ This passage, which is somewhat at variance with the general doctrine that the length of the day depends upon the velocity of the sun's course, and which has not been noticed in any other Pauráńik text, is defended, by the commentator, upon the authority of the Jyotiliśástra or astronomical writings. According to them, he asserts, the signs of the Zodiac are of different extent: Aquarius, Pisces, and Aries are the shortest; Taurus, Capricornus, and Gemini are something longer; Leo and Scorpio, longer still; and the remaining four, the longest of all. According to the six which the sun traverses, the day or night will be the longer or shorter. The text is,

I have added this line. Apparently, Professor Wilson thought it would be somewhat superfluous to translate it.

In his northern declination, the sun moves quickest by night, and slowest by day; in his southern declination, the reverse is the case.

The night is called Ushá, and the day is denominated Vyushti, and the interval between them is called Sandhyá.* On the occurrence of the awful Sandhyá, the terrific fiends† termed Mandehas attempt to devour the sun: for Brahmá; denounced this curse upon them, that, without the power to perish, they should die every day (and revive by night); and, therefore, a fierce contest occurs (daily) between them and the

The apparent contradiction may, however, be reconciled by understanding the sun's slow motion, and the length of a sign, to be equivalent terms.

' That is, Usha is a part of the night; Vyushfi, of the day.
उषा राचिः समाखाता बुष्टिश्वायुच्यते दिनम्।
प्रोच्यते च तथा संध्या उपायुष्योर्यदन्तरम्॥

So read all my MSS. The smaller commentary remarks: उपा द्वि। राचिना उपा:। अञ्चिति जुते:। But the compound in the latter half of the stanza seems to show that we are to read Usha, not Ushas. Hence, probably, either the commentary—unless only loose—is corrupted, or else the text that accompanies it. Ushovyushtyok, which yields Ushas, is, however, a lection found in parallel passages of other Puranas.

The Translator's "Vyushfa", which I have altered, is here impossible, unless we assume that we have, in some MSS., that and Vyushfi—the word embedded in the compound—in the same stanza.

The ensuin gloss on Ushas is taken from Professor Wilson's Translation of the I g-veda, Vol. I., p. 78, second foot-note:

"The dawn, daughter of the personified heaven, or its deity, Dyudevatáyá duhitá. Rosen translates the name Aurora; but it seems preferable to keep the original denomination; as, except in regard to time, there is nothing in common between the two. In the Vishiu-puraña, indeed, Ushá, a word of similar derivation as Ushas, is called night; and the dawn is Vyushtá [sic: for Vyushfa]. Several passages seem to indicate that Ushá or Ushas is the time immediately preceding daybreak."

The same story occurs in the Váyu,† with the addition that the Mandehas are three crores in number. It seems to be an ancient legend, imperfectly preserved in some of the Puránas.

The sacred syllable Om has been already described (Vol. I., p. 1, note). The Gáyatrí, or holiest verse of the Vedas, not to be uttered to ears profane, is a short prayer to the sun, identified as the supreme, and occurs in the tenth hymn of the fourth section of the third Ashíaka of the Samhitá of the Rig-veda:

Professor Wilson, in his Translation of the Rig-veda, Vol. III., p. 110, gives another rendering of this verse: "We meditate on that desirable

light of the divine Savitri, who influences our pious rites."

To this he adds the following comment: "This is the celebrated verse of the Vedas which forms part of the daily devotions of the Brahmans, and was first made known to English readers by Sir W. Jones's translation of a paraphrastic interpretation. He renders it: 'Let us adore the supremacy of that divine sun, the godhead who illuminates all, who recreates all, from whom all proceed, to whom all must return, whom we invoke to direct our understandings aright in our progress toward his holy seat' (Works, 8vo., Vol. XIII., p. 367). the foul fiends are consumed. When the first oblation is offered, with solemn invocations, in the morning rite, the thousand-rayed deity shines forth with un-

ning this text, that copyists of the Vedas not unfrequently refrain from transcribing it, both in the Samhitá and Bháshya.

Or, in the text, with the prayer that commences with the words Suryo jyotih: 'That which is in the sun (or light) is ador-

The last member may be also rendered, 'who may animate or enlighten our intellects.' The verse occurs in the Yajus, III., 35, and in the Saman, II., 8, 12. Both commentators are agreed to understand, by savitri, the soul, as one with the soul of the world, Brahma: but various meanings are also given. Thus, Sayana has, we meditate on the light which is one with Brahma, his own light, which, from its consuming influence on ignorance and its consequences, is termed bhargas; and is that which is desirable, from its being to be known or worshipped by all (varenya); the property of the supreme being (parameswara), the creator of the world, and the animator, impeller, or urger (savitri), through the internally abiding spirit (antaryamin) of all creatures. Again, yak, although masculine, may, by Vaidik licence, be the relative to the neuter noun bhargas; that light which animates all (dhiyah) acts (karmáni), or illumes all understandings (buddhik). Again, devasya savituk may mean, of the bright or radiant sun, as the progenitor of all, sarvasya prasavituk; and bhargas may be understood as the sphere or orb of light, the consumer of sins, pápánám tápakam tejo-mandalam. Again, bhargas may be interpreted food; and the prayer may only implore the sun to provide sustenance: tasya prasádád annádi-lakshanam phalam dhimahi, tasyádhára-bhutá bhavema, we anticipate from his favour the reward that is characterized by food and the like, that is, may we be supported by him. Mahidhara in his comment on the same text in the Yajus, notices similar varieties of interpretation."

In the Introduction to the volume just quoted from, Professor Wilson says, of the Gayatri, at p. X.:

"The commentators admit some variety of interpretation; but it probably meant, in its original use, a simple invocation of the sun to shed a benignant influence upon the customary offices of worship; and it is still employed by the unphilosophical Hindus with merely that signification. Later notions, and, especially, those of the Vedanta, have operated to attach to the text an import it did not at first possess, and have converted it into a mystical propitiation of the spiritual origin and essence of existence, or Brahma."

must never, therefore, be delayed; for he who neglects it is guilty of the murder of the sun. Protected thus by the Brahmans and the (pigmy sages called) Válikhilyas, the sun goes on his course, to give light to the world.

Fifteen twinklings of the eye (Nimeshas) make a Káshíhá; thirty Káshíhás, a Kalá; thirty Kalás, a Muhúrta (forty-eight minutes); and thirty Muhúrtas, a day and night. The portions of the day are longer or shorter, as has been explained; but the Sandhyá is always the same in increase or decrease, being only one Muhúrta.¹ From the period that a line may be drawn across the sun (or that half his orb is visible) to the expiration of three Muhúrtas (two hours and twenty-four minutes), that interval is called Prátak* (morning), forming a fifth portion of the day. The next portion, or three Muhúrtas from morning, is termed Sangava (forenoon); the three next Muhúrtas constitute midday; the afternoon comprises the next three Muhúrtas; the three Muhúrtas following are considered as the

¹ But this comprehends the two Sandhyás, 'morning and evening twilight.' Two Nádís, or half a Muhúrta, before sunrise, constitute the morning Sandhyá; and the same interval after sunset, the evening. Sandhyá, meaning 'junction,' is so termed, as it is the juncture or interval between darkness and light; as in the Váyu and Matsya:

evening: and the fifteen Muhúrtas of the day are thus classed in five portions of three each. But the day consists of fifteen Muhúrtas only at the equinoxes; increasing or diminishing, in number, in the northern and southern declinations of the sun, when the day encroaches on the night, or the night upon the day. The equinoxes occur in the seasons of spring and autumn, when the sun enters the signs of Aries and Libra. When the sun enters Capricorn (the winter solstice), his northern progress commences; and his southern, when he enters Cancer (the summer solstice).*

Fifteen days of thirty Muhúrtas each are called a Paksha (a lunar fortnight); two of these make a month; and two months, a sclar season; three seasons, a northern or southern declination (Ayana); and those two compose a year. Years, made up of four kinds of morths, are distinguished into five kinds; and an aggregate of all the varieties of time is termed a Yuga (or cycle). The years are, severally, called Samvatsara,

¹ The four months are named in the Váyu, † and are: 1. the Saura or solar-sidereal, consisting of the sun's passage through a sign of the Zodiac; 2. the Saumya or Chándra or lunar month, comprehending thirty lunations or Tithis, and reckoned, most usually, from new moon to new moon, though, sometimes, from full moon to full moon; 3. the Sávana or solar month, containing thirty days of sunrise and sunset; and, 4. the Nákshatra or lunar-asterismal month, which is the moon's revolution through the twenty-eight lunar mansions.

Parivatsara, Idwatsara, Anuvatsara, and Vatsara. This is the time called a Yuga.¹

1 The five years forming this Yuga or cycle differ only in denomination, being composed of the months above described, with such Malamásas or intercalary months as may be necessary to complete the period, according to Vriddha Garga. The cycle comprehends, therefore, sixty solar-sidereal months of 1800 days; sixty-one solar months, or 1830 days; sixty-two lunar months, or 1860 lunations; and sixty-seven lunar-asterismal months, or 1809 such days. Colonel Warren, in his Kála Sankalitá, considers these years to be, severally, cycles. "In the cycle of sixty," he observes, "are contained five cycles of twelve years, each supposed equal to one year of the planet [Jupiter]. I only mention this cycle because I found it mentioned in some books; but I know of no nation or tribe that reckons time after that account. The names of the five cycles, or Yugas, are as follows: 1. Samvatsara, 2. Parivatsara, 3. Idwatsara, 4. Anuvatsara, 5. Udravatsara. The name of each year is determined from the Nakshatra in which Brihaspati sets and rises heliacally; and they follow in the order of the lunar months." Kála Sankalitá, pp. 212, 213. It may be reasonably doubted, however, if this view be correct; and the only connexion between the cycle of five years and that of Brihaspati may be the multiplication of the former by the latter (5 x 12), so as to form the cycle of sixty years; a cycle based, the commentator remarks, upon the conjunction (Yuga) of the sun and moon in every sixtieth year. The original and properly Indian cycle, however, is that of five years, as Bentley remarks: "The astronomers of this period [1181 B. C.] *** framed a cycle of five years, for civil and religious purposes." Ancient and Modern Hindu Astronomy. It is, in fact, as Mr. Colebrooke states, the cycle of the Vedas, described in the Jyotisha or astronomical sections, and specified, in the institutes of Parásara, as the basis

The mountain-range that lies most to the north* (in Bharata-varsha) is called Śringavat (the horned), from its having three principal elevations (horns or peaks), one to the north, one to the south, and one in the centre. The last is called the equinoctial; for the sun arrives there in the middle of the two seasons of spring and autumn, entering the equinoctial points in the first degree of Aries and of Libra, and making day and night of equal duration, or fifteen Muhúrtas each. When the sun, most excellent sage, is in the first degree of the lunar mansion Krittiká, and the moon is in the fourth of Viśákhá; or when the sun is in the third degree of Viśákhá, and the moon is in the head of Krittiká, (these positions being contemporary with the equinoxes), that equinoctial season is holy¹ (and is styled

As will be seen, Professor Wilson took the positions, about to be enumerated, from the *Linga-puráña*, which is, here, fuller than the *Vágu*. In the same chapter with this quotation we read, \$1.16-20:

So read, concurrently, all the five MSS. of the Váyu-puráña within my reach, except as to the latter half of the third stanza. No mention is here made of the positions of Budha and Ketu; and Ráhu, rightly or wrongly, is placed in Revatí. Furthermore, it may be that Tishya is corrupted from some other name. Not one of my MSS. gives yatta clearly; and yet, on collation, they appear to point to this reading, that of some copies of the Linga-puráña. One would have expected Maghá or Pitryá, and in the plural.

I may add, that I do not find it stated in the Váyu-purána, as Professor Wilson alleges, that the positions laid down in the preceding passage are referred to the "end" of the Chákshusha Patriarchate. Did this "end" originate from a hasty glance at the words चाउप ऽनार?

That the passage just cited has suffered excision may be suggested by the ensuing stanzas, which precede it, in the Váyu-puráňa, by a short interval:

> यसियान्वतरे चैव यहा वैमानिकाः खृताः। विवस्तानदितः पुत्रः मूर्यो वैवस्तते ऽन्तरे॥ विषमान्धर्मपुत्रसु सोसो देवो वसुः सृतः। गुन्नो देवसु विद्ययो भागवी ऽसुरयाजकः॥ नृहत्तेजाः सृतो देवो देवाचार्यो ऽङ्गिरःसुतः। नुधो मनोहर्यव ऋषिपुत्रसु स सृतः॥ यपिविकत्यात्मंजद्ये युवासौ सोहिताधिपः। नचत्रस्यगामिन्यो दावायसः सृतासु ताः। स्वर्भानुः सिंहिकापुत्रो भूतसंतापनी ऽसुरः॥

Comparing these two extracts, we learn that the sun, &c. have the

Budha is unnoticed in the first extract; and Šaura (Sani), in the second. Supplementarily to these particulars, the *Linga-purána*, as adduced in my third note in p. 256, specifies Soma as sire of Budha, makes Vikeśi mother of Lohitárchis (Angáraka), names the Sun and Sanjná as the parents of Sauri (Śani), and calls Śikhin (Ketu) son of Mŕityu.

** Professor Whitney, premising the Chakshusha Manwantara, observes: "There is something unaccountably strange in the Puranic definition of the positions of Mercury and Venus at this important spoch. How Mercury can be, even by a Hindu cosmogonist, placed in Sravishtha when Venus is put in Pushya, at least 146° 40' distant from him; or how either can receive such location when the sun is made to stand in Višakha, at least 93° 20' from Venus, and at least 80° from Mercury, it is hard enough to see. The furthest distance from the sun actually attained by Venus is about 48°; by Mercury, 29°; so that they can

are differences between some of these and the positions cited by Bentley; but most of them are the same. He considers them to have been observations of the occultations of the moon by the planets, in the respective lunar mansions, 1424-5 B. C. According to the Váyu, these positions or origins of the planets are from the Vedas:

never actually be more than 77° apart: nor are the greatest elongations of the two planets, as determined by the modern Hindu astronomy, very different from these. It looks as if the defined positions of the planets at the Great Equinox were mere guess-work, and the work, too, of a very unlearned and blundering guesser, rather than found by retrospective calculation. The putting of the moon's modes, also, in Bharani and Aśleshá-or, at the utmost, only 106° 40' apart—is a yet grosser error of the same character." † Mr. Bentley writes: "For determining the time of the formation of the Lunar Mansions, we have other observations to mention that will be found to be still more accurate, as they can be depended on to the very year; and these are of the planets. [Then follows a legend.] The observations here alluded to are supposed to have been occultations of the planets by the Moon, in the respective Lunar Mansions from which they are named: they refer us to the year 1424—5 B. C.," &c. &c. A Historical View of the Hindu Astronomy, &c., pp. 3, 4.

Professor Max Müller asserts that "the coincidence between the legend quoted by Bentley and the astronomical facts determined by Mr. Hind is a real one. Bentley, it is true, does not give his authority; but Professor Wilson, in a note to his translation of the Vishau-purána, speaks distinctly of the legend as occurring in the Vayu- and Linga-puránas; and he mentions that these Puránas appeal to the authority of reve-

pears (Kuhú),* the day when the moon is quite round (Ráká), and the day when one digit is deficient (Anumati), are, all, seasons when gifts are meritorious.

Sankhapá and Hiranyaloman are, thus, the readings which I find; and yet the passages from the Vdyu-purána quoted in notes ‡ and § to p. 263, infra, have Sankhapád and Hiranyaroman.

† विर्ज्ञात्मजो विद्योन्सुधामा नाम विश्वतः। सुधामा सुतो वैराजः प्राच्यां दिश्चि समाश्रितः। सोकपानः सुधमाता। गौरीपुत्रः प्रतापवान्॥

Sudhaman is here called son of Viraja and Gauri, and Lokapala of

the eastern quarter.

Elsewhere, self-consistently, the Váyu-puráńa expresses itself as follows, regarding the paternity of Sudháman and Ketumat:

प्रजापतिर्विर्जसः पूर्वस्यां दिश्चि विश्वतस्।
पुत्रं नाम्ना सुधामानं राजानं सीऽभ्यवेचयत्॥
पश्चिमस्यां दिश्चि तथा रजसः पुत्रमस्वृतम्।
केतमन्तं महात्मानं राजानं चास्यवेचयत॥

At p. 86, supra, I have changed Professor Wilson's "Viraja" to Vairaja. But the father of the Lokapala Sudhanwan is there spoken of; and none of my MSS. gives any reading but Sudhanwan. Here, then, unless it is to be supposed that Vairaja and Sudhanwan are, both of them, textual depravations, we have an irreconcileable discrepancy. In one place, the Lokapala of the east is Sudhanwan, son of Vairaja and Vairaja is Sudhaman, according to the Vayu-puraña—; and, in another place, the corresponding Lokapala is Sudhaman, of whose origin the Vishiu-puraña gives no information.

The passage of p. 86, just referred to, is thus worded:

पूर्वस्थां दिशि राजानं वैराजस्थ प्रजापते:।

दिश: पानं सधन्वानं राजानं सीऽभ्येषस्यत ॥

On this the larger commentary observes: वराजस्य ब्रह्मसूनी: पुन-मिति शेष:। राजानं दीप्तिमन्तम्। सुधन्दानं राजानं चित्रम्। तनय-सिति पाठी वा। Vairāja is here said to be a son of Brahmá, i. c., a M

Furthermore, there can be little doubt as to the correctness of the reading Sudhanwan. Some of my MSS. have, in the first line of the stanza, instead of राजान, सतं न, the reading of the smaller commentary.

For the grandsons of the patriarch Vairaja, among whom were Satadyumna and Sudyumna, see Vol. I., p. 177.

Such is the result of the collation of five MSS.; and they must all be corrupt,—with or without lines 4—6, which two of them omit,—at least in placing Nágavithí in the south as well as in the north, to the exclusion of Ajavithí. It can scarcely be doubted that lines 4—6 are an interpolation, inasmuch as, at variance with what follows, they make up Ajavithí, in the south, from the two Ashádhás, with Múla, and give Abhijit, Púrvajá (Aświni?), and Swáti as the asterisms of Nágavithí. Abhijit, whose presence here, as an integral asterism, is noticeable, "in the modern Indian astronomy does not occupy an equal portion of the ecliptic with the other nakshatras, but is carved out of the contiguous divisions." Colebrooke's Miscellaneous Essays, Vol. II., p. 341.

On the assumption that Nágavíthi, where inserted the second time, is an error for Ajavíthi, the further contents of the passage just quoted may be thus represented:

Nagavithi, &c., Arshabhi, &c., and Ajavithi, &c., are stated to be northern, intermediate, and southern, respectively; constituting groups known as Airávata, Járadgava, and Vaiśwanara.

The Proshthapadás are the Bhadrapadás; Váruna is Satabhishaj; Maitra,

Anurádhá; and Aindra, Jyeshthá.

The word Punarvasu, implied in the ninth line of the Sanskrit extract, deserves passing notice. The special plural inflection there given to the compound of which it forms the last member shows that the word must have been regarded, by the writer of the Purana, as feminine. One may suggest, therefore, that he mistook the Vaidik Punarvasu, a masculine dual, for a feminine singular.

The path of the gods lies to the north of the solar sphere, north of the Nágavíthí,¹ and south of the seven Rishis. There dwell the Siddhas, of subdued senses, continent and pure, undesirous of progeny, and, therefore, victorious over death: eighty-eight thousand of these chaste beings tenant the regions of the sky, north of the sun,* until the destruction of the universe: they enjoy immortality, for that they are holy; exempt from covetousness and concupiscence, love and hatred; taking no part in the procreation of living beings; and detecting the unreality of the properties of elementary matter.† By immortality is meant existence to the end of the Kalpa:¹ life as long as the three regions (earth, sky, and heaven) last is called exemption from reiter-

The path south of the solar orb is, according to the Vedas, that of smoke or darkness.

The stars of the Nágavíthí are those of Aries and Taurus; and by the seven Řishis we are here to understand Ursa Major.

The space between the seven Rishis and Dhruva,² the third region of the sky, is the splendid celestial path of Vishńu (Vishńupada), † and the abode of those sanctified ascetics who are cleansed from every soil, and in whom virtue and vice are annihilated. This is that excellent place of Vishńu to which those repair in whom all sources of pain are extinct, in consequence of the cessation of (the consequences of) piety or iniquity, and where they never sorrow more. There abide Dharma, Dhruva, and other spectators of the world, radiant with the superhuman faculties; of Vishńu, acquired through religious meditation; § and

The second of these stanzas is abridged in the translation. The first may be rendered: 'There is a necessary consequence arising to one who does evil or good by such acts as the slaying of a Brahman or the performing of a hippocaust. The result of such acts is said, O regenerate, to extend to the limit of the dissolution of created beings.'

† A station of Vishnu is here spoken of, namely Dhruva, which is

said to be higher than the Rishis, and further to the north:

That is, generally as affecting created beings, not individuals, whose acts influence their several successive births.

there are fastened and inwoven, too, all* that is, and all that shall ever be, animate or inanimate. † The seat of Vishńu is contemplated by the wisdom of the Yogins, identified with supreme light, as the radiant eye of heaven.: In this portion of the heavens the splendid Dhruva is stationed, and serves for the pivot (of the atmosphere). On Dhruva rest the seven great planets; and on them depend the clouds. The rains are suspended in the clouds; and from the rains come the water which is the nutriment and delight of all, the gods and the rest; and they, (the gods,) who are the receivers of oblations, being nourished by burntofferings, cause the rain to fall for the support of created beings. This sacred station of Vishnu, therefore, is the support of the three worlds, as it is the source of rain.

From that (third region of the atmosphere, or seat of Vishńu,) proceeds the stream that washes away all sin, the river Gangá, embrowned with the unguents of the nymphs of heaven (who have sported in her

Having her source in the nail of the great toe of Vishnu's left foot, Dhruya1 receives her, and sustains her, day and night, devoutly on his head; and thence the seven Rishis practise the exercises of austerity; in her waters, wreathing their braided locks with her waves. The orb of the moon, encompassed by her accumulated current, derives augmented lustre from her contact. Falling from on high, as she issues from the moon, she alights on the summit of Meru, and thence flows to the four quarters of the earth, for its purification. The Śítá, Alakanandá, Chakshu, and Bhadrá are four branches of but one river, divided according to the regions towards which it proceeds. Its waters, offered by sons to their ancestors, in faith, for three years, yield to the latter rarely attainable gratification. Men of the twice-born orders who offer sacrifice in this river to the lord of sacrifice, Purushottama, obtain whatever they desire, either here or in heaven. Saints who are purified from all soil by bathing in its waters, and whose minds are intent on Keśava, acquire, thereby, final liberation. This sacred stream, heard of, desired, seen, touched, t bathed in, or hymned, day by day, sanctifies all beings; and those who, even at a distance of a hundred leagues, § exclaim "Gangá, Gangá", atone for the sins committed during three previous lives. and considerations here presented may be summed up as follows:-First, it is impossible for us to determine, more nearly than within a few degrees, what point upon the ecliptic is meant by any designation of its place with reference to the asterisms which is given us by Hindu authorities of older date than the establishment of the modern astronomical system; second, we have no reason for ascribing to the ancient Hindus any pretence to such exact knowledge, or any attempt at such precision of statement, as should give real significance to an implied difference of a quarter of an asterism in the location of the colures by two different authorities: third, even if we chose to attribute intended precision to the statement of the Jvotisha, the difficulty of the observation, and the weakness of the Hindus as practical astronomers, would forbid us to suppose that they can have made other than a rude approximation to the true place of the solstices: and hence, finally, it is utterly in vain for us to attempt to assign a definite date to the observation here in question; a period of a thousand years is rather too little than too great to allow for all the enumerated sources of doubt and error. He who declares in favour of any one of the centuries between the eighth and the eighteenth before Christ, as the probable epoch of the Jyotisha observation, does so at his peril, and must be prepared to support his opinion by more pertinent arguments than have yet been brought forward in defence of such a claim.

"The possibility that the observation which we have been discussing may require to be yet more totally divorced from connexion with any assignable period in Hindu literary history, as having been made elsewhere than in India itself, is worth a passing reference, although it does not require to be urged. Some recent authors have shown an unnecessary degree of sensitiveness to any suggestion of the importation of astronomical knowledge into India in early times. Such importation, of course, is not to be credited as a fact, without satisfactory evidence; but it is, also, not to be rejected as a possibility, upon insufficient à priori grounds. To Müller's erroneous assumption (Preface, p. xxxviii.), that 'none of the sacrifices enjoined in the Brahmanas could be conceived' without 'the division of the heavens into twenty-seven sections', I have referred elsewhere (Journ. Am. Or, Soc., Vol. VIII., p. 74); claiming that, on the contrary, the concern of the nakshatras with these sacrifices is, for the most part, a matter of nomenclature merely. It is true, for instance, that one cannot obey an injunction to perform a certain sacrifice 'on the first of Chaitra', without a system of asterisms: but the reason why such a sacrifice had been enjoined was not that the moon was to be full fifteen days later in the neighbourhood of Spica Virginis, rather than of some other star; the ceremony was established for a certain new moon of spring, to which the star only gives a name: it may, for aught we know, have been religiously observed long before the month got its present title. The

asterism Chitrá does not furnish the occasion of the sacrifice, immediately or mediately; it simply denominates the natural period at the beginning of which the sacrifice is to be performed. And so in other like cases. It is not, indeed, to be denied that the nakshatras have acquired a certain influence and importance of their own, as regards the seasons of sacrifice: their propitious or unpropitious character must be had in view, in regulating some of its details; but all this, like the astrological influence of the signs of the zodiac, is only the natural secondary outgrowth of an institution originally intended for other purposes. To claim to settle the vexed and difficult question of the ultimate origin of the asterismal system, possessed in common by the Hindus, the Chinese, and the Arabs, by the simple consideration of its importance to the Hindu ceremonial, is wholly futile. Biot, by similar reasoning, arrives at the confident conclusion that the system must be indigenous to China: he finds it too thoroughly interwoven with the sacred and political institutions of that country to be able to conceive of its ever having been introduced from abroad. And special students of Arab antiquity, upon the same grounds, advance the same claim in behalf of Arabia. It is, in each case, prepossession which gives to this class of considerations a controlling importance: the question of origin, if it ever finds its satisfactory settlement, must be settled by arguments of another and more legitimate character."

* * * * * * * * * * *

"Let me not be misunderstood as attributing to the Hindus special incapacity for astronomy, or special awkwardness in the management of their calendar. They did all that could be expected of them, with their means and their habits of mind, towards reconciling and adjusting the trying differences of solar and lunar time; and with all the success which was needful for their purposes. I am only protesting against the misconceptions of those who would ascribe to them wants and desires, and credit them with mechanical devices, in no way answering to their condition. To look for an exact observation of the place of the colures in a treatise which adopts a year of 366 days, and assumes and teaches the equable increase and decrease of the length of the day from solstice to solstice, is, obviously, in vain: to calculate a precise date from such an observation is but to repeat, in another form, the worst errors of Bailly and Bentley." VISHNU PURÁNA.

Devala is cited as writing:

श्रित्रियाः सर्वा नागाया दहनानिकाः। वीषयो भृगुपुताः खुर्नव प्रोक्ताः पुरातनैः॥

That is to say, the vithis are declared to have been called, by the ancients, sons of Bhrigu.

In the ensuing stanzas, which are attributed to Kasyapa, we have the same filiation of the vithis:

चिष्वित्यादिषु यदा चर्नि भृगुनन्दनाः।
नागवीथीति सा चीया प्रथमा या निवीधत॥
रोहिष्णादि गजा चीयादित्यावैरावता स्नृता।

जारद्गवी विशाखावा मूजावा मृगवीथिका।
जावीथी विष्णुभावाजावा तु दहना स्नृता॥

Here the vithis are denominated Nagavithi, Gaja, Airavata, Vrishabha, Go, Jaradgavi, Mrigavithika, Ajavithi, and Dahana. But Mrigavithi consists of Mula, &c.; and Ajavithi, of Sravana, &c. In other words, the sequence of the asterisms, so far as indicated, is that observed in the extract, given at p. 266, supra, professedly from the Vayu-purana.

Áditya is Punarvasu; Vishnubha, Śravana; and Aja, Purvabhadrapada.
Aditi-whence the patronymic Áditya-is the presiding deity of Punar
vasu; Vishnu, of Śravana; and Aja, here substituted for his asterismof Purvabhadrapada.

The subjoined question is credited to Garga:

कत्तिका भरणी स्वाती नागवीथी प्रकीर्तिता।
रोहिखावासिस्रस्तिभा गर्नेरावता स्वभा॥
स्रवाहिनुंभ्रपीष्णाश्चि गोवीथीति प्रकीर्तिता।

सप्तमी मृगवीथी स्थादजवीथी तथाष्टमी।

According to this, we have:

Någavithi

Bharaúi Krittika

Gajá or Swáti

Gajavithi two other asterisms

Airávatá or Three asterisms Airávatí Řishabhá or Three asterisms Árshabhi Aja Ahirbudhna Govithi Paushna Aświn Śravańa and Járadgavi two other asterisms Mriga or Maitra and two other asterisms Mŕigavithí Hasta Chitra Ajavithi Viśákhiká The two Dahana Ashádhás.

Garga's order of the vithis agrees with Kasyapa's; but the constituent parts of the vithis, as here detailed, differ greatly from anything before brought forward. Not to mention other peculiarities, one vithi contains, in this distribution, four asterisms, and another, only two.

Ahirbudhna is Uttarabhádrapadá; Paushía, Revati; and Aświn, Aświni. As Bhaffa Utpala seems to intimate, it is, so far as we know, Garga's view of the vithis and their component members which Varáhamihira adduces and disapproves.

As to Nagavithi, it is the doctrine of the Samasa-sanhita also, that it

comprehends Bharani, Krittika, and Swati:

वीथी नागा नासा खातिर्भरणी च हात्तिका चैव।

And Parasara writes, to the same effect: नागारीययाव्यवाचि। For Ágneya is Krittika, Yamya, Bharani; and Vayavya, Swati.

Parasara.—The form of the mighty Hari which is present in heaven, consisting of the constellations, is that of a porpoise, with Dhruva situated in the tail. As Dhruva revolves, it causes the moon, sun, and stars* to turn round, also; and the lunar asterisms follow in its circular path: for all the celestial luminaries are, in fact, bound to the polar star by aerial cords. The porpoise-like figure of the celestial sphere is upheld by Narayana, who himself, in planetary radiance, is seated in its heart; whilst the son of Uttanapada, Dhruva, in consequence of his adoration of the lord of the world, shines in the tail of the stellar porpoise. The upholder of the porpoise-shaped sphere is the sovereign of all, Janardana. This sphere is the supporter

^{*} More closely, 'the moon, sun, and other planets': सेष अमन्श्रामयति चन्द्रादिखादिकान्यहान्।

i The reading of all my MSS., and that followed by both the commentators, is as follows:

of Dhruva; and by Dhruva the sun is upstayed. Upon the sun depends this world, with its gods, demons, and men. In what manner (the world depends upon the sun), be attentive, and you shall hear.

During eight months of the year, the sun attracts the waters, which are the essence of (all) fluids, and then pours them upon earth, (during the other four months), as rain: from rain grows corn; and by corn the whole world subsists. The sun with his scorching rays absorbs the moisture of the earth, and with them nourishes the moon. The moon communicates, through tubes of air, its dews to the clouds, which, being composed of smoke, fire, and wind (or vapour), can retain the waters with which they are charged: they are, therefore, called Abhras, because their contents are not dispersed. When, however, they are broken to pieces

Consequently, the Linga Purina observes, there is no waste of water in the universe, as it is in constant circulation:

² The theory of the clouds is more fully detailed in the Váyu, Linga, and Matsya Puranas.† It is the same in its general tenour, but comprises additional circumstances. Clouds, according to those authorities, are of three classes: 1. Ágneya, originating from fire or heat, or, in other words, evaporation: they are charged with wind and rain, and are of various orders, amongst which are those called Jímúta, from their supporting life;

That rain which falls whilst the sun is shining, and without a cloud in the sky, is the water of the heavenly Ganges, shed by the solar rays. If, however, rain falls from a bright and cloudless sky whilst the sun is in the mansion of Krittiká and the other asterisms counted by odd numbers, (as the third, fifth, &c.,) the water, although that of the Gangá of the sky, is scattered by the elephants of the quarters, (not by the rays of the sun): it is only when such rain falls, and the sun is

VISHNU PURÁNA.

The water which the clouds shed upon earth is, in truth, the ambrosia of living beings; for it gives fertility to the plants which are the support of their existence.* By this all vegetables grow and are matured, and become the means of maintaining life. With them, again, those men who take the law for their light perform daily sacrifices, and, through them, give nourishment to the gods. And thus sacrifices, the Vedas, the four castes, with the Brahmans at their head, all the residences of the gods, all the tribes of animals, the whole world, all are supported by the rains by which food is produced. But the rain is evolved by the sun; the sun is sustained by Dhruva; and Dhruva is supported by the celestial porpoise-shaped sphere, which

phants of the quarters is, in summer, dew, and, in winter, snow; or the latter is brought, by the winds, from a city called Puńdra, which lies between the Himavat and Hemakúta mountains, and falls down upon the former.

In like manner, also, as heat radiates from the sun, so cold radiates from the moon:

सूर्यादुष्णं निःसर्ते सीमाच्हीतं प्रवर्तते । †

* All my MSS, read as follows:

यत्तु मेघैः समुत्पृष्टं वारि तत्नाणिनां द्विज। पुष्णात्वीषधयः सर्वा जीवनायामृतं हि तत्॥

'As to the water discharged by the clouds, regenerate one, it developes all annuals, for the behoof of living creatures: it is, indeed, nectar to existence.'

Note the affectation of archaism in Muse: as accusative plural.

CHAPTER X.

Names of the twelve Adityas. Names of the Rishis, Gandharvas, Apsarasas, Yakshas, Uragas, and Rákshasas, who attend the chariot of the sun in each month of the year. Their respective functions.

Paráśara.—Between the extreme northern and southern points, the sun has to traverse, in a year, one hundred and eighty degrees, ascending and descending. His car is presided over by divine Ádityas, Kishis, heavenly singers and nymphs, Yakshas, terpents, and Rákshasas: (one of each being placed in it in every month). The Áditya Dhátři, the sage Pulastya, the Gandharva Tumburu, \$ the nymph Kratu-

¹ It might be doubted whether the text meant 180 in each hemisphere, or in both; but the sense is sufficiently clear in the Váyu, &c.; and the number of Mańdalas travelled in the year is 360: the Mańdalas, 'circles' or 'degrees', being, in fact, the sun's diurnal revolutions, and their numbers corresponding with the days of the solar year; as in the Bhavishya Puráńa:

द्वाशीतिमण्डनशतिमयन्यन्देन व हयाः। बाह्यतोऽभ्यन्तरं चैव मण्डलं दिवसक्रमात्॥

The horses of the sun travel twice 180 degrees in a year, internal and external (to the equator), in the order of the days.'

[&]quot; Strictly, 'divine beings, namely, Adityas.'

[†] In the original, Gandharvas, Apsarases, and Gramanis.

The Sun's attendants are said, in the Bhágapata-puráña, V., XXI., 18, to be Rishis, Gandharvas, Apsarases, Nágas, Grámanis, Yátudhánas, and Devas.

[§] One of my MSS. gives Tumbaru.

sthalá,* the Yaksha Rathakŕit, the serpent Vásuki, and the Rákshasa Heti,† always reside in the sun's car, in

* Four MSS. have Kritasthala; three, Kritasthali.

† The mythological figments named in this sentence are not characterized in the original, Rathakfit excepted, who is there called a Gramańi, i. e., Yaksha.

In the Sanskrit of our text, no uniform order is observed in registering the appellations of the Sun's attendants during each of the twelve months; these appellations being disposed, in the main, to satisfy metrical exigencies. Professor Wilson's arrangement of the Adityas, &c., according to the subordination indicated above, admits of amendment; and the Professor, as I show in other notes to this chapter, would probably, have taken a different view of some of them, had he scrutinized the commentaries more closely. the month of Madhu or Chaitra, as its seven guardians. In (Vaiśákha or) Mádhava the seven are Aryaman,* Pulaha, Nárada, Punjikasthalí,† Rathaujas, Kachchhaníra,‡ and Praheti. In Śuchi§ (or Jyaishtha) they are Mitra, Atri, Háhá, Menaká,¶ Rathaswana, Takshaka, and Paurusheya.*** In (the month) Śukra†† or Áshádha they are Varuńa, Vasishtha, Huhu,‡ Sahajanyá,§§ Ra-

As to many of these names, it is no easy undertaking to determine which of the Puranas gives them correctly. See my note at pp. 290—293, infra.

Amsa is the older name, not Amsu; Daksha anciently held the place

of Dhatfi; &c. &c.

For the Adityas, see p. 27, supra, and Dr. Muir, Journal of the Royal Asiatic Society, New Series, Vol. I., pp. 51—140; for the Rishis, Vol. I. of this work, pp. 100—103; for the Gandharvas, pp. 75—77, supra; for the Apsarases, pp. 75 and 80—84, supra; for the Gramanis or Yakshas, the Sarpas or Serpents, and the Rakshasas, pp. 74, 75, supra.

* Corrected from "Aryamat", and again in the note at the end of this

chapter. See p. 27, supra, where the Translator had "Aryaman".

† All my MSS, but one have Punjikasthala.

; In emendation of "Kachanira".

§ See the note on Sukra, a little below.

One of my MSS. exhibits the elongated form Hahaka.

¶ Professor Wilson put the short form, "Mená", for which I find no authority in this place.

** Called, in the original, a Rakshas.

it Jyaishtha, just above, is supplied by the Translator; his Ashadha is in the original. Sukra, according to the Medini-koša, designates the one and the other of these months; but I nowhere find that Suchi stands except for Ashadha. After looks, therefore, like an error for Taxis. Instead of the lection Tax, yielding 'in Sukra', some MSS. have, simply, with, 'in the month', of Ashadha, to-wit. Taxis, 'in Suchi', would suit the metre equally well.

The commentators remark on the names here discussed, but neither mention other readings, nor support, by adducing external authorities, the tenability of the text which they accept.

11 Also read Hubu, Hubu, and Hubu.

§§ Did Kálldása invent his own mythology, or did he follow an earlier than that of the Puranas, in making Chitralekhá wait on the Sun through

thachitra, Nága, * and Budha. † In the month Nabhas (or Śrávańa) they are Indra, Angiras, Viśwavasu, Pramlochá, : Śrotas, § and Elápatra (the name of both serpent and Rákshasa). In the month Bhádrapada they

the hot season, that is to say, during Jyaishtha and Ashadha? See the

Vikramorvasi, Act III.

* The order of these names, in the original, is: Varuna, Vasishtha, Naga, Sahajanya, Huhu, Budha, Rathachitra. One of my MSS. has the reading Nága; but all the rest exhibit Rambhá. The Apsaras so called is appointed, below, for Phalguna; and the smaller commentary is disposed to take the view that, under the name Sahajanya, she here serves during the first of two months. Rathachitra is, then, to be taken as the name of the Yaksha, and also as that of the serpent. The reading Naga, in preclusion of the necessity of such speculation, is, however, mentioned: रक्षा च सहजन्येति पाठे फालाने वन्यमाण्यभायावृत्यर्थं सहजन्येति संज्ञानरिण तस्य विशेषणम् । रथचिच इति यचसर्पयीरेकं नाम । नागय सहजन्येति पाठे नागसंज्ञकः सर्पः।

In the larger commentary we read:

रक्षा अपसराः। सहजन्येति नामान्तरेण तस्या एव विशेषणं फाल्गुने वच्यमाग्रद्भाव्यावृत्त्वर्थम्। तदा र्वचित्र द्ति यवसर्पयोरिकं गाम। वत्सासहजन्ये इति पाठे वत्सः सर्पः। देवतावन्द्रत्वाहीर्घत्वम् । Here

we have a still different serpent introduced, Vatsa.

There is, in my opinion, not much doubt that Rambha is, here, a corruption of Rambha, - a very unusual name, if compared with the familiar Rambhá,-the reading of the Vayu-purána and Linga-purána. Or, if we had the reading रकासहजन्ये, - which that of वत्सासहजन्ये. coupled with the fact of the common occurrence of thi HEATI. evinces to be altogether supposable, -we should still be entitled to Rambha. by the rule referred to, touching Vatsa, in the last paragraph. See Pabini, VI., III., 26. That neither of these very obvious suggestions presented itself to our commentators is little to their credit.

† Vadha, though occurring in but one of my MSS., is the only reading

that I find in other Purauas.

Five of my MSS, have, distinctly, Pramlova; but this, which I have seen elsewhere, as in MSS, of the Vayu-purana, seems to be only an error of the scribes.

§ The more ordinary, and preferable, reading is Srotas. But Pratali,

which also is found in MSS., is, more likely, the right name.

इन्ह्री विश्वावसः श्रोतः एनापत्रस्रधाकिराः। प्रकाचा च वभस्ति सर्पदाने वसन्ति वै॥

In the month of Kárttika they are Parjanya, Bharadwája, (another) Viśwávasu, Viśwáchí, Senajit, Airávata, and Chápa.§ In (Ágraháyaňa or) Márgasírsha they are Amśu, Kaśyapa, Chitrasena, Urvaśí, Tárkshya,¶ Mahápadma, and Vidyut. In the month of Pausha, Bhaga, Kratu, Úrňáyu, Púrvachitti,** Arishíanemi, Karkofaka, and Sphúrja are the seven who abide in the orb of the sun, the glorious spirits who scatter light throughout the universe. In the month of Mágha the seven who are

serpent; and Sarpa-omitted in the translation-is the Rákshasa. Thus the smaller commentary: एलापनी नागः। * सपी राचसः। And the larger commentary: सपी राचसः।

* Umlochá is the lection of two MSS.

+ This is, perhaps, a corruption of Aruna, or of Varuna.

† The more usual designation of the month Aśwayuja, named in the original.

§ The smaller commentary is for taking Senajit twice; as the Yaksha, and as the Rakshasa. But it also notices the reading Chapa: सन्जिल्संडी यन्। सनजिलाप इति पाठे वापो राज्यः। The larger commentary has these identical words, with the important difference of reading आपो राज्यः, 'Ap is the Rakshasa'.

All my MSS. have, wrongly, and also, the reading preferred by the commentators. Had the authors of the commentaries but looked into the Puranas which I quote in a subsequent note to this chapter, they would have seen that and is, doubtless, to give place to are: To say what I can for the commentators, it is not forbidden to suppose that both are created and are commentators, it instead of are consequently may be the offspring of meddlesome transcription. 'Apas' - an outgrowth of ap is a rare word for 'Water'. The Rákshasa of the month preceding Karttika, it will be observed, is Váta, 'Wind'.

In five MSS. I find Kasyapa. There seems to be no good reason, however, for believing that this is anything better than a clerical error.

¶ One MS gives Tarksha. Called an Apsaras, in the original.

in the sun are Twashtri, Jamadagni, Dhritarashtra, Tilottama, Ritajit, * Kambala, and Brahmapeta. Those who abide in the sun in the month Phalguna are Vishnu, Viśwamitra, Suryavarchas, † Rambha, Satyajit, Aśwatara, and Yajnapeta.

In this manner, Maitreya, a troop of seven celestial beings, supported by the energy of Vishńu, occupies, during the several months, the orb of the sun. The sage celebrates his praise, and the Gandharva sings, and the nymph dances before him, the Rákshasa§ attends upon his steps, the serpent harnesses his steeds, and the Yaksha trims the reins: If the (numerous pigmy sages, the) Válikhilyas, *** ever surround his chariot. The whole troop of seven, attached to the sun's car, are the agents in the distribution of cold, heat, and rain, at their respective seasons.

¹ A similar enumeration of the attendants upon the sun's car

^{*} Kratujit is the name in one MS.

[†] Instead of the "Súryaverchchas" of the original edition.

[†] The original mentions him as a Rakshas.

Besides the variants already specified, I have found, with several that seem quite unworthy of notice, the following, each occurring in only a single MS.: Kashfanira, for Kachchhanira; Maitra, for Mitra; Daksha, for Haha; Rathasyana and Daksha, for Rathaswana; Paurusha, for Paurusheya; Dhana, for Budha; Ápúrayat, for Ápúraúa; Śyenajit, for Senajit; Karkataka, for Karkotaka; Saptajit, for Satyajit.

[§] In the Sanskrit, nišácharáh, 'night-roamers.'

The original, वहन्ति पद्मगाः, is explained, in both the commentaries: वहन्ति वहनानुकूलत्या रथं संनद्धान्तीत्यर्थः। संनद्धान्ति रथं नागा रित गुकोत्तिः।

प्रची: क्रियतेऽभीषुशंग्रह:। Thus interpreted, in the smaller commentary: अभीषसंग्रह:। रश्मिसंगीजनम्।

Add, where I have left blanks, Senajit and Tárkshya, senánis. Are they the chiefs of the Grámanis?

Variants are: Tumbaru, for Tumburu; Nimlochá, for Anumlochá; Úrjas, for Úrja; Śrotas, for Prátali; Ápúraúa, for Aruúa; Tárksha, for Tárkshya; Kratujit, for Kitajit; Sankírúa, for Sankírúára; Ap, for Apas. In several manuscripts, moreover, there are traces of the names Rakshoha and Nříšwadhátu, as against the elsewhere explicit Heti and Praheti.

The terms Yatudhana and Rakshasa are used, in the Puranas, synonymously. Anciently, however, the Yatudhana appears to have been a goblin with hoofs, and so far forth comparable with the Devil of our pious ancestors. See Dr. Muir, Journal of the Royal Asiatic Society, New Series, Vol. I., p. 95, first foot-note.

In the Linga-purchia, Prior Section, LV., 17-65, the names of the Sun's attendants are catalogued twice, at full length:

Here, as before, Senajit and Tarkshya figure as senanis.

Variants are: Tumbaru, for Tumburu; Mitrasena, for Chitrasena; Rathabhřit, for Rathakřit; Rathamitra, for Rathachitra; Nága, for Rambha; Iravat, for Airávata. In one of the two enumerations above spoken of occurs Rathaswana; in the other, Prátah.

The Kūrma-purāna—Part I., Chapter XIII., 2-16—coincides with the Linga-purāna, except as regards the particulars about to be specified. It gives Sukra and Kaušika, the synonyms of Indra and Viśwamitra: it has Amša, for Amšu; Varchavasu, for Paravasu; Subahuka, for Subahu; Sarpapungava, for Rambha; and it transposes Subahuka and Rathachitra, Varuna and Rathaswana, Senajit and Sushena, Dhananjaya and Airavata. Its variants, in my MSS., are: Jayatsena, for Ugrasena; Tushfavu, for Tumburu; Prakoshūa, for Pramlocha; Anushūa, for Anumlocha; Kankanūra and Kanganīla, for Kankanūka; Adya for Ap; Bala, for Vata.

These details - and they might be largely supplemented - were worth going into, if only to show, that, in order to arrive at even an approximation to the correct reading of a proper name met with in a Purana, one cannot consult too many works of the same class, or too many

copies of each work.

CHAPTER XI.

The sun distinct from, and supreme over, the attendants on his car: identical with the three Vedas and with Vishnu: his functions.

MAITREYA.—You have related to me, holy preceptor; the seven classes of beings who are ever present in the solar orb, and are the causes of heat and cold.* You have, also, described to me their individual functions, sustained by the energy of Vishnu. But you have not told me the duty of the sun himself; for, if, as you say, the seven beings (in his sphere) are the causes of heat, cold, and rain, how can it be also true, (as you have before mentioned,) that rain proceeds from the sun? Or how can it be asserted that the sun rises, reaches the meridian, or sets, if these situations be the act of the collective seven?

Paráśara.—I will explain to you, Maitreya, the subject of your inquiry. The sun, though identified with the seven beings in his orb, is distinct from them, as their chief. The entire and mighty energy of Vishńu, which is called the three Vedas, or Rich, Yajus, and Sáman, is that which enlightens the world, and destroys its iniquity.: It is that, also, which, during the

continuance of things, is present as Vishnu, actively engaged in the preservation of the universe, and abiding, as the three Vedas, within the sun. The solar luminary that appears in every month is nothing else than that very supreme energy of Vishnu which is composed of the three Vedas, influencing the motions (of the planet): for the Richas (the hymns of the Rigveda) shine in the morning; * the prayers of the Yajus, at noon; and the Brihadrathantara + and other portions of the Sáman, in the afternoon. This triple impersonation of Vishnu, distinguished by the titles of the three Vedas, is the energy of Vishnu, which influences the positions of the sun.1

But this triple energy of Vishnu is not limited to the sun alone; for Brahmá, Purusha (Vishnu), and Rudra

¹ This mysticism originates, in part, apparently, from a misapprehension of metaphorical texts of the Vedas, - such as agr बसीव विचा तपति, 'that triple knowledge (the Vedas) shines', and ऋचलापनि, 'the hymns of the Rich shine,' +- and, in part, from the symbolization of the light of religious truth by the light of the sun, as in the Gayarri. P. 250, note 2. To these are to be added the sectarial notions of the Vaishnavas.

^{&#}x27;Just as, in the class of seven, the great sun, by virtue of its superiority, is unmatched, so stands supreme the whole or aggregated power of Vishnu, denominated Rich, Yajus, and Saman. It is this same triad of Vedas that burns and destroys the sin of the world."

The smaller commentary takes aufa, which I render 'burns', to signify, apparently, 'warms', and to be without regimen.

^{*} Purváhna, 'forencon'.

are, also, made up of the same triform essence. In creation, it is Brahmá, consisting of the Rig-veda; in preservation, it is Vishńu, composed of the Yajur-veda; and, in destruction, Rudra, formed of the Sáma-veda, the utterance of which is, consequently, inauspicious. 1*

Thus, the energy of Vishnu, made up of the three Vedas, and derived from the property of goodness † presides in the sun, along with the seven beings belonging to it; and, through the presence of this power, the planet shines with intense radiance, dispersing, with his beams, the darkness that spreads over the whole world: and hence the Munis praise him, the quiristers and nymphs of heaven sing and dance before him, and fierce spirits; and holy sages § attend upon his path. Vishnu, in the form of his active energy, never either rises or sets, and is, at once, the sevenfold sun and distinct from it. In the same manner as a man, approaching a mirror, placed upon a stand, beholds, in it, his own image, so the energy (or reflection) of

(to the full, in the fortnight of its growth); and, in the fortnight of its wane, the ambrosia of its substance is perpetually drunk by the immortals, (until the last day of the half month), when the two remaining digits are drunk by the progenitors: hence these two orders of beings are nourished by the sun. The moisture of the earth, which the sun attracts by his rays, he again parts with, for the fertilization of the grain and the nutriment of (all terrestrial) creatures; and, consequently, the sun is the source of subsistence to every class of living things,—to gods, progenitors, mankind, and the rest. The sun, Maitreya, satisfies the wants of the gods for a fortnight (at a time); those of the progenitors, once a month; and those of men and other animals, daily.

for a whole Kalpa, as do the coursers of the sun. The radiant sun supplies the moon,-when reduced, by the draughts of the gods, to a single Kalá, -with a single ray; and, in the same proportion as the ruler of the night was exhausted by the celestials, it is replenished by the sun, the plunderer of the waters: for the gods, Maitreya, drink the nectar and ambrosia accumulated in the moon, during half the month; and, from this being their food, they are immortal. Thirty-six thousand, three hundred, and thirty-three divinities drink the lunar ambrosia.† When two digits remain, the moon enters the orbit of the sun, and abides in the

The orb of the moon, according to the Linga, § is only congealed water:

घनतोयाताकं तच मण्डलं ग्राग्निनः सातम्। as that of the sun is concentrated heat:

घनतेजोमयं शुक्तं मण्डलं भास्तरस्य च।

* सुधामृतं, i. e., according to the smaller commentary, सुधारूपममृतं स्वभवज, 'amirita-a prophylactic against death-in the form of sudha,' And this view does not clash with the fact that the food of the gods is implied, in the second half of the stanza, to be simply sudha:

संवृतं चार्धमासेन तत्सोमस्यं सुधामृतम्। पिवन्ति देवा मैचेय सुधाहारा चती उमराः॥

Where named conjointly, sudhá and amiita, being alike potable, can never be so sharply distinguished as the nectar and ambrosia of Olympian gastronomy, whose ordinarily recognized consistency, however, Sappho and Aleman reverse. Amirita is "not a solid substance, like eusgonia, though both words are kindred in origin." Goldstücker's Sanskrit Dictionary, p. 380. In the chapter under annotation, amrita and sudhá are used as though they were, respectively, generic and specific.

ray called Amá; whence the period is termed Amávásyá.* In that orbit, the moon is immersed, for a day and night, in the water;† thence it enters the branches and shoots of the trees, and thence goes to the sun. Consequently, any one who cuts off a branch, or casts down a leaf, when the moon is in the trees, (the day of its rising invisible), is guilty of Brahmanicide. When the remaining portion of the moon consists of but a fifteenth part, the progenitors approach it in the afternoon, and drink the last portion, that sacred Kalá which is composed of ambrosia, and contained in the two digits of the form of the moon.

¹ There is some indistinctness in this account, from a confusion between the division of the moon's surface into sixteen Kalás or phases, and its apportionment, as a receptacle of nectar, into fifteen Kalás or digits, corresponding to the fifteen lunations, on the fourteen of which, during the wane, the gods drink the Amrita, and on the fifteenth of which the Pitris exhaust the remaining portion. The correspondence of the two distinctions appears to be intended by the text, which terms the remaining digit or Kalá, composed of Amrita, the form or superficies of the two Kalás:

^{*} For other etymologies of amávásyá, from the Satapatha-bráhmana, Matsya-purána, &c., see Goldstücker's Sanskrit Dictionary, pp. 364, 365, sub voce असावास्ता.

[§] This is the reading adopted in the smaller commentary; and the larger commentary, though not adopting it, pronounces it to be 'clear', spashta.

The celestial porpoise, in which Dhruva is fixed, has been mentioned: but you shall hear its constituent parts in more detail; as it is of great efficacy.* For the view of it at night expiates whatever sin has been committed during the day; and those who behold it live as many years as there are stars in it, in the sky, or even more. Uttánapáda is to be considered as its upper jaw; Sacrifice, as its lower. Dharma is situated on its brow; † Náráyańa, in its heart. The Aświns are its two fore feet; and Varuńa and Aryaman, its two hinder legs. § Samvatsara is its sexual organ; Mitra, its organ of excretion. fiction. The component parts of it are much more fully detailed in the Bhágavata, * whence it has been translated by Sir William

* V., XXIII. In preference to Sir William Jones's translation, I transcribe that of Burnouf:

"Çuka dit: Treize cent mille Yôdjanas au delà est le lieu qu'on nomme la demeure suprême de Vichíu, où le grand serviteur de Bhagavat, Dhruva, fils d'Uttânapâda, honoré par Agni, Indra, le Pradjâpati Kaçvapa et Dharma, associés tous pour une durée pareille et marchant autour de lui avec respect en le laissant à leur droite, réside encore aujourd'hui, pour tout le temps du Kalpa, terme de son existence; sa grandeur a été décrite dans ce poëme.

"Placé par le Seigneur comme le poteau solide, autour duquel les troupes des astres, planètes et Nakchatras, tournent entraînées par le Temps divin dont l'œil ne se ferme jamais et dont la course est insensible, il resplendit éternellement; comme les bœufs marchant autour du poteau de l'aire auquel ils sont attachés, les astres parcourent, chacun suivant leur position, les degrés du cercle [céleste], pendant l'espace de

temps que forment les trois divisions du jour.

"C'est ainsi que les troupes des astres, planètes et autres, attachées par un lien intérieur et extérieur au cercle du Temps, tournent jusqu'à la fin du Kalpa, poussées par le vent, autour de Dhruva auquel elles sont suspendues. De même que les nuages et les oiseaux se meuvent dans la ciel, ceux-là par l'action du vent, ceux-ci sous la direction de leurs œuvres, ainsi les astres, soutenus par l'union de la Nature et de l'Esprit, et suivant la voie tracée par leurs œuvres, ne tombent pas sur la terre.

"Quelques-uns décrivent cette armée des astres sous la figure de Çîçumâra (la Tortue), symbole sous lequel en se représente par la médi-

tation du Yôga le bienheureux Vâsudêva.

"A l'extrémité de la queue de cet animal, dont la tête se dirige vers le sud et dont le corps est courbé en forme d'anneau, est placé Dhruva; le long de sa queue sont le Pradjapati, Agni, Indra, Dharma, et à la racine, Dhâtři et Vidhâtři; sur ses reins sont les sept Richis. Sur le côté droit de son corps, ainsi courbé vers le sud, on place les Nakchatras qui se trouvent sur la route septentrionale [du soleil], et sur le côté gauche, ceux de la route méridionale; de sorte que les deux côtés de la Tortue, dont le corps a la forme d'un anneau, sont composés d'un nombre

and their inhabitants. Their nature has, also, been explained; but it may be briefly recapitulated.

From the waters, which are the body of Vishńu, was produced the lotos-shaped earth, with its seas and mountains. The stars are Vishńu; the worlds are Vishńu; forests, mountains, regions, rivers, oceans, are Vishńu: he is all that is, all that is not. He, the lord, is identical with knowledge, through which he is all forms, but is not a substance. You must conceive, therefore, mountains, oceans, and all the diversities of earth and the rest, are the illusions of the apprehension. When knowledge is pure, real, universal, independent of works, and exempt from defect, then the varieties of substance, which are the fruit of the tree of desire, cease to exist in matter. Where is the thing that is devoid of beginning, middle, and end, of one uniform nature? How can reality be predicated of that which is subject to change, and reassumes no more its original character? Earth is fabricated into a jar; the jar is divided into two halves; the halves are broken to pieces; the pieces become dust; the dust becomes atoms. Say, is this reality, though it be so understood by man, whose selfknowledge is impeded by his own acts? Hence, Brahman, except discriminative knowledge, there is nothing, anywhere, or at any time, that is real. Such knowledge is but one, although it appear manifold, as diversified by the various consequences of our own acts. Knowledge, perfect, pure, free from pain, and detaching the affections from all that causes affliction; knowledge, single and eternal-is the supreme Vásudeva, besides whom there is nothing. The truth has been, thus, communicated to you by me; that knowledge which is truth; from which all that differs is false. That information, however, which is of a temporal and worldly nature has, also, been imparted to you. The sacrifice, the victim, the fire, the priests, the acid juice, the gods, the desire for heaven, the path pursued by acts of devotion and the rest, and the worlds that are their consequences, have been displayed to you. CHAPTER XIII.

Legend of Bharata. Bharata abdicates his throne and becomes an ascetic: cherishes a fawn, and becomes so much attached to it, as to neglect his devotions: he dies: his successive births: works in the fields, and is pressed, as a palankin-bearer, for the Raja of Sauvíra: rebuked for his awkwardness: his reply: dialogue between him and the king.

Maitreya.—Reverend sir,¹ all that I asked of you has been thoroughly explained; namely, the situation of the earth, oceans, mountains, rivers, and planetary bodies; the system of the three worlds, of which Vishnu is the stay. The great end of life has, also, been expounded by you, and the preeminence of holy knowledge.* It now remains that you fulfil the promise you made, (some time since),² of relating to me the story of king Bharata, and how it happened, that a monarch like him, residing constantly at (the sacred place) Sálagráma, and engaged in devotion, with his mind ever applied to Vásudeva, should have failed,

" परमार्थसु ते प्रोक्ती यथा ज्ञानं प्रधानतः।

'And the supreme object of human thought has been explained by thee, just as divine knowledge, preeminently.'

The commentators twist 'divine knowledge, preeminently' into 'preeminent divine knowledge'. But this seems contrary to any natural interpretation of the text.

through the sanctity of the shrine, and the efficacy of his abstractions, to obtain final emancipation; how it was that he was born again as a Brahman; and what was done by the magnanimous Bharata in that capacity: all this it is fit that you inform me.

Paráśara.—The illustrious monarch of the earth resided, Maitreya, for a considerable period, at Śalagráma, his thoughts being wholly dedicated to god, and his conduct distinguished by kindness and every virtue, until he had effected, in the highest degree, the entire control over his mind.† The Raja was ever repeating the names Yajneśa, Achyuta, Govinda, Mádhava, Ananta, Keśava, Krishńa, Vishńu, Hrishíkeśa: nothing else did he utter, even in his dreams; nor upon anything but those names, and their import, did he ever meditate. He accepted fuel, flowers, and holy grass, for the worship of the deity, but performed no other religious rites, being engrossed by disinterested, abstract devotion.

On one occasion, he went to the Mahánadí, 1 for the

§ Vide p. 146, supra.

A The Mahánadí; is, properly, a river in Orissa: but the name is applicable to any great stream; and its connexion with Śalagráma Tírtha makes it probable that it is intended for the Gańdakí or Gańdaka, § in which the Śalagráma or Ammonite is most abundantly found. It may be here noticed, that Śalagráma is named amongst the Tírthas in the Mahábhárata: see p. 102, n. 3.

purpose of ablution. He bathed there, and performed the ceremonies usual after bathing. Whilst thus occupied, there came to the same place a doe big with young, who had come out of the forest to drink of the stream. Whilst quenching her thirst, there was heard, on a sudden, the loud and fearful roaring of a lion; on which the doe, being excessively alarmed, jumped out of the water upon the bank. In consequence of this great leap, her fawn was suddenly brought forth, and fell into the river; and the king, seeing it carried away by the current, caught hold of the young animal, and saved it from being drowned. The injury received by the deer, by her violent exertion, proved fatal; and she lay down, and died; which being observed by the royal ascetic, he took the fawn (in his arms), and returned, with it, to his hermitage. There he fed it and tended it every day; and it throve and grew up under his care. It frolicked about the cell, and grazed upon the grass in its vicinity; and, whenever it strayed to a distance, and was alarmed at a wild beast, it ran back thither for safety. Every morning it sallied forth from home, and every evening returned to the thatched shelter of the leafy bower of Bharata.

Whilst the deer was, thus, the inmate of his hermitage, the mind of the king was ever anxious about the animal, now wandering away, and now returning to his side; and he was unable to think of anything else.* He had relinquished his kingdom, his children, all his friends, and now indulged in selfish affection for a

fawn. When absent for a longer time than ordinary, he would fancy that it had been carried off by wolves, devoured by a tiger, or slain by a lion. "The earth," he would exclaim, "is embrowned by the impressions of its hoofs. What has become of the young deer, that was born for my delight? How happy I should be, if he had returned from the thicket, and I felt his budding antlers rubbing against my arm. These tufts of sacred grass, of which the heads have been nibbled by his new teeth, look like pious lads chanting the Sáma-veda."1* Thus the Muni meditated, whenever the deer was long absent from him; and contemplated him with a countenance animated with pleasure, as he stood by his side. His abstraction; was interrupted; the spirit of the king being engrossed by the fawn, even though he had abandoned family, wealth, and dominion. The firmness of the prince's mind became unsteady, and wandered with the wanderings of the young deer. In the course of time, the king became subject to its influence. He died, watched by the deer, with tears in its eyes, like a son mourning for his father: and he himself, as he expired, cast his eyes upon the animal, and thought of nothing else, being wholly occupied with one idea.

¹ The applicability of this simile is not explained by the commentator. It refers, possibly, to the cropped or shaven heads of the religious students.

In consequence of this predominant feeling at such a season, he was born again, in the Jambumarga forest, 1 as a deer, with the faculty of recollecting his former life; which recollection inspiring a distaste for the world, he left his mother, and again repaired to (the holy place) Śálagráma. Subsisting, there, upon dry grass and leaves, he atoned for the acts which had led to his being born in such a condition; and, upon his death, he was next born as a Brahman, still retaining the memory of his prior existence. He was born in a pious and eminent family of ascetics, who were rigid observers of devotional rites. Possessed of all true wisdom, and acquainted with the essence of all sacred writings, he beheld soul as contradistinguished from* matter (Prakriti). Imbued with knowledge of self, he beheld the gods and all other beings as, in reality, the same. It did not happen to him to undergo investiture with the Brahmanical thread, nor to read the Vedas with a spiritual preceptor, nor to perform ceremonies, nor to study the scriptures. † Whenever spoken to, he replied incoherently, and in ungrammatical and unpolished speech.: His person was un-

clean; and he was clad in dirty garments. Saliva dribbled from his mouth; and he was treated with contempt by all the people. Regard for the consideration of the world is fatal to the success of devotion. The ascetic who is despised of men attains the end of his abstractions. Let, therefore, a holy man pursue the path of the righteous, without murmuring, and, though men contemn him, avoid association with mankind.* This, the counsel of Hiranyagarbha,1 did the Brahman call to mind, and, hence, assumed the appearance of a crazy idiot, in the eyes of the world. His food was raw pulse, potherbs, wild fruit, and grains of corn. Whatever came in his way he ate, as part of a necessary but temporary infliction.2+ Upon his father's death, he was set to work, in the fields, by his brothers and his nephews, and fed, by them, with vile for and, as he was firm and stout of make, and a simpleton

in (outward) act, he was the slave of every one that chose to employ him, receiving sustenance alone for his hire.*

The head-servant; of the king of Sauvíra, looking upon him as an indolent, untaught Brahman, thought him a fit person to work without pay (and took him into his master's service, to assist in carrying the palankin).

The king, having ascended his litter, on one occasion, was proceeding to the hermitage of Kapila, on the banks of the Ikshumatí river, 1 to consult the sage,to whom the virtues leading to liberation were known,what was most desirable in a world abounding with care and sorrow. Amongst those who, by order of his head-servant, had been compelled gratuitously to carry the litter, was the Brahman, who had been equally pressed into this duty, and who, endowed with the only universal knowledge, and remembering his former existence, bore the burthen as the means of expiating the faults for which he was desirous to atone. Fixing his eyes upon the pole, he went tardily along, whilst the other bearers moved with alacrity; and the king, feeling the litter carried unevenly, called out: "Ho, bearers! What is this? Keep equal pace together." Still it proceeded unsteadily; and the Raja again exclaimed: "What is this? How irregularly are you

going!" When this had repeatedly occurred, the palankin-bearers at last replied to the king: "It is this man, who lags in his pace." "How is this?" said the prince to the Brahman. "Are you weary? You have carried your burthen but a little way. Are you unable to bear fatigue? And yet you look robust." The Brahman answered and said: "It is not I who am robust; nor is it by me that your palankin is carried. I am not wearied, prince; nor am I incapable of fatigue." The king replied: "I clearly see that you are stout, and that the palankin is borne by you; and the carriage of a burthen is wearisome to all persons." "First tell me," said the Brahman, "what it is of me that you have clearly seen; and then you may distinguish my properties as strong or weak. The assertion that you behold the palankin borne by me, or placed on me, is untrue. Listen, prince, to what I have to remark. The place of both the feet is the ground; the legs are supported by the feet; the thighs rest upon the legs; and the belly reposes on the thighs; the chest is supported by the belly; and the arms and shoulders are propped up by the chest: the palankin is borne upon the shoulders; and how can it be considered as my burthen? This body which is seated in the palankin is defined as Thou. Thence, what is, elsewhere, called This is, here, distinguished as I and Thou. I, and thou, and others are constructed of the elements; and the elements, following the stream of qualities, assume a bodily shape; but qualities, such as goodness and the rest,

are dependent upon acts; and acts, accumulated in ignorance, influence the condition of all beings. The pure, imperishable soul, tranquil, void of qualities, preeminent over nature (Prakriti), is one, without increase or diminution, in all bodies. But, if it be equally exempt from increase or diminution, then with what propriety can you say to me, 'I see that thou art robust?' If the palankin rests on the shoulders, and they on the body, the body on the feet, and the feet on the earth, then is the burthen borne as much by you as by me. When the nature of men is different, either in its essence or its cause, then may it be said that fatigue is to be undergone by me. That which is the substance of the palankin is the substance of you, and me, and

¹ The condition—that is, the personal individuality—of any one is the consequence of his acts; but the same living principle animates him, which is common to all living things.

² The body is not the individual; therefore, it is not the individual, but the body, or, eventually, the earth, which bears the burthen.

^{&#}x27;Since this litter, which rests on the shoulders, nevertheless rests on the earth, the feet, the legs, the hips, the thighs, and the belly, also, therefore the burthen is the same for me and for thee. In the same manner, the burthen that comes from the litter is the same to other beings, also, besides thee and me; and not only this burthen, but likewise that which comes from mountains, trees, and houses, or even that which comes from the earth.'

all others; being an aggregate of elements aggregated by individuality."*

Having thus spoken, the Brahman was silent, and went on bearing the palankin. But the king leaped out of it, and hastened to prostrate himself at his feet, saying: "Have compassion on me, Brahman, and cast aside the palankin; and tell me who thou art, thus disguised under the appearance of a fool." The Brahman answered and said: "Hear me, Raja. Who I am it is not possible to say: arrival at any place is for the sake of fruition; and enjoyment of pleasure, or endurance of pain, is the cause of the production of the body. A living being assumes a corporeal form, to reap the results of virtue or vice. The universal cause of all living creatures is virtue or vice. Why, therefore, inquire the cause (of my being the person I appear)." The king said: "Undoubtedly, virtue and vice are the causes of all existent effects; and migration into several bodies is for the purpose of receiving their consequences: but, with respect to what you have asserted, that it is not possible for you to tell me who you are, that is a matter which I am desirous to hear explained. can it be impossible, Brahman, for any one to declare himself to be that which he is? There can be no detriment to one's-self from applying to it the word I." The Brahman said: "It is true that there is no wrong done to that which is one's-self, by the application, to it, of the word I; but the term is characteristic of error, of conceiving that to be the self (or soul) which is not self or soul. The tongue articulates the word I, aided by the lips, the teeth, and the palate; and these are the origin of the expression, as they are the causes of the production of speech. If, by these instruments, speech is able to utter the word I, it is, nevertheless, improper to assert that speech itself is I.1 The body of a man, characterized by hands, feet, and the like, is made up of various parts. To which of these can I properly apply the denomination I? If another being is different, specifically, from me, most excellent monarch, then it may be said that this is I, that is the other: but, when one only soul is dispersed in all bodies, it is, then, idle to say Who are you? Who am I? Thou art a king; this is a palankin; these are the bearers; these, the running footmen; this is thy retinue. Yet it is untrue that all these are said to be thine. The palankin on which thou sittest is made of timber derived from a tree. What, then? Is it denominated either timber or a tree? People do not say that the king is perched upon a tree, nor that he is seated upon a piece of wood, when you have mounted your palankin. The vehicle is an assemblage of pieces of timber,

artificially joined together. Judge, prince, for yourself, in what the palankin differs, really, from the wood. Again, contemplate the sticks of the umbrella in their separate state. Where, then, is the umbrella? Apply this reasoning to thee and to me. 1 A man, a woman, a cow, a goat, a horse, an elephant, a bird, a tree, are names assigned to various bodies, which are the consequences of acts. Man2 is neither a god, nor a man, nor a brute, nor a tree: these are mere varieties of shape, the effects of acts. The thing which, in the world, is called a king, the servant of a king, or by any other appellation, is not a reality; it is the creature of our imaginations: for what is there, in the world that is subject to vicissitude, that does not, in the course of time, go by different names? Thou art called the monarch of the world, the son of thy father, the enemy of thy foes, the husband of thy wife, the father of thy children. What shall I denominate thee? How art thou situated? Art thou the head, or the belly? Or are they thine? Art thou the feet? Or do they belong

² The term, in this and the preceding clause, is Pums; here used generically, there, specifically.

The aggregate limbs and senses no more constitute the individual than the accidental combination of certain pieces of wood makes the fabric anything else than wood: in like manner as the machine is, still, timber, so the body is, still, mere elementary matter. Again, the senses and limbs, considered separately, no more constitute the man than each individual stick constitutes the umbrella. Whether separate or conjoined, therefore, the parts of the body are mere matter; and, as matter does not make up man, they do not constitute an individual.

to thee? Thou art, O king, distinct, in thy nature, from all thy members! Now, then, rightly understanding the question, think who I am, and how it is possible for me, after the truth is ascertained (of the identity of all), to recognize any distinction, or to speak of my own individuality by the expression I."

CHAPTER XIV.

Dialogue continued. Bharata expounds the nature of existence, the end of life, and the identification of individual with universal spirit.

PARASARA. - Having heard these remarks, full of profound truth, the king was highly pleased with the Brahman, and respectfully thus addressed him: "What you have said is, no doubt, the truth; but, in listening to it, my mind is much disturbed. You have shown that to be discriminative wisdom which exists in all creatures, and which is the great principle that is distinct from plastic nature; * but the assertions-'I do not bear the palankin', 'The palankin does not rest upon me', 'The body, by which the vehicle is conveyed, is different from me', 'The conditions of elementary beings are influenced by acts, through the influence of the qualities, and the qualities are the principles of action'; -what sort of positions are these? Upon these doctrines entering into my ears, my mind, which is anxious to investigate the truth, is lost in perplexity. It was my purpose, illustrious sage, to have gone to Kapila Rishi, to inquire of him what, in this life, was the most desirable object; but, now that I have heard from you such words, my mind turns to you, to become acquainted with the great end of life. The Rishi Kapila is a portion of the mighty and universal Vishnu, who has come down upon earth to dissipate delusion; and, surely, it is he who, in kindness to me, has thus mani-

fested himself to me, in all that you have said. To me, thus suppliant, then, explain what is the best (of all things); for thou art an ocean overflowing with the waters of (divine) wisdom." The Brahman replied to the king: "You, again, ask me what is the best of all things, not what is the great end of life:1 but there are many things which are considered best, as well as those which are the great ends (or truths) of life.* To him who, by the worship of the gods, seeks for wealth, prosperity, children, or dominion, each of these is, respectively, best. Best is the rite, or sacrifice, that is. rewarded with heavenly pleasures. Best is that which yields the best recompense, although it be not solicited. Self-contemplation, ever practised by devout ascetics, is, to them, the best. But best of all is the identification of soul with the supreme spirit. Hundreds and thousands of conditions may be called the best; but these are not the great and true ends of life. Hear what those are. Wealth cannot be the true end of life; for it may be relinquished through virtue, and its characteristic property is expenditure for the gratification of

^{&#}x27;You ask what is Śreyas (श्रेंस), not what is Paramartha (प्रमार्थ). The first means, literally, 'best', 'most excellent', and is here used to denote temporary and special objects, or sources of happiness, as wealth, posterity, power, &c.; the latter is the one great object or end of life, true wisdom or truth, knowledge of the real and universal nature of soul.

भूषः पृष्टिस कि श्रेषः परमार्थं न पृष्टिस। श्रेयांसि परमार्थानि अभैवाणि च भूपते॥

desire.* If a son were final truth, that would be equally applicable to a different source; for the son that is, to one, the great end of life, becomes the father of another. Final or supreme truth, therefore, would not exist in this world; as, in all these cases, those objects which are so denominated are the effects of causes, and, consequently, are not finite. If the acquisition of sovereignty were designated by the character of being the great end of all, then finite ends would sometimes be, and sometimes cease to be. If you suppose that the objects to be effected by sacrificial rites, performed according to the rules of the Rik, Yajur, and Sáma Vedas, be the great end of life, attend to what I have to say. Any effect which is produced through the causality of earth partakes of the character of its origin, and consists, itself, of clay: so, any act performed by perishable agents, such as fuel, clarified butter, and Kuśa grass, must, itself, be of but temporary efficacy. The great end of life (or truth) is considered, by the wise, to be eternal: but it would be transient, if it were accomplished through transitory things. If you imagine that this great truth is the performance of religious acts, from which no recompense is sought, it is not so: for such acts are the means of obtaining liber-

The Sanskrit scholar will perceive that the translation of these stanzas is not very strict. Many passages somewhat similarly rendered have been passed by, unannotated, in the last fifty pages of this volume.

ation; and truth is (the end,) not the means. Meditation on self, again, is said to be for the sake of supreme truth: but the object of this is, to establish distinctions (between soul and body); and the great truth of all is without distinctions. Union of self with supreme spirit is said to be the great end of all: but this is false; for one substance cannot become, substantially, another.1 Objects, then, which are considered most desirable are infinite. What the great end of all is, you shall, monarch, briefly learn from me. It is soulone (in all bodies), pervading, uniform, perfect, preeminent over nature (Prakriti), exempt from birth, growth, and decay, omnipresent, undecaying, made up of true knowledge, * independent, + and unconnected with unrealities, with name, species,; and the rest, § in time present, past, or to come. The knowledge that this spirit, which is essentially one, is in one's own and

¹ But this is to be understood as applying to the doctrines which distinguish between the vital spirit (Jívátman) and the supreme spirit (Paramátman), the doctrine of the Yoga. It is here argued, that it is absurd to talk of effecting a union between the soul of man and supreme soul; for, if they are distinct, essentially, they cannot combine; if they are already one and the same, it is nonsense to talk of accomplishing their union. The great end of life or truth is not to effect the union of two things, or two parts of one thing, but to know that all is unity.

in all other bodies, is the great end, or true wisdom, of one who knows the unity and the true principles of things. As one diffusive air, passing through the perforations of a flute, is distinguished as the notes of the scale (Shadja* and the rest), so the nature of the great spirit is single, though its forms be manifold, arising from the consequences of acts. When the difference of the investing form, as that of god or the rest, is destroyed, then there is no distinction."

Bharata relates the story of Ribhu and Nidágha. The latter, the pupil of the former, becomes a prince, and is visited by his preceptor, who explains to him the principles of unity, and departs.

Parassara continued.—Having terminated these remarks, the Brahman repeated to the silent and meditating prince a tale illustrative of the doctrines of unity. "Listen, prince", he proceeded, "to what was formerly uttered by Ribhu,* imparting holy knowledge to the Brahman Nidágha. Ribhu was a son of the supreme† Brahmá, who, from his innate disposition, was of a holy character, and acquainted with true wisdom. Nidágha, the son of Pulastya, was his disciple; and to him Ribhu communicated, willingly, perfect knowledge, not doubting of his being fully confirmed in the doctrines of unity, when he had been thus instructed.:

satisfied, when he has finished his meal. Why should you inquire if my hunger has been appeased? When the earthy element is parched by fire, then hunger is engendered; and thirst is produced, when the moisture (of the body) has been absorbed (by internal or digestive heat). Hunger and thirst are the functions* of the body; and satisfaction must always be afforded me by that by which they are removed: for, when hunger is no longer sensible, pleasure and contentment of mind are faculties of the intellect? Ask their condition of the mind, then; for man't is not affected by them. For your three other questions, 'Where I dwell,' 'Whither I go,' and 'Whence I come,' hear this reply: Man (the soul of man) goes everywhere, and penetrates everywhere, like the ether; and is it rational to inquire where it is, or whence or whither thou goest? I neither am going nor coming; nor is my dwelling in any one place; nor art thou thou; nor are others others; nor am I I. If you wonder what reply I should make to your inquiry, why I made any distinction between sweetened and unsweetened food, you shall hear my explanation. What is there that is, really, sweet, or not sweet, to one eating a meal? That which is sweet is no longer so, when it occasions the sense of repletion; and that which is not sweet becomes sweet, when a man (being very hungry) fancies that it is so. What food is there that, first, middle, and last, is equally grateful? As a house built of clay is strengthened by fresh plaster, so is this earthly body (supported) by

earthly particles; and barley, wheat, pulse, butter, oil, milk, curds, treacle, fruits, and the like are (composed of) atoms of earth. This, therefore, is to be understood by you; that the mind which properly judges of what is, or is not, sweet is impressed with the notion of identity, and that this effect of identity tends to liberation.'

"Having heard these words, conveying the substance of ultimate truth, Nidágha fell at the feet of his visitor, and said: 'Show favour unto me, (illustrious) Brahman; and tell me who it is that, for my good, has come hither, and by whose words the infatuation of my mind is dissipated.' To this, Ribhu answered: 'I am Ribhu, your preceptor, come hither to communicate to you true wisdom; and, having declared to you what that is, I shall depart. Know this whole universe to be the one undivided nature of the supreme spirit, entitled Vásudeva.' Thus having spoken, and receiving the prostrate homage of Nidágha, rendered with fervent faith, Ribhu went his way."

CHAPTER XVI.

Ribhu returns to his disciple, and perfects him in divine knowledge.

The same recommended to the Raja, by Bharata, who, thereupon, obtains final liberation. Consequences of hearing this
legend.

"AFTER the expiration of (another) thousand years, Ribhu (again) repaired to the city where Nidágha dwelt, to instruct him further in true wisdom. When he arrived near the town, he beheld a prince entering into it, with a splendid retinue; and his pupil Nidágha, standing afar off, avoiding the crowd; his throat shrivelled with starvation, and bearing from the thicket fuel and holy grass. Ribhu approached him, and, saluting him reverentially (as if he was a stranger), demanded why he was standing in such a retired spot. Nidágha replied: 'There is a great crowd of people attending the entrance of the king into the town; and I am staying here to avoid it.' 'Tell me, excellent Brahman,' said Ribhu, - 'for I believe that thou art wise,-which is, here, the king, and which is any other man.' 'The king,' answered Nidágha, 'is he who is seated on the fierce and stately elephant, vast as a mountain-peak; the others are his attendants.' 'You have shown me,' observed Ribhu, 'at one moment the elephant and the king, without noticing any peculiar characteristic by which they may be distinguished. Tell me, venerable sir, is there any difference between them? For I am desirous to know which is, here, the elephant, which is the king.' 'The elephant,' answered Nidágha, 'is underneath; the king is above him. Who

is not aware, Brahman, of the relation between that which bears and that which is borne?' To this Ribhu rejoined: 'Still, explain to me, according to what I know of it, this matter. What is it that is meant by the word underneath, and what is it that is termed above?' As soon as he had uttered this, Nidágha jumped upon Ribhu, and said: 'Here is my answer to the question you have asked: I am above, like the Raja; you are underneath, like the elephant. This example, Brahman, is intended for your information.' 'Very well,' said Ribhu; 'you, it seems, are, as it were, the Raja, and I am like the elephant. But, come now, do you tell me which of us two is you, which is I.'

"When Nidágha heard these words, he immediately fell at the feet of the stranger, and said: 'Of a surety, thou art my saintly" preceptor, Ribhu. The mind of no other person is so fully imbued with the doctrines of unity as that of my teacher; and, hence, I know that thou art he.' To this, Ribhu replied: 'I am your preceptor, by name Ribhu, who, pleased with the dutiful attention he has received, has come to Nidágha, to give him instruction. For this purpose have I briefly intimated to you divine truth, the essence of which is the non-duality of all. Having thus spoken to Nidágha, the Brahman Ribhu went away, leaving his disciple profoundly impressed, by his instructions, with belief in unity. † He beheld all beings (thenceforth) as

the same with himself, and, perfect in holy knowledge, obtained final liberation.

"In like manner do thou, O king, who knowest what duty is, regarding equally friend or foe, consider yourself as one with all that exists in the world." Even as the same sky is, apparently, diversified as white or blue, so Soul, which is, in truth, but one, appears, to erroneous vision, distinct in different persons. That One, which here is all things, is Achyuta (Vishńu), than whom there is none other. He is I; he is thou; he is all: this universe is his form. Abandon the error of distinction."

Parasara resumed.—The king, being thus instructed, opened his eyes to truth, and abandoned the notion of distinct existence; whilst the Brahman, who, through the recollection of his former lives, † had acquired perfect knowledge, obtained, now, exemption from future birth.: Whoever narrates or listens § to the lessons inculcated in the dialogue between Bharata and the king has his mind enlightened, mistakes not the nature of individuality, and, in the course of his migrations, becomes fitted for ultimate emancipation. 1

¹ This legend is a good specimen of a sectarial graft upon a Pauránik stem. It is, in a great measure, peculiar to the Vishnu Purána; as, although it occurs also in the Bhágavata, it is narrated, there, in a much more concise manner, and in a strain that looks like an abridgment of our text.
