INTRODUCTION

Twenty-two compressibility runs were made with helium at 0° C. Data from the twenty-two runs were fitted to equation (3) by a non-linear least squares technique. Tables that were fitted to equation

$$Z = 1 + B_1 P + C_1 P^2 + \left(\frac{R}{P}\right) \left(\frac{C_2}{P}\right) \left(\frac{N}{P}\right) \quad (1)$$

- 1) Bureau of Mines, Bureau Research Center, Bureau of Mines, Washington, D.C.
 2) Unpublished tables in manuscript refer to items in the list of substances at the end of this report.

Work on manuscript completed October, 1965.

COMPRESSIBILITY DATA FOR HELIUM AT 0° C AND PRESSURES TO
800 ATMOSPHERES FITTED TO AN EQUATION OF THE FORM

$$Z_r = 1 + BP_r + CP_r^2 + DP_r^3 + EP_r^4$$

ABSTRACT

The 0° C helium compressibility data of Helium Research Center Internal Report No. 88 (3)^{2/} were fitted to an equation of the form $Z_r = 1 + BP_r + CP_r^2 + DP_r^3 + EP_r^4$ by using a non-linear least squares technique. Results of fitting the data to the equation $Z_r = 1 + BP_r + CP_r^2 + DP_r^3 + EP_r^4$ are recorded in this report, and the results are compared with the data treatment of Helium Research Center Internal Reports No. 88 (3) and No. 97 (4).

INTRODUCTION

Twenty-two compressibility runs were made with helium at 0° C. Data from the twenty-two runs were fitted to equation (1) by a non-linear least squares technique. Later they were fitted to equation

$$Z_r = 1 + BP_r + CP_r^2 = \left(\frac{Z_o}{P_o}\right) f_r N^r P_r \quad (1)$$

^{1/} Research chemist, Helium Research Center, Bureau of Mines, Amarillo, Tex.

^{2/} Underlined numbers in parentheses refer to items in the list of references at the end of this report.

- Z_r = compressibility factor at P_r
 P_r = pressure after the r th expansion
 B = constant evaluated from the experimental pressures
 C = constant evaluated from the experimental pressures
 P_o = pressure before the first expansion
 $r = R$ = expansion number
 Z_o = compressibility factor at P_o
 f_r = factor to correct for elastic pressure distortion
of the compressibility bombs
 N = isothermal volume ratio at zero pressure

(2) by using a non-linear least squares method.

$$Z_r = 1 + BP_r + CP_r^2 + DP_r^3 = \left(\frac{Z_o}{P_o}\right) f_r N^r P_r \quad (2)$$

- D = constant evaluated from the experimental pressures

A description of the experimental apparatus and experimental procedure used to obtain data for the twenty-two runs, treatment of the experimental observations, and results of the least squares fitting of the data to equation (1) are recorded in Helium Research Center Internal Report No. 88 (3).

The pressure residuals obtained when the data were fitted to equation (1) were not random in sign; therefore, the data were fitted to equation (2).

Results of fitting the 0° C helium compressibility data to equation (2) are recorded in Helium Research Center Internal Report No. 97 (4).

Fitting the data to equation (2) gave smaller pressure residuals than fitting the data to equation (1), and some randomness of the signs of the pressure residuals resulted.

The same experimental pressures for the twenty-two helium compressibility runs at 0° C were fitted to equation (3) by using a non-linear least squares method.

$$Z_r = 1 + BP_r + CP_r^2 + DP_r^3 + EP_r^4 = \left(\frac{Z_0}{P_0}\right) f_r N^r P_r \quad (3)$$

E = constant evaluated from the experimental pressures

Details of a non-linear least squares treatment of compressibility data obtained by the Burnett method are recorded in Helium Research Center Internal Reports No. 85 (2) and No. 86 (1).

The extensive numerical calculations required for the data treatment were carried out by the Branch of Automatic Data Processing by using an IBM 1401 computer. Results of the computer calculations were printed directly on multilith masters to minimize typing and proofreading time.

RESULTS OF FITTING THE 0° C HELIUM COMPRESSIBILITY DATA TO EQUATION (3)

The pressure expansion numbers are listed in table 1 under the column heading R. Experimental pressures in absolute atmospheres, calculated pressures in absolute atmospheres, differences between the experimental pressures and the least squares calculated pressures, and relative differences between the experimental and calculated pressures are recorded in table 1 for each of the twenty-two compressibility runs. The quantities are listed in "E format." The

number to the right of the E indicates the exponent of ten for the number to the left of the E.

A weighting factor of 1 was used for the calculations and the sum of the weighted squares of the residuals is printed out in table 1 for each of the twenty-two runs.

The least squares calculated constants for equation (3) (N, B, C, D, and E), and the standard errors of the constants (SN, SB, SC, SD, and SE) are listed in table 1 for each of the twenty-two runs.

The variances of the constants were designated as S2N, S2B, S2C, S2D, and S2E. Covariances of the constants were designated as S2BC, S2BD, S2BE, S2BN, S2CD, S2CE, S2CN, S2DE, S2DN, and S2EN. Variances and covariances of the constants are recorded in table 1.

Variances of pressures calculated at nominal increments of pressure and covariances of BP, CP, DP, and EP at nominal increments of pressure are recorded in table 2 under the headings S2P, S2BP, S2CP, S2DP, and S2EP, respectively.

Compressibility factors and standard errors of the compressibility factors calculated at nominal increments of pressure are listed in table 3 under the headings Z and SZ, respectively.

Values of the compressibility apparatus zero-pressure volume ratio (N) for each of the twenty-two runs are recorded in table 4 along with the value of the average N, the standard error of the average N, the average standard error of N, and the standard error of a single N.

Values for the constant B of equation (3) for helium at 0° C are recorded in table 5 for each of the twenty-two compressibility

Average $B = 2.3885 \times 10^{-4} \pm 0.0133 \times 10^{-4} \text{ atm}^{-1}$
 Average standard error of $B = \pm 0.0412 \times 10^{-4} \text{ atm}^{-1}$
 Standard error of a single $B = \pm 0.0250 \times 10^{-4} \text{ atm}^{-1}$

The value of B for this run was omitted from the calculations.

runs along with the average B, the standard error of the average B, the average standard error of B, and the standard error of a single B.

Values for the constant C of equation (3) for helium at 0° C are recorded in table 6 for each of the twenty-two runs along with the average C, the standard error of the average C, the average standard error of C, and the standard error of a single C.

Values for the constant D of equation (3) for helium at 0° C are recorded in table 7 for each of the twenty-two runs along with the average D, the standard error of the average D, the average standard error of D, and the standard error of a single D.

Values for the constant E of equation (3) for helium at 0° C are recorded in table 8 for each of the twenty-two runs along with the average E, the standard error of the average E, the average standard error of E, and the standard error of a single E.

Values for the compressibility factor (Z) for helium at 0° C and 1 atmosphere calculated from equation (3) are recorded in table 9 for each of the twenty-two runs. The average Z, the standard error of the average Z, the average standard error of Z, and the standard error of a single Z for helium at 0° C and 1 atmosphere are recorded in table 9.

Values for the compressibility factor (Z) for helium at 0° C and 700 atmospheres calculated from equation (3) are recorded in table 10. The average Z, the standard error of the average Z, the average standard error of Z, and the standard error of a single Z for helium at 0° C and 700 atmospheres are recorded in table 10.

runs along with the average B, the standard error of the average B, the average standard error of B, and the standard error of a single

B.

Values for the constant C of equation (3) for helium at 0° C are recorded in table 6 for each of the twenty-two runs along with the average C, the standard error of the average C, the average standard error of C, and the standard error of a single C.

Values for the constant D of equation (3) for helium at 0° C are recorded in table 7 for each of the twenty-two runs along with the average D, the standard error of the average D, the average standard error of D, and the standard error of a single D.

Values for the constant E of equation (3) for helium at 0° C are recorded in table 8 for each of the twenty-two runs along with the average E, the standard error of the average E, the average standard error of E, and the standard error of a single E.

Values for the compressibility factor (Z) for helium at 0° C and 1 atmosphere calculated from equation (2) are recorded in table 9 for each of the twenty-two runs. The average Z, the standard error of the average Z, the average standard error of Z, and the standard error of a single Z for helium at 0° C and 1 atmosphere are recorded in table 9.

Values for the compressibility factor (Z) for helium at 0° C and 700 atmospheres calculated from equation (2) are recorded in table 10. The average Z, the standard error of the average Z, the average standard error of Z, and the standard error of a single Z for helium at 0° C and 700 atmospheres are recorded in table 10.

HE-0-21	1.348653 ± 0.000299	+0.000821
HE-0-22	1.346965 ± 0.001033	-0.000867
Average Z = 1.347832 ± 0.000179		
Average standard error of Z = ± 0.000486		
Standard error of a single Z = ± 0.000820		

1/ The value of Z for this run was omitted from the calculations.

Data for Run No. HE-0-13 are not consistent with the data of the other runs; therefore, data for Run No. HE-0-13 were omitted from the calculations of the various average quantities and standard errors of tables 4, 5, 6, 7, 8, 9, and 10.

Tables of pressure residuals ($P_{\text{obs.}} - P_{\text{cal.}}$) were compiled for all of the runs with initial pressures (P_0) of about 700 atmospheres. Tables 11, 12, 13, 14, 15, 16, and 17 of pressure residuals were prepared for expansion numbers 1, 2, 3, 4, 5, 6, and 7, respectively. Data for Run No. HE-0-13 were omitted from the calculations of the various average pressure residuals and standard errors recorded in the pressure residual tables.

The data treatment of Helium Research Center Internal Report No. 97 (4) indicated an error in the data of Run No. HE-0-9. The pressure residuals for Run No. HE-0-9 of table 1 of this report look large when compared with the pressure residuals of the other runs; however, there are no conclusive indications that the data for Run No. HE-0-9 fitted to equation (3) should be excluded from the calculations of the various average quantities and standard errors.

DISCUSSION OF RESULTS

The average N of table 4 of this report (Internal Report No. 101) agrees with the average N of table 4 of Helium Research Center Internal Report No. 97 (4) within the standard errors of the single measurements.

The average B of table 5 of this report agrees with the average B of table 5 of Helium Research Center Internal Report No. 97 (4) within the standard errors of the single measurements.

Data for Run No. HE-0-13 are not consistent with the data of the other runs; therefore, data for Run No. HE-0-13 were omitted from

the calculations of the various average quantities and standard

errors of tables 4, 5, 6, 7, 8, 9, and 10.

Tables of pressure residuals ($P_{obs} - P_{cal}$) were compiled

for all of the runs with initial pressures (P_0) of about 700 atmos-

pheres. Tables 11, 12, 13, 14, 15, 16, and 17 of pressure residuals

were prepared for expansion numbers 1, 2, 3, 4, 5, 6, and 7, respec-

tively. Data for Run No. HE-0-13 were omitted from the calculations

of the various average pressure residuals and standard errors recorded

in the pressure residual tables.

The data treatment of Helium Research Center Internal Report No.

97 (a) indicated an error in the data of Run No. HE-0-9. The pressure

residuals for Run No. HE-0-9 of table 1 of this report look large when

compared with the pressure residuals of the other runs; however, there

are no conclusive indications that the data for Run No. HE-0-9 fitted

to equation (7) should be excluded from the calculations of the various

average quantities and standard errors.

DISCUSSION OF RESULTS

The average μ of table 4 of this report (Internal Report No.

97) agrees with the average μ of table 4 of Helium Research Center

Internal Report No. 97 (a) within the standard errors of the single

measurements.

The average β of table 5 of this report agrees with the average

β of table 7 of Helium Research Center Internal Report No. 97 (a)

within the standard errors of the single measurements.

HE-0-19	+5.249	+1.923
HE-0-20	+1.106	-2.220

Average (P,obs.-P,cal.) = $+3.326 \times 10^{-4} \pm 1.137 \times 10^{-4}$ atm

Standard error of a single (P,obs.-P,cal.) = $\pm 4.826 \times 10^{-4}$ atm

1/ Data for this run were omitted from the calculations.

The average C of table 6 of this report does not agree with the average C of table 6 of Helium Research Center Internal Report No. 97 (4) within the standard errors of the single measurements.

The average D of table 7 of this report agrees with the average D of table 7 of Helium Research Center Internal Report No. 97 (4) within the standard errors of the single measurements. The calculated standard error of D exceeds the absolute magnitude of D for several of the runs recorded in table 7. The standard error of a single D is about as large as the average D when the 0° C helium compressibility data are fitted to equation (3).

The calculated standard error of E exceeds the absolute magnitude of E for a number of runs recorded in table 8. The standard error of a single E is approximately equal to the average E; therefore, little was gained by adding E to the constants to be evaluated.

The average compressibility factor of table 9 of this report for helium at 0° C and 1 atmosphere agrees with the average compressibility factor of table 8 of Helium Research Center Internal Report No. 97 (4) within the standard errors of the single measurements.

The average compressibility factor of table 10 of this report for helium at 0° C and 700 atmospheres agrees with the average compressibility factor of table 9 of Helium Research Center Internal Report No. 97 (4) within the standard errors of the single measurements.

I conclude that equation (2) gives a better representation than equation (3) of the 0° C helium compressibility data of this investigation, and that equation (2) is a better functional form

than equation (1) for representing the 0° C helium compressibility data.
