PUBLISHERS' PREFACE.

WE are gratified in being able to offer to the public the most elaborate, comprehensive, and perfect Gazetteer of the United States that has ever issued from the press. In its preparation, no considerations of expense or labor have been allowed to interfere with a work designed to be as PERFECT AS POSSIBLE IN EVERY DEPARTMENT, AND IN ALL OF ITS DETAILS. Nor have the successive issues of other Gazetteers, hurried through the press to claim the market, tempted us to offer our book before all of the results of the ample Census of 1850, and other material in the hands of the Editors, were FULLY DIGESTED AND ACCURATELY ARRANGED.

When this Gazetteer was first announced, 900 pages were designed as the utmost limit of the book. But owing to the amount of important matter, accumulated through the personal labors of the Editors, and their assistants, as well as through the active efforts of SEVERAL THOUSAND CORRESPONDENTS IN ALL PARTS OF THE UNITED STATES, the work has swelled to above 1300 pages. This new matter is all of a recent character, and in many instances embraces STATISTICS AND POPULATIONS TO 1853, obtained since the census was taken. This gives it an inestimable value over every other work of the kind in existence.

INTRODUCTION

1898

The following is a list of the names of the persons who have been elected to the office of Justice of the Peace for the year 1898. The names are arranged in alphabetical order of their surnames. The names of the persons who have been elected to the office of Justice of the Peace for the year 1898 are as follows: [The text is extremely faint and illegible, but appears to be a list of names.]

PREFACE.

AT no time since the first settlement of our country have so many important changes taken place as during the last ten years. Within that period the Republic has been increased by the acquisition of territory comprising above 800,000 square miles, an area considerably greater than that of Spain, Italy, France, Great Britain, and Germany combined. This new territory, added to that previously belonging to the United States, gives an extent of about 3,000,000 square miles, nearly equalling the whole of continental Europe; while in the diversity of its geographical features, as well as in that of its climate, and in the variety of its productions, it greatly surpasses every other country or region of equal area on any portion of the globe.

Although much of the newly acquired territory is of little value for agricultural purposes, the remote position and exhaustless mineral wealth of one portion has aroused and kept awake a spirit of enterprise that has imparted new life to every department of business. An activity unexampled in the history of our nation, has been communicated not only to commerce and manufactures, to supply the constantly increasing wants of the gold-producing State—but also to the construction of new lines of communication, by which the remoter regions of our vast territory may be rendered readily accessible to all. Hence it is, that within the last two or three years, railroads have been projected on a scale, and are being completed with a rapidity unparalleled in the past achievements of this or any other country. A railway map of our North-western, Western, and South-western States, containing a perfect representation of the roads that were planned and completed a year ago, would now be so far antedated as scarcely to be recognized by one who is familiar with the lines as they exist at present. It is these lines of communication which convey, like so many arteries, the nourishment which has supplied the amazing growth of our hundred and twenty cities. It is to these that Chicago owes her astonishing prosperity, and an increase which, if continued in the same ratio, would, in less than twenty years, give her a population far greater than that of New York at the present time. (See UNITED STATES, page 1178.)

Our country exhibits at present a remarkable combination of all the various elements of national prosperity and progress, at least so far as regards material wealth and power. On the one hand we see a spirit of boundless activity and enterprise, pervading not only every class, but, we might almost say, every individual of the entire community: on the other, we behold the gifts of fortune poured out without stint or measure everywhere around us. We need only allude to our immense agricultural resources, to our extraordinary commercial advantages, and to those recent discoveries of inexhaustible mineral wealth in different parts of the United States, but more especially in that new El Dorado, whose true history throws into the shade all that was fabled of the ancient Hermus, or

“Rich Pactolus, rolled o’er sands of gold.”

Nor should we omit to mention—what is indeed no less important, and, we may add, is equally the gift of fortune to our country—the thronging myriads that are constantly poured upon our shores from over-peopled Europe, supplying laborers for our great works of internal improvement, and for the development of those unexplored resources which seem too vast for the unassisted efforts of any single nation.

To represent correctly the PRESENT condition of this Republic, so vast in its extent, so various in its features, and so astonishing in its progress, is the task that has been proposed to us. The inherent difficulties of the undertaking—difficulties not so much owing to the endless number and variety of topics, as to the changes that are continually taking place in every city or village throughout the land—must be obvious to every intelligent and reflecting mind. No reasonable person will look for perfection in a work of this kind; but those who feel an interest in the progress of their country, or who seek information respecting any town or section within the limits of our immense territory, will expect and have a right to demand, that a book professing to be a “Gazetteer of the United States,” shall be as nearly perfect in respect to completeness and accuracy, as it is possible for unremitting labor and the most watchful diligence to make it.

In the performance of our arduous task, we have been anxious to avail ourselves of every possible means through which recent and authentic information might be obtained. We have not only carefully consulted the numerous and valuable works on topography and statistics that have been published within the last few years, but have been at particular pains to collect our materials as much as possible from private and ORIGINAL sources. In the last respect (originality) we feel persuaded that our Gazetteer may claim, both as regards matter and arrangement, a great superiority over every other work of the kind that has been published in this country. By deriving the most important part of our information

from individuals actually residing in the particular town or section to be described, we have been enabled to bring our work fully up to the times, and to avoid the numerous errors that result from copying from other works which were either written themselves, or have derived their materials from those that were written many years ago.

Especial attention has been given to the subject of arrangement, so all-important in every work of reference. A particular explanation of our plan will be found on page 11. It may be proper, however, to observe here, that in all those cases in which the same name—such as WASHINGTON, for example—is applied to a multitude of different places, and consequently is repeated a great number of times, the repeated names are so arranged that one who is acquainted with our plan can at once turn to the particular place which he may be in search of. The longer articles are divided into sections, distinguished by headings, which indicate to the inquirer at a glance the part where he must look for information respecting the different topics treated of in the article. Under the head of "*Objects of Interest to Tourists*," is comprised a much greater variety of subjects than would be implied in the common expression, "Natural Curiosities," inasmuch as it has been deemed proper to point out not only natural, but also artificial curiosities; in short, all such objects as would be especially interesting to the scientific and general inquirer, as well as to the admirer of the wonders of nature.

In a work comprising such an immense variety of matter, and containing many thousand names not given in any other Gazetteer, it is obvious that a large number of the descriptions must of necessity be brief. It will, however, be perceived that the notices of all important places are full and comprehensive; and these have been almost without exception prepared from materials RECENTLY furnished by some one residing in the place described, or its immediate vicinity. We have been anxious, as far as our limits would permit, to do full justice to every section of the United States; but especial attention has been bestowed upon the newer portions of our country, both on account of the greater interest felt by all in the young and rising settlements of the West, and on account of those constant and rapid changes, to keep pace with which, the most unremitting diligence and watchfulness are necessary. The notices of the counties in this Gazetteer will, it is believed, be found far more full and satisfactory than those given in other similar works. The aim of the editors has been, to sum up in a small compass all the more important facts, including ALL THE MOST INTERESTING POINTS IN THE STATISTICS FURNISHED BY THE CENSUS OF 1850.

While on the subject of statistics, it may be observed that the population of a great number of the Western towns has been very inadequately represented by the census returns of 1850, owing doubtless not only to

the ravages of the cholera in 1849, but to its prevalence also, in many places, at the very time the census was being taken. The knowledge of this fact has made us very anxious to procure from other sources materials whereby the statements of the census might be corrected or confirmed. Accordingly, we have sought and obtained a large amount of local information, which has enabled us, in a multitude of instances, to give the population of towns and villages up to 1853. And although in some cases the populations given are only estimates furnished by some resident of the place, yet such an approximation to the true census as this will generally furnish, is of the greatest service in enabling one to form a just idea of the size and importance of a town; and, indeed, may be much nearer the actual truth than a regular census taken when, owing to some extraordinary cause, the place may have far less or far more than its average number of inhabitants.

It will be perceived that in a majority of instances we have given the origin of the names of the different counties, more particularly of such names as have been bestowed in honor of some distinguished individual. This has never before been done in any Gazetteer of the United States. It is due, in our opinion, to posterity, as well as to the reputation of each State, that the names and character of those who have been distinguished for their services, either to the country at large or to the particular settlement which they may have honored by their private virtues, or defended by their valor, should be preserved in some more public and enduring record than the memory of those who have been eyewitnesses of their great or noble deeds. It is to be regretted that so many works on the geography or history of the individual States, omit to give us those particulars respecting the character and life of the more prominent of the early settlers, which cannot fail to be of the greatest interest to the next, if not to the present generation, and which it is all the more important to mention, because they are seldom found in works of a more extensive and general character. It is scarcely necessary to observe, that many interesting incidents, which could now be readily given with all the attending circumstances, will, in a few years, either be entirely lost, or only connected with authentic history by some frail thread of tradition, or some semifabulous legendary story.

It may be remarked that in a few instances, the pronunciation of geographical names—especially of such as are difficult or of foreign origin—has been given in this work. Those who feel a particular curiosity with regard to this subject, are referred to Baldwin's Pronouncing Gazetteer, in which the names are not only pronounced, but the principles of geographical pronunciation are laid down and fully explained.

It remains for us to perform an act of justice by acknowledging our obligations to the different sources whence we have obtained our most

valuable information. Among the works to which we are especially indebted, is HUNT'S "Merchant's Magazine," a commercial journal of the highest character, treating of almost every subject related either directly or indirectly to trade, finance, internal improvements, &c.

Nor can we omit to express our great obligations to the "American Almanac," a publication of which each successive issue has only contributed to establish and extend a reputation that has long been of the very highest order. As a convenient, accurate, and well-digested compendium of scientific and miscellaneous information, we know of no book worthy to be compared with it.

We should withhold a just tribute from one of the ablest and most interesting periodicals published in our country, did we omit to acknowledge the important assistance we have derived from DE BOW'S "Commercial Review;" nor are we less indebted to the "Internal Resources of the South and West," a work comprising an immense amount of geographical and statistical information respecting a vast region whose resources have till recently been almost unexplored.

For no inconsiderable portion of the commercial statistics contained in our work—especially in relation to places situated on the great lakes—we are indebted to ANDREWS' "Report on Colonial and Lake Trade."

We would here take occasion to express our heartfelt acknowledgments to the Honorable J. GUTHRIE, Secretary of the Treasury, for the courtesy and promptitude he has manifested in furnishing us, from his department, the various documents necessary in prosecuting our work.

In addition to the above, we have consulted numerous works on the history and geography of the individual States, among which we may name, WHEELER'S "History of North Carolina," WHITE'S "Statistics of Georgia," and HUNT'S "Gazetteer of Wisconsin," published late in the summer of the present year. The editor of the last-named work very kindly forwarded to us the sheets of his Gazetteer as they were printed, many weeks before the entire work was given to the public, by which means we were enabled to avail ourselves of whatever new and valuable matter it contained, respecting one of the most important and rapidly improving of all the Western States.

But if our acknowledgments are due to the works from which we have derived such important assistance, we owe, indeed, our heartfelt thanks to the gentlemen in different parts of the Union, who have so generously contributed to aid us in our laborious undertaking. We are not permitted to give the names of many of those—especially in the Southern and Western States—to whom our warmest acknowledgments are due. But we take great pleasure in paying a just tribute of gratitude to the following gentlemen, who have furnished information, without which our work

would have been very deficient with respect to many important places in the Eastern and Middle States.

In committing the result of our long and arduous labours to the public, we are encouraged by the reflection that those whose criticism is most to be valued or feared, will be most capable of appreciating the extraordinary difficulties of our undertaking, and will best know how to make allowance for those imperfections from which no human production can be entirely exempt.

PHILADELPHIA, *December 23, 1853.*

EXPLANATION OF THE PLAN, ETC., OF THE PRESENT WORK.

I. THE population of states, counties, and townships, and the agricultural and other statistics of the counties, are invariably given (except in the case of California) according to the census of 1850: in such instances, no date is usually affixed.

The population and agricultural statistics of the counties of California are given according to the census of 1852, as stated in the Governor's message, issued January, 1853.

The population of villages and towns (except of the larger class) being very rarely given in the census, has generally been obtained from private correspondents or other recent sources. They usually refer to 1852 or 1853: in these cases, however, the dates are generally affixed.

II. With regard to arrangement, the greatest care has been used to make it ALPHABETICAL in the strictest sense. If a name is composed of two or three parts, it is arranged in the same place as if it were written as a single word: thus, OAK ORCHARD (OAKORCHARD) is placed after OAKLAND and before OAK RIDGE.

When one and the same name, referring to different places, occurs several times in succession, the repeated names are arranged according to the order of the states or territories in which the places are situated, as follows:—Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas, Tennessee, Kentucky, Ohio, Michigan, Indiana, Illinois, Missouri, Iowa, Wisconsin, Minnesota, New Mexico, Utah, California, Oregon, and Washington. Thus, if one is looking for a place named WASHINGTON, in Maine, he will find it at the beginning of the series; if in Georgia or Louisiana, near the middle; if in Iowa or Wisconsin, near the end. If the same name should chance to be given to several townships or villages in one state, these are arranged according to the names of the counties in which they are situated. Thus, CENTRE, a township of *Guernsey* county, Ohio,

will be given after CENTRE of *Columbiana* county, and before CENTRE of *Monroe* county.

The general rule of arrangement by states has the following partial exceptions:—1. *Natural* objects, such as rivers, mountains, &c., are given before states, counties, or towns of the same name. It is important, however, to observe that when the word "river" is an *essential* part of the name, as in RED RIVER, BEAR RIVER, it will take its regular alphabetical place as a compound word. For example, BEAR RIVER will come after BEAR CREEK and BEAR MOUNTAIN, and before BEAR-TOWN. 2. All the counties of one name are given together (arranged according to the order of the states, as exhibited above) before any of the towns or villages.

Cities, villages, and towns of the same name are arranged according to the order of the states, but promiscuously, since there is, in our country, no decided and permanent distinction between a village and a town, or between a town and a city.

III. It is proper to observe, that what is called a "town" in New England, is a very different thing from a town in most of the other states. In order to prevent any misapprehension from this source, as well as for the sake of consistency, the same designation has been applied to these as to townships in other states, for it seems proper, in a general work on the United States, to avoid as much as possible merely local or sectional terms and phrases. It should, however, be remarked that the townships of New England differ from those of the other states in this—they invariably contain a village of the same name, although this village may have but a few houses, and may be far from being the largest in the township.

Whenever, after describing a village, the population of the township is given, unless expressly stated to the contrary, the township is to be understood as having the same name as the village.

IV. Care has been taken to give the correct spelling of names, as this is essential to their proper alphabetical arrangement. As this subject, however, is one of great difficulty, inasmuch as the greatest diversity fre-

quently prevails even among writers well acquainted with the names in question, two or three different spellings have in many instances been given in this Gazetteer, with a reference to what was considered the preferable or more popular spelling. It would, however, have been impossible to do this in all cases, on account of the immense number of names variously written. It is, there-

fore, recommended that the inquirer should not abandon the search in despair, even if he does not find a name with the spelling with which he is most familiar: *e. g.* if he should not find PERRYVILLE, he may perhaps find the place he is in search of under PERRYSVILLE; if he cannot find CLARKSVILLE, he may very probably succeed in finding CLARKESVILLE, &c. &c.

AAR

AARONSBURG, a post-village in the S. E. part of Centre county, Pennsylvania, on an affluent of Penn's creek, about 20 miles E. by S. from Bellefonte, and 89 miles N. N. W. from Harrisburg. Population about 200.

AARONSBURG, a post-office of Clinton county, New York.

AARON'S RUN, a post-office of Montgomery county, Kentucky, 65 miles E. of Frankfort.

ABBAYE POINT, in the upper peninsula of Michigan, is situated between Huron bay and Keweenaw bay, on Lake Superior.

ABBENVILLE, a post-office of La Fayette county, Mississippi.

ABBEVILLE, a district in the W. N. W. part of South Carolina, bordering on Georgia, has an area of about 960 square miles. The Savannah river (navigable by small boats) forms the entire boundary on the S. W., and the Saluda river on the N. E.; the district is drained by Long Cane and Rocky rivers, affluents of the Savannah. The surface is elevated, and finely diversified in hill and dale; the soil is generally fertile, well watered, and extensively cultivated. Cotton, Indian corn, wheat, oats, cattle, sweet potatoes, and swine are the staples. This district produced in 1850, 27,192 bales of cotton; 1,054,333 bushels of corn; 99,101 of wheat; 279,935 of oats; and 119,774 of sweet potatoes. There were 39 grist mills, 8 saw and planing mills, and 12 tanneries. It contained 43 churches and 2 newspaper establishments. There were 1151 pupils attending public schools, 500 attending a college, and 557 attending academies or other schools. Three gold mines are worked in the district. It is intersected by the Greenville and Columbia railroad, lately constructed. Abbeville is one of the most populous districts in the N. W. part of the state. Capital, Abbeville. Population 32,318.

ABBEVILLE, a small town, capital of the above district, is situated on an affluent of Little river, 97 miles W. by N. from Columbia, (with which it is connected by railroad,) and 529 miles S. W. from Washington. It contains a court-house, jail, arsenal, magazine, and a newspaper office. The surrounding country is fertile, and mostly occupied by plantations

ABE

of cotton and Indian corn. Population about 400.

ABBEVILLE, a post-village, capital of Henry county, Alabama, on Yattayabba creek, 211 miles S. E. of Tuscaloosa, and 837 W. S. W. from Washington. It was chosen as the county seat in 1834. Present population about 300.

ABBEVILLE, a post-office of Vermilion parish Louisiana.

ABBEVILLE, a post-village of Medina county, Ohio, on a branch of Rocky river, 123 miles N. E. of Columbus.

ABBOT, a post-township of Piscataquis county, Maine, 76 miles N. by E. from Augusta, intersected by the Piscataquis river. Population 747.

ABBOT, a township of Sheboygan county, Wisconsin.

ABBOTT'S CREEK, a post-office of Davidson county, North Carolina.

ABBOTSFORD, a post-office of Westchester county, New York.

ABBOTT'S CREEK, of Davidson county, North Carolina, flows southward into Yadkin river.

ABBOTTSTOWN, a post-village of Adams county, Pennsylvania, on a small affluent of Conewago creek, 16 miles W. S. W. from York, and 29 miles S. from Harrisburg.

ABBOTTSVILLE, a post-office of Darke county, Ohio.

ABB'S VALLEY, a post-office of Tazewell county, Virginia.

ABE SPRING, a post-office of Calhoun county, Florida.

ABERDEEN, a flourishing town, capital of Monroe county, Mississippi, is situated on the right bank of Tombigbee river, 165 miles N. E. from Jackson, 28 miles N. from Columbus, and about 400 miles by water from Mobile. It is the largest town on the Tombigbee, and one of the most flourishing and commercial places in the state. Steamboats navigate the river regularly from Mobile to Aberdeen during the greater part of the year, and about 30,000 bales of cotton are shipped annually from the latter town. It was formerly considered the limit of steam navigation on this river, but recently boats have ascended 40 miles farther during high water. The projected railroad from Mobile

to the Ohio river passes 5 miles W. from Aberdeen. The adjacent country is highly productive. Two or three newspapers are published in the town. An active emigration has been directed to this vicinity during the last ten years. First settled in 1836. Population in 1853, about 5000.

ABERDEEN, a post-office of Monroe county, Arkansas.

ABERDEEN, a small village of Monroe county, Tennessee.

ABERDEEN, a post-village of Brown county, Ohio, 123 miles S. W. from Columbus. It is situated on the Ohio river, opposite Maysville in Kentucky. Population about 800.

ABERDEEN, a post-office of Ohio county, Indiana.

ABERFOIL, a post-office of Macon county, Alabama, 158 miles S. E. of Tuscaloosa.

ABERNETHY, a post-village of Perry county, Missouri, about 10 miles S. W. of Mississippi river.

ABERT (ábert) LAKE, in Minnesota Territory, W. of Sioux river, in lat. 44° 30' N., lon. 97° 15' W. It is scarcely 2 miles W. from Lake Poinsett; length about 8 miles, greatest breadth 3 or 4 miles.

ABERT LAKE, Oregon, in lat. about 42° 45' N., lon. 120° W., is about 20 miles long, and 5 miles wide. It is a curious fact that neither of these lakes is connected with any important body or stream of water. They were named in honor of Colonel J. J. Abert, chief of the Topographical Bureau at Washington.

ABINGDON, a post-village of Harford county, Maryland, about 25 miles N. E. from Baltimore, and 52 N. N. E. from Annapolis. It is situated about 4 miles S. W. of the railroad connecting Havre de Grace with Baltimore.

ABINGDON, a handsome town, capital of Washington county, Virginia, is pleasantly situated in a valley between the main forks of Holston river, about 7 miles from each, 304 miles W. by S. from Richmond, and nearly 8 miles from the boundary of Tennessee. It is the most considerable and flourishing town in the S. W. part of Virginia. The situation is elevated, the town is well built, and the principal street is macadamized. It contains 6 churches, 2 academies, 2 printing-offices, and manufactories of leather, saddles, and harness. Abingdon is on the route of the great railroad which is in progress of construction between Lynchburg on one hand, and Knoxville, Tennessee, on the other, which, when finished, will form part of the most direct route from New York to New Orleans. Population about 1000.

ABINGDON, a post-village of Lake county, Illinois, 4 miles S. W. from Waukegan, and 243 N. by E. from Springfield.

ABINGDON, a post-office of Jefferson county, Iowa.

ABINGTON, a post-township of Plymouth county, Massachusetts, on the Old Colony

railroad, 20 miles S. by E. from Boston. The village contains a bank. Pop., 5269.

ABINGTON, a post-village of Windham county, Connecticut, 39 miles E. by N. from Hartford.

ABINGTON, a post-township of Montgomery county, Pennsylvania, about 10 miles N. from Philadelphia, and 109 E. from Harrisburg. The post-office is at the village of Mooretown, on the Philadelphia and Doylestown turnpike. Population, 1836.

ABINGTON, a post-township, Wayne county, Indiana. Population, 836.

ABINGTON, a post-village, in the above township, on the E. fork of Whitewater river, 72 miles E. from Indianapolis. Population about 200.

ABINGTON, a thriving village in the S. W. corner of Knox county, Illinois.

ABINGTON, a township in the N. E. part of Luzerne county, Pennsylvania, about 25 miles N. N. E. from Wilkesbarre. Population, 2880.

ABINGTON CENTRE, a flourishing post-village in the above township, 135 miles N. E. from Harrisburg. It is a place of active business, and is rapidly improving. It is connected by railroad with the New York and Erie railroad at Great Bend. The name of the post-office has been changed to Waverley.

ABIQUIU, à` be-ke-oo', a post-town of Rio Arriba county, New Mexico, on the left bank of the Rio de Chama, about 60 miles N. W. from Santa Fe, in lat. about 36° 5' N., lon. 106° 40' W.

ABO, á'bo, a town (now in ruins) of New Mexico, on an affluent of the Rio Grande, in about 34° 26' N. lat., and 106° 15' W. lon.

ABOITE, a small river of Allen county, Indiana, flows into Little river.

ABOITE, a post-township, Allen county, Indiana. Population, 539.

ABOITE, a post-village of Allen county, Indiana, on the canal connecting Fort Wayne with Peru.

ABRAHANTOWN, a post-office of Marion county, Florida.

ABRAM'S CREEK, a small stream of Columbia county, New York, falling into the Hudson river, 4 miles above Hudson city.

ABSCOTA, a post-office of Calhoun county, Michigan, 120 miles W. of Detroit.

ABSE'COM, (written also, ANSECMBE, ABSECUM, and ABSECON,) a post-village of Atlantic county, New Jersey, on a creek of the same name, 95 miles south from Trenton, and 2 miles above Absecom bay. It is connected with Camden by the Absecom railroad.

ACADEMIA, a post-office of Juniata county, Pennsylvania.

ACADEMIA, a post-office of Knox county, Tennessee, 193 miles E. of Nashville.

ACADEMY, a post-office of Ontario county, New York.

ACADEMY, a post-office of Pochahontas county, Virginia.

ACCATINK, a post-office of Fairfax county, Virginia.

ACCIDENT, a post-office of Alleghany county, Maryland.

ACCOMACK, a county in the E. part of Virginia, bordering on Maryland, has an area of about 480 square miles. AIR-LINE RAILROAD, a phrase recently introduced, signifying a railroad that connects two points by the shortest possible distance. An air-line railroad strictly denotes a straight road, although, understood in a popular sense, it may deviate from a right line, to avoid insurmountable obstacles, but never to connect with way-places. The most important railways of this class now projected are the New York and Boston railroad—the Chicago St. Charles and Mississippi railroad, and the Chicago and Galena railroad, all of which are in course of construction. The first will pass through Middletown, Conn. that town being directly between the two termini.—See *Table of Railroads*, APPENDIX.

E. from Columbus, and 36 miles S. from Cleveland. It occupies the highest ground on the line of the canal between Lake Erie and the Ohio river, and is 400 feet above the lake. By means of the canal and little Cuyahoga river, the town is amply supplied with water-power, which is employed in a variety of manufactures; and its mercantile business is extensive. Immense quantities of wheat are shipped here. Akron was laid out in 1825. In 1827 the Ohio and Erie canal was constructed to this point, and in 1841 Akron was chosen as the county seat. The canal was finished in 1832; cost \$5,000,000. The same year the canal which connects it with Beaver, Pennsylvania, was opened, and a new impetus given to its improvement. It has several churches, 1 bank, 2 woollen factories, 5 large flouring mills, a steam-engine factory, 1 blast-furnace, and 1 mineral-paint mill, 1 extensive stove manufactory, and 1 card manufac-

tory, besides various other manufactories; all of which are propelled by water-power. Immense beds of Ohio mineral fireproof paint are found in the vicinity, and the article is exported to all parts of the Union. Population in 1850, 3266; in 1853, about 4500.

ALABAMA (al-ă-bah'mă) river, of Alabama, is formed by the Coosa and Talapoosa, which unite 10 miles N. of the city of Montgomery. It then flows westward to Selma with many and wide deviations from its general direction. Below that point it pursues a very tortuous course toward the south-west, until it unites with the Tombigbee, about 45 miles N. from the city of Mobile. The river formed by this confluence is called the Mobile. The Alabama is an excellent stream for steamboat navigation, being navigable for the largest class of boats through its whole extent, and at all seasons of the year, except in instances of extraordinary drought. The navigation is not closed by the ice like the Northern rivers, nor obstructed by snags and sawyers like many others in the South-west. The length of the main stream is about 300 miles, and the distance from Mobile to Wetumpka, which is at the head of the navigation for large boats, is about 460 miles. The region through which it flows is occupied by plantations of cotton, extensive savannas, and forests of valuable timber.

ALABAMA creek, or Big Sandy, of Texas, flows into Neches river from the N. W., about 15 miles N. from Beaumont.

ALABAMA, one of the Southern States of the American confederacy, is bounded on the N. by Tennessee, E. by Georgia, S. by Florida and the Gulf of Mexico, and W. by Mississippi. It lies between 30° 10' and 35° N. latitude, and between 85° and 88° 30' W. longitude; being about 330 miles in extreme length from N. to S., and 300 miles in its greatest breadth; including an area of 50,722 square miles, or 32,462,080 acres, only 4,435,614 of which were improved in 1850.

Population.—The number of inhabitants in the state in 1820 was 127,901; 309,527 in 1830; 590,756 in 1840; and 771,671 in 1850; of whom 219,728 were white males, 206,779 white females, 1047 free colored males, 1225 free colored females, and 171,853 male and 171,037 female slaves. There were 73,786 families, occupying 73,070 dwellings. Representative population 634,514. There were 9084 deaths in the year ending June, 1850, or 12 persons in every one thousand. Of the population in 1850, 237,542 only were born within the state; 182,490 in other states; 941 in England; 8639 in Ireland; 584 in Scotland; 67 in Wales; 49 in British America; 1068 in Germany; 503 in France; 787 in other countries, and 1109 whose places of birth were unknown. There were 308 blind, of whom 164 were whites, 3 free colored, and 141 slaves—211 deaf and dumb,

of whom 157 were whites, 1 free colored, and 53 slaves. The number of paupers who had received support in the year ending June 1, 1850, was 363, of whom 11 were foreigners.

Counties.—There are in Alabama 52 counties, viz. Autauga, Baldwin, Barbour, Benton, Blount, Bibb, Butler, Chambers, Clarke, Choctaw, Cherokee, Coffee, Conecuh, Coosa, Covington, Dale, Dallas, De Kalb, Fayette, Franklin, Greene, Hancock, Henry, Jackson, Jefferson, Lawrence, Lowndes, Lauderdale, Limestone, Macon, Madison, Marion, Marengo, Marshall, Mobile, Monroe, Montgomery, Morgan, Perry, Pickens, Pike, Randolph, Russell, Shelby, St. Clair, Sumter, Talladega, Tallapoosa, Tuscaloosa, Walker, Washington, and Wilcox.

Cities and Towns.—Mobile is the commercial metropolis of Alabama, with a population of 20,513; the other principal towns are Montgomery, the capital of the state, population 4955; Huntsville, population, 2863; Tuscaloosa, population above 2000. Florence, population about 1200.

Face of the Country, Mountains, &c.—The Alleghany mountains have their termination in the N. part of Alabama, where they become depressed to little more than elevated hills. The state gradually declines from the north to the Gulf of Mexico; being hilly and broken in the centre, and level for 50 or 60 miles from the coast. All the rivers of any magnitude, except the Tennessee, (which makes a bend into the north part of the state,) descend toward the Gulf of Mexico.

Minerals.—Alabama is rich in mineral treasures, particularly in coal, iron, lime, and marble. Red ochre, lead, (scattered about the state in various parts,) and manganese are also met with. Iron is found extensively in Shelby, Bibb, Jefferson, and Tuscaloosa counties. Bituminous coal of a superior quality abounds. "A vein of this coal is first seen in the bed of the Black Warrior river, near Tuscaloosa, and pursues a N. E. direction till it crosses the Alabama and Coosa rivers at or just above their falls, and thence probably passes into Georgia." (*De Bow's Industrial Resources.*) There are salt, sulphur, and chalybeate springs in different sections of the state. Gold has been found in St. Clair county, and a mine was worked there for a short time. Beautifully variegated marbles exist near the head of navigation on the rivers, particularly on the Cahawba, and in Talladega county. Some of these marbles are buff-colored, filled with organic remains, some white and crystalline, and some are black. Statuary granite, said to be the best in the United States, and marble of a superior quality, are found in Coosa county: a more particular notice of these, however, will be given under the head of Coosa.

Rivers, Bays, &c.—The principal bays in Alabama are Mobile bay, extending north 30 miles from the Gulf of Mexico; Bonese-

cour bay, (an eastern arm of Mobile bay,) and Pascagoula bay, or sound, west of Mobile bay. All of these open into the Gulf of Mexico. Perdido bay lies on the boundary line between Alabama and West Florida. All the rivers of Alabama, with the exception of the Tennessee, which makes a sweep into the northern part of the state, and some smaller rivers passing into West Florida, unite their waters in the Mobile river and bay. The Tombigbee comes into Alabama from the N. E. part of Mississippi, receives the Tuscaloosa or Black Warrior from the former state, and unites with the Alabama to form the Mobile. The Alabama, in its turn, is formed by the Tallapoosa and Coosa from the north of Georgia, and flows S. W. till it meets the Tombigbee. The Chattahoochee forms the boundary between Georgia and Alabama for about 150 miles. The Mobile river throws off an arm from its east bank, which flows into the bay at Blakely. The Cahawba joins the Alabama, from the middle of the state. The Escambia, Black Water, Yellow Water, and Choctawhatchee flow from the S. E. of Alabama into West Florida. The Tombigbee is about 500 miles long, and all its course in Alabama is navigable for steamboats. The Alabama, including its head waters, is about 600 miles long, and may be ascended by steamboats to Wetumpka, on the Coosa branch, 460 miles from the Gulf. The Tuscaloosa is about 150 miles long, and is navigable for steamers to Tuscaloosa. The Tennessee has 130 miles of its course in Alabama, but its navigation is here obstructed by the Muscle Shoals, above which impediment it is, however, again navigable.

Objects of Interest to Tourists.—Though Alabama has no mountains of great elevation or stupendous cataracts, she is by no means deficient in objects of interest to the curious and inquiring mind. De Kalb county is noted for wild and picturesque views; and in Walker county there is a natural bridge, said to be equally curious with the famous one in Rockbridge county, Virginia, while many wild and romantic gorges lie among its hills, which are the highest south of the mountains. There are, in Alabama, a number of mineral springs for the resort of those seeking health or pleasure: Blount's Springs, in Blount county, a fashionable watering place, contains several different varieties of sulphur waters within the space of twenty feet. Chalybeate waters occur at the same place; and other sulphur springs are found in Talladega and Shelby counties. Bladen Springs is also a fashionable watering place. There are salt springs in Clarke county, now abandoned. The beautiful varieties of marble already mentioned as existing in Talladega and Coosa counties, are now attracting much attention, and are well worthy of the notice of tourists.

Climate, Soil, Productions.—Approaching to within 7° of the tropics, Alabama is allied in its climate and productions to the torrid zone. The rivers here seldom freeze in winter, and the summer heats are mitigated by the breezes from the Gulf of Mexico. According to meteorological observations made at Eutaw, in Greene county, in the years 1850–51, the maximum temperature of the three winter months was 82°, the minimum 18°; the mean temperature at 3 o'clock p. m. 48° 25'. The maximum of the spring months was 93°, minimum 22°, average 62° 20'. The maximum of the summer months was 104°, minimum 60°, mean 81° 49'. The maximum of November, 82°, the minimum 19°, mean 51° 90'. The bottom lands are unhealthy near the rivers and the Muscle Shoals, but the climate in the uplands is salubrious. Alabama has, in many parts, a soil of exuberant fertility; yielding more cotton, the great staple of the South, than any other member of the confederacy. Even the low mountains of the north have fine grazing lands, while the flats between them are very rich in soil. The central part is occupied by fertile prairies; and the southern, though often sandy and inferior in productiveness, has many fertile alluvial bottoms, which yield rice. In Marengo and Greene counties were formerly extensive canebrakes, which are now nearly cleared, disclosing some of the best lands in the state. Sugar-cane grows in the S. W. neck between Mobile bay and Mississippi. Besides the great staple already named, Alabama produces large quantities of Indian corn, oats, live stock, sweet potatoes, and butter; a considerable amount of wheat, rye, rice, wool, hay, peas, beans, Irish potatoes, fruits, market vegetables, and sugar, and some tobacco, barley, buckwheat, wine, cheese, grass seeds, hops, flax, and silk, are raised. Indigo was formerly cultivated, but being undersold by the foreign article, its culture was given up, though not from want of adaptability in the soil. According to the census of 1850, there were in Alabama 41,964 farms, containing 4,435,614 acres of improved land, producing 294,064 bushels of wheat; 28,754,048 of Indian corn; 2,965,697 of oats; 892,701 of beans and peas; 261,482 of Irish potatoes; 5,475,204 of sweet potatoes; 225,771,600 pounds of cotton; 8,242,000 pounds of sugar; 83,428 gallons of molasses; 164,990 pounds of tobacco; 657,118 pounds of wool; 4,008,811 pounds of butter; 2,311,252 pounds of rice; 897,021 pounds of beeswax and honey; 32,685 tons of hay; live stock valued at \$21,690,112; orchard fruits worth \$15,408; market goods worth \$84,821; and slaughtered animals worth \$4,823,485; value of farming implements and machinery, \$5,125,663.

Forest Trees.—In the central and northern parts of the state, oak of different varieties, poplar, hickory, chestnut, and mulberry are

the principal woods, while in the south are cypress and loblolly; pine is abundant south of the mountains.

Animals.—Wild deer and turkeys are plentiful, and bears, wolves, and foxes are still met with.

Manufactures.—But little attention, comparatively speaking, has been paid as yet to manufactures in Alabama; but according to the census of 1850, there were in the state 1022 establishments, each producing annually \$500 and upward; of which 12 were cotton factories, employing capital to the amount of \$651,900, with 346 male and 390 female hands, consuming raw material worth \$237,081, and producing 3,081,000 yards of stuffs, and 790,000 pounds of yarn, valued at \$382,200; 14 forges, furnaces, &c., employing capital to the amount of \$230,125, and 266 male hands, consuming raw material worth \$111,855, and producing 2537 tons of castings, pig, and wrought iron, valued at \$280,876. Capital invested in distilleries \$500, hands employed 2, product 3000 gallons. There were also 149 tanneries in Alabama, employing \$200,570, consuming raw material worth \$158,247, and producing leather valued at \$335,911.

Internal Improvements.—There were in Alabama, in January, 1853, 135 miles of railroad completed, and 945 in course of construction. One connecting Montgomery with West Point; another extending from Tusculumbia to Decatur; and 33 miles of the projected railway from Mobile to the Ohio are completed. Those that are projected or in course of construction are designated as the Memphis and Charleston, the Alabama and Mississippi, the Girard and Mobile, the Tennessee and Selma, and the Alabama and Tennessee railroads.—See *Table of Railroads*, APPENDIX.

Commerce.—This state enjoys great advantages for both foreign and internal commerce, her ports being open to the sea through Mobile bay, and having more than 1500 miles of steamboat navigation on her rivers, giving an outlet not only to her own productions, but also to some of those of Mississippi and Georgia. According to De Bow, there were 549,499 bales of cotton brought to Mobile in 1851–2, besides what was sent to New Orleans and the ports of Florida. The exports of Alabama in 1851 were \$18,528,824, imports \$413,446. Tonnage owned in 1851, 21,327·08; number of vessels built in the state, 5, whose tonnage was only 354·62. Considerable quantities of sawed lumber and staves are exported from Mobile to Cuba, to Mexico, and to domestic ports. The sawed lumber exported in 1850–51 amounted to 6,816,054 feet, and of staves 360,779.

Education.—In 1850 there were 127,390 children in Alabama, of whom only 35,039 were attending schools. The common-school

fund in 1852 was \$1,075,818, and the university fund \$250,000. There are four colleges in the state, with an aggregate of 349 students, and 21,100 volumes in the libraries; and one law school. The state university of Alabama, located at Tuscaloosa, is in a very flourishing condition, with an annual income of \$15,000.—See *Table of Colleges*, APPENDIX.

Religious Denominations.—Of the 1235 churches in Alabama, in 1850, 505 belonged to the different divisions of Baptists; 13 to the Christians; 16 to the Episcopalians; 531 to the Methodists; 150 to the Presbyterians; and 5 to the Roman Catholics; the rest were owned by the Africans, the Free Church, Independents, Lutherans, Unionists, Unitarians, and Universalists.—See *Table of Religions*, APPENDIX.

Public Institutions.—There is a state penitentiary at Wetumpka, which had 151 prisoners on October 1st, 1851. Provision has been made by the state for the establishment of a state lunatic asylum at Tuscaloosa. A blind asylum has been recently established at Mobile, and \$5000 have been appropriated by the legislature for organizing and sustaining an institution for the deaf and dumb. The buildings of the Alabama university, near Tuscaloosa, are very fine, and cost \$150,000. The other public buildings, not strictly state institutions, will be described under the head of the respective towns in which they are situated.

Government.—The governor of Alabama is elected for two years by the people, and receives an annual salary of \$2500. The senate consists of 33 members, elected for four years, and the house of representatives of 100 members, elected for two years, both by the people. The pay of members of both branches is \$4 per diem. One-half of the senate is elected every second year. The legislature meets biennially. The judiciary consists, 1. Of a supreme court, composed of one chief and four associate judges, elected by the legislature for six years, and receiving \$2250 per annum; 2. Of a court of chancery, composed of three chancellors, elected in the same manner; 3. Of nine circuit courts, holding two sessions a year in each county; 4. The city court of Mobile. The judges of probate, who are also clerks of the court and registers of deeds, are, as well as the circuit judges and the judges of the Mobile court, elected by the people for six years. All these judges receive \$1500 per annum except the judge of the Mobile court, who receives \$2000. The assessed value of property in Alabama in 1850, was \$219,476,150; estimated value \$228,204,332. Public debt \$6,742,339, of which \$1,087,501 was contingent. Ordinary annual expenses, exclusive of debt and schools, about \$100,000. The number of banking institutions, January, 1852, was only two, with a capital of \$2,000,000, a

circulation of \$3,500,000, and \$1,800,000 in coin.

History.—The famous exploring expedition of De Soto across the southern part of the (present) United States, about the year 1541, is believed to have been the first visit of the white man to the wilds of Alabama. De Soto met with fierce opposition from tribes of savages, who appear to have been more populous and less rude than the northern aborigines. He is said to have nearly annihilated a tribe numbering many thousands, and to have destroyed their capital, Maubiliá. He then advanced into the forests, crossing the Tuscaloosa river, (named from the chief of the tribe he had just conquered,) meeting with constant opposition and annoyance from the natives, which resulted in a second engagement within the present limits of Mississippi, scarcely less disastrous than the preceding. The houses of these people evinced less barbarism, as before hinted, than many other Indian tribes. "The chief's house was, in one instance, 120 feet by 40, and included small buildings like offices. A remarkable temple found upon the Savannah river, at Silver Bluff, was 100 feet long, 40 feet wide, and proportionably high." (*De Bow's Industrial Resources of the South and West.*) The next we hear of the white man in Alabama is in 1702, when Bienville, a Frenchman, built a fort on Mobile bay. The present site of Mobile, however, was not occupied till nine years after. At the peace of 1763, Alabama, with all the French possessions E. of the Mississippi (except New Orleans) fell to the English. This state formed a part of Georgia until 1802; from this date it was included in Mississippi territory till 1817, when it was organized into a separate government, and in 1819 became an independent member of the great American confederacy, and now ranks fourth in population of the Southern states. It was in Alabama that General Jackson first gave practical proof of those great military talents which afterwards so won upon the favour of his countrymen. General Jackson routed the Creeks with great slaughter at Talladega, in November, 1812; General Floyd at Autossee; and General Claiborne at Euchauachaca, a few weeks after; and General Jackson again at Tohopeka, killing about 600 savages, and reducing them to sue for peace. This war against the Creeks had its origin in the massacre, by that tribe, of about 300 men, women, and children at Fort Mimms, whither they had fled for refuge. They were incited to this savage atrocity by the celebrated Tecumseh, who urged them to take advantage of the war with England to regain independent possession of the land of their fathers.

ALABAMA, a post-township of Genesee county, New York, 12 miles from Batavia, and 263 W. from Albany. It is inter-

sected by the Tonawanda creek. Population, 2054.

ALABAMA, a small bayou of Iberville parish, Louisiana, communicating in time of floods with the Atchafalaya.

ALABAMA (or Big Sandy) creek, Texas, flows on the S. W. border of Tyler county, and falls into the Neches 15 miles above Beaumont.

ALABAMA, a village of Leon county, Texas, on the right bank of Trinity river, about 60 miles in a straight line N. N. E. from Washington, the former capital of the state.

ALACHUA, ă-latch'u-ă, a county in the north-west part of the peninsula of Florida, has an area of about 1000 square miles. The Santa Fe river forms its northern, and the Suwanee its western boundary. Orange lake is partly included in its limits, and it contains several ponds. Surface rolling or level; soil generally fertile; Indian corn, cotton, rice, and sweet potatoes are the staples. It produced in 1850, 64,724 bushels of corn; 28,063 of sweet potatoes; 561 bales of cotton; 17,935 pounds of rice; 5558 gallons of molasses. Capital, Newnansville. Population, 2524, of whom 1618 were free, and 906 slaves. It was named from Alachua savanna, a grassy and marshy plain in the county north of Lake Okechobee.

ALACULSA CREEK, Cherokee county, Georgia, a branch of Little river.

ALAIEDON, a post-town of Ingham county, Michigan, about 70 miles W. by N. from Detroit. Population, 377.

ALAMAKEE.—See ALLOMAKEE.

ALAMANCE, ăl'ă-mance, creek of North Carolina, flows into Cape Fear river from the W., in Alamance county.

ALAMANCE, a county in the N. central part of North Carolina, has an area of about 500 square miles. Haw river, a branch of Cape Fear, flows through the middle of the county, and Alamance creek, from which the name is derived, flows through the western part into the Haw river. The surface is undulating; the soil productive. Wheat, Indian corn, oats, hay, cotton, and tobacco are the staples. In 1850 it produced 419,130 bushels of corn; 82,887 of wheat; 108,265 of oats; 3783 tons of hay; 121 bales of cotton; 14,650 pounds of tobacco, and 80,051 of butter. It contained in that year 5 cotton factories, 1 iron foundry, and 30 grist and flouring mills. Number of churches 15. The route of the Central railroad, now in progress, passes through the county, and a plank-road is projected from the county seat to the coal mines on the banks of Deep river. The county was formed out of the western part of Orange in 1848. Capital, Graham. Population, 11,444, of whom 8248 were free, and 3196 slaves.

ALAMEDA, ă-lă-mă'dă, a town of Bernalillo county, New Mexico, on the left bank

of the Rio Grande, 6 miles above Albuquerque.

ALAMO, TEXAS.—See FORT ALAMO.

ALAMO, al'ā-mo, a post-office of Montgomery county, Indiana, forming the N. W. extremity.

ALAMO, a post-township of Kalamazoo county, Michigan, 70 miles W. S. W. from Lansing.

ALAMO, a post-village of Contra Costa county, California.

ALAMODE, a post-office of Reynolds county, Missouri.

ALAMUTCHA, a post-village of Lauderdale county, Mississippi, about 80 miles E. of Jackson.

ALANTHUS GROVE, a post-office of Gentry county, Missouri, about 200 miles N. W. from Jefferson city.

ALAPAHA, ah-lap'ā-haw, a river of Georgia, flowing into the Suwanee. Length about 100 miles.

ALAPAHA, a post-village of Lowndes county, Georgia, 262 miles S. of Milledgeville.

ALATAMAHA.—See ALTAMAHA.

ALAUQA, al'ā-quaw, a small river of Florida, flowing into Choctawhatchee bay.

ALAUQA, a post-village of Walton county, Florida, on the above river, about 125 miles W. by N. from Tallahassee.

ALARKA, a post-office of Macon county, North Carolina.

ALARM FORK, a small village of Oregon county, Missouri, 15 miles S. of Thomasville.

ALBA, a post-village of Bradford county, Pennsylvania, 143 miles N. by E. from Harrisburg.

ALBANY, al'bü-ne, a county in the E. part of New York, has an area of about 483 square miles. It is bounded on the E. by the Hudson, and partly on the N. by the Mohawk, and is principally drained by Normanskill and Catskill creeks, which afford valuable water-power. The surface in the W. and N. is rough and mountainous, but along the Hudson and other streams nearly level. The soil along the river is fertile, but in the interior sandy and in some places quite sterile. Indian corn, buckwheat, rye, oats, potatoes, and butter are the staples. In 1850 there were raised 244,411 bushels of corn; 648,389 of oats; 406,040 of potatoes; 970,142 pounds of butter, and 71,804 tons of hay. There were 7 breweries, 13 cabinet-ware manufactories, 2 edge-tool manufactories, 3 cotton factories, 8 woollen factories, 8 iron foundries, 20 flour and grist mills, 23 saw mills, 3 planing mills, 3 paper mills, 5 stove and furnace manufactories, 15 tanneries, 10 tobacco factories, and 1 bell foundry. It contained in that year 107 churches, and 14 newspaper establishments. There were 17,054 pupils attending public schools, and 1502 attending academies and other schools. Iron ore, gypsum, marl, and water limestone are found, although not in great abundance. The Hud-

son river, is navigable to Troy and by means of lockage to Lansingburg. The Erie and Champlain canals terminate in the north-eastern part of the county, which is also intersected by the railroad connecting Albany with Utica. Organized in 1683, and named in honor of the Duke of York and Albany, afterwards James II. Capital, Albany. Population, 93,279.

ALBANY, the capital of New York, and the second city in importance in that state, is situated on the W. bank of the Hudson river, 145 miles N. from New York city, 164 W. by N. from Boston, and about 370 N. E. from Washington: lat. 42° 39' N., lon. 73° 44' 49" W. As viewed from some parts of the Hudson, the appearance of the city is highly picturesque and imposing. A low alluvial flat from 15 to 100 rods wide extends along the margin of the river, but west of this the ground rises about 220 feet in the distance of a mile. Albany, compared with most other American cities, is not remarkable for the regularity of its streets, nor generally speaking for the neatness or elegance of its houses; nevertheless, it contains many handsome, and several splendid edifices. The principal street is State street, extending from the Hudson to the capitol; from the river to Broadway it is quite narrow, but on reaching that street it widens to 150 feet or upwards, and continues of this breadth to its western extremity. The city contains a number of public squares, the most important of which is situated at the end of State street. Among the principal edifices of Albany may be mentioned the capitol, a substantial and handsome stone building 115 feet long, and about 90 feet wide; the walls are about 50 feet high, consisting of two stories and a basement story of 10 feet; it is faced with brown freestone from the quarries on the Hudson below the Highlands. The columns, pilasters, and other decorations are of marble, chiefly from Berkshire, in Massachusetts. The edifice is crowned with a dome on which stands a statue in wood of the goddess Themis, (Justice,) 11 feet high, with a sword in her right hand and a balance in her left. The capitol contains an assembly chamber 56 feet long and 50 feet wide and 28 feet high, and a senate chamber 50 feet long, 28 feet wide, and the same in height, besides various other apartments. The capitol stands on the west side of the public square already alluded to. On the opposite side of the square, facing the west, is the state hall, a splendid edifice of marble, containing the different offices of the state government: on the same side is situated the city hall, a large and handsome building, also of marble, with a gilded dome. Albany has about 40 churches, many of which are handsome buildings. The Catholic cathedral, not yet finished, will probably be one of the most splendid as well as largest church edifices in the United States.

It fronts on Eagle street, having its north and south sides on Lydius and Jefferson streets. Standing on an eminence, it presents the whole of its magnificent proportions as the most prominent object to one approaching the city from the south and east.

Albany is distinguished for her educational and literary institutions, among which may be mentioned the University of Albany, incorporated in 1852. This is intended to be national in its character, and of a higher order than any similar institution in the country; its object is to furnish the graduates of American colleges the means of completing an education without going abroad: its departments are of law, medicine, scientific and practical agriculture, civil and mechanical engineering, the mechanic arts, physical geography, political economy, history in its relations to civilization, chemistry in its application to the arts, and astronomy. A splendid observatory, connected with the university, to be called the Dudley Observatory, is now being erected at a cost of \$25,000. The Albany Medical College was founded in 1839, and is furnished with the most ample means of instruction. It has one of the best museums of the kind in this country, and a well-selected library of 3000 volumes, 500 of which are set apart for the use of students, free of charge: number of students in 1852, 114; professors, 8. The State Normal School, a flourishing institution, under the control of the state, was established in 1844, "for the instruction and practice of teachers of common schools in the science of education and the art of teaching;" it has a library of 700 volumes. The Albany Academy, on the east side of the public square, opposite the capitol, and the Albany Female Academy in Pearl street, enjoy a high reputation as institutions of instruction. The former, which is incorporated, is for the education of boys, and has [in 1853] 394 students: they are fitted for any class in college or for business pursuits. The latter, also incorporated, has about 300 pupils. There are also 11 public schools in the city, where a good English education can be obtained free of expense. Belonging to them are libraries numbering in all 8050 volumes. The Albany Institute, having for its object the collection and diffusion of scientific information, possesses a valuable mineralogical cabinet and a library of 5000 volumes: it is in a flourishing condition. The Young Men's Association, established for mutual improvement, has a valuable library of 8000 volumes, and sustains annually, during the winter season, a course of lectures upon literary and scientific subjects. Besides the libraries mentioned, there are the State Library, open to the public, containing 27,000 volumes, and an Apprentices' Library of 3000 volumes.

The State Agricultural Rooms, in the old State House building, on State street, contain a valuable and most interesting collection in natural history and agriculture; above them are the Geological Rooms. In the same building are the valuable collections made in the progress of the preparation of the magnificent State Natural History.

Among the benevolent institutions may be named the Orphan Asylum, which is liberally endowed, and provides for all the destitute orphans of the county: the building is a fine structure, situated one mile west of the City Hall. St. Vincent's Orphan Asylum, incorporated in 1849, is a Catholic institution, under the direction of the Sisters of Charity. The Emigrant's Friend Society furnishes protection and information to emigrants. A society under the direction of a number of benevolent ladies was organized in December, 1850, for the purpose of giving fair and liberal prices to seamstresses: large numbers have been employed by the society, which is now in a most flourishing condition.

Albany is advantageously situated for commerce, at the head of the sloop navigation on the Hudson, and communicates by means of canals with Lake Erie, Lake Ontario, and Lake Champlain. It is also the centre in which a number of very important railroads meet, connecting it with New York, Boston, Buffalo, and other less prominent places. The tonnage of property arriving at Albany by canal in 1852, amounted to 1,019,307 tons, being an increase of that year over the preceding of 96,597 tons: the aggregate tonnage cleared at this place in 1852, was 177,084 tons, exceeding that of the previous year by 41,559 tons. The value of property arriving here by canal in 1852, was \$27,439,180, being an increase over that of the preceding year of \$4,982,625. The value of property cleared the same year amounted to \$31,476,375, exceeding that of 1851 by \$8,613,748. One of the most important articles in the commerce of Albany is lumber. The clear pine of Michigan and Canada, the oak, cherry, and poplar of Ohio, the common pine of Pennsylvania and New York, meet here, furnishing probably the largest lumber market in the world. The value of the lumber received by canal in 1852, amounted to \$6,421,219. The same year there were received 1,651,789 barrels of flour, valued at \$7,482,604; 4,145,970 pounds of wool, valued at \$1,741,307; 2,981,938 bushels of corn, amounting in value to \$1,997,898; 1,495,714 bushels of wheat, valued at \$1,525,628; 1,886,678 bushels of barley, worth \$1,012,275; unmanufactured tobacco, valued at \$1,303,698, besides other articles of less amount. Albany contains 9 or 10 newspaper offices, and 10 banks. The total assessed value of real estate in this city is \$15,831,630, and of personal property, \$4,078,671.

Among the principal hotels of Albany may be mentioned the Delavan House, the City Hotel, and the Mansion House, on Broadway, near the river; Congress Hall, on Washington street, on the hill near the capitol.

The population of Albany in 1850 was 50,763.

ALBANY, a post-township of Oxford county, Maine, 15 miles W. by N. from Paris. Population, 747.

ALBANY, a post-township of Carroll county, New Hampshire, about 60 miles N. by E. from Concord. Population, 455.

ALBEMARLE (ál-be-marl') SOUND, situated in the N. E. part of North Carolina, extends

from the Atlantic westward about 60 miles, and is from 4 to 15 miles wide. It communicates with Currituck sound and with Pamlico sound by narrow inlets. The water is nearly fresh, and not affected by the tide wave of the sea, from which it is separated by a narrow island.

ALBEMARLE, a county in the E. central part of Virginia, has an area of about 700 square miles. The James river forms its southern boundary, and it is drained by the Rivanna and Hardware rivers, affluents of the James, which rise by several small branches in the W. part of the country. The Blue Ridge forms its N. W. boundary, and a ridge called South-west Mountain, or Carter's Mountain, extends across the county in a N. E. and S. W. direction. The surface is beautifully diversified, and the scenery in all parts of the county is exceedingly picturesque. The soil of the valleys and river bottoms is remarkably fertile, and a large portion of the highlands is susceptible of cultivation. Indian corn, wheat, oats, hay, tobacco, wool, and butter are the staples. In 1850 it produced 798,354 bushels of corn; 278,575 of wheat, 191,549 of oats; 4328 tons of hay; 1,456,300 pounds of tobacco, and 164,882 pounds of butter. The produce of corn was greater than that of any other county in the state. It contained in that year 44 churches, and 4 newspaper establishments. There were 550 pupils attending public schools, and 465 attending academies and other schools. The Rivanna river is navigable in the eastern part of the county, which is intersected by the Central railroad of Virginia, lately constructed, while the James River Canal passes along the south border. Albemarle is among the most populous and highly cultivated counties of Virginia, and is distinguished as the native place of Thomas Jefferson, third President of the United States, whose residence, Monticello, is beautifully situated 3 miles S. E. from Charlottesville, commanding a magnificent view of the distant mountains, and of the Rivanna river, which flows in the immediate vicinity. Capital, Charlottesville. Population, 25,800, of whom 12,462 were free, and 13,338 slaves.

ALEXANDRIA, a city port of entry and capital of Alexandria county, Virginia, on the right bank of the Potomac, 7 miles below Washington. Lat. 38° 49' N. Lon. 77° 4' W. The river, here one mile wide, forms a commodious harbor, sufficiently deep for the largest ships. The city is pleasantly situated on undulating ground, with a fine view of the capitol at Washington and of the broad Potomac. The streets cross each other at right angles and are generally well paved and lighted with gas. The public buildings are a court house and about 12 churches. There are 3 banks, 2 newspaper offices, and several excellent schools. The water of the river has recently been introduced into the city by means of machinery. A considerable amount of shipping is owned here, in which corn, tobacco, and stone coal are exported. A canal has

been opened to Georgetown intersecting the Chesapeake and Ohio canal, and a railroad 90 miles long extends from this city to Gordonsville on the Central railroad. These improvements were finished in 1852, and have attracted considerable trade to this port. The manufacture of cotton cloths has recently been introduced here, and is carried on quite extensively, a number of mills being in successful operation. Population, 8752

ALEXANDRIA, a post-village of Benton county, Alabama, about 136 miles N. E. from Tuscaloosa.

ALLEGAN, a county in the W. S. W. part of Michigan, bordering on Lake Michigan, has an area of 840 square miles. It is intersected by Kalamazoo river, (navigable by small steamboats,) and also drained by Black and Rabbit rivers. The surface is generally undulating; the soil on the margins of the rivers is a deep, black alluvion, and in some other parts sand and clay predominate. The county is mostly covered with forests, from which large quantities of lum-

ber are procured. Indian corn, wheat, oats, hay, potatoes, and pork are the staples. In 1850, the county produced 52,155 bushels of corn; 2521 of wheat; 16,711 of oats; 43,741 of potatoes, and 92,610 pounds of maple sugar. It contained in that year 6 churches and 1 newspaper establishment. There were 1196 pupils attending public schools. A limestone quarry has been opened in the S. W. part of the county. Capital, Allegan. Population, 5125.

ALLEGAN, a thriving post-village, capital of Allegan county, Michigan, on both sides of the Kalamazoo river, 160 miles W. by N. from Detroit. It is situated at the head of navigation for small boats, and has an active trade. Lumber is the chief article of export. Laid out in 1835. A bridge crosses the river at this place. Population of the township, 752.

ALLEGANY. See ALLEGHANY.

ALLEGHANY, *al-le-gá'ne, a river which rises in Potter county, in the N. part of Pennsylvania. After making a circuit in New York, it returns again into Pennsylvania, and uniting with the Monongahela at Pittsburg, forms the Ohio. It flows through a hilly country, in which pine timber and stone coal are abundant, and is navigable for small steamboats nearly 200 miles from Pittsburg. Its principal towns on its banks are Warren, Franklin, and Kittanning.

ALLEGHANY MOUNTAINS, or ALLEGHANIES, a designation sometimes used as synonymous with APPALACHIAN MOUNTAINS, and employed to denote the great mountain chain or system which extends south-westerly, nearly parallel to the Atlantic coast, along the south-eastern side of the North American continent. (See APPALACHIAN MOUNTAINS.) This name is, however, more commonly, though rather loosely, applied to that portion of the Appalachian system lying south-west of the Hudson river, and constituting the line which divides the waters that flow into the Atlantic on the east, from those which descend the Mississippi on the west.

* It is much to be desired that a uniform orthography of this name should be adopted. In New York it is commonly written *Allegheny*; in Pennsylvania, *Allegheny*; and in Virginia and the Southern States, *Alleghany*. As nearly all of the works on general geography, even those published in New York and Pennsylvania, spell the name ALLEGHANY, the citizens of those states might, it is believed, without any unmanly concession, or without the slightest abandonment of what is due to the dignity of sovereign states, conform in this respect to the usage of the majority. The impropriety, not to say absurdity of this discrepancy in the spelling, will be seen by referring to a representation of New York and Pennsylvania on the same map. We shall there find one and the same river named *Allegheny*, near its source; while lower down, for the distance of some 40 or 50 miles, it is *Alleghany*, and then again *Allegheny* for the rest of its course. If we have occasion to speak of the mountains, we must, according to this method, call them *Alleghany* in a description of New York; *Allegheny* in an article on Pennsylvania; and *Alleghany* in treating of Virginia or any of the Southern or Western States.

The term ALLEGHANY Mountains, in a still more restricted sense, is applied to a broad range or mass of mountains in Pennsylvania, Maryland, and Virginia, forming the western portion of the great Appalachian system in those states. The ridges which form the Alleghany are not very distinctly defined, although the entire chain is so remarkable a feature in the geography of our country. The length of this mountain range may be stated at 300 miles; the mean height is about 2500 feet. Like most of the other chains of the Appalachian system, the Alleghany does not rise into peaks, but stretches in parallel ridges, which, to the view from either side, exhibits the appearance of gently rounded or swelling knolls, or of easy curves or undulations, marking the line of the far distant horizon.

ALLEGHANY, a county in the W. S. W. part of New York, bordering on Pennsylvania, has an area of about 1045 square miles. It is intersected by the Genesee river, and principally drained by its tributaries, which turn numerous grist and saw mills. The Genesee Falls at Portage, in the N. part of the county, produce an immense water-power. The country on each side of the Genesee valley rises, and in the E. and W. parts the surface consists of table-land. The soil is generally fertile; in the N. part best for grain, although the whole county is better adapted to grazing than tillage. Wheat, oats, potatoes, and grass are the staples. In 1850 this county produced 183,631 bushels of wheat; 504,466 of oats; 258,870 of potatoes; 73,212 tons of hay; 1,141,162 pounds of butter; 270,212 of wool, and 1,145,391 of cheese. There were 18 flour and grist mills; 122 saw mills, 18 tanneries, 5 woollen factories, 8 iron foundries, and 2 carding and fulling mills. It contained in that year 46 churches and 3 newspaper establishments. There were 6301 pupils attending public schools, and 384 attending academies or other schools. Bog iron ore and limestone are found. The New York and Erie railroad and the Genesee canal traverse this county. Organized in 1806, having been formed from a portion of Genesee county. Capital, Angelica. Population, 37,808.

ALLEGHANY, a county in the W. S. W. part of Pennsylvania, has an area of about 750 square miles. The Alleghany and Monongahela rivers unite near the centre of the county, and form the Ohio, which flows toward the S. W. It is also drained by the Youghiogeny river, and by Chartiers, Turtle, and Pine creeks. The surface in the vicinity of the rivers is much broken, and furrowed into deep ravines; a large portion of the upland is rolling or hilly, and presents a beautiful variety of landscape. The soil of the S. E. part is excellent, having a basis of limestone; in the N. W. part the soil is clayey, and nearly all of the county is ara-

ble land. Grain, cattle, potatoes, wool, hay, and butter are the staples of agriculture. In 1850 this county produced 526,856 bushels of wheat; 438,966 of corn; 257,408 of potatoes; 35,836 tons of hay, and 971,434 pounds of butter. There were 28 distilleries, 8 nail factories, 2 coach-spring manufactories, 84 clothing establishments, 57 cabinetware manufactories, 9 glass manufactories, 2 glass-cutting establishments, 17 iron foundries, 4 hardware establishments, 13 machine shops, 13 rolling mills, 1 copper refinery, 69 flour and grist mills, 32 saw mills, and 21 tanneries. It contained 179 churches and 36 newspaper establishments. There were 12,664 pupils attending public schools, and 3468 attending academies and other schools. Large quantities of bituminous coal are procured from the hills in the vicinity of Pittsburg. The manufacture of iron, glass, wool, &c. is carried on very extensively in the county; a more particular account of this branch of industry will be found under the head of Pittsburg, the county seat. The county is liberally supplied with water-power. The Pennsylvania canal follows the course of the Alleghany and Ohio rivers through the county; the Central railroad has its western terminus at Pittsburg; the Ohio and Pennsylvania railroad extend westward to Indiana, &c., and others are in progress toward Erie and Steubenville. In respect to population and manufacturing industry, Alleghany county is the second in the state. Organized in 1788, and named from the Alleghany river. Capital, Pittsburg. Population, 138,290.

ALLEGHANY, a county forming the western extremity of Maryland, bordering on Pennsylvania and Virginia, has an area of about 800 square miles. The extreme length is 65 miles, the breadth varies from 7 to 35 miles. The southern boundary is formed by the Potomac river and its north branch; the county is intersected in the western part by the Youghiogeny river, and also drained by Town, Evits Wills, and Glade creeks. It is traversed by the main Alleghany mountain, and by several minor ridges, and the surface is exceedingly broken and rocky. The mountainous districts present broad valleys, called *glades*, the soil of which is fertile, and peculiarly adapted to grazing and dairy farms. They furnish the celebrated glades butter and mountain mutton. Indian corn, wheat, oats, butter, and hay are the staples. In 1850 the county produced 101,773 bushels of corn; 73,525 of wheat; 163,943 of oats; 231,038 pounds of butter, and 10,896 tons of hay. It contained in that year 2 woollen factories, 1 iron foundry, 1 iron furnace, 4 saw mills, 1 machine shop. There were 31 churches and 3 newspaper establishments, 2480 pupils attending public schools, and 105 attending academies and other schools. The prevailing rocks are

limestone and variously colored sandstones. Iron ore abounds in many parts of the county; large quantities of stone coal are procured from the mines a few miles W. from Cumberland. The beds of coal are from 3 to 14 feet in thickness, and extend from the Potomac river to the boundary of Pennsylvania. The county is intersected by the Baltimore and Ohio railroad. Capital, Cumberland. Population, 22,769, of whom 22,045 are free, and 724 slaves.

ALLEGHANY, a county situated a little S. W. from the centre of Virginia, has an area of about 500 square miles. It is intersected by Jackson's river, which unites with the Cow Pasture river on the E. border, to form the James river; and it is also drained by Potts and Dunlap creeks. The main Alleghany chain forms its boundary on the N. W.; a ridge called Middle Mountain extends along the S. E. border, and the Warm Springs and Peter's mountains extend across the middle of the county. The scenery of this county is remarkably fine, particularly at the passage of Jackson's river, through one of the mountains. The soil of the valleys is fertile. APPALACHEE BAY is situated on the coast of Florida, in the Gulf of Mexico.

APPALACHIAN MOUNTAINS, also called Alleghany mountains, the general appellation of the vast mountain system in the southeastern part of North America, extending, under various names, from Maine, southward, to the northern part of Alabama. In New Hampshire, near the northern termination of this chain, it is less than 100 miles from the Atlantic coast, but it gradually diverges as it advances southward, so that towards its southern extremity it is about 300 miles from the sea. In New England and New York the chain is somewhat broken and irregular, many of the ridges of which it is composed, running nearly north and south. But in Pennsylvania and the Southern states, the different ranges are more continuous, and for the most part nearly parallel to the general direction of the entire chain. The name Alleghany Mountains is more commonly applied to that portion of the Appalachian system lying south of the northern boundary of Pennsylvania, although it is often extended to the mountains in the N. W. part of New Jersey, and the S. and E. parts of New York, including the Catskill. But as the chain is scarcely less interrupted by the Delaware than by the Hudson, it seems difficult to assign any good reason why the mountains of New England should not be included under this general appellation as well as those of New York. On the whole, it would perhaps be better to limit its use as a general appellation to its popular signification, always employing Appalachian to denote the entire mountain system, as above indicated.

The different mountain groups and ranges composing this chain will be treated under their respective heads.

APPALACHICOLA, a river of Florida, formed by the Chattahoochee and Flint, which unite at the S. W. extremity of Georgia. It flows southward through Florida, and after a course of about 100 miles, empties itself into the Gulf of Mexico, through a bay of its own name. It is navigable for steamboats through its whole course.

APPALACHICOLA, a post-town, port of entry, and capital of Franklin county, Florida, at the mouth of the river of the same name, (which flows through Appalachicola bay into the Gulf of Mexico,) 135 miles S. W. from

Tallahassee. The harbor is accessible by steamboats from the gulf, and large quantities of cotton are shipped here. It contains 2 churches, 1 newspaper office, and numerous stores and warehouses.

APPALACHIN, or **APALACHIN**, a post-office of Tioga county, New York.

APPANOOSE, a county in the S. part of Iowa, bordering on Missouri, has an area of 492 square miles. The Chariton river flows diagonally through the county, in a S. E. direction. The county is drained also by the S. fork of Chariton, and by Walnut and Cooper creeks. The surface is rolling or nearly level; the soil is fertile but mostly uncultivated. Indian corn, butter, and wool are the staples. In 1850 this county produced 80,930 bushels of Indian corn; 7893 of oats; 2337 pounds of wool; and 13,896 pounds of butter. Large beds of stone coal are found in several places. The county contains numerous prairies, and many of the streams are bordered by tracts of timber. Chariton river furnishes ample water-power. The county was first settled about the year 1845. Capital, Centreville. Population, 3131.

APPANOOSE, a village of Hancock county, in the W. part of Illinois, on the Mississippi river, about 6 miles N. E. from Nauvoo.

APPERSONS, a post-office of Charles City county, Virginia.

APPLE RIVER, in the N. W. part of Illinois, rises in Jo Davies's county, and flowing in a southerly course with a very winding channel, falls into the Mississippi river, in Carroll county.

APPLEBACHSVILLE, a post-office of Bucks county, Pennsylvania.

APPLE CREEK, a post-office of Wayne county, Ohio, 99 miles E. from Columbus.

APPLE CREEK, Illinois, falls into the Illinois river in Green county.

APPLE CREEK, a small post-village of Cape Girardeau county, Missouri, 170 miles S. E. from Jefferson city.

APPLE CREEK, a small stream of Henry county, in the W. part of Missouri, falls into Grand river, an affluent of the Osage river.

APPLE GROVE, a post-office of York county, Pennsylvania.

APPLE GROVE, a post-office of Morgan county, Alabama.

APPLE GROVE, a post-office of Meigs county, Ohio.

APPLE GROVE, a post-office of Polk county, Iowa.

APPLETON, a township of Waldo county, Maine, 25 miles E. by S. from Augusta; soil favorable to wheat. Population, 1727.

APPLETON, a post-township in Licking county, Ohio. Population, 66.

APPLETON, a small post-village of Perry county, Illinois, 12 miles N. E. from Pinckneyville.

APPLETON, or **GRAND CHUTE**, a post-village, capital of Outagamie county, Wisconsin, on

the Neenah or Fox river, 30 miles from its mouth, 95 miles N. E. from Madison, and about 4 miles from the foot of Winnebago lake. It is situated near the rapids called the Grand Chute, where the river descends about 30 feet in the course of one mile and a half, affording immense water-power. Five dams have been built across the river, which render it navigable for steamboats through its whole course. By this means steamboats can pass from Lake Michigan to the Mississippi. The county was organized in 1850.

APPLETON, a post-office of Winnebago county, Wisconsin.

APPLING, a county in the S. E. part of Georgia, has an area of 1060 square miles. It is bounded on the N. and N. E. by the Altamaha river, and drained by the Little St. Illa river and Hurricane creek. The surface is level, and the soil sandy and poor. Cotton, Indian corn, sugar, sweet potatoes, and pine lumber are the staples. In 1850 the county produced 63 bales of cotton; 53,794 bushels of corn; 2038 of oats; and 35,234 of sweet potatoes. It contained 17 churches, and 222 pupils attending public schools. Named in honor of Colonel Daniel Appling, an officer in the war of 1812. Capital, Holmesville. Population, 2949, of whom 2545 were free, and 404 slaves.

APPLING, a post-office of Jefferson county, New York.

APPLING, a post-village, capital of Columbia county, Georgia, 23 miles W. from Augusta, is in a declining condition. It has a court-house, academy, and a few shops.

APPOMATTOX, a river in the S. E. part of Virginia, rises in Appomattox county, and flowing in a general eastward direction forms the boundary between several counties on each side, passes by the city of Petersburg and enters the James river at City Point. It is a valuable stream for navigation, having a narrow and deep channel. Large vessels ascend to Petersburg, about 20 miles from its mouth, and batteaus to Farmville, perhaps 100 miles farther. The whole length is estimated at 150 miles. The navigation is good at all seasons for boats of 5 or 6 tons to Farmville.

APPOMATTOX, a county in the S. E. central part of Virginia, has an area of 260 square miles. It is bounded on the N. W. by the James river and canal, and drained by the sources of the Appomattox river, from which the name is derived. The surface is diversified by several small ranges of mountains and covered with extensive forests. The soil is generally fertile. Indian corn, wheat, oats, tobacco, hay, and butter are the staples. In 1850 the county produced 186,855 bushels of corn; 76,345 of wheat; 92,116 of oats; 964,100 pounds of tobacco, and 82,299 of butter. It contained in that year 1 iron furnace, 5 flour mills, and 2 tanneries.

There were 22 churches, 361 pupils attending academies and other schools. It is intersected by the South Side railroad, extending from Petersburg to Lynchburg, which is a source of much improvement. A plank-road has lately been laid in the county. Capital, Clover Hill. Population, 9193, of whom 4394 were free, and 4799, slaves.

APPOMATTOX DEPOT, a post-office of Amelia county, Virginia.

APPOQUINNIMINK, a small creek of New Castle county, Delaware, flows eastward into Delaware bay.

APPOQUINNIMINK, a hundred of Newcastle county, Delaware, has a population of 3126.

APULIA, a post-office of Onondaga county, New York, 124 miles W. from Albany.

AQUACKANOCK, New Jersey. See ACQUACANONCK.

AQUASCO, a post-office of Prince George's county, Maryland, 51 miles S. W. from Annapolis.

AQUIA creek, in the E. part of Virginia, flows through Stafford county into the Potomac river, and is navigable for schooners several miles from its mouth.

AQUIA, a post-office of Stafford county, Virginia.

AQUILA, a post-office of Franklin county, Georgia, 118 miles N. by E. from Milledgeville.

AQUOKEE river. See TOCOA.

AQUONE, a post-office of Mason county, North Carolina.

ARAGO, a cape of Oregon, about 20 miles S. of the mouth of Umpqua river.

ARAMINGO, a district of Philadelphia county, Pennsylvania, about 4 miles N. by E. from Philadelphia.

ARANSAS, a small river of Texas, rises near the S. E. border of Bexar county, and flowing south-eastward, forms the boundary between San Patricio county on one hand, and Goliad and Refugio on the other, until it empties itself into Aransas bay.

ARANSAS BAY, (otherwise called Aransazua, and Aransaso bay,) on the coast of Texas, is immediately N. of Corpus Christi bay. Length about 18 miles, greatest breadth 8 miles.

ARANSAS, a small post-village of Refugio county, Texas, on Aransas bay.

AR-AP'A-HOE Indians, a tribe dwelling between the S. fork of Platte river, and the head waters of the Arkansas.

ARARAT MOUNTAIN. See PILOT MOUNTAIN.

ARARAT, a small river of North Carolina, which enters Yadkin river from the N. W. a few miles E. from Rockford.

ARARAT, a post-office of Patrick county, Virginia.

ARATOR or ARRATOR, a post-village of Pettis county, Missouri, 58 miles W. by N. from Jefferson city.

ARBA, a post-office of Randolph county, Indiana.

AREACOCOCHEE, a post-office of Randolph county, Alabama.

AREELA, a post-office of Scotland county, Missouri.

AREORVITE, a post-office of Pike county, Alabama.

ARBUCKLE, a post-office of Mason county, Virginia.

ARCADE, a small village in China township, Wyoming county, New York, about 35 miles S. E. of Buffalo. It contains 2 flouring mills, 2 woollen factories, 3 stores, and 1 academy.

ARCADIA, a post-office of Washington county, Rhode Island.

ARCADIA, a post-township in the S. part of Wayne county, New York, about 30 miles E. by S. from Rochester, intersected by the Erie canal, the Syracuse and Rochester railroad, and the railroad connecting Elmira and Sodus bay. Population, 5145.

ARCADIA, a post-village in the above township, on the Erie canal, and on the Rochester and Syracuse railroad, 185 miles W. by N. from Albany. It contains 1 or 2 churches and several stores.

ARCADIA, a post-office of Bienville parish, Louisiana.

ARCADIA, a post-office of Sullivan county, Tennessee.

ARCADIA, a post-office of Hamilton county, Indiana.

ARCADIA, a post-office of Morgan county, Illinois, 40 miles S. W. from Springfield.

ARCADIA, a small post-village of Madison county, Missouri, on one of the sources of St. Francis river, 120 miles S. E. from Jefferson City.

ARCANUM, a post-office of Darke county, Ohio.

ARCHER, a post-township in the central part of Harrison county, Ohio, about 110 miles N. E. by E. from Columbus. Population, 875.

ARCHIBALD, a thriving post-village of Blakely township, Luzerne county, Pennsylvania, on the Lackawanna river, 4 miles S. S. W. from Carbondale, and 26 miles N. E. from Wilkesbarre. The Delaware and Hudson railroad, 17 miles long, connects it with Honesdale. The village owes its importance and rapid growth to the rich coal mines which are worked in the vicinity by the Delaware and Hudson Canal company. The iron business is also carried on extensively. The Lackawanna river flows through a fertile and populous valley, bounded on each side by high ridges. Population, 1500.

ARCOLA, or GUM SPRING, a post-village of Loudon county, Virginia, 146 miles N. from Richmond, contains a few stores.

ARCOLA, a post-office of Warren county, North Carolina.

ARCOLA, a small village in the E. part of Lake county, Ohio, about 36 miles N. E. from Cleveland.

ARENA, a post-village of Iowa county, Wis-

consin, on the S. bank of Wisconsin river, about 30 miles W. by N. from Madison.

ARENAC, a new county in the E. part of Michigan, bordering on Saginaw bay, contains about 544 square miles. It is drained by Sandy river. The surface is mostly covered with forests. The county is not yet organized, and is attached to Saginaw county for the judicial purposes. It is not named in the census of 1850.

ARENDSVILLE, a post-office of Adams county, Pennsylvania.

ARENZVILLE, a small post-village of Cass county, Illinois, on Indian creek, about 48 miles W. from Springfield.

ARGENTINE, a post-township in the S. part of Genese county, Michigan, about 55 miles N. W. from Detroit. Population, 436.

ARGO, a post-office of Hall county, Georgia, 120 miles N. from Milledgeville.

ARGO, a small post-village of Carroll county, Illinois, 200 miles N. from Springfield and 6 miles E. from the Mississippi river.

ARGO, a post-village of Crawford county, Missouri, 60 miles S. E. from Jefferson city.

ARGOSVILLE, a post-office of Schoharie county, New York, 46 miles W. from Albany.

ARGUS, a post-office of Montgomery county, Alabama, 141 miles S. E. from Tuscaloosa.

ARGYLE, a post-township of Penobscot county, Maine, about 90 miles N. E. from Augusta; soil fertile, producing excellent wheat. Population, 338.

ARGYLE, a post-township of Washington county, New York, 36 miles N. from Albany. Population, 3274.

ARGYLE, a village in the above township, on Moseskill creek.

ARGYLE, a post-village in Cumberland county, North Carolina, 74 miles S. S. W. from Raleigh.

ARGYLE, a post-office of Decatur county, Georgia.

ARGYLE, a post-office of McDonough county, Illinois, 92 miles N. W. from Springfield.

ARGYLE, a post-office of Jefferson county, Missouri.

ARGYLE, a small post-village of Lafayette county, Wisconsin, on the Wassemom river, about 45 miles N. E. from Galena.

ARIEL, a post-office of Wayne county, Pennsylvania.

ARIEL, a post-office of Marion district, South Carolina.

ARIETTA, a township in S. part of Hamilton county, New York, about 65 miles S. W. from Albany. Population, 108.

ARISPE, a small post-village of Bureau county, Illinois, about 60 miles N. from Peoria.

ARK, a post-office of Lafayette county, Arkansas.

ARKADELPHIA, a post-village, capital of Clark county, Arkansas, on the right bank of Washita river, about 75 miles S. W. from Lit-

the Rock. It has one newspaper office. Small boats navigate the river above and below this place.

ARKAN'SAS, formerly pronounced Ar'kan-saw', a river of the United States, next to the Missouri the largest affluent of the Mississippi. Rising in the Rocky mountains near the boundary between Utah and the Indian territory, it pursues an easterly course for several hundred miles. Near the 98th degree of W. longitude, it turns and flows south-eastward to Fort Smith on the western boundary of Arkansas. Continuing in the same general direction, it traverses that state dividing it into two nearly equal portions, and empties itself into the Mississippi in lat. 33° 54' N., lon. 91° 10' W.

The whole length exceeds 2000 miles. The current is not obstructed by considerable falls or rapids. It is navigable by steamboats during nine months of the year for a distance of 800 miles from its mouth. The difference between high and low water in this river is about 25 feet. It is from $\frac{2}{3}$ to $\frac{1}{2}$ a mile wide throughout the last 600 miles of its course. Stone coal is found in many places along its banks between Little Rock and Van Buren. In the former part of its course it flows through sterile plains of great extent, but after entering the state of Arkansas the soil of the regions which it traverses is generally very productive.

ARKANSAS, generally classed as one of the Western states, but having for the most part the soil and products of the Southern, is bounded on the N. by Missouri, E. by Missouri and the Mississippi river, (which separates it from the states of Tennessee and Mississippi.) S. by Louisiana and Texas, and W. by Texas and Indian territory. It lies between 33° and 36° 30' N. lat., and between 89° 45' and 94° 40' W. lon.; being about 240 miles in length from N. to S., and 224 in breadth from E. to W.; and including an area of near 52,198 square miles, or 33,406,720 acres, only 781,531 of which were improved in 1850.

Population.—There were in Arkansas in 1820, 14,273 inhabitants; 30,288 in 1830; 97,574 in 1840; and 209,639 in 1850: of which 85,689 were white males, 76,369 were white females, 318 free coloured males, 271 free coloured females, and 46,982 slaves. There were also in 1850, 28,416 families occupying 28,252 dwellings. Representative population, 190,846. The number of deaths in the year ending June 1st, 1850, was 2987, or nearly fifteen in every one thousand persons. Of the population at the last census there were 63,286 born in the state, 97,139 in other states of the Union, 196 in England, 514 in Ireland, 71 in Scotland, 11 in Wales, 41 in British America, 516 in Germany, 77 in France, 262 in other countries, and 824 whose places of birth were unknown. The whole number of paupers who received aid

in the year ending June 1st, 1850, was 105. 8 of whom were foreigners. Blind, 75 whites. 1 free coloured, and 5 slaves—total, 81. Deaf and dumb, 83 whites, and 6 slaves.

Counties.—There are in Arkansas 54 counties, viz. Arkansas, Ashley, Benton, Bradley, Carroll, Chicot, Clark, Conway, Crawford, Crittendon, Dallas, Desha, Drew, Franklin, Fulton, Greene, Hempstead, Hot Spring, Independence, Izard, Jackson, Jefferson, Johnson, Lafayette, Lawrence, Madison, Marion, Mississippi, Monroe, Montgomery, Newton, Perry, Phillips, Pike, Poinsett, Polk, Pope, Prairie, Pulaski, Randolph, St. Francis, Saline, Scott, Searcy, Sevier, Union, Van Buren, Washington, Washita, White, and Yell: These three have been formed since 1850: Calhoun, Columbia, and Sebastian.

Towns.—There are but few large towns in Arkansas. The principal are Little Rock, the capital of the state, with a population of about 3000; Van Buren, the most commercial town in the state, with a population of 1500; Fort Smith, population 1500; Camden, population 1400; Batesville, population about 1600.

Face of the Country.—The eastern part of Arkansas for about 100 miles back from the Mississippi, is generally a vast plain covered with marshes, swamps, and lagoons, but occasionally interspersed with elevations, (some of which are 30 miles or more in circuit,) which, when the rivers are overflowed, form temporary islands. A plank-road is about to be made through a part of this region. A bill having recently been passed by Congress, giving to the Southern and Western States all the overflowed swamp-lands within their respective limits, the state of Arkansas is now constructing, along the whole eastern boundary, levees of great strength, by means of which extensive tracts, that have hitherto been entirely worthless, will be converted into cultivable land of extraordinary fertility. The Ozark mountains, which enter the N. W. part of the state, are of uncertain height; they do not, however, exceed 2000 feet, and are generally much below that elevation. These mountains divide the state into two unequal parts, of which the northern has the climate and productions of the Northern States, while the southern portion, in the character of its climate and productions, resembles Mississippi or Louisiana. The Black hills in the north, and the Washita hills in the west, near the Washita river, are the only other considerable elevations. The central parts of the state, as well as the regions north of the Ozark mountains, are broken and undulating.

Minerals.—Arkansas gives indications of considerable affluence in mineral resources, which are principally coal, iron, lead, zinc, manganese, gypsum, and salt. The coal field of Arkansas commences 40 miles above Little Rock, and extends on both sides of the river beyond the western boundary of the state.

Cannel, anthracite, and bituminous coal are all found in the state. Gold is said to have been discovered in White county. Near the Hot Springs is a celebrated quarry of oilstone, superior to any thing else of the kind in the known world: the quantity is inexhaustible: there are great varieties, exhibiting all degrees of fineness. According to a writer in De Bow's Resources of the South and West, there is manganese enough in Arkansas to supply the world; in zinc it excels every state except New Jersey; and has more gypsum than all the other states put together, while it is equally well supplied with marble and salt. The lead ore of this state is said to be particularly rich in silver.

Rivers, Lakes, &c.—Arkansas has no seaboard, but the Mississippi river (which receives all the waters of this state) coats the almost entire eastern boundary, and renders it accessible to the sea from many points. Probably no state in the Union is penetrated by so many navigable rivers as Arkansas: owing, however, to the long-continued droughts which prevail in the hot season, none of these streams can be ascended by vessels of any size more than about nine months in the year. The Arkansas is the principal river that passes wholly through the state. It enters the western border from the Indian Territory, and sweeping almost directly through the middle of the state for about 500 miles, (the whole distance navigable for steamboats,) after receiving a number of small tributaries, discharges its waters into the Mississippi. The White river and the St. Francis, with their affluents, drain the N. E. part of the state. They have their sources in Missouri, and their outlet in the Mississippi river. The White river, which debouches by one channel into the Arkansas, and into the Mississippi by the other, is navigable for steamboats 500 miles, the Big Black for 60, and the St. Francis for 300 miles. The Red river runs through the S. W. angle of the state, and receives some small tributaries within its limits. It is navigable for steamboats beyond Arkansas. The Washita and its numerous affluents drain the southern portion of the state. The main stream is navigable for 375 miles, and its tributary, the Saline, for 100 miles. The Bayous Bartholomew, Bœuf, Macon, and Tensas are all tributaries of the Washita, and have an aggregate of 635 miles of navigable water. They all rise in the S. part of Arkansas and flow into Louisiana, where they join the Red river. The Little Missouri and Bayou D'Arbonne are western branches of the Arkansas, the former navigable 60, and the latter 50 miles, for light steamboats. There are no considerable lakes in Arkansas.

Objects of Interest to Tourists.—Under this head stand prominent the Hot Springs, situated in a county of the same name, about 60 miles S. W. of Little Rock. From a point or

ridge of land forming a steep bank from 150 to 200 feet high, projecting over Hot Spring creek, an affluent of the Washita, more than 100 springs issue at different elevations, and of different temperatures, from 135° to 160° of Fahrenheit. A considerable portion of this bank consists of calcareous deposits, formed from the water as it is exposed to the air. These springs are visited annually by thousands of people. The waters are esteemed particularly beneficial to persons suffering from the chronic effects of mercury; also in rheumatism, stiffness of the joints, &c. &c. Near the top of the bank above alluded to, there is a fine cold spring so near to the warm springs, that a person can put one hand into cold, and the other into hot water at the same time. The creek below the springs is rendered warm enough to bathe in, even in the coldest season. Cane Hill, in Washington county, elevated about 1000 feet, is flat or rolling on the top, with exactly the same growth of trees, &c. (including the grape-vine, papaw and gum trees) as on the river bottoms. It was originally covered with cane, hence the name. It is 4 or 5 miles wide, and perhaps 10 miles long, and densely populated. The mountains on the western border of the state, abound with picturesque and romantic scenery. There is in Pike county on the Little Missouri river, a mountain of alabaster, said to be of the finest quality, and white as the driven snow. In the same county also there is a natural bridge, which is regarded as a great curiosity.

Climate.—The climate of the northern and western parts of Arkansas is allied to that of the North-Western States, while the southern and eastern portion partakes of that of Louisiana. (See *Face of the Country*, page 50.) The lowlands are unhealthy, but the uplands will compare favorably with the most healthful regions of the Western States. The following extract from the letter of a gentleman of great respectability, residing at Little Rock, contains much interesting and valuable information in relation to this subject: "We never have very deep snows in Arkansas, though in the northern and mountainous parts it is sometimes a foot deep, but lasts a short time only. The peach-tree thrives here beyond parallel. The fruit is as good as any in the world, and is *indigenous*.(?) It blossoms in February ordinarily, although I have seen them bloom in January, with plenty of fruit the same year; the average time is the middle of February. We often eat corn here in June, though crops do not ripen so soon, because not planted soon enough. It ripens by the middle of August, and is often gathered in August. According to a meteorological table kept in Pulaski county, near Little Rock, the mean temperature of the year from the 16th December, 1850, until the 15th December, 1851, inclu-

sive, was 62° 66'. Mean temperature of the months of December, January, and February, for the years 1849 and 1850, 45° 82'. Mean temperature for the corresponding months for the years 1850 and 1851, 44° 52'. Mean temperature for the months of June, July, and August, for the year 1850, 79° 66'. Mean temperature for the corresponding months, for the year 1851, 80° 26'. There were 47 days during the summer of 1850, when the mercury rose to 90° and upwards; 51 days during the summer of 1851, when the mercury rose to 90° and upwards. The greatest elevation of the mercury, 1850, was the 24th August, when it rose to 99°. The greatest elevation for 1851, was the 16th August, when it rose to 99½°. The lowest depression of the mercury during the year 1850, was 8°, the 8th of December. The lowest depression during the year 1851, was 12°, the 19th January. From the 1st of March, 1850, until the 30th of November, 1851, inclusive, there fell in rain and snow 79.66 inches of water, making an average of about 3.79 inches per month, and 45.52 inches in 12 months. The greatest amount of rain during one month, was April, 1850, when there fell 7.93 inches of water; the least that fell in any one month was September, 1851, when there fell .02 of an inch."

Soil and Productions.—There is a great variety in the soil of Arkansas; along the river intervals, it is of the richest black mould, (yielding from 50 to 80 bushels of Indian corn to the acre,) but much of it unfit for cultivation for want of a system of drainage. On the White and St. Francis rivers there is some land of especial excellence; while in the country back from the rivers there are some sterile ridges. Grand prairie, between White and Arkansas rivers, about 90 miles long and 30 broad, is badly supplied with water, but most of the other prairie lands are well watered. The region north of the Ozark mountains, including about two tiers of counties, is well adapted to grazing; it produces also abundance of excellent wheat, and, perhaps, the finest apples in the world. This section of the country is elevated, hilly, or rolling, interspersed with prairies, and abounds with fine springs of excellent water. Grain and stock are the staples. The tops of the hills and mountains are often flat or rolling, and covered with a good soil and a heavy growth of timber. The staple products of Arkansas are Indian corn, cotton, and live stock, and considerable quantities of wheat, oats, tobacco, wool, peas, beans, sweet potatoes, Irish potatoes, fruits, garden vegetables, butter, hay, rice, beeswax, and honey, with some rye, barley, buckwheat, wine, cheese, grass-seeds, hops, hemp, flax, silk, and maple sugar. There were in Arkansas in 1850, 17,758 farms, occupying 781,531 acres of improved land, and producing live stock worth \$6,847,969; 199,639

bushels of wheat; 8,893,939 of Indian corn; 656,183 of oats; 285,738 of peas and beans; 193,832 of Irish potatoes; 788,149 of sweet potatoes; 63,179 pounds of rice; 218,936 of tobacco; 23,038,400 of cotton; 182,595 of wool; 1,854,239 of butter; 3977 tons of hay; 192,338 pounds of beeswax and honey; and orchard products valued at \$40,041; and market vegetables at \$17,150.

Forest-Trees.—In Arkansas the bottomlands are generally covered with a heavy growth of cotton-wood, ash, cypress, and gum. The mountains or hilly portions have hickory and the different kinds of oak. Pine is found in considerable abundance on the Arkansas river, near the centre of the state, and from this southward to Red river. Beech is said to be found in great abundance on the St. Francis river. Immense quantities of these different kinds of timber are sent down the Mississippi river to New Orleans. From the letter referred to on the preceding page, we extract the following passage:—"The principal forest-trees are the oak, (white,) found in remarkable abundance and of good quality; the other oaks are also abundant and very fine. White oaks, 5 feet in diameter and 60 or 80 feet without a limb, are common. Hickory, ash, black walnut, gum, cherry, pine, red cedar, dogwood, cypress, maple, beech, cotton-wood, poplar, sugar-maple in the north parts; bois d'arc, (pronounced *bo dark*,) sassafras, and black locust; all these are found in abundance, and are very valuable. The pecan is included in *hickory*, and is also very abundant."

Animals.—Arkansas is still the home of many wild animals, and the bear, buffalo, (a few of which are still found in the Mississippi swamp in Crittenden county,) deer, wolf, catamount, wildcat, beaver, otter, raccoon, and gopher yet infest its forests, prairies, and savannas. The gopher is a little animal found chiefly, it is said, west of the Mississippi. It is rather larger than a rat, and has pouches on each side of its head and neck, in which it carries out the dirt it makes while excavating its burrow. It is very destructive to trees by gnawing their roots. Of birds, there are found wild geese, turkeys, and quails. The streams abound in fish, particularly trout.

Manufactures.—This state is not extensively engaged in manufactures. According to the census of 1850, there were only 271 manufactories producing each \$500 and upwards, annually. Of these 3 were engaged in the manufacture of cotton, employing \$16,500 capital, and 13 male and 18 female hands, consuming raw material worth \$8975, and producing 81,250 pounds of yarn, valued at \$16,637; but no wooden or iron manufactories or distilleries reported. There were also fabricated in 1850, home-made manufactures valued at \$646,938, and 51 tanneries, employing \$42,100 capital, consuming raw ma-

terial worth \$85,230, and producing leather valued at \$78,734.

Internal Improvements.—This young state has as yet made little advance in this respect, having full occupation in the preliminary steps of clearing and settling the country. Some plank-roads are in course of construction. But Arkansas is so well supplied with river navigation, she will scarcely feel the want of other means of communication till her back country is more settled.

Commerce.—This state has no foreign commerce, though it has considerable boating trade with New Orleans, engaged in the export of its productions. The rivers of Arkansas afford an interior navigation of more than 1000 miles, bringing a large portion of the state within the reach of navigable water. According to De Bow the White river is more easily navigated than the Ohio; in addition to this the Arkansas is navigable the entire breadth of the state, the St. Francis for 300, and the Big Black river for 100 miles. The S. and S. W. portion of the state may be approached by steamboats through the Red river, the Washita, and their branches. Lumber, cotton, slaughtered animals, and Indian corn are the great articles of export.

Education.—This state has no colleges, nor has she yet organized a system of public schools.

Religious Denominations.—Of the 185 churches in Arkansas, the different sects of Baptists owned 73; the Episcopalians 2; the Free Church 1; the Methodists 73; the Presbyterians 25; the Roman Catholics 6; and the Union Church 7.

Public Institutions.—As yet Arkansas has no institutions for the insane, or for the deaf and dumb, or blind. There is at Little Rock one state penitentiary, which has been once or twice burned down by the convicts.

Government—Finances, &c.—The governor is elected by the people for 4 years, and receives a salary of \$1800 per annum and the use of a house. The senate consists of 25 members, elected for 5 years, and a house of representatives of 75 members, elected for 2 years, both by the people. The members of both these bodies receive \$3 per diem during the session, and \$3 for every 20 miles travel.

The Judiciary. Consists, 1st, of a supreme court, composed of a chief justice and two associates, elected by the legislature for 8 years, and receiving a salary of \$1800 each per annum; and, 2d, of six circuit courts, held twice a year in each circuit. The circuit judges are elected by the people for 4 years, and the prosecuting attorney for two years. The circuit judges receive \$1250 per annum. Arkansas sends two members to the national house of representatives, and is entitled to four electoral votes for president of the United States. The national debt in 1852 was \$1,506,562; school fund, none; an-

nual expenditures, inclusive of debt and schools, \$35,000. The assessed value of real and personal property in 1850 was \$36,428,675. There were no banks in Arkansas in January, 1852.

History.—Arkansas was settled by the French at Arkansas Post as early as 1685, and formed a part of the great tract purchased from France in 1803, under the name of Louisiana. It made little progress until after its formation into a territory of the United States in 1819. It became a member of the American Union in 1836.

ARKANSAS, a county in the E. S. E. part of Arkansas, contains 1206 square miles. It is intersected by the river of its own name, and the White river flows along its E. border. The surface is generally level, and about one-third of it is occupied by Grand prairie, the largest in the state. The soil of this part is fertile and adapted to corn and cotton. The rivers are navigable by steamboats nearly the whole year. In 1850 this county produced 116,535 bushels of Indian corn; 4204 of peas and beans; 10,712 of sweet potatoes, and 3769 bales of cotton. A description of the celebrated Weyer's cave of this county will be found under the head of VIRGINIA. The Central railroad of Virginia (lately commenced) will pass through this county and connect it with Richmond. Augusta county was formed from Orange in 1738. Capital, Staunton. Population, 24,610, of whom 10,557 were free, and 5053 slaves.

AUGUSTA, a city, seat of justice of Kennebec county, Maine, and capital of the state, at the head of sloop navigation, on the Kennebec river, 43 miles from its mouth by railroad. It is 60 miles N. N. E. from Portland, 65 miles S. W. from Bangor, and 105 N. N. E. from Boston. Lat. 44° 19' N., lon. 69° 50' W. The city is situated principally on the right bank of the Kennebec river, which is here crossed by a bridge 520 feet long. A short distance westward from the river the ground suddenly rises to a considerable elevation, after which the ascent is very gradual. On this elevation are most of the residences and hotels. The business portion of the city is principally along the bank of the river under the hill. The state house, a noble structure of whitish granite, about half a mile south from the city, occupies an eminence commanding a wide and varied prospect. Immediately in front is a

spacious park, handsomely adorned with walks and shade-trees. On the east side of the river is the United States Arsenal, surrounded with extensive grounds, tastefully laid out and enclosed by a neat iron fence. The arsenal contains about 2000 stand of arms, besides cannon and other munitions of war. The hospital for the insane, on the same side of the river, occupies an elevated position, overlooking a landscape of almost unrivalled beauty. Four or five newspapers are published in Augusta. The city contains a flourishing female academy, several manufactories, a number of hotels, 3 banks, and 9 or 10 churches of various denominations. A dam, 584 feet in length, has been constructed across the Kennebec, about half a mile N. of the city, for the purpose of improving the navigation of the river above. A vast hydraulic power has thus been created, which is extensively employed for manufacturing purposes. A steamboat plies daily on the river above the dam, between Waterville and this city. The railroad connecting Portland with Bangor passes through Augusta. It was settled in 1771, and incorporated as a town in 1797. Population in 1830, 3980; 1840, 5314; 1850, 8231; in 1853, about 9500.

The Georgia railroad, of which Augusta is the eastern terminus, extends to Atlanta, and the South Carolina railroad connects it with Charleston. The following extract from a letter received from a highly intelligent gentleman of this place, will be interesting, as explaining the causes of its former and present prosperity:—"Situated at the head of navigation on Savannah river, it was for

many years the chief and indeed only inland town of the state of any commercial importance, and so continued until that spirit of internal improvement was aroused in the people of Georgia which has acquired for our state the enviable fame of the empire state of the South. For some years after the construction of the Georgia railroad Augusta visibly declined, as was manifested by the tenantless houses, empty streets, and decrease in population. This decline was owing to the fact that the peculiar kind of trade (the *wagon* trade) on which the prosperity of the city had depended, was entirely taken away from her. This blight, however, was not of long duration. The character of our business has altogether changed. The upper country of Georgia has been densely settled, the advance in improvement and civilization has created new wants where none before existed; villages have sprung mushroom-like into life, and the merchants of these country villages have become to those of Augusta what the merchants of Augusta were to those of Charleston, New York, and Philadelphia. In a word, our merchants have established a wholesale business, and now sell tens of thousands where before they sold but thousands. Another cause of prosperity is the Augusta canal, which was constructed in 1845. It is nine miles in length, and brings the waters of the Savannah river some 35 or 40 feet above the level of the city. By the water-power thus furnished, factories, machine shops, and other such establishments have been erected and are now in successful operation. Now there are no houses tenantless, and none to be procured at any rent. New buildings are going up every day for the accommodation of our increased population. Augusta has increased in population wonderfully in the last 5 or 6 years, and we now number, by a recent city census, over 12,000." The streets are wide, straight, and lighted with gas. Among the remarkable public buildings are the city hall, which cost \$100,000, the Richmond Academy, a Masonic hall, and a Medical college. Augusta also contains about 14 churches, a hospital, arsenal, 6 banks, (including a branch of the state bank,) and 4 or 5 newspaper offices. A line of steamboats communicates with Savannah. A bridge crossing the river connects the city with Hamburg in South Carolina.

BALDWIN, a township of Cumberland county, Maine, about 20 miles W. N. W. from Portland. Population, 1100.

BALDWIN, a post-office of Chemung county, New York.

BALDWIN, a township of Alleghany county, Pennsylvania, on the Monongahela river, about 3 miles above Pittsburg. Population, 1610.

BALDWIN, a small post-village of Butler county, Pennsylvania.

BALDWIN, a small village in Hinds county, Mississippi, on Big Black river, about 35 miles from Jackson.

BALDWIN, a small village of St. Louis county, Missouri, 20 miles W. from St. Louis.

BALDWINSVILLE, a small post-village in Templeton township, Worcester county, Massachusetts, about 55 miles W. N. W. from Boston.

BALDWINSVILLE, a post-village of Lysander township, Onondaga county, New York, on the Seneca river, where it is crossed by the Oswego and Syracuse railroad, 12 miles N. by W. from Syracuse, and 21 miles S. by

E. from Oswego. The Seneca river affords good water-power, which is improved for manufacturing purposes. It contains 10 or 12 stores, several mills and factories, and a flourishing academy. Canal-boats are conducted to the village through the Seneca river from the Oswego canal. Population, about 1200.

BALDWINSVILLE, a post-office of Edgar county, Illinois.

BALDWINSVILLE, a small village in Mississippi county, Missouri, on the bank of the Mississippi river, 3 or 4 miles above Wolf Island.

BALLARD, a county in the W. part of Kentucky, bordering on Missouri and Illinois, from which it is separated by the Ohio river. It is traversed by Mayfield's creek. The surface is undulating, and well timbered; the soil of the S. part is fertile, and of the N. part poor. Tobacco, hemp, Indian corn, and oats are the staples. In 1850 this county produced 272,550 bushels of corn; 9141 of wheat; 25,280 of oats; 152,700 pounds of tobacco; 3680 of wool, and 7351 of flax. It contained 10 churches, and 480 pupils attending public schools. The county was formed out of parts of McCracken and Hickman counties, in 1842, and was named in honor of Captain Bland Ballard, an officer in the war of 1812. Capital, Blandville. Population, 5496, of whom 4654 were free, and 842, slaves.

BALLARD'S BRIDGE, a post-office of Chowan county, North Carolina.

BALLARDSVILLE, a small post-village in the N. part of Boone county, Virginia, about 250 miles W. by N. from Richmond.

BALL PLAY, a post-office of Monroe county, Tennessee.

BALL'S POND, a post-office of Fairfield county, Connecticut.

BALLSTON, a post-township of Saratoga county, New York, 25 miles N. from Albany, is intersected by the Schenectady and Saratoga railroad. Population, 2269.

BALLSTON CENTRE, a post-village of Saratoga county, New York, 25 miles N. from Albany.

BALLSTON SPA, a post-village, capital of Saratoga county, New York, on the Saratoga and Schenectady railroad, 30 miles N. from Albany, and 7 miles S. W. from Saratoga Springs. The mineral springs at this place

have considerable celebrity. The village contains a court house, several churches, a bank, 1 or 2 newspaper offices, and the Sans Souci hotel, which is 160 feet long, with wings extending back 153 feet. Population, in 1852, about 2000.

BALLSTOWN, a post-office of Ripley county, Indiana.

BALLSVILLE, a post-office of Powhattan county, Virginia.

BALLSVILLE, a village of Sandusky county, Ohio, on the Sandusky river, $1\frac{1}{2}$ mile above Fremont. The falls of the river afford valuable water-power, which is employed in 1 cotton factory, 1 woollen factory, and several mills.

BALLVILLE, a village of Orange county, New York, 23 miles W. by N. from Newburg.

BALLVILLE, a township in the S. part of Sandusky county, Ohio, about 28 miles S. W. from Sandusky City. Population, 1556.

BALTIMORE, a county in the N. part of Maryland, bordering on Pennsylvania, and on the Chesapeake bay, has an area of about 700 square miles. The Patapsco river forms its boundary on the South and West, and it is intersected by Gunpowder river. The surface is pleasantly diversified by hills, some of which rise about 800 feet above the tide-water. The ledge of primitive rock which limits the ascent of the tide, traverses the south-eastern part of the county. The land in many parts is rocky, but in general productive. Indian corn, wheat, oats, hay, butter, beef, and pork are the staples. In 1850 the county produced more oats than any other county in the state. There were raised in that year 755,224 bushels of corn; 294,187 of wheat; 280,288 of oats, and 21,810 tons of hay. It contained 22 cotton factories, 4 woollen factories, 13 paper mills, 2 glass works, 13 iron foundries, 10 brass foundries, 26 coach factories, 8 potteries, 10 manufactories of agricultural implements, 111 of cabinet-ware, 46 flour and grist mills, 2 powder mills, 4 nail factories, 4 iron furnaces, and 5 manufactories of chemicals. Capital invested in manufactures, \$9,929,232. Value of annual productions, \$24,540,014. There were 162 churches, and 22 newspaper establishments; 10,308 pupils attending public schools, and 5191 attending academies or other schools. Granite, gneiss, hornblende, limestone, and soapstone are the principal rocks of the county, which also contains mines of copper, iron, and chrome, and beds of red and yellow ochre and magnesia. The Baltimore and Ohio, the Baltimore and Susquehanna, and the Philadelphia and Baltimore railroads all terminate in this county, which is by far the most populous and important in the state. Capital, Baltimore. Population, 210,646.

BALTIMORE, a township of Windsor county, Vermont, about 65 miles S. of Montpelier. Population, 124.

BALTIMORE, a city, port of entry, and seat of justice of Baltimore county, Maryland, is situated on a small bay or estuary which extends about two miles and a half inland from the N. side of Patapsco river, about 12 miles from its entrance into Chesapeake bay. The city, by ship channel, is about 200 miles from the ocean. It is 38 miles by railroad N. E. from Washington, and 98 miles S. W. from Philadelphia. Lat. 39° 17' N., lon. 76° 37' W. Baltimore is admirably situated both for foreign and internal commerce. The bay around which it is built affords a secure and spacious harbor, and it has communication by railway not only with Philadelphia and Washington, but with Winchester, Annapolis, Cumberland, Frederick City, York, Lancaster, and Harrisburg. The limits of the city comprise about 10,000 acres of land, extending about four miles and a half from east to west, and three and a half from north to south. It consisted originally of more than fifty elevations or hills, separated by abrupt valleys, or ravines, and in a few instances by formidable marshes, while, nearly in the centre, it is divided by a rapid stream of water known as "Jones' Falls." This stream has several times overflowed its banks, causing loss of life as well as occasioning a great damage to property. The city authorities have in consequence been at great pains to remove all obstructions from its bed, and have taken care that the numerous bridges by which the stream is crossed should be constructed with a single arch, and of such a height as to remove all further danger from this source. The city east of Jones' Falls is divided into two parts, Fell's Point and the Old Town. The Point is the most easterly portion of Baltimore, and has the advantage of greater depth of water at the wharves than the upper harbor contains. It is the resort of seamen and immigrants, and the place where the greater part of the ship-building and manufactures of the city are carried on. Old Town lies north and west of this, and is principally inhabited by mechanics and laborers. The portion west of "the Falls" is likewise divided into two parts, the City Proper and Spring Garden section. The former is the centre of trade, and contains most of the residences of the more wealthy citizens. Spring Garden section is the extreme south-western quarter, and is inhabited chiefly by mechanics and laborers. From the number and prominence of its monuments, Baltimore has been designated the Monumental city. The most remarkable of these is the Washington monument, which stands on an eminence at the intersection of Charles and Monument streets, about 150 feet above high-water mark. Its base, 20 feet high and 50 feet square, supports a Doric column 167 feet in height, surmounted by a statue of Washington 13 feet high. The shaft, 20 feet square at the base

and 14 at the top, is ascended by means of a winding stairway within. The whole is composed of white marble, and cost \$200,000. Its summit commands a beautiful and varied prospect. Battle monument, at the corner of Calvert and Fayette streets, was erected in 1815, to the memory of those who fell while defending the city from the attack of the British, September 12, 1814. The base is square and 20 feet in height, with an Egyptian door on each front. The column, 18 feet high, is in the form of the Roman fasces, and encircled by bands having the names of those who fell in the battle inscribed on them in letters of gold. On its summit stands a beautiful statue of a female, emblematical of the city of Baltimore, making the entire height of the monument 52 feet. The Armistead monument, a beautiful specimen of sculpture, near the city fountain, was erected to the memory of Colonel George Armistead, the commander of Fort McHenry, when bombarded by a British fleet in September, 1814. Among the public edifices of Baltimore may be named the city hall, on Holiday street, occupied by the city council and public offices; it is a plain building three stories high, with a portico supported by four massive pillars. The court house, a commodious edifice at the corner of Washington and Lexington streets, contains the rooms of the city and county courts. It is 145 feet long, 65 feet wide, and two stories high, surmounted by a dome. Being elevated considerably from the ground, the approach to it from the front and rear is by flights of steps, above which is a colonnade of marble pilasters, of the Ionic order, supporting a plain entablature at the top. The state penitentiary, at the corner of Madison and Forrest streets, consists of three separate buildings besides the workshops. The whole occupies about four acres of ground, which is surrounded by a stone wall 20 feet high. A short distance from the penitentiary stands the county prison, a handsome building, surmounted by a cupola, and ornamented with a tower at each end in the form of an octagon. The exchange, in Gay street near Water, is a spacious structure 225 feet in front, 141 in depth, and three stories high above the basement. It is surmounted by a dome, the top of which is 115 feet from the ground. On the east and west sides is a colonnade of six Ionic pillars, each a single block of beautifully wrought Italian marble. The merchants' room, which is the principal one in the building, is 50 feet square. The south wing, fronting on Lombard street and entered from Water street, is occupied as a custom house. Among the first objects that strike the attention of one approaching the city are the shot towers, one of which, the Merchants' Shot Tower, is the highest in the world, having an elevation of 250 feet. The most imposing church edifice in Balti-

more is the Roman Catholic cathedral, on Mulberry street, between Charles and Cathedral streets. It is a massive granite structure, 190 feet long, 177 broad, and 127 feet from the ground to the top of the cross surmounting the dome. At the west end of the building are two towers crowned with Saracenic cupolas, resembling the minarets of a Mohammedan mosque. The original design was to place an Ionic portico between these towers. The cathedral contains one of the largest organs in the United States, having 600 pipes and 36 stops; and two beautiful paintings, one, "The Descent from the Cross," presented by Louis XVI. of France; the other, "St. Louis burying his officers and soldiers slain before Tunis," presented by Charles X. The Catholics have a number of other churches besides the cathedral, the principal of which are St. Mary's chapel, on Pennsylvania avenue, and St. Peter's, in Saratoga near Charles street, the oldest Catholic church in the city. The Unitarian church, at the corner of Franklin and Charles streets, is much admired for its architecture. It is 108 feet long and 78 wide, with a dome 55 feet in diameter, supported by 4 arches, each 33 feet span. It is 80 feet from the ground to the summit of the cupola. In front is a colonnade formed by four Tuscan columns and two pilasters. The interior of the building is a square, the entrance to which is by five bronze doors, in imitation of the Vatican at Rome. St. Paul's, an Episcopal church on the corner of Saratoga and Charles streets, the First Presbyterian church, corner of North and Fayette streets, the First Baptist church, at the corner of Lombard and Sharp streets, and the German Reformed church in Second, between Gay and Belvidere streets, are all distinguished either for elegance or their style of architecture. At the last census, Baltimore contained 99 churches of the various denominations. Hunt's Magazine (article on BALTIMORE, vol. xxiii. p. 34) gives 104 churches, as follows:—Methodist, 43; Protestant Episcopal, 12; Presbyterian, 11; Roman Catholic, 11; Lutheran, 8; Baptist, 5; Disciples, 2; German Reformed, 3; Evangelical Association, 2; Friends, (Quakers,) 3; United Brethren, 1; Universalist, 1; Unitarian, 1; Winnebrannians, 1; besides 2 Jewish synagogues.

Institutions.—The educational, literary, and benevolent institutions of Baltimore are numerous. St. Mary's College, founded in 1805, and situated at the corner of Franklin and Green streets, is a well-conducted and flourishing institution, under the direction of the Catholics. The medical school of the University of Maryland was founded in 1807. In 1852 it had 909 graduates, 100 students, and 6 professors. Washington Medical College was founded in 1827, and has 25 students, and 6 professors. The University of Maryland, founded in 1812, is situated on Lom-

bard street, between Green and Paca streets: connected with it is the Baltimore Eye and Ear Infirmary, where students have an opportunity of attending lectures and witnessing operations. The Maryland Institute occupies a suite of rooms in the Athenæum, at the corner of Lexington and St. Paul streets. Its object is, the diffusion of useful knowledge and the promotion of the mechanic arts. It possesses an extensive chemical laboratory, and a very complete philosophical apparatus. The building is a noble brick edifice, 112 feet by 50, and 66 in height. It was completed in 1848, at a cost of over \$28,000. The various apartments besides those appropriated to the use of the Institute are occupied by the Mercantile Association, who have a well-selected library of 8000 volumes, and an ample supply of the choicest magazines and papers of the day; the Baltimore Library company possessing a valuable library of 14,000 volumes and the Maryland Historical Society, whose library numbers about 15,000 volumes, consisting for the most part of statistical and historical works. The City Library, designed for the use of the stockholders, the Apprentices' Library, and the Exchange Reading-room, are all important institutions. The Exchange Reading-room is supported by subscription. Strangers and masters of vessels, however, have access to the periodicals and newspapers, free of expense. The Baltimore Hospital, in the north-western suburb of the city, consists of a centre building, four stories high, flanked with wings that connect with two other buildings which form the ends of the vast pile. The entire structure cost \$150,000. It occupies a commanding elevation, overlooking the city, the bay, and a wide extent of country. The interior arrangements are upon the most approved plan. The Almshouse is on the Franklin road, about 2 miles N. W. from the city: the building consisting of a centre and two wings, has 375 feet front, and is surrounded with spacious grounds. The Baltimore Manual-Labor School for Indigent Boys has connected with it a tract of land, on which, between the hours of study, the pupils are occupied in labor, thus combining useful employment with healthful exercise. The Baltimore Association for Improving the Condition of the Poor is under the direction of those whose duty it is to visit and inquire into the circumstances and character of the persons relieved, with a view to discourage indiscriminate and injudicious alms-giving. The other prominent benevolent institutions are the City Dispensary, corner of Holliday street and Orange Alley, the Eastern Dispensary, corner of Market street and Hartford Run avenue, two Orphan asylums, and the Indigent Sick Society, composed of ladies, who visit the poor and minister to their comforts in sickness.

Education.—The system of public instruc-

tion in Baltimore has, within a few years past, been much improved, and is now rapidly increasing in public favor. December 31st, 1852, there were in the city 3 high schools, 21 grammar, and 26 primary schools, being an increase from 36 to 50 schools during the year. For these there were 173 teachers, 35 males and 138 females: increase over the former year, 35. The whole number of scholars in all the schools at this date was 9081; 482 of whom were in the high schools; 2477 in the male, and 2321 in the female grammar schools, and 3783 in the primary schools. Increase of pupils over the previous year 1070. Salaries of the principals in the high schools \$1000, except in the Central High School, which is \$1200. Salaries of the principals in the male grammar schools, \$850; of the male assistants, \$450; female assistants, \$150. Salaries of the principals in the female grammar schools, \$450; in the primary schools, \$250. Salaries of music teachers, \$600. Whole amount expended for school purposes during the year ending December 31st, 1852, was \$75,308 89. Attached to the high schools are normal classes, instituted with a particular view to qualify pupils to become thorough and competent teachers.

Commerce, Finances, &c.—In commercial importance, Baltimore ranks among the first cities in the United States. Its position is such as to render it a great center of trade. Situated near the head of Chesapeake bay, it enjoys superior advantages for foreign commerce, while the numerous lines of railways that here have their termination, invite to it the agricultural and mineral wealth of a vast interior. The recent completion of the Baltimore and Ohio railroad to Wheeling is a most important event, and destined to exert an immense influence on the commercial activity of this great emporium. In the eloquent language of one of her citizens, "We have reached the threshold and stepping-stone of our true commercial greatness, and there is nothing now that can turn us back. The wide and far West has opened her ample arms to receive us, and bids us God-speed in our efforts to secure the prize which nature has so long and so patiently held out to us." The arrivals at the port of Baltimore, exclusive of the bay craft, during the year ending December 31st, 1852, were 128 ships, 292 barques, 401 brigs, and 1068 schooners; total, 1889 vessels. Of these, 39 ships, 53 barques, 97 brigs, and 29 schooners were from foreign ports. During the same year the number of vessels engaged in foreign trade, clearing at this port, was 583, with an aggregate burthen of 147,570 tons: 227 of these, the aggregate burthen of which was 58,772 tons, were owned in foreign countries. In the same period 72 vessels, of 14,598 tons burthen, were admeasured. There were received at Baltimore in 1852, 256,000 tons of

Cumberland, and 125,000 of anthracite coal, (an increase from former years;) 33,594 bales of cotton; coffee from South America, 253,692 bags; hides, do., 173,987, (a decrease from former years;) Peruvian guano, 25,500 tons; sugar, 25,772 hogsheads, and 2960 barrels; West India molasses, 7027 hogsheads, 2064 tierces, and 80 barrels—coastwise, 838 hogsheads, 153 tierces, and 14,794 barrels; wool, about 925,000 pounds, of which some 325,000 pounds were of foreign raising; 3,415,150 bushels of wheat; 3,745,900 bushels of Indian corn: the total of all kinds of grain and pulse, 8,177,050 bushels; about 115,000 barrels of whisky; 76,402,129 feet of lumber, and 66,572 hogsheads of tobacco. There were also inspected at Baltimore the same year, wheat flour, 1,307,165 barrels; rye flour, 6449 barrels; corn meal, 447 hogsheads, and 52,658 barrels; mackerel, 22,337 barrels; herring, 29,000 barrels, and shad 4565 barrels. The provision trade of Baltimore is estimated at \$8,000,000 annually. Imports of Baltimore in 1850, \$6,417,113; 1851, \$7,243,963. Exports in 1850, \$8,530,970; 1851, \$6,466,165; 1852, \$7,549,766. There were, January 3, 1853, 12 banks in Baltimore, with an aggregate capital of \$7,291,415, and a circulation of \$2,074,587; 2 other banks have since been chartered; 1 health and 10 fire and marine insurance companies, besides many insurance agencies. The total assessed value of the real and personal property of the city of Baltimore in 1850, amounted to \$80,237,960. It is contemplated to establish a line of steamers between Baltimore and Savannah. The steamer Palmetto, sailing to Charleston, is to have a consort of 1300 tons, (the largest steamship ever built at Baltimore,) which is already in an advanced stage of construction.

Baltimore enjoys superior advantages for manufactures. Jones's Falls and Patapsco river afford immense water-power, which is extensively employed for flouring mills, of which there are over 60 within 20 miles of the city. Numerous cotton and other manufactories are also in operation. Mr. ROSS Winans has here one of the largest engine establishments in the United States, where near 100 locomotives, worth each about \$10,000, are made annually.

This city has an abundant supply of pure water, both from springs and from Jones's Falls. These springs, or fountains, are in different parts of the city, and enclosed with circular iron railings. Over them are small open temples, consisting of a dome supported by pillars. The water from Jones's Falls is brought by means of an aqueduct, about half a mile long, to a reservoir in Calvert street, and from thence is conducted through distributing pipes to the various parts of the city. The more elevated portions, however, are supplied from a reservoir

replenished by forcing-pumps on an eminence in Charles street, near Washington Monument. On Federal Hill is an observatory, which serves, in connection with another at Bodkin Point, to announce the approach of vessels. In this way a marine telegraph is established, by which information is conveyed in a few minutes from the mouth of the Patapsco to an observatory in the exchange.

Among the numerous hotels which Baltimore contains, may be mentioned the City Hotel, (formerly Barnum's,) in Calvert street, near the Battle Monument; McIntosh Howard House, in Howard street; the Eutaw House, corner of Eutaw and Baltimore streets; the Fountain Hotel, in Light street; and the United States Hotel. About 25 newspapers are issued in Baltimore, of which 6 or 7 are dailies.

History.—The present site of the city of Baltimore was first fixed upon for a town in 1729; the name Baltimore was given to it in 1745. In 1768 it became the shire town of the county. Its first newspaper, "The Maryland Journal and Baltimore Advertiser," a weekly, was issued on the 20th of August in 1773. It became a port of entry, a custom house was opened, and a naval officer appointed in 1780. None of the streets were paved till 1782, when a beginning was made on Baltimore street, which has always been regarded as the main street of the city. In the same year the first regular communication with Philadelphia—a line of stage coaches—was commenced; watchmen were employed in 1784; an act of incorporation was obtained on the last day of the year 1796, and the city government was organized in 1797. A census was taken in 1775, when the town was found to contain 564 houses and 5934 persons. In 1790, there were in Baltimore 12,530 inhabitants; in 1800, 26,514; in 1810, 46,455; in 1820, 62,738; in 1830, 80,620; in 1840, 102,513; in 1850, 169,054; in 1853, about 195,000.

BALTIMORE, a flourishing post-village of Liberty township, Fairfield county, Ohio, on the Ohio and Erie canal, 24 miles in a direct line S. E. from Columbus. It is one of the principal business places in the county. Population, 492.

BALTIMORE, a post-office of Barry county, Michigan.

BALTIMORE, a post-office of Warren county, Indiana, on the Wabash river, 78 miles N. W. from Indianapolis.

BALTIMORE, a post-village of Jo Daviess county, Illinois, 10 miles E. N. E. of Galena.

BALTIMORE, a small town near the boundary between Tuolumne and Mariposa counties, California, on the left bank of the Merced river, about 1 mile from its junction with the San Joaquin.

BALTIMORE hundred, Sussex county, Delaware. Population, 2910.

BANCROFT, a new county in the N. N. W. part of Iowa, bordering on Minnesota, has an area of 450 square miles. It is principally drained by Manketo river and its tributaries. Several small lakes are situated in and near the N. border of this county. It is not included in the census of 1850. County seat not located.

BANCROFT, a township in Aroostook county, Maine. Population, 157.

BANCROFT, a post-office of Hampshire county, Massachusetts.

BANCROFT, a small village of Franklin county, Georgia, 110 miles N. W. from Augusta.

BANELA, a post-village of Chickasaw county, Mississippi, on the Yallobusha river, at the head of keel-boat navigation, 132 miles N. by E. from Jackson. It is surrounded by rich plantations of cotton, and has an active trade.

BANGALL, a post-office of Dutchess county, New York.

BANGOR, a township in Elk Hart county, Indiana. Population, 587.

BANGOR, a city, port of entry, and seat of justice of Penobscot county, Maine, on the right bank of Penobscot river, about 60 miles from its mouth. It is 66 miles E. N. E. from Augusta, 116 W. from Eastport, 126 N. E. from Portland, 231 N. E. from Boston, and 661 miles N. E. from Washington. Lat. 44° 47' 50" N., lon. 68° 47' W. It is situated on both sides of the Kenduskeag river, which here enters the Penobscot. This stream, about 190 yards wide, is crossed by several bridges, uniting the two parts of the city. A fall in the Kenduskeag, about a mile from its mouth, affords extensive water-power. A short distance above the city, a bridge 1320 feet long extends across the Penobscot, connecting Bangor with Orringford. The harbor, which is at and below the mouth of the Kenduskeag, is nearly 500 yards wide, and at high tide (the tide rises here 17 feet) is of sufficient depth for vessels of the largest size. Bangor is one of the greatest lumber depôts in the world. The great extent of country drained by the Penobscot and its tributaries is heavily timbered with pine, the cutting and hauling of which to the numerous saw mills that everywhere line the banks of the rivers, afford one of the chief occupations of the inhabitants. The vast amount of lumber which these mills yearly produce is all brought to Bangor for exportation; this port being at the head of navigation on the Penobscot. Nearly 2000 vessels are annually employed in this trade during the season of navigation, which usually continues eight or nine months in the year. Bangor is also extensively engaged in foreign commerce, in the coast trade and in ship-building. The city has a pleasant location, commanding a fine view of the river and surrounding country. The buildings are generally neat and well constructed, while some exhibit a style of superior elegance. It contains a theologi-

cal seminary and a number of other educational institutions, several fine churches and hotels, a custom house, 11 banks, besides the county buildings. The Bangor Theological Seminary is situated in the more elevated portion of the town, commanding a fine view of the Penobscot river. It was originally established at Hampden, 6 miles S. of Bangor. Four newspapers are published in the city. Steamboats make regular trips from this place to Boston, Portland, and places along the river about two-thirds of the year. Bangor is connected by railroad with Old Town, 12 miles distant. It is also in the line of the Eastern railroad. The lumber surveyed at this port in 1852, amounted to 199,889,422 feet. The aggregate burden of the shipping, June 30th, 1852, of the same year, amounted to 12,570 tons registered, and 19,660 tons, enrolled and licensed: total, 32,230 tons. During the year, 29 vessels, (7 of them ships,) with an aggregate of 4615 tons, were admeasured. Population in 1820, 1221; 1830, 2868; 1840, 8627; 1850, 14,432.

BANGOR, a post-township of Franklin county, New York, about 160 miles N. by W. from Albany, is intersected by the Northern railroad. Population, 2159.

BANK LICK, a post-office of Kempton county, Kentucky.

BANKS, a township forming the western extremity of Carbon county, Pennsylvania, 10 miles N. W. from Mauch Chunk. It contains the Beaver Meadow coal mines. Population, 1745.

BANKSTON, a post-office of Choctaw county, Mississippi.

BANKTON, a small post-village of Saline county, Illinois, about 10 miles S. W. from Raleigh.

BEDFORD, a county in the S. part of Pennsylvania, bordering on Maryland, has an area of about 1000 square miles. It is traversed by Raystown branch of the Juniata river, and also drained by Dunning's, Aughwick, and Wills creeks. The surface is very mountainous, being traversed by numerous ridges of the Alleghany range, the principal of which are named Warrior ridge, Tussey's mountain, Dunning's mountain, and Broad Top mountain. The main Alleghany extends along the W. border of the county. Many of the valleys are of the richest limestone; the slate, shale, and sandstone lands, where sufficiently level, are susceptible of much improvement; but one-half of the county is rocky mountain, unfit for cultivation. Wheat, Indian corn, oats, hay, and butter are the staples. In 1850 there were raised 248,802 bushels of wheat; 206,344 of corn; 240,803 of oats; 18,094 tons of hay, and 346,587 pounds of butter. There were 55 flour and grist mills, 7 saw mills, 3 manufactories of cabinet-ware, 3 of coaches, 1 of edge tools, 1 of stoves and ranges, and 2 of agricultural implements, 1 lusseid-oil mill, 1 tobacco factory, 6 woolen factories, 1 iron foundry, 2 furnaces, and 20 tanneries. It contained in that year 52 churches, and 3 newspaper establishments. There were 5229 pupils attending public schools, and 52 attending academies or other schools. Iron ore is abundant, and rich mines of stone coal have been opened on Broad Top mountain, in the N. part of the county. The streams furnish extensive water-power. A turnpike leading from Pittsburg to Philadelphia passes through the county. Bedford county was formed in 1771, and named from a county in England. Capital, Bedford. Population, 23,052.

BEDFORD, a county in the S. central part of Virginia, has an area of 504 square miles. The James river forms its N. E., the Staunton its S. W. boundary, and Otter creek flows through the middle. The county has an ele-

vated surface, and the scenery is delightful, the N. W. boundary passing along the summit of the Blue Ridge, which here attains in the Peaks of Otter the height of 5307 feet above the sea. The soil is highly productive. Indian corn, wheat, oats, tobacco, and butter are the staples. In 1850 there were raised 602,862 bushels of corn; 178,990 of wheat; 294,852 of oats, the greatest quantity produced in any one county of the state, except Halifax county; 1,955,436 pounds of tobacco, and 238,233 of butter. There were 5 tanneries, 14 flour, grist and saw mills, and 4 tobacco factories. It contained 40 churches; 638 pupils attending public schools, and 72 attending academies or other schools. The James River canal passes along the border, and the Virginia and Tennessee railroad passes through the county. Bedford county was formed from Lunenburg in 1763. Capital, Liberty. Population, 24,080, of whom 14,019 are free, and 10,061, slaves.

BEDFORD, a county in the S. central part of Tennessee, has an area of 550 square miles. It is intersected by Duck river. The surface is undulating, the soil fertile, and extensively cultivated. BENICIA, be-nish'e-ñ, the present capital of the state of California, is situated in Solano county, on the N. side of the strait of Karquenias, connecting San Pablo and Suisun bays. The strait is from one to two miles wide and several miles long. The site of the town is excellent, the land gently rolling for about a mile from the extreme water or S. front, and a little over that distance E. and W. Beyond these limits in the rear, the hills gently rise, and beyond them again, are a succession of hills and valleys, the latter of which are capable of cultivation. There is

little or no cultivation in or around the town, and not a tree to be seen, though the extent of vision is necessarily contracted by the proximity of the surrounding hills. The houses are mostly of wood, but being comparatively new, present a neat and respectable appearance. There are several large hotels in full operation, and now that the legislature holds its sessions here, a great impetus has been given to business; and to answer the increased demand of trade, various buildings are in the course of erection, while others are removed from their old locations to more desirable ones. The capitol is a fine large brick edifice, and stands on the brow of a slope a half a mile from the water front of the city. It is two stories in height, with numerous windows, and adorned in front by two large Corinthian columns. The caps of the latter, as well as the foundation blocks, door-sills, and window-pieces, are of stone, quarried a short distance below the town. These quarries are inexhaustible. The stone is of a light brownish colour, very soft, and easily wrought: it is said, however, to harden with exposure and age. Ships of the largest size can lie in the harbor close to the town. There is at this place an arsenal and navy station. At the eastern end of the town are the works of the Pacific Mail-Steamship Company, where there are all the necessary machinery and apparatus for working in iron, as well as extensive carpenter shops, &c. Two large brick foundries have been erected by the company in the rear of their present building, which will compare favorably with any similar buildings in Philadelphia or New York. Several steamboat lines, running between San Francisco and Sacramento, touch at Benicia. This town is a port of entry. Population in 1853, estimated at 2000.

BLUE RIDGE, the most easterly ridge of the Alleghany mountains, extending in an almost continuous chain from West point, in New York, through Pennsylvania, Virginia, North Carolina, Georgia, to the N. part of Alabama. This range, after passing through the north-western counties of New Jersey, is traversed by the Delaware, immediately below the influx of the Lehigh, and again by the Schuylkill at Reading. It runs in a south-westerly course, nearly parallel to the Blue mountains of Pennsylvania, between Lancaster and Lebanon, York and Cumberland, Franklin and Adams counties, to the Maryland line. In Pennsylvania it is termed the South mountain. Crossing the Potomac at Harper's Ferry, in Virginia, it first takes the name of Blue Ridge. It forms the dividing line between Eastern and Western Virginia. A large portion of the streams of Eastern Virginia have their sources on the

south-eastern slope of this range. The Roanoke and James river alone take their rise considerably farther inland, breaking through the Blue Ridge, in order to convey their waters to the distant sea. This mountain range advancing south, passes near the western limit of North Carolina, grazes the N. W. extremity of S. Carolina, intersects the N. W. part of Georgia, and is finally lost in Alabama. Mount Mitchell, 6476 feet high, in North Carolina, is the most elevated summit of this range, and of the whole Appalachian system. The Ohio river bounds it on the N. and W. for a distance of about 40 miles, forming the "Great North Bend," and separating it from Ohio and Indiana. The surface is generally hilly; the soil is based on limestone, and is productive. The staple productions are Indian corn, wheat, oats, tobacco, hay, fruit, and pork. In 1850 this county produced 1,056,650 bushels of corn; 71,749 of wheat; 62,719 of oats; 298,152 pounds of tobacco; 35,027 of wool, and 19,074 of flax. It contained 28 churches, 1 newspaper establishment, 650 pupils attending public schools, and 70 attending academies or other schools. The rock found next to the surface is the blue or Trenton limestone. Boone county was formed in 1798. Capital, Burlington. Population, 11,185, of whom 9081 were free, and 2104, slaves.

BOONE, a county situated a little N. W. from the centre of Indiana, contains 408 square miles. It is drained by the Eagle and Sugar creeks. The surface varies from level to undulating; the soil is several feet deep, and well adapted to grain or grass. Wheat, corn, oats, beef, pork, and horses are the chief articles of export. In 1850 this county produced 583,045 bushels of corn; 76,289 of wheat; 46,187 of oats, and 4,259½ tons of hay. It contained 29 churches, 2708 pupils attending public schools, and 75 attending an academy. This county was originally covered with a dense forest of the oak, ash, beech, sugar-maple, and walnut. Great improvement has been made within the last 10 years. It is intersected by the Lafayette and Indianapolis railroad. Capital, Lebanon. Population, 11,631.

BOONE, a county in the N. part of Illinois, bordering on Wisconsin, has an area of 270 square miles. It is intersected by the Kishwaukee river, an affluent of Rock river; it is also drained by the Piskasaw and other creeks. The surface is undulating, and is divided by prairies and woodlands; the soil is excellent. Wheat, Indian corn, oats, and hay are the staples. In 1850, Boone county produced 248,107 bushels of wheat; 159,114 of corn; 141,825 of oats; 12,676 tons of hay, and 173,966 pounds of butter. It contained 6 churches, 1843 pupils attending public schools, and 90 attending other schools. The Chicago and Galena railroad passes through the county. Capital, Belvidere. Population, 7626.

BOONE, a county in the N. central part of Missouri, has an area of 648 square miles. It is bounded on the S. W. by the Missouri river, and on the E. by Cedar creek, and traversed by Roche Perceé and Petite Bonne Femme rivers, which flow nearly southward into the Missouri. The surface is moderately diversified, and consists partly of prairie and partly of timbered land: the soil is uniformly and highly productive, and extensively cultivated. Indian corn, wheat, oats, tobacco, hemp, cattle, and pork are the staples. In 1850 this county produced 1,001,983 bushels of corn; 70,163 of wheat; 80,543 of oats; 584,949 pounds of tobacco, and 51 tons of hemp. It contained 51 churches, and 1 newspaper establishment. There were 2460 pupils attending public schools. Stone coal and limestone are found in the county. Boone county is one of the most populous in the state. Capital, Columbia. Population, 14,979, of whom 11,313 were free, and 3666, slaves.

BOONE, a county in the W. central part of Iowa, has an area of 576 square miles. It is intersected by the Des Moines river, dividing it into two nearly equal parts. The county has a fertile soil, is well timbered, and contains stone coal. The population is increasing rapidly. Capital, Booneville.

BOONE, a post-village, capital of Watauga county, North Carolina, about 200 miles W. by N. from Raleigh. It is situated in a mountainous district. Daniel Boone, from whom the name is derived, once resided in the vicinity. The seat of justice was established here at the formation of the county in 1849.

BOONE, a township forming the N. W. extremity of Cass county, Indiana, about 14 miles N. W. from Logansport. Population, 594.

BOONE, a township in Crawford county, Indiana. Population, 406.

BOONE, a township in Madison county, Indiana. Population, 299.

BOONE, a township in Porter county, Indiana, about 12 miles S. by W. from Valparaiso. Population, 541.

BOONE, a township in Warrick county, Indiana. Population, 2207.

BOONE, a small post-village in the above township. Population, about 200.

BOONE, a post-township in Boone county, Illinois, about 10 miles N. E. from Belvidere.

BOONE, a post-township in Franklin county, Missouri.

BOONE, a post-office of Dallas county, Iowa.

BOONE COURT HOUSE, a small post-village, capital of Boone county, Virginia, on the Little Coal river, 245 miles in a direct line W. from Richmond. The surrounding country is very thinly settled.

BOONE RIVER, Iowa, rises in the N. part

of the state, and flowing southward, enters Des Moines river on the E. border of Yell county.

BOONESBOROUGH, a post-office of Washington county, Arkansas.

BOONESBOROUGH, a small and decayed village of Madison county, Kentucky, on the Kentucky river, about 18 miles S. E. from Lexington. This place is memorable as the site of a fort which was built in 1775 by Daniel Boone, the pioneer of Kentucky, and was the first erected in the state. Here also convened, more than 75 years ago, the first legislative assembly of the Western States.

BOONESBOROUGH, a post-office of Boone county, Iowa.

BOONESBOROUGH, a small post-village of Boone county, Missouri, 30 miles N. from Jefferson City.

BOONE VALLEY, a post-office of Letcher county, Kentucky.

BOONEVILLE, a post-village of Oneida county, New York, on the Black River canal, 31 miles N. from Utica, contains several churches, a bank, and numerous stores and mills. Population, estimated at 700.

BOONEVILLE, a post-village, capital of Warwick county, Indiana, is situated on elevated ground, 11 miles from the Ohio river, and 170 miles S. S. W. from Indianapolis. It was settled in 1817.

BOONEVILLE, a flourishing town, capital of Cooper county, Missouri, is situated on the right (S.) bank of the Missouri river, 48 miles N. W. from Jefferson City. It owes its prosperity and importance to its advantages as a commercial point, which have drawn to it the principal trade of S. W. Missouri, of a portion of Arkansas, and the Cherokee nation. For health, it is unsurpassed by any city of the Union, both town and country having entirely escaped the ravages of the cholera during the epidemic of 1849 and '50. Three or four newspapers are published here. It is surrounded by a rich farming region. The grape is extensively cultivated here, and will soon be an important article of export. Iron, lead, stone coal, marble, and hydraulic limestone are abundant in the vicinity. This place was settled by Daniel Boone, the celebrated pioneer of Kentucky. Population, 2336.

BOONEVILLE, a village of Boone county, Iowa, 140 miles W. by N. from Iowa City.

BOON GROVE, a post-office of Porter county, Indiana.

BOONHILL, a post-office of Johnson county, North Carolina.

BOON'S MILLS, a post-office of Franklin county, Virginia, 184 miles W. by S. from Richmond.

BOON'S STATION, a post-office of Alamance county, North Carolina.

BOONTON, an important post-town of Hanover township, Morris county, New Jersey, is situated on the Rockaway river, and on the Morris canal, 8 miles N. E. from Morristown. This town has an extensive iron manufactory, consisting of a blast furnace, a large rolling mill, and a nail factory, the whole forming one of the most complete and extensive establishments in the country.

BOONTON, a small village in the W. part of Boone county, Missouri.

BOONVILLE, a village in the S. W. part of Adams county, Indiana, on the Mississippi river.

BOOTHBAY, a post-township of Lincoln county, Maine, about 40 miles S. S. E. from Augusta. Population, 2504.

BOOTHSVILLE, a village of Marion county, Virginia, with about 150 inhabitants.

BOOTON'S TAN-YARD, a post-office of Madison county, Virginia.

Boque's creek of Ohio, enters the Scioto river in Delaware county.

BOQUET river of Essex county, New York, falls into Lake Champlain.

BORDEAUX, a post-office of Abbeville district, South Carolina.

BORDENTOWN, a post-borough of Chesterfield township, Burlington county, New Jersey, on the Camden and Amboy railroad, 30 miles N. E. from Philadelphia, 57 miles S. W. from New York City, and 6 miles S. E. from Trenton. It is pleasantly situated on an elevated plain on the left bank of the Delaware river, about 65 feet above the level of the water. The railroad passes under the principal streets by means of a viaduct. There are 25 or 30 buildings now in process

of construction, among which is a large public school house, calculated to accommodate 400 pupils. The place contains 9 public schools, several private schools, and a bank. The value of the lumber brought to this depôt the present season exceeds \$600,000. The mansion formerly occupied by Joseph Bonaparte, ex-king of Spain, in the vicinity, is an object of much interest to visitors. Bordentown is the terminus of the Delaware and Raritan canal. A railroad also connects it with Trenton. Steamboats from Philadelphia touch at this place, causing it to be much frequented in the summer season. Incorporated in 1825. Population, about 3000.

BORDLEY, a village of Union county, Kentucky.

BORNE, a lake, or rather bay, situated in the S. E. part of Louisiana, 12 miles E. from New Orleans, communicates with the Gulf of Mexico on the E., and is connected with Lake Pontchartrain on the W. by means of the Rigolets pass, about 10 miles long. Length, about 60 miles; greatest breadth, 26 miles.

BORLAND, a post-office of Newton county, Arkansas.

BORODINO, a post-village of Onondaga county, New York, 18 miles S. W. from Syracuse.

BORODINO, a post-office of Wayne county, Michigan.

BOSSARDSVILLE, a post-office of Monroe county, Pennsylvania.

BOSSERMAN'S MILLS, a post-office of Perry county, Pennsylvania.

BOSSIER, a parish in the N. W. part of Louisiana, bordering on Arkansas, contains 1066 square miles. It is bounded on the W. by Red river, and on the E. by Dauchite bayou and Lake Bistineau. The chief productions are cotton and maize. In 1850 there were raised 4181 bales of cotton, and 225,122 bushels of Indian corn. It contained 5 churches and 460 pupils attending public schools. Red river is navigated by steamboats to the "Raft," which is situated on the border of this parish. Bossier was formed out of the W. part of Claiborne parish. Capital, Belleview. Population, 6962, of whom 2507 were free, and 4455, slaves.

BOSSIER POINT, a post-office of Bossier parish, Louisiana.

BOSTICK'S MILLS, a post-office of Richmond county, North Carolina.

BOSTON, a city and seaport, seat of justice

of Suffolk county, Massachusetts, and capital of the state, is situated at the western extremity of Massachusetts bay. By railroad, it is 464 miles N. E. from Washington; 236 miles N. E. from New York; 200 miles E. by S. from Albany; 111 miles S. S. W. from Portland; 43 miles N. N. E. from Providence; 76 miles S. S. E. from Concord; and 124 miles N. E. from Hartford. Lat. of the state house, 42° 21' 22" N., lon. 71° 4' 9" W. The city consists of three parts, Boston Proper, East Boston, and South Boston. Boston Proper, or Old Boston, occupies a peninsula embracing about 700 acres; the surface is very uneven, and in three places rises into hills of considerable elevation, the highest being 138 feet above the level of the sea. A narrow isthmus, or "Neck," as it is called, a little more than a mile in length, joins the peninsula to the mainland of Roxbury on the south. This Neck, once overflowed by the tides, was the only passage to the city till the year 1786, and by fortifying it in the early part of the revolution, the British were enabled to cut off all intercourse between Boston and the surrounding country. It has since been raised, and made much wider, so that at present there are four broad avenues leading over it from Roxbury to Boston. Besides these thoroughfares, seven bridges connect Boston Proper with East Boston, South Boston, and the mainland. The first one built was the Charles River bridge, 1503 feet long, leading to Charlestown. It was opened for travel on the eleventh anniversary of the battle of Bunker's Hill, June 17th, 1786. The Old Cambridge bridge, 2758 feet in length, with a causeway of 3432 feet extending across Charles River to Cambridge road, was completed in 1793. The South Boston bridge, 1550 feet long, leading from the Neck to South Boston, was opened in 1805. Canal Bridge, 2796 feet in length, connecting Boston with Lechmere Point, was finished in 1809. From the centre of this bridge another bridge, 1820 feet in length, extends to Prison Point, in Charlestown. Boston Free bridge, about 500 feet in length, leading to South Boston, and Warren bridge, 1390 feet long, leading to Charlestown, were finished in 1828. In addition to these, the Western avenue, about 1½ miles long, and from 60 to 100 feet wide, extends from the foot of Beacon street to Sewell's Point in Brookline. It is built upon a substantial dam, which is constructed across the bay, enclosing an area of about 600 acres. By means of a cross-dam, this enclosure is divided into two large basins, which, by the aid of tide-gates, are filled at flood tides, thereby creating a vast hydraulic power, at all times available. The partition dam also forms the basis of a branch avenue leading from the main one to Roxbury. The entire work was completed in 1821,

at a cost of over \$600,000. With the exception of Western avenue, all the others leading from the city, either are or will become, at a given time, the property of the state, and free for public use. The various railroads conducting into the city proper have bridges constructed expressly for their accommodation. Places in the vicinity, not reached by any of these thoroughfares, communicate with Boston by means of steam-ferris.

South Boston, set off from Dorchester in 1804, extends about two miles along the south side of the harbor, between Boston Proper and Fort Independence. It embraces about 600 acres of varied surface, and is handsomely laid out; many of the streets intersect each other at right angles, and form squares. Near the centre, and about two miles from the state house, are the famous "Dorchester Heights," by the fortification of which, in the revolutionary war, the Americans succeeded in expelling the enemy from Boston. These "Heights," nearly 130 feet above the level of the ocean, afford a magnificent view of the city, bay, and surrounding country. One of them contains a capacious reservoir of the Boston Water-works.

East Boston occupies the western part of what was formerly known as Noddle's Island. Samuel Maverick lived on this island as his homestead in 1630, the same time that John Blackstone owned and improved the peninsula. It embraces about 660 acres of arable land, together with a large body of flats. The surface is quite uneven, portions of it rising into considerable elevations, which afford fine sites for dwellings. The island is situated at nearly the same distance (about 650 yards) from Boston Proper as from Charlestown. It was purchased and laid out into streets in 1832, since which time it has increased rapidly in population. It has already become a place of extensive business, particularly in ship-building and the various branches of manufactures, among the more important of which may be mentioned an immense sugar refinery, and a large steam flouring mill. A wharf, 1000 feet in length, is devoted to the use of the Cunard line of Liverpool steamships. East Boston is the terminus of the Grand Junction railroad. The several parts of the city, together with the town of Chelsea, constitute the county of Suffolk.

The streets of Boston were originally laid out upon no systematic plan, and being accommodated to the unevenness of the surface, many of them are crooked and narrow; but these defects have of late been remedied to a considerable extent, so that now the principal thoroughfares are convenient and spacious. Washington and Tremont streets are the fashionable promenades. Although Boston Proper is circumscribed in its limits, it

contains one of the finest public parks, the Common, that is to be found in any city of America. Known to the earliest settlers by the name of "Tower Fields," and occupied afterwards as a town cow-pasture, Boston Common has since been set apart, ornamented, and carefully preserved for the common benefit of the citizens in all coming time. Nearly 50 acres are included within its boundaries, embracing almost every variety of surface, from the level plat to the gentle slope and abrupt ascent. Towering elms, some of which are a hundred years old, enclose the borders, while within, graded walks, beautifully shaded, intersect each other in every direction. Near the centre is a small pond where a fountain of Cochituate sends up its crystal stream whirling and sparkling 60 or 70 feet into the air. The entire grounds are surrounded by a costly iron fence, 1977 yards in length. The northern portion of the common, occupying the southern declivity of Beacon Hill, affords a fine view of Charles river, and the country in that direction. The space towards the west, between the common and Charles river, is occupied by a botanic garden, covering about 25 acres. Other public grounds have been laid out in the newer portions of the city, some of which are beautifully ornamented, and have fountains in the centre.

Boston harbor opens to the sea between two points nearly 4 miles distant from each other—Point Alderton on Nantasket, and Point Shirley in Chelsea. It is sheltered from the ocean by the peninsulas of which these two points are the extremities, and a large number of islands, between which are three entrances. The main passage, which is about 3 miles S. E. from the navy-yard, and so narrow as scarcely to admit two vessels to pass abreast, lies between Castle and Governor's islands, and is defended by Fort Independence and Fort Warren. A passage N. of Governor's island is also protected by Fort Warren. A new fortress, of great size and strength, now nearly completed, on George's island, guards the entrance to the outward or lower harbor. The entire surface included within Point Alderton and Point Shirley is estimated at 75 square miles, about half of which affords good anchorage ground for vessels of the largest class. It is easy of access, free from sandbars, and seldom obstructed with ice. The whole is thickly studded with islands, and is the reservoir of several small streams, among which are the Mystic, Charles, Neponset, and the Manantiquot rivers.

Among the public buildings, the state house from its position is the most conspicuous. It stands on the summit of Beacon Hill, fronting the common. It was erected in 1798 on ground termed in the grant, "Governor Hancock's pasture." The edifice is 173 feet long, and 61 feet wide, with a dome 50 feet in

diameter, and 30 feet high, the summit of which is about 120 feet from the ground, and 230 feet above the level of the sea. The view which is afforded from the cupola is unsurpassed by any thing in the United States, if not in the world. Every portion of the city is before the eye of the beholder. The harbor is spread out towards the east, embosoming a multitude of beautiful islands, and whitened with a thousand sails. On the other hand is an illimitable expanse of country adorned with fruitful fields, and everywhere dotted over with elegant villas and flourishing villages; while to the north towers Bunker Hill monument, marking the place where the first great battle of the Revolution was fought. The number of persons who visited the cupola of the state house from April to November, 1849, was 62,430. On the entrance-floor stands a fine statue of Washington, by Chantrey. The representatives' hall is in the centre on the principal floor, the senate chamber in the east, and the governor's and council chamber in the west wing. The old state house is still standing at the upper end of State street, on the site occupied as the seat of government in Massachusetts 140 years. The first building was erected in 1659, (afterwards destroyed by fire;) the second in 1714, (also destroyed by fire;) and the present one in 1748. Faneuil Hall, the "Cradle of Liberty," as it is called, is an object of much interest, as being the place where the orators in the days of Hancock and Adams roused the people to resistance against British oppression. It is situated in Dock square, and is 100 feet long, 80 wide, and 3 stories high. The hall is 76 feet square, and 28 feet high, with deep galleries on three sides. The building was presented to the citizens, in 1742, by Peter Faneuil, Esq. Faneuil Hall Market, immediately east of Faneuil Hall, on Dock street, was at the time of its erection the handsomest market-house in the United States. It is upwards of 500 feet long, 50 feet wide, and two stories high, with a dome. The second story, called Quincy Hall, is so constructed that it can be occupied as several apartments, or thrown into one, as occasion may require. The building was erected in 1826, at a cost of about \$150,000. There are several other markets in the city, besides those at East Boston and South Boston. The custom house is near the head of Long Wharf, fronting both on Commerce street and on the harbor. It is built of granite, in the form of a cross, and surmounted by a dome, the top of which is 90 feet from the ground. The foundations rest upon 3000 piles. Its length is 140 feet; width, including the projections of the cross, 95 feet. Each front has a portico of six Doric columns—each a single stone, costing about \$5000. The entire cost of the building was upwards of \$1,000,000. The Merchants' Exchange is a magnificent fire-

proof building, situated on the south side of State street. It has 76 feet front, and extends back 250 feet to Lindall street, covering 13,000 feet of ground. The front is composed of Quincy granite, with four pilasters, each a single stone 45 feet high, and weighing about 55 tons. The roof is of wrought iron, covered with galvanized sheet-iron. The great central hall, 80 feet by 58, is occupied as the Merchants' Exchange and reading room. In the basement is the city post-office. The building was finished in 1842, and cost, exclusive of the ground, \$175,000. The city hall, a granite building, consisting of an octagon centre with wings, is located on a plat of ground between Court square and School street. The court house, also of granite, is in Court square between the city hall and Court street. It contains the rooms of the city, county, and United States courts. The city prison, consisting of a centre building in the form of an octagon with four wings extending in opposite directions, is near the foot of Cambridge street. Masonic Temple, in which the Freemasons have a lodge, is on Tremont street, fronting the Common. The new Tremont Temple, erected on the site of the one burnt in 1852, is on Tremont street, opposite the Tremont House. The main hall, which is on the upper floor, is 130 feet by about 73, and 45 feet in height, having galleries on three sides, with eight separate flights of stairs. Directly under this hall are 13 rooms, averaging about 16 feet in width, and from 32 to 38 feet in length. Fronting on Tremont street are four rooms occupied as stores, in the rear of which are two others, each 32 feet by 16, and a vestry, 73 feet by 33. Still farther in the rear is another hall or chapel, 73 feet by 53, with a ceiling 25 feet high. In a recess at one end of the great hall stands one of the largest organs in America. It is 45 feet high, and 36 feet wide, containing 70 stops and 3010 pipes. The Boston Music Hall, completed in 1852, fronts both on Winter street and on Bumstead place. The length of the central hall is 130 feet; width 80 feet; height 65 feet. The Fitchburg railroad depôt, at the corner of Causeway and Haverhill streets, was at the time of its completion the handsomest railroad edifice in the United States, and cost upwards of \$70,000.

In Boston there are nearly a hundred churches of the various denominations, viz. Unitarian 22; Congregationalist 14; Baptist 13; Methodist 12; Episcopalian 11; Roman Catholic 11; Universalist 6, besides those of various other denominations. Christ church, (Episcopal,) built in 1723, is the oldest church edifice in Boston. The Old South Meeting-house, erected in 1730, is the next. From the great historical interest connected with this church, it is selected for the annual election sermon, preached before the governor and general court.

The wharves and warehouses of Boston are on a scale of magnitude and grandeur surpassed by no other city of equal population. The N. and E. sides of Old Boston are lined with wharves and docks, which, taken together, make up an aggregate length of over 5 miles. Many of them are stupendous structures. Long wharf, lined with spacious warehouses, extends into the harbor 1800 feet; T wharf reaches from the centre nearly to the outer extremity of this wharf on the N. side, and is parallel to it. The two are united by means of a short cross-wharf. The next S. of Long wharf is Centre wharf, 1379 feet long, with a uniform range of warehouses four stories high, throughout its whole extent. The custom house is situated between these two, on Commercial street. Still farther S. is India wharf, 980 feet in length, and from 246 to 280 in breadth, having a range of lofty warehouses in the centre. Here are found vessels from China and India. The most important N. of these are Commercial wharf, Lewis's wharf, and the Eastern Railroad wharf. Commercial wharf and Lewis's wharf are each occupied by a range of massive granite warehouses. On the Eastern Railroad wharf, the landing of the East Boston ferry, there are two such ranges, with an avenue between leading to the station house.

Institutions.—Boston contains a great number of literary, scientific, and educational institutions, among which may be mentioned the Boston Athenæum, incorporated in 1807, situated on Beacon street. It has one of the largest and most valuable libraries in the United States, numbering about 50,000 bound volumes, upwards of 20,000 pamphlets, and nearly 500 volumes of engravings, besides a rare collection of coins. About 450 bound volumes, and from 800 to 1000 pamphlets, formerly belonging to the library of Washington, have recently been added to it. The Athenæum likewise contains a fine gallery of sculpture, and also one of paintings. The Massachusetts Historical Society, organized in 1790, possesses a library of 7000 bound volumes, and about 450 volumes of manuscripts, together with an extensive collection of pamphlets, maps, charts, coins, and other relics. The Boston Library Society, founded in 1792, have a hall in the Tontine buildings, and a library of over 12,000 volumes. The American Academy of Arts and Sciences has a library of 8000 volumes. Excepting the American Philosophical Society at Philadelphia, this is the oldest organization of the kind in the United States, having been founded in 1780. The Mercantile Library Association, instituted in 1820, has a collection of upwards of 13,600 volumes. The first Mechanics' Apprentices' Library Association ever organized was established in Boston in 1820. The origin of this class of institutions is traced to Dr. Franklin.

Efforts are now being made to establish a Free City Library, towards which the contributions have been very liberal. The Lowell Institute was established by John Lowell, junior, who bequeathed to it a legacy of \$250,000. The bequest provides for regular courses of free lectures, to be given upon natural and revealed religion, physics and chemistry in their application to the arts, and numerous other important subjects. There are also many other similar societies, such as the New England Historical and Genealogical Society; the Boston Society of Natural History; the American Oriental Society; the American Statistical Association; the Boston Lyceum; the Handel and Haydn Society; the Musical Educational Society, and the Boston Academy of Music.

Closely identified with the history of Boston is her system of public instruction. Ever cherished with maternal care, her schools have long been ornaments to the city and the pride of New England. As early as 1625, the town records bear evidence to the establishment of a "free school," and from that hour to the present no interest has received more earnest attention than the subject of education. The system comprises four grades, primary, grammar, high, and Latin schools. There are about 190 primary, and 21 grammar schools. The high and Latin schools are exclusively for boys. There were in the primary schools in 1852, about 12,000 pupils; in the grammar schools, 9979; in the high schools, 173; and in the Latin schools, 185: total number in all the schools, approximately, 22,307 pupils; number in the grammar, high, and Latin schools, 10,337; over 15 years of age, 610; average attendance, 9064. Number of masters in the grammar, high, and Latin schools, 31; sub-masters, 11; ushers, 17; female assistants, 144. Salaries of the masters in the high and Latin schools, \$2400; sub-masters, \$1500; ushers, \$800, with an increase of \$100 a year till the salary amounts to \$1200. Masters in the grammar schools, \$1500; sub-masters, \$1000; ushers, \$800; head assistants, \$400; others, \$250 the first year, \$300 the second, and \$350 the third and succeeding years; teachers of music, \$100 in each school. All salaries are fixed by the school committee. The amount of money expended in the Boston schools for the year 1850-51 was \$325,126 60. Average cost of tuition of each scholar per annum for the last ten years in the public schools has been \$10 59; in the grammar, high, and Latin schools, \$15 26; primary, \$6 28. Total amount expended for school edifices up to May 1st, 1851, \$1,271,273 57. The school committee consists of the mayor of the city, the president of the common council, and 24 other persons chosen for the purpose.

The benevolent institutions of Boston are numerous and well endowed. The Massachusetts General Hospital occupies

a plot of four acres of ground in the western part of the city, on the right bank of Charles river. The building is constructed of Chelmsford granite, 274 feet long and 54 wide. Besides a permanent fund of \$171,119, it has other sources of income, making the total receipts for the year 1850, \$28,517. The number of patients admitted during the same period was 746. The McLean Asylum for the Insane, a branch of the General Hospital, is delightfully situated on an eminence in Summerville, about 2 miles N. W. of Boston. The asylum comprises a group of five elegant buildings, surrounded with 15 acres of ground, beautifully laid out and ornamented. Thirty thousand dollars have been contributed since 1843 for the support of this institution, by a single individual, the Hon. William Appleton of Boston. The McLean Asylum received its name from John McLean, Esq., of Boston, a liberal benefactor of the General Hospital. The Perkins Institution and Massachusetts Asylum for the Blind occupies the fine building formerly known as the Mount Washington house, in South Boston. In addition to other contributions, it receives \$9000 annually from the state. The average number of pupils is about 100. There are also located in South Boston, the Boston Lunatic Hospital and the houses of Industry and Reformation. Belonging to these two last named are 60 acres of land, in the cultivation of which the inmates are employed. The new almshouse, an imposing structure in the form of a Latin cross, is on Deer island, and the Quarantine Hospital on Rainsford's island. In the western portion of the city is the Boston Eye and Ear Infirmary, and in the southern part, the New England Female Medical College.

There are issued in Boston about 100 periodical publications, treating of almost every subject, whether of news, art, literature, or science. Of these, more than 12 are dailies. Among the others are comprised several of the most distinguished literary and scientific journals in the United States.

Commerce, Finances, &c.—In commercial importance, Boston is among the first cities of America. Her foreign commerce has always been great, and extends to almost every nation on the globe. Her coast trade is also immense. Along the wharves, in every direction and at all times, may be seen forests of masts, and vessels from all parts of the world. During the year 1852 there were at Boston 2974 foreign, and 6406 coastwise arrivals. Of the coastwise, 1838 were from Philadelphia, 500 from New York, 298 from Bangor, 283 from Baltimore, 277 from Portland, 156 from New Orleans, and smaller numbers from other ports. Of the foreign arrivals, about 75 were from the Cape of Good Hope and beyond. The clearances from Boston for the same year were 6154 vessels,

of which 188 ships, 350 barques, 839 brigs, and 1486 schooners were bound for foreign ports, and 78 ships, 14 barques, 5 brigs, and 1 schooner for California. The burthen of the vessels cleared from this port in 1851, amounted to an aggregate of 494,063 tons. The aggregate shipping, June 30th, 1852, was 326,529 tons registered, and 54,584 tons enrolled: total, 381,088 tons. During the year, 46 vessels, (23 of them ships,) with an aggregate of 24,970 tons burthen, were admeasured. Three-fourths of the trade carried on by the United States with Russia, and more than half with East India, comes to this port. Boston has also extensive commercial relations with the countries bordering on the Mediterranean, with South America, and the West India islands.

The annexed table exhibits some of the leading imports and exports of Boston, for the year ending December 31st, 1852:

The foreign exports of cotton manufactures for 1852 were much greater than any previous year, and consisted of 62,669 packages. Of these, 24,677 packages, value \$1,252,051, were for the East Indies; 23,603 do., value \$1,125,205 89, for South America, and 2018 do., value \$154,313, for Hayti. The total value of foreign exports in cotton manufactures for 1850 amounted to \$1,896,148; 1851, \$2,507,703, and 1852, \$3,090,106 59.

The total value of foreign imports into Boston for 1850 amounted to \$29,909,376; 1851, \$31,350,553; 1852, \$33,987,144.

There were in December, 1852, 32 banks in Boston, with an aggregate capital of \$24,660,000; circulation, \$8,304,591; specie, \$2,784,792; proportion of circulation to one dollar of specie, \$2.98; amount of circulation and deposits, \$18,597,678. Five other banks have since gone into operation. There were 18 insurance companies, with resources to the amount of \$6,783,172, and liabilities amounting to \$5,955,060. The assessed value of real and personal property in Boston, in 1851, was about \$187,000,000, on which a tax was collected at the rate of \$7 on \$1000, to the amount of \$1,350,000.

The expense of the city police for the year ending May 1st, 1852, was \$49,737, and of watch for the same period, \$95,645. The entire cost of the Boston water-works up to January 1st, 1852, amounted to \$5,185,711. The cost of introducing water into East Boston was \$306,980. During the year 1852, a loan of £400,000 was made for the balance of the temporary water debt, at 4½ per cent., payable in 20 years, in London. The total amount of city debt, May 1st, 1853, was \$1,830,000.

The want of river advantages is supplied to Boston by railroads, of which seven great lines terminate in this city. There are lines of railway recently completed, opening communication with the St. Lawrence river at Ogdensburg in New York and La Prairie in Canada, and another in process of construction through Maine, that is to connect with Montreal. The Great Western line extends through Albany, Buffalo, Detroit, and Chicago, and when completed, will connect with the Mississippi at two points, Galena and Rock Island.

Although the peninsula on which Boston is situated furnishes large quantities of excellent water from springs, still the supply has been found inadequate to the wants of the rapidly increasing population. As early as 1795, a company was incorporated for

the purpose of conducting water into the city from Jamaica Pond. In 1845, nearly 15 miles of pipe had been laid, and about 3000 houses furnished with water. But the elevation of the pond proved to be too low to supply the higher portions of the city. During the year 1845, a plan was undertaken to bring water into Boston from Lake Cochituate, or Long Pond, as it was formerly called. Cochituate lake lies about 20 miles west of Boston, partly in three towns, Farmington, Wayland, and Natic. It covers over 650 acres of surface, is 70 feet deep in places, and drains an area of more than 11,000 acres. Its elevation is 124½ feet above spring tide, and is capable of supplying 10,000,000 gallons of water daily. The water is conveyed by means of a brick conduit to a grand reservoir in Brookline, and from thence to the different distributing reservoirs at Boston Proper, East Boston, and South Boston. Over Charles river it is carried in two iron pipes, each 30 inches in diameter, resting on a granite bridge, having 3 arches, each 30 feet span. The entire length of all the pipe laid from the commencement, up to January 1st, 1852, was a little more than 100 miles.

Among the principal hotels of Boston may be named the following:—The Tremont House, on Tremont street; the Revere House, on Bowdoin square; the American House, on Hanover street; the Winthrop House, on Tremont street, and the Adams House, on Washington street. Most of the above are first class hotels.

History.—The Indian name of the Boston peninsula was Shawmut, signifying Living Fountains. From the peculiar conformation of its surface, the first settlers called it Tremont, or Trimountain. This name, however, was soon dismissed for the present one, which was given it in honor of the Rev. John Cotton, who emigrated from Boston, England. The Rev. John Blackstone was the first white inhabitant of the peninsula. Here he lived alone until the arrival of John Winthrop, the first Governor of Massachusetts, who came to Charlestown with a small party of emigrants, and having remained a short time, removed across the river in 1630. About the year 1635, Mr. Blackstone removed to Rhode Island, having sold his “right and title to the peninsula of Shawmut” for £30. The first church was built in 1632, and the first wharf in 1673. Four years after, John Hayward was appointed postmaster, “to take in and convey letters according to direction.” The first newspaper was issued April 17th, 1704, called the Boston News Letter. Benjamin Franklin was born January 17, 1706. In 1763, the difficulties between the colonies and the mother country becoming serious, two regiments of British soldiers were landed in Boston, October 1st, and quartered in the

old state house. March 5th, 1770, the citizens were fired on in the streets by the soldiery, and several killed and wounded. March 31st, the port of Boston was closed by act of Parliament. On the 17th of June, 1775, was fought the battle of Bunker Hill. From this time, the British army, to the number of about 10,000 troops, had possession of Boston till March, 1776, when they were compelled by the Americans entrenched on Dorchester Heights to withdraw from the town and harbor. The first blood shed in defence of American liberty was shed in Boston, and throughout the entire war no people contributed more largely towards its support. Boston continued a town until its population had increased to nearly 45,000. The government was administered by a board of selectmen, according to the custom of other towns in New England. At length a majority being favorable to a municipal organization, Boston became an incorporated city, February 23d, 1822. The city is divided into 12 wards, and governed by a mayor, 8 aldermen, and a board of common council, consisting of 48 members, 4 from each ward. The mayor and aldermen constitute one board, and the common council another. Population, in 1800, 24,937; 1810, 33,250; 1820, 43,298; 1830, 61,391; 1840, 93,383; 1850, 136,881.

BRISTOL, a county in the S. E. part of Massachusetts, has an area of about 517 square miles. It is bounded on the S. by Buzzard's bay, and is drained by the Taunton river and smaller streams, which afford valuable water-power. It has a seacoast of about 18 miles, affording many excellent harbors. The inhabitants are largely engaged in navigation and the fisheries. The surface is somewhat broken, but generally level; the soil in some parts is good, and in

others of an inferior quality. Indian corn, potatoes, and grass are the staples. In 1850 this county produced 164,064 bushels of corn; 250,488 of potatoes; 28,552½ tons of hay, and 311,794 pounds of butter. There were 3 calico-printing establishments, 49 cotton, and 2 woollen factories, 4 nail and 4 tack manufactories, 4 iron foundries, 1 brass foundry, 1 cordage establishment, 1 copper rolling mill, 5 coach, and 2 chemical manufactories, 6 chandleries, 25 boot and shoe establishments, 10 machine shops, 5 grist, 21 saw and planing mills, 13 whale-oil establishments, 6 potteries, 9 sail-making, 3 ship-building, and 1 ship-smithing establishment, 18 jewellery establishments, 2 britania manufactories, and 8 tanneries. It contained 133 churches and 9 newspaper establishments. There were 10,908 pupils attending public schools, and 391 attending academies or other schools. Extensive beds of iron ore are found in this county, and quantities of the iron are manufactured into various articles. Railroads connecting Boston with Providence, Fall River, and New Bedford, intersect this county. Organized in 1685, and named from Bristol, a city of England. Seats of justice, Taunton and New Bedford. Population, 76,192.

BRISTOL, a county in the E. central part of Rhode Island, has an area of about 25 square miles, being the smallest county in the state. It is bounded on the E. by Mount Hope bay, and on the S. and W. by Narraganset bay. It enjoys almost unrivalled facilities for navigation and the fisheries; a large amount of capital is invested in the whale fishery. The surface is somewhat uneven. Mount Hope, once the residence of the Indian king, Philip, is the greatest elevation. The soil is very fertile. Indian corn, oats, potatoes, and grass are the staples. In 1850 this county produced 25,451 bushels of corn; 11,075 of oats; 24,898 of potatoes; 3062 tons of hay; and 32,262 pounds of butter. There were 3 cotton factories, 1 hinge and 1 nail factory, 1 brass foundry, 1 iron foundry, 2 ship-building establishments, 2 cordage factories, 3 chandleries, and 2 brick yards. BROOKLYN, a city, seaport, and seat of justice of King's county, New York, at the

western extremity of Long island, 146 miles S. from Albany, and 226 miles N. E. from Washington. Lat. of the navy-yard, 40° 41' 50" N.; lon. 73° 59' 30" W. A strait, called the East river, about three-fourths of a mile wide, separates it from New York city. This strait is crossed by several steam-ferris, the principal of which are the Fulton, South, Catharine, Jackson, and the Hamilton Avenue ferris. Of these the Fulton ferry is by far the greatest thoroughfare. Boats leave the opposite landings every few minutes during the day, and once in 30 minutes from 12 o'clock at night until morning. The crowd of passengers, both at the Fulton and South ferris, morning and evening, is immense: three boats at each are kept constantly plying, and occupy no more than 5 or 6 minutes in crossing. The site of Brooklyn is considerably elevated and very uneven, though much has been done in the way of grading and other improvements to overcome the original inequalities of the surface. One prominence, towards the East river, denominated the "Heights," is 70 feet above the level of the sea, and affords a magnificent view of New York city, the harbor, and surrounding scenery. The streets are generally about 60 feet in width, and, with the exception of Fulton, nearly all straight, intersecting each other at right angles. Many of them are beautifully shaded, which, in the summer season, imparts to the city all the freshness and tranquil appearance of a country town. Fulton street, leading from Fulton ferry, is the great thoroughfare; enclosed on either side with blocks of lofty buildings, it forms an imposing entrance to the city. Most of the finest streets are towards the S. W., near the bay. Many of the dwellings in this section are of surpassing elegance, and are generally surrounded with yards, adorned with beautiful gardens and shrubbery. The more densely settled portions of the city have no public squares, but from its elevated position, the breadth of the streets, and the profusion of shade-trees, the want of those means of ventilation and sources of health is much less felt than might have been expected. In the newer parts, however, provision for some public grounds has been made. The proximity of Brooklyn to New York, its healthy atmosphere, and the facilities afforded for communication with the great metropolis, have made it a favorite place of residence to persons doing business in that city. It is to this circumstance that its rapid growth is mainly attributable.

Brooklyn is one of the best-built cities in the United States, and contains a large number of edifices that are distinguished either for elegance or architectural design. The most prominent of these is the new city hall, situated on a triangular piece of ground bounded by Fulton, Court, and Joralemon

streets. It is constructed of white marble, 162 feet by 102, and 75 feet in height, comprising three stories and a basement. A dome surmounts the building, the top of which is 153 feet from the ground. Its entire cost was about \$200,000. The jail, erected in 1837, is a substantial building of freestone, situated in the eastern part of the city, near Fort Greene.

There are 66 churches in Brooklyn, several of which are imposing structures. The Church of the Pilgrims, a gray stone building, with a tower and spire, is a commanding object to those approaching the city from the bay. The Holy Trinity (Episcopal) is a brown stone edifice, of Gothic architecture, and cost about \$150,000. Grace church, the Unitarian church, and the Church of the Restoration, are all of brown stone, and in the Gothic style of architecture. Dr. Cox's church, and Dr. Bethune's, (the latter not yet completed,) are also of brown stone.

The Atlantic dock, 1 mile S. of Fulton ferry, is one of the most extensive works of the kind in the United States. It was built by a company incorporated in 1840, with a capital of \$1,000,000, and embraces within the piers 40 $\frac{5}{10}$ acres. Its depth is sufficient for ships of the largest size. The outer pier, extending 3000 feet on Buttermilk channel, is occupied with a range of granite stores, which completely shelters it from the harbor. An extensive dry dock, at the navy-yard, has recently been completed at a cost of about \$1,000,000. The shores of Brooklyn, where not protected by docks and wharves, are rapidly wearing away, in consequence of the strong current in the East river. Governor's Island was formerly connected with Long Island, and, previous to the Revolution, cattle were driven from Red Hook Point to it across Buttermilk channel, then a shallow passage, but now of sufficient depth for vessels of the largest class. The United States navy-yard is situated on the S. side of Wallabout bay, which makes up towards the N. E. part of Brooklyn, in the form of a broad curve. It occupies about 40 acres of ground, which is enclosed on the land side by a high stone wall, and contains, besides the residences of the officers, two extensive ship-houses, various workshops, and a large amount of military stores.

Among the literary and charitable institutions, may be mentioned the Brooklyn Athenæum, at the corner of Atlantic and Clinton streets. It is provided with a library, reading room, and a course of lectures. The building is a fine structure, 90 feet by 80, and cost \$60,000. The City Library contains a collection of valuable works. The Lyceum, in Washington street, is a noble granite structure, with a spacious lecture room. The United States Lyceum, organized in 1833, is in the navy-yard, and possesses besides a valuable collection of curiosities, ex-

tensive geological and mineralogical cabinets. The new City Hospital, in Raymond street, near De Kalb, was opened in April, 1852, and has accommodations for 170 patients. The whole number of admissions during the year 1852, was 456. The "Graham Institution, for the relief of respectable, aged, indigent females," was founded in 1851, and the building dedicated October 26th, 1852. It is constructed of brick, 52 feet front, 80 deep, and 4 stories high, containing 55 rooms, which afford accommodation for 90 persons. Entire cost, \$29,044. The Orphan Asylum of the City of Brooklyn, incorporated in 1835, furnishes a home to about 150 children. The Marine Hospital, surrounded with about 30 acres of well-cultivated land, occupies a commanding elevation on the opposite side of Wallabout bay. In addition to the above, may be mentioned the Church Charity Foundation, a corporation organized in 1851, having for its object the relief of indigent and destitute persons, and the Brooklyn Dispensary, on Pineapple street, near Fulton.

The public schools of Brooklyn are in a very prosperous condition. From the original formation of the board of education in 1843, to January 1st, 1853, the number of schools had increased from 10 to 15; the average attendance of pupils from 1865 to 6338; the number of teachers, from 29 to 157, and the yearly amount of teachers' salaries from \$9510 to \$35,063. The number of pupils registered, January 1st, 1853, was 9903, and the number who had received instruction during the year, 19,148. Of the teachers, 18 were males, and 139 females. During the year referred to, 571 volumes were added to the school libraries, making an aggregate of 19,799 volumes. The appropriations for 1852 amounted to \$48,403 74; \$23,403 74 of this sum was received from the state, and \$25,000 from the city tax. In addition to this the Board advanced \$33,861 for the purchase of school sites and the erection and repairing of houses, making the entire sum expended for school purposes in 1852, \$82,264 74.

Brooklyn contains six banks and two savings institutions. Four daily and three or four weekly newspapers are published in the city.

At Wallabout bay, in the Revolutionary war, were stationed the English prison-ships, in which it is said nearly 12,000 Americans perished from close confinement and other ill treatment. The bodies of the sufferers were hastily buried upon the shore with but little care, except to conceal them from sight. In 1808 their bones, which were beginning to be washed from their graves, were taken up and placed in thirteen coffins, inscribed with the names of the thirteen original states, and then deposited in a common vault beneath a building erected for the purpose, on Hudson avenue, near the navy-yard. Brooklyn was

first settled in 1625, near Wallabout bay. The first deed for land was granted in 1639. In 1776 this part of Long Island became the seat of the Revolutionary war. Brooklyn was incorporated as a township in April, 1806, and as a city, having the same limits as the township, 6 miles long and 4 wide at its greatest breadth, in April, 1834. It is divided into 9 wards, and governed by a mayor and a board of 18 aldermen, 2 from each ward, elected annually. Population in 1810, 4402; 1820, 7175; 1830, 15,396; 1840, 36,233; 1850, 96,838; 1853, estimated at 125,000.

BUFFALO, a city, port of entry, and seat of justice of Erie county, New York, is situated at the eastern extremity of Lake Erie, 2 or 3 miles S. from the commencement of Niagara river: W. from Albany 364 miles by the Erie canal, and 325 miles by the Central railroad, (both of which terminate in this city,) 470 miles N. W. from New York, 22 miles S. S. E. from Niagara Falls, 103 miles N. E. from Cleveland, 290 miles N. by E. from Detroit, and 597 miles E. by N. from Chicago. Lat. 42° 53' N.; lon. 78° 55' W. It is regularly, and for the most part, handsomely built, partly on an elevation, and partly on a marsh or low ground, intersected in the southern part by Buffalo creek. This latter portion is the seat of the principal business. The site rises gradually as it recedes from the water's edge, and at the distance of 2 miles becomes an extended plain, 50 feet above the level of the harbor, affording delightful views of the city, lake, Niagara river, and Canada shore. The streets are broad, straight, and usually intersect each other at right angles. Main street, more than 2 miles long, and 120 feet wide, is perhaps the finest in the city, being enclosed on either side with lofty buildings. There are three public squares, Niagara, Franklin, and Washington, all of which are planted with shade-trees, and otherwise ornamented. The harbor is formed by Buffalo creek, and is of sufficient depth one mile from its entrance into the lake, for vessels drawing from 12 to 14 feet of water. It is capacious, and well protected from storms, having a pier or breakwater which extends 1500 feet from the S. side of the mouth of the creek. By thus confining the channel, the bar that originally obstructed the entrance to the harbor has in great measure been washed away by the current. Upon the end of this pier is a light-house, 20 feet in diameter at its base, and 46 feet high. The principal obstruction to the harbor at present, is the ice which at the breaking up of winter is often driven into it by strong westerly winds, where it not unfrequently remains long after the lake

is clear. Several hundred thousand dollars have been expended within a few years past, on this portion of Buffalo creek, in the construction of slips and ship canals to meet the growing wants of commerce. The public buildings are a court house, a jail, 2 market-houses, and about 40 churches, several of which have recently been erected. The Catholic cathedral, not yet completed, will be one of the finest structures of the kind in the United States. St. Paul's and St. John's, (Episcopal,) the North church, and the Central church are distinguished for their architectural elegance.

Among the literary, educational, and benevolent institutions may be mentioned the Buffalo University, chartered in 1846. Connected with it is a flourishing medical college. The Young Men's Association has a library of over 6000 volumes, and sustains an able course of lectures. A society recently organized, denominated the German Young Men's Association, possesses a valuable collection of about 2000 volumes, consisting for the most part of works in the German language. Both of these societies have reading-rooms well supplied with periodicals and newspapers. The female academy is delightfully situated, and endowed to the amount of about \$50,000. Buffalo is distinguished for her public schools, and has the honor of being among the very first cities in the state in introducing and perfecting this system of popular education. The schools are under the direction of the city council, and open to the children of all classes free of charge. Buffalo has a marine hospital, founded in 1833, an orphan asylum, and an organization called the Sailors' and Boatmen's Friend Society.

The manufactures of Buffalo are important, especially in the article of iron, in the production of which several large establishments are engaged. The city is supplied with excellent water from Niagara river by a corporation having a capital of \$400,000: it is also lighted with gas.

Commerce.—The trade of Buffalo is immense. Its position is such as to render it a great entrepôt, through which much of the commerce between the East and West must pass. The first impulse was given to it by the completion of the Erie canal in 1824. Since then lines of railways have been constructed, opening communication with nearly every section of New York, with the great cities on the Atlantic coast, and in Canada, and with the fertile valleys of the Ohio and the Mississippi. These improvements, with her advantages for navigating the great inland waters, have secured to Buffalo the first rank among the great commercial cities on the north-western lakes. Another railroad is also projected, to connect with Pittsburg through the Sunbury railroad. This will communicate with the coal regions of Penn-

sylvania. During the year 1852, there were built at this port 6 steamers, 9 propellers, and 8 schooners, with an aggregate burthen of 8610 tons. There were also commenced in the fall of 1852, to be completed for the spring navigation, 5 steamers, 4 of 1800 tons each, 2 propellers, 4 schooners, one of 360 tons, 1 brig, and 1 steamtug. The aggregate burthen of the vessels to be built during the winter of 1852 and '53 was 11,142 tons. From 1000 to 1200 mechanics are constantly employed at the various shipyards on the creek. There were enrolled and licensed, December 31st, 1852, in the district of Buffalo Creek, 28 steamers, 31 propellers, 33 brigs, 1 barque, and 100 schooners, with an aggregate of 56,523 tons. The following table shows the entrances and clearances of Foreign and American vessels, with their tonnage, at this port, during the year 1852:—

In addition to the above, \$819,737 worth of goods were brought by the State Line railroad, making the total value of all the imports received at Buffalo from the West in 1852, \$34,872,535, being an increase from 1851 of about \$3,000,000. The value of the imports from Canada the same year amounted to \$1,068,585, and by canal, \$41,810,398. The value of the exports from Buffalo by canal in 1852 was \$21,049,908, and from the

district of Buffalo Creek to Canada, \$840,800. The duties collected at this port amounted, in 1843, to \$4346; 1846, \$12,389; 1849, \$46,939; 1852, \$69,723. The shipping enrolled and licensed in the district of Buffalo Creek, June 30th, 1852, amounted to an aggregate of 49,614 $\frac{3}{4}$ tons.

There are in Buffalo 10 banks, 2 savings institutions, and upwards of 40 fire, marine, and other insurance companies and agencies. About 15 newspapers are issued here.

Among the hotels, the American, the Clarendon, and the Mansion House, on Main street, and the Western Hotel, on the Terrace, near the Niagara Falls Depôt, may be named as the most prominent.

Buffalo was originally laid out by the Holland company in 1801. In 1812 it became a military post. In December, 1813, it contained 200 houses, all of which, except two, were burned by a party of British and Indians. As a compensation for their losses by this disaster, Congress granted the inhabitants the sum of \$80,000. An act, incorporating it a city, was passed by the legislature in April, 1832. It is divided into 5 wards, and governed by a mayor and common council, annually elected. Population, in 1810, 1508; 1820, 2095; 1830, 8653; 1840, 18,213; 1850, 42,261; 1853, estimated, 60,000.

BURLINGTON, a county occupying the middle part of New Jersey, has an area of about 600 square miles. It is bounded on the N. W. by the Delaware river, and S. E. by the Atlantic ocean, extending entirely across

the state. It is drained by Little Egg Harbor river, which partly bounds it on the S. W., and its branches flowing into the Atlantic, and by Rancocun, Assiscunk, and Crosswicks creeks, falling into the Delaware. The surface is generally level, and in many parts covered with pine timber. The soil in the N. W. portion, for about 12 miles from the river, is a very fertile loam; the remainder principally sandy, with a substratum of clay. Indian corn, wheat, potatoes, hay, and butter are the staples. In 1850 this county produced 883,011 bushels of corn; 364,461 of potatoes; 152,369 of wheat; 41,783 tons of hay, and 688,868 pounds of butter. The quantity of hay was the greatest produced by any county in the state. There were 4 chandleries, 3 newspaper, and 1 calico-printing establishment, 2 cotton and 2 woollen factories, 7 foundries, 4 glass manufactories, 28 flour mills, 2 grist mills, 2 paper mills, 52 saw mills, and 19 coach manufactories. It contained 83 churches, and 6771 pupils attending public schools, and 1400 attending academies or other schools. Bog iron ore is found in many places, and marl is abundant in the western part. Animal relics, such as shells, bones, and also petrified vegetables, are frequently found in the marl. In Springfield township there is a petrifying well. The Camden and Amboy railroad traverses this county, and a branch railroad connecting Burlington with Mount Holly is included within it. Organized in 1694, and named from Bridlington, commonly pronounced Burlington, a town of England. Capital, Mount Holly. Population, 43,203.

BURLINGTON, a port of entry, and seat of justice of Chittenden county, Vermont, and the most populous town in the state, is situated on a bay of its own name, on the E. side of Lake Champlain, 40 miles by railroad W. N. W. from Montpelier, and by steamboat 82 miles N. from Whitehall. Lat. 44° 27' N.; lon. 73° 10' W. The ground on which Burlington is situated is low along the borders of the lake, but rises as it recedes from the shore to a considerable elevation. The United States government has erected a light-house on Juniper island, at the mouth of Burlington bay, and constructed a break-water to protect the shipping in the harbor. For beauty of location Burlington is scarcely surpassed by any town or village in New England. The streets cross each other at right angles; those extending eastward from the lake are a mile in length. In the centre is the public square, around which are situated the court house, the principal hotels, and several fine stores. Many of the dwellings are surrounded with yards ornamented with shrubbery and

shade-trees. The University of Vermont is located about a mile from the shore, at the eastern extremity of the village, on a commanding elevation, 281 feet above the level of the lake. Belonging to it are four spacious edifices. The dome of the centre building commands a magnificent view of the lake and surrounding country. Connected with the institution is a medical school. The university was founded in 1791, and received from the state a grant of about 30,000 acres of land. The town contains four banks, three newspaper offices, and a number of churches. Besides the facilities for steamboat navigation which it enjoys on the lake, Burlington has direct communication by railroad with Boston, Whitehall, Ogdensburg, and Montreal. Burlington was settled 1783. Population of the township in 1830, 3525; 1840, 4271; 1850, 6110.

BURLINGTON, a city of Burlington county, New Jersey, on the Delaware river, nearly opposite Bristol, 20 miles above Philadelphia, and 12 miles S. W. from Trenton. Lat. 40° 5' N.; lon. 73° 10' W. The Camden and Amboy railroad connects it with New York and Philadelphia. The river is here about one mile wide, and is divided by an island containing 300 acres, lying nearly opposite the city. The streets are wide, straight, and well shaded with trees and lighted with gas. The houses are mostly built of brick, and the bank of the Delaware is adorned with many handsome residences and gardens. The city is copiously supplied with good water, raised by means of hydraulic machinery. It contains 1 Catholic and 9 Protestant churches, a bank, a public library, and a lyceum building, now used as a town hall. There are 2 large and flourishing boarding schools, one for each sex, beautifully situated on the bank of the river. Burlington college of this place was founded by the Episcopalians in 1846, and had in 1852, 118 students, with a library of 1200 volumes. This city is much resorted to during the summer months by the citizens of Philadelphia, with which it communicates by steamboats several times a day. It was settled in 1667, and was originally called New Beverly. Population, 4536.

BUTTE, (bute,) a county in the N. part of California, bordering on the Utah Territory, has an area estimated at 5000 square miles. It is bounded on the W. by Sacramento river, and is drained by Feather river and its Middle fork, which afford many fine mill sites. The surface is uneven, and in some parts mountainous, with many beautiful and fertile valleys fitted for agriculture and stock-raising. These valleys are timbered and covered with the finest grass; water is abundant, and irrigation easy. The mountains are often covered with majestic pines and cedars. Its scenery is picturesque and grand. Butte mountains, on the Sacramento river, Table mountain, near Feather river, having the appearance of an ancient castle, and the lofty Mount Hood, whose snow-capped summit may be seen at an immense distance, are situated in this county. The soil, when not too much broken, is generally fertile. Barley, wheat, cattle, and horses are the staples. In 1852 this county produced 32,940 bushels of barley, and 3355 of wheat. There were 4536 beef-cattle, and 1560 horses. The number of acres in cultivation was 2144. The amount of capital

employed in quartz mining was \$340,764; in placer mining \$22,350, and in other mining \$55,650. Platina and iron abound in all the mining districts, but not in sufficient quantities to justify the use of machinery. Quicksilver is found in abundance; silver in small quantities, and lead in a pure state on the head waters of Middle fork. Gold is found in the county, chiefly imbedded in quartz, the mining of which pays a good percentage. The name of the county was derived from the Butte mountains, on Sacramento river. County seat, Hamilton. Population, 8572.

CALHOUN, a new county in the N. central part of Mississippi, drained by the Yallobusha and Loosacoona rivers. It was formed out of portions of Chickasaw, Lafayette, and Yallobusha counties. County seat not yet established.

CALHOUN, a county in the S. part of Texas, bordering on the Gulf of Mexico, has an area of 484 square miles. The Guadalupe river forms its boundary on the S. W., the

Matagorda and Lavacca bays wash its N. E. border. The surface is nearly level. The soil produces cotton, Indian corn, and sweet potatoes. In 1850 this county yielded 7660 bushels of corn; 2300 of sweet potatoes, and 109 bales of cotton; there was 1 newspaper office, and 126 pupils attending public schools. Capital, Lavaca. Population, 1110, of whom 876 were free, and 234, slaves.

CALHOUN, a new county in the S. part of Arkansas. It is bounded on the S. W. by the Washita river, navigable for steamboats, and on the E. by the Moro river. The surface is undulating or hilly; the soil is mostly fertile, producing cotton and Indian corn. This county is not included in the census of 1850. Capital, Hampton.

CALHOUN county, Michigan, situated in the S. W. central part of the state, contains 720 square miles. It is intersected by the St. Joseph's and Kalamazoo rivers, and also drained by Battle creek. The surface is undulating, and the soil is a rich sandy loam, producing fine crops of the grasses and grains. The greater part of the county is covered with a scattered growth of the white oak and burr oak. In 1850 this county produced 385,959 bushels of wheat; 327,544 of corn; 18,779 tons of hay, and 126,991 pounds of wool. It contained 18 churches and 2 newspaper establishments. There were 5864 pupils attending public schools, and 345 attending academies or other schools. The county is liberally supplied with water-power, and contains quarries of sandstone. It is intersected by the Michigan Central railroad. Organized in 1833. Capital, Marshall. Population, 19,162.

CALHOUN, a county in the W. part of Illinois, bordering on Missouri, has an area of 260 square miles. It occupies a narrow strip of land between the Mississippi and Illinois rivers, which unite at the S. E. extremity of the county. The surface is broken by bluffs and ravines, and is partly subject to inundations. The river bottoms produce good pasture for cattle. In 1850 there were raised 146,205 bushels of Indian corn; 3370 of wheat, and 163 tons of hay. It contained 1 church, and 196 pupils attending public schools. Pork and beef are exported. Stone coal is abundant on the banks of the Mississippi in this county. Capital, Hardin. Population, 3231.

CALHOUN, a post-village of Anderson district, South Carolina, 115 miles W. N. W. from Columbia.

CALHOUN, a thriving post-village, capital of Gordon county, Georgia, on the Western and Atlantic railroad, 80 miles N. W. from Atlanta, and 50 miles from Chattanooga, Tennessee. It is surrounded by a rich, well cultivated country, and is an important depôt for produce. Laid out in 1850. Population, about 400.

CALHOUN, a village in the S. part of Lump-

kin county, Georgia, 50 miles N. N. E. from Atlanta.

CALHOUN, a post-office of Autauga county, Alabama.

CALHOUN, a post-office of Pontotoc county, Mississippi.

CALHOUN, a post-office of La Fayette county, Arkansas.

CALHOUN, a post-office of Daviess county, Kentucky.

CALHOUN, a post-village of McMinn county, Tennessee, on the Hiawassee river, and on the E. Tennessee and Georgia railroad, 168 miles E. S. E. from Nashville.

CALHOUN, a post-office of Richland county, Illinois.

CALHOUN, a small post-village of Henry county, Missouri, 90 miles W. by S. from Jefferson City.

CALHOUN'S MILLS, a post-office of Abbeville district, South Carolina.

CALHOUNSVILLE, or McALLISTERSVILLE, a small post-village of Juniata county, Pennsylvania, 55 miles N. W. from Harrisburg.

CALIFORNIA. At the close of the recent war with Mexico, the United States acquired by conquest and purchase, a tract of country, for the most part arid, sterile, and mountainous, covering a space of nearly 500,000 square miles, the greater part of which had been hitherto known as the Mexican territory of Upper California. From the western portion of this sterile region, the Congress of the United States, in September, 1850, created, and admitted into the American confederacy, the thirty-first sovereign state, under the name of California. This state is bounded on the N. by Oregon, E. by Utah, (from which it is partly separated by the Sierra Nevada mountains,) and New Mexico, S. by the Mexican territory of Old California, and W. by the Pacific. It lies between 32° 28', and 42° N. lat., and between 114° 10' and 124° 50' W. lon. California is very irregular in shape, having its greatest length (about 700 miles) in a N. W. and S. E. direction, and its greatest breadth about 335, and its least about 150 miles, including an area of 188,982 square miles, or 120,000,000 acres.

Population.—No member of the American confederacy—perhaps we might safely say, no portion of the earth—has so mixed a population as California, adventurers being found from almost every quarter of the globe; even the exclusive empire of China has here its representatives by tens of thousands, whose patient industry makes them useful inhabitants. The Indians also form a large portion of the population. According to a state census, taken towards the close of 1852, the population of California was 264,435 inhabitants, (one county, El Dorado, being estimated,) of whom 151,115 were white males, 29,741 do. females; 1637 male negroes, 253 female do.; 424 male mulattoes, 98 female do.; 19,675 male domesti-

ated Indians, 12,864 female do.; 93,344 were citizens of the United States over 21 years of age; 50,631 male foreigners, and 4360 female do. Of the foreigners, 39,444 were over 21 years of age.

Counties.—California is divided into 36 counties, viz. Butte, Calaveras, Colusi, Contra-Costa, El Dorado, Klamath, Los Angeles, Marin, Mariposa, Mendocino, Monterey, Napa, Nevada, Placer, Sacramento, San Diego, San Joaquin, San Francisco, San Luis Obispo, Santa Clara, Santa Cruz, Santa Barbara, Shasta, Sierra, Siskiyou, Solano, Sonoma, Sutter, Trinity, Tuolumne, Tulare, Yolo, and Yuba. The following have been formed since the census of 1852, Alameda, from Contra Costa and Santa Clara counties; Humboldt, from Trinity, and San Bernardino, from Los Angeles county. Capital, Benicia.

Cities and Towns.—San Francisco had, in 1852, a population of 34,876;* it has now, (1853,) as is estimated, not less than 60,000; Sacramento City has about 20,000; Marysville, 7000, and Stockton, from 4000 to 6000. Among the other prominent towns are Nevada City, Placerville, San José, Vallejo, Sonora, Shasta City, Sonoma, and Monterey.

Face of the Country.—As the voyager sails along the coast of California, he looks upon a low range of mountains, which in many instances approach to the water's edge, and form a bluff, iron-bound coast, through which he enters, by a narrow strait named the Golden Gate, the Bay of San Francisco. Following these low mountains on the coast N. of the Golden Gate, is a broken and hilly country, to which succeeds the coast range, entering from Oregon, and extending nearly parallel with the ocean, at distances varying from 30 to 100 miles, till it reaches the 35th parallel of N. lat., where it unites with the Sierra Nevada, and passes into Old California. Mount Linn, in lat. 40°, is the highest known peak of this part of the coast range, but its altitude has not been ascertained. South of the Golden Gate, San Bernardino, in lat. 34°, attains the elevation of perpetual snow. In this portion, between the Sierra Morena mountains (near the Pacific) and the coast range, lie the valleys of the San Juan and of the Buenaventura, which have their outlets in the Pacific ocean. The latter is 60 miles long, and from 15 to 20 wide. The Sierra Morena, or Brown mountains, (2000 feet high,) descend towards the Golden Gate, of which they form the southern wall. The mountains immediately on the coasts bear various local names. Table Hill, on the N. side of the strait leading into San Francisco bay, is 2560 feet high, and Mount Diablo, E. of San Francisco, 3770 feet in height. Near the northern boundary of the

state, in a spur of mountains running N. E. from the coast range to the Sierra Nevada, is Mount Shasta, the highest known peak in California, having an elevation of 14,400 feet: it is covered with perpetual snow. The great valley of the Sacramento and San Joaquin extends from N. to S. about 500 miles, with an average breadth of about 60 miles, bounded by the coast range on the W., and by the Sierra Nevada on the E. From a base of about 500 feet above the sea commences the ascent of the Sierra Nevada, the acclivities being wooded to about half the mountain's height with oak, succeeded by a forest of gigantic pines, cedars, and cypress; then follows the naked granite, and lastly, the summits crowned with perpetual snow. At the N. end of the Sacramento valley is a second higher valley, of about 100 miles in length, and some thousands of feet in elevation, heavily timbered, and containing tracts of arable land along the streams. The Sierra Nevada range may be regarded as a continuation of the Blue mountains of Oregon. It extends almost directly S., till it unites with the coast range, in lat. 34° N., forming in its course the E. boundary of California, as far as the 39th degree of N. lat., near which is Fremont's Pass, 7200 feet above the sea level. There is a volcano in Calaveras county, near the sources of Jackson's river. On the western slope of these mountains, mostly between 37° and 40° N. lat., are the celebrated "gold diggings," towards which the eyes of those "who make haste to be rich" have been so eagerly turned since the first discovery of gold in Sutter's mill-race in 1847.

Geology.—We have had no full and complete geological survey of California. According to Mr. Tyson's survey, speaking generally, a section across the state, from Bodega bay, bearing N. 80° E. to the Sierra Nevada, exhibits first, on the western side, in the coast range, a sandstone formation, with interpositions of leptinite, clays, trachyte, talcose slate and trap rocks; while the recent sedimentary deposits of the Sacramento valley rest upon beds of conglomerate, sandstone, and clay, and the western declivities of the Sierra Nevada consist mainly of talcose and other slates, through which are extruded trappean rocks, leptinite, granite, and serpentine. A similar section across the state from San Francisco bay, bearing N. 70° E., exhibits sandstones with some fossil deposits E. of the bay, and on the W. slope, conglomerate sandstone, and slates with trap, volcanic tufa, and porphyry.

Minerals.—It is almost superfluous to say that California is one of the most important mineral regions in the world, particularly in its deposits of gold. The great gold diggings lie on the western slope of the Sierra Nevada mountains, principally between 37°

* It must be borne in mind, in giving populations in California, that there is an immense floating population, particularly in San Francisco, not enumerated in the census.

and 40° N. lat.; but this precious mineral has also been found in other quarters in considerable quantities, particularly in Klamath county, in the N. W., and in Shasta county. The gold first discovered was evidently not in place, but the washings from the upper regions; and when that shall have been exhausted, there are large bodies of auriferous quartz, which (with greater labor and expense,) will probably afford large supplies of this metal for generations to come. The amount of capital invested in quartz mining, according to the state census of 1852, was \$5,871,401; in placer and other mining operations, \$3,851,623. Up to the close of 1851 there had been deposited at the United States mint, \$98,407,990 of California gold. The deposits of the year 1852 amounted to \$46,528,076, making a total of \$145,000,000. But doubtless this falls far short of the real amount produced, as probably much more has been sent to Europe in a state of dust or bullion, not to mention the unreported sums which have been privately taken out of the state. The exports reported at San Francisco for 1852 were, according to one account, about \$45,500,000, and according to another, \$49,000,000. A considerable quantity, too, doubtless, remains in California. In addition to the precious metal just noticed, there has been found in Butte county an abundance of quicksilver, plaster, iron, lead, and some silver; copper and silver, quicksilver, asphaltum, marble, and granite occur in Marion county; quicksilver in Napa; rich silver mines and coal in San Louis Obispo; quicksilver in Santa Clara; copious salt springs (sufficient, report says, to supply the state) in Shasta; bituminous springs in many places along the coast, and hot sulphur springs in Santa Barbara; warm soda springs near Benicia, in Solano; bituminous and sulphur springs in San Louis Obispo, and hot, asphaltum, and salt springs in Los Angeles county. According to Professor Trask, "platina is widely distributed, scarcely a section of country where gold has been found, but that this metal has been discovered." Silver has been found in several mines in the southern district, copper is widely distributed, and chromium occurs in large quantities in serpentine rocks. Diamonds are reported to have been recently discovered.

Bays, Rivers, Lakes, &c.—San Francisco bay, the best and most capacious harbor on the Pacific coast, is (including the two arms, San Pablo and San Francisco bay proper) perhaps 70 miles in length, and in the widest part 14 miles broad, with a coast line of 275 miles. A strait, about a mile wide and from 5 to 7 miles long, breaking through a range of low mountains, connects it with the ocean. This strait has been termed, not inappropriately, the Golden Gate, as it is the passage through which the multi-

tudes from every region of the world are constantly hastening, in order to gather the wealth of this new and richer El Dorado. Within the barrier of hills already alluded to, the bay divides into two parts, the one stretching to the S. about 40 miles, and the other to the N. for about 30. On the N. W. shore of the southern arm stands the city of San Francisco. The northern arm (San Pablo) is united by a second strait, Karquenaa, with Suisun bay directly east of it, which is 15 or 20 miles long. The Golden Gate is the only channel of communication between the Pacific and the interior of California. Humboldt, Monterey, Pelican, Santa Barbara, and San Diego are the other bays, all opening into the Pacific. The Sacramento and San Joaquin are the principal rivers of California, and running in opposite directions, the former from the N. and the latter from the S., they drain almost the entire valley between the two great ranges, Sierra Nevada and the coast range, and unite about 15 miles above Suisun bay, into which they discharge their mingled waters. Each of these rivers has a course of from 250 to 300 miles. All their tributaries of importance descend the Sierra Nevada slope. The principal of these, commencing at the N., are the Sacramento, the Feather, Yuba, and American; and of the San Joaquin, the Calaveras, the Stanislaus, the Tuolumne, and Merced rivers. The Moquelumne meets the Sacramento and San Joaquin near their junction. The Sacramento has been ascended by small steamers as far as Marysville, the San Joaquin as far as Fort Miller, the Merced for 20 miles. The Klamath river from Oregon runs through the N. W. part of the state, and the Buenaventura drains part of the valley between the Sierra Morena and coast mountains: both empty into the Pacific. The principal lakes are Tulare lake, about 60 miles long, in the south, which has an outlet into the San Joaquin river, and Clear lake, in Colusi and Yolo counties. Owen, Kern's, and Bonpland's lakes are all small.

Objects of Interest to Tourists.—Though California is not surpassed by any state in the Union in grand and sublime scenery, the greater part of it is as yet too imperfectly explored to justify our speaking of it except in very general terms. Not to repeat what has already been said of the magnificent mountain ranges, with their summits clad with everlasting snow, we may notice a few natural curiosities of quite a different character. Among the most remarkable of these are the hot sulphur springs, the Geysers of America, in Napa county, about 70 miles N. from the city of this name. They are from 1 to 9 feet in diameter, and constantly in a boiling state, ejecting water to heights of 10 or 15 feet. Hundreds of fissures on the sides of the mountains emit strong cur-

rents of heated gas, with a noise resembling that of vapor escaping from ocean steamers. We condense the following from Silliman's Journal of November, 1851, by Professor Sheppard:—"From a high peak we saw on the W. the Pacific, on the S. Mount Diablo and San Francisco bay, on the E. the Sierra Nevada, and on the N. opened at our feet an immense chasm, from which, at the distance of 4 or 5 miles, we distinctly saw dense columns of steam rising. Descending, we discovered within half a mile square from 100 to 200 openings, whence issued dense columns of vapor to the height of from 150 to 200 feet, accompanied by a roar which could be heard for a mile or more. Many acted spasmodically, throwing up jets of hot, scalding water to the height of 20 or 30 feet. Beneath your footsteps you hear the lashing and foaming gyrations; and on cutting through the surface, are disclosed streams of angry, boiling water. 'The Three Buttes,' says Lieut. Derby, 'have been erroneously represented, since they are in reality a range of about 12 miles in width by 6 in breadth, and contain perhaps 20 peaks; the highest of which, and the most interesting, is that on the N., which is a very steep cone, surmounted by a turret-shaped rock, 56 feet high, and has an elevation of 2483 feet.' This commands an extensive view from the Coast Range to the Sierra Nevada, and for perhaps 80 miles up and down the Sacramento valley, and will doubtless one day be one of the fashionable resorts of the San Franciscans." (For *Springs*, see *Minerals*.) Among the mountains not named in the general survey, are Mount Prospect, 5000 feet high, and Salmon mountain, covered with snow nine months in the year, both in Klamath county; Mount St. Helen's, 3500 feet, in Napa; Saddle Peak, 7200 feet; Table mountain, 8000 feet, and Butte, at the head of S. fork, 9000 feet, all in the Sierra Nevada mountains; two Double Peaks, conspicuous landmarks, in Solano; and Oregon Hill, 2800 feet high, in Yuba county. Near Vallecita, on Chyote creek, in Calaveras county, is a striking display of volcanic action, in the shape of what are called the natural bridges; two immense arches, thrown over the above-named creek, and covered with imitations of clusters of fruits and flowers, doubtless formed when the mass was first upheaved in a molten state. In the same vicinity is "Chyote Cave," a deep semicircular chasm, entered by a perpendicular descent of 100 feet, and then proceeding by a gradual slope till it reaches a depth of nearly 200 feet below the surface, where you come to a chamber called "The Cathedral," from its containing two stones, resembling bells, which, when struck, produce a chiming sound. Proceeding 100 feet farther, always on the descent, a lake is reached of great depth, and apparently covering many acres; but the exploration has not yet

been carried beyond this point. The roof of the cave is studded with stalactites, assuming various fantastic forms.

Climate, Soil, and Productions.—The climate of California is much milder, even at considerable elevations, than in the same latitude on the Atlantic border, and the winters are short and seldom severe. At San Francisco the mercury seldom rises above 80°, yet the temperature often varies 30° in 24 hours, and in the rainy season the thermometer rarely sinks below 40°. On the coast, generally, snow is a rarity. The summers of San Francisco and other parts near the sea, are more disagreeable than the winters, owing to the prevalence of N. W. winds from the ocean, which bring with them chilling fogs. In the hot season these winds set in at San Francisco about 11 o'clock, and are poured through the Golden Gate directly upon the city, producing a chilling effect contrasted with the heat of the morning. The sheltered valleys along the coast enjoy a delicious climate, equally removed from the chilliness of the exposed parts of the coast, and the heat of the great valley between the Coast Range and the Sierra Nevada. In any country ranging through 10° of latitude, the difference of temperature would be considerable; but in California this difference is greatly increased by the peculiarities of its surface, inasmuch that no general statement would be at all correct. The northern portion has more of the chilling fogs of the warm season, and more and longer rains in the wet season, than the southern portion; and in the great valleys of the Sacramento and San Joaquin, the heat is much greater in summer than near the coast, the mercury not unfrequently rising to 110° and 112° at Suttersville. Owing, says Mr. Tyson, to the extreme dryness of the air, it does not produce that prostrating effect that a much less degree of heat would produce in the Atlantic and Mississippi states. The nights he represents as never so hot as to prevent sleep. The Sierra Nevada precipitates whatever moisture has been left in the air after the passage of the Coast Range, and sends it into Utah dry and warm. The terms winter and summer, as understood E. of the Rocky Mountains, will not apply here, and we must resort to the tropical names of wet and dry seasons. The rains begin in the N., says Tyson, early in the autumn, and extend slowly southward, reaching San Francisco about a week before the first of December, and San Diego a month later, where the rainy season is over by February, and retrograding, continues later into the year as we proceed N., where the rain not only lasts longer, but falls in greater quantity in a given time. During the dry season scarcely a cloud is to be seen in the great valley for a month at a time.

According to observations made during 75 days by the exploring expedition at San

Francisco, between August 18th and October 31st, N. W. winds prevailed 13 days, S. W. 44, W. 4, S. E. 5, and calm 5 days. Mean temperature, from May 27th to June 6th, 61°, maximum 86°, minimum 48°; while at New Helvetia, during the same period, the thermometer rose to 114°. According to observations made by Fremont, in San Joaquin valley, between the middle of December and the middle of June, the mean was 29° at sunrise, and 52° at sunset; and from the 10th to the 22d of March, 38° and 56°, at sunrise and sunset respectively; at Deer creek, 40° N. lat., between March 30th and April 4th, mean at 2 p. m. 59°; at the Three Buttes, in 39° N. lat., at an elevation of 800 feet, 90° at 2 p. m. In lat. 35° 30', mean between December 27th and January 17th, 60° at noon; and near Monterey early in March, 62° at 2 p. m., at a height of 2200 feet.

According to Captain Wilkes, not more than 12,000 square miles of California are susceptible of cultivation. This opinion will probably have to be very much modified with the progress of knowledge, in developing the agricultural capabilities of the country, which now lie much neglected in the general rush to "the diggings." Enough has been done to show marvellous fertility in the soil, both as to variety, quantity, and size of the products. In the south, and in some of the low interior valleys as far north as Napa, figs, dates, sugar-cane, and even bananas flourish; and most tropical plants may be grown in this region where irrigation can be practised, which, in many parts, is absolutely necessary to successful agricultural operations. The sheltered valley between the Sierra Morena and Coast Range S. of the bay of San Francisco, is peculiarly favorable to plants and fruits requiring a mild climate. The southern country is highly favorable to the grape, and according to the state census, Los Angeles county alone produced 2,250,000 pounds. Peaches, pears, apples, cherries, quinces, and apricots flourish. Santa Barbara county reports 1370 barrels of olives. Wheat and rye yield largely in many parts north of Point Conception; these crops maturing so early as to be little injured by the dry season. Oats grow wild in great quantities in the Sacramento valley, and westward of it. This cures in the dry season and forms excellent fodder, as there is no moisture to cause decomposition. Hemp, rice, tobacco, cotton, and coffee, all can, it is believed, be cultivated successfully; the first three having been tried. According to the state census of 1852, there were 110,748 acres of land under cultivation, the greater portion of which is in the middle and W. side of the state, between 36° and 40° of latitude. The largest yield was of barley, 2,973,737 bushels; potatoes, 1,393,170; wheat, 271,763; oats, 100,497; Indian corn, 62,532; beef cattle, number 315,392; cows, 104,339;

working oxen, 29,065; horses, 64,773; mules, 16,578; sheep, (in 20 counties,) 82,867; hogs, 38,976, and poultry, 96,230.

Forest Trees.—The variety of timber in California is not great, but it is large in size and abundant in quantity. The Lambertine pine, or fir, on the mountains, of gigantic size, the red-wood, a species of cypress, the "palo Colorado" of the Mexicans, a tree of huge dimensions, (Colonel Fremont mentions one 21 feet in diameter,) the maple, oak, cedar, sycamore, and a species of cotton-wood, are among the principal forest-trees.

Animals.—Elks, deer, grizzly bears, antelopes, California lions, (a species of panther, very destructive to cattle and horses); the coyote, (an animal between a fox and a wolf, which preys upon sheep and pigs); a black wild-cat, a water-rat, living in the mountains, and building itself a brush hut four or five feet in height, about the size of a muskrat, web-footed, with a fine mouse-colored fur; an animal resembling a martin, gray foxes, rabbits, hares, (very large,) gray squirrels, and wild horses and cattle, are the principal quadrupeds. Geese, ducks, snipes, quails, plovers, curlews, doves, ravens, crows, vultures, (rarely seen,) hawks, partridges, penguins, and various sea-birds, are the principal of the feathered tribe. Among the fishes are the seal, sturgeon, bass, mackerel, crawfish, blackfish, sardines, (in sufficient numbers to become an article of export,) clams, oysters, lobsters, crabs, halibut of a large size, sharks, a large fish of a dingy red color off the soundings, salmon in great abundance, (large in size and excellent in quality,) salmon-trout, trout, smelts, and a large fresh-water fish from 1½ to 2½ feet long.

Manufactures.—California has few manufactures, and this state of things is likely to continue so long as there is so great a demand for labor in other and more profitable kinds of business.

Internal Improvements.—There are no railroads in California, though one is projected from San Francisco to San José. As a primary movement in this direction, plank-roads now engage public attention, and the probability is, that while we write, two have been already begun, one from Marysville to Grass Valley and Nevada, and the other from Sacramento to Auburn, Grass Valley, and Nevada. Canalling, for the purpose of conducting water to the mines, is a species of improvement peculiar to this state. In Placer county alone, about \$1,400,000 is invested in this way.

Commerce.—The commercial city of San Francisco has sprung up as if by magic, and its harbour is thronged with shipping from Europe, Asia, Australia, and the Atlantic coast of the United States. At the moment we write, in all our great Atlantic ports, large numbers of the first-class ships are loading with valuable cargoes for California.

Several lines, employing 41 immense ocean steamers, of from 900 to 3000 tons burthen, crowded with passengers, to a degree unparalleled in the history of navigation, weekly arrive at and depart from San Francisco at the one terminus, and New York and New Orleans at the other. With the exception of the export of gold, California's commerce is almost wholly an importing one, the frames and materials of houses themselves being imported. The commerce of California threatens to revolutionize the trade of the East, and San Francisco seems likely to become the Alexandria of modern times, the halting-place of the transit trade of Asia, in its new western route to Europe, to open commerce (and with it civilization) to the isles of the Pacific, and to infuse even into the Chinese the spirit of progress. The foreign imports of California for the fiscal year 1852, were \$4,648,587, and the exports consisted of about \$50,000,000, gold dust. The imports of course do not include the immense trade with the Atlantic shores of the republic. There entered into California in 1852, 718 vessels, tonnage 261,352, and cleared 906, tonnage 360,872. About one-third of the commerce was in foreign bottoms. Total tonnage owned in the state, \$99,041.88. See SAN FRANCISCO.

Education.—Congress appropriated half a million acres of land in California for the support of common schools; of this, 150,000 acres have been sold, forming a school fund of \$300,000. Besides this, two sections of land in each township are set apart for the same purpose, and 72 sections for a state university. The money available for present use, arising from different sources, amounted to nearly \$50,000 in 1853. The superintendent of public schools, the same year, reported to the legislature, 17,821 white children in the state, 20 public schools attended by 3314 pupils; number of teachers employed, 15, of whom 6 were females; highest salary, \$150 per month; lowest, \$75; total expended on teachers' salaries, \$21,355.42. Eight or ten academies and high schools have been founded, supported by private means, and the Catholic bishop of Monterey reports eight schools under his direction.

Religion.—In 1850, California had 23 churches, of which 1 belonged to the Baptists, 4 to the Methodists, 1 to the Presbyterians, and 17 to the Roman Catholics.

Public Institutions.—A state lunatic asylum is now in course of erection at Stockton, which will be an ornament to the state. In 1852 there were in temporary buildings, 30 patients. The state marine hospital, at San Francisco, in 1852 admitted 2283 patients, of whom 1408 were foreigners. A United States marine hospital is now being erected in the same city, 182 feet by 96 feet, 4 stories high, and capable of accommodating 800 patients. A penitentiary is now in course of erection at St. Quentin, 15 miles N. of

San Francisco, at which place 200 convicts are employed in constructing the building.

Government, Finances, &c.—The governor of California is elected for two years by popular vote, and receives \$10,000 salary. The senate consists of 33 members, elected for 2 years, and the house of representatives of 80, elected annually. California, by the recent state census, will be entitled to three members in the national house of representatives, (if the state census should be taken as the guide to apportionment, otherwise but two,) and to five electoral votes for president of the United States.

The judiciary consists, 1. Of a supreme court, composed of one chief and two associate judges, elected by the people for six years, and receiving \$8000 each, annually. 2. Of district courts, the judges of which are also elected by popular vote, for six years. 3. A county judge is elected in each county for four years, to act as judge of probate, and to hold courts for the transaction of criminal business, in conjunction with two justices of the peace; and 4. Of the superior court of San Francisco. The district judges receive \$7500 per annum.

The productions and capital employed in various branches of business, (Calaveras and El Dorado counties, estimated,) including live stock, agricultural products, mines, &c. &c., make a total of \$103,522,568. California has a debt of \$1,000,000, contracted in a war with the Indians, which it is supposed the United States will pay; besides which she has a debt of \$1,250,000, for which the state alone is responsible, to which another million will probably be added by the erection of the penitentiary.

History.—The north part of California was discovered by Sir Francis Drake, in 1578; but was first colonized by some Spaniards in 1768. After the Mexican revolution, California formed a province of that republic until 1836, when the inhabitants rebelled, drove out the Mexicans, and formed an independent congress. After having been the scene of several sanguinary contests during the war with Mexico, by the treaty of peace in 1848, it became a part of the United States, and in 1850 was admitted into the American confederacy, as a sovereign state; since which time its almost daily history has been blazoned to the world, far and near, in the newspapers of the day. During its occupancy by the Spaniards, it was resorted to by the Americans, principally for the hides and tallow cured at the Jesuit missionary stations, and by the Russians in pursuit of the seal.

CALLAWAY, a county in the S. W. part of Kentucky, bordering on Tennessee, has an area of about 450 square miles. The Tennessee river forms the entire E. boundary, and it is also drained by Clark's river. More than half of the surface consists of level river bottoms; the remainder is hilly; the soil is fertile. Tobacco, Indian corn, and oats are the staples. In 1850 this county produced 405,785 bushels of corn; 8414 of wheat; 64,450 of oats; 957,381 pounds of tobacco, and 13,637 of wool. It contained 24 churches; 880 pupils attending public schools, and 40 attending academies or other schools. The Tennessee river is navigable by steamboats on the border of the county. Formed in 1821, and named in honor of Colonel Richard Callaway, one of the early settlers of Kentucky. Capital, Murray. Population, 8096, of whom 7104 were free, and 992, slaves.

CALLAWAY, a county in the E. central part of Missouri, on the N. bank of the Missouri river, contains 743 square miles. It is drained by Cedar creek and other small streams. The surface is gently undulating, and the soil is highly productive both on the river bottoms and the uplands. About one-third of the county is prairie. The principal productions are wheat, corn, oats, tobacco, and hemp. Many horses, mules, and horned cattle are reared for exportation. In 1850 this county produced 811,885 bushels of corn; 50,178 of wheat; 184,418 of oats; 886,800 pounds of tobacco, and 177,369 pounds of butter. The crop of oats was greater than that of any other county in the state, excepting Greene county; and the quantity of hay was exceeded only by Howard county. It contained 31 churches and 1 newspaper establishment. Large beds of canal coal, bituminous coal, iron ore, and

fine limestone underlie the greater part of the county. A stratum of canal coal, 24 feet thick, has been opened near the river. Fine potter's clay is abundant, and is extensively manufactured. The county was organized in 1820, and is among the most populous in Missouri. Capital, Fulton. Population, 13,827, of whom 9920 were free, and 3907, slaves.

CAMBERIA, a county in the S. W. central part of Pennsylvania, has an area of about 670 square miles. Conemaugh creek rises in the S. E. part, and flows westward; the West branch of the Susquehanna also rises in the county by two branches, namely, Clearfield and Chest creeks. The county is an elevated table-land, lying on the western slope of the Alleghany mountain: the surface is irregular and broken, furrowed by

deep and precipitous ravines, and extensively covered with dark forests of pine and other timber. Lumber is the chief article of export. The soil of the highlands is adapted to pasturage. Wheat, oats, hay, and butter are the staples. In 1850 this county produced 42,898 bushels of wheat; 193,082 of oats; 10,326 tons of hay, and 290,780 pounds of butter. There were 58 saw mills, 1 coal-mining establishment, 5 grist mills, 4 iron foundries, 5 furnaces, 2 wool-carding mills, and 5 tanneries. It contained 31 churches, and 3 newspaper establishments. There were 4070 pupils attending public schools, and 30 attending an academy. Veins of bituminous coal and iron ore are abundant, and are worked to some extent. The county is traversed by the Portage railroad and Pennsylvania canal, which connect at Johnstown; and also by the Central railroad. In consequence of these improvements the population of the county has increased rapidly for several years past. Cambria was mostly settled by emigrants from Ireland and Wales, and when it was organized in 1804, the ancient name of the latter country was given to it. Capital, Ebensburg. Population, 17,773.

CAMBRIDGE, a city and semi-capital of Middlesex county, Massachusetts, 3 miles W. N. W. from Boston, in lat. 42° 22' 21" N., lon. 71° 7' 38" W. It comprises Cambridge, the seat of Harvard University, East Cambridge, (formerly Lechmere Point,) Cambridgeport, about midway between Old Cambridge and Boston, and the district called North Cambridge. Old Cambridge, or Cambridge Proper, is delightfully situated in the midst of a beautiful plain, extending from Charles river. The streets are generally broad, and shaded with lofty elms.

Many of the dwellings stand at considerable distances from each other, and are surrounded with spacious yards, ornamented with shrubbery and evergreens. The principal object of interest in the place is Harvard University, the oldest and best endowed collegiate institution in the United States. It was founded in 1638, and derives its name from the Rev. John Harvard, who bequeathed it a legacy of about £780. Its funds, at the present time, amount to about \$1,000,000. Besides the collegiate department proper, the university embraces a law school, a theological school, a medical college, and a department for those who wish to prepare themselves for business pursuits, without going through a classical course. The last was instituted in 1848, mainly through the efforts of the Hon. Abbott Lawrence, who bestowed upon it a munificent donation. The buildings occupied by the University are 15 in number, 14 of which are in Cambridge; the other is located in North Grove Street, Boston. The most prominent are University Hall, containing the chapel and lecture rooms; Harvard Hall, in which are the mineralogical cabinet, philosophical apparatus and a large room for declamation, adorned with the portraits of the officers and benefactors of the institution; Gore Hall, a fine granite structure, having in it the college library; and Holden Chapel, containing the anatomical museum and chemical laboratory. In addition to these, there are Divinity Hall, occupied by the theological students, and four other buildings for the accommodation of undergraduates. The institution has a botanical garden of about eight acres, stored with a choice collection of shrubs and plants, both native and exotic; and one of the most powerful telescopes in this country. The lectures to medical students are given at the Medical College in Boston. In 1852 the alumni were 6342, a greater number than of any other college in the Union. Cambridge contains 2 banks.

Cambridgeport, connected with Boston by a bridge, contains the town house, a number of elegant mansions, 2 or 3 churches, and 2 banks.

East Cambridge is connected with Boston by Canal bridge, and with Charlestown by Prison Point bridge. It is regularly laid out with streets intersecting each other at right angles, and contains, besides the county buildings, a post-office and several manufactories. Among the latter may be mentioned, an establishment for making glass, where \$500,000 worth is annually produced.

Cambridge is one of the oldest towns in New England, having been settled in 1630. It first took the name of Newtown, which was soon after changed for its present one. The "Freeman's Oath," one of the first newspapers published in the United States, was issued here by Stephen Day. During

the Revolutionary war, the American army was encamped in Cambridge, while the British had possession of Boston. Population, in 1830, 6072; 1840, 8409; 1850, 15,215.

CAMBRIDGE, a post-township of Washington county, New York, 33 miles N. N. E. from Albany. Population, 2593.

CAMBRIDGE, a post-village of Venango township, Crawford county, Pennsylvania, on French creek, 102 miles N. from Pittsburgh, and 25 miles S. from Erie, is rapidly improving, and has an active trade.

CAMBRIDGE, a small post-village on the line between Lancaster and Chester counties, Pennsylvania, 22 miles E. by N. from Lancaster. The post-office is in Lancaster county.

CAMBRIDGE, a handsome post-village, capital of Dorchester county, Maryland, is situated on the S. side of the Choptank river, about 12 miles from its entrance into Chesapeake bay, and 50 miles S. E. from Annapolis. It has a court house, academy, and several churches. The river at this place is 2 or 3 miles wide.

CAMBRIDGE, a post-village in Abbeville district, South Carolina, about 60 miles W. by N. from Columbia.

CAMBRIDGE, a post-village of Dallas county, Alabama, 80 miles S. by E. from Tuscaloosa.

CAMBRIDGE, a township in the central part of Guernsey county, Ohio. Population, 2488.

CAMBRIDGE, a post-village, capital of Guernsey county, Ohio, is situated in the above township, on the National road, 24 miles E. from Zanesville, and 77 miles E. by N. from Columbus. It contains, besides the court house, 4 or 5 churches, an academy, a printing office, and several mills. Wills creek passes by the village. Population, about 1200.

CAMBRIDGE, a post-township in the N. W. part of Lenawee county, Michigan. Population, 973.

CAMBRIDGE, or CAMBRIDGE CITY, a post-village of Wayne county, Indiana, on the Whitewater river, and canal of that name, where it is crossed by the National road, 52 miles E. of Indianapolis. The navigation of the canal, and the water-power of the river, render it a place of active business. A railroad is now in progress, which, when finished, will connect it with Cincinnati. Population, 1217.

CAMBRIDGE, a flourishing post-village, capital of Henry county, Illinois, 140 miles N. by W. from Springfield. It is surrounded by a rich farming district, in which stone coal is abundant.

CAMBRIDGE, a thriving post-village of Dane county, Wisconsin, on the Koshconong river, 22 miles E. by S. from Madison, has a good

water-power, with a flouring and a saw mill. Population, about 300. Laid out about the year 1848.

CAMBRIDGEPORT, a post-office of Windham county, Vermont.

CAMBRIDGEPORT, Massachusetts. See CAMBRIDGE.

CAMDEN, a county in the W. S. W. part of New Jersey, has an area of about 220 square miles. It is bounded on the N. E. by Pensauken creek, N. W. by the Delaware, and on the S. W. by Big Timber creek, and is also drained by Cooper's creek, which affords some water-power. The surface is level except where worn down by streams. The soil in the E. part is sandy, and in the W. a fertile loam producing great quantities of fruit and vegetables for the Philadelphia markets. Indian corn, Irish potatoes, sweet potatoes, hay, and butter are the staples. In 1850 this county yielded 259,684 bushels of corn; 307,869 of potatoes; 65,191 of sweet potatoes; 12,946 tons of hay; and 299,856 pounds of wool. It contained 2 foundries, 5 glass manufactories, 1 locomotive manufactory, 11 flouring, 1 paper, and 23 saw mills, 35 churches, and 3 newspaper offices; 3,639 pupils attending public schools, and 386 attending academies or other schools. Marl is abundant in most parts of the county. The inhabitants in the eastern portion are principally engaged in manufactures of iron and glass. The railroad connecting Camden with Absecon traverses the county. Organized in 1844, having been formed from Gloucester county, and named from its seat of justice, the city of Camden. Population, 25,422.

CAMDEN, a county in the N. E. part of North Carolina, bordering on Virginia, and on the N. side of Albemarle sound, has an area of about 280 square miles. Pasquotank river forms the entire boundary on the S. W. The surface is level and partly occupied by the Dismal Swamp. The soil is fertile. The staple is Indian corn. In 1850 there were raised 363,000 bushels of corn; 28,492 of sweet potatoes; and 23,000 pounds of butter. There were 5 shingle mills, 1 corn and flour mill, 3 stave manufactories and 7 churches. The county contains forests of cedar and cypress which are valuable for lumber. It is intersected by the Dismal Swamp canal, 22 miles long. The county was formed in 1777, and named in honor of the Earl of Camden, who, as a member of the British Parliament, advocated the cause of the American colonies. Capital, Camden Court House. Population, 6049, of whom 3862 were free, and 2187 slaves.

CAMDEN, a county forming the S. E. extremity of Georgia, bordering on the Atlantic and on Florida, has an area of 1125 square miles. It is intersected by the Santilla river, and bounded on the S. by the St. Mary's river. The surface is mostly level, and the

soil sandy. The limits of the county include Cumberland Island, which is 18 miles long, by 2 or 3 miles wide, and separated from the mainland by a narrow channel. Rice, sugar, sweet potatoes, and Indian corn are the staples. In 1850 the county produced 6,400,940 pounds of rice; 45 hogsheads of sugar; 52,328 bushels of sweet potatoes; and 63,478 of corn. The produce of rice was greater than that of any other county of the state excepting Chatham. There were 3 turpentine distilleries, 1 tannery, and 1 saw mill. It contained 10 churches; 25 pupils attending public schools, and 90 attending academies or other schools. Capital, Jefferson. Population, 6319, of whom 2073 were free, and 4246, slaves.

CAMDEN, a county in the central part of Missouri, has an area of about 600 square miles. It is intersected by the Osage river, and also drained by the Niangua, the Little Niangua, and the Grand Auglaize and its two branches. The surface is uneven, the soil moderately fertile. Indian corn, wheat, oats, hay, cattle, and swine are the staples. In 1850 this county produced 256,054 bushels of corn; 22,241 of wheat; 45,176 of oats; and 219 tons of hay. Lead is found on the banks of Osage river, in this county. This stream is navigable during a few months of the year. Capital, Erie. Population, 2338, of whom 2208 were free, and 130, slaves.

CAMDEN, a post-township in Waldo county, Maine, on the west side of Penobscot bay, 40 miles S. E. by E. from Augusta. Population, 4005.

CAMDEN, a post-village of Oneida co., N. Y., about 35 miles N. W. from Utica, on the Rome and Watertown railroad. It contains a bank. Population of the township, 2820.

CAMDEN, a city, port of delivery, and seat of justice of Camden county, New Jersey, is situated on a plain on the left bank of the Delaware river, immediately opposite to Philadelphia, with which it is connected by means of 5 steam ferries. By railroad it is 32 miles S. S. W. from Trenton; 87 miles S. W. from New York, and 9 miles N. from Woodbury. The Absecon railroad, extending from this place to Absecon Beach, is now (1853) nearly completed. The city is regularly laid out with streets intersecting each other at right angles, and contains many fine dwellings, especially in the north ward. The public buildings are a court house, recently erected, a bank, 2 extensive railroad depôts, and 10 churches, viz. 2 Episcopal, 2 Presbyterian, 2 Baptist, 2 Methodist, and 2 Friends. The court house, in which are apartments occupied as a jail, is a roughcast edifice with iron columns. In Camden there are 2 literary associations and a mutual insurance company; also 3 saw mills, 2 iron foundries, 1 paper, 1 rolling, 1 drug, and 1 grist mill, besides chemical and glass works, and

a ship-yard. Three papers are issued. Gas light was first introduced about the commencement of the present year. The shipping of this port, June 30, 1852, was 17,448 tons. The city was chartered in 1831, and is divided into three wards, governed by a mayor and common council. In consequence of its proximity to Philadelphia, this city within a few years past has increased rapidly in population. In 1840, Camden contained only 3371 inhabitants; in 1850, 9479.

CAMDEN, a flourishing post-village of Kent co., Delaware, on a branch of Jones creek, 3 miles S. from Dover. Pop., about 400.

CAMDEN, a post-office of Camden county, North Carolina.

CAMDEN, a flourishing town, capital of Kershaw District, South Carolina, is situated on the east bank of the Wateree river, 33 miles N. E. from Columbia and 142 miles N. by W. from Charleston, with which it is connected by railroad. The river is navigable by steamboats to this place. Camden is surrounded by a fertile district in which cotton, maize, and peaches flourish. The recent completion of the Camden Branch railroad has increased the activity of business in the town. It contains an academy, an arsenal, a library, a bank, and 4 or 5 churches. There is 1 cotton factory in operation about 1 mile from the town. The two banks of the river are connected by a bridge near this place. A battle was fought here in August, 1780, between General Gates and Lord Cornwallis; another in April, 1781, between General Greene and Lord Rawdon.

CAMDEN, a thriving post-village, capital of Wilcox county, Alabama, is situated on a healthy eminence 4 miles S. from Alabama river, and about 80 miles S. W. from Montgomery. It is the centre of an active trade and is the most populous town in the county. The population has nearly doubled since 1847. This place has been erroneously named "Barboursville" on several maps of the state. Camden contains a respectable academy and 2 female seminaries. Population, about 800.

CAMDEN, a small post-village of Madison county, Mississippi, 40 miles N. N. E. from Jackson and 5 miles from Big Black river.

CAMDEN, a handsome post-village, capital of Washita county, Arkansas, on the right (W.) bank of the Washita river, 110 miles S. by W. from Little Rock. It is situated on the declivity of a high range of hills, and is built in a very tasteful style. A few years ago the site was occupied by a dense forest, and many of the trees are still standing in the streets. Camden is one of the most flourishing towns in the state, and possesses great advantages for trade, being at the head of navigation for large steamers, several of which are constantly employed in conveying produce down the river to New Orleans. A

plank-road has been commenced, which will connect Camden with Fulton, on Red river, and will probably draw an increase of business. The growth of this place has been very rapid, and is likely to continue so. It was settled about 1842. In 1848 the population was near 600, in 1853, about 1400. The site was formerly a rendezvous for hunters, and known as "Ecore à Fabre."

market on the Ohio canal, which passes 8 miles W. from Canton. The Ohio and Pennsylvania railroad was completed from Pittsburgh to this place in 1852, and has greatly increased its importance and prosperity. Canton possesses advantages for manufacturing, as the creek furnishes extensive water-power, and good stone coal is abundant in the vicinity. Limestone suitable for building is also found in connection with the coal. There were, in 1852, in operation, 3 woollen factories, 3 iron foundries, and 2 gun-barrel factories. Canton contains churches for the Presbyterians, Methodists, German Lutherans, and Roman Catholics; an academy, a bank, and 4 newspaper offices. Pop. in 1853 estimated at from 3000 to 4000.

CAPE FEAR RIVER of North Carolina, is formed by the union of the Haw and Deep rivers, which unite at Haywood, in Chatham county, near the centre of the state. Flowing in a S. E. direction, it passes by Fayetteville on the right, and Wilmington on the left, and enters the Atlantic near $33^{\circ} 55' N.$ lat., and $78^{\circ} 5' W.$ lon., by two channels, separated by Smith's island. The S. extremity of the island is called Cape Fear.

The water in the main (south-west) entrance, is from 10 to 14 feet deep over the bar. Cape Fear river is the largest and most important river, whose course lies wholly in North Carolina, and the only one which flows directly into the sea from this state. Steamboats ascend in all stages of water to Fayetteville, 120 miles; and the navigation has been opened by means of dams and locks as far as the coal mines of Chatham county. At Averysborough, the river falls over the primitive ledge, which divides the hilly region of the state from the low country; after which it traverses a level and sandy district, in which large forests of pitch-pine are found. The length, including one of the branches, is estimated at above 300 miles.

CAPE FLATTERY, a high promontory, the N. W. extremity of Lewis county, Washington territory, bounded by the Straits of Juan da Fuca on the N. E., and the Pacific ocean on the S. W. Lat. about 48° 45' N., lon. 124° 30' W.

CAPE MAY, the most southern county of New Jersey, has an area of about 250 square miles. It is bounded on the E. by the Atlantic ocean, on the W. by Delaware bay, and partly on the N. by Tuckahoe creek. The surface is level. This county is entirely of alluvial formation. On the Atlantic coast is a sandbeach, which for the width of from half a mile to two miles is covered with grass, affording excellent pasture. It is broken by various inlets by which the sea penetrates the marshes, forming lagoons or salt-water lakes. The marsh is about 4 miles wide: a similar marsh extends across the N. W. part of the county. Near Dennisville is a deposit of cedar timber in the soil to an indefinite depth, which, (although from the growth above it, it is believed to be over two thousand years old,) is still perfectly sound, and a large number of persons are employed in digging it out and working it into shingles, posts, &c. The soil near the central part is clayey with a sandy subsoil, and is naturally of a good

quality. Indian corn, hay, and butter are the staples. In 1850 this county produced 84,915 bushels of corn; 9972 tons of hay; and 46,269 pounds of wool. There were 19 churches, and 1860 pupils attending public schools. The railroad connecting Camden with Cape May will intersect this county. Organized in 1710, and named from Cornelius Jacobse Mey, a navigator in the service of the Dutch West India Company, who visited Delaware bay in 1623. (*Gordon.*) Capital, Cape May Court House. CARBON, a county in the E. part of Pennsylvania, has an area of about 400 square miles. The Lehigh river flows through the county in a S. E. direction, receiving in its passage the Quakake, Nesquehoning, Mahoning, Lizard, and Aquanichola creeks. The Kittatinny, or Blue mountain, forms the S. E. boundary, and the surface is traversed by minor ridges of the Alleghanies, the direction of which is nearly parallel with the mountain first named. The most considerable of these ridges are named Mauch Chunk mountain, Mahoning ridge, Broad mountain, Spring mountain, and Pokono mountain. Excepting a small portion of the valleys, the land is too rugged and sterile for cultivation, but the highlands contain inexhaustible stores of the best anthracite coal. Indian corn, oats, potatoes, hay, and butter are the staples. In 1850 this county produced 21,852 bushels of corn; 20,952 of oats; 20,768 of potatoes; 3041 tons of hay, and 31,390 pounds of butter. There were 33 saw mills, 8 flour and grist mills, 9 coal-mining works, 2 manufactories of wire-work, 4 iron foundries, 5 forges, 2 furnaces, 3 machine shops, and 3 powder mills. It contained 20 churches, and 2 newspaper establishments. There were 2200 pupils attending public schools, and 150 attending academies or other schools. The southern anthracite coalfield of Pennsylvania, extending eastward from Schuylkill county, terminates on the W. side of the Lehigh river, near Mauch Chunk. The stratum of coal at the summit mines, near the top of Mauch Chunk mountain, is about 50 feet in thickness. "It lies as a saddle on the top of the hill, and the coal is uncovered and quarried in the open day." (*Trego's Geography.*) A railroad extends from the mines

to the Lehigh river. In 1850, 722,000 tons of coal were procured from the mines of this county, and in 1852 about 1,000,000 tons. The Beaver Meadow and Hazleton mines, near the N. W. border, are very rich, and yield a superior quality of coal. The navigation of the Lehigh has been opened by means of dams and locks as far as White Haven, about 25 miles above Mauch Chunk. A railroad is projected, which, when finished, will connect the county with Easton and Philadelphia. The county was formed in 1843, out of part of Northampton, and derives its name from *carbo*, the Latin term for "coal." Capital, Mauch Chunk. Population, 15,686.

CARBONDALE, a post-township in the N. E. part of Luzerne county, Pennsylvania, contains the city of Carbondale. It is drained by Lackawanna river. Population, including the city, 5404.

CARBONDALE, a city of Luzerne county, Pennsylvania, is situated at the head of Lackawanna valley, and near the source of the Lackawanna river, 30 miles N. E. from Wilkesbarre, and 145 miles N. E. from Harrisburg. A railroad, 17 miles long, connects it with Honesdale. This is the most populous town of Luzerne county, and the principal market of Northern Pennsylvania. In 1851 it was incorporated as a city, and preparations are making to build a city hall. Many handsome buildings have been erected here within a few years, and the population has rapidly increased. The Lackawanna valley, which is a continuation of the fertile valley of Wyoming, contains extensive beds of coal, which, in the vicinity of Carbondale, are about 20 feet in thickness. About 500,000 tons of coal are annually taken out from these mines by the Delaware and Hudson Canal Company, and it is estimated that they pay out \$1,200,000 in a year. The coal is drawn up several inclined planes by steam-engines to the height of 850 feet; thence it is conveyed by a railroad, 16 miles, to Honesdale, and thence by the Delaware and Hudson canal to the Hudson river. Population in 1850, 4945; in 1853, about 7000.

CHAMPLAIN LAKE, between the States of New York and Vermont, extends from Whitehall, in New York, in about 43° 30' N. lat. northward a few miles across the Canada line, to 45° 6' N. lat. It lies between 73° and 73° 30' W. lon. Extreme length, about 130 miles. Its breadth varies from half a mile to 10 miles. If we include the expanse embracing the large islands, the breadth in its widest part will amount to 15 miles. Its principal islands are South and North Hero, and La Motte. Lake Champlain is navigable throughout its length for vessels of near 100 tons. Steamboats run constantly between Whitehall and St. John's, in Canada, except in winter, when the lake is generally covered with solid ice. Navigation usually opens about the middle or latter end of April. The lake abounds with salmon, trout, pike, and other fish. The Sorelle or Richelieu river forms the outlet, and discharges its waters into the St. Lawrence about 80 miles below Montreal.

In favorable weather Lake Champlain presents to the traveller, views of surpassing beauty and magnificence, many of the principal peaks both of the Adirondack group, in New York, and of the Green mountains, in Vermont, being visible from the steamboats, as they pass from one extremity to the other. The name is derived from that of Samuel Champlain, a French naval officer, who discovered this lake in 1609.

CHARLESTON, a handsome post-village, capital of Kanawha county, Virginia, is situated on the Kanawha river, 60 miles from its mouth, and at its confluence with Elk river, 308 miles W. by N. from Richmond. The river at this place is about 300 yards wide, and is navigable by steamboats at all seasons. The principal thoroughfare from Richmond to the Ohio river passes through the town, which is the centre of an active trade. It contains 3 or 4 churches, a branch bank, and a printing office. The district court of the United States is held here twice each year. The county contains abundance of coal and a number of salt springs. Large quantities of salt are manufactured a few miles from Charleston. Population, 1092.

CHARLESTON, a port of entry, capital of a district of its own name, and the largest city of South Carolina, is situated on a tongue

of land between the rivers Ashley and Cooper, which unite immediately below the town, and form a spacious harbour, communicating with the ocean at Sullivan's island, 7 miles below. It is 118 miles N. E. from Savannah, 580 S. W. from Baltimore, and 540 from Washington. Lat. 32° 46', N. lon. 79° 57' W. Cooper and Ashley rivers are from 30 to 40 feet deep, the former 1400, and the latter 2100 yards wide. The ground on which the city is built is elevated 8 or 9 feet above the level of the harbor at high tide, which rises about six feet, flowing by the city with a strong current, thus contributing to its salubrity. A sandbar extends across the mouth of the harbor, affording, however, two entrances, of which the deepest, near Sullivan's island, has 16 feet of water at low tide. The harbor is defended by Fort Pinckney and Fort Johnson, each on an island, the former two and the latter four miles below the city, and also by Fort Moultrie, on Sullivan's island.

Charleston is regularly built, and extends about 2 miles in length and nearly 1½ miles in breadth. The streets, many of which are 60 or 70 feet broad, and bordered with the Pride of India and other beautiful shade-trees, pass, for the most part, parallel to each other, from the Cooper to the Ashley river, and are intersected by others nearly at right angles. Many of the houses are of brick, some of which are in a style of superior elegance; others are of wood, neatly painted, and embowered during the summer season amid a profusion of foliage and flowers. The dwellings are often furnished with piazzas extending to the roof, and ornamented with vines or creepers, while the gardens attached to them are adorned with the orange, peach, and other choice trees, and a variety of shrubbery.

Institutions.—Charleston contains numerous educational and literary institutions, among which may be mentioned the Medical College of the State of South Carolina, a flourishing school, founded in 1833. The Charleston college was founded in 1785, chartered anew in 1791, and again re-organized in 1837. This institution has of late been greatly improved; extensive additions have been made to the main building, and another professorship established, entitled the chair of Intellectual Philosophy and Greek Literature. It is now in a very prosperous condition, with an able faculty, and the number of students steadily increasing. The Literary and Philosophical Society has a valuable collection of specimens in natural history. The Apprentices' Association possesses a library of 10,000 volumes, and maintains an annual course of lectures upon scientific subjects. The City Library numbers about 20,000 volumes. There are also in the city a high-school and several common schools, all of which are in a flourishing condition. The high-school was es-

tablished in 1839, and is endowed with \$1000 per annum for a hundred years. The number of pupils in attendance is usually from 130 to 150. The orphan asylum is richly endowed, and accommodates about 150 children. The building is one of the most remarkable in the city. A commodious almshouse is provided for the poor. Charleston contains about 30 churches, a theatre, several first-class hotels, (one of which, the City Hotel, cost \$150,000,) 4 cotton presses, a cotton factory, 5 or 6 engine manufactories, a large number of grist mills, 5 ship-yards, and an extensive dry-dock, at which the largest vessels, with their cargoes, can be drawn up in about three hours. There are also in the city 9 banks, with an aggregate capital of \$11,153,582, 6 individual incorporated banks having an aggregate capital of \$8,030,235 and a circulation of \$3,944,660, and several insurance and other incorporated companies. Two of the nine banks of Charleston, with a capital of \$1,000,000 each, were chartered by the legislature of 1852-53.

Commerce.—The chief exports of Charleston are cotton and rice. The average crop of sea-island cotton, in South Carolina, is from 22,000 to 23,000 bales, about two-thirds of which comes to Charleston; the rest goes to Savannah. The rice crop of the state is usually in the neighborhood of 130,000 tierces, of which Charleston receives all, except 1000 or 1500 tierces going to Georgetown. During the year ending August 31st, 1851, Charleston exported 15,000 bales of sea-island cotton; 394,683 bales of upland cotton; 125,166 tierces of cleaned rice; 443,723 bushels of rough rice, and 18,135,231 feet of lumber. Tobacco was also exported in considerable quantities. The total amount of the exports during the year 1852 was \$12,899,620. Charleston exports more rice than any other city in the Union, and is surpassed only by New Orleans and Mobile in the exportation of cotton. In 1820 the imports were nearly equal to one-half of the exports; now they are only about one-eighth. The revenue collected at this port in 1801, amounted to \$2,257,100; in 1843 it had fallen to \$158,405, being the smallest amount collected any one year, with the exception of 1814, since the establishment of the federal government. This decline is explained by the fact that the imports which formerly came directly to Charleston, are now entered at Northern ports. The imports in 1852 were \$1,767,943, of which \$1,285,716 were by American vessels, and \$481,627 by foreign vessels. Charleston formerly was extensively engaged in ship-building, but of late years this business has very much declined. During the year ending June 30th, 1852, only 3 schooners and 3 steamers, with an aggregate burthen of 851 $\frac{1}{2}$ tons were built. The number of ships and brigs owned and sailing

from this port, is also much smaller than it was ten years ago. Still the commerce is important. There are lines of steamers—three steamships to New York, one to Philadelphia, one to Baltimore, and one to Havana; of sailing vessels—11 ships, 2 barques, 8 brigs, and 5 schooners to New York; 3 barques and 3 brigs to Boston; 3 barques, 3 brigs, and 3 schooners to New Orleans; 2 brigs and 8 or 9 schooners to Philadelphia, and 5 or 6 schooners to Baltimore. Besides these there are a large number of vessels of various classes engaged in foreign commerce. The entire shipping of the port, June 30th, 1852, amounted to an aggregate of 22,526 $\frac{2}{3}$ tons registered, and 19,616 $\frac{2}{3}$ tons enrolled and licensed.

The great extent of railroads that open communication with the interior, affords Charleston superior advantages for inland trade. The Hamburg railroad, 136 miles in length, was, at the time of its completion in 1833, the longest railroad in the world. Other railroads, recently constructed, connect it not only with the principal towns of North and South Carolina and Georgia, but with Chattanooga and Nashville, thereby opening communication with the navigable waters of the Tennessee, Mississippi, and Ohio rivers. A line of steamboats makes daily trips to Wilmington, connecting with the great Northern route. Steamboats also ply between Charleston and the places along the coast.

The press of Charleston comprises 4 daily and 4 or 5 weekly papers, besides several other periodicals. The "Medical Journal," issued every two months, ranks among the first publications of the kind in the Union.

The citizens of Charleston are distinguished for their hospitality and refinement, and perhaps no place in the United States affords more agreeable society. In winter it is particularly pleasant as a residence, and is much resorted to by persons from other parts of the Union.

History.—The city of Charleston is one of the most ancient in the United States, its foundations having been laid in 1672. Some fifteen years afterwards, a company of French refugees, exiled from their native country on account of their religious faith, settled in South Carolina, a part of them at Charleston. From this noble stock, the French Huguenots, have sprung some of the first families of Charleston. In 1731 the city contained 600 houses and 5 churches, and in 1744, 230 vessels were laden at its wharves. It was incorporated in 1783. On the 28th of June, 1776, the garrison on Sullivan's island, consisting of 400 men, under the command of Colonel Moultrie, sustained an assault from a British squadron of nine ships of war, and triumphantly repulsed them, losing only 32 men killed and wounded, while the enemy's loss amounted to nearly 200. Charleston was afterwards besieged by the British under Sir Henry Clinton, from

the 1st April, 1780, until May 12th, when it was surrendered by General Lincoln. It was held by the enemy until May, 1782. Charleston has suffered greater disasters by fire than almost any city in the United States. In 1778, 252 houses were consumed, and in 1796 nearly a third part of the city, involving a destruction of property to the amount of \$2,500,000. Again, at the great fire in 1838, the loss was estimated at \$5,000,000. Population in 1800, 18,711; 1810, 24,711; 1820, 24,780; 1830, 30,289; 1840, 29,261; 1850, 42,958, of which 14,692 were slaves.

CHARLESTOWN, a post-township of Sullivan co., New Hamp., on the E. side of the Conn., and on the Sullivan railroad, 50 miles W. of Concord. It contains a bank. Pop., 1644.

CHARLESTOWN, a post-township of Washington co., Rhode Island, on the Stonington and Providence railroad, 15 miles S. W. of Newport. Population 694.

CHARLESTOWN, a city and seaport of Middlesex county, Massachusetts, is situated on a peninsula immediately N. of Boston, with which it is connected by the Warren and Charles River bridges. It is 237 miles by railroad N. E. from New York; 200 miles E. by S. from Albany; and 111 miles S. S. W. from Portland; lat. 42° 2' N., lon. 71° 3' 33" W. The peninsula extends from the mainland of Summerville about two miles in a south-easterly direction, between two small estuaries, formed by the Mystic and Charles rivers. These are crossed by two public bridges; the one on the right leading from Prison Point to East Cambridge, and the other to Chelsea and Malden. The surface is remarkably uneven, and near the centre rises into two prominences called Bunker's and Breed's Hills, the summits and slopes of which afford delightful sites for dwellings. The streets, though irregular, are generally spacious and finely shaded. Two broad avenues, Main and Bunker Hill streets, extend nearly through the entire length of the peninsula. These are intersected at various angles by those passing from the Mystic to Charles River, and others leading to different sections of the city. Charlestown is, for the most part, handsomely built, and contains a large number of elegant mansions. Its healthy atmosphere and proximity to Boston have made it a favorite place of residence to many of the merchants and business men of that city. The principal public buildings are the churches, 8 or 9 in number, a bank, and a State's prison. The latter is situated at the western extremity of the city, on what is called Prison Point. It consists of an octagonal centre, with four wings, having its interior arrangements upon the Auburn plan. The chief object of interest, however, to persons visiting Charlestown, is the Bunker Hill Monument, erected in commemoration of the first great battle fought between the English and Americans. It stands on Breed's Hill, usually called Bunker Hill, near the spot where the brave Warren fell. Its foundations, which are 50 feet above the level of the sea, are enclosed 12 feet under ground. The corner-stone was laid by the Marquis La Fayette, June 17th, 1825, the fiftieth anniversary of the battle. June 17th, 1843, the completion of the monument was celebrated, in the presence of the President of the United States, many of the members of his cabinet, and a vast concourse of citizens. It consists of a plain granite shaft, 220 feet high, 31 feet square at the base, and 15 at the top. Within is a winding stairway, by which it is ascended to a chamber immediately under the apex, 11 feet in diameter, containing four windows, which afford a magnificent panoramic view of the surrounding scenery. In this chamber are two of the four cannon which constituted the whole train of field artillery possessed by the Americans at the commence-

ment of the war, in April, 1775. These two pieces are named respectively Hancock and Adams.

The United States navy-yard at Charlestown, established about the year 1798, is situated at the foot of Bunker Hill. It occupies an area of from 70 to 80 acres, extending from the mouth of Charles river to Chelsea bridge, and is enclosed on the land side by a high stone wall. The dry-dock, at its upper end, was completed in 1833, at a cost of \$670,089. It is constructed of chiselled granite, 341 feet long, and 80 wide, having a depth of 30 feet. The first vessel received was the United States frigate Constitution. There are also in the yard four large ship-houses, a granite ropewalk 1300 feet long, the dwellings of the officers, and naval stores to the amount of some \$2,000,000. Connected with it, is a naval hospital, located in Chelsea.

Charlestown is memorable for its sufferings during the Revolutionary war. In the early part of the battle of Bunker Hill, fought June 17th, 1775, the town was set on fire by the British and burned to the ground. Incorporated a city in 1847. Population, 17,216.

CHARLESTOWN, a township of Chester county, Pennsylvania, 25 miles W. N. W. from Philadelphia; drained by Pickering creek. Population, 979.

CHATHAM, a county in the central part of North Carolina, has an area of about 700 square miles. It is traversed by the Haw and Deep rivers, which unite in the S. E. part and form the Cape Fear; it is also drained by Rocky and New Hope rivers. The surface is diversified; the soil is generally clayey and productive. Wheat, Indian corn, oats, cotton, hay, and butter are the staples. In 1850 the county produced 625,828 bushels of corn; 126,178 of wheat; 99,660 of oats; 4893 tons of hay; and 960 bales of cotton. Extensive beds of stone coal have recently been opened in the county, near Deep river. This stream has been rendered navigable by small boats as high as the coal mines. A plank-road is in progress through this county, from Deep river to the Central railroad. Organized in 1770, and named in honor of the illustrious orator William Pitt, Earl of Chatham. Capital, Pittborough. Population, 18,449, of whom 12,464 were free, and 5985, slaves.

CHATHAM, a county forming the E. extremity of Georgia, bordering on the sea, has an area of 358 square miles. The Savannah river forms its boundary on the N. E. and the Ogeechee on the S. W. The surface is level, and partly occupied by swamps. The soil near the rivers is rich, adapted to the cultivation of rice; other parts are sandy and sterile. Cotton, Indian corn, rice, and fruits of various kinds are cultivated. In

1850 this county produced 580 bales of cotton; 57,427 bushels of corn; and 19,453,750 pounds of rice. It contained 3 brick-yards, and 1 sash and blind manufactory; 14 churches, 4 newspaper establishments; 80 pupils attending public schools, and 457 attending academies or other schools. CHATTAHOOCHEE, a large river of Georgia, a branch of the Appalachian, rises on the declivity of the Blue Ridge, in Habersham county, in the N. E. part of the state, and flows first S. W. through the gold region of Upper Georgia, until it strikes the boundary between Georgia and Alabama, at West Point. Below this its general direction is southward, and it forms the W. boundary of Georgia, through the whole of its subsequent course, to its junction with Flint river. Its length is estimated at 550 miles. Steamboats of 200 tons navigate this river during eight months of the year, from November to June, and ascend as far as Columbus, which is about 350 miles from the Gulf. The rapids, at the limit of navigation, produce excellent water-power. It is said that the vertical rise of the water in the course of a year sometimes amounts to 60 feet. (*White's Statistics of Georgia.*) The chief towns on its banks are West Point, Columbus, Eufaula, and Fort Gaines.

CHATTAHOOCHEE, a post-village of Gadsden county, Florida, at the junction of the Flint and Chattahoochee rivers, 42 miles N. W. of Tallahassee. It contains a United States arsenal, and about 50 inhabitants.

CHATTANOOGA creek, of Georgia and Tennessee, rises in Walker county, Georgia, and enters the Tennessee near Chattanooga.

CHATTANOOGA, a flourishing post-village of Hamilton county, Tennessee, on the Tennessee river, 250 miles by water below Knoxville, and 140 miles S. E. from Nashville. It is the terminus of the Nashville and Chattanooga railroad, and of the Western and Atlantic railroad, which connects it with the chief towns of Georgia. The Tennessee river is navigable by steam during about eight months in the year, and by small boats at all times. These circumstances render Chattanooga one of the most important and flourishing towns of the state. Since the completion of the Western and Atlantic railroad, in 1850, the population has increased at the rate of about 100 per month. The surplus productions of East Tennessee, and of part of Middle Tennessee, are mostly shipped from this point. The surrounding region is liberally supplied with water-power and timber, and the hills contain

abundance of stone coal and iron ore. Chattanooga has 1 steam saw mill, 2 sash and blind factories, 3 cabinet factories, in which steam-power is used, 4 newspaper offices, and 1 bank. The manufacture of iron has also been commenced. Laid out in 1839. Population in 1853, estimated at 3500.

CHATTOOGA river, one of the head branches of the Savannah, rises near the S. frontier of North Carolina, and flows S. W. along the boundary between South Carolina and Georgia. After passing the mouth of Tallula creek, it takes the name of Tugaloo river.

CHATTOOGA, a small river of Georgia and Alabama, rises in Walker county, near the N. W. extremity of Georgia, and flowing S. W., enters the Coosa in Cherokee county, Alabama.

CHATTOOGA, a county in the N. W. part of Georgia, bordering on Alabama, has an area of 360 square miles. It is intersected by the Chattooga river, from which the name is derived, and also drained by the Eukalanaqua, Amuchee, and Snake creeks. The surface is beautifully diversified by productive valleys and wooded mountains, connected with the Blue Ridge. The most considerable elevations bear the local names of Taylor's Ridge, John's mountain, and Dirtseller mountain. Cotton, Indian corn, wheat, oats, grass, and potatoes are the staples. In 1850 this county produced 1668 bales of cotton; 301,180 of corn; 36,481 of oats, and 52,986 of sweet potatoes. It contained 1 cotton factory, 1 cabinet-ware manufactory, and 4 tanneries. There were 19 churches, 330 pupils attending public schools, and 20 attending an academy. The county contains quarries of limestone and marble, and an abundance of iron and lead ore, with several fine mineral springs. Capital, Summer-ville. Population, 6815, of whom 5130 were free, and 1680, slaves.

CHATTOOGAVILLE, a post-village of Chattooga county, Georgia, on the N. W. side of Chattooga river, about 200 miles N. W. from Milledgeville.

CHAUMONT, (shū-mō,) a post-village of Jefferson county, New York, on Chaumont bay of Lake Ontario, and on the Rome and Watertown railroad, 14 miles N. W. from Watertown. It has a good harbor, and contains a number of stores and mills. A river of the same name enters the bay at this place.

CHAUNCEY, a thriving post-village of Athens county, Ohio, on the Hocking river and Hocking canal, 65 miles S. E. from Columbus. It has coal mines and salt works in the vicinity.

CHAUNCEYVILLE, a post-office of Manitowoc county, Wisconsin.

CHAUTAUQUE, shā-tau'que, the most western county of New York, has an area of about 1000 square miles. It is bounded on the N. W. by Lake Erie, and on the W. and

S. by Pennsylvania, and is drained by Conewango creek with its tributaries, and several smaller streams, which furnish abundant water-power. The Chautauque ridge passes through this county at from 3 to 10 miles distance from the lake; between this ridge and the lake the surface is nearly level, or moderately uneven. The soil is generally good, and along the lake shore and the banks of its numerous streams, very fertile. Indian corn, oats, potatoes, and grass are the staples. In 1850 there were raised 513,827 bushels of corn; 614,392 of oats; 319,026 of potatoes; 125,947 tons of hay, and 2,706,612 pounds of butter. There were 36 flour and grist mills, 160 saw mills, 12 carding and fulling mills, 32 tanneries, 6 iron foundries, 4 woollen factories, and 4 edge-tool factories. Bog, iron ore, shell marble, and sulphur springs are found in this county. There are also several springs, emitting carburetted hydrogen; the gas from one of which, near Fredonia, has been successfully employed for lighting the dwellings in the village. It contained 86 churches, and 9 newspaper offices; 17,720 pupils attending public schools, and 938 attending academies and other schools. By means of the Conewango creek, which falls into the Alleghany, a branch of the Ohio, a boat navigation is open from within 10 miles of Lake Erie to the Gulf of Mexico. The railroad connecting Buffalo with Erie, in Pennsylvania, traverses the county, and the New York and Erie railroad partly intersects it. Capital, Maysville. Population, 50,493.

CHAUTAUQUE, a post-township of Chautauque county, New York, situated on the lake of same name, about 5 miles S. E. from Lake Erie. Population, 2622.

CHAUTAUQUE LAKE, near the S. W. extremity of New York, in the central part of Chautauque county, is a beautiful expanse of water, 18 miles long, and from one to three miles wide. It is about 730 feet above Lake Erie, and 1290 above the Atlantic ocean; being, it is said, the highest navigable water on the continent. Steamboats run from Maysville, at its N. extremity, to the commencement of the outlet, whence small boats can descend to the Alleghany river. The name "Chautauque," or "Chatauqua," is a corruption of an Indian phrase, signifying a "foggy place," and was given in consequence of the mists which frequently rise from the surface of this mountain lake.

CHESAPEAKE bay, the largest bay in the United States, enters Virginia between Cape Charles and Cape Henry, lat. about 37° N., lon. 76° W., and extends into Maryland as far as 39° 36' N. lat., 76° 3' W. lon. The length, following the curve, is about 200 miles; the breadth varies from 4 to 40 miles. The distance from Cape Charles to Cape Henry is about 12 miles. Probably no other bay on the globe is marked with so many arms or estuaries as the Chesapeake. These are of various dimensions, and of the most fantastic forms. While many

of them serve as outlets or reservoirs to the waters of the different rivers of Maryland and Virginia, others are scarcely fed by any permanent stream, being nothing more than mere arms or projections from the sea. The depth of the Chesapeake is sufficient for the largest ships to ascend the main bay nearly to the mouth of the Susquehanna. South-west from Cape Henry the rivers, harbors, and sounds are shallow; but with the Chesapeake commence deep bays which continue at no great distance from each other to the N. E. extremity of the Atlantic coast of the United States. The region drained by the Chesapeake bay, and the rivers flowing into it, embraces an area of about 70,000 square miles.

CHESAPEAKE, or **CHESAPEAKE CITY**, a post-village of Cecil county, Maryland, at the W. terminus of the Chesapeake and Delaware canal, near the entrance of Elk river into the Chesapeake bay, 84 miles N. E. from Annapolis.

CHESHIRE, a county forming the S. W. extremity of New Hampshire, has an area of about 770 square miles. It is bounded on the W. by Windham county, Vermont, the Connecticut flowing wholly within its border, and is drained by the Ashuelot and its numerous tributaries, and by the head branches of Contoocook and some smaller streams. It contains a number of lakes and ponds. Bellows falls, on the Connecticut, in the N. W. part, is one of the most remarkable cataracts in the state. The surface is generally uneven, with a few mountains, among which may be mentioned the Grand Monadnock and Ashuelot mountains. The soil is generally fertile, especially along the streams. Indian corn, potatoes, and grass are the staples. In 1850 this county produced 177,301 bushels of corn; 364,501 of potatoes; 67,129 tons of hay; 758,181 pounds of butter, and 437,681 pounds of cheese. There were 19 woollen and 4 cotton factories, 2 foundries, 3 glass works, 1 forge, 9 machine shops, 23 flour mills, 11 grist mills, and 68 saw mills. It contained 65 churches, 4 newspaper offices; 8065 pupils attending public schools, and 560 attending academies and other schools. The Connecticut river, navigable for boats, and the railroad connecting Worcester, Massachusetts, and Montpelier, Vermont, intersect this county and part of that connecting Hartford, Connecticut, and Keene is included within its limits. Organized in 1771. Capital, Keene. Population, 30,143.

CHESHIRE, a post-township of Berkshire county, Massachusetts, about 120 miles W. by N. from Boston; intersected by the Pittsfield and North Adams railroad. Pop., 1298.

CHESTER, a county in the S. E. part of Pennsylvania, bordering on Delaware and Maryland, has an area of 738 square miles. The Schuylkill river forms its boundary on the N. E., the Octorara creek on the W., the branches of Brandywine creek rise within its limits, and it is also drained by French and Elk creeks. The surface is agreeably diversified; a low ridge, called the Welsh mountain, forms the N. W. boundary; the eastern part is generally undulating, and the central and north-western parts hilly. The Great Valley extends across the county from the Schuylkill river in a W. S. W. direction with an average width of about 2 miles. The soil of this valley, and of many other parts, is exceedingly fertile, and in a high state of cultivation. Indian corn, wheat, rye, oats, cattle, swine, and butter are the staples. In 1850 there were raised 1,339,466 bushels of corn; 547,498 of wheat; 1,145,712 of oats; 96,315 tons of hay, and 2,092,019 pounds of butter. The quantity of corn was the greatest produced by any county of the state, except Lancaster; and that of hay greater than of any except Montgomery. There were 165 flour and grist mills, 88 saw mills, 48 lime kilns, 10 iron mines, 1 lead mine, 17 manufactories of agricultural implements, 3 iron foundries, 3 furnaces, 5 forges, 1 nail factory, 18 woollen factories, 8 machine shops, 22 paper mills, 10 rolling mills, 9 cotton factories, 8 cotton and woollen factories, and 27 tanneries. It contained 150 churches, and 5 newspaper offices; 11,366 pupils attending public schools, and 1322 attending academies and other schools. The rocks which underlie the county are of the primary strata-

of the tertiary class, and perhaps no part of the state offers so great a variety of rare minerals. Extensive quarries of primitive limestone and marble are worked in the Great Valley; mines of copper and lead have been opened near the Schuylkill river; zinc, chromate of iron, and kaolin are procured for exportation in other parts of the county. It also contains zircon, silver, titanium, agate, chalcodony, sapphire, amethyst, and beryl. Water-power is abundant in the county, and is employed in manufactories of various kinds. It is intersected by the Philadelphia and Columbia railroad, and several branch railroads terminate in it. Chester county was one of the 3 original counties of Pennsylvania, established by William Penn in 1682, and was named from the city of Chester in England. Capital, West Chester. Population, 66,438.

CHESTER, a district in the N. part of South Carolina, has an area of 570 square miles. It is bounded on the E. by the Catawba river, on the W. by Broad river, and drained by Fishing, Rocky, and Sandy creeks. CHICAGO river, a small stream flowing into Lake Michigan at Chicago. See CHICAGO.

CHICAGO, a post-office of Henry county, Indiana.

CHICAGO, she-kau'go, the most populous and commercial city of Illinois, and seat of justice of Cook county, is situated on the south-western shore of Lake Michigan, and on both sides of Chicago river, 278 miles W. by S. from Detroit, 180 miles E. by S. from Galena, and 410 miles by water from St. Louis. Lat. 41° 52' 20" N., lon. 87° 35' W. This city, which appears destined to become the chief commercial emporium of the North-west, in consequence of its commanding situation, was settled about the year 1831, previous to which it was a mere trading post amidst the wigwams of the Indian. It was incorporated in 1836; in 1840 it contained 4853 inhabitants; in 1850, 29,963, and in 1853, not less than 60,000; from which it may be perceived that the population has doubled itself about every four years.

The ground on which the city stands is an extremely level plain, sufficiently elevated to prevent inundation, and extending many miles towards the south and west. The adjacent country consists of beautiful and fertile prairies, interspersed with groves, and diversified by gentle slopes. Chicago river, and its North and South branches, which unite about three-quarters of a mile from the lake, separate the city into three portions. The main stream, flowing directly eastward, is from 50 to 75 yards wide, and from 15 to 20 feet deep, and forms one of the best natural harbors on the lake. Substantial piers have been extended into the lake, and a lighthouse erected on one of them. Vessels ascend Chicago river and one of its branches nearly 5 miles.

The city is laid out in rectangular blocks, with streets extending nearly north and south, and east and west. The shore of the lake and the northern parts of the city are occupied with the finest residences, but the principal business is transacted on the south side of the river, the banks of the South branch being lined with docks and large warehouses. Many of the streets are paved with planks and lighted with gas. Michigan avenue, which is, perhaps, the most beautiful street in the city, extends along the shore of the lake, and is bordered with shade-trees. Next to, and parallel with this, is Wabash avenue, adorned with double rows of trees.

The most remarkable public buildings are the new court house, the Merchants' Exchange, the Marine Hospital, the Medical College, and the Second Presbyterian church. The court house is a splendid edifice of Lockport limestone, having a prison on the first floor, the county offices on the second, and a court room and town hall on the third, with a cupola and roof of galvanized iron. The

Marine Hospital is a spacious and handsome building, of Milwaukee brick. The Second Presbyterian church, at the corner of Wabash and Washington streets, in the Gothic style, with a steeple about 200 feet high, is perhaps the most beautiful edifice of its class west of New York. It is built of a kind of pitchy stone, in which black and white are mingled, and presents a singular and striking appearance. Chicago contains 7 banks and about 20 printing offices, from which numerous daily and weekly journals are issued. The public schools are well organized, and are accommodated with excellent buildings.

By a glance at the map of the United States, the great commercial advantages of Chicago will at once be perceived. It communicates by means of the chain of lakes with the Atlantic cities; the Illinois and Michigan canal, 100 miles long, affords an easy access to the Mississippi valley, and to the coal mines of Central Illinois; while the Galena and Chicago railroad penetrates to the mineral region of Wisconsin and Iowa. The Michigan Central and Michigan Southern railroads were completed to this place in 1852, opening a direct steam communication with New York city. Numerous other lines centering in this city are in process of construction, namely, the Illinois Central, which will extend to the mouth of the Ohio, and connect with the Mobile railroad; the Illinois and Wisconsin, the Chicago and Rock Island, the Chicago and Milwaukee railroad, &c.

Chicago communicates with Buffalo and intermediate ports by a daily line of steamboats, which, in respect to size, speed, and comfortable accommodations are scarcely inferior to any in the world. The number of arrivals of steamers and sail vessels in 1851, was 2279. The shipping, on June 30th, 1852, amounted to an aggregate of 25,209 tons, enrolled and licensed. The aggregate value of exports and imports in 1852, was estimated by the Governor of Illinois, in his late message, at \$20,000,000. The same document states that there are 211 houses engaged in wholesale business, many of which import directly from Europe, and 26 forwarding and commission merchants, doing a heavy business. The quantities of leading articles received at this place in 1852, are reported as follows:—2,757,011 bushels of Indian corn; 937,496 of wheat; 124,316 barrels of flour; 24,363 head of cattle, (or about 13 million pounds of beef;) 59,156 hogs, (or about 6 million pounds of pork;) 147,816,232 feet of boards, and 77 million thousands of shingles. The lumber market of Chicago is the most extensive in the Western States, employing a capital of about two million dollars. This market is also celebrated for the quality as well as the quantity of its beef.

Nearly two million dollars are invested in manufactures, the most important productions of which are steam-engines, railway

cars, reaping and threshing machines, with other agricultural implements, horse-powers and other machinery, stoves, gas pipes, leather, lumber, flour, and lard oil. There were in 1851, 10 iron foundries with machine shops, which together produced annually \$241,900; 9 manufactories of agricultural implements, which produced \$390,250; 5 tanneries, which produced \$240,000; 10 manufactories of cabinet ware, 2 or 3 of railway cars, 25 of carriages and wagons, 4 flouring mills with an aggregate capital of \$155,000, and 3 planing mills.

The city is supplied with water from the lake, raised by steam power to a brick reservoir, 80 feet in height, situated at the foot of Chicago avenue. The estimated cost of these works is \$400,000. The Chicago and Galena Railroad Company have erected a fine dépôt for passengers, and another for freight, which is about 300 feet in length.

Among the hotels of Chicago may be mentioned the Tremont House, which is one of the largest as well as one of the very best establishments of the kind in the United States.

CHILICOTHE, a beautiful city, capital of Ross county, Ohio, on the right bank of the Scioto river, and on the Ohio and Erie canal, 45 miles S. from Columbus, and 45 miles N. from the Ohio river at Portsmouth. The situation is remarkably beautiful. The river winds gracefully through a level plain of considerable extent, enclosed on either hand by verdant and cultivated hills, which attain an altitude of about 500 feet. These eminences form the background of a landscape which can scarcely be surpassed in the Western States, and which appears to great advantage through the medium of a bright and transparent atmosphere. Paint creek flows along the southern side of the town, and enters the river about 3 miles below. The plan of the town is regular; the streets are wide, lighted with gas, and adorned with many handsome buildings, among which are 14 churches, 2 academies, and 3 banks. Five newspapers are published in the town. Chilicothe is the centre of trade in the fertile and populous valley of the Scioto, one of the finest farming regions in the United

States, and is steadily advancing in population and importance. A railroad has been commenced which will connect it with Marietta on one hand, and with Cincinnati on the other. The hydraulic works of this place cost \$75,000; they afford extensive water-power. When the railroad shall have opened a ready access to the coal and iron mines of Southern Ohio, Chillicothe will offer great inducements to capitalists as a manufacturing town. It was founded in 1796 by emigrants from Virginia and Kentucky, and in 1800 it became the seat of the state government. The convention which formed the constitution of Ohio met here in November, 1802, and the sessions of the state legislature were held in Chillicothe until 1810, when the seat of government was removed to Zanesville. The old stone state-house, built in 1801, is now used as a court house for the county. Population, 7100.

CINCINNATI, the metropolis of Ohio, and capital of Hamilton county, on the right bank of the Ohio river, opposite the mouth of the Licking, and immediately above the mouth of Mill creek. It is distant by water 458 miles W. S. W. from Pittsburg, 138 miles N. E. from Louisville, 655 miles E. from St. Louis, and 500 from the mouth of the Ohio: by land, 115 miles S. W. from Columbus, 90 miles N. from Lexington, and about 500 from Washington. Lat. 39° 6' 30" N., lon. 84° 26' W. The upper part of the city is 540 feet above the level of the sea.

Cincinnati is the most populous city of the Western States, and the fifth in size and importance among all the cities of the Union. It is remarkable for its rapid growth, extensive trade, and productive industry. From its central position between Pittsburg and the mouth of the Ohio, it has become the principal gathering and distributing point in the valley of that river. The city is beautifully situated in a valley 3 miles in diameter, intersected from east to west by the Ohio, and environed by a range of hills,

with a well-defined circular form, rising by gentle acclivities, about 400 feet above the river. From the summits of these the most beautiful views of Cincinnati are obtained. The greater part of the city is built on two terraces or plains, of which the first is 50, and the second 108 feet higher than low-water mark. The front margin of the latter, originally a steep bank, has been graded to a gentle declivity, so that the drainage of the city is effected by means of the streets directly into the river. The upper terrace slopes gradually toward the north, and, at the average distance of a mile, terminates at the base of the Mount Auburn range of limestone hills, adorned with country seats, vineyards, and gardens. The city extends more than three miles along the river, without including the suburban villages. The central portions are compactly and handsomely built with streets, about 66 feet wide, bordered with spacious warehouses and dwellings of brick and stone. Many of them are well paved, lined with shade-trees, and lighted with gas. Main street extends from the steamboat landing in a N. N. W. direction, and Broadway, Sycamore, Walnut, Vine, Race, Elm, and Plum streets are parallel with it. It is intersected at right angles by 14 principal streets, named Front, First, Second, Third, &c. Among the handsomest portions of the city are Broadway, Main, Pearl, and Fourth streets. At the foot of Main street is the public landing or levee, an open area of 10 acres, with 1000 feet front. The shore is paved with stone from low-water mark to the top of the first bank, and furnished with floating wharves, which accommodate themselves to the great variation in the height of the river. The mean annual range from low to high water is about 50 feet. The city is divided into 16 wards, and governed by a mayor and a board of trustees, consisting of three members from each ward, usually known by the name of the city council.

Among the most prominent and interesting public buildings may be mentioned the edifice of Cincinnati College, on Walnut street, occupied in part by the Chamber of Commerce and Mercantile Library; it is 140 feet long, by 100 feet wide, with a marble front, in the Doric style: the Roman Catholic cathedral, at the corner of 8th and Plum streets, one of the finest buildings in the West, with a spire 250 feet high; it is 200 feet long, and 80 wide, and cost about \$100,000: the Episcopal church, at the corner of Seventh and Plum streets, recently erected, at a cost of about \$80,000: the First Presbyterian church, at the corner of Main and Fourth streets: the new City Hall, on Plum street, between Eighth and Ninth: the Melodeon, at the corner of Fourth and Walnut streets, containing a public hall, 100 feet long, 60 wide, and 25 feet high: the Masonic Hall, at the corner of Third and

Walnut streets, erected in the castellated style of Gothic architecture: the Burnet House, at the corner of Third and Vine streets, one of the most spacious hotels in the United States; its dimensions, including the terrace, are 212 feet by 210; it is six stories in height, contains 342 apartments, and is surmounted by a dome which is 100 feet above the basement; the cost is estimated at \$300,000: the Cincinnati Observatory, a fine stone edifice, situated on the top of an eminence, (Mount Adams,) which rises about 500 feet above low water, commanding a wide and varied prospect of the city and the "vine-clad hills." Through the centre of the main building rises a pier of masonry, founded on the native rock, supporting the great equatorial telescope, which is one of the largest and most perfect in the world. The focal length is about $17\frac{1}{2}$ feet, and the diameter of the object glass 12 inches, with magnifying powers varying from 100 times up to 1400 times. In 1852 the city contained more than 90 churches, besides 4 synagogues; among which were 15 Methodist Episcopal, 11 Presbyterian, 7 Lutheran, 5 Episcopal, 7 Baptist, 4 Congregational, 4 Reformed Presbyterian, several German Reformed, and 10 or 12 Catholic.

Institutions.—Cincinnati is distinguished for its literary and benevolent institutions, as well as for wealth and public spirit. It has three colleges, properly so called, namely, the Cincinnati College, which has a law school in operation, the other departments being suspended for the present; the Woodward College, founded by a bequest of the late William Woodward; and the St. Xavier College, founded by the Roman Catholics, with ample buildings and accommodations: there are 3 medical colleges, devoted to the several systems of practice, besides the College of Dental Surgery. Lane Seminary, a theological school of high reputation, is situated on Walnut Hill, about two miles from the river. It is well endowed, and is under the direction of the Presbyterian Church (New School;) there are also theological seminaries, under the direction of the Old School Presbyterians, and of the Baptists. The public schools, which will compare favorably with those of any other city in the United States, occupy 13 three-storied brick buildings, each capable of accommodating over 500 pupils. Connected with these is the Central High School, in which the languages and higher branches of science are taught. The Mercantile Library Association have a collection of about 13,000 volumes. At the Mechanics' Institute, fairs are held and lectures delivered, for the promotion of the mechanic arts. About 12 daily and above 20 weekly papers are published in Cincinnati, besides numerous monthly periodicals. In addition to the above, the offices of the daily journals each

issue a weekly or tri-weekly publication. Four of the daily and four of the weekly journals are in the German language. The city has 6 or 7 chartered banks, besides numerous private banking companies, and 13 insurance companies. Among the benevolent institutions may be named the Commercial Hospital and Lunatic Asylum, 4 orphan asylums, the Widows' Home and Asylum for Indigent Females, the House of Refuge, and the Hotel for Invalids.

Commerce.—Cincinnati carries on an extensive trade by the Ohio river, the Miami canal connecting it with Lake Erie and the Whitewater canal. Railway communications have been formed between this city and the ports of Lake Erie, the Atlantic seaports, and the chief towns of Indiana. The following lines are in course of construction: The Ohio and Mississippi, leading to St. Louis; the Cincinnati and Marietta; the Cincinnati and Parkersburg; and the Covington and Lexington, which forms part of a chain extending to Charleston and other seaports of the South. In 1852, there were 267 steamboats employed in the commerce of Cincinnati, and the whole number of steamboat arrivals amounted to 3700. The shipping of the port, June 30th, 1852, amounted to an aggregate of 11,781 tons enrolled and licensed. During the year, 55 vessels, (45 of them steamers,) with an aggregate burthen of 13,137 tons, were admeasured. The chief article of export is pork, for which Cincinnati is the most extensive market in the Union. The trade of this city, during the year ending August 31, 1852, is stated as follows:—There were received 410,000 hogs and 16,532,884 pounds of pork in bulk, besides 22,500 barrels and 10,330 hogsheads of bacon, amounting in value to \$5,486,592. The value of the principal articles received, not including dry goods, hardware, queensware, and lumber, was estimated at \$24,715,331, and that of the total imports at \$56,861,731. No statement of the value of exports in that year appears to have been published.

Manufactures.—Cincinnati is no less remarkable for the variety and importance of its manufactures than for its commerce. Perhaps there is no place in the whole country where fuel, food, and the raw materials of cotton, wool, and iron can be procured so cheaply. More than 200 steam-engines are employed in the manufactories of this city. The total value of manufactured productions in 1851, according to "Cist's Cincinnati," was about \$55,000,000. There were 44 iron foundries, with machine shops, which produced \$3,676,500; 5 rolling mills, which produced \$1,050,000; 34 lard-oil and stearine factories, which produced \$3,015,000; 14 flowering mills, which produced \$1,690,000; 108 manufactories of clothing, which produced \$1,947,500; 136 of furniture, which produced \$1,660,000; 12 publishing esta-

blishments, which produced \$1,246,000; 40 wine factories; 9 paper mills; 62 tobacco factories; 5 cotton factories; 2 type foundries; 12 bell and brass foundries; 40 manufacturing of hats; 19 of edge-tools; 38 of soap and candles; 15 of trunks, and 7 boat-yards, besides many other establishments. In 1852, 27 steamboats and 6 barges were built, besides 10 boats which were still in the docks at the close of the year. The total capacity of these was estimated at 19,000 tons. This city is supplied with water raised from the Ohio river by steam power into a limestone reservoir, which holds 5,000,000 gallons. The average daily consumption in 1851 was 2,300,000 gallons, and the cost of the apparatus \$796,000. The climate of Cincinnati is favorable to the cultivation of the grape. In 1852, the vineyards in this vicinity occupied about 1200 acres. Wine of good quality is made here from the native Catawba grape. The annual product of the vines in the neighborhood of the city is estimated at above 200,000 gallons; this branch of business is constantly and rapidly increasing.

Cincinnati was first settled in December 26, 1788, and was originally called Losanteville. It was incorporated as a city in 1819. In 1800, it contained 750 inhabitants; in 1820, 9602; in 1830, 24,830; in 1840, 46,388; in 1850, 115,438, and in 1853, 160,186.

CLEARFIELD, a county in the W. central part of Pennsylvania, has an area of about 1150 square miles. It is intersected by the W. Branch of the Susquehanna river, which divides it into nearly equal portions. Moshannon creek forms part of the S. E. boundary, and Clearfield creek, from which the name is derived, enters the river about the middle of the county. The county lies mostly on the W. declivity of the Alleghany mountain; the eastern part is traversed by deep ravines formed by the watercourses, and is too rugged for cultivation; the remainder is generally rolling and uneven. The soil in the valleys of the large streams is productive, and much of the upland is moderately fertile, and adapted to grazing. Wheat, oats, hay, and butter are the staples. In 1850 there were raised 80,588 bushels of wheat; 158,870 of oats; 10,556 tons of hay, and 168,845 pounds of butter. There were 96 saw mills, 13 flour and grist mills, 1 woollen factory, 2 iron foundries, and 6 tanneries. It contained 20 churches, 1 newspaper office; 2810 pupils attending public schools, and 50 attending academies or other schools. Large quantities of timber, pine, oak, poplar, and cherry are procured from the forests, and floated down the river to market. Mines of iron ore and stone coal are worked. CLEVELAND, a thriving post-village, capital of Bradley county, Tennessee, on the East Tennessee and Georgia railroad, 156 miles E. S. E. from Nashville, and about 80 miles N. E. from Chattanooga. The surrounding country is fertile and well watered, and is rapidly improving since the opening of the railroad. Cleveland is a place of active business, and has from 500 to 600 inhabitants. It was laid out in 1840. A railroad is in course of construction from this point to Chattanooga.

CLEVELAND, city and port of entry of Ohio, and capital of Cuyahoga county, on the S. shore of Lake Erie, at the mouth of Cuyahoga river, 135 miles by railroad E. N. E. from Columbus, 255 miles N. E. from Cincinnati, and 195 miles by water S. W. from Buffalo. Lat. 41° 30' N., lon. 81° 47' W. Next to Cincinnati, it is the most commercial town of Ohio, and there are strong reasons for believing that it will continue to increase in population and importance until it becomes a large city. Besides its natural advantages, which are probably equal to any on the lake, its trade is facilitated by the Ohio canal, which extends to the Ohio river at Portsmouth, and by the following railroads, which are already completed: the Cleveland, Columbus, and Cincinnati; the Cleveland and Pittsburg, and the Cleveland and Erie. The mouth of the river forms a good harbour, which has been improved by a pier on each side, extending into the lake. The situation is elevated and remarkably beautiful. The greater part of the city is built on a gravelly plain, nearly 100 feet higher than the lake. The streets cross each other at right angles, and vary from 80 to 120 feet in width. Many of them are well paved and bordered with ornamental trees, and open delightful vistas of the blue and boundless waters. The principal business is transacted on Main street, which is 120 feet in width, and is lined with rows of brick and stone buildings, 3 or 4 stories high. Near the centre of the city is a public square of 10 acres, divided into four parts by intersecting streets. The most remarkable public buildings are the Merchants' Exchange, the court house, the Medical College, the American Hotel, the Weddell House, and the different

churches. The Western Reserve Medical College is a flourishing institution, having, in 1852, 6 professors and about 200 students. There is also a Homœopathic Medical College, founded in 1850. Cleveland has 25 churches, among which are 3 Presbyterian, 3 Episcopalian, 3 Methodist, 2 Baptist, 2 Catholic, besides 1 Jewish synagogue. It contains 6 banks, 1 theatre, and numerous newspaper offices. Ohio City, on the W. side of the river opposite Cleveland, is separately incorporated, and has a mayor and council. It contains several thousand inhabitants. The reported value of the exports and imports of Cleveland for 1851 was about \$14,000,000. The last year will doubtless show a large increase in this respect. In 1852, 137,926 tons of stone coal were received at this port. The number of vessels owned here (Cuyhoga district) June 30th, 1852, was over 100, with an aggregate of 38,238 tons enrolled and licensed. During the year 19 vessels, (7 of them steamers,) with an aggregate burden of 4718 $\frac{3}{4}$ tons, were admeasured. Arrangements have been made by the public authorities to supply the city with pure water from Lake Erie, to be raised by a steam-engine. From the level character of the grounds in the vicinity, a brick tower and tank will be resorted to as the only practical means to obtain the requisite head of water. The cost of the works is estimated in the engineer's report to the city council at \$380,766. Cleveland is lighted with gas, and several daily and weekly papers are published here. A railroad is in course of construction from this town to Sandusky, and another (the Cleveland and Mahoning) to Newcastle, Pennsylvania. Cleveland was settled in 1796, and incorporated in 1836. The population in 1840 was 6071; in 1850, 17,024; in 1853, (including Ohio City with 9992 inhabitants) 41,196.

COLORADO, an important river of Texas, and one of the largest which intersects the state. It rises in the table-lands in the N. W. part of the state, and flows in a general south-easterly direction. After passing by Austin City, Bastrop, La Grange, and Columbus, it enters Matagorda bay at the town of Matagorda. The whole length probably exceeds 900 miles. It is navigable by steamboats to Austin City, (about 300 miles,) in the higher stages of water. It is stated that they can ascend to La Grange, during at least six months of the year. Below Austin it flows through an alluvial plain, adapted to the growth of cotton, rice, and sugar.

COLORADO, or **RIO COLORADO**, *ree'o-ko-lo-rah'do*, (called also the Colorado of the West, to distinguish it from the Colorado of Texas,) a river of the United States, W. of the Rocky mountains, in which it takes its rise, by two branches, namely, Green and Grand rivers, which unite in about 35° 30' N. lat., and 112° 55' W. lon. Flowing at first S. W., then W., and lastly, almost due S., it falls into the head of the Gulf of California, in about 32° 10' N. lat., and 114° 20' W. lon. The entire length, including that of Green river, its longest branch, may be estimated at 1200 miles. Although the largest river W. of the Rocky mountains, with the exception of the Columbia, the quantity of water carried down its channel during the dry season is very small. It is called Rio Colorado, or "Red River," because, owing to the fall of rains upon a soil of red clay, its waters often assume that color.

COLORADO, a county in the S. E. central part of Texas, has an area of about 1020 square miles. It is intersected by the Colorado river. The soil near the river is alluvial, and extremely fertile; some parts of it are sandy

COLUMBIA, or **OREGON** river, the largest stream of water entering the Pacific ocean from the United States, rises in a small lake on the western slope of the Rocky mountains, in about 50° N. lat., and 116° W. lon. The first part of its course is toward the N. W., along the base of the above mountain range, till it receives its northernmost tributary, in about 52° 30' N. lat., after which it flows in a southerly direction, to the 46th parallel. From this point to the Pacific, it runs due W., forming the boundary between Washington and Oregon territories. Between the 46th and 48th parallels, the Columbia is very crooked, flowing in a serpentine course N. W., W. and S. W., about 140 miles, and then S. E. to Fort Wallawalla. It is a remarkably rapid stream, often passing through mountain gorges, and over falls. The tide sets up about 140 miles, to the foot of the Cascades, a series of rapids caused by the passage of the river through the Cascade range. Its principal affluents are McGillivray's, or Flat Bow river, entering it from the S. E., in British America; Clarke's, or Flat Head river, which joins it about 30 miles below, in Washington territory; and Lewis, or Snake river, flowing into it in about 46° 20' N. lat., and 118° 50' W. lon. Besides these, all of which rise in the Rocky mountains, there are the Okonagan, Wallawalla, Fall river, and Willamette, which unite their waters with those of the main stream. For 30 or 40 miles from its entrance into the Pacific, the Columbia forms a kind of bay, from 3 to 7 miles in breadth. At its mouth, it is estimated that over the flats which extend from

Point Adams on the S., nearly to Cape Disappointment, there are 20 feet of water at low tide, while the channel has a depth of 24 feet. Vessels of 200 or 300 tons burthen ascend to the Cascades. Above these, no portion of the river is navigable continuously for more than 20 or 30 miles, and then only by vessels of the smaller class. The Columbia was discovered by Captain Robert Gray, who entered it on the 11th of May, 1792, in the Columbia Rediviva, of Boston, Massachusetts. It was from this vessel that the river received its name. The first exploration of the Columbia river was made in 1804-5, by Captains Lewis and Clarke, under the direction of the United States Government.

COLUMBIA, DISTRICT OF. See DISTRICT OF COLUMBIA.

COLUMBIA, a county in the E. S. E. part of New York, has an area of about 620 square miles. It is bounded on the E. by the state of Massachusetts, and on the W. by the Hudson, and is drained by Factory creek, with its two branches, Kinderhook and Claverack creeks, and by Jansen's creek and several smaller streams, which afford valuable water-power. The surface in the E. part is uneven and hilly, but in the central and western portions nearly level. The soil is generally fertile, and well cultivated. Indian corn, oats, potatoes, and grass are the staples. In 1850 this county produced 560,079 bushels of corn; 972,015 of oats, (the greatest quantity produced by any county in the state, except Dutchess county;) 409,472 of potatoes; 526,450 of rye; 74,478 tons of hay, and 1,571,982 pounds of butter. There were 35 flour and grist mills, 12 cotton and 9 woollen factories, 6 iron foundries, 1 furnace, 1 forge, and 13 paper mills. It contained 68 churches, 8 newspaper offices, 8789 pupils attending public schools, and 560 attending academies and other schools. Iron and lead ores, limestone, slate, and marble, are among its mineral productions. The warm springs of New Lebanon, in the N. E. part, are much resorted to. The Hudson river is navigable for ships to Hudson, and for smaller vessels along the entire border. The Western railroad and the Hudson River railroad traverse this county; the Harlem railroad, and the railroad connecting Chatham Four Corners with Bridgeport, Connecticut, partly intersect it. Organized in 1786. Capital, Hudson. Population, 43,073.

COLUMBIA, a county in the E. central part of Pennsylvania, has an area of about 375 square miles. It is intersected by the North branch of the Susquehanna, and drained also by Catawissa and Fishing creeks. The surface is traversed by branches of the Alleghany mountains, namely, the Knob mountain, Catawissa mountain, and Muncy Hills. The soil of the valleys has a basis of limestone, and is very productive; some portions

of the upland are moderately fertile, the mountains are sterile. Grain, cattle, swine, iron, and lumber are the chief articles of export. In 1850 there were raised 199,530 bushels of corn; 153,760 of wheat; 160,364 of oats; 12,884 tons of hay, and 368,055 pounds of butter. There were 72 saw mills, 33 flour and grist mills, 16 stone quarries, 10 iron mines, 1 manufactory of agricultural implements, 4 iron foundries, 6 furnaces, 1 forge, 5 woollen factories, 2 paper mills, and 18 tanneries. It contained 38 churches, 3 newspaper offices; 4558 pupils attending public schools, and 60 attending an academy. Limestone and iron ore are abundant. The North Branch canal passes through the county. Columbia county was organized in 1813. Capital, Bloomsburg. Population, 17,710.

COLUMBIA, a county in the east part of Georgia, bordering on Savannah river, which separates it from South Carolina, contains about 500 square miles. The Little River forms the boundary on the north-west. The surface is uneven; the soil was once fertile, but has been injured by improvident cultivation. Cotton and maize are the chief productions. In 1850 this county produced 11,336 bales of cotton; 434,777 bushels of corn; 94,641 of oats; and 78,115 of sweet potatoes. There were 3 saw mills, 1 agricultural implement manufactory, and 1 tannery; 20 churches, and 490 pupils attending academies and other schools. The county contains granite, hornblende, and other primary rocks. A gold mine near Little river has been worked profitably. The Georgia railroad passes through the county. Formed in 1790, having been separated from Richmond county. Capital, Appling. Population, 11,959, of whom 3689 were free, and 8270, slaves.

COLUMBIA, a county in the N. E. part of Florida, bordering on Georgia, has an area of 2560 square miles. The Suwanee river forms its boundary on the N. W. and W., the St. Mary's on the N. E., and the Santa Fe on the S. The surface is nearly level, and partly covered with pine woods; the soil is mostly sandy. Indian corn, cotton, sugar, and sweet potatoes are the staples. In 1850 this county produced 112,090 bushels of corn; 802 bales of cotton; 179 hogsheads of sugar; and 51,973 bushels of sweet potatoes. COLUMBUS, a flourishing city of Georgia, and seat of justice of Muscogee county, on the left (E.) bank of the Chattahoochee river, 90 miles W. S. W. from Macon, 128 miles W. S. W. from Milledgeville, and 290 miles W. from Savannah. The city is laid out in oblong blocks of 4 acres, each of which is divided into eight square lots. It extends one mile and a quarter in the direction of the river, and about half a mile towards the interior. The court house is one

of the finest buildings of its class in the state. Many of the private houses are well built and pleasantly embowered with trees. Columbus contains 7 or 8 places of worship, 1 orphan asylum, a number of excellent schools, and 2 or 4 newspaper offices. A handsome bridge extends across the river and connects the city with the village of Girard. It is the third city of the state in population and wealth, and has an advantageous position for trade and manufactures. The river, which in this part of its course forms the boundary between Georgia and Alabama, is navigable for steamboats from this point to the Gulf of Mexico, during eight months of the year. These boats each carry about 900 bales of cotton on an average, and usually run from November to the end of June. The cotton shipped at this place amounts to about 80,000 bales in a year. The bed of the river opposite Columbus is filled by large and rugged rocks, which form a succession of rapids, and produce abundant water-power. Considerable capital has been invested in hydraulic improvements, and in the erection of manufactories, and it is thought Columbus will become one of the greatest manufacturing towns in the Southern States. A dam 500 feet long has been built across the river. There were in 1850, 4 cotton factories, 1 paper mill, 1 cotton-gin factory, 1 woollen factory, 2 iron foundries, several mills, 3 banks and 1 manufactory of farming implements. Columbus is the terminus of the Muscogee railroad, opened in 1852, which connects with other lines leading to Macon and Savannah. Another railroad has been commenced which leads from this place to some point on Mobile bay. Laid out in 1828. Population in 1850, 5942, in 1853, about 7000.

COLUMBUS, a small post-village of Columbia county, Florida, on the Suwanee river, 80 miles E. from Tallahassee.

COLUMBUS, a thriving post-town, capital of Lowndes county, Mississippi, on the left bank of the Tombigbee river, 140 miles N. E. from Jackson, and 28 miles below Aberdeen. The river is navigable at all seasons for steamboats, which make frequent passages between this place and Mobile. Columbus is surrounded by a fertile planting district, and has an active business. Large quantities of cotton are shipped here annually. It contains a court house, an United States land-office, several churches, and 1 newspaper office. Population in 1850, 2611; in 1853, about 3000.

COLUMBUS, a thriving post-village, capital of Colorado county, Texas, on the right bank of the Colorado river, 95 miles S. E. from Austin City. The river is a navigable stream flowing through an alluvial and extremely fertile valley or plain.

COLUMBUS city, capital of the state of Ohio, and seat of justice of Franklin county, is pleasantly situated on the E. bank of the Scioto river, 90 miles from its mouth, 116 miles N. E. from Cincinnati, 115 miles S. from Sandusky city, and 350 miles from Washington. Lat. 39° 57' N., lon. 83° 3' W. It is on the same parallel of latitude with Philadelphia, from which it is 450 miles distant. It was laid out in 1812, in the midst of an unbroken wilderness, and incorporated in 1816. The state house, a plain brick building, was erected in 1814, and the legislature met here for the first time in December, 1816. The site of Columbus is level; the streets are wide and laid out with great neatness and uniformity. Broad street, 120 feet wide, extends from east to west, and is crossed by High street, 100 feet wide, on which the principal business is transacted. At the intersection of these is a public square of 10 acres. The old state house, occupying one corner of this square, was entirely consumed by fire, February 1, 1852. A new capitol had previously been commenced, which is designed to be the finest building in the state, and will surpass in magnitude every other state house in the Union: it is 304 feet long by 184 wide, and covers an area of 55,936 square feet. The height to the top of the rotunda is 157 feet. The material is a hard, whitish limestone, resembling marble. The other remarkable edifices are the Ohio Lunatic Asylum, the Institution for the Blind, the Asylum for the Deaf and Dumb, and the Ohio Penitentiary. The Lunatic Asylum, founded in 1836, is a brick building, 296 feet in front, and 46 in depth, with wings 39 feet wide, extending back 218 feet; it cost about \$150,000, and can accommodate 350 patients. The number admitted in the year ending November, 1851, was 283, and 300 were discharged in the same period. The Institution for the Blind is a handsome brick building, three-quarters of a mile E. from the state house. In 1851 it had 69 pupils. The Asylum for the Deaf and Dumb is also a fine edifice, and surrounded by ornamental grounds. In 1851 there were 132 pupils. The Ohio Penitentiary, situated on the E. bank of the river, is an imposing edifice, of Ohio marble; together with the numerous workshops, it comprises a square of six acres. The whole number of prisoners in 1851, was 628. They are employed in useful manufactures, the proceeds of which are more than sufficient to meet the expenses

of the establishment. The Starling Medical College was recently established in this city, by means of a legacy of \$50,000 from the late Lyne Starling. It is a Gothic edifice, the walls of which are brick, with cornices, caps, arches, sills, &c. of whitish limestone, giving it a very tasteful appearance. The Olentangy river enters the Scioto about half a mile above Columbus.

Columbus is surrounded by a rich and populous country, and is a place of active business. The National road passing through it from E. to W. is a great thoroughfare of travel, and the Columbus feeder connects it with the Ohio canal. Other internal improvements recently finished have given an impetus to its growth, viz. the Cleveland and Columbus railroad; the Columbus and Xenia railroad, which connects it with Cincinnati; and the Central railroad, which extends to Zanesville, and will be continued to Wheeling. Several plank-roads and turnpikes also terminate here. The city is lighted with gas. It contains about 20 churches, 1 academy, several seminaries, and 5 banks. Two daily and several weekly newspapers are published in this town. There is a park of 40 acres on the N. side of Columbus, given to the public by one of the citizens. Eastwood, one mile E. from the city, contains the gardens of the Columbus Horticultural Society, occupying 10 acres, and the grounds of the Franklin County Agricultural Society. Population in 1840, 6048; in 1850, 18,138; and in 1853, about 25,000.

CONCHARDEE, a post-office of Talladega county, Alabama.

CONCORD, a post-township in Somerset

county, Maine, 50 miles N. by W. from Augusta. Population, 550.

CONCORD, a post-town, seat of justice of Merrimack county, New Hampshire, and capital of the state, is pleasantly situated on the right bank of the Merrimack river, 59 miles N. N. W. from Boston. Lat. 43° 12' 29" N., lon. 71° 29' W. It extends about 2 miles along the river, and three-quarters of a mile back. The streets are handsomely laid out, and many of them beautifully shaded. The hotels, most of the mercantile business, and a large portion of the manufactories are on Main street, which is nearly 100 feet broad and about 2 miles long. State street, also about 2 miles long, has on it the state prison, a massive granite structure, and the Methodist General Biblical Institute, founded in 1847. The state house stands in the midst of a beautiful common, planted with maple and elm trees. It is built of hewn granite, is 126 feet long, 49 feet wide, and 2 stories high above the basement. The other public buildings are the churches, 7 or 8 in number, 2 railroad depôts and 3 banks. Condition of the latter, December 1st, 1852: Debts due, \$389,115; specie, \$26,164; deposits, \$159,114; circulation, \$176,896. By the aid of locks, the falls in the Merrimack, opposite the town, furnish a vast hydraulic power, extensively employed in manufacturing. The business of Concord, which is important and rapidly increasing, centres principally in Boston. Formerly, it was carried on through the Merrimack river and Middlesex canal; but since the completion of the various railroads opening communication with nearly every section of the state, the canal has been abandoned. Nine newspapers are published here. Population of the entire township, 8576.

CONCORD, a post-township of Essex county, Vt., on the west side of Connecticut river, 40 miles E. by N. from Montpelier. Pop., 1153.

CONNASAUGA river, of Georgia, rises in Gilmer county, near the Blue Ridge. It flows first northward to the N. boundary of the state, then turns southward, and unites with the Coosawattee, near New Echota, to form the Oostenaula.

CONNEAUT creek, rises in the N. W. part of Pennsylvania, passes into the state of Ohio, and flows into Lake Erie, in Ashtabula county, 2 miles from the village of Conneaut.

CONNEAUT, a township in the W. part of Crawford county, Pennsylvania, drained by Shenango creek, 16 miles W. by N. from Meadville. Population, 1807.

CONNEAUT, a township forming the S. W. extremity of Erie county, Pennsylvania, drained by Conneaut creek, and intersected by the Beaver and Erie canal, 24 miles S. W. from Erie. Population, 1942.

CONNEAUT, a township forming the N. E. extremity of Ashtabula county, Ohio. Population, 2695.

CONNEAUT, a flourishing post-borough in the above township, on a creek of its own name, on the Cleveland and Erie railroad, 2 miles from Lake Erie, and 226 miles N. E. from Columbus. It is memorable as the landing-place of the party which made the first settlement of Northern Ohio, in 1796; and is sometimes called the Plymouth of the Western Reserve. The settlers were natives of New England. The harbor at the mouth of the creek is visited by the steamers of the lake, and is an important point of transhipment. A light-house has been erected here, and a number of vessels are owned in the town. The borough contains (1853) 4 or 5 churches, a classical academy, and about 1500 inhabitants.

CONNEAUTVILLE, a post-borough of Spring township, Crawford county, Pennsylvania, on the Erie Extension canal, 105 miles N. N. W. from Pittsburg. It is the most important town in the county, except Meadville the capital, and has considerable trade. Within a few years past it has increased rapidly in population and business. Population in 1851, about 1000.

CONNECTICUT river. This beautiful stream, the largest in New England, rises in the Highlands, between the United States and Canada, and flowing in a S. S. W. direction, divides Vermont from New Hampshire, passes through the western part of Massachusetts, and centre of Connecticut, as far as Middletown, where it infects to the S. E., discharging its waters into Long Island sound at Saybrook, lat. 41° 16' 15" N., lon. 72° 21' W. Its source, 1600 feet above the level of the sea, is a few miles N. of Connecticut lake, through which it passes. One of its branches

forms the boundary line between Canada East and New Hampshire, to the 45th parallel of N. latitude. The entire length of the river is rather more than 400 miles. Its breadth at the northern boundary of Vermont is 150 feet; 60 miles below, 390 feet; in Massachusetts and Connecticut, it varies from 450 to 1050 feet. The volume of the Connecticut is increased by a large number of affluent streams, the principal of which, on the W. are the Pasumpsic, emptying into it at the foot of Fifteen Mile falls; the White river, joining it at Hanover; the Deerfield and Westfield, rivers in Massachusetts, and the Farmington in Connecticut. Those most prominent on the E. are the Ammonoosuck, in New Hampshire, and Miller's and Chickopee rivers, in Massachusetts. Numerous bridges have been thrown across this stream; the one farthest down is at Hartford, 50 miles from its mouth. To this place it is navigable for vessels of 8 feet draft, and to Middletown for those drawing 10 feet of water. By the aid of canals around the falls, boats of 8 or 10 tons burthen are enabled to ascend as far as Newbury, at the mouth of Wells river, in Vermont, a distance of 270 miles from Long Island Sound. The Connecticut Valley, measuring in a straight line, is about 300 miles long, with a mean breadth of about 40 miles. It is no less celebrated for the fertility of its soil than for the variety of its enchanting scenery. Some portions are diversified with magnificent mountains and beautiful lakes; others consist of broad tracts of alluvion, skirting the stream. The latter are annually overflowed in the spring, and not unfrequently at other seasons, being thereby rendered extremely productive. Shad of a superior quality are taken in large quantities in the Connecticut; but the salmon, with which it formerly abounded, have entirely disappeared. The Indians called this river Quonektacut, signifying "long river," or, as some render it, "without end."

CONNECTICUT, one of the original states of the American confederacy, and the most S. W. of the New England states, is bounded N. by Massachusetts, E. by Rhode Island, S. by Long Island sound, and W. by New York. It lies between 41° and 42° 3' N. lat., and 71° 55' and 73° 50' W. lon.; being about 93 miles in length from E. to W., and 68 miles in its greatest breadth from N. to S.; including an area of about 4674 square miles, or 2,991,360 acres, of which 1,734,277 were improved in 1850.

Population.—The population of Connecticut is, in common with the other New England states, of more pure English origin than the other states of the Union, though of latter times an influx of emigrants from foreign countries has commenced. In 1790, there were in this state 238,141 inhabitants; 251,002 in 1800; 262,042 in 1810; 275,202 in 1820; 297,675 in 1830; 309,978 in 1840;

and 370,791 in 1850; of whom 180,001 were white males; 183,404 white females; 3749 colored males; and 3737 colored females. This population was divided among 73,448 families, occupying 64,013 dwellings. To confine one's attention to the increase of the residents of the state, would give a very inaccurate idea of the increase of the enterprising and sturdy sons of Connecticut; who has been sending forth all over the Union, leading merchants, statesmen, and lawyers, who have not only assisted in founding new states but are among the prominent men who direct the affairs of those already formed. And although she may also send forth some itinerant tradesmen and sharpers, these are not to be regarded as the fair representatives of the morals of Connecticut or New England. Of the population in 1850, 290,653 were born in the state; 39,883 in other states of the confederacy; 5091 in England; 26,689 in Ireland; 2027 in Scotland and Wales; 959 in British America; 1671 in Germany; 321 in France; 704 in other countries; and 794 whose places of birth were unknown. Number of deaths in the year ending June 1st, 1850, 5781, or nearly 18 in every 1000 persons. The number of paupers who received aid in the same period, were 2237, of whom 465 were foreigners. Of 192 blind, 15 were colored persons. Of 389 deaf and dumb, 4 were colored. Of 462 insane, 13 were colored. Of 300 idiots, 4 were colored.

Counties.—Connecticut is divided into 8 counties, viz. Fairfield, Hartford, Litchfield, Middlesex, New Haven, New London, Tolland, and Windham. Capitals, alternately Hartford and New Haven.

Cities and Towns.—New Haven is the largest town in Connecticut; population, 20,345. The other most important towns are Hartford, population 13,555; Norwich, 10,265; Danbury, 5964; New London, 8991; Bridgeport, 7560; Stamford, 5000; Stonington, 5431; Middletown, 4230; Litchfield, 3953; Fairfield, 3614; and Windsor, 3294.

Face of the Country.—Much of the surface of Connecticut is hilly and rugged, being crossed by several ranges of low mountains, or perhaps more properly, high hills. The Green mountains, entering the N. W. portion of this state from Massachusetts, extend in a succession of detached eminences through the W. part of Connecticut. Another range, in the N. of the state, intervenes between the Green mountains and the Talcet, or Greenwoods range, which cross the state from its northern boundary to near New Haven. Farther east are the Middletown mountains, extending parallel to the last-named ridge, between Hartford and a point east of New Haven. Crossing the Connecticut river, we come upon a ridge that appears to be a continuation of the White mountains of New Hampshire. The Green mountain

ranges, and the mountains east of the Connecticut, are primitive, or granitic; while the other ranges, near the west bank of the Connecticut, are composed of trap rock, more precipitous on the western than on the eastern declivity. There are, between these ranges, valleys and plains of greater or less extent, and, those on the river intervals particularly, of great agricultural capabilities. The channel of the Connecticut, in the lower part of its course, is cut through a primitive formation. The trap rocks generally rest on a base of sandstone.

Minerals.—Public attention has been much excited, in this period of mineral development, by the re-discovery, near Middletown, of an argentiferous lead mine, which appears to have been worked previously to the Revolution. The fortunate (if we may call that fortunate which was the result of scientific skill) re-discoverer, was Eugene Frankfort, M. D., a French mineralogist and chemist, a pupil of the celebrated Liebig. Dr. Frankfort was led to the discovery by the appearance of certain rocks, which indicated mineral treasures, near the mouth of what proved to be a lead mine, that appears to have been closed for a long period. The archives of the past have been searched, and proof is thought to have been found that Governor Winthrop knew of and worked this mine, which it is supposed he closed to elude the vigilance of the crown officers. Independently of its richness in lead, the ore of this mine is largely argentiferous. The region around Middleton is rich in lead, zinc, cobalt, and copper, and companies are forming, with large capitals, to work the different mines.

Rivers, Bays, &c.—Long Island sound washes the entire southern boundary of the state. New Haven bay is the largest bay opening into the sound, though there are a number of small ones. The Connecticut river, entering the state from Massachusetts, traverses its whole extent from N. to S., and divides it into two nearly equal portions. This river is navigable 50 miles for vessels drawing 8 feet water. The Housatonic crosses the western part of the state, first in a S. W. and then in a S. E. direction, and is navigable for small vessels 12 miles. The Thames, in connection with its main branch, the Quinebaug, traverses the E. part of the state, and is navigable 14 miles to Norwich. New London, on this river, has an excellent harbor. These rivers all empty into Long Island sound. The Farmington river enters the Connecticut from the W. above Hartford. The Shetucket, on the east, unites with the Quinebaug to form the New Thames. The smaller rivers and streams abound in falls and rapids, which afford valuable water-power.

Objects of Interest to Tourists.—Though Connecticut has no high mountains, or any

scenery reaching the sublime, she has much that is highly picturesque in various parts. The shores of the Connecticut river are often bold and precipitous; sometimes with rugged cliffs on one side, while the other spreads into beautiful meadows, terminated by hills or mountains at no great distance. Romantic hills and low mountains diversify the whole of that part W. of the Connecticut river and some of the eastern portion. "At Rocky Hill, near Hartford," says Goodrich, "in a quarry of building stone, the junction of sandstone and trap is conspicuously exhibited. Most of the ridges are parallel, and their western parts generally precipitous, so that in many places the country seems divided by stupendous walls. Immense masses of ruins are collected at their feet. These consist sometimes of entire cliffs and pillars of many tons weight, which are thrown off by the freezing of water in the gullies, and often fall with a mighty concussion into the valleys. On the opposite side, there is generally a gradual slope, covered with trees." "In Meriden," (we quote the same author,) "is a natural ice-house, in a narrow defile between ridges of greenstone. The defile is choked up with the ruins of the rocks which have fallen from the ridges, and form a series of cavities overgrown with trees, and strown with thick beds of leaves. The ice is formed in the cavities of these rocks, and remains the whole year. A portion of it melts during summer, causing a stream of cold water perpetually to flow from the spot. The space between the mountains is called Cat Hollow, and presents the most wild and picturesque scenery in the state." Mount Tom, near Litchfield, is 700 feet high, and Bald mountain, near the Massachusetts line, is the highest elevation in the state W. of the Connecticut river. The chalybeate springs of Stafford, in the neighborhood of Bald mountain, are the most noted in the state. There is a waterfall near Norwich, that Bartlett has thought worthy of a place in his Views of American Scenery. Sachem's Head, Say Brook, and Guilford, on Long Island, are places of resort in the bathing season.

Climate, Soil, and Productions.—The climate of Connecticut, like that of New England in general, is severe in winter, though vegetation, owing to its somewhat more southern latitude, commences a little earlier in the spring than in the other Eastern States. It is liable, in March and April, to chilling N. E. winds from the ocean, but the same proximity to the sea mitigates the heats of summer and renders the nights pleasant. The soil in the valleys of the Connecticut, Quinipiac, Housatonic, and other streams, is generally very fertile, especially that of the Connecticut. The N. W. and E. parts of the state are best adapted to grazing, but the W. has many fertile districts suited to raising grain. Wherever the soil admits of it, it is skillfully

tilled, and is generally made to produce the most it is capable of with our present system of culture. Connecticut yields most abundantly butter and cheese, live stock, Indian corn, oats, rye, market products, tobacco, wool, and Irish potatoes; she also produces wheat, peas, beans, barley, buckwheat, hay, grass-seeds, and beeswax and honey in considerable quantities, and some sweet potatoes, wine, hops, flax, silk, and maple sugar. In 1850 there were in the state 22,445 farms, occupying 1,768,168 acres of improved land, or less than an average of 80 acres to each farm, which produced 41,762 bushels of wheat; 600,893 of rye; 1,935,043 of Indian corn; 1,158,738 of oats; 2,689,725 of Irish potatoes; 229,297 of buckwheat; 30,449 of grass-seeds; 1,267,264 pounds of tobacco; 497,454 of wool; 6,498,119 of butter; 5,363,277 of cheese; 50,796 of maple sugar; 93,304 of beeswax and honey; 516,131 tons of hay; live stock valued at \$7,467,490; orchard products, at \$175,118; market products, at \$196,874, and slaughtered animals, at \$2,202,266.

Manufactures.—Connecticut has long been celebrated for the itinerant venders of its manufactures, who have travelled over our country in all directions, and have even penetrated the neighboring countries of Mexico and Canada. Though its wares are generally fabricated in small quantities by individuals with trifling capital, yet the aggregate amount is great, placing Connecticut among the first of the manufacturing states of the Union. The wooden clocks of this state note the lapse of time to the remotest settlers of our Western States, and have of later years been exported even to Europe. Wooden, iron, copper, tin, and brass ware; hats, boots, shoes, coaches, combs, axes, buttons, saddlery, paper, and agricultural and mechanical apparatus, are all largely manufactured in this state. Extensive factories of cotton and woollen goods have lately sprung into existence, and the following figures will show that Connecticut does her full proportion in the production of these important articles. She is nearly equal to New York or Pennsylvania in the absolute amount of those articles produced, and, compared with her population, greatly superior, while she is only inferior to Pennsylvania in the relative amount of iron manufactured. In 1850, there were 3913 manufacturing establishments, producing annually \$500 and upwards; 128 of these were cotton factories, employing capital to the amount of \$4,219,100, and 2707 male, and 3478 female hands; consuming \$2,500,602 worth of raw material, and producing 51,780,700 yards of stuffs, and 950 pounds of yarn, worth a total value of \$4,257,522; 149 woollen factories, employing a capital to the amount of \$3,733,950, and 2907 male and 2581 female hands; consuming raw material worth \$3,325,709, and producing

9,408,777 yards of cloth, worth \$6,465,216; 115 tanneries employing \$360,500 of capital, consuming raw material worth \$453,854, and producing a total value of \$731,000; 91 furnaces, forges, &c., employing \$1,335,900 of capital, and 1464 male and 7 female hands, consuming raw material worth \$993,374, and producing 30,955 tons of castings, wrought iron, &c.; \$15,500 were invested in the manufacture of spirituous and malt liquors, consuming 20,000 bushels of Indian corn, 20,000 of rye, 10 hogsheads molasses, and 2 tons of hops; and producing 130,000 gallons of whisky, wine, &c., and 1200 of rum; and homemade manufactures were produced, valued at \$188,996.

Commerce.—The foreign commerce of Connecticut is nearly all carried on through the ports of New York and Boston. She has, however, some direct trade with the West Indies, and an active coasting trade. Her domestic trade consists principally in the export of her manufactures. There were 9 arrivals in the ports of Connecticut from the whale fisheries in 1852, bearing 802 barrels of sperm and 12,065 of whale oil; indicating a decline in the trade, as in 1851, 4387 gallons of sperm and 99,124 of whale oil were imported. The foreign imports for the fiscal year 1852 amounted to \$394,675, and the exports to \$506,174; tonnage entered, 30,850; cleared, 37,744; of which about one-third was foreign; tonnage of the several districts, 125,088 $\frac{2}{3}$; of which 25,992 $\frac{1}{3}$ was engaged in the whale fishery, 6764 $\frac{2}{3}$ in the cod, and 1554 $\frac{2}{3}$ in the mackerel fishery; and number of vessels built 65, with an aggregate tonnage of 9034 $\frac{2}{3}$. Of the vessels built, 6 were steamers.

Internal Improvements.—Connecticut is threaded in all directions by railways, connecting her principal towns with each other, and with New York and Boston. Lines of railway coast Long Island sound from New York to New London, from which branches diverge to the N. from Bridgeport, New Haven, New London, Stonington, and smaller places, uniting the towns just named with Albany, Pittsfield, Winsted, Tarriffville, Hartford, Springfield, Palmer, Worcester, Providence, and various intermediate places. The Providence, Hartford, and Fishkill railway is completed for 51 miles. Several branch railways diverge from the main tracks to Danbury, Collinsville, and other villages. In January, 1853, there was a grand total of 647 miles of railway in operation in Connecticut, and 198 miles in course of construction. Of the lines projected, one is an airline railroad, between Boston and New York.—See *Table of Railways*, APPENDIX.

Education.—This state has long been celebrated for the attention she has given to the subject of popular instruction. She had, in 1852, a school fund of \$2,049,482, originally derived from the sale of certain public lands

in Ohio, the property of the state. Although this fund has distributed among the schools of the state nearly \$4,000,000 since its formation in 1795, it has nearly doubled its principal. In 1852, the revenue distributed among the different schools was \$132,792.80. The number of children in 1851, between 4 and 16 years, was 94,852. The Legislature appropriated \$10,000 in 1849 for the formation of a state normal school for the instruction of youths intending to become teachers, which had, in 1850, 154 pupils. These are educated gratis, but the number at one time in the institution must not exceed 220. There are schools connected with this for exercising the pupils in the practice of teaching, which had 400 pupils in 1851. An active zeal is manifested in this state for improvement in the modes of instruction, and, to promote this end, societies of teachers are formed, and state and county conventions held. Yale College, the most numerously attended of any college in the United States, had 440 students in 1852, and 51,000 volumes in its library. This is one of the oldest colleges in the country, and has sent forth some of the most distinguished scholars, divines, and statesmen of the Union. It is located at New Haven. There are two other colleges in Connecticut, with an aggregate of 195 students and 27,000 volumes in their libraries. There are also 2 theological schools with 55, 1 law school with 26, and 1 medical school with 37 students.—See *Table of Colleges*, APPENDIX.

Religious Denominations.—Of the 719 churches in Connecticut in 1850, the different sects of Baptists owned 113; the Congregationalists, 252; the Episcopalians, 100; the Methodists, 178; the Presbyterians, 17; the Roman Catholics, 12; and the Universalists, 22. The rest belonged to the Africans, the Christians, the Free Church, the Friends, Mariner's Church, Scandinavians, Second Advent Union Church, and Unitarians. These give an average of one church to every 515 persons. Value of church property, \$3,554,894.

Public Institutions.—Connecticut has manifested the same wise and benevolent care for her erring and unfortunate children as for literary instruction to the virtuous, healthy, and sane. An act was passed in 1851 for the establishment of a State Reform School, for the instruction and reformation of juvenile offenders under 16 years of age. The state appropriates \$10,000, a like sum to be contributed by individuals. The Retreat for the Insane at Hartford receives a liberal contribution from the state. Since its establishment in 1824, it has received 2318 patients, of whom 1203 have recovered, 712 improved, and 222 died; April 1, 1852, there were 181 patients in the institution. The expenditure for the year was \$28,637.50; received for the support of patients, \$31,341.50. The Deaf and Dumb Asylum at Hartford was the

first institution of the kind established in the United States. Appropriations are made for the benefit of their own citizens in this institution, severally by Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and South Carolina. Of the 207 pupils in the institution in 1852, May 1, 16 were supported by the State of Maine, 23 by New Hampshire, 18 by Vermont, 72 by Massachusetts, 6 by Rhode Island, 29 by Connecticut, and 6 by South Carolina. The charge for tuition, board, &c. is \$100 per annum, an extra charge being made during sickness. The state prison is at Wethersfield, and in March 31, 1852, had 171 inmates, 116 of whom were white males, 10 females; 42 colored males, and 3 colored females. The male convicts are employed in manufacturing shoes, cabinet-ware, and cutlery, and the females in cooking, washing, mending, and boot-binding. There is a library connected with the institution for the benefit of the prisoners, who are also instructed in the elements of knowledge. There is a Sunday-school also in the prison. The receipts for 1852 exceeded the expenditures by more than \$4000.

Government, Finances, &c.—The governor of Connecticut is elected by the people annually, and receives \$1100 per annum; a lieutenant-governor, who is also president of the senate, is elected in a like manner, and for the same period, and he receives \$300 per annum. The senate, which consists of 21 members, and the house of representatives, of 215 members, are both elected annually by popular vote. Connecticut sends four members to the national house of representatives, and is entitled to six electoral votes for president of the United States. Any white male, 21 years of age, who has resided in the town (township) where he wishes to vote, six months next preceding the election, or four months, if previously admitted to the electoral oath, and of good moral character, is a constitutional voter. The judiciary consists—1. Of a supreme and superior court, composed of one chief, and four associate judges, receiving from \$1250 to \$1300 per annum. One term of the superior court is held triennially in each county by a single judge; and the supreme court, comprised of five judges, meets annually in each county. The judges in this court cannot hold their seats after the age of 70. The judges of the supreme court hold the circuits of the superior court, one judge holding such superior court quarterly each year. 2. Of county courts, held in each county three times a year by one judge, appointed annually by the legislature. The assessed value of property in Connecticut in 1850, was \$119,088,672; the state debt \$91,212, (in 1852;) and the ordinary expenses, exclusive of debt and schools, \$115,000. There were 53 banks in April, 1852, with an aggregate capital of

\$12,500,808, a circulation of \$7,118,625, and \$825,379 in coin.

History.—The early history of Connecticut is fraught with adventure, savage forays, and abundance of incident for the novelist; but this is not the place to dwell upon such themes, and we enter at once upon a few brief facts. Though the Dutch had erected a trading house at Hartford as early as 1631, the English colony (an off-shoot of the Plymouth) at Windsor is generally considered the first permanent settlement in Connecticut. Two years after, Hartford was founded by English emigrants, Wethersfield in 1636, and New Haven in 1638. In 1637 the settlers in Connecticut were much annoyed by the Indians, several persons killed and animals destroyed at Wethersfield and Saybrook. Shortly after, however, the savages were completely subdued in engagements at Mystic and Fairfield, and never more gave the whites of this state serious trouble. Some difficulties occurred between the Dutch of New York and the people of this colony, as to the right of possession, which was terminated by a treaty in 1650. New Haven was for several years a separate colony; and when Charles II., in 1665, granted a charter to Connecticut, she refused her adhesion for a time, but at length submitted, and the Connecticut colonies were consolidated into one government. Sir Edmund Andros was sent over by King James II., in 1686, to resume the charters granted to the colonies. The assembly was in session on his arrival at Hartford, and while the subject was under consideration, the lights were suddenly extinguished, and the charter secretly conveyed away and concealed in the cavity of an old oak. This tree is still in existence, and is called the "*Charter Oak.*" After the deposition of Andros, the charter was resumed, and continued in force till 1818, when the present constitution was adopted. Connecticut early took an active part in the cause of American independence, and throughout the entire contest sustained an eminent distinction both for the wisdom of her statesmen and the bravery of her soldiers.

CONNECTICUT FARMS, OF UNION, a small village of Essex county, New Jersey, 6 miles S. W. from Newark.

CONNELLSVILLE, a post-township of Fayette county, Pennsylvania, on the Youghiogheny river, 40 miles S. E. from Pittsburg. Population, 1553.

CONNELLSVILLE, a thriving post-borough in the above township, on the right bank of the Youghiogheny river, 180 miles W. by S. from Harrisburg, contains 4 churches. A bridge connects it with New Haven on the opposite bank of the river. There is a paper-mill and large woollen factory and several iron foundries in the vicinity.

COOK, a county in the N. part of Texas, bordering on Red river, which separates it from the Indian territory, contains about 5800 square miles. It is intersected by the Brazos river, and drained by the sources of the Elm fork and West fork of the Trinity river. A large tract of forest, called the Upper Cross Timbers, extends across the county in a N. and S. direction. Indian corn, sweet potatoes, and cattle are the staples. In 1850 the county produced 5870 bushels of corn; 437 of sweet potatoes; and 5249 pounds of butter. Capital, Cook Court House. Population, 220, of whom 1 was a slave.

COOK, a county in the N. E. part of Illinois, bordering on Indiana and Lake Michigan, has an area of 1027 square miles. It is intersected by the Des Plaines, Calumet, and Chicago rivers. Lake Michigan washes the eastern border. The surface is slightly undulating, and in some parts level. The prairies of this county are large, generally low and flat, and are interspersed with small groves of timber. The soil is deep, and highly productive. The flat land was formerly thought unfit for tillage, but it is now much cultivated, and commands the highest prices. Indian corn, wheat, oats, hay, and butter are the staples. In 1850 the county produced 429,513 bushels of Indian corn; 238,952 of wheat; 403,234 of oats; 48,449 tons of hay; 27,954 pounds of wool; and 656,690 pounds of butter. The quantities of oats, hay, and butter were the greatest produced by any county of the state. It contained 37 churches and 21 newspaper offices. There were 2950 pupils attending public schools. The county is intersected by the Illinois and Michigan canal; by the Chicago and Galena railroad; the Chicago and Rock Island railroad, and by the Michigan Central railroad. Cook county is the most populous and important in the state, containing the city of Chicago, the commercial capital of Illinois. Organized in 1831, and named in honor of Daniel P. Cook, a member of Congress from Illinois, who obtained from the United States a grant of 300,000 acres of land, for the purpose of aiding in the construction of the canal above named. Population, 43,385.

CO-OS', a county forming the N. extremity of New Hampshire, has an area of about 1950 square miles. It is bounded on the W. by the Connecticut river, and is drained by the Androscoggin, Saco, Amonoosuck, and

other smaller streams. The Connecticut river has its source in this county, near its N. extremity. The surface is generally rough and mountainous, and not fitted for cultivation; but along the banks of the Connecticut and some other streams it is comparatively fertile. The celebrated White mountains, among which the Saco river has its principal sources, are situated in the S. part of this county. Indian corn, oats, potatoes, and grass are the staples. In 1850, the county produced 40,376 bushels of corn; 99,773 of oats; 256,928 of potatoes; 30,795 tons of hay, and 358,445 pounds of butter. There were 3 woolen factories, 10 grist mills, 1 foundry, 22 saw mills, 5 starch factories, and 5 tanneries. It contained 16 churches, 2 newspaper offices; 3594 pupils attending public schools, and 165 attending academies or other schools. The Great Atlantic and St. Lawrence railroad passes through the S. part of Coos. Organized in 1803, and named from the pine forests with which a portion of the county is covered; *coos*, in the Indian language, signifying "pines." Capital, Lancaster. Population, 11,853.

COOSA, a river of Georgia and Alabama, is formed by the confluence of the Etowah and Oostenaula, which unite at Rome, in Georgia. It flows south-westward to the Ten Islands near Fort Struther, in Alabama, after which its general course is nearly S. until it unites with the Tallapoosa and forms the Alabama, about 10 miles N. from Montgomery. Its length is estimated at 350 miles. Several small steamboats navigate this river between Rome and the Ten Islands, a distance of 180 miles. Between the latter point and Wetumpka the channel is obstructed by numerous shoals which prevent navigation, excepting the passage of flat-boats down the stream.

COOSA, a county in the E. central part of Alabama, has an area of 860 square miles. Its entire boundary on the S. W. is formed by the Coosa river, from which the name is derived: it is also drained by Sochatopatoy and other creeks. The surface is elevated, and in some parts broken. The soil is fertile and supplied with perennial springs of the purest water. It is particularly adapted to pasturage and to the cultivation of grain. In 1850, Coosa county produced 5524 bales of cotton; 418,991 bushels of corn, and 126,233 of sweet potatoes. There were 8 grist and saw mills, 3 tanneries, and 1 cotton factory. It contained 61 churches, 2 newspaper offices, 381 pupils attending public schools, and 150 attending academies or other schools. Quarries of statuary granite and fine marble have been opened in the county. The following interesting extract relating to the mineral productions of this county, is from a letter of one of our correspondents, a gentleman of the highest respectability, residing at Wetumpka:

"About a mile from the village of Eradford there is found the best statuary granite yet discovered in the United States. It is of the most beautiful gray colour, easy of access, being almost entirely above the surface of the ground, and what, according to my information, is an exceedingly rare excellence, it may be split in any direction the entire length of the block, and is capable of being worked into any desirable shape or size. In addition to this, a plank-road passes by the quarry. We have specimens in several buildings here and in Montgomery, of the New Hampshire granite, between which and the Coosa granite there is no comparison. In the northern part of the county there is also a very superior marble, equalling, in the opinion of judges, the best Italian marble, a specimen of which may be seen in the Washington Monument. It is so far superior to any thing yet seen in the United States, that I noticed in some of the Northern papers an insinuation, if not a direct charge, that it was an imposition of Italian for American marble; when in truth it was quarried by Mr. Nix, our own townsman, out of his own quarry, and polished and lettered within one quarter of a mile from where I now write. Indeed, I have seen richer specimens often from the same quarry. All the tombstones and all the marble used in building or furniture, in the southern part of this state, is obtained from this quarry. It extends from the northern part of Coosa through Talladega into Benton county. Lead and iron ore are also found in this county." The streams of the county furnish an ample supply of motive power. Large steamboats can navigate the Coosa river as high as Wetumpka. A plank-road is in progress of construction from this town to the Tennessee river. Coosa county was formed out of part of the Creek Indian territory, and organized about 1834. Capital, Rockford. Population, 14,543, of whom 10,423 were free, and 4120, slaves.

DAN RIVER, of Virginia and North Carolina, rises in Patrick county, of the former state, at the S. E. base of the Blue Ridge, and flowing first S. E., it enters North Carolina, in Surrey county. It then pursues a general easterly direction, near the boundary between the two states, which it crosses no less than five times, and after a tortuous course of about 200 miles, it unites with the Staunton, or Roanoke, at Clarksville, in Mecklenburg county, Virginia. It is navigable by batteaus to Danville, Virginia, which is the principal town on its banks. The water-power at Danville is very abundant, but is not yet employed to any great extent. The area drained by this river is estimated at 4000 square miles.

DAN'S FORK, of Black river, Missouri. See **BLACK RIVER**.

DANVILLE, a thriving post-village of Livingston county, New York, on Canaseraga creek, about 40 miles S. from Rochester. It contains churches of 4 or 5 denominations, a bank, and 3 or 4 newspaper offices. The falls of the creek at this place furnish valuable water-power, which is employed in mills and factories of several kinds. Dansville is connected with the Genesee Valley canal by a branch canal about 10 miles long. Population in 1853, estimated at 2500.

DANVILLE, Bucks county, Pennsylvania. See **DANBOROUGH**.

DANVILLE, a flourishing post-borough, capital of Montour county, Pennsylvania, on the right bank of the N. Branch of the Susquehanna river, about 12 miles above Sunbury, and 67 miles N. by E. from Harrisburg. It is a place of great activity, and is especially noted for the manufacture of iron. By its position on the N. Branch canal, in the vicinity of rich and inexhaustible mines of iron ore and anthracite coal, Danville possesses great advantages for this branch of industry. The celebrated Montour's Ridge, which extends 21 miles along the river, in the immediate vicinity of this town, abounds in excellent iron ore and limestone, which is used as a flux in the process of smelting. Since the anthracite coal has been used as a fuel in the iron furnaces, the prosperity of the region in which these three substances are abundant, has received a rapid development: 5 blast furnaces, 3 rolling mills, and several foundries are kept in constant operation. The town contains a bank, and an academy. Two weekly newspapers are published here. The Montour Iron Works for the manufacture of railroad iron are among the most extensive establishments of the kind in the United States. A bridge connects the opposite banks of the river at this place. Danville was settled about 1780; the seat of justice was established here from 1813 to 1845, when it was removed to Bloomsburg by the vote of the citizens, and the county of Montour was formed. Population in 1850, 3302.

DANVILLE, the principal village of Pittsylvania county, Virginia, on the Dan river, 5 miles from the North Carolina line, and 168 miles W. S. W. from Richmond. The town is pleasantly situated on high ground, near the

head of navigation, and is a place of active business. It is surrounded by a fertile farming region, which abounds in stone coal, iron ore and limestone. The canal which has been constructed around the falls at this place affords abundant water-power. A railroad is extending from Richmond to Danville. The village has 4 or 5 churches, 3 academies, 2 banks, and several iron foundries and mills. Population in 1850, 1514.

DAUCHITE, also written **DORCHEAT**, a bayou of Arkansas and Louisiana. Rising in the S. W. part of the former state, it flows southward into Louisiana, and forms the W. boundary of Claiborne parish until it falls into Lake Bistineau, about 8 miles S. W. from Minden. Steamboats navigate the lower part of this bayou.

DAUPHIN, a county in the S. E. central part of Pennsylvania, has an area of 530 square miles. Susquehanna river forms its entire boundary on the W. and S. W., Mahantango creek washes its northern border, and the county is traversed by Swatara river, and by Wiconisco, Powell's, Clark's, and Paxton creeks. The surface is mostly occupied by parallel mountain ridges and intervening valleys, the general direction of which is N. E. and S. W. The Kittatinny, or Blue mountain, raises its crest across the middle of the county; the ridges which traverse the N. W. part bear the local names of Second, Third, Peter's, Berry's, and Mahantango mountains. South mountain extends along the S. border of the county. The soil has almost every variety; the valley in the southern part is of limestone formation, and is extremely fertile. Indian corn, wheat, oats, potatoes, hay, and butter are the staples. In 1850 there were raised 340,755 bushels of corn; 308,879 of wheat; 370,027 of oats; 115,827 of potatoes; 27,814 tons of hay, and 575,668 lbs. of butter. There were 37 flour and grist mills, 2 coal mines, 8 manufactories of agricultural implements, 4 iron

furnaces, 2 foundries, 2 forges, 1 rolling mill, 1 powder mill, 5 woollen factories, and 15 tanneries. It contained 84 churches, and 7 newspaper offices. There were 6333 pupils attending public schools, and 36 attending academies or other schools. Extensive mines of anthracite coal are worked in the N. part of the county. Iron is also found. The Susquehanna canal extends along the W. border of the county, and the Union canal passes through the S. part. It is traversed by the Lancaster and Harrisburg railroad, and by another, not yet finished, connecting Harrisburg with Reading. The county was organized in 1785, and named as a compliment to the Dauphin of France, afterwards called Louis XVII. Harrisburg is the county seat and capital of the state.

DAUPHIN, a thriving post-borough of Middle Paxton township, Dauphin county, Pennsylvania, on the Susquehanna river and the Pennsylvania canal, 10 miles N. by W. from Harrisburg. Stony creek enters the river at this point. Population, 650.

DAVENPORT, a post-township of Delaware county, New York, 13 miles N. from Delhi. Population, 2305.

DAVENPORT, a flourishing city, capital of Scott county, Iowa, is finely situated on the Mississippi river, at the foot of the upper rapids, opposite the town of Rock Island, 330 miles above St. Louis, and 60 miles E. from Iowa City. It has advantages which indicate that it will continue to grow in extent and importance. Its prosperity is increased by the certainty of a connection with the East by means of the Chicago and Rock Island railroad, commenced in 1851. Another railroad is projected from this point to the Missouri river. During low water the navigation is obstructed by the rapids, which extend 20 miles above this place. The project of bridging the "great river" at this point is exciting considerable attention. Two or three newspapers are published here. Stone coal is so abundant and cheap in the vicinity, that steam-power is chiefly used for manufacturing purposes. Davenport is built at the foot of a bluff, which rises gradually from the river, with a chain of rounded hills in the background. The scenery around the town is scarcely surpassed by any on the river. It was first settled in 1837, and is now incorporated as a city. Population in 1853, estimated at 4500.

DAYTON, a pleasant and flourishing post-village of Marengo county, Alabama, 76 miles S. from Tuscaloosa. It owes its growth and prosperity to the salubrity of the situation and its proximity to a fertile cotton-growing region, known as the "Canebrake." Many wealthy planters, who own estates in the vicinity, have fixed their residences in this place, for the benefit of good society and good schools. Several churches and flourishing seminaries have in consequence been established here, and the village is rather eligible as a retreat from business than as a place of trade.

DAYTON, a flourishing city, capital of Montgomery county, Ohio, is situated on the left or E. bank of the Great Miami, at the mouth of the Mad river, and on the line of the Miami canal, 52 miles N. N. E. from Cincinnati, 67 miles W. by S. from Columbus, and 460 miles from Washington. Lat. 39° 44' N. ; lon. 84° 11' W. This is the fourth city of Ohio in respect to population and wealth, and surpasses all other Western towns of equal size in the variety and extent of its manufactures. It is the terminus of six railway lines, viz. the Mad River and Lake Erie, the Dayton and Cincinnati, the Dayton and Western, the Greenville and Miami, the Dayton and Xenia,

and the Dayton and Michigan, leading to Toledo. All of these are completed except the last. A continuous line of railroad is under contract from the Ohio river at Wheeling, to the Mississippi opposite St. Louis, on which Dayton is one of the principal points. Nine Macadamized or hard gravelled roads radiate in all directions from Dayton, with an aggregate length of more than 250 miles. The town is laid out with streets 100 feet wide, crossing each other at right angles. The public buildings are remarkably splendid, and excellent taste is displayed in the construction of the private residences, and in the embellishment of the adjoining grounds. The county court house, built of compact, white marble, quarried in the vicinity, is perhaps the most elegant edifice of its class in the Western States. The style of architecture is that of the Parthenon, with slight modifications. The dimensions are 127 feet in length, by 62 in breadth. It cost about \$100,000. Dayton contains about 15 churches, a public library, 3 banks, 2 market houses, 6 well-organized free schools, and the Cooper Female Academy, a large and flourishing institution, and 7 or 8 newspaper offices. The streets, stores, and public buildings are lighted with gas. Quarries of excellent limestone are worked in the vicinity, and furnish material for the finest buildings of Cincinnati. The abundant water-power which Dayton possesses is one of the chief elements of its prosperity. In 1845 an hydraulic canal was made, by which the water of Mad river is brought through the city. It is the seat of extensive manufactories of railroad cars, of wrapping and printing paper, and of stoves and hollow ware. The annual products of these three branches are valued at \$500,000. It also contains several cotton factories, woollen factories, oil mills, and flouring mills. Dayton was first settled in 1796, and incorporated in 1805. In 1829 the Miami canal was opened from Cincinnati to this point, from which event its prosperity may be dated. It contained in 1830, 2954 inhabitants; in 1840, 6067; in 1850, 10,976, and according to the census just taken, (in 1853,) 16,562.

DE KALB, a county in the N. E. part of Alabama, bordering on Georgia, is about 50 miles long, and has an area of 775 square miles. It is intersected by Wills creek, an affluent of Coosa river, dividing the county into nearly equal portions. This creek flows through a valley of the same name, about 60 miles long, and 5 miles wide, which is enclosed by Lookout mountain on the S. E. and Sand mountain on the N. W. The soil of the valley is fertile and much improved. Grain and cattle are the staples. In 1850 there were raised 363,225 bushels of Indian corn; 75,550 of oats, and 34,377 of sweet potatoes. There were 4 grist and saw mills, and 2 tanneries. It contained 22 churches, and 565 pupils attending public schools. Water-power is abundant. The county is noted

for its romantic scenery. Capital, Lebanon. Population, 8245; of whom 7739 were free, and 506, slaves.

DE KALB, a county in the N. central part of Tennessee, has an area estimated at 300 square miles. It is intersected by Caney fork, an affluent of Cumberland river, and also watered by several creeks which furnish motive-power. The surface is agreeably diversified; the soil productive. Indian corn, tobacco, and cattle are the staples. In 1850 this county produced 417,251 bushels of Indian corn, and 57,361 pounds of tobacco. It contained 12 churches; 1912 pupils attending public schools, and 70 attending academies and other schools. The turnpike from Lebanon to Sparta passes through the county. Capital, Smithville. Population, 8016, of whom 7348 were free, and 668, slaves.

DE KALB, a county in the N. E. part of Indiana, bordering on Ohio, contains 346 square miles. It is drained by the St. Joseph's river of the Maumee, and by Cedar creek. The surface is mostly undulating, and the soil fertile. The staples are wheat, corn, oats, and grass. In 1850 this county produced 139,986 bushels of corn; 75,995 of wheat; 34,366 of oats, and 4660 tons of hay. It contained 2 churches, and 1600 pupils attending public schools. Organized in 1836. Capital, Auburn. Population, 8251.

DE KALB, a county in the N. part of Illinois, has an area of 648 square miles. It is drained by Sycamore and Indian creeks, affluents of the Kishwaukee and Fox rivers. The surface is undulating and the soil good. The greater part of the county is prairie, with some good timber. Wheat, Indian corn, oats, and hay are staples. In 1850 this county produced 221,796 bushels of wheat; 215,733 of Indian corn; 138,903 of oats; 21,193 tons of hay, and 138,989 pounds of butter. It contained 2 churches; 1865 pupils attending public schools, and 100 attending other schools. Capital, Sycamore. Population, 7540.

DE KALB, a new county in the N. W. part of Missouri, has an area of 441 square miles. It is drained by Blue and Grindstone creeks, affluents of Grand river, and by Livingston creek, and the Third fork of Platte river. The surface is diversified by prairies and woodlands; the soil is productive. Indian corn, wheat, oats, hay, butter, and pork are the staples. In 1850 this county produced 103,865 bushels of corn; 11,731 of wheat; 13,547 of oats; 108 tons of hay, and 30,375 pounds of butter. De Kalb was formed out of part of Clinton county. Capital, Marysville. Population, 2075, of whom 2010 were free, and 65, slaves.

DE KALB, a post-township of St. Lawrence county, New York, on both sides of the Oswegatchie river, 15 miles S. S. E. from Ogdensburg. Population, 2389.

DE KALB, a post-office of Gilmer co., Va.

DE KALB, a small village of Kershaw district, South Carolina, on Pinetree creek, about 1 mile from Camden, has a cotton factory.

DE KALB, a post-village, capital of Kemper county, Mississippi, about 105 miles E. N. E. from Jackson.

DE KALB, a post-village of Bowie county, Texas, 14 miles N. W. from Boston, the county seat, and 29 miles E. from Clarksville, contains 3 or 4 families.

DE KALB, a small post-village of Crawford county, Ohio.

DE KALB, a post-office of De Kalb co., Ind.

DE KALB, a post-township in De Kalb county, Illinois. Population, 486.

DE KALB, a small post-village of De Kalb county, Illinois, about 200 miles N. by E. from Springfield.

DE KALB, a post-village of Buchanan county, Missouri, 50 miles N. W. from Independence.

DE KALB CENTRE, a post-office of De Kalb county, Illinois, near 200 miles N. by E. from Springfield.

DEKORRA, a post-township in the W. part of Columbia county, Wisconsin, on both sides of Wisconsin river. Population, 661.

DEKORRA, a post-village in the above township, on the left bank of Wisconsin river, 6 miles below Winnebago Portage, and 30 miles N. from Madison. Small steamers can ascend from the Mississippi to this place. It has 1 church, 1 mill, and 150 inhabitants.

DELAFIELD, a post township in the N. W. central part of Waukesha county, Wisconsin. Population, 1134.

DELAFIELD, a post-village in the above township, 25 miles W. from Milwaukee. It has 2 flouring mills, 4 stores, and 1 machine shop.

DELAMAR, a small post-village of Tioga county, Pennsylvania.

DE LANCEY, a post-office of Madison co., N. Y.

DE LA PALMA, a post-office of Brown co., O.

DE LARGE BAYOU, of Louisiana, commences in the N. part of Terre Bonne parish, and flows S. W. into the Gulf of Mexico.

DELAVAN, a post-office of Cattaraugus county, New York.

DELAVAN, a post-village of Tazewell county, Illinois, 45 miles N. by E. from Springfield.

DELAVAN, a thriving post-village of Delavan township, Walworth county, Wisconsin, on the plank-road leading from Racine to Janesville, 45 miles W. from the former. Turtle creek and the outlet of Swan lake unite here and supply a valuable water-power, which is partly improved. Population of the entire township, 1260.

DELAWARE river, called by the Indians *Makeriskiton*, an important river of the United States, rises in New York, on the W. declivity of the Catskill mountains, by two branches, the Oquago (or Coquago) and the Popacton, which unite at the village of Hancock, on the boundary between New York

and Pennsylvania, near the N. E. extremity of the latter state. It flows first south-eastward for a distance of more than 70 miles, to Port Jervis, where it encounters the Kittatinny (or Shawangunk) mountain, by which its course is inflected to the S. W. Pursuing this direction to the N. extremity of Northampton county, it passes through that mountain ridge at the well-known Delaware Water Gap, one of the most remarkable curiosities in the state. The mountain on each side rises almost perpendicularly from the water's edge to the height of 1000 or 1200 feet above the river. From this point its general course is southward until it crosses the South mountain, a few miles below Easton, and turning again to the S. E., falls over the primitive ledge at Trenton, and meets the tide-water 132 miles from the sea. Now increased to a fine navigable river, about half a mile in width, it takes a south-westward course, passes by Philadelphia, and empties itself into Delaware bay, about 40 miles below that city. Its entire length is about 300 miles. The main stream, through its whole course, forms the boundary between the states of New York and New Jersey on one hand, and Pennsylvania and Delaware on the other. It is navigable for ships of the largest size to Philadelphia, and for steamboats to Trenton: smaller boats can descend the stream through its whole course. A canal has been constructed along this river from Bristol to Easton, a distance of 60 miles, and a heavy trade in coal, lumber, and grain is carried on by this means. The chief towns on the Delaware are Easton and Philadelphia on the right, and Trenton, Burlington, and Camden on the left bank. The area drained by the Delaware is estimated by Darby at 11,250 square miles. The great inflections of this river and of the Susquehanna, exhibit a remarkable parallelism, and both receive their largest tributaries from the right hand. Islands of small extent occur in various parts of its channel, one of which lies between Philadelphia and Camden, where the river is about 1 mile wide. Substantial bridges extend across this river at several points, of which Trenton is the first that occurs in ascending from its mouth. The New York and Erie railroad follows the course of the Delaware for a distance of about 90 miles, and two canals extend from this river to the Hudson, namely, the Morris canal, and the Delaware and Hudson. This river was bridged with solid ice at Philadelphia in the winter of 1851-2, but this only happens in seasons of unusual severity. Large numbers of shad are caught in the river in the lower part of its course.

DELAWARE BAY, a large arm of the sea, separating the states of New Jersey and Delaware, communicates with the Atlantic Ocean between Cape May and Cape Henlopen, 17 miles distant from each other. Its

entire length to the entrance of the Delaware river, of which it may be regarded as a broad estuary, is about 60 miles; greatest breadth, 25 miles. Numerous shoals in the bay render the navigation in some parts difficult. The want of any good anchorage ground on this portion of the United States coast, has induced the general government to construct an extensive breakwater within Cape Henlopen. By this means an artificial harbour, embracing about half a square mile, with a depth of from 4 to 6 fathoms, has been formed, affording a safe refuge for vessels in time of storms.

DELAWARE, one of the Middle States, and one of the original thirteen, is bounded on the N. by Pennsylvania, E. by the Delaware river and bay, (which separates it from New Jersey,) and the Atlantic ocean, and S. and W. by Maryland. It lies between 38° 28' and 39° 50' N. lat., and between 75° and 75° 45' W. lon., being about 96 miles in length, and 37 in its greatest breadth, including an area (the smallest except Rhode Island in the Union) of 2120 square miles, or 1,356,000 acres, of which 580,862 were improved in 1850.

Population.—The number of inhabitants in 1790 was 59,096; in 1800, 64,273; in 1810, 72,674; in 1820, 72,749; in 1830, 76,748; in 1840, 78,085, and in 1850, 91,535, of whom 35,771 were white males, 35,518 white females, 8989 free colored males, and 8968 free colored females, and 2289, slaves. This population was divided into 15,439 families, occupying 15,290 dwellings. Of the population, 72,351 were born in the state, 11,617 in other states, 952 in England, 3513 in Ireland, 192 in Scotland and Wales, 21 in British America, 343 in Germany, 73 in France, 137 in other countries, and 63 whose places of birth were unknown. In the 12 months ending June 1st, 1850, there died 1209 persons, or about 13 in every thousand; and in the same period 697 paupers, of whom 123 were foreigners, received aid, at an expense of about \$35 each. There were also in 1850, 58 deaf and dumb, of whom 2 were free colored and 2 slaves; 46 blind, of whom 19 were free colored; 70 insane, of whom 13 were free colored, and 101 idiotic, of whom 19 were free colored, and 4, slaves.

Delaware has 3 counties, namely, Kent, Newcastle, and Sussex. Capital, Dover.

Cities and Towns.—Wilmington is the largest town in the state. Population in 1853, 16,163. The other principal towns are Dover, population, about 3000, Milford, Newcastle, Lewes, Smyrna, and Georgetown.

Face of the Country, Minerals, &c.—There are no mountains in Delaware, but the northern portion is beautifully variegated by hill and vale, while the central and southern portions are mostly level. Delaware forms a part of a low peninsula between the Chesapeake and Delaware bays, of which the East-

ern Shore of Maryland constitutes the larger portion. There is a slightly elevated region on the western side of Delaware, running N. and S., which is occupied by a swampy tract, the source of the streams which flow in opposite directions to the Chesapeake and Delaware bays. This elevation is terminated by a cypress swamp at the south. Delaware has few minerals; a fine sand for glass manufacture, is found near the head of Delaware bay, which is exported to New England. Bog iron ore exists in the southern part of the state.

Rivers, Bays, &c.—The Delaware river and bay, as has been elsewhere stated, bound this state on the E. There are no other large waters. The Brandywine and Christiana creeks, the former running S. E. from Pennsylvania, and the other coming in from the S. W. unite at Wilmington, and pour their waters into the Delaware one mile below their junction. There are a number of other creeks which empty into the Delaware bay, that are navigable by coasting vessels for a short distance, and therefore important to the inhabitants. Indian river flows into the Atlantic ocean, near the southern extremity of the state. The Choptank and Nanticoke have their origin near the middle of Delaware, and flow S. W. into Chesapeake bay. The Brandywine, so well known for the important battle fought on its shores, just beyond the limits of Delaware, is a very fine mill stream, and has numerous flour, powder, and other mills on its banks.

Objects of Interest to Tourists.—The banks of the Brandywine near Wilmington are very romantic and wild, and near them are the Brandywine Chalybeate Springs, much visited by Philadelphians, who seek a pleasant retreat with their families in the summer months. Lewes, or Lewistown, near Cape Henlopen, is becoming a bathing resort. Near it is Delaware Breakwater, about two-thirds of a mile in extent, with one face presented to the sea and another to the current of the river; the latter to protect vessels from floating ice. The ice-breaker is about 1500 feet long. Both are built of massive stone, at an expense to the United States government of over \$2,000,000. The deep cut in the Delaware and Chesapeake canal is 90 feet perpendicular, and is said to be the deepest excavation of the kind in any canal in the world.

Climate, Soil, Productions.—The climate of the N. of Delaware is severe at times, but in the southern part the air is ameliorated by the influence of the sea. The soil in the N. and on the shore of the Delaware river is good, but the southern portion is sandy; in the centre it consists of clay and sand mixed. Wheat, Indian corn, and butter are the staples of the state; besides which considerable quantities of oats, live stock, wool, Irish and sweet potatoes, market vegetables, hay, and fruits, with some rye, barley, buckwheat, peas, beans, wine, cheese, grass seeds, hemp,

flax, hops, beeswax, and honey are produced. The peaches of Delaware have become very celebrated: the other fruits are apples, pears, plums, grapes, and berries of different kinds. In 1850 there were in Delaware 6063 farms under cultivation, occupying 580,862 acres of improved land, and producing 482,511 bushels of wheat; 3,145,533 of Indian corn; 604,518 of oats; 240,542 of Irish potatoes; 65,443 of sweet potatoes; orchard products, valued at \$46,574; market goods, worth \$12,714; live stock, \$1,849,281; slaughtered animals, \$373,665; 1,055,308 pounds of butter; 57,756 of wool, and 41,248 of beeswax and honey.

Internal Improvements.—Delaware is crossed by two lines of railway, forming parts of the great chain of communication between the North and East and the capital of the Union; about 40 miles of their tracks are included within the state. A railroad is being built from Wilmington through Dover to the southern part of the state. The Philadelphia, Wilmington, and Baltimore railway crosses through Wilmington and Newark, leaving the state near Elkton, Maryland. The New Castle and Frenchtown railway forms part of a steamboat line between Philadelphia and Baltimore, much travelled when navigation is open. An air line railway is talked of from Norfolk to New York, through the southern and eastern part of Delaware. The Chesapeake and Delaware canal connects the bays of the same names at Delaware City and Back creek, and forms an important link in the coast navigation between Philadelphia, Baltimore and the ports of Virginia. It is of sufficient depth to allow schooners and small steamers to pass through.—See *Table of Railroads and Canals*, APPENDIX.

Manufactures.—Wilmington in this state is a manufacturing town, and has long been celebrated for its powder, paper, and flour mills: recently, coach-making has become a very important branch of industry in this town. In 1850 there were in Delaware 513 manufactories, each producing over \$500 annually. A considerable amount of shipbuilding is done at Wilmington. Of the manufacturing establishments in the state in 1850, 12 were cotton mills, employing a capital of \$460,100, and 413 male and 425 female hands, consuming raw material valued at \$312,068, and producing 3,521,636 yards of stuffs, and 533,000 pounds of yarn, worth together \$538,439; 8 woollen mills, employing a capital of \$148,500, and 122 male, and 18 female hands, consuming raw material worth \$204,172, and producing 152,000 yards of stuffs valued at \$251,000; 15 forges, furnaces, &c., employing a capital of \$388,500, and 300 male hands, consuming raw material worth \$173,352, and producing 4180 tons of wrought and cast iron, valued at \$322,462; and 16 tanneries, employing a capital of \$99,350, and consuming raw material worth

\$99,620, and producing leather valued at \$163,742: homemade manufactures valued at \$32,809 were also fabricated.

Commerce.—Though bounded by navigable water, for nearly half her extent, Delaware has but little foreign trade, because of her proximity to Philadelphia and Baltimore. The tonnage owned by the state in 1852 was 7010.46 tons; and the number of vessels built the same year was 23, tonnage 2923.29. Delaware exports to other states considerable flour, grain, large quantities of peaches, lumber, (from the cypress swamps,) and sand for the manufacture of glass.

Education.—The school fund of Delaware amounted in 1852 to \$225,000; the number of scholars to 13,288, educated at an expense of \$44,596.89, of which \$27,507.53 was defrayed by a fund, and the rest by taxation. Newark College with 45 students, and 7500 volumes in its library, is the only college in Delaware. Wilmington, however, is noted for its boarding schools. There are also flourishing academies or high schools in New Castle, Georgetown, Milford, and other towns.

Religious Denominations.—Of the 180 churches in Delaware in 1850, the different sects of Baptists owned 12; the Episcopalians, 21; the Friends, 9; the Methodists, 106; the Presbyterians, 26; the Roman Catholics, 3; the Union Church, 1; and the Africans, 2.

Government, Finances, &c.—The governor of Delaware is chosen for 4 years, and receives a salary of \$1333 per annum. The senate is composed of 9 members, elected for 4 years, and the house of representatives of 21 members, chosen for 2 years. These officers are all elected by the direct vote of the people. The legislature meets biennially. Every white male citizen over 22 years of age, who has paid a county tax, and resided one year in the state, and one month next preceding the election in the county where he votes, is entitled to the right of suffrage. Those between 21 and 22, not otherwise disqualified, may vote without having paid a tax. Delaware has but one member in the national house of representatives, and three electoral votes for president of the United States. This small state, however, has furnished several distinguished men to the national councils: John Dickinson to the Revolutionary period, and Rodney, Bayard, McLane, and Clayton since that period. The judiciary consists—1. Of a superior court, one chief and three associate judges; 2. A court of chancery, with one judge; 3. An orphans' court, composed of a chancellor and a judge of the superior court; and, 4. A probate court. There is at present (1853) before the people of Delaware a new and amended constitution, which is soon to be submitted to their decision by ballot. The assessed value of property in Delaware in 1850 was \$17,412,640; productive property, \$190,000;

ordinary expenses, \$11,000 per annum, exclusive of schools. The school fund was \$225,000. Public debt, none. There were in 1852, 9 banks in Delaware, with an aggregate capital of \$1,440,000, a circulation of \$1,000,000, and \$250,000 in coin.

History.—Delaware was first settled by the Swedes and Finns about 1627; was subjected by the Dutch from New York in 1655; but fell into the hands of the English with that colony in 1664. It formed a part of the grant to Penn from the crown in 1682, under the name of the "Three Lower Counties of Delaware;" but in 1701 was separated from Pennsylvania, though subject to the same governor down to the period of the Revolution.

DELAWARE, a county in the S. S. E. part of New York, has an area of about 1550 square miles. It is bounded on the N. W. by the E. branch of the Susquehanna, and on the S. W. the Delaware river separates it from Pennsylvania. It is drained by the Coquago and Popacaton branches of the Delaware river, Olaut creek, and other smaller streams. The surface is generally hilly or mountainous, with fertile intervening valleys. Indian corn, oats, potatoes, and grass are the staples. In 1850 this county produced 119,334 bushels of corn; 591,571 of oats; 373,317 of potatoes; 120,964 tons of hay, and 3,780,585 lbs. of butter, (the greatest quantity produced by any county in the United States, except Oneida county, New York.) There were 23 flour and grist mills, 199 saw mills, 4 iron foundries, 28 tanneries, 5 woollen mills, and 9 carding and fulling mills. It contained 67 churches, 3 newspaper offices; 12,598 pupils attending public schools, and 742 attending academies or other schools. The Delaware and Susquehanna are navigable for boats from this county, and large quantities of lumber are annually rafted down them. The New York and Erie railroad traverses the S. W. part of the county. Named from the Delaware river, which has its source in the N. E. part of the county. Capital, Delhi. Population, 39,834.

DELAWARE, a county forming the S. E. extremity of Pennsylvania, bordering on the state and river of the same name, has an area of 180 square miles. It is intersected by Darby, Crum, Ridley, and Chester creeks. Brandywine creek forms the boundary on the S. W. The surface is generally undulating or hilly, excepting the level tracts along Delaware river. The soil being derived from primary rocks, is not naturally the most fertile; but has been rendered highly productive by the use of lime and other manures. A large part of the land is occupied by dairy farms, which supply butter, cheese, milk, and ice-cream for the Philadelphia and Baltimore markets. In 1850 there were raised 294,209 bushels of corn; 121,096 of wheat; 169,754 of oats, 108,508 of potatoes; 27,932 tons of hay, and 1,342,243 pounds of butter. There were 27 flour

and grist mills, 20 saw mills, 8 stone quarries, 4 manufactories of edge tools, 3 of carpets, 1 of shawls, 3 of coaches, 1 of coach springs, 21 cotton factories, 4 woollen factories, 13 cotton and woollen factories, 2 iron foundries, 6 paper mills, and 10 tanneries. It contained 53 churches, 3 newspaper offices; 2995 pupils attending public schools, and 241 attending academies and other schools. The principal rocks which underlie the county are gneiss and mica slate; the quarries of the former furnish a large quantity of building material for Philadelphia. Whetstones of good quality are procured near Darby creek, and exported to all parts of the Union. The county is liberally supplied with water-power, which is employed in numerous manufactories. It is intersected by the West Chester, the Philadelphia and Columbia, and the Philadelphia and Wilmington railroads. The earliest settlement of the province was made in this county, by the Swedes in 1643. Organized in 1789 and named from the Delaware river. Capital, Media. Population, 24,679.

DELAWARE, a county in the central part of Ohio, has an area of 478 square miles. It is traversed from N. to S. by the Scioto and Olentangy rivers, and also drained by the Big Walnut, Alum, and Mill creeks. The surface is generally level; the soil productive. Indian corn, wheat, oats, hay, wool, cattle, and pork are the staples. In 1850 this county produced 774,289 bushels of corn; 44,523 of wheat; 142,992 of oats; 22,021 tons of hay, and 124,064 pounds of wool. It contained 45 churches, 2 newspaper offices, and 8261 pupils attending public schools. There are valuable sulphur springs at the county seat. The county is liberally supplied with water-power. It is intersected by the Cleveland and Cincinnati railroad, and by another, (not yet finished,) leading from Springfield to Loudonville. Capital, Delaware. Population, 21,817.

DELAWARE, a county in the E. part of Indiana, contains 400 square miles. It is drained by the White and Mississinewa rivers. The surface is nearly level; a small portion of it is occupied by wet prairies, which are adapted to grass. The soil of the county is generally productive. Indian corn, wheat, oats, and grass are the staples. In 1850 this county produced 429,209 bushels of corn; 55,078 of wheat; 41,992 of oats, and 4957 tons of hay. It contained 15 churches, 2 newspaper offices, and 1894 pupils attending public schools. The streams afford an ample supply of water-power. The county is traversed by the Bellefontaine and Indianapolis railroad. The name is derived from the Delaware tribe of Indians, by whom the county was once inhabited. Capital, Muncie. Population, 10,843.

DELAWARE, a county in the E. N. E. part of Iowa, has an area of 576 square miles.

It is intersected by the Makoqueta river, an affluent of the Mississippi, and by Buffalo creek. The surface is uneven, and in some parts broken; the soil is mostly productive. Timber and water are said to be abundant, and the climate is considered healthy. Indian corn, wheat, oats, and hay are the staples. In 1850 this county produced 48,515 bushels of Indian corn; 22,150 of wheat; 13,925 of oats, and 2504 tons of hay. Capital, Delhi. Population, 1759.

DELAWARE, a township of Camden county, New Jersey, on the Delaware river. Population, 2577.

DELAWARE, a township of Hunterdon county, New Jersey, on the Delaware river, about 20 miles N. W. from Trenton. Population, 2554.

DELAWARE, a township of Juniata county, Pennsylvania, on both sides of Juniata river, 30 miles N. W. from Harrisburg, intersected by the Pennsylvania railroad.

DELAWARE, a township of Mercer county, Pennsylvania, 65 miles N. N. W. from Pittsburgh. The Beaver and Erie canal passes through it. Population, 2863.

DELAWARE, a township forming the N. W. extremity of Northumberland county, Pennsylvania, on the W. branch of Susquehanna river, 18 miles N. from Sunbury. Population, 1908.

DELAWARE, a post-township of Pike county, Pennsylvania, on the Delaware river, about 40 miles N. by E. from Easton. Population, 754.

DELAWARE, a township of Defiance county, Ohio, about 10 miles W. from Defiance. Population, 445.

DELAWARE, a post-township in the central part of Delaware county, Ohio. Population, 3323.

DELAWARE, or DELAWARE COURT HOUSE, a post-town, capital of Delaware county, Ohio, situated in the above township, on the right bank of the Olentangy river, and on the railroad between Cleveland and Columbus, 24 miles N. from the latter. It is pleasantly situated on rolling ground, and is neatly built. There is a bridge across the river here. The Ohio Wesleyan University, established at this place in 1845, has a library of 5700 volumes and about 350 students. Delaware has a medicinal spring, resorted to by many persons, the water of which is cold hydrosulphurous. The Springfield and Loudonville railroad, now in progress, crosses the river at this point. Delaware contains 5 or 6 churches, 2 printing offices, 1 bank, and the "Hinton House," one of the largest hotels in Ohio. Population, 2074.

DELAWARE, a township forming the southeastern extremity of Hancock county, Ohio. Population, 1035.

DELAWARE, a township of Hamilton county, Indiana. Population, 867.

DELAWARE, a post-township of Ripley county, Indiana. Population, 1274.

DELAWARE, a post-village of Ripley county, Indiana, 36 miles N. by E. from Madison.

DELAWARE, a small post-village of Jersey co., Illinois, 59 miles S. W. from Springfield.

DELAWARE, a post-office of the Indian country, Nebraska.

DELAWARE BREAKWATER BEACON, on the north-west end of the Breakwater in Delaware bay, exhibits a red fixed light, 56 feet above the level of the bay.

DELAWARE BRIDGE, a post-office of Sullivan county, New York.

DELAWARE CITY, a thriving post-borough of Newcastle county, Delaware, on Delaware river, near its mouth, 46 miles below Philadelphia. It is the eastern terminus of the Chesapeake and Delaware canal, and contains 2 or 3 churches, a bank, and numerous stores. Population, in 1850, 908.

DELAWARE GROVE, a post-village of Mercer county, Pennsylvania.

DELAWARE HILL, a small village of Green county, Arkansas.

DETROIT, a post-township of Somerset county, Maine, about 30 miles E. from Norridgwick. Population, 517.

DETROIT, a flourishing city and port of entry of the state of Michigan, and seat of justice of Wayne county, on Detroit river, 18 miles above the head of Lake Erie, 80 miles E. S. E. from Lansing, 302 miles W. from Buffalo, and 526 miles from Washington. Lat. 42° 20' N., lon. 82° 58' W. It is beautifully situated on the W. bank of the river, which is here about half a mile wide, and forms one of the finest harbours in the United States. The part of the city contiguous to the river is built on a rectangular plan, extending 1200 feet back from the shore; the space beyond this is divided into triangular sections by a number of avenues, which converge to an open area called the Grand Circus. These avenues vary in width from 120 to 200 feet. The principal buildings and public offices are situated on Jefferson and Woodward avenues. The city is adorned with several public squares, one of which is named the Campus Martius. Jefferson avenue, one of the finest streets in the city, is well paved, with brick and stone sidewalks. Woodward avenue, crossing the first at right angles, is the principal business street. Congress street is also distinguished for its fine appearance. Among the remarkable edifices may be mentioned the old state house, a commodious brick building, 90 feet by 60, with a dome and steeple 140 feet high, which commands an extensive view, embracing the city with its environs, Lake St. Clair and the Canadian shore; the city hall, which is a brick building 100 feet by 50, and the Bank of Michigan, a substantial structure of stone, in the Grecian style, which cost about \$40,000. Detroit has a well-organized system of public schools. It contains 23 churches, 4 banks, a museum, theatre, and two orphan asylums. The railroad company have a large brick freight house, about 600 feet long by 100 feet wide. Ten or eleven newspapers are published in Detroit, three of them daily, and the others tri-weekly or weekly. The city is lighted with gas, and also supplied with water of the purest quality from Detroit river. It is first forced by steam-power into a reservoir having an elevation of about 50 feet, and thence is conducted through distributing-pipes to the various parts of the town.

Detroit is admirably situated for commerce, and its importance is greatly enhanced by its intimate and extensive relations with a region towards which a prodigious tide of emigration is flowing. By its position on the great chain of lakes, and by means of the connecting rivers and canals, it has a ready communication with the principal centres of trade. A number of large steam-packets, freighted with the merchandise of all climes, and with emigrants from various nations, are con-

stantly ploughing the waters of Lake Erie between Detroit and Buffalo. The Detroit river is an excellent stream for navigation, and never overflows its banks. The average difference between high and low water is only 2 or 3 feet. It is closed by ice about four months in the year. The Michigan Central railroad, which is 218 miles long, extends across the state to Lake Michigan, and connects with another road leading to Chicago. The number of passengers on this road, during the year ending June 30, 1852, exceeded 200,000. Several plank-roads extend from the city toward the interior, one of which connects it with the capital of the state. The business of Detroit is immense. The annual exports coastwise amount to about \$4,000,000, and the imports to upwards of \$15,500,000. Considerable trade is also carried on with Canada. The shipping of the port, June 30th, 1852, amounted to an aggregate of 43,925 $\frac{1}{2}$ tons, enrolled and licensed, of which 24,115 $\frac{1}{2}$ tons were employed in steam navigation. During the year, 10 vessels, (5 of them steamers,) with an aggregate burthen of 2287 $\frac{9}{16}$ tons were admeasured.

The manufactures of the city are extensive and important, consisting of steam-engines and various other kinds of machinery, mill-irons, stoves, ploughs, cabinet ware, &c. Brewing and tanning are also carried on to a considerable extent. At the different steam saw mills here in operation, about 10,000,000 feet of lumber are annually turned out.

Detroit was founded by the French in 1760, and has ever since been a military post. It was the capital of Michigan from the settlement of the state until Lansing was selected as the seat of government. Population in 1830, 2222; in 1840 it was 9102, and in 1850 21,019; in 1853, 34,436.

DISTRICT, a township in the E. part of Berks county, Pennsylvania, 18 miles E. from Reading. Population, 842.

DISTRICT OF COLUMBIA, a small tract of territory set apart as the site of the capital of the United States, was ceded to the general Government by the State of Maryland, by which it is bounded on all sides except the S. W., which is washed by the Potomac river. The capitol in Washington is in lat. 38° 53' N., lon. 77° and 2' W. from Greenwich. American geographers, however, often compute longi-

tude from this place. Originally, the District of Columbia was 10 miles square, or 100 square miles; but, by the retrocession of Alexandria county to Virginia in 1846, it was reduced to 60 square miles, or 38,400 acres, 16,267 of which are improved.

Population.—The District of Columbia had 14,093 inhabitants in 1800; 24,023 in 1810; 33,039 in 1820; 39,834 in 1830; 43,712 in 1840, and 51,687 in 1850, of whom 18,548 were white males, 19,479 do. females, 4210 free colored males, 5763 do. females, and 1422 male, and 2265 female slaves. Of the free population, 24,967 were born in the District, 17,989 in other parts of the Union, 32 in British America, 622 in England, 2373 in Ireland, 162 in Scotland and Wales, 1404 in Germany, 80 in France, 234 in other countries, and 77 whose places of birth were unknown; 19 were deaf and dumb, of whom 2 were free colored and 1 a slave; 23 blind, of whom 8 were free colored, and 1 a slave; 22 insane, of whom 8 were free colored, and 1 a slave, and 11 idiotic, of whom 4 were free colored. In the year ending June 1st, 1850, 846 deaths occurred, being about 16 in every one thousand persons.

Counties.—The entire district constitutes the county of Washington.

Cities.—Washington, the capital of the United States, population, 40,000, and Georgetown, 8336, include nearly the entire population of the district.

Surface.—The surface is generally undulating, with some marshes. There are eminences of sufficient prominence to command fine views and give variety to the scene.

Rivers.—The Potomac river separates the district from Virginia, which, except a small tributary called the East branch, and Rock creek, separating Washington from Georgetown, is the only stream of importance.

Productions.—The district has very little agricultural importance. Products in 1850, 17,370 bushels of wheat; 5509 of rye; 65,230 of Indian corn; 8134 of oats; 28,292 of Irish potatoes; 14,872 pounds of butter; 2279 tons of hay, with some tobacco, peas, beans, sweet potatoes, barley, buckwheat, wine, cheese, beeswax, and honey. Value of live stock produced, \$71,643; do. orchard products, \$14,843, and do. market garden, \$67,222.

Manufactures.—In 1850 the District of Columbia had 1 cotton factory, employing \$85,000 of capital, and 41 male and 103 female hands, consuming raw material worth \$67,000, and producing 1,400,000 yards of stuffs, valued at 100,000; 1 woollen factory, employing \$700 capital, and 2 male hands, consuming raw material worth \$1630, and producing 10,000 yards of stuff, valued at \$2400; 2 furnaces, employing \$14,000 capital, and 80 male hands, consuming raw material worth 18,100, and producing 512 tons of castings, &c., valued at \$52,695; \$12,000 were invested in the manufacture of malt and

spirituous liquors, consuming 5000 bushels of barley, and producing 1350 barrels of ale; and 2 tanneries, employing \$25,000 capital, consuming raw material worth \$25,600, and producing leather valued at \$40,000.

Internal Improvements.—A few miles of the Washington and Baltimore railroad are in the District of Columbia, and the Chesapeake and Ohio canal has its terminus at Georgetown. These constitute the internal improvements of the district.

Commerce.—The imports of 1851-2 amounted to \$54,142, and the exports \$79,005; tonnage entered, 901; cleared, 2014; belonging to the district, 26,197, of which 3327 $\frac{3}{8}$ was steam tonnage, and number of vessels built, 27, the tonnage of which was 1995 $\frac{3}{8}$.

Education.—There were in 1850, 2 colleges in the district, with an aggregate of 235 students, and 32,300 volumes in their libraries; 1 medical school with 40 students; and 2611 children taught in common schools, by 29 teachers, at an expense of \$11,677.

Religious Denominations.—Of 46 churches, the Baptists owned 6, Episcopalians 8, Friends 1, Lutheran 2, Methodists 16, Presbyterians 6, Roman Catholics 6, and Unitarian 1, making about one church for every 1109 persons; value of church property, \$363,000.

Public Institutions.—See WASHINGTON and GEORGETOWN.

Government.—The District of Columbia is under the direct government of the Congress of the United States, and without any representation in the national Congress, or any vote for president. The judiciary consists, 1. Of a circuit court, with one chief and two associate judges, the former receiving \$2700, and the latter \$2500 each per annum. 2. Of a criminal court, presided over by one judge, receiving \$2000; and, 3. Of an orphans' court, with a judge receiving \$1500 per annum. Assessed value of property in 1850, \$14,018,874. In January, 1852, there were in the district four banks, with an aggregate capital of \$1,182,300, a circulation of \$350,000, and \$300,000 in coin.

History.—In 1790, Maryland and Virginia ceded 100 square miles to the United States. This tract was named the District of Columbia, in honor of the great discoverer of America. This district, about two-thirds of which was on the Maryland shore of the Potomac, was designed for the site of the capital of the nation, and, in accordance with this intention, a city was laid out, public buildings erected, and in 1800 the government officials removed thereto. During the war of 1812, the British forces took Washington, and burned the capitol, (including the library of Congress,) and the president's house. In 1846, Alexandria county was retroceded to Virginia.

DUBOIS, a county in the S. W. part of Indiana, has an area of about 420 square miles. It is intersected by the Patoka river, and bounded on the N. by the E. fork of White river. The north-eastern part is rolling, and the other portions level. The county is heavily timbered. The soil is generally fertile. Indian corn, cattle, horses, and hogs are the chief articles of export. In 1850 this county produced 287,905 bushels of corn; 38,590 of oats; 15,213 of wheat, and 1241 tons of hay. It contained 8 churches, and 273 pupils attending academies and other schools. Extensive beds of stone coal are

found in this county. The E. fork is navigable on the border a few months in the year. Organized in 1818, and named in honor of Toussaint Dubois, a merchant of Vincennes. Capital, Jasper. Population, 6321.

DUBUQUE, (du-book', oo as in moon,) a county in the eastern part of Iowa, bordering on Illinois and Wisconsin, has an area of about 600 square miles. The Mississippi river forms its north-eastern boundary, and the county is also drained by Fall river and Little Maquoketa river. The surface is uneven and extensively covered with timber. The county comprises the principal portion of the mineral region of Iowa. Large quantities of lead are annually taken from the mines of this county and sent down the river by steamboats. Indian corn, wheat, hay, and butter are the chief agricultural productions. In 1850 there were raised 164,045 bushels of Indian corn; 102,038 of wheat; 86,739 of oats, and 11,123 tons of hay—more than any other county in the state. The rock which underlies the county is limestone. A railroad is projected from Dubuque to Keokuk. Named in honor of M. Dubuque, a Frenchman, who obtained a grant from the Spanish government for mining lead in this region. Capital, Dubuque. Population, 10,841.

DUBUQUE, a flourishing city of Iowa, and seat of justice of Dubuque county, is situated on the right bank of the Mississippi river, about 200 miles above Burlington, 450 miles above St. Louis, and 24 miles by water from Galena. The situation of Dubuque is regarded by some persons as more beautiful than that of any other city in Iowa. It stands on a broad plateau or terrace, which extends along the river for several miles. The city is regularly laid out and contains a number of handsome buildings. The following sketch of the place is extracted from the letter of an intelligent traveller:—"How sweetly this queen city, with its wide, rectangular, well-shaded streets, lies spread out upon its broad plateau, much as New Haven lies between the East and West rocks! But New Haven can never boast of such a verdure as here clothes alike bluff and plateau. And then the river, here a mile in width, rolling so majestically, flanked on the other shore with tall and verdant bluffs, and studded with islands of richest green." Dubuque is the central depôt of the mining region of Iowa, and is a place of active trade. Large quantities of lead are taken from the mines in this vicinity, and sent down the river by steamboats: stone coal and limestone are also abundant. It is stated in the public journals that a quarry of variegated brown marble has been recently found on the bank of the river opposite Dubuque. The city contains a Catholic cathedral, a number of Protestant churches, a United States land-office, 4 newspaper offices, and 2 banks. In 1852 about 100 houses, chiefly of brick, were erected, and

large sums were expended in improving the harbor and in paving the streets. The reported value of imports in 1852, was \$1,670,890, and that of exports was \$629,140, including 116,000 pigs of lead, valued at \$348,000. The number of steamboat arrivals in 1851 was 351, and in 1852, 417. Dubuque is the terminus of the Northern Branch of the Illinois Central railroad, and of the Dubuque and Keokuk railroad, both of which are in process of construction. It is the oldest town in the state, having been settled by French Canadians about 1786. Population in 1853, about 7500.

DUNKIRK, an important post-town of Pomfret township, district of Buffalo creek, Chautauque county, New York, on Lake Erie, at the western terminus of the New York and Erie railroad, 469 miles from New York city. It is beautifully situated, the ground rising as it recedes from the lake, so that at a distance of a mile from the shore it is 100 feet above the level of the water. The vicinity is free from local diseases, and the climate delightful. The railroad company are making preparations for an extensive business. Individual enterprise also is actively engaged in developing the resources of the place. In 1824 the United States government erected a lighthouse on the W. point of the bay, and subsequently a beacon light at the principal channel. Since then, a breakwater has been thrown across the harbor, making it one of the best protected on the lake. It is much resorted to by vessels in bad weather: it is free from ice somewhat earlier in the spring than that of Buffalo. From its facilities for communication both with the E. and W., and from the great amount of trade and travel which, from its central position, it must attract to it from all parts of the country, Dunkirk is likely to become one of the most wealthy and populous cities on the lake. Among the articles received at this port in 1852, were—

flour, 182,139 barrels, value \$819,625; wool, 4796 bales, \$359,700; furs, 1022, \$153,300; leather, 1490 rolls, \$178,800; bacon, 2800 casks, \$140,000; butter, 1,761,150 pounds, \$317,007; live hogs, 14,805, \$117,660; pork, 6643 barrels, \$112,931; tobacco, \$105,920. The total value of all the articles received by lake, for the year ending December 31, 1852, was \$3,274,756. Dunkirk contains 2 banks and 1 newspaper office. A railroad connects it with Buffalo, and another with Erie, in Pennsylvania, 50 miles distant. Population of Pomfret township, 4483; of Dunkirk, in 1853, about 3000.

It is bounded on the W. by St. Francis river, and on the E. in part by Lake Pemisicot, intersected by Castor river, and extensively occupied by swamps. The surface consists partly of open plains or prairies. This county, together with several adjoining, was severely injured by the earthquakes of 1811 and 1812. The state legislature in 1850-51 made an appropriation for the reclamation of the sunken lands. The soil, where not overflowed, is highly productive. Indian corn, oats, cattle, and pork are the staples. In 1850 this county produced 77,360 bushels of corn, and 2776 of oats. It contained 1 church, 1 newspaper office, and 80 pupils attending public schools. Named in honor of the late Daniel Dunklin, former governor of Missouri. Capital, Kennet. EL PASO, or EL PASSO, a post-office in the above county.

EL PASO DEL NORTE, el pá'so del nor'tá, better known as EL PASO, (often written EL PASSO,) though not within the limits of the United States, has become so well known in connection with the unsettled national boundary question, that some notice of it seems indispensable. El Paso is properly a line of settlements, embracing a population of about 5000 souls, situated in a rich but narrow valley, which extends 9 or 10 miles along the right bank of the Rio Grande, in the Mexican state of Chihuahua, 350 miles S. by W. from Santa Fé. The grape is extensively cultivated in this locality, and considerable quantities of a weak but well-flavoured wine and brandy (known to the American traders as Pass wine and Pass brandy) are made. The houses are built of adobes, or sun-dried bricks, chiefly of one story, with earthen floors. Though supplied with abundance, the inhabitants are remarkably deficient in the commonest appliances of civilized life: glazed windows, chairs, tables, knives and forks, and other conveniences, which the humblest American considers indispensable to comfort, are unknown even to the rich. Few of the people are pure white, being nearly all more or less tinged with Indian blood. That portion of the settlement at the northern part of the valley, where the *plaza*, the parish church, and the dwellings of a few of the principal inhabitants are located, may be considered as the town of El Paso. It is in lat. N. 31° 42', lon. W. 106° 40', 1420 miles above the mouth of the Rio Grande, following the course of the stream, 600 miles in a direct line eastward of the Pacific coast, and 1800 miles from Washington City. El Paso is the chief thoroughfare between New Mexico and Chihuahua, and the other Mexican states farther south, the Rio Grande being fordable near the town a great portion of the year. The name, signifying "the passage," is supposed to be derived from the passage of the river through a gorge or gap in the mountain, just above the town.

ERIE, lake, one of the five great lakes drained by the St. Lawrence river, lies between 41° 25' and 42° 55' N. lat., and between 78° 55' and 83° 34' W. lon., having Canada West on the N., a part of the state of New York, Pennsylvania, and Ohio on the S., and a part of Michigan on the W. Its shape is elliptical, the entire length being

about 240 miles; greatest breadth, 57 miles; average breadth, 38 miles; computed circumference, 658 miles. The depth of this lake is less than that of any other in the chain, the greatest yet obtained from soundings being only 270 feet; and its mean depth does not exceed 120 feet. Towards the shores, and especially at the western extremity, its shallowness is a serious impediment to navigation, which is entirely suspended during the winter months, in consequence of the shoal portions being frozen. The surface of Lake Erie has an elevation of 322 feet above the level of Ontario, and 565 feet above high-water mark in the Hudson at Albany. There is some reason to suppose that it was once much higher than this. Ancient beaches have been discovered in Ohio and Michigan, having an elevation of more than 100 feet above the present surface of the water. Its principal supply is by the Detroit and St. Clair rivers, which constitute the outlet of the three great lakes to the N. W., viz. Huron, Michigan, and Superior. Numerous other streams also flow into it, the more important of which are the Maumee, Sandusky, Grand, Huron, and Raisin. Its own waters are discharged by the Niagara river into Lake Ontario, and thence by the St. Lawrence to the ocean. The principal harbors on the coast are Buffalo, Cleveland, Toledo, Dunkirk, Erie, Sandusky bay, and Monroe, all of which have been improved by the United States government. The commercial importance of Lake Erie has been greatly increased by the construction of numerous canals and railroads, connecting its ports with the interior and the seaboard. The amount of business and travel which these channels of communication conduct to it is almost incalculable. The shipping of the several American ports on Lake Erie, June 30, 1852, amounted to an aggregate burthen of 148,219 $\frac{3}{8}$ tons, of which 70,561 $\frac{3}{8}$ were employed in steam navigation. The commerce of the single port of Buffalo amounts to nearly \$80,000,000 annually. The lake abounds with fine fish. A kind termed *whitefish* was formerly taken in vast quantities, but their number has somewhat diminished. Lake Erie is remarkable for its violent storms, which prevail most in the months of November and December, often causing the most disastrous shipwrecks, attended with fearful loss of life.

ERIE, a county in the W. part of New York, has an area of about 950 square miles. It is bounded on the W. by Lake Erie, N. by Tonawanda creek, and S. by Cattaraugus creek, and is drained by Buffalo creek, with its three branches, Cazenove, Seneca, and Cayuga, and by Ellicott's and Conquaga creeks, with some smaller streams, which furnish valuable water-power. The surface in the N. part is undulating, and the soil well adapted to the production of grain; in

the southern portions the face of the country is uneven, and the land more suitable for grazing. Wheat, oats, and grass are the staples. In 1850 this county produced 242,221 bushels of wheat; 740,270 of oats; 90,984 tons of hay; 1,544,201 pounds of butter, and 4,293,949 of cheese. There were 10 iron foundries, 132 saw mills, 1 cotton, and 6 woollen mills, 1 white-lead factory, and 38 tanneries. It contained 121 churches, and 24 newspaper offices; 20,279 pupils attending public schools, and 1938 attending academies and other schools. Iron ore, limestone, water cement, and brick clay are among its mineral productions. The Erie canal has its western termination at Buffalo, and connects with Niagara river at Black Rock, where there is an extensive basin. The county is traversed by six railroads, which pass through or terminate in Buffalo. Organized in 1821, having been formed from part of Niagara county, and named from the great lake which forms its western boundary. Capital, Buffalo. Population, 100,993.

ERIE, a county forming the N. W. extremity of Pennsylvania, bordering on New York, Ohio, and Lake Erie, has an area of 740 square miles. It is intersected by French and Conneaut creeks: Walnut and Elk creeks rise in the county, and flow into Lake Erie, which forms the entire N. W. boundary. The surface is generally rolling, with a ridge of highland, extending nearly parallel with the lake shore, at a distance of several miles. The soil is clayey, having a basis of slate and sandstone: the northern part produces good crops of grain, the southern is better adapted to pasturage and dairy farming. Corn, wheat, oats, potatoes, wool, butter, cheese, maple sugar, and lumber are the staples. In 1850 it yielded 433,692 bushels of Indian corn; 147,825 of wheat; 433,765 of oats; 171,855 of potatoes; 69,422 tons of hay; 252,843 pounds of butter, and 333,748 of maple sugar, being the greatest quantity of that article produced by any one county of the state, except Somerset county. There were 86 saw mills, 21 flour and grist mills, 8 manufactories of oilcloth, 6 of pot and pearl ash, 3 of oars, 3 of coaches, and 2 of stoves and ranges, 12 woollen factories, 2 paper mills, 1 linseed-oil mill, 4 iron foundries, 3 distilleries, and 19 tanneries. It contained 57 churches, and 5 newspaper offices; 9343 pupils attending public schools, and 375 attending academies and other schools. Iron is the principal mineral. French creek furnishes extensive water-power. The county is traversed by the Erie Extension canal, and by the railroad connecting Cleveland with Buffalo. The Sunbury and Erie railroad, lately commenced, has its W. terminus at the county seat; and several plank-roads have also been laid. Formed in 1800, and named from Lake Erie. Capital, Erie. Population, 38,742.

ERIE, a county in the N. part of Ohio, bordering on Lake Erie and Sandusky bay, contains 250 square miles. It is intersected by Huron and Vermilion rivers, and by Pipe creek. The surface is nearly level, with a gentle declivity towards the N. The soil is alluvial and remarkably rich. Indian corn, wheat, oats, hay, wool, and butter are the staples. The influence of Lake Erie renders the climate favorable to fruits. In 1850 this county produced 374,988 bushels of corn; 180,521 of wheat; 116,791 of oats; 17,204 tons of hay, and 299,066 pounds of butter. It contained 26 churches, 6 newspaper offices; 4976 pupils attending public schools, and 110 attending academies and other schools. The county contains abundance of fine limestone, which is extensively quarried at Sandusky. Numerous ancient mounds and enclosures are found near Huron river. Erie county is intersected by the Mad river and Lake Erie railroad, and by the Sandusky and Mansfield railroad; another, from the county seat to Cleveland and Toledo, is not yet finished. Capital, Sandusky City. Population, 18,568.

ERIE, a post-borough, port of entry, capital of Erie county, Pennsylvania, on the lake of the same name, 90 miles S. W. from Buffalo, 129 miles N. from Pittsburg, and 310 miles by turnpike from Harrisburg. Lat. 42° 8' N., lon. 80° 10' W. It is pleasantly situated opposite the island of Presque Isle, formerly a peninsula. The harbor, which is one of the largest and best on the lake, is 3½ miles long, and over 1 mile wide, and from 9 to 25 feet deep the whole length. Large sums have been expended in improving and fortifying the harbor, and in erecting a lighthouse. The island is 4 miles long and 1 mile wide. Erie is an important place of outfit for vessels of the United States, and is remarkable for its flourishing trade. The Erie Extension canal connects it with the Ohio river and Beaver; several railways extend to Cleveland, Buffalo, &c. It is the terminus of the Sunbury and Erie railroad, now in course of construction, with a branch leading to Pittsburg. Erie contains a court house, a bank, about 10 churches, a fine hotel, an academy, and four newspaper offices. About 20,000,000 feet of lumber are received here annually by canal, and over 80,000 tons of stone coal. The reported value of imports and exports in 1851, was \$3,832,852. The canal affords extensive water-power, which is employed in mills of different kinds. The shipping of the district, (Presque Isle,) June 30th, 1852, amounted to an aggregate of 81227½ tons, enrolled and licensed, of which 5350¾ tons were employed in steam navigation. Incorporated in 1805. Population in 1840, 3412; in 1850, 5850.

There were 8 churches, 1666 pupils attending public schools, and 74 attending academies or other schools. The Great Atlantic and St. Lawrence railroad passes through the N. E. part of this county. Organized in 1792, and named from Essex, a county in England. Capital, Guildhall. Population, 4650.

ESSEX, a county forming the N. E. extremity of Massachusetts, has an area of about 500 square miles. It is bounded on the E. by the Atlantic, and on the S. E. by Massachusetts bay, and is traversed by the Merrimack and Ipswich rivers. It has a great extent of seacoast and many fine bays which afford excellent harbors. A large portion of the great wealth of the inhabitants of the seaboard towns, is invested in commerce and the fisheries. The interior towns are manufacturing and agricultural. Until within the last few years the manufacture of leather and shoes were almost the only branches of industry; but recently several steam cotton mills erected in Lawrence, Salem, and Newburyport, have contributed very much to the industrial prospects of the county. The surface is generally rough and rocky, and the soil hard, but well cultivated, and productive in some districts. Indian corn, potatoes, and grass are among the staples. In 1850 this county produced 158,264 bushels of corn; 339,423 of potatoes; 57,968½ tons of hay, and 560,789 pounds of butter. The Merrimack river is navigable for sloops of 200 tons to Haverhill in this county. Essex is traversed by railroads connecting Boston with Gloucester, Portsmouth, Portland, and Manchester, and several short lines partly intersect it. Organized in 1642. Seats of justice, Salem, Ipswich, and Newburyport. Pop., 131,300.

ESSEX, a county in the N. E. part of New York has an area of about 1656 square miles. It is bounded on the E. by Lake Champlain, and the river Au Sable forms part of its northern boundary. It is drained by the head waters of the Hudson, and by Boquet and Scroon rivers, all of which afford motive-power for numerous grist and saw mills. The surface in the western part is rough and mountainous and usually thickly wooded, but along the lake shore it is much more level. Mount Marcy is the principal elevation and the highest mountain in the state. The soil is generally good. Indian corn, potatoes, and grass are the staples. In 1850 this county produced 120,425 bushels of corn; 307,549 of potatoes; 37,868 tons of hay, and 150,258 pounds of wool. There were 26 iron forges, 60 saw mills, 9 flour mills, 2 nail factories, 3 woollen factories, and 1 rolling mill. It

contained 42 churches, and 4 newspaper offices; 8482 pupils attending public schools, and 512 attending academies or other schools. This county abounds in iron ore and limestone; and some marble and blacklead have been found. Lake Champlain is navigable along its entire eastern border. Organized in 1799, having previously formed part of Clinton county. Capital, Elizabethtown. Population, 31,148.

EVANSVILLE, a post-township in Vanderburg county, Indiana. Population, 3663.

EVANSVILLE, a flourishing town, port of entry, and capital of Vanderburg county, Indiana, is situated on a high bank of the Ohio river, 200 miles from its mouth, and 200 miles below Louisville, in Kentucky. It is connected by railroad with Vincennes, 55 miles distant, and is the terminus of the Wabash and Erie canal, which was completed in 1853. This canal, which is about 460 miles long, is the most extensive in the Union. The course of the river is here so winding that Evansville is not far from the centre of the county. The situation is fine, on ground which ascends gradually. About one-fourth of the houses are built of brick, and the others of wood. Among the public buildings are 9 or 10 brick churches, a court house, the branch of the State Bank, a splendid and costly edifice, and a marine hospital. There are 6 printing offices. The commercial advantages above named, together with the navigation of the Ohio, which is seldom obstructed either by drought or ice below Evansville, render this a place of extensive trade, and the principal shipping point for the grain and pork of South-western Indiana. The village of Lamasco joins Evansville on the N. W. Population in 1853, about 8000.

The passage of the river for ordinary travel is by a wooden bridge, about 300 yards in length, and for the railroad cars by a massive frame structure, supported by piers and braces, at an elevation of about 40 feet above the surface of the water. Most of that part of the village on the right bank of the Quinnepiac is built on a beautiful plain, which extends to West river, beyond New Haven. The streets are regularly laid out, intersecting each other at right angles, and the dwellings are usually surrounded with highly ornamented grounds. The left bank rises gradually to an elevation of 100 or 150 feet, affording delightful sites for residences. The view of the river and bay, with the shipping, New Haven, and the bold outline of hills towards the N., commanded from this eminence, is of surpassing beauty. About 40 vessels are owned in Fair Haven. It is stated that 800,000 kegs of oysters are annually exported to different parts of the United States. They are taken in the Delaware and Chesapeake bays, and brought here during the winter season to be opened. FALL RIVER, an important manufacturing post-town and port of entry of Bristol county, Massachusetts, at the entrance of Taunton river into Mount Hope bay, the eastern arm of Narraganset bay, and at the terminus of the Boston and Fall River railroad, 53 miles S. S. W. from Boston. It has a fine situation on elevated ground, and enjoys superior advantages for manufacturing: a stream, the outlet of Watuppa ponds, uniting with the Taunton at its mouth, furnishes a never-failing hydraulic power. The town is well built, much of it of granite which is obtained in large quantities from quarries in the vicinity, and contains 10 or 12 churches, 2 newspaper offices, 2 banks, a fine granite building occupied as a market house and town hall, and several flourishing schools. The streets are handsomely adorned with shade-trees, which, during the summer months, add much to the comfort and beauty of the place. Fall river, from which the town derives its name, is about 2 miles in length, the greater part of which distance it flows over a rocky bed, between high banks, and in the last half mile of its course has a descent of about 130 feet. This portion of it is occupied with extensive manufactories, generally with a separate dam each, either extending partially or entirely across the stream; and so rapidly do they succeed each other that there is scarcely room between the buildings to admit air and light. About 50,000 spindles are employed in the production of cotton fabrics, of which nearly 20,000,000 yards are annually turned out. The most extensive establishment in the place is for the manufacture of iron rods, hoops, castings, &c., the machinery for which is propelled by steam. The company employ about 500 hands, and use nearly 12,000 tons of iron annually. Woollen goods, machinery, and sperm oil are also largely produced. Fall river enjoys excellent advantages for commerce. Its harbor is safe, capacious, easy of access, and of sufficient depth to admit vessels of the largest class. The shipping of the port, June 30th, 1852, amounted to an aggregate of $3808\frac{3}{4}$ tons registered, and $11,375\frac{1}{2}$ tons enrolled and licensed. Of the former, $856\frac{1}{2}$ tons were employed in the whale fisheries, and of the latter, $4826\frac{1}{2}$ tons in steam navigation; (none in the cod or mackerel fisheries.) The foreign arrivals for the year were 23, (tons, 4023,) 14 of which (tons, 2808) were of American vessels. The clearances for foreign ports were 12, (tons, 1966,) of which only 751 tons were in American bottoms. During the same year 12 vessels, (4 of them ships,) with an aggregate burthen of 4227 tons, were admeasured. July 2d, 1843, Fall river was visited by a destructive conflagra-

tion, in which about 200 buildings, including several churches and manufactories, were consumed. The loss of property was estimated at upwards of \$500,000. Population of the township, 11,524.

A few miles from the village, New river flows along the base of a remarkable cliff or precipice of stupendous height, known by the name of the "Hawk's Nest," or Marshall's Pillar. Chief-justice Marshall measured it with a line, and found the height to be 1000 feet.

FAYETTEVILLE, a flourishing town, capital of Cumberland county, North Carolina, is situated on the left bank of Cape Fear river, at the head of natural navigation, 60 miles S from Raleigh, and 100 miles N. W. from Wilmington. The town is regularly laid out, with streets of 100 feet in width. It is the centre of an extensive trade, which is facilitated by plank-roads extending in various directions. The adjoining country is partly occupied by extensive forests of pine, which supply important articles of export, in the form of turpentine, tar, lumber, &c. The navigation has lately been extended, by the construction of locks and dams, as far as the coal mines of Chatham county. The ample water-power of the river is employed in manufactories of cotton and flour. Fayetteville contains an arsenal of construction, a large establishment enclosing about 50 acres, now nearly completed; also 3 banks and 3 newspaper offices. In 1831 a large part of the town was destroyed by fire, and nearly \$100,000 were subscribed for the relief of the sufferers by the citizens of this and other states. The prosperity of the place has recently been increased by the establishment of distilleries of turpentine, and by the construction of plank-roads. The aggregate length of the latter, completed and in progress, is about 350 miles. Population in 1853, about 7000.

FLETCHER, a post-township of Franklin county, Vermont, 20 miles N. E. of Montpelier. Population, 1084.

FLETCHER, a post-village of Miami county, Ohio, 80 miles N. from Cincinnati, has about 300 inhabitants.

FLEWELLIN'S CROSS ROADS, a post-office of De Soto county, Mississippi.

Flicksville, a post-village of Northampton county, Pennsylvania, 117 miles N. E. from Harrisburg.

FLINN, a township of Lawrence county, Indiana. Population, 1165.

FLINN'S LICK, a post-office of Jackson county, Tennessee.

FLINT, a post-office of Cherokee Nation, Arkansas.

FLINT, a post-township in the central part of Genesee county, Michigan. Pop., 3304.

FLINT, a thriving post-village in the above township, and capital of Genesee county, Michigan, on the river of its own name, 58 miles N. W. from Detroit. It is connected by a plank-road with Saginaw river. The river affords valuable water-power in this vicinity. Flint is surrounded by a fertile country, and has an active business. The Michigan Asylum for the Deaf and Dumb and Blind has lately been established here. It contains, besides the county buildings, a United States land-office, and 2 newspaper offices. Pop. in 1853, about 1000.

FLINT, a post-office of Steuben co., Ind.

FLINT CREEK of Ontario county, New York, flows northward into the Canandaigua outlet.

FLINT CREEK of Indiana, a small stream flowing into the Wabash, near the northern extremity of Fountain county. An immense bed of small fragments of flint is found at the mouth of this creek.

FLINT CREEK, a little stream of Des Moines co., Illinois, falls into the Mississippi river.

FLINT CREEK, a post-village of Ontario county, New York, 184 miles W. from Albany.

FLINT CREEK, a post-office of Harrison county, Mississippi.

FLINT CREEK, a post-village of Lake county, Illinois, 35 miles N. W. from Chicago.

FLINT GAP, a post-office of Knox co., Tenn.

FLINT HILL, a post-office of Rappahannock county, Virginia.

FLINT HILL, a post-office of Lumpkin co., Ga.

FLINT HILL, a post-village of St. Charles co., Missouri, 48 miles W. N. W. from St. Louis.

FLINT ISLAND, a post-office of Mead co., Ky.

FLINT RIDGE, a post-office of Lancaster district, South Carolina.

FLINT RIVER of Georgia (*Thronateeska* of the Indians) rises near Fayetteville, in the western part of the state, and flowing in a general southward direction, passes by La-

nier, Oglethorpe, and Albany, and unites with the Chattahoochee at the south-western extremity of Georgia. The river thus formed is the Appalachicola. Steamboats ascend to Albany, which is about 250 miles from the Gulf of Mexico. The whole length of the Flint is estimated at 300 miles.

FLINT RIVER, a small river of Morgan county, Alabama, flows into the Tennessee, near Decatur.

FLINT RIVER of Michigan, a branch of the Saginaw, rises in Lapeer county, flows westward and north-westward, and unites with the Shiawassee near the middle of Saginaw county. Length estimated at 100 miles. Small boats can ascend it 20 miles or more.

FLINT ROCK, a post-office of Catawba co., North Carolina, 165 miles W. from Raleigh.

FLINT'S MILLS, a post-office of Washington county, Ohio.

FLINT SPRING, a post-office of Bradley county, Tennessee.

FLINTVILLE, a post-village in Marion district, South Carolina, about 130 miles E. by N. from Columbia.

FLIPPO'S, a post-office of Caroline co., Va.

FLOLA, a post-office of Smith co., Texas.

FLOLA, a township in the southern part of Boone county, Illinois.

FLOLA, a township in Sauk county, Wisconsin. Population, 239.

FLORAL COLLEGE, a small village of Robeson county, North Carolina, 95 miles S. W. from Raleigh, has a female seminary of high standing.

FLORENCE, a post-office of Hampshire co., Ms.

FLORENCE, a post-township of Oneida county, New York, 33 miles N. W. from Utica. Population, 2575. It contains a village of the same name.

FLORENCE, a thriving post-village of Washington county, Pennsylvania, on the railroad now in progress, from Pittsburg to Steubenville, about 25 miles W. from the former. Population, 318.

FLORENCE, a post-village of Guilford county, N. C., about 97 W. by N. from Raleigh.

FLORENCE, a post-village of Stewart county, Georgia, on the Chattahoochee river, 177 miles S. W. from Milledgeville. Population, about 200.

FLORENCE, a flourishing post-village, capital of Lauderdale county, Alabama, is situated at the head of navigation on the Tennessee river, and at the foot of the Muscle Shoals, nearly opposite Tuscombua, and 250 miles N. W. from Montgomery. It is the principal shipping point for the produce of the county and of parts of Tennessee, and does a large business in proportion to the population. The river, which is here about half a mile wide, is crossed by a fine bridge which cost \$150,000. The route of the railroad which has been commenced between Memphis and Charleston passes near this village. A railroad is proposed which will connect Florence with Nashville and New

Orleans. Florence contains 3 large brick churches, a female seminary, and a newspaper office. There are 2 large cotton factories on Cypress creek, 3 miles from the village, having a capital of \$45,000 each. Shoal creek also gives motion to a cotton factory (9 miles distant) which cost \$60,000. The river is navigable by steamboats from its mouth to Florence, a distance of 300 miles. Population in 1853, about 1500.

FLORENCE, a thriving post-village of Boone county, Kentucky, on the turnpike from Covington to Lexington, 10 miles S. W. from Cincinnati. It contains 2 or 3 churches, and several schools. Population, about 400.

FLORENCE, a post-township forming the S. E. extremity of Eric county, Ohio. Pop., 1491.

FLORENCE, a township in the W. part of Williams county, Ohio. Population, 669.

FLORENCE, a post-township in the S. W. part of St. Joseph county, Michigan. Pop., 731.

FLORENCE, a post-office of Switzerland county, Indiana.

FLORENCE, a post-village of Pike county, Illinois, on the right bank of the Illinois river, 11 miles E. from Pittsfield. It has a landing place for steamboats.

FLORENCE, a township in Stephenson county, Illinois. Population, 445.

FLORENCE, a post-office of Morgan county, Missouri, 54 miles W. from Jefferson City.

FLORENCE, a post-office of Fremont co., Iowa.

FLORENCE, a village in Louisa county, Iowa, on Iowa river, 50 miles S. S. E. from Iowa City. This place was formerly the residence of Black Hawk, a famous Indian chief.

FLORENCE, a post-office of Richland co., Wis.

FLORID, a post-office of Putnam co., Ill.

FLORIDA, the most southern of the United States, and the twenty-seventh in the order of admission into the American confederacy, is bounded N. by Alabama and Georgia, E. by the Atlantic, and S. and W. by the Gulf of Mexico and Alabama. This state, which forms a peninsula in the southern part, lies between 25° and 31° N. lat., and between 80° and 87° 44' W. lon. It is about 385 miles long from N. to S., in the peninsula about 50, and in the northern expanse 250 miles wide, including an area of about 59,268 square miles, or 37,931,520 acres, of which only 349,423 were improved in 1850.

Population.—The number of inhabitants in 1830, was 34,730; in 1840, 54,477, and in 1850, 87,401; of whom 25,764 were white males; 21,493, white females; 419, free colored males; 505, free colored females, and 39,309, slaves; representative population, 71,677. This number of inhabitants was divided among 9107 families, occupying 9022 dwellings. Of the population, 20,563 were born in the state; 24,757, in other states; 300 in England; 878, in Ireland; 198, in Scotland and Wales; 97, in British America; 307, in Germany; 67, in France; 915, in other countries; and 58, whose places of birth were

unknown. During the year ending June 1st, 1850, there occurred 933 deaths, or about 11 to every one thousand persons. In the same period, 76 paupers received support, of whom 12 were foreigners; the number of deaf and dumb was 22, of whom 10 were slaves; 26 blind, of whom 2 were free colored, and 12 slaves; 8 were insane, of whom 2 were slaves; and 37 were idiotic, of whom 1 was free colored, and 7 were slaves.

Counties.—Florida is divided into 30 counties, viz. Alachua, Benton, Calhoun, Columbia, Dade, Dallas, Duval, Escambia, Franklin, Gadsden, Hamilton, Hillsborough, Holmes, Jackson, Jefferson, Leon, Levy, Madison, Marion, Monroe, Nassau, Orange, Putnam, St. John, St. Lucie, Santa Rosa, Sumter, Wakulla, Washington, and Walton. Capital, Tallahassee.

Cities and Towns.—Key West is the largest town in Florida; population, in 1850, 2367. The other more important towns are Pensacola, population, 2164; St. Augustine, 1934; Tallahassee, 1391, and Jacksonville, 1045.

Face of the Country.—“Florida is generally level, probably never elevated more than 250 or 300 feet above the sea, and the southern part of the peninsula (we quote De Bow’s ‘Resources of the South and West’) is covered with a large sheet of water, called the Everglades, of an immense extent, (filled with islands,) which it is supposed may be rendered available by drainage. The central portion of the peninsula is somewhat elevated, the highest point being about 171 feet above the ocean, and gradually declining towards the coast on each side. The country between the Suwanee and Chattochee is elevated and hilly, and the western portion of the state is level.” “The lands of Florida,” says the same writer, “are almost *sui generis*, very curiously distributed, and may be designated as high hummock, low hummock, swamp, savanna, and the different qualities of pine land. High hummock is usually timbered with live and other oaks, magnolia, laurel, &c., and is considered the best description of land for general purposes. Low hummock, timbered with live and water oak, is subject to overflow, but when drained is preferred for sugar. Savannas, on the margins of streams, and in detached bodies, are usually very rich alluvions, and yielding largely in dry, but needing ditching and dyking for ordinary seasons. Marsh savannas, on the borders of tide streams, are very valuable, when reclaimed, for rice or sugarcane.” South-west of Florida is a chain of rocky keys or islets, dangerous to navigators, but favorable to the manufacture of salt, and for fisheries. On the N. E. coast are Amelia and other islands, which it is thought may yield the celebrated sea-island cotton advantageously. The Everglades cover an extent of about 160 miles long by 60 broad, occupying the most of that part of Florida S. of Lake Okechobee, and are described by De

Bow as a vast lake studded with thousands of islands, from one-fourth of an acre to hundreds of acres in area, mostly covered with dense thickets of shrubbery and vines, and occasionally with lofty pines and palmettoes. The water is from 1 to 6 feet in depth, out of which (from a vegetable deposit at the bottom,) issues a rank growth of tall grass. The Everglades furnish a soil well adapted to the banana and plantain.

Rivers, Bays, &c.—Florida has a number of bays, viz. Chatham, Charlotte's Harbor, Tampa, Appalachee, Appalachicola, Choctawatchee, and Pensacola bays, all on the W. side. The last affords an excellent harbor. There is also a chain of lakes running through the middle of the state, the largest and most southern of which is Lake Okecho-bee. The rivers too are numerous, and mostly more or less navigable. In the N. W. is the Perdido, a small river separating Florida from Alabama; followed in order by the Escambia, Blackwater, Yellow-water, Choctawatchee, and Chipola river, but none of great length, and all entering the state from Alabama, discharge their waters into the Gulf of Mexico, with the exception of the Chipola, which is an affluent of the Appalachicola. The latter, (the largest river in the state,) together with the Oclockonee, Oscilla, and Suwanee, enter the state from Georgia, and also flow into the Gulf of Mexico. The St. Mary's, (separating the state from Georgia on the N.), the St. John's, and Indian river, (or inlet,) are the principal rivers falling into the Atlantic. The St. John's is a broad and sluggish stream, resembling an inlet, and is navigable for vessels drawing eight feet water for more than 100 miles. The Appalachicola is navigable for vessels of the same draught to the junction of the Chattahoochee and Flint. Rivers in this state often issue from the ground with sufficient force to turn a mill at their source.

Objects of Interest to Tourists.—About 12 miles from Tallahassee, a spring bursts from a vast depth, which has been sounded with 250 fathoms of line before finding bottom. This forms a lake of beautiful transparency, reflecting the sky in all its hues, and is nearly as cold as ice in the hottest weather. The number of these springs, some of which, at their source, have sufficient force and body to turn a mill, bursting from a great depth below the surface, has led to the conjecture that a vast cave, or series of caves, underlies the whole country in which they exist, and through whose roof they burst with violence, wherever an opening in the rock has either been made or found. The Great Sink in Alachua county is an underground passage, by which the waters of the Alachua-Savannah are supposed to discharge themselves into Orange lake. "In this place," says Bartram, "a group of hills almost surround a large basin, which is the general re-

ceptacle of the water draining from every part of the savanna, by lateral conduits, winding about, and one after another joining the main creek or general conductor, which at length delivers them into this sink, where they descend, by slow degrees, through rocky caverns into the bowels of the earth, whence they are carried by secret subterranean channels into other receptacles and basins. There are three great doors or ventholes through the rocks in the sink, two near the centre, and the other one near the ring, much higher up than the other two, which was conspicuous through the clear water. The beds of rocks lie in horizontal thick strata or lamina, one over the other, where the sink-holes or outlets are." There is a warm and slightly sulphurous spring on Musquito river. In Benton county are iron and sulphur springs.

Climate, Soil, and Productions.—The peninsula of Florida, the most southern land belonging to the United States, approaches within a degree and a half of the torrid zone, of whose climate it largely partakes, and a number of whose productions it yields. According to Dr. Perrine's tables, the mean temperature at Key West and Havana, in 1838, (which we extract from De Bow,) was—

Months.	At Key West.	At Havana.
January	69	71
February.....	70	75

On the night of June 28-29, the coldest known for many years, the thermometer fell to 44°. Bartram, however, states, in 1765, that on the 3d of January, the thermometer fell to 26°, and all the orange-trees were killed. At St. Augustine, the thermometer has sunk on various occasions to 33°, 30°, and 24°; and at Pilatka, in lat. 29° 38', to 28°, and to 27°; at Tampa, lat. 27° 48' to 28°, 26°, 40°, 28°, 30°, 38°, and 30°. At Fort King, in the interior, half a degree S. of St. Augustine, the climate is more severe than on the coast, and ice an inch thick is sometimes seen in its vicinity. The summers, however, are hotter than on the coast. While the minimum range at St. Augustine was 39°, and the maximum 92°, at Fort King the minimum was 27°, and maximum 105°. The Gulf coast, too, has a more severe winter climate than the Atlantic: the minimum (at the time referred to) was 35°, and maximum 92°, at Tampa bay.

From the relative number of deaths occurring annually, it appears that Florida is the most healthy of the United States.

The soil of the state is generally sandy, except in the hummocks, where it is mixed with clay; yet, owing to the mild climate, it is highly productive in many parts. The best lands, however, of the state lie useless at present for want of drainage. Florida is particularly well adapted to grazing. Besides the forest and fruit-trees subsequently enumerated, the state produces cotton, Indian corn, sugar-cane, rice, tobacco, (of a very fine quality,) beans, peas, sweet potatoes, and butter, in considerable quantities; and some wheat, rye, oats, Irish potatoes, barley, buckwheat, wine, cheese, hay, grass-seed, hops, flax, and silk. This state is also favorable to the growth of Sisal hemp. In 1850 there were 4304 farms in Florida, containing 349,423 acres of improved land, and yielding 1,996,809 bushels of Indian corn; 66,586 of oats; 135,359 of peas and beans; 757,226 of sweet potatoes; 1,075,090 pounds of rice; 998,614 of tobacco; 18,052,400 of cotton; 23,247 of wool; 371,498 of butter; 18,015 of cheese; 2510 tons of hay, and 2,752,000 pounds of sugar; live stock, valued at \$2,880,058; market products, \$8721, and slaughtered animals, \$514,685.

Forest-Trees.—Florida abounds in forest-trees, among which are the live oak, so valuable in ship-building; the water, and other varieties of oak, swamp cypress, pine, hickory, magnolia, dogwood, and laurel. The palma christi, or castor-oil bean, becomes a large tree; and on the islands and keys, boxwood, satin-wood, mastic, and lignumvitæ abound. Arrowroot grows wild, and ginger and cinnamon may be cultivated. The pine grows from Cape Sable to near Indian river. Fruit-trees of great variety find a congenial soil and climate in Florida, (except in a few seasons of unusual severity.) The lime, lemon, orange, olive, cocoanut, plantain, pine-apple, banana, guava citron, pimento, coffee, pepper, cloves, &c. may all be successfully cultivated.

Animals.—Hideous alligators bask on the shores of the inlets, rivers, and lagoons of Florida. Turtle, oysters, and other shell and fin fish abound. Great numbers of wild fowl are found in many parts along the coast.

Manufactures.—This is not a manufacturing state. There were in 1850 but 121 establishments producing annually \$500 and upwards. There were invested in cotton factories that year \$80,000, employing 900 male and 335 female hands; consuming raw material of the value of \$80,000, and producing 624,000 yards of stuffs, worth \$49,920; value of homemade manufactures, \$74,362.

Internal Improvements.—Florida has not made much advance in works of internal communication, nor is it to be expected in a state so sparsely populated, and the greater

part of whose settlements lie contiguous to some navigable waters. In 1853 there were 54 miles of railway completed, one connecting St. Mark's with Tallahassee, and the other Iola and St. Joseph's.

Commerce.—Florida has but little foreign commerce, and its domestic trade is limited pretty much to the export of its products, viz. cotton, rice, live oak and other lumber, pitch, tar, turpentine, and resin. Salt is exported from the Salt Keys, and fish are sent to Cuba. The lumber trade is rapidly increasing in importance. According to De Bow, 188,499 bales of cotton were received at the ports of Florida in 1851-2, nearly all of which was probably exported. The foreign exports for the same year amounted to \$2,511,976, and imports to \$30,713. Only one small vessel built. Entire tonnage of the several districts, 9668,97. The fisheries are valued at about \$15,000 annually.

Education.—There is no system of free schools in Florida, nor any college. According to the census report in 1850, there were 10 academies and 69 common or public schools.

Religious Denominations.—Of the 132 churches in Florida, 45 belonged to the Baptists, 10 to the Episcopalians, 1 to the Free Church, 75 to the Methodists, 14 to the Presbyterians, 5 to the Roman Catholics, and 2 to minor sects. Averaging 1 church to each 507 persons. Value of church property, \$165,400.

Government.—The executive power in Florida is vested in a governor elected by the people for four years, and receiving a salary of \$1500 a year. The legislative power is placed in the hands of a senate, of 19 members, elected for four years, and a house of representatives, of 40 members, elected annually, and both by popular vote. The judiciary consists, 1. Of a supreme court, composed of a chief and two associate judges, which holds four sessions annually, one in each of the following places—Tallahassee, Jacksonville, Tampa, and Mariana; and, 2. Of four circuit courts. The judges' salaries of both courts are \$2000 a year each. Florida has but one member in the national house of representatives, and three electoral votes for president. The assessed value of property in 1850 was \$22,784,837; ordinary expenses, \$45,000 per annum.

History.—Florida was the earliest settled of the now existing states of the United States, but was not a part of the territory of the Union till 1820, when it was purchased of Spain. Though so recently become a member of the American confederacy, Florida is more fertile in materials of history than many of her elder sisters. Her territory was visited by Ponce de Leon as early as 1512, and afterwards by Narvaez, who invaded the country from Cuba with 400 men, and penetrating into the interior, was never again heard of. De Soto subdued the savages, after a bloody resistance, in 1539. The French

began settlements, but after a struggle, in which mutual atrocities were perpetrated, they were expelled by the Spaniards, who settled St. Augustine (the first permanent colony) about 1565. Previous to the Revolution, Florida was involved in a war with the English colonies of Georgia and South Carolina, in which the Spaniards were defeated by Oglethorpe. At the peace of 1763, Florida fell into the hands of the English, but was reconquered by Spain in 1781. Since its acquisition by the United States, it has been the theatre of many sanguinary conflicts with the Seminole Indians, led on by their daring chief, Osceola. The savages, though but a handful in number, managed to baffle for years the skill and power of our armies, by retreating to their swamps and forests, and it cost the United States government many millions of dollars before they were finally subdued, which event took place in 1842. In 1846, the greater part of them were removed beyond the Mississippi. General Jackson followed these Indians, in 1818, into the then territory of Spain, to chastise them for depredations on the American settlers, took possession of St. Mark's and Apalachicola, besieged the Spanish governor, who had aided the Seminoles, and brought them all to submission. There is a remnant of this tribe still in Florida, who steadfastly resist all offers of the general government to induce them to remove.

FLORIDA, a post-township of Berkshire county, Massachusetts. Population, 561.

FLORIDA, a township of Montgomery county, New York, on the Erie canal, 27 miles N. W. from Albany. Population, 3571.

FLORIDA, a small post-village of Orange co., N. Y., about 110 miles S. S. W. of Albany. It contains two churches, and several mills.

FLORIDA, a small post-village of Henry county, Ohio, on the Wabash and Erie canal, and Maumee river, 48 miles above Toledo.

FLORIDA, a post-office of Hillsdale co., Mich.

FLORIDA, a thriving post-village of Monroe county, Missouri, on Salt river, at the junction of its three main branches, and at the head of navigation, 13 miles E. from Paris.

FLORIDA BAY, at the S. end of Florida, between Florida reefs and the main land.

FLORIDA REEFS, OR KEYS, an almost continuous chain of small islands and sandbanks, reefs or keys, extending from Cape Florida in a S. W. direction, for a distance of 220 miles, the whole lying in a bow or curve. They are very numerous. Among the principal may be mentioned, Key or Cayo Largo, Cayo Huesco or Key West, on which the city of Key West is built.

FLORIS, a post-village in Davis county, Iowa, 75 miles S. W. from Iowa City.

FLORISSANT, a post-village in St. Louis co., Missouri; 18 miles N. W. from St. Louis.

FLOWER CREEK, a post-office of Pendleton county, Kentucky.

FLOWERFIELD, a post-township forming the

N. W. extremity of St. Joseph county, Michigan. Population, 564.

FLOWERFIELD, a post-village of St. Joseph county, Michigan, on Rocky creek, 154 miles W. from Detroit. Population, about 300.

FLOWERTOWN, a village of Montgomery county, Pennsylvania, on the Bethlehem turnpike, 8 miles E. by S. from Norristown. It contains several inns and stores.

FLOWERY MOUND, a post-office of Concordia parish, Louisiana.

FLOYD, a county in the S. S. W. part of Virginia, has an area of 279 square miles. It is drained by Little river, an affluent of the New or Kanawha. The surface is high and mountainous, the county occupying the north-western declivity of the Blue Ridge, which slopes gradually towards the valley of New river. The land is generally rough, and in some parts unproductive, but a large portion is adapted to pasturage. Indian corn, wheat, oats, hay, and live stock are the staples. In 1850 the county produced 104,630 bushels of corn; 23,992 of wheat; 92,654 of oats, and 3226 tons of hay. There were 7 grist mills, 5 flour mills, 3 wool-carding mills, and 4 tanneries. It contained 9 churches; 832 pupils attending public schools, and 104 attending academies or other schools. The highlands contain copper, iron ore, and other minerals. The county is plentifully supplied with water-power. Organized in 1831, and named in honor of John Floyd, at that time governor of Virginia. Capital, Jacksonville. Pop., 6458, of whom 6015 were free, and 443, slaves.

FLOYD, a county in the W. N. W. part of Georgia, bordering on Alabama, has an area of 540 square miles. It is traversed by the Coosa river and its constituent streams, the Etowah and Oostenaula rivers, which unite at the county seat; also drained by Cedar and other creeks. The surface is beautifully diversified, and in some parts mountainous. Taylor's ridge is the principal elevation. The soil of the valleys and the river bottoms is represented to be very productive. Cotton, Indian corn, wheat, oats, and sweet potatoes are the staples. In 1850 this county produced 1976 bales of cotton; 254,722 bushels of corn; 15,370 of oats, and 36,818 of sweet potatoes. There were 2 manufactories of coaches, 2 of cabinet-ware, and 3 tanneries. It contained 2 newspaper offices; 409 pupils attending academies and other schools. Iron, plumbago, galena, slate, satin spar, and agate are found. There is a valuable mineral spring in the S. W. part. A branch railroad extends from the county seat to the Western and Atlantic railroad. Organized about the year 1833, previous to which time the soil was in the possession of the Cherokee Indians. Named in honor of General Floyd, formerly member of Congress from Georgia. Capital, Rome. Population, 8205, of whom 5206 were free, and 2999, slaves.

FLOYD, a county in the E. part of Ken-

tucky, has an area estimated at 750 square miles. It is intersected by the West fork of Big Sandy river, and also drained by the sources of Licking river. The surface is broken by highlands, which produce good pasture and contain large beds of stone coal. Indian corn and pork are the staples. In 1850 this county produced 208,325 bushels of corn; 17,521 of oats, and 13,541 pounds of flax. It contained 4 churches, and 302 pupils attending public schools. Floyd county was formed in 1799, and named in honor of Colonel John Floyd, an officer in the war of the Revolution. Capital, Prestonburg. Population, 5714, of whom 5565 were free, and 149, slaves.

FLOYD, a county in the S. part of Indiana, bordering on the Ohio river, contains 148 square miles. It is drained by Silver and Indian creeks. The surface is diversified; the soil is not uniformly productive. A range of steep hills, called the "Knobs," extends through the county N. and S., with an altitude of about 500 feet. Wheat, corn, oats, and pork are the chief productions. In 1850 this county yielded 131,261 bushels of corn; 30,706 of wheat; 61,154 of oats, and 3241 tons of hay. It contained 29 churches, 4 newspaper offices; 2016 pupils attending public schools, and 90 attending an academy. The county contains extensive beds of iron ore, limestone, sandstone, and slate. The hills produce good timber for boat-building. The New Albany and Salem railroad passes through the county. Organized in 1819. Capital, New Albany. Population, 14,875.

FLOYD, a new county in the N. N. E. part of Iowa, has an area of about 550 square miles. It is intersected by Cedar river, and also drained by Lime and Shell-rock creeks, (branches of English river,) which unite in the S. W. part of the county. The slope of the county is south-eastward. It is not included in the census of 1850. County seat not yet located.

FLOYD, a post-township of Oneida county, New York, 6 miles E. from Rome. Pop., 1495.

FLOYD, a village of Camden county, Georgia, near the mouth of Santilla river, 35 miles S. from Darien.

FLOYD, a township in Putnam county, Indiana. Population, 1386.

FLOYD COURT HOUSE, a post-village, capital of Floyd county, Virginia, 180 miles W. S. W. from Richmond.

FLOYD KNOBS, a post-office of Floyd co., Ind.

FOND DU LAC, a county in the E. part of Wisconsin, at the S. end of Lake Winnebago, contains 754 square miles. It is drained by the sources of Milwaukee and Rock rivers, and by Fond du Lac river. A high, steep ledge of limestone extends through the county from S. W. to N. E. On the S. E. side of this, the land is heavily timbered; the W. part of the county contains extensive prairies. The soil is calcareous and fertile. Wheat, Indian corn, oats, pork, and butter are the staples. The produce of the county in 1850 was 166,718 bushels of wheat; 74,361 bushels of corn, and 1,347,479 pounds of butter. It contained 17 churches, 2 newspaper offices; 2844 pupils attending public schools, and 85 attending academies and other schools. A plank-road extends from Lake Michigan to Fond du Lac, and a railroad has been commenced which will connect it with Chicago. The settlement of the county began in 1835, and has progressed with great rapidity. "Fond du Lac," in French signifies the "end of the lake." Capital, Fond du Lac. Population, 14,510.

FOND DU LAC, a flourishing town, capital of Fond du Lac county, Wisconsin, is admirably situated at the S. end of Winnebago lake, 72 miles N. N. W. from Milwaukee, and 90 miles N. E. from Madison. Lake Winnebago, which is a beautiful sheet of water, 30 miles long and 10 miles wide, forms a link in the chain of navigable waters, connecting Lake Michigan and its tributaries with the Mississippi river, and is the channel of an active and extensive trade. The Fox river, by which Winnebago lake communicates with Green bay, is to be rendered navigable for steamboats, and a canal has been cut from the same river to the Wisconsin. Fond du Lac has grown up almost entirely since 1845, and the population has increased with surprising rapidity. A plank-road has been constructed from this place to Sheboygan, on Lake Michigan, and similar roads are projected in several other directions. The Fond du Lac and Rock River railroad, nearly finished, will connect Fond du Lac with Chicago. The town is built on ground ascending gradually from the lake, and is pleasantly embowered among groves and clumps of trees. It has an abundance of the purest water, obtained by means of artesian wells, which vary in depth from 90 to 130 feet. These wells are very numerous, almost every family being provided with one. It contains 3 newspaper offices, 2 banking houses, 1 car factory, 1 iron foundry, 12 dry-goods stores, and about 60 other stores. Population in 1850, 2014; in 1853, about 4000.

FOUR LAKES, a name given to a chain of lakes in Dane county, Wisconsin, extending in a row from N. W. to S. E., and discharging their waters into Catfish river. The water of all these lakes is pure, and deep enough in most places for the purposes of navigation. In describing them we shall reverse the order in which they are named, beginning with the uppermost, and descending. Fourth lake, at the north-west extremity of the chain, is considerably the largest, being 6 miles in length, and 4 in its greatest breadth. The water is cold and pure. It is navigable for small steamboats: the depth in some parts is estimated at from 50 to 70 feet. This beautiful lake is mostly fed by springs, having but one tributary. It has clear, white and gravelly shores. The surface is estimated at 210 feet above Lake Michigan. Third lake, the next below, is 6½ miles long and 2 miles wide. Madison, the capital of the state, is situated on the north shore of this lake, on the strip of land between it and Fourth lake. Second lake, the next order, is 3½ miles long, and near 2 miles wide. First lake, the lowest of the chain, is rather more than 3 miles long, and about 2 miles wide. The region in the vicinity of the Four Lakes is a beautiful country, with a rich limestone soil, well adapted for agricultural purposes.

FRANKFORT, a handsome town, capital of Kentucky, and seat of justice of Franklin county, is beautifully situated on the right (or N. E.) bank of Kentucky river, 60 miles from its mouth, 24 miles W. N. W. from Lexington, 53 miles E. from Louisville, and 550 miles from Washington. Lat. 38° 14' N., lon. 84° 40' W. It stands on an elevated plain or valley, between the river and the bluff, which rises a short distance behind the town to the height of about 150 feet. The river, which is here near 100 yards wide, flows in a deep channel of limestone rock. The eminences on the N. E. side of the town present a delightful view of the picturesque scenery for which this river is so remarkable. Frankfort is regularly planned, and generally well built. The state house stands on a small eminence, nearly midway between the river and the northern limit of the valley. It is a handsome edifice of Kentucky marble, quarried in the vicinity, with a portico supported by six columns of the Ionic order. The governor's house is a plain building of brick. The other public buildings are the state penitentiary, a court house, 4 churches, 1 academy, and 2 banking houses. Seven newspapers are published in Frankfort. The town is supplied with excellent spring water, which is conveyed into the town through iron pipes. It is the centre of an active trade, which is facilitated by railroads leading to Louisville and Lexington, and by the navigation of the river. The latter has been improved by means of dams and locks, so that steamboats can ascend from its mouth to the junction of its constituent branches. A chain bridge connects the town with the village of South Frankfort, on the opposite bank. Pop. in 1853, about 5000.

The Kentucky river flows through the middle, and Elkhorn river flows through the E. part into the former stream. The surface is finely diversified, undulating, and hilly. The Kentucky river in this county flows through a chasm between steep cliffs of limestone several hundred feet high. The soil is very productive and much improved. Wheat, Indian corn, oats, and hemp are the staples. In 1850 this county produced 549,723 bushels of corn; 25,335 of wheat, and 98,742 of oats. It contained 17 churches, 556 pupils attending public schools, and 215 attending academies or other schools. The rock which underlies the county is the blue or Trenton limestone. Quarries of marble are also worked near the Kentucky river. The river is navigable by steamboats in this county, which is intersected by the Louisville and Lexington railroad. Organized in 1794. Frankfort is the county seat and capital of the state. Population, 12,462, of whom 9097 were free, and 3365, slaves.

FRANKLIN county, Ohio, situated a little S. from the centre of the state, contains 530 square miles. It is drained by the Scioto and Olentangy rivers, and by Walnut and Alum creeks. The surface is level; the soil is fertile, and much of it is well cultivated. Wheat, Indian corn, oats, cattle, and pork are the chief productions. In 1850 this county yielded 97,993 bushels of wheat; 2,521,988 of corn; 174,963 of oats, and 19,644 tons of hay. It contained 58 churches, 14 newspaper offices, 14,287 pupils attending public schools, and 95 attending an academy. Four important railways radiate from Columbus towards the chief towns of the state, and several plank-roads have been laid in the county. Franklin is the fourth county of the state in respect to population, and is rapidly improving. Capital, Columbus. Population, 42,910.

FRANKLIN, a county in the S. E. part of Indiana, bordering on Ohio, contains about 380 square miles. It is drained by the forks of Whitewater river, which unite near the centre of the county. The surface is level in some parts, and hilly in others; the soil contains a large proportion of lime, and is mostly fertile. The productions are wheat, corn, oats, potatoes, pork, beef, and various provisions for the Cincinnati market. In 1850 this county produced 1,002,149 bushels of corn; 124,269 of wheat; 100,279 of oats, and 6392 tons of hay. It contained 42 churches, 2 newspaper offices, and 1670 pupils attending public schools. The county is amply supplied with water-power, and has manufactories of cotton, paper, and flour. It is traversed by the Whitewater canal. Extensive beds of blue or Trenton limestone are found. Organized in 1810. Capital, Brookville. Population, 17,968.

FRANKLIN, a county in the S. part of Illinois, has an area of 400 square miles. It is intersected by the Big Muddy river, and also drained by Saline creek.
