FREDERICK, a county in the N. part of Maryland, bordering on Pennsylvania, has an area of 770 square miles. It is bounded on the S. W. by the Potomac river, which separates it from Virginia, intersected by Monocacy river, and also drained by Catoctin, Pipe, Linganore, and Bennett's creeks. The South mountain, a continuation of the Blue Ridge of Virginia, forms its western boundary, and the surface is generally undulating. The soil in different parts is formed of decomposed limestone and slate, and is highly productive. Wheat, Indian corn, oats, potatoes, hay, butter, and live stock are the staples. According to the census of 1850, this county produced more hay and more butter than any other in the state, and more wheat than any excepting Washington. There were raised 731,864 bushels of wheat; 782,603 of corn; 180,922 of oats; 23,838 tons of hay, and 723,064 pounds of butter. There were 9 woollen factories, 1 iron foundry, 1 iron furnace, 72 flouring mills, 43 tanneries, 12 cooper shops, 6 manufactories of cabinet-ware, 2 of agricultural implements, and 5 brick-yards. It contained 79 churches, 7 newspaper offices: 5182 pupils attending public schools, and 740 attending academies or other schools. The limestone which underlies the surface is of superior quality: a quarry of fine white marble has been opened in the county, which also contains valuable mines of copper, iron, and manganese. The streams furnish abundant water-power. The county is intersected by the Baltimore and Ohio railroad, and has the Chesapeake and Ohio canal on its south-western border. Capital, Frederick. Population, 40,987, of whom 37,074 were free, and 3913, slaves.

FREDERICK, a county in the N. N. E. part of Virginia, has an area of 378 square miles. The Opequan, Sleepy, and Black creeks, affluents of the Potomac, rise within it and flow north-eastward. The surface is beautifully diversified with mountain scenery: the principal elevation is the North mountain, extending along the western border. The county occupies part of the Great Valley of Virginia, and is one of the most wealthy and highly cultivated in the state. Wheat, Indian corn, oats, hay, butter, cattle, and pork are the staples. In 1850 it produced 311,060 bushels of wheat; 199,242 of corn; 50,701 of oats; 6433 tons of hay, and 193,394 pounds of butter. There were 35 flour mills, 38 saw mills, 7 woollen factories, 4 tobacco factories, 7 tanneries, 1 iron furnace, and 1 iron foundry. It contained 31 churches, 360 pupils attending public schools, and 305 attending academies and other schools. Blue limestone underlies a large portion of the county. The streams furnish abundant motive-power for mills and factories. A railroad

extends from Harper's ferry to Winchester, the capital of the county. Turnpike-roads radiate in several directions from the latter town. Formed in 1738. Population, 15,975, of whom 13,681 were free, and 2294, slaves.

GALENA, a flourishing city and capital of Jo Daviess county, Illinois, on Fevre river, 6 miles from its entrance into the Mississippi river, 450 miles above St. Louis, 180 miles W. N. W. from Chicago, and 250 N. by W. from Springfield. "The river on whose rocky shelf this town is built is more properly an arm of the Mississippi river, setting up between lofty bluffs, around whose base it winds with picturesque effect. The streets rise one above another, and communicate with each other by flights of steps, so that the houses on the higher streets are perched like an eagle's eyrie overlooking the rest and commanding an extensive prospect. Pleasant churches meet the eye, on the first ledge or terrace above the levee, and private residences, wearing an aspect of neatness and comfort, adorn each successive height." (*Thompson's Letters*.) Galena owes its growth and importance mainly to the rich mines of lead with which it is surrounded in every direction. Considerable quantities of copper are found in connection with the lead. The amount of lead shipped at this place in 1852 was 40,000,000 pounds, valued at \$1,600,000. The Fevre river is navigable by steamboats, which make regular passages from Galena to St. Louis, St. Paul's, and other ports on the Mississippi river. The commerce of the place is extensive and rapidly increasing. The

total value of exports in 1851 was computed at \$1,800,358. A large portion of Wisconsin, Iowa, and Minnesota are tributary to this town. It is the western terminus of the Chicago and Galena railroad, which is nearly completed. A branch of the Central railroad from Peru to Galena is about to be constructed. Galena contains 1 bank, and 3 newspaper offices. An error in the spelling and pronunciation of Fevre river, (named from La Fevre, an early French trader,) has given some currency to an unfounded impression that the place is unhealthy. The name of the city is taken from *galena*, a species of lead ore. Population in 1850, 6004; in 1853, about 8000.

GASCONADE, a river of Missouri, which rises by several branches in Wright county, in the S. part of the state, interlocking with the sources of White river of Arkansas. Its general direction is N. N. E. It is a beautiful stream of clear water, flowing through a hilly country abounding with picturesque scenery, and covered by extensive forests of pine and other timber. Steamboats have ascended about 60 miles from its

mouth when the water is high. Large rafts of yellow-pine lumber are floated down the stream annually. It enters the Missouri in Gasconade county, 40 miles below Jefferson City, after a course of about 250 miles. *Branches.*—The Osage fork rises near the W. border of Wright county, and flowing north-eastward, enters the river in La Clede county. The Robidoux fork, rising in Texas county, flows northward and falls into the river a few miles from Waynesville, Pulaski county. The Big Piney fork rises in the S. part of Texas county, and flowing northward, enters the main stream near the centre of Pulaski county, after a course of about 100 miles. These are more properly affluents than constituent branches.

GASCONADE, a county in the E. part of Missouri, has an area of 540 square miles. It is bounded on the N. by the Missouri river, and intersected in the N. W. part by the Gasconade river, from which the name is derived. The Bourbeuse creek and several of its branches flow through the S. E. part of the county. The surface is uneven and broken: the soil is inferior, excepting the river bottoms and lowlands. Indian corn, wheat, oats, cattle, pork, and butter are the staples. The manufacture of wine has lately commenced. In 1850, this county produced 190,913 bushels of corn; 20,427 of wheat, and 26,269 of oats. It contained 3 churches, 2 newspaper offices, 73 pupils attending public schools, and 72 attending academies or other schools. Iron ore and sulphur are abundant, and indications of copper along Bourbeuse creek are reported. Limestone underlies the greater part of the county, and burrstone of good quality is found on the Gasconade. Small steamboats navigate the river when the water is high. The county is well supplied with timber and water power. Capital, Hermann. Population, 4996, of whom 4884 were free, and 112, slaves.

GENESSEE river, of New York, has its sources in Pennsylvania near the boundary between the two states. It flows first in a north-westerly course into Alleghany county, then turning it runs in a north-easterly direction through Wyoming and Livingston counties, and enters Lake Ontario about 7 miles N. of Rochester. Near its mouth there are falls of about 100 feet high, and at Rochester others of nearly the same height. By these falls an immense water-power is produced, which is applied to turning several grist and saw mills. Above the falls are rapids, from the head of which a feeder leads into the Erie canal. In the N. part of Alleghany county there are 3 other falls, one of 60, one of 90, and the other of 110 feet; and for 2 or 3 miles along both sides of the river are perpendicular walls of rock, near 400 feet high. At Rochester the Erie canal is carried across this river by an aqueduct, built of freestone, of 9 arches, each 50 feet span.

GENESSEE, a county in the western part of New York, has an area of about 486 square miles. It is drained by Tonawanda, Allen's, and Oak Orchard creeks, and other smaller streams. The surface is slightly undulating. The soil is fertile, chiefly a moist, sandy, or gravelly loam, well adapted to both grazing and tillage. Wheat, Indian corn, and grass are the staples. In 1850 this county produced 734,051 bushels of wheat; 390,424 of corn; 47,759 tons of hay; 887,510 pounds of butter, and 369,957 of wool. There were 18 flour and grist mills, 22 saw mills, 4 woolen factories, 5 iron foundries, 12 tanneries, and 2 coach manufactories. It contained 49 churches, 4 newspaper offices, 8760 pupils attending public schools, and 741 attending academies or other schools. Iron ore, limestone, water-cement, and salt springs are among its mineral productions. It is intersected by the Buffalo and Rochester railroad, the Canandaigua and Niagara Falls railroad, and by a branch of the New York and Erie railroad. Organized in 1802, (having been formed out of part of Ontario county,) when it contained all that part of the state lying W. of the Genesee river, from which it derived its name. Capital, Batavia. Population, 28,188.

GENESSEE, a county in the E. central part of Michigan, contains 500 square miles. It is drained by the Flint and Shiawassee rivers, and by Thread and Kearsley creeks. The surface is rolling: the soil is mostly a dry and fertile sandy loam. Extensive oak openings are found in the S.; the other parts produce dense forests of pine and other timber. Wheat, Indian corn, oats, and grass are cultivated, and pine lumber is exported. In 1850 the county produced 134,021 bushels of

wheat; 128,326 of corn; 84,334 of oats; and 16,964 tons of hay. It contains 4 churches, 2 newspaper offices, and 3876 pupils attending public schools. The streams furnish extensive water-power. A plank-road about 35 miles long extends from the county seat to the Saginaw river. Organized in 1836. Capital, Flint. Population, 12,031.

GEORGE LAKE, called also HORICOX, a beautiful mountain lake of New York, between Warren and Washington counties, 36 miles in length, with a breadth varying from three quarters of a mile to four miles. The water is remarkably transparent, and in some parts is more than 400 feet deep. To a passenger traversing this lake, scarcely any thing can be imagined more beautiful or picturesque than the scenery along its banks. The romantic effect of the prospect is greatly enhanced by a multitude of delightful islands, of various forms and sizes, which meet the gaze of the beholder on every side. Of these, if we include many little islets and rocks, there are more than 300: a popular notion prevails that their number corresponds to that of the days of the year. Twelve miles from the S. W. extremity of the lake there is an island of about 20 acres, called, from its position, Twelve Mile Island. A mile farther north there is a high point, or tongue of land, called Tongue mountain, west of which projects a small arm of the lake, named North-west bay. Here the Narrows, that is, the narrowest part of the lake, commence, and continue 7 or 8 miles. Near the W. end of the Narrows, on the E. side of the lake, is Black mountain, the summit of which is regarded as the highest point in the immediate vicinity of the lake, having an elevation of 2200 feet above its surface. About 12 miles beyond Black mountain there is a rock about 200 feet high, rising almost perpendicularly from the surface of the water. During the French war, Major Rogers, being closely pursued by the Indians, slid down this steep declivity, and landed safely on the

ice, leaving his pursuers petrified with astonishment at the dangerous exploit which they had witnessed. From this circumstance the rock has been named Rogers' Slide. Two or three miles beyond the place just mentioned is Lord Howe's Point, where the division of the English army under Lord Howe landed previous to their attack on Ticonderoga.

GEORGETOWN, a district in the E. S. E. part of South Carolina, bordering on the sea, has an area of 813 square miles. It is bounded on the S. W. by Santee river, and intersected by the Pedee, Waccamaw, and Black rivers, which unite in the S. E. part, and flow through Winyaw bay into the Atlantic. The surface is a level plain, in many places marshy, and partly covered with pine woods. The soil is moderately fertile. Rice, Indian corn, and sweet potatoes are the staples. In 1850 this district produced 46,765,040 pounds of rice; 136,312 bushels of corn, and 209,800 of sweet potatoes. The quantity of rice was the greatest produced by any county or district in the United States, except Beaufort of S. C. There were 2 saw and planing mills, and 1 iron foundry. It contained 26 churches, and 2 newspaper offices; 170 pupils attending public schools, and 281 attending academies or other schools. Population, 20,647, of whom 2394 were free, and 18,253, slaves.

It contains a court house, an academy, and several other flourishing schools, a bank, 3 or 4 churches, a newspaper office, a fine Odd-Fellows' hall, and 10 or 12 stores. Pop. estimated at 1200.

GEORGETOWN, a city and port of entry of Washington county, District of Columbia, at the head of navigation on the Potomac river, about 125 miles (following the windings of the channel) from its mouth, and 2 miles W. N. W. from Washington City, from which it is separated by Rock creek. It is situated on the left bank of the river, on a range of hills, the most elevated of which are denominated the Heights. These eminences, which are occupied by numerous elegant villas, command a view of the most exquisite beauty, embracing the city, Washington, the Potomac, and an almost illimitable expanse of country. On the north-western declivity of the Heights, is Oak Hill Cemetery, a burial-place of classic elegance, laid out in 1849. The entire grounds are thickly shaded, and enclosed by an iron fence. Georgetown exhibits quite an antiquated appearance, though within a few years past it has been greatly improved. It contains 7 or 8 churches, 2 banks, and several fine hotels. It is chiefly distinguished for its literary advantages and for its polite society. The Russian and some of the other foreign ministers have made it their place of residence. Among the literary institutions, the college under the control of the Catholics may be mentioned as the most important. It was first founded as an academy in 1789; chartered as a college in 1799, and in 1818 Congress invested it with authority to confer degrees. The institution occupies two commodious brick edifices, standing at the western extremity of the city, in the midst of a large tract of land owned by the corporation. The college is furnished with an extensive philosophical apparatus and a museum of natural history. Connected with it is a flourishing female academy, taught by the nuns, and a fine botanic garden. Besides the above, the city contains numerous

private seminaries, among which is an excellent boarding school for young ladies, conducted by Mrs. English. The newspaper press consists of two issues, a triweekly and a weekly. Georgetown is one of the greatest shad and herring markets in the United States. Vast quantities of these fish, taken in the Potomac, are brought here for barreling.

The port has considerable foreign commerce, and also carries on an important coast trade. Its shipping, June 30th, 1852, amounted to an aggregate of 2955 $\frac{7}{8}$ tons registered, and 23,241 $\frac{3}{8}$ tons enrolled and licensed. During the year, 25 sloops and canal boats, and 2 steamers, with an aggregate burthen of 1995 $\frac{3}{8}$ tons, were admeasured. The flouring business is extensively carried on, and keeps nearly 50 mills in operation. Manufacturing has also been introduced, and of late has become an important branch of industry. The Chesapeake and Ohio canal is carried over the Potomac at this place in an aqueduct, a stupendous structure, 1446 feet in length, and 36 feet above the ordinary surface of the water. Cost of construction about \$2,000,000. Pop. in 1850, 8366.

GEORGETOWN, a port of entry, and capital of Georgetown district, South Carolina, is situated on the W. shore of Winyaw bay, a little below the confluence of the Great Pedee, Black, and Waccamaw rivers, about 15 miles from the sea, and 182 miles E. S. E. from Columbia. The confluence of these three navigable rivers renders the position advantageous for trade. It contains a court house, a bank, several churches, and seminaries. Georgetown is one of the oldest towns in the state, but in consequence of a bar obstructing the entrance to its harbor, and the previous unhealthiness of the place, it has remained in *statu quo* for many years. Recently, however, its salubrity has been improved by a change in the cultivation of rice in the vicinity, and several steam saw mills and turpentine distilleries have been erected. It also has 1 iron foundry and 1 shoe factory. The shipping of the port, June 30th, 1852, amounted to an aggregate of 1896 $\frac{2}{3}$ tons registered, and 2696 $\frac{1}{3}$ tons enrolled and licensed. The clearances for foreign ports during the year were 14, (tons, 2091,) all in American bottoms. The census of 1850, gives this town a population of 704. Two papers are issued here.

GEORGETOWN, a post-village of Randolph county, Georgia, on the Chattahoochee river, nearly opposite Eufaula, in Alabama. Cotton is shipped here in steamboats.

GEORGETOWN, a post-village in Copiah county, Mississippi, on the W. bank of Pearl river, 40 miles S. from Jackson.

GEORGETOWN, a post-village, capital of Williamson county, Texas, on San Gabriel river, about 40 miles N. from Austin.

GEORGETOWN, a flourishing post-village, capital of Scott county, Kentucky, on the North Elkhorn river, 17 miles E. from Frank-

fort. It stands on elevated ground, surrounded by a beautiful and fertile region. Georgetown college, under the direction of the Baptists, is a prosperous institution, with about 130 students, and a library of 6500 volumes. The main college edifice is 100 feet long, and 60 wide. There are also 2 female seminaries in the place. It contains 2 newspaper offices, 2 woollen factories, and 2 bagging and rope factories. Population, estimated at 2000.

GEORGETOWN, a post-village in Pleasant township, and capital of Brown county, Ohio, 100 miles S. S. W. from Columbus and 7 miles from the Ohio river. It is situated in a rich farming district, and has considerable business. It contains 5 churches, and 2 or 3 newspaper offices. Population, about 800.

GEORGETOWN, a village of Columbiana county, Ohio, 150 miles N. E. from Columbus. Population, over 200.

GEORGETOWN, a village of Harrison county, Ohio, 6 miles S. E. from Cadiz, contains 150 inhabitants.

GEORGETOWN, a post-township in the S. E. part of Ottawa county, Michigan, on both sides of Grand river. Population, 196.

GEORGETOWN, a small village of Cass county, Indiana, on the Wabash river and canal, 8 miles W. from Logansport, has about 100 inhabitants.

GEORGETOWN, a post-township in Floyd county, Indiana. Population, 1198.

GEORGETOWN, a post-village of Floyd county, Indiana, 9 miles W. from New Albany.

GEORGETOWN, a small village of Clay co., Ill.

GEORGETOWN, a small village of Randolph co., Ill., about 15 miles E. from Kaskaskia.

GEORGETOWN, a post-village of Vermilion county, Illinois, and 10 miles S. from Danville. It has a plank-road leading to the Wabash river.

GEORGETOWN, a small post-village, capital of Pettis county, Missouri, on the W. fork of La Mine river, 37 miles W. S. W. from Booneville.

GEORGETOWN, a post-office of Monroe co., Io.

GEORGETOWN, a post-office of Lafayette county, Wisconsin.

GEORGETOWN, a post-office of El Dorado county, California.

GEORGETOWN CROSS ROADS, a post-office of Kent county, Maryland.

GEORGIA, one of the original states of the United States of North America, is bounded on the N. by Tennessee and North Carolina; E. by South Carolina, (from which it is separated by the Savannah river,) and by the Atlantic ocean; S. by Florida, and W. by Florida and Alabama, from which it is partly separated by the Chattahoochee river. Georgia lies between 30° 21' 39" and 35° N. lat., and between 81° and 85° 53' 38" W. lon., being about 300 miles in length from N. to S., and 256 in its greatest breadth from E. to W., including 58,000 square miles, or 37,120,000

acres, of which only 6,378,479 are improved, showing that this already great and flourishing state is but in the commencement of developing her resources and wealth.

Population.—The original settlers of Georgia were English, Scotch, and Germans, with the usual admixture of other nations, (as shown by the figures below,) as the peopling of the state progressed. Up to 1838, the Cherokee Indians, one of the most civilized, intelligent, and numerous of the aboriginal tribes, formed a considerable part of the population of Georgia. In 1790 the number of inhabitants was 82,548; 162,101 in 1800; 252,433 in 1810; 340,987 in 1820; 516,823 in 1830; 691,392 in 1840, and 906,101 in 1850, being a ratio of increase greater than any of the original states since the first census in 1790. This population is divided into 91,471 families, occupying 91,011 dwellings. Of the population in 1850, 266,183 were white males, 255,305 females; 1379 free colored males, 1552 free colored females; 188,838 male slaves, and 192,844 female slaves. Of the free population, 402,582 were born in the state; 115,413 in other states of the Union; 679 in England; 3202 in Ireland; 380 in Scotland and Wales; 108 in British America; 974 in Germany; 177 in France; 514 in other countries, and 597 whose places of birth were unknown.—In the year ending June 1, 1850, there died 9920 persons, or about 11 in every 1000 persons, showing a ratio of mortality less than that of any Southern state except Florida, and of the entire Union except 3. In the same period, 1036 paupers received aid, of whom 58 were foreigners, at an expense of about \$30 to each person. There were 252 deaf and dumb, of whom 41 were slaves; 309 blind, of whom 5 were free colored, and 80, slaves; 306 insane, of whom 2 were free colored, and 23, slaves; 577 idiotic, of whom 3 were free colored, and 98, slaves.

This state is divided into 97 counties, viz. Appling, Baker, Baldwin, Bibb, Bryan, Bullock, Burke, Butts, Camden, Campbell, Carroll, Cass, Chatham, Chattooga, Cherokee, Clarke, Clinch, Cobb, Columbia, Coweta, Crawford, Dade, Decatur, De Kalb, Dooly, Early, Effingham, Elbert, Emanuel, Fayette, Floyd, Forsyth, Franklin, Gilmer, Glynn, Gordon, Greene, Gwinnett, Habersham, Hall, Hancock, Harris, Heard, Henry, Houston, Irwin, Jackson, Jasper, Jones, Jefferson, Laurens, Lee, Liberty, Lincoln, Lowndes, Lumpkin, McIntosh, Macon, Madison, Marion, Meriwether, Monroe, Montgomery, Morgan, Murray, Muscogee, Newton, Oglethorpe, Paulding, Pike, Pulaski, Putnam, Rabun, Randolph, Richmond, Scriven, Stewart, Sumter, Talbot, Taliaferro, Tatnall, Taylor, Telfair, Thomas, Troup, Twiggs, Union, Upson, Walker, Walton, Ware, Warren, Washington, Wayne, Whitefield, Wilkes, Wilkinson. Milledgeville is the capital.

Cities and Towns.—The towns of Georgia have received a new impetus since the completion of her railways; and places that were mere cross-roads a few years ago, with their tavern, store, and smithy, have become flourishing manufacturing villages. Savannah,* the principal city, had 16,060 inhabitants in 1850; Augusta, 9559; Columbus, 5942; Athens, 3795; Atlanta, 2572; Griffin, 2320; Milledgeville, 2216.

Face of the Country.—Georgia has every variety of surface, from the mountains of the north, through all gradations of rough, hilly, and undulating country, to the alluvial flats which begin about 100 miles from the sea, to which they extend. We learn from White's "Statistics of Georgia," from which we are obliged to condense, that "commencing at the Atlantic ocean, and spreading out from 100 to 150 miles westward, we have an extensive plain of a tertiary formation, gradually swelling up to a height of 500 feet, at a line passing near the head of navigation of the Savannah, Ogeechee, Oconee, and Ocmulgee rivers, where it meets a primary formation." An angle of cretaceous formation, underlying the tertiary, enters Georgia from Alabama, between Fort Gaines and Columbus, and extends, with its apex, to a point between Macon and Knoxville. The N. side of this triangle is about 50, and the S. E. about 100 miles in length. The primary formation crosses the state in a S. W. direction, above the falls of the rivers named, with a breadth of 160 miles at the northern, and 100 miles at the southern limit. A second plain above the falls succeeds, of about 60 or 70 miles in width, beyond which, on the N. W. side of the primary belt, and running nearly parallel with it, we come upon the Blue Ridge mountains, which reach an elevation varying from 1200 to 4000 feet. The N. W. of Georgia consists of transition rocks, except in the extreme N. W. counties, which are carboniferous in their formation. In the S. E. is Okefonokee swamp, or rather series of swamps, which have a circuit of about 180 miles, filled with pools and islands, and covered with vines, bay-trees, and underwood. Alligators, frogs, lizards, cranes, &c. find a congenial home in this region.

Minerals.—Previous to the discovery of the gold mines of California, Georgia was one of the Eldorados of America; but though her mines are almost swept out of mind by the richer yields of the new state on the Pacific, a soberer time may come again, when slow and patient industry may be content to develop the golden treasures of this region. The tract containing the gold mines has its centre in Lumpkin county, in the northern part of the state; and at Dahlonega, in this county, a branch mint has been established, which coined in 1851, \$351,592 in gold. Besides this pre-

cious metal, Georgia contains some silver, copper, iron, lead, manganese, titanium, graphite, antimony, and zinc; also granite, marble, gypsum, limestone, coal, sienite, marl, burrstone, soapstone, asbestos, slate, shale, tripoli, fluor-spar, barytes, tourmaline, arragonite, kaolin, epidote, porcelain clay, ruby, opal, augite, cyanite, emerald, prase, cornelians, chalcedony, agate, jasper, amethyst, precious garnets, schorl, zircon, rose quartz, beryl, and even diamonds. Fossils are found in abundance in the S. E. counties near the sea.

Rivers, Bays, &c.—Georgia is abundantly supplied with rivers, both for the purposes of navigation and for propelling power. To the central plateau which forms the falls or rapids, the rivers are *mostly* navigable for steamers, and among and above them they furnish advantageous sites for mills. Of the 36 cotton factories in Georgia in 1851, 34 were driven by water. The Oconee and Ocmulgee rise in the N. of the state, pass through its centre to within 100 miles of the ocean, where they unite to form the Altamaha, which flows eastward into the Atlantic ocean. The Altamaha is navigable to Darien for vessels drawing from 11 to 14 feet water, and its confluent to Macon and Milledgeville for steamboats. The Savannah, which forms the greater part of the eastern boundary, dividing Georgia from South Carolina, is formed by the Tugaloo and Seneca rivers. It is about 500 miles in length, is navigable for ships to Savannah, and for large steamboats to Augusta. The Ogeechee, a river flowing S. E. about 200 miles, drains the country between the rivers named above. It is navigable for sloops 30 or 40 miles, and for keel-boats to Louisville. Cannouchee, a western branch, is navigable 50 miles. The Santilla and St. Mary's drain the south-eastern counties, and the Flint, Oclockonee, and Suwanee, with their branches, the south-western. The Santilla and St. Mary's are navigable for sloops about 30 or 40 miles, and for keel-boats perhaps as much more. The Flint, a branch of the Chattahoochee, is about 300 miles long, and is navigable to Albany for steamboats. The Chattahoochee rises in the N. E. of Georgia, crosses the state in a S. W. direction till it strikes the W. boundary, which it follows for about 150 miles to its union with the Flint, at the S. W. extremity of Georgia, where their united floods form the Appalachicola. The Chattahoochee is navigable to Columbus for steamboats. The Tallapoosa and Coosa, head waters of the Alabama, and the Hiawasee, one of the sources of the Tennessee river, take their rise in the N. of this State. The Suwanee and the Oclockonee pass S. into Florida. A line run through the middle of the state from S. to N. would nearly divide the waters flowing into the Atlantic from those flowing into the Gulf of Mexico; but this line would trend to the E., both in

the N. and S., and to the W. in the centre. The waters of the Hiawasee, however, reach the gulf through the Ohio and Mississippi valleys. Georgia has about 80 miles of sea-coast, which is lined by small islands, on which grows the celebrated sea-island cotton. These islands are cut off from the mainland by narrow sounds, inlets, or lagoons.

Objects of Interest to Tourists.—The geologist will find in the alluvions of the south-eastern counties of Georgia extensive fossil remains, while her minerals and mountains will offer much for his examination; and the antiquarian too may find objects, even in this new country, to baffle his most ingenious theories. In Hancock county is an Indian mound, of a semioval form, 2000 feet long and 37 high, and surrounded by a ditch. Human bones have been found here. About 9 miles E. of Macon is a mound, covering about 300 acres at its base and 50 at its top, which seems to be a natural elevation, but is covered on the summit with the ruins of a limestone fortification. There are several artificial mounds in the same neighborhood, and in other parts of the state. One in Cass county is 1114 feet in circuit and 75 feet high, in which has been found large quantities of pottery. To the lover of the picturesque, Georgia offers many grand scenes, and among them the Stone mountain, in De Kalb county, 7 miles in circuit, and 2226 feet in height; the falls of Tallulah, a branch of the Tugaloo, in Habersham county, where it passes through a ridge of mountains, forming cliffs from 200 to 500 feet, and descending in a succession of four falls through the space of a mile; Toccaco falls, in the same stream, 185 feet high; Amicolah falls, in Lumpkin county, with a descent of 400 feet in as many yards; the Towaligo falls, in Monroe county; the Eastatoah and Stockoa falls, in Rabun county, (thought by many to surpass the Toccaco;) a series of falls in the Hiawasee, sometimes with a descent of about 100 feet; Nicojack cave, opening into the Raccoon mountains, near the N. W. extremity of the state, extending for miles into the mountain, which it enters by a portal 160 feet wide, and 60 high: through this passes a stream, up which the visitor must be boated for three miles, when further progress is stopped by a cataract; (Wilson's cave is described in the same neighborhood, by Sears: whether or not it is the same cave under a different name we have no means of determining;) Nix's cave, in Floyd county; Track Rock and Pilot Mountain, (1200 feet high,) both in Union county—are all worthy of a separate description in a work of a different character.

Climate, Soil, and Productions.—“While the inhabitants (we quote De Bow's Resources of the South and West) of Southern and Middle Georgia are being parched with heat, frequently so intense as to prevent comfortable rest, even at night, the more northern climate,

among the mountains, is such as to render necessary a blanket in order to comfortable repose. A more lovely heaven does not smile upon the classic land of Italy than upon the favored inhabitants of Georgia." According to meteorological observations made at Savannah by Dr. Posey, during the year ending May, 1852, the maximum in June, at 2 p. m., was 97° 4'; minimum, 70; mean for the day, 77° 10'; maximum for July, 99° 3'; minimum, 90° 5'; mean, 81° 7'; maximum for August, 93°; minimum, 82° 5'; mean, 79° 70'; maximum for September, 88° 1'; minimum, 66° 2'; mean, 67° 7'; maximum for October, 85° 6'; minimum, 56° 9'; mean, 66° 25'; maximum for November, 77° 1'; minimum, 50° 1'; mean, 56° 12'; maximum for December, 58° 5'; minimum, 43° 3'; mean, 47° 27'; maximum for January, 75°; minimum, 29° 5'; mean, 41° 75'; maximum for February, 81° 7'; minimum, 60°; mean, 55° 45'; maximum for March, 84°; minimum, 43° 9'; mean, 61° 30'; maximum for April, 86° 7'; minimum, 67° 9'; mean, 63° 27'; and maximum for May, 94° 9'; minimum, 69° 9'; and mean, 75° 52'. There were 85 rainy days in the year, viz. 13 in June, 12 in July, 10 in August, 4 in September, 5 in October, 5 in November, 7 in December, 4 in January, 5 in February, 7 in March, 8 in April, and 5 in May. The thermometer was highest, July 30th, 2 p. m., 99° 3, and lowest, January 20th, 7 a. m., 13° 8. The peach blossomed February 20th, and the plum on the 23d. Snow falls sometimes, but does not lie long.

The diversity of soil is not less than that of climate, from the rich alluvions near the seacoast and rivers, to the thinner soil of the pine barrens (not so sterile by far as their name implies) and the rougher mountain regions. The good and bad lands of Georgia are so intermingled, that it is difficult to describe them by districts. In the south, we have on the coast the islands with their light sandy soil, but fertile in sea-island cotton; and on the mainland are the rich alluvions, but interspersed with swamps, which, however, yield rice in abundance. The bottom lands of the Savannah, Ogeechee, Altamaha, and the smaller rivers, are exceedingly fertile, and produce rice, cotton, Indian corn, and sugar. Farther west, about 60 miles from the coast, commence the pine barrens, at present mostly valuable for their timber and naval stores, but easily cultivable and productive, should occasion require. In the south-west the soil is light and sandy, but fertile, and productive in cotton. The sugarcane is also sometimes cultivated successfully. The soil, though fertile, is easily exhausted, and requires manuring to restore it. The middle region consists of a red loamy soil, once productive, but, owing to a bad system of culture, much impoverished. Its products are cotton, tobacco, and the various kinds of grain. We now come to the Cherokee country in the north, once in possession of the

Indians of that name, and containing lands among the most fertile in the state, particularly in its valleys, which, though worked by the Indians for ages past, are still capable of producing from 50 to 75 bushels of grain to the acre. This region is not so well adapted to the culture of cotton, though it can be raised successfully, but yields wheat, corn, Irish potatoes, peas, beans, &c. abundantly. Here, too, are to be found gold, iron, coal, marble, granite, limestone, and other minerals, valuable in building and the industrial arts. The iron is represented as being of very superior quality. Our summary of the natural resources and the physical characteristics of this flourishing state, bring us to the conclusion that it is surpassed by no Atlantic or Gulf state, to say the least, in the elements of a rapid growth in agriculture, manufactures, and commerce. With a soil capable of yielding most of the great staples of the country, and some tropical fruits, with a mild climate, yet cold enough in the north for the restoration of health to the enervated inhabitant of the south, and for the production of the winter grains; with rivers that can be navigated by steamboats to her centre, and whose branches furnish water-power in abundance, what element of prosperity does she lack, if she be true to herself? The prime articles of cultivation in Georgia are cotton, rice, sweet potatoes, and Indian corn, besides which large quantities of live stock, wheat, oats, tobacco, wool, peas, beans, Irish potatoes, fruits, market products, butter, cheese, hay, sugar, molasses, beeswax and honey, and some rye, barley, buckwheat, wine, grass seeds, hops, flax, and silk are produced. Georgia is first of the states of the Union in the amount of sweet potatoes raised, and second in that of rice and cotton. In 1850 there were in this state 51,759 farms, containing 6,378,475 acres of improved land, averaging about 120 acres to a farm, and producing 1,088,534 bushels of wheat; 53,750 of rye; 30,080,099 of Indian corn; 3,820,044 of oats; 1,142,011 of peas and beans; 227,379 of Irish potatoes; 6,986,428 of sweet potatoes; 11,501 of barley; 38,950,691 pounds of rice; 432,924 of tobacco; 199,636,400 of cotton; 990,019 of wool; 4,640,559 of butter; 46,976 of cheese; 23,449 tons of hay; 1,644,000 pounds of cane sugar; 732,514 of honey and beeswax; 216,150 gallons of molasses; live stock valued at \$25,728,416; orchard products, at \$92,776; market goods, at \$76,500; and slaughtered animals, at \$6,339,762.

Forest Trees.—There are extensive forests of pine and live oak in the South; the swamps afford cedar and cypress, and the middle country oak and hickory. The other forest-trees are walnut, chestnut, poplar, sycamore, beech, maple, ash, gum, elm, fir, spruce, magnolia, laurel, and palmetto.

Animals.—Bears, deers, wolves, panthers, foxes, gophers, rabbits, among quadrupeds; alligators, terrapins, lizards, scorpions, rattlesnakes, among reptiles; and turtle, rock, black, and flying-fish, trout, bass, drum, sheephead, Spanish mackerel, porgey, and mullet, among fish, are the leading objects of animated nature in Georgia.

Manufactures.—Georgia has recently made great advances in the establishment of manufactures, for which she enjoys great facilities, in the abundance of her water-power and fuel, in the nearness of the raw material to the manufacturer, and in the number of her navigable rivers and iron roads ready to carry her fabrics to market. In 1850 there were in Georgia 1407 manufacturing establishments, each producing \$500 or upwards annually; 35 of these were cotton factories, employing \$1,736,156 capital, and 873 male and 1399 female hands, consuming raw material worth \$900,419, and producing 7,209,292 yards of stuffs, 4,198,351 pounds of yarn, valued at \$2,135,044; three woollen factories, employing \$68,000 capital, and 40 male and 38 female hands, consuming raw material worth \$153,816, and producing 340,600 yards of stuffs, valued at \$88,750; 10 forges, furnaces, &c., employing a capital of \$70,200, consuming raw material worth \$43,776, and producing 1405 tons of pig, wrought, and cast iron, valued at \$118,884; 140 tanneries, employing \$262,855 capital, consuming \$185,604 worth of raw material, and producing leather valued at \$361,586, and homemade manufactures of the value of \$1,838,988.

In Hunt's Magazine of May, 1852, it is stated that there were 36 cotton mills in Georgia, employing a capital of \$1,611,100, and 1266 male and 771 female hands, and consuming raw material worth \$805,648, and producing stuffs valued at \$1,626,485.

Internal Improvements.—Georgia takes the lead of the Southern States in the number and extent of her railways, which cross the middle and north of the state in all directions, connecting her commercial centre with all the important towns of her own interior, with Alabama on the W., and with Tennessee and the great Ohio and Mississippi valleys to the N. and N. W. In January, 1853, there were in Georgia 857 miles of railway in operation, and 311 in course of construction. 1053 miles of railway, either already made or in course of construction, centre in Savannah, which is connected with Macon, Columbus, and Montgomery, in Alabama; with Augusta, Oglethorpe, and Atlanta; and with Chattanooga and Charleston, in Tennessee. Augusta is also connected indirectly with the same places. A continuous line of railway through Georgia is now completed from Charleston, South Carolina, to Nashville, Tennessee. This forms an important artery in the trade between the North and the South-western States,

and has entirely diverted a large portion of it from its ancient channels. Branch roads diverge to Athens, Rome, West Point, Milledgeville, Muscogee, Florida, Eatonton, Rome, and other places, which are either wholly or partly completed. There are only a few short canals in Georgia, one connecting the Savannah and Ogeechee rivers, another from Brunswick to the Altamaha, and a canal round the falls in the Savannah, at Augusta, making a total of about 50 miles.—See TABLE OF RAILWAYS AND CANALS, *Appendix*.

Commerce.—Georgia is favorably situated for internal trade, having a number of navigable rivers which may be ascended by steam-boats from 200 to 300 miles from the sea, and still farther for keel-boats. She has an active coasting trade with her sister states, and beside sailing-vessels, has lines of ocean steamers running regularly between Savannah and New York, and the same port and Philadelphia. The principal exports of Georgia consist of her great staple cotton, and of rice, lumber, and naval stores. Her exports to foreign countries amounted, in 1852, to \$4,999,090, and her imports to \$474,924: tonnage entered, 49,994; cleared, 62,875. Georgia exports also largely of her rice, lumber, and cotton to other states of the Union. According to De Bow there were received at the different ports of Georgia, in 1851–2, 325,714 bales of cotton, most, if not all of which, was doubtless exported. The tonnage of the state, in 1852, was 25,785 $\frac{3}{8}$, of which 8295 $\frac{4}{9}$ was steam tonnage; the number of vessels built was only 2, whose tonnage was 322 $\frac{3}{8}$.

Education.—Georgia is celebrated for her female institutes, which are said to be conspicuous objects as the traveller passes through her territories; but her public schools are less patronized; they had, however, in 1850, 29,675 pupils in attendance: there were 13,493 pupils attending other schools. Among the numerous high schools and academies, we may mention the Georgia Female College, at Macon, which (White says) is generally attended by 140 pupils, who go through an extensive course of study. The number of volumes in school libraries in 1850 was 1800. There are 5 colleges in Georgia, with an aggregate attendance, in 1852, of 596 students, and 23,800 volumes in their libraries; and one theological school with 6, and one medical college with 115 students. The school fund amounted in the same year to \$263,310. As an evidence of increasing interest in the subject of education, a common-school journal has been established at Columbus, in this state.

Religious Denominations.—Of the 1723 churches in Georgia, in 1850, 821 belonged to the different sects of Baptists, 19 to the Episcopalians, 735 to the Methodists, 92 to Presbyterians, 8 to the Roman Catholics, and 16 to the Union Church. The rest were owned by the Bible Christians, the Christians,

the Congregationalists, the Free Church, Friends, Independents, Lutherans, Moravians, and Universalists, making one church to every 525 persons. Value of church property, \$1,269,159.

Public Institutions.—There is a state lunatic asylum near Milledgeville, which went into operation in 1842, and up to 1849 had received 204 patients, of whom 95 were in the institution at the date named. Up to the same period the whole amount expended by the state on the institution was \$94,201. There is also an asylum for the deaf and dumb at Cave Springs, in Floyd county, which received, in 1852, \$17,000 from the state. The state penitentiary at Milledgeville is a three-story granite building, 200 feet by 80. The convicts are employed in manufacturing leather, wagons, shoes, pails, and many other articles, the sale of which leaves a small balance over the expenses of the penitentiary. There were, in 1850, in Georgia, 24 public libraries, with an aggregate of 35,632 volumes.

Government.—This state is similar in its governmental divisions to the other members of the confederacy. The legislature meets biennially. The governor is elected by the people for two years, and receives a salary of \$3000 per annum. The senate consists of 47 members, and the house of representatives of 130, both elected for each session of the legislature, and receiving \$5 per diem. Every white male, who has paid a tax the previous year, and resided in the county where the election takes place 6 months before the election, is a legalized elector. The state of Georgia is entitled to 8 members in the national house of representatives, and to 10 electoral votes for president of the United States.

The judiciary is composed—1. Of a court of errors and appeals, presided over by three judges, elected for 6 years by the legislature; 2. Of a superior court, held in every county in the state twice a year, and presided over by judges elected for 4 years by the legislature; 3. Of an inferior court, consisting of 5 justices in each county, elected by the people for 4 years, and holding 2 sessions a year; and 4. Of justices' courts, consisting of 2 justices for each militia district, elected by the people of their respective districts. The state is divided into eleven judicial districts. The judges of the superior court are elected by the legislature for 4 years. The judges of the supreme court receive \$2500 per annum.

The public debt of Georgia in 1852, was \$1,995,724.22. Sources of revenue (which averages about \$300,000 a year) are a general tax, and a special tax on bank stocks. The expenditures, for the pay of legislators, civil establishments, judiciary, public charities, &c., are about \$130,000 a year. The public debt consists of bonds issued for the

construction of railways. In 1852 there were 18 banking institutions in the state, with an aggregate capital of \$5,629,315, a circulation of \$1,300,000, and \$1,700,000 in coin.

History.—Georgia was the last settled of the original thirteen states of the American confederacy, the first colony having been planted by Oglethorpe at Yamacraw Bluff, now called Savannah, in 1733, more than 100 years after the settlement of most of the original colonies, and 63 years after that of South Carolina, her nearest neighbor. Three years afterwards, some Germans founded Ebenezer on the River, about 25 miles above Savannah. The settlement of Darien was commenced about the same time by some Scotch Highlanders. The infant colony was involved in some severe contests with the Spaniards of Florida, who claimed the country as far the 33d degree of north latitude. In 1739, Oglethorpe invaded Florida, took Fort Diego, and besieged St. Augustine, but was obliged to raise the siege and return. The Spanish in turn invaded Georgia in 1742, but being alarmed by a stratagem of Oglethorpe's, they retreated without coming to blows. Slaves were first admitted into the colony in 1749. The proprietors, harassed by the difficulties that surrounded them, gave up the province to the crown in 1752, when Dr. Franklin was appointed its agent near the British government. In 1761 the Cherokee Indians were attacked by Colonel Montgomery, on which occasion the savages so bravely resisted, that, though Montgomery claimed the victory, he thought it advisable to retreat. The following year Colonel Grant burned their towns, laid waste their country, and reduced them to sue for peace. Georgia entered warmly into the Revolution, and during parts of 1778, 1779, and 1780, was in the hands of the British troops. Savannah was captured by them December 29th, 1778, and the combined American and French armies were repulsed in an attempt to retake it in October, 1779, with a loss to the allies of 1100 men. In 1838 the Cherokee Indians were removed from the state to the Indian territory, beyond the Mississippi, and Georgia came into possession of the long-coveted Indian reservation.

GLOUCESTER, a county in the S. W. part of New Jersey, has an area of 952 square miles. It is bounded on the N. W. by the Delaware river, N. E. by Big Timber creek, and S. W. by Oldman's creek, and is drained by Raccoon and Mantua creeks. The surface is level, except where worn down by streams. Along the Delaware river, for about 7 miles from its bank, the soil is a clayey loam, very fertile, and highly cultivated. S. E. of this it is sandy, and generally covered with pine forests. Indian corn, Irish potatoes, sweet potatoes, hay, and butter are the staples. In 1850 this county produced 380,221 bushels of corn; 253,964 of potatoes; 254,870 of sweet potatoes; 14,152 tons of hay, and 257,022 pounds of butter. The quantity of sweet potatoes was the greatest produced by any county in the state. There were 4 glass manufactories, 11 flour mills, 8 grist mills, and 14 saw mills. It contained 26 churches, and 1 newspaper office; 3656 pupils attending public schools, and 90 attending academies or other schools. Marl is found along the

bank of the Delaware and for several miles inland, iron ore near Woodbury, which is exported for manufacture; and beds of shells in different places. The inhabitants are largely engaged in glass and iron manufactures. The proposed railroad from Camden to Cape May will probably pass through this county. Organized in 1677, (since which its area has been much diminished by the formation of Atlantic and Camden counties,) and named from Gloucester, a county of England. Capital, Woodbury. Population, 14,655.

GLOUCESTER county, Virginia, situated on Chesapeake bay, in the S. E. part of the state, contains 280 square miles. The Piank-tank forms its N. and the York river its S. W. boundary. The surface is very level. The soil produces good crops of corn, cotton, and wheat. The waters contain an abundance of fish and oysters, which furnish employment and subsistence to a great number of the inhabitants. Large quantities of oysters and wood are exported to New York and Philadelphia. In 1850 this county produced 336,063 bushels of corn; 65,551 of wheat; and 62 bales of cotton. There were 16 flour, grist, and saw mills, and 2 tanneries. It contained 14 churches; 253 pupils attending public schools, and 95 attending academies or other schools. Formed in 1642. Capital, Gloucester Court House. Population, 10,527; of whom 4970 were free, and 5557, slaves.

GLOUCESTER, a port of entry of Essex co., Massachusetts, 28 miles N. N. E. from Boston, is situated on the S. side of the peninsula of Cape Ann, and connected by railroad with the principal cities and towns of the seaboard and interior. It contains 8 or 10 churches, 4 newspaper offices, and a bank with a capital of \$200,000. The inhabitants are chiefly engaged in the fisheries, particularly those of cod and mackerel. The harbor is one of the best on the coast, and is accessible at all seasons for vessels of the largest class. The shipping of the port June 30th, 1852, amounted to an aggregate of 21391 $\frac{1}{2}$ tons registered, and 23,941 $\frac{7}{8}$ tons enrolled and licensed. Of the latter, 12,153 $\frac{3}{8}$ tons were employed in the cod fishery, and 11,033 $\frac{3}{8}$ in the mackerel fishery. The foreign arrivals for the year were 173, (tons, 14,849,) of which 147 (tons, 11,031,) were by foreign vessels. The clearances for foreign ports were 164, tons, 13,794 of which 11,031 were foreign bottoms. During the same year, 45 schooners, with an aggregate burthen of 3828 $\frac{3}{4}$ tons were admeasured. There are also some manufactures in the town, such as boots and shoes, and anchors. Incorporated in 1639. Population of the township, 7786.

GRAND RAPIDS city, capital of Kent co., Michigan, is finely situated on the rapids of Grand River, 40 miles from its mouth, and 60 miles W. N. W. from Lansing. It is handsomely laid out on the left bank of the river, and has a pleasant and healthy situation, commanding a fine view of the river, and of the Indian mounds on the opposite shore. It is one of the most important and flourishing inland towns of the state, and a place of much activity in trade and manufactures. Large steamboats run daily from this place to Grand Haven, at the mouth of the river, where they connect with the lake steamers; and a smaller boat ascends from the head of the rapids to Lyons, which is about 50 miles distant by water. Salt and gypsum of good quality are found here; limestone

and pine lumber, and other materials for building, are abundant in the vicinity. Nearly 20 manufactories were in operation here in 1851. The river at this place is about 300 yards wide, and falls 18 feet in the course of a mile, producing an amount of hydraulic power that is not surpassed by any in the state. Grand Rapids is the seat of St. Mark's College, established in 1850, and contains 8 or 10 churches, 2 newspaper offices, and several seminaries. Settled in 1833, and incorporated in 1850. Population in 1853, about 5000.

GRAND RIVER, of Ohio, rises in the N. E. part of the state, and flows into Lake Erie in Lake county, about 3 miles from Painesville.

GRAND RIVER, of Michigan, (*Washtenong* of the Indians,) an affluent of Lake Michigan, is not exceeded in length or volume by any river which traverses the peninsula. Its branches rise in Washtenaw and Hillsdale counties, and after a course of a few miles unite near Jackson. The river then flows in a general N. W. direction, with many windings, to Lyons, in Iowa county, where it is joined by the Maple river. From this point it pursues a general westerly course, and enters the Lake at Grand Haven. Its length is estimated at 270 miles, and it is about 320 yards wide near its mouth. The harbor formed by its mouth is the best on the W. side of the peninsula. Large steamboats navigate the river daily, from the lake to Grand Rapids, a distance of 40 miles, and a smaller boat ascends about 50 miles farther. The "Rapids" are caused by a stratum of limestone rock, which extends about $1\frac{1}{2}$ miles along the channel, with a descent of 18 feet, affording abundant water-power. The chief towns on its banks are Jackson, Lansing, and Grand Rapids.

GRAND RIVER, of Missouri, an affluent of Missouri river, is formed by two small branches, the East and West forks, which unite in Gentry county. It flows south-eastward through Daviess and Livingston counties, and then forms the boundary between Carroll and Chariton, until it enters the Missouri, 30 miles above Glasgow. The lower part of the channel is navigable for small boats. *Branches.*—The East and West forks rise near the N. border of the state, and pursue a southerly course. The Crooked fork, which is properly

an affluent, rises in the S. part of Iowa, and flowing southward, enters Grand river in Livingston county, a few miles S. W. from Chillicothe.

GRAND RIVER, of Missouri, rises near the W. frontier of the state, and flowing south-easterly, falls into the Osage in Benton county, a few miles from Warsaw.

GRAND RIVER, a branch of the Colorado, rises in the Rocky Mountains, near Long's Peak, and flowing nearly S. W., joins Green river after a course of about 300 miles.

GREAT KANAWHA, a river of North Carolina and Virginia, has its sources in Ashe county of the former state, between the Blue Ridge and the Iron Mountain. Flowing north-eastward it enters Virginia, and breaks through the Iron Mountain on the northern border of Grayson county. After crossing Pulaski county, it assumes a north-westerly course, and traverses several ridges of the Alleghany chain, known by the local names of Walker's, Peter's, and Greenbrier mountains. Below the passage of the latter ridge, the river flows through Fayette county to the mouth of Gauley river, which enters it from the right hand. The Kanawha here attains a width of 500 yards, and takes the name of the Great Kanawha. The falls which occur about two miles below the junction, are somewhat remarkable for picturesque beauty, and form the limit of navigation. The whole stream is precipitated over a ledge of rocks 22 feet in height. Continuing a north-western course, the river flows through a hilly region, abounding in salt springs and stone coal, passes by Charleston, and enters the Ohio at Point Pleasant. Above the mouth of Gauley river it bears the local name of New river. The whole length is estimated at 400 miles, and the area drained, including its affluents, according to Darby, is 10,800 square miles. It is navigated by steamboats, in all stages of water, from its mouth to the falls at Gauley Bridge, a distance of more than 100 miles.

HALIFAX, a county in the S. part of Virginia, bordering on North Carolina, has an area of 960 square miles. The Staunton or Roanoke river forms its entire boundary on the N. and E. It is intersected by the Dan river, which unites with the former on the border of the county, and also drained by the Banister and Hycootee rivers. The surface is moderately hilly, and the soil good. Halifax is among the most populous and wealthy counties of the state. Tobacco, Indian corn, wheat, oats, cattle, and swine are the staples. By the census of 1850 it produced more to-

bacco and oats than any other county in Virginia: the quantity of the former was not exceeded by any county in the Union, excepting Prince George of Maryland. There were raised in that year 6,485,762 pounds of tobacco; 649,896 bushels of corn; 146,769 of wheat, and 365,182 of oats. There were 5 flour mills, 4 grist mills, 2 manufactories of farming implements, and 2 tanneries. It contained 51 churches; 252 pupils attending public schools, and 36 pupils attending an academy. A rich mine of plumbago has recently been discovered. The county is intersected by the Richmond and Danville railroad. Organized in 1752. Capital, Banister. Population, 25,962; of whom 11,510 were free, and 14,452, slaves.

HALLIFAX, a county in the N. N. E. part of North Carolina, area estimated at 680 square miles. The Roanoke river forms its entire boundary on the N. E., and Fishing creek flows along the S. W. border. The surface is diversified; the soil in some parts is fertile. Cotton, Indian corn, tobacco, and turpentine are the staples. In 1850 this county produced 1740 bales of cotton; 879,040 bushels of corn, and 34,885 pounds of tobacco. There were 3 stave manufactories, and 1 tar and turpentine distillery. It contained 2 newspaper offices. Roanoke river is navigable by small steamboats on the border of the county. The Weldon and Wilmington railroad passes through it. Granite underlies a portion of the soil. Formed in 1758, and named in honor of the Earl of Halifax, then first lord of the board of trade. Capital, Halifax. Population, 16,592; of whom 7638 were free, and 8954, slaves.

HARPER'S FERRY, a post-village of Jefferson county, Virginia, is situated at the confluence of the Shenandoah with the Potomac river, where the united stream breaks through the Blue Ridge, 160 miles N. from Richmond, and 53 miles N. W. from Washington City. The scenery in the vicinity is in the highest degree beautiful and picturesque. Thomas Jefferson considered the "passage of the Potomac through the Blue Ridge one of the most stupendous scenes in nature, and well worth a voyage across the Atlantic to witness." The place was originally called Shenandoah Falls. Its present name is derived from a ferry long since established across the Potomac, which is also spanned by a fine bridge, about 800 feet in length. The village is compactly, though irregularly, built around the base of a hill, and is the centre of considerable trade. It contains 4 or 5 churches, several manufactories and flouring mills, a United States armory, in which about 250 hands are employed, producing, among other articles, some 10,000 muskets annually, and a national arsenal. In the latter are continually stored from 80,000 to 90,000 stands of arms. As these are subject to the orders of the executive department at Washington, the deficiencies occurring from time to time are supplied from the factories. Harper's Ferry is in the line of the Baltimore and Ohio railroad, and at the northern terminus of a railroad con-

necting it with Winchester. The Ohio and Chesapeake canal also passes along the opposite side of the Potomac.

HARRIS, a county in the W. part of Georgia, has an area of 360 square miles. The Chattahoochee river forms its W. boundary, and separates it from Alabama: it is also drained by Flat Shoal, Old House, Mountain, and Mulberry creeks. The surface presents much variety, and is partly covered with forests of oak, hickory, pine, &c. The eastern or north-eastern parts are traversed by ridges called the Pine mountains and Oak mountains. The soil is generally productive. Cotton, Indian corn, wheat, oats, and sweet potatoes are the staples. In 1850 the county produced 11,935 bales of cotton; 554,895 bushels of corn; 82,187 of oats, and 109,926 of sweet potatoes. There were 16 flour mills, 14 saw mills, and 6 tanneries. It contained 31 churches, and 399 pupils attending academies, or other schools. The rocks which underlie the county are primitive. The Mulberry creek (Cataula) furnishes excellent water-power. Organized in 1827, and named in honor of Charles Harris, a lawyer of some eminence, and at one time mayor of Savannah. Capital, Hamilton. Population, 14,721; of whom 6739 were free, and 7982, slaves.

HARRIS, a county in the E. part of Texas, bordering on Galveston bay. Contains about 1600 square miles. It is drained by Buffalo bayou and San Jacinto river. The surface is an alluvial plain, which is mostly destitute of forests, excepting the margins of the streams. The soil is highly productive, and adapted to cotton, corn, and sugar, which are the staples. Many horses and cattle are fed on the fine pastures which grow spontaneously in the savannas of the county. The produce of the county is exported in steamboats which navigate Buffalo bayou. A railroad is in progress of construction from Harrisburg to the Brazos river. In 1850 the county produced 50,664 bushels of corn; 20,371 of sweet potatoes; 30,860 pounds of butter, and 11 bales of cotton. HARRISBURG city, capital of Pennsylvania,

and seat of justice of Dauphin county, is delightfully situated on the E. bank of the Susquehanna river, 100 miles W. by N. from Philadelphia, and 110 miles N. by E. from Washington. Lat. 40° 16' N. lon., 76° 50' W. The Pennsylvania railroad connects at this point with the Lancaster and Harrisburg railroad. The Lebanon Valley railroad now in progress leads from Harrisburg to Reading, and the Cumberland Valley railroad extends in the opposite direction. The site is an elevated plain between the river and Paxton creek. The public buildings belonging to the state occupy an eminence in the N. part of the town. The capitol is a handsome brick building 180 feet long by 80 wide, having a circular portico in front, supported by six Ionic columns, and surmounted by a dome. The latter affords a delightful view of the broad river, studded with verdant islands, and spanned by handsome bridges, with the Kittatinny mountain in the background. On each side of the capitol is a smaller building, uniform in design, containing the executive chamber, the state treasury, &c. Harrisburg also contains an arsenal of the state, a fine county prison of cut stone, one bank, a savings institution, about 12 churches, a Masonic hall, and a Lancasterian school. One daily and 8 weekly newspapers are published here. The city is freely supplied with pure river water distributed through iron pipes. Among the manufactories of this place are 2 extensive iron furnaces, a rolling mill, and several breweries and potteries. Harrisburg was founded by John Harris, in 1785, and incorporated in 1808. It became the capital of the state in 1812. Population in 1840, 5980, in 1850, 7834, and in 1853, about 8500.

HARRODSBURG, a flourishing post-town, capital of Mercer county, Kentucky, is situated on a commanding eminence, 1 mile from Salt river, and 30 miles S. from Frankfort. It is said to be the oldest village in Kentucky, the first cabin having been built in 1774, by Captain James Harrod. The town is beautiful and well built, and is a place of great resort in the summer on account of its mineral waters. The Harrodsburg springs are among the most celebrated in the state, and perhaps the most fashionable in the Western States: \$300,000 have been expended in the buildings and other improvements. This town has lately been selected as the site for the new military academy. A large quantity of fine dry goods is sold in this place, which is also an important market for cattle, horses, and other stock. It contains 1 bank. Turnpikes extend from the town in seven directions, and a railroad is in process of construction which will connect it with Frank-

fort. A newspaper is published here. Population in 1853, estimated at 3000.

HART, a county in the W. central part of Kentucky, has an area estimated at 425 square miles. It is traversed from E. to W. by Green river, navigable by steamboats, and also drained by Nolin and Bacon creeks. This county forms part of the region commonly called the "Barrens," the surface of which is diversified by conical hills, a few hundred feet high, and sparsely covered with small timber, chiefly oak. The soil is derived from limestone, and is generally fertile. Indian corn, oats, tobacco, cattle, horses, and swine are the staples. In 1850 this county produced 434,618 bushels of corn; 88,550 of oats, and 814,444 pounds of tobacco. It contained 11 churches, and 630 pupils attending public schools, and 23 attending an academy. The rock which underlies the county is cavernous limestone, suitable for building: numerous caves and sink-holes are found in it. The county is liberally supplied with water-power. It is intersected by the Louisville and Nashville railroad, now in course of construction. Formed in 1819, and named in honor of Captain Nathaniel Hart, an officer in the war of 1812. Capital, Munfordville. Population, 9093, of whom 7792 were free, and 1301, slaves.

HART, a township in Warwick co., Indiana. Population, 1434.

HARTFIELD, a post-village of Chautauque co., New York, about a mile N. of Chautauque lake.

HARTFORD, a county in the N. central part of Connecticut, has an area of about 807 square miles. It is intersected by the Connecticut river, and is drained by Farmington river and other smaller streams, which afford valuable water-power. The industry of the inhabitants is principally directed to agriculture and manufactures. The surface is uneven, and in some parts mountainous. Talcott mountain is the principal elevation. The soil is fertile and well cultivated. Indian corn, potatoes, tobacco, and grass are the staples. In 1850 this county produced 381,744 bushels of corn; 490,387 of potatoes; 80,817 tons of hay; 1,132,114 pounds of tobacco, and 1,071,486 of butter. There were 11 clock manufactories, 2 carpet manufactories, 17 woollen factories, 12 cotton factories, and 1 edge-tool manufactory. It contained 114 churches, and 18 newspaper offices; 15,332 pupils attending public schools, and 1366 attending academies and other schools.

The Connecticut river is navigable for sloops to Hartford, and for small steamboats through the county. The railroads extending from New Haven to Springfield, and from New Haven to Northampton, and that from Providence to Fishkill, traverse this county, and several shorter lines of railroad partly intersect it. Organized in 1666. Capital, Hartford. Population, 69,966.

HARTFORD, a post-township of Oxford co., Maine, 20 miles W. of Augusta. Pop., 1293.

HARTFORD, a post-township of Windsor co., Vermont, on the W. side of Connecticut river, 40 miles S. S. E. from Montpelier. Pop., 2159.

HARTFORD, a city, seat of justice of Hartford county, and semi-capital of Connecticut, is situated on the right bank of the Connecticut river, at the head of sloop navigation, 50 miles from Long Island sound, 36 miles by railroad N. N. E. from New Haven, 124 miles W. S. W. from Boston, and 112 miles N. E. from New York. Lat. $41^{\circ} 45' 59''$ N.; lon. $72^{\circ} 40' 45''$ W. It is connected with East Hartford, on the opposite side of the river, by a covered bridge 1000 feet long. The chartered limits of the city extend along the W. bank of the river upwards of a mile, and three-quarters of a mile back, including an area of about 700 acres. The site is considerably elevated, and the surface somewhat broken. There are upwards of 70 streets and alleys, some of which run parallel with the river, and are intersected at right angles by those passing from E. to W.; while others are very irregular. Main street reaches from the northern to the southern extremity of the city, dividing it into two nearly equal parts. On this street, which is broad, and more than a mile in length, are many of the public buildings and churches, and also a large number of the retail stores. State street extends from Maine street to the river; on it is done most of the wholesale business: near its junction with Main street it divides into two parts, enclosing the state house and public square. Asylum street passes westward to the principal railroad station, and is the seat of an important business, consisting chiefly of cotton and woollen goods of home manufacture. The city is, for the most part, compactly built, principally of brick and freestone, and exhibits much taste and elegance. Among the public buildings the state house, erected in 1792, may be mentioned as the most remarkable. It is a fine structure of the Doric order, 114 feet by 76, with walls 54 feet high. Besides the legislative halls, it contains apartments for the several courts of the state and county, and numerous public offices. The edifice is adorned with two porticos and a dome, the top of which affords a magnificent view of the city, the river, and the surrounding country. The legislature meets alternately here and at New Haven—the odd years at Hartford. The city hall, fronting on mar-

ket square, is a handsome building of Grecian architecture, containing the police court-room, a large hall for public purposes, and the city market. There are also 2 extensive railroad depôts. In 1852 the city contained 21 churches of the various denominations, many of them large and elegant edifices.

The literary and educational institutions of Hartford are numerous, and of a highly respectable character. Among the first in importance is Trinity College, situated on a gentle acclivity about a mile W. from the state house. It was founded in 1823, and is under the direction of the Protestant Episcopal church. The grounds, comprising about 14 acres, are handsomely laid out and variously ornamented. The buildings are of stone, 3 in number, named Seabury, Jarvis, and Brownell halls. For statistics, see *Table of Colleges*, in the APPENDIX. The Wadsworth Athenæum, a beautiful granite building in the castellated Gothic style, is devoted to the promotion of literature, science, and the arts. The southern compartment is occupied by the Connecticut Historical Society, and contains, besides the library, comprising some 5000 printed volumes and a great number of ancient documents and manuscripts, a large and valuable collection of historical relics. The northern compartment is appropriated to the use of the Young Men's Institute, which maintains an able course of lectures, and has a library of about 10,000 volumes. A gallery of paintings and other rooms devoted to the fine arts occupy the central portion of the building. The system of public instruction adopted by the city is probably the best in the state. The schools are free to all resident pupils, the expense being defrayed partly by the income from the public school fund, and partly by a tax on property. The studies pursued in the high-school are similar to those usually embraced in a college course. The newspaper press consists of 10 publications, of which 2 are issued daily.

Hartford has long been distinguished for its benevolent institutions. The American Asylum for the Deaf and Dumb, standing just without the city limits, was the first institution of the kind ever established in the United States. The late Rev. T. H. Gallaudet, LL. D., having visited Europe for the purpose of ascertaining the best method of imparting instruction to the deaf and dumb, brought with him, on his return in 1816, M. Laurent Clerc, a deaf mute, who had been many years a successful teacher in Paris, under the Abbé Sicard. The American Asylum was organized in 1817, under the direction of Mr. Gallaudet, as principal, and M. Laurent Clerc as associate teacher. The institution rose rapidly into public favor, the seven deaf mutes with which it first commenced having soon increased to 140. The average number of pupils at present is about 200. The main building was erected in 1820,

and is 130 feet by 50, and 4 stories high. The Retreat for the Insane, founded in 1822, is situated in the S. W. part of the city, on a gentle elevation, commanding an extensive, varied, and most beautiful prospect. The buildings are surrounded with some 17 acres of ground, tastefully ornamented with walks, shade-trees, and shrubbery. The number of patients during the year ending April 1, 1853, was 321, of which 64 had been discharged entirely cured; 21 much improved; 26 not improved, and 21 had died; leaving 170 in the institution.

Hartford is advantageously situated for trade, manufactures, and commerce. It is in the great line of railways connecting the New England with the Middle, Southern, and Western States, and also in the line of the Providence, Hartford, and Fishkill railroad. The Connecticut river, which is navigable to Hartford for sea-vessels and steam-boats of 1000 tons burthen, admits the passage of small boats as far as Newburg in Vermont, a distance of 220 miles. There are about 20 incorporated companies in Hartford, having upwards of \$2,000,000 capital, besides many that are not incorporated, engaged in commercial and manufacturing enterprises. The value of the city manufactures for the year ending June 1, 1850, as given by the census returns, amounted to \$3,619,389; and at the present time, August, 1853, their value probably exceeds \$4,500,000. The more important articles of manufacture are railroad cars, firearms, and hardware of the various kinds. Book publishing has always been carried on to a great extent. There are 8 banks in Hartford, with an aggregate capital of about \$5,000,000; 2 savings institutions, capital and deposits upwards of \$2,000,000, and 10 fire and life insurance companies, with an aggregate capital of \$3,888,100. The city is lighted with gas; it is also contemplated to supply it with water from the Connecticut, at Winsor Locks, by means of an aqueduct. The city is divided into 6 wards. The municipal government is vested in a mayor, elected once in two years, 6 aldermen, chosen annually, and the common council, composed of 24 persons, also chosen annually.

Hartford was permanently settled in 1635, by an English colony from Massachusetts. Its name was given in honor of one of the leading settlers, Mr. Stone, who was born in Hartford, England. Previous to the settlement of the colony, the Dutch had explored the Connecticut, and erected a fort on what is still called Dutch Point, in the S. E. part of the city. The old "Charter Oak" is still alive, and an object of much interest to visitors. See CONNECTICUT. The Indian name of Hartford was *Suckiaug*. Incorporated as a city in 1784. Population in 1820, 4726; in 1830, 7076; in 1840, 9468; in 1850, 17,966, and in 1853, about 22,000.

HOBOKEN, a new town of Sacramento co., California, is situated on the left bank of the American river, (which is navigable for small steamers,) about 6 miles, by water, from Sacramento city. The "oldest inhabitant" cannot remember that its site has ever been overflowed by the freshets of the American river. The town was begun in the early part of January, 1853, and in the rapidity of its growth it appears to have surpassed all that is related of those other wondrous productions of our Western world, where cities seem to spring out of the earth as at the touch of an enchanter's wand. The State Journal of Sacramento says, "Some estimate may be formed of what is going on at Hoboken when we say, unhesitatingly, that *since its existence*

within the last ten days, there have been incomparably more goods sold there than at any point in the state, excepting, of course, the great commercial emporium, San Francisco." Before the town was ten days old an election took place for mayor and harbor-master, the whole number of votes polled being 1757. The fear is, however, that, as in most other cases, so rapid a growth can scarcely be permanent, and that what has "risen like an exhalation" may depart like the morning cloud.

HOT SPRING, a county in the S. W. central part of Arkansas; area, 964 square miles. It is drained by the Washita river and its several forks. The surface is hilly or mountainous. Indian corn, potatoes, and grass are the staples. In 1850 this county produced 127,565 bushels of corn; 4411 of peas

and beans; 12,990 of potatoes; and 26,620 pounds of butter. It contained 2 saw mills, 2 oilstone manufactories, 36 pupils attending a public school, and 273 attending academies or other schools. The Washita river is navigable for small boats as far up as Rockport. The county is liberally supplied with water-power and mineral springs, among which are the famous Hot Springs, 6 miles from the Washita river. Magnetic iron abounds in the "Magnet Cove," a valley which occupies an area of 2 square miles, enclosed by large pine forests. The magnetic influence is such that the land can not be surveyed with a compass. (*De Bow's Review*, vol. v.) Large quarries of excellent oilstone have been opened in the county, and the article is exported to all parts of the Union. Capital, Rockport. Population, 3609; of whom 3248 were free, and 361, slaves.

HOT SPRINGS, a post-village of Bath county, Virginia, 175 miles W. N. W. from Richmond. This place is situated in a narrow valley, and surrounded by a mountainous region which is remarkable for the salubrity of its climate and for the charming character of its scenery. There are several springs here, which vary in temperature from 98° to 106°, and are considered efficacious in the cure of dyspepsia, rheumatism, affections of the liver, etc. The water contains the sulphates of lime and of magnesia, the carbonates of lime and of magnesia, and sulphate of soda. A spring of extremely cold water rises in close proximity to one at 98°. Several bathing houses and other buildings have been erected here.

HOT SPRINGS, a post-village of Hot Springs county, Arkansas, 6 miles N. from the Washita river, and 55 miles S. W. from Little Rock. It is situated in a valley about 700 yards long and 70 yards wide, having a high mountain on each side. The temperature of the springs, which are about 35 in number, varies from 135° to 160°. (See **ARKANSAS**, page 51.) The main stage-route from Little Rock passes through this place, which was formerly the capital of the county. Novaculite, or oil-stone, of fine quality, is abundant in the vicinity.

HOUSTON, hews'ton, a county in the S. W. central part of Georgia, has an area of 875 square miles. The Ocmulgee river, navigable by steamboats, bounds it on the E., the Echacconee creek flows along the northern border, and it is drained by Mossy, Big Indian, Sandy Run, and Lumpkin's creeks. The surface is nearly level; the soil is of limestone formation, very fertile, and extensively cultivated. Cotton, Indian corn, wheat, oats, rice, and sweet potatoes are the staples. By the census of 1850, this county produced more cotton and sweet potatoes than any other in the state. There were raised 19,362 bales of cotton; 662,600 bushels of corn; 46,830 of oats, and 188,224 of sweet potatoes. There were 6 grist mills, 10 saw mills, 1 cotton fac-

tory, and 1 woollen factory. It contained 24 churches, and 616 pupils attending public schools. The South-western railroad passes through the county, and the Muscogee railroad has its eastern terminus in it. Named in honor of John Houston, governor of Georgia in 1778. Capital, Perry. Population, 16,450, of whom 6526 were free, and 9924, slaves.

HOUSTON, a county in the E. part of Texas, contains about 1295 square miles. The Trinity river bounds it on the W., and the Neches on the N. E. The surface is, or was, mostly occupied by woodlands; the soil is highly productive, especially in the valley of Trinity river. Cotton and Indian corn are the staples; sugar, rice, and oats also flourish in this region. In 1850 the county produced 71,495 bushels of corn; 21,707 of sweet potatoes; 750 bales of cotton; 82 hogsheds of sugar, and 44,476 pounds of butter. There were 50 pupils attending academies or other schools. The Trinity river is regularly navigated by steamboats as far up as this county. Elkhart creek affords fine water-power. Named in honor of General Sam Houston, United States senator from Texas. Capital, Crockett. Population, 2721, of whom 2048 were free, and 673, slaves.

HOUSTON, a thriving post-village, capital of Chickasaw county, Mississippi, is situated near a branch of the Oktibbeha, creek, 150 miles N. N. E. from Jackson. It is surrounded by a rich cotton-planting region, and has an active trade. Three newspapers are published here.

HOUSTON a city capital of Harris county, Texas, situated on Buffalo bayou, 45 miles by water from its entrance into Galveston bay, 82 miles N. W. from Galveston city, and 200 miles E. S. E. from Austin city. Lat. 29° 45' N., lon. 95° 30' W. This flourishing town, the second of the state in commercial importance, is advantageously situated for trade, at the head of steamboat navigation. Several steamboats ply regularly between this place and Galveston. Houston is the principal shipping port for several adjacent counties, in which cotton, sugar, and maize are produced, and towards which a copious tide of emigration is flowing. A large portion of the county is occupied by savannas or treeless plains, which produce excellent pasturage, and large numbers of cattle and horses are kept here with little labor. A railroad has been commenced which is to be extended westward to the Brazos river, and probably to Austin. Five or six newspapers are published here. It contains 1 iron foundry, with a machine shop, and 1 hat fac-

tory. It was settled in 1836, and was at one time the capital of Texas. Population in 1853, estimated at 6000.

HOWARD, a new co. in the central part of Maryland, containing about 280 square miles. It is bounded on the N. E. by the Patapsco, and on the S. W. by the Patuxent river. The surface is uneven or hilly. Wheat, Indian corn, oats, and tobacco are the staples. The county is intersected by the Baltimore and Washington railroad. The census of 1850 furnishes no information respecting this county, which was formed since that year out of the N. W. part of Anne Arundel co. Capital, Ellicott's Mills.

HOWARD, a county in the N. central part of Indiana, contains 293 square miles. It is drained by the Wildcat creek, an affluent of the Wabash. The surface is nearly level, and the soil uniformly fertile. The county was originally heavily timbered, except a few small prairies. The staples are wheat, maize, oats, and grass. In 1850 this county produced 238,853 bushels of corn; 27,930 of wheat; 6063 of oats, and 569 tons of hay. It contained 10 churches, and 1 newspaper office. It is intersected by railroads, which communicate with Lake Michigan and the Ohio river. Howard county formed part of the Miami Reservation, was organized in 1844, and named in honor of General T. A. Howard, member of Congress from Indiana. Capital, Kokomo. Population, 6657.

HOWARD, a county in the N. W. central part of Missouri, has an area of 432 square miles. The Missouri river forms part of its western, and the whole of its southern boundary. It is intersected by Bonne Femme and Moniteau creeks, affluents of the Missouri river. The general surface is undulating; the soil is remarkably fertile, extensively cultivated, and supplied with abundant springs of limestone water. Indian corn, wheat, oats, tobacco, hay, hemp, cattle, and swine are the staples. In 1850 this county

produced 939,048 bushels of corn; 114,196 of wheat; 97,534 of oats; 5401 tons of hay, and 3,188,122 pounds of tobacco. The above quantities of hay and tobacco were the greatest raised in any county of the state. It contained 19 churches, 2 newspaper offices, and 2053 pupils attending public schools. Valuable quarries of limestone and sandstone have been opened, and stone coal is abundant in the county. A plank-road is in progress of construction from Huntsville to Glasgow, the county seat. Named in honor of General Benjamin Howard, of Kentucky. Population, 13,969, of whom 9079 were free, and 4890, slaves.

HUDSON, or NORTH RIVER, one of the finest and most important in the United States, is formed by two small streams, which rise in the Adirondack mountains, one in Hamilton,

and the other in Essex county, New York, and unite in Warren county, about 40 miles from the source of each. To Sandy Hill the course of the river is irregular, being first S. by E., then E., after which it flows almost in a straight line, nearly due S., entering New York bay in lat. $40^{\circ} 42' N.$, lon. $74^{\circ} 1' 30'' W.$ Its entire length is rather more than 300 miles; its breadth below Albany varies from 300 to 900 yards. Between Haverstraw and Piermont, however, for a distance of 10 or 12 miles, it expands into a broad basin, 4 or 5 miles wide. It has but few tributaries: the Mohawk, flowing into it near Troy, and the Walkill, entering it at Kingston, are the principal. The scenery of the Hudson is in the highest degree picturesque, and in some places approaches even the sublime. The banks are generally elevated, and not unfrequently rise to lofty eminences, many of which are rocky and precipitous. At the Passage of the Highlands, 52 miles above New York, the view is eminently grand and imposing. A chain was suspended across the river at this place in the Revolution, to prevent the enemy's vessels ascending. On the W. shore, about 30 miles below, commences what is called the "Palisades," a remarkable range of trap rock, which rises perpendicularly from the margin of the river, nearly 500 feet, and extends 18 or 20 miles down the stream. The largest ships ascend to Hudson, about 117 miles, and schooners to Troy, at the head of tide-water, a distance of 166 miles. As a commercial channel, probably no river in the United States of equal extent is so important as the Hudson. Upwards of 70 sail-vessels, all moving at the same time, have been counted from a single point of observation on its banks. A great number of steamboats, many of them of immense size, also ply between New York, Albany, and the intermediate places. Some of these are the most splendid water-craft in the world. The first successful attempt at propelling vessels by steam was made upon the waters of this river, by Robert Fulton, in 1808.

HUDSON, a county in the N. E. part of New Jersey, has an area of about 180 square miles. It is bounded on the S. by the Passaic river, Newark bay, and the Kills; on the E. by New York bay and the Hudson river, and on the W. by the Passaic river, and is intersected by the Hackensack and Saddle rivers. The surface is elevated in the E. and W. portions, while the valley of the Hackensack lies in the centre. Indian corn, potatoes, hay, butter, and garden vegetables are the staples. In 1850 this county produced 37,155 bushels of corn; 32,885 of potatoes; 4161 tons of hay; 49,891 pounds of butter, and garden vegetables to the value of \$91,619. There were 4 machine shops, 1 manufactory of steel, 1 of wool, 1 of glass, 1 copper furnace, 1 nail factory, 1 pottery,

and 2 ship-yards. It contained 21 churches, 2 newspaper offices; 1641 pupils attending public schools, and 765 attending academies or other schools. Magnetic iron ore and limestone are found, and there are extensive deposits of copper in the W. part, near the Passaic river. This county is intersected by the New Jersey railroad, by the Ramapo and Paterson railroad, and by the Morris canal. Named from the river which forms its eastern boundary. Capital, Jersey City. Population, 21,821.

HUDSON, a township of Hillsborough co., New Hampshire, on the Merrimack river, which is here crossed by a bridge, about 36 miles S. by E. from Concord, contains a small village of its own name. Population, 1312.

HUDSON, a city and seat of justice of Columbia county, New York, is situated on the left bank of the Hudson river, at the head of ship navigation, and on the Hudson River railroad, 116 miles N. from New York city. Lat. $42^{\circ} 14' N.$, lon. $73^{\circ} 46' W.$ It is built upon an elevation, which rises in the background to a height of 200 feet, called Prospect hill. In front, the bank, which is here 60 feet high, projects into the river, terminating in a bold promontory, on the brow of which is a delightful promenade, and on either side a fine bay, having a depth of water sufficient for the largest ships. Along the margin of these bays and at the foot of the promontory are the wharves, which are carried out on a line with the base of the hill. The city is for the most part regularly laid out; with streets usually intersecting each other at right angles. Near the river are extensive warehouses, stores, &c. Warren street is the principal thoroughfare and seat of business. It extends in a southeasterly direction, about a mile, terminating near a fine public square. The principal public buildings are the court-house, a handsome edifice, constructed of marble and limestone, and surmounted by a dome; 8 or 10 churches, and 2 banks. The city contains a lunatic asylum, situated on State street, facing the court house, and several seminaries of learning. The newspaper press consists of 7 publications, most of which are issued weekly. Hudson is both a commercial and a manufacturing city. Formerly it was extensively engaged in the West India trade, but of late this business has mostly given place to the whale fisheries. Its river trade is important. Great quantities of produce are also brought to its markets from the interior. It enjoys superior advantages for manufacturing, as the streams in the vicinity afford good water-power. There are in the city upwards of 70 establishments of various kinds, some of them very extensive. Hudson is well supplied with pure water from a spring at the foot of Becraft mountain, about 2 miles distant. A steam ferry crosses to Athens on the opposite side of the

river. Settled in 1784, and incorporated a city in 1785. Population in 1850, 6289.

HURL GATE. See HELL GATE.

HURON, the third in size of the five great lakes communicating with the St. Lawrence river, lies between 43° and 46° 15' N. lat., and between 80° and 84° 40' W. lon., being limited on the S. S. W. by the State of Michigan, and in all other directions by Canada West, except where it receives its supplies from Lakes Michigan and Superior, by the Straits of Mackinaw and Saut St. Marie, and at its outlet by St. Clair river. It is divided into two unequal portions by a long peninsula, named Cabot's Head, and the Manitouline chain of islands. The parts to the N. and E. are called Manitou (*i. e.* the Great Spirit) bay, or the North channel, and Manitouline lake, or Georgian bay. With the exception of these bodies of water and Saginaw bay, the outline of Lake Huron approaches in form very nearly to a crescent. Its position, lengthwise, is about S. S. E. and N. N. W., and the distance from one extremity to the other, following the curve, does not vary much from 280 miles. The greatest breadth, exclusive of Georgian bay, is 105 miles; average breadth, 70 miles; estimated area, 20,400 square miles. The surface of the water is elevated 19 feet above Lake Erie, 352 feet above Ontario, and 600 feet above the level of the sea. The depth of Lake Huron is greater than that of any other in the chain, averaging, probably, not less than 1000 feet. Off Saginaw bay it is said that leads have been sunk 1800 feet, or 1200 feet below the level of the Atlantic ocean, without reaching bottom. The waters are remarkably clear, especially towards the Straits of Mackinaw, and have an excellent flavor. It is to their peculiar transparency that Dr. Drake attributes the fact which he ascertained by actual experiment, that the temperature of the waters at the surface and 200 feet below the same spot, was precisely

the same—56 degrees. The sun's rays pass through them as through a cloudless atmosphere, without meeting with sufficient solid matter in suspension to elicit heat. This lake is said to contain upwards of 3000 considerable islands. It is the reservoir of numerous streams, and its coast affords many fine harbors. Like most of the other lakes in the chain, it is subject to fearful storms, but its navigation is not generally considered dangerous.

HURON, a county in the N. part of Ohio, has an area of 464 square miles. It is traversed from south to north by Huron and Vermilion rivers, and also drained by Pipe and other creeks. The surface is nearly level, or rather, is an inclined plain with a moderate declivity to the north. The soil contains a large portion of sand, and is excellent and highly cultivated. Indian corn, wheat, oats, hay, wool, butter, and live stock are the staples. In 1850 this county produced 666,416 bushels of corn; 301,892 of wheat; 244,601 of oats; 31,433 tons of hay; 255,134 pounds of wool; and 748,701 of butter. It contained 42 churches, 2 newspaper offices; 7380 pupils attending public schools, and 158 attending academies or other schools. The county is intersected by three railway lines, viz. the Sandusky and Mansfield, the Cleveland and Columbus, and the Cleveland, Norwalk, and Toledo. It was formed in 1815, and named from Huron river. Capital, Norwalk. Population, 26,203.

HURON, a new county in the E. part of Michigan, bordering on Lake Huron, contains about 570 square miles. It is bounded on the N. W. by Saginaw bay. The surface has but little elevation, and is mostly covered with forests. County seat not yet located. Population, 210.

ILLINOIS river, the largest stream in the state of Illinois, is formed by the union of the River Des Plaines and the Kankakee river, which unite at Dresden, in Grundy county. It flows in a general south-westerly direction nearly through the centre of the state, and falls into the Mississippi about 20 miles above Alton. It is navigable in high water (and is being improved so as to be navigable at all seasons) for steamboats to Ottawa, at the mouth of Fox river, about 286 miles from its mouth. Length, exclusive of branches, about 320 miles. More than fifty steamboats are plying upon this river. The most important town on the bank of the Illinois river is Peoria, situated about 200 miles from its mouth.

ILLINOIS, one of the Western United States, is bounded on the N. by Wisconsin; E. by Lake Michigan and Indiana, from the last of which it is partly separated by the Wabash river; S. by the Ohio river, which separates it from Kentucky; and S. W. and W. by Missouri and Iowa, from which it is separated by the Mississippi river. It lies between 37° and 42° 30' N. lat., and between 87° 30' and 91° 40' W. lon., being about 380 miles in extreme length from N. to S., and about 200 in its greatest, and 140 miles in its average breadth, including 55,405 square miles, or 35,459,200 acres, of which only 5,175,173 acres were improved in 1850, showing an immense capacity for increase of population in this exuberantly fertile state, which has scarcely any soil uncultivable.

Population.—There were in Illinois 12,282 inhabitants in 1810; 55,211 in 1820; 157,445 in 1830; 476,183 in 1840, and 851,470 in 1850, of whom 445,644 were white males, 400,460 females; 2756 colored males, and 2610 females. The ratio of increase in Illinois in the last ten years preceding 1850 was nearly 79 per cent., notwithstanding there were in other states about 50,000 citizens born in Illinois. This population was divided among 149,153 families, occupying 146,544 dwellings. Of the entire population, only 343,618 were born in the state; 393,313 in other states of the Union; 18,628 in England; 27,786 in Ireland; 4661 in Scotland; 572 in Wales; 10,699 in British America; 38,160 in Germany; 3396 in France; 6691 in other countries, and 3947 whose places of birth were unknown. In the year ending June 1, 1850, 797 paupers had received support, of whom 411 were foreigners; and 11 619 died, or

about 14 in every 1000 persons. According to the census of 1850, there were 475 deaf and dumb, of whom 2 were colored; 257 blind, of whom 4 were colored; 249 insane, of whom 3 were colored, and 371 idiotic, of whom 3 were colored.

Counties.—Illinois has 100 counties, viz. Adams, Alexander, Bond, Boone, Brown, Bureau, Calhoun, Carroll, Cass, Champaign, Christian, Clarke, Clay, Clinton, Coles, Cook, Crawford, Cumberland, De Kalb, De Witt, Du Page, Edgar, Edwards, Effingham, Fayette, Franklin, Fulton, Gallatin, Greene, Grundy, Hamilton, Hancock, Hardin, Henderson, Henry, Iroquois, Jackson, Jasper, Jefferson, Jersey, Jo Daviess, Johnson, Kane, Kankakee, Kendall, Knox, Lake, LaSalle, Lawrence, Lee, Livingston, Logan, McDonough, McHenry, McLean, Macon, Macoupin, Madison, Marion, Marshall, Massac, Mason, Menard, Mercer, Monroe, Montgomery, Morgan, Moultrie, Ogle, Peoria, Perry, Piatt, Pike, Pope, Pulaski, Putnam, Randolph, Richland, Rock Island, St. Clair, Saline, Sangamon, Schuyler, Scott, Shelby, Stark, Stephenson, Tazewell, Union, Vermilion, Wabash, Warren, Washington, Wayne, White, Whitesides, Will, Williamson, Winnebago, and Woodford. Capital, Springfield.

Cities and Towns.—Illinois has a number of thriving towns, and so rapidly do they increase, that the census of 1850 will be in many cases far below the truth; but for want of other reliable information, we must adhere to it. Chicago is the largest city, population, 29,963, (said to be 50,000 in 1853;) Quincy, 6901; Galena, 6004; Peoria, 5562; Springfield, 4533, and Alton, 3875; besides Peru, Rock Island, Bridge Prairie, Waukegan, Belleville, Jacksonville, Joliet, Elgin, St. Charles, and many other flourishing villages.

Face of the Country.—Illinois is generally a table-land, elevated from 350 to 800 feet above the level of the Gulf of Mexico, with a general inclination from N. to S., as indicated by the course of the rivers. This state, generally speaking, may be characterized as level, though there are elevated bluffs on the Illinois river, and still higher ones on the Mississippi. There is a small tract of hilly country in the S., and in the N. W. is a good deal of broken land. Many of the prairies are quite small, but others are very large; among the latter is Grand Prairie, extending from Jackson county, in a N. E. direction, to Iroquois county, and varying in width from 1 to 12 miles, and even more. This is probably the highest land between the Mississippi and the Wabash. The prairie is everywhere skirted with wood, and on its border is a circle of settlements, which have been here located on account of the timber. The prairies are interspersed with groups of trees, but the timber is generally sparse on them, which, however, seems not

to arise from any thing unfavorable in the soil, but from the annual burning of the prairie grass; for where this is prevented, a forest of young trees speedily springs up, and farmers are thus enabled to proceed inward with settlements, as it were, tier after tier. The prairies are not generally flat, but gracefully undulating, and profusely decked with the greatest variety of beautiful wild flowers of every hue, which ravish the beholder with delight.

Minerals.—Illinois has within her limits a large portion of the great lead region, which she shares with Iowa and Wisconsin. Galena, in the N. W. part of the state, is almost wholly supported by trade in this mineral. More than 13,000,000 pounds have been smelted (including Wisconsin) in one year. Bituminous coal occurs in almost every county, and may be often obtained without excavation. Vast beds are found in the bluffs adjacent to the American Bottom. A bed of anthracite coal is reported to have been discovered in Jackson county. Copper abounds in the N. part on Plum creek, and on the Peckatonica river. It has also been found in Jackson and Monroe counties. Iron is found in the southern part, and is said to be abundant in the north. Lime, zinc, some silver, (*reported in St. Clair county,*) marble of a fine quality, freestone, gypsum, and quartz crystals are the other minerals. There are salt springs in Gallatin, Jackson, and Vermilion counties, leased by the state. Medicinal springs, chiefly sulphur and chalybeate, are found in various parts, and one especially, in Jefferson county, is much resorted to. In the southern part of the state is one strongly impregnated with Epsom salts. Others of medicinal properties are found between Ottawa and Peru.

Rivers.—The rivers of Illinois have generally cut channels through the table-land or plain which they drain, presenting precipitous bluffs, sometimes close to the river's brink, and at other times leaving an alluvion bottom between the river and the bluffs. The Mississippi coats the entire western, and the Ohio river the entire southern boundary, giving the state commercial access to the great valleys bearing the names of their respective rivers. The Illinois river is formed by the Kankakee from Indiana, and the Des Plaines from Wisconsin, in the N. E. of the state, and crossing the middle of the state, after a course of 500 miles, empties itself into the Mississippi. The Rock river rises in Wisconsin, and the Kaskaskia in the middle of Illinois; both flow S. W. into the Mississippi. The Sangamon empties itself into the Illinois 80 miles above its mouth, after a westerly course of about 200 miles. The Kankakee from Indiana, and the Des Plaines and Fox from Wisconsin, are the sources of the Illinois, which has a number of smaller tributaries. The Wabash, which receives the waters

that drain the E. part of the state, forms the E. boundary for more than 100 miles. Lake Michigan bounds the state on the N. E. for 60 miles, and adds greatly to its commercial importance. Lake Peoria, an expansion of the Illinois river, near the middle of the state, and Lake Pishtaka, in the N. E., are the only other lakes of any importance. The Illinois has a sluggish current, and in time of freshets the waters of the Mississippi back up into it for 70 miles. It is navigable for steamboats 260 miles, and at high water boats proceed beyond the rapids above the Vermilion river. The Rock river has obstructions near its mouth, but, notwithstanding, both it and the Kaskaskia, as well as the Sangamon and Spoon, are navigable for a considerable distance at high water by steamboats, and still higher for small boats. The Wabash is navigable for steamboats beyond the point where it first touches the Illinois boundary. The rivers flowing into the Wabash from Illinois are the Vermilion, Embarras, and Little Wabash, having courses of from 100 to 150 miles. The Embarras is navigable for keel-boats.

Objects of Interest to Tourists.—Though Illinois presents but few bold or very striking features to the view of the traveller, she is not without her objects of interest to the lover of nature. Her wide-spread prairies, decked with flowers of every hue that can gratify the eye, and covered with waving grass, convey, besides their quiet landscape beauty, a feeling of sublimity from their vastness, similar to that created by viewing the ocean; and perhaps no natural objects in our country would more strike the European than our prairies—especially the Grand Prairie, which has already been referred to. The river bluffs inspire the same sense of rugged grandeur as mountains, though in a less degree. The most remarkable of these are on the Mississippi, and are from 100 to 400 feet high. Fountain Bluff, on the Mississippi river, in Jackson county, is of an oval shape, 6 miles in circuit, and 300 feet high. The top is full of sinkholes. Starved Rock, and Lover's Leap are each eminences on the Illinois river. The former is a perpendicular mass of lime and sandstone, 8 miles below Ottawa, and 150 feet above the river. It received its name from a band of Illinois Indians having taken refuge here, who, being surrounded by the Pottowatomies, all died, not of starvation, but of thirst. Lover's Leap is a ledge of precipitous rocks, some distance above Starved Rock. On the other side of the river, and nearly opposite to the Lover's Leap, is Buffalo Rock, 100 feet high, precipitous next the river, but sloping inland. Hither the Indians formerly drove the buffalo, and frightening them by shouts, caused them to crowd each other over the precipice. The Cave in the Rock, in Hardin county, on the banks of the Ohio, presents, as you approach it, the appearance of a vast mass

of rocks, some resembling castellated ruins, and others jutting out irregularly in a variety of forms. The entrance of the cave, which is but little above the bed of the river, is a semicircle, 80 feet wide and 25 feet high. The cave ascends gradually from its entrance to the extreme limit, 180 feet back from the mouth. A small opening leads into a second cave, whose dimensions are not known. This cave was in 1797 the abode of a band of robbers, who sallied out to rob the unfortunate boatmen and emigrants. It has since been the abode of other bands of robbers. The miners, in sinking their shafts in the lead region, often come upon caverns at the depth of 40, 70, and even 100 feet, which present brilliant specimens of stalactites, stalagmites, and other varieties of calcareous spar, and resemblances of leaves, birds, animals, &c. In some caves, sulphate of lime, in different crystallized forms, is found. Near Cahokia is a mound 2000 feet in circumference and 90 feet high. There is great inducement for the sportsman to visit Illinois to shoot the prairie hen, a species of pheasant or grouse, and to fish for trout in the clear streams of Northern Illinois.—For *Springs*, see *Minerals*.

Climate, Soil, and Productions.—Illinois, extending through more than 5° of longitude, has considerable variety of climate. Though somewhat milder than the Atlantic States in the same parallels of latitude, there is great irregularity in the seasons. Generally there will not fall six inches of snow at one time, which does not lie more than a few days, but at distant intervals the rivers are frozen for two or three months, and the snow lies for as long a period. The summers are hot, but mitigated by the fresh breezes from the prairies. During 15 years, peach-trees blossomed from March 25th to April 20th, and apple-trees from April 1st to May 3d. In the same period the earliest frost was September 17th, but sometimes there is none till near the end of October. The southern part, of course, has a milder climate than the northern. Cattle often are unsheltered during the whole winter. The meteorological table kept at Muscatine, Iowa, (which see,) will perhaps be a fair average representation of the temperature of Illinois.

In agricultural capabilities Illinois is unsurpassed, if equalled, by any state in the American confederacy. In some of her river bottoms the soil is 25 feet deep, and the upland prairies are but little inferior in fertility. The Great American Bottom, lying on the Mississippi, between the mouths of the Kaskaskia and the Missouri rivers, is of exceeding fertility, and has been cultivated for 100 years without apparent deterioration. This bottom is about 80 miles in length, covering an area of 288,000 acres. On the river side is a strip of heavy timber, with dense underwood, which extends for 2 or 3 miles. The rest is mostly prairie to the eastern limit,

which is terminated by a chain of sandy or rocky bluffs from 50 to 200 feet high. This fine region is, however, not healthy, though probably capable of being made so by drainage. The Rock river country is another highly fertile district on the Rock river and its branches. Of the same character are the regions about the Sangamon, Kaskaskia, and other rivers. Other regions of Illinois are fertile; but those mentioned pre-eminently so, producing not unfrequently 40 bushels of wheat and 100 of Indian corn to the acre. This is especially true of the narrow river bottoms immediately adjacent to their banks. The prairies of this state are peculiarly favorable to the raising of stock and the productions of the dairy. Illinois stands third in the absolute amount of Indian corn raised in the states of the Union; but, first, if we regard population and the number of acres under cultivation. The other agricultural staples are wheat, oats, Irish potatoes, hay, butter, and cheese. Besides these, large quantities of rye, wool, beans, peas, barley, buckwheat, fruits, garden vegetables, and some tobacco, sweet potatoes, wine, grass-seeds, hops, hemp, flax, silk, maple sugar, and molasses, beeswax and honey, and the castor bean are produced. Of indigenous fruits there are a variety of berries, plums, grapes, crabapples, wild cherries, persimmons, and the papaw (a sweet pulpy fruit, somewhat like the banana.) Of orchard fruits, the apple and peach flourish best, but pears and quinces are cultivated with facility. Of nuts, the shellbark or hickory, walnut, butternut, a white walnut, and pecan, abound. According to the census reports of 1850, there were 76,208 farms in Illinois, containing 5,039,545 acres of improved land, and producing 9,414,575 bushels of wheat; 83,864 of rye; 57,646,984 of Indian corn; 10,037,241 of oats; 82,814 of peas and beans; 2,514,861 of Irish potatoes; 157,433 of sweet potatoes; 110,795 of barley; 184,504 of buckwheat; 841,394 pounds of tobacco; 2,150,113 of wool; 12,526,543 of butter; 1,278,225 of cheese; 601,952 tons of hay; 17,807 bushels of grass-seeds; 160,033 pounds of flax; 248,904 of maple sugar; 869,444 of beeswax and honey; live stock, valued at \$24,209,258; slaughtered animals, at \$4,972,286; orchard products, at \$446,089, and market produce, at \$127,494.

Forest Trees.—Illinois would not be wanting in timber if it were more equally diffused. The occupation of the country will, however, remedy this deficiency (even in parts where there is now a scarcity) by protecting the young trees from the ravages of the prairie fires. The bottom lands have a rich growth of black and white walnut, ash, hackberry, elm, sugar-maple, honey-locust, buckeye, catalpa, sycamore, (of a size unknown in the Atlantic States,) cottonwood, pecan, hickory, and oak of various species; and of under-

wood, redbud, papaw, grape-vine, eglantine, dogwood, spicebush, hazel, green-brier, &c. On the uplands are post-oak (very valuable for fencing) and other species of oak, blackjack, (useless except for fuel,) hickory, black and white walnut, linn or basswood, cherry, &c. The white and yellow poplar are found in the southern part of the state, and the cypress on the Ohio bottoms.

Manufactures.—Illinois is not largely engaged in manufacturing, though the facilities for carrying on this branch of industry are not wanting, when circumstances shall arise to make it profitable or necessary. According to the census of 1850, there were in Illinois 3099 manufacturing establishments, each producing \$500 and upwards annually, and home-made manufactures, valued at \$1,155,902; of these 16 were engaged in the fabrication of woollens, employing \$154,500, and 124 male and 54 female hands, consuming raw material worth \$115,364, and producing 306,995 yards of stuffs and 137,000 pounds of yarn, worth a total value of \$206,572; 31 furnaces, forges, &c., employing \$325,400 capital, and 482 male hands, consuming \$187,830 worth of raw materials, and producing 2700 tons of pig and 4160 tons of cast iron, worth a total value of \$511,385; 96 tanneries, employing \$188,373 capital, consuming raw material worth \$129,907, and producing leather valued at \$244,028.

Internal Improvements.—In 1836, when the spirit of speculation was rife throughout our entire nation, Illinois projected an extravagant system of railroads and canals, which shortly resulted (in the monetary revulsions between 1837 and 1840) in a general suspension. Notwithstanding, that spirit of enterprise which seems to grow from our free system, and to be as boundless as our extended territory, has again, with more rational views, stimulated the citizens of this state to enter upon a still more magnificent scheme of railroads than that projected in 1836. Besides these, she has completed her great canal from Chicago to Peru, uniting the waters of Lake Michigan with the Mississippi river.

In January, 1853, there were in operation in Illinois, 296 miles of railroad, and 1772 in course of construction. Chicago is at present connected by railroad, either directly or indirectly, with Detroit, Cincinnati, New York city, Philadelphia, and Boston, beyond the limits of the state, and with Rockford, St. Charles, Aurora, and Peru, within the state; besides these, there are railroads uniting Springfield with Jackson, Naples, and Alton; and Quincy with Columbus. When the roads under contract shall have been completed, Chicago will have continuous lines of railroad to almost every important point in the state, and through connection with other railroads, with St. Louis, Terre Haute, Louisville,

Nashville, New Orleans, Mobile, Savannah, and Charleston.

Commerce.—Illinois is most favorably situated for internal commerce, being able to communicate with the western, southern, and central parts of the Mississippi valley, by means of the Mississippi, Missouri, and Ohio rivers, and with the Northern and Eastern States by way of the great lakes. The total of the imports into this state from the lakes, in 1851, was \$7,820,953, and exports \$4,435,012. Tonnage of the Chicago district, 15,890 $\frac{3}{5}$; total tonnage of the state, 25,209 $\frac{3}{5}$; steamers, 993 $\frac{5}{8}$. Vessels built in 1850, 13, of which only one was a steamer. In 1852, 17 vessels were built, the tonnage of which was only 1217 $\frac{2}{3}$. The vessels doing the lake and river trade are mostly built in New York, Ohio, Pennsylvania, and Kentucky. The foreign imports and exports are trifling. For 1852 the foreign exports amounted to \$51,325, and imports to \$4832. Tonnage entered 1155, and cleared 3616. Chicago does an immense business in lumber and general trade, but we have no complete statistics thereof. The domestic exports from Galena in 1851, amounted to \$1,800,358, of which seven-ninths was lead. About \$80,000 worth of lumber was received during the same year.

Education.—In 66 counties, in 1850, there were 2641 school houses, and 2350 volumes in the school libraries. There were also 132,324 children in the common schools. In the same year, \$230,712 were paid to teachers, of which \$148,871 was public money. The school fund, in 1850, was \$939,799, derived from the public lands and the surplus revenue of the United States. On the formation of the state, one section in each township was appropriated for the support of schools, and afterwards an additional income of 3 per cent. on the actual proceeds from the sale of public lands within the limit of the state. One-sixth of these proceeds is appropriated to colleges. There were, in 1852, four colleges in the state, with an aggregate of 198 students, and 14,800 volumes in their libraries; one theological (Baptist) and one medical school.—See *Table of Colleges*, APPENDIX.

Religious Denominations.—Of the 1167 churches in Illinois in 1850, 265 were owned by different divisions of Baptists; 67 by Christians; 46 by Congregationalists; 27 by Episcopalians; 40 by Lutherans; 389 by Methodists; 198 by Presbyterians; 58 by Roman Catholics; 31 by Unionists; and the rest by Africans, Concordists, Covenanters, Dutch Reformed, Evangelicals, Evangelists, Free Church, Friends, German Reformed, Independents, Moravians, Mormons, Protestants, Swedenborgians, Tunkers, Unitarians, and Universalists, giving one church to each 729 persons. Value of church property \$1,476,335.

Public Institutions.—Illinois has a state lunatic asylum at Jacksonville, and a state penitentiary at Alton. There were in 1850, 27 public libraries, with an aggregate of 19,916 volumes.

Government.—The executive power in Illinois is lodged in a governor and lieutenant-governor, elected by the people for 4 years; the former receiving \$1500 per annum, and the latter, who is ex-officio president of the senate, \$3 per day during the session of the legislature. The governor is ex-officio fund commissioner, and is only eligible for 4 years out of any 8 years. The senate consists of 25, and the house of representatives of 75 members, both elected by the people, the former for 4, and the latter for 2 years. The judiciary consists of a supreme court, of three divisions, presided over by as many judges, receiving each \$1200 per annum, and 15 circuit courts, presided over by as many judges, each receiving \$1000 per annum. All white male citizens, of 21 years of age, who have resided in the state six months next preceding an election, are qualified voters. Illinois is entitled to 9 members in the national house of representatives, and to 11 electoral votes for president of the United States. The state debt in 1852 was \$16,621,509. The governor of the state, in his message to the legislature, Jan., 1853, states the finances to be in an excellent condition, and that a surplus over expenditures of \$100,000 will remain in the treasury, March 1st, 1853. Ordinary expenses of government \$125,000; school fund, seminary, and university, \$939,798; productive property, \$5,000,000; assessed value of property in 1850, \$114,782,645. Illinois has a free-banking law, which requires that no company shall go into operation until the company have deposited stocks to the amount of \$50,000 with the auditor.

History.—Though Illinois did not become a member of the confederacy till 1818, it was colonized about the same period as Philadelphia. Marquette, a French traveller, visited it as early as 1673, and settlements were made at Cahokia and Kaskaskia at the close of the 17th century. These, however, like other French colonies, did not increase rapidly. At the treaty of Paris in 1763, Illinois fell into the hands of the English, and came, with all the territory east of the Mississippi, into the possession of the government of the United States at the Revolution in 1775. Soon after some settlers from Virginia located themselves in the territory, and in 1787 it became a part of the North-west Territory, then created, and which included all the country N. W. of the Ohio river. In 1800 it formed part of a separate territory, under the name of Indiana, in conjunction with the state now bearing that name. A second division took place in 1809, when the present state was

organized as the Territory of Illinois, and was admitted as an independent member of the confederacy in 1818, since which it has gone on with an average decennial increase of more than 200 per cent.

ILLINOIS, a township in Washington county, Arkansas. Population, 714.

ILLINOIS, a township in Calhoun county, Illinois. Population, 520.

ILLINOIS BAYOU, of Pope county, Arkansas, flows south-westward into Arkansas river.

ILLINOIS CITY, a post-village of Rock Island county, Illinois, on the Mississippi river.

ILLINOIS FURNACE, a post-village of Hardin county, Illinois, about 5 miles N. from the Ohio river.

ILLINOISTOWN, a post-village of St. Clair county, Illinois, on the Mississippi river, opposite St. Louis. It contains several hundred inhabitants.

ILLYRIA, a post-office of Fayette co., Iowa.

IMLAY, a township in Lapeer county, Michigan. Population, 183.

IMLAYSTOWN, a small post-village of Monmouth county, New Jersey, 14 miles E. S. E. from Trenton.

INCREASE, a post-office of Early county, Georgia.

INDEPENDENCE, a county in the N. E. central part of Arkansas, contains about 1000 square miles. It is intersected by White river, and bounded on the E. by Black river. The surface is diversified by hills and valleys, which are partly occupied by forests of pine and other timber. The soil is fertile. Wheat, corn, oats, and cattle are the chief products. In 1850 there were raised 388,395 bushels of Indian corn, the greatest quantity produced in any one county of the state except Ashley; 10,114 of wheat; 29,260 of oats, and 65,120 pounds of butter. There were 2 saw mills, 5 tanneries, 1 castor-oil mill, and 1 manufactory of farming implements. It contained 4 churches, 2 newspaper offices; 310 pupils attending public schools, and 85 attending an academy. The White river is navigated by steamboats from its mouth to Batesville, in nearly all seasons. Black marble, slightly variegated, is found in the county. An active emigration is directed to this part of the state. Capital, Batesville. Population, 7767; of whom 6939 were free, and 828, slaves.

INDEPENDENCE, a post-township forming the S. E. extremity of Alleghany county, New York. Population, 1701.

INDEPENDENCE, a post-township of Warren county, New Jersey, 14 miles E. N. E. from Belvidere. Population, 2621.

INDEPENDENCE, a township of Beaver county, Pennsylvania. Population, 799.

INDEPENDENCE, a small village of Beaver county, Pa., 10 miles S. from Beaver.

INDEPENDENCE, a post-village of Washington county, Pennsylvania, about 200 miles W. from Harrisburg.

INDEPENDENCE, a small post-village, capi-

tal of Grayson county, Virginia, 288 miles W. S. W. from Richmond. It is situated in a wild, mountainous region.

INDEPENDENCE, a small village of Preston county, Virginia, on the Baltimore and Ohio railroad.

INDEPENDENCE, a post-village of Autauga county, Alabama, about 90 miles S. E. from Tuscaloosa.

INDEPENDENCE, a post-village of Washington county, Texas, 88 miles E. from Austin city. It is the seat of Baylor University, a flourishing institution under the direction of the Baptists.

INDEPENDENCE, a post-office of Dickson co., Tennessee.

INDEPENDENCE, a post-village, capital of Kenton county, Kentucky, 11 miles S. from Cincinnati, was incorporated in 1840. It contains 1 church and several stores.

INDEPENDENCE, a post-township in the central part of Cuyahoga county, Ohio, intersected by the Ohio canal. Population, 1485.

INDEPENDENCE, a village of Defiance county, Ohio, on the Maumee river and Wabash and Erie canal, 53 miles above Toledo.

INDEPENDENCE, a township in the N. part of Oakland county, Michigan. Pop., 978.

INDEPENDENCE, a thriving post-village of Warren county, Indiana, on the Wabash river, 9 miles above Williamsport.

INDEPENDENCE, a township in Coles county, Illinois. Population, 905.

INDEPENDENCE, a small village of Coles county, Illinois.

INDEPENDENCE, a small post-village of Fulton county, Illinois, 9 miles N. E. from Lewistown. The post-office is called Jackson Grove.

INDEPENDENCE, a post-office of McLean county, Illinois.

INDEPENDENCE, a township in Dunklin county, Missouri. Population, 447.

INDEPENDENCE, a thriving town, capital of Jackson county, Missouri, is situated 5 miles S. from Missouri river, and 165 miles W. by N. from Jefferson City. It is important as one of the starting points in the trade with New Mexico and Utah, and a place where many of the emigrants to Oregon and California procure their outfit. It is the centre of trade for a considerable extent of the surrounding country, which is extremely fertile. The prodigious tide of emigration which has passed through this place for about four years past, has created a demand for horses, provisions, and merchandise, at prices which have enriched the farmers and traders of this vicinity. It contains several churches, 3 hotels, and 2 newspaper offices. A railroad extends from the town to the river. Population in 1853, estimated at 2500.

INDEPENDENCE, a post-village, capital of Buchanan county, Iowa, on the Wapsipinicon, about 75 miles N. N. W. from Iowa City. Its origin is very recent.

INDEPENDENCE, a post-office of Polk co., Ogn.

INDEPENDENCE HILL, a post-office of Prince William county, Virginia.

INDEPENDENCE RIVER, rises in Hamilton county, in the N. E. central part of New York, and falls into Black river, in Lewis county.

INDESVILLE, a post-village of Surry co., N. C.

INDIANA, one of the Western States, and a portion of the Great Mississippi Valley, is bounded on the N. by Lake Michigan and the State of Michigan, E. by Ohio, S. by Kentucky, from which it is separated by the Ohio river, and W. by Illinois, from which it is partly separated by the Wabash river. It lies between 37° 45' and 41° 52' N. lat., being about 275 miles in its greatest length from N. to S., and about 135 miles in width, forming nearly a parallelogram, and including 33,809 square miles, or 21,637,760 acres, only 5,045,453 of which are improved, leaving three-fourths of this fertile state uncultivated. When we take into consideration that the million of inhabitants who possess the cultivated portion are far from densely settled, we arrive at conclusions foreshadowing the immense population that must one day occupy the Great Mississippi Valley.

Population.—There were in Indiana, 4875 inhabitants in 1800; 24,520 in 1810; 147,178 in 1820; 343,031 in 1830; 685,896 in 1840, and 988,393 in 1850; of whom 506,400 were white males, 471,205 white females; 5472 colored males, and 5316 colored females. There were also in 1850, 171,564 families, inhabiting 170,178 dwellings. Of the entire population, 541,078 were born in the state, 390,313 in other states of the Union, 5550 in England, 12,787 in Ireland, 1510 in Scotland and Wales, 1878 in British America, 23,584 in Germany, 2279 in France, 1838 in other countries, and 2598 whose places of birth were unknown. In the year ending June 1st, 1850, there occurred 12,728 deaths, or about 13 in every thousand persons; and in the same period, 1182 paupers received aid, of whom 322 were foreigners, at an expense of nearly \$50 to the individual. There were at the same time, 349 blind, of whom 9 were colored; 618 deaf and dumb, of whom 4 were colored; 579 insane, of whom 10 were colored, and 919 idiots, of whom 13 were colored persons.

Countries.—Indiana is divided into 91 counties, viz. Adams, Allen, Bartholomew, Benton, Blackford, Boone, Brown, Carroll, Cass, Clark, Clay, Clinton, Crawford, Daviess, Dearborn, Decatur, De Kalb, Delaware, Du Bois, Elkhart, Fayette, Floyd, Fountain, Franklin, Fulton, Gibson, Grant, Greene, Hamilton, Hancock, Harrison, Hendricks, Henry, Howard, Huntington, Jackson, Jasper, Jay, Jefferson, Jennings, Johnson, Knox, Kosciusco, La Grange, Lake, Laporte, Lawrence, Madison, Marion, Marshall, Martin, Miami, Monroe, Montgomery, Morgan, Noble, Ohio, Orange, Owen, Parke, Perry, Pike, Porter, Posey, Pulaski, Putnam, Randolph, Ripley,

Rush, Scott, Shelby, Spencer, Stark, Steuben, St. Joseph, Sullivan, Switzerland, Tippecanoe, Tipton, Union, Vanderburgh, Vermilion, Vigo, Wabash, Warren, Warwick, Washington, Wayne, Wells, White, and Whitley. Capital, Indianapolis.

Cities and Towns.—New Albany is the largest town, population (in 1850) 8181; the other principal towns are Madison, population, 8005; Indianapolis, 8090; Fort Wayne, about 4000; Terre Haute, about 4000; Lafayette, 6129; Evansville, 3633; besides a number of other towns between 1000 and 2000 each.

Face of the Country.—Indiana has no mountains or great elevations, but portions S. of the White river are somewhat hilly and rugged. A low ridge from Kentucky extends in a N. W. direction across the Ohio, White, and Wabash rivers, causing rapids in each. North of the White and Wabash rivers, (forming much the larger part of the state,) the country is generally level, or slightly undulating. Most of the rivers have rich alluvial bottoms of a few miles in width. A range of hills runs along the Ohio, sometimes approaching and at others receding from the river, forming in the S. W. an exceedingly broken and rocky country. In the N. W. part is some land heavily timbered with walnut, beech, maple, buckeye, &c., with a considerable portion of the richest prairie land. Immediately bordering on Lake Michigan are some sandhills about 200 feet in height, behind which is a region covered with pine. The N. E. part of Indiana is also heavily timbered, interspersed with prairie, barrens, and marsh lands. The most of the streams empty into the Ohio, showing a general inclination of the surface in that direction.

Minerals.—Indiana has beds of coal within her limits, estimated to cover 7700 square miles, capable of yielding 50,000,000 bushels to the square mile. One coal deposit commences near the Ohio, in Perry county, and extends N. W. about 150 miles, into Vermilion county. Besides coal, Indiana contains iron, some copper, lime, marble, freestone, gypsum, and grindstones. In 1850 about \$172,000 were invested in forges, furnaces, &c., for the working of iron.

Rivers, Lakes, &c.—Lake Michigan borders on the N. W. portion of Indiana for about 40 miles, and opens to it the trade of the great lakes. There are a number of small lakes in the N. part of the state. The Ohio forms the entire southern boundary of Indiana, and gives it access to the commerce of the Ohio and Mississippi valleys. The Wabash is the largest river that has its course mainly within the state, of whose surface, with its branches, it drains three-fourths. It rises in the W. of Ohio, and flowing N. W. and then S. W. across the state, meets the boundary of Illinois, which it follows for more than 100 miles, till it discharges its waters into the Ohio, after a

total course of about 500 miles, (including its windings,) 400 of which may be navigated by steamboats at high water. At low water its channel is obstructed by bars and ledges of rocks just above the mouth of the White river, its principal tributary. The latter rises in two branches in the eastern part of the state, flow S. W. and unite about 30 miles from the Wabash. The course of the largest branch (the W. fork) is about 200 miles. It is navigable in the season of floods to Indianapolis, 140 miles from its mouth. The Maumee is formed by the St. Joseph's and St. Mary's, in the N. E. part of Indiana, and passes off into Ohio. The Kankakee, one of the sources of the Illinois, drains the N. W. portion of the state. The upper St. Joseph's makes a bend into Indiana from Michigan, to which, after a course of about 80 miles, it returns. Some branches of the Ohio and Wabash form the other principal streams.

Objects of Interest to Tourists.—There are a number of caves in this state. Wyandotte Cave, in Crawford county, 11 miles from Corydon, is said to rival Mammoth Cave, in Kentucky, in extent and interest. Previous to 1850, the cave had been explored for 3 miles. In that year new chambers and galleries were discovered, more extensive than the old, and abounding in stalactites and other calcareous concretions, some of great size and splendor. Epsom Salts Cave, on the Big Blue river, is in the side of a hill 400 feet high. About 2500 yards from the entrance is a white column, 15 feet in diameter, 30 in height, regularly fluted, and surrounded by smaller and similar columns. The earth of the floor yields Epsom salts, nitre, aluminous earth, and gypsum. There is within, a rude painting of an Indian on the rock. There are a number of mounds scattered over the state, similar to those described in Ohio.

Climate, Soil, and Productions.—The climate of Indiana partakes of the general character of the other Western States, N. of the Ohio, that is to say, somewhat milder than on the Atlantic coasts, but subject to sudden changes. The cold of winter is severe, but of comparatively short duration; the snow does not generally fall to a great depth or lie very long; though there is considerable difference in this respect between the northern and southern parts of the state. The earlier fruits blossom in March, but are liable to be injured by frosts. The soil is generally good, and much of it highly fertile. The richest lands are found in the river bottoms, where the soil is very deep. This is especially the case in the valleys of the Wabash and its tributaries above Terre Haute, and in parts of the Ohio valley. The country between the rivers is somewhat elevated, and not so luxuriantly fertile as on the river bottoms, but amply repays the labors of the husbandman; indeed there

is very little of this state uncultivable; even its wet and marshy lands will no doubt, at some future day, when the density of population and cheapness of labor may warrant it, become as productive as most of the other lands in the state. Indiana ranks fourth of the states of the Union in the absolute amount of Indian corn raised, and third as respects population. It also produces large quantities of wheat, oats, with Irish potatoes, fruit, butter, and live stock, besides considerable rye, barley, buckwheat, sweet potatoes, tobacco, wool, peas, beans, cheese, grass-seeds, flax, hops, maple sugar, molasses, beeswax and honey, and some wine, hemp, and silk. In 1850 there were in Indiana 98,396 farms, occupying 5,046,543 acres of improved land, (averaging about 50 acres to each plantation,) and producing 6,214,458 bushels of wheat; 52,964,363 of Indian corn; 5,655,014 of oats; 78,792 of rye; 35,773 of peas and beans; 2,083,337 of Irish potatoes; 201,711 of sweet potatoes; 45,483 of barley; 149,740 of buckwheat; 30,280 of grass-seeds; 1,054,620 pounds of tobacco; 2,610,287 of wool; 12,781,535 of butter; 624,564 of cheese; 403,230 tons of hay; 92,796 pounds of hops; 584,469 of flax; 2,921,642 of maple sugar, (fourth in amount of the United States;) 935,329 of beeswax and honey; 14,055 gallons of wine; 180,325 of molasses; live stock valued at \$22,478,555; orchard products at \$324,940; market products at \$72,864; and slaughtered animals at \$6,567,935.

Forest Trees.—Indigenous to Indiana, are various species of oaks, popular, ash, walnut, hickory, elm, cherry, sugar-maple, buckeye, beech, and some sassafras, lime, locust, sycamore, cottonwood, hackberry, and mulberry in the bottom lands. The fruits common to the latitude thrive in Indiana.

Manufactures.—Though not yet largely engaged in manufacturing industry, Indiana has every facility, in the abundance of her water-power and the cheapness of her coal, for becoming a manufacturing state, when it may become advantageous for her so to do. There were in 1850, in this state, 4326 manufacturing establishments, each producing \$500 and upwards annually, of which two were cotton mills, employing \$43,000 capital, and 38 male, and 57 female hands consuming raw material, valued at \$28,220, and producing stuffs and yarns worth \$44,200; 33 woollen mills, employing \$171,645, and 189 male and 57 female hands, consuming raw material worth \$120,486, and producing 235,500 yards of stuffs, and 104,000 pounds of yarn, valued at \$205,802; 19 furnaces, forges, &c., employing \$171,900 capital, and 253 male hands, consuming raw material worth \$95,743, and producing 3782 tons of cast, wrought, and pig iron, valued at \$219,190; 358 tanneries, employing \$514,897

capital, consuming raw material worth \$405,838, and producing leather valued at \$714,813; and \$334,950 invested in the manufacture of malt liquors, whisky, wine, &c., consuming 118,150 bushels of barley, 1,417,900 of Indian corn, 48,700 of rye, 1000 of oats, and 18 tons of hops, and employing 287 hands, and producing 11,005 barrels of beer, ale, &c., and 4,639,900 gallons of whisky, wine, &c. Homemade manufactures were produced valued at \$1,631,039.

Internal Improvements.—Indiana is among the leading states of the Great Mississippi Valley in works of internal improvement. In January, 1853, there were within her limits 755 miles of railroad completed, and 979 in course of construction; and so rapid is her progress in this respect, that any correct account of them one year would be antedated the next. One line passes through the middle of the state, uniting Terre Haute, on its western border, with Columbus, in Ohio, and passing through Indianapolis. Branching off from the latter place is another railroad, uniting the capital with Cleveland, Ohio. The Southern Michigan, and Northern Indiana, connecting Monroe, in Michigan, and Cleveland, and various other points in Ohio, and even New York city and Philadelphia with Chicago, has about 130 miles of its track in the N. W. of Indiana. Other lines connect the capital, directly or indirectly, with Madison, with Lafayette, with Muncie Town, with Rushville, Shelbyville, and Knightstown. There are some other roads given in the Appendix. The projected and incomplete railroads are the Evansville and Terre Haute, (27 miles finished,) Fort Wayne and Muncie, Indianapolis and Lawrenceburg, (63 miles finished,) Indianapolis and Peru, (30 miles finished,) Junction, New Albany and Salem, (83 miles finished,) Ohio and Mississippi, and Richmond and Logansport. The Wabash and Erie canal, connecting the Maumee river at Toledo with Terre Haute, is 340 miles long, and has much the greater part of its course in Indiana. The receipts from it in 1852 were \$460,452; expenditures, \$409,621. Another canal, 68 miles long, unites Lawrenceburg, on the Ohio, with Cambridge City, in the interior.—See *Table of Railroads and Canals*, APPENDIX.

Commerce.—Indiana has no foreign commerce, but an active lake and river trade with New Orleans and the various points of the Mississippi and Ohio valleys, by the rivers of the same name, and with New York by the lakes, though for the most part in vessels owned in other states. The report of the secretary of the treasury of the United States, gives no tonnage nor any vessels built to Indiana. The great objects of export are cattle, hogs, and other live stock, pork, beef, lard, Indian corn, wheat, and wool.

Education.—Indiana has a school fund,

derived from several sources, which Governor Wright, in his message of December, 1851, estimates at \$4,664,279, which is constantly augmenting, from fines, forfeitures, and the profits of the sinking fund. The receipts from the university fund for 1852 were \$15,528; and from the common school fund, \$73,839. There were expended for the Indiana University in the same year, \$16,361. The constitution provides for the election by the people of a superintendent of public schools, to hold office for two years. The number of children in the schools in 1851 was 225,318, or nearly one-fourth of the inhabitants. There were in 1852 four colleges in Indiana, with an aggregate of 421 students, and 20,800 volumes in their libraries; one theological school, one medical school, with 50 students, and one law school, with 29 students.—See *Table of Colleges*, APPENDIX.

Religious Denominations.—Of the 1947 churches in Indiana, in 1850, the different sects of Baptists owned 412; the Christian Church, 182; the Episcopalians, 24; the Free Church, 10; the Friends, 85; the Lutherans, 60; the Methodists, 745; the Moravians, 53; the Presbyterians, 267; the Roman Catholics, 63, and the Universalists, 15. The rest belonged to the Benevolent Church, the Congregationalists, the Dutch Reformed, the German Reformed, the New Lights, the Seceders, Tunkers, Union Church, and the Unitarians; giving one church to every 507 persons. Value of church property, \$1,512,485.

Public Institutions.—Indiana stands among the first of the Western States in provision for the unfortunate. There are at Indianapolis asylums for the deaf and dumb, blind, and insane; and the constitution directs the erection of houses of refuge for the reformation of juvenile criminals. In 1851 there were 172 pupils in the deaf and dumb, and 52 in the blind asylum. In the same year, the insane hospital had 137 patients, 52 of whom it discharged cured. This institution was opened in 1848. All the deaf and dumb between the ages of 10 and 30, and all blind children of the state may, if they choose, receive a gratuitous education. The different benevolent institutions received from the state, in 1852, appropriations amounting to \$105,050.21. There were 16 public libraries in Indiana in 1850, with an aggregate of 40,000 volumes.

Government.—The governor and lieutenant-governor are both elected by the people for four years. The former, who receives \$1300 per annum, can only be elected once in any period of eight years. The latter is ex-officio president of the senate, and receives \$3 per day during the sessions of the legislature. The senate consists of 50, and the house of representatives of 100 members, both elected by the people; the former for four, and the latter for two years. The se-

cretary of state, auditor, and treasurer, are each chosen by the people for two years. The auditor is also superintendent of public schools. The judiciary consists of a supreme court, composed of not less than three or more than five judges, elected by the people for six years; and of thirteen circuit courts, presided over by judges elected by the people of each district, for six years. The judges of the supreme court receive \$1300 per annum. Justices of the peace are chosen by the people of each township for four years. Any voter of good moral character may practise law, and any white male of 21 years of age, born in the United States, or any foreigner, resident in the United States one year, and who has declared his intention, according to law, of becoming a citizen, may vote, after six months' residence in the state. Indiana is entitled to 11 members in the national house of representatives, and to 13 electoral votes for president of the United States.

Banks, Finances.—The state debt, principal and interest, in 1847, was \$14,374,640; but by an act of the legislature of that year, the bondholders took the state's interest in the Wabash and Erie canal, which they were to finish for half this debt, while the state should issue new certificates for the other half. In August, 1850, the state liabilities were \$6,775,522.50. In January, 1852, there were 14 banks, with an aggregate capital of \$2,082,151, a circulation of \$3,680,000, and \$1,300,000 in coin. The general banking law prevails in this state. The assessed value of property in 1850 was \$152,870,339; the public debt, \$6,907,477. In 1852 the expenses, exclusive of debt and schools, benevolent institutions, &c., were \$108,076. Receipts for 1852, including arrearages of former years, \$1,464,325.06, and expenditure, \$1,061,605.58.

History.—Indiana was settled in the early part of the eighteenth century by the French, who remained here, without much accession to their numbers, till long after the close of the American Revolution. Like other French settlements, they were nearly stationary, as far as regarded increase from without, until the arrival of the Americans among them; enjoying life with the characteristic cheerfulness of their nation, and mingling with the neighboring savages, not only on terms of amity, but sometimes forming matrimonial alliances with them. In 1800, Indiana became, in conjunction with Illinois, a territorial government, and in 1816, an independent member of the confederacy. In 1811, the savages of the Shawnee tribe, led on by their prophet, and incited, it is said, by the British, who put arms into their hands, attacked the American settlements, and committed great depredations. General Harrison being sent against them, routed them completely at Tippecanoe, but with the loss of 200 of his own troops.

INDIANA, a county in the S. W. central part of Pennsylvania, has an area of about 770 square miles. The Conemaugh river forms its boundary on the S. It is also drained by Little Mahoning, Crooked, Black Lick, and Two Lick creeks. The surface is hilly. The soil, where not too rough for cultivation, is moderately fertile. Grain, horses, cattle, and sheep are the staples. In 1850 there were raised 213,636 bushels of corn; 209,763 of wheat; 493,182 of oats; 18,189 tons of hay, and 470,251 pounds of butter. There were 17 flour and grist mills, 5 saw mills, 3 iron foundries, 1 furnace, and 2 woollen factories. It contained 61 churches, 3 newspaper offices, 5271 pupils attending public schools, and 57 attending academies or other schools. Extensive forests of white pine and other timber overspread a portion of the surface. The highlands contain large quantities of bituminous coal and iron ore; and valuable salt springs occur in the S. part of the county. The Pennsylvania canal and Central railroad pass along the S. border. Organized in 1803, and named from the general appellation of the aboriginal tribes. Capital, Indiana. Population, 27,170.

INDIANA, a township of Alleghany co., Pennsylvania, on the Alleghany river, 10 miles N. E. from Pittsburg. Pop., 2448.

INDIANA, a thriving post-borough, capital of Indiana co., Pennsylvania, is handsomely situated on high ground, on the turnpike leading from Ebensburg to Kittanning, 50 miles E. N. E. from Pittsburg. A plank-road, about 16 miles long, extends southward to the Central railroad. It contains the usual county buildings, 5 or 6 churches, and an academy. Population in 1850, 963.

INDIANAPOLIS, a city, capital of Indiana, and seat of justice of Marion county, on the W. fork of White river, at the crossing of the National road, and immediately below the mouth of Fall creek, 109 miles N. W. from Cincinnati, and 86 miles N. N. W. from Madison. Lat. 39° 46' N., lon. 86° 5' W. It is situated in a fertile and extensive plain, very nearly equidistant from the several boundaries of the state. When this place was selected for the capital of Indiana, in 1820, the whole country for 40 miles in every direction was covered with a dense forest. On the 1st of January, 1825, the public offices of state were removed from Corydon, and the seat of government was permanently established here. The streets generally cross each other at right angles, excepting 4 diagonal streets, which converge to a circular area in the centre of the town. The principal public buildings are on Washington street, which is 120 feet wide. Several other streets are 90 feet wide. The state house, erected at a cost of \$60,000, is an elegant building, surmounted by a dome, and having 10 Doric columns on each front. Its dimensions are 180 feet long by 80 wide. Among the public

buildings may be mentioned the governor's house, the court house, a large Masonic hall, the Bates House, the largest hotel in the state, besides many other hotels, 2 market houses, and the depôt of the Madison and Indianapolis railroad, 350 feet long, by 56 wide. There are 26 churches, and 3 others are in course of construction. Indianapolis is said to contain a greater number of churches in proportion to its population than any other city in the Union. Great attention is paid to education, and the public schools are in a very flourishing condition. The city contains 2 banks. Seven or eight newspapers are published here, one of which is a daily. The city contains several iron foundries, flouring mills, and manufactories of steam engines, paper, window sashes, and other articles. Indianapolis is the terminus of seven railroads, viz. the Madison and Indianapolis, opened in 1847, the Lafayette, the Terre Haute and Indianapolis, the Indiana Central, the Indianapolis and Bellefontaine, the Peru and Indianapolis, and the Lawrenceburg and Upper Mississippi railroad. Nearly all of the above are now in operation. Population in 1840, 2692; in 1850, 8090; in 1853, about 12,000.

INDIANAPOLIS, a post-village of Mahaska county, Iowa, about 14 miles N. E. from Oskaaloosa, the county seat.

INDIAN CREEK, Georgia, flows into Little river, in Putnam county, about 8 miles N. W. from Eatonton.

INDIAN CREEK, of Tishemingo county, Mississippi, enters Tennessee river near Eastport.

INDIANA CREEK, a small stream of Yuba county, towards the N. part of California, falls into Dry creek about 22 miles from its junction with Yuba river. Gold is found along this stream in considerable quantities; miners average \$5 a day. The banks are well wooded with excellent timber.

INDIAN CREEK, of Indiana, rises in Floyd county, and flowing S. W., passes Corydon, and falls into the Ohio. The Little Indian creek enters it at Corydon.

INDIAN CREEK, of Indiana, rises in Monroe county, and enters the E. fork of White river, at the Sulphur Springs, in Martin county.

INDIAN CREEK, of Morgan county, Indiana, falls into the W. fork of White river, a few miles below Martinsville.

INDIAN CREEK, of Switzerland county, Indiana, flows into the Ohio near Vevay.

INDIAN CREEK, of Missouri, enters the Maramee from the right in Franklin county.

INDIAN CREEK, a post-village in Monroe co., Virginia, 190 miles W. from Richmond.

INDIAN CREEK, a post-office of Newbury district, South Carolina.

INDIAN CREEK, a post-office of Jackson county, Georgia.

INDIAN CREEK, a post-office of Pike co., Ala.

INDIAN CREEK, a post-office of Washington county, Tennessee.

INDIAN CREEK, a post-office of Kent co. Mich.

INDIAN CREEK, a township in Lawrence county, Indiana. Population, 1227.

INDIAN CREEK, a post-township in Monroe county, Indiana. Population, 1202.

INDIAN CREEK, a township in Pulaski county, Indiana. Population, 420.

INDIAN CREEK, a post-village of Monroe co., Mo., 80 miles N. N. E. from Jefferson City.

INDIAN CREEK, a small village of Pike co., Missouri.

INDIAN FIELDS, a post-office of Albany county, New York.

INDIAN FIELDS, a post-office of Fulton county, Indiana.

INDIAN GROVE, a post-office of Grayson county, Texas.

INDIAN GROVE, a small post-village of Livingston county, Illinois, 94 miles N. E. from Springfield.

INDIAN HILL, a post-office of Abbeville district, South Carolina.

INDIAN HILL, a post-office of Elbert co., Ga.

INDIAN KENTUCKY CREEK, of Indiana, rises in Ripley county, and flows into the Ohio, 8 miles above Madison City.

INDIAN KEY, a post-village of Dade county, Florida, is situated on a small island in the Atlantic, about 30 miles E. S. E. from Cape Sable, and 75 miles E. N. E. from Key West. The island is of coral formation. This village contains nearly the whole population of the county, which in 1850 was only 159. The climate renders it a desirable winter residence for invalids.

INDIAN LAKE, New York, in the E. part of Hamilton county, is 8 or 9 miles long, and near 2 miles wide. The outlet called Indian river falls into the Hudson.

INDIAN MOUND, a post-office of Stewart county, Tennessee.

INDIANOLA, a post-village of Calhoun county, Texas, on the western shore of Matagorda bay, about 35 miles W. S. W. from Matagorda. A newspaper is published here, and steamboats ply between this place and Galveston.

INDIANOLA, a post-office of Vermilion co., Ill.

INDIANOLA, a post-village, capital of Warren county, Iowa, 135 miles W. by S. from Iowa City. The county has a fertile soil, and contains extensive beds of stone coal.

INDIAN ORCHARD, a post-office of Wayne county, Pennsylvania.

INDIAN PRAIRIE, a post-office of Van Buren county, Iowa.

INDIAN RIVER, of New Hampshire. See INDIAN STREAM.

INDIAN RIVER, in the W. part of New York, rises in Lewis county, crosses Jefferson, and passing through Black lake, enters the Oswegatchie river in St. Lawrence county.

INDIAN RIVER, of Sussex county, Delaware, flows eastward into the Atlantic.

INDIAN RIVER, of Florida, on the E. side of the peninsula, flows nearly parallel with the coast. Length, about 100 miles. The depth varies greatly in different seasons. The

breadth also is very unequal; in some parts it expands into extensive lakes or lagoons.

INDIAN RIVER, a post-office of Washington county, Maine.

INDIAN RIVER, a hundred in the E. part of Sussex county, Delaware. Population, 1683.

INDIAN RIVER, a post-office of St. Lucie county, Florida.

INDIAN SPRINGS, a small post-village of Butts county, Georgia, 50 miles N. W. from Milledgeville, is a fashionable place of resort.

INDIAN STREAM, of Coos county, in the N. part of New Hampshire, unites with the E. branch to form the Connecticut.

INDIAN STREAM, a township of Coos county, New Hampshire, bordering on Canada East, is drained by the head waters of the Connecticut river.

INDIAN TAVERN, a small village of Morgan county, Tennessee.

INDIAN TERRITORY is a vast tract of country set apart by the government of the United States as a permanent home for the aboriginal tribes removed thither from the east of the Mississippi river, as well as those indigenous to the territory. It is bounded on the N. by the extensive region known as the Missouri, or North-west Territory, and by Minnesota; E. by Iowa, Missouri, and Arkansas; S. by Texas, and New Mexico, and W. by Texas, New Mexico, Utah and Oregon. The Platte river forms a part of the N., the Missouri of the E., and the Red of the S. boundary. Indian Territory lies between 33° 30' and 42° 50' N. lat., being about 700 miles in extreme length from E. to W., and about 600 from N. to S., including an area of 187,171 square miles.

Population.—We have no census returns of the population of this territory, but the eastern portion is mainly in possession of tribes removed thither by the United States government, including among others, the Choctaws, Chickasaws, Creeks, Cherokees, Senecas, Shawnees, Seminoles, Quapaws, several Miami tribes, Potawatamies, Ottawas, Delawares, Kickapoos, Sacs, and Iowas. The country directly west of these, with a small tract in the N. E., is occupied by the Osages, the Kansas or Konzas, the Otoes, Omahas or Mahas, Pawnees, and the Puncaks, all indigenous tribes. The central and western portions are roamed over by the Camanches, Kioways, Pawnees, Arrapahoes, Utahs, Chiennes, Gros Ventres, Arickaras or Rickarees, and some other nomad tribes. Some of the removed tribes have made considerable advances in agriculture and the industrial arts, and have established schools and churches, while others are relapsing into indolence and vagrancy, and, following the common fate of the savage when in contact with the civilized man, are fast diminishing under the influence of intemperance and vicious connection with abandoned whites.

Face of the Country.—There is a general inclination of the country from the base of the Rocky mountains, on the western border of Indian Territory, toward the Mississippi river, beyond the eastern boundary of the territory. The Rocky mountains form a vast wall between this region and Utah and Oregon territories. They rise from a base of about 3000 feet, and attain in Pike's and Long's Peaks an estimated elevation of 12,000 feet. East of the main chain are some outlying ridges of moderate elevation, and some table-lands, which are followed by a vast barren and sandy tract, generally known as the Great American Desert. The rest of the territory spreads out, for the most part, into undulating plains of great extent, with the exception of the Ozark or Washita mountains, which enter the S. E. angle of Indian Territory from Arkansas. This territory, however, has been too imperfectly explored to enable us to speak with great precision of its surface.

Rivers.—Indian Territory is drained by four great rivers, viz. the Platte, or Nebraska, the Kansas, Arkansas, and Red rivers, with their tributaries: these all have their sources in or near the Rocky mountains, and after flowing in an eastern, or south-eastern direction across or on the borders of the territory, empties itself, the first two into the Missouri, and the last directly into the Mississippi. The Kansas is the only one of these rivers that has its course wholly within the territory; the Platte, as before stated, forming a part of the north, and the Red river of the south boundary, while the Arkansas passes off into the state of the same name. The Missouri coats the N. E. boundary. The tributaries are, (within the territory,) of the Platte, the South fork; of the Kansas, the Smoky Hill and Solomon's forks; of the Arkansas, the Cimarron, Neosha, North fork, and Canadian, and of the Red, the Washita—all having nearly an eastern course, except the Neosha, which runs south. The Osage, a tributary of the Missouri, has its sources in the east part of Indian Territory. These rivers have generally broad and shallow channels; and in the case of the Platte and Kansas, in the dry season constitute little more than a series of sandy pools, and in the winter and spring are only navigable by flat-boats and canoes, or for steamboats (if at all) near their mouths. The Arkansas and Red rivers are both navigable for steamboats, but to what distance we are not accurately informed. The Arkansas has a course of about 2000, the Red of 1200, and the Platte and Kansas each of about 1000 miles.

Climate.—Of the climate we have little definite information, but that of the eastern portion is probably similar to the climates of Arkansas and Missouri, on which it borders; while the table-lands of the west are dry and hot in the daytime, with cool

nights. The mountain region is of course temperate in summer, but severe in winter, with deep snows, some peaks rising to the line of perpetual frost.

Soil and Productions.—On this point, too, our information is limited. The eastern portion, occupied by the partly civilized Indians, is represented as fertile prairie land, interspersed "with mountain and flat hills," for an extent of 200 miles westward from the boundary of Arkansas and Missouri. On the borders of the streams are strips of woodland, mostly cottonwood and willows: the country is, however, generally destitute of timber. The Cross Timbers, thus described by Captain Marcy, are partly in this territory:—"A narrow strip of woodland, called the Cross Timbers, from 5 to 30 miles wide, extending from the Arkansas river some 500 miles in a S. W. direction to the Brazos, divides the arable land from the great prairies, for the most part arid and sterile." The western portion of the territory is mostly a barren, dreary waste "of bare rocks, gravel, and sand," destitute of all vegetation, except perhaps a few stunted shrubs, "yuccas, cactuses, grape-vines, and cucurbitaceous plants." The water is brackish, and the surface in many places covered with saline efflorescences. The eastern prairies are well adapted to grazing, and the products of the adjoining states flourish there.

Animals.—Vast herds of buffaloes and wild horses roam over its prairies, and in the mountain district is found the grizzly bear, Rocky mountain goat, antelope, deer, and some other animals. Upon the other points generally treated of in our articles on the states and territories, we have too little reliable information to speak in a work meant to be one of facts and not of conjectures. Indian Territory forms a part of the great Louisiana tract purchased by President Jefferson from France in 1803. The United States Government have military stations at Fort Leavenworth and Council Bluff, on the Missouri; Fort Gibson, on the Arkansas; Fort Towson, on the Red; Fort Washita, on the Washita, and Fort Laramie, on the Platte. It has been proposed to form a new territory on both sides of the Platte or Nebraska, to be named from that river, which would take from Indian Territory all N. of 40° N. latitude.

INDIAN TOWN, a small village of Camden co., North Carolina.

INDIAN TOWN, a post-village in Currituck co., N. C., 165 miles E. N. E. of Raleigh.

INDIAN TOWN, a post-village in Williamsburg district, South Carolina, 85 miles E. S. E. of Columbia.

INDIAN TOWN, a small post-village of Bureau co., Illinois.

INDIAN VALLEY, a post-office of Floyd co., Va.

INDIAN VILLAGE, a post-village of Washita parish, Louisiana.

INDIAN WHEELING CREEK, of Ohio, flows

through Belmont co., and enters the Ohio opposite Wheeling.

INDIGO HEAD, a post-office of Coffee co., Ala.

INDUSTRY, a post-township of Franklin co., Maine, on both sides of Sandy river, about 28 miles N. N. W. from Augusta. Pop., 1041.

INDUSTRY, a post-village of Beaver co., Pennsylvania, on the right bank of the Ohio river, about 38 miles below Pittsburg.

INDUSTRY, a post-office of Austin co., Texas.

INDUSTRY, a post-village of Hamilton co., Ohio, on the Ohio river, 4 miles below Cincinnati, contains a stove foundry, and near 200 inhabitants.

INDUSTRY, a post-office of McDonough co., Ill.

INGHAM, a county in the S. central part of Michigan, contains 560 square miles. It is intersected by Grand river, and also drained by Red Cedar and Sycamore creeks. The surface is mostly level, and heavily timbered with the sugar-maple, beech, &c. The soil is productive. Wheat, Indian corn, oats, and grass are cultivated. In 1850 this county produced 88,577 bushels of wheat; 94,721 of corn; 62,756 of oats, and 8837 tons of hay. It contained 2 churches, 2 newspaper offices, and 2936 pupils attending public schools, and 25 attending an academy. Mines of iron and coal have been found in the county, but not yet explored. The streams furnish extensive water-power. A plank-road extends from the county seat to Detroit. Named in honor of Samuel D. Ingham, secretary of the treasury under President Jackson. Capital, Lansing. Population, 8631.

INGHAM, a post-township in the S. E. part of Ingham county, Michigan. Pop., 744.

INGHAM CENTRE, a small post-village of Ingham county, Michigan, in the township of the same name. It has a steam saw mill and 1 or 2 stores.

INGRAHAM PRAIRIE, a post-office of Clay county, Tennessee.

INGRAM'S CROSS ROADS, a post-office of Lauderdale county, Alabama.

INLAND, a post-office of Summit co., Ohio.

INLAND, a post-office of Cedar co., Iowa.

INMANVILLE, a post-office of Rock co., Wis.

INMANVILLE, a small village in Providence county, Rhode Island, about 25 miles N. W. by W. from Providence. It contains a scythe factory. Population, about 60.

INTERCOURSE, a post-village of Lancaster co., Pa., 12 miles E. from Lancaster city.

INTERCOURSE, a post-office of Sumter co., Alabama.

INVERNESS, a post-office of Columbiana co., O.

INVERNESS, a small village of Mackinac county, Michigan, on Sheboygan river, 18 miles S. from Mackinac. Large quantities of pine lumber are sawn here.

INYAN REAKAH, *River of the Rock*, a river which rises in the Minnesota territory, and flowing through the N. W. part of Iowa, falls into the Sioux river.

INYAN YANKEY river, of Iowa, rises to-

ward the N. W. part of the state, and flowing south-westerly, enters the Missouri in Harrison county. It is sometimes called the LITTLE SIOUX.

ION, a post-office of Morehouse parish, La.

IONE, a post-office of Effingham co., Ill.

IONI, a post-office of Anderson co., Texas.

IONIA, a county in the W. central part of Michigan, contains 576 square miles. It is intersected by the Grand and Flat rivers, and also drained by Maple and Looking-glass rivers, and by Prairie creek. The surface is gently undulating, and the soil is partly alluvial, and uniformly fertile and free from stone. More than half of the county is occupied by timbered openings, which have a sparse growth of oak and hickory; the other portion is covered with dense forests. Wheat, Indian corn, oats, hay, potatoes, pork, and maple sugar are the staples. In 1850 this county produced 77,838 bushels of wheat; 76,035 of corn; 43,363 of oats; 53,555 of potatoes; and 5598 tons of hay. It contained 3 churches, 1 newspaper office, and 2610 pupils attending public schools. Grand river is regularly navigated by steam as high as the county seat. The streams furnish sufficient water-power for mills. A quarry of red sandstone has been opened in the county. Capital, Ionia. Pop. 7597.

IONIA, a post-township in the central part of Ionia county, Michigan, intersected by Grand river. Population, 774.

IONIA, a post-village, capital of Ionia co., Michigan, on the right bank of Grand river, about 90 miles from its mouth, and 38 miles N. W. from Lansing. The river is navigable as high as this point in all stages of water, and a small steamer plies regularly between the village and the city of Grand Rapids. A quarry of red sandstone, valuable for building, has been opened near Ionia. It contains a United States land-office and several churches. The water-power of the river is employed in mills of various kinds.

IONIA, a post-office of Warren co., Illinois.

IONIA, a village in Morgan co., Missouri, 40 miles W. by S. from Jefferson City.

IOSCO, a new county in the E. part of Michigan, bordering on Lake Huron, contains about 900 square miles. It is intersected by the Au Sable river. This county is not named in the census of 1850, and probably has no civilized inhabitants. It was originally called *Kamotin*.

Iosco, a post-township in the W. part of Livingston county, Michigan. Population, 645.

IOWA river, in the state of the same name, rises in Hancock county, and flowing in a general S. E. direction, passes by the seat of government, and enters the Mississippi 35 miles above Burlington. The whole length is estimated at over 300 miles. Small steam boats can ascend as far as Iowa City, about 80 miles, for three months in the year.

IOWA, a newly formed state, W. of the Mis-

Mississippi, is bounded N. by Minnesota Territory, E. by the Mississippi, which separates it from the states of Wisconsin and Illinois, S. by Missouri, and W. by Indian Territory and Minnesota, from the former of which it is separated by the Missouri, and from the latter by the Great Sioux river. It lies (with the exception of a small projection in the S. E. between the Des Moines and Mississippi rivers) between 40° 30' and 43° 30' N. lat., and between 90° and 97° W. lon., being about 300 miles in extreme length from E. to W., and about 208 in breadth, including an area of 50,914 square miles, or 32,584,960 acres, of which only 824,682 were improved in 1850.

Population.—Iowa had 43,112 inhabitants in 1840, and 192,214 in 1850, of whom 100,885 were white males, 90,994 white females, 168 colored males, and 167 colored females. (By a state census in 1852, the population was 230,000.) This population was divided among 33,517 families, occupying 32,962 dwellings. Of the population of Iowa, 50,380 were born in the state, 120,240 in other states of the Union, 3785 in England, 4485 in Ireland, 1064 in Scotland and Wales, 1756 in British America, 7152 in Germany, 382 in France, 2208 in other countries, and 362 whose places of birth were unknown, making more than 10 per cent. of the population of foreign birth. During the year ending June 1, 1850, 2044 deaths occurred, or about 10 in every 1000 persons: 135 paupers received support in the same period, of whom 35 were foreigners. In the same year there were 51 deaf and dumb, all white; 47 blind, do.; 40 idiotic, do.; and 93 insane, do.

Counties.—There are in Iowa 49 organized counties, viz. Allomakee, Appanoose, (or Appanuse,) Benton, Black Hawk, Boone, Buchanan, Cedar, Clarke, Clayton, Clinton, Dallas, Davis, Decatur, Delaware, Des Moines, Dubuque, Fayette, Fremont, Henry, Iowa, Jackson, Jasper, Jefferson, Johnson, Jones, Keokuk, Lee, Linn, Louisa, Lucas, Madison, Mahaska, Marion, Marshall, Monroe, Muscatine, Page, Polk, Pottawatomie, Poweshiek, Scott, Tama, Taylor, Van Buren, Wapello, Warren, Washington, Wayne, and Winnishiek. Capital, Iowa City.

Cities and Towns.—At the census of 1850, Burlington was the largest town in the state; population, 4081. Dubuque, Keokuk, Muscatine, and Davenport have populations varying from 2000 to 5000. Iowa City had a population of 1250.

Face of the Country.—The surface of Iowa is generally composed of rolling prairies, having nothing within its limits which approaches a mountain in elevation. The highest ground in the state is a plateau in the N. W., called 'Coteau des Prairies,' which enters the state from Minnesota. A small portion in the N. E., on the Mississippi, is rugged and rocky, and Table Mound, a

conical elevation with a flat summit, 3 or 4 miles from Dubuque, is, perhaps, 500 feet high. The state, however, may be generally described as a rolling prairie, crossed by rivers whose banks are skirted with wood. There are said to be some swamps in the N. W. portion of the state. The prairies, though sometimes 20 miles across, are rarely more than 5 or 10.

Geology.—The great coalfield of Missouri and Iowa, occupying the centre and southern parts of the latter state, and extending out in the form of a semicircle, is surrounded on every side but the S. by a belt of upper carboniferous limestone. The Mississippi, on the S. E. of the state, has its channel in a bed of the lower carboniferous limestone. The great drift deposits from Minnesota enter the N. of Iowa. A narrow strip of the lead-bearing magnesian limestone lies on the Mississippi to the N. E., and is succeeded on the S. W. first by a broad belt of upper magnesian, and then by a second of limestone of the Devonian period. The coal veins of Iowa are not nearly so thick as those of Illinois, being seldom more than 4 or 5 feet. The prairies of this state are sprinkled over with boulders, some of them of immense size. One measured by Professor Owen was 50 feet in circumference, 12 feet high, and probably as many beneath the soil.

Minerals.—Iowa is rich in mineral resources. A portion of the great lead region of Illinois and Wisconsin extends into this state. The ore is abundant, but lies deeper than on the E. side of the river. Lead mines have been opened in Dubuque and Clayton counties. Zinc and copper are also found in the same localities, and in connection with the lead. The great bituminous coalfield of Iowa and Missouri has an extent of near 200 miles from E. to W., and 140 from N. to S., within the former state, and occupying most of the central and southern portions. Copper has been recently discovered in Cedar county in considerable quantities.

Rivers.—The rolling prairies of Iowa are furrowed by several important rivers, which cross it in a S. E. direction, and help to swell the volume of waters in the great Mississippi, into which they discharge themselves. The Des Moines, the most important of these, has its sources in Minnesota, and traversing the entire state, forms near its mouth a small portion of the S. E. boundary. Its length is about 450 miles, 250 of which are navigable for light steamboats at high water. The other rivers which flow into the Mississippi, proceeding in order northward, are the Skunk, Iowa, (the Red Cedar, a branch of the Iowa,) Wapsipinicon, Makoqueta, Turkey, and Upper Iowa. The Skunk is about 200, the Iowa 300, and the rivers last named from 100 to 200 miles in length. The Iowa is navigable for steamboats 110, and the Cedar river 60 miles. The Makoqueta

and the Wapsipinicon have rapid currents, and furnish abundant water-power. The Missouri and its tributary, the Great Sioux, form the W. boundary. The Little Sioux, the next important tributary of the Missouri from Iowa, has a course of little more than 100 miles. There are a few small lakes in the N. and W. part of the state.

Objects of Interest to Tourists.—The principal claim of this new, and as yet scarcely explored state, on the attention of travellers, must chiefly rest upon the beauty of its undulating prairies or its picturesque landscapes. There are, however, a few objects which may be classed among natural curiosities, of which the following are the most prominent. Numerous sinks, or circular depressions in the surface of the ground, from 10 to 20 feet across, are found in different places, and particularly on Turkey river, in the N. part of the state. Small mounds from 3 to 6 feet high, and sometimes 10 or 12 in a row, are found on the same stream, within 10 or 15 miles of its mouth. A cave several rods in extent exists in Jackson county, from which flows a stream large enough to turn a mill. The Upper Iowa and Makoqueta rivers have worn their channels through magnesian limestone rocks, leaving, on their southern banks, cliffs worn by the rain, frost, and winds into resemblances of castles, forts, &c.

Climate, Soil, and Productions.—According to meteorological tables kept at Muscatine, in 1851, by T. S. Parvin, Esq., the maximum of January was 46°, the minimum, 16°; for February, max. 52°, min. 0°; March, max. 78°, min. 12°; April, max. 70°, min. 24°; May, max. 82°, min. 23°; June, max. 85, min. 44°; July, max. 92°, min. 44°; August, max. 85°, min. 52°; September, max. 91°, min. 30; October, max. 79°, min. 18°; November, max. 51°, min. 14; December, max. 56°; min. —18°. Greatest heat, July 27th, 92°; greatest cold, December 16th, —18°; range, 110°. The Mississippi closed January 30th; opened February 21st. Last frost, May 24th; first in autumn, September 28th. Rainy days 101; 53 of which were in May, June, and July; 20 snowy days, 55 cloudy, 88 clear, and 212 variable. The amount of rain that fell during the entire year was 72.4 inches. A frost in May killed most of the fruit. The peach-tree blossoms in April, fall wheat ripens in July, spring wheat in August, and Indian corn in October. The rivers are frozen over from 2 to 3 months on an average each winter. The soil of Iowa is generally excellent and of easy cultivation, with prairie and woodland intermingled. The valleys of the Red Cedar, Iowa, and Des Moines, (we quote Owen's Geological Report,) as high as lat. 42° or 42° 31', presents a body of arable land, which, taken as a whole, for richness in organic elements, for amount of saline matter, and due admixture of earthy silicates, affords a combination that belongs

only to the most fertile upland plains. After passing lat. 42° 30' N., near the confines of the Couteau des Prairies, a desolate, knobby country commences, the highlands being covered with gravel and supporting a scanty vegetation, while the low grounds are either wet or marshy, or filled with numerous ponds or lakes, and where the eye roves in vain in search of timber. North of 41° 30', and between the head waters of the Grand, Nodaway, and Nishnabotona rivers, the soil is inferior in quality to that S. of the same parallel. The staples of this state are Indian corn, wheat, and live stock, besides considerable quantities of oats, rye, buckwheat, barley, Irish potatoes, butter, cheese, hay, wool, maple sugar, beeswax and honey; and some rice, tobacco, beans, peas, sweet potatoes, orchard fruits, wine, grass-seeds, hops, flax, and silk are produced. There were 14,805 farms, including 824,682 acres of improved land in Iowa in 1850, producing 8,656,799 bushels of Indian corn; 1,530,581 of wheat; 1,524,345 of oats; 276,120 of Irish potatoes; 52,516 of buckwheat; 25,093 of barley; 19,916 of rye; value of live stock \$3,689,275; 373,898 pounds of wool; 2,171,188 of butter; 206,849 of cheese; 89,055 tons of hay, and 78,407 pounds of maple sugar.

Forest Trees.—Iowa is in many places destitute of timber; along the rivers, however, it is well wooded, except near their sources. On the intervals between the rivers there are often prairies of from 15 to 20 miles, without so much as a bush higher than the wild indigo and compass plant. The greatest scarcity of trees is N. of 42°. Ash, elm, sugar, and white maple grow in alluvion belts of from one-fourth to one mile in width on the river banks. The other forest trees are poplar, various species of oak, black and white walnut, hickory, locust, ironwood, cottonwood, lime or basswood, and some pine in the northern parts of the state. Oak constitutes the larger part of the timber of the state. The peach grows too luxuriantly, and blooms too soon to admit of its being cultivated to advantage. The grape, gooseberry, and wild plum are indigenous.

Manufactures.—As a newly settled state, Iowa can of course have made as yet but little progress in manufactures; though she has within her limits two important elements of manufacturing industry, viz. abundance of coal and water-power. In 1850 there were 482 establishments, producing each \$500 or upwards annually; of these 3 were engaged in the manufacture of iron, employing \$5500 capital, and 17 male hands, consuming raw material worth \$2524, and producing castings, &c. worth \$8500; 1 a woollen factory, employing \$31,225 capital, and 7 male hands, consuming raw material worth \$3500, and producing 14,000 yards of stuffs, valued at \$13,000; and \$19,000 invested in manufacturing malt and spirituous liquors, consuming

51,150 bushels of Indian corn, and 7200 of rye, and producing 160,000 gallons of whiskey, &c. Homemade manufactures were valued at \$221,292.

Internal Improvements.—Iowa has made little progress as yet in this direction, though she will doubtless not be behind her sisters, age and population considered, in her future advance in this particular. Only seven years a member of the confederacy, her energies have been necessarily directed to opening common roads and laying some plank-roads. Until her river borders have all been settled, she will scarcely need the aid of railways to carry her products to market. A railroad of 180 miles in length is projected from Dubuque to Keokuk.

Commerce.—Iowa has no foreign trade, but is very favorably located for internal traffic, washed as it is by the Missouri on the west, the Mississippi on the east, and its interior traversed by the Des Moines, Iowa, Cedar, and other rivers. The principal articles of export are grain, flour, lead, and pork.

Education.—All lands granted by Congress, all escheated estates, and whatever percentage Congress may allow on the public lands sold within the state, are to constitute a fund, the interest of which and the rent of unsold lands, together with military and court fines, are to form an appropriation for the support of public schools in Iowa, which are to be under the direction of a superintendent of public instruction, elected for three years by the people. Schools must be kept open at least three months of every year in each district. An appropriation is also made for the support of Iowa University, which is to be perpetual. The school fund in 1850 amounted to \$250,230; annual expenditure, 41,693; volumes in school libraries, 287; and children in the state 64,336, of whom only 24,804 were in school.

Religions.—There were 148 churches in Iowa in 1850, of which the Baptists owned 16; Christians, 8; Congregationalists, 14; Episcopalians, 4; Friends, 5; Lutherans, 4; Methodists, 50; Presbyterians, 24; and the Roman Catholics, 17. The rest were divided among German Reformed, Moravians, Unionists, and Universalists.—See *Table of Religions*, APPENDIX. Number of persons to each church, 1298. Value of church property, \$177,400.

Public Institutions.—In 1850 there were five public libraries in Iowa, with an aggregate of 2660 volumes. There is a state prison at Fort Madison, on the Mississippi.

Government, Finances, Banks, &c.—The governor of Iowa is chosen for four years, and receives \$1000 per annum; the senate, composed of 19 members, for the same period; and the house of representatives, of 39 members, for two years; all elected by popular vote. The sessions of the legislature are biennial. The members receive \$2 per diem

for the first fifty days of the session, but after that only \$1 a day; \$2 are allowed for every 20 miles travelled. The judiciary is composed—1. Of a supreme court, presided over by one chief and two associate judges, receiving each \$1000 per annum. 2. Of district courts, each presided over by a single judge, receiving \$1000 per annum. The judges of the supreme court are elected by joint vote of the legislature for six years, and the district judges by the people of their respective districts for five years. The assessed value of property in Iowa in 1850 was \$21,690,642; and public debt, \$81,792, in December, 1852. There was but one bank in the state in June, 1852, with a capital of \$200,000, circulation \$100,000, and coin \$50,000.

History.—Iowa formed originally a part of the Louisiana purchase, then successively a part of Missouri, Wisconsin, and lastly of Iowa Territory. It became an independent member of the confederacy in 1845. Settlements were permanently commenced about 1833; the first at Burlington.

IOWA, a new county in the S. E. central part of Iowa, has an area of 576 square miles. The Iowa river, from which the name is derived, flows eastward through the northern part, and the North fork of English river traverses the southern part of the county. The principal streams, besides these, are Beaver, Oldman's, and Richmond creeks. The county is said to have a fertile soil, a healthy climate, and good timber. In 1850, Iowa county produced 31,145 bushels of Indian corn, 5535 of wheat. The projected railway route from Davenport to Council Bluffs passes through the county. Capital, Marengo. Pop., 822.

IOWA, a county in the S. W. part of Wisconsin, contains 740 square miles. The Wisconsin river bounds it on the N., and it is drained by the branches of the Pekatonica, which rise in the county and flow south-eastward. The surface is occupied by valleys and ridges, which are mostly destitute of timber, excepting small and scattered groves. The soil is calcareous and fertile. Wheat, Indian corn, oats, and wool are the staples of agriculture. In 1850 the county produced 50,747 bushels of wheat; 81,108 of Indian corn; 109,875 of oats; and 53,090 pounds of butter. It contained 13 churches; 1664 pupils attending public schools, and 85 attending academies or other schools. This county is remarkable for mineral wealth. Lead is abundant, and is one of the chief articles of export. Copper and zinc are also found in connection with the lead. The county is intersected by the Milwaukee and Mississippi railroad, not yet finished. Capital, Mineral Point. Population, 9525.

IOWA, a small post-village of Perry co., Illinois, near the Illinois Central railroad.

IOWA CITY, a flourishing town, capital of the State of Iowa, and seat of justice of John-

son county, is beautifully situated on the bluffs which rise from the left bank of the Iowa river, about 80 miles from its mouth, 33 miles N. W. from the Mississippi river at Muscatine, and about 760 miles in a straight line W. by N. from Washington. Lat. $41^{\circ} 39' N.$; lon. $91^{\circ} 30' W.$ When this place was selected as the seat of government, in May, 1839, it was entirely in a state of nature; and within a year from that time it contained from 500 to 700 inhabitants. The town is embowered among groves of trees, and surrounded by fertile prairies. The principal streets are Capitol street and Iowa avenue, which are about 100 feet in width. At the intersection of these, on a commanding eminence, stands the capitol, a fine edifice of the Doric order, 120 feet long by 60 feet wide. The material was quarried in this vicinity, and is marked with spots and rings, which give it the name of "bird's-eye marble." The cost is estimated at \$100,000. The river is navigable by steamboats from its mouth to this place in all stages. Several railways have been surveyed, which, when finished, will connect the town with Dubuque, Keokuk, and Davenport. The river affords in this vicinity excellent water-power, which is partially improved. Iowa City contains several churches, a college, an academy, and other schools. Three or four newspapers are published here. Population in 1850, 2262; in 1853, about 4000.

IOWAVILLE, a small post-village of Van Buren co., Iowa, on the Des Moines river, in the N. W. corner of the county, is surrounded by a country which is rapidly improving.

IPSWICH, a post-village, port of entry, and one of the shire-towns of Essex county, Massachusetts, is situated on both sides of a river of its own name, about 4 miles from the sea, and on the Eastern railroad, 25 miles N. N. E. from Boston. Ipswich river affords good water-power, and at its mouth is an excellent harbor. It is crossed by a stone bridge, built in 1764, at a cost of £1000. JAMES RIVER, the largest of the rivers which have their course wholly within the state of Virginia, is formed by the Jackson and Cowpasture rivers, which unite 15 miles below Covington, on the border between Alleghany and Botetourt counties. Flowing first south-eastward through the mountains of Central Virginia, it is joined by the Calfpasture river from the left at the base of the Blue Ridge, through which it forces a passage about 15 miles N. E. from the Peaks of Otter. It then flows south-eastward, passes by Lynchburg, and at the southern extremity of Amherst county changes its course to the north-east. Below Scottsville its general direction is east-south-east. After passing by Richmond, where the channel is divided by numerous islands, and the river descends over rocky rapids about 6 miles in extent, it gradually expands into an estuary of several miles in width, and flows into the southern extremity of Chesapeake bay, between Willoughby Point and Old Point Comfort. The whole length, exclusive of the branches, is about 450 miles. The tide ascends to Richmond, about 150 miles from the sea. It is navigable for vessels of 130 tons to the port of Richmond, from which point the James River and Kanawha canal has been constructed along the upper part of the river. This canal is completed to Buchanan, beyond the Blue Ridge, and is to be extended to Covington, on Jackson's river. Here it will connect with the eastern terminus of the Covington and Ohio railroad, now in course of construction. James river passes through a fertile and populous country, and is an important channel of trade. The chief towns on its banks are Richmond, Lynchburg, Scottsville, Manchester, and Buchanan. That part of the estuary which lies between Hampton and Norfolk is called Hampton Roads.

KENT'S HILL, a post-office of Kennebec co., Maine.

KENTUCKY, a beautiful river of Kentucky, formed by the North, Middle, and South forks, which unite at Proctor, in Owsley county. It flows north-westward, forming the boundary between Fayette, Jessamine, and Woodford counties, on the right, and Madison, Garrard, Mercer, and Anderson, on the left. Then passing through Franklin county and Frankfort City, and separating Owen from Henry county, it falls into the Ohio at Carrollton. The length of the main stream is about 200 miles. By means of dams and locks, steamboats ascend to Frankfort at all times; and flat-boats ascend 90 or 100 miles farther. In many parts of its course it flows through a deep channel formed by perpendicular walls of limestone, and is remarkable for picturesque scenery. *Branches.*

—The North fork rises in Letcher county, among the Cumberland mountains, and flows north-westward. The Middle fork rises in Perry county, and flows in a N. N. W. direction. The South fork rises in Clay county, and flows nearly northward. Large beds of stone coal and iron ore are found on these branches.

KENTUCKY, one of the Western states, and the second admitted into the confederacy after the Revolution, is bounded on the N. W. and N. by Illinois, Indiana, and Ohio, (from which it is separated by the Ohio river,) E. by the Big Sandy river and Cumberland mountains, which divide it from Virginia; S. by Tennessee, and W. by the Mississippi river, which runs between it and Missouri. Kentucky lies between 36° 30' and 39° 10' N. lat., and between 81° 50' and 89° 26' W. lon., being about 300 miles in length, from E. to W., about 180 in its greatest, and 150 in average width, and including an area of nearly 37,680 square miles, or 24,115,200 acres, of which 11,368,270 were improved in 1850.

Population.—The population of Kentucky was originally derived from Virginia and North Carolina, and has always been noted for its stalwart forms, frank and manly bearing, for gallantry in the field, and fondness for humor. The number of inhabitants in 1790 was 78,077; 220,955 in 1800; 406,511 in 1810; 564,317 in 1820; 687,917 in 1830; 779,828 in 1840; and 982,405 in 1850—of whom 392,810 were white males, 368,607 white females, 4863 free colored males, 5144 free colored females; 105,044 male, and

105,937 female slaves. This population is divided among 132,920 families, occupying 130,769 dwellings. Representative population, 898,012. Of the free population, 601,764 were born in the state; 130,117 in other states of the Union, 2805 in England, 9466 in Ireland, 854 in Scotland and Wales, 275 in British America, 13,607 in England, 1116 in France, 1066 in other countries, and 1354 whose places of birth were unknown, making about 4 per cent. of the free population of foreign birth. In the year ending June 1, 1850, there occurred 15,206 deaths, or about 12 persons in every 1000; and in the same period, 1126 paupers received aid, of whom 155 were foreigners, at an expense of about \$51 to the individual. There were 539 deaf and dumb, of whom 4 were free colored, and 50 slaves; 530 blind, of whom 19 were free colored, and 90 slaves; 507 insane, of whom 3 were free colored, and 16 slaves; and 849 idiotic, of whom 20 were free colored, and 80 slaves.

Counties.—Kentucky is divided into 100 counties, viz. Adair, Allen, Anderson, Ballard, Barren, Bath, Boone, Bourbon, Boyle, Breathitt, Bracken, Breckinridge, Bullitt, Butler, Caldwell, Callaway, Campbell, Carroll, Carter, Casey, Christian, Clark, Clay, Clinton, Crittenden, Cumberland, Daviess, Edmonson, Estill, Fayette, Fleming, Floyd, Franklin, Fulton, Gallatin, Garrard, Grant, Graves, Grayson, Greene, Greenup, Hancock, Harlan, Harlan, Harrison, Hart, Henderson, Henry, Hickman, Hopkins, Jefferson, Jessamine, Kenton, Knox, Laurel, La Rue, Lawrence, Letcher, Lewis, Lincoln, Livingston, Logan, Madison, Marion, Marshall, Mason, McCracken, Meade, Mercer, Monroe, Montgomery, Morgan, Muhlenburg, Nelson, Nicholas, Ohio, Oldham, Owen, Owsley, Pendleton, Perry, Pike, Pulaski, Rockcastle, Russell, Scott, Shelby, Simpson, Spencer, Taylor, Todd, Trigg, Trimble, Union, Warren, Washington, Wayne, Whitley, Woodford. Capital, Frankfort.

Cities and Towns.—Louisville is the largest and most commercial town, population in 1850, 43,194; (in 1853, 51,726;) the other most populous towns are Lexington, population, about 12,000; Covington, 9408; Newport, 5895; Maysville, 3840; Frankfort, (in 1853,) 5000, and Paducah, population, 2428.

Face of the Country.—The Cumberland mountains form the S. E. boundary of the state, and several outlying ridges traverse the south-eastern counties, but none of them are of great elevation, being probably under 2000 feet. Passing westward, the central and northern counties are hilly, or undulating, but those west of the Cumberland river are mostly level. A range of hills runs nearly parallel with the Ohio river, with intervals of bottom land between it and the river, sometimes having a breadth of 10 or even 20 miles.

Geology.—This state partakes of the car-

boniferous rocks characteristic of the Mississippi valley. The strata, which are composed of sedimentary rocks, lie all nearly horizontal, or with very little dip, verging from Cincinnati as a centre. The blue limestone is the lowest rock in Kentucky exposed to the surface, mostly mixed with clay and magnesia, the latter is found sometimes in large quantities. It forms the surface rock in a large part of Kentucky adjacent to the state of Ohio, extending S. E. from Dayton to Danville, and E. from Madison to Maysville. These strata extend to a probable depth of 1000 feet, and, where the rivers have cut down through them, present perpendicular cliffs, which, in the Kentucky river near Frankfort, are nearly 500 feet high. These yield an inferior marble, suitable for building; but, though capable of a high polish, it is liable to fracture. The cliff limestone overlies the blue limestone in a belt of about 20 or 30 miles in width, between Louisville (where it forms the rapids in the Ohio) and Madison, extending N. E. by N. to Niagara Falls, and N. W. into Illinois and Iowa. The slate rests upon the cliff limestone, and passes, in a semicircular direction, (as a surface rock,) in a belt of only about 20 miles in width, just outside the cliff limestone above described, forming part of a large curve extending from the N. E. of Illinois to the centre of New York; and abounding in pyrites, iron ores, and mineral springs. Overlying the slate, but outside of the belt mentioned, is the sand or freestone, which forms a line of hills from Louisville round by Danville and back to the Ohio, near Portsmouth, where it is about 350 feet thick. One striking feature of this state is its limestone caverns, of which the celebrated Mammoth cave is an example; but besides which there are numberless smaller ones. This formation, occupying about a fourth of the state, is located south-west from the centre, and thence to the southern border between Monroe county and Cumberland river, and is bounded on the N. E. by the Rolling Fork of Salt river. This limestone furnishes a valuable building material, which is sent down the Mississippi in considerable quantities. Throughout this region occur "sinks," where the streams sink below the surface, and run, for great distances, in subterranean channels. In parts of this limestone region there is a scarcity of spring-water, resulting from the cavernous nature of the ground. Resting on the cavernous limestone is the conglomerate, or pudding stone, which underlies the coal series, and occupies two regions in Kentucky, the one in the E. and S. E. of the state, and the other on the Green river counties, extending to the Ohio and beyond the mouth of the Green river. Both districts may cover 10,000 or 12,000 square miles. Great quantities of organic remains are found in all the strata of Kentucky.

Minerals.—Kentucky abounds in bituminous coal, which, though not yet extensively mined, crops out of the river banks and hillsides, indicating its localities, when the scarcity of wood or the increase of manufactures may call for its use. The amount of iron manufactured in 1850 was about 33,000 tons, a small quantity in proportion to the abundance of the raw material which exists in the state. Lead, iron pyrites, marble, (on the cliffs of the Kentucky river,) freestone, gypsum, conglomerate, and cliff limestone are the other minerals. Salt and medicinal springs are particularly numerous in this state. The salt licks, so famous in the hunter's vocabulary, are names given to the vicinity of the salt springs, where the buffalo and other wild animals have licked the ground, and almost eaten it, so as to present a bare space for some distance around.—See *Objects of Interest to Tourists*. Salt is extensively manufactured from these springs, and large quantities of saltpetre were procured from the Mammoth cave during the war of 1812.

Rivers.—Kentucky is washed along the entire extent of her northern boundary by the Ohio river, which gives her a steamboat navigation of more than 600 miles, and opens to her the inland commerce of the Ohio valley. The great Mississippi in like manner coasts her western limits, and gives Kentucky access to the trade of the immense valley which bears its name. The Cumberland river rises in the S. E. part of the state, makes a bend into Tennessee, and returning, crosses the western part of Kentucky, and flows into the Ohio. It is about 600 miles long, and is navigable for steamboats to Nashville, and sometimes to Carthage, while keel-boats ascend still higher. The Tennessee has its mouth and about 70 miles of its course in that part of the state west of the Cumberland river. It is navigable for steamboats far beyond the limits of Kentucky. The other rivers, commencing at the east, are the Licking, Kentucky, Salt, and Green. These have N. W. courses, varying from 100 to 350 miles, of which, in the order they are named, except the Licking, there are severally navigable for steamboats 62, 35, and 150 miles, while keel-boats may ascend them to a still greater distance. The Big Sandy, a tributary of the Ohio, (as are all the important streams of Kentucky,) forms the eastern boundary for about 100 miles, of which 50 are navigable.

Objects of Interest to Tourists.—No Western State probably presents so great a variety of objects to interest the lover of nature, as Kentucky; whether we regard mere picturesqueness, or the wild and more striking deviations from the ordinary course of creation. Prominent among these, and perhaps first among the subterranean caverns of the globe, stands the Mammoth cave, in Edmondson county, S. of the middle of the state. In the extent and number of its chambers, in the

length of its galleries, and its variety of interesting objects, such as streams, mounds, stalactites, stalagmites, &c., it has no equal. It is said to have been explored for ten miles (part of that distance in a boat, on a deep river, inhabited by white, eyeless fish) without giving any indications of coming to a termination. If its lateral branches are included, you have an extent of probably 40 miles of cavernous windings. Stalactites of ponderous size hang from the vaults, formed by the droppings from the limestone roofs, and gigantic stalagmites bristle the floors of these immense chambers; one of which, called the Temple, is stated to occupy an area of two acres, and to be covered by a single dome of solid rock, 120 feet high. Consumptive patients sometimes resort hither, and reside in the cave for weeks together, to be improved by its equable temperature. Human bones are found, indicating its having been a place of sepulture to former races inhabiting the country. There are a number of other caves, that would attract attention in any other vicinity, viz. in Allen, Barren, Bourbon, Breckinridge, Christian, Hart, Knox, Meade, Jessamine, Rockcastle, Union, Warren, Wayne, and Whitley counties. These caves occur in the limestone formations, in a rough but not mountainous district. Goodrich thus describes the sinks:—"In this state are also many singular cavities or depressions in the surface of the ground, called sinkholes. They are commonly in the shape of inverted cones, 60 or 70 feet in depth, and from 60 to 300 feet in circuit at the top. Their sides and bottoms are generally covered with willows and aquatic productions. The ear can often distinguish the sound of waters flowing under them, and it is believed that there are perforations in the bed of limestone below the soil, which have caused the earth above to sink. Sometimes the ground has been opened, and disclosed a subterraneous stream of water. Considerable streams disappear in several places, and afterwards rise again to the surface, at some distance below." The most remarkable of these is Sinking creek, in Breckinridge county, where a stream, a few miles from its source, sinks beneath the earth, and does not reappear for 5 or 6 miles. We condense from Collins' Kentucky, the following descriptions:—"Near Munfordville, in Hart county, is a remarkable spring, which is connected with a millpond, the waters of which, at about 12 o'clock each day, rise 12 or 15 inches, overflow the dam, and recede to their ordinary level, with all the regularity of the tides. Six miles E. of the same village is a hole, shaped like an inverted cone, 70 feet in diameter at the top, but diminished to 10 or 12 at the depth of 25 or 30 feet. A stone thrown into this rumbles down the sides without returning any sound indicating its having touched the

bottom. In the same vicinity, near the top of an elevation called Frenchman's Knob, commences a hole or sink, which has been descended 275 feet by means of a rope, without finding bottom. The Devil's Pulpit, in Jessamine county, on the Kentucky river, is a rocky eminence, 300 feet high. The last 100 feet of this rock is an oblong shaft, resembling an inverted candlestick, the top of which forms the pulpit, and is 15 feet across. A natural bridge, 30 feet high, and 60 feet in span, in Christian county, is located in the midst of romantic scenery. Dismal rock, in Edmonson county, on Dismal creek, has a perpendicular elevation of 163 feet. Cumberland gap, in Knox county, is the passage of the river of that name, between cliffs of 1300 feet elevation, through the Cumberland mountains. There are also in Kentucky a variety of mineral and medicinal springs. Of the latter, Harrodsburg Springs, in Mercer county, 35 miles S. of Frankfort, is the most fashionable watering-place in the West. Sulphates and carbonates of magnesia, sulphates of soda and lime, carbonate of lime, sulphuretted hydrogen, and iron are yielded by an analysis of its waters. The Blue Lick springs, scarcely inferior to these in reputation, are situated in Nicholas county, 70 miles N. E. from the capital. The waters are very extensively exported to different parts of the United States. In Clinton county, on the top of Poplar mountain, whose elevation is from 1000 to 1500 feet above the valleys, are three chalybeate springs. This spot unites to healing waters the invigorating air of the mountains, and the charm of beautiful scenery, to invite the invalid to its locality. A fine waterfall, of 90 feet perpendicular pitch, on Indian creek, is in this neighbourhood. Our limits will permit us merely to name the falls of Kentick's creek, and Rock House, in Cumberland county; Pilot Rock, in Christian county; Indian Rock, in Edmonson county; Flat Rock and Anvil Rock, in Union county; and the cliffs of the Kentucky and Dick rivers, in Mercer county. Both the antiquarian and geologist may gratify their taste within the domains of Kentucky. For the former are numerous mounds and fortifications, erected, it is supposed, at a period antecedent to the race who possessed the country before the Europeans arrived. The most remarkable of these is a fortification in Allen county, 17 miles from Bowling Green, where a wall of solid limestone, 200 yards in length, 40 feet high, 30 feet thick at the base, and 6 feet wide at the top, crosses a neck formed by a bend in Drake's creek, and encloses a peninsula of 200 acres, elevated 100 feet above the river. On the top of this natural mound is an area of 3 acres, enclosed by a wall and a ditch, forming one of the strongest fortresses in the world. Similar works, with mounds of different sizes within and around them, which

entomb human bones, beads, trinkets, and copper implements and ornaments, are found in Barren, Bourbon, La Rue, Montgomery, Spencer, Boone, and Warren counties. For the geologist, besides the examinations of its different strata of rocks, there are at Bigbone Licks, in Boone county, deposits of immense bones of extinct mastodons, which had no doubt been drawn hither by the saline waters, and perhaps perished in fierce combats with each other at the springs, leaving their skeletons to form a page in the book of the geologist. Some of these bones have found their way into the cabinets of the savans of this country and Europe. Other fossil remains are found in Bourbon county; and in Union county are impressions of the feet of human beings and dogs, imbedded in a rock near Morganfield. Human bones have been found in caves in many parts of the state.

Climate.—Kentucky enjoys in her climate a happy medium between the severity of the Northern states and the enervating heats of the South, having but two or three months' winter, with mild springs and autumns. It is milder than the same latitude on the Atlantic side of the Alleghanies, but subject to sudden changes.

Soil and Productions.—In the fertility of its soil, Kentucky rivals the most favored parts of the great Mississippi valley. Perhaps no district in the United States surpasses that around Lexington, both for the richness of the soil and the picturesqueness of "its lay," if we may be allowed the use of the term. "View the country," says Tilson, "round from the heads of the Licking, the Ohio, the Kentucky, Dick's, and down the Green river, and you have 100 miles square of the most extraordinary country on which the sun has ever shone." The soil is mostly a black mould, without sand, and often two or three feet deep. Kentucky is generally well timbered, and in parts the cane grows to a height of 12 feet, forming extensive cane-brakes, so dense that it is often difficult to pass through them. In short, there is but little of this state that is not capable of cultivation. The Barrens, so called, in the S. part of the state, and about the head-waters of the Green river, are very unjustly named, as, with the exception of a few sterile elevations, they are, when in a state of nature, covered with pasture. But for an injudicious system of culture, Kentucky must have been, in proportion to its area, one of the leading agricultural states of the Union. Its staple products are Indian corn, tobacco, flax, and hemp, besides which large quantities of wheat, rye, oats, wool, peas, beans, Irish and sweet potatoes, barley, fruits, market products, butter, cheese, hay, grass-seeds, maple sugar, beeswax, and honey, and some buckwheat, rice, wine, hops, cotton, silk, and sugar-cane are produced. Of these articles, Kentucky raises more flax

and hemp than any other state; is second only to Virginia in the amount of tobacco produced; and, if we regard population and area relatively, greater even than that state. It is also the second in the yield of Indian corn, Ohio being the first. In 1850 there were in this state 74,777 farms, occupying 11,368,270 acres of improved land, less than half the area of the state, and giving about 150 acres to each farm. There were produced 2,140,822 bushels of wheat; 415,073 of rye; 58,675,591 of Indian corn; 8,201,311 of oats; 202,574 of peas and beans; 1,492,487 of Irish potatoes; 998,184 of sweet potatoes; 95,343 of barley; 16,097 of buckwheat; 75,579 of flaxseed; 24,681 of grass-seed; 55,501,196 pounds of tobacco; 303,200 of cotton; 2,297,403 of wool; 9,877,868 of butter; 213,784 of cheese; 7,793,123 of flax; 437,345 of maple sugar; 284,000 of cane sugar; 1,156,939 of beeswax and honey; 113,655 tons hay; 55,692 of hemp; live stock valued at \$29,591,387; orchard products at \$106,160; market products at \$293,120, and slaughtered animals at \$6,469,318.

Forest Trees.—Kentucky, at its first settlement, was one of the best wooded of the Western states. The natural growth of the state includes the black walnut, oak, chestnut, buckeye, sugar-tree, elm, papaw, honey-locust, mulberry, ash, yellow poplar, coffee-tree, cottonwood, and whitethorn. The fruit-trees are the apple, pear, plum, and peach. White grapes are abundant.

Manufactures.—Kentucky is not yet largely engaged in manufactures, though the amount of capital invested in this branch of industry is considerable. In 1850 there were in the state 3471 establishments, each producing \$500 and upwards annually, and homemade manufactures were fabricated of the value of \$2,487,493. Large quantities of coarse bagging are made from hemp, and sent South for packing cotton. Of the manufacturing establishments named above, 8 were cotton factories, employing \$239,000 capital, and 181 male and 221 female hands, consuming raw material worth \$180,907, and producing 1,003,000 yards of stuffs, and 433,000 pounds of yarn, valued at \$394,700; 25 woollen factories, employing \$249,820 capital, and 256 male and 62 female hands, consuming raw material worth \$205,287, and producing 878,034 yards of stuffs, valued at \$318,819; 45 forges, furnaces, &c., employing \$1,602,900 capital, and 2586 male hands, consuming raw material worth \$736,485, and producing 33,203 tons of cast, wrought, and pig iron; 275 tanneries, employing \$763,455 capital, consuming raw material worth \$537,147, and producing leather valued at \$985,267; and \$168,895 capital employed in the manufacture of malt and spirituous liquors, consuming 65,650 bushels of barley, 551,350 of Indian corn, 30,520 of rye, 5000 of apples, and 18 tons of hops, producing 19,500 bar-

rels of ale, &c., and 1,491,745 gallons of whiskey, wine, &c.

Internal Improvements.—Although Kentucky has not kept pace with her sister states N. of the Ohio river in constructing works of intercommunication, yet she has not been inattentive to the importance of cheap and expeditious means of transport for her valuable products. In January, 1853, there were 94 miles of railroad in operation, and 661 in course of construction. Those completed connect the capital with her commercial metropolis, Louisville, and with Lexington. Those projected are to connect Louisville with the Chattanooga, Danville, and Jeffersonville, Covington with Lexington, and Maysville with Big Sandy river and Danville. There were recently in Kentucky, (according to De Bow's "Internal Resources of the South and West,") 400 miles of turnpike, and 290 of slackwater navigation. The United States government has constructed a canal round the rapids of the Ohio at Louisville, through which small steamboats pass at low water. Though only $1\frac{1}{2}$ miles long, its construction cost \$750,000. It is 200 feet wide at the top, 50 at the bottom, and has 22 feet of lockage. Plank-roads are beginning to claim attention in this state, as elsewhere in the United States.—See *Table of Railroads*, APPENDIX.

Commerce.—Kentucky carries on an active trade with New Orleans and other towns on the Mississippi and Ohio rivers. Most of her rivers are navigable to a considerable distance for steamboats, and still farther for flat-boats. The exports are hemp, salt beef, pork, bacon, butter, cheese, hogs, horses, and mules. Large numbers of the last two are annually driven east to the Atlantic States for sale. Cotton bagging and hemp cordage are also extensive articles of export. In 1852 there were built in Kentucky 27 steamboats, with an aggregate tonnage of 7312 $\frac{3}{4}$. The tonnage owned in the state the same year was 11,818 $\frac{3}{4}$, and the foreign exports \$185,559. In 1853, Louisville owned a steam marine of 26 vessels, and a tonnage of 14,529, all high-pressure.

Education.—There is a state school fund, which amounted in December, 1851, to \$1,400,270, and which yields an income of about \$75,000. The number of children reported for 1851, was 186,111; but the average attendance at school was only 74,343. Children in the state, between 5 and 16, 205,557. Total raised for schools by tax and state appropriations, \$111,666.60. There were 8 colleges in 1852, with an aggregate of 656 students, and 87,700 volumes in their libraries; 1 theological school, with 18; 2 law schools, with 125; and 2 medical schools, with 590 students; showing a larger number of law and medical students (in colleges) than in any other state South or West.—See *Table of Colleges*, APPENDIX.

Religious Denominations.—Of the 1818

churches in Kentucky in 1850, 789 were owned by different sects of Baptists; 112 by the Christians; 117 by the Episcopalians; 32 by the Free Church; 522 by the Methodists; 222 by the Presbyterians; 15 by the Protestant Church; 48 by the Roman Catholics; and 31 by the Union Church. The rest were owned by the African Church, German Protestant, Jews, Lutherans, Republicans, Shakers, Tunkers, Unitarians, and Universalists; giving 1 church to every 540 persons. Value of church property, \$2,260,098.—See *Table of Religions*, APPENDIX.

Public Institutions.—Kentucky has not been unmindful of her unfortunate children, for 249 of whom a state lunatic asylum at Lexington afforded shelter and medical aid in 1852; a deaf and dumb asylum at Danville instructed 67 mute and deaf, and a blind school at Louisville, 35 sightless pupils. A second lunatic asylum is nearly finished at Hopkinsville, at a cost of \$180,000. The state penitentiary at Frankfort confined 166 prisoners in the same year. This is conducted on a plan somewhat peculiar, being farmed out to keepers, who pay to the state two-thirds of the profits, guaranteeing that they shall not fall short of \$5000 annually. Each prisoner is furnished with a suit of clothes and \$5 at his dismissal.

Government, Finances, &c.—The governor of Kentucky is elected by the people for four years, and receives \$2500 per annum. The senate consists of 38 members, elected for 4, and the house of representatives of 100 members, elected for 2 years. The judiciary consists—1. Of a court of appeals, composed of one chief and 4 associate judges. 2. Of a court of chancery, presided over by a single chancellor; and, 3. Of 12 circuit courts. The judges of the court of appeals and the chancellor each receive \$1500 per annum, and the circuit judges \$1400. All these officers are elective. Kentucky is entitled to 10 members in the national house of representatives, and to 12 electoral votes for president of the United States. The assessed value of property, real and personal, in this state in 1851, was \$317,082,604; the public debt in 1852, \$5,726,938; productive property, \$6,000,000, and ordinary expenses, exclusive of debt and schools \$250,000. The receipts for the fiscal year ending October 1851 were \$738,245.52, and expenditures \$733,653.40. The receipts of the sinking fund for the payment of the public debt for the same time, were \$531,044.54. The banking capital of Kentucky, in January, 1853, was \$7,656,700, a circulation of \$8,889,101, and \$3,634,043 in coin.

History.—The name of Kentucky (the dark and bloody ground) is an epitome of her early history, of her dark and bloody conflicts with a wily and savage foe. This state was formerly included in the territory of Virginia, to which it belonged till 1792

It was originally explored by, and the theatre of many of the daring exploits of the far-famed Daniel Boone and his compeers, about the year 1769, at or near which date Boonsborough was settled. Harrodsburg was founded in 1774, and Lexington a year or two after, probably while the news of the battle of that name was fresh in the minds and hearts of its founders. The first court was held at Harrodsburg in 1777. The first settlers were much annoyed by incursions and attacks of the Indians. The state owes its name not merely to the Indian forays upon the whites, but to its being the grand battle-ground between the northern and southern Indians. There was a period of discontent subsequent to the Revolution, and previous to the admission of Kentucky into the federal union in 1792, caused partly by the inefficiency of the protection afforded by Virginia and the old federal Congress against the inroads of the savages, and partly by a distrust lest the central government should surrender the right to navigate the Mississippi to its mouth. The most important battle ever fought on the soil of Kentucky since it has been in the possession of the white race, was that fought between the Indians and the Kentuckians, on the 19th of August, 1782, near the Blue Lick Springs. The celebrated Colonel Boone bore a prominent part in this engagement, in which he lost a son. The whites numbered only 182, while the savages were twice or thrice that number. The combat resulted in the rout of the Kentuckians, and a loss of 60 killed and wounded. Thus ended the most disastrous conflict in which the whites had been engaged with the aborigines since the defeat of Braddock. Kentucky was the central scene of the imputed intrigues of Aaron Burr and his coadjutors to form a western republic. The Kentuckians, however, frank and brave in character, were not the material from which to manufacture rebels—nor the state that gave Henry Clay to the national councils, one to foster disunionists. Kentucky has been largely and effectively represented in the war with Great Britain in 1812, and in the more recent conflicts with Mexico in 1846 and 1847.

KENTUCKYVILLE, a small post-village of Susquehanna co., Pennsylvania, 174 miles N. N. E. from Harrisburg.

KENWOOD, a post-office of Albany co., N. Y.

KENYON, a small post-village of Jackson co., Arkansas.

KEOKUK, a county in the S. E. part of Iowa, has an area of 576 square miles. It is traversed by Skunk river, and its N. and S. forks, which flow nearly eastward, and unite in the S. E. part of the county; and the S. fork of English river intersects the N. part. The soil is productive, and adapted to grain and grass. The county contains numerous prairies, alternating with groves of hard timber. Wool, Indian corn, and oats

are the staples. In 1850 this county produced 246,650 bushels of Indian corn; 58,266 of oats, and 11,923 pounds of wool. A railroad is projected through the county from Muscatine to Oskaloosa. First settled about 1843. Named in memory of a noted Indian chief. Capital, Lancaster. Pop., 4822.

KEOKUK, a flourishing town of Iowa, and semicapital of Lee county, is situated at the foot of the "Lower Rapids" of the Mississippi river, 205 miles above St. Louis, and 125 miles S. from Iowa City. It is at the head of navigation for the larger class of steamers, and the natural outlet of the fertile valley of the Des Moines, which is the most populous part of the state. A line of splendid steam-packets communicates daily between Keokuk and St. Louis. The number of steamboat arrivals in 1852 was stated to be 795. The Lower Rapids are eleven miles in extent, in the course of which the river has a fall of 24 feet. The cargoes of vessels ascending the river are transhipped over the rapids by lighters drawn by horses, and then reshipped on board of steamboats for their destination. Keokuk stands on a basis of fine limestone, affording an excellent material for building. It contains the medical department of the state university, 6 or 7 churches, 3 academies, several public schools, and a hospital. Two weekly newspapers and 1 medical journal are published here. The town contains also between 80 and 90 stores, 2 steam flouring-mills, and 2 iron foundries. The reported value of merchandise sold here in 1852 was \$1,345,000. A railroad is in course of construction from this place to Dubuque, 180 miles. Keokuk is thought to be one of the most eligible points for bridging the Mississippi, which is here about 1 mile wide. The river flows over a bed of limestone, and is bordered by bluffs which rise abruptly nearly 150 feet high. Between these bluffs is an island 1700 feet wide. The population of Keokuk in 1845 was 460; in 1852 it amounted to 3963; in 1853, to about 5000.

KEY WEST, the most western of the Pine Islands, about 60 miles S. W. from Cape Sable, Florida. On Whitehead's Point, the south-western extremity of the island, is a fixed light, 83½ feet above the level of the sea. Lat. 24° 32' 40" N., lon. 81° 48' 40" W.

KEY WEST CITY, a port of entry and capital of Monroe county, Florida, on a small island of its own name, in lat. 24° 20' N., lon. 82° 4' W. It is the most populous town of the state, and occupies an important position as the key to the Florida Pass and the Gulf of Mexico. The island of Key West is 4 miles long by 1 mile wide, and elevated not more than 20 feet above the level of the sea. It is of coral formation, with little available soil. The name is said to be a corruption of *Cayo Hueso*, or Bone Key, and has no relation to the position of the island, which is not the most western of the reef. The town is laid out with streets 50 feet wide, crossing each other at right angles. It contains Episcopal, Methodist, Baptist, and Roman Catholic churches, 5 schools, 26 stores, 10 warehouses, 650 houses, and about 3000 inhabitants. The marine hospital is a fine

building, 100 feet long by 45 feet wide. The harbor is capacious, safe, and easily accessible for ships of 22 feet draught. The principal business of Key West is derived from the salvages and other perquisites of wrecked vessels, which amount to about \$200,000 annually. This business is not, as some suppose, a species of piracy, but is conducted under equitable rules, for the mutual benefit of the parties. From 30 to 50 vessels are usually wrecked every year in this vicinity. The entrance of the harbor is defended by Fort Taylor, a large and very costly structure. Key West is a military station of the United States. The shipping of the port, June 30th, 1852, amounted to an aggregate of 4080 $\frac{6}{8}$ tons registered, and 2157 $\frac{9}{8}$ tons enrolled and licensed. The foreign arrivals for the year were 101 (tons, 25,617) of which 81—tons, 24,171, were by American vessels. The clearances for foreign ports were 80—tons, 7361, of which 6884 were in American bottoms. The Charleston and Havana steamer touches at this port once a week, which is the only regular communication with the mainland. About 30,000 bushels of salt are made annually in the island by solar evaporation, and sponges are procured and exported in large quantities. First settled in 1822.

KITCHING'S MILLS, a post-office of Orangeburg district, South Carolina.

KITTANNING, a post-township of Armstrong co., Pennsylvania, on the Alleghany river. Population, 1175.

KITTANNING, a thriving post-borough in the above township, and capital of Armstrong county, Pennsylvania, on the left bank of the Alleghany river, 45 miles above Pittsburg, and 200 miles W. by N. from Harrisburg. It is pleasantly situated on the river flats, with high hills in the rear, and occupies the site of an Indian town of the same name. The vicinity abounds in coal and iron ore, and an impulse has recently been given to the growth of Kittanning by the erection of iron-works. It contains a court house, jail, academy, several churches, and 2 newspaper offices. Incorporated in 1821. Population, in 1850, 1561; in 1853, about 2000.

KITTATINNY, or **BLUE MOUNTAINS**, a chain which, commencing in Shawaugunk, in Ulster co., New York, passes through the N. W. part of New Jersey, and crossing the Delaware at the Water Gap, becomes, through the greater part of Pennsylvania, one of the principal mountain ridges in that state. Although its course, as it approaches the Potomac, is less clearly marked, it may be traced through Virginia, North Carolina, and Tennessee, into Alabama. The average elevation and bulk

of this range is greater than of the Blue Ridge; yet the latter, on account of its having a narrow base, and being better defined, as well as on account of its loftier mountain summits, occupies a more conspicuous place on all our maps of the United States. As a distinct and nearly continuous range, the Kittatinny extends more than 800 miles. Its elevation above the sea varies from about 800 to 2500 feet.

KITTERY, a post-township of York county Maine, bordering on the Atlantic, and on the Piscataqua river opposite Portsmouth, with which it is connected by a bridge, 50 miles S. W. from Portland. Its coasts are deeply indented, and afford good harbors. The Portland Saco and Portsmouth railroad passes through it. Population, 2706.

KITTOCTAN CREEK, in the N. E. part of Virginia, flows through Loudon county and falls into the Potomac above the Point of Rocks, after a course of about 30 miles.

KLAMATH, or **TLAMATH**, river, has its source in Klamath lake, in the S. W. part of Oregon Territory. It flows in a general southerly course, (crossing the boundary line between Oregon and California,) till it receives the waters of Rhet lake; it then runs north-westwardly into Oregon; and turning again, takes a S. W. direction to its junction with Trinity river; and lastly, reassuming a N. W. course falls into the Pacific in about 41° 30' N. lat. Its whole length is estimated at 250 miles. There is a bar at the mouth of the Klamath which at high water will admit a ship of the line, but more frequently nothing larger than a whale-boat. It might be navigated by a small steamboat 40 miles beyond this point. Its waters abound in fish, particularly salmon. Gold is found in abundance on this river, miners averaging \$7 per day.

KLAMATH, a county, forming the N. W. extremity of California, has an area of about 4500 square miles. It is bounded on the W. by the Pacific ocean, on the N. by Oregon Territory, and partly E. by the Coast Range of mountains. It is intersected by the Klamath, and also drained by Trinity and Salmon rivers. The surface is uneven and mountainous, and often heavily wooded; redwood, pine, and fir are the principal kinds of timber. The redwood in some cases measures 21 feet in diameter. Salmon mountain, between Salmon and Klamath rivers, is covered with snow nine months in the year, and Mount Prospect, on Klamath river, 5000 feet above the level of the sea, is covered with snow eight months in the year. The soil of a strip of land on the coast about 20 miles long and 5 wide is unsurpassed for agricultural purposes and is finely watered. In the valley of Trinity river, a portion of which has been set apart as an Indian reservation, it is also of excellent quality. Potatoes, barley, mules, and horses are the principal productions. In 1852 this county pro-

duced 1732 bushels of potatoes, and 380 of barley. There were 406 mules, and 89 horses. The number of acres under cultivation was 109. But little attention has yet been paid to agriculture, a large portion of the inhabitants being engaged in quartz and placer mining. Klamath, Trinity, and Salmon rivers all abound in gold. About 250 men are at work on them, averaging \$7 per day. Capital not yet determined. Population, 530.

KLAMATH, a town of Klamath county, in the N. N. W. part of California, is situated on the Klamath river, about 10 miles from its mouth, and 280 miles in a direct line N. N. W. from San Francisco.

KNOX, a county in the central part of E. Tennessee, area estimated at 510 square miles. It is intersected by the Holston river, bounded on the N. W. by the Clinch, and also drained by the French Broad river. The surface is traversed by several high ridges between the Cumberland mountains and the main Alleghany chain. These are locally denominated Copper Ridge, Chestnut Ridge, and Bay's mountain. The valleys and river bottoms are fertile and well watered with excellent springs. Indian corn, oats, cattle, and swine are the staples. In 1850, Knox county produced 861,703 bushels of corn; 256,890 of oats, and 176,916 pounds of butter. It contained 37 churches, 5 newspaper offices, 2500 pupils attending public schools, and 285 attending academies and other schools. The county contains extensive beds of limestone, fine marble, and iron ore. Many of the streams furnish permanent and abundant water-power. The rivers are navigable by steamboats in all seasons. The Great railroad of East Tennessee passes through the county. Organized in 1794, and named in honor of General Henry Knox, then secretary of war of the United States. Capital, Knoxville. Population, 18,755; of whom 16,562 were free, and 2193, slaves.

KNOX, a county in the S. E. part of Kentucky, bordering on Tennessee, contains an area estimated at 600 square miles. It is intersected by the Cumberland river. KNOXVILLE, a flourishing city, capital of Knox county, Tennessee, and formerly the seat of the state government, is beautifully situated on the right bank of the Holston river, 4 miles below its confluence with the French Broad river, 185 miles E. from Nashville, and 204 miles S. E. from Lexington, in Kentucky. The situation is elevated and healthy, commanding a beautiful view of the river, and of the Blue mountains of Chilhowee, some 30 miles distant. The river is navigable for steamboats at all seasons from this point downward; and during winter and spring they extend their trips up the river as far as Kingsport. The region, however, in future will not be dependent on the river for the means of transportation. The East Tennessee and Georgia railroad, which extends from Knoxville to Dalton in Georgia, connecting with the extensive railways in that state, was opened in 1852, and has given a new impetus to every department of business. Another railroad has been commenced, which will extend from Knoxville to the Virginia line. When these two roads shall have been completed, East Tennessee will be intersected by a chain of railways extending from Boston to Memphis, forming the great thoroughfare of the Union, and traversing a country remarkable for the fertility of its

soil and the salubrity of its climate. This will be the most central and direct line from New York to New Orleans. Knoxville, from its midway position, may be expected to derive much benefit from the immense amount of trade and travel which must pass along this route. The completion of the railroad from Dalton to Knoxville appears to have produced a great sensation among the inhabitants of East Tennessee, a region heretofore almost isolated from the busy world. In the poetical language of a gentleman residing in that region, to whom the editors are indebted for much valuable information, "the neigh of the iron horse mingles with the roar of her innumerable waterfalls, and awakens the echoes of her vast and silent forests." The city already exhibits an aspect of increased prosperity, and manufactures of various kinds are springing up in its vicinity. The manufactory of window-glass at this place is said to be the largest in the Southern States. Knoxville contains the state asylum for the deaf and dumb, and is the seat of the university of East Tennessee, founded in 1807. It has 5 churches, 3 banks, several academies, and printing offices issuing 6 or 7 newspapers. It was laid out in 1794, in which year it became the capital of the state, and so continued until 1817. Population in 1850, 3690; in 1853, about 5000.

LAMOILLE RIVER, in the N. part of Vermont, rises in Orleans county, and after flowing south-westerly into Caledonia county, turns and flows, in a W. N. W. direction, through Lamoille and Franklin counties, and falls into Lake Champlain, in Chittenden county, in the N. W. part of the state.

LAMOILLE, a county in the N. part of Vermont, has an area of about 450 square miles. It is intersected by the Lamoille river, and is principally watered by it and its numerous tributaries, which afford valuable water-power. The Green mountain range passes through the county, on which account the soil is more adapted to grazing than tillage, although along the Lamoille river, especially in the eastern portion, there are some excellent tracts of rich meadow land. Indian corn, potatoes, maple sugar, and grass are the staples. In 1850 this county produced 68,017 bushels of corn; 278,252 of potatoes; 26,973 tons of hay; 437,110 pounds of butter, and 427,918 of maple sugar. There were 4 woollen factories, 5 grist mills, 8 saw mills, 10 starch works, and 6 tanneries. It contained 17 churches, 4344 pupils attending public schools, and 205 attending academies or other schools. Organized in 1836. Capital, Hyde Park. Population, 10,872.

LANCASTER, a county in the S. E. part of Pennsylvania, bordering on Maryland, has an area of 950 square miles. Susquehanna river forms its boundary on the S. W., and the Octorara creek on the S. E. It is intersected by Conestoga creek and its branches. The ridge called South mountain, or Cone-wago hill, extends along the N. W. border; and Mine Ridge traverses the S. E. part. Between these is a broad and fertile limestone valley, the surface of which is undulating, and the soil a rich calcareous loam. The county is well watered, highly cultivated, and densely peopled. In respect to population, it is only inferior to Philadelphia and Alleghany counties; in the value of agricultural productions it is not equalled by any in the state. Grain of various kinds, potatoes, fruit, cattle, horses, and swine are the staples. In 1850 this county produced 1,803,312 bushels of Indian corn; 1,365,111 of wheat; 1,578,321 of oats; 215,277 of potatoes; 96,134 tons of hay, and 1,907,843 pounds of butter. The quantity of oats was the greatest raised in any county of the United States; that of wheat the greatest in any except Monroe county, New York; and that of corn greater than in any other county of the state. There were 191 flour and grist mills, 68 saw mills, 4 iron mines, 54 limekilns, 31 manufactories of farming implements, 37 of cabinet-ware, 26 of coaches, 12 of guns, and 23 of bricks, 5 iron foundries, 11 furnaces, 12 forges, 2 cotton factories, 17 woollen factories, 1 rolling mill, 3 machine shops, 9 potteries, 37 distilleries, and 53 tanneries. It contained 190 churches, 10 newspaper offices, 17,001 pupils attending public schools, and 943 attending academies and other schools. The county contains quarries of blue limestone, suitable for building, and of roofing slate. Marble, chrome, and magnesia, are also found. The creeks furnish abundant motive-power. It is intersected by the Philadelphia and Columbia railroad, and in part by the Lancaster and Harrisburg railroad. Organized in 1729, and named from Lancaster, a county of England. Capital, Lancaster. Population, 98,944.

LANCASTER, a county in the E. part of Vir

ginia, bordering on Chesapeake bay, at the mouth of Rappahannock river, which forms its S. W. boundary. Area, 168 square miles. The surface is moderately uneven; the soil is sandy and light. Indian corn, wheat, and potatoes are the staples. In 1850 this county produced 120,530 bushels of corn; 24,424 of wheat; and 10,857 of sweet potatoes. There were 2 coach factories and 1 tannery. It contained 10 churches, 282 pupils attending public schools, and 46 attending an academy. Organized in 1652. Capital, Lancaster Court House. Population, 4708, of whom 2068 were free, and 2640, slaves.

LANCASTER, a district in the N. part of South Carolina, bordering on North Carolina, has an area of 690 square miles. It is bounded on the W. by the Catawba, or Wateree river, on the N. E. by Lynche's creek, and drained by Sugar, Waxsaw, and other creeks. The surface is uneven, or hilly; the soil, in some parts, is productive. Cotton, Indian corn, wheat, oats, and sweet potatoes are the staples. In 1850 this district produced 8661 bales of cotton; 21,644 bushels of wheat; 352,218 of corn; 65,100 of oats, and 34,683 of sweet potatoes. There were 7 grist, 6 saw and planing mills, and 2 tanneries. It contained 25 churches, and 569 pupils attending public schools. Capital, Lancaster Court House. Population, 10,988, of whom 5974 were free, and 5014, slaves.

LANCASTER city, capital of Lancaster co., Pennsylvania, is pleasantly situated on the Philadelphia and Columbia railroad, 1 mile W. from Conestoga creek, 70 miles by railroad W. from Philadelphia, and 37 miles E. S. E. from Harrisburg. It was for many years the largest inland town of the United States, and was the seat of the state government from 1799 to 1812. At present it is the fourth city of Pennsylvania in respect to population. It is situated in the most popu-

lous and wealthy agricultural districts of the state, and carries on a considerable trade by means of the railroad and the slack-water navigation of the Conestoga. The oldest turnpike in the United States has its western terminus at this place, and connects it with Philadelphia, which is 62 miles distant by this route. The streets are generally straight, crossing each other at right angles, and well paved. The greater part of the town is substantially built of brick, and the more modern houses are commodious and elegant. During the last 10 years, great improvement has been made in the appearance and business of the city. Gas-light has been introduced by a company with a capital of \$100,000. Three large steam cotton factories have been put in operation, giving employment to 800 persons. A new county prison, of sandstone, has been erected at a cost of \$110,000. The new court house, nearly finished, is a magnificent edifice, in the Grecian style: the cost is estimated at above \$100,000. Franklin College, of this place, was founded in 1787, but subsequently declined. Recently a charter was obtained for the union of this institution with Marshall College, on the condition that \$25,000 should be raised by the citizens of Lancaster county. This sum having been collected, the buildings will be erected the present year, (1853,) and the institution will be speedily organized. Lancaster contains about 16 churches, among which are 2 Lutheran, 2 or 3 German Reformed, 2 Methodist, 1 or 2 Presbyterian, 1 Episcopal, 1 Moravian, 2 Roman Catholic, and 1 Winebrennerian. The First Lutheran has a steeple 200 feet in height. Among the remarkable buildings may be mentioned Fulton Hall, recently erected for the accommodation of public assemblies and musical concerts. Its dimensions are 105 feet long, by 57 wide. The city also contains a classical academy, 2 public libraries and 3 banks. It is noted for the manufacture of rifles, axes, carriages, and threshing machines. It is plentifully supplied with water brought in pipes from Conestoga creek. The inhabitants are mostly of German descent. Lancaster was laid out in 1730, and incorporated as a city in 1818. Population in 1800, 4292; in 1840, 8417; in 1850, 12,363; and in 1853, about 14,000.

The surface is somewhat diversified, the soil generally fertile. Indian corn, wheat, oats, grass,

butter, and pork are the staples. In 1850 the county produced 293,564 bushels of corn; 19,488 of wheat; 68,687 of oats, and 29,678 pounds of butter. It contained 9 churches, 680 pupils attending public schools, and 75 attending academies or other schools. Stone coal is found in the N. W. part. The county is copiously supplied with water-power. Capital, Mount Vernon. Population, 4859, of whom 4611 were free, and 248, slaves.

LAWRENCE, a post-town and semicapital of Essex county, Massachusetts, on the left (N.) bank of the Merrimack river, 26 miles N. from Boston, and 12 miles N. E. by E. from Lowell. This is one of those wonderful creations of the manufacturing enterprise of New England, under the influence of which, a petty village, or perhaps a tract without inhabitants, is almost instantaneously converted into a populous city. In 1845 the Essex company constructed a dam across the Merrimack river at this place, by which a fall of 28 feet in the entire volume of the river has been obtained. The work cost about \$250,000. A canal, more than a mile long, and from 60 to 100 feet wide, and about 12 feet deep, conducts the water from the dam to the different mills. The town is laid out on both sides of the Spicket river, but chiefly between the Spicket and Merrimack, with streets extending from river to river. Near the centre is a handsome common, comprising 17½ acres. The principal public buildings are a town house, 120 by 62 feet, containing town offices in the lower story, and in the second a large hall for public meetings, a jail just completed, and 10 or 12 churches.

Among the literary and educational institutions may be mentioned the Franklin Literary Association, incorporated April 26th, 1847. Besides other donations, one of \$1000 was received from the Hon. Abbott Lawrence, for the purchase of scientific works. Means have also been provided for the maintenance of public lectures. Lawrence has an excellent system of public schools. Two or three newspapers are published in the town. The financial institutions are a bank with a capital of \$300,000, and a savings' institution.

The Essex Company commenced their operations upon the dam August 1st, 1845. During the session of the legislature of 1846 charters were granted to the following corporations, to be located at Lawrence, viz. February 2d, the Bay State Mills, for the manufacture of woollen and other goods, with a capital of \$1,000,000; February 3d, the Atlantic Cotton Mills, with a capital of \$2,000,000, and March 26th, the Union Mills, for the production of cotton, woollen, and linen goods, with a capital of \$1,000,000. Other companies, with heavy capitals, have since been incorporated. The machine shop owned by the Essex Company is one of the largest of the kind in the United States. It is a stone building 400 by 60 feet, and 4 stories

high, and, with the foundry, furnishes employment to about 1000 hands. The Bay State Corporation have a building adjoining the river 998 feet long, and varying from 3 to 5 stories in height, with wings each 240 feet in length, and 3 stories high. The entire building is appropriated to the various purposes of woollen manufacturing, such as dyeing, drying, assorting, repair shop, &c. The manufactures of Lawrence comprise nearly every article embraced in the various branches of mechanical industry. A highly intelligent correspondent, who has every means necessary to form a correct judgment, assures us that when the mills and other buildings now in course of construction are completed, the present population of Lawrence will be doubled. The town is lighted with gas, and supplied with an abundance of pure water from the Merrimack river. Incorporated in 1847, and named in honor of the Lawrence family. The first sale of land by the Essex Company was on the 29th of April, 1846. January 1st, 1848, the population was not less than 6000; in 1850, 8283; and in 1853, about 12,000.

LEHIGH river, of Pennsylvania, (Lechay of the Indians,) has its sources in the pine swamps and forests of Luzerne, Pike, and Monroe counties. It is a beautiful and rapid stream, and the scenery along its banks is highly picturesque. After flowing through the rich coal region of Carbon county, it breaks through the Blue Ridge, 12 miles below Mauch Chunk, and falls into the Delaware at Easton. The improved navigation which has been opened on this river from its mouth to White Haven, a distance of 70 miles by water, is the channel of an immense trade in coal and lumber. Its whole length is about 90 miles.

LEHIGH, a county in the E. S. E. part of Pennsylvania, has an area of 350 square miles. The Lehigh river, from which the name is derived, flows along the N. E. border, and intersects the eastern part of the county, which is also drained by the Little Lehigh, Jordan, Saucon, and Copley creeks. The greater part of it lies in the Kittatinny valley, bounded on the N. W. by Blue mountain, and on the S. E. by a ridge called South mountain, or Lehigh hills. This valley has an undulating surface, and is remarkable for its beauty and fertility. Grain, cattle, pork, and iron are the staples. In 1850 this county produced 397,048 bushels of corn; 261,301 of wheat; 327,505 of rye; 289,669 of oats; 30,332 tons of hay, and 833,816 pounds of butter. There were 67 flour and grist mills, 17 saw mills, 9 iron-mining establishments, 5 foundries, 3 furnaces, 5 manufactories of farming implements, 10 of coaches, 10 of bricks, 3 of woollen goods, and 28 tanneries. It contained 39 churches, 6 newspaper offices,

7888 pupils attending public schools, and 85 attending other schools. Limestone and clay slate are abundant in the county, and quarries of the latter have been opened. Great quantities of iron ore are found, and several furnaces are kept in constant operation. The canal which has been constructed along the Lehigh river to the coal region has contributed materially to the wealth of this county. It was mostly settled by Germans, and the German language is chiefly spoken. Organized in 1812. Capital, Allentown. Population, 32,479.

LITTLE ROCK, capital of Arkansas, and seat of justice of Pulaski county, on the right or southern bank of Arkansas river, about 300 miles from its mouth, 155 miles W. by S. from Memphis, and 1065 miles W. by S. from Washington. Lat. 34° 40' N., lon. 83° 10' W. It is situated on a rocky promontory, or bluff, about 50 feet high, the first that occurs in ascending the river, commanding a delightful and extensive view of the surrounding country.

The state house is a fine brick edifice, rough cast. The town contains a United States arsenal, the state penitentiary, which has been once or twice burned down by the convicts, and 6 churches, all handsomely built of brick, namely, 1 Presbyterian, 1 Episcopalian, 1 Methodist, 1 Christian, and 2 Roman Catholic. There are 2 newspapers published here. It has also a Masonic hall, an Odd-fellows' hall, and several seminaries. The United States court for the eastern district is held here. Many of the residents are planters who own estates in this part of the state. Little Rock communicates regularly by steamboats with different points on the Arkansas and Mississippi rivers. Good clay for brick is found in the vicinity; also quarries of fine slate, and granite very like the Quincy granite, but not so hard. A company has been formed by a number of gentlemen from Cincinnati to work the slate quarry, which is in the immediate vicinity. The origin of the name Little Rock is explained as follows:—In ascending the river there appears on the south bank, rising out of the water, a bald, igneous slate rock, which at low water is about 25 feet above the surface, but at high water is almost hidden from view. This gives name to the city, and is called by the townspeople "the Point of Rocks." Two miles above this, on the N. bank, is another rocky bluff, about 200 feet high, which is called the "Big Rock." Population in 1850, 2167; in 1853, about 3000.

LOCKPORT, a flourishing post-village, capital of Niagara county, New York, on the Erie canal, and on the Rochester, Lockport, and Niagara Falls railroad, 31 miles N. N. E. from Buffalo, and 260 miles W. by N. from Albany. Lat. 43° 11' N., lon. 78° 46' W. It is situated at the point on the canal where the water descends from the level of Lake Erie to the Genesee level, by ten double combined locks of massive masonry, in the best style of workmanship. The abundant hydraulic power obtained by this means constitutes one of the chief sources of the prosperity of Lockport. This power will be greatly augmented by the completion of the Erie canal enlargement to Buffalo, which is now far advanced. In the construction of this great work, a barrier of solid limestone has been excavated from the head of the locks, about 3 miles southward, from 25 to 40 feet in depth, and 62 feet in width, with an additional space of 15 feet for a towpath. Water, in any desirable quantity, may be drawn from the Erie level, and returned to the canal, 60 feet below, without detriment to the navigation. Large quarries of the finest limestone and of sandstone flagging are worked at this place, furnishing constant employment to several hundred men. Lockport has 6 flouring mills, 3 of which are of the first class, 11 saw mills, 5 iron foundries, 1 cotton factory, 1 woollen factory, 4 banks, and several printing offices which issue newspapers. It has 6 primary public schools and 1 Union school: the latter is a large and substantial stone building, in which from four to six hundred children, after leaving the primary schools, are instructed in all the branches of a liberal education. There are 13 churches in Lockport, viz. 2 Episcopal, 2 Presbyterian, 1 Methodist, 1 Baptist, 1 Lutheran, 1 Universalist, 1 Catholic, and several others. A direct railroad, 22 miles long, has been opened from this place to Buffalo. The Rochester, Lockport, and Niagara railroad crosses the canal by a viaduct 500 feet in length, and 60 feet above the water. This road was completed in June, 1852, and is designed to connect with the Great Western railway through Canada West to Detroit, by a suspension bridge over the Niagara river,

1½ miles below the falls. Lockport is the largest unincorporated town in the state. Population in 1852, from 12,000 to 14,000.

LOGAN, a county in the W. S. W. part of Virginia, bordering on Kentucky, has an area of 825 square miles. It is intersected by the Guyandotte river, and bounded on the S. W. by the Tug fork of Sandy river. The county slopes towards the N. W. The surface is mountainous, and overspread with extensive forests; the soil is generally good. Indian corn, oats, and butter are the staples. In 1850 it produced 154,943 bushels of corn; 20,014 of oats, and 31,374 pounds of butter. It contained 6 churches, and 175 pupils attending public schools. The highlands of this county abound in stone coal and iron,

which are not much used at present. Formed in 1824, and named in honor of a distinguished chief of the Mingo tribe. Capital, Lawns-ville, or Logan Court House. Population, 3620; of whom 3533 were free, and 87, slaves.

LOGAN, a county in the S. S. W. part of Kentucky, bordering on Tennessee, has an area estimated at 600 square miles. It is traversed by Red river, an affluent of Cumberland river, and also drained by Muddy and Whippoorwill creeks. The surface is beautifully diversified by ranges of hills, covered with timber. The soil is fertile, and well watered. Indian corn, wheat, oats, tobacco, and live stock are the staples. In 1850 this county produced 1,103,186 bushels of corn; 50,316 of wheat; 242,340 of oats, and 2,684,767 pounds of tobacco. It contained 39 churches, 1 newspaper office; 746 pupils attending public schools, and 99 attending academies or other schools. The surface rock is the cavernous limestone. The creeks furnish motive-power for mills. The county contains a number of artificial mounds, which recall the memory of former ages. Formed in 1792, and named in honor of General Benjamin Logan, one of the pioneers of Kentucky. Capital, Russellville. Population, 16,581, of whom 11,114 were free, and 5467, slaves.

LOGAN, a county in the W. central part of Ohio, has an area of 457 square miles. It is intersected by the Miami river, and also drained by the sources of Mad river, and of Rush, Darby, and Mill creeks. The surface is generally rolling or level, and the soil productive and well timbered. Indian corn, wheat, oats, hay, butter, and live stock are the staples. In 1850 this county produced 665,605 bushels of corn; 166,811 of wheat; 97,562 of oats; 14,555 tons of hay, and 359,332 pounds of butter. It contained 27 churches, 2 newspaper offices; 7965 pupils attending public schools, and 35 attending an academy. It is intersected by the Mad River and Lake Erie railroad, and by the Bellefontaine and Indiana railroad. Organized in 1817. Capital, Bellefontaine. Population, 19,162.

LOS ANGELES, a large county in the S. E. part of California, has an area of above 4,800 square miles. It is bounded on the S. W. by the Pacific, and on the E. by San Bernardino co., and drained by the San Gabriel and

Rio de Los Angeles rivers, with their tributaries. The surface is uneven and mountainous, with many broad and fertile valleys. Several broken spurs of the Coast Range rear their summits in the N. part of the county. The climate is remarkably salubrious and genial. Wheat, Indian corn, barley, fruit, cattle, and horses are the staples. In 1852 Los Angeles county, included all territory now comprised in the new county of San Bernardino: it produced 34,230 bushels of wheat; 6934 of corn; 12,120 of barley; and 2,250,000 pounds of grapes, 1,000,000 of which were shipped to San Francisco, and from the rest was manufactured 2000 barrels of wine. There were 48,424 cows; 65,051 beef cattle, and 12,173 horses. Cotton and sugar-cane succeed well. The quantity of wine, 57,355 gallons, was the greatest produced by any county in California. This county affords great facilities for agriculture, which has not, however, been much attended to heretofore. It is celebrated for its vineyards, of which there are above 100. It contains several missions, among which may be mentioned San Gabriel, San Fernando, and San Juan Capistrano. The county contains some silver, and probably other metals, and limestone and building rock are abundant. Six miles from Los Angeles is a spring, covering about two acres, from which pitch boils up in great abundance: this is used for covering the roofs of houses. There are also a number of saline springs, which supply abundance of salt. The anchorage in the port of San Pedro is good and perfectly safe, except during the prevalence of the south-easterly winds in the winter season. Capital, Los Angeles. Population, 7831.

LOUISA, a small post-village, capital of Lawrence county, Kentucky, is situated at the forks of Big Sandy river, on the E. boundary of the state, about 135 miles E. from Frankfort. It contains a court house, 1 church, and 4 stores.

LOUISA, a post-village in Stephenson co., Illinois, 135 miles W. N. W. from Chicago.

LOUISA COURT HOUSE, a small post-village, capital of Louisa co., Virginia, on the Central railroad, 60 miles N. W. from Richmond.

LOUISA FORK. See **SANDY RIVER**.

LOUISBURG, a mining village of Schuylkill co., Pennsylvania, about 11 miles E. by N. from Pottsville.

LOUISBURG, a post-village, capital of Franklin co., North Carolina, on the left bank of Tar river, 35 miles N. E. from Raleigh. It contains a court house and 2 churches.

LOUISIANA, one of the Southern States of the American confederacy, is bounded on

the N. by Arkansas and Mississippi; E. by Mississippi, (from which it is separated by the Mississippi and Pearl rivers,) and the Gulf of Mexico; S. by the Gulf of Mexico, and W. by Texas, from which it is partly separated by the Sabine river. It lies between 29° and 33° N. lat., and 88° 50' and 94° 20' W. lon., having an extreme length from E. to W. of about 292, and a breadth of 250 miles, including an area of 46,431 square miles, or about 29,715,840 acres, of which only 1,500,025 were improved in 1850, or scarcely one-twentieth part of the entire surface of the state.

Population.—Louisiana being originally colonized by France and Spain, has a larger admixture of the inhabitants of those countries (with their manners and customs) than any other state of the Union. There were in Louisiana in 1810, 76,556 inhabitants; 153,407 in 1820; 215,739 in 1830; 352,411 in 1840, and 517,763 in 1850; of whom 141,244 were white males; 114,248 females; 7479 free colored males; 9983 free colored females, and 125,874 male and 118,935 female slaves. Representative population, 419,824. This population was divided among 73,786 families, occupying 73,070 dwellings. Of the white population, 145,474 were born in the state; 60,447 in other states; 3550 in England; 24,266 in Ireland; 1244 in Scotland and Wales; 499 in British America; 17,507 in Germany; 11,552 in France; 7795 in other countries, and 620 whose places of birth were unknown, making nearly one-fourth of the free population of foreign birth. During the year ending June 1, 1850, there occurred 11,948 deaths, or about 23 in every 1000 persons—the greatest proportion in any state of the Union. In the same period, 423 paupers, of whom 290 were foreigners, received aid, at an expense of about \$40 to each person. The number of deaf and dumb in 1850 was 118, of whom 5 were free colored, and 34, slaves; blind, 218, of whom 25 were free colored, and 126, slaves; idiotic, 173, of whom 13 were free colored, and 56, slaves; and insane, 208, of whom 15 were free colored, and 43, slaves.

Parishes.—Louisiana is divided into 48 parishes, viz. Ascension, Assumption, Avoyelles, Bienville, Bossier, Caddo, Calcasieu, Caldwell, Carroll, Catahoula, Claiborne, Concordia, De Soto, East Baton Rouge, East Feliciana, Franklin, Iberville, Jackson, Jefferson, Lafayette, Lafourche, Livingston, Madison, Morehouse, Natchitoches, Orleans, Plaquemines, Point Coupee, Rapides, Sabine, St. Bernard, St. Charles, St. Helena, St. James, St. John Baptist, St. Landry, St. Martin's, St. Mary, St. Tammany, Tensas, Terre Bonne, Union, Vermilion, Washita, Washington, West Baton Rouge, West Feliciana, and Winn, Capital, Baton Rouge.

Cities and Towns.—New Orleans (population, 116,370) is the largest city in Louisiana, and the commercial metropolis of the South

western States. The other towns are Lafayette, (a suburb of New Orleans,) population, 14,187, and Baton Rouge, 3905. The other principal towns are Donaldsonville, Iberville, Alexandria, and Shreveport.

Face of the Country.—The surface of Louisiana nowhere attains an elevation of more than 200 feet above the level of the Gulf, while at Trinity, in Catahoula parish, it is only 68 feet, and much of the southern portion is so low as to be overflowed at high water. West of the basin of the Mississippi, and occupying the central and northern portion of the state, the country is hilly and broken. The N.W. part is intersected by several arms of the Red river, forming small lakes, and rendering the country for about 50 miles in length, and 6 in breadth, generally marshy. The bottoms on this river are from 1 to 10 miles wide. South of the central portion commences the low prairie lands, which terminate in the marshes of the coast. The elevation of this district varies from 10 to 50 feet. Below the mouth of the Red river, the Atchafalaya branches off from the Mississippi, and forms the western boundary of a great delta, occupying an area of several thousand square miles, which is elevated but 10 feet above low water, and at high water is often inundated. There is a belt of similar character on the W. bank of the Mississippi, above the Delta, which is protected by artificial embankments, that serve to deepen as well as confine the channel. That part of the state adjacent to the S. boundary of Mississippi, is similar in character to the district described in the N. W. Near the Gulf, a portion is salt marsh, mostly destitute of timber, and often overflowed in equinoctial gales. Darby states that 2700 square miles on the Mississippi, above the Red river, 2550 on the Red river, and 3200 on the Mississippi, below the Red river, are subject to inundations, though not all portions of it, annually.

Geology.—According to Professor Forshey, the tertiary formation occupies two-fifths of the state, and lies N. of a waving line, commencing on the Sabine near the mouth of the river Neches, and extending 20 miles N. of Alexandria, to Harrisonburg: it contains coal, salt, iron, ochre, gypsum, and marl. A saline bed seems to underlie the tertiary. The rest of the state is alluvial and diluvial.

Minerals.—Of the minerals mentioned above, iron is abundant in almost all the tertiary strata. The coal is inferior to that of Pittsburg, but the marl is rich, and the gypsum of the best quality. The alluvions of the Mississippi are bounded on the W. by precipitous hills of freestone, from 80 to 200 feet high. In the region around Harrisonburg, Dr. Holliday has collected very large quartz crystals, abundance of agates, jasper, sardonyx, cornelians, onyx, selenite, or crystallized gypsum, feldspar of a splendid quality, alumine in great abundance, chalcedony, lava,

meteoric stones, amorphous iron ore, and fossils of various kinds.

Rivers, Bays, &c.—Lake Borgne (properly a bay) and Black bay open into the Gulf of Mexico on the S. E.; and Bastien, Barataria, Atchafalaya, Cote Blanche, and Vermilion bays on the S.; and Sabine, Calcasieu, and Mermentau lakes on the S. W., are all expansions of rivers bearing the same names. Lakes Pontchartrain and Maurepas are expansions of the Amite river, near its entrance into Lake Borgne. Small lakes or sloughs are very numerous in the marshy regions in the southern part of the state and along the Mississippi river. Catahoula in the centre, and Bistineau, and Caddo in the N. W. are the principal lakes. The Mississippi river forms the east boundary of Louisiana to 31° N. lat., and passing through the south-eastern portion of the state, discharges its waters into the Gulf of Mexico by several mouths. The Red river enters the N. W. angle of Louisiana from Arkansas, and joins the Mississippi about the centre of the state. The Washita, coming S. from Arkansas, is the principal branch of the Red river. The Sabine, Calcasieu, and Mermentau drain the W. and S. W. parts of the state. The Pearl forms a part of the S. E. boundary. The Mississippi is navigable for the largest class steamboats far beyond the limits of Louisiana; and the Red river, since the removal of the obstruction called the Great Raft, near the N. W. boundary, is also navigable beyond the limits of the state. Of the different arms that part from the parent stream below 31° N. lat., the Atchafalaya, on the west, is the largest. Nine of these are navigable, according to Colonel Long's estimate, from 5 to 140 miles, making an aggregate of nearly 500 miles. The same authority estimates the Washita as navigable 375 miles, and its branches sum up a total of 715 miles of water, mostly within the state, navigable by steamers, to which the Red and its branches add several hundred more.

Objects of Interest to Tourists.—Dr. Kilpatrick informs us that in the parish of Concordia there are numerous mounds, constructed by a race which he considers superior to the Indians of the present day. These mounds contain human bones, pottery, arrow-heads, stone hatchets, relics cut in the shape of a canoe or crescent, and in one instance, a gold ornament worth \$7.50 was found. According to the same authority, these mounds form, in this country subject to overflow, good sites for gardens, orchards, &c. To the general inquirer, as well as to the geologist, the delta of the Mississippi affords a curious and most interesting subject for contemplation or research.—See MISSISSIPPI, DELTA OF.

Climate, Soil, and Productions.—Louisiana has very mild winters, but more severe than in the same parallel on the Atlantic coast.

The long, hot summers acting on the extensive marshes of this state, cause a poisonous exhalation, which every autumn produces more or less yellow fever. The orange, lemon, lime, and other tropical fruits grow here, but the orange does not flourish above 30° N. lat., nor the sugar-cane above 31°. The apple thrives in the northern parts of the state. The best soil is on the river bottoms, which are exuberantly fertile, and productive in sugar-cane and rice. Two-thirds of the alluvial land is heavily timbered, and overrun with a thick undergrowth of cane. This district is easily drained, and when drained very productive. The prairie lands are often of no great fertility, and in some places barren. Cotton and sugar-cane are the great staples of the state, and of the latter, Louisiana produced nine-tenths of the whole amount raised in the Union in 1850. Indian corn, rice, peas, beans, Irish, and sweet potatoes, and butter are extensively produced; tobacco, wool, fruits, market products, hay, beeswax, and honey to considerable extent; and wheat, rye, buckwheat, wine, cheese, grass-seeds, hops, silk, and maple sugar, in very small quantities. Of fruits, the principal are oranges, figs, peaches, apples, and grapes. According to the census returns of 1850, there were in Louisiana 13,422 farms, occupying 1,590,025 acres of improved land, (nearly 120 acres to each plantation,) producing 10,226,373 bushels of Indian corn; 89,637 of oats; 161,732 of peas and beans; 95,632 of Irish potatoes; 6,428,453 of sweet potatoes; 3 of buckwheat; 2 of clover-seed; 97 of other grass-seeds; 4,425,349 pounds of rice; 26,878 of tobacco; 178,737 bales of cotton, of 400 pounds each; 109,897 pounds of wool; 683,069 of butter; 226,001,000 of cane sugar; 96,701 of beeswax and honey; 25,752 tons of hay; 10,931,177 gallons of molasses; value of orchard produce, \$22,359; market goods, \$148,329; and live stock, \$11,152,275.

Forest Trees.—Walnut, oak, sassafras, ash, mulberry, poplar, hickory, and magnolia are found in the central and northern parts, and on the more fertile uplands; buckeye, locust, papaw, cottonwood, and willow flourish in the bottom lands. Cypress swamps occupy certain basins, which having no outlet, retain the waters they receive at the flood season, till they either evaporate or sink into the earth. Pine and oak grow on the sandy uplands. Dr. Kilpatrick mentions among the timber of Concordia parish, (which is probably similar to many other river parishes,) the cottonwood, red elm, hackberry, maple, ash, pecan, hickory, honey locust, basket elm, dogwood, tupelo, 5 species of oak, box elder, cypress, prickly ash, black locust, mulberry, persimmon, willow, and wild cane, growing to the height of from 15 to 30 feet. The same authority says of fruits, in the same locality, the peach, quince, plum,

and fig do well, but the apple and pear do not encourage culture.

Animals.—Dr. Kilpatrick reports black bears, wolves, and panthers as occasionally found; besides which are wildcats, racoons, otters, polecats, opossums, squirrels, and moles; and among amphibia, huge alligators and various species of turtle. Among reptiles are the rattlesnake, viper, horned, and other snakes. Among birds are the bald and gray eagle, several species of hawks and owls, a few wild turkeys and pigeons, partridges, cranes, herons, water turkeys, wild geese, brant in abundance, and a great variety of smaller birds.

Manufactures.—This state is not largely engaged in manufactures. In 1850 there were 1021 establishments, producing \$500 and upwards annually, of which 8 were furnaces, employing \$255,000 capital, and 347 male hands, consuming raw material worth \$73,300, and producing 1570 tons of castings, valued at \$308,500. Louisiana is largely engaged in the manufacture of the coarser sugars and molasses; but the refining of these articles is mostly done in the Northern States. Of the 236,547 hogsheads produced in 1851–2, only 32,625 were refined in the state.

Internal Improvements.—Louisiana has not the same necessity for railways and canals as many other states, having probably 2500 miles of navigable waters within her limits; still she has need of them for communication with other states, if she would maintain her commercial position. Railroads are projected and partly completed, connecting her commercial metropolis (New Orleans) with the great lakes at Chicago, and with the Ohio valley by way of Nashville, Tennessee. In January, 1853, there were 63 miles of railroad in operation, and 200 in course of construction, in this state; connecting Clinton and Port Hudson; New Orleans and Lake Pontchartrain; New Orleans and Proctorsville; and Woodville (Mississippi) and Bayou Sara, (Louisiana.) Besides these are the Carrollton, and the West Feliciana railroads, both short.

Commerce.—Louisiana has no parallel on the face of our globe in the natural advantages which she enjoys for river trade with an interior, extending back directly north 2000 miles to St. Anthony's Falls; north-westward 3000 miles to the very base of the Rocky mountains; north-eastward through the entire extent of the Ohio Valley, 2500 miles, even into the State of New York; besides innumerable intermediate points in the great valleys of the Mississippi, Missouri, Ohio, Arkansas, Tennessee, Cumberland, Red river, and a multitude of tributary streams, which pour the products of fourteen states into her lap; while many more await but the advance of population to add new treasures from tracts now roamed over by the savage and the buffalo. Immense amounts

of the products of the Western and South-western States, including cotton, pork, sugar, lead, flour, wheat, Indian corn, &c., are transhipped from New Orleans to various parts of our own and to foreign countries. The value of domestic produce received from the interior in 1850-51 amounted to \$106,924,083, and to \$108,051,708 in 1851-2, of which \$81,216,925 were exported in the former year, and \$76,344,569 in the latter. The articles from the interior received in the greatest amount are pork and bacon, beef, cotton, corn, flour, hides, lard, lead, molasses, sugar, tobacco, and whiskey, besides large quantities of apples, beans, baggings, bale rope, butter, cheese, candles, coal, furs, hemp, hay, leather, oats, linseed, castor and lard oil, potatoes, staves, and wheat; some bees-wax, buffalo robes, cider, dried apples and peaches; feathers, flaxseed, iron, lime, onions, porter, ale, deer and bear skins, shot, soap, Spanish moss, tallow, twine, vinegar, window glass, and various other articles. The foreign imports for 1851-52 amounted to \$12,057,724, and exports to \$49,058,885; tonnage entered, 424,281; cleared, 544,482; tonnage owned in the different districts, 268,170 $\frac{2}{3}$; and number of vessels built, 16, with an aggregate tonnage of 1284 $\frac{3}{4}$. Of the entire tonnage owned, about 170,000 was in steam-vessels. About three-tenths of the foreign trade was carried on in foreign bottoms.—See NEW ORLEANS.

Education.—The constitution provides for a superintendent of public schools, to hold office for two years, and that free public schools shall be established throughout the state. An appropriation of \$250,000 is made annually for the support of free schools, raised by taxation; and a fund is established, to be derived from the proceeds of public lands granted for the purpose, and from lands escheated to the state. This fund amounted on January 1, 1850, to \$40,272.63. According to the census, the number of public schools in the state in 1850, was 675; teachers, 845, and pupils, 25,793; of academies there were 142; teachers, 355, and pupils, 5379; and of colleges, 8, professors and tutors, 47, and students, 725. In 1852 there were 1 law school, with 3 professors, and 1 medical, with 7 professors, and 188 students.—See *Table of Colleges*, APPENDIX.

Religious Denominations.—Of the 278 churches in Louisiana, in 1850, 72 were owned by the Baptists; 12 by the Episcopians; 106 by the Methodists; 17 by the Presbyterians; and 55 by the Roman Catholics: the rest were owned by the Christians, the Free Church, French Protestants, German Reformed, Jews, Temple of the Lord, Unionists, and Universalists—giving 1 church to every 1862 persons. Value of church property, \$1,782,470.—See *Table of Religious Denominations*, APPENDIX.

Public Institutions.—The state penitentiary

of Louisiana is located at Baton Rouge, and received 105 convicts in 1848, the receipts from whose labors exceeded the expenditures by about \$6600. The charity hospital at New Orleans will be described under that heading. In 1850 there were six public libraries, with an aggregate of 80,000 volumes, and 13,000 in the different college libraries. The site for a deaf, dumb, and blind asylum has been located, and temporary buildings erected.

Government, Finances.—The governor of Louisiana is elected for four years by the people, and receives \$6000 per annum; the lieutenant-governor, who is ex-officio president of the senate, is elected for a like period, and receives \$8 per diem when that body is in session. The senate consists of 32 members, and the house of representatives of 97, both elected by the people, the former for four, and the latter for two years. The judiciary consists—1. Of a supreme court, composed of one chief and three associate judges; and 2. Of nine district courts. The judges of the supreme court are appointed for eight, and those of the district court for six years, jointly by the executive and legislature. The chief justice of the supreme court receives \$6000, and his associates \$5500 per annum. The judges of the district courts of New Orleans receive \$3500 per annum. The new constitution, adopted in 1852, requires that the judiciary shall be elected by popular vote. Louisiana is entitled to 4 members in the national house of representatives, and to 6 electoral votes for president of the United States. The assessed value of property in Louisiana in 1850 was \$220,165,172. Public debt in 1852, \$11,492,566, of which \$10,557,000 is contingent debt. Productive property, \$2,416,938. Ordinary expenditures, exclusive of debt and schools, \$515,000. In January, 1853, Louisiana had \$10,934,130 of banking capital, a circulation of \$4,409,271, and \$5,946,990 in coin.

History.—Louisiana was visited and the mouth of the Mississippi discovered by La Salle, as early as 1691; and though Iberville attempted a settlement in 1699, no permanent colony was established at that time. In 1712 the king of France granted to M. Crozat a charter which included the whole of the territory of Louisiana. The celebrated John Law, so notorious for the financial commotion and subsequent disasters caused by him in France, became in 1717 the head of a company which purchased Louisiana; but after the deplorable failure of his schemes, Louisiana came again into the possession of the crown, which transferred it, in 1762, to Spain. Retroceded to France in 1800, Louisiana including all the the territory west of the Mississippi, (excepting Texas and New Mexico, and the territory west of the Rocky mountains,) was purchased by President Jefferson in 1803, for the sum of \$11,250,000,

beside the assumption on the part of the United States of some claims of our citizens against the government of France. Previous to this purchase the inhabitants of the Western States and Territories had been in a state of great excitement lest they should lose the control of the mouth of the Mississippi, so essential as an outlet for their products; and the satisfaction of that portion of the country was proportionately great on its peaceful acquisition. That part of the Louisiana territory now known as the State of Louisiana became an independent member of the confederacy in 1812, and was, two years afterward, the scene of a conflict between the British and American troops, in which General Jackson repulsed the former with great loss, January 8th, 1815.

LOUISIANA, a post-village of Pike county, Missouri, on the Mississippi river, 1 mile below the mouth of Salt river, 88 miles N. E. from Jefferson City. It contains numerous warehouses, and 2 newspaper offices.

LOUISVILLE, a post-township in the N. part of St. Lawrence co., New York, on the St. Lawrence river. Population, 2054.

LOUISVILLE, a thriving village of Potter co., Pennsylvania, on the road from Coudersport to Cowanesque. A great quantity of pine lumber is procured in this vicinity.

LOUISVILLE, a village of Orangeburg district, South Carolina.

LOUISVILLE, a decayed post-village, capital of Jefferson county, Georgia, on Rocky Comfort creek, 54 miles E. from Milledgeville. It was the capital of the state from 1795 to 1804, when the seat of government was removed to Milledgeville. It has a court house, a church, and an academy.

LOUISVILLE, a post-village of Barbour co., Ala., about 85 miles S. E. from Montgomery.

LOUISVILLE, a post-village, capital of Winston county, Mississippi, near the source of Pearl river, 95 miles N. E. from Jackson. It contains several academies. A newspaper is published here. Pop. in 1853, about 400.

LOUISVILLE, a post-village of Blount co., Tennessee, on the left bank of the Holston river, about 20 miles, by land, below Knoxville. It is a place of rapid growth, and one of the most flourishing in East Tennessee, having a brisk trade on the river, which is navigated by steamboats. The East Tennessee and Virginia railroad passes through this village.

LOUISVILLE, a city and port of entry of Kentucky, and seat of justice of Jefferson county, is situated on the Ohio river, at the head of the falls, at the mouth of Beargrass creek, 130 miles below Cincinnati, and 53 miles W. from Frankfort, and 590 miles from Washington. Lat. 38° 3' N., lon. 85° 30' W. It is the largest town in the state, and one of the most important places on the Ohio river. The population in 1830 was 10,341; in 1840, 21,210; in 1850, 43,196; and in

1853 it amounts to 51,726. A railroad, 93 miles long, connects it with Frankfort and Lexington, and several others are in course of construction from this place to Danville, Nashville, &c. The situation and surrounding scenery are remarkably beautiful. Some parts of the city present delightful views of the Ohio river, which is here about one mile wide; of the rocky rapids, and of the town of New Albany, a few miles below. Louisville stands on a plain elevated about 70 feet above low water, and is regularly laid out. Eight handsome streets extend nearly 2 miles in length parallel with the river, which here flows from east to west. These vary in width from 60 to 120 feet, and are intersected, at right angles, by more than 30 others, with a uniform width of 60 feet. The streets are generally paved and lighted with gas, and bordered with ornamental trees. The public buildings most remarkable for size and splendor are the city hall, lately erected, the court house, the first Presbyterian church, St. Paul's church, (Episcopal,) the medical institute, and the University of Louisville, which is now in successful operation. The medical institute, which ranks high among the public institutions of Louisville, was founded by an ordinance of the city council, which appropriated \$50,000 for the library, buildings, &c. The number of students in 1852 was 356. The asylum for the blind, established by the state, occupies a commodious and handsome building, erected by joint contributions of the state and the citizens of Louisville. The Mercantile Library Association has a library containing from 4000 to 5000 volumes. The Historical Society of this place has collected valuable documents relating to the early history of the state. Louisville also contains a marine asylum, founded by the state, 2 orphan asylums, about 40 churches, 2 synagogues, a prison, 4 market houses, 5 banks, and 4 large public school houses. Six daily, seven weekly newspapers and 1 monthly medical journal are published here.

Louisville may be said to owe its existence to the falls, which arrested the course of navigation at this point. In 1833 a canal 2½ miles long was opened around these falls, with a total lockage of 22 feet. It was cut through the solid limestone rock, at a cost of \$750,000. The dimensions having been found too small to admit the passage of the largest steamers now built for the New Orleans trade, a railway has been projected on the Indiana side, the object of which is to transport such vessels around the rapids by means of a stationary engine and pulleys. The stock has been taken, and the work will doubtless shortly be completed. In 1850 the entire trade of Louisville was estimated at \$50,000,000. (De Bow's Review.) The wholesale business has increased rapidly since that period. There are now near 100 houses

doing an exclusively wholesale business, the amount of which is computed at \$20,321,400; viz. 25 of dry goods, 39 of groceries, 8 of drugs, 9 of hardware, 8 of hats and furs, 8 of boots and shoes, and 9 of saddlery. Many of the warehouses are 3 or 4 stories high, and from 100 to 130 feet deep. No exact record has been kept of the exports of this port, but a good estimate may be formed from the circumstance that about 10 steamboats depart daily from its wharfs, all well patronized in freight and passengers. The chief articles of export are tobacco, pork, hemp, and flour. In 1852 the quantity of tobacco received was 16,176 hogsheads. The number of steamboat arrivals from different ports below the falls, for the year ending June, 1852, was 1124. Those from the Upper Ohio were probably about the same number. The shipping at the above-named date amounted to an aggregate of 11,818 $\frac{3}{4}$ tons enrolled and licensed, all of which was employed in steam navigation. Louisville has several establishments for the construction of steamboats. During the year referred to, 27 boats, with an aggregate burthen of 7312 $\frac{7}{8}$ tons were admeasured. There are in the vicinity a great variety of manufactories, including iron foundries, with machine shops, ropewalks, large bagging factories, cotton and woollen factories, glass works, 2 white-lead factories, 6 flouring mills, several extensive potteries, &c.

LOUISVILLE, a thriving post-village of Nimi-shillen township, Stark county, Ohio, on the Ohio and Pennsylvania railroad, 126 miles N. E. from Columbus. It was settled almost entirely by the French.

LOUISVILLE, a post-village of Henry co., Indiana, on the National road, and on the Central railroad, 42 miles E. from Indianapolis.

LOUISVILLE, a small post-village of Clay co., Illinois, on the Little Wabash river, 110 miles S. E. from Springfield.

LOUISVILLE, a post-village in Lincoln co., Missouri, 75 miles N. E. by E. from Jefferson City.

LOUISVILLE LANDING, a post-office of St. Lawrence co., New York.

LOUNDES' FERRY, a post-office of Williams-burg district, South Carolina.

LOUTRE ISLAND, a post-office of Montgomery co., Missouri.

LOUTRE, or OTTER RIVER, of Missouri, flows through Montgomery co., and falls into the Missouri river at Loutre island. It affords motive-power for mills.

LOVELACE, a post-office of Wilkes co., N. C.

LOVELACEVILLE, a small post-village of Ballard co., Kentucky.

LOVELADY, a post-office of Caldwell co., N. C.

LOVELAND, a post-office of Clinton co., Pa.

LOVELAND, a post-office of Clermont co., O.

LOVELIA, or LOVILLA, a post-village of Monroe co., Iowa, 90 miles W. S. W. from Iowa City.

LOVELL, a post-township of Oxford co.,

Maine, about 20 miles W. by S. from Paris. Population, 1193.

LOVELY MOUNT, a post-office of Montgomery co., Virginia.

LOVE'S LEVEL, a post-office of Union co., N. C.

LOVE'S MILLS, a post-office of Washington co., Virginia.

LOVETT'S, a post-office of Newton co., Miss.

LOVETT'S GROVE, a post-office of Wood co., O.

LOVETTSTOWN, a post-village of Loudon co., Virginia, 2 miles from the Potomac, and 166 miles N. from Richmond. It contains 2 or 3 churches.

LOVEVILLE, a post-village of Newcastle co., Delaware.

LOVINGSTON, a post-village, capital of Nelson county, Virginia, 118 miles W. from Richmond. It is beautifully situated on a branch of Tye river, and surrounded by hills, the summits of which afford a magnificent view of the Blue Ridge. The village has 3 churches and about 350 inhabitants.

LOVINGTON, a small post-village of Moultrie co., Illinois.

LOWELL, a post-township of Penobscot co., Maine, on the Passadumkeag river, about 33 miles N. E. from Bangor. Population, 378.

LOWELL, a post-township of Orleans co., Vermont, at the head of Missisquoi river, about 40 miles N. from Montpelier. Population, 637.

LOWELL, a city and one of the capitals of Essex county, Massachusetts, is situated on the right bank of the Merrimack where it receives the Concord river, and at the terminus of five railroads, which communicate with the principal cities on the seaboard, and with various sections of the interior, 25 miles N. by W. from Boston. Lat. 42° 38' 46" N., lon. 71° 19' 2" W. In the extent and variety of its manufactures this city may be regarded as without a rival in the United States. The site has many inequalities of surface, but is regularly laid out with streets intersecting each other at right angles. In different sections are two public squares. The one in the southern part of the city, called South Square, has an ample area, which is being graded and beautifully ornamented. The private edifices are for the most part spacious and elegant; those occupied as boarding-houses for the 15,000 operatives employed in the mills, will compare favorably with the better class of residences in other American cities. The principal public edifices are the Court House, Mechanics' Hall, a market-house, and the churches, of which there are 22, viz. 1 Episcopal, 3 Roman Catholic, 4 Baptist, 3 Congregational, 3 Universalist, 3 Methodist, 2 Unitarian, 2 Orthodox, and 1 ministry at large. A new court house was erected by the county two or three years since, at a cost of about \$100,000; it is fire-proof throughout, and a very handsome structure. A costly railroad dépôt has been erected within the present year, the upper

story of which contains a large hall for the use of the city council. The literary and educational institutions of Lowell are highly respectable. Among the most prominent may be mentioned the Mechanic Association, incorporated in 1825, with a fund of \$25,000. It has a valuable library of about 6000 volumes, reading room, philosophical apparatus, &c. The City School Library, comprising about 9500 vols., is owned by the city, and accessible to all upon the annual payment of fifty cents. A hospital was established in 1839 by the several manufacturing companies, chiefly for the benefit of persons in their employ. Lowell has an excellent system of public instruction. It comprises 48 primary, 3 intermediate, 10 grammar schools, and 1 high-school, for the maintenance of which about \$44,000 have been appropriated in 1853. The press consists of 4 daily and 4 weekly papers. The total number of pupils for this year is about 9500.

The almost unrivalled advantages which Lowell enjoys for manufacturing are derived from a descent of 30 feet in the Merrimack, known as the Pawtucket Falls, which, by the aid of canals and locks, furnishes an immense hydraulic power. The original design of the first canal was to provide a passage for boats and rafts from Concord river to the head of the falls. In 1822, a company, entitled the Proprietors of Locks and Canals on Merrimack River, commenced the enlargement of this channel for the purpose of securing an extensive and available water-power for the propulsion of machinery. Its present dimensions are, length, a mile and a half, breadth, 60 feet, and depth, from 6 to 8 feet. In 1847, the old canal proving in some degree inadequate to the rapidly increasing demand, a new one of greater capacity was constructed, averaging 100 feet wide, 15 feet deep, and nearly a mile in length, costing upwards of \$600,000. The same corporation are the proprietors of all the principal water privileges at Lowell, and also of most of the lands adjoining the falls on both sides of the river. In the short space of three months, the Lowell Machine Shop is prepared to furnish machinery for a mill with a capacity for 6000 spindles: the mill can be built in the same period. In 1852 there were 12 manufacturing corporations in Lowell, owning 51 mills, and employing an aggregate capital of \$13,900,000. The number of hands engaged were, males, 4163; females, 3470; total, 12,633. Number of spindles in operation, 342,722; looms, 10,606; cotton consumed during the year, 91,650 bales; wool, 5,158,000 pounds; iron in machine shops, 4500 tons; anthracite coal, 50,576 tons; charcoal, 68,350 bushels; wood, 3220 cords; whale and sperm oil, 69,607 gallons; lard, 47,000 gallons; and starch, 1,400,000 pounds. The weekly products of the looms were, cotton cloth, 2,087,000 yards; osnaburgs, 90,000 yards; woollens, 27,000 yards; carpets, 25,000 yards; cotton goods

died and printed, 300,000 yards. The medium produce of a loom per day is about 45 yards of No. 14 yarn, and 33 yards of No. 30 yarn. Average produce of a spindle per day, $1\frac{1}{2}$ yards. The average wages of males per week, clear of board, are about \$4.80, and of females, \$2.00. Among the 12 corporations, the Merrimack Manufacturing Company, with a capital of \$2,500,000, may be mentioned as one of the most extensive. It annually makes use of 1,000,000 pounds of madder, 38,000 pounds of coppers, 60,000 pounds of alum, 50,000 pounds of sumac, 45,000 pounds of indigo, and 40,000 pounds of soap. The Middlesex Company annually use 6,000,000 teasels, 2,000,000 pounds of fine wool, 50,000 pounds of glue, \$30,000 worth of dyestuffs, and \$13,000 worth of soap. Other manufactures, in addition to those above specified, embracing powder, paper, batting, &c., are annually produced to the value of \$1,500,000, employing a capital of \$400,000, and about 1500 operatives.

Comparatively few adults are natives of Lowell; about one-third of the whole population are foreigners, principally Irish; the other two-thirds are nearly all from the different New England states, New Hampshire and Maine furnishing a large portion. Very great efforts are made to avoid the usual objections to a manufacturing city arising from immorality. No female of doubtful reputation is employed in any of the mills, and even a reasonable suspicion of any impropriety of conduct is, by an arrangement among all the manufacturing companies, sufficient to procure her discharge and to prevent her employment in any other manufactory in the city. The result is a highly respectable community, in which the daughters of the worthy farmers of New Hampshire and Maine find profitable work and agreeable society, without a suggestion that the employment is in any degree derogatory to their reputation. They remain only about three years on the average. Lowell has 5 banks, an insurance company, and 2 savings institutions. The amount deposited in the latter, November 1st, 1851, was \$812,598.63, and the number of depositors, 6224, nearly all of whom were persons employed in the mills. A reservoir of great capacity has been built on an elevation, in Belvidere, east of the city, for the purpose of furnishing a ready supply of water to any part of Lowell in cases of fire. The water is conveyed into the reservoir by forcing-pumps from the Lowell Machine Shop, and thence by distributing pipes to the city hydrants, to which hose can be attached when necessary. The annual expenditures of the government are about \$200,000. The mills are all heated by steam and lighted with gas. The name of Lowell is derived from Francis C. Lowell, a gentleman of Boston, distinguished for his efforts to introduce the manufacture of cotton into the United States. It was incorporated

a town in 1826, and a city in 1836. When the enlargement of the canal was commenced in 1822, the territory included within the limits of Lowell contained less than 200 inhabitants. In 1830 the population was 6474; in 1840, 20,796; in 1850, 33,385; and in September, 1853, about 37,000.

LUZERNE, a county in the N. E. part of Pennsylvania, has an area of 1400 square miles. It is intersected by the N. branch of Susquehanna river; the Lehigh river flows along its S. E. border; and it is also drained by the Lackawanna, Nescopeck, Huntingdon, and Wapwallo'pen creeks. The surface is diversified by several parallel mountain ridges of the Alleghany chain. Wyoming mountain traverses the middle of the county, parallel with the river, and extends towards the N. E. under the name of Moosic mountain. The average height of this ridge is about 1000 feet above the valley. Another ridge, called in different parts the Nanticoke and Lackawanna mountains, rises in the N. W. part. Between these lies the beautiful and

fertile valley of Wyoming, through which the Susquehanna river flows. Including the valley of the Lackawanna, this is a long elliptical basin, early 60 miles in length, and 5 miles in width, constituting a separate coal-field, the beds of which in some parts are about 30 feet thick. Large quantities of coal are mined near Carbondale and Wilkesbarre. The soil of these valleys is well adapted to agriculture. Indian corn, wheat, oats, potatoes, hay, and butter are the staples. In 1850 this county produced 290,122 bushels of corn; 165,328 of wheat; 287,797 of oats; 183,047 of potatoes; 31,601 tons of hay, and 558,168 pounds of butter. There were 85 saw mills, 20 collieries, 23 flour and grist mills, 11 iron foundries, 2 manufactories of edge tools, 2 woollen factories, and 15 tanneries. It contained 39 churches, 2 newspaper offices, 6815 pupils attending public schools, and 445 attending academies or other schools. It is intersected by the north branch of the state canal, and in part by the Lackawanna and Western railroad, the Lehigh and Susquehanna railroad, and the Pennsylvania Coal Company's railroad. Organized in 1786, and named in compliment to Chevalier de la Luzerne, at that time minister from France to the United States. Capital, Wilkesbarre. Pop., 56,072.

LYCOMING, a county in the N. N. E. part of Pennsylvania, has an area of 1500 square miles. The West branch of the Susquehanna river flows eastward through the S. part; and it is also drained by Muncy, Loyalsock, Lycoming, and Pine creeks. The surface is mountainous; the main Alleghany, here called North mountain, extends through the middle. The soil of the valleys is based on limestone, and is very productive; the uplands are mostly susceptible of improvement. Grain, cattle, lumber, and iron are the staples. In 1850 this county produced 285,925 bushels of wheat; 262,456 of Indian corn; 166,308 of oats; 15,035 tons of hay, and 300,401 pounds of butter. There were 114 saw mills, 25 flour and grist mills, 2 manufactories of coaches, 2 iron foundries, 50 forges, 8 woollen factories, 11 distilleries, and 21 tanneries. It contained 44 churches, 4 newspaper offices, 5179 pupils attending public schools, and 180 attending academies or other schools. It has extensive mines of bituminous coal, and is liberally supplied with water-power. A canal has been made along the river in this county. The Williamsport and Elmira railroad terminates at the county

seat. Formed in 1795, and named from Lycoming creek. Capital, Williamsport. Population, 26,257.

LYNCHBURG, a flourishing town of Campbell county, Virginia, is finely situated on a steep declivity on the right (S.) bank of James river, 120 miles W. S. W. from Richmond, and 20 miles S. E. from the Blue Ridge. Lat. 37° 36' N., lon. 79° 22' W. The South Side railroad, leading to Petersburg and Richmond, connects here with the Virginia and Tennessee railroad, which is to form part of the most direct route from the Eastern States to those of the South-west, and to be one of the principal

thoroughfares of the Union. The James River and Kanawha canal, the greatest public work in the state, following the course of the river from the falls at Richmond, is completed to Buchanan, about 50 miles above Lynchburg, and is to be continued to Covington. The distance between Richmond and Lynchburg by canal is 147 miles. The navigation of the canal renders this town the market of an extensive and fertile tract of country. The principal article is tobacco, of which about 15,000,000 pounds are inspected here annually. About 300,000 bushels of wheat are also received here every year. The town is supplied with river water from a reservoir which is elevated about 253 feet above the level of the river, and contains 400,000 gallons. This work was finished in 1829, at a cost of \$50,000. The river is here about 200 yards wide, and is crossed by a fine bridge. It affords abundant water-power, which is employed in the manufacture of cotton, wool, flour, &c. The town contains 9 churches, 3 printing offices, 3 banks, 3 savings banks, 1 cotton and woollen factory, 36 tobacco factories, 4 brass and iron foundries, and 150 stores, in which the annual sales exceed \$2,000,000. Capital employed in 1851 in manufactures, \$725,000. The town was founded in 1786, and incorporated in 1805. In 1848 it contained 7678 inhabitants. Pop. in 1853, about 10,000.

LYNN, a city and seaport of Essex co., Massachusetts, on the Eastern railroad, 9 miles N. E. from Boston. Lat. 42° 27' 51" N., lon. 70° 57' 27" W. It is situated on the north-eastern shore of Massachusetts bay, in the midst of the most varied and picturesque scenery. The beaches and Nahant, in the vicinity, are noted places of resort, both for pleasure and health. Lynn was incorporated a city in 1850, and is handsomely built on wide and pleasant streets. The principal public edifices are the City Hall, Lyceum Hall, and the churches, of which there are fifteen, of the various denominations. Among the institutions, the Society for the cultivation of Natural History deserves notice. It has a library, and a valuable collection of curiosities. An efficient system of education has been provided, similar to that generally adopted in the state. There are in the city an academy, a high-school, 9 principal, 6 intermediate, and 18 primary schools, besides several private ones. The press consists of two weekly issues. Lynn has long been celebrated for the manufacture of ladies' shoes. This branch of business was pursued here before the Revolution. The sales were then chiefly confined to New England; but since that period the business has been greatly extended, and shoes are now exported in large quantities to almost every part of the United States. It is estimated that at the present time there are 150 manufactories in the city, giving employment to about 10,000 persons, more than half of which are females; and that 4,500,000 pairs of ladies' and misses' shoes are annually made, amounting in value to some \$3,500,000. From 400,000 to 500,000 pairs are also purchased from neighboring towns. Besides the above, there are manufactories of leather, morocco, cotton prints, chocolate, glue, machinery, tinware, &c. There are 2 banks in Lynn, with a capital of \$250,000, a savings' institution, and 2 insurance offices. Settled in 1629, and incorporated as a town in 1632. Population in 1830, 6188; 1840, 9367; 1850, 14,257.

Population, 15,727; of whom 10,334 were free, and 5393, slaves.

MADISON, a county in the S. W. central part of Ohio, has an area of 480 square miles. It is intersected by Darby and Little Darby creeks, and also drained by the sources of Little Miami river, and of Deer creek. The surface is nearly level, and partly covered with forests of large timber. The soil is good, and particularly adapted to grazing. Indian corn, hay, wool, butter, and cattle are the staples. In 1850 this county produced 726,451 bushels of corn; 19,308 tons of hay; 120,696 pounds of wool, and 128,948 of butter. It contained 24 churches, 1 newspaper office, and 3833 pupils attending public schools. It is traversed by the Columbus and Xenia railroad, and by the Columbus and Piqua railroad, the latter of which is not yet finished. Capital, London. Pop., 10,015.

MADISON, a county in the E. central part of Indiana, contains 400 square miles. It is watered by White river, Fall creek, and Pipe creek. The surface is undulating or nearly level, and was originally covered with heavy timber. The soil is extremely fertile. Wheat, corn, oats, and grass are the staples; and cattle, mules, and swine are raised for exportation. In 1850 this county produced 895,817 bushels of corn; 107,483 of wheat; 47,857 of oats, and 4353 tons of hay. There were 20 churches, 1 newspaper office, and 2752 pupils attending public schools. The county contains valuable quarries of limestone and marble, and is very liberally supplied with water-power. The Bellefontaine and Indianapolis railroad, recently opened, passes through the county. Organized in 1823. Capital, Anderson. Pop., 12,375.

MADISON, a county in the S. W. part of Illinois, bordering on Missouri, has an area of about 690 square miles. It is situated on the Mississippi river opposite the mouth of the Missouri, and nearly opposite St. Louis. It is intersected by Cahokia creek, and also drained by Silver creek and its branches. The surface is elevated and undulating, diversified by prairies and woodlands. The river bottom below Alton is several miles wide, and bounded on the E. by a bluff which rises from 100 to 200 feet. The soil is re-

markably fertile, and is extensively cultivated. Indian corn, wheat, oats, potatoes, pork, and butter are the staples. In 1850 the county produced 1,153,183 bushels of corn; 88,893 of wheat; 202,059 of oats; 6499 tons of hay, and 251,824 pounds of butter. There were in that year 3574 pupils attending public schools, and 209 attending academies or other schools; 78 churches, and 2 newspaper offices. Stone coal and limestone are abundant on the banks of the river near Alton. The county is intersected by the Alton and Terre Haute railroad, and by the Chicago and Mississippi. Capital, Edwardsville. Population, 20,436.

MADISON, a county in the S. E. part of Missouri, has an area of about 900 square miles. It is intersected by the St. Francis river, and Castor creek, flowing from N. to S., and also drained by More's and Big creeks. The soil is generally thin. Indian corn, wheat, oats, hay, and butter are the staples of agriculture. Lead is the chief article of export. In 1850 the county produced 266,690 bushels of corn; 11,439 of wheat; 39,505 of oats, and 540 tons of hay. It contained 4 churches. Limestone and sandstone are the principal rocks of the county. Iron and lead are abundant, and a small quantity of copper is found in connection with the lead. The La Motte mine, in the N. part of the county, has yielded about 1,000,000 pounds of lead in a single year. In the N. W. part is a remarkable eminence, called Pilot Knob, which is covered with the micaceous oxide of iron. Capital, Fredericktown. Population, 6003; of whom 5307 were free, and 696, slaves.

MADISON, a new county in the S. W. central part of Iowa, has an area of 576 square miles. The North and Middle rivers, affluents of the Des Moines, traverse the county from W. to E.; it is also drained by Prairie branch of Middle river. Extensive prairies occur in the county. The soil is productive and well watered. Indian corn, butter, and wool are the staples. In 1850, Madison county produced 26,250 bushels of Indian corn; 842 of wheat; 1410 pounds of wool, and 6005 pounds of butter. There were 56 pupils attending public schools, and 25 attending another school. Large beds of stone coal are found. Capital, Winterset. Pop., 1179.

MADISON, a flourishing city and river port of Indiana, and seat of justice of Jefferson county, on the Ohio river, 90 miles below Cincinnati, 44 miles above Louisville, and 86 miles S. S. E. from Indianapolis. Lat. 38° 46' N., lon. 85° 21' W. It is advan-tageously situated for trade, and is equal, if not superior, to any town of the state in po-pulation and importance. Steamboats make regular passages between this port and other towns of the Mississippi valley. The naviga-tion is usually open all winter in ordinary seasons. Several steamboats are owned here. Madison is the S. terminus of the Madison and Indianapolis railroad, which was completed in 1848, and is doing a large business in conveying freight and passen-gers. The city is beautifully situated in a valley nearly 3 miles in length, which is en-closed on the N. by steep and rugged hills about 400 feet high. The site is elevated 30 or 40 feet above the highest floods. Mad-ison is well built, containing a larger propor-tion of brick houses than is usual in the towns of Indiana. It has a court house, a jail, 2 market houses, 1 bank, 2 large public schools, and about 15 churches. There are 4 or 5 newspapers published here. Several

of the streets are paved, and lighted with gas. A considerable amount of capital and labor is employed in manufactures of cotton, wool, iron, machinery, and oil, and the establishments for packing pork are very extensive. First settled in 1808. Pop. in 1840, 3798; in 1850, including N. Madison village, 8681; in 1853, about 12,000.

MADISON, capital of the state of Wisconsin, and seat of justice of Dane county, is pleasantly situated on an isthmus between Third lake and Fourth lake, 80 miles W. from Milwaukee, and 154 miles N. W. from Chicago. Lat. 43° 5' N., lon. 89° 20' W. It stands in the centre of a broad valley, surrounded by heights from which the town can be seen at a distance of several miles. The isthmus is about three-quarters of a mile in width. Fourth lake, which lies on the N. W. side of the town, is 6 miles long by 4 miles wide. It is a beautiful sheet of water, with clean, gravelly shores. The depth is sufficient for navigation by steamboats, and is estimated at about 60 feet. The Third lake is rather smaller. When this place was selected for the seat of government, in 1836, it contained no building but a solitary log cabin. The capitol, which is a limestone structure, built at an expense of \$50,000, stands on ground 70 feet above the level of the lakes, and is surrounded by a public square. The streets which lead from the capitol towards the cardinal points descend gradually to the shores of the lakes, excepting the one which extends westward to College hill. On this eminence, 1 mile W. from the capitol, and about 125 feet above the lake, is situated the university of Wisconsin, which was instituted in 1849. Three newspapers are published. It contains a bank, 5 or 6 churches, 26 stores, an iron foundry, a woollen factory, and several steam mills. The author of "Western Portraiture" gives the following lively sketch of this place and its environs:—"Madison perhaps combines and overlooks more charming and diversified scenery to please the eye of fancy and promote health and pleasure, than any other town in the West, and in these respects it surpasses every other state capital in the Union. Its bright lakes, fresh groves, rip-

pling rivulets, shady dales, and flowery meadow lawns, are commingled in greater profusion, and disposed in more picturesque order than we have ever elsewhere beheld. . . . Nor is it less noteworthy for its business advantages and its healthful position. Situated on elevated ground, amid delightful groves and productive lands, well above the cool, clear lakes, it must be healthy; while the abundance and convenience of fine streams and water-power must facilitate a sound and rapid advancement in agriculture and the mechanic arts. There are also liberal charters for railroads connecting Madison with Milwaukee, Chicago, and the Mississippi, some of which are being pushed ahead with energy." Population in 1840, 376; in 1850, 1525; in 1853, about 3500.

MAINE, the largest of the New England States, and the most easterly of the United States, is bounded on the N. by Canada East, (from which it is separated by the St. John's river,) on the E. by New Brunswick, S. by the Atlantic ocean, and W. by New Hampshire and Canada East. It lies between 43° 5' and 47° 30' N. lat., and between 66° 50' and 71° W. lon., being about 250 miles in extreme length from N. to S., and 190 in its greatest breadth from E. to W., including an area of about 30,000 square miles, or 19,200,000 acres, of which only 2,036,596, or less than one-ninth, were improved in 1850.

Population.—Till recently, the population of Maine was almost wholly of English or New England origin, but now it begins to receive a portion of the mixed emigration from Europe. The number of inhabitants was 96,540 in 1790; 151,719 in 1800; 228,705 in 1810; 298,335 in 1820; 399,455 in 1830; 501,793 in 1840, and 583,169 in 1850; of whom 296,745 were white males; 285,068 females; 726 colored males, and 630 females. This population was distributed among 103,787 families, occupying 95,797 dwellings. Of the entire population, 517,117 were born in the state; 34,012 in other states of the Union, 1949 in England, 13,871 in Ireland, 592 in Scotland and Wales, 14,181 in British America, 290 in Germany, 143 in France,

430 in other countries, and 584 whose places of birth were unknown, making about 6 per cent. of the population of foreign birth. In the year ending June 1st, 1850, there occurred 7545 deaths, or about 13 in every 1000 persons; in the same period, 5503 paupers, of whom 950 were foreigners, received aid, at an expense of about \$38 to each person. Of 230 deaf and dumb, 1 was a colored person; of 201 blind, none were colored; of 536 insane, 3 were colored, and of 558 idiotic, 3 also were colored.

Countries.—Maine is divided into 13 counties, viz. Aroostook, Cumberland, Franklin, Hancock, Kennebec, Lincoln, Oxford, Penobscot, Piscataquis, Somerset, Waldo, Washington, and York. Augusta is the capital.

Cities and Towns.—Portland is the largest and most commercial town; population in 1850, 20,815. The other most important places are Bangor, population, 14,432; Augusta, 8225; Bath, 8020; Gardiner, 6486; Saco, 5798; Rockland, Belfast, Brunswick, Westbrook, Calais, Frankfort, Eastport, Waldoborough, Ellsworth, and Camden.

Face of the Country.—A ridge of broken and detached eminences, apparently an irregular continuation of the White mountains of New Hampshire, extends along the western side of Maine for some distance, and then crosses the state in a N. E. direction, forming a chain of scattered peaks, which terminate in Mars Hill, on the eastern boundary. Mount Katahdin, the highest summit in Maine, and inferior only to some of the higher peaks of the White mountains, has an elevation of 5385 feet above the sea level. This mountain is situated E. of Chesuncook lake, and a little below the 46th degree of N. latitude. There are several peaks varying from 1000 to 4000 feet in altitude. The ridge of highlands just described separates the waters flowing N. into the St. John's river from those flowing S. into the Atlantic. Amid this group of mountains lie a number of beautiful lakes of considerable magnitude. Another range of highlands from 2000 to 4000 feet elevation, separates Maine from Canada E., till it strikes the head waters of the St. John's river. The state is generally hilly and diversified. Along the coast, however, from 10 to 20 miles inland, there are some small and marshy plains. Mount Desert, on an island of the same name in Frenchman's bay, has an elevation of more than 2000 feet, and forms a striking contrast with the vast plain of waters around it.

Minerals.—Maine is not distinguished for its mineral resources, but iron, lime, and a fine building granite, are extensively found. Some of the marble which abounds in the state, admits of a fine polish, particularly in the neighborhood of Thomaston, and on the W. branch of the Penobscot river. Slate of a fine quality for roofing and for school purposes is found between the sources of the

Kennebec and the St. John's river. Lead is found in small quantities.

Rivers, Lakes, Bays, &c.—The rivers of Maine are numerous and important, affording near their sources, or on their branches, sites for mills, with abundant water-power, and furnishing in the principal streams, channels for navigation, down which are floated those vast quantities of lumber, which constitute so important a source of the wealth of the inhabitants of this state. The Penobscot and Kennebec rivers are the largest, and, traversing the interior of the state, empty into the Atlantic, after courses of from 200 to 300 miles. The Penobscot river, in which the tide rises from 20 to 25 feet, is navigable to Bangor (52 miles) for large vessels. The Kennebec river is navigable 12 miles, to Bath for ships, to Augusta (50 miles) for sloops, and to Waterville (68 miles) for keel-boats. The Androscoggin river issues from Umbagog lake, and pursuing a very winding course through New Hampshire and Maine, joins the Kennebec a few miles from the sea. The Saco river rises in the White mountains in New Hampshire, and passing through the celebrated Notch, empties into the Atlantic in the S. W. part of Maine. The St. Croix river forms the E. boundary for about 50 miles, and the St. John's river the N. boundary for about 70 miles. The coast of Maine is lined with islands, the principal of which are Mount Desert island, in Frenchman's bay, Deer, Long, and Fox islands in Penobscot bay. The coast of Maine is indented with bays and inlets, forming the greatest number of fine harbors possessed by any state in the Union. Commencing at the E., the most important are the Passamaquoddy, Machias, Pleasant River, Frenchman's, Penobscot, and Casco bays, besides a number of smaller inlets, but all important to the trade of the state. Maine is mirrored over with beautiful sheets of water, some of them lakes of considerable magnitude, among the largest of which are Moosehead lake, 35 miles long, Chesuncook lake, 24 miles long, Millinocket, Schoodic, Eagle, Grand, Umbagog, Sebago, (and a number of others with unpronounceable names,) which diversify and give beauty to the landscape. So numerous are the lakes and bays of Maine, that it has been estimated one-tenth of its surface is covered with water.

Objects of Interest to Tourists.—If the scenery of Maine was not overshadowed by the grandeur and fame of the neighboring White mountains of New Hampshire, it would be the resort of crowds of admiring tourists. In addition to its picturesque lakes and waterfalls, Mount Katahdin rears its bold summit to a height but little inferior to that of Mount Washington, and commands a panorama scarcely inferior in extent or grandeur. Sugar Loaf mountain on the Sebagois river, thought not quite 2000 feet in elevation, is said to overlook 50 mountains and 17 lakes.

Chase's mountain, in the same vicinity, Mars Hill on the E. boundary, (1519 feet high,) and Mount Bigelow, Saddleback, Squaw, Bald, Blue, Speckled, Gilead, and other mountains on the W., abound in sources of delight to the lover of the romantic in nature. On Mount Desert island, as has been elsewhere stated, a mountain of the same name, 2500 feet high, exhibits in striking contrast the grandeur of the ocean and the land, pleasing the more by contrast, and heightening the effect of each other. Some of the mountains in the W. are said to attain an elevation of 4000 feet. Maine abounds in waterfalls, which lovely as they are in their scenic aspects, do not dash and foam adown their rocky descents merely for man's amusement, but are there as an unfailling source of utility in all coming time, as sites for mill seats, factories, and forges. Near Lewiston, on the Androscoggin river, the water is precipitated over a broken ledge for about 50 feet. Godfrey's falls in the Sebagois river, Rumford's falls in the Androscoggin river, Frye's fall, on a tributary of Ellis river, several falls in the Kennebec river at Waterville, Skowhegan, Norridge-wock, and Solon, are all highly picturesque objects.

Climate, Soil, and Productions.—The winters of Maine are long and severe, but the cold generally steady, and free from those frequent changes that prove so deleterious to health in the states farther south. The summers are short, the period of vigorous vegetation scarcely lasting four months, rendering it unfavorable to maize; but the late springs favor apples, pears, plums, and melons, because they are not tempted to blossom so early as to be caught by the frosts. The snow lies for three, and in some of the interior forest districts, for five months in the year. The N. E. winds from the Atlantic, in the spring and early summer, charged with fog and chilliness, are among the most unpleasant and unhealthful features of the climate of this state. Meteorological tables kept at Biddeford, by James G. Garland, in the years 1851–2, gave the monthly mean of July at 1½ p. m., at 80°; of August, 77°; of September, 59° 76; of October, 60°; of November, 40.09°; of December, 27.93°; of January, 27.41°; of February, 37.13°; of March, 41.04°; of April, 49.13°; of May, 65.08°, and of June, 75° 46'. Wind westwardly 151 days, eastwardly 54, northwardly 84, and southwardly 77. Quantity of rain, 49.24 inches. First frost in 1851, September 15th; last in the spring of 1852, June 12th; first snow, October 26; last in spring of 1852, April 16. Saco frozen over December 1st; opened March 31st. Lowest point of the mercury 8° below, and highest 98° above zero. The mercury, however, in some parts, and in severe seasons, descends to nearly 30° below zero.

The soil of Maine is as various as its surface.

The best lands are between the Penobscot and Kennebec, and are highly productive; there is also much good land in the valley of the St. John's, and on some other rivers. There is a great deal of poor land in the mountainous districts, and along the coast, especially in the S. E. part of the state. The most abundant agricultural products of Maine are Irish potatoes, oats, Indian corn, hay, butter, cheese, wool, live stock, and fruits, besides considerable quantities of wheat, rye, peas, beans, barley, buckwheat, market produce, grass-seeds, maple sugar, beeswax, and honey; and some wine, hops, flax, and molasses. In 1850 there were in the state 46,760 farms, occupying 2,036,596 acres of improved land, and producing 296,259 bushels of wheat; 102,916 of rye; 1,750,056 of Indian corn; 2,181,037 of oats; 205,541 of peas and beans; 3,436,040 of Irish potatoes; 151,731 of barley; 104,523 of buckwheat; 18,311 of grass-seeds; 1,364,034 pounds of wool; 9,243,811 of butter; 2,484,454 of cheese; 93,542 of maple sugar; 139,618 of beeswax and honey; 755,889 tons of hay; live stock valued at \$9,705,726; orchard products at \$342,865; market products at \$122,387, and slaughtered animals at \$1,646,773.

Forest Trees.—The great staple of Maine is its lumber. Extensive forests of pine cover the country around the sources of the Kennebec, Penobscot, and other rivers in the centre and N. of the state. Hemlock and spruce abound in all parts; but white and red oak are confined to the districts near the coast. Maple, beech, birch, and ash are plentiful, and some butternut and white walnut are found, but not in abundance. Cedar swamps occur in the north central portions. The other trees are the poplar, elm, sassafras, dogwood, willow, wild plum, basswood, buttonwood, juniper, hornbeam, &c. The cutting and rafting of timber to the saw mills, where it is converted into boards, shingles, scantling, &c., is a great business in Maine. In winter, great numbers of men are employed in felling the trees, and dragging them over the hard and deep snow to the rivers, where they are suffered to lie till the breaking up of the ice in the spring, when they are floated down to the mills and places of export. Of the fruit-trees, the apple, pear, plum, and cherry flourish, but the peach does not succeed well.

Animals.—The moose and caribon are still occasionally met with in the forests of Maine; the other animals are the bear, deer, catamount, wildcat, wolf, mink, wolverine, beaver, martin, sable, weasel, porcupine, woodchuck, racoon, squirrel, &c. The birds are wild geese and ducks, passenger-pigeons, hawks, eagles, owls, ravens, humming-birds, thrushes, quails, &c.

Manufactures.—Maine is not so extensively engaged in manufactures as some of the New England States; she had, however, according

to the census of 1850, 3682 manufacturing establishments, each producing \$500 and upwards annually, of which 12 were cotton factories, employing \$3,329,700 capital, and 780 male and 2950 female hands, consuming raw material worth \$1,573,110, and producing 32,852,556 yards of stuffs, valued at \$2,596,356; 36 woollen factories, employing \$467,600 capital, and 310 male and 314 female hands, consuming raw material worth \$495,940, and producing 1,023,020 yards of stuffs, and 1200 pounds of yarn, valued at \$753,300; 26 iron foundries, forges, furnaces, &c., employing \$364,100 capital, and 314 male and 1 female hands, consuming raw material worth \$127,509, and producing 5175 tons of pig iron and castings, valued at \$301,616; and distilling establishments employing \$17,000 capital, and 5 hands, and producing 220,000 gallons of rum. There are 213 tanneries, employing \$732,747 capital, consuming raw material worth \$892,343, and producing leather valued at \$1,620,636; and \$17,000 were invested in the manufacture of malt and spirituous liquors, consuming 2000 gallons of molasses, and producing 220,000 gallons of rum. More ships are built, and perhaps more boards and scantling sawn in Maine, than in any other state in the Union. It was estimated that 100,000 tons of shipping would be built in the state during the year 1853. Lime is also largely manufactured for export, chiefly in Thomaston and Rockland.

Commerce.—Maine has a coast indented by bays and inlets, presenting a greater number of good harbors than any other state in the confederacy, navigable by vessels of the largest class. Her rivers may be ascended by ships and other sea-crafts from 12 to 50 miles, and much farther by keel-boats. The great staple of export from Maine is lumber, of which 202,005,830 feet was manufactured in 1851, independent of lath, shingles, &c., which are also largely exported, as well as lime, marble, granite, and ice. The fisheries employ a number of vessels and hands in the catching, curing, and carrying the fish to foreign (*i. e.* out of the state) markets. The foreign imports for 1852 amounted \$1,717,818, and the exports to \$1,094,977. The completion of the Atlantic and St. Lawrence railroad, it is thought, will greatly increase the foreign commerce of Portland. The increase of the imports of 1851 over 1850, was over \$300,000. The tonnage owned in Maine in 1852 was 592,805 $\frac{3}{8}$, of which 44,070 $\frac{3}{8}$ were engaged in cod, and 15,078 $\frac{3}{8}$ in the mackerel fishery; number of ships built, 354, with an aggregate capacity of 100,047 $\frac{1}{2}$ tons, being the greatest amount of ship-building in any state in the Union.

Internal Improvements.—In January, 1853, Maine had 394 miles of railroad completed, and 111 in course of construction. Her chief commercial town, Portland, is connect-

ed by railroad with Boston and all the intermediate places of importance in Maine as well as in New Hampshire and Massachusetts. A line already completed to Island Pond, in Vermont, and passing within 5 miles of Mount Washington, will soon connect Portland and Montreal. From the latter, roads branch to Buckfield and Waterville; Augusta, Hallowell, and Gardiner are also united to Portland by railway, and railroads are projected to connect St. John's, New Brunswick, and Bangor, Maine, with the commercial metropolis of the state.—See *Table of Railroads*, APPENDIX. The Cumberland and Oxford canal, including some lockage, forms a navigable line of 50 miles, uniting Portland with Sebago, Brandy, and Long Ponds.

Education.—Maine has a permanent school fund, arising from 20 townships of land set apart by the state in 1820. In 1850, twenty-four half-townships more were set apart. The fund arising from the first appropriation amounted, in 1850, to \$104,363. In addition to this, the banks pay a semi-annual tax of one-half of one per cent. on their capital for school purposes, and a tax of 40 cents per capita is levied in each town. All these sources yielded, in 1850, \$300,000, when there were 6627 schools, and 230,724 pupils, but with an average attendance of only 91,519. The same year Maine had 92 chartered academies, and school libraries in 9 towns. There are 2 colleges in this state, with an aggregate of 217 pupils, and 43,000 volumes in their libraries, 1 theological seminary with 37, and 1 medical school with 51 students.—See *Table of Colleges*, APPENDIX.

Religious Denominations.—Of the 851 churches in Maine in 1850, there belonged to the Baptists 283, to the Christians 9, the Congregationalists 165, the Episcopalians 8, the Free Church 19, the Friends 24, the Methodists 171, the Presbyterians 7, the Roman Catholics 11, the Union Church 83, the Unitarians 15, and to the Universalists 53. The remaining churches were owned by the Church of the Second Advent and the Swedenborgians—giving one church to every 685 persons. Church property valued at \$1,712,152.—See *Table of Religions*, APPENDIX.

Public Institutions.—The state prison of Maine is at Thomaston, and is conducted on the Auburn (or silent) system. The prisoners are engaged in stone-cutting and quarrying. There is a state insane asylum located at Augusta, which was partly destroyed by fire in December, 1850, when 27 of the unfortunate lunatics perished in the flames. It was sufficiently repaired to receive patients in about a month after the calamity. In 1852, Maine appropriated \$5126.25 for the education of the deaf and dumb and the blind, (the former in the asylums of Connecticut,) \$3000 to the state reform schools, \$602 for the insane hospital and \$500 for the state prison.

Government, Finances, Banks, &c.—The governor of Maine is elected annually by popular vote, and receives a salary of \$1500 per annum. He is aided by a council of seven persons, elected on joint ballot by the legislature. The senate, composed of 31, and the house of representatives, of 151 members, are elected annually by the people. Three months' residence in the state previous to an election, gives every male citizen of the United States, not a pauper or criminal, the right of suffrage. Maine is entitled to six members in the national house of representatives, and to eight electoral votes for president of the United States. The judiciary consists—1. Of a supreme judicial court, composed of 1 chief and 6 associate judges, holding courts in three judicial districts, the western, eastern, and middle, for the purpose of hearing and determining questions in law and equity: other cases are tried in the several counties where they are commenced. The judges of this court have salaries of \$1800 dollars per annum; 2. Of probate courts, held in each county, and receiving salaries of from \$160 to \$500; 3. Of municipal and police courts in the larger towns.

The assessed value of property in Maine in 1850 was \$96,765,868; public debt in 1852, \$600,500; school fund, \$350,000; other productive property, \$700,000, and ordinary expenses, exclusive of debt and schools, \$150,000. In January, 1853, there were in this state 39 banking institutions, with an aggregate capital of \$3,923,000, circulation \$3,254,882, and coin \$622,300.

History.—A settlement was made on the site of the present town of Phippsburg in 1607, contemporaneously with Jamestown in Virginia, but afterwards abandoned. Settlements from New Hampshire gradually extended themselves into Maine, and York and Saco are known to have had an existence in 1625. In 1635 a French armed vessel took possession of a trading house on the Penobscot and sent the colonists back to Plymouth. In the same year Maine fell into the hands of Gorges, but after his death in 1652, was annexed to Massachusetts, as far as the Kennebec river. In the latter part of the 17th century, Maine suffered much from incursions by the savages and French, many of the towns being laid waste and the inhabitants slaughtered. This state of things was terminated by the treaty of Utrecht in 1712, by which Maine passed with Acadie into the hands of the English, and lost its separate history in that of Massachusetts, to which it was attached. During the Revolutionary war, Portland was bombarded by the English in 1775, and more than 100 buildings, public and private, were destroyed. The ever-memorable march of Arnold, on his passage to Quebec, in the fall and winter of the same year, took place along the margin of the Kennebec, within the limits of the present state of

Maine. In 1820 this state became an independent member of the great American confederacy. After a long diplomatic controversy, which had nearly resulted in an appeal to arms, Great Britain and the United States, by treaty, in 1842, defined the N. and N. W. boundary of Maine to be the St. John's and St. Francis rivers to Pohenagamoook lake, and from thence in a S. W. direction along the highlands to the N. E. corner of New Hampshire.

MAINE, a post-township in the W. part of Broome co., New York. Population, 1848.

MAINE, a post-village in the above township, about 70 miles S. from Syracuse. It contains 2 churches.

MAINE, a township of Columbia co., Pennsylvania, on the Susquehanna. Pop., 581.

MAINE, a post-office of Cook co., Illinois.

MAINESBURG, a post-village of Tioga co., Pa.

MAINESVILLE, a small post-village of Columbia co., Pennsylvania.

MAINESBURG, see MAINESBURG.

MAIN STREAM, a post-office of Somerset co., Maine.

MAKEE, a post-office of Allamakee co., Iowa.

MAKOQUETA (mä-k'kë-tä) river, of Iowa, rises near the S. E. corner of Fayette county, and empties itself into the Mississippi in Jackson county, about 22 miles below Galena. Its general course is south-easterly, and its whole length exceeds 100 miles.

MAKOQUETA, a thriving post-village in Jackson co., Iowa, on the river of its own name. It is 32 miles S. W. from Galena, and 60 miles N. E. by E. from Iowa City. It is pleasantly situated in the middle of a beautiful prairie.

MALAGA, a post-village in Franklin township, Gloucester co., New Jersey, about 20 miles S. S. E. from Woodbury, contains a church, a glass factory, and near 40 dwellings.

MALAGA, a post-township in the N. W. part of Monroe co., Ohio. Population, 1561.

MALAGA, a post-village of Monroe co., Ohio, 110 miles E. by S. from Columbus, has about 200 inhabitants.

MALCOLM, a post-village of Jefferson co., Mississippi, 26 miles E. N. E. from Natchez, is the eastern terminus of the Malcolm and Natchez railroad, in course of construction.

MALDEN, a flourishing post-village of Middlesex county, Massachusetts, at the junction of the Medford branch with the Boston and Maine railroad, 5 miles N. from Boston. It contains several churches, and a bank. A bridge 2420 feet in length across the Mystic connects it with Charlestown. Population of the township, 3520.

MALDEN, a post-village of Ulster co., New York, on the W. bank of Hudson river, 42 miles below Albany. It has a steamboat landing.

MALDEN BRIDGE, a post-village of Columbia co., New York, on Kinderhook creek, 16 miles S. S. E. from Albany.

MALHEUR (mal-oor') river, in the S. E. part

of Oregon, rises in the Blue mountains, and flows into Snake river.

MALLET'S CREEK, a small post-village of Medina co., Ohio, 115 miles N. N. E. from Columbus.

MALLOYSVILLE, a post-village of Wilkes co., Georgia, 76 miles N. N. E. from Milledgeville. It has 1 church, 1 academy, and 1 cotton-gin factory.

MALONE, a post-village in Malone township, and capital of Franklin county, New York, on both sides of Salmon river, and on the Northern railroad, about 150 miles in a direct line N. by W. from Albany. It contains 3 or 4 churches, 2 newspaper offices, an academy, an arsenal of the state, a bank, and has manufactories of cotton, iron, &c. A bridge crosses the river here. Population of the township, 4550.

MALTA, a post-township in the S. E. part of Saratoga co., New York. Pop., 1349.

MALTA, a post-township in the central part of Morgan co., Ohio. Population, 1302.

MALTA, a thriving post-village in the above township, on the right bank of the Muskingum, opposite to McConnellsville, and 75 miles E. S. E. from Columbus. It contains 2 or 3 churches, and 1 flouring mill. Population, about 700.

MALTAVILLE, a post-village of Saratoga co., New York, 30 miles N. from Albany.

MALUGIN GROVE, a post-office of Lee co., Illinois, 90 miles W. from Chicago.

MALVERN, a small post-village of Carroll co., Ohio, 137 miles E. N. E. from Columbus.

MAMAKATING, a township forming the S. E. extremity of Sullivan co., N. Y. Pop., 4107.

MAMARONECK, a post-village of Westchester county, New York, in the township of the same name, on Long Island sound, and on the New York and New Haven railroad, 23 miles N. E. from New York. It has 2 or 3 churches. Population of the township, 928.

MAMMELLE, a creek of Pulaski co., Arkansas, flows into the Arkansas river, several miles above Little Rock.

MAMMOTH CAVE, a post-office of Edmonson co., Kentucky.

MANADA HILL, a post-office of Dauphin co., Pennsylvania.

MANACK, a post-office of Lowndes co., Ala.

MANAHOCKING, a flourishing post-village of Ocean county, New Jersey, on a creek of its own name, about 19 miles S. from Tom's River, contains 3 or 4 stores, and about 45 dwellings.

MANALAPAN, a post-office of Monmouth co., New Jersey.

MANALAPAN BROOK, or SOUTH RIVER, of New Jersey, rises in Monmouth county, flows northward, and enters the Raritan, 4 miles below New Brunswick.

MANANTICO CREEK, of Cumberland co., New Jersey, flows into Maurice river.

MANASQUAN RIVER, of Monmouth county, New Jersey, flows nearly south-eastward, and

enters the Atlantic by Manasquan inlet, at the S. E. extremity of the county.

MANASSUS STATION, a post-office of Prince William co., Virginia.

MANATAWNY, a post-office of Berks co., Pa.

MANATAWNY CREEK, of Pennsylvania, enters the Schuylkill river near Pottstown.

MANATEE, a post-office of Hillsborough co., Florida.

MANAYUNK, a manufacturing town of Philadelphia county, Pennsylvania, on the left bank of the Schuylkill river, and on the Philadelphia and Norristown railroad, 7 miles N. N. W. from Philadelphia. It is built on the declivity of the hills which rise near the margin of the river, and is not laid out with much regularity. A number of handsome residences and churches occupy the higher parts of the town. Arrangements are now in progress for the introduction of gas-light. Manayunk is amply supplied with water-power, and is the seat of extensive manufactories of cotton, of which there are about 16 in operation. It contains also several manufactories of Kentucky jeans, and of woollen goods, 3 paper mills, and 1 rolling mill. There are 6 Protestant and 2 Catholic churches. Two bridges cross the river at this place. Pop. in 1850, 6158; in 1853, about 7000.

MANCHAC, a post-office of East Baton Rouge parish, Louisiana.

MANCHAC BAYOU, of Louisiana, a small stream forming the S. boundary of East Baton Rouge, communicates with the Mississippi on the W., and with the Amite on the E. A small steamboat plies between its extremities.

MANCHAUG, a post-office of Worcester co., Massachusetts.

MANCHESTER, a city and one of the shire towns of Hillsborough county, New Hampshire, is situated on the left bank of the Merrimack river, at the junction of the Manchester and Lawrence, the Concord, and the Vermont Central railroads, 18 miles S. S. E. from Concord, and 59 miles N. W. from Boston. This town, like a number of others in New England, through the development of the manufacturing enterprise, has suddenly grown from a small farming community into a wealthy and populous city. Its site is on an elevated plain, 90 feet above the surface of the river. It is regularly planned; the principal street, 100 feet broad, extends upwards of a mile from N. to S., with others of less breadth parallel to it, and to the river. These are intersected by others, running from E. to W. There have been laid out in different sections four public squares, some of which are handsomely ornamented. The eastern portion of the city is built almost exclusively of brick, while the western abounds in structures of wood, many of which are tasteful and elegant residences. The mills and boarding-houses occupy the slope between

the western verge of the plain and the river. The principal public buildings are the new town house, erected in the place of the one destroyed by fire in 1842, and the churches, of which there are 12, of the various denominations. An Athenæum was established in 1844, having a reading room and a library, which at present numbers about 3500 volumes. The system of public instruction comprises a high-school, 2 grammar schools, an intermediate, 6 middle, and 12 primary schools, besides others not classed. Manchester contains 9 or 10 newspaper offices, 6 insurance agencies, and 3 banks, with an aggregate capital of \$500,000. A gas company, for lighting the city, was incorporated in 1851, with a capital of \$75,000.

The present prosperity of Manchester commenced about the year 1839, at which date the locality now occupied by the city contained no more than 50 inhabitants. The Merrimack here has a descent of 54 feet in the distance of a mile, called the Amoskeag falls, which are the most extensive throughout its entire course. By the erection of a dam across the river, at the head of the falls, and the construction of canals, the stream has been made to furnish an hydraulic power sufficient to run several hundred thousand spindles. With these advantages for manufacturing, the place has increased rapidly in population and importance. Among the most extensive corporations in Manchester, may be mentioned the Amoskeag Manufacturing Company, who have 4 mills, containing 62,846 spindles and 1665 looms. These are operated by 2100 females and 400 males, who daily manufacture 65,000 yards (37 miles) of tickings, denims, pantaloon stuffs, drillings, and sheetings. The machine shops connected with the above employ 500 hands, who annually turn out 60 locomotives, besides a vast amount of machinery of every description. The Sark Mills (3 in number) employ 1000 females and 200 males. These daily produce 17,000 yards of drilling, and 30,000 of sheeting, equal to 27 miles of cloth, besides more than 5000 seamless bags. One loom yields 40 substantial fancy striped bags daily, woven from top to bottom without a seam. The Manchester Print Works, burnt down in September, 1853, are now being rebuilt, and will be ready for operation by March, 1854. In these works 12,000,000 yards of delaines were annually printed. The cloth is manufactured by the Merrimack mills, at the rate of 38,000 yards (22 miles) daily. Besides the above, numerous other establishments in Manchester annually turn out a vast amount of various kinds of work. Several new companies have been incorporated the present year, (1853.) Among these may be named the Bloodgett Paper Company, (capital, \$200,000,) intended to make 8000 rolls of paper hangings daily; the New Paper Mill, for the manufacture of all kinds of paper, at the rate of 8 tons a

day; the New Machine Shop, capital \$100,000, and the New Brass, Copper, and Iron Foundry. Buildings for the above are now in course of erection, and will be ready for operation about the 1st of January, 1854. A new foundry has just been completed, with which is connected the building of freight cars, intended to employ 200 machinists. The Amoskeag Company are also laying the foundation of another mill, to be completed next year, in which 1500 operatives will be employed. Manchester received a city charter in 1846. By a late act the corporate limits have been extended, including the villages of Piscataquog and Amoskeag, (commonly called "Squog" and "Skeag.") Population in 1850, 13,932; in 1853, 20,000.

MANCHESTER, a post-village, semi-capital of Bennington co., Vermont, on the Battenkill river, about 88 miles S. S. W. from Montpelier. Population of the township, 1782.

MANCHESTER, a post-village and seaport of Essex county, Massachusetts, on the Eastern railroad, 9 miles N. E. from Beverly, and 23 miles N. E. from Boston. The industry of the inhabitants is chiefly directed to the manufacture of cabinet-ware, which employs a capital of \$500,000. Incorporated in 1645. Population of the township, 1638.

MANCHESTER, a post-township of Hartford county, Connecticut, intersected by the Providence, Hartford, and Fishkill railroad, 8 miles E. from the city of Hartford. Pop., 2546.

MANCHESTER, a manufacturing village of Dutchess co., New York, on Wappinger's creek, a few miles from Poughkeepsie.

MANCHESTER, a village of Oneida co., New York, on Oriskany creek. It has several mills and a cotton factory.

MANCHESTER, a post-village in Manchester township, Ontario county, New York, on the Canandaigua outlet, 8 miles N. N. E. from Canandaigua. It has several churches, and a woollen factory. Population of the township, 2940.

MANCHESTER, a post-office of Ocean co., New Jersey.

MANCHESTER, a township of Passaic co., New Jersey. Population, 2781.

MANCHESTER, a flourishing borough of Reserve township, Alleghany county, Pennsylvania, on the right bank of the Ohio river, two miles below Pittsburg. It has been built up since 1840. Here are large manufactories of paper, ploughs, wagons, oilcloth, and India rubber. Immediately below is the United States Marine Hospital, a four-story brick building, recently erected. The name of the post-office is West Manchester. Population, 1755.

MANCHESTER, a township of Wayne co., Pennsylvania, 18 miles N. by E. from Honesdale. Population, 749.

MANCHESTER, a post-township of York co., Pennsylvania, 18 miles S. from Harrisburg. Population, 2603.

MANCHESTER, a post-village of Carroll co., Maryland, 60 miles N. N. W. from Annapolis. It contains a few stores and about 600 inhabitants.

MANCHESTER, a post-village of Chesterfield county, Virginia, on the James river, opposite Richmond, with which it is connected by a bridge. It has a beautiful situation, and contains several elegant residences erected by persons who do business in Richmond. It has 2 churches, and manufactories of tobacco, cotton, and flour. Population in 1853, estimated at 1800.

MANCHESTER, a post-office of Cumberland co., North Carolina.

MANCHESTER, a post-village of Sumter district, South Carolina, on the Wilmington and Manchester railroad, about 36 miles E. S. E. from Columbia. It is a station on the railroad which connects with the Camden branch about 6 miles from this village.

MANCHESTER, a post-village, capital of Coffee county, Tennessee, is situated at the junction of the forks of Duck river, 62 miles S. E. from Nashville. The above streams afford an excellent water-power. MARIPOSA river, of Mariposa county, California, rises among the hills at the foot of the Sierra Nevada, and flowing in a general W. S. W. course, falls into the San Joaquin.

MARIPOSA, a county in the central part of California, has an area estimated at about 8000 square miles. It is bounded on the S. W. by the Coast Range, and is drained by San Joaquin river and its tributaries, the Mercede and Fresno, and other smaller streams. These streams afford many desirable locations for mining and for mills of different kinds. The surface in the E. part is uneven and mountainous, being traversed by the Sierra Nevada, or Snowy Range of California. Agriculture is yet in its infancy; but abundant proofs have been given of the adaptation of the soil and climate to almost every kind of product, and many preparations are being made for cultivating the soil and raising stock. The chief productions are wild oats, clover, and other rich grasses, which are abundant in the San Joaquin valley, and on the hills at the foot of Sierra Nevada. Thousands of wild horses are found in this county, and game of almost every kind abounds. The finest quality of marble exists on the N. fork of the Mercede and elsewhere. Various kinds of mineral springs are found in different parts. Gold is abundant. Six quartz mills are already in operation, all of which are paying well, and many more are being erected. There are 60 townships, (quartz-grinding machines,) each paying from \$16 to \$25 per day. Five hundred and twenty-two quartz veins are legally located, and many more are known to exist. New and rich discoveries are daily made, and it is believed that immense deposits of gold lie in the beds of the San Joaquin, Mercede, and other rivers, which can only be obtained by a heavy expenditure of capital and labor. A great variety of other minerals are found in various parts. The gold district in this county is perhaps 100 miles wide, and extends back indefinitely into unexplored regions. Capital, Mariposa. Pop. in 1852, 8969.

MARY ANN FURNACE, a small village of Cumberland co., Pennsylvania.

MARYLAND, one of the thirteen original states of the American confederacy, and the most southern of the Middle States, is bounded on the N. by Pennsylvania, E. by Delaware and the Atlantic, and S., S. W., and W. by Virginia, from which it is separated by the Potomac river. It lies between 38° and 39° 44' N. lat., and between 75° 10' and 79° 20' W. lon. Maryland is very irregular in outline, occupying an extent of about 190 miles on its northern boundary, which contracts on its W. side till at its southern limits, it has scarcely half that extent, even including Chesapeake bay. Its greatest breadth, in a N. and S. direction, is about 120 miles. This state is divided by Chesapeake bay into two portions, called the Eastern and Western Shore; the two divisions, exclusive of the bay, including an area of about 9356 square miles, or 5,987,840 acres, of which 2,797,905 were improved land in 1850. The Western Shore is about double the area of the Eastern. About 60 square miles of the original territory of Maryland have been taken off by its grant of the District of Columbia to the government of the United States.

Population.—Maryland was originally settled mostly by the English, but it partakes at present of much the same mixture of population that characterizes the United States generally. The number of inhabitants was 319,728 in 1790; 341,548 in 1800; 380,546 in 1810; 407,350 in 1820; 447,040 in 1830; 470,019 in 1840; 583,035 in 1850; of whom 211,495 were white males, 207,095 white females, 34,914 free colored males, 39,163 free colored females, 45,944 male slaves, and 44,424 female slaves. This population is divided into 87,384 families, occupying 81,708 dwellings. Representative population, 546,887. Of the white population, 400,594 were born in the state; 38,322 in other states of the Union; 3467 in England; 19,557 in Ireland; 1353 in Scotland and Wales; 215 in British America; 26,936 in Germany; 507 in France; 1253 in other countries, and 462 whose places of birth were unknown; making about 10 per cent. of the free population of foreign birth. There occurred, in the year ending June 1, 1850, 6467 deaths, or about 11 in every 1000 persons. In the same period, 4494 paupers, of whom 1093 were foreigners, received aid, at an expense of about \$16 to each person. Of 254 deaf and dumb, 36 were free colored, and 23 slaves. Of 307 blind, 71 were free colored, and 43 slaves. Of 553 insane, 52 were free colored, and 24 slaves; and of 393 idiotic, 53 were free colored, and 72 slaves.

Maryland is divided into 21 counties, viz Alleghany, Anne Arundel, Baltimore, Calvert, Caroline, Carroll, Cecil, Charles, Dorchester,

Frederick, Harford, Howard, Kent, Montgomery, Prince George, Queen Anne, St. Mary's, Somerset, Talbot, Washington, and Worcester. Capital, Annapolis.

Cities and Towns.—The principal towns of Maryland are Baltimore, population in 1850, 169,054; Cumberland, 6067; Frederick, 6028; Hagerstown, 3884; Annapolis, (the capital,) 3011, and several other towns with populations varying from 1000 to 1500.

Face of the Country.—The surface on both shores of Chesapeake bay is level, and the soil sandy. A range of hills enters the state where the N. boundary strikes the Susquehanna, and extends in a S. W. direction to the Potomac river, which it intersects about 10 miles above Washington City. This ridge divides the alluvial from the mountainous portion of the state. The mountainous district occupies the strip of territory (not more than 4 miles wide in its narrowest part) in the N. W. of the state, between the Pennsylvania line and the Potomac river. This section is crossed by different ridges of the Alleghany mountains, bearing different local names, such as South-east mountain, Sugar Loaf, Catocin, Blue Ridge, Kittatinny, Rugged mountain, and Will's mountain. None of these are of any great elevation. A belt of primary formation, composed of gneiss, mica slate, serpentine, hornblende, limestone, clay slate, &c., forms the mountainous part of this district. The N. W. mount of this state is rich in bituminous coal and iron. The trade in this coal has received a double impetus recently by the completion of the Baltimore and Ohio railroad, and from the increased demand for the use of steam vessels at New York. The sales of coal increased from 4964 tons, in 1843, to 162,500 in 1851. In the first six months of 1853 there were sent to market 205,169 tons. The estimated sales for 1852 were 450,000 tons. The extent of its iron resources will be best shown by the simple statement of the fact that there were 31 furnaces in Maryland in 1851-2, smelting 70,500 tons of iron. Copper mining is beginning to attract much attention in this state, by the recent discovery of localities rich in that mineral. The copper mines in Frederick county are also rich in argentiferous lead ore. Cobalt, too, is sometimes found, in connection with the copper, in abundance. The capital engaged in copper mining in 1850 was only \$13,200. The other minerals are alum, porcelain clay, lime, chrome, manganese, magnesia, barytes, marble, marls, ochres, hones, and even gold.

Rivers and Bays.—The Chesapeake bay extends northward about 120 miles within this state, with a breadth varying from 7 to 20 miles. It is navigable for large vessels throughout its whole extent, and receives the large and navigable river Potomac at the S. extremity of the state, besides the Patuxent and Patapsco from the W., the Susque-

hanna from the N., and the Elk, Chester, Choptank, Nanticoke, and Pocomoke from the E. All these rivers are more or less navigable for small ocean craft, and the Potomac for the largest class vessels to Alexandria. The bay abounds with fine fish, oysters, and terrapins. The waters of the bay back up in numerous inlets, and bring the means of cheap and easy transport almost to the very doors of the farmer, beside furnishing him with a cheap supply of a great variety of the finest fish. There are a number of islands in Chesapeake bay, the principal of which are Kent island, opposite the city of Annapolis, 12 miles long, and Tangier island, farther south.

Objects of Interest to Tourists.—Maryland shares with Virginia the wild scenery at Harper's Ferry, where the Potomac bursts through the Blue Ridge, and which Mr. Jefferson declared worth a voyage across the Atlantic to witness. The falls of the Potomac, about 14 miles above Georgetown, though of no great perpendicular height, are represented as being one of the most interesting cataracts in the United States. The descent is about 80 feet in 1½ miles, from 30 to 40 feet of which are in one perpendicular pitch. It is not, however, the fall of water that constitutes the whole interest of the scene, which is very much heightened by the wild perpendicular cliffs that shut in the river on the Virginia side.

Climate, Soil, and Productions.—Maryland occupies a position about equally removed from the extremes of the North and South as to temperature. Her contiguity to the ocean, and the fact of the Chesapeake bay permeating her midst, give her the advantage of whatever mitigating effects large bodies of water may exert on climate. On the other hand, the lowlands on the borders of the Chesapeake bay are subject to exhalations of miasmatic matter, which give rise to bilious fevers and fevers with ague in the autumn.

The soil of the Eastern Shore, and some of the counties on the Western, is a mixture of sand and clay, which, though not of the most fertile character, is easily improved, and by the aid of manure, which it possesses at hand in its extensive beds of marl, well repays cultivation. Some of the valleys of the middle and northern counties are highly fertile. Maryland has formerly suffered from an injudicious system of agriculture, of constant cropping with but little manuring. This system is, however, happily passing away: emigrants from the North are taking up the lands worn out by the system referred to, and by means of guano, bone-dust, marl, and other manures, are restoring the land to more than its pristine fertility. The soil receives improvement easily, is readily cultivated, and the farmers emigrating from the rougher soil of the North find their labors here much diminished. Maryland ranks

third of the states of the Union in the absolute amount of tobacco produced, and if we regard population, the second. The other great staples are wheat and Indian corn; besides which, large quantities of oats, rye, buckwheat, flax, hay, grass-seeds, Irish and sweet potatoes, peas, beans, fruits, butter, beeswax, honey, and wool, and some barley, wine, cheese, hops, hemp, silk, maple sugar, and molasses are produced. According to the census of 1850, there were in Maryland 21,850 farms, occupying 2,797,905 acres of improved land, (about 130 acres to each farm,) producing 4,494,680 bushels of wheat; 226,014 of rye; 11,104,631 of Indian corn; 2,242,151 of oats; 12,816 of peas and beans; 764,939 of Irish potatoes; 203,993 of sweet potatoes; 103,671 of buckwheat; 17,778 of grass-seeds; 2446 of flax-seed; 21,407,497 pounds of tobacco; 480,226 of wool; 3,806,160 of butter; 157,956 tons of hay; 35,686 pounds of flax; 47,740 of maple sugar; 74,802 of beeswax and honey; live stock valued at \$7,997,634; orchard products, \$164,051; market products, \$200,869; and slaughtered animals, \$1,954,300.

Forest Trees.—Several varieties of oak, pine, chestnut, cedar, poplar, maple, fir, hickory, ash, beech, gum, birch, persimmon, sycamore, walnut, cypress, sassafras, locust, dogwood, magnolia, holly, elm, and cherry are the principal woods.

Manufactures.—Maryland has a large amount of capital invested in a great variety of manufactures. In 1850 there were 3803 establishments, each producing \$500 and upwards annually; of these, 24 were cotton factories, employing \$2,236,000 capital, and 1908 male and 2014 female hands, consuming raw material worth \$1,165,579, and producing 27,883,923 yards of stuffs, and 46,000 pounds of yarn, valued at \$2,120,504; 38 woollen factories, employing \$244,000 capital, and 262 male and 100 female hands, consuming raw material worth \$165,568, and producing 373,100 yards of stuffs, valued at \$295,140; 51 furnaces, forges, &c., employing \$2,559,750 capital, and 2699 male hands, consuming raw material worth \$1,259,426, and producing 59,885 tons of castings, pig iron, &c., valued at \$2,512,831; \$247,100 were invested in the manufacture of malt and spirituous liquors, consuming 76,900 bushels of barley; 166,100 of Indian corn; 54,300 of rye; 460 of oats, and 25 tons of hops, employing 126 hands, and producing 26,380 barrels of ale, and 787,400 gallons of whiskey, wine, &c.; and 116 tanneries, employing \$628,900 capital, consuming \$725,612 worth of raw material, and producing leather valued at \$1,103,139. Home-made manufactures, valued at \$111,828, were fabricated.

Internal Improvements.—Maryland was among the earliest of the United States to enter with zeal upon a system of internal

improvements; and it is believed that a portion of the Baltimore and Ohio railroad was the first in America used for the purposes of ordinary travel and transport of goods. This state, as well as Pennsylvania, displayed more enterprise than caution in projecting her earlier works of intercommunication, and involved herself in a heavy debt, particularly for the construction of the Chesapeake and Ohio canal, for which, up to the year 1839, she had expended upwards of \$7,000,000, and which has never been completed beyond Cumberland, (200 miles,) nor yielded a remunerating income in tolls. Maryland has loaned and expended more than \$15,000,000 in aid of railroads and canals, which are now likely to become richly remunerative. She has already a sinking fund of \$2,770,802, which will probably be multiplied rapidly by the increased productiveness of the completed works. Discoveries of new veins of coal in the Cumberland coal region, for which there is now a great demand for steamships and other purposes, together with the increased production of iron from the same region, cannot fail to add greatly to the income from the canal. In January, 1853, there were in Maryland 521 miles of railroad in operation. These roads connect Baltimore with Wheeling, and various intermediate places, with Washington City, with Wilmington, in Delaware, with Harrisburg, with Philadelphia, and with Annapolis, the state capital. The Chesapeake and Delaware canal opens an inland navigation to Philadelphia, and the Susquehanna canal gives Baltimore a share in the trade of the interior of Pennsylvania, bringing to her the lumber of southern New York. Hagerstown, in Maryland, is also connected with Chambersburg, and with Carlisle and Harrisburg, in Pennsylvania.

Commerce.—Maryland possesses great facilities both for foreign and internal commerce, having the Chesapeake bay, navigable for the largest vessels, extending through the heart of her territory, and her south-western shore washed by the Potomac and the Susquehanna, floating a portion of the products of southern New York and the interior of Pennsylvania to her commercial metropolis. Communicating with the great West by the Baltimore and Ohio railway, and the Chesapeake and Ohio canal; with Pennsylvania, and the north-east by the Chesapeake and Delaware canal; and by several railroads, Maryland has every prospect of increasing her trade in a rapid ratio. The Cumberland coal, now much in demand for steamers, will add greatly to her coasting tonnage. The prime articles of foreign export are flour, wheat, pork, and tobacco. The imports of Maryland for the year 1851-52 amounted to \$6,719,986, and her exports to \$6,667,861; tonnage entered, 128,021; cleared, 128,243; owned in the state, 206,243; and number

of vessels built, 119, with a tonnage of 18,158 $\frac{3}{4}$. Of the vessels built, 7 were steamers.

Education.—In 1852 there were in Maryland 5 colleges, with an aggregate attendance of 408 students, and 34,892 volumes in their libraries, and 2 medical schools with 125 students.—See *Table of Colleges*, APPENDIX. Of 104,488 children in the state in 1850, only 34,467 were in the schools, for which there was annually expended \$225,260. The school fund in 1852 was \$148,509. There were 8 school libraries, with 6335 volumes. In Baltimore are a number of educational institutions of a public character, among which are the Central High School, the Eastern Female High School, and the Western Female High School, the first of which had 230, the second 136, and the third 134 pupils in 1852. There were also 11 male, and a like number of female grammar schools; 4 male, and 22 female primary schools; with an aggregate of 9081 pupils. All these schools were maintained at an expense of \$32,583.73, including repairs of buildings, &c.

Religious Denominations.—Of the 909 churches in Maryland in 1850, the different sects of Baptists owned 48; the Episcopalians, 133; Friends, 26; German Reformed, 22; Lutherans, 42; Methodists, 479; Moravians, 12; Presbyterians, 57; Roman Catholics, 65, and Union Church, 10. The remaining churches belonged to the Jews, Mennonites, Tunkers, Unitarians, and Universalists, giving one church to every 641 persons. Value of church property, \$3,947,884.—See *Table of Religions*, APPENDIX.

Public Institutions.—The state penitentiary is located at Baltimore, which received a state appropriation in 1851 of \$30,000. The number of convicts in this institution in December, 1852, was 305, of whom 54 were minors; but for the latter class a place of *correction* rather than punishment is about to be supplied, in a house of refuge, now in course of construction, which will embrace the improvements suggested by institutions established in other states. The Maryland hospital for the insane, at Baltimore, had 164 patients under care in the year 1852, of whom 101 were private patients, and 63 public. Of these, 34 were admitted during the year, 10 recovered, 18 were discharged, 3 improved, 15 unimproved, and 6 died. The expenditures for the year were \$25,647.06. From the establishment of this institution, in the early part of the present century, up to this time, (1853,) it has received from the state \$111,000, and from other sources \$98,000. A lot has been purchased on which to erect a new building, more suited to the improved modes of treatment. For other institutions, see BALTIMORE.

Government, Finances, Banks, &c.—The governor of Maryland is elected by the people for four years, and has a salary of \$3600

per annum, with the use of a furnished house. The senate consists of 22 members, elected for four, and the house of representatives of 74, elected for two years, both by the people. The state is divided into three districts, from which the governor must be chosen in rotation. After 1854, the sessions of the legislature are to be biennial. The judiciary consists—1. Of a court of appeals, composed of four judges, elected from districts by popular vote for ten years, but each judge must retire at the age of 70. The governor and senate designate one of the four as chief justice. 2. Of eight circuit courts, presided over by as many judges, each elected from a separate district, by popular vote, for ten years. The fifth circuit comprises the city of Baltimore, which has three courts, viz. a superior court, court of common pleas, and a criminal court. The judge of the latter is elected for six years. 3. Of an orphans' court in each county, and in the city of Baltimore, composed of three persons as judges, elected by popular vote for four years. Registers, sheriffs, constables, justices of the peace, and prosecuting attorneys are all elected by the people, for periods varying from two to six years. The judges of the court of appeals, and the Baltimore city courts, receive salaries of \$2500, and the circuit judges \$2000 per annum. The office of attorney-general has been abolished by the new constitution. No debt is to be contracted by the state for a greater sum than \$100,000, or for a longer period than 15 years. Every free white male citizen of the United States, 21 years of age, resident in the state one year, and in the county, town, or city where he offers to vote, for six months next preceding the election, may vote. Maryland is entitled to 6 members in the national house of representatives, and to eight electoral votes for president of the United States. The assessed value of property in 1850 was \$208,563,568. The public debt, in January, 1853, \$15,136,792, including a loan of \$3,200,000 to the Baltimore and Ohio railroad, and a sinking fund of \$2,770,302; independent of these, it is reduced to \$9,166,490. School fund in 1852, \$148,509; amount of productive property, \$11,212,617; and, of at present unproductive property, \$16,319,138; ordinary expenses, exclusive of debt and schools, \$170,000. The number of banking institutions in January, 1852, was 26, with an aggregate capital of \$9,287,395, a circulation of \$3,700,000, and \$3,000,000 in coin; and partial returns for January, 1853, give \$8,064,930 capital, \$4,254,412.47 circulation, and \$2,888,071.09 in coin.

History.—Maryland derived its name from Henrietta Maria, queen of Charles I., who granted to Lord Baltimore a charter for the territory now occupied by the present State of Maryland. Leonard Calvert, brother of Lord Baltimore, led the first colony, which settled at St. Mary's in 1634. In 1649, to

her lasting honor, Maryland passed an act granting religious toleration to all sects and creeds. In 1660, when Philip Calvert assumed the government, the colony had 12,000 inhabitants; eleven years afterwards they had increased to 20,000. In 1688, William III. assumed the government; which, however, was restored to the family 27 years later. In 1694 and 1695, a disease prevailed among the stock, carrying off about 90,000 cattle and hogs. In 1753, the colony had 154,188 inhabitants. No conspicuous engagement took place in Maryland during the Revolutionary contest, but some of the sessions of the continental Congress were held at Annapolis, and there Washington resigned his command at the close of the war. During the war of 1812, however, her territory was twice invaded by the British, who were gallantly repulsed from North Point, near Baltimore, September 13th, 1814; although they had gained a temporary triumph a few weeks before, at Bladensburg, which they sullied by the burning of the capitol and national library at Washington. The constitution of Maryland underwent a radical change at the Revolution, and has been twice remodelled since, viz. in 1833 and 1851.

MARYLAND, a post-township in the S. E. part of Otsego co., New York. It contains a small village of the same name. Pop., 2152.

MARYLAND LINE, a post-office of Baltimore co., Maryland.

MARY'S CREEK, Texas, rises in Cook co., and flows south-eastward into Stewart's fork, in Tarrant county.

MARYSVILLE, a post-village in Campbell co., Virginia, near Staunton river, 115 miles S. W. by W. from Richmond.

MARYSVILLE, a post-village, capital of Charlotte co., Virginia, is situated near the railroad from Richmond to Danville, 100 miles S. W. from the former. It contains 3 churches, an academy, and about 600 inhabitants.

MARYSVILLE, a post-office of Robeson co., North Carolina.

MARYSVILLE, a post-office of Itawamba co., Mississippi.

MARYSVILLE, a thriving post-village, capital of Blount county, Tennessee, 18 miles S. by W. from Knoxville, and about 8 miles S. from Holston river. It is the seat of the South-western Theological Seminary, founded by the Presbyterians in 1821.

MARYSVILLE. See CLAYSVILLE.

MARYSVILLE, a thriving post-village of Paris township, capital of Union county, Ohio, on Mill creek, an affluent of the Scioto river, 30 miles N. W. from Columbus. It is situated in a beautiful and fertile country, at the intersection of two railroads, now in course of construction, which will connect it with Columbus, Springfield, Cincinnati, &c. Marysville contains a court house, an academy, and several churches. Population, 800.

MARYSVILLE, a post-village, capital of De

Kalb co., Missouri, about 150 miles in a straight line N. W. from Jefferson City.

MARYSVILLE, a post-village in Benton co., Iowa, 40 miles N. W. by N. from Iowa City.

MARYSVILLE, an important post-town, capital of Yuba county, California, is situated on the N. bank of the Yuba river, 1 mile above its junction with Feather river, and about 100 miles N. N. E. from Benicia. Steamboats ply regularly between this town and San Francisco; and the main road from Sacramento City passes through it. There were, in 1852, 4 churches in this town, and 3 newspaper offices. Pop. in 1853, 8000.

MARYSVILLE, a post-village of Benton co., Ogn., on the W. bank of the Willamette river.

MARYSVILLE, a post-village of Noddaway co., Mo., 220 miles N. W. from Jefferson City.

MASARDIS, a post-township of Aroostook co., Maine, intersected by Aroostook river.

MASCOMY RIVER, a small stream of Grafton co., near the centre of New Hampshire, falls into Mascomy Pond.

MASCOUTAH, a post-village of St. Clair co., Illinois, 25 miles E. S. E. from St. Louis. It has 1 Methodist and 1 Catholic church, and a steam-flouring mill.

MASHAPANG, a post-office of Tolland co., Connecticut.

MASKE'GON, or MASKE'GO river, of Michigan, rises in the N. central part of the state, and flowing nearly south-westward, enters Lake Michigan in Ottawa county, about 12 miles N. N. W. from Grand Haven. Its whole length is estimated at 200 miles, and it is navigable 25 miles from its mouth. Fifty miles from its mouth it has a fall of 25 feet. Maskegon lake, an expansion of the river, is 10 miles long, and is about half a mile from Lake Michigan.

MASKEGON, or MUSKEGON, a post-township in the N. W. part of Ottawa co., Michigan, intersected by Maskegon river. Pop., 484.

MASON, a county in the W. part of Virginia, bordering on the Ohio river, has an area of 300 square miles. The Kanawha river flows through the middle of the county into the Ohio. The surface is diversified by hills and valleys, and the soil is productive. Indian corn, wheat, cattle, and swine are the staples. In 1850 it produced 399,080 bushels of corn, and 20,545 of wheat. There were 2 flour mills, 5 grist mills, 4 saw mills, and 2 tanneries. It contained 12 churches, and 1150 pupils attending public schools. Timber and stone coal are abundant. Salt springs of great value have lately been found near the Ohio river in this county, and several furnaces for preparing salt are now in operation. Formed in 1804, and named in honor of George Mason, a distinguished statesman of Virginia. Capital, Point Pleasant. Population, 7539; of whom 6892 were free, and 647, slaves.

MASON, a county in the N. N. E. part of Kentucky, bordering on the Ohio, contains 220 square miles. The Ohio river bounds it

on the N., and it is intersected by the N. fork of the Licking, and also drained by Limestone and Lee's creeks. A bold range of hills extends along the Ohio river, and the surface of the interior is finely diversified. The soil is calcareous, deep, and highly productive. The staples are Indian corn, hemp, and tobacco. Cattle, horses, swine, and sheep are also exported. In 1850 this county produced 978,470 bushels of corn; 52,486 of wheat; 50,236 of oats; 2,492,622 pounds of tobacco, and 1853 tons of hemp. It contained 35 churches, 5 newspaper offices, 542 pupils attending public schools, and 417 attending academies or other schools. The "Mason county tobacco" has a high reputation among the admirers of the "weed." It is intersected by the Maysville and Danville railroad, and by a turnpike leading to Lexington. Capital, Washington. Population, 18,344; of whom 14,060 were free, and 4284, slaves.

MASON, formerly NOTIPESKAGO, an unorganized county in the W. part of Michigan, bordering on Lake Michigan, contains about 400 square miles. It is intersected by the Notipeskago river. The census of 1850 states the population at 93.

MASON, a county in the W. central part of Illinois, has an area of 540 square miles. The Illinois and Sangamon rivers respectively form its boundaries on the N. W. and the S., and unite at its western extremity. The surface is generally level or flat, and liable to submersion; the soil is very productive. Indian corn, wheat, oats, potatoes, and pork are the staples. In 1850 this county produced 555,610 bushels of corn; 142,474 of wheat; 70,400 of oats, and 66,177 pounds of butter. It contained 1 church, and 440 pupils attending public schools. Stone coal is abundant. The Illinois river furnishes an easy access to the northern and southern markets. Capital, Havana. Pop., 5921.

MASON, a post-township in Hillsborough co., N. H., on the Peterborough and Shirley railroad, 38 miles S. by W. of Concord. Pop., 1626.

MASON, a township forming the N. E. extremity of Lawrence co., Ohio. Pop., 1132.

MASON, a post-village of Warren co., Ohio, about 90 miles S. W. from Columbus, contains a few stores, and 431 inhabitants.

MASON, a small village of Branch county, Michigan, on the Coldwater river, 85 miles S. S. W. from Lansing, and 1½ miles from the Southern railroad.

MASON, a township in the S. part of Cass co., Michigan. Population, 570.

MASON, a thriving post-village, capital of Ingham county, Michigan, 12 miles S. E. from Lansing. The Sycamore creek, which passes through the village, affords water-power. Mason is the oldest village in the county, which was first settled about 1837. Population in 1853, about 600.

MASON HALL, a post-office of Orange co., N. C.

MASON HALL, a post-office of Obion co., Tennessee, 153 miles W. by N. from Nashville.

MASON GROVE, a post-village of Madison co., Tennessee, 15 miles N. W. from Jackson.

MASON'S POINT, a small post-village of Benton co., Tenn., on the Tennessee river.

MASON RIVER, Illinois, a little stream which falls into the Illinois river, opposite to Morris, in Grundy county.

MASONTOWN, a post-village of Fayette co., Pennsylvania, 194 miles W. by S. from Harrisburg.

MASON VILLAGE, a post-village of Hillsborough co., New Hampshire.

MASONVILLE, a post-township in the W. part of Delaware co., New York, contains a village of the same name. Pop., 1550.

MASONVILLE, a post-village in Lauderdale co., Alabama, near the Tennessee river, about 200 miles N. N. W. from Montgomery.

MASONVILLE, a small village of Daviess co., Kentucky.

MASPETH, a post-office of Queen's co., N. Y.

MASSAC, a county in the S. part of Illinois, bordering on the Ohio river, which separates it from Kentucky, has an area of about 140 square miles. The surface is uneven and heavily timbered. Indian corn, oats, cattle, and pork are the staples. In 1850 this county produced 146,700 bushels of corn; 12,607 of oats, and 30,650 pounds of butter. It contained 2 newspaper offices, and 143 pupils attending public schools. Stone coal and lead are found in the county, but not worked. Capital, Metropolis. Population, 4092.

MASSAC, a village of Massac co., Illinois, on the Ohio river.

MASSACHUSETTS, one of the original states of the American confederacy, and one of the New England or Eastern States, is bounded on the N. by Vermont and New Hampshire. E. by the Atlantic, S. by the Atlantic, Rhode Island, and Connecticut, and W. by New York. It lies between 41° 10' (including the islands) and 42° 53' N. lat., and between 69° 50' and 73° 30' W. lon. It is very irregular in shape, the S. E. portion projecting into the ocean so as almost to enclose Cape Cod bay. The greatest length of the state from E. to W. is about 145 miles, and it has in the longitude of Boston a breadth of about 90 miles, while the western portion is not more than 48 miles wide. It includes an area of about 7800 square miles, or 4,992,000 acres, of which 2,133,436 are improved.

Population.—Massachusetts was originally settled, and for a long period almost exclusively occupied by people of nearly unmixed English descent. In point of morals, education, and intellectual culture, her citizens are unsurpassed in any portion of the Union, and she has given birth to a larger number of eminent authors, inventors, and statesmen, than any other state of the confederacy. Among the multitude of her distinguished authors may be named Prescott,

Bancroft, Bryant, Hawthorn, and Bowditch; and it is no exaggeration to say that the renown of her statesmen is coextensive with the fame of their country. At the first national census in 1790, the inhabitants numbered 378,717; 423,245 in 1800; 472,040 in 1810; 523,287 in 1820; 610,408 in 1830; 737,699 in 1840, and 994,499 in 1850; of whom 484,284 were white males, and 501,420 females; 4314 colored males, and 4481 females, being the most densely peopled of the United States, viz. 127 to the square mile. This population was divided into 192,679 families, occupying 152,835 dwellings, or 30,000 more families than dwellings. In the year preceding June 1st, 1850, there occurred 19,414 deaths, or rather more than 19 persons in every thousand—a greater ratio than in any state except Louisiana. In the same period, 15,777 paupers, of whom 9247 were foreigners, received aid, at an expense of about \$24 to each pauper. Of the entire population in 1850, 695,236 were born in the state; 134,830 in other states; 16,685 in England; 115,917 in Ireland; 4683 in Scotland and Wales; 15,862 in British America; 4319 in Germany; 805 in France; 2638 in other countries, and 3539 whose places of birth were unknown—being about 16 per cent. of foreign birth. Deaf and dumb in the state at the same period, 364; of whom four were colored; 497 blind, of whom seven were colored; 1647 insane, of whom 18 were colored, and 791 idiotic, of whom 6 were colored.

Counties.—Massachusetts is divided into 14 counties, viz. Barnstable, Berkshire, Bristol, Dukes, Essex, Franklin, Hampden, Hampshire, Middlesex, Nantucket, Norfolk, Plymouth, Suffolk, and Worcester. Capital, Boston.

Cities and Towns.—In proportion to its extent and population, Massachusetts has more large towns than any other state in the Union. The most important of these are Boston, population in 1850, 136,881; Lowell, 33,383; Salem, 20,624; Roxbury, 18,364; Charlestown, 17,216; Worcester, 17,049; New Bedford, 16,443; Cambridge, 15,215; Lynn, 14,257; Springfield, 11,766; Fall River, 11,524; Taunton, 10,441; Newburyport, 9572; Nantucket, 8542; Lawrence, 8288, (12,000 by a local census in 1853); Chicopee-8291; Dorchester, 7969; Gloucester, 7786; Andover, 6945; Marblehead, 6167; Plymouth, 6024; Haverhill, 5877; Newtown, 5258; Fitchburg, 5120, and Quincy, 5017; besides a large number of villages, with populations varying from 2000 to 5000. It is to be observed, that in giving the populations above, the township is included with the village or town. To give a correct idea of the relative importance of Boston, we should give in its population a number of neighboring towns and villages, dependent on it, and doing business in it. Taking a radius

of ten miles, with Tremont House for a centre, you will enclose an area containing 250,000 inhabitants; or limiting it to its *immediate* suburbs of Charlestown, Chelsea, Cambridge, Roxbury, Brookline, Dorchester, &c., you will have an aggregate of more than 200,000 inhabitants.

Face of the Country.—The surface of Massachusetts is generally uneven, and in many parts rugged and mountainous. The middle, eastern, and north-eastern portions are hilly and broken, and the south-eastern level and sandy. The western portion, though mountainous, does not attain a very great elevation above the sea. Saddle mountain, in the N. W. extremity, 3505 feet in altitude, is the highest land in the state. This is a peak of the Green mountains, which enter the state from Vermont and pass into Connecticut. They run nearly parallel with the Connecticut river, at distances of about 20 to 30 miles. The other principal mountains are the isolated peaks of Mount Tom, and Mount Holyoke, near Northampton—the former on the W., and the latter on the E. side; and Wachusett mountain, N. of the middle of the state. Wachusett has an elevation of about 2018 feet, Mount Tom of 1200, and Holyoke of 910 feet. The Green mountain divides into two ranges in Massachusetts; the most western and most elevated is called the Taugkannic, or Taconic, and the eastern the Hoosic ridge, and is about half the height of the other. Saddle mountain, already named, and Bald mountain, or Mount Everett, or Mount Washington, by all which names it is designated, 2624 feet in height, in the S. W. angle of the state, are peaks of the Taugkannic range. Mount Holyoke, Mount Tom, and Wachusett mountain are considered as detached parts of the great White mountain range from New Hampshire.

Geology.—The rocks of Massachusetts are mostly primary, in some places covered with the older secondary formation. A belt of this kind, 10 to 15 miles in width, extends from Boston S. W. to Rhode Island. The primary rocks extend in the N. to the ocean's verge, while the valley of the Connecticut rests on a bed of red sandstone. The primary rocks of this state form some excellent building stone, and the gray granite of the Quincy Hills has probably its representative in one or more of the public buildings of every great city or town from Massachusetts to Texas. The mountains of the western part of the state are composed of granite, gneiss, quartz and other siliceous rocks, of mica and clay slates, limestone, and hornblende. The white marble of Berkshire county is a fine building material, and forms parts of the walls and columns of the Girard College at Philadelphia. The other minerals are serpentine, asbestos, slate, some anthracite coal in the secondary formation, some copper near Greenfield, iron in Ply-

mouth and Bristol counties, argillaceous earth in the islands, plumbago and ochre in Worcester county, sulphuret of iron, and some lead, constitute the present known mineral wealth of Massachusetts.

Rivers, Bays, and Islands.—The E. and S. E. border of Massachusetts is much indented with bays. A large gulf, between Cape Ann and Cape Cod, has protruded itself for about 25 miles in a S. W., and 65 in a S. E. direction, into the eastern part of the state; the northern portion having received the name of Massachusetts, and the southern of Cape Cod bay. Buzzard's bay from the S. extends in a N. E. direction towards Cape Cod bay, forming Barnstable county into a peninsula almost enclosing Cape Cod bay. Plymouth bay is a smaller inlet of Cape Cod on the W. The Connecticut river, which passes through the W. part of the state, is the only large river in Massachusetts; and even this, on account of its rapid descent, is not navigable in this state without the aid of canals and locks. The Merrimack, from New Hampshire, runs 85 miles within the N. E. portion of Massachusetts, and by means of its falls and rapids, furnishes valuable water-power to the great manufacturing towns of Lowell and Lawrence. It receives from this state the Nashua and Concord rivers. The latter is a feeder of the Middlesex canal. Blackstone river passes from the centre of the state S. E. into Narragansett bay. The Connecticut receives the Miller's and Chicopee rivers from the E., and Deerfield and Westfield from the W. The Housatonic rises in the N. W. of Massachusetts, and runs S. into the state of Connecticut. Taunton river, celebrated for its water-power, and on whose banks stand the manufacturing towns of Taunton and Fall River, runs from the S. E. part of this state into Narragansett bay.* The rivers of this state furnish abundant water-power, and in many places exhibit wild and romantic scenery. There are several small islands belonging to this state, near the S. E. shore. The principal of these are Nantucket and Martha's Vineyard, chiefly noted for their employment in the whale and other fisheries. Nantucket island has an area of about 50 square miles, and Martha's Vineyard, 85.

Objects of interest to Tourists.—Massachusetts abounds in picturesque scenery. This observation is especially true of the western part of the state, and the view of the Connecticut river and valley from Mount Holyoke has long been celebrated. Though rather less than 1000 feet in height, the views it commands, and its easy ascent, being traversed to its summit by a good carriage road, have invited hither many tourists in the season for travelling. The spectator has below him the beautiful meandering Connecticut

wending its way through the meadows and among the villages, while to the S. W., and at no great distance, is Mount Tom; and still farther in the same direction, Bald or Washington mount, and in the N. W. Saddle mountain, the highest ground in the state; and turning to the E. and N. E. he has the peaks of Wachusett, in Massachusetts, and Monadnock in New Hampshire; the intermediate parts of the scene being filled up with a great variety of landscape, villages, hills, rivulets, and low mountains or hills. There is a good hotel on the top of Mount Tom, and in the vicinity the beautiful village of Northampton, at which the tourist may take up his quarters and make his excursion from thence over the mountain. A yet more extensive view is obtained from Saddle mountain, but it has hitherto lain more out of the line of travel, and been less visited, though of thrice the elevation of Mount Tom. It commands a view of the surrounding country for 40 or 50 miles, extending to the Catskills on the W., overlooking the Green mountains on the N., S., and E., and on the N. E. reaching to Monadnock mountain, in New Hampshire. This mountain is fertile to the summit, near which is a small lake or pond. Goodrich describes a phenomenon as having occurred here in 1784, called by the inhabitants *the bursting of a cloud*. About dawn of a certain morning, the tenants of a house on the banks of the Hoosic, on the western slope, were aroused by the roaring of the torrent, and had barely time to escape before their dwelling was swept away by the flood. The torrent wore a gully in the mountain 20 feet deep, and swept away the timber entirely from about 10 acres of land. Berkshire county abounds in sublime and picturesque scenery, and has become a favorite resort not only for tourists, but for citizens seeking pleasant summer residences. Hawthorne, Miss Sedgwick, Fanny Kemble, James, and others, have rendered their tribute to the charms of Berkshire scenery, by taking up their abode there for considerable periods. The Ice Hole, a narrow and deep ravine of great wildness, in Stockbridge, where the ice remains the year round; a fall of about 70 feet descent, amid wild scenery, in the Housatonic, in Dalton; the Natural bridge, on Hudson's brook, in Adams, where a fissure of from 30 to 60 feet deep, and about 500 long, has been worn through the limestone rock, forming a bridge 50 feet above the water; a rock of 30 or 40 tons, in New Marlborough, so nicely balanced that a finger can move it; and Hanging mountain, on the Farmington river, in Sandisfield, rising in a perpendicular wall above the river to the height of more than 300 feet; are, after the mountains already named, the most remarkable natural objects in Berkshire. Blue Hill, 11 miles S. W. from Boston, which commands a fine view of Boston harbor and the

ocean, is 635 feet high, being the most elevated land in eastern Massachusetts. On the side of Mount Toby, a hill of sandstone, elevated about 1000 feet above the Connecticut, is a cavern about 150 feet in length and 60 in depth. Nahant, a rocky promontory on the N. shore of Boston bay, extending 4 miles into the sea, is the most noted watering place in Massachusetts. It is about 9 miles N. E. of Boston, and commands a fine view of the ocean, and of the shipping entering and departing from the harbor. In addition to its good beach, Nahant has the charm of wildness given to it by the rugged rocks which form the promontory, and into the caves and recesses of which the sea surges at times with great violence. The mineral springs of this state have not acquired any great celebrity beyond her own limits; the principal are, one in the town of Hopkinton, impregnated with carbonic acid, and carbonates of lime and iron; one in Shutesbury, containing muriate of lime; and a chalybeate sulphur spring in Winchenden. The Quincy granite quarries, 6 or 8 miles S. of Boston, in a range of hills 200 feet high, are worthy of a visit.

Climate, Soil, and Productions.—The climate of Massachusetts is severe in winter, and on the sea coast, subject to chilling N. E. winds in the spring, that are very unfavorable to delicate lungs. According to observations made at Worcester in 1850–51, snow fell two days in October, and on 5 days in April, and one day in May. According to a register kept by Mr. Bond, at Cambridge, from May, 1851, to April, 1852, the mean temperature of 4 observations made between sunrise and 9 p. m., gave for May, 55.53; for June, 64.76; July, 71.40; August, 68.02; September, 61.09; October, 52.94; November, 34.80; December, 22.86; January, 20.80; February, 27.43; March, 32.94, and April, 41.02. The greatest cold was 8° below zero, January 16th, at sunrise; the greatest heat 98°, June 30th, at 3 p. m. North-west winds prevailed 149 days, S. W. 67, and N. E. 37 days, in 1850–51. It snowed 37 days in the same year, and rained 97; 219 days were fair, and 129 cloudy; 4577 inches of rain, and 61 of snow fell. The most unpleasant feature of the climate is the sudden changes, sometimes more than 40° in 24 hours. The settled weather of the winter is more regular, and perhaps on that account more healthful than farther south. The rivers are frozen for two or three months, and occasionally the harbors for as many weeks. Though vegetation is rather late in putting forth, it makes amends by its rapidity. The peach and apricot bloom about the middle of April, and cherry and apple about the same period in May. Though the soil and climate of Massachusetts are not the most favorable to agriculture, the skill and industry of her people have made even her rocky

soil to yield rich rewards to the husbandman, and there is probably no more scientific farming than in the Bay state. The best soils are in the middle and western parts of the state, in the valleys of her streams and rivers, and particularly those of the Connecticut and Housatonic. The poorest soil is in the flat, sandy counties of the south-east. Salt marshes abound near the coast. Senator Preston, of South Carolina, has said of Massachusetts, that though the most prosperous state in the confederacy, yet she literally exported none of the products of her soil but her rocks and her ice. Though she does not produce grain enough to supply her own consumption, she is enabled by her skill, enterprise, and industry in the production of manufactures, and by her wide extended commerce, generally to keep the balance of trade in her favor, and to support the densest population in the United States, in the greatest average amount of comfort. Her most important agricultural products are Indian corn, oats, Irish potatoes, rye, barley, buckwheat, fruits, butter, cheese, hay, maple sugar, and live stock; with considerable tobacco, wool, peas, beans, wheat, grass seeds, hops, bees, wax, and honey; and some wine, flax, silk, and molasses. In 1850 this state had 34,235 farms occupying 2,133,436 acres of improved land, (or about 63 acres to each farm,) producing 31,211 bushels of wheat; 481,021 of rye; 2,345,490 of Indian corn; 1,165,106 of oats; 43,709 of peas and beans; 3,585,384 of Irish potatoes; 112,385 of barley; 106,095 of buckwheat; 138,246 pounds of tobacco; 585,136 of wool; 8,071,370 of butter; 7,088,142 of cheese; 651,807 tons of hay; 121,595 pounds of hops; 795,525 of maple sugar; 59,508 of beeswax and honey; live stock valued at \$9,647,710; orchard products \$463,995; market products \$600,020; and slaughtered animals \$2,500,924.

Manufactures.—In manufactures, as indeed in most else requiring skill, industry, and enterprise, Massachusetts takes the lead. Though small in area, and with a churlish soil and climate, this state, through the aid of her manufactures, is more densely populated and more thickly dotted over with thriving towns and villages, than any member of the confederacy. By the census returns of 1850, she stands far before every other state in the amount of her woollen and cotton manufactures. According to the same census, there were in Massachusetts 9637 (the greatest relative amount in the Union) manufacturing establishments, each producing \$500 and upwards annually, of which 213 were cotton manufactories, employing \$28,455,630 capital, and 9293 male, and 19,437 female hands, consuming raw material worth \$11,289,309, and producing 298,751,392 yards of stuffs, and 353,660 pounds of yarn, valued at \$19,712,461; 119 woollen factories, employing \$9,089,342

capital, and 6167 males, and 4963 female hands, consuming raw material worth \$8,671,671, and producing 25,865,658 yards of stuffs, and 749,550 pounds of yarn, valued at \$12,770,565; 80 forges, furnaces, &c., employing \$2,578,350, and 2119 male hands, consuming raw material worth \$1,464,833, and producing 52,081 tons of pig, wrought, and cast iron, valued at \$2,959,078; invested in the manufacture of malt and spirituous liquors, \$457,500, consuming 80,000 bushels of barley, 19,400 of Indian corn, 26,600 of rye, 35,130 hogsheads of molasses, and 29 tons of hops, producing 25,800 barrels of ale, &c., 120,000 gallons of wine, whiskey, &c., and 3,786,000 gallons of rum; and 246 tanneries, employing \$1,377,725 capital, consuming raw material worth \$2,311,178, and manufactured leather valued at \$3,519,123.

Internal Improvements.—We would not speak in superlatives, but justice to Massachusetts seems to require it. While nature has dealt out her favors to her with a sparing hand, she has surpassed all other states in industrial and mechanical improvement, and has laid down more miles of railroad than any other member of the confederacy, population and area considered. Though not the first to enter the field in this kind of improvement, she has amply atoned for any temporary delay at the commencement by her subsequent energy and enterprise; and at the beginning of 1853 had 39 lines of railroad, numbering 1203 miles, completed, and 36 in course of construction. By these roads Boston communicates directly with every important town in Massachusetts, and with most of those of the neighboring states. There are three lines of continuous railroads, uniting the capital of the state with New York and with the intermediate towns of Rhode Island, Connecticut, and central Massachusetts. Two other lines connect Boston with Portland and the towns between them. Two, one through Vermont, and the other through central New Hampshire, bring her in direct intercourse with Burlington, Vermont, with Montreal, and with Ogdensburg; and another to Albany, opens an uninterrupted line of railway communication between Boston, Cincinnati, Terre Haute, and Chicago, and by the close of the present year (1853) will probably be united to St. Louis. See *Table of Railroads*, APPENDIX. Railroad communication has generally diverted public attention from canals, and in Massachusetts the beds of two canals, the Blackstone, from Worcester to Providence, and the Hampden and Hampshire canal from Northampton to Southwick, have been converted into tracks for railroads; so that the Middlesex canal, uniting Boston with Lowell, is the only important canal left in the state, with the exception of some short ones round the falls in the Connecticut and Merrimaek rivers.

Commerce.—In commerce, this state oc-

cupies the same prominence as in most else, being second only to New York in absolute amount; but if we regard population, first in this respect in the Union. Though, as before stated, she exports nothing of her native products but her rocks and her ice, yet her hardy sons explore every sea where the whale ranges, bringing home, after years of toil and endurance, rich cargoes of oil and bone, which are distributed over the world. Her citizens at home are no less industrious; calling to their aid the most ingenious machinery, and the powers of water and steam, they manufacture millions of yards of stuffs to be distributed, not only over their own country, but send them to South America, the West Indies, and even to Europe and China. She has also nearly monopolized the trade with Hindostan and Russia. The foreign imports for the fiscal year 1851-2 amounted to \$33,504,789, and the exports \$16,546,499; tonnage entered 645,944; cleared, 657,513; tonnage owned 767,739.72, (relatively the greatest in the Union) number of vessels built; (second only to Maine) 161, of which only 4 were steamers, with an aggregate tonnage of 48,001.56. Of the tonnage owned in the state 53,258.97 were employed in the whale, 48,938.48 in the cod, and 54,695.86 in the mackerel fishery. In 1848 the tonnage of Massachusetts engaged in the cod fisheries, amounted to 44,754, and in the mackerel fisheries to 37,696 tons. The importation of whale oil in 1849 was 204,000 barrels, being three-fifths of the total amount imported into the United States. More than half of the cod and mackerel fisheries is carried on in Massachusetts bottoms. There is great irregularity in this branch of trade, the product in 1850 for example being twice that of 1849 in the cod fishery, and but little more in the latter year than in 1838. This department of industry, as a distinct employment, is almost peculiar to New England, and more especially to Massachusetts, which, perhaps, has a greater amount of capital and hands employed in the fisheries generally, (and in the whale fisheries *certainly*,) than any other country in America, if not in the world. The entire whaling tonnage of the United States for the year 1851, was 184,644; in the cod fisheries 87,475, and in the mackerel 59,539. Taking the known results of other years for data, if we give three-fifths of this to Massachusetts we shall not be very far from the truth. A recent return of the assessors of Massachusetts, gave the capital invested in the fisheries generally at \$13,619,578, employing 20,313 persons, and yielding \$9,622,611 in fish and oil. The future prospect of the cod and mackerel fisheries is, notwithstanding, not flattering, as we have been almost entirely superseded in foreign markets. We learn from De Bow's Resources of the South and West, that the two Canadas exported between 1840 and 50,

fish of the value of \$7,000,000, and Halifax, in one year, \$275,000. The total amount of mackerel inspected in Massachusetts in 1852, was 196,768½ barrels, and of all kinds, pickled and smoked, 333,332½ barrels. The greatest amount (389,944 barrels,) was inspected in 1831, the smallest (58,309 barrels) in 1840. These items are given to show the irregularity of the trade.

Education.—In Massachusetts was begun that system for the diffusion of knowledge among all classes, by means of common schools, which has since extended itself to the Middle and Western states, is slowly making its way in the Southern States, and even into Europe; and wherever it goes carrying with it the spirit of liberty, for which it seems, (humanly speaking) the only fit preparation. Though many of her sister states are now rivalling Massachusetts in the excellence of their common schools and other educational institutions, yet to her belongs the undoubted honor of having first extended her care to the intellectual culture of her humblest citizens; the rich reward of which is seen not only in the number of splendid names that adorn her literature, but in the distinguished sons she has sent out to form the legislators, professors, authors, and teachers of other states. There are four colleges, three theological seminaries, and two medical schools in Massachusetts. (See APPENDIX.) Of these Harvard College, at Cambridge, stands first in reputation in the United States, unless Yale College be considered its rival in this respect. In 1851 there were 3987 public schools in the state of Massachusetts, attended in winter by 199,429 pupils, and in summer by 179,497. Entire number of children in the state 235,289; number of incorporated academies 69, unincorporated academies and private schools 785, with an aggregate attendance of 20,812; so that, independent of colleges, there are in the different schools about 220,000 pupils, or more than one-fifth of the population. The towns raised by taxation \$915,840, the surplus revenue income \$9,998, and the income of the school fund (\$955,120,) about \$40,000; making a total of nearly \$1,000,000 of annual expenditures for public free schools, to which may be added more than \$350,000 for tuition in private schools and academies. There were 91,530 volumes in the school libraries in 1851, and apparatus worth \$23,826. There are three Normal schools, (for the education of teachers,) one at Westfield, another at West Newton, and a third at Bridgewater, supported at an annual expense of \$8,174, and training 225 persons for the office of teachers.

Religious Denominations.—Of the 1430 churches in Massachusetts, in 1850, the different sects of Baptists owned 252; the Christians, 29; the Congregationalists, 439; the Episcopalians, 53; the Friends, 37;

the Methodists, 255; the Presbyterians, 15; the Roman Catholics, 36; the Unitarians, 162, and the Universalists, 117. The remaining churches were owned by the Free Church, French Protestants, German Protestants, Jews, Liberals, Lutherans, Restorationists, Second Advent Church, Shakers, Swedenborgians, and the Union Church—giving 1 church to every 695 persons. Value of church property, \$10,205,284.—See *Table of Religions*, APPENDIX.

Public Institutions.—This state abounds in institutions of this class, conspicuous among which are the State Lunatic Asylum at Worcester, founded in 1832. This is considered a model of its kind, and has been very successful in the cure of patients. Of 2306 lunatics admitted in 13 years, over 1000 were discharged cured. The average number of patients is about 400. Of the 466 inmates in the asylum, November, 1851, 208 were paupers. The McLean Asylum for the Insane is also an institution where great pains are taken to interest the minds of patients, to surround them with agreeable objects, and to avoid severe remedies. It was established in 1818, and named from its founder. The state reform school at Westborough is an institution for the reformation of juvenile offenders; expenses for the year, \$31,224.47. In November, 1850, there were 310 boys in the school. Four hours of each day are devoted to school, and six to labor. The other charitable institutions being mostly located in Boston, will be found described under that head. The state prison, located in Charlestown, was founded in 1800. The number of prisoners (September, 1851) was 472, 399 of whom were confined for offences against property, and 73 against the person; 168 were natives of Massachusetts, 146 of other states, and 158 were foreigners. Among the convicts were 35 negroes, and 15 mulattoes. Expenses, \$45,843.78; receipts, \$45,344.93. The whole number of prisoners in the jails and houses of correction for 1851 was (including 1471 debtors) 11,628, of whom 5072 were foreigners, and 498 colored. Expenses, \$91,548; value of labor, \$28,730. In 1850, Massachusetts had 762 public libraries, with an aggregate of 415,658 volumes.

Government, Finances, &c.—The governor and lieutenant-governor are elected annually by the people, the former receiving \$2500 per annum, and the latter \$4 per diem. The senate consists of 40, and the house of representatives of 356 members, both elected annually by popular vote. Massachusetts is entitled to 11 members in the national house of representatives, and to 13 electoral votes for president. The judiciary consists—1. Of a supreme court, comprised of 6 judges, appointed by the governor and council, and holding office during good behaviour. This court has exclusive jurisdiction in all capital and chancery suits, and in all civil cases

where the amount exceeds \$600 in Suffolk, or \$300 in the other counties; 2. Of a court of common pleas, composed of 1 chief and 6 associate judges, which has jurisdiction in all cases exceeding \$20, and in criminal cases not capital, except in Suffolk, where the municipal court has cognizance in criminal actions; 3. Of a justices' court; 4. Of the police court of Boston; and 5. Of commissioners of insolvency. The judges of the supreme court have salaries, the chief of \$3500, and the associates of \$3000; of the court of common pleas, the chief has \$2300, and the associates \$2100; of the police court, \$1500 per annum; and the commissioners of insolvency are remunerated by fees not to exceed \$1500 each. [A convention is now (July, 1853) sitting to amend the constitution.] The assessed value of property in Massachusetts, in 1850, was \$546,003,057; the public debt in 1852 was \$6,391,030, of which \$5,049,555 was contingent; productive, \$7,821,000; unproductive, \$1,607,000; and average expenditure, \$500,000, exclusive of debt and schools. There were in Massachusetts in January, 1853, 187 banks, with an aggregate capital of \$43,270,500, a circulation of \$21,172,369, and in coin, \$3,563,782. There are besides 54 saving banks, 45 of which reported in 1851 deposits made by 86,537 persons, amounting to \$15,554,088.88 securely invested, and yielding an average dividend for 5 years of 6.21 per cent.

History.—Massachusetts has been the theatre of some of the most stirring events in the history of our country. Here the mental conflict, as well as the struggle in arms, with Great Britain commenced. The first settlement was made at Plymouth, December 22, 1620, by the Pilgrim Fathers, the founders of our public school system, now scattering blessings wherever it goes, and of those principles of endurance and private virtue which have been the stay of the land in every hour of peril. What if they did transmit some bigotry and intolerance along with it: in human affairs we expect nothing perfect; and stern virtues in their excesses are often nearly allied to vices. If men believe ardently, they are apt to support strongly; and it requires a great enlargement of views or great forbearance, to tolerate that which is to us clearly wrong. Indifference may tolerate every thing; but it is next to impossible for zeal to do so.

In 1675, a native chief, named Philip of Pokaneket, having aroused the different tribes to make a united effort to expel the English, made an attack upon the inhabitants of Swansey, in which a number of the colonists perished; this kindled a war of savage incursions, lasting for three years, which was terminated by the capture and death of Philip, and the complete overthrow of the power of the Indian in Massachusetts. The Revolutionary contest began in this

state, with the skirmish at Lexington, in April, 1775, which was followed by the battle of Bunker's Hill, June 17th of the same year, and the evacuation of Boston by the British troops in March, 1776, which forever destroyed British rule in Massachusetts. This state has since been the scene of but one struggle in arms, when an attempt was made in 1786 to resist the authorities by a party of rebels led on by one Daniel Shays. This revolt led to no important engagement, and was finally put down in the commencement of the following year. Massachusetts has given two presidents to the United States, (the elder and younger Adams,) and has sent some of the most distinguished statesmen and orators to the national councils.

MASSACK, a post-office of McCracken co., Kentucky.

MASSANUTTEN, a post-office of Page co., Virginia, 144 miles N. W. from Richmond.

MASSENA, a post-township, forming the N. extremity of St. Lawrence co., New York, on the St. Lawrence river. Population, 2870.

MASSENA CENTRE, a post-village of St. Lawrence co., New York.

MASSEY'S CREEK, of Greene co., Ohio, flows into the Little Miami river.

MASSIE'S MILLS, a post-office of Nelson co., Virginia.

MASSILLON, a handsome and flourishing town of Perry township, Stark co., Ohio, on the Tuscarawas river, and on the Ohio canal, 112 miles N. E. from Columbus, and 65 miles S. from Cleveland. The Ohio and Pennsylvania railroad connects it with Pittsburg on one hand, and with the railways of Indiana on the other. The town is regularly planned and compactly built, and contains a number of handsome residences. It is situated in a highly productive and populous farming district, which is liberally supplied with hard timber, stone coal, and water-power. Large quantities of flour, wheat, and Indian corn are shipped by the canal at this place. Wool is also an extensive article of export. Massillon contains churches of 7 denominations, 1 bank, 3 iron foundries, with machine shops, and 1 woollen factory; 3 newspapers are published here. Population in 1853, estimated at 4000.

MASSILLON, a post-office of Allen co., Ind.

MASSILLON, a post-village of Cedar co., Iowa, near the E. line of the county, 40 miles N. E. by E. from Iowa City.

MASTEN'S CORNER, a post-office of Kent co., Delaware.

MASTERSONVILLE, a post-office of Lancaster co., Pennsylvania.

MASTERTON, a post-office of Monroe co., O.

MAST HOPE, a railroad station in Wayne co., Pennsylvania, on the New York and Erie railroad, 126 miles from New York city.

MAST YARD, a post-office of Merrimack co., New Hampshire.

MATAGORDA, a county in the S. E. part of

Texas, on the Gulf of Mexico, and on Matagorda bay. It is intersected by the Colorado river and the Caney bayou. The surface is an alluvial plain, which is destitute of timber, excepting the margins of the streams. The Colorado river is navigable for steamboats, and flows through a fertile valley, in which cotton, sugar, and corn flourish. The uplands are mostly uncultivated. In 1850 the county produced 1613 bales of cotton; 1394 hogsheads of sugar, (more than any other in the state excepting Brazoria;) 10,336 bushels of corn, and 39,400 of sweet potatoes. It contained 2 churches, 1 newspaper office, and 80 pupils attending academies or other schools. Capital, Matagorda. Population, 2124, of whom 916 were free, and 1208, slaves.

MATAGORDA, capital of Matagorda county, Texas, is situated on the bay of the same name, at the mouth of the Colorado river, 250 miles S. E. from Austin City. The river is navigable for steamboats to the city of Austin. Matagorda has considerable trade, and is the depot for the produce of the Colorado valley, which is one of the richest portions of the state, producing cotton, sugarcane, rice, indigo, and maize. The sea breeze, which blows during the summer, renders this town a favorite summer residence of citizens from the interior. A lighthouse has lately been erected here. A weekly newspaper is published. Pop. in 1853, about 1200.

MATAGORDA BAY, an extensive lagoon of Texas, at the mouth of the Colorado river. Length about 45 miles, greatest breadth about 7 miles.

MATAMORA, a small post-village of Hardeman co., Tennessee, near the Hatchee river, 67 miles E. from Memphis.

MATAMORAS, a village of Dauphin county, Pennsylvania, 13 miles N. from Harrisburg, has 123 inhabitants.

MATAMORAS, a post-office of Montgomery county, North Carolina.

MATAMORAS, a small village of Blackford county, Indiana, on the Salamonie river, about 85 miles N. E. from Indianapolis.

MATASKA, a small village of Itawamba county, Mississippi.

MATAWAMKEAG river, in the N. E. part of Maine, rising in Aroostook county, falls into the Penobscot in Penobscot county.

MATAWAMKEAG, or MATTAWAMKEAG, a post-office of Penobscot co., Maine.

MATCHAPONIX BROOK, of New Jersey, rises in Monmouth county, and falls into the South river in Middlesex county, near Spottswood.

MATHERTON, a post-office of Ionia co., Michigan.

MATILDA FURNACE, a small village of Mifflin co., Pennsylvania.

MATILDAVILLE, a small post-village of Clarion county, Pennsylvania, on Clarion river, about 6 miles from its mouth.

MATINICUS, a post-office of Lincoln co., Me.

MATOUCHIN, a village in Woodbridge township, Middlesex county, New Jersey, on the New Jersey railroad, about 7 miles N. E. from New Brunswick.

MATTAPOISETT, a post-office of Plymouth co., Massachusetts.

MATTAPONY RIVER, in the E. S. E. part of Virginia, rises in Spottsylvania county, and flowing in a general S. E. course after forming the boundary between King and Queen and King William counties, unites with the Pamunkey to form the York river.

MATTAMISCONTIS, a township in Lincoln co., Maine. Population, 54.

MATTAWAN, a post-village of Van Buren county, Michigan, on the Michigan Central railroad, 156 miles W. from Detroit.

MATTEWAN, a post-village of Fishkill township, Dutchess county, New York, on Fishkill creek, about 90 miles S. from Albany. It has abundant water-power, and contains manufactories of iron and cotton fabrics. Population estimated at 1900.

MATTHEWS, a county in the E. part of Virginia, bordering on Chesapeake bay, near its southern extremity. It consists of a peninsula washed by Piankatank river on the N., by the Chesapeake on the E., and by Mobjack bay on the S. W., and joined to the main land by an isthmus about 1 mile wide. Length, 20 miles; greatest breadth, 8 miles. Area, about 90 square miles. The surface is extremely level; the soil is sandy and moderately fertile. Wheat, potatoes, oats, hay, and live stock are the staples. The forests consist of pine, chestnut, and a species of oak, valuable for ship-building, which is an important branch of business in this county. In 1850 the county produced 7640 bushels of wheat; 13,292 of sweet potatoes; 19,405 of oats, and 1288 tons of hay. There were 2 saw mills, 1 tannery; 9 churches, and 400 pupils attending public schools. MAUCH CHUNK, a flourishing town, capital of Carbon county, Pennsylvania, on the right bank of the Lehigh river, at the mouth of Mauch Chunk creek, 100 miles N. E. from

Harrisburg, and 36 miles W. N. W. from Easton. The surrounding region is traversed by several rugged and sterile mountain ranges, which abound in coal and iron ore. The banks of the river near this place are high and precipitous, and the scenery is remarkably wild. Mauch Chunk is built in one of the narrow ravines through which the river passes, where there is scarcely room for buildings, and there are no gardens in the place. The ground being all occupied in Mauch Chunk proper, they are now building in what is termed Upper Mauch Chunk, on the top of the hill, and on the E. bank of the river. The latter quarter is called Greenwood. Mount Pisgah, which is a short distance N., rises about 1000 feet above the surface of the Lehigh. Mauch Chunk is a place of active business, particularly in coal and lumber. The bed of coal on the top of Mauch Chunk mountain, or Summit hill, is about 50 feet in thickness. In 1850, 722,000 tons of coal were exported from Carbon county by the Lehigh company's canal, which has contributed greatly to the prosperity of this region. The amount paid out by the Company in the year was computed at \$603,000. In 1851 the produce of the mines amounted to 989,296 tons. The navigation of the river has been improved as far as Whitehaven, 25 miles above. The works on this part of the line are truly magnificent; there are dams 50 feet high, and locks of solid stone, which raise the water 33 feet. A railroad has been constructed to the mines of Summit hill, about 9 miles W. of the town. The cars, loaded with coal, descend by their own gravity to the landing, and after being emptied have been heretofore drawn up the plane by mules. But now the labors of the mules are superseded. A "back track" has been constructed, which is regarded as a master-piece of bold and successful engineering. From the chutes where the coal cars are unloaded at the town of Mauch Chunk, they return by their own weight to the foot of Mount Pisgah. They are then drawn to the top of that mountain on an inclined plane by means of a stationary engine. From the head of this plane they pass by their own gravity along a railway of 6 miles, to the foot of another inclined plane. To the top of this they are again raised by steam, and thence descend to the different mines, where they are filled with coal, and again descend by their own weight to the chutes. Two papers are issued here. Pop. in 1850, 3500.

MEIGS county, in the S. S. E. part of Ohio, bordering on Virginia, contains about 350 square miles. The Ohio river washes the eastern and part of the southern border. The surface is hilly and broken, and the soil is chiefly composed of clay. It is more remarkable for its mineral than its agricultural riches. The hills along the Ohio river contain very extensive mines of excellent coal, from which 5,000,000 bushels have been exported in a year. The salt-works of this county are probably as extensive as any in the Western states. In 1851 five or six companies were formed for the manufacture of salt, near the Ohio river. Wells have been sunk to the depth of 1000 feet, each of which throws up 50 gallons of brine per minute. Wheat, Indian corn, wool, and butter are the staples. In 1850 this county produced 113,091 bushels of wheat; 267,404 of corn; 44,142 pounds of wool, and 173,582 of butter. It contained 37 churches, 1 newspaper office; 5366 pupils attending public schools, and 160 attending an academy. Capital, Pomeroy. Pop., 17,971.

MEMPHIS, a post-village and steamboat landing of Pickens co., Alabama, on the Tombigbee river below Columbus.

MEMPHIS, a flourishing city and port of entry of Shelby county, Tennessee, is beautifully situated on the Mississippi river, just below the mouth of Wolf river, and on the 4th Chichasaw bluff, 420 miles below St. Louis, and 209 miles W. S. W. from Nashville. It is the most populous and important town on the river between St. Louis and New Orleans, and occupies the only eligible site for a commercial depôt from the mouth of the Ohio to Vicksburg, a distance of 650 miles. The bluff on which it stands is elevated about 30 feet above the highest floods, and its base is washed by the river for a distance of three miles, while a bed of sandstone projects into the stream and forms a convenient landing. The appearance of Memphis from the river is remarkably fine. An esplanade, several hundred feet wide, extends along the bluff in front of the town, and is bordered with blocks of large warehouses. Travellers who have recently visited Memphis, express astonishment at the signs of improvement and commercial activity which are here exhibited. The population has been doubled since 1845.

It contains 6 or 7 churches, 1 academy, a medical college, 2 banks, and a telegraph office. The United States government has recently established a naval depot at this place. The river is deep enough to float the largest ship of war from this point to its mouth. The building of steamboats has been commenced, and manufactories of cotton, iron, and ropes have been established. Six weekly and several daily newspapers are published here. Memphis is the western terminus of the Memphis and Charleston railroad, part of which is in operation. Another railroad is in course of construction from this place to Nashville, and one also projected to Little Rock, Arkansas. Steamboats make frequent passages between this and other ports on the river. The quantity of cotton annually shipped here is estimated at above 100,000 bales. The population in 1840, was 3300, in 1850 it amounted to 8841, and in 1853 it is estimated at 12,000.

METOMPKIN, post-office of Accomack co., Va.

METROPOLIS CITY, a post-village, capital of Massac co., Illinois, on the Ohio river, 36 miles from its mouth, and 214 miles S. by E. from Springfield. Two newspapers are published here. Population, about 600.

METS, a post-office of Steuben co., Ind.

METUCHEN, a post-office of Middlesex co., New Jersey.

MEXICO, a post-township of Oxford county, Maine, on the left bank of the Androscoggin river, about 38 miles W. N. W. from Augusta. Population, 482.

MEXICO, a post-township of Oswego co., New York, on Lake Ontario. Pop., 4221.

MEXICO, a post-village in the above township, on Salmon creek, about 35 miles N. from Syracuse. It contains 3 or 4 churches, an academy, and several mills. Population, over 500.

MEXICO, a post-village of Juniata co., Pa., on the Juniata river and canal, 42 miles N. W. from Harrisburg.

MEXICO, a post-office of Jefferson co., Ala.

MEXICO, a post-village of Wyandot co., Ohio, on the Sandusky river, 78 miles N. by W. from Columbus.

MEXICO, a small post-village of Miami co., Indiana, on the plank-road from Peru to Rochester, 5 miles N. N. W. from the former.

MEXICO, a small post-village, capital of Audrain co., Missouri, on a fork of Salt river, 50 miles N. N. E. from Jefferson city, contains a few stores and dwellings, and about 100 inhabitants.

MEXICO, GULF OF. See UNITED STATES.

MEYER'S MILL, a post-office of Somerset co., Pennsylvania.

MEYERSVILLE, a post-office of De Witt co., Texas.

MIAMI river, Ohio, rises in Hardin county, in the N. W. central part of the state. Its general course is nearly S. W., and after passing Troy, Dayton, and Hamilton, it empties itself into the Ohio river at the S. W. extremity of the state, about 20 miles below Cincinnati. Its principal tributaries are the West branch, the Mad river, and the Whitewater river. Its length is computed at about 150 miles. It is a beautiful and rapid stream, flowing through a highly productive and populous valley or plain, in which limestone and hard timber are abundant. The Miami canal follows the course of the river for about 70 miles. The river and canal furnish extensive water-power.

MIAMI, a county in the W. part of Ohio, contains about 400 square miles. It is intersected by the Miami river, by the West branch of that river, and also drained by Greenville and Panther creeks. The surface of the eastern part is rolling, and that of the western part more level. The soil is rich and under good cultivation. Indian corn, wheat, oats, hay, butter, cattle, and swine are the staples. In 1850 this county produced 1,129,456 bushels of corn; 222,122 of wheat; 163,987 of oats; 11,057 tons of hay, and 491,676 pounds of butter. It contained 43 churches, 7 newspaper offices; 10,579 pupils attending public schools. The county contains an abundance of excellent limestone. It is copiously supplied with water-power, and is intersected by the Miami and Erie canal.

One or two railroads are in course of construction through this county. Capital, Troy. Population, 24,996.

MIAMI, a county in the N. central part of Indiana, contains 384 square miles. It is intersected by the Wabash and Eel rivers. The surface is hilly near the rivers, and almost level in other parts. The soil is fertile. Wheat, corn, oats, pork, and beef are the principal articles of export. In 1850 this county produced 548,338 bushels of corn; 114,454 of wheat; 29,569 of oats, and 3701 tons of hay. It contained 12 churches, 1 newspaper office; 2500 pupils attending public schools, and 170 attending other schools. The Wabash and Erie canal passes through the county, and a railroad is in course of construction from Indianapolis to Peru. Capital, Peru. Population, 11,304.

MIAMI, a post-village of Dade county, Florida, on Key Biscayne bay, at Cape Florida. A lighthouse has been erected, and a company of United States troops stationed here. It is considered a desirable winter residence for invalids.

MIAMI, a township in Clermont county, Ohio. Population, 2690.

MIAMI, a township in the N. part of Greene county, Ohio, intersected by the Mad river and Lake Erie railroad. Population, 1865.

MIAMI, a post-township forming the S. W. extremity of Hamilton county, Ohio, intersected by the Miami river. Pop., 1556.

MIAMI, a township forming the S. W. extremity of Logan co., Ohio. Pop., 775.

MIAMI, a township in the S. part of Montgomery co., Ohio, intersected by the Miami river, the Ohio canal, and the railroad connecting Dayton with Hamilton. Pop., 3456.

MIAMI, a post village of Miami co., Indiana, on the Peru and Indianapolis railroad, 10 miles S. from Peru.

MIAMI, a post-office of Saline co., Mo.

MIAMISBURG, a flourishing post-village of Miami township, Montgomery county, Ohio, on the Miami river and canal, 10 miles below Dayton, with which it is connected by railroad. The village is neatly built in the midst of a rich and populous neighborhood. The river affords extensive water-power, and is crossed by a covered bridge. Miamisburg contains 3 or 4 churches, 1 cotton factory, 1 woollen factory, and 1 iron foundry. About one mile from the town is a remarkable mound of a conical form, 67 feet high. It is the largest one in the northern states, except the Mammoth Mound at Grave creek, below Wheeling.

MIAMISVILLE, a post-office of Clermont co., Ohio.

MIAMITOWN, a post-village of Hamilton co., Ohio, on the Miami river, 14 miles W. N. W. from Cincinnati, contains several hundred inhabitants.

MIANUS, a post-office of Fairfield co., Ct.

MICANOPY, a post-office of Alachua co., Fla.

MICCOSUKEE, a post-office of Leon co., Fla.

MICHAELSVILLE, a post-village in Harford co., Maryland.

MICHESEBEE, a small river of Saginaw co., Michigan, flows into the Shiawassee $1\frac{1}{2}$ miles from its junction with the Flint.

MICHETTE, a township in Martin co., Indiana. Population, 953.

MICHIGAN, one of the five great Lakes of North America, connected with the St. Lawrence river, situated between $41^{\circ} 30'$ and $46^{\circ} N.$ lat., and between $85^{\circ} 50'$ and $88^{\circ} W.$ lon. It is the largest lake that is wholly included within the United States. The principal portion lies between the state of Michigan on the E. and Illinois and Wisconsin on the W.; but the N. E. extremity, to the extent of about 100 miles, is comprised within the state of Michigan. Its length, following the curve, is near 350 miles; its greatest breadth, about 90 miles. The surface of the lake is about 600 feet above the level of the sea; the depth is stated to be 900 feet; some have estimated its mean depth as high as 1000 feet; area estimated at 20,000 square miles. The shore of the lake is generally low, being formed of limestone, rock, clay, or sand. It never has high cliffs, like those on the upper part of the Mississippi river. In accordance with the spirit of the age, the lake appears to be moving westward, as the water is constantly, though slowly, receding from the Michigan shore, and encroaching upon that of Wisconsin. On the E. shore, the sand thrown up by the waves during a heavy sea soon becomes dry, and is carried inland by the action of the winds. This loose sand forms hills ranging in height from 10 to 150 feet, the forms of which are constantly changing. (See Laphan's Gazetteer of Wisconsin, p. 132-3.) Lake Michigan is destitute of islands, except a few near its N. E. extremity. It is usually clear of ice about the middle or latter part of March; but as the straits of Mackinaw remain frozen considerably later, steamers from the E. seldom reach Milwaukee before the middle of April, and they are sometimes prevented by the ice from arriving before the middle of May. Lake Michigan has but few bays on its shores, and fewer good harbors. Among the latter may be mentioned Little Traverse bay, in the N. part of the Lower Peninsula, and Grand Haven, at the mouth of Grand river, in Ottawa county, Michigan. Green bay, lying principally within the limits of Wisconsin, is the only considerable bay on Lake Michigan. See GREEN BAY.

MICHIGAN, one of the more recently settled of the North-Western States, occupies two peninsulas, the southern one lying between Lakes Erie, St. Clair, and Huron on the E., and Lake Michigan on the W.; and the northern between Lakes Michigan and Huron on the S., and Lake Superior on the N. The whole is bounded N. by Lake Su-

perior, E. by the straits of St. Mary, Lake Huron, St. Clair river and lake, Detroit river and Lake Erie, (all which separate it from Canada West,) on the S. by Ohio and Indiana, and on the W. by Lake Michigan and Wisconsin, from the latter of which it is partly separated by the Menomonee and Montreal rivers. Michigan lies between 41° 40' and 47° 30' N. lat., (if we exclude Isle Royale, a dependency of this state,) and between 82° 12' and 90° 30' W. lon. The northern peninsula is about 320 miles in extreme length from S. E. to N. W., and 130 in its greatest breadth, and the southern about 283 from N. to S., and 210 from E. to W. in its greatest width. The joint area of the two peninsulas is 56,243 square miles, or 35,595,520 acres, of which only 1,923,582 were improved in 1850. About two-fifths of the area is included in the northern peninsula.

Population.—Though originally settled by the French, the great bulk of the population is from the New England and Middle States. A large portion of the latter is of New England descent. The number of inhabitants in Michigan in 1810, was 4762; 8896 in 1820; 31,639 in 1830; 212,267 in 1840, and 397,654 in 1850, of whom 208,471 were white males, 186,626 white females; 1412 colored males, and 1145 colored females. There were also 72,611 families, occupying 71,616 dwellings. Of the entire population, 140,648 were born in the state, 200,943 in other states of the Union, 10,620 in England, 13,430 in Ireland, 2448 in Wales, 14,008 in British America, 10,070 in Germany, 945 in France, 3291 in other countries, and 1211 whose places of birth were unknown, making about 12 per cent. of the population of foreign birth. In the twelve months preceding June 1st, 1850, 1190 paupers received aid, of whom 541 were foreigners, and in the same period there were 4520 deaths, or about 12 in every one thousand persons. Of 122 deaf and dumb, 1 was a colored person; of 122 blind, none were colored; of 136 insane, 1 was colored, and of 190 idiotic, 3 were colored.

Counties.—Michigan is divided into 64 organized counties, viz. Allegan, Barry, Berrien, Branch, Calhoun, Cass, Chippewa, Clinton, Eaton, Genessee, Hillsdale, Houghton, Huron, Ingham, Ionia, Jackson, Kalamazoo, Kent, Lapeer, Lenawee, Livingston, Macomb, Marquette, Mackinaw, Mason, Midland, Montcalm, Monroe, Newago, Oakland, Oceana, Ontonagon, Ottawa, Saginaw, Sanilac, St. Clair, St. Joseph, Schoolcraft, Shiawassee, Tuscola, Van Buren, Washtenaw, Wayne, besides 21 unorganized counties. Capital, Lansing.

Cities and Towns.—The towns of this state exhibit the same rapid growth which is so wonderful a characteristic of the Western States generally. Detroit, the largest town in the state, had, in 1850, a population of 21,019. The other principal towns are Ann Arbor,

population, 4868; Jackson, 4147; Flint, 3304; Grand Rapids, 3147; Ypsilante, 3051; Adrian, 3006; Marshall, 2822; Pontiac, 2820; Monroe City, 2813; Tecumseh, 2679; Kalamazoo, 2507; Coldwater, 2166; and Clinton, 2130. These populations, as in New England, sometimes include the townships.

Face of the Country, Geology, and Minerals.—The southern peninsula of Michigan, so interesting in its agricultural and economical aspects, is rather tame in its topographical features, as there is no considerable elevation (compared with the country immediately around it) within its whole extent, though the ridge which divides the waters flowing into Lakes Huron and Erie from those flowing into Lake Michigan, is 300 feet above the level of the lakes, and about 1000 above the sea. The country, however, may be generally characterized as a vast undulating plain, seldom becoming rough or broken. There are occasional conical elevations of from 150 to 200 feet in height, but generally much less. The shores of Lake Huron are often steep, forming bluffs; while those of Lake Michigan are coasted by shifting sand-hills of from 100 to 200 feet in height. In the southern part are those natural parks, thinly scattered over with trees, called in the parlance of the country "oak openings;" and in the S. W. are rich prairie lands. The northern peninsula exhibits a striking contrast, both in soil and surface, to the southern. While the latter is level or moderately undulating, and luxuriantly fertile, the former is picturesque, rugged, and even mountainous, with streams abounding in rapids and waterfalls—rich in minerals, but rigorous in climate, and sterile in soil. The Wisconsin or Porcupine mountains, which form the watershed between Lakes Michigan and Superior, are much nearer the latter than the former, and attain an elevation of about 2000 feet in the N. W. portion of the peninsula. The E. part of this division of the state is undulating and picturesque, but the central hilly, and composed of table-land. The shores of Lake Superior are composed of a sandstone rock, which in many places is worn by the action of the wind and waves into fancied resemblances of castles, &c., forming the celebrated Pictured Rocks; while the shores of Lake Michigan are composed of a limestone rock. The streams on the northern slope of the Porcupine mountains have a rapid descent, and abound in picturesque falls and rapids. The north peninsula is primitive, and the southern secondary; but primitive rocks are scattered over the plains of the latter of more than 100 tons weight, most abundant on the borders of the great lakes, on the flanks of valleys, and where traces of recent floods are apparent.

Michigan, in its northern peninsula, possesses probably the richest copper mines in the world. A block of almost pure copper,

weighing some tons, and bearing the arms of the state, rests imbedded in the walls of the National Monument at Washington. The region from which this block was taken lies on the shores of Lake Superior, near the mouth of the Ontonagon river. The same mineral abounds in Isle Royale, near the N. shore of Lake Superior. Iron, said to be of a very superior quality, is found in a district about 60 miles S. E. of the great copper region, as well as in some other parts of Michigan. The other minerals known to exist in this state, whose mineral resources are very imperfectly developed as yet, are lead, gypsum, peat, limestone, marl, and some coal. An excellent sand for the manufacture of the finer kinds of glass-ware is found on the shores of Lake Michigan as well as Lake Erie. The copper mines in the northern peninsula are estimated to have produced within the past year, (March, 1853,) nearly 4000 tons of copper, worth, on the seaboard, \$1,500,000. Great activity prevails in the mining region this year; new discoveries are being made, an increased number of hands employed, and additional machinery erected. A mass of copper, weighing 5072 pounds, sent from Michigan, is now (1853) exhibited at the World's Fair in New York.

Lakes, Rivers, and Islands.—Michigan is fairly entitled to the soubriquet of "The Lake State," surrounded as it is by the largest fresh water lakes on the globe. The sea-like Superior laves the shores of the northern peninsula for more than 350 miles, with its stormy waves, while Lake Michigan washes the western shore of the southern peninsula for nearly the same distance. Lake Huron, the N. E., for 300; and Lakes Erie and St. Clair, the S. E., for about 40 and 80 miles respectively; giving to Michigan a lake coast of considerably more than 1000 miles. The small lake, St. Clair, lies about midway between Lakes Huron and Erie, with which it communicates by the straits (commonly called rivers) St. Clair and Detroit, each about 25 miles in length. There are a number of small lakes in Michigan of no importance to navigation, which yet add to the general picturesqueness of the state. The straits of Mackinaw (formerly written Michilimackinac) separate the southern from the northern peninsula, and connect the waters of Lakes Michigan and Huron by a navigable channel. Finally, the straits of St. Mary unite the waters of Lake Huron with Lake Superior, but here unfortunately occurs a bar to the navigation, in a rapid called the Sault St. Mary, which has a descent of about 22 feet in half a mile. A ship-canal is now being excavated, which it is expected will soon enable vessels to surmount this impediment. The rivers of Michigan are not large; the most important in the southern peninsula, on the W., (commencing

at the S.,) are the St. Joseph's, Kalamazoo, Grand, Maskegon, and Manistee, all emptying into Lake Michigan; and on the E. are the Au Sable and Saginaw, flowing into Lake Huron, and the Huron and Raisin, discharging their waters into Lake Erie. The Saginaw is formed by a number of branches, proceeding from almost every point of the compass. The rivers of the northern peninsula are also small, and, as has been before stated, those descending into Lake Superior have short and rapid courses, obstructed by frequent falls and rapids, which oppose navigation, but furnish valuable mill-sites. The principal rivers in this section are, the Menomonee, Montreal, and Ontonagon. The Menomonee, forming part of the boundary between Wisconsin and Michigan through the greater part of its course, empties itself into Green bay. The Montreal also forms a portion of the same boundary, but discharges its waters into Lake Superior, as does the Ontonagon, about 50 miles farther E. Keweenaw bay, on the northern peninsula, opens into Lake Superior; and Green bay, in the S. W. of the same peninsula, opens into Lake Michigan. This bay is partly in Wisconsin. Great and Little Traverse bays project from Lake Michigan into the N. W. of the southern peninsula, and Thunder and Saginaw bays, from Lake Huron, extend into the N. E. of the same peninsula. The St. Joseph's, Kalamazoo, Grand, and Maskegon have courses of from 200 to 300 miles, and are navigable from 40 to 50 miles for vessels of light draught. There are several small islands belonging to Michigan. The most important of these are Isle Royale, in Lake Superior, valuable for its copper mines; and Mackinaw, Beaver, Bois Blanc, and Drummond islands, in and near the straits of Mackinaw.

Animals.—The wild animals of Michigan are the wolverine, black bear, wolf, elk, deer, moose, lynx, wildcat, panther, fox, martin, raccoon, porcupine, opossum, weasel, skunk, gopher, squirrel, marmot, rabbit, hare, with some beavers, otters, muskrats, and minx.

Objects of Interest to Tourists.—The island of Mackinaw, in the straits of the same name, already visited for its picturesque beauty, may probably become the future Newport of the North-western States. In addition to its bold shores, rising to a height of nearly 200 feet perpendicularly above the water, and the charm of its picturesque views and cool breezes, it has the accompaniment of fine fishing in its vicinity; and the pleasant excursions to Sault St. Mary, to angle for the far-famed white fish, to tempt the sportsman and epicure to while away a summer vacation in this vicinity. About 60 miles W. of the entrance of the strait St. Marie, are the celebrated "Pictured Rocks," composed of sandstone of various colors, and worn by the action of the wind and waves into resem-

blances of ruined temples, castles, &c. One peculiarly striking object, called the Doric Rock, is a colonade of four round pillars, of from about 3 to 7 feet in diameter, and 40 feet in height, supporting an entablature, 8 feet thick and 80 feet across. These rocks extend for about 12 miles, and rise about 800 feet above the water. Sometimes cascades shoot over the precipice, so that vessels can sail between them and the natural wall of rock. On laying out the track for a railway across the state from Detroit, the engineers encountered a singular lake, covered with an accumulation of vegetable matter—the growth of ages—but concealing beneath a deep and dangerous, though not extensive lake, which made it necessary to make a detour from the road.

Climate, Soil, and Productions.—Notwithstanding the severity of the climate in Michigan, it is moderated by its proximity to the lakes; yet the temperature of the northern peninsula is quite rigorous. A registry kept at Fort Brady, in January, 1825, showed a range of 61° between 36° above and 25° below zero, with prevailing winds S. E.; while in July, of the same year, the range was from 51° to 89°, and winds mostly W. Average for the year 43-52; maximum, 89°; minimum, 25°; range, 114°; prevailing winds W; fair days, 162; cloudy, 43; rainy, 95, and snowy, 65. The temperature of southern Michigan is milder than the same parallel in the Eastern states. Observations kept at Detroit, in January, 1828, showed a range of from 3° below to 60° above zero; averaging 33° for the month, prevailing winds S. W. The northern peninsula is favorable to winter grains, but not to Indian corn; while the southern produces maize as well as the winter grains abundantly. The prevailing diseases are bilious fevers, ague, and dysentery; consumption is rare.

Great fertility is the characteristic of most of the soil in the middle and S. of the lower peninsula; mostly free from stone, and of a deep, dark sandy loam, often mingled with gravel and clay. The northern peninsula has a large portion of rugged and poor soil, but its agricultural capabilities are not yet well developed. Portions of it are well timbered with white pine, spruce, hemlock, birch, oak, aspen, maple, ash, and elm. As the wants of the advancing settlements increase the demand, this region can furnish large supplies of lumber from its forests of pine, spruce, &c., manufactured at the fine mill-sites afforded by the rapid streams on the Superior slope of the Porcupine mountains. Much of southern Michigan is occupied by those beautiful and fertile natural lawns, called oak openings, covered with scattered trees, and free from underwood. Another portion is prairie, and yet another timbered land, covered with black and white walnut, sugar maple, different species of oaks, hickory, ash,

basswood, soft maple, elm, linden, locust, dogwood, poplar, beech, aspen, sycamore, cottonwood, cherry, pine, hemlock, spruce, tamarack, cypress, cedar, chestnut, papaw, &c. The prairies are small, and divided into wet and dry, the latter of course being somewhat elevated. The N. W. of the lower peninsula is but little known, but recent letters from that region represent it as well timbered, well watered, and fertile; it, however, has an uninviting aspect from the lakes. On the shores of Lake Huron, near Saginaw bay, is a marshy district. Michigan is eminently an agricultural state; the staple products being wheat, Indian corn, oats, Irish potatoes, (for which it is especially favorable,) butter, hay, maple sugar, wool, and live stock, with large quantities of buckwheat, rye, peas, beans, barley, fruits, cheese, beeswax, and honey; and some tobacco, sweet potatoes, wine, grass seeds, hops, flax, silk, and molasses. In 1850 there were 34,089 farms in Michigan, containing 1,929,110 acres of improved land, (being about 60 acres to each farm,) producing 5,641,420 bushels of Indian corn; 4,925,889 of wheat; 2,866,056 of oats; 2,359,897 of Irish potatoes; 472,917 of buckwheat; 2,043,283 pounds of wool; 7,065,878 of butter; 1,011,492 of cheese; 2,439,794 of maple sugar; 404,934 tons of hay, and live stock to the value of \$8,008,734; market products, \$14,738; orchard, \$182,650, and slaughtered animals, \$1,328,327.

Manufactures.—In common with the other more recently settled states, Michigan has not yet had leisure to give much attention to the development of her manufacturing resources. In 1850 there were in the state, 1,979 manufacturing establishments each producing \$500 and upwards annually, of which 15 were engaged in woollen manufactures, employing \$94,000 capital, and 78 male and 51 female hands, consuming raw material worth \$43,402, and producing 141,570 yards of stuffs worth \$90,242; 64 forges, furnaces, &c. employing \$210,450 capital, and 362 male hands, consuming raw material worth \$105,865, and producing 5430 tons of castings, pig iron, &c. valued at \$300,697; \$139,425 capital, and 98 hands were employed in the manufacture of 10,320 barrels of ale, porter, &c., and 890,900 gallons of whiskey, wine, &c.; and 60 tanneries, employing \$286,000 capital, consuming raw material worth \$203,450, and producing manufactured leather valued at \$863,980; domestic manufactures were fabricated worth \$354,936.

Internal Improvements.—This youthful state has made rapid advances in internal communication, although she has been provided by nature with an excellent and cheap highway to nearly all her borders, in the inland seas which surround her. In January, 1853, she had 474 miles of railroad completed, which

connect Detroit and Munroe with Chicago, Illinois, and various interior towns in Michigan. Detroit is also connected with Pontiac, and Adrian with Toledo, Ohio. A portion of the Southern railroad leaves Michigan, and passes into Indiana, about 40 miles E. of Lake Michigan. A contract has been entered upon (1853) for constructing a ship-canal round the rapids on St. Mary's river, to connect Lakes Superior and Huron, and to be completed in 1855. This work, when in operation, must add greatly to the commercial importance of Michigan, and enhance the value of the copper, iron, and lead mines on the shores of Lake Superior.

Commerce.—Michigan, surrounded as it is by inland seas, is most favorably situated for internal trade, and trade with British America. Her foreign commerce is, however, small, and only amounted, in 1851–2, in imports, to \$191,976, and exports \$145,152; tonnage entered for the same year, 66,041; cleared, 69,981; owned, 46,318–12, of which 24,681–73 was steam tonnage; number of vessels built, 16, with a tonnage of 2639–00. In the spring of 1853 there were owned at Detroit and Mackinaw, 56 steamers, with a tonnage of 17,925. The lake trade of 1851 has been stated at, imports, \$5,330,609, and exports, \$5,790,860. Wheat and other grain, flour, pork, live stock, wool, and copper are among the leading articles of export.

Education.—On the subject of education, Michigan is largely imbued with the opinion of New England, (from whence so many of her sons derive their origin,) that republican government and common school education must proceed or fall together. Her school fund, in 1852, was \$575,668; in addition to which, is a fund called the University Fund, of \$100,000. In 1850, \$42,794 were apportioned among the schools, and \$81,392 raised by taxation for their support, besides \$46,797 raised for buildings, &c. During the same year, 132,234 pupils attended the schools, of whom 125,866 were educated from the public funds. There is a state normal school, at Ypsilanti, about going into operation, for the education of teachers, under the control of a board of six persons appointed by the legislature. The township libraries, in 1850, numbered on their shelves 84,823 volumes.

Religion.—Of the 362 churches in Michigan, in 1850, the Methodists owned 103, the Presbyterians 67, Baptists 58, Roman Catholics 42, Congregationalists 29, Episcopalians 25, and Lutherans 12; the rest belong to Friends, Christians, Dutch Reformed, Free Church, Moravians, Union Church, Universalists, Mariners, and some others, giving one church to every 1098 persons. Value of church property \$723,200.—See *Table of Religions*, APPENDIX.

Public Institutions.—Provision has recently been made for the establishment of asylums for the deaf, dumb, blind, and insane, which

are now in course of construction. The former at Flint, and the latter (the insane) at Kalamazoo. An additional appropriation of \$20,000 was made in favor of these institutions in 1853. They are under the control of a board of 5 trustees, appointed by the legislature. The state prison is at Jackson, and had 131 inmates in November, 1850, of whom 115 were white, and 16 colored; 94 could read and write, 34 read only, 3 could neither read or write, and 19 learned to read in prison; 86 were natives, and 45 foreigners. The income during the year was \$10,700, and expenditure \$16,736, leaving nearly \$6000 to be paid by the state.

Government, Finances, &c.—The governor and lieutenant-governor of Michigan are each elected by the people for two years; the former receiving a salary of \$1500 per annum, and the latter, who is ex-officio president of the senate, \$6 per diem, during the sessions of the legislature. The senate consists of 32, and the house of representatives of 66 members—both elected by the people for two years. The state sends 4 members to the national house of representatives, and casts 6 electoral votes for president of the United States. The judiciary consists of a supreme court, composed of 8 circuits, presided over by one chief, and seven associate judges. The assessed value of property in Michigan, in 1850, was \$30,877,223; public debt, November 30, 1852, \$2,307,850.19; school fund \$500,000; other productive property \$628,000; expenses, exclusive of debt and schools, about \$125,000 a year; total expenses for 1852, \$431,918.87, and receipts \$451,082.97. In January, 1853, the banking capital of the state was \$665,803, circulation \$861,140, and \$197,294.92 in coin.

History.—Michigan was colonized by the French near Detroit in the latter half of the seventeenth century, and also at Mackinaw; but like other French colonies in America, did not progress rapidly. At the peace of 1763 it came, with the other French possessions in North America, under the dominion of Great Britain, and so remained till the breaking out of the American Revolution, when it of course came into the hands of the United States. On the expulsion of the French, the celebrated Indian chief, Pontiac, seized the occasion to rid the country of the hated whites, by a general uprising, and simultaneous attacks on all the forts of the English on the lakes. Mackinaw was taken by stratagem, and the garrison mercilessly butchered. Detroit was besieged for some months by Pontiac with 600 Indians; but it held out till the Indian allies, becoming weary of the siege, retired, and left Pontiac no choice but to make peace. The British did not surrender Detroit to the United States till 1796. In 1805, Michigan, which up to that period had been a part of the North-west territory, was formed into a separate govern-

ment. In 1812 it became the scene of some stirring events in the war with Great Britain. Lying contiguous to Canada, it was invaded in the very commencement of that struggle, and its capital (Detroit) surrendered, August 15, 1812, by General Hull, under circumstances which led to his displacement from his command. Previous to this, Fort Mackinaw had been taken by the enemy. At Frenchtown, in this state, occurred (January 22, 1813) a cruel massacre by the savages, of a party of Americans, prisoners of war. General Harrison soon after drove the enemy out of the territory of Michigan, and removed the seat of war into Canada. Michigan became an independent member of the American confederacy in 1837, and has since been rapidly progressing in population, wealth, and internal improvements.

MILWAUKEE, a river of Wisconsin, which rises in Fond du Lac county, and after a course of perhaps 100 miles, enters Lake Michigan, at the city of Milwaukee. Its general direction is S. S. E. The lower part of its course for about 30 miles is nearly parallel with the lake, from which it is only 4 or 5 miles distant. It furnishes extensive water-power.

MILWAUKEE, a county in the S. E. part of Wisconsin, bordering on Lake Michigan, contains 240 square miles. It is drained by the Milwaukee, Menomonee, and Root rivers. The surface is gently undulating. The soil is calcareous, and highly productive. The staples are wheat, corn, oats, potatoes, hay, and butter. In 1850 the county produced 61,147 bushels of wheat; 125,584 of oats; 11,246 tons of hay, and 158,521 pounds of butter. It contained 32 churches, 17 newspaper offices, 4857 pupils attending public schools, and 1506 attending academies and other schools. The streams furnish water-power for numerous mills and factories. Milwaukee county is traversed by 6 plank-roads, and by the Milwaukee and Mississippi railroad. Settled in 1834 or '35. Though the smallest in extent, it is the most populous county in the state, and the most important, as containing the city of Milwaukee, the commercial capital of Wisconsin. Population, 31,077.

MILWAUKEE, a post-township in the E. part of Milwaukee county, Wisconsin. Population, 1351.

MILWAUKEE, a city, port of entry, capital of Milwaukee county, and the most populous town of Wisconsin, is situated on the west shore of Lake Michigan, at the mouth of Milwaukee river, 90 miles N. from Chicago, and 75 miles E. from Madison. Lat. 43° 8' 45" N., lon. 87° 57' W. It is pleasantly situated on the flats bordering the river, and on the bluffs which rise abruptly from the margin of the lake to the height of about 100 feet. The river approaches from the N. in a direction nearly parallel with the lake shore, and is joined, about 1 mile from its mouth, by the Menomonee river, which comes from the W. The largest boats of the lake can ascend the river 2 miles from its mouth. The general appearance of the city is peculiar and striking from the color and superior quality of the bricks manufactured here. They have a delicate and enduring cream or straw color, which is highly agreeable to the eye, and is

not affected by the action of the elements. Many of these bricks are exported to distant parts of the Union. Milwaukee contains about 30 churches, of which 26 are Protestant and 4 Roman Catholic, 5 public schools, the Milwaukee University Institute, a female college, several academies, 3 orphan asylums, and other benevolent institutions. The public press consists of 7 daily newspapers, and about the same number of weekly issues. There are 3 or 4 banks, and several insurance companies. The streets, stores, &c. are lighted with gas. In 1853 the citizens voted a loan of \$50,000, to be expended in the improvement of the harbor, Congress having previously appropriated \$15,000 to that purpose.

The Milwaukee and Mississippi railroad is completed from this place to Janesville, 70 miles, and is to be extended next year to Madison. Other railroads are in progress to Chicago, Green Bay, Beloit, &c. Plank-roads extend from the city in six directions, with an aggregate length of about 200 miles. Milwaukee is the outlet of the productions of a rich and rapidly improving country. The following quantities of produce were shipped here in 1852, viz. 394,386 bushels of wheat; 345,620 of barley; 428,800 of oats; 88,597 barrels of flour; 1,771,314 pounds of pork in bulk; 19,603 barrels of pork; 321,121 pounds of wool; about 1,000,000 pounds of lead, and 700,000 bricks. The number of arrivals at this port in 1852 was about 1600. The tonnage of vessels owned here, 8548. The navigation is usually open about 8 months in the year, from March to November. Milwaukee enjoys a healthy climate, the great lakes having a sensible influence in modifying the extremes of heat and cold. The mean annual temperature in 3 years was 47°. The extensive water-power of the river constitutes an important element in the prosperity of Milwaukee. At the head of the navigable part of the river, a dam has been built, which raises the water 12 feet, and a canal conveys it to the city. Here are 5 large flouring mills, a woollen factory, several machine shops, and other establishments. The reported value of articles manufactured in 1852 was over \$2,000,000. Milwaukee is remarkable for the rapidity of its growth, which has not been surpassed, if equalled, by any of the Western towns. It maintains intimate relations with a region to which a vast emigration is flowing—a region which a few years ago was a solitary waste, or a field of savage warfare, but is now appropriated to the peaceful pursuits and liberal institutions of civilized society. The place was settled in 1835. The city was incorporated in January, 1846. Population in 1840, 1751; in 1850, 20,061; and in 1853, about 30,000.

MILWAUKEE, a post-office of Clackamas co., Oregon.

* MINA, a post-township on the W. border of Chautauque co., New York. Pop., 996.

MINAVILLE, a post-office of Montgomery co., New York.

MINDEN, a post-township on the W. border of Montgomery co., New York, on the Mohawk river and Erie canal. Population, 4623.

MINDEN, a beautiful post-village, and former capital of Claiborne parish, Louisiana, is situated about 2 miles E. from the Dauchite river, and 400 miles N. N. W. from New Orleans. Its landing place is frequently visited by steamboats which ascend from Red river, through Lake Bistineau. It is a place of active business, and destined to rise in importance. In respect to wealth and population, it is second to no town in northern Louisiana, except Shreveport. It has 2 churches, 2 printing offices, 1 iron foundry, 12 stores, and shops in which various utensils are made. Population in 1853, about 1000.

MINDEN, a township in the N. part of St. Joseph co., Michigan. Population, 862.

MINDENVILLE, a post-office of Montgomery co., New York.

MINDORO, a post-office of La Crosse co., Wis.

MINE LA MOTTE, a post-office of Madison co., Missouri.

MINERAL HILL, a post-office of Sevier co. Ark.

MINERAL POINT, a post-township in the S. part of Iowa co., Wisconsin. Pop., 2584.

MINERAL POINT, a thriving post-village in the above township, and capital of Iowa county, Wisconsin, 47 miles W. S. W. from Madison. It stands on a point of land between two small streams, and is surrounded by a rich mineral region, from which large quantities of lead and copper are exported by way of Galena. The village is a place of active business, and is rapidly improving. It has 5 churches, 4 smelting furnaces, 11 dry-goods stores, and 1 bank. A company has been formed here to construct a railroad which shall intersect with the Illinois Central railroad, and connect this point with Chicago. Laid out in 1827. Population in 1853, estimated at 3000.

MINERAL RIDGE, a small village of Mercer co., Pennsylvania.

MINERAL SPRINGS, a post-office of Columbia co., Florida.

MINE RIDGE, in the S. E. part and extending along the E. border of Lancaster county, Pennsylvania, derives its name from the copper mines which it contains, but which are no longer worked.

MINERS, a village of Washington county, Missouri, 110 miles S. E. by E. from Jefferson City.

MINERSVILLE, a village of Alleghany co., Pennsylvania, 2 miles E from Pittsburg.

MINERSVILLE, a thriving post-borough of Schuylkill county, Pennsylvania, on the West branch of Schuylkill river, 4 miles W. from Pottsville. It is pleasantly situated in a valley, surrounded by hills which contain rich beds of coal. A branch railroad, 7 miles long, connects it with Schuylkill Haven, on the Reading railroad. It has a newspaper office, 1 iron foundry, 1 car factory, and 1 flour mill. Incorporated in 1831. Pop. in 1840, 600; in 1850, 2951; in 1853, about 4000.

MINERSVILLE, a post-village of McDowell county, North Carolina.

MINERSVILLE, a village of Salisbury township, Meigs county, Ohio, on the Ohio river, 100 miles S. E. from Columbus. It joins the upper part of Pomeroy.

MINERVA, a post-township in the S. W. part of Essex co., New York. Population, 586.

MINERVA, a post-office of Houston co., Ga., 68 miles S. W. from Milledgeville.

MINERVA, a post-village of Mason co., Kentucky, 10 miles W. from Maysville. It has 2 or 3 churches.

MINERVA, a post-village of Stark county, Ohio, on the Sandy and Beaver canal, 110 miles in a direct line N. E. from Columbus. Grain is shipped here on the canal.

MINERVA, a post-office of Jasper co., Iowa.

MINE SHIBBOLETH, a small village of Washington co., Missouri.

MINETTO, a post-office of Oswego co., N. Y.

MINGO FLAT, a post-office of Randolph co., Virginia.

MINISINK, a post-township in the W. part of Orange co., N. Y., on the Erie railroad. It has a small village of the same name.

MINNEAPOLIS, a small post-village, capital of Hennepin county, Minnesota, on the right bank of the Mississippi, a little above the falls of St. Anthony.

MINNESOTA, a territory of the United States, is bounded on the N. by British America, E. by Lake Superior and the State of Wisconsin, S. by Iowa and Missouri Territory, and W. by Missouri Territory. The Lake of the Woods, with a chain of small lakes and their outlets, form a part of the northern boundary; the St. Croix and Mississippi a part of the eastern, and the Missouri and White Earth rivers the western boundary. It lies between 42° 30' and 49° N. lat., and between about 89° 30' and 103° 30' W. lon., being about 650 miles in extreme length from E. to W., and 420 from N. to S., including an area of nearly 166,000 square miles, or 106,240,000 acres.

Population.—The commencement of the settlement of this territory is quite recent, and at the United States census of 1850 there were only 6077 inhabitants, of whom 3695 were white males, 2343 white females; 21 free colored males, and 18 free colored females. Governor Ramsay estimated the Indian population in 1852 at 25,000. The number of families in 1850 was 1016, occu-

pying 1002 dwellings. Of the population, except Indians, 1337 were born in the Territory, 2673 in the different states of the Union, 84 in England, 271 in Ireland, 41 in Scotland and Wales, 1417 in British America, 141 in Germany, 29 in France, 65 in other countries, and 22 whose places of birth were unknown, giving about 33 per cent. of foreign birth. In the year ending June 1st, 1853, there occurred 30 deaths, or about 5 in every one thousand persons. In the census returns, no deaf, dumb, or blind, and but one idiot was reported.

Counties.—Minnesota is divided into 19 counties, viz. Benton, Blue Earth, Cass, Chisago, Dakota, Fillmore, Goodhue, Hennepin, Itasca, Le Sueur, Nicollet, Pierce, Pembina, Ramsay, Rice, Scott, Sibley, Wabashaw, and Washington. Mankatah and Wahnahta have been obliterated since 1850. Capital, St. Paul. The principal towns are St. Paul, population in 1852, 3000, (estimated;) and St. Anthony's, population, 1000. Stillwater, St. Croix, and Wabasha are the other important places.

Face of the Country.—Though there are no mountains in Minnesota, it is the most elevated tract of land between the Gulf of Mexico and Hudson's bay, and from its central heights sends its waters to every point of the compass, but mostly to the N. and S. The position from which the Red River of the North and the St. Peter's take their opposite courses is almost exactly in the centre of the territory, and elevated about 2000 feet above the Gulf of Mexico. A plateau, called the "Coteau des Prairies," or "Prairie Heights," about 200 miles in length, and from 15 to 40 in breadth, runs through the middle of the southern part of Minnesota. Its greatest elevation is about 1916 feet above the level of the sea, and its average height about 1450 feet. The northern portion, which is the highest, is about 890 feet above Bigstone Lake, which lies in its vicinity. Passing the St. Peter's or Minnesota river, we come upon another range of heights, known as the Coteau du Grand Bois, or the Wooded Heights, which extend for more than 100 miles nearly parallel with the Coteau des Prairies. This ridge is mostly covered with an extensive forest of hard wood. Through the middle of the triangle which occupies the N. E. portion of the territory, runs a third range of heights, called the "Hauteurs de Terre," or "Highlands," which extend W. by S. about 300 miles, and form the dividing ridge, whence flow the waters that seek Lake Superior and the Mississippi in one direction, and Hudson's bay in the other. A range of less altitude than the "Coteau des Prairies," but continuing in the same direction, forms the watershed of the streams flowing into the Missouri on the W., and those flowing into the Red river on the E. The rest of the country generally alternates between sandhills and swamps,

and river bottoms and prairies. In the N., on the Red river, are extensive savannas, level as a floor, while the central region and the portion between that and Lake Superior is much of it occupied with marshes, separated by hills of drift. West of the Coteau des Prairies and Red river, the county has been but little explored; but that portion of it between the Rivière à Jacques and the Missouri is represented as composed of high rolling prairies.

Geology.—Minnesota, east of the Red River of the North, is mostly covered with drift, lying on crystalline and metamorphic rocks, which occasionally protrude to the surface in the valleys of the rivers and on the shores of lakes. In the S. E., the lower magnesian limestone crops out in the valleys of the Mississippi and St. Peter's rivers; and on the latter river the sandstone occasionally obtrudes in a few places, with occasional intrusions of igneous rocks. On the shores of Lake Superior are "alternations of metamorphic schists, slates, and sandstones, with volcanic grits and other bedded traps and porphyries, intersected by numerous basaltic and greenstone dikes, with occasional deposits of red clay, marls and drift." In the N. E. angle of Minnesota is a tract of hornblende and argillaceous slates, with bedded porphyries and intrusions of greenstone and granite. On the Lake of the Woods, Rainy lake, and their outlets, are metamorphic schists, with gneiss and gneissoid rocks.

Minerals.—The indications from geological surveys of Minnesota, do not favor the hopes of great metallic wealth within its borders. Copper has been found, but in most instances it is not "in place," but appears to have been carried thither by the drift and boulders. The probability is that, of richer metallic ores than iron, this territory will not afford (except near Lake Superior) sufficient quantity to repay the labors of the miner; for if they exist at all, they probably lie at great depths. The indications are equally unfavorable to there being any large deposits of coal. A lead vein, 4 inches in thickness, was discovered on the Waraju river, by the geological corps of Professor Owen. The most remarkable mineral in this territory is the red pipestone, of which the Indians make their pipes, and which is believed to be peculiar to the region of the Coteau des Prairies. A slab of this stone has been, or is to be, sent to Washington, to be inserted in the great national monument, erecting to the memory of the father of his country. Salt is reported to exist in vast quantities between 47° and 49° N. lat., and 97° and 99° W. lon.

Lakes and Rivers.—Minnesota is perhaps even more deserving than Michigan of the appellation of the "Lake State," as it abounds in lacustrine waters of every size, from lakes of 40 miles in extent, to small ponds of less than a mile in circuit. These beautiful sheets

of water give origin to rivers flowing N., S., and E.; some finding their way to the Atlantic through the mighty Mississippi and the Gulf of Mexico; others through the great lakes, Niagara, and the St. Lawrence; and others, again, pass off to the N., and seek the ocean through Hudson's bay and straits. The largest of these lakes, with the exception of Lake Superior, are the Lake of the Woods, Rainy lake, Red, Minni-Wakan or Devil lake, Leech, and Mille Lac or Spirit lake. These generally have clear, pebbly bottoms, and are well stocked with fish, among which are the white fish, pike, pickerel, maskelonge, sucker, perch, and trout. Wild rice grows on the borders of many of them, especially at the North. Devil lake, which is on the 48th parallel of N. lat., in the N. W. of Minnesota, is about 40 miles in length, by 15 in breadth, and its waters, which are brackish, have no visible outlet. Red lake, on the same parallel, E. of Red river, with which it communicates, is divided into two portions, united by a strait of 2 miles in width, and covers about the same area as Devil lake. Lake of the Woods, and Rainy lake, (the former a large sheet of water, perhaps 100 miles in circuit,) are both on the N. E. boundary of the territory. Lake Pepin, a beautiful sheet of water, is a mere expansion of the Mississippi in the S. E. of this territory. The rivers and large streams of Minnesota are almost as numerous as its lakes. The far-famed Mississippi takes its humble origin from Itasca lake, from whose pellucid waters it issues a rivulet of but a few feet in width, and first meandering in a N. E. direction through a number of small lakes, to receive their tribute, it turns to the S., and pursues its lordly way to its far distant exit in the Gulf of Mexico, laving in its course the shores of nine states and one territory. About 800 miles of its length are included within Minnesota, of which 500 are navigable, 200 below the Falls of St. Anthony, and 300 above. The Rum and St. Croix, tributaries of the Mississippi, drain the S. E. portion of the territory, and the Red river the northern, passing off into Hudson's bay. It is the outlet of Traverse, Ottertail, Red, and several smaller lakes. It has a course of about 500 miles within Minnesota, though it does not flow directly north more than 200 miles in that distance. The Lake Superior slope is principally drained by the St. Louis and its branches, and by the outlets of that series of small lakes that form the N. E. boundary of Minnesota. The great valley formed by the slopes of the Coteau des Prairies and the Coteau du Bois is drained by the St. Peter's and its tributaries. This river runs first in a S. E., and then in a N. E. course, with a total length of from 400 to 500 miles, and is navigable for steamers, during high water, 56 miles above its mouth in the Mississippi, and 60 farther for keel-boats. Its principal branch is the Blue Earth

or Mankato river. The St. Peter's, with the Crow Wing and Crow rivers, are the principal tributaries of the Mississippi from the West. The Rivière a Jacques (ree've-air' ah zhak) and the Sioux are the principal affluents of the Missouri from this territory. They both have an almost directly S. course, the former being about 600, and the latter 350 miles long. Nearly the whole western boundary is washed by the Missouri, which opens the western part of the territory to the commerce of the great Mississippi valley. The rivers of Minnesota abound in small falls and rapids, which, while they interrupt navigation, furnish extensive water-power.

Objects of Interest to Tourists.—If we except cataracts of the first magnitude and high mountains, Minnesota presents as great a variety of natural objects of interest as any portion of our widely extended domain. The traveller enters her territory ascending the Mississippi, amid beautiful islands, (one of which, Mountain island, is 428 feet high,) and between cliffs of sandstone and magnesian limestone rising to an elevation of from 300 to 500 feet. Soon he passes into that beautiful expansion of the river named Lake Pepin, on the E. bank of which he has Maiden's rock, 400 feet high; and near the northern extremity of the lake, La Grange mountain, a headland about 330 feet above the lake, 180 of which, at the base, is sandstone, capped with magnesian limestone. As he proceeds, continuing his ascending voyage, the traveller arrives at the famed St. Anthony's falls, less celebrated on account of their perpendicular pitch (only $16\frac{1}{2}$ feet) than for their accompaniments of wild scenery and their geological interest. The falls are divided by an island, as at Niagara, the greater portion of the water passing on the western side, which is 310 yards wide. The entire descent, including the rapids, is 58 feet in 260 rods. St. Anthony's falls will no doubt one day become a Western Lowell; indeed its capabilities as a manufacturing site far transcend those of the town named, when the wants of the country shall call them into requisition. Fountain cave, 2 or 3 miles above St. Paul, is an excavation in the white sandstone, which opens, by an arched entrance 25 feet wide and 20 high, into a chamber 150 feet long and 20 wide, along the centre of which glides a rivulet, which may be heard from its inner and hidden recesses dashing down in small cascades. The passage becomes very narrow as you proceed up the channel, occasionally opening into small chambers. Mr. Seymour advanced nearly 1000 feet within the cave without reaching its termination. Brown's falls are in a narrow stream, the outlet of several small lakes on the W. side of the Mississippi. They have a perpendicular descent of 50 feet; and including smaller falls and rapids, 100 feet. Pilot Knob, near the confluence

of the Mississippi and St. Peter's, is an elevation of 262 feet, which commands a fine view of the surrounding country and the two rivers near whose junction it stands. The St. Croix falls or rapids, about 30 miles from its mouth, have a descent of nearly 50 feet in 300 yards; but the most interesting portion of the scene consists in the perpendicular walls of trap rock through which the river has forced its way, about half a mile below the rapids, and through which it rushes with great velocity, forming eddies and whirlpools. At this place, 40 or 50 feet above the river, portholes 20 to 25 feet in diameter, and 15 to 20 deep, have been worn by the action of the water. This pass is called the Dalles of the St. Croix. The Sioux river "breaks through a remarkable formation of massive quartz, which crosses it perpendicularly," at the Great Bend, in about $43^{\circ} 30'$ N. lat., and forms a series of falls and rapids, one of which is 21 feet, another 18 and a third 10 feet in perpendicular pitch. The entire descent in 400 yards is 100 feet. Minnesota shares with Wisconsin in the falls and rapids of the St. Louis river, another picturesque and romantic display of nature's works—for a description of which, see WISCONSIN. The rivers of Minnesota are filled with picturesque rapids and small falls, and often bordered with perpendicular bluffs of lime and sandstone, or gently sloping hills that gracefully recede from the water. This region is the paradise of the hunter: its prairies and forests are the home of many wild animals, and in its rivers and lakes swim great varieties of fish.

Climate.—The climate of this territory is severe, especially in the northern part. At the Pembina settlement, under the 49th parallel of latitude, the cold is frequently so great as to freeze quicksilver. According to observations kept by the officers stationed there in January, 1847, the mean temperature of the month, from three observations a day, at 9 A. M., and 3 and 9 P. M., was $12\frac{1}{2}^{\circ}$ below zero; and the greatest cold 48° below the same point. The average of 66 days' observations was $22\frac{1}{2}^{\circ}$ below zero; and the highest point reached in the month of January, 30° above zero. The hottest day in the month of July was 96° , showing a range of 144° between the greatest cold and greatest heat. From the 17th of June to the 17th of July, 1848, the mean temperature was 69° . Even as late as in the latter weeks of March, and as early as in November, the thermometer often falls below zero. Observations made at St. Paul's, in lat. $44^{\circ} 56'$ N., in December, January, and February, of the winter of 1850–51, gave the following result: Clear days, 22; variable, 45; cloudy, 23; rain, 5; snow, 24; and hail, 1. Greatest height of the mercury, 47° ; lowest point, $32^{\circ} 5'$ below zero; average of the winter, $15^{\circ} 23'$. Thirty-one days the mercury was at or above

freezing, and 37 days below zero. The coldest day, (January 30), it was 20° below; and the mildest, (February 25), 36° 6' above zero. Winds, N. N. W., 50 days; S. E. to E. N. E., 20 days; variable, 20 days. The amount of rainy days this winter is stated as unusually large, from which the dryness of the atmosphere may be inferred. The earliest closing of the navigation by ice, between 1844 and 1850, was November 8; the latest, December 8. The earliest opening, in the same period, was March 31; the latest, April 19. The climate of Minnesota, in some parts, is too severe for Indian corn, but the dryness and steadiness of the cold favor wheat and other winter grains.

Soil and Productions.—The soil of Minnesota varies greatly. In the valleys of the rivers it is mostly excellent, especially in those of the St. Peter's, and of the Mississippi and its tributaries in the south-east of the territory. Above the Falls of St. Anthony, with the exception of the river alluvions and some prairie land, the country is generally covered with drift, interspersed with marshes, too wet for cultivation; but the elevated portion is often much of it of tolerable fertility, though inferior to the calcareous lands of the river bottoms, and not unfrequently covered with dwarf timber. Professor Owen remarks that "the general agricultural character of the Red river country is excellent. The principal drawbacks are occasional protracted droughts during the midsummer months, and during the spring freshets, which from time to time overflow large tracts of low prairie, especially near the Great Bend." According to Governor Ramsay, wherever the test has been made, Minnesota produces corn, wheat, oats, and potatoes equal in quality to that produced in any state in the Union, and in quantity such as to astonish those who have been familiar even with the rich bottom lands of Indiana and Illinois. The nutritious wild rice, strawberries, currants, plums, cranberries, grapes, and crab-apples are indigenous. According to the census of 1850, there were 5035 acres of land only under cultivation, but as the population is now (1853) probably more than treble what it was at that period, this will be a very unfair representation of the present agricultural condition of the territory. In the year of the national census, there were produced 1401 bushels of wheat; 125 of rye; 16,725 of Indian corn; 30,582 of oats; 10,002 of peas and beans; 21,145 of Irish potatoes; 200 of sweet potatoes; 1216 of barley; 515 of buckwheat; 2019 tons of hay; 85 pounds of wool; 2950 of maple sugar; 80 of beeswax and honey. Value of live stock, \$92,859; of market produce, \$150; and of slaughtered animals, \$2840.

Forest Trees.—Parts of Minnesota are densely timbered with pine forests, and the ridges of the drift districts with small pine, birch, aspen, maple, ash, elm, hemlock, firs,

poplar, and basswood. In the swamps between the ridges, the tamarack, cedar, and cypress are found; while the river bottoms furnish a good growth of oak, aspen, soft maple, basswood, ash, birch, white walnut, linden, and elm. Much of this timber on the poorer ridges, and in some of the marshes, is rather of a dwarf character. On the Rum, St. Croix, and Pine rivers there are extensive forests of pine, of good, but not of the largest growth. According to Professor Owen, "a belt of forest crosses Minnesota in lat. 44° 30', which is remarkable for its unusual body of timber, in a country otherwise but scantily timbered." Taken as a whole, therefore, Minnesota can scarcely be called a well-wooded country. But here, as in other parts of the West, when the prairies are protected from fire, a growth of young timber soon springs up.

Animals.—Minnesota has always been a favorite hunting ground of the Indians, and vast herds of buffalo, elk, deer, antelope, and other game still roam over the plains west of the Coteau des Prairies and the Red river. Deer, black bear, antelope, wolverine, otter, muskrat, mink, martin, wolf, and raccoon abound, and the moose and grizzly bear are occasionally met with. The prairies are frequented by grouse, pheasants, and partridges, and the streams by wild ducks and geese. The other birds are hawks, buzzards, harriers, owls, quails, plovers, larks, and a great variety of small birds. Among the water fowl are the pelican, tern, hooded sheldrake, bustard, broadbill, ruffle-headed duck, wood duck, teal, wild goose, and loon. Both the golden and bald eagle are occasionally met with. The rivers and lakes abound in fine fish, among which are the bass, cap, sunfish, pickerel, pike, catfish, whitefish, sucker, maskelonge, and trout.

Manufactures.—There are great capabilities in the innumerable rivers of Minnesota, with their falls and rapids, for manufacturing establishments. At present the conversion of her pine forests into boards, scantling, &c. constitutes the principal manufacture of this new and flourishing territory.

Internal Improvements.—These, of course, are as yet confined to opening common and military roads. In the settlement of a new country, the emigrants naturally first locate on the great rivers, and a considerable time elapses before they need any other highway than these rivers themselves and short roads leading to them. The best lands of Minnesota are on her two great navigable rivers, the Mississippi and St. Peter's; and the first acts of internal improvement needed by this territory will be the removal of some obstructions in these streams. It is among the probabilities that the great Pacific railway may traverse this region, as engineers are now examining the feasibilities of a northern route.

Commerce.—Minnesota has the advantage

of two outlets for her products; one by way of the Mississippi, to every portion of the Mississippi valley; and the other by way of Lake Superior, with the Lake States and with the East. The great export of this territory is her lumber, and in the winter of 1850-51, 21,000,000 feet were cut on the St. Croix and its tributaries; the same region would send, it was calculated, 60,000,000 feet to market in 1853. In 1841, according to Mr. Prescott's register at Fort Snelling, 40 steamboats arrived from below; 48 in 1845; 24 in 1846; 47 in 1847; 63 in 1848; 85 in 1849; and 102 in 1850. The Mississippi river was open for navigation, or the first boat arrived, in the years 1841, '5, '6, '8, '9, and '50, respectively, on the 20th of March, 6th of April, 31st of March, 7th of April, 9th of April, and 19th of April; and the river closed, in the same years, on the 23d and 26th of November; and on the 4th, 7th, and 1st of December. Foreign exports for 1851-2, amounted to \$1207.

Education.—Minnesota has a public system of free schools, which are under the general direction of a superintendent of common schools, and the local supervision of trustees. Every township containing not less than five families is considered a school district. These school trustees are elected every year, and a majority of the voters may levy a tax not to exceed \$600 a year. A county tax is also levied for school purposes, of one-fourth of one per cent. on the *ad valorem* amount of assessment roll made by the county assessors; also 15 per cent. of all moneys raised by licenses of spirituous liquors, and on all fines for criminal acts. "An act to incorporate the University of Minnesota," was passed February 25, 1851. This institution is to consist of five departments, namely, of science, literature, and art; of laws; of medicine; of agriculture; and of elementary instruction. Twelve regents appointed by the legislature manage its affairs. It is located at St. Anthony. The proceeds of all lands granted by the United States go to form a perpetual fund for the support of the university. Congress has granted two townships of land for this purpose already.

Public Institutions.—A penitentiary, located at Stillwater, is the only other institution, beside the university, of a strictly territorial character.

Government.—The governor is appointed by the president of the United States for four years; salary, \$2500. The legislature consists of a council, composed of nine members, and a house of representatives, of 18 members, both elected by the people, the former for two years, and the latter annually. The number of councilmen may be increased to 15, and of the representatives to 39. The judiciary consists of a supreme, district, and probate courts. The territory sends a delegate to the national house of representatives, who may speak, but not vote.

History.—Minnesota is said to have been first visited by white men in the person of two free traders in the year 1654; who, on their return to Montreal two years afterwards, gave such glowing descriptions of the country as to induce, not only traders and trappers, but Jesuit missionaries to visit the country. To the latter are we indebted for the first printed records of Minnesota. The present territory of Minnesota formed part of the original Louisiana Territory, as purchased from France in 1803. The eastern portion formed a part of the French possessions which were surrendered to the English at the peace of 1763, and subsequently by the latter to the Government of the United States after the close of the Revolution. During the administration of Mr. Jefferson, (in 1805,) an exploring expedition, under General Pike, traversed the country. The first fortification of the United States within the present limits of Minnesota was located at Fort Snelling, which has been occupied by an American garrison ever since 1819. With the exception of the British settlement at Pembina, which was not then known to be within the limits of the United States, no settlements were made in this territory till about 1845. In 1849 it was organized into a territorial government. It has successively formed parts of the Missouri, North-west, Wisconsin, and Iowa Territories.

MINNESOTA CITY, a post-village, capital of Fillmore county, Minnesota, on the right bank of the Mississippi river, at the mouth of the Rollingsstone, 120 miles below St. Paul. It was settled in 1852, by the "Western Farm and Village Association," who number over 100 persons. The Rollingsstone furnishes water-power in the vicinity.

MINNETONKA, or **MINNITANKA**, a lake of Minnesota, included in Sibley and Hennepin counties, is 23 miles long.

MINNI WAKAN, or **DEVIL LAKE**, in Minnesota Territory, intersected by the 48th parallel of N. lat., and the 99th meridian of W. longitude. Length, about 40 miles; greatest breadth, 12 miles. The water of this lake is of a deeper tint than that of the neighboring fresh-water lakes; it is so brackish that it cannot be used as drink by man; the buffaloes, however, are said to be very fond of it, drinking it as freely as they would any other water. No outlet has yet been discovered.

MINO, Pennsylvania. See **MENNO**.

MIXOR, a post-township of Cumberland co., Maine, on the Androscoggin river, about 28 miles S. W. from Augusta. Population, 1734.

MINOT'S LODGE, or **COHASSET ROCKS**, Boston harbor, 8 miles S. E. from Boston light, has a fixed light 66 feet high.

MINSTER, a post-village of Auglaize co., Ohio, on the Miami canal, 122 miles N. from Cincinnati. Population in 1853, about 600.

MINTONSVILLE, a post-village of Gates co., North Carolina.

MINTONVILLE, a post-office of Casey co., Ky.
 MINT SPRING, a post-office of Augusta co., Virginia.

MIRABLE, a post-office of Caldwell co., Mo.
 MIRANDA, a post-village of Rowan co., North Carolina.

MIRICKVILLE, a post-office of Bristol co., Massachusetts.

MISHAWAKA, a flourishing post-village of St. Joseph county, Indiana, is situated on the St. Joseph's river, and on the railroad from Chicago to Toledo, 89 miles E. by S. from the former. It is surrounded by a rich farming region, which contains abundance of iron ore. The river is navigable by small steamboats several miles higher than this place, and also affords abundant water-power. The village has 1 or 2 furnaces, 1 rolling mill, 1 woollen factory, a large flouring mill, and several saw mills. Population in 1850, 1412; in 1853, about 2000.

MISHTEGAYOC river, of Michigan, rises in Genesee and Shiawassee counties, and flowing nearly northward, enters the Flint river, 5 miles from its junction with the Shiawassee.

MISISQUE, or MISSISSCO RIVER, rises in Orleans county, in the N. part of Vermont, and flows in a northerly direction into Canada, where, after running for several miles, it returns into Vermont, and traversing Franklin county, falls into Misisque or Missisco bay, an arm of Lake Champlain. The whole length of the river is about 75 miles, and it is navigable for vessels of 50 tons about six miles, to Swanton falls, where there is a very valuable water-power.

MISPILLION, a hundred in Kent co., Del.

MISPILLION CREEK, of Delaware, forms the boundary between Kent and Sussex counties, and enters Delaware bay.

MISSAUKEE, a new and unorganized county in the N. central part of Michigan, contains 625 square miles. It is drained by an affluent of Maskegon river. The county is not named in the census of 1850, and has few inhabitants, except Indians.

MISSION RIVER, a small stream of Texas, which flows through Refugio county into Aransas bay.

MISSIONARY STATION, a post-office of Floyd co., Georgia, on the Rome railroad, 185 miles N. W. from Milledgeville.

MISSION POINT, a post-office of La Salle co., Illinois.

MISSION SAN JOSE, a post-office of Concha Costa, California.

MISSISSINEWA river rises in Darke county, in the W. part of Ohio, and flowing in a general N. W. direction, falls into the Wabash about three miles above Peru, in Indiana.

MISSISSINEWA, a township of Westmoreland co., Pennsylvania, 23 miles S. E. from Pittsburg. Population, 771.

MISSISSINEWA, a post-township in Darke co., Ohio. Population, 378.

MISSISSIPPI, (Missi Sipi, *i. e.* the "Great Water,") the most important river in North America, and with the Missouri, its principal affluent, the longest in the world, rises on the Hauteurs de Terre, the dividing ridge of the Red River of the North, 3160 miles from the Gulf of Mexico, and 1680 feet above the level of the ocean, lat. 47° N., lon. 95° 54' W. A small pool, fed by the neighboring hills, discharges a little rivulet, in breadth scarce measured by a span. Meandering over sand and pebbles, and blending with it here and there a kindred streamlet, it ripples on, forming a number of basins, until it subsides at last into Itasca lake. From this issues a second stream, giving promise of the strength of its maturity. First flowing northward through several small lakes, and then in various directions, forming Cass lake, Lake Winnepece, and a number of other bodies of water, it afterwards assumes a southerly course, receives mighty rivers as tributaries, and having rolled its vast volume through more than eighteen degrees of latitude, enters the Gulf of Mexico by several mouths, lat. 29° N., lon. 89° 25' W. Though not so large as the Missouri, which flows into it from the N. W., 1253 miles from the Gulf, yet having been first explored, it received the name Mississippi, which it has since retained throughout its entire course. If we regard the Missouri as a continuation of the Mississippi above the junction, the entire length will amount to about 4300 miles. Above the confluence, the waters of the Mississippi are remarkably clear, but after commingling with those of the Missouri, (the name of which signifies "*Mud river,*") they become exceedingly turbid, and contain about three-tenths of sedimentary matter. The other principal tributaries from the N. W. and W. are the St. Peter's or Minnesota, which flows into the Mississippi 2192 miles from its mouth; the Des Moines, forming the boundary between Iowa and Missouri; the Arkansas and the Red rivers. Those from the N. E. and E. are the Wisconsin, entering it 1932 miles from its mouth; the Illinois, flowing into it 506 miles below; and the Ohio river, which joins it 1216 miles from the Gulf of Mexico. Besides these, it has a great many other affluents, some of which are navigable for hundreds of miles. The descent of the Mississippi, from its source to its embouchure, averages a fraction over 6 inches to the mile. The elevation of various points are, at its extreme source, 1680 feet; Itasca lake, 1575 feet; falls of St. Anthony, 856; Prairie du Chien, 642 feet; St. Louis, 382 feet; mouth of the Ohio, 324 feet; Natchez, 86 feet; entrance of the Red river, 76 feet, and opposite New Orleans, 10½ feet. The only falls of any considerable note are those of St. Anthony, 2200 miles from the Gulf of Mexico, and the rapids of Pecagama, 685 miles farther up the stream. The river at

the latter place is compressed to a width of 80 feet, and precipitated over a rugged bed of sandstone at an angle of about 40°. The entire descent is 20 feet in about 300 yards. At the former there is a perpendicular fall of 17 feet, with rapids above and below, making in all about 65 feet descent in three-quarters of a mile. The scenery here is grand and picturesque, especially at the time of the spring floods. Below this the river is navigable, a slight obstruction only being offered, when the water is very low, by the rapids, about 9 miles in extent, a short distance above the entrance of the Des Moines. The average depth of the Mississippi, below the mouth of the Ohio, varies from 90 to 120 feet, and the breadth from 600 to 1200 yards. Opposite the Mint at New Orleans, it is stated by J. L. Riddell, in a communication to Professor Lyell, to be one-third of a mile wide, and 100 feet deep. The mean velocity of the current at this place is about two feet per second; between the Gulf and the entrance of the Missouri, from 60 to 70 miles per day; above, the current is less rapid. A peculiarity of this river is its extremely winding course; sometimes a bend of 30 miles will occur where the distance across the neck does not exceed a mile. This circumstance no doubt tends to check the current and facilitate navigation. But the great distinctive feature of the Mississippi is, that it flows from north to south. A river that runs east or west has no variety of climate or productions from its source to its mouth. On the contrary, the trapper and husbandman descending the "Father of Waters" constantly meet with a change of climate: they take with them their furs and cereal grains, the products of the North, to exchange for the sugar and tropical fruits that are gathered on the banks below. Again, the floods produced by winter snows and spring rains cannot be simultaneously discharged. The course of the stream being from north to south, spring advances in a reverse direction, and releases in succession the waters of the lower valley, then of the middle section, and finally, the remote sources of the Mississippi and its tributaries. It is a remarkable fact, that the waters from this last-named region do not reach the Delta until upwards of a month after the inundation there has been abating. The swell usually commences toward the end of February, and continues to rise by unequal diurnal accretions till the 1st of June, when they again begin to subside. No experience will enable a person to anticipate, with any approach to certainty, the elevation of the flood in any given year. Some seasons the waters do not rise above their channels; others, the entire lower valley of the Mississippi is submerged. Embankments, called *levees*, have been raised from 5 to 10 feet high on both sides of the stream, extend-

ing many miles above and below New Orleans. By this means the river is restrained within its proper limits, except at the greatest freshets, when the waters sometimes break over, causing great destruction of property, and even loss of life. The average height of the flood, from the Delta to the junction of the Missouri, is about 15 feet; at the mouth of the latter river it is 25 feet; below the entrance of the Ohio the rise is often 50 feet; at Natchez it seldom exceeds 30 feet, and at New Orleans is about 12 feet. This diminution is supposed to result from the drainage through the Atchafalaya, Bayou la Fourche, and other channels breaking from the lower part of the river to the Gulf of Mexico. The flood often carries away large masses of earth with trees, which frequently become embedded in the mud at one end, while the other floats near the surface, forming snags and sawyers. Vessels are usually from 8 to 10 days in ascending the Mississippi from the Gulf to New Orleans, and 9 or 10 weeks not unfrequently elapse in sailing to the mouth of the Illinois river. By the aid of steam, however, the passage from Cincinnati to New Orleans and back again is made in less than 20 days. Flat-boats, a species of raft not designed to return, are extensively used for transportation down the stream. Large ships seldom ascend above Natchez. The first steamboat for navigation on the Western waters was built at Pittsburg, in 1811. In 1815, there were about 14 in use; in 1829, 230; in 1843, 600, and in 1848, 1200. The number of steamboats now plying on the Western rivers and lakes is supposed to be about 1500, with an aggregate burthen of more than twice the entire steamboat tonnage of Great Britain, and probably equal to that of all other parts of the world. The total value of the steamboats annually afloat on the Western waters is estimated at \$6,000,000. The Mississippi river and its tributaries drains an area of over 1,200,000 square miles. This vast region, from its almost unexampled fertility, has obtained the title of the "*Garden of the World.*"

The Delta of the Mississippi consists of that portion of territory at the mouth of the river, composed entirely of alluvion. It is about 200 miles in length, with a mean width of 75 miles, constituting an area of about 15,000 square miles of delta formation. The depth of the alluvion is estimated at one-fifth of a mile. The debris carried along with the flood is principally deposited near the borders of the stream, the necessary result being that these portions have been raised to a much higher level than the adjoining lands. In some places the slope is as much as 18 feet in a distance of a few miles. The interior consists of vast swamps covered with trees, of which the tops only are visible during the floods. The river, for almost 50

miss from its mouth, runs nearly parallel with the Gulf of Mexico, from which it is separated at particular places by an embankment only half a mile across. The passes through which the waters of the Mississippi are discharged into the Gulf are undergoing incessant changes; old channels are filling up, and new ones forming. The depth of water in these passes has never been equal to the requisitions of commerce; and it is only by the most enormous application of steam-power and ploughing through deep beds of sand, that ships of the largest class are enabled to get safely over the bars.

MISSISSIPPI, one of the Southern States of the American confederacy, is bounded N. by Tennessee, E. by Alabama, S. by the Gulf of Mexico and Louisiana, and W. by the Pearl and Mississippi rivers, which separate it from Louisiana and Arkansas. It lies between 30° 20' and 35° N. lat., and between 88° 12' and 91° 40' W. lon., being about 399 miles long from N. to S., and 150 in average breadth, including an area of about 47,156 square miles, or 30,179,840 acres, of which only 3,444,358 are improved.

Population.—The number of inhabitants in 1800, was 8850; 40,352 in 1810; 75,448 in 1820; 136,621 in 1830; 375,651 in 1840, and 605,948 in 1850, of whom 156,287 were white males, 139,431 white females; 474 free colored males, 456 free colored females, and 154,674 male, and 154,626 female slaves. Representative population, 482,595. This population was divided into 52,107 families, occupying 51,681 dwellings. Of the free population, 140,885 were born in the state, 150,229 in other states, 593 in England, 1928 in Ireland, 327 in Scotland and Wales, 79 in British America, 1064 in Germany, 440 in France, 527 in other countries, and 576 whose places of birth were unknown; making about 1 $\frac{2}{3}$ per cent. of the free population of foreign birth. In the year ending June 1st, 1850, there occurred 8711 deaths, or about 14 to every one thousand persons. In the same period, 260 paupers, of whom 12 were foreigners, received aid, at an expense of \$70 for each individual. Of 108 deaf and dumb, 1 was free colored, and 26 slaves; of 217 blind, 1 was free colored, and 86 slaves; of 149 insane, 22 were slaves, and of 210 idiotic, 5 were free colored, and 64 were slaves.

Counties.—Mississippi is divided into 59 counties, viz. Adams, Amite, Attala, Bolivar, Carroll, Chickasaw, Choctaw, Clairborne, Clarke, Coahoma, Copiah, Covington, De Soto, Franklin, Greene, Hancock, Harrison, Hinds, Holmes, Issaquena, Itawamba, Jackson, Jasper, Jefferson, Jones, Kemper, Lafayette, Lauderdale, Lawrence, Leake, Lowndes, Madison, Marion, Marshall, Monroe, Neshoba, Newton, Noxubee, Oktibbeha, Panola, Perry, Pike, Pontotoc, Rankin, Scott, Simpson, Smith, Sunflower, Tallahatchie, Tippah, Tishomingo, Tunica, Warren, Washington, Wayne, Wilkin-

son, Winston, Yallobusha, and Yazoo. Capital, Jackson.

Cities and Towns.—There are no large towns in this state: Natchez, the largest, had, in 1850, a population of about 6000: the other principal towns are Aberdeen, population, 4000; Vicksburg, 3678; Jackson, estimated at 3500; Columbus, 2614; Holly Springs, 2052; Port Gibson, 1036; and Shieldsborough, 924.

Face of the Country.—The eastern and central parts of the state are a kind of tableland, descending towards the Mississippi by steps formed by two ranges of bluffs of irregular outline, sometimes approaching close to the river's brink, and overhanging it by precipices of from 100 to 200 feet in height. In other places, a wide expanse of swamp fills up the interval. One of these marshes extends from 50 miles below the mouth of the Yazoo river to Memphis, in Tennessee, with a breadth varying from a few miles to 50, and sometimes even 100 miles, occupying an area of nearly 7000 square miles. This section is liable to inundations at the period of freshets, and sometimes is covered with water to the depth of several feet. The rivers generally run in a S. W. course, showing the general slope of the country to be in that direction; a portion of the N. E., however, is drained by the Tombigbee, and the central and S. E. portions by the Pearl and Pascagoula rivers, which seek the Gulf of Mexico on a S. and S. E. direction. The northern and central parts of the state are undulating, presenting a champaign appearance. The N. E. is prairie land, extending for some distance down the Alabama boundary, when the country again becomes rolling and timbered. The S. E. of the state is low but undulating, and abounding in pine. Near the coast, the country, which farther west is swampy, becomes firm. The mineral resources of the state, so far as developed, are not extensive. Some gold has been found in Marion county, but coal and marble are not known to exist in any considerable quantity. In 1850 about \$100,000 were invested in iron foundries, &c.

Rivers, Bays, &c.—The western part of this state is drained by the Mississippi and its tributaries, the eastern by the tributaries of the Tombigbee and Pascagoula, and the central by the Pearl river. The Yazoo and the Big Black are the largest branches of the Mississippi from this state, and drain the N. W. portion. The Tennessee river touches the N. E. boundary of the state for about 15 miles. The Mississippi river renders this state accessible to the largest steamboats for the whole extent of its western boundary, and smaller steamboats ascend the Yazoo for 300 miles, the Big Black for 50 miles, the Pearl sometimes to Jackson, (though its navigation is much impeded by sandbars and shallows,) and the Pascagoula for a short distance. There is a chain of lakes and bays,

so called, but more properly sounds, separating some low islands from the coasts. The principal of these bays, or lakes, are Lake Borgne and Pascagoula bay. Biloxi and St. Louis bays are arms of these. This state borders on the Gulf for about 60 or 70 miles, but has no good harbors.

Objects of Interest to Tourists.—Mississippi has not many striking objects in her physical conformation to arrest the mere tourist, but must rely on her rich soil and utilitarian advantages principally to interest the statesman and philosopher. Not far from Natchez, at a village called Seltzertown, there is a group of mounds, the most elevated of which is about 35 feet high, with a flat area on the summit, of some 2 or 3 acres, surrounded by a rampart 2 or 3 feet high, and enclosing 6 other mounds, one of which is 30 feet in elevation, or 65 feet above the base of the large mound. Numerous relics, such as pipes, weapons, vessels, &c., have been taken from them. Another group, of smaller but similar earth-works, lies still nearer Natchez. There are several medicinal springs in this state, of much resort; among them are Cooper's Well, in Hinds county, 12 miles W. of Jackson, (the waters of which are impregnated with sulphur and iron, and regarded as beneficial in diseases of the bowels and skin;) and Lauderdale Springs, in the county of the same name, contain white sulphur and chalybeate waters. One spring has a body of water sufficient to turn a mill. The bluffs on the western side of the state, which sometimes rise perpendicularly from the water's edge to the height of 150 or 200 feet, and then recede many miles into the interior, become very interesting objects to the voyager on the Mississippi, from their contrast to the monotonous scenery of that region.

Climate, Soil, and Productions.—Mississippi approaches within a few degrees of the torrid zone, and its long summers partake of the heat of that region; but the winters, as well as those of Louisiana, have a temperature a few degrees lower than on the Atlantic in the same latitude. In the southern part of the state the season is long enough to mature the fig and the orange, while in the north the apple flourishes. The valleys of the northern and central portions of Mississippi are exceedingly fertile, but subject, in places, to the washing of sand from the less fertile upland regions during freshets. Cotton was formerly the staple of this region, but since the soil has been somewhat exhausted, lighter crops have taken its place. The prairie region of the N. E. has a rich, black, adhesive soil, impregnated with lime, and yielding luxuriant crops of Indian corn and cotton. The soil in the S. E. part of the state is sandy, mostly covered with pine, interspersed with more fertile portions, producing Indian corn and small grain abundantly, and cotton and rice to some extent. Fruits flourish in this

district, which is also famous for its cattle, being sometimes called the "cow country." The southern country, back from the sea-coast, is sandy, and covered with pine forests, which are beginning to be turned to account in the production of turpentine, &c. But the richest and most inexhaustible soil in Mississippi is that section lying between the upland bluffs and the Mississippi, called sometimes the swamp lands. A writer in De Bow's Resources of the South and West, asserts "that the opinion that this region is unhealthy is fast giving way, and that population of the very best character is now settling there." The great drawback, however, (its liability to inundations,) still remains, though even this will probably be removed as the population becomes more dense, and further and stronger embankments are made. The great staple of the state is cotton, in the production of which it ranks third (and if we regard only population, second) of the states of the Union. The principal products are Indian corn, peas, beans, Irish and sweet potatoes, butter, beeswax, honey, and live stock; considerable wheat, rice, tobacco, wool, fruits, cheese, and some molasses, sugar, barley, buckwheat, wine, hay, grass-seeds, rye, hops, hemp, flax, and silk. In 1850 there were in Mississippi 23,960 farms, containing 3,444,358 acres of cultivated land, or about 146 acres to each farm, producing 137,990 bushels of wheat; 9606 of rye; 22,446,552 of Indian corn; 1,503,288 of oats; 1,072,757 of peas and beans; 261,482 of Irish potatoes; 4,741,795 of sweet potatoes; 2,719,856 pounds of rice; 49,960 of tobacco; 193,717,200 of cotton; 559,619 of wool; 4,346,234 of butter; 21,191 of cheese; 12,505 tons of hay; 388,000 pounds of sugar; 397,460 of beeswax and honey; live stock of the value of \$19,403,602; slaughtered do. \$3,636,582; products of orchards, \$50,405; and market goods, \$46,250.

Forest Trees.—The swamps abound in a growth of black and white cypress, (the latter an excellent kind of timber,) and the southern portions with pine, a ridge of which crosses the state from Jackson to Alabama. The north is well wooded with oak and hickory. The oaks include red, white, post, and live oaks. The other timber is black walnut, locust, a dwarf species of buckeye, beech, dogwood, persimmon, and papaw. The fruits are peaches, figs, oranges, plums, cherries, grapes, and melons.

Internal improvements have made but little progress in this state. In January, 1853, there were 100 miles of railway completed, and 491 in course of construction. Brandon, Jackson, and Raymond are connected with Vicksburg, and Citronelle with Mobile, by 33 miles of the finished portion of the Ohio and Mobile railroad. Plank-roads are beginning to claim attention here as elsewhere.—See *Table of Railroads*, APPENDIX.

Manufactures.—The manufactures in this state are few. In 1850 there were 866 establishments, each producing \$500 and upwards annually. Homemade manufactures the same year were produced to the value of \$1,164,020. There were only 2 establishments engaged in cotton manufactures, employing \$38,000 capital, and 19 male and 17 female hands, consuming raw material of the value of \$21,500, and producing 171,000 pounds of yarn, worth \$30,500; no woollen establishments; 8 iron foundries, &c., employing \$100,000 capital, and 112 male hands, consuming raw material of the value of \$50,370, and producing 924 tons of castings, worth \$117,400. There were also 92 tanneries, employing \$145,615 capital, consuming raw material worth \$111,474, and producing leather valued at \$229,407.

Commerce.—The commerce of this state being mostly carried on through New Orleans, no tables of its exports or imports can be given; but the great article of export is cotton. The tonnage of Mississippi in 1852 was only 1452 $\frac{3}{4}$. No vessels are reported as being built within the state. The products of the N. W. of the state find their outlet principally at Memphis, Tennessee; of the N. E., through Tombigbee river, at Mobile. A large portion of the E. and S. E. also has the same market. The pine will probably soon contribute largely to the exports of Mississippi, both in lumber and naval stores.

Education.—Laws have been recently passed improving the school system of this state, but they had not in 1852 gone into efficient operation. There were in the same year three colleges, with an aggregate of 204 students, and 8450 volumes in their libraries.—See *Table of Colleges, APPENDIX*. In 1850 there were 762 public schools, and 189 academies and other schools in Mississippi.

Religious Denominations.—Of 910 churches in the state in 1850, the Baptists owned 336; Episcopalians, 13; Methodists, 406; Presbyterians, 135, and Roman Catholics, 8. The rest were owned by the Christians, Free Church, and Union Church.

Public Institutions.—There is an excellent penitentiary at Jackson, and an asylum for the blind at the same place. It is in contemplation to erect a lunatic asylum.

Government, Finances, &c.—The governor is elected by the people for two years, and receives \$3000 salary. The senate is composed of 32, and the house of representatives of 92 members, both elected by the people, the former for four and the latter for two years. The sessions of the legislature are biennial. The judiciary consists—1. Of a high court of errors and appeals, composed of one chief and two associate judges; 2. Of a superior court of chancery, held at Jackson, and considered in law as always open; 3. Of district chancery courts; and 4. Of seven circuit courts. The judges of the court

of appeals receive \$3000, the chancellor \$2600, and the vice chancellors \$2000 per annum. The district judges are elected for four years. The assessed value of property in 1850 was \$208,422,167; the public debt. (in 1852,) \$7,271,707; of which \$5,000,000 was contingent debt; public property, (not at present productive,) \$2,000,000, and ordinary expenses, exclusive of debt and schools, about \$130,000 per annum. Mississippi requires 12 months' residence to entitle a citizen to the right of suffrage. This state sends five members to the national congress, and gives seven electoral votes for president of the United States. In January, 1853, there was in Mississippi \$132,726.93 banking capital, with a circulation of \$46,925, and \$19,211.06 in coin.

History.—Mississippi was first visited by Europeans about the year 1540, when De Soto, with 1000 followers, crossed the state on an exploring expedition from Florida. This party having suffered severely by attacks from the aborigines, no other attempt was made to establish a permanent colony till 1682, when La Salle descended the Mississippi and visited this region. He returned in two years with a party which he intended to settle in Mississippi, but meeting with misfortunes, the colony never reached its destination. The next attempt at settlement was made by Iberville, but with no successful result. The settlement at Fort Rosalie (now Natchez) in 1716, by some Frenchmen under Bienville, was generally considered the first permanent colony. A general massacre of the white inhabitants by the savages took place in 1728, but, as in every other contest between the Indians and the whites, victory ultimately rested with the latter. Other conflicts in 1736, '39, and '52, though carried on with varying success, had the same result. At the peace of Paris, in 1763, Mississippi became a part of the English territory. Soon after, a portion of the French, so inhumanly driven by the English from Nova Scotia, settled in Mississippi; and in 1768 commenced an emigration from the Eastern colonies, by way of the Ohio and Mississippi rivers. In 1798, Mississippi, including Alabama, was erected into a territory, and in 1817 was admitted into the Union as an independent state.

MISSISSIPPI, a county forming the E. N. E. extremity of Arkansas, and bordering on Missouri and the Mississippi river, which washes the entire E. border. The area is about 1000 square miles. It is bounded on the W. by St. Francis river. The surface is flat, and partly occupied by lakes and swamps, formed by the overflow of the "great river." The soil of the drier portions is very fertile, producing cotton and maize. In 1850 there were raised 200,250 bushels of Indian corn, 455 bales of cotton, and 21,273 pounds of butter were made. There were 55 pupils attend

ing public schools. Capital, Osceola. Population, 2368; of whom 1503 were free, and 865, slaves.

MISSISSIPPI, a county in the S. E. part of Missouri, bordering on the river of its own name, opposite the mouth of the Ohio, has an area of 400 square miles. The Mississippi river separates it from Kentucky and Illinois, and forms its boundary on the N., E., and S. The county is drained by James and Cypress bayous. The surface is level; the soil is very fertile, particularly adapted to Indian corn, which is the staple production. In 1850 there were raised in the county 354,700 bushels of corn; 3727 of wheat; 95 tons of hay, and 22,955 pounds of butter. It contained 4 churches, and 190 pupils attending public schools. A portion of the county is occupied by cypress swamps. An appropriation has been made by the state for the purpose of reclaiming the lands in this county which were submerged by the earthquakes of 1811 and 1812. Organized in 1845. Capital, Charleston. Population, 3123, of whom 2377 were free, and 746, slaves.

MISSISSIPPI CITY, a post-village, capital of Harrison co., Mississippi, on the Gulf of Mexico, about 70 miles W. by S. from Mobile.

MISSOURI, (*i. e.* the "Mud river,") the longest tributary stream in the world, has its source in the Rocky Mountains, lat. 45° N., lon. 110° 30' W. The springs which give rise to this river are not more than a mile from the head waters of the Columbia, which flows W. to the Pacific ocean. The first 500 miles of its course to the Great Falls is nearly N.; then inflecting E. N. E., it reaches its extreme northern bend at the junction of White Earth river, lat. 48° 20' N. After this its general course is S. E., till it joins the Mississippi in about 38° 50' N. lat., and 90° 10' W. lon. At a distance of 411 miles from the source of the Missouri, are what are denominated the Gates of the Rocky Mountains. The scenery at this place is remarkable wild and impressive. For a distance of nearly six miles, the rocks rise perpendicularly from the water's edge to a height of 1200 feet. The river is compressed to a width of 150 yards, and for the first three miles there is only one spot, and that of but a few yards in extent, on which a man could stand between the water and the perpendicular walls. At a distance of 110 miles below this, and 2575 miles above the mouth of the Missouri, are the Great Falls, where the river descends, by a succession of falls and rapids, 357 feet in 16½ miles. The perpendicular falls commencing down the stream are, first one of 87 feet, one of 19 feet, one of 47 feet, and one of 26 feet. Between and below these are continual rapids, from 3 to 18 feet descent. These falls, next to Niagara, are the grandest in North America. The bed of the Missouri commences at the confluence of three small streams, about

equal in length, and running nearly parallel to each other—Jefferson's, Madison's, and Gallatin's. The Yellowstone, 800 yards wide at its mouth, and probably the largest tributary of the Missouri, enters it from the S. W., 1216 miles from its navigable source. These two rivers, at their junction, are about equal in size. Steamboats ascend to this point, and might ascend farther both by the main stream and its affluent. Chienne river, 400 yards wide at its mouth, enters the Missouri from the S. W., 1310 miles from its mouth; White river, 300 yards wide, enters it from the S. W., 1130 miles from its mouth; Big Sioux river, 110 yards wide, enters it from the N. E., 853 miles from its mouth; Platte river, 600 yards wide, enters it from the S. W., 600 miles from its mouth; Kansas river, 233 yards wide, enters it from the S. W., 340 miles from its mouth; Grand river, 190 yards wide, joins it from the N., 240 miles from its mouth, and Osage river, 397 yards wide, flows into it from the S. W., 133 miles from its junction with the main stream. The Missouri is stated to be 3096 miles long to its confluence with the Mississippi: add to this 1253 miles, the distance its waters must flow to reach the Gulf of Mexico, and we have an entire length of 4349 miles. There is, however, reason to believe that the early statements respecting the extent of this river and its tributaries were somewhat exaggerated. Throughout the greater part of its course, the Missouri is a rapid, turbid stream. No serious obstacle, however, is presented to navigation from its mouth to the Great Falls, a distance of 2575 miles, excepting perhaps its shallowness during the season of the greatest drought, when steamboats sometimes meet with difficulty in ascending. The flood from this river does not reach the Mississippi till the rise in the Red, the Arkansas, and the Ohio rivers has nearly subsided. Vast prairies, with narrow strips of alluvion skirting the streams, compose the Missouri basin, excepting the upper portion of the river, which flows through an arid and sterile region. The entire extent of area drained is estimated at 500,000 square miles.

MISSOURI, one of the largest of the United States, and the first formed wholly W. of the Mississippi river, is bounded on the N. by Iowa, (from which it is separated for about 30 miles on the N. E. by the Des Moines river,) on the E. by the Mississippi river, which divides it from Illinois, Kentucky, and Tennessee; on the S. by the Arkansas, and on the W. by Indian Territory, from which it is partly separated by the Missouri river. This state lies (with the exception of a small projection between the St. Francis and the Mississippi river, which extends to 36°) between 36° 30', and 40° 30' N. lat., and 89° 10' and 96° W. lon., being about 285 miles in its greatest length from E. to W.,

and 280 in width from N. to S., including an area of 67,380 square miles, or 43,123,200 acres, only 2,938,425 acres of which were improved in 1850.

Population.—Though originally settled by the French, less than one-third of one per cent. of the present inhabitants of Missouri are of that extraction. The population amounted to 66,586 in 1820; 140,145 in 1830; 383,702 in 1840, and 682,244 in 1850; of whom 312,987 were white males, and 279,017 females; 1361 free colored males, and 1257 females; 43,484 male slaves, and 43,938 female. There were in 1850, 100,890 families, occupying 96,849 dwellings. In the year ending June, 1850, 12,211 deaths occurred, or nearly 19 in every one thousand persons; in the same period 2977 paupers received aid, of whom 1729 were foreigners, at an expense of about \$18 to each pauper. Of the free population, 277,604 were born in the state; 244,222 in other states; 5379 in England; 14,734 in Ireland; 2225 in Wales and Scotland; 1053 in British America; 44,352 in Germany; 2138 in France; 3593 in other countries, and 1322 whose places of birth were unknown; making more than one-eighth of the population of foreign birth. There were in the state, according to the census, 259 deaf and dumb, of whom 15 were slaves; 211 blind, of whom 3 were free colored, and 28 slaves; 282 insane, of whom 2 were free colored, and 9 slaves; and 333 idiots, of whom 29 were slaves.

Counties.—There are in Missouri 101 counties, viz. Adair, Andrew, Atchison, Audrain, Barry, Bates, Benton, Boone, Buchanan, Butler, Caldwell, Callaway, Camden, Cape Girardeau, Carroll, Cass, Cedar, Chariton, Clarke, Clay, Clinton, Cole, Cooper, Crawford, Dade, Dallas, Daviess, De Kalb, Dodge, Dunklin, Franklin, Gasconade, Gentry, Greene, Grundy, Harrison, Henry, Hickory, Holt, Howard, Jackson, Jasper, Jefferson, Johnson, Knox, Laclede, Lafayette, Lawrence, Lewis, Lincoln, Linn, Livingston, Macon, McDonald, Madison, Marion, Mercer, Miller, Mississippi, Moniteau, Monroe, Morgan, Montgomery, New Madrid, Newton, Nodaway, Oregon, Osage, Ozark, Perry, Pettis, Pike, Platte, Polk, Pulaski, Putnam, Ralls, Randolph, Ray, Reynolds, Ripley, Scotland, St. Charles, St. Clair, St. Francis, St. Genevieve, St. Louis, Salina, Schuyler, Scott, Seneca, Shannon, Shelby, Stoddard, Sullivan, Taney, Texas, Warren, Washington, Wayne, and Wright. Capital, Jefferson City.

Cities and Towns.—St. Louis is the largest city in Missouri, population, 77,860, (by a local census in 1853, 88,000;) the other principal towns are Hannibal, population in 1850, 2557; Lexington, 2459; Castor, 2084; Weston, 1915; Palmyra, 1284; and St. Genevieve, 958.

Face of the Country.—This great state is mostly level or undulating N. of the Missouri

river, while S. of this river (much the larger portion of the state) exhibits a much greater variety. In the S. E. part, near the Mississippi river, and S. of Cape Girardeau, is an extensive marsh, reaching beyond the state into Arkansas, and occupying an area of about 3000 square miles. The remainder of this portion, between the Mississippi and the Osage rivers, is rolling, gradually rising into a hilly and mountainous district, forming the outskirts of the Ozark mountains. Beyond the Osage river, at some distance, commences a vast expanse of prairie land, which stretches away to the Rocky mountains. The ridges forming the Ozark chain, which probably in no place reach an elevation of 2000 feet, extends in a N. E. and S. W. direction, separating the waters that flow N. E. into the Missouri river from those that flow S. E. into the Mississippi river. The geological features of this state are very interesting. One of the richest coalfields perhaps in the world occupies the greater part of Missouri N. of the Osage river, and extends nearly to the N. boundary of Iowa. A carboniferous limestone, which comes to the surface on the E. and W. borders of the state, forms a rim from 5 to 40 miles in breadth. The lower magnesian limestone crops out on the Missouri river, from 25 miles above Jefferson City to within 35 miles of its mouth, with occasional obtrusions of sandstone. Schoolcraft thus speaks of the Ozark mountains: "The Ozark is a term applied to a broad, elevated district of highlands, running from N. to S. centrally through the states of Missouri and Arkansas. It has on the E. the striking and deep alluvial tract of the Mississippi river, and on its W. the woodless plains or deserts which stretch below the Rocky mountains."

Minerals.—Missouri is particularly rich in minerals, and a vast region in the neighborhood of Iron mountain is, perhaps, unsurpassed in the globe for productiveness in iron of the best quality. Though existing in the greatest abundance and purity in this locality, this mineral is found scattered throughout the state. In the eastern counties S. of the Missouri river, large quantities of lead, sometimes mixed with zinc, are found. Copper exists throughout the mineral region, (a tract of 17,000,000 or 18,000,000 acres,) but is most abundant near the La Motte mines. It is found combined with nickel, manganese, iron, cobalt, and lead, and these often yield 34 per cent. of the pure metal. Of the other metals named, all except nickel are found in considerable quantities. Silver exists in the lead ore, 350 pounds of pure silver having been obtained from 1,000,000 pounds of lead. Tin has been found in small quantities. Of the non-metallic minerals, limestone abounds N. of the Missouri river, and forms a good building stone. Marbles beautifully veined and crystalline are found in parts of the

state; also gypsum, sandstones, red and white, porphyries, sienite, saltpetre, sulphate of baryta, kaolin, and inferior clays. The red sandstone is of too coarse and loose a texture for architectural purposes, but the white, found near St. Genevieve, makes superior glass. Porphyries of a red ground interspersed with crystals, admitting of a high polish, are found S. of the Missouri river.

Coal.—Bituminous coal, much of it cannel coal, exists in vast beds in the N. of the state, and has also been found 40 miles up the Osage river. The great cannel coalbed in Callaway county consists, in one place, of a solid stratum 24 feet, and in another 75 feet in thickness, and is believed to be the largest body of cannel coal known.

Rivers.—Missouri enjoys the navigation of the two greatest rivers in the United States, if not in the world. By means of the Mississippi river, which coasts her entire eastern boundary, she can hold commercial intercourse with the most northern territory of the Union, with the whole of the valley of the Ohio, with some of the Atlantic States, and with the Gulf of Mexico. By means of the Missouri, her other great river, she may extend her internal commerce to the Rocky mountains, besides receiving the products that may be furnished in future times by its multitude of tributaries. The Missouri river coasts the N. W. of the state for about 200 miles, (following its windings,) and then darts across the state in a direction a little S. of E., dividing it into two portions, of which about a third is N., and the remainder S. of that river. The S. shore is bounded in many places by bluffs of from 100 to 300 feet in height, while the N. is often bottom lands not generally liable to inundation. Both the Mississippi and Missouri rivers are navigable for large steamers far beyond the limits of the state, though the navigation of the latter is impeded by the swiftness of its current (twice that of the Mississippi) and by the shifting sands. The Missouri river receives a number of tributaries within the limits of the state, the principal of which are the Chariton and Grand rivers from the N., and the Osage and Gasconade from the S. The principal tributaries of the Mississippi river within the state are the Salt river, N., and the Maramec river, S. of the Missouri river. The St. Francis and White rivers, with their branches, drain the S. E. part of the state, and pass into Arkansas. The Osage is navigable for boats of light draught 200 miles, and it is proposed to improve its navigation, as well as that of the Grand, Salt, and Maramec rivers. Fine plank and timber are floated down the Gasconade river.

Objects of Interest to Tourists.—We shall hardly be able to do justice to Missouri in this respect, in the present state of our knowledge of the interior, as there are doubtless, in her mountain recesses, gorges, water-

falls, and caves whose fame has not yet reached us. To the geologist the state already possesses ample inducements for a visit; while the lover of fine scenery will find much to interest him in the wild bluffs both of the Missouri and Mississippi rivers, which rise to an elevation varying from 50 to 300 feet. In the S. E. part of the state, the scene of the earthquakes of 1811 and 1812, may be viewed many traces of that startling event: among others are to be seen, at the bottoms of lakes, submerged forests and canebreaks. Pilot Knob, 444 feet high, and Iron mountain, 1500 feet high, the former of steel, as it is said, and the latter of nearly pure iron, are well worth a visit from the curious and scientific tourist. Big Spring, at the head of the Maramec river, rising in a very deep basin 100 feet across, and surrounded by banks as many feet in perpendicular height, gives rise to a stream 60 feet wide and 3 feet deep, and with sufficient force to turn two mills at its source. The water is extremely cold. Schoolcraft describes a cave near some of the head waters of the White river thus:—"The opening appeared to be 80 or 90 feet wide and 30 high. A vast gloomy rotunda opened before us, which very soon after entry increased to a height of 60 or 70 feet, and in width to 150 or 200 feet. This hall extended into the rock southerly, branching off into lateral avenues. We explored the main gallery for 500 or 600 yards, when we met with obstructions."

Climate.—The climate of Missouri is very variable: in the winter the thermometer sinks below zero, and the rivers are frozen so as to admit the passage of heavily laden vehicles. The summers are excessively hot, but the air dry and pure. In the autumns, bilious and remittent fevers are common on the river bottoms. Pulmonary complaints, however, to such a degree as to terminate in consumption, are infrequent.

Soil and Productions.—The soil of Missouri, speaking generally, is good, and of great agricultural capabilities; but the most fertile portions are in the river bottoms, which are a rich alluvion, (in some cases, however, mixed with sand,) and in that portion N. of the Missouri river, except in the E., where a sandy soil prevails. South of the Missouri there is a greater variety in the soil, but much of it is fertile, and even in the mountains and mineral districts there are rich valleys, and about the sources of the White, Eleven Points, Current, and Big Black rivers, the soil, though unproductive, furnishes a valuable growth of yellow pine. The marshy district of the S. E. part will, when the population shall have become sufficiently dense to justify the expense of drainage, be probably one of the most fertile portions of the state. The great staple of Missouri is Indian corn, and more hemp is produced than in any state ex-

cept Kentucky: the other great products are wheat, oats, tobacco, wool, peas, beans, Irish and sweet potatoes, fruits, butter, cheese, pork, hay, flax, honey and beeswax; considerable rye, buckwheat, market products, grass-seeds, maple sugar; and some rice, barley, wine, hops, silk, and molasses. In 1850 there were in the state 54,458 farms, occupying 2,924,991 acres of improved land, (less than 60 acres to each farm,) and producing 2,966,928 bushels of wheat; 44,112 of rye; 36,069,543 of Indian corn; 5,243,476 of oats; 45,974 of peas and beans; 934,627 of Irish potatoes; 332,120 of sweet potatoes; 23,590 of buckwheat; 13,641 of flaxseed; 17,100,884 pounds of tobacco; 1,615,860 of wool; 7,792,499 of butter; 202,122 of cheese; 116,743 tons of hay; 22,558 of hemp; 520,008 pounds of flax; 178,750 of maple sugar; 1,357,822 of beeswax and honey; orchard products valued at \$512,527; market products, \$99,454; live stock, \$19,766,851; and slaughtered animals, \$3,349,517.

Forest and Fruit Trees.—"The river bottoms are covered with a luxuriant growth of oak, elm, ash, hickory, cottonwood, linn, and white and black walnut. In the more barren districts are found white and pin oak, and sometimes forests of yellow pine. The crab-apple, papaw, and persimmon are abundant; as also the hazel and pecan." There are three species of wild grape; and apples, pears, peaches, apricots, and nectarines yield well.

Manufactures.—Missouri has not as yet largely engaged in this branch of industrial employments; though in 1850 there were 3030 establishments each producing \$500 and upwards annually; 2 of these were cotton factories, employing \$102,000 capital, 75 male and 80 female hands, consuming raw material worth \$86,446, and producing 13,260 bales of batting, valued at \$142,000; 1 woollen factory, employing \$20,000 capital, 15 male and 10 female hands, consuming raw material worth \$16,000, and producing 12,000 yards of cloth, and 6000 pairs of blankets, worth a total value of \$56,000; 13 iron forges, foundries, &c., employing \$348,100 capital, and 722 male hands, consuming raw material worth \$254,996, and producing 25,413 tons of pig, cast, and wrought iron, valued at \$719,795; capital invested in the manufacture of malt and spirituous liquors, \$298,900, consuming 124,400 bushels of barley; 309,200 of Indian corn; 24,900 of rye, and 31 tons of hops, producing 44,850 barrels of ale, &c., and 939,400 gallons of wine, whiskey, &c.; and 148 tanneries, employing \$228,095 capital, consuming raw material worth \$247,956, and producing leather valued at \$866,241. Homemade manufactures were produced to the value of \$1,674,705.

Internal Improvements.—On the 1st of January, 1853, Missouri had not a mile of completed railroad; but according to Mr.

Kennedy's Census Abstract, she had 515, or according to Hunt's Magazine, 249 miles in course of construction, intended to connect Hannibal with St. Joseph's, and St. Louis with Independence. According to more recent newspaper intelligence, 50 miles of the latter are already in operation. Plank-roads are coming much into vogue in this state as well as elsewhere. Three per cent. on the sale of public lands in this state is devoted to internal improvements. The state loans \$4,000,000, and gives 1,250,000 acres of land towards the Pacific railroad, *i. e.* that portion of it between St. Louis and Independence.

Commerce.—St. Louis is the great centre of internal commerce of the Mississippi and its tributaries, which must greatly increase as the settlements on those great rivers extend themselves. The foreign imports of Missouri (a very small part of its trade) amounted in 1851-52 to \$914,826; tonnage of the state, 37,861 $\frac{1}{2}$; number of vessels built, 11, of which 6 were steamers; tonnage, 2133 $\frac{1}{3}$. Of 1195 steamers owned in the United States in 1853, 126 belonged to St. Louis. The exports of this state consist mainly of lead, pork, flour, wheat, tobacco, and live stock. Missouri has long been the principal seat of an active caravan trade with Santa Fé: whether the new state of things on the Pacific coast will interfere with this trade, remains to be seen. For further particulars, see Sr. Louis.

Education.—Missouri has a school fund (in 1852) of \$575,668, and another fund of \$100,000, called the seminary fund. The interest of the former is distributed among the counties in proportion to the number of scholars in each. In 1850 there were 59,927 children in the state, of whom 39,983 were in the schools. Annual expenditure for school purposes, \$88,124; number of volumes in school libraries, 6200. Every sixteenth section of public lands is devoted to common schools. There are (1853) 6 colleges in the state, with an aggregate of 378 students, and 18,400 volumes in their libraries; and 2 medical schools, with 164 students. The state university, located at Columbia, in Boone county, is endowed with six townships of land by the general government. Four counties contended for the honor of having it located within their limits, and it was accorded to Boone because its citizens subscribed most liberally to its funds. Howard High School, at Fayette, in Howard county, is a flourishing and successful school. St. Charles College, at the town of St. Charles, was established by Mr. Collier, who bequeathed the institution \$10,000.—See *Table of Colleges*, APPENDIX.

Religious Denominations.—Of 773 churches in Missouri in 1850, the different sects of Baptists owned 283; the Christian Church, 51; the Episcopalians, 10; the Free Church, 13; the Lutherans, 21; the Methodists, 200;

the Presbyterians, 108; the Roman Catholics, 64, and the Union Church, 11. The rest belonged to the Boatmen's Church, the Church of Christ, the Evangelists, the German Protestants, the German Evangelical Church, the Independents, the Jews, the Mennonites, the Mormons, the Republicans, the Rationalists, the Unitarians, and the Universalists—giving one church to every 882 inhabitants. Value of church property, \$1,558,590.

Public Institutions.—The state penitentiary at Jefferson City had in December, 1852, 232 convicts confined within its walls, of whom 145 were from the county of St. Louis. This institution is conducted by lessees, who pay an annual rent of \$5000 to the state. The legislature, in 1853, made the following appropriations:—\$57,000 for the lunatic asylum at Fulton, \$37,000 for the deaf and dumb asylum at the same place, and \$20,000 for a blind asylum. In 1850 there were 19 public libraries in the state, with an aggregate of 37,506 volumes.

Government, Finances, &c.—The governor and lieutenant-governor are elected by popular vote for four years, the former receiving \$2000 per annum, and the use of a furnished house, and the latter \$4.50 per diem during the session of the senate, of which he is ex officio. The senate consists of 18, and the house of representatives of 49 members, the former elected for 4 and the latter for 2 years, by the people. The sessions of the legislature are biennial. Twelve months' residence in the state is necessary before exercising the right of suffrage. Missouri is entitled to seven members in the national house of representatives, and to 9 electoral votes for president. The judiciary consists—1. Of a supreme court, composed of three judges; 2. Of 14 circuit courts, and the courts of St. Louis, (viz. common pleas, criminal, and probate courts,) and the common pleas courts of Hannibal City; and 3. Of county courts. The judges of the supreme and circuit courts are elected for 6 years, by popular vote, and the county judges for 4 years, in the same manner. The supreme court holds two sessions annually, one at St. Louis and one at Jefferson City. A circuit court is held twice a year in each county, and has exclusive jurisdiction in criminal matters, and in all contracts and matters of tort over \$90. The county courts are limited to matters of probate and local county affairs. The judges of the supreme court receive \$1500 salary each; the circuit judges \$1000 each, and the judges of the St. Louis courts \$3000. There is a recorder's court at St. Louis, confined to small offences. The assessed value of property in the state in 1850 was \$98,595,463; public debt, (in 1852,) \$922,261; school fund, \$575,668, and other productive property, \$382,034, and ordinary expenses, exclusive of debts and schools, \$110,000 per annum. Missouri had in January, 1853, one

bank with five branches, with \$1,210,622.69 capital, \$1,253,311.96 in coin, and \$2,427,720 circulation.

History.—Though the French were the first settlers, and for a long time the principal inhabitants of Missouri, yet a very small portion of her present population is of that descent. A fort was built by that people as early as 1719, near the site of the present capital, called Fort Orleans, and its lead mines worked to some extent the next year. St. Genevieve, the oldest town in the state, was settled in 1755, and St. Louis in 1764. At the treaty of 1763, it was assigned, with all the territory west of the Mississippi, to Spain. "In 1780, St. Louis was besieged and attacked by a body of British troops and Indians, 1540 strong." During the siege, 60 of the French were killed. The siege was raised by Colonel Clark, an American, who came with 500 men to the relief of the place. At the close of the American Revolution, the territory west of the Mississippi remained with Spain till it was ceded to France in 1801. In 1803, at the purchase of Louisiana, it came into the possession of the United States, and formed part of the territory of Louisiana till the formation of the state of that name in 1812, when the remainder of the territory was named Missouri, from which (after a stormy debate in Congress as to the admission of slavery) was separated the present state of Missouri in 1821. In 1811 and 1812 occurred a series of earthquakes which, in the neighborhood of New Madrid in this state, caused the earth to open, and entirely changed the face of the country, swallowing up hills and forming new lakes, while others at the same time were drained of their water. The current of the Mississippi was turned back till the accumulating waters gained sufficient force to break through the newly raised barrier. All this region is now a widely extended marsh.

MISSOURI, or NORTH-WEST TERRITORY, an unorganized territory occupying the vast region lying between the White Earth and Missouri rivers on the E., and the Rocky mountains on the W., and (with the exception of a small tract in the S. E., belonging to the Indian Territory) between the Platte river on the S., and British America on the N. It lies between about 40° 30' and 49° N. lat., and between about 97° 45' and 113° W. lon., covering an estimated area of about 587,564 square miles, or space enough for five states larger than Illinois. This vast tract would include the proposed territory of Nebraska.

Population.—We have no census returns from this wild region, which has been appropriated as the abode of different Indian tribes, among which may be mentioned the Crows, Blackfeet, (a very warlike and cruel tribe,) Minnetarees, Riccarees, Puncals, and Pawnees.

Face of the Country.—The greater part of this territory, as far as is known, seems to consist of a high prairie land. A chain of highlands, called the Black Hills, runs from near the Platte river in a N. E. direction to the Missouri river, which they approach in about 102° of W. lon., dividing the waters running into the Yellowstone from those flowing into the Missouri below its great south-eastern bend. On the W., the Rocky mountains rear their lofty summits, in some instances above the snow line, and send out spurs into Missouri. Fremont's Peak, the loftiest known in this chain in the United States, is on the S. W. border of this territory.

Rivers and Lakes.—This extensive tract is traversed by the Missouri, one of the most important rivers in the world, which rises near its south-western border, runs for about 1000 miles in a N. E. direction, to 48° 20' N. lat., receiving a large number of affluents from the N., one of which, the Yellowstone, is 980 miles in length, and a multitude of sub-tributaries from the S. From the latitude named above, it flows off to the S. E., forming the eastern boundary for perhaps 1000 miles. In about lat. 43° 30', the Missouri makes a grand detour, called the Great Bend, "where the river makes a circuit of 30 miles in advancing 2000 yards in a direct course." A number of important streams flow into the Missouri, within this territory, below the bend alluded to, so that this region is well watered, and gives promise of being more suitable for settlement than the country below the Platte river. There are some small lakes in the S. W., and perhaps others yet to be discovered and described.

Objects of Interest to Tourists.—The Great Falls of the Missouri, and the gorge below, enclosed with perpendicular rocks 1200 feet high, may claim the first place among the striking natural objects of this territory. See MISSOURI RIVER. For a description of that extraordinary region, called Mauvais Terres, see NEBRASKA.

Animals.—This country is the paradise of the hunter and trapper. Vast herds of buffalo roam over its prairies, though now rapidly diminishing in numbers. Lewis and Clark have stated that at times the Missouri was backed up as by a dam, by the multitude of these animals crossing. The grizzly bear, Rocky mountain goat, sheep, and antelope infest the slopes of the Rocky mountains; and the beaver in former times existed in great numbers, though the trappers are now fast thinning them out. Panthers were met with by Lewis and Clarke; also black bears, elks, and wolves.

Commerce.—The fur and peltry trade constitutes the commerce of this vast region. Steamboats ascend the Missouri above the mouth of the Yellowstone, and up the latter river 300 miles.

MISSOURI, a township in Hempstead co., Arkansas. Population, 513.

MISSOURITON, a post-village of St. Charles co., Missouri.

MITCHELL, a new county in the N. part of Iowa, bordering on Minnesota, has an area of 420 square miles. It is intersected by the Cedar river, which flows in a S. S. E. direction. This county is not included in the census of 1850, and has few, if any, civilized inhabitants. Named in honor of Mitchell, the Irish patriot.

MITCHELL, a township in Poinsett co., Arkansas. Population, 954.

MITCHELL, a post-office of Sheboygan co., Wisconsin.

MITCHELLS, a small village of Jasper co., Iowa, 65 miles W. from Iowa City.

MITCHELL'S, a post-office of Walker co., Texas.

MITCHELL'S LANDING, a post-office of Obion co., Tennessee.

MITCHELL'S MILLS, a post-office of Indiana co., Pennsylvania.

MITCHELL'S MILLS, a small village of Boyle co., Kentucky, 45 miles S. W. from Lexington.

MITCHELL'S SALT-WORKS, a post-office of Jefferson co., Ohio.

MITCHELLSVILLE, a small post-village of Robertson county, Tennessee, on the turnpike from Nashville to Louisville, 35 miles N. from the former, and on the N. line of the state.

MITCHELLSVILLE, a post-office of Boone co., Kentucky.

MITTINEAGUE, a post-office of Hampden co., Massachusetts.

MIXERVILLE, a post-office of Franklin co., Indiana.

MIXTOWN, a post-office of Tioga co., Pa.

MIXVILLE, a village of Alleghany co., New York, near the Genesee river, 14 miles N. from Angelica.

MOBILE river, of Alabama, is formed by the confluence of the Alabama and Tombigbee, at the southern extremity of Clarke county. After a course of about 6 miles, it divides into two channels, of which the western and largest retains the name of Mobile, and the eastern is called the Tensaw. The Mobile flows southward, forming the boundary between Mobile and Baldwin counties, and enters Mobile bay at the city of its own name, after a course of 50 miles. It is navigable by large steamboats.

MOBILE, a county forming the S. W. extremity of Alabama, bordering on Mississippi and the Gulf of Mexico, has an area of 1400 square miles. The Mobile river and bay of the same name form its boundary on the E., and it is also drained by Escatappa river. The surface is nearly level, and extensively covered with forests of pine; the soil is sandy and generally poor. Indian corn and rice are the staples. In 1850 this county produced 34,500 bushels of corn; 44,720 of potatoes, and 90,402 pounds of rice. There were 12 saw mills, 2 flour and grist mills,

and 2 iron foundries. It contained 19 churches, and 6 newspaper offices; 1774 pupils attending public schools, and 718 attending academies or other schools. Steamboats navigate the Mobile river. The county is intersected by the Mobile and Ohio railroad. Capital, Mobile. Population, 27,600; of whom 18,244 were free, and 9356, slaves.

MOBILE, a city and port of entry of Alabama, and capital of Mobile county, is situated on the W. bank of Mobile river, immediately above its entrance into the bay of the same name, 30 miles N. from the Gulf of Mexico, 330 miles by water S. W. from Montgomery, 165 miles E. by N. from New Orleans, and 1033 miles from Washington. Lat. $30^{\circ} 41' 48''$ N., lon. $87^{\circ} 59'$ W. It is by far the most considerable town of the state both in population and commerce, and, next to New Orleans, is the greatest cotton market in the United States. Population in 1840, 12,672; and in 1850, 20,515. The site is a level sandy plain, sufficiently elevated for the purpose of convenient drainage, being about 15 feet higher than the bay. The streets are wide, and mostly run N. and S. and E. and W. Much attention has recently been paid to planting shade-trees, and the city is supplied with spring water brought from the distance of several miles. It is not compactly built, excepting the portion occupied by the commercial houses. On the S. and W. side of the town there are dry sandy pine-hills, which afford agreeable and healthy retreats during the hot season. Mobile is the seat of Spring Hill College, founded by the Catholics, having a library of 7000 volumes. It also contains an institution for the blind, a city hospital, a United States marine hospital, 2 orphan asylums, a theatre, 2 or 3 banks, and 6 newspaper offices. There are churches of six denominations, and several academies. The health of the place has recently been improved by draining and filling in the low grounds on the N. side of the town. The entrance of the bay is defended by Fort Morgan, formerly Fort Brower, and a light-house has been erected in the same vicinity. Mobile has an advantageous position for trade, being the natural outlet of the greatest cotton region in the South. Steamboats ply regularly, at all seasons, between this port and Montgomery and Tuscaloosa. Another line keeps up a daily communication with New Orleans *via* Lakes Borgne and Pontchartrain. A regular line of sailing vessels is established from Mobile to New York. A railroad about 450 miles long is in course of construction from Mobile to the mouth of the Ohio river, connecting with the Central railroad of Illinois. This road, when finished, will form part of the direct route from the Gulf of Mexico to the great lakes, and must materially promote the prosperity of Mobile. More than 30 miles of it are now in operation. Another railroad is in progress, which will connect

this city with Columbus, in Georgia. The exports of cotton for the year ending September 1st, 1852, amounted to 549,499 bales. In 1851, 6,816,054 feet of lumber were shipped from Mobile. The tonnage of the port, June 30th, 1852, amounted to an aggregate of 7412 $\frac{2}{3}$ tons registered, and 21,120 $\frac{2}{3}$ tons enrolled and licensed. Of the latter, 20,245 $\frac{2}{3}$ tons were employed in the coast trade, and 16,225 $\frac{5}{8}$ tons in steam navigation. The foreign arrivals for the year were 150—tons, 87,289, of which 61—tons, 21,630 were by American vessels. The clearances for foreign ports were 252,—tons, 163,135, of which 91,067 were in American bottoms.

MOBILE BAY, situated in the S. W. part of Alabama, extends southward from the mouth of Mobile river, and communicates with the Gulf of Mexico by two channels, separated by Dauphin Island. The eastern, or main channel, has about 18 feet of water. Length from N. to S., 35 miles. The width increases gradually in passing southward, until it amounts to about 15 miles.

MOBILE POINT, the E. side of the entrance to Mobile bay, Alabama. A revolving light, 55 feet high, is on its western extremity. Lat. $30^{\circ} 15' 40''$ N., lon. $87^{\circ} 58'$ W.

MOBLEY'S POND, a post-office of Scriven co., Georgia, 40 miles in a direct line S. E. from Augusta.

MOCCASIN CREEK, of North Carolina, rises near the E. border of Wake co., and flowing S. E., unites with Contenty creek.

MOCKSVILLE, a small and neat post-village, capital of Davie co., North Carolina, 140 miles W. from Raleigh, and 10 miles from the Yadkin river.

MODENA, a post-village of Ulster co., New York, about 80 miles S. from Albany.

MODEST TOWN, a small post-village of Accomack co., Virginia, 3 miles from the Atlantic, and 10 miles E. from Accomack Court House, contains 2 churches, and a few shops.

MOFFATTSVILLE, a post-village of Anderson district, South Carolina, 117 miles W. N. W. from Columbia.

MOFFET'S STORE, a post-office of Columbia co., New York.

MOFFITT'S MILLS, a post-office of Randolph co., North Carolina.

MOGADORE, a post-village of Ohio, on the line between Summit and Portage counties, 15 miles S. W. from Ravenna. It has manufactories of stone-ware.

MOHAWK, a river of New York which rises near the border, between Lewis and Oneida counties, about 20 miles N. of Rome. It passes through Herkimer, Montgomery, and Schenectady counties, and enters the Hudson river, 3 miles above Troy. Its general direction is E. by S., and its whole length about 150 miles. The Erie canal follows the course of this river from Rome to its mouth. The river has a direct fall of 70 feet at Cahoes, about 2 miles from its mouth, and

affords abundant water-power at several places. The chief towns on its banks are Rome, Utica, Little Falls, and Schenectady.

MOHAWK, a post-village of Herkimer county, New York, on the Mohawk river, and on the Erie canal, about 80 miles W. N. W. from Albany. It contains a bank, a newspaper office, and over 100 dwellings.

MOHAWK, a township of Montgomery co., New York, on the Mohawk river. It contains Fonda, the county seat. Population, 3095.

MOHAWK VALLEY, a post-office of Coshocton co., Ohio.

MOHICAN, a post-township in the S. E. part of Ashland co., Ohio. Population, 1774.

MOHICAN RIVER, Ohio. See WALHONDING.

MOHICANVILLE, a post-village of Ashland co., Ohio, about 80 miles N. N. E. from Columbus. The post-office is Mohiccan.

MOHRSVILLE, a post-office of Berks co., Pa.

MOINGONAN RIVER, a name sometimes given to the upper portion of the Des Moines river.

MOIRA, a post-township and village of Franklin co., New York, on the Northern railroad, 47 miles E. from Ogdensburg. Population of the township, 1340.

MOLINE, a thriving post-village of Rock Island county, Illinois, on the Mississippi river, about 3 miles above Rock Island City. The rapids of the river at this place afford abundant water-power, which is used in mills and factories.

MOLINO, a post-office of Tippah co., Miss.

MOLINO, a post-office of Lincoln co., Tenn.

MOLINO DEL REY, a post-office of Arkansas co., Arkansas.

MOLLHORN, a post-office of Newberry district, South Carolina.

MOLLTOWN, a post-village of Berks co., Pennsylvania, 64 miles E. of Harrisburg.

MOMENCE, a post-township in Will co., Illinois. Population, 573.

MONADNOCK MOUNTAIN, commonly called Grand Monadnock, is situated in Cheshire co., New Hampshire, 22 miles E. from Connecticut river. It is about 5 miles in length, N. E. and S. W., and 3 miles wide, with an elevation of 3250 feet above the level of the sea.

MONAGHAN, a post-office of St. Clair co., Mo.

MONCHES, a post-office of Waukesha co., Wisconsin, on the plank-road from Milwaukee to Dodge county, about 28 miles N. W. from the former.

MONCLOVA, a post-office of Lucas co., Ohio.

MONDAY CREEK, of Ohio, flows into the Hockhocking river a few miles above Athens.

MONDAY CREEK, a township forming the S. W. extremity of Perry co., Ohio. Pop., 1124.

MONEEK, a post-office of Winnishiek co., Io.

MONEY CREEK, a post-office of McLean co., Illinois.

MONGAUF VALLEY, a post-office of Sullivan co., New York.

MONGOQUINONG, a post-village in La Grange co., Ind., 155 miles N. N. E. from Indianapolis.

MONGUAGON, a township in the S. E. part

of Wayne co., Michigan, situated partly on Grosse Island, in Detroit river, and partly on the adjacent land. Population, 984.

MONESTEE, or MONISTIQUE RIVER, of Michigan. See MANISTEE.

MONITEAU, a county near the centre of Missouri, has an area estimated at 400 square miles. It is bounded on the N. E. by Missouri river, and intersected by Saline, Moreau, and Moniteau creeks. The surface is uneven. The soil in some parts is fertile. Indian corn, wheat, oats, and butter are the staples. In 1850 this county produced 342,914 bushels of corn; 24,540 of wheat; 68,615 of oats, and 63,258 pounds of butter. It contained 9 churches, and 780 pupils attending public schools. Limestone underlies part of the county. Stone coal of fine quality is abundant. Capital, California. Population, 6004; of whom 5488 were free, and 566, slaves.

MONITEAU, a small village of Moniteau co., Missouri.

MONITEAU CREEK, of Missouri, flows through Moniteau county, and enters the Missouri river at the N. extremity of Cole county.

MONITEAU CREEK, of Howard county, Missouri, flows into the Missouri from the left at Rocheport, and furnishes valuable water-power.

MONITOWOC. See MANITOWOC.

MONK'S CORNERS, a post-office of Charles-ton district, South Carolina.

MONK'S STORE, a post-office of Sampson co., North Carolina.

MONKTON, a post-township of Addison co., Vermont, about 30 miles W. by S. from Montpelier. Population, 1246.

MONKTON MILLS, a post-office of Baltimore co., Maryland.

MONMOUTH, a county in the E. central part of New Jersey, has an area of about 810 square miles. It is bounded on the E. by the Atlantic Ocean, and on the N. by Sandy Hook bay and Raritan bay, and is drained by Nevisink and Manasquan rivers, flowing into the Atlantic, and by Crosswick's and Doctor's creeks, which fall into the Delaware. These streams afford valuable water-power. The surface is generally level, except the Nevisink hills, in the N. E. part. The whole county is of alluvial formation, and consists of clay mingled with sand, gravel, and, in low places, vegetable mould. Indian corn, wheat, potatoes, hay, butter, and various kinds of fruit are the staples. In 1850 this county produced 841,072 bushels of corn; 152,904 of wheat; 773,272 of potatoes; 29,120½ tons of hay, and 628,602 pounds of butter. The quantity of potatoes was the greatest produced by any county in the United States except Grafton county, New Hampshire. There were 14 distilleries, 4 woollen mills, 2 foundries, 23 flour mills, 9 grist mills, and 23 saw mills. It contained 60 churches, and 6 newspaper offices, 6029 pu-

pils attending public schools, and 174 attending academies or other schools. Marl is found, and much used as a manure. Raritan bay, on the N. border, affords an excellent harbor. Capital, Freehold. Pop., 30,313.

MONMOUTH, a post-township of Kennebec co., Maine, on the Androscoggin and Kennebec railroad, about 15 miles S. W. from Augusta. Population, 1925.

MONMOUTH, a post-village of Adams co., Indiana, on the St. Mary's river, 114 miles N. E. from Indianapolis.

MONMOUTH, a post-village, capital of Warren county, Illinois, on the Peoria and Burlington railroad, 120 miles N. W. of Springfield. It is situated in a rich and beautiful prairie, under good cultivation. It became the county seat in 1831. A newspaper is published here.

MONONGAHELA river, a branch of the Ohio, is formed by the West Fork and Tygart's Valley rivers, which rise in Randolph and Lewis counties of Virginia, and unite 1 mile from Fairmont in Marion county. It pursues a north-easterly course to the mouth of Cheat river, its principal tributary, which enters it near the boundary between Virginia and Pennsylvania, after which its general direction is northward until it unites with the Alleghany at Pittsburg. Large steamboats ascend this river to Brownsville, Pennsylvania, and those of medium size to Fairmont, Virginia. The whole length, exclusive of branches, is 150 miles. The Baltimore and Ohio railroad crosses the river just below the junction of its branches by a wire suspension bridge. It is about 400 yards wide at Pittsburg, and 300 yards, on an average, below the mouth of Cheat river. The obstructions caused by rapids in the lower part of its course have been obviated by dams. *Branches.*—The West fork, also called West Fork river, rises in Lewis county, Virginia, flows northward and north-eastward through Harrison county, and meets the other branch in Marion county, after a course of more than 100 miles. Water-power is abundant on this stream. Tygart's Valley river will be described under its own head.

MOUNT MITCHEL, formerly BLACK MOUNTAIN, on the borders of Yancey and McDowell counties, North Carolina, is the highest mountain summit in the United States east of the Rocky mountains. Height, 6470 feet. The mountain has two peaks, the lower of which is called Potato Top; the other has been named Mount Mitchel, in honor of Professor Mitchel, of the University of North Carolina, who was the first to ascertain its real elevation. The former name, "Black Mountain," is said to have been derived from its being covered from the base to the summit, with a dense growth of pine, which gave it a dark appearance in the distance.

MURRAY, a county in the N. N. W. part of Georgia, bordering on Tennessee, has an area of 600 square miles. The Coosawattee river forms part of the southern boundary, the Connasauga traverses the county from N. to S., and unites with the other on the border, to form the Oostenaula; it is also drained by Holly, Sumach, Rocky, and Mill creeks. The surface is elevated, and in some parts mountainous: the Cohutta and Chattoogata mountains are remarkable for their grand and picturesque scenery. The soil is generally fertile. Indian corn, wheat, oats, potatoes, and cotton are the staples. In 1850 the county produced 518,745 bushels of corn; 56,588 of oats; 67,391 of sweet potatoes, and 159 bales of cotton. There were 10 saw mills, and 9 tanneries. It contained 27 churches, 1 newspaper office, and 400 pupils attending public schools. Gold, silver, lead, zinc, and hydraulic limestone are found in the county. Since the Western and Atlantic railroad was opened the population has increased rapidly. Organized in 1832, and named in honor of Thomas W. Murray, a former member of the Georgia legislature, and speaker of the house. Capital, Spring Place. Population, 14,423, of whom 12,503 were free, and 1930, slaves.

MUSCATATA, or MUSKAKITUCK river, of Indiana, rises in Ripley county, and flowing south-westerly, enters the Driftwood fork of White river, near the S. boundary of Jackson county. The Indian name is Mesh-ca-quetuck, i. e. "Pond river."

MUSCATINE, a county in the E. S. E. part of Iowa, bordering on Illinois, has an area of 450 square miles. The Mississippi river, which makes a great bend opposite the county, forms its south-eastern boundary for a distance of about 40 miles, and it is intersected by Red Cedar river. The surface is generally rolling, and diversified with groves of trees and extensive prairies; the soil is exceedingly fertile, and much improved. Wheat, Indian corn, and grass are the staples. In 1850 this county produced 341,465 bushels of Indian corn; 68,246 of wheat, and 5433 tons of hay. It contained 9 churches, 2 newspaper offices, and 1590 pupils attending public schools. Extensive beds of stone coal and quarries of freestone and limestone are found. A railroad is projected through this county from Rock island to the Missouri river. Capital, Muscatine. Population, 5731.

MUSCATINE, formerly BLOOMINGTON, a flourishing city and river-port of Iowa, and capital of Muscatine county, is situated on the right bank of the Mississippi, 100 miles above Keokuk, and 32 miles S. E. from Iowa City. Commencing at the head of the upper rapids of the river, that stream may be traced in a direction almost due west for more than 40 miles, until it strikes a series of bold rocky bluffs, by which its course is suddenly turned towards the S. At the apex of this bend, on the summit of these bluffs, is situated the city of Muscatine. The place was first settled by the whites in 1836, previous to which time it had been an Indian trading post, known by the name of Manatheka. It is one of the most populous and commercial towns of the state, and is the shipping point for an extensive and fertile territory. In consequence of the bend in the river, Muscatine is nearer the centre of the state than the other ports on the Mississippi, and it naturally commands the trade of two great fluvial divisions of Iowa, namely, the valleys of the Red Cedar and Iowa rivers. The projected railroad from Rock island, Illinois, to Fort Des Moines, is expected to pass through this place. Muscatine has a good landing for steamboats, which ply frequently between

this and other towns on the river. It contained, in 1850, 2 printing offices and several churches. Pop. in 1853, estimated at 5000.

MUSCLE SHOALS, a term applied to an extensive series of rapids in the Tennessee river, between Lauderdale and Lawrence counties, Alabama. The river has a descent of about 100 feet in the course of 20 miles, and no boats can pass over the shoals except in the highest stages of water. The channel, at this place, varies from 1 to 2 miles in width, but at the lower termination of the shoals it is contracted to half a mile. The bluffs on each side are composed of an upper stratum of flint, and a lower stratum of fine limestone. About the year 1840, a canal, 12 miles long, was constructed around the shoals on the north side of the river; but, unfortunately, the locks were made too short to admit even the smallest steamboats that navigate the river. It was soon abandoned, and the channel has been filling up for the last 10 years. Thousands of wild geese and ducks resort to this locality to feed on the species of shell-fish, from which the name of Muscle Shoals is derived.

MUSCODA, a post-township forming the N. E. extremity of Grant co., Wisconsin.

MUSCODA, a post-village in the above township, on the left bank of Wisconsin river, 30 miles N. N. E. from Lancaster. It has 3 stores and about 250 inhabitants.

MUSCO'GEE, a county in the W. part of Georgia, contains about 400 square miles. The Chattahoochee river forms its W. boundary, and separates it from Alabama, and it is also drained by Upatoi, Randall's, and Nocheefaloochee creeks. The soil varies from the richest mould to the poorest sand. Cotton, maize, wheat, oats, and potatoes are the staples. In 1850 this county produced 8508 bales of cotton; 399,113 bushels of corn; 34,731 of oats, and 83,425 of sweet potatoes. There were 4 cotton factories, 1 woollen factory, 1 manufactory of farming implements, 2 foundries, 7 flour and grist mills, 1 paper mill, and 10 saw mills. It contained 6 churches, 4 newspaper offices, and 255 pupils attending public schools. The county contains granite, hornblende, iron, agate, jasper, chalcedony, and other rare minerals. The Chattahoochee affords abundant water-power, and is navigable for steamboats from this county to the Gulf of Mexico. The vertical rise and fall of this river is not less than 60 feet. This county is the most populous in the state except Chatham. It is intersected by the Muscogee railroad, which terminates at Columbus, the county seat. Organized in 1826, and named from a tribe of the Creek Indians. Population, 18,578; of whom 10,422 were free, and 8156, slaves.

MUSCONETCONG, a river in the N. W. part of New Jersey, issues from Hopatcong pond, between Morris and Sussex counties, flows south-westward, forming the boundary be-

tween Warren county on the right, and Morris and Hunterdon on the left, and empties itself into the Delaware about 10 miles below Easton. The length is near 50 miles. It drains a narrow valley, bounded by parallel ridges, and affords extensive water-power.

MUSKINGUM RIVER, of Ohio, is one of the largest affluents which the Ohio river receives from that state. Its main branches, the Tuscarawas and Walhonding rivers, rise in the N. part of the state and unite at Coshocton. From that point the course of the river is nearly S. E., and it flows through a beautiful, fertile, and populous region, (in many parts of which stone coal is abundant,) until it enters the Ohio, at Marietta. The main stream is about 110 miles long, and 225 yards wide, near its mouth. Steamboats ascend as high as Dresden, a distance of about 95 miles. The navigation has been improved by the construction of dams, and a sidecut has been opened from Dresden to the Ohio canal.

MUSKINGUM, a county in the E. central part of Ohio, has an area of 610 square miles. It is traversed from N. to S. by the Muskingum river, dividing it into nearly equal parts, and also drained by Licking river, and by Wills, Tomoka, and Jonathan creeks. The surface is agreeably diversified by hills and gentle undulations. The soil contains a large portion of clay, and is well watered and very productive. Indian corn, wheat, oats, hay, butter, and live stock are the staples. In 1850 this county produced 1,144,855 bushels of corn; 415,847 of wheat; 281,748 of oats; 20,997 tons of hay, and 772,502 pounds of butter. It contained 101 churches, 9 newspaper offices, 15,800 pupils attending public schools, and 589 attending academies or other schools. Bituminous coal and iron ore abound in this division of the state. Salt is procured by boring into strata of sandstone to the depth of several hundred feet. The county is liberally supplied with

water-power. Steamboats navigate the Muskingum river through the county, which is intersected by the Ohio canal and by the Central railroad, and in part by 2 other railroads extending to Cleveland and Cincinnati. In respect to population, this is the third county in the state. Capital, Zanesville. Population, 45,049.

NANTUCKET, the most S. E. county of Massachusetts, has an area of about 60 square miles. It consists of Nantucket island, Tuganuck island, Muskejet island, and the Gravel islands, lying in the Atlantic ocean, about 30 miles S. of Barnstable county. The surface of Nantucket, the principal island, is level in the S. part, and hilly in the N. The soil is generally sandy, but affords some pasture. The inhabitants are principally engaged in navigation and the fisheries, especially the whale fishery. Indian corn, potatoes, and grass are the staples. In 1850 this county produced 3206 bushels of corn; 5997 of potatoes; 1439 tons of hay, and 21,271 pounds of butter. There were 7 whale-oil establishments, 2 boat-yards, 2 chandleries, 6 cooper shops, 1 cordage manufactory, 2 nail-works, and 2 sail manufactories. It contained 9 churches and 2 newspaper offices; 1230 pupils attending public schools, and 356 attending academies and other schools. Organized in 1659. Capital, Nantucket. Population, 8452. South-east of this island are situated the Nantucket shoals, on which many vessels and lives have been lost. They cover an area of about 45 by 50 miles.

NANTUCKET, a post-town, port of entry, and seat of justice of Nantucket county, Massachusetts, is situated at the entrance of a deep bay on the N. side of Nantucket island, about 105 miles S. E. by S. from Boston, and 50 miles S. E. from New Bedford; lat. $41^{\circ} 16' 56''$ N., lon. $70^{\circ} 6' 12''$ W. The harbor is excellent, being capacious, deep, and nearly landlocked by two projecting points of beach, the extremities of which are only about three-fourths of a mile apart. The village is compactly built, mostly of wood, with narrow streets. It contains 8 or 9 churches, a bank with a capital of \$200,000, an Athenæum, a handsome building, and 2 newspaper offices. Besides a library of about 2500 volumes, the Athenæum has a valuable collection of curiosities. The inhabitants of Nantucket have been long and successfully engaged in the whale fishery. The shipping of the port. June 30th, 1852, amounted to an aggregate of 23,779 $\frac{1}{2}$ tons registered, and 3451 $\frac{3}{4}$ tons enrolled and licensed. Of the registered tonnage, 18,015 $\frac{3}{4}$ tons were employed in the whale fishery; and of the enrolled and licensed, 3048 $\frac{3}{4}$ tons were employed in the coast trade, 403 $\frac{1}{2}$ tons in the cod and mackerel fisheries, and 479 $\frac{3}{4}$ tons in steam

navigation. The receipts for the year 1849 were 17,887 barrels of sperm oil; 6461 barrels of whale oil, and 68,200 pounds of whalebone. The whale fishery usually employs about 2000 hands, and from \$2,500,000 to \$3,000,000 capital in vessels and outfits. July 13th, 1846, Nantucket was visited by a fearful conflagration, which destroyed not less than 350 buildings, including two banks, a church, the Athenæum, and 7 oil and candle manufactories. The loss was estimated \$1,000,000. A steamboat plies between Nantucket and New Bedford. Population of the township, 8452.

NASH'S STREAM, of Coos co., New Hampshire, flows into the Upper Amonoosuck.

NASHUA, formerly Dunstable, an important manufacturing post-town of Hillsborough county, New Hampshire, 40 miles N. N. E. from Boston, is situated at the confluence of the Nashua river with the Merrimack, and at the terminus of the Lowell, the Worcester, the Wilton, and the Concord railroads, by which it has communication with the principal cities and towns of New England. The Nashua river has a fall at this place of 65 feet in about 2 miles, affording a vast hydraulic power, which has been greatly improved for manufacturing purposes. Its volume is 180 cubic feet per second in the driest season. A canal, with locks of solid stone, 82 feet long, and 24 feet high, connects the waters of this stream above the falls with those of the Merrimack. Nashua has long been distinguished for its manufactures, which are very extensive, and embrace articles of almost every description. Among the numerous corporations may be mentioned the Nashua Manufacturing Company, chartered in 1823, with a capital of \$300,000, which has since been increased to \$1,000,000. This company has at present four extensive mills, which give employment to about 1000 operatives, having charge of 37,450 spindles, 1089 looms, consuming annually 10,000 bales of cotton, and producing 13,000,000 yards of prints, shirtings, &c. The company also have a large machine shop, in which several hundred hands are employed. The sales of the Nashua Iron Company amount to \$175,000 per annum. The entire quantity of cotton fabrics annually produced is about \$18,000,000 yards, and the total capital employed \$1,480,000. The total capital invested in the various manufactures is upwards of \$2,000,000, and the number of operatives engaged about 1000 males and 1300 females. The receipts of the post-office amount to about \$3000 a year. There are in Nashua, 7 churches, 3 newspaper offices, and a bank. In 1842 the township was divided, and the part lying chiefly on the N. side of Nashua river, received the name of Nashville. A bridge connects the two places. Nashville also has 1 bank. Population of the township, 5820.

NASHUA, a post-township in Ogle co., Ill.

NASHUA RIVER rises near the centre of Massachusetts, in Worcester co., and flowing in a north-easterly direction, falls into the Merrimack in New Hampshire.

NASHVILLE, a post-office of Chautauque co., New York.

NASHVILLE, a post-village, capital of Nash

co., North Carolina, on an affluent of the Tar river, 45 miles E. N. E. from Raleigh.

NASHVILLE, a village in Lowndes co., Mississippi, on Tombigbee river, 140 miles N. E. by E. from Jackson.

NASHVILLE, a post-village of Milam co., Texas, on the Brazos river, 75 miles N. E. from Austin. It was formerly the county seat.

NASHVILLE, a handsome and flourishing city, capital of the State of Tennessee, and of Davidson county, is situated on the left bank of Cumberland river, 200 miles from its mouth, 230 miles E. N. E. from Memphis, 206 miles S. W. from Lexington, in Kentucky, and 684 miles from Washington. Lat. $36^{\circ}9'N.$, lon. $86^{\circ}49'W.$; elevation above the sea, 460 feet. It is the most wealthy and populous city of Tennessee, and is distinguished for its enterprising spirit, literary taste, and polished society. Many of the private residences are built on a scale of palatial magnitude and splendor, and the public buildings exhibit a corresponding character. The new capitol, which stands on a commanding eminence, 175 feet above the river, is one of the most noble, magnificent, and costly structures in America. The material is of a fine limestone, which was quarried on the spot, and nearly resembles marble. The dimensions are 240 feet by 135, and the estimated cost \$1,000,000. It is built, as it is stated, entirely of stone and iron, without any wood about it, except the plank on which the copper roofing is fastened: the floor and inner walls are of dressed stone. The foundation of the capital was laid in 1845. A lunatic asylum, on a large scale, has recently been erected in the vicinity. The state penitentiary at this place is 310 feet by 50, containing 200 cells. The university of Nashville was founded in 1806. The medical college connected with the university was opened in 1851: it occupies a capacious building, and has about 100 students. There are also a number of female seminaries, the largest of which is attended by above 300 pupils. About 12 newspapers are published here, 5 or 6 of which are dailies. Nashville contains 3 banks, with a total capital of \$5,181,500, and about 14 churches. The mineral cabinet of the late Dr. Troost contains the largest private collection in the United States. The Cumberland river is crossed by a magnificent wire suspension bridge, recently built at a cost of \$100,000. The city is lighted with gas, and supplied with water raised from the Cumberland river. Nashville has expended large sums in the construction of macadamized turnpikes, 8 of which radiate in different directions. The river is navigated during high water by large steamboats from its mouth to this point, and a number of splendid packets are owned here. The shipping of the port, June 30th, 1852, amounted to an aggregate of \$4,082,375 tons, enrolled and licensed, all of which were employed in steam navigation. During the

year, 5 steamboats, with an aggregate burthen of 479 $\frac{3}{4}$ tons, were admeasured. This city is the centre of an active trade, and the seat of manufactories of various kinds. Nashville is the terminus of the Nashville and Chattanooga railroad, 150 miles long, which was finished in 1852, at an expense of about \$3,000,000. The road is built in a very substantial manner, and completes the connection with Charleston and Savannah. The construction of this railroad has greatly enhanced the value of property, and has given a vigorous impulse to the prosperity and improvement of the place. Other railroads have been commenced, which will connect this city with Louisville, Memphis, New Orleans, &c. Pop., in 1845, 12,000; in 1853, about 20,000.

NASHVILLE, a post-village of Holmes co., Ohio, 82 miles N. E. from Columbus, has 3 churches, and about 400 inhabitants.

NASHVILLE, a small post-village, capital of Brown co., Indiana, 40 miles S. from Indianapolis. Settled in 1837.

NASHVILLE, a small village of Hancock co., Indiana, on Sugar creek, 33 miles N. E. from Indianapolis.

NASHVILLE, a post-village, capital of Washington co., Illinois, 118 miles S. by E. from Springfield. It is situated on a rich prairie.

NASHVILLE, a post-village of Boone co., Missouri, on the Missouri river, 26 miles above Jefferson City. It has a landing for steamboats, and a few warehouses.

NASHVILLE, a village of Lee co., Iowa, on the Mississippi river, 10 miles above Keokuk.

NASHVILLE, a post-office of El Dorado co. Cal.

NASONVILLE, a post-village in Burrillville township, Providence co., Rhode Island, about 25 miles N. W. from Providence. It contains 1 hoe and axe factory.

NASSAU, a post-township in the S. part of Rensselaer co., New York. Population, 3261.

NASSAU, a post-village in the above township, about 14 miles S. E. from Albany. It contains several churches, and an academy.

NASSAU, a county forming the N. E. extremity of Florida, bordering on the Atlantic, has an area of 970 square miles. It is bounded on the N. and W. by the St. Mary's river, which separates it from Georgia, and on the S. by the Nassau river. The surface is level, the soil sandy. Sugar, rice, and Indian corn are the staples. In 1850 this county produced 44 hogsheads of sugar; 404,305 pounds of rice, and 29,812 bushels of corn. The quantity of rice was the greatest produced by any county in the state. It contained 1 saw mill, 1 ship building establishment, 1 turpentine manufactory, and 1 tannery. Capital, Nassau Court House. Population, 2164; of whom 1087 were free, and 1077, slaves.

NASSAU, a village in Lee co., Iowa, on the Des Moines river, 100 miles S. by E. from Iowa City.

NASSAU RIVER, Florida, forms the S. border

of Nassau co., and falls into the Atlantic, near the S. end of Amelia Island.

NATCHEZ, the most populous and commercial city of Mississippi, and capital of Adams county, on the E. bank of the Mississippi river, 279 miles above New Orleans, and 100 miles S. W. from Jackson. Lat. $31^{\circ} 34' N.$, lon. $91^{\circ} 25' W.$ It is pleasantly situated on a bluff which rises about 200 feet above the river, affording an extensive view of the immense cypress swamps of Louisiana. The surface of the ground in the city and in the adjacent country is undulating, and presents a striking contrast with the flat surface of the opposite side of the river. The streets of Natchez are wide and rectangular, and some of the public buildings are handsome. The private residences are mostly built of wood, and many of them have flower gardens and orange groves adjoining. Among the public buildings are the court house, 5 or 6 churches, a hospital, orphan asylum, and Masonic hall. Three or four newspapers are published here. Within a few years Natchez has increased considerably, in consequence of its numerous flourishing seminaries, and its public school, which is supported by a general taxation of the citizens. The latter averages about 500 pupils annually. Natchez is the centre of an extensive trade, of which cotton is the principal article. Steamboats are constantly arriving at and departing from its wharves. The heavy shipping business is transacted in the lower part of the town, called Natchez-under-the-Hill. Population, about 6000.

NATCHEZ, a village of Monroe co., Ohio, on the Ohio river, opposite New Martinville, 23 miles below Wheeling. It has a good landing for steamboats. Laid out in 1850.

NATCHEZ, a village of Martin co., Indiana, on the turnpike from New Albany to Vincennes, 56 miles W. N. W. from the former.

NATCHITOCHES, natch-e-totch-éz, (often pronounced nak-e-tush,) a parish in the N. W. part of Louisiana, has an area of 2260 square miles. It is intersected by Red river, and contains numerous small lakes connected with that stream. The land in the vicinity of the river is fertile, producing cotton and Indian corn. In 1850 there were raised 15,574 bales of cotton and 394,011 bushels of corn. There were 4 saw and planing mills, and 1 tannery. It contained 11 churches, 1 newspaper office, and 634 pupils attending public schools. Steamboats navigate Red river through this parish, from New Orleans to Shreveport. Capital, Natchitoches. Population, 14,228; of whom 6347 were free, and 7881, slaves.

NATCHITOCHEs, a post-village, capital of Natchitoches parish, Louisiana, on Red river, about 500 miles by water W. N. W. from New Orleans. Several steam-packets make

regular passages between this place and New Orleans in all stages of water. The village is pleasantly situated between the shore and the pine-clad bluffs, which approach very near the river. It is a place of active trade, containing a United States land-office, a newspaper office, and several churches.

NAUTRILLE, a post-office of Bremer co., Io.

NAUVOO, a post-office of Tioga co., Pa.

NAUVOO CITY, of Hancock co., Illinois, on the Mississippi river, near the head of the lower rapids, 52 miles above Quincy, and 220 miles above St. Louis. It was founded by the Mormons in 1840, and once contained from 15,000 to 18,000 inhabitants. The situation is one of the most beautiful on the river. The ground rises gradually from the water's edge to an unusual height, presenting a smooth and regular surface, with a broad plain at the summit. Nauvoo was laid out on an extensive plan, with broad rectangular streets. The dwellings were mostly log cabins, or small frame houses. The Mormon Temple, built of compact polished limestone, was 130 feet long by 88 feet wide, and was one of the most costly edifices in the West. In the basement there was a baptistry, a large stone basin, supported by 12

colossal oxen. In October, 1848, this temple was fired by an incendiary, and reduced to ruins. About that time the Mormon population were expelled from the state by force of arms, and emigrated to Utah, leaving the greater part of their houses unoccupied. A company of French socialists, under M. Cabot, have recently established themselves here, having purchased the site of the temple and other property. Their number is stated to be about 400. Nauvoo has a good steamboat landing. Population in 1853, estimated at 2000.

NEBO, a post-office of Jefferson co., Ohio.

NEBRASKA, a post-office of Crawford co., Io.

NEBRASKA, a small village of Potawatomie co., Iowa.

NEBRASKA TERRITORY. This territory, the name of which is the Indian appellation for the Platte river, though spoken of daily in conversation, and mentioned constantly in the public prints, has in reality no legal existence; it has never been organized by Congress, and is therefore without any definite position or bounds. In a popular acceptance, it may be considered to include the region lying between the States of Iowa and Missouri on the east, and the Rocky mountains on the west. Since the year 1818, many treaties advantageous to the United States have been, from time to time, concluded with the various tribes indigenous to the soil of the region in question, as well as with those formerly resident E. of the Mississippi, by which suitable portions of the proposed territory have been assigned to them for ever, and the whole is now in their occupancy. Two attempts were made in Congress to organize a territory, by the foregoing title, viz. in June, 1845, and again in March, 1853, but in neither case with success. The territory proposed by the first bill was to extend from the Missouri river westward to the Rocky mountains, and from the 41st to the 43d parallel of N. latitude. That contemplated by the bill of 1853 was to extend from the western boundary of the State of Missouri to the Rocky mountains, and from the parallel of 41° to that of 36° 30' N. It provided that the rights of such Indian tribes as reside within the proposed bounds, having treaty stipulations with the United States, shall not be infringed without the consent of such tribes, and only after ample compensation shall be accepted therefor. It will be seen by the above that the proposed territories were to occupy positions altogether independent of each other.

Objects of Interest to Tourists.—Near 42° N. lat. and 103° W. lon., on the head waters of White Earth river, and between Fort Laramie and the Missouri, is a remarkable tract or valley, about 30 miles wide, and perhaps 80 or 90 long, called *Mauvaisés Terres*, or "bad lands," from its thin, sterile soil, which is covered with only a very scanty growth of grass. The appearance of this region presents a most striking contrast to that of the adjacent country. "From the uniform, monotonous, and open prairies, the traveller suddenly descends 100 or 200 feet into a valley that looks as if it had sunk away from the surrounding world, leaving standing all over it thousands of abrupt ir-

regular prismatic and columnar masses, frequently capped with irregular pyramids, and stretching up to a height of from 100 to 200 feet or more. So thickly are these natural towers studded over the surface of this extraordinary region, that the traveller threads his way through deep, confined, labyrinthine passages, not unlike the narrow irregular streets and lanes of some quaint old town of the European continent. One might almost imagine oneself approaching some magnificent city of the dead, where the labor and genius of forgotten nations had left behind them the monuments of their art and skill." In one sense, this region is truly a great "city of the dead," as it contains, in the most extraordinary profusion, the fossil skeletons of various tribes of animals now extinct, particularly of the *Pachydermata*. Among others, there was found a nearly entire skeleton of the *Palaeotherium*, eighteen feet in length. Unhappily its substance was too fragile to admit of removal.—See *Owen's Geological Survey*, p. 196.

NECADA RIVER, a small river of Adams co., Wisconsin, enters the Yellow river.

NECHES, netch'es, a small river of Texas, which rises in Van Zandt county, and empties itself into Sabine lake, near the S. E. extremity of the state. Its general direction is S. S. E. During high water boats can ascend it more than 100 miles.

NECOSTA, a new county in the W. central part of Michigan, has an area of 840 square miles. It is intersected in the N. W. by the Maskego river, by whose tributaries, together with the head waters of Chippewa river, it is principally drained. This county is not included in the census of 1850. County seat not yet located.

NECOT, a post-office of Linn co., Iowa.

NED'S POINT, the E. side of Mattapoiset harbor, Buzzard's bay, Massachusetts. It contains a fixed light, 40 feet above the level of the sea.

NELSON, a county a little S. E. from the centre of Virginia, has an area of 340 square miles. The James river washes the S. E. border, and it is drained by Rockfish river. The Blue Ridge forms the entire boundary on the N. W., and the surface is generally occupied by hills and valleys. The soil is fertile. Indian corn, wheat, and tobacco are the staples. In 1850 there were raised 353,432 bushels of corn; 122,230 of wheat, and 1,433,730 pounds of tobacco. There were 37 flour and grist mills, 12 saw mills, 6 tanneries, 4 wool-carding mills, and 4 distilleries, 21 churches, 347 pupils attending public schools, and 30 attending an academy. The canal, which extends along James river, connects the county with Richmond. Formed in 1807, and named in honor of Thomas Nelson, governor of Virginia in 1781. County town, Lovingston. Population, 12,758; of whom 6616 were free, and 6142, slaves.

NELSON, a county near the middle of Kentucky, has an area estimated at 300 square miles. It is drained by the Rolling fork and Beech fork of Salt river, and by Pottinger's creek. The surface is undulating; the soil in general is excellent. Grain, grass, and fruits are cultivated. The exports consist chiefly of horses, mules, cattle, swine, Indian corn, hemp, and apples. In 1850 this county produced 1,070,066 bushels of corn; 227,138 of oats, and 37,328 pounds of wool. It contained 13 churches, and 2 newspaper offices; 118 pupils attending public schools, and 357 attending academies or other schools. Blue limestone underlies a portion of the surface, affording a good material for building. The county is intersected by the Louisville and Nashville turnpike, and by the Louisville and Chattanooga railroad, now in progress of construction. Formed in 1781. Capital, Bardstown. Population, 14,789, of whom 9659 were free, and 5130, slaves.

NEUSE, a river of North Carolina, which rises in Person county, in the N. part of the state. Next to Cape Fear river, it is the largest stream which rises and terminates in North Carolina. The whole length is about 300 miles, and the general direction is south-eastward. After passing by Waynesborough, Goldsborough, and Newbern, it empties itself into the W. extremity of Pamlico sound, through an estuary which is several miles wide and more than 25 miles long. It is navigable by steamboats for eight months of the year from its mouth to Waynesborough, over 100 miles; smaller boats have ascended about 200 miles. After it passes the middle part of its course, the river flows through sandy plains, which are occupied by extensive forests of pitch pine.

NEVADA, ná-vá'-dà, a county towards the N. part of California, contains about 900 square miles. Drained by the Middle and South Yuba which afford valuable water-power. The surface in the E. part is mountainous, being traversed by the Sierra Nevada or Snowy range of California. The inhabitants are principally engaged in mining, and comparatively but little attention has yet been paid to agriculture. Barley, potatoes, cattle, horses, and hogs are the principal productions. In 1852 there were raised 14,310 bushels of barley, and 9950 of potatoes. There were 3838 working oxen; 2268 beef cattle; 1738 cows; 1304 horses, and 4279 hogs. Number of acres under cultivation, 1537. Gold is abundant in

this county, both in quartz veins and in placers. There were 33 quartz mills, with a capital of \$3,385,425; and nearly \$900,000 are employed in placer mining. Capital, Nevada City. Population, 21,365.

NEW ALBANY, a flourishing city, capital of Floyd county, Indiana, on the right bank of the Ohio river, 2 miles below the Falls, 3 miles below Louisville, and 136 miles below Cincinnati. Lat. 38° 18' N., lon. 85° 51' W. It is the southern terminus of the New Albany and Salem railroad, which extends to Michigan City, 287 miles, and is nearly completed. It is remarkable for its rapid growth and active trade; in fact, it may be considered the most commercial town in the state excepting Madison, which contains a nearly equal population. Steamboats arrive and depart daily to all points on the Ohio and Mississippi. The streets are wide and straight, and furnished with pleasant sidewalks. The town contains about 12 churches, a collegiate institute, a Presbyterian theological seminary, 2 banks, and 2 printing offices. Two newspapers are published. Steamboat build-

ing is carried on more extensively here than at any other place on the Ohio, scarcely excepting Cincinnati; there are also manufactories of iron, brass, bagging, &c. A plank-road, 20 miles long, extends from New Albany to Corydon. Laid out in 1813. About 1640 buildings have been erected in the city within last the year. Pop. in 1840, 4226; in 1850, 8181; in 1853, about 14,000.

It contains 4 or 5 churches, a bank, a large Union school house, which cost \$9000, and several large warehouses. The new Presbyterian church cost from \$10,000 to \$12,000. Population in 1853, estimated at 1400.

NEWARK, a city, port of entry, and seat of justice of Essex county, New Jersey, is situated on the right bank of the Passaic, about 4 miles from its entrance into Newark bay, and on the railroad connecting New York with Philadelphia, 9 miles W. from the former, and 78 miles N. E. from the latter; lat. 40° 45' N., lon. 74° 10' W. This city, the largest in the state, and one of the most flourishing E. of the Alleghany mountains, is built chiefly on a plain, terminated on the W. by an elevation, or ridge of land, extending from the northern to the southern extremity of the town. It is regularly laid out, for the most part, with wide, straight streets, intersecting each other at right angles. Broad street, the principal thoroughfare and seat of business, is one of the finest avenues anywhere to be met with. It is upwards of 80 feet in breadth, and extends throughout the entire length of the city, dividing it into two nearly

equal parts. Near its centre it is intersected by Market street, which is also an important thoroughfare, communicating with the principal railroad depôt. North of this, and bordering on Broad street, are two beautiful public squares, called the Upper and Lower parks, each adorned with majestic elms. In the vicinity of these parks are some of the finest residences in Newark. Among the public buildings deserving of notice, may be mentioned the Court House, a large brown stone edifice, in the Egyptian style, at the intersection of Market with High street, and the Market-street railroad depôt. The latter is a very imposing structure, adorned with a colonnade on each side. The Library Building, in Market street, is one of the finest edifices in the city, and contains, besides the apartment for the library, a large hall for public lectures, concerts, &c., and in the third story an Art-Union gallery. The literary institutions of Newark comprise the Library Association, occupying the library building above referred to: it maintains an annual course of lectures on scientific subjects; the New Jersey Historical Society, founded in 1845: its meetings are held alternately at Newark and Trenton; it has a library of 1200 volumes: the New Jersey Literary Association, founded in 1842, with provision for monthly lectures; the Association of Teachers and Friends of Education, founded in March, 1853. The Wesleyan Institute has a fine brick building, situated on the most elevated part of High street. From the grounds is obtained a beautiful view of the city and Passaic valley for many miles. The institute, although organized but a few years since, now numbers upwards of 300 pupils, and is in a most prosperous condition. Many of the churches are splendid edifices. The Catholic church in Washington street, the Methodist church in Market street below Broad, and the new Presbyterian churches, one near the Lower park, and the other in High street, all of which have recently been erected, are scarcely surpassed by any similar buildings in the country. The three first are especially remarkable for their lofty and graceful spires. Several large church edifices are now in course of construction, among which may be mentioned the Methodist Episcopal church in Broad street below Market street; estimated cost, when completed, \$80,000. There are, in all, about 40 churches of the various denominations. About \$17,000 are annually expended on the public schools of Newark. There are 7 fine brick school houses, one in each ward of the city; each of these contains 2 schools, one for either sex. Number of pupils attending public schools, about 2,500. A substantial edifice is now in course of construction for the purpose of organizing a high-school. Four or five newspapers are published in the city, three of which are dailies. There are also 4 banks, with a capital of about \$1,800,000, and sev-

eral insurance companies. Gas is used to light the streets.

The rapid growth of Newark is chiefly owing to its manufactures, for which it has long been distinguished. This department of industry is not generally controlled by mammoth corporations, as in some of the towns of New England, but includes a great number of enterprising persons, who, with a moderate capital, employ a few hands and do a profitable business. There are, however, several very extensive establishments, among which may be mentioned those for the production of India-rubber goods, 3 or 4 of carriages, 1 of omnibuses, and several of machinery and castings. Leather, boots, shoes, saddles, harness, and clothing, have always constituted an important part of the Newark manufactures, the various branches of which comprise nearly every article in use. The commerce of the port is limited chiefly to the coast trade. June 30, 1852, its shipping amounted to an aggregate of 257 $\frac{3}{4}$ tons registered, and 4848 $\frac{3}{4}$ tons enrolled and licensed. Of the latter, all was employed in the coast trade, and 1188 $\frac{3}{4}$ tons in steam navigation. The foreign arrivals for the year were 21, (tons, 2304,) and the clearances 13, (tons, 1393.) During the period above specified, 3 schooners and 1 steamer, with an aggregate burthen of 296 $\frac{1}{2}$ tons were admeasured. Railroad cars leave for New York nearly every hour during the day. Newark also has communication with the metropolis by steamboats plying on the river, and by a plank-road completed in 1852. It is likewise the eastern terminus of the Morris and Essex railroad, and of the Morris canal. At the entrance of the latter into the western suburb is a very steep inclined plane, over which loaded boats are passed and repassed by the application of water-power furnished by the canal. Newark was settled in 1666, by a company from New Haven and other towns in Connecticut. Population in 1830, 10,950; in 1840, 17,290; in 1850, 38,983, and in 1853, about 45,500.

NEWARK, a post-village of Newcastle co., Delaware, on the Wilmington and Baltimore railroad, 12 miles W. S. W. from Wilmington. It has 3 churches, an academy, and several hotels, and is the seat of Delaware College, which was founded in 1833.

NEWARK, a handsome and flourishing town in Newark township, and capital of Licking co., Ohio, is situated at the confluence of the three forks of Licking river, and on the Ohio canal, 37 miles E. from Columbus, and 24 miles W. by N. from Zanesville. A railroad, 117 miles long, connects the town with San-

dusky city. The site of Newark is level, the streets are wide, and the houses are well built. It is surrounded by a fertile and populous country, and has an active trade. Newark contains 10 churches, 3 newspaper offices, 2 academies, 2 banks, and several factories, and flour mills. This place at present is the southern terminus of the Sandusky, Mansfield, and Newark railroad, which is to be extended to Portsmouth, on the Ohio river. The Central Ohio railroad, when finished, will connect it with Columbus on one hand, and Wheeling on the other. Quarries of sandstone are found in the vicinity, and there is a large mine of cannel coal 8 miles S. E. from the town. Laid out in 1801. Pop., in 1850, 3654; in 1853, about 5000.

NEW BEACON, otherwise called GRAND SACHEM, the highest summit of the Highlands, is situated in Dutchess county, New York, and has an elevation of 1635 feet. It commands a very extensive view of the adjacent mountains and of the Hudson river. The name is due to the circumstance that, during the Revolutionary war, beacons were erected on its top, as well as on those of the neighboring hills.

NEW BEDFORD, a city, port of entry, and semi-capital of Bristol county, Massachusetts, is situated on a small estuary formed by Buzzard's Bay, 55 miles S. from Boston. lat. 41° 38' 7" N., lon. 70° 55' 49" W. The city is regularly laid out, on an acclivity commanding a beautiful prospect. It is built largely of wood, though of late a more durable material has been much used. The streets are generally adorned with shade-trees, which, with the ornamental grounds that enclose many of the dwellings, constitute a very attractive feature. The upper portion of the city is remarkable for its neatness and elegance. Among the public edifices the town hall may be mentioned as one of the handsomest buildings devoted to civil purposes in Massachusetts. It is a magnificent granite structure, 100 feet in length, 60 feet wide, and 3 stories high, costing \$60,000, including the ground. The custom house is a fine granite edifice, containing the post-office. There are in the city about 20 churches, of the various denominations. Liberal means have been provided for the support of education. The Friends' Academy is a flourishing institution for young ladies, pleasantly situated, and surrounded with beautiful groves. The public schools comprise a high-school and about 35 others. Five or six newspapers are pub-

lished in New Bedford, 2 of which are dailies. The Social Library, owned by a corporation, contains about 5000 volumes. Next to Boston, New Bedford, in proportion to its population, is perhaps the wealthiest city in New England. It has a greater amount of tonnage employed in the whale fishery than any other port of the United States. This business was commenced here as early as 1764, and successfully prosecuted till interrupted by the war of the Revolution. Since that event, with but few exceptions, it has been constantly increasing. By the discovery of the California gold mines, however, several vessels were diverted from the whale fishery, and fitted out for the port of San Francisco. The shipping of the district, (New Bedford,) June 30, 1852, amounted to an aggregate of 139,062 $\frac{2}{3}$ tons registered, and 10,145 $\frac{3}{8}$ tons enrolled and licensed. Of the former, 125,530 $\frac{4}{9}$ tons were employed in the whale fishery, and of the latter, 9039 $\frac{2}{5}$ tons in the coast trade. The foreign arrivals for the year were 113, (tons, 27,940), the clearances for foreign ports 192, (tons, 58,340,) of which 174, (tons, 55,347,) were by American vessels. The whole number of American vessels arrived at New Bedford during the year ending December 31, 1852, was 99, of which 59 were employed in the whale fisheries. The value of sperm oil entered at the custom house during the same period was \$1,927,511, of whale oil \$1,040,829, and of whalebone \$444,318; total, \$3,412,658. The amount of duties collected on imported merchandise was \$24,979.95. The manufactures of New Bedford are extensive and peculiar, being mainly dependent upon the whale fishery. There are in the town upwards of 20 establishments, employing a vast amount of capital, in the production of oil of the various kinds, and candles, besides several planing mills and manufactories of cordage, Prussian blue, copper bolts, iron, &c. Coopering and ship building are also extensively carried on. During the year ending June 30, 1852, 14 ships, 1 schooner, and 3 brigs, with an aggregate burthen of 5626 $\frac{3}{8}$ tons were admeasured. The financial institutions are 4 banks, with an aggregate capital of about \$2,000,000. New Bedford is connected by railroad with Fall River, Providence, and Boston. It also has steamboat communications with Nantucket and Martha's Vineyard. Population in 1830, 7592; in 1840, 12,087; in 1850, 16,443; and in 1853, about 17,500.

NEW BRUNSWICK, a city, capital of Middlesex county, New Jersey, on the right, or S. W. bank of the Raritan river, and on the New Jersey railroad, 26 miles N. N. E. from Trenton, and 30 miles S. W. from New York. Lat. 40° 30' N., lon. 74° 30' W. The ground is low in the immediate vicinity of the river but rises rapidly as it recedes. The upper part of the town is laid out with wide streets, and contains many handsome buildings. Rutgers' College, of this place, was founded in 1770. The building is of dark red free-stone, situated on an eminence. The city contains a theological seminary of the Dutch Reformed Church, about 10 churches, of which one is Roman Catholic, 2 banks, and several seminaries for girls. Three newspapers are published here. The New Jersey railroad crosses the Raritan by a bridge at this place, connecting it with New York and Philadelphia. New Brunswick is at the head of navigation on the river, and the eastern terminus of the Delaware and Raritan canal, extending to Bordentown, 42 miles. This canal is 75 feet wide and 7 deep, and is navigated by steamboats and sloops of 100 or 150 tons. The trade of this city is said to be flourishing. New Brunswick is comprised in the townships of North Brunswick and Franklin, which together contained, in 1850, 13,070 inhabitants.

NEWBURYPORT, a city, port of entry, and one of the capitals of Essex county, Massachusetts, 34 miles N. by E. from Boston, is situated on the right bank of the Merrimack river, and at the union of the Newburyport with the Eastern railroad. Lat. $42^{\circ} 48' 32''$ N., lon. $70^{\circ} 52' 47''$ W. It stands on a gentle acclivity, commanding a beautiful prospect, and is laid out with great regularity, in the form of a parallelogram. Near its centre, at an elevation of 60 feet above the surface of the river, is a small pond, comprising an area of about 6 acres. This has been surrounded with a wall and terraced promenade, rendering it one of the most attractive features of the place. The harbor of Newburyport is spacious and safe, but obstructed at its entrance by a shifting sandbar. The town is considered one of the pleasantest in New England. The principal public buildings are the custom house, a large granite structure with an elegant Grecian portico; the court house; the new city hall, a beautiful edifice, cost \$35,000; and the churches, of which

there are 16 of the various denominations. Besides 18 primary and 10 grammar schools, there are 2 liberally endowed free schools. The Putnam free school, dedicated April 12th, 1848, has a permanent fund of \$50,000, the income of which is appropriated to the benefit of pupils, without regard to residence. The newspaper press consists of 2 daily, a semi-weekly, and a weekly issue. The city contains a Lyceum provided with lectures, and an excellent library, just established. Gas light has recently been introduced.

Newburyport formerly suffered severe commercial reverses, but for many years past its trade, both foreign and coastwise, has been steadily increasing. The shipping of the port June 30th, 1852, amounted to an aggregate of 20,308 $\frac{1}{2}$ tons registered, and 9121 $\frac{2}{3}$ tons enrolled and licensed. Of the latter, 1547 $\frac{2}{5}$ tons were employed in the coast trade, and 7574 $\frac{1}{4}$ tons in the cod and mackerel fisheries. The foreign arrivals for the year were 110 (tons, 9231), of which 95 (tons, 5889) were by foreign vessels. The clearances for foreign ports were 116—tons, 10,140, of which 6995 tons were in foreign bottoms. During the year, 15 vessels, (8 of them ships,) with an aggregate burthen of 6137 $\frac{6}{9}$ tons were ad-measured.

There are in the city 5 manufacturing corporations, employing an aggregate capital of \$1,180,000, and from 1500 to 1600 hands. The principal articles are cotton goods, of which about 12,000,000 yards are annually produced. There are also manufactures of iron, machinery, leather, boots, shoes, &c. Incorporated as a town in 1764; and in 1851 chartered as a city, including in its limits two adjoining villages. There are 3 banks, with an aggregate capital of \$650,000, and a savings institution, with deposits amounting to about \$600,000. The celebrated George Whitefield died in Newburyport, September 30th, 1770. Pop., in 1850, 11,318; in 1853, about 13,000.

NEW HAMPSHIRE, one of the New-England States, and one of the original members of the American confederacy, is bounded on the N. by Canada East; E. by Maine and the Atlantic; S. by Massachusetts, and W. by Vermont, from which it is separated by the Connecticut river. It lies between 42° 40' and 45° 25' N. lat., and 70° 40' and 72° 35' W. lon., being nearly triangular in shape, having its base on the S., where it is about 90 miles in breadth, from whence it gradually tapers to the N., with an average breadth of about 45 miles; its extreme length from N. to S. is near 185 miles, and its area 9280 square miles, or 5,939,200 acres, of which 2,251,488 only were improved in 1850.

Population.—The original population of New Hampshire was almost exclusively of English descent, and the rural districts still remain without much intermixture; but in the large towns foreigners are creeping in to some extent. This state had 141,899 inhabitants in 1790; 183,762 in 1800; 214,360 in 1810; 244,161 in 1820; 269,328 in 1830; 284,574 in 1840, and 317,964 in 1850, of whom 155,902 were white males; 161,487 females; 243 colored males, and 232 females. There were, in 1850, 62,287 families, occupying 57,339 dwellings. Of the entire population, 261,591 were born in the state; 42,636 in other states; 1469 in England; 8811 in Ireland; 478 in Scotland and Wales; 2501 in British America; 147 in Germany; 69 in France; 96 in other countries, and 178 whose places of birth were unknown—giving about 4½ per cent. of foreign birth. In the year ending June 1, 1850, there occurred 4268 deaths, or about 13 in every 1000 persons. In the same period, 3600 paupers received aid, of whom 747 were foreigners, at an expense of nearly \$44 to the individual. Of deaf and dumb there were 163, all white; of blind, 136, two of whom were colored persons; 385 insane, all white, and 352 idiotic, 4 of whom were colored.

Counties.—This state is divided into 10 counties, viz. Belknap, Carroll, Cheshire, Coos, Grafton, Hillsborough, Merrimack, Rockingham, Strafford, and Sullivan. Capital, Concord.

Cities and Towns.—The principal towns are Manchester, population in 1850, 13,932;

Portsmouth, 9738; Concord, 8576; Dover, 8196; Nashua, 5820; and Exeter, Nashville, Keene, Winchester, and Rochester, each containing more than 3000 inhabitants. (The population mostly includes the township in which each town or village is situated.)

Face of the Country.—New Hampshire, with one exception, contains the most elevated land E. of the Mississippi; Mount Washington, the highest peak of the White mountains, rises 6226 feet above the level of the sea. The White mountains proper extend only from 14 to 20 miles, but isolated and detached groups of the chain extend from the N. of New Hampshire even into Connecticut. The White mountains, which, on account of their sublimity and grandeur, have given to this region the cognomen of the "Switzerland of America," lie in Coos county, N. E. from the centre of the state. There are several peaks in this group, viz. Mount Jefferson, 5657 feet; Mount Adams, 5759, and Mount Madison, 5415 feet—N. E. from Mount Washington; and Mount Monroe, 5349 feet; Mount Franklin, 4850 feet; and Mount Pleasant, 4712; besides several neighboring peaks little inferior in altitude. In another group 20 miles S. W. of Mount Washington, is Mount Lafayette, about 5500 feet high, the second in point of interest in the White mountain range. The whole state may be said to be mountainous, hilly and broken, with the exception of a small portion in the S. E., which extends from 20 to 30 miles from the sea, and is either level or gently undulating. Of the mountains outlying from the great central nucleus, there are the Blue Hills, in the S. E., 1151 feet above the sea; Chocorua, in Carroll county, 3358 feet; Carrs, in Grafton county, 1381 feet; Kearsarge, in Hillsborough county, 3067 feet; Monadnock, in Cheshire county, 3718 feet; Andover, in Merrimack county, 2000 feet; Peququet, 3367 feet, and Mooshillock, 4636 feet.

Geology.—The mountainous portions of New Hampshire are mostly composed of granite and mica slate rocks. Granite predominates in the White mountains proper, and mica slate in the southern mountains, particularly in the Great Monadnock and the neighboring summits. According to Goodrich, "Porphyritic granite occurs also in boulder, and in rolled masses E. of the southern ridge. A beautiful fine-grained granite is found in many places, as at Concord, Boscawen, and Hopkinton, and affords admirable building stone. East of this great ridge, mica slate, gneiss, and greenstone occur. In passing from Concord easterly to Portsmouth, the following succession of rocks may be observed: granite, 4 miles; gneiss, 11 miles; mica slate, 14 miles; granite, 15 miles; then gneiss, and lastly greenstone. The direction of the strata is nearly N. E. and S. W. There is a remarkable alluvion formation through which the Merrimack passes,

and which embraces all the sandy plains, which are covered with pine and black timber, in the neighborhood of the river. This formation extends through Chelmsford to Cambridge and Boston on the one hand, and on the other it follows the course of the river quite to the ocean, embracing large tracts of land on either side. Rocks in some places break through this alluvial deposit, but they form no very high hills."

Minerals.—Of the metallic ores, iron abounds, especially at Lisbon; the other ores are copper, lead, zinc, and graphite or plumbago. The non-metallic minerals are a fine building granite, gneiss, crystallized quartz, talc, steatite, tourmalins, ochres, limestone, different kinds of spar, terra sienna, sulphur, magnesia, beryls, garnets, jasper, manganese, asbestos, and amethysts. There are mineral springs of some note in several parts of the state.

Rivers and Lakes.—The great river of New Hampshire, as of all New England, is the Connecticut, which rises in the extreme N., and forms nearly the whole western boundary of the state. The Merrimack rises in the White mountains, and runs S. through the middle of New Hampshire into Massachusetts, furnishing an abundant supply of water-power to Manchester and other manufacturing towns on its banks. The Salmon Falls and the Piscataqua (which is a mere widening of the former river near its mouth) form part of the boundary between Maine and New Hampshire, and empty into the Atlantic ocean. The Androscoggin has a small part of its course in the N. E. of this state, and the Saco also has its source among the White mountains, and runs S. E. into Maine. The passage of the Saco near its head waters, through the mountains, forms the celebrated Notch. The Upper and Lower Ammonoosuc in the N., and the Ashuelot in the S., are the principal tributaries of the Connecticut from this state. The Margalloway, a feeder of Lake Umbagog, has part of its course in the N. E. of New Hampshire. The Contoocook, Souhegan, and Nashua are tributaries of the Merrimack from the W. The last two have their origin in Massachusetts. The Winnepiseogee (the outlet of the lake of that name) and the Pemigewasset are the chief sources of the Merrimack. The Cocheo is a branch of the Salmon Falls. The Lamprey and Exeter discharge their waters into the Piscataqua proper. The Merrimack and its branches and the Salmon Falls abound in cataracts that furnish great water-power, which has been extensively applied to manufacturing purposes at Manchester, Dover, Nashua, and other towns on their banks.

Prominent among the lakes of New Hampshire is Lake Winnepiseogee, the largest and most picturesque in the state. It is very irregular in its shape, being indented with numerous bays. It is about 25 miles long by

from 1 to 10 in width. It lies E. of the middle of the state, is very deep, has very pure and clear water, and is thought by some to rival Loch Lomond in picturesque beauty. Umbagog lake, about 18 miles long by 10 wide, the source of the Androscoggin, on the boundary between New Hampshire and Maine; Connecticut, the source of the river of that name, in the N.; Squam lake, a tributary of the Merrimack, in the middle; Sunapee, an affluent of the Connecticut, in the S. W. of the state, and Ossipee, discharging itself into the Saco, are the other principal lakes in New Hampshire.

The widening of the Piscataqua, and a sheet of water connected with it, are the only bays of importance.

Islands.—A group of small islands in the Atlantic, about 18 miles from the shore, called the Isles of Shoals, belong to New Hampshire.

Objects of Interest to Tourists.—New Hampshire stands pre-eminent in this respect among the states E. of the Mississippi river. The White mountains, already referred to, attract more tourists than any other natural object in the United States, excepting only Niagara Falls. The traveller may journey for weeks through its wild scenery, with a constant succession of grand objects to interest his mind. The fashionable route is to enter New Hampshire by the Boston and Montreal railways, (which coasts the picturesque shores of the Merrimack, with rugged hills in the foreground, and mountains in the distance,) and proceed to Weir's, on Lake Winnipiseogee; then take the steamboat, and, having made the circuit of the lake, enter the stage for Conway, on the E. side of the White mountains, and from thence, by another stage, through the celebrated Notch, to the Notch House, which stands in the very jaws of the pass. The return is by the Franconia Notch, (about 26 miles S. W. of the White Mountain Notch,) and S. down the valley of the Pemigewasset, to Plymouth, or back to Lake Winnipiseogee, according as the tourist wishes to direct his steps thereafter. This journey may be reversed, with about an equal amount of pleasure, though the route indicated above is the one more commonly taken. The White Mountain Notch is a pass of great celebrity. Coming from the N. or W., you enter it by an opening only 23 feet in width, between two perpendicular rocks, one 20 and the other 12 feet high. The infant Saco trickles its way through this narrow opening, gradually expanding as it proceeds down the pass, and receiving other tributaries from the mountain-sides, which form the walls of the gorge, and which tower to the height of about 2000 feet above the bed of the Saco. In this pass occurred, in 1826, the landslide which destroyed the Willey family. The more wild and abrupt parts of the Notch extend for 2 or 3 miles from its entrance at the

Notch House. Mount Washington is ascended on horseback from the Notch House, by a bridge path, first climbing Mount Clinton—in immediate proximity to the hotel—for 2½ miles, and then coasting the E. side of the peaks of Mount Pleasant, Mount Franklin, and Mount Monroe, for 4 miles farther, occasionally ascending a rough, steep ridge, and again descending, now riding on the verge of a vast ravine of several hundred feet in depth, and now on the crest of a ridge commanding a view of both sides of the chain—we arrive at the foot of Mount Washington, 1500 feet in *perpendicular*, and about one mile in *inclined* ascent, above the base of the cone or peak, and 6226 feet above the sea. This is the most difficult, though scarcely dangerous part of the ascent, as it is little else than riding on horseback over a pile of rocks of every variety of size, cast together as if hurried there by the Titans, in war or at play. From the summit, if the day be clear, is afforded a view unequalled, perhaps, on the eastern side of the North American continent. Around you, in every direction, are confused masses of mountains, bearing the appearance of a sea of molten lava suddenly cooled whilst its ponderous waves were yet in commotion. On the S. E. horizon gleams a rim of silver light—it is the Atlantic ocean, 65 miles distant—laving the shores of Maine. "Lakes—of all sizes, from Lake Winnipiseogee to mere mountain ponds—and mountains beneath you gleam misty and wide." Far off to the N. E. is Mount Katahdin. In the western horizon are the Green Mountains of Vermont, and to the S. and S. W. are Mount Monadnock and Kearsarge or Kiarsage, while the space between is filled up with every variety of landscape, mountain and hill, plain and valley, lake and river.

Those to whom it is an object to reach Mount Washington with as little stage-riding as possible, may be landed at Gorham by the Portland and Montreal railway cars, within 5 miles of the base of the mountain. The Franconia Notch is deemed by many quite as interesting as the White Mountain Notch. Near it are many agreeable accessories not to be found in the latter; among which are Echo lake, just at the northern entrance of the gorge, and the "Old Man of the Mountain," a well-defined profile of a human face, 1000 feet above the level of the pass. The Basin, (with a rock worn into an exact resemblance of the lower joint of the thigh-bone,) 4 miles S. of the Notch, is a pool of beautifully transparent water. One mile below this, again, in the vicinity of the Flume House, is the celebrated Flume, a narrow gorge or opening in the rocks, only a few feet in width, and from 70 to 120 in height, through which flows a small tributary of the Pemigewasset; below this is a cascade of 616 feet in length, which in the spring and fall freshets is an object of great interest. In

the same neighborhood is the Pool, (a basin formed by a small fall in the Pemigewasset,) which is about 60 feet in diameter, and 40 feet deep, surrounded by mural precipices 150 feet in height. The clear water, rendering the gravelly bottom perfectly visible, and the surrounding accompaniments of scenery, make this a delightful place of resort to those staying at the Flume House, the largest and one of the best-appointed houses among the mountains. The Flume, the Basin, and the Pool, are all within an agreeable walking distance from this hotel. Mount Lafayette—only 700 feet inferior in altitude to Mount Washington—is also ascended from the same house, which has the further advantage of being within a five-mile ride of the Franconia Notch, and of a view of more than 30 miles in extent down the valley of the Pemigewasset, which is hemmed in on each side by lofty hills and mountains. The other detached mountains scattered over New Hampshire, would in any other state, not overshadowed by Mount Washington and his court, merit conspicuous notice. Dixville Notch, about 46 miles N. of Lancaster, is said to be but little inferior to the two great passes already described. New Hampshire shares with Vermont the beautiful river Connecticut, whose shores are often grand, and seldom tame. Bellows Falls, in this river, on the S. W. border of the state, are formed by the contraction of the river bed to about 20 feet on the W. side at low water, through which the stream rushes with great violence. At high water it flows in the eastern as well as western channel. These beds are separated by a huge rock. The entire descent in half a mile is 42 feet. At Amoskeag, the Merimack descends 50 feet in three successive pitches. In the White Mountain Notch is a cascade which winds down the face of the mountain, through a fall of 800 feet, giving, after copious rains, an additional interest to the scene as it glides or leaps over the different stages of its descent. There are two interesting falls in the Amonoosuc, within a pleasant drive from the Notch House.

Climate.—The climate of New Hampshire is severe, and the winters long, but less subject to frequent changes than in other Northern States of a lower latitude. The snow lies late among the mountains, and exercises some effect on the temperature of other parts of the state. In the higher gorges it may be found in patches of half an acre's extent in July. The snow begins to fall and the rivers to freeze in November. The snow lies into April in the S., and often till May in the N. The springs are damp and foggy, but the state enjoys a bracing and healthy air, and is remarkably free from epidemics.

Soil and Productions.—The soil of this state generally is not of a highly fertile character, though New-England industry and economy have wrung from its stony bosom valuable

products. The best lands are in the valleys of the rivers, which are occasionally overflowed, especially in the valley of the Connecticut. The northern portion is but little cultivated. The hills afford valuable pasturage for cattle and sheep. Wheat, rye, oats, Indian corn, barley, buckwheat, Irish potatoes, peas, beans, fruits, butter, cheese, hay, hops, wool, maple sugar, beeswax, and honey are produced in considerable quantities, and some tobacco, wine, grass-seeds, flax, silk, and molasses. In 1850 there were in New Hampshire 29,229 farms, containing 251,488 acres of improved land, (or about 75 acres to each farm,) yielding 185,658 bushels of wheat; 183,117 of rye; 1,573,670 of Indian corn; 70,856 of peas and beans; 4,304,919 of Irish potatoes, (the greatest yield, in proportion to population, in the Union, except Vermont;) 70,256 of barley; 65,265 of buckwheat; 1,108,476 pounds of wool; 6,977,056 of butter; 3,196,563 of cheese; 257,174 of hops; 1,294,863 of maple sugar; 117,140 of beeswax and honey; value of market products, \$56,810; orchard products, \$248,563; live stock, \$8,871,901; and slaughtered animals, \$1,522,873.

Forest Trees.—There is a dense growth of forest-trees on the lower slopes of the mountains, consisting of oak, white pine, fir, hemlock, beech, maple, walnut, &c.; while on the lowlands grow elm, birch, poplar, ash, cherry, locust, hornbeam, &c. The rock maple yields abundance of sugar, and the pine, of which there are several varieties, furnishes an ample supply of lumber. The latter tree often attains the height of 200 feet.

Manufactures.—New Hampshire is largely engaged in manufactures, great water-power being furnished by the Merrimack, Cocheo, and other rivers, on whose banks are the flourishing manufacturing towns of Manchester, Dover, Nashua, Nashville, and others. By the census of 1850, there were 3301 manufactories, each producing \$500 and upwards annually, of which 44 were engaged in cotton manufactures, employing 2911 male, and 9211 female hands, and \$10,950,000 capital, consuming raw material worth \$4,839,429, and producing 113,106,247 yards of stuffs, and 140,700 pounds of yarn, valued at \$8,830,619; 61 woollen factories, employing 926 male, and 1201 female hands, \$2,437,700 capital, consuming raw material worth \$1,267,329, and producing \$9,712,840 yards of stuffs, and 165,200 pounds of yarn, valued at \$2,127,745; 29 iron foundries, furnaces, &c., employing 390 male hands, \$238,700 capital, consuming raw material worth \$187,560, and producing 6074 tons of pig, cast, and wrought iron, valued at \$388,100, and 163 tanneries, employing \$441,975 capital, consuming raw material worth \$543,779, and producing leather valued at \$900,421.

Internal Improvements.—New Hampshire is crossed by railroads in all directions, by lines

uniting Boston with Montreal and Portland, and Portland again with Montreal. Some connect with railroads to New York city and Albany, giving the citizens of New Hampshire access to all the intermediate towns of importance in Vermont, Massachusetts, and Connecticut, while others interlock with iron roads leading to most of the important places in New England. In January, 1853, there were in this state 624 $\frac{3}{4}$ miles of railroad completed, and 41 in course of construction.—See *Table of Railroads and Canals*, APPENDIX.

Commerce.—Though New Hampshire has one of the best harbors in the United States, she has but little foreign commerce—less indeed than in former years. Nor has she any river favoring internal navigation in vessels larger than keel-boats for any considerable distance. The Connecticut and Merrimack, by aid of locks, may be ascended, the former for 270 miles from Long Island sound, and the latter for 40 miles within the state. The foreign exports from New Hampshire in 1852, amounted only to \$69,458, and imports to \$83,319. Of course this only includes the imports and exports of her own ports, but a much larger amount doubtless passes through the ports of neighboring states. This state, however, possesses a considerable amount of shipping, and builds and sends forth a large number of vessels that are owned elsewhere. The tonnage owned in the state in the year above named was 24,891 $\frac{2}{3}$, of which 2283 $\frac{1}{2}$ were engaged in the cod and mackerel fisheries. The number of vessels built was 14, having an aggregate capacity of 9515 $\frac{3}{4}$ tons. The principal articles of export are lumber, live stock, wool, fish, beef, pork, pot and pearl ashes, and granite.

Education.—Popular education is under the direction of county school commissioners, who form a state board of education. In 1852, 71,232 pupils attended the winter schools, and 58,805 the summer schools. In the same year there was raised by taxation for the support of common schools, \$150,527.76, and from other sources, \$39,398.03. A building is now being erected at Concord by the state for a manual labor school, capable of accommodating 300 boys. There were in 1852, 1 college in New Hampshire, with 237 students and 25,000 volumes in its library; 3 theological schools, with an aggregate of 99 students and 8300 volumes, and 1 medical school with 45 students.—See *Table of Colleges*, APPENDIX.

Religious Denominations.—Of 602 churches in New Hampshire in 1850, the Baptists of different sects owned 180; Christians, 23; Congregationalists, 172; Episcopalians, 11; Friends, 15; Methodists, 99; Presbyterians, 13; Union Church, 32; Unitarians, 13; Universalists, 36; Free Church, 2; Roman Catholic, 2; Second Advent, 4; giving 1 church to every 528 persons. Value of church property, \$1,401,586.—See *Table of Religions*, APPENDIX.

Public Institutions.—New Hampshire Asylum for the Insane at Concord has been (1853) in existence about ten years, during which it has received 923 patients, of whom 118 now remain in the asylum, 107 were admitted during the year, and 106 dismissed, 66 of whom were cured. The state penitentiary at Concord had 111 inmates in May, 1852, three only of whom were females. There is a library for the use of the prisoners of 600 volumes. The receipts of 1852 exceeded the expenditures by \$1484.51. For manual labor school, see EDUCATION. This state contributed \$550 for educating the blind, and \$2162 for the deaf and dumb, in institutions of other states.

Government, Finances, &c.—The governor is elected by the people annually, and receives a salary of \$1000 per annum. The senate consists of 12, and the house of representatives of 286 members, also chosen annually by the people.

The judiciary consists—1. Of a supreme court, composed of one chief and four associate judges, which holds its sessions twice a year at Concord. 2. Of courts of common pleas, and courts of probate. The chief justice of the supreme court receives \$1400; and each of the others, and the circuit justices of the common pleas, \$1200 per annum. The judges of the common pleas receive \$3 per day during the session of the courts, and ten cents per mile for travel. The superior court has chancery powers, and determines questions of law, and receives petitions for divorce. Two judges of this court, or one superior and one circuit judge, must be present at the trial of capital cases. The assessed value of property in 1850 was \$92,177,959; public debt in 1852, \$75,732; ordinary expenses, exclusive of debt and schools, \$80,000. In January, 1853, New Hampshire had 31 banking institutions, with an aggregate capital of \$3,076,000; a circulation of \$2,625,707, and \$175,156 in coin. The aggregate capital of the savings' institutions was \$2,132,218.

History.—New Hampshire was first settled near Portsmouth in 1623, and was several times connected with Massachusetts up to 1679, when it became a royal province, but renewed its connection with Massachusetts in 1689, and was for a short time attached to New York; but finally, in 1741, became an entirely separate province, and so remained till the Revolution. New Hampshire was much harassed by the Indians, and in 1639 a party of them attacked Dover, (in revenge for some executions of part of their number 13 years before,) killed many of the whites, and burnt the town. No important action took place on the soil of this state, either in the war of the Revolution or that of 1812.

NEW HAMPTON, a post-township of Belknap co., New Hampshire, on the left side of the Merrimack river, 33 miles S. by W. from Concord. Population, 1612.

NEW HAMPTON, a post-village of Orange co., New York, on the W. bank of the Walkill river, where it is crossed by the New York and Erie railroad, 74 miles from N. Y. city.

NEW HAMPTON, a small post-village of Hunterdon co., New Jersey, on the New Jersey Central railroad, about 16 miles N. N. W. from Flemington.

NEW HANOVER, a county in the S. E. part of North Carolina, bordering on the Atlantic at the mouth of Cape Fear river; area estimated at 1000 square miles. The Cape Fear and South rivers form the S. W. boundary, and the North branch of the former flows through the county. The surface is level; the soil is sandy and rather poor, excepting the margins of the rivers. The staples are Indian corn, rice, turpentine, resin, and tar. In 1850 this county produced 215,488 bushels of corn; 163,002 of sweet potatoes, and 1,413,525 pounds of rice. There were 6 saw mills, 4 saw and planing mills, 14 turpentine distilleries, 25 tar and turpentine manufactories, and 2 ship-yards. It contained 19 churches, 6 newspaper offices; 1170 pupils attending public schools, and 323 attending academies or other schools. The county contains large forests of pitch pine. It is intersected by the Weldon and Wilmington railroad. Capital, Wilmington. Formed in 1728. Population, 17,668, of whom 9087 were free, and 8581, slaves.

NEW HANOVER, a new township of Burlington co., New Jersey. Population, 2245.

NEW HANOVER, a post-township of Montgomery co., Pa., 64 miles E. from Harrisburg. Population, 1635.

NEWARD'S, a post-office of Northampton co., Pennsylvania.

NEW HARMONY, a post-office of Brown co., O.

NEW HARMONY, a thriving post-village of Posey co., Indiana, on the Wabash river, 15 miles N. from Mount Vernon. It was first settled in 1814 by Frederick Rapp and a colony of Germans from Pennsylvania. They purchased a large tract of rich land, planted orchards and vineyards, erected mills and manufactories, and built about 200 dwellings. In 1825, Robert Owen, purchased the town for the purpose of making an experiment in socialism. As might have been expected, it was entirely unsuccessful. A plank-road extends to Mount Vernon. Population in 1853, about 400.

NEW HARRISBURG, a small post-village of Carroll co., O., 6 miles N. W. from Carrollton.

NEW HARRISON, a post-office of Darke co., O.

NEW HARTFORD, a post-township of Litchfield co., Connecticut, about 20 miles N. W. by W. from New Haven. Population, 2643.

NEW HARTFORD, a thriving post-village in above township, on an affluent of the Farmington river, about 20 miles N. W. by W. from Hartford. It contains 2 churches and 8 stores.

NEW HARTFORD, a post-township in the S. E. part of Dneida co., New York. Pop., 4847.

NEW HARTFORD, a post-village in the above township, near the Chenango canal, 4 miles W. by S. from Utica. It contains several churches and cotton factories. Population, estimated at 1000.

NEW HARTFORD, a post-village in Pike co., Illinois, about 80 miles W. S. W. from Springfield.

NEW HARTFORD CENTRE, a post-village of Litchfield co., Connecticut, contains 1 or 2 churches.

NEW HAVEN, a county in the S. W. central part of Connecticut, has an area of about 620 square miles. It is bounded on the S. by Long Island sound, and on the S. W. by the Housatonic river, and is drained by the Naugatuck and Quinepiack rivers, and other smaller streams, which turn numerous grist and saw mills. This county has some excellent harbors, affording great advantages for navigation and the fisheries. Some attention is also paid to manufactures. The surface is uneven, and in some parts hilly. The soil is various, but generally good. Indian corn, potatoes, rye, and grass are the staples. In 1850 this county produced 225,881 bushels of corn; 445,125 of potatoes; 112,727 of rye; 67,176 tons of hay, and 943,915 pounds of butter. There were 12 foundries, 32 hardware establishments, 6 India-rubber and 37 boot and shoe manufactories, 4 cutlery, 3 edge-tool, and 3 pin manufactories, 3 cotton and 7 woollen factories, 6 brass foundries, 3 copper and 12 iron foundries, 11 grist, 6 paper, 15 saw and planing mills, and 12 tanneries. It contained in that year 103 churches, 15 newspaper offices, and 9613 pupils attending public schools, and 1832 attending academies and other schools. The Housatonic river is navigable for steamboats 12 miles to Derby. The county is traversed by the New Haven, Hartford and Springfield, the New Haven and Northampton, and the Naugatuck railroads, and partly intersected by connecting lines of the New York and New Haven, and New Haven and New London railroads. Capital, New Haven. Population, 62,126.

NEW HAVEN, a post-township of Addison co., Vermont, on the N. side of Otter creek, about 32 miles S. W. by W. from Montpelier. Population, 1663.

NEW HAVEN, a post-village in the above township, on the Rutland and Burlington railroad, about 30 miles S. W. by W. from Montpelier.

NEW HAVEN, a city, port of entry, seat of justice of a county of its own name, and semi-capital of Connecticut, is situated in a beautiful plain, at the head of New Haven bay, 4 miles from its entrance into Long Island sound. It is 160 miles S. W. from Boston, and 76 miles N. E. from New York, being in a direct line between the two cities. Lat. 41° 18' 23" N., lon. 72° 56' 30" W. The plain on which New Haven stands inclines gently towards the water, and is environed on all
