Wikibase, bewerkbare
linked open data voor
iedereen

Wikidata, sinds
2012

Wikibase is the underlying software application upon which Wikidata is built.

Wikibase is essentially a blank copy of Wikidata into which you can enter your own items and properties.

Bron

Waarom is Wikibase tof?

Wikibase is an open-source software collaboration opening Open Data

Learn more

Why Wikibase?

- Free and Open**

Wikibase is the free software for open data projects. It connects the knowledge of people and organizations and enables them to open their linked data to the world.
- Powerful**

We're proud of what our partners achieve with Wikibase. You can become a part of a network of Wikibase users and learn from best practices.
- For Everyone**

Wikibase connects the knowledge of people and organizations. It delivers the infrastructure for the participation of humans and machines in the world of linked open data, in any language.

Who is it for?

Any organization can use it to manage and open up their structured data, and many do—in particular, data-minded GLAM organizations across the world. Here's a sampling of them and their projects using Wikibase.

- Libraries**

Libraries frequently find Wikibase well suited to their requirements: it provides librarians with powerful
- Research**

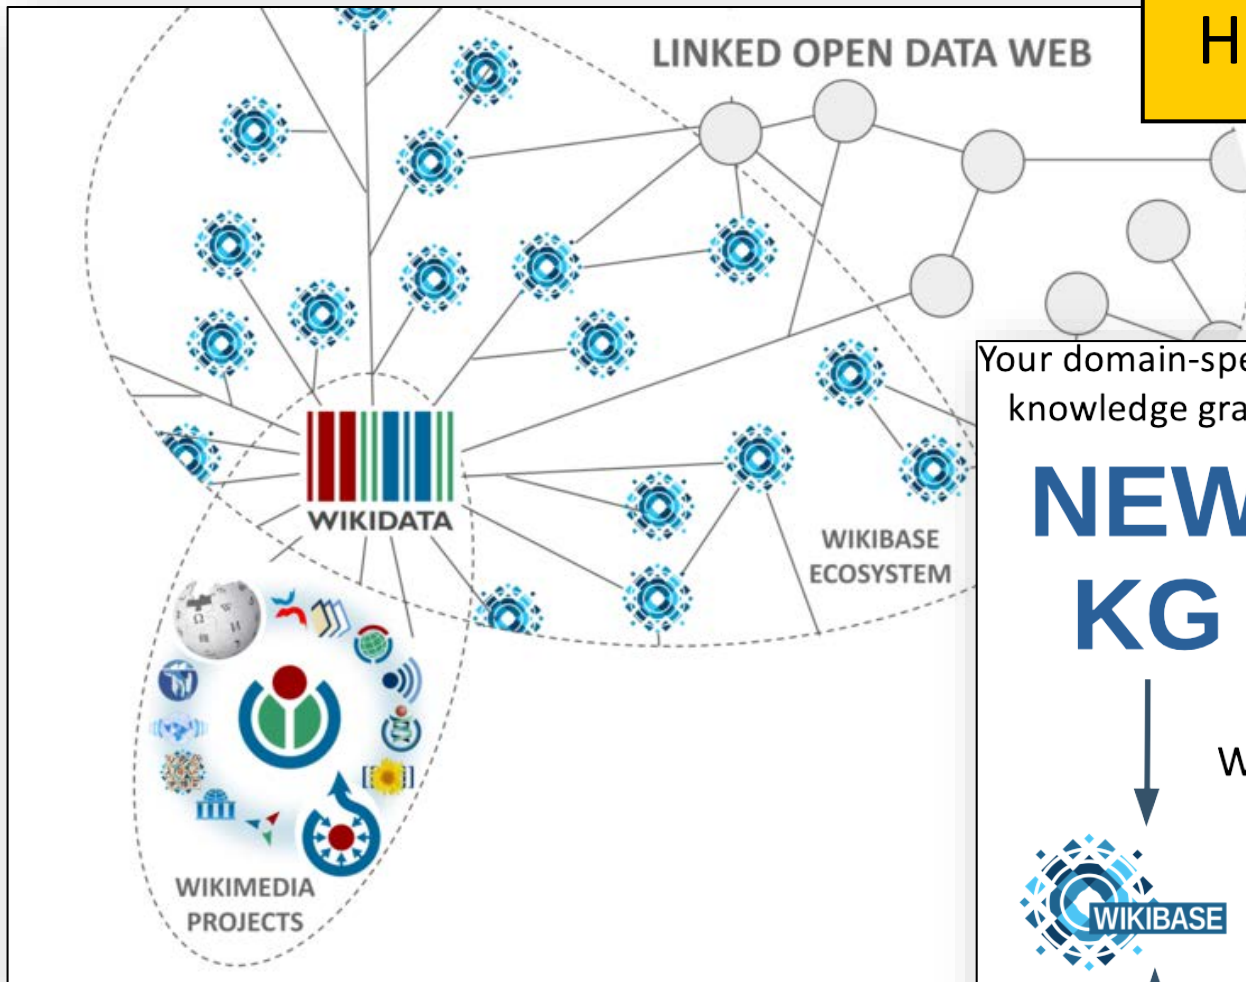

Wikibase offers the greenfield conditions often needed by collections with large bodies of custom data in order to create an
- Collections**

Perhaps no subset of Wikibase's usership leaps as readily to one's mind as Digital Humanities: huge amounts of raw data,
- Science**

We see universities and research groups using Wikibase for its flexibility and ease in collaboration, and we see it

< [LinkedOpenData](#) | [Strategy2021](#)

Overview	Joint Vision	Wikidata	Wikibase Ecosystem
-----------------	---------------------	-----------------	---------------------------

Purpose

Wikibase makes it easier than ever before to **create, connect, and grow** a collaborative linked knowledge base. We are enabling the co-creation of the **world's largest knowledge graph** of free and open data which will be used to **create new knowledge** for the world.

Guiding principles

Openness: The Wikibase Ecosystem is free and open first. We prioritize enabling the release of more free and open knowledge into the world (e.g., CC licensed data and publicly accessible instances) over optimizing Wikibase for closed-system use cases. We will therefore invest the most resources in supporting projects that are committed to allowing the broader public to access (i.e., read and query) their Wikibases, and/or those that contain data with a Creative Commons (or compatible) license. Although there are certainly interesting and inspiring use cases for Wikibase software that benefit the members of specific organizations, these projects should not be our focus when it comes to deciding the direction of Wikibase products. Supporting projects that do not directly result in the release of more Linked Open Data into the world is not contributing to the vision of the Wikibase Ecosystem, nor is it as impactful to the Movement.

Sustainability: The sustainability of the Wikibase Ecosystem depends on a variety of factors that must play well together: an engaged user base maintaining diverse and high-quality data, a healthy support network of service providers, a community of developers producing complementary software and tools, and ways to connect data across institutional boundaries. We prioritize the sustainable development of a holistic Wikibase Ecosystem over, for example, rapid scaling of any one aspect simply for the sake of growth.

Knowledge equity & Co-creation: Individuals, institutions, research teams, and niche projects around the world will be able to directly shape the decentralized knowledge graph by contributing to a diverse range of Wikibase projects. Wikidata is one very important hub in the Wikibase Ecosystem with its own thriving community of contributors that are building and maintaining a broad range of general-purpose knowledge. For the knowledge graph to expand to include many more well-maintained knowledge hubs, we must ensure that the caretakers of a wide variety of specialized, non-CC0 data have the core technology (e.g., products within the Wikibase product portfolio) and documentation

Een stukje geschiedenis...

February 15, 2022

Wikibase a history

I have had the pleasure of being part of the Wikibase journey one way or another since 2013 when I first joined Wikimedia Germany to work on Wikidata. That long-running relation to the project s good position to give a high-level overview of the history, from both a technical and hi here it goes.

For those that don't know Wikibase is code that powers wikidata.org, and a growing r want to know more read about it [on Wikipedia](#), or [the Wikibase website](#).

For this reason, a lot of the early timeline is quite heavy on the Wikidata side. There a points missing, if you think they are worthy of mentioning then leave a comment or re

2005

At [Wikimania 2005](#) there was a series of talks on "Semantic web". One of these was [Web – The Missing Links](#), and this Wikimania lead to the creation of [Semantic Media](#)

The WikiProject "Semantic MediaWiki" provides a common platform for discussing MediaWiki software that allow for simple, machine-based processing of Wiki-cont some form of "semantic annotation," but the special Wiki environment and the mul applications impose a number of additional requirements.

[Semantic MediaWiki at 22:29, 2 January 2006](#)

The initial version of Semantic MediaWiki was released in [late 2005 \(version 0.1\)](#), with the start of 2022.

If you read through the Wikimania and connected resources carefully, you'll find a ref though at this point Wikidata is only a project proposal.

2021

[Wikibase Yearly Summary 2021 by Envel Le Hir](#)

This year Wikibase got its own [all-important Twitter account](#). More and more workshops and projects around Wikibase were created, including a series of working hours around WBStack. Great projects exposing user needs were created such as [RaiseWikibase](#). Federated properties, blog posts, [WikidataCon 2021](#) and more.

The [Wikibase stakeholder group is thriving](#) with 17 organizational members, and 26 individual members. [Institutional requirements have been collected and presented](#), and the group even has a [budget](#) to work with, and also [a Twitter account](#)!

Most importantly the new [Linked Open Data strategy](#) was published by Wikimedia Germany. The highlight of this for Wikibase, is the clear and distinct [strategy for the Wikibase Ecosystem](#).

- **Empower knowledge curators to share their data:** Increase the number and diversity of Wikibases that can eventually be connected to the LOD web.
- **Ecosystem enablement:** Enable an ecosystem of extensions as well as tools and custom interfaces based on WB APIs to emerge around Wikibase, extending the functionality of the software for more use cases.
- **Connect data across technological & institutional barriers:** Ensure Wikibases can connect more deeply with each other and Wikidata to form an LOD web

Code wise some of the libraries that were split out of Wikibase.git back in 2013 [were moved back into the code base to be managed as a mono repo](#).

2022

[Wikibase Yearly Summary 2022 by Envel Le Hir](#)

It's only February, and the next thing on the cards for Wikibase is the [Wikibase.cloud offering by Wikimedia Deutschland to replace wbstack.com](#).

Lots still to happen here, as I am writing this in February :)

A Voice in the Orchestra of Opening the GND

What really distinguishes us is the way in which we cooperate on a major scale.¹

A workshop report from the Office for Library Standards at the German National Library

When people discuss topics with verve and persistence, this is generally a sign of dedication and connection. The topic of “Opening the GND” features these positive qualities. It affects and moves many people. It raises questions on the major topic of collaboration, both in great detail and a vast range of different contexts. The opening quote to this article is taken from the historian Yuval Noah Harari’s² much-acclaimed graphic novel “Sapiens”, which tells the history of how humankind developed. It also describes our work in the *Office for Library Standards (AFS)* at the German National Library. Organising collaborations is at the heart of what we do. Our task is to facilitate the cataloguing of knowledge resources across national and disciplinary boundaries. We organise collaborations by promoting consensus on standards that we ultimately use to describe the world while keeping them equally comprehensible for all. Using these standards, the community of German-language libraries is defining how publications should be described with greater precision than by means of natural language so that others can definitively refer to them. This is where the *Integrated Authority File (GND)* comes into play. Harari refers to the nature of humankind as a whole, and how this differs from the character of chimpanzees, for example. The work of cataloguing, the definition of media based on the rules of descriptive and content cataloguing, is far removed from the challenges faced by Homo Sapiens during the Stone Age. And yet, in a sense, it is simply a different section of the same light beam. As a result of the “cognitive revolution”³ that occurred back then, today, we are facing the challenges of the digital transformation. And this too we will master precisely because of our ability to collaborate. This is what we do.

In the course of opening the GND to include communities beyond library institutions, one thing

Register van Wikibase-instanties

Main page Discussion

Main Page

Wikibase Registry is a wiki that hosts a registry of Wikibase instances. If you have a Wikibase install to add please [go ahead](#) after reading the [README](#).

It was set up in Antwerp on April 25, 2018 during a workshop on an ecosystem of Wikibase instances federated around Wikidata. The workboard for this project can be found on [Phabricator](#) at [/wikibase-registry/](#).

See also a list of wikis using Wikibase at [WikiApiary](#). It will be great to have all wikis listed there also registered on this wiki.

This document covers installing the Wikibase suite manually. For Docker installation instructions, see [Wikibase/Docker](#). For installing just the Wikibase extension, see [Wikibase/Installation](#).

Contents [show]

Introduction

 [edit source]

A Wikibase install often consists of the following elements:

- An RDBMS (MariaDB/MySQL or SQLite) [required]
- MediaWiki [required]
 - The Wikibase extension [required]
 - Other related extensions [optional]
- The Wikidata query service (WDQS) [optional]
 - The WDQS proxy
 - The WDQS frontend
- QuickStatements [optional]
- Elasticsearch [optional]

The [Docker](#) install contains all these components Wikibase users, especially those just starting out.

However, for those not wanting to run Docker (because the components better), here's how to install each

Network configuration

 [edit source]

Consult the network description and diagram: [http](#)

A software bundle that helps users create self-installed and self-maintained Wikibase instances that have greater customization needs.

Primarily targeted at larger institutions with massive amounts of data, usually with their own technical staff and infrastructure that can run a production Wikibase instance.

2) Docker

The screenshot shows the MediaWiki Wikibase/Docker page. A yellow box in the top right corner contains the text "2) Docker". The page header includes the MediaWiki logo and a search bar. The main content area has a "Page" tab selected, with "Discussion" also visible. The title "Wikibase/Docker" is prominently displayed. Below the title, there is a link to "< Wikibase" and a section for "Other languages" with "English" selected. A paragraph of text follows, mentioning Docker images and installation instructions. A "Contents" box is present, listing sections from "1 Installing Wikibase with Docker" to "1.5.2 Further reading". The main text begins with "Installing Wikibase with Docker" and mentions that the Wikibase team is regularly releasing Docker images. Two callout boxes are present: one yellow box on the right contains the text "Docker images with MediaWiki, Wikibase and associated services.", and another yellow box at the bottom right contains the text "Before you start [edit]". The left sidebar contains various navigation links such as "Main page", "Get MediaWiki", "Tech blog", "Support", "User help", "FAQ", "Technical manual", "Bug tracker", "Code docs", "Code repository", "Statistics", "MediaWiki.org", "Community portal", "Recent changes", "Translate content", "Random page", "Village pump", "Sandbox", "Tools", "What links here", "Related changes", "Upload file", "Special pages", "Permanent link", "Page information", "Cite this page", "Print/export", "Create a book", "Download as PDF", and "Printable version".

WBStack close and migration

The time is approaching for the end of life of the WBStack alpha platform (don't worry, it's still some months away, and there is a migration path to a new platform etc :)).

In this post you'll find an update on the current state of WBStack, another introduction to Wikibase.Cloud, some rough dates and connections to other communications. If you don't know what WBStack is then you can start [with this introduction](#).

Wikibase.Cloud

Following the [pre launch announcement of Wikibase.Cloud at WikidataCon 2021](#), the WMDE team has been working on getting the new platform set up and ready to replace wbstack.com. This includes updates to components such as MediaWiki, Wikibase, reworking components, modifying code bases to be more easily maintained by a team, and generally getting to grips with the platform.

Maar binnenkort.....

Lets get started

Wikibase.Cloud is a software-as-a-service offering launching in 2022.

Its primary target groups are research groups, private individuals and less well-funded organizations that want to share free and open data with the world but that lack the dedicated resources needed to maintain the software themselves.

Overview of Wikibase support

[Wikibase](#) is a platform for collaborative knowledge base editing. Its flagship instance [Wikidata](#) offers structured data about the world and can be edited by anyone. OpenRefine provides powerful ways to both pull data from Wikibase and add data to it.

OpenRefine's Wikibase integration is provided by an extension which is available by default in OpenRefine. In this page, we present the functionalities for Wikidata, but [any Wikibase instance can be connected to OpenRefine](#) to obtain a similar integration.

Editing Wikidata with OpenRefine

As a user-maintained data source, Wikidata can be edited by anyone. OpenRefine makes it simple to upload information in bulk. You simply need to get your information into the correct format, and ensure that it is new (not redundant to information already on Wikidata) and does not conflict with existing Wikidata information.

You do not need a Wikidata account to reconcile your local OpenRefine project to Wikidata, but to upload your cleaned dataset to Wikidata, you will need an [autoconfirmed](#) account, and you must [authorize OpenRefine with that account](#).

Wikidata is built by creating entities (such as people, organizations, or places, identified with unique numbers starting with Q), defining properties (unique numbers starting with P), and using properties to define relationships between entities (a Q has a property P, with a value of another Q).

For example, you may wish to create entities for local authors and the books they've set in your community. Each writer will be an entity with the occupation [author \(Q482980\)](#), each book will be an entity with the property "instance of" ([P31](#)) linking it to a class such as [literary work \(Q7725634\)](#), and books will be related to authors through a property [author \(P50\)](#). Books can have places where they are set, with the property [narrative location \(P840\)](#).

To do this with OpenRefine, you'll need a column of publication titles that you have reconciled (and create new items where needed); each publication will have one or more locations in a "setting" column, which is also reconciled to municipalities or regions where they exist (and create new items where needed). Then you can add those new relationships, and create new entities for authors, books, and places where needed. You do not need columns for properties; those are defined later, in the creation of your [schema](#).

Version: 3.5

Connecting OpenRefine to a Wikibase instance

This page explains how to connect OpenRefine to any Wikibase instance. If you just want to work with [Wikidata](#), you can ignore this page as Wikidata is configured out of the box in OpenRefine.

For Wikibase end users

All you need to configure OpenRefine to work with a Wikibase instance is a *manifest* for that instance, which provides some metadata and links required for the integration to work.

We offer some off-the-shelf manifests for some public Wikibase instances in the [wikibase-manifests](#) repository. But the administrators of your Wikibase instance should provide one that is potentially more up to date, so it makes sense to request it to them first.

For Wikibase administrators

To let your users contribute to your Wikibase instance with OpenRefine, you will need to write a manifest as described above. There is currently no canonical location where this manifest should be hosted - just make sure it can be found easily by your users. This section explains the format of the manifest.

Requirements

To work with OpenRefine, your Wikibase instance needs an associated reconciliation service. For instance you can use [a Python wrapper](#) for this. Also, in addition to Wikibase, the [UniversalLanguageSelector extension](#) should be installed.

Version: 3.5

Version: 3.5

Reconciling with Wikibase

The Wikidata [reconciliation service](#) for OpenRefine [supports](#):

- A large number of potential types to reconcile against
- Previewing and viewing entities
- Suggesting entities, types, and properties
- Augmenting your project with more information pulled from Wikidata.

You can find documentation and further resources on the reconciliation API [here](#).

For the most part, Wikidata reconciliation behaves the same way other reconciliation services do, but there are a few processes and features specific to Wikidata.

Language settings

You can install a version of the Wikidata reconciliation service that uses your language. First, you need the language code: this is the [two-letter code found on this list](#), or in the domain name of the desired Wikipedia/Wikidata (for instance, “fr” if your Wikipedia is <https://fr.wikipedia.org/wiki/>).

Then, open the reconciliation window (under [Reconcile](#) → [Start reconciling...](#)) and click [Add Standard Service](#). The URL to enter is <https://wikidata.reconci.link/fr/api>, where “fr” is your desired language code.

When reconciling using this interface, items and properties will be displayed in your chosen language if the label is available. The matching score of the reconciliation is not influenced by your choice of language for the service: items are matched by considering all labels and returning the best possible match. The language of your dataset is also irrelevant to your choice of language for the reconciliation service; it simply determines which language labels to return based on the entity chosen.

Content page [Discussion](#)

Wikibase Community User Group

The **Wikibase Community User Group** exists to support *Wikibase* as an entity distinct from *Wikidata*. Its mission is to cultivate *Wikibase*'s development and to encourage like-minded developers and data analysts not only to improve *Wikibase*'s existing tools but also to create new ones.

The overall objectives are to provide an alternative space for people interested in *Wikibase* to see how people can use it, and encourage others to expand on these ideas to push the software further. This would be similar to what happened with *MediaWiki*, where outside developers and community developers used the software, and created a bunch of tools, extensions and apps. This increased the use of the software around the Internet, with these tools then assisting the *Wikimedia* community by bringing developers into it that would otherwise not have been there.

Its mission is to cultivate Wikibase's development and to encourage like-minded developers and data analysts not only to improve Wikibase's existing tools but also to create new ones.

Objectives [\[edit \]](#)

The objectives of the Wikibase Community User Group are:

- Provide technical documentation related to a project the participants are working on as it relates to *Wikibase*.
- Provide a list of resources for other members of the community to have easy access to inside the *Wikimedia* ecosystem when it comes to setting up their own *Wikibase* install, *Wikibase Query Engine* install, and other related pieces of software.
- Do new and interesting things using *Wikibase* that are different than many of the developers at the *WMF* and *WMDE* are doing. Provide outside thinking of how the software can be used in ways that benefit a project the participants are working on and the wider community.
- Encourage the creation of a bigger developer community around *Wikibase*.
- Provide documentation on data normalization that can be used by less technically-minded data people who want a pre-packaged data analysis software tool like *Wikibase* and its query engine.

The overall objective would be to provide an alternative space for people interested in *Wikibase* to see how people can use it, and encourage others to expand on these ideas to push the software further. This would be similar to what happened with *MediaWiki*, where outside developers and community developers used the software, and created a bunch of tools and extensions and apps. This increased the use of the software around the Internet, with these tools then assisting the *Wikimedia* community by bringing developers into it that would otherwise not have been there.

A short history of the Wikibase Community User Group

by Envel Le Hir — April 29, 2021 — Wikibase, Wikimedia Deutschland

This post is only a short summary, that does not mean to be perfect, and is part of a series, yet to be written. See also [Another history of Denezhzh](#).

The User Group

The [Wikibase Community User Group](#) is an organization, founded by Laura Hale and Miguel Paraz, to support [Wikibase](#) outside of [Wikidata](#). For instance, its members created the [Wikibase mailing list](#) and the first Wikibase group on Telegram. The Wikibase Community User Group is independent from Wikimedia Deutschland, the organization that develops Wikibase, and was formed when Wikimedia Deutschland was not really promoting Wikibase outside of Wikidata.

The Wikibase Community User Group is a recognized affiliate of the Wikimedia Foundation, which gives several rights, like using the logos of the Wikimedia movement, applying for [specific grants](#), taking part in strategic discussions of the Wikimedia Foundation with other affiliates, or [voting](#) for the affiliate-selected board seats of the Wikimedia Foundation.

In 2019, the Wikibase Community User Group was inactive. The founders of the user group seemed no longer active in the Wikimedia movement (one did not edit Wikimedia projects for years, and the other one deleted their Wikimedia account). As I [believe](#) in the usefulness to have an active Wikibase community user group, that can be a complement to Wikimedia Deutschland, I tried to revive it. For instance, I wrote a large part of the [2019 report](#), invited the community to improve it, and [submitted it](#). I also [applied](#) to represent the user group at the Wikimedia Summit.

Wikimedia Summit 2020

The Wikimedia Summit is the annual conference of the Wikimedia Foundation affiliates. While it is organized by Wikimedia Deutschland, it is [fully funded](#) by the Wikimedia Foundation. The conference has [strict eligibility criteria](#) for participants, for instance up to one representative per user group.

Designation of a representative

There was immediately an issue with my application: two people applied as the representative of the Wikibase Community User Group. After discussing with the other one, it seemed that, while they had no interest in Wikibase, but that they were given the slot by the founders of the user group. They stated that they had no intention to leave it. I notified the community, who promptly reacted, [starting a public vote](#) to “untie the knot”.

Simultaneously, I also notified Lydia Pintscher and Léa Lacroix, as they were, at that time, the people I knew at Wikimedia Deutschland interacting with the Wikibase community, and shared with them the discussions I had with the other candidate. Léa Lacroix immediately came to chat with me, explaining that Wikimedia Deutschland “had tensions” with the founders of the Wikibase Community User Group, detailing some of the issues, and

The screenshot shows the GitHub profile for the Wikibase Stakeholder Group. At the top, there is a search bar and navigation links for Pull requests, Issues, Marketplace, and Explore. The profile header includes the group's logo, name, and website URL: <https://wbstakeholder.group>. Below the header, there are navigation tabs for Overview, Repositories (3), Packages, People (35), Teams (7), and Projects (2). The main content area is divided into three sections: Pinned, Repositories, and People. The Pinned section features a repository named 'Wikibase-Stakeholder-Group.github.io' (Public) with a description 'Website of the Wikibase Stakeholder Group', 1 star, and 5 forks. The Repositories section has a search bar and filters for Type, Language, and Sort, with a 'New' button. It lists two repositories: 'Wikibase-Stakeholder-Group.github.io' (Public) and 'Members' (Private). The 'Members' repository is described as 'Members of the stakeholder group' and has 0 stars and 0 forks. The People section shows a grid of 20 member avatars and a 'View all' link. The Top languages section shows HTML as the primary language.

Calls [\[bewerken\]](#) [brontekst bewerken](#)

Calls will be scheduled as a part of the [Wikidata Working Hours](#).

Upcoming calls [\[bewerken\]](#) [brontekst bewerken](#)

- 11 March 2022, 11AM-12PM Eastern US ([Time zone converter](#)), [Registration link](#): Introduction to Linked Open Data Strategy with WMDE, she is also one of the main thinkers behind the Linked Open Data strategy.
- April 2022, date and time TBD. Digital Scriptorium 2.0 in Wikibase
- May 2022, date, time and topic TBD.
- 30 June 2022, 11AM-12PM Eastern US ([Time zone converter](#)), [Registration link](#): The German Integrated Authority file building its encouraging cooperation and openness in digital transformation. Fischer is head of the DFG-research project [GND for Cultural data](#) Fischer works to increase the quality of metadata through Authority Control to foster retrieval and linked data. (Jan 2022)

Past calls [\[bewerken\]](#) [brontekst bewerken](#)

- 16 December 2021, 11AM-12PM Eastern ([Time zone converter](#)), [Registration link](#): Creating a WBStack Instance for alternative LCSH Labels: item creation. We will use a small-group breakout format and create items in the experimental WBStack instance
- 15 November 2021, 3PM-4PM Eastern ([Time zone converter](#)), [Registration link](#): Creating a WBStack Instance for alternative LCSH Labels: property creation
- 26 October 2021 Creating a WBStack Instance for alternative LCSH Labels: data modeling. NOTE: session moderator forgot to record this session -- apologies!
- 17 September 2021 via [Zoom](#): Building Enslaved.org in Wikibase
 - [Video recording](#)
 - [Audio recording](#)
- 27 August 2021, 1:00PM Eastern (US) *Next steps after installing a Wikibase instance -- creating users, items, and properties*
 - [Recording](#), [WBStack Slides](#), [Wikibase Slides](#), [Shared notes](#)
 - **Ryan Mendenhall** Metadata Librarian at Columbia University presented *Next steps with WBStack*. Following on the WBStack session earlier this year, this continuation looked briefly at WBStack interfaces for Federated properties, Mappings, QuickStatements and the WBStack query service.
 - **Jim Hahn** Head of Metadata Research at the Penn Libraries presented *Next steps with Wikibase*. Following on the Wikibase install session from Spring, this continuation provided an overview of a local Wikibase configuration once you have Wikibase run

Community discussion of Wikidata & Wikibase with the goal of understanding how the library can contribute to and leverage these as a platform for publishing, linking, and enriching library linked data.

Import Data

Learn how to import data to your Wikibase.

Table of Contents ▾

The main entrypoint to adding data to Wikibase is through its user interface. Here adding data is straightforward. Data is added statement by statement, reference by reference and qualifier by qualifier. Although straightforward this approach does not scale. For bulk imports of data into a Wikibase one has to rely on the api available at `/w/api.php`

Different tools and libraries have been developed providing a wrapper around the wikibase api of Wikidata. Some of those can also be used in any deployed Wikibase. In this chapter 2 will be addressed, quickstatements and the Wikidata Integrator

QuickStatements

QuickStatements is a tool developed for Wikidata to create items and add statements. It uses a syntax of TAB separated constructs. QuickStatements is also packed in the docker-compose script, which enables using quickstatements on the Wikibase it is packed with on that docker run stack. Once deployed go to `:9191` to access the quickstatement module of that Wikibase. For details and instructions on how to use quickstatement on the installed wikibase click on

Ghent University Wikidata and Wikibase Workshop: developing a Wikibase instance [\[bewerken | brontekst bewerken \]](#)

Wednesday 3 - 5 July 2019

at Ghent University, Belgium

The archival materials of the past provide us with insights to retrace historical, social, literary, linguistic, and cultural phenomena. This information is largely relational- where individuals were affiliated to organizations, lived and traveled to specific places, with written or photographic evidence of their activities through say editors and writers publications, census, correspondence, diaries and so on. Thus it comes as no surprise that the Galleries, Libraries, Archives and Museums (GLAM) sector and humanities researchers are increasingly turning to modeling this interrelated information as Linked Open Data for archiving, storing, and maximizing its reuse.

The Wikimedia ecosystem, and Wikidata as an infrastructure in particular, is seen as a gold standard for not only modeling this information, but also sharing it both openly or in a closed Wikibase, as it provides an open source infrastructure for modeling data, as well as for querying information to draw insights.

About the Ghent University Wikidata and Wikibase Workshop [\[bewerken | brontekst bewerken \]](#)

In this 3 day workshop at UGent we seek to bring together small project teams from the GLAM sector and the Digital Humanities to develop their own Wikibase instance from a pre-existing data source or database, in an effort to take advantage of these affordances in telling the narratives around their cultural heritage data.

During these three days you will learn to make your data come alive through the use of Wikidata; learning to install a Wikibase, model Wikidata, make your Wikibase - prepare and upload data, use your Wikibase from developing a narrative to analysis. No prior knowledge of Wikidata is needed, although some familiarity with data and modeling data would be helpful. Knowledge of programming is a "nice to have", but is certainly not necessary.

Workshop attendance is based on the submission and acceptance of a proposal that shows significant promise for realizing over the 3 days. We are accepting proposals from teams that intend to get "dirty with their data and in Wikidata and Wikibase" over three days, ensuring a high motivation and curiosity for modeling your data in a Wikibase, to ensure a productive discussion with accepted teams and to further the data modeling and potential impact of the projects for developers, users, and stakeholders of the data. A maximum of 5 teams will be submitted to the Workshop.

The content of the workshop will be given by [Micelio](#), with the support of the [Ghent Centre for Digital Humanities](#), [WeChangEd ERC project](#), [Wikimedia Deutschland](#),

Wikibase a history

I have had the pleasure of being part of the Wikibase journey one way or another since 2013 when I first joined Wikimedia Germany to work on Wikidata. That long-running relation to the project should put me in a fairly good position to give a high-level overview of the history, from both a technical and...

Wikibase installeren

- Wikibase Suite - <https://www.mediawiki.org/wiki/Wikibase/Suite> - *A software bundle that helps users create self-installed and self-maintained Wikibase instances that have greater customization needs. Primarily targeted at larger institutions with massive amounts of data, usually with their own technical staff and infrastructure that can run a production Wikibase instance.*
- Docker - *Docker images with MediaWiki, Wikibase and associated services* - <https://www.mediawiki.org/wiki/Wikibase/Docker>
- WBstack.com & Wikibase.cloud - *Free cloud based Wikibase hosting / WBaaS* - <https://www.wbstack.com/> + <https://addshore.com/2022/02/wbstack-close-and-migration/> + <https://www.wikibase.cloud/> - *Wikibase.Cloud is a software-as-a-service offering launching in 2022. Its primary target groups are research groups, private individuals and less well-funded organizations that want to share free and open data with the world but that lack the dedicated resources needed to maintain the software themselves.*

Community

- Wikibase Community User Group - *Its mission is to cultivate Wikibase's development and to encourage like-minded developers and data analysts not only to improve Wikibase's existing tools but also to create new ones* - https://meta.wikimedia.org/wiki/Wikibase_Community_User_Group - [Geschiedenis](#) - [Leden](#) – [Mailingslijst](#) – [Telegram](#)
- Wikibase Stakeholder Group - *Commissions production and maintenance of open source extensions to Wikibase, and documentation for institutions that want to operate and maintain a fully-fledged instance of Wikibase. The group will focus on extensions to Wikibase instead of contributing to Wikibase core* - <https://wbstakeholder.group/about> - [Leden](#) - [Meetings](#) - [Twitter](#) – [Github](#)
- LD4 Wikidata Affinity Group - *Community discussion of Wikidata & Wikibase with the goal of understanding how the library can contribute to and leverage these as a platform for publishing, linking, and enriching library linked data* - https://www.wikidata.org/wiki/Wikidata:WikiProject_LD4_Wikidata_Affinity_Group/Wikibase_and_WBStack_Working_Hours
- Learning Wikibase - *a place to learn and share online resources (e.g. articles, videos, workflows, FAQ's) that make it easier to install, maintain or customize your Wikibase instance. The goal is to share our learnings and experience to benefit from each other* - <http://learningwikibase.com>
- Wikibase workshops, trainingen, meetups - [Antwerpen 2018](#) – [Gent 2019](#) – [Stockholm 2019](#) – [Tokyo 2019](#) – [NFDI 2021](#) – [Wikimania 2021](#) + [List of sessions](#)
