Introducing the well-known Brand in a New Container

The day of the paper bag of “Just Grass Seed” is gone.

Particular people have recognized for years the wisdom of using “Breck’s Boston Park Lawn Grass Seed.”

It is now put up in one pound canisters for your protection when buying and for your convenience in using. What is left in the can is preserved from dust and damp and the ravages of vermin until you need it.

Experts on lawns say that the *finest lawn grass seed obtainable is the most economical to use*. They say further that lawns originally seeded with the poorer grades of lawn grass mixtures may be brought to the highest standard of perfection by judicious re-seeding and by patching with the finest quality of grass seeds mixed in properly balanced proportions.

In each one pound canister of “Breck’s Boston Park Lawn Grass Seed” will be found a copy of *Lawns in the Making*, a booklet giving the most approved modern methods for the construction and maintenance of lawns.

ONE POUND OF “BOSTON PARK” IS SUFFICIENT TO SOW ABOUT 600 SQUARE FEET

BRECK'S CONCISE CATALOGUE for 1924

THE ONE HUNDRED AND THIRD YEAR OF AN OLD NEW-ENGLAND INSTITUTION

THIS catalogue, a Concise edition of our General Catalogue, has been issued again this year because of the insistent demand from our patrons for a Handy Garden edition. As the name concise implies it "lists much in brief form." Breck's Concise Catalogue of vegetable and flower seeds embodies the most popular of the best known quality seeds obtainable. This Catalogue has been compiled with the utmost care, the thought ever uppermost in our minds being to serve our trade in the best possible way by placing in their hands a seed list of unquestioned merit, compiled, first on the basis of quality, and second on the basis of popularity.

OUR friends in large numbers have been more than kind in expressing their appreciation of our Concise Catalogue issued for the first time last year. We offer our 1924 Concise Catalogue with the definite knowledge that it is a worthy salesman to represent our firm. As the oldest and largest seed house in New England, we obviously carry the most extensive line of any firm in the trade. We issue a Complete Catalogue, a copy of which we shall be only too glad to send you on request. Our Complete Catalogue lists *Everything for Farm, Garden, and Lawn*, and embraces many varieties, especially of vegetable seeds, which are popular locally in different parts of New England, as well as Nursery Stock and a vast number of tools and implements required in agriculture.

FOR the greater convenience of those who may not always find it easy to come to our Boston Store we have arranged with many local dealers through New England to furnish all the seeds and other agricultural supplies which have been sold by BRECK'S for so many years. You can find these at "A Breck's Store"—you probably have seen this orange and black sign in the shop windows in your locality:

A BRECK'S Store

On pages 63 and 64 of this Catalogue you will find a list of the "Breck's Stores" arranged alphabetically by towns so you can find the one nearest to you. We urge you to patronize them. They will carry in stock the most popular varieties. As you can realize it will be impossible for them to stock *everything* we handle, but anything you want they will get for you if you place the order through them. *Always demand Breck's Seeds.*

We issue specialized catalogues covering complete lines. Send for

Breck's Lawn Grass Seed

Lawn on the Estate of Henry G. Lapham, Esq., Brookline, Mass.

JOSEPH BRECK & SONS, BOSTON, MASS.

Brookline, Mass., July 20, 1923

Dear Sirs: The lawns on this Estate were originally laid down with Breck's Lawn Grass Mixtures and we have used them exclusively ever since. The results attained have given us the utmost satisfaction. *Very truly yours,*

(Signed) R. BARKHOUSE, Superintendent for Henry G. Lapham, Esq.

We have given much thought and made many experiments in order to ascertain just what are the best mixtures for Permanent Lawns and Golf Courses and the grasses which are best suited to this climate. By the proper blending of the varieties which constitute Breck's Lawn Grass, we have obtained mixtures that from early Spring to late Autumn will give to lawns made with them that rich, deep green so often admired upon the lawns and parks of England, but so seldom seen in this country.

Correspondence solicited regarding special mixtures for Golf Courses, Bowling Greens, Polo Fields, Tennis Courts, etc.

Its sweetness is unsurpassed, vines of strong growth, very prolific; fruit will frequently weigh 10 pounds. The Oka melon is clearly netted, cream coloured; flesh bright salmon, small seed cavity. BEANS—Dwarf or Bush

To obtain a continuous supply of beans throughout the season, make plantings every two weeks from early May until about the middle of July. Beans are usually planted 2 inches deep in drills sixteen or eighteen inches apart. Many growers claim, however, that larger yields are obtained if three or four beans are planted in a hill, the hills being about eight inches apart in the row. Inoculate all beans with Farmogerm if possible. Cultivate frequently, but not deeply, and only when the plants are dry, as earth scattered on the foliage or pods when moist will often cause the development of rust.

Two pounds of beans will sow 100 feet of drill.

All beans sold by weight. Two pounds equal about one quart.

Packets of all varieties except as stated, 15¢ each, postpaid

✦610 Breck's Tewksbury Dwarf Horticultural. Our favourite shell bean for home garden. When ready to pick, the yellowish surfaces of the pods are beautifully marbled and splashed with bright crimson. The vines bear great numbers of long pods, inclined to curve slightly, generally containing six beans each, although seven are not unusual. Until they have attained full size the pods are comparatively dull and inconspicuous, the colour intensifying rapidly as maturity is reached. It is characteristic of the vines to throw out tendrils like those of pole beans, but the plants are distinctly dwarf and upright, displaying no tendency to climb or sprawl over the ground. *Lb. 40¢; 2 lbs. 70¢; 8 lbs. \$2.50.*

GREEN PODDED VARIETIES

✦640 Bountiful. Extra early, flat green pods, tender and stringless. *Lb. 35¢; 2 lbs. 60¢; 8 lbs. \$2.25.*

DWARF or BUSH LIMAS

830 Burpee's Improved. A true bush form. *Lb.* 45¢; 2 *lbs.* 85¢; 8 *lbs.* \$3.00.

★850 Fordhook, Early. A perfect bush Lima of erect habit and very large. The best sort for this locality. *Lb.* 45¢; 2 *lbs.* 85¢; 8 *lbs.* \$3.00.

860 Henderson's. A small bean but a continuous cropper, fine for the home garden. *Lb.* 35¢; 2 *lbs.* 65¢; 8 *lbs.* \$2.00.

BEANS—Pole or Running

It is a good policy to plant Pole Beans at least a week later than the first planting of dwarf varieties because they are not so hardy. The poles are usually set at the time of planting. Plant four or five beans to a hill in hills three or four feet apart each way. Some growers raise the hills a little to insure good drainage. Hill-applications of well composted manure are of value. One quart of Limas will plant 100 hills, one quart of the smaller seeded sorts about 200 hills. All large seeded Limas should be planted eye down to insure quick growth.

GREEN PODDED VARIETIES

980 Horticultural or Speckled Cranberry. Large green pods, streaked with red, good either as a string or shell bean. *Lb.* 35¢; 2 *lbs.* 60¢; 8 *lbs.* \$2.25.

MANGEL-WURZEL and SUGAR BEETS

To obtain the best results in New England, the seed should be sown the latter part of May, in rich, moist, well drained soil, which has been prepared by very deep ploughing and thorough harrowing. Sow in drills 2½ feet apart to permit horse cultivation and thin to about 10 inches in the row. Six to eight pounds of seed are required per acre. Two ounces per 100 feet of drill.

All kinds sold in 5 lb. lots at 70¢ lb. and in 10 lb. lots at 65¢ lb.

Under good cultivation immense crops can be secured with little labour. Ten to fifteen tons per acre are not unusual returns. Oz. 10¢; ¼ lb. 30¢; lb. 75¢.

1260 Giant Mangel-Wurzel. The seed we offer is Danish grown and Sludstrup has been repeatedly awarded the highest honors in Danish Agricultural Exhibitions. While the roots do not grow to as great a length as Mammoth Long Red the growth is more above ground, thicker and heavier, frequently weighing 15 pounds and more; colour reddish yellow. A most desirable stock feed. Oz. 10¢; ¼ lb. 35¢; lb. \$1.00.

1350 Lane's Improved Sugar Beet. A well-known variety, valuable for feeding to cattle. Oz. 10¢; ¼ lb. 30¢; lb. 75¢.

The Kales are very hardy, and make excellent greens for late Fall and early Spring use. Sow about May first in prepared beds, transplant in June, proceeding as with Cabbage plants. Siberian Kale may be sown late in August and banded like Spinach for Spring greens. One ounce of seed will sow 150 feet of drill.

1360 Dwarf Green Curled Scotch. Leaves bright green, closely curled, very tender. Quality is improved if the plants are touched by frost before being used. Pkt. 10¢; oz. 25¢; ¼ lb. 60¢; lb. \$2.00.

If you want a Complete List of Vegetable Seeds it will be sent free on request

BRUSSELS SPROUTS

This interesting vegetable produces small beads resembling miniature cabbages all over its tall stem. The sprouts, either cooked or pickled in the same way as cauliflower, are esteemed a great delicacy. Seed may be sown in May in a seed bed, and the plants afterward set out and cultivated like cabbage. Being small and hardy the sprouts are not in the least injured by frost. One ounce of seed produces about 1500 plants.

1410 Improved Paris Market. A very desirable strain. Pkt. 10¢; oz. 50¢; ¼ lb. \$1.50.

1420 Dalkeith. The finest variety. Pkt. 10¢; oz. 50¢; ¼ lb. \$1.50.

Copenhagen Market Cabbage

CABBAGE

Cabbage will do well in any deep, rich, well-drained, and abundantly manured soil. Sow seed of the early varieties in hot beds about February 1st, and prick out into other hot beds as soon as the plants are strong enough, or set in cold frames in March. When danger of frost is past, transplant to the open ground. The late or Winter crop seed can be sown in seed beds in May and plants set in the field in July. Late varieties are usually planted in rows 30 inches apart with 2 feet between plants; early sorts may be set 15 by 24 inches or even closer. One ounce of seed should produce about 2500 plants.

For Cabbage Plants, see page 19.

Breck's Market Garden Danvers Half-Long Carrot

CARROTS

Carrots are grown extensively both for culinary purposes and for stock feeding. "Horn" and medium varieties for the former; the long sorts for the latter use. Fine, mellow, sandy loams, which have been manured liberally for some previous crop, such as potatoes or onions, will produce smooth, well-shaped roots. Carrot seed may be sown towards the end of April, in May, or for late crops for table use, up to the middle of June, in drills 12 or 15 inches apart and not over 1 inch deep. For an early crop sow the "Horn" or medium varieties as early in Spring as the ground can be prepared. If a horse cultivator is to be used the rows should be 28 or 30 inches apart. Thin out the plants from 3 to 5 inches apart, according to the variety. As Carrot seed is slow in germinating, cultivation may begin earlier if a little radish seed is sown with the carrot to mark the rows.

One ounce will sow 100 feet of drill; 4 pounds, 1 acre.

Cauliflower, Breck's White Bouquet

CAULIFLOWER

Cauliflower is the most delicious member of the cabbage family. Although the ideal soils for this vegetable are well-drained, rich moist, heavy loams, it will do well in any soil that grows good cabbage. Plants from seed sown in the hot-bed late in February will be ready for the open ground about the first of May. The seedlings should be transplanted as soon as they are strong enough; later, when the time for setting in the field is approaching the plants should be gradually hardened by exposure. For late plants sow the seed sparingly in a well-prepared seed-bed in May, selecting a cool place; treat the seedlings as if they were cabbage, but exercise greater care. In the field make the rows 30 inches apart and set the plants 18 inches apart in the row. When the heads are forming tie the tops of the leaves together with raffia or soft twine in order to shut out the sun and rain; pure white attractive heads can not be grown without protection.

For prices of Cauliflower Plants see page 19

- ★ **1940 Breck's White Bouquet Cauliflower.** For early or for main crop; those who have grown it, private and market gardeners alike, agree that Breck's White Bouquet Cauliflower has no peer. It will head when other varieties fail; moreover it is a strain well-adapted for forcing under glass during Winter and Spring. The plants are comparatively short stemmed, have small leaves, and produce medium to large close-grained, snowy-white heads of the finest quality. We feel confident that no better strain has ever been developed, and that it is the earliest and most reliable variety for New England. *Pkt. 25¢; ½ oz. \$3.00; oz. \$5.00.*
- 1950 Early Short Leaf Snowball.** A sure header. Recommended for greenhouse forcing. Heads large, white, and solid. Danish grown from the same grower who developed our strain of White Bouquet Cauliflower. *Pkt. 25¢; oz. \$5.00; ¼ lb. \$12.00.*

CELERY

It is important that the seed-bed be of good, rich soil, thoroughly prepared. About the middle of April sow thinly in a hot-bed or cold-frame, in rows 2 inches apart, taking care to cover the seed with not more than $\frac{1}{8}$ of an inch of fine soil. Place pieces of burlap over the bed until the seeds have germinated, and water by sprinkling the burlap. When the seedlings are $2\frac{1}{2}$ or 3 inches high transplant into a moist seed-bed, setting the plants 4 by 4 inches. To ensure stocky plants the tops may be cut back once or twice before setting in the field. Celery does well in any deep richly-manured soil. Make the rows about 4 feet apart, and leave 5 or 6 inches between plants in the row. Cultivate frequently, but not deeply. With the advent of cool Fall weather, begin to draw earth up about the plants, keeping the stalks well together; continue this process of ridging until late Autumn when only the tops of the leaves should remain uncovered. The golden Self-Blanching variety is usually blanched by means of boards 12 or 15 inches wide set on edge on either side of the row. Celery should be stored where the air will remain cool and fairly moist. Simply set the plants close together in an upright position with several inches of soil about the roots. Cold frames, when dug to the proper depth, afford very satisfactory conditions for storing this crop. The frames should be covered with boards, lapped to shed the rain; if sash is used, under the boards, it can be blocked up slightly on mild days to give ventilation. The turnip-rooted variety, which does not require blanching, may be planted in rows about 15 inches apart.

One ounce of seed should produce about 3000 plants.

For Celery Plants see page 19

Breck's Bantam Crosby Sweet Corn

WHITE SWEET CORN

While sweet corn is often grown in hills, experienced gardeners prefer drills. Make the first planting the latter part of May in a rich, warm soil; successive sowings should be made at intervals of about ten days until July. Sow in drills from $2\frac{1}{2}$ to $3\frac{1}{2}$ feet apart, according to the height of the variety, and thin out the plants to 10 or 12 inches apart in the row. If grown in hills, 3 or 4 feet apart each way gives ample space; never allow more than four plants to remain in one hill.

One pound of seed will plant 100 feet of drill, or about 150 hills.

All packages 15¢ postpaid except as noted

The stalk is about 6 feet tall and is perhaps 1 foot dwarfer than Stowell's Evergreen and 2 feet taller than Golden Bantam. Cucumber, White Spine Arlington

CUCUMBERS

Seed should be started under glass about May 1 for an early crop in order to have plants ready to set out in the garden 3 or 4 weeks later when the ground has become thoroughly warm. Plant the seed in paper or earthen pots not less than 4 inches in diameter, in berry baskets, or other receptacles which can be handled easily and carried to the field without disturbing the young plants; leave only the 3 or 4 strongest seedlings in each container. Well-rotted manure or fertilizers may be dug into the hills a week or two before planting time. In good soil the distance between hills should not be less than 4 by 5 feet; in less fertile soils 4 by 4 feet will answer. It is generally safe to plant seed in the garden late in May; for pickles the middle of June is early enough. Cultivate often, and continue as late in the season as is possible without injuring the plants. Always pick cucumbers before they begin to turn white or yellow. One ounce of seed will plant about 50 hills.

DANDELION

When grown in deep rich soil cultivated varieties produce large, tender leaves much superior to those of the wild dandelion, both in size and flavour. Sow seed early in May in shallow drills about a foot apart; later, thin the plants to 6 inches apart in the row, and cultivate to keep down the weeds. If blanched with soil the leaves make excellent salad. The plants may be held over Winter by covering with litter after the ground freezes but before the advent of severe weather.

2720 American Improved. Large fleshy leaves. *Pkt.* 25¢; *oz.* \$1.50; $\frac{1}{4}$ lb. \$5.00.

Egg Plant, New York Improved

EGG-PLANT

Owing to their extreme tenderness, egg-plants should not be set out in the garden much before the middle of June. This vegetable may well be planted in soil heavily manured for some earlier crop such as radishes. Sow in a hot-bed about April first, transplant into another bed, and later shift into 4 or 5 inch pots. In warm, settled weather transfer to the garden, setting the plants 2 by 3, or 3 by 3 feet. Conservation of moisture is important. One ounce of seed will produce about 1000 plants.

For price of Egg-Plant Plants, see page 19

2750 Black Beauty. Early, fruit jet black, round in form and very solid. *Pkt.* 15¢; *oz.* 85¢; $\frac{1}{4}$ lb. \$3.00.

2770 New York Improved. The leading market variety; excellent and very productive. *Pkt.* 15¢; *oz.* 85¢; $\frac{1}{4}$ lb. \$2.75

ENDIVE

The good qualities of this vegetable are not widely known. It is used in place of lettuce in salads, and may also be chopped up and used in soups. Although endive is sown chiefly in the latter part of July for Winter use, an early crop may be started in April. Sow in shallow drills a foot apart in rich, moist soil, and later thin the plants to one foot apart. Unless wanted for soups, the leaves should be blanched when 6 or 8 inches long by tying the tops together around the heart with coarse twine or raffia. This should be done only when the plants are dry or they will rot. Moreover, do not blanch the plants faster than they can be used. Blanching usually requires 15 or 20 days. Before freezing weather the plants may be lifted with some earth adhering to the roots, and reset in a cool cellar or shaded cold frame. Stored in this way endive may be preserved well into the Winter. One ounce of seed will sow 150 feet of drill.

2780 Broad Leaved (Escarolle). A very sweet variety for Fall and Winter use. *Pkt.* 10¢; *oz.* 30¢; $\frac{1}{4}$ lb. \$1.00.

2790 Green Curled. The standard sort, suitable for Fall and Winter. *Pkt.* 10¢; *oz.* 35¢; $\frac{1}{4}$ lb. \$1.00.

KOHL-RABI (Turnip Rooted Cabbage)

This vegetable, the enlarged stems of which are superior to the turnip in flavour, is closely related to cabbage, and no more difficult to grow. Early plants can be started in hot beds in the same manner as cabbage. Seed may be sown in the garden in May, June and July, in shallow drills 18 inches apart; later, thin the plants to 8 inches apart in the row. Kohl-Rabi should be eaten when about 3 inches in diameter, before the flesh becomes woody. One ounce of seed will sow 150 feet of drill.

2830 Early White Vienna. Flesh white. *Pkt.* 10¢; *oz.* 50¢; $\frac{1}{4}$ lb. \$1.50.

2840 Early Purple. Differing from the above in colour. *Pkt.* 10¢; *oz.* 35¢; $\frac{1}{4}$ lb. \$1.25.

Leek, Large Flag

LEEK

Sow the seed in moist soil as early in Spring as the ground can be prepared. In July cut back the tops severely and transplant the seedlings forthwith, setting them at least 4 inches apart in trenches 5 inches deep and one foot apart. As the plants grow, gradually fill in the trenches. One ounce of seed will sow 100 feet of drill.

- ☉2850 Large Flag. A hardy and profitable sort, excellent for Winter use. Pkt. 10¢; oz. 35¢; ¼ lb. \$1.00.
- 2860 Large Rouen, Winter. Large and of fine flavour. Remains a long time in good condition. Pkt. 10¢; oz. 35¢; ¼ lb. \$1.00.
- 2870 Musselburgh or Carentan. The famous Scotch sort, large, hardy, and distinct. Pkt. 10¢; oz. 50¢; ¼ lb. \$1.25.

LETTUCE

Lettuce is the most popular of all salad plants, and, at the same time, is one of the easiest to grow due to its comparative freedom from disease and insects. While all types of lettuce thrive in properly enriched, loose, light loams, they will grow satisfactorily in any good garden soil; heading varieties, particularly should never be planted in compact heavy soils. A satisfactory way of starting the early crop is to sow in hot beds in March, and transplant to 2 by 2 inches preferably in flats, which may be transferred to cold frames when the plants are strong enough. Plants that have been properly hardened in cold frames may be set out of doors as early as the ground can be prepared; the rows should be made 12 or 15 inches apart, with plants 1 foot apart in the rows. Seed may be sown in the open from the latter part of April until the middle of August. Most of the Cos varieties will be of finer quality if blanched by tying the tops together with soft twine or raffia when the plants have nearly attained their growth.

MELONS

MUSKMELONS

Good muskmelons may be grown in almost any soil if it is skillfully handled; a sandy loam that was heavily manured the previous year for some other crop such as onions or carrots is ideal. Begin to prepare the soil early in Spring. Late in May, when the ground is warm, plant the seed 1 inch deep in hills 5 or 6 feet apart each way, putting in 8 or 10 seeds per hill. Frequent and shallow cultivation is essential to success. Much trouble with insects is avoided by starting the plants under glass. Plant the seed in berry baskets, pots, or other containers from which the seedlings can be removed easily, and without disturbing the soil about their roots. Tobacco or plaster dust sprinkled on the plants makes them distasteful to insects. The striped cucumber beetle is perhaps the most destructive pest likely to attack melon vines.

One ounce of seed will plant about 50 hills; 2 to 3 pounds, 1 acre.

WATERMELONS

Watermelons require the same general treatment as muskmelons, but being more tender they should have the best possible exposure. Make hills at least 8 by 8 feet apart. Watermelon seed is usually sown in the open ground. One ounce of seed will plant about 30 hills; 4 pounds, 1 acre.

Breck's Yellow Globe Danvers

ONIONS

The onion requires a very fertile soil for the best development of its bulbs. While muck and peat soils are ideal, sandy loams properly enriched with well-rotted manure furnish excellent conditions. Onions should always be grown on practically level land, or considerable loss may be sustained from washing. As early in Spring as the land can be worked, sow seed sparingly in drills 1 foot apart and about ½ inch deep. Unless the soil is quite moist it should be pressed firmly down on the seed to insure rapid and uniform germination. Weeding and thinning must be done by hand; at the first weeding, thin out to about 8 plants per linear foot or row. Cultivation should be shallow and frequent. When all the tops are yellow the onions are usually pulled and left on the ground for 10 days or more if the weather is favourable, until the outer skin of the bulbs is dry; after the first three or four days, stir them occasionally with a wooden rake to hasten the process. One ounce of seed will sow 100 feet of drill; from 4 to 5 pounds, 1 acre.

Parsley, Champion Moss Curled

PARSLEY

Parsley is the most beautiful vegetable grown for garnishing and flavouring purposes. It will thrive in any fertile garden soil; a single row forms an effective edging for beds and walks. Sow early in Spring, or at intervals until June, in shallow drills about 1 foot apart; when the plants are 2 inches high, thin out to 6 or 8 inches apart in the row. The seed germinates very slowly, and sometimes three weeks elapse before the seedlings appear. For Winter use the plants may be set in protected cold frames. One ounce of seed will sow about 150 feet of drill.

✪**3380 Breck's Double Green Crest.** A splendid sort for frames or open ground. Pkt. 25¢; oz. 75¢; ¼ lb. \$2.00.

3385 Champion Moss Curled. Leaves beautifully curled, extra fine for garnishing. Pkt. 10¢; oz. 25¢; ¼ lb. 75¢.

PARSNIPS

Parsnips need a long growing season in order to reach maturity; consequently the seed should be sown early in Spring. Any of the lighter types of soil, high in fertility, will grow smooth roots. Sow thickly in drills 15 or 18 inches apart and 1 inch deep; when the plants are well started, thin out to 5 or 6 inches apart in the row. Since parsnips are perfectly hardy, and freezing improves their quality, it is customary to dig in the Fall only enough roots for Winter use, leaving the balance of the crop in the ground until Spring. One ounce of seed will sow about 100 feet of drill; 5 pounds, 1 acre.

Parsnip seeds of all kinds very scarce.

✪**3410 Breck's Market Garden.** For flavour, texture of flesh, form, smoothness and as a cropper, this variety is without an equal. Pkt. 10¢; oz. 30¢; ¼ lb. \$1.00.

3420 Hollow Crown. Standard sort, large, good flavour. Pkt. 10¢; oz. 25¢; ¼ lb. 75¢.

GARDEN PEAS

Of course you will plant peas—at least three kinds, early, medium, and late for a proper succession to keep your table well supplied with this succulent vegetable.

Peas mature earliest in light, fertile loams, but will give good results in any well-prepared garden soil. Sow the smooth sorts as early in Spring as the ground can be worked; after that, make successive plantings every ten days until about the middle of June, giving the wrinkled sorts the preference. From the middle to the end of July, when the driest and hottest weather of the season is usually over, plantings of the extra early varieties may again be made with reasonable hope of a crop. Inoculate the seed with Farmogerm if possible. Plant in trenches, or wide furrows, 3 or 4 inches deep and from 18 inches to 4 feet apart, according to the height of the variety. Brush or supports of some kind, should always be provided for the vines of tall growing sorts. All peas sold by weight, not by measure. One pound equals about 1 pint, and 14 pounds about 1 peck, dry measure. Two pounds of peas will plant about 100 feet of drill.

Peas by the packet, postpaid. At the prices quoted we do not deliver free peas purchased by the pound, two pounds, and over.

Breck's Aroostook Grown Certified Stock Green Mountain Potatoes

PEPPERS

Sow the seeds in hot-beds about the middle of March and transplant the seedlings to 2 by 2 inches apart as soon as they are strong enough. It is an advantage to shift the plants again, two or three weeks later, into pots of proper size. In the latter part of May, when the ground is warm, plant in the garden in rows 2 feet apart, leaving 12 or 14 inches between plants in the row. Peppers should be cultivated in the same way as Egg-plants, and will thrive in any well-drained soil. One ounce of seed will produce about 2000 plants.

POTATOES

A deep, mellow loam, rich in humus, furnishes ideal conditions for growing potatoes, but good crops are raised on both heavier and lighter types of soil. Early varieties may be planted as soon as the ground can be prepared. Cut the tubers into pieces the size of hen's eggs each of which must contain an eye; drop a piece every 15 inches in furrows 3 feet apart, and cover to a depth of 3 or 4 inches. Cultivate at intervals of a week or ten days, gradually throwing earth up around the stalks after the plants are 4 inches high. For potatoes fertilizers are unquestionably better than barnyard manure. We furnish only Aroostook Grown Potatoes from hill-selected seed stock, carefully inspected during growing season, sorted and graded.

Prices: per 15 lbs. 85¢; 60 lbs. \$3.00; 120 lbs. \$5.00

Radishes: French Breakfast and Scarlet Turnip

RADISH

Loose, fertile, light loams are to be preferred for radishes; in distinctly clayey soils, the crop not only matures slowly, but the roots are usually rough, ill-shaped and of inferior quality. For a constant supply, sow at intervals of two or three weeks from early April until September. An early crop may be grown in the hot-bed in February. For use during the Winter, the roots may be stored in earth in a cool cellar, but should be placed in cold water for an hour or so before they appear on the table.

One ounce of seed will sow 100 feet of drill; 10 pounds, one acre.

SALSIFY or OYSTER PLANT

The demand for this vegetable is increasing from year to year, but as yet its good qualities are not widely known. The roots are usually fried, boiled or stewed, but may be sliced raw for salad purposes. The methods suggested for growing and keeping Parsnips apply equally well to this crop. One ounce of seed will sow 50 feet of drill.

⊕ **3805 Breck's Improved Long White.** Roots of medium size, white and smooth. Pkt. 10¢; oz. 30¢; ¼ lb. \$1.00.

Mammoth White Bush Squash

SQUASH

Squash seed should not be planted until the ground has become thoroughly warm and the weather is settled. Squashes grow satisfactorily in almost any well-drained soil. If possible, enrich each hill with one or two forkfuls of rotted manure. For bush types, the hills should be at least 4 by 4 feet apart; for the running varieties, 10 by 10 feet.

During the early stages of growth keep the plants well sprinkled with tobacco or plaster dust to make them distasteful to insects; the way to deal with the squash vine borer is to cover the joints with an inch or two of soil so that secondary roots may develop.

BUSH VARIETIES

One ounce of seed will plant about 30 hills.

⊕ **3820 Giant Summer Crookneck.** Yellow fruit, large and good. Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; lb. \$2.50.

SPINACH

Spinach thrives in rich soil, and may be planted as soon as the ground can be prepared in Spring. Sow the seeds in drills one inch deep and 12 or 15 inches apart. The main crop, for Spring consumption, is sown in late August or September, the plants being protected during the Winter by a covering of straw or litter. A single sowing of New Zealand Spinach will supply greens of excellent quality throughout the Summer; plant the seed 3 or 4 in a bill, in bills 3 feet apart each way. Seeds of this variety grow in very hard shells and should be soaked in hot water before sowing.

- 3945 Victoria. Very dark coloured leaves, fine variety for Spring sowing, later than Long Standing. Pkt. 10¢; oz. 15¢; ¼ lb. 30¢; lb. \$1.00.

Tomato, Breck's Belmont

TOMATO

Sow the seed sparingly about the middle of March, in drills ¼ of an inch deep and 2 inches apart, in a hot-bed or sunny window where the temperature will not fall below 65 degrees. When the seedlings are two inches high, they should be transplanted to 3 inches apart each way in other flats of soil 3 inches deep, in which they may remain until time for planting in the garden. If a very early crop is desired, transplant again three weeks later, preferably into 4 inch pots of very rich soil. About the first of June the plants may be set in the open ground. A heavy soil is conducive to high yields but the crop matures much earlier on fertile, sandy loams; in the former, set the plants four feet apart each way; in the latter, 3 by 3 feet will give ample space. One ounce of seed will produce about 2000 plants. (For Price of Tomato Plants, see Page 19)

- 3960 Breck's Belmont. The best early either for forcing or open ground cultivation, fruit bright scarlet, few seeds, fine flavoured and solid. Pkt. 10¢; oz. 40¢; ¼ lb. \$1.50.
- 4030 Bonny Best. Very early, a vigorous grower, and prolific. Pkt. 10¢; oz. 50¢; ¼ lb. \$1.50.
- 3970 Chalk's Early Jewel. Extra early bright red, fine flavour and very productive. Pkt. 10¢; oz. 50¢; ¼ lb. \$1.50.
- 3975 Dwarf Champion. Dwarf and strong habit of growth, very solid and of extra quality. Pkt. 10¢; oz. 30¢; ¼ lb. \$1.00.
- 3985 Earliana. Earliest and best bright red tomato, smooth and firm. Pkt. 10¢; oz. 40¢; ¼ lb. \$1.25.
- 3990 Golden Queen. Good size and quality, bright yellow colour. Pkt. 10¢; oz. 40¢; ¼ lb. \$1.25.
- 4000 John Baer. A most profitable variety for the market gardener. It has been grown in New England for several years with great success and profit. The fruit of the John Baer is nearly round, colour clear scarlet and of large size for an early tomato, flesh smooth and firm. The vines are hardy, productive and continue to bear fruit for a long period. Pkt. 10¢; oz. 50¢; ¼ lb. \$1.75.
- 4025 Perfection. Large and early, thick meat, few seeds, blood-red colour. Pkt. 10¢; oz. 40¢; ¼ lb. \$1.25.
- 4045 Plum Shaped Yellow. Uniform shape, used for pickles. Pkt. 10¢; oz. 40¢; ¼ lb. \$1.25.
- 4035 Stone. Very smooth, solid, thick flesh, bright scarlet colour. Pkt. 10¢; oz. 40¢; ¼ lb. \$1.25.

TURNIP

Turnip seed may be sown at all seasons from April until the middle of August in our climate; but the roots will be of finer quality if seed is sown early in Spring for the Summer crop, and about August first for the Fall and Winter crop. A light soil, well-manured the previous year, furnishes ideal conditions; no manure should be applied at the time of sowing, unless it be well rotted compost, or the turnips are apt to be strong flavoured or bitter. The ground should be dug or plowed deep, and made mellow and fine. Sow the seed in drills ½ inch deep and from 12 to 18 inches apart, dropping one seed to every inch of furrow. Plants of the early varieties should be thinned to about 3 inches apart, while those of the larger late varieties should not be left closer than 5 inches apart in the row. Cultivate, often, and keep the crop free from weeds. The Ruta-Baga sorts which are generally grown for Winter use, may be sown from the 20th of June to the middle of July. For stock feeding, the late crop is often sown broadcast on well-prepared soil and raked in lightly. One ounce of seed will sow 150 feet of drill; two pounds, one acre in drills, from 1 to 1½ pounds will sow one acre broadcast.

- 4100 Early Snowball. Small and of quick growth, pure white. Pkt. 10¢; oz. 20¢; ¼ lb. 60¢; lb. \$1.50.
- 4120 Purple-Top White Globe. Round, handsome, of superior quality. Pkt. 10¢; oz. 20¢; ¼ lb. 40¢; lb. \$1.00.
- 4125 Purple-Top Milan. Earliest of the flat Red-Tops; small strapped leaves, white tender flesh. Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; lb. \$2.50.

BRECK'S FLOWER SEEDS

Novelties and Specialties 1924

Petunia—Breck's Steely Blue

A wonderful acquisition to this popular class of Annuals, the plants being compact growing and free flowering. They produce large, single blossoms of a beautiful shade of Steely Blue, veined like *Salpiglossis*. A very distinct and effective colour. Comes true from seed. A most remarkable novelty. *Per pkt. 50c; 3 pkts. for \$1.25.*

ANNUAL plants are those which go through all stages of their growth, from germination to the final seed ripening, in the open ground without protection. The greatest cause for failure in growing Annuals is not thinning them out sufficiently; dwarf sorts should be thinned out to about 6 inches apart, taller sorts from 10 to 15 inches. This allows them to branch and they will then flower for a longer period. The ground about them should be kept well stirred and loosened.

PERENNIALS go on living and increasing for a number of years, the stems dying down each season and coming again from the roots each Spring. Perennials are easily raised from seed which should be sown during Spring and Summer in a cold frame. These should be ready for planting out into beds in Autumn and then transferred to their permanent quarters in Spring. The arrangement here is alphabetical.

⊕ Denotes varieties which we can especially recommend

CARNATION PINKS—Allwoodii

THIS new race of hardy Perennial plants, belonging to the *Dianthus* family has met with universal appreciation. The seed now offered will produce an average of 75% of double flowers of almost every shade of colour except yellow. The single flowers are quite as handsome as the doubles, and have the advantage of making larger clusters. *Allwoodii* is exceptionally hardy; commencing to flower in early Spring, it continues through the Summer and Autumn. *Packet of 25 seeds, 50¢; 50 seeds, 75¢.*

ANTIRRHINUM MAJUS Grandiflorum—“Peachblow”

No more distinct variety than this Annual has been introduced up to date. The individual flower is exceptionally large, with bold outstanding petals which keep their graceful contour throughout. The plants bear many massive spikes of bloom, and are most striking when massed in a prominent position. The individual flower is unique in its colouring, having a central band of rich golden yellow which merges above and below into a delicate tint like the flush on the cheek of a well-ripened peach. It is not easily described, nor soon forgotten when once seen. *Per pkt. 35¢; 3 pkts. for 90¢.*

A New Verbena "Mayflower"

Exquisite pink of the shades found in the Trailing Arbutus, with flowers double the size of any other variety. A robust grower, very floriferous, and a sensation wherever shown. *Pot grown Plants only, ready after May first, 35¢ each; \$3.00 for ten.*

CELOSIA — Chrysantheflora

An Autumn flower of unusual size and variety of colour, the result of many years of experimenting. The flowers are distinguished not alone for their size—they grow in height from two to six feet and the blossoms are sometimes eight inches across—but because they are everlasting, retaining all the beauty of colour, size, and shape after being properly dried in a dry, airy place. *Per pkt. 50¢; 3 pkts. for \$1.25.*

LEPTOSYNE — Breck's Profusion

In the variety Profusion we have a great improvement in this beautiful Annual with large golden yellow blossoms of elegant shape and over two inches in diameter which remain from five to six weeks in full beauty. *Per pkt. 35¢; 3 pkts. for 90¢.*

**NICOTIANA SANDERÆ
"Crimson King"**

The extra large flowers of Crimson King are of splendid effect, presenting as they do the richest and deepest tint—a dark, velvety, crimson red. *Per pkt. 35¢; 3 pkts. for 90¢.*

ANTIRRHINUM—Breck's Matchless

The three following new greenhouse forcing varieties we consider the best for use under glass; treated for Winter flowering they produce flower stems nearly a yard long and are especially desirable for cutting. In colours: Pink, white, or yellow. *Per pkt. 60¢; 3 pkts. for \$1.50.*

Quite a unique type, for which the name of "Miniature Chrysanthemum" has also been suggested. Sown in Spring the plants will, in the same year, produce a profusion of small graceful flowers with tiny central disk, suggesting an Anthesis, but appearing in many different colours. The foliage is also ornamental, being finely lacinated and the vigorous plants will do excellently for Autumn decoration of both gardens and apartments. *Per pkt. 35¢; 3 pkts. for 90¢.*

DAHLIA — "Stella"

A new and striking form of the Single Cactus type of Dahlia, suggesting the shape of a Star-fish, due to the peculiarly recurved shape of the ray petals, which are of a different colour on the reverse side, the tints of the latter being generally marbled or watered. **GYPSOPHILA PANICULATA
Flore Pleno — "Snow White"**

**LUPINUS POLYPHYLLUS
"Downer's Hybrids"**

Sown outdoors in early Spring it produces splendid bold spikes of flowers the first year, the colours being most beautiful, comprising lovely soft tints as well as rich ones. Among a batch cut at hazard were obtained sixteen distinct hues, including deep rose, light blue, dark blue, pale lilac, light rose, blue with yellow lip, golden bronze, and various shades of pinks and yellows. These splendid plants have made quite a sensation at various Shows where they have been exhibited. *Per pkt. 25¢; 3 pkts. for 60¢.*

**LUPINUS POLYPHYLLUS
"Elliott's Sweet Scented"**

POPPY—Papaver

ANNUAL. Our new strains of Poppies produce softer and more pleasing shades than we have offered hitherto. Sowing in May, and again several times during Spring, produces a continuous bloom from early Summer until frost. The seed should be sown where the plants are to bloom, as Poppies do not take kindly to transplanting. Cover seed very lightly, and firm the soil with a flat board. When large enough thin out the plants. A sandy loam and early Spring sowings produce the best flowers.

BRECK'S CELEBRATED SWEET PEAS

THE Sweet Pea is today one of the most popular garden Annuals. Their pretty flowers and delightful perfume make them universally esteemed.

Our list comprises all the latest novelties and all the choicest varieties sent out of late years which have become noted for their colour and the immense size of their flowers.

As the number of varieties has become so numerous and likely to confuse and lead to useless duplication of colours we have rigorously weeded out a great many of the older sorts which were considered good in their day, but have had to give place to newer and greatly improved varieties showing larger flowers and giving three to four blooms on a stem. We shall, however, be glad to supply any of the older sorts, or any Novelty which we have not catalogued.

CULTURAL DIRECTIONS: In Autumn or early Spring when the site has been fixed upon where the Peas are to be planted, a trench should be dug about two feet deep, and then filled about one-third with garden refuse, leaves, etc.; then another third of well-rotted manure should be added, and the trench then filled up with good soil and left in the rough to the weather. It will be found beneficial before seed is sown in Spring to give the ground a good dusting of soot and land lime, and fork it well in.

During the month of April, or as soon as frost is out of the ground, select a sunny day for sowing the seeds which should be sown at a depth of six inches from the top of the trench. Spread the seeds as even as possible and do not let them run together, leaving Peas from one to two inches apart in the trench. Cover the seeds with two inches of soil and fill in balance of the trench as the vines grow. As soon as the plants get about six inches high they should be supported by brush or trellis wire.

During their growth if the weather is dry, the vines will benefit by being watered twice a week. About the end of June the surface of the soil should be well mulched with good decomposed manure or cocoanut fibre. The time of blooming will be considerably lengthened by keeping the flowers well cut and allowing no pods to form. *To get the best results the seed should be inoculated with Farmogerm before planting. See page 14.*

SHADE AND ORNAMENTAL TREES

THIS abridged list contains the better-known trees, suitable for street or lawn planting. Our stock includes many other varieties which will be found in our Complete Nursery Catalogue, sent free on request.

MAPLES

These are without doubt the most popular shade and street trees. They grow rapidly to a height of forty feet or more; they are very hardy, and are comparatively free from insect pests.

Silver Maple (*Acer dasycarpum*). Very rapid growing, with deeply-cut leaves, silvery beneath. *Each*: 8 to 10 ft. \$1.50; 10 to 12 ft. \$2.00.

Norway Maple (*Acer platanoides*). Broad and spreading, with dense, deep green foliage. Probably the best shade tree. Its yellow flowers in Spring are most attractive. *Each*: 8 to 10 ft. \$2.00; 10 to 12 ft. \$2.75; 12 to 14 ft. \$3.25.

Sugar or Rock Maple (*Acer saccharum*). Upright growing, straight and symmetrical, well adapted to street planting. Autumn foliage bright yellow. *Each*: 8 to 10 ft. \$2.00; 10 to 12 ft. \$2.50; 12 to 14 ft. \$3.00.

BIRCHES

White Birch, European. (*Betula alba*). A symmetrical tree reaching a height of thirty feet. The bark is pure white after three or four years' growth. *Each*: 5 to 6 ft. \$1.00; 6 to 8 ft. \$1.50.

Cut-leaved Weeping Birch (*Betula*, var. *pendula laciniata*). Very much in favour as an ornamental tree for the small lawn. Slender and graceful, its branches droop in long streamers. Spring planting is best. *Each*: 6 to 8 ft. \$3.00; 8 to 10 ft. \$3.50; larger specimens \$5.00 to \$15.00.

CATALPAS

Umbrella Tree (*Catalpa Bungei*). A dense, spherical head of heart-shaped leaves on a stem five to six feet in height, useful as a formal ornament for lawn or avenue. Hardy in Boston and southward. *Each*: 2 year beads, \$2.50; 3 year beads, \$3.00.

ELMS

American Elm (*Ulmus Americana*). A description of this tree is scarcely necessary, our New England villages finding a much-valued heritage in the lofty Elms which over-arch their streets. This characteristic feature should be perpetuated by an inter-planting of young trees. *Each*: 8 to 10 ft. \$2.00; 10 to 12 ft. \$2.50.

English Elm (*Ulmus campestris*). The leaves of this variety are oval and deep green. The habit of growth is dense and spreading, rendering the tree especially fitted for street planting, for which it is much used. *Each*: 8 to 10 ft. \$2.00; 10 to 12 ft. \$2.50.

FLOWERING DOGWOODS

White-flowering Dogwood (*Cornus florida*). One of the best flowering trees, usually not exceeding fifteen feet in height. Blooms in May, with scarlet berries in Autumn. Prefers a sheltered situation. *Each*: 3 to 4 ft. \$1.00; 4 to 6 ft. \$1.50.

Red-flowering Dogwood (*Cornus*, var. *rubra*). Habit of growth the same as that of the white variety, the flowers being deep rose colour. The foliage of both red and white varieties colours gorgeously in Autumn. *Each*: 3 to 4 ft. \$3.00.

FLOWERING HAWTHORNS

Paul's Scarlet Thorn (*Crataegus*, var. *Paulii*). This double-flowered Thorn thrives in New England, and in May is a mass of bright blossoms. The red fruit hangs on the tree well into the Winter. It grows into a small bushy tree, twelve to fifteen feet in height. *Each*: 3 to 4 ft., \$2.00.

MULBERRYS

Tea's Weeping Mulberry (*Morus*, var. *pendula*). An old favourite for lawn decoration. It makes a low tree six feet high, with pendulous branches that reach to the ground. A truly delightful tree. Bears luscious black fruit. *Each*: 3 year beads, \$4.00.

Norway Maple

POPLARS

Carolina Poplar (*Populus*, var. *monilifera*). A symmetrical tree much used for planting where rapid growth is the chief consideration; either for shade or ornament. It is much more spreading than its near relative, the *Lombardy Poplar*, but grows as vigorously. *Each*: 8 to 10 ft. \$1.50; 10 to 12 ft. \$1.75.

Lombardy Poplar (*Populus nigra fastigiata*). Probably no other tree is so commonly used for screen-planting, its rapid growth and dense foliage rendering it particularly suitable for this purpose. Planted three feet apart and headed back to six feet high the second year, a dense hedge is formed that may be sheared and maintained at any height up to twelve or fifteen feet. *Price*: 6 to 8 ft. \$1.00 each, \$9.00 for ten; 8 to 10 ft. \$1.25 each, \$11.00 for ten; 10 to 12 ft. \$1.50 each, \$12.50 for ten.

OAKS

Red Oak (*Quercus rubra*). This variety is especially sought on account of its brilliant Autumn colouring. It is a comparatively rapid-growing, long-lived tree, becoming symmetrical and sturdy as it matures, although young trees are somewhat irregular. *Each*: 6 to 8 ft. \$2.00; 8 to 10 ft. \$2.50.

Pin Oak (*Quercus palustris*). For street planting the Pin Oak is meeting with especial favour as it is a long-lived tree, of quite rapid growth. Its branches are horizontal; the general contour of the tree is sharply pyramidal. "Hardy as an Oak." *Each*: 6 to 8 ft. \$2.00; 8 to 10 ft. \$2.50; 10 to 12 ft. \$3.00.

ROSES *for* OUT-OF-DOORS

Hardy garden roses are of two classes, Hybrid Perpetuals and Hybrid Teas. The former are strong-growing, bearing large full blooms on the ends of the new shoots, and having usually but one blooming period, in June. They are somewhat hardier than the Hybrid Tea varieties. The latter are of weaker growth, but bloom almost constantly from June until frost. In our climate they need some Winter protection, the best method being to bill up the plants with earth and to mulch heavily with strawy manure or other light covering. Both classes have their merits, and both should have a place in the home grounds. Rich well-drained soil and a sunny situation are essential for good results with roses; Spring planting is best. Frequent cultivation and watering should be given during the season of bloom.

Dormant plants must be severely pruned as soon as planted.

FERTILIZERS & CHEMICALS

PREMIER BRAND

Pulverized Poultry Manure

NATURE'S BEST PLANT FOOD

Prepared in much the same manner as the better grades of commercially prepared Pulverized Sheep Manure but is of much greater manurial value as shown by guaranteed analysis:

Nitrogen.....	4.10%
Equivalent to Ammonia.....	5%
Total Phosphoric Acid.....	2.70%
Available Phosphoric Acid.....	1.70%
Potash.....	1.30%

A Plant Food in the most available form, stimulates bacterial action in the soil, thereby making additional plant food available.

NO NOXIOUS WEEDS

Recommended for Flower Beds, Lawns, Golf Courses, Fruits and Vegetables. 1 lb. package, 10¢; 10-lb. package, 50¢; 50-lb. bag, \$2.00; 100-lb. bag, \$3.50; 1 ton, \$55.00.

BRECK'S LAWN AND GARDEN DRESSING

Its superiority over stable-manure can scarcely be estimated as the latter, in addition to disfiguring the lawn by its unsightly appearance, also gives out an unpleasant odour and always contains weeds and other undesirable seeds. Great care should be taken to distribute the dressing evenly, and in no greater quantities than recommended on the tag which accompanies each bag, as a too liberal application will injure the sward. It can be applied at any time during the year, from April to November as often as the grass seems to need nourishment. Never apply the dressing while the grass is wet with dew or rain. Any time the grass is perfectly dry will answer but the best time to apply it is just before a shower.

Trial bag for 1000 square feet, 10 lbs.	75¢.
Trial bag for 2500 square feet, 25 lbs.	\$1.25.
Bag for 5000 square feet, 50 lbs.	\$2.25.
Bag for ¼ acre, 100 lbs.	\$4.00.
Per Ton,	\$70.00.

LAND LIME

Lime is one of the chemical substances essential to plant growth yet most soils contain enough of it in some form to meet the mere plant-food requirement of many kinds of plants. It must be remembered, however, that lime is used chiefly to correct the acid or bad physical condition of soils, rather than as plant food. It does not furnish the elements supplied by commercial fertilizers, and hence can never take their place. The material should be spread as evenly as possible. Lime-spreaders and certain fertilizer-spreaders may be used to great advantage in the application of ground limestone, and should be employed when possible in order to lessen the cost of the work. This may also be done from a wagon, with light shovels. Spread one hundred pounds every 33 feet, each way, equal to two tons to the acre. Price: \$1.25 per 100 lbs.; \$16.00 per ton.

BRECK'S RAM'S HEAD BRAND

PULVERIZED SHEEP MANURE—(Odourless)

A standard dressing for lawns and around private homes or cemeteries, on golf courses and wherever a strong, luxuriant growth of grass is needed. No time is lost waiting for Pulverized Sheep Manure to rot, as is the case with stable or barnyard manure. No necessity for raking off refuse after an application of **Breck's Ram's Head Brand**, or danger of tracking into the house, or making the lawn unsightly and evil smelling. Apply **Breck's Ram's Head Brand** two or three times during the season before rain or watering at the rate of one pound or over to 30 square feet or less. This will keep the lawn or golf course in flourishing condition.

Breck's Ram's Head Brand is pure and unadulterated. We get it from sheep corrals where the animals have been kept under cover, hence it retains its full strength, and besides has been put through a mechanical drying and grinding process which destroys absolutely all weed seeds.

STIM-U-PLANT — Plant Stimulant Tablet

The better grades of commercial fertilizers do not contain more than 3 to 5 per cent of Nitrogen, 6 to 10 per cent Phosphoric Acid, and 3 to 5 per cent Potash; Stim-U-Plant contains a guaranteed analysis of 11 per cent Nitrogen, 12 per cent Phosphoric Acid, and 15 per cent of Potash. The fertilizer ingredients in commercial fertilizer are for the most part in a relatively slow acting form, while in Stim-U-Plant they are water-soluble, which causes them to become immediately available to the plants.

Stim-U-Plant tablets are designed for use by all who grow plants — home gardeners, market gardeners, small-fruit growers, fruit growers, florists, and farmers. Their most valuable use is in feeding the growing plants. Being composed of water soluble materials of great feeding power and of known weight and percentage of plant food, Stim-U-Plant tablets can be used directly at the base of the plants to feed them definite amounts of available food. Once in the soil they immediately dissolve and mingle with the soil water, pass into the root-hairs and roots to begin feeding the plants. No matter how fertile the soil may be Stim-U-Plant is effective in feeding the crops because of its rich, available food content.

Stim-U-Plant tablets are packed in four sizes as follows: Trial Size, 15¢; Small Size, 25¢; 100 tablets, 75¢; 1000 tablets, \$3.50.

OAT SPROUTERS

To get eggs in Winter, feed sprouted oats. Hens kept in dry lots should always be fed the sprouted grains,—oats, wheat, barley or rye. HARDY CHRYSANTHEMUMS

Price: 30c each; \$2.50 for ten; \$18.00 for 100

CULTURE: Plant in any good well enriched garden soil. Plants may be set any time after danger from frost is past. Space rows two feet apart, plants 18 inches, or in groups of 3 to 5 plants in the sunny border 1 foot apart. Pinch out head when setting and under no conditions allow plant to grow over six inches in height without pinching out the centre. When plant has developed 3 or 4 leaders of strong growth, again pinch out tips, and then discontinue this practice. Feed plants from the first of July every two weeks with liquid manure, or Thompson's Special Chrysanthemum Manure. Tie plants firmly to 2 foot stakes, and be careful not to cultivate too near the plant, as the roots may be injured. During dry weather water thoroughly.
