D. O. HAYNES & CO.

PUBLISHERS

INDEX TO VOLUME XXX.

JULY 2, TO DECEMBER 31, 1903.

A

Abortifacients, Sale, 551
 Acid Benzoic Solubility, 32.
 Artifice, Sales should be Registered, 325.
 Cresylic Saponated, 409.
 Hyacinthine, 238.
 Nitric, Tests, 525.
 Phoric, Solubility, 499.
 Salicylic, Hydrated, 320.
 Acetone, Estimation, 139.
 Adulteration No New Thing, 626.
 Advertising Clear Business, 627.
 Dental Goods, 199.
 Honesty, 413.
 News, 442.
 Philosophy, 213.
 Retail Druggists', 343.
 Rules, 32.
 Window, 215.
 Acrylic, 318.
 Ammon, Iodine Reaction, 524.
 Alcohol, Amylic, Physiological Effects, 113.
 Free, 687.
 Tests, 494.
 Wood, Preservation, 18.
 Almonds, Color Reaction, 34.
 Aldehyde, Catalytic Conversion into Alcohol, 371.
 Alkaloidal Drugs, Assay, 559.
 Alkaloids, Lloyd Reaction, 214.
 Selenium, 379.
 Almonds, Blanching, 36.
 Ferment, 329.
 Alses, Active Constituent, 56.
 Alum, Mucous, 341, 344.
 Alumina, 218.
 Ammonia, 218.
 Analepta, Confusiva, 447.
 Angostura as a Trademark, 128.
 Aniline Dyes for fats, 578.
 Poisoning, 689.
 Anthrosol, 920.
 Antihydroxy, Free Milk, 457.
 Manufacturers, 429.
 Municipal, 15.
 Standard, 145.
 Antiseptic, Free, 323.
 A P B & Office Seeking, 339.
 Atomospheric Constitution, 112.
 Arsenic, Hydroxylic Determination, 67.
 Reagents, 628.

ASSOCIATIONS.—PHARMACEUTICAL (Alum.)
 Societies, Drug Clerks, Palmita, Glama, Etc.

Always Drug Club, 352
 American Chemical Society, 480, 629.
 American Chemical Society, Chicago Section, 21.
 American Chemical Society, New York Section, 581.

The Pharmaceutical Era.

EVERY THURSDAY.

VOL. XXX.

NEW YORK, JULY 2, 1903.

No. 1

Entered at the New York Post Office as Second Class Matter.

Established 1887.

THE PHARMACEUTICAL ERA,

Published Every Thursday,

By D. O. HAYNES & Co., No. 8 Spruce Street, New York.

SUBSCRIPTION RATES.

U. S., Canada and Mexico - - \$3.00 per annum.
Foreign Countries in Postal Union - - 4.00 per annum.

THE PRICE LIST EDITIONS of the Era are issued in the Spring and Fall of each year and one copy is sent free to each regular yearly subscriber. To non-subscribers and for ext a copies the price is \$1.00 per copy.

ERA BINDERS.—Subscribers are advised to save their Eras, together with the complete INDEX which is supplied with each volume (6 mos.) We supply a substantial Binder at 75 cents each, post-paid.

Address THE PHARMACEUTICAL ERA, New York.

Tel. No. 3572 John. Cable Address "ERA"—New York.

SEE LAST READING PAGE FOR COMPLETE INDEX TO THIS NUMBER.

BUSINESS NOTICES.

A HELP IN PRESCRIPTION WORK.

There are a great many things that the average dispenser can't remember, and there are as many more that he shouldn't try to remember—it isn't safe. These things come up in prescription filling when time is an important factor and accuracy is strictly essential. There are questions about dosages, dose equivalents, percentage solutions, specific gravity, incompatibilities, metric and thermometric equivalents, meanings of Latin, French or German terms. These things are all tabulated, or figured out, handy for instant reference, in the Era Dose Book (Third Edition, Revised and Enlarged). Price 50 cents, postpaid.

Is pharmacy a business or a profession?

The highly educated pharmacist who tries to conduct a store without a knowledge of business details will inevitably fail.

In the same way will a business man who tries to run a pharmacy without some knowledge of the profession inevitably come to grief.

Speculation as to the relative values of the two classes of knowledge is useless—both are necessary.

There are good business men who make poor pharmacists, and good pharmacists who make poor business men.

If you belong to the latter class, we feel sorry for you, if to the former there is a remedy, The Era Course in Pharmacy.

Write to The Pharmaceutical Era, No. 8 Spruce Street, New York, N. Y., for a prospectus.

THE NEW YORK BRAND OF ANTITOXIN TO DISAPPEAR FROM THE MARKET.

The authorities of New York City have at last been brought to see the injustice, and perhaps also the false economy, of public competition with private industry. This enterprising town has for some time been manufacturing and selling antitoxin in direct opposition to the interests and wishes of the drug trade. Health Commissioner Lederle now recommends that the sale of the serum to persons outside the city be discontinued. He explains that the remedy made by private manufacturers is now equal in quality to that prepared by the department. It has been generally supposed that the preparation of this remedy for diphtheria was begun and continued by the city authorities in the interests of public health and charity, but it now appears that Greater New York has been in the business for profit. The commissioner reports that by stopping the sale to outside buyers the city's revenue will be decreased by about \$12,000. The American metropolis has, therefore, been a direct competitor of the firms that have been perfecting processes and appliances for producing this indispensable remedy. Have our statesmen noticed this fact? It has usually been taught that the functions of a government properly include directing and fostering the people's industries, not discouraging them by unfair competition. What would Thomas Jefferson have thought of this anomaly in our system of government?

MUNICIPAL MANUFACTURE AND SOCIALISM.

There are still a great many people who believe that it would be a good thing if all important industries, such as railroads, telegraphs, coal mining, etc., were under the direct control and management of our government. This socialistic heresy will not down. The practical thinkers of the country have pointed out again and again that public monopoly of any industry under our system would inevitably lead to loss of efficiency and offer irresistible temptation to "grafters" big and little. The stock argument offered in answer to this objection has always been: "Look at the United States Postal Service! There is efficiency for you! And who dares mention corruption?" Unfortunately corruption has not merely been hinted at, but actually discovered

to the public, that the objection of the last-mentioned category, with all the dreadful possibilities of its being resorted to, remains unanswered. Municipal ownership of government production of the necessities of life and the public, as the beneficent employment of labor is a beautiful dream of the socialists, and here as there, driven by the floorists, it is utterly impracticable. Municipal manufacture of antitoxin has had a fair trial, and what has been the result? Leaving out of consideration the injury to private enterprise due to unfair competition, the lack of efficiency has been shameful, leading to the waste of public funds, not to speak of the loss of life. The death of fourteen innocent children as the result of criminal negligence in the preparation of serum by the St. Louis health authorities is fresh in the memory of all. The municipal laboratory of Boston has lately been shown to be in a shamefully unsanitary condition. And now it has been shown that the product of the New York laboratory, probably the best equipped and most carefully managed municipal laboratory in the country, costs the city three times as much as the same material would cost purchased in the market. Commissioner Lederle has taken a step in the right direction but he has not proceeded far enough. Boards of health have work and responsibility enough when acting in a corrective capacity. Let them protect the public from the dangers of ignorance and designing fraud, and leave industrial production to the people. Their proper function is to test, investigate and advise, not to produce staple articles of trade.

WHAT DO YOU KNOW ABOUT DRUG ABUSE?

We are indebted to Prof. E. G. Eberle, chairman of the A. Ph. A. committee which is investigating the drug habit, for a circular explaining the methods employed in the inquiry. The first step in correcting any evil must always be an inquiry into the extent and the exact nature of the abuse to be corrected. That the drug evil exists, no one doubts, but there has been much wild talking about the startling number of "fends" and their utter demoralization, but well-authenticated facts and observations have been few. The Committee on the question of the Acquirement of the Drug Habit last year presented to the A. Ph. A. some valuable figures and recommendations. The work of the committee has been continued this year, and the committee is seeking the co-operation of every one having personal knowledge of the subject. A number of letters and blanks for reports on the prevalence of drug habit have been sent out, but it is of course utterly impossible to reach in this way some of those who could furnish the most valuable data, and the committee therefore requests everyone having such information to write to the chairman. The points of value to be considered may be summarized as follows: The name of the individual, the number of habitues, age, color, sex, whether increasing or decreasing, and how many are thereby caused to call upon the public or state institutions for aid or support. These are all matters of the greatest importance to the druggist. If the pharmacist wishes to preserve the good name of his calling, he must blast out the evil which threatens to cover up the drug store as a haunt even more disgusting than that of the drunk shop. If you have information, whether oral or in writing, do not merely write

to the chairman, E. G. Eberle, Dallas, Texas. We have a few blanks on hand which we shall be pleased to furnish upon request to this office.

THE "OLD BOYS" OF CHICAGO.

The younger members of the trade should be able to draw a goodly amount of inspiration from the proceedings of the Chicago Veteran Druggists' Association. Here is a group of prominent citizens who have grown gray in the practice of pharmacy, who enjoy life as only those who have passed the period of stress and uncertainty and are conscious of an honorable record can enjoy themselves. They take their enjoyment as pharmacists and are proud of their calling. They do not retire and strive to forget the toil and occupation of earlier days, as so many are tempted to do. As veteran druggists they now find keen pleasure in discussing old times, because during the period of struggle they also found room for enjoyment and pride in their work. It is their pride of calling that renders their meetings so intensely interesting now. In this there is a lesson for the rising generation. How few clerks take a real pride in their work, or possess any of that esprit which forms at the same time the self-respect and connecting bond of a body of men! The Chicago veterans remind us that pharmacy as a calling is decidedly worth while. It offers substantial rewards, both material and intellectual.

A LORD, OWEN & CO. SURPRISE.

The sale at auction of the drug stock of Lord, Owen & Co., the great Chicago drug firm which recently failed, resulted in more than one surprise. The highest offer received for the stock in its entirety was \$80,000. This offer was refused by Judge Kohlsaat on the advice of the auctioneer who guaranteed at least \$85,000 as the proceeds of a sale in detail. The events justified the decision, for \$125,000 have been delivered to the receiver as the result of the sale just completed. The judgment of the auctioneer, therefore, proved more accurate than that of the entire drug trade. The firm will probably be able to return 50 cents per dollar of indebtedness, which is also a surprise for few believed that the assets could yield more than ten cents per dollar.

TRAPS FOR LOOSE PENNIES.

Every body admits the wisdom of the advice contained in the old adage, "Look after the pennies and the dollars will take care of themselves"; but as a matter of fact few of us treat the subject at all seriously. People do not value small coins in proportion to the larger sum which they help to make up. Even exceedingly close and inseparable friends of the dollar think no more of a handful of pennies than so much chaff. The reason is not far to seek. Pennies are absolutely useless in making any considerable purchase; no one thinks of handing out a collection of coppers in exchange for a cigar or even for a "shine" at the hands of the most humble foreign polisher. Unwritten law seems to demand that no one with any claim to respectability shall ever appear to possess any coin smaller than a nickel—the paper snatched in passing is only the exception that proves the rule. Hence the contempt of the humble penny, and the wonderful success of the various traps prepared to capture it. The vending machine does not sneer

or run its eye over your clothes when you proffer the familiar disk of metal. It is always ready, always courteous, and never obtrusive. It makes sales without a serious thought on the part of the purchaser. It is merely suggestive at the right place and in the opportune time as to what shall become of the loose pennies which no one values. The public is careless of the few, the machine careful of the many.

SIGNS OF PROSPERITY.

To offset the discouraging tales about cutting, adulteration and small profits, we have an abundance of evidence to show that there is still some prosperity in the drug business. The state meetings were unusually well attended this year and in matters of entertainment, expense seemed to be only a minor consideration. When a goodly proportion of the pharmacists can afford to journey some distance, and accompanied by wives and fine feathers, scatter money in expensive hotels for several days, the calling is not in such desperate straits as many would have us believe. Pharmacy is still worth while, and many of its followers continue to lay by something in the bank and have time to spare for the quest of fun. Whether these druggists owe their happiness to themselves, the calling or the N. A. R. D. we are not prepared to say. Perhaps all three factors contribute their share and each should have credit. Is the whine about evil conditions in pharmacy, after all, only the plaint of the unsuccessful? We don't know. Certainly things are not in a hopeless way, when the streets about a druggists' meeting are crowded with automobiles, as was the case in Connecticut last week. Motor cars are becoming common enough, but they are still signs of conspicuous prosperity. Druggists have quite as much right as anyone to own automobiles and we are pleased to see them so provided, but the right to own presupposes the ability to buy, and machines resplendent with enamel and brass are not obtained on starvation profits. Perhaps the poverty howl has been too loud and has told only one side of the story.

PRICE-CUTTING IN A NEW DISGUISE.

Trading stamps are an abomination, a work of the evil one, a nuisance and a peculiarly detestable form of price-cutting, as everyone should know. No doubt in time they will be so recognized and relegated to the limbo of punctured frauds. In the mean time the little green, blue or yellow square of paper is playing hob with many carefully laid plans and schedules. Let us hope that it is only a passing fad, and that its departure will mark the end of the present amazing popularity of patent trade-getting schemes. The despised little stamp is only one of many such devices now being thrust upon an unwilling trade. A Boston cutter—the race does not seem to be quite extinct—has adopted a new variety which seems to possess no little originality. He has secured a supply of 10,000 carnation pinks which are to be given away to customers. The plan promises to be very effective, for as all the world knows, the value of a posey does not depend upon its price. Price-cutting, like Satan, is capable of assuming various forms, many attractive and apparently innocent, but always destructive of peace and harmony.

GEORGE S. CAMPBELL, Milburn, N. J.
President New Jersey Ph. A.

A LIGHTHOUSE ON A HILL, OR A DARK LANTERN!

"For instance!" said we. "Here is a health food advertisement in a sporting magazine. Can that bring in enough orders to pay for the space?" "You do not seem to know much about the game," said the Intrepid Advertiser. "Did you think that people who wish to attract attention to their goods, could make their appeals only to those they think likely to buy? You are thinking of the salaried salesman and the personal letter. Publicity is something that must be scattered widely like the rain and the sunshine. A great deal of rain falls into the sea, and much sunshine is wasted in the desert. If nature were to dole out its nourishment in the few spots where in our judgments it might do some good, there would be very scanty vegetation on this planet. A general advertiser does not aim his remarks at an object in plain view. He knows very well that the game he wishes to reach is scattered and often hidden in unheard-of places. He, therefore, uses scattering ammunition so as to cover the entire field." "You mean," said we, "that the health food man does not expect to reach many buyers directly through that sporting journal. He is only scattering his shot broadcast."

"Precisely! In the same way, do I advertise in journals which go only to the retailer, although the real demand for my goods comes from the consumer. I don't know that any of these journals bring me any orders directly, but they are in the field and they add to the general illumination." "Oh! publicity is a sort of general illumination, is it?" "Yes, and the firm that is so saving of oil, that it uses only dark-lanterns aimed at the promising spots only, is not going to have much of a celebration. A lighthouse on a hill, that spreads its light generously over the whole landscape, is the thing."

THE AVERAGE DRUGGIST'S EDUCATIONAL IDEA.

"Well, how is soap?" "S—sh, not a word, my boy!" replied Average Druggist, with a wink, as he passed out a handful of 10-cent straights, "I'm afraid I've overdone the thing—I've sold so much soap this last three days that my neighborhood won't need any more for a year or two." "Oh, I guess I'll sell some more," he said, cutting off some consoling remarks, "the only point that is worrying me is the lot of money I have lost in not doing long ago and every day, plain-as-daylight way of advertising myself and my goods as this—Why, the thought is awful! The scheme worked all right! Surprising how people can be interested in soap. One old lady bought two dozen cakes to take to her son who lives in the country somewhere, where she goes every Summer. I can't begin to tell you how many people have thanked me for telling them what good soap should be and what cheap soap is and is not. I believe I can detect a new shade of deference in my customers, as if they recognized that they were getting their soap from an expert. Oh, you needn't grin.

"I may be a bit enthusiastic, but all the same, I am satisfied that I am on the right track. From now on I'm going to quit worrying about cut-prices, patent medicines and such like and put in my time studying up how to tell people that I've got the best stuff they can buy for their money. It's the whole science of pharmacy made into a dollar-making proposition, all the old things I learned at college—and promptly forgot—about where things come from, how they are made and what they are, will be worth money to me if I can work this thing out right. And there's no price-cutting or throat cutting competition, it's professional, strictly professional my boy, to know the whys and wherefores of your stock, and mighty good business to make people know you know it by simply letting them see for themselves.

"I've elaborated on my idea, my scheme really involves educating customers up to knowing what is good and why it is good and why it is cheaper all around to pay a fair price for good quality and the harm that comes from 'cheap' drugs and such like. The fact that my first venture has been a success—I've sold more soap in a day than I ever sold in a week before—doesn't fool me into the belief that I'm going to do a land-office business in everything I take up, no sirree, I am looking to the future for my real reward, I'll be satisfied if my extra sales during my early period pay for the work and advertising. I have studied the thing out and my conclusion is that with a drug store at every other corner and all down to rock-bottom prices there's no show for a man making more than a living unless he gets a trade that will buy good stuff at good prices and plenty of it. I believe that there are lots of people who have the money to pay for first-class articles and who would buy nothing else if they only knew what was first class and the danger and wastefulness of cheap trashy stuff, and I believe that I can get a good big share of this kind of trade by convincing them of the facts underlying my scheme. I know I can't lose money by it. I have time and material for working out my ambition—to be the druggist in this neighborhood. Maybe I'll do better than just local fame, but this is a big city—wish I had a store in a small town—that is the real place to work out my scheme properly. There wouldn't be any 'mail order nightmares' for me."

"What about being called an expensive store? Say, that doesn't worry me a bit. My idea is to tell people all about my goods and convince them that I am a druggist who knows his business thoroughly, knows what is best and gets the best for his trade because he knows how to do it and gives his customers the benefit and protection of his knowledge—then let prices take care of themselves.

"Well, I suppose you think I've got connected with my gas generator, but, old man, I'm enthusiastic. Now here is what I am going to do next week. My soap is doing so well I'll let it run until Saturday, and take up toothbrushes as a logical sequence. Then after that, I'll get on to the topic of dental washes,

powders, etc., in fact, I've a whole six month's campaign worked out. You see I will have to read up pretty thoroughly on my subjects so I can tell my public about them intelligently, and that means mapping out definite plans ahead. Now here is what I am going to say about toothbrushes—. Got to go, eh? Well, drop in next week."

DON'T TAKE MUD; DON'T YAWN.

The old druggist was coaching his son who was just going to the city to work in a big pharmacy:

There are two things a fellow's got to do to that are more important than any other. One is to take an interest in things and the other is to be independent. If a fellow does both he'll win.

I say, hang a man who doesn't take an interest in things. He can't succeed. I know in five days whether a boy stays more than seven or not. Just watch how he looks and takes hold of things. He may be as clumsy as all get out. That don't roil me. The worth of any man excepting the automatic sort which are sometimes necessary is how he looks at things, not how his hands act.

The boy who takes an interest in things never yawns. He is not sleepy. He inspires. He likes to work. He never lags; for the clock to go faster and, indeed, sometimes finds a day all too short. He's the chap who puts new wrinkles into your business and more dollars into your tills. He makes you feel at home in your own store and when you're in your home you feel secure, for you know there are other eyes and another brain than your's looking out for your business. Men who have employes like that have even been known to take a vacation.

And such a man is going to climb by his own effort, the part of the employer being simply to recognize his worth.

Supposing I didn't recognize his worth? Suppose I was a crank and refused to promote or even appreciate him?

Then he has just one thing to do—be independent—get out—go somewhere else.

I have no use for those fellows who continually cry out against hard taskmasters. It's their own fault; either they take so little interest in their work that their employer is kept dinging away all of the time at them or else he's a fool and they're soft hearts or nerveless—fellows with no independence.

There is no such thing to a man who is alive, who holds his head up, who saves he will get along as not getting along. There is no such thing as keeping down a fairly healthy man who has it in him to keep up. Get discharged? All right—plenty of other jobs. Hurts your reputation? Oh no, it doesn't; not if your part is dignified and honest.

If he tells you how to do a thing—listen. Then do it. If you see him doing something, watch and learn how. If you must ask a question to clear your mind on some point in his operation, ask it. If your question was in good taste and he reprimands you or refuses to answer—quit right there. You can't afford to work for such a man; he'll kill both your independence and your interest in things if you do.

Don't take mud from anyone. Don't yawn. The Lord loves a man who opens his eyes and grits his teeth.

"The Glorious Fourth."

WILHELM BODEMANN.

The engraved document held up to view with such evident pride and satisfaction, is the new certificate of membership in the Chicago Veteran Druggists' Association.

THE AUTOBIOGRAPHY OF A PHARMACIST.

A Portion of the Archives of the Chicago Veteran Druggists' Association Presented at the Annual

Reunion, June 22, 1903, Being Some

Personal Recollections of
WILHELM BODEMANN.

FOR the benefit of the C. V. D. A. in general and for historian Ebert in particular I submit the following cornerer's inquest on my record, conducted by myself.

A Promising Start.

On June 6, 1840, the family midwife knocked at my father's study: "Mr. Pastor! It's a boy—and he yearns to be a trooper." And the kid has kept on yelling so loud that one of my bosses said to me once: "If you ever buy, we shall have to kill that mouth of yours separate from us again." Of course he was speaking figuratively, so am I, but as a matter of fact I was born June 6, 1840. If any of you veterans ever tackle me, I'll be 60-60. If you lose, saw wood; if you win I'll be 100-50 as to the treasury of our beloved Association.

The name of the place of my birth is Schnaackenburg, Hanover. Schnaack is a platt Deutsch for talking, and means conversation. My father was the regular doctor in the town, a stout, stout 7 inches high, of indomitable energy, who went out down in the fields and gardens, according to the time, and sitting up till 2 A. M. writing books, pamphlets, and letters. I must have inherited his room for writing, and have not been able to shake it off to this day. If I have something on my mind, or wish I have, I itch all over to get it poured out. I'll talk. This will explain to some of you why I have a pen in my hand, or a quill secure in my pocket.

My good mother was an extremely small woman, but she was the real rock up to her last day on earth at the age of 87 years. A good Christian and friend of

mine visited Hamburg the very year my mother died. Mother had heard of her arrival, could not wait till she came to see her, so mother went in spite of her eighty years to Hamburg. My lady friend wrote me and described her visit thus: "It was twilight when your mother entered the room but her eyes sparkled so brightly and full of vitality that the room seemed to light up." Whenever I think of those sparkling eyes of my good mother, my own grow dim.

From my mother I inherited fondness for life and action; I must have my fun at somebody's expense every day of my life. I enjoy cheerful faces and action.

The Foundations of a Vigorous Vocabulary.

When twelve years old my father was removed to a parish near Hamburg and I was sent to a pensionat or college in Holstein, near Altona. Half of the forty boarders were English boys and I laid low for the new arrivals. Whenever a fresh John Bull turned up I froze on to him. He had to have a mentor, and I wanted to pick up the English language and succeeded enough that later on when I was apprentice in a place where English was of use to the preceptor I received, contrary to custom, \$500 for four years service instead of paying \$50 for the privilege of apprenticeship. Schooling finished, the great question—and oh, what a question, how often burlingly solved—what are you going to be in life? arose. My father asked me what career I had selected and I told him I would like to be something of a Schiller, Goethe or Shakespeare. It grieved my father greatly. He did not have the means to send me to the university. It was the old story, champagne taste and beer price. Detecting some musical talent in me, as he thought, he decreed that I should become a piano maker, and whether my heart were bleeding or not, I had to obey, and obey I did. For two years I was apprentice in a carpenter shop in the city of Hannover, drying the clothes of the master's family at the city bleach and blacking boots for the entire family every Sunday morning and at night carrying out bags of wood-shavings. While in Hannover my cousin, now Dr. Barth, was apprentice in Dr. Prolin's Raths Apotheke and when it was his turn to answer night calls he had the privilege to go to his room at 8 P. M. He was the son of the Apotheker Barth in Bremerhaven, and as Bremerhaven was a port where a good deal of English was necessary in business, he embraced the opportunity to perfect his school English on me, and many an evening did I spend in that Raths Apotheke clerk's room translating Shakespeare with cousin Barth.

Pharmacy Gains a Recruit.

These evening visits brought about my determination to quit the carpenter shop, and, I ducked, ran away, and in the spring of 1853 I found myself installed as apprentice in Dr. Barth's Engel Apotheke at Bremerhaven, at a salary of 50 thalers for four years, board, room and washing thrown in, and for Christmas I received Hager's Kommentar, a book I hold priceless in memory of my beloved preceptor, a man of unusual intellect and a good practical business man.

In his laboratory and under his guidance I made extractum ferri pomati from hydrated oxide of iron in as many hours as the old way of making it from rusty nails took weeks, and got a far superior product; and when finished my preceptor induced me to write the new method up for Hager's Centralhalle, and thus I broke loose for the first time in a pharmaceutical journal. Think what that good man has to account for seducing me to journal writing.

My fellow apprentice at Barth's was F. Wiedel, now at Paulina and Chicago Avenue. We took turns, one month one of us was at the prescription desk, the other in the laboratory and ship medical chests. When I was done with my work I used to stroll over to the harbor and drum up trade with the captains of vessels in port. In summer time our preceptor sent us out regularly botanizing, always considering our progress in education and anxious to combine it with outdoor exercise. For the balance of my years I shall always cherish that good man's memory.

Other Scenes, Other Faces.

When I was 20 years old I had the choice of playing soldier for the King of Hannover for three years, then go back clerking for two years, then to the university, and then—what without money? So I heaved anchor for New York in 1867. Arrived in Milwaukee in March—through my uncle Helmholz got a job at O. Schorse's, of gauze and bandage fame—and in July I was out of debt. Meantime my uncle's daughter had married a Chicago gentleman and through her kindness I got a job with Moench & Reinhold October, 1867, then at Clark and Indiana streets. Mr. Moench's name was Charles, and that was the reason they called him Henry. When he worked for Louis Wahrlich he found a Charley at work there. Two Charleys in one store would not do, and so Henry was his name up to his last day. Lots of the first families of the North side called him Henry, never having known his family name. Rheinhold, who was a pharmacist, a good chemist and a physician, built up quite a mineral water trade, but the fire wiped out the firm's money, trade and ambitions. Both of the partners died poor.

Other Travelers on the Highway.

While at M. & R. I met a queer job lot of druggists and doctors. My predecessors in the store were A. Stammer and H. Bueckner. Our next neighbors were Schlosser, Bromold and Dietzsch, Blocki & Co., later H. Biroth, and at the latter firm I first met my friend Thomas Braun, who was boarding with me at the famous hash factory of Schwennicks. Of the doctors patronizing M. & R. I remember Paoli, Helmuth, Storck, Heinecke, Henrotin, Wagner, Blainey, J. A. Allen, E. Schmidt, Merkle, and others. At Schwennicks' boarding house I met the Baron von Glahn, whose brother I knew at Bremerhaven. This queer genus had a famous divorce suit attracting world-wide attention, and costing a small fortune. While the world called the unfortunate man a miser, and his enemies so stated in his obituary, I came out in the daily papers the next day with a card, denouncing his assailants publicly, announcing that he had given me \$200 to start me in business, not exactly the act of a professional miser. I also met our friend J. Blocki while at M. & R.'s, but the circumstances are too delicate to go on record.

The Launching of the Ship.

While my friend, the Baron, was at his lawyer's office one day in April, 1869, the office boy asked him if he did not want to buy a drug store, Dr. Lane's, closed up by the law firm, Charley Reed and Harry Richardson. He at once hunted me up, brought W. Hasselbach along, and as the combined savings of the new firm were \$200 short of the price, the Baron loaned the amount, no note, no interest, the only condition was to pay off as soon as earned, and in July, '69, Bodemann & Hasselbach were out of debt, running a store corner of Harrison and State. Here we were at the time of the big fire. Our store was the northern limit of the city after the fire. The fire stopped right there, everything north of us was swept off the earth. This terrible calamity that swept away so many lives and fortunes helped us wonderfully; we coined money. The U. S. Courts were right across the street from us, over Pottgiesser's saloon. Here I got acquainted with my noble friend Grassy. Tom Braun was on the corner of Harrison and Clark, Ernst George Miller on the corner of Polk. Soon after the fire Mr. Ebert and G. Buck called on me and sand-bagged me out of \$25 for the Chicago College. In the summer of 1872, we established a branch on State near Thirty-fifth street. Hasselbach is now in Munich—when he found out he had the stuff for a great painter in him, I bought him out and sold the branch to Braun's clerk, Paul Muehlmann.

In the spring of 1873 I moved to the Orient Hotel (St. James) northeast corner of Van Buren street, and here my store was the last building to be swept away by the second big fire in July, 1874. Four weeks after this fire I opened up on the corner of Jackson and State where I remained until high rents drove me out.

I started in with \$120 rent and wound up with \$575 for one-half the room. I had figured that the southward move of the Post Office was a sign of the times. The new post office was not rebuilt at Monroe but at Jackson. My diagnosis proved to be correct. I was long on foresight but short on hind quarters. A five years' delay in the completion of the post office held back the development of that corner, and I sank all I had made in the big fire and saved in the second fire. By '78 I was at the end of my rope and took a clerk by the name of O. Zinn as a partner, and luckily for me he had domestic troubles—skipped the town in 1880—his family sold his interest back to me, and I was out of the woods.

Safely Anchored.

Another event of utmost importance took place in 1878, July 7, almost 25 years ago. I married, and from that day on I was a different man. I cut out monkeying around, tended to business and made headway. If my experience in matrimony were a universal criterion, bachelors would be a mighty scarce article. The discovery of my good wife is, in my opinion, the event of my life. We set up housekeeping on Harrison street, but the noise of Pottgiesser's Concert Saloon drove us out to Hyde Park, another lucky find, for through this I sized up the lay of the land in that section, and in 1886 established a branch at Fiftieth street and Lake avenue, and one at Forty-third street and Lake avenue. For this branching out I took in John Couran as a partner. In 1892 we split up, he remaining down town. I took the Hyde Park stores. This finishes the chronological part, now a word about the inner man.

A Wider Horizon.

Up to about 1883 I had paid no attention to other druggists, or college, or associations. In '83 Hallberg got me to join the Chicago College of Pharmacy. Here Ebert picked me up and railroaded me into the chairmanship of the business committee, by his resigning that office. Here I met some men with whom in after life I formed lasting and warm friendships. Among others my friends Patterson, Sargent, Maynard, Dyche with whom I started the Illinois College of Pharmacy. We had made a contract with the faculty. Ebert wanted the professors fired. I would not stand for repudiation and stepped down and out as acting president, with the real president, Henry Fuller, out of the country for good. Ebert never forgave me this, and for years we did not speak as we met, until consolidation of the two schools loomed up, and the great peace maker, Biroth, took Ebert into my office one day and we made up. But consolidation did not come. Hallberg and others "busted it higher than a kite" and as a result Hallberg and I did not speak as we met for years. Time and age has softened down the pugilistic qualities of both parties to the fray and all is serene again. What a grand thing it is for people to find out before it is too late what d—d fool they can make of themselves if they only try hard enough.

It was early in the 80s that Engelhard and I concluded to wage war against the city liquor license of \$25. I issued a call for a mass meeting and forged Jamieson's name as a good drawing card to it. This I believe brought Jamieson and me closer together and if this forgery had brought me a five years' residence in Joliet I would call it a God-send. This started the C. R. D. A. Jamieson acted as my trainer and landed me as chairman of the executive committee of the I. P. A. while Patterson was president, and Jamieson, secretary. Once having had my appetite whetted—smelled blood as it were—I pitched in good and proper, and joined everything that came along the pike, the Telephone Subscription Company, the Interstate Druggists' Association, with a one plank platform, the Retail Druggists' Association and the Apothecaries' Association.

Battles, Defeats, Victories.

My inquest would not be complete if I omitted to state that I took an almost morbid delight in journal-

stick my pen into the telephone rates of the day, and one by one reducing the same. The abolition of the apprentice, the compulsory education, the patent law ironstrosities, the new telephone rates, what not. If I missed a fight I would have been a little one for a cent." While our efforts in the direction of reducing the telephone rates were being consummated as a brilliant failure we cut short the general session of the men that had caused our Waterbury. Although badly knocked out I did not give up. In 1895, I proposed to the C. R. D. A. to ask the telephone company to arrange for automatic telephone. I was determined to freeze out the free phone and beat system and I am delighted to say I succeeded.

Enter, the N. A. R. D.

In 1898 T. V. Wooten issued a call for a national meeting of delegates from all associations throughout the country. He called the apothecaries' society together at a dinner in the basement of the Masonic Temple during the summer of '98 to report results. Mr. Wooten was so disgusted and so disheartened at the lack of support in Chicago that he announced to that dinner party his determination to give up the delegate convention as a bad job. He threw up the sponge. I hardly realized the bearing of his announcement until Linghard and Tillotson got me into a corner. Said Linghard: "By the eternal, you must make a bid—on a bluff, or Wooten will give up the ship." I ordered an extra beer and made a "bid—on a bluff." I asked Wooten how many delegates from Chicago he would consider for him to change his gloomy determination. He named the number and I thundered my clenched fist on the table, knocked over a couple of water tumblers—had no use for the stuff—and pledged him double that number. I delivered the goods and thus saved Chicago's honor, for to Chicago belongs the honor of having given birth to this most important of all associations that were ever connected by the retail trade. Talk about your raising the standard—"to bid—on a bluff, or you cannot raise a living," and "there is an agency that makes it at all possible for the druggists of America to make a living, an honest, decent one, gentlemen, that one agency is the N. A. R. D. saved from shipwreck before it was launched at that historic dinner in the Masonic Temple basement. It would not give you the birth certificate of another association in 1898, the C. V. D. A. Of this association Johnson is the father, Fbert the mother.

The Closing of the Score.

I fear my friends I have taxed your patience but you have ordered my record, and I obeyed your mandate. The other day I counted up my assets and liabilities, and I found I did not quite come up to "book-keepers" last tax statement, but thank Heaven I was a winner. He has not. I have lots of friends, he has a few advisers that harp on his generosity for being so forthcoming, but the real stuff called friends. Without being a party of one I assert that I have not been asleep since the 6th of June, 1846, and should be the one when you lay me down to sleep. "I am a doctor, am I not?" Oh I hope that all of you may be as good as dead at rest should that day come and you will be in grave and feel that you miss me. I am your friend and be assured that I did not leave you.

BROMOQUINAL

According to Nouveau remede, bromoquinal is a colorless crystalline substance. It is a yellowish crystalline body, the crystals melting between 107 and 108 degrees C. and it reacts with difficulty in water, also with ether. Two doses of 0.1 to 0.25 gram per day are said to produce the same effect upon fevers as doses of 15 grains of quinine hydrochloride and bromoquinal is easily tolerated by the patient. The presence of bromine generated at the same time some valuable polymeric.

THEORY AND PRACTICE

SANDALWOOD IN DANGER OF EXTINCTION.

Frederick S. Mason (Pharm. Jour.) states that the sandalwood tree, *Santalum album*, is threatened with total extinction in southern India. The plant, which is a parasite drawing its supply of moisture and mineral salts from other plants belonging to several different orders, seems to be suffering from a mysterious disease called "spike," which attacks the underground portion of the tree changing its entire appearance and causes death often in the course of a few months. The malady is infectious and does not seem to be due to any parasite, vegetable or animal. As the suckers attacked are from 100 to 150 feet long the disease is very difficult to deal with. The author suggests that the trouble may be caused by toxins developed in plants which have been introduced to serve as hosts for the sandalwood and that the removal of these plants, which have spread over large territories, might save the existing plantations. The situation is very serious for the sandal has already become extinct in some countries, notably the Sandwich Islands and Fiji, and if it should become necessary to begin other plantations it would be necessary to set aside large reserve forest and to wait a half century, at least, before wood could be available as a source of the essential oil. In the meantime sandalwood oil as a drug and for use in perfumery would probably have lost its usefulness.

ALCOHOL IN CHLOROFORM DECOMPOSITION.

M. Adrian (Nouveaux remede) reports the results of his study of the spontaneous decomposition of chloroform and the supposed power of alcohol to retard or prevent this decomposition. The influence of the method of manufacture upon the resistance of the liquid was also taken into account. Thirty samples of chloroform prepared by the well known methods, some purified by special processes and some the ordinary commercial product, were subjected to the action of light for a number of months after the addition of varying quantities of ethyl alcohol. The results are important for they throw light upon the curious beneficial action of even infinitesimal proportions of alcohol. They show that alcohol does not hinder the decomposition of chloroform, but merely changes its nature; it fixes the chlorine formed giving instead of hydrochloric acid and phosgene, chlorine derivatives which have no injurious effect upon the organism. One c. c. of alcohol per liter is in most cases sufficient to fix the chlorine formed in a year's exposure. If the proportion of alcohol present is insufficient to change all the chlorine disengaged injurious compounds appear in the chloroform. Sulphur and oil of sweet almonds like alcohol also cause the formation of harmless compounds of the decomposition products of chloroform.

LECITHIN.

Owing to the difficulty of preparing substances of the lecithin group and their comparatively high price many commercial samples are more or less impure. Lecithin should be soluble in its own weight of absolute alcohol or chloroform, a property which may be utilized for the detection of proteids, phosphates and glycerophosphates, these being insoluble in the two fluids mentioned. The most important test, is, however, the determination of the relative proportions of phosphorus and nitrogen. The former occurs to the extent of 3.80 to 3.00 per cent, according to the source of the lecithin, and the latter about 1.72 per cent. Pure lecithin contains the two elements mentioned in quantities proportioned to their atomic weights, i. e. as 31. 14. Any departure from this proportion indicates

impurity. The phosphorus may be determined in the ash as pyrophosphate of magnesium and the nitrogen by Kjeldahl's method on the original substance.—*Journ. de Pharm. et de Chim.*, through *Pharm. Journ.*

FILMARON.

F. Kraft (*Pharm. Zeit.*) has isolated the anthelmintic constituent of the male fern rhizome. The new body has been named filmaron. It is a bright, yellowish-brown powder, insoluble in water, slightly soluble in water, slightly soluble in cold methyl and ethyl alcohol and petroleum spirit, but very soluble in other general solvents. The rhizome contains about 5 per cent. of the substance. When dissolved in acetone filmaron is slowly decomposed into filicic acid and felix-nigrin. It probably contains four butanones, one of which is identical with aspidinol, while the other three together are identical with filicic acid; two of these products are identical with albaspidin or flavaspidic acid. A pharmacological examination of these constituents showed that filmaron only contained any considerable anthelmintic action. In doses of .5 to .7 gram it was successful in thirty cases without exception.

SURFACE STAINS ON NEGATIVES.

H. W. Bennet (*Photography*) divides the stains which appear on the surface of photographic negatives into two classes, those which appear immediately after developing, probably caused by dampness, and those which develop slowly after a time. Stains of the first class are frequently iridescent, and may often be removed with a very weak hypo and ferricyanide fixing bath. If very weak, the stains, unless exceptionally bad, will disappear in a few seconds, and in this time a weak solution will have no effect upon the image. Stains that are only developed after a time are more difficult to remove, but unless very severe they may usually be removed by rubbing the dry negative with a soft rag thoroughly saturated with alcohol.

THE PHYSICS OF FILTRATION.

G. F. Horsby (*Chem. News, Pharm. Journ.*) finds that when the sides of the funnel are ribbed so that the glass offers no obstruction to the flow of liquid through the paper, the theoretical law governing the velocity of flow of fluids in thin tubes holds good. In order to use a minimum amount of wash liquid, the quantity on the filter paper must be kept small, and the time required cannot be greatly varied by changing the manner of adding the wash liquid provided that the upper edges of the filter are properly treated. To thoroughly wash a filter with the minimum of work and loss of time each addition of liquid should be as large as possible and the precipitate should be allowed to drain.

INCOMPATIBILITY OF CERTAIN TINCTURES.

Dr. Badel (*Bull. d Pharm. du Sud-Ouest.*) recommends the use of citric acid instead of hydrochloric acid in overcoming the incompatibility between tincture of hydrastis and tincture of hamamelis. A solution of citric acid in equal parts of alcohol is suggested. The addition of this acid also gives a transparent product when the tincture of viburnum is added to the tincture of hydrastis or hamamelis. Citric acid may also be used with advantage in combinations of tincture of rhuibarb with cinchona, rhuibarb with colombo, gentian, nux vomica and cinchona, grindelia drosine and ipecac, aniseed, ipecac and boldo, etc.

CLEANING OIL BOTTLES.

The Journal de Pharmacie of Alsace-Lorraine states that bottles containing oil may usually be quickly and easily cleaned by the addition of from 5 to 20 grams of quillaya bark. The bark in quantities varying according to the size of the vessel, is placed in the bottle and enough cold or lukewarm water added to permit of easy shaking. In most cases simply shaking and rinsing is all that is necessary.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Depilatory Paste.

(S. R.) All depilatories or preparations for the removal of hair from the face are more or less injurious to the skin, and the more efficient a preparation of this sort is, the more likely it is to prove injurious. No depilatory removes the hair permanently, and all such preparations afford merely temporary relief from superfluous hair. The only method of permanent removal is through the destruction of the hair bulb by means of the electric needle; an operation which should be attempted only by a dermatologist or physician skilled in the process. We present the following formulas from the Era Formulary.

(1)

Powdered quicklime, 10 grams; sulphide of barium, 10 grams; starch, 10 grams. The powder is first moistened with little water and then applied. It acts in a few minutes.

(2)

Quick lime, 16 ounces; pearlsh, 2 ounces; liver of sulphur, 2 ounces. Powder very finely and keep in a stoppered bottle. Directions:—When required for use, mix a small quantity with water to form a soft paste; apply to the spot and in three minutes remove with a paper knife. If the skin smarts much apply a little cold cream.

(3)

Sodium sulphide, 6 drams; powdered lime, 3 ounces; starch, 2 ounces; powdered orris, 1 ounce. Mix. The sulphide of barium should be fresh. It can be prepared by making barium sulphate and its own weight of charcoal into a paste with linseed oil, rolling the paste into the shape of a sausage and placing it on a bright fire to incinerate. When it has ceased to burn and is a white hot mass, remove from the fire, cool and powder. Any of the foregoing may be made into paste with soft soap or glycerin. Another way is to take fresh-burned quicklime, 30 parts, slake with about 15 parts of water, and, when cold, sift. Place the powder in a wide mouthed bottle and add water to make a paste. Pass sulphuretted hydrogen to the bottom of the paste for an hour or two, then add glucose, 70 parts, and oil of lemon, 3 parts. This paste does not keep well.

Naval Pharmacists.

(F. E. S.) Present naval regulations restrict the number of "pharmacists" (warrant officers) to twenty-five, the appointments for this grade being made from the hospital stewards now in the service. The pay is from \$900 to \$1,800 per year. In addition to naval pharmacists the hospital corps of the navy consists of the following grades: Hospital steward, with the rank of chief petty officer, pay \$60 per month, one ration (30 cents a day); hospital apprentice, first-class, rate of petty officer, third-class, pay \$30 per month, one ration; hospital apprentice, rate of ordinary seaman, pay \$20 per month. On original enlistments the

FRANK C. STUTZLEN, Elizabeth, N. J.
Secretary, New Jersey Ph. A.

ages of the applicants must be as follows: Hospital stewards, 21 to 30 years; hospital apprentices, first class, 21 to 28 years; hospital apprentices, 18 to 25 years. Application for enlistment must be made to the Surgeon-General of the United States Navy and must be accompanied by suitable testimonials as to character, habits and experience of the applicant, citizenship, etc. All applicants after passing a physical examination before a medical officer are required to pass examinations as to their general educational qualifications and professional knowledge. The regulations do not require that the applicant shall be a graduate of a college of pharmacy or a registered pharmacist. For full information concerning the steps of these examinations and other hints concerning entry into the hospital corps of the United States Service see this journal August 24, 1899, page 293.

Fruit Preservative.

(R. M. R.) "Please give me a formula for preserving fruit in its natural state. I want a transparent solution to show fruit in."

A compound for the preservation of fruits, vegetables, etc., in the raw state, has the following composition:

- Boric acid..... 1 part
- Sulphuric acid..... 1 part
- Sodium sulphate..... 1 part
- Water..... 100 parts
- Water..... 100 parts

Mix and distill. Of this syrup add 1 part to 6 parts of water to make preserving liquid. A variation for fruit and vegetables better preservative, is as follows:

- Sodium sulphate..... 1 part
- Sulphuric acid..... 1 part
- Water..... 1 part
- Sugar..... 1 part

Combine in a glass bottle, shake to make a stock solution. Add 1 part of this solution to 8 parts of water to make the preserving liquid.

Another formula may be used for exhibition purposes as follows:

- Sulphuric acid..... 1 ounce
- Glycerin..... 2 parts
- Sodium sulphate..... 1 part
- Water..... 8 parts
- Water..... 2 parts

Dissolve the salicylic acid and saccharin in the glycerin with gentle heat, dissolve the sugar in the water, mix with the solution of acid and saccharin and strain.

Take fresh sound clean fruit, pack tightly in jars and fill the jars to the top with the solution; keep the fruit in a cool place.

Keeping Flies Off Horses and Cattle.

(W. H. R.) Intusions of bitter substances like quassia, gentian, smartweed, etc., have been used, it is claimed, with satisfactory results. They are applied by means of a sponge or brush. Preparations like the following have also been recommended:

- (1) Carbolic acid..... 1 ounce
- Oil of pennyroyal..... 2 ounces
- Spirits camphor..... 2 ounces
- Oil tar..... 4 ounces
- Glycerin..... 2 ounces
- Lard oil..... 1 ounce
- (2) Pine tar..... 1 part
- Fish oil..... 2 parts

The oil is used to keep the tar from sticking; if fish oil cannot be obtained, lard oil may be used. An addition of 2 ounces of crude carbolic acid to the gallon of paste will improve it. Paint the mixture on when necessary.

(3) Melt 50 parts of tallow or other cheaper fat with 25 parts of resin; add 50 parts of crude soda and 25 parts borax, boil with water; add 75 parts carbolic acid and 30 parts calcium sulphide solution, and finally 80 parts extract of tobacco.

Marshall's "Royal Shoo-Fly" is manufactured by the Marshall Medicine Co., Kansas City, Mo. Briggs' Shoo-Fly paper is made by F. W. Briggs & Co., 548 Washington street, Buffalo, N. Y.

Rhodinol.

(S. & C. Curacao.) Rhodinol is listed in the Price List edition of the Era at \$4 per oz. and it is claimed to "replace the natural oil of rose to advantage." Rhodinol or synthetic rose occurs in two forms—(I) a colorless liquid, for soaps, "extracts," and oils; (II) more concentrated and more refined than rhodinol I. This refers to one brand of the commercial article. Chemically, rhodinol is an alcohol (C₁₀H₁₈O) and is obtained from rose geranium and other oils. It is also called citronellol and renniol. Commercial rhodinol is said to be a mixture of about 3 parts of geraniol and 1 part of true rhodinol. Commercial renniol is a similar mixture in different proportions.

Osier.

(H. G. W.) "Osier" is a popular name of a species of willow used chiefly for basket making and other wicker ware. The common osier is the *Salix viminalis*, a description of which you will find in any work on botany. Medicinal willow bark is obtained from *Salix alba*, *S. fragilis*, and *S. purpurea*, the first named being official.

The red osier or swamp dogwood (*Cornus sericea*) is a shrub found in moist woods, on the banks of streams, in all of the states east of the Mississippi river, and is described in all of the dispensatories. The bark is employed to some extent in medicine, being used as a substitute for *Cornus florida*.

Formulas for Proprietary Medicines.

(I. A. S. & F. C. J.) Formulas for proprietary remedies are trade secrets which their owners do not disclose and we cannot therefore publish the formulas for the remedies you name.

New York Excise Regulations.

(W. J. H.) An explanation of the new excise regulations now in force in this State was printed in the Era of May 28, 1903, page 556.

Chewing Gum.

(J. H. M.) We know of no treatise on the manufacture of chewing gum. Some formulas were published in the Era of December 18, last year, page 627.

NEWS DEPARTMENT.

State Associations Meet.

SILVER JUBILEE.

Ohio's Twenty-fifth Annual was Like "Finnegan's Wake," Says Professor J. H. Beal, and He Tells

Us All About It, as Follows:

Toledo, June 30.—The silver jubilee meeting of the Ohio Ph. A., held at Toledo, June 23 to 26, like Finnegan's wake.

"Will ne'er be forgot,

By them as was there and them as was not."

It was a strenuous meeting, every portion of the three days being filled by some important item, but with so much variety that the last was received with as much pleasure as the first. Speeches from witty orators, sage addresses from Nestors of the craft upon problems which beset the druggist in daily life, trolley rides through the beautiful cities of Toledo and Detroit, vaudeville show and band concerts, steamship rides across Lake Erie, banquets and receptions, etc., until the last hour. So well had the Toledo druggists planned and so assiduously did they work that the entire program went through without a skip, began on time and ended on time, except the banquet and ball which manifested a tendency to include the day after.

Cincinnati Fellows' First Elevator Ride.

Toledo, the coming metropolis of the unsated seas, was usurping in her hospitality, and the visitors wandered through her well kept streets and gazed upward in amazement at the tall buildings. The Cincinnati visitors were at first a little shy of the elevators, but after becoming accustomed to the sensation, were loud in their praise of the convenience.

All in all the writer, as an old attendant at state meetings, believes the Toledo meeting to have been the best planned and the best managed of all the meetings in the twenty-five years of the association.

The association was called to order at 3:45 p. m. Tuesday, in Zenobia Hall where the sessions were all held. President Garrett introduced Mayor Sam Jones, who welcomed the guests on behalf of the city authorities, and Druggist J. M. McCann, who presented the welcome of the local association, W. R. Ogier of Columbus, responding on behalf of the visitors. After the naming of some committees and the formal business the meeting adjourned for a trolley ride to the vineyards and cellars of the Lenk Wine Co., where they were entertained at luncheon, and escorted to the nearby Farm Theatre for a band concert and vaudeville entertainment, which concluded the day.

On Wednesday the association was entertained all day by Parke, Davis & Co. The visitors met on board the new Greyhound, swift and beautiful excursion steamer of the Lakes. Arriving at Detroit they debarked at the P. D. & Co. wharf. After a trip through the big establishment they lunched on the grounds, and re-embarked for the return ride.

Session in Steamboat's Smoking Room.

After nightfall the serious minded members assembled in the smoking room and listened to President Garrett's address and several papers. The address was an able presentation of the problems surrounding the retail drug business and contained an eloquent appeal to

the druggists of the State for the support of their oldest and ablest champion. The discussions were animated, and it was not until the lights of Toledo were seen shining in the distance, that the meeting broke up.

After so much play the association settled down to work with a vim early Thursday morning and devoted the entire day and until nearly 9 o'clock to business.

An unusual number of interesting papers and reports were presented. The list of papers follows:

"Timely Topics," Joseph Feil, Cleveland; "Is the Sale of Poisons on the Increase" and "How do Commercial Flavoring Extracts Compare with U. S. P. Spices?" both by J. F. Kutzbach; "Home-Made Pharmaceutical Apparatus," H. V. Army; "The Teaching of Materia Medica," R. A. Hatcher; "Physiology in Pharmacy," G. H. Matson.

The officers elected for the ensuing year are: President, L. C. Hopp, Cleveland; first vice-president, J. L. McCann, Toledo; second vice-president, O. M. Harter; general secretary, Theodore Wetterstroem, Cincinnati; treasurer, J. H. Von Stein, Upper Sandusky; executive committee—G. H. Matson, Columbia; Frank Amou, Portsmouth; Z. T. Baltzly, Massillon.

Something Good to Eat, and Then a Dance.

The banquet, which closed the day, was an elaborate affair. The toasts responded to were as follows:

"The Silver Jubilee," L. C. Hopp; "The Ladies," B. S. Young; "The Ohio State Ph. A.," H. V. Army; "Getting Together," G. B. Kaufman; "Ohio," J. H. Beal; "The Medical Profession," J. C. Lloyd.

In addition to the toasts of the evening, Mr. Dietrich, now of Missouri, one of the early presidents of the association, favored the company with an interesting reminiscence talk.

The banquet was also made the occasion of presenting to L. C. Hopp a solid silver table service, in appreciation of his faithful services of twenty-five years as general secretary. A ball followed, lasting how late nobody knows except the participants, and they are reticent on the subject.

GRANITE STATE.

Ph. A. Meets at the Weirs.—They Spend Much Time Socially.—Good Attendance and the Weirs Will be Place of the Next Meeting.

The Weirs, June 20.—Each year the last week in June brings the annual convention of the New Hampshire Ph. A. As in the past, the meeting this year, the thirtieth annual, was held at The Weirs, on Lake Winnepesaukee, and the attendance was fair. Some of the druggists were accompanied by their wives.

On the first day there were arrivals at all hours before the convention finally got under way with an afternoon meeting. Several matters of business came up for consideration, but none of special importance. The annual election of officers resulted as follows:

President William D. Grace, Portsmouth; vice-presidents, A. J. Weeks, Exeter; Lewis G. Gilman, Manchester; treasurer, N. S. Whitman, Nashua; secretary, John H. Marshall, Manchester; auditor, A. G. Rice, Nashua; executive committee, G. W. Nutter, Somersworth; Edwin C. Bean, Belmont; John H. Marshall,

IN KENTUCKY.

Twenty-sixth Annual State Meeting.—Many Interesting Papers Read and a General Good Time for All.

Estell Springs, Ky., June 30.—The twenty-sixth annual meeting of the Kentucky Ph. A. was held at Estell Springs, a beautiful summer resort in Estell county on the Kentucky river. The attendance was fair. The business sessions were held in the ball room of the hotel and were characterized by good feeling and interest. If the druggists of the State generally could be made to understand how profitable and agreeable the annual meetings of their association are the attendance would undoubtedly be increased.

The meetings were presided over by President H. K. McAdams of Lexington, and secretary J. W. Gayle of Frankfort was present. Many interesting papers were read. The Miles plan and the N. A. R. D. were endorsed.

Particular praise is due the entertainment committee, of which James E. Cooper of Lexington, was chairman, for the handsome manner in which they kept every one amused and comfortable. The committee on nominations reported the following names which were unanimously concurred in: President, C. W. Peters, Sharpshurg; first vice-president, R. C. Stockton, Richmond; second vice-president, Dr. C. A. Leathers, Lawrenceburg; third vice-president, George L. Penny, Stanford; secretary, J. W. Gayle, Frankfort; corresponding secretary, George W. Dye, Sardis; treasurer, Vernon Driskell, Ghent. The next meeting will be either at Glenn Springs or Mammoth Cave.

A prize was awarded to G. S. Hazard of Cincinnati for his paper on "How Shall the Drummer Approach the Buyer?" For answer to query "How Shall the Buyer Meet the Salesman?" J. W. Gayle of Frankfort, won the prize. And the prize for the best paper on "The Old-Time Pharmacy" was awarded to T. B. Wood of Lexington.

Other papers were: "How a Druggist's Wife Can Best Promote Her Husband's Interests," Miss Diehl and Mrs. B. M. Overton; "The National Significance of the Little Green Stamp Over a Bottle of Whiskey," G. W. Gayle and B. M. Overton.

A handsome and the only display of sponges and chamois was made by the Fuchs-Bulde Co. of Cincinnati, and won much attention.

Addison Dimmitt, chairman of the new entertainment committee, has something novel in store for the next meeting.

IOWA DRUGGISTS TO MEET AT COUNCIL BLUFFS.

Council Bluffs, Iowa, June 25.—The committee on arrangements are making elaborate preparations for the State pharmaceutical meeting here July 14, 15 and 16. Local druggists are doing all in their power to advertise the event. Headquarters will be at the Grand Hotel and the athletic events will take place at Lake Manawa. A one and one-third rate has been secured on all railroads. There will be fine list of events with suitable prizes. On the first day of the meeting there will be a session of the State pharmacy board to hold examination for registration.

MAINE COMMENCEMENT.

Orono, Me., June 25.—Commencement exercises passed off very pleasantly. The graduates of the school of pharmacy were as follows: Ph. C.—E. L. Cowan, West Hampden; H. D. Cowles, Athol, Mass.; A. L. Hoyt, Dover, and J. L. Rose, Green Lake; B. S. in pharmacy—S. J. Foster, Bingham, and S. G. Small, Lulac.

PROGRAM OF A. PH. A. MEETING.

The fifty-first annual meeting of the A. Ph. A. will convene at Mackinac Island, Mich., August 3 to 8, 1903. The daily program follows:

Monday, August 3—9:30 a. m., council meeting; 3:00 p. m., first general session; 8:00 p. m., social gathering at Grand Hotel.

Tuesday—10:00 a. m., second general session; 3:00 p. m., carriage drive around island; 8:00 p. m., session of section on scientific papers.

Thursday—10:00 a. m., session of section on practical pharmacy and dispensing; 3:00 p. m., session of section on practical pharmacy and dispensing; 8:00 p. m., stereopticon lecture by Dr. H. M. Whelpley.

Friday—10:00 a. m., session of section on pharmaceutical education and legislation; 3:00 p. m., steamboat ride; 8:00 p. m., session of section on pharmaceutical education and legislation.

Saturday—10:00 a. m., last general session.

The members of the transportation committee, the nearest one of whom should be written by those desiring information, are: Charles Caspari, Jr., chairman, Baltimore; Caswell A. Mayo, New York; Chas. M. Ford, Denver; Chas. G. Merrell, Cincinnati; S. A. D. Sheppard, Boston; S. P. Watson, Atlanta; W. M. Searby, San Francisco; W. A. Frost, St. Paul; Max Samson, New Orleans; Dr. H. M. Whelpley, St. Louis.

Local Secretary F. W. R. Perry of Detroit, who is also chairman of the committee on arrangements, informs us that the transportation associations have granted one-third fares for the round trip to Mackinac Island, provided the purchaser of tickets secures at starting point his credentials from the ticket agent, the same to be used by the local secretary at Mackinac. All who take the water route to the Island should secure early reservation of berths, as during August the boats carry to their full capacity.

VANDERBILT UNIVERSITY.

Nashville, June 25.—The twenty-fourth annual commencement exercises of the Department of Pharmacy, Vanderbilt University were held in the University chapel. Fourteen graduates received diplomas. They are Isaac Chanslor, Ky.; E. E. Clark, Tex.; M. H. Darby, Ala.; T. Harrison, Ala.; L. H. Holt, Tenn.; H. H. Hopkins, Tenn.; C. L. Jackson, Miss.; E. I. Joseph, Miss.; L. M. King, Tenn.; R. D. Laupheimer, Tenn.; Miss Daisy I. Nickel, Tenn.; U. L. Norton, Ala.; G. W. Rutherford, Tex., and T. N. Uffelman, Tenn.

T. Harrison received the founders medal and J. F. Smith of Arkansas received the junior class Taylor medal. The alumni exercises and banquet were held on the preceding Monday night and on Tuesday night the graduating class was addressed by Gov. Aycock of North Carolina.

—The Tennessee Board of Pharmacy meets at Monticello, July 14. R. L. Eves, secretary of the board announces that all persons attending this meeting will be accorded the same railroad and hotel rates as those attending the annual meeting of the State Ph. A., which convenes at the same place on the following day, July 15. The secretary also states that he is ready to issue renewals of certificates for the coming year.

WILMOT CASTLE CO.,
26 Elm Street, Rochester, N. Y.

NEW YORK AND VICINITY.

BROOKLYN BUYING CLUB.

Now Being Organized—Success Assured—Probably Will Have Schedule of Selling Prices Also—The Story of This Infant and of Other Adult Clubs.

Many pharmacists are organizing a retail buying club. It will be operated along about the same lines as the New York Consolidated Drug Co. The tentative stages are past and, probably, by the end of this week permanent organization will be effected, all details worked out and a constitution in force.

John G. Wischerth of 1076 Bedford avenue, is the leading spirit in the formation of the new company, and, at the preliminary meeting at the Lafayette Hotel, early in the last month, when it was decided to form and incorporate, he was elected temporary chairman. C. Dyma of 333 Quinny street, is secretary pro tem. A membership committee, Mr. Wischerth chairman, and a committee to draw up a constitution and by-laws was appointed.

The purpose is, of course, to buy at lowest possible cash prices, which means buying from the manufacturers direct. A warehouse has been secured in Bedford avenue and one of the members will have charge, probably Mr. Dyma. This is a letter sent out on June 25:

"That we may have a sufficient number of members to guarantee the success, and also to more fully acquaint you with the objects, we wish to call your attention to the following:

The intention is to organize with a capital of \$5,000; this to be increased if needed.

Before we start we wish to have 50 members or more who will each subscribe \$100 worth of stock, to be paid in desired in 30, 60 and 90 days.

With this money as a working capital we purpose to buy all such articles upon which it is saving for spot cash can be had, and also to take advantage of such bargains as from time to time may offer.

This organization, it must be understood, is for the good of the retail druggists only, and will be managed by men who are themselves actively engaged in the retail business and elected by the members.

Should this proposition meet with your approval, a line to either of the addresses below will be appreciated, and, as soon as a sufficient number have signified their willingness to join us, a call for another meeting will be sent out, at which a regular and permanent organization will be established.

Hoping this will have your support, and knowing that your business men will show you the benefits to be derived from such a combination, we are,

Fraternally yours,

J. G. WISCHERTH, Chairman.
C. DYMA, Secretary pro tem.

Though the above letter limits the capitalization to \$5,000, the actual capitalization will likely be \$10,000. More than 50 members have already signed and it is believed that there will be 100 signatures when the company is incorporated. "In less than a year," said one of the organizers, "we will have 200 members."

The mover in the plan are former members of the Bedford Pharmaceutical Association, organized for affiliation with the N. A. R. D. It is peculiarly significant that these men are now interested in a project heretofore discountenanced by the N. A. R. D. A few of these most active in addition to Messrs. Wischerth and Dyma are J. H. Rabfuss, Osmar Klöpsch, A. P. Lohmeyer and Thomas D. McElheney. The old Bedford association had 85 members.

But this organization, it is asserted, will not stop content with buying cheaply. A feature new to buying clubs will be introduced later—a schedule of selling prices will be adopted. Those will both ends be looked out for. Said one of the organizers a man whose head is particularly clear on all matters both of speculation and of business:

"This kind of organization is the one that pays a retailer. It isn't tripartite, but it is business and the tripartite plan was not founded on business lines. If some one offers me Peruna away down am I to throw him out, as though he stole it? I used to be one of the fellows who did that sort of thing, but it is not business."

"There are only three or four things we will have trouble in getting. Of course, Miles goods will be protected at full price because they are protecting us. But the whole subject of patents in this connection is a really small one.

"We are being robbed right and left by the jobbers. They could have straightened out the patent difficulties—it was all in their hands—but they did not. But, as I said, patents are the small part. It is on stationery, toilet articles, brushes, and all that sort of thing that we are being horribly robbed."

As an instance, he said he had received only last week two consignments of rubber bands, one from the stationer and one from his jobber. The latter only cost him 40 per cent. more! "This case is paralleled in hundreds of ways," he said.

Brooklyn, being largely residential and the conditions being uniform outside of the limited Fulton street business section, offers a good opportunity for a price schedule. This phase will be watched with more interest than any other, though it is assured of success from its inception, because participated in by those who are financially interested.

In the meantime buying clubs are being conducted with success in other cities. The New York Consolidated Co., with 200 ultra-members, incorporated at \$40,000, is the most notable. It yields, it is claimed, a yearly profit to its members of 300 per cent. on their investment! It was begun by Sidney Faber with eleven \$50 shareholders. Profits on each order now are from 12 to 15 per cent. net and there are few articles that are not within its scope.

The Shockoe Drug Co., Richmond, has been changed to the Vaughan-Robertson Drug Co., and from a mutual purchasing agency became, last month, a full-fledged stock company for the sale of drugs at wholesale. The company was started by a few retailers without organization.

The Calvert Drug Co., of Baltimore, was organized by half a dozen men six years ago. Later 20 houses joined in establishing their own storehouse. There are 56 members and the number continually increases.

Philadelphia has the Philadelphia Wholesale Drug Co., so big that it is popularly listed with the wholesale establishments.

AN OUTING THAT WAS AN OUTING.

Bigger than many a State meeting was the annual outing on last Thursday of the German Apothecaries' Society. 150 were expected at the banquet and 212 were there, including hurried improvising of overflow tables by the bonifaire.

The good time was at Bachmann's Park, Clifton, S. I. Prof. Loderhaus kept the music going from one o'clock, when the merry-makers left South Ferry, until sometime after two the next morning, when they again reached Manhattan.

S. V. B. Swann was proctor of the bowling alleys, and at the banquet got three cheers for general strenuousness and efficiency. Wm. Carr, of Parke, Davis & Co.; President Henry Hulth, Ch. H. Schmidt, Frederick Trent, George E. Huetner and August Diehl won bowling prizes in the order named. Mrs. F. Gerber, Mrs. H. P. Albert, Miss H. Lehman and Miss Volken-

berg were the winners of the ladies' bowling trophies. August Diehl and Hugo Kantowitz occupied the precarious position of judges at the ladies' and childrens' games. Altogether there were twenty-one handsome presents.

The egg race, showing skill in racing with an egg held in a wooden spoon, was won by Mrs. Paul F. Gebicke, Miss A. Rogers was second, Miss Wegmann third, and Miss Seifert, fourth. Elma Schmidt, Clara Zitz and Albert Zahn were one, two, three, in the potato race for children, and the "vogelstechen" best prize went to Mrs. A. J. Stephens, Mrs. George E. Huether, Mrs. H. C. Wurm and Mrs. Fred Gauss finishing in prize places.

Messrs. Fleischer, Wortmann and Franze tried the good old German game of "Skat" in a corner of the pavilion.

President Imhof and Frau Imhof led the march to the banquet tables. Paul Arndt toasted the president and Wm. P. L. Gregorius, prince of entertainment committee chairmen. The president spoke and ex-president Schlessner conveyed the greetings of Carl Kessler, who sailed that morning for the Fatherland.

CROSHER AND GERRISH IN QUEST OF VICTIMS.

When the world comes to an end it is not improbable that those Bachelors of Swindling, Henry P. Crosher and F. L. Gerrish, will complacently transfer their base of villiany to their new clime and good wholesalers in some other clime will get some such letters as this: "Please mail price list and best trade discount on your Easymark Oil."

Are Gerrish and Crosher working together again? It seems strange that one house in this city should get, within three days of each other, requests from both, on paper bearing the same water mark, type-written with like ink and type.

Perhaps the solution is, however, that one of their "fences" in the retail trade, who is out of the article, called on both of his sneaks for a supply.

Then there remains the ink, and paper, and type. But here again is a plausible explanation. Probably all were laid in at the expense of some poor fool victim before the precious pair fell out.

The Era received three letters on last Friday, one written by Gerrish (Oxford Novelty Co., 14 Maiden Lane) and two by Crosher (106-108 Greenwich street) to city firms, asking quotations. Most of the wise credit men forward such letters to the Era, with compliments.

WITH A COPPER AS AN ALLY.

A worthy copper brought by Dr. Albert H. Brundage, president of the State board of pharmacy, along with a notary public, presumably to maintain law and order at Monday's election of a member to the Eastern branch, was somewhat nonplussed at a turn of events. So was Dr. Brundage.

The latter assumed charge of the balloting, as he had promised. A moment later the long form of Dr. George C. Dickman darkened the door. There were twinkles in various eyes when he pulled out an order signed by three members of the branch—Messrs. Bigelow, Muir and himself—empowering him to preside. It was a development that surprised even the copper, who, nevertheless, decided to keep allegiance with the chair, no matter who occupied it.

The notary public was not called upon to hear deponents. No one was challenged. Dr. Brundage's previous announcement that members of other organizations than the Kings County Ph. Soc. could vote, provided they lived in the prescribed counties, brought out none of them, fortunately, as their votes would have

been challenged. And the opposition that has been variously shown Dr. William Muir met its usual ignominious rout in the election, 92 to 18, over his opponent, D. Master, Jr.

DEDICATION OF THE CHARLES RICE MONUMENT.

All friends and admirers of the late Dr. Chas. Rice are invited to attend the dedication of the monument at Woodlawn Cemetery on July 7. Train leaves Grand Central station at 4.06 P. M., by New Haven railroad. The exercises will be over in time to leave by 5.21 train returning.

VIRGIL COBLENTZ,

Chairman of Monument Committee.

It is expected that the trustees of the Pharmacopoeial Revision Committee will be present and that short addresses will be made by Charles E. Dohme, Baltimore, Prof. Jos. P. Remington, Philadelphia, and Ewen McIntyre of this city.

NO MORE ANTITOXIN SOLD BY CITY.

Health Commissioner Lederle, in a letter sent to Mayor Low, recommends stopping the sale of antitoxin to persons outside the city. He explained that the anti-toxin made by private manufacturers is now of as high grade as that produced by the department.

Dr. Lederle told the mayor that stopping the sale outside the city will decrease the receipts of the department about \$12,000. Many other smaller cities and some of considerable magnitude have been buying antitoxin of the local health department for some time. The change will be a boon to manufacturers.

MISSIONARY WORK AT A DOCTORS' GATHERING.

A notable feature of the recent meeting of the Kings' County Medical Society was the reading by Dr. W. N. Belcher of a valuable paper on National Formulary preparations.

Pharmacists John G. Wischerth and Albert E. Marsland also read excellent papers. Mr. Wischerth said that the effect has been very marked. Great interest was shown at the meeting and this has substantially extended to many inquiries and to an increase in prescriptions of formulary articles.

NEW YORK NOTES.

—Farsightedness all around: William Sautter, the big Albany druggist now has his manager for brother-in-law. Miss Anna Sautter is now Mrs. Charles Krum. Mrs. Krum gets a good husband and a very successful business man. Mr. Sautter is more sure of holding on to his manager, and Mr. Krum of staying, while the latter gets a charming young wife and both men creditable brothers-in-law. Bride and husband came this way for their honeymoon.

—Daily papers say that a servant girl died after taking "Roachsalt," a patent insect powder, by mistake instead of Rochelle salts. She said a Fourth avenue drug clerk sold her the wrong stuff, though she could not tell the address of the store. A man in New Jersey expected to take Rochelle salts also. He got concentrated ammonia water instead. It was his own mistake. He recovered.

SOMNOS is a definite synthetic product, known chemically as Chloroethnal Alcoholate. It is the only hypnotic known that is without effect on the heart and general circulation, and it can be safely administered even to patients suffering from chronic heart disease. We have special inducements to offer to those druggists who desire to aid us in introducing it to physicians. Write for particulars, sending us a correct mailing list of your physicians.

H. K. MULLFORD COMPANY, - Philadelphia.

—LEO CARNO, 601 N. York C. P., has gone to C. M. Moore & Co.'s Newport store from their store at 171 Broadway street and Broadway. Leo Carno has transferred to the old J. N. Hegeman & Co., 1218 Broadway, the term of clerking in Fall River, Mass. ERIC L. HAYSZ is left the Hegeman employ at 1218 Broadway, One Hundred and Twenty-fifth street S. S.

—LEAD PAPERS attaches to the formation of the new Mason University School of Pharmacy, Macon, Ga., because of the fact that Malloy H. Taylor, lecturer on pharmaceutical chemistry, is an old New York C. P. LAY T. A. CHAMMAN, lecturer on pharmacy, and MAX MERRILL, lecturer in materia medica, were Philadelphia C. P. graduates. All these are successful Georgia druggists.

—A suit brought by a receiver appointed on the petition of the Lead Chemical Co., has resulted in the setting aside of the judgment obtained some time ago by the National Lead Co., against Charles H. Pleasant's former pharmacy at Houston and Worcester streets, and the ordering of a settlement with the Lead Chemical Co.

—T. A. CHAMMAN, Jr., '03, New York C. P., has left his preceptors, Caswell, Massey & Co., Twenty-seventh street and Broadway, to go to Macon, Ga., to take charge of the prescription department of the Lamar & O'Quinn Drug Co., the junior member of which is his father.

—JOSEPH LASCOFF of Eighty-third street and Lexington avenue, has been spending honeymoon days at Atlantic City. The bride was Miss Sadie Kastenbaum, and the wedding was in Logelung's cafe, Fifty-seventh street, by the Rev. Dr. Braehman.

—There was a short scene of excitement in Edward Pfeiffer's store at One Hundred and Twenty-fourth street and Lenox avenue one day last week when a woman took a phenacetine headache powder and promptly fainted. Not fatal.

—MEYER BLUM an Albany boy now at J. N. Hegeman & Co.'s 1218 Broadway, was somewhat hoaxed because of a recent rumor that he was married. Premature. Miss Jennie Siskel, Trenton, N. J., will be Mrs. Blum some day.

—The Normandy pharmacy, One Hundred and Nineteenth street and Lenox avenue, was sold at auction on last Friday. J. C. Carpenter was the owner and opened the store, stock and fixtures being new, in last January.

—Dr. M. Hall, proprietor of Broadway's Apothecary Hall, opens a new store under the West End Hotel, Ashby Park, this week. Morris Feinberg, a New York college boy, and George Hughes will go with him.

—"To the woods for me and Mrs. B.," said H. S. Bussard, the Ansonian pharmacy man, and away they went for two weeks in Maine.

—GEO. R. G. HENDERSON, of J. N. Hegeman & Co., has returned from a forty day hunting trip in the mountains and Miss V. Jenkins, the pretty cashier, from New London, with sports.

—The Drug pharmacy, the owner of which recently announced was purchased by E. Dreyfuss & Co., auctioneer, for \$1,100, to be sold at auction.

—MRS. J. GARDNER, of M. J. Breitenbach & Co., had to accompany T. O. Eberle, and for Europe on the Kaiser Wilhelm.

—The Drug Store, 1218 Broadway pharmacy is soon to have a new owner.

AROUND SYRACUSE.

—Several druggists at the recent meeting of the New York State Druggists Association adopted amended articles of the constitution and articles prohibiting any member practicing or assisting in the practice any Japanese patent and providing that any member who is proved by the association to be selling growing

any Japanese ginseng roots of his own or under his control after January 1, shall be expelled.

—P. H. Ruffert of Reifert & Kimmey, won the second prize on pike at the annual contest of the Anglers' Association on Oneida Lake. His catch was 22½ inches long. Henry M. Quigley on June 18 came home from Oneida Lake with a big catch of pike pickered and bass. Thomas Quigley is at his cottage on Cayuga Lake spending a few days fishing. Barius Smith expects to spend a time in the woods fishing and hunting.

—The Syracuse D. A. at its last meeting took up the matter of giving trading stamps. There are several concerns in the city that are promoting the trading stamp nuisance. The opinion was unanimous that no druggist should give stamps. The association also voted to hold a picnic on Skaneateles Lake later in the season.

—Earl Van Wormer, with Van Buskirk in South Salina street, is mentioned as a candidate for a Republican nomination for alderman. W. J. Sutton, who for a long time has represented Burrows Bros. in the State, has made his farewell visit to Syracuse.

—Mrs. Marietta Harmon will sail in a few days on the Furuscia, Anchor Line, for an extended trip through England, Ireland and Scotland.

—George E. Thorpe, president of the Syracuse D. A., will spend his vacation in Michigan, accompanied by his wife and daughter.

'ROUND ABOUT BUFFALO.

—W. S. O'Brien, for many years located at Eagle and Niagara streets, is now entirely settled in his new and handsome quarters at Eagle and Franklin streets, a short block away from the old stand. Mr. O'Brien has two large and elegant corner show windows in his new store, into each of which is set an attractive illuminated sign of leaded glass, bearing the words "Soda water always."

—L. R. Blackney has assumed charge of E. K. Davidsons store, 71 Grant street. H. G. Stillwell is now associated with the Elite pharmacy, 60 Niagara street, owned by R. R. Zolotitzsky.

—J. H. Brown, formerly at Swan and Jefferson streets, is now employed by Faxon, Williams & Faxon in their drug department.

Famous Brushes.

For over one hundred years, particular customers have been buying Kent's Brushes. All these years they have been the standard of excellence, and their name is known all over the world, whose brushes are known at all, and any druggist who wants the trade, cannot afford to be without them. They are made by G. B. Kent & Sons, Ltd., London, Eng., and may be obtained of McKesson & Robbins, 31-37 Fulton St., N. Y., who are selling agents for the United States, and will import them in quantity, with customers' name and address stamped on handles, when desired, without extra charge.

"Fatty" Dog illustration

NEW ENGLAND.

A BOARD WITH SMALL POWER.

Providence, June 30.—By some sort of analogy peculiar to the genius of Rhode Island political institutions the powers of the State board of pharmacy are only incidental to those of the town or city authorities.

In a large town near Providence the attention of the board was called to the fact that three drug stores were doing business in flagrant violation of the law which requires that a registered pharmacist shall be employed in every drug store. The town council was notified and the names of the druggists published in the newspapers.

That was months ago and the places are doing business yet. The council complained of one of the druggists for selling liquor and warned him to stop the practice. Other than that no notice was taken of the trio.

The council has been legally advised that the board of pharmacy should follow up its complaint with evidence sufficient to convict the lawbreakers. The board takes the position that the fact that the places are open and doing business contrary to the statute is sufficient to warrant the town authorities in ordering them closed.

Thanks to the impotence of the board, however, and the indifference of the town authorities, the drug stores run by men whose qualifications are confined to a keenness of vision which enables them to catch the difference between the meaningless and the meaning wink, continue to do a brisk trade, much to the annoyance and injury of legitimate pharmacists.

SOME BUSINESS CHANGES IN THE BAY STATE.

Boston, June 30.—Business changes either effected or contemplated! Captain Edison M. Roche, druggist of South Deerfield, who recently suffered a large loss by fire, intends to erect a new building for temporary use. Eventually he is to build on the site of the former building a fine, modern block with stores on the street floor and tenements above.

Improvements are under way in the drug store of M. Michelman & Sons, Ware, to give them largely increased floor space.

Alterations have been finished in Austin E. Martin's store, East Gloucester, now reopened. A new head clerk from Boston is to be engaged.

Dr. C. W. F. Hamilton, druggist at Brockton, has joined John Nason in opening a drug business in Rockland under the firm name of John Nason & Co., in Brockton. Dr. Hamilton has been connected with the Battles street pharmacy.

Dr. D. J. Driscoll for the last two years in partnership with William T. Cote, Chicopee, has sold his interests to George Grabowski, a member of the executive board of the United Textile Workers' Union of America.

DR. GARST WANTS HIS PRICES UPHELD.

Boston, June 30.—Dr. Julius A. Garst of Worcester, is plaintiff and Dr. C. A. Charles, druggist in Malden, the defendant in a bill in equity filed in the Superior Court in Worcester. The plaintiff states that he is the manufacturer of phenyo caffeine, made and sold by him and his agents under special contract regarding retail prices. He seeks to have the defendant enjoined from sending his preparation otherwise than direct from him under the terms contained in the contract.

Dr. Garst asserts that Dr. Charles has secured phenyo caffeine through other sources and has advertised and retailed 25-cent size packages for 18 cents. A subpoena has been issued returnable in July.

JUNE AND ITS WEDDINGS.

Boston, June 30.—Herbert S. Goodwin, son of William Goodwin, druggist in Marblehead, married Miss Eleanor L. Hawkesworth, a schoolteacher of that town.

At the Melrose home of Benjamin F. Bradbury, the veteran Boston druggist, his daughter Miss Edith Bradbury, was married on the night of June 18 to Albert B. Franklin, Jr., of Melrose. The ceremony was performed by Mr. Bradbury's son, Rev. Woolman Bradbury of the Old Cambridge Baptist church.

James E. Curley, a Springfield drug clerk, has fallen into line by marrying Miss Lillian M. Hogan of that city. The nuptial mass was celebrated at the Church of the Rosary, in Springfield and a reception and wedding breakfast at the bride's home followed.

WHOLESALE THIEF WAS NABBED.

Boston, June 30.—Several mysterious cases of robbing of drug stores in Malden and Everett in the last few weeks are now solved in the arrest of Joseph Murphy, nineteen years old, of Franklin, N. H. He was caught just after a policeman saw him and four other men coming out of the store of Horace P. Childs, Malden, at 4 o'clock a. m. Murphy had his plunder in a bag and pleaded guilty. He was charged with complicity in the recent burglary of the store of Andrew J. Moffitt, Malden, but denied it. The police have since discovered an unoccupied house in Malden, where they found a quantity of just such things as those stolen from other drug stores in Malden and Everett.

CANDY MEN JEALOUS OF DRUGGISTS.

New London, Conn., June 29.—The small candy dealers and confectioners of this city have started a movement to prevent drug stores from opening on Sunday afternoon before sundown. The drug stores have been in the habit of opening at five o'clock but the candy men claim that no especial privileges should be extended which they cannot enjoy. William L. Hawkins, who runs a news room and an ice cream parlor, has appealed to the mayor to take a hand in the matter. He said: "I do not begrudge the drug stores the amount of business they do on Sunday but I want my privileges as a citizen." The candy dealers are united.

Little Things Count.

A metropolitan druggist asserts that a penny vending machine, stationed near his door, pays his rent every month—no small item, either, as he is located in a district where rents are high.

The Curtiss-Williams Co., of Chicago, has perfected a novel machine which is shown on page 16. It sells gum, chocolate and salted peanuts, all put up in attractive penny packages and of excellent quality. The peanuts, for example, are of the best Virginia hand-picked variety, costing nearly twice as much as the lower grades often sold, consequently purchasers of one package come back for more. The machines themselves are artistic and the goods show to the best advantage. A customer who is unwilling to invest so small an amount as a penny in a store will often hunt through his pockets for an old cent or two to drop into the vending machine. The machine works 24 hours a day and 365 days per year, without salary. It has a good reputation and constantly growing sale.

Eff. Lithia Tablets

Send for sample and special net prices on our carton package Aluminum Cap Bottles with your name on them.

Our Tablets made by a new process are very satisfactory.

BILLINGS CLAPP COMPANY, Boston, Mass.

PENNSYLVANIA.

DRUG CLERKS' UNION.

Philadelphia, June 30.—For the last few weeks a most strenuous effort has been made to form a drug clerks' union. Two meetings have been held and a third is set out for a third, the two first having been unsuccessful.

The question is to start in by asking for a 65-hour basis for overtime and no member to be compelled to put in any extra hours, either with or without pay unless he desires. It is to be called a union, but whether it will affiliate with labor is doubtful, the better class opposing it on the ground that a good clerk always draws good wages.

CLIFFE GETS THERE.

Philadelphia, June 30.—Wm. L. Cliffe, of this city, has received the notice of his appointment to the vacant place on the pharmacy board. Telegrams were sent to the Governor congratulating him on his wise choice and thanking him for his courtesy in accepting the united recommendation of the State societies.

OTHER HAPPENINGS.

—A. S. Besore of Fourth and Huntingdon streets, Philadelphia, and J. H. Vogelbach, formerly at Fifth and Cumberland streets, were called as witnesses in the Hossey murder trial, testifying that their records showed that Mrs. Hausz who is accused of poisoning her husband, had frequently purchased tartar emetic from them on the plea that her husband was a drunkard and that she wanted to "cure" him.

—P. K. Boltz, proprietor of a pharmacy at 5900 Haverford street, Philadelphia, was awakened by a peculiar popping sound. He investigated and found that the store was on fire, and that the noise was made by the explosion of medicinal powders. The flames damaged the store and dwelling to the amount of \$450.

—H. F. Rull of Manheim, has just received from "Profitable Advertising" a check for \$250—the capital prize offered for the best retail advertisement submitted to them. The ad, that won this comfortable check was on the subject of tooth brushes.

—No other Philadelphia department stores have followed Shellenburg's lead. After the glaring advertising columns of two weeks ago, the "come-down" last Sunday is rather pitiful. Two items only below usual rates.

—William E. Krewson, Jr., and Miss Etta May Shoemaker were married at Lewisburg. After a short trip they will be at home at Jasper and Huntingdon streets.

—H. L. Wertley of Eighth and Parrish streets, Philadelphia, has bought out the interest of his partner, C. E. Elston, and will hereafter conduct the store alone.

—Diedrich Kirkel, takes charge of the Barber pharmacy, Philadelphia. A. A. Unger goes with Wilson, Albert Boyd and Thomas Jarvis leave for Pittsburg.

—A. Elfreth has moved his store at Preston and Brown streets, Philadelphia, to Twenty-ninth and Duquesne streets. It has been rented and much improved.

—Lucien Scott Kemp's wedding to Miss Leone Bamford, was conducted recently. They will be at home at 1515 Lehigh avenue, Philadelphia.

—Columbia Pharmacy Co. takes title to the handsome new Eckels store at Twenty-third and Columbia avenue, Philadelphia.

—Oliver R. Server of Third and Penn streets, Chester, completed his forty-sixth year in business on Friday, June 19.

—A. A. Grady of 180 Lancaster avenue, Philadelphia, opens at Fifty-second street and Haverford avenue,

THE SOUTH.

PLANS OF MARYLAND MEETING.

Baltimore, June 30.—The program for the annual meeting of the Maryland Ph. A. at Ocean City on July 14 to 17 has been issued. The delegates will be welcomed on the afternoon of Tuesday, July 14. At night there will be a banquet.

More reports and routine will be on the third day. For 8 o'clock p. m. a social session is scheduled.

On Thursday morning there will be a business session and in the afternoon, surf bathing, golf and general recreative sports. In the evening bowling and pool contests for prizes by ladies and gentlemen will occupy the time.

The last business session is fixed for Friday morning. Many papers on subjects of interest to pharmacists are expected. Prizes have been donated by many wholesale firms. Special railroad and steamboat rates have been secured for the meeting. Headquarters will be made at the Hotel Plimhinmon. The entertainment committee includes J. Edwin Hougst, chairman, Charles H. Morgan, J. Emory Bond and George A. Sohl.

WOOD ALCOHOL CASES SETTLED.

Baltimore, June 30.—The celebrated wood alcohol cases against the wholesale and manufacturing drug firm of Gilbert Bros. & Co., North Howard street, this city, have been settled out of court. It will be recalled that five suits were entered on behalf of persons, who, it was claimed, had been either blinded or lost their lives as a result of drinking Jammaica ginger prepared with wood alcohol. One of these suits, brought by Dr. George A. Brehm, of the former class, resulted in a disagreement of the jury.

A mass of contradictory testimony was taken at the trial as to the effects of wood alcohol on the human system, and soon after negotiations were begun to settle the cases out of court. The amounts which the firm agreed to pay have not been given out. It is said, however, that the aggregate does not exceed \$3,000. The costs of the case were very heavy.

TENNESSEE DRUGGISTS ANNUAL MEET.

Bell Buckle, June 29.—E. F. Trolinger, secretary, is busily engaged sending out programmes for the coming meeting of the Tennessee Druggists' Association to be held at Monticello, July 15 to 17. Monticello is on the summit of the Cumberland mountains, nearly midway between Nashville and Chattanooga on the N. C. & St. L. R. R. Reduced railroad and hotel rates have been secured.

The programme includes a number of subjects for papers on which leading manufacturing houses offer prizes. The various business sessions will be interspersed with athletic contests, an informal dance on Thursday evening, and a trip on Friday afternoon to Monticello cave, said to be one of the greatest natural wonders in the United States.

THE CAPITAL CITY.

—The cases against a number of Washington druggists charged with having sold adulterated phenacetin, have been dropped by mutual agreement. While a few of the accused parties owned up to having sold a mixture of acetanilid and phenacetin for headache, the majority were in a position to prove that they were using phenacetin only as supplied in original packages. The incident has aroused considerable feeling among Washington druggists and a number are contemplating taking steps to acquaint local physicians of the character of the monopoly.

—Dr. Edward A. Duckett, the well-known druggist of Twenty-second street and Pennsylvania avenue, is lying at the point of death from a stroke of apoplexy. While his present condition is very serious, hopes of his recovery are entertained because of his vigorous constitution. Dr. Duckett has for many years been the local representative in Washington of the A. Ph. A., and is now president of the National C. P. He is also apothecary of the naval battalion of the District militia forces.

—The Modern drug store, Eleventh and F streets, N. W., conducted by Frank J. Biondome, has been sold to Paul Muller, president of the Maryland Drug Co. of Baltimore, is reported. The Modern Drug Store will be conducted by Mr. Muller in connection with another pharmacy in the neighborhood. It has been known as a cut-rate establishment and does a large trade business.

LOUISIANA.

—The meeting and election of officers of the New Orleans association was postponed a week. It is understood that Secretary Villere, one of the most competent men who has ever filled the position, will resign. Delegates to the N. A. R. D. will be elected.

—Geo. W. McDuff, who has been special examiner of drugs for the Government at this port will, it is understood, be reappointed to his position for another four years. Mr. McDuff is a political leader and is secretary of the State association.

—Ed. Danneman has bought the business of Dr. James O. Adams, on Second street, New Orleans. J. E. Vergne, the Bienville street, New Orleans, pharmacist, has sold his store. E. J. Levie has bought on Bayou Road, New Orleans.

BALTIMORE NOTES.

—P. M. Briggs, a negro from Richmond, Va., will open a drug store at 10 North Fremont avenue. He will be the third colored man in the business here.

—The base ball nine of Sharp & Dohme went to Sparrows Point last Saturday to try conclusions with a team there.

OHIO RIVER VALLEY.

CAN DESTROY TRADE MARKS SAYS JUDGE.

Cincinnati, June 30.—Judge Hollister of the Hamilton county Court of Common Pleas, decided against the plaintiff in the case of the Freeman Perfume Co. vs. M. Cora Dow, the cutter of Cincinnati, in which the plaintiff sought an injunction for mutilation of his packages of face powder.

The case is of great importance. It involves a principle which if sustained will greatly aid in the enforcement of the contract and serial numbering plan.

The Freeman Perfume Co., which for several years has been making efforts to protect the retail price of its powder by adopting a system of serial numbering has, it is alleged, been greatly hindered by cutters who obtained the powder through indirect channels and removed the numbers to avoid detection. To bring the question to an issue the company brought the present suit.

The defendant claimed that in the absence of contractual relationship between the parties, they might do whatever they pleased with the powder, having bought and paid for it. The court found for the defendant, holding no cause of action. The court said that a purchaser of a chattel having no contractual relationship with the manufacturer might do what he pleased with it, notwithstanding that it was protected by trade mark. That

the purchaser could tear off trade mark from every package in his possession and otherwise mutilate as much as he desired and yet sell the powder as Freeman's Face Powder. The Freeman Perfume Co. has taken an appeal.

OHIO HAPPENINGS.

—The annual outing of the Ohio Valley D. A., will take place at Hartman's Grove on July 21. The committee of arrangements have provided innumerable entertainments and a large attendance is expected. The wholesalers have agreed to close their places of business on that day and attend.

—Alfred De Lang, who recently sold his two Cincinnati drug stores, will again embark in retail business. He is fitting up the store formerly occupied by Henry Strauss in East Fifth street.

—William Simonson, druggist at Ninth and Race streets, Cincinnati, has been appointed chemist for the State dairy and food commission.

—John M. Fallon has purchased the store formerly owned by the late R. C. Ferguson at May and McMullan streets, Walnut Hills.

—Rupert J. Stier has sold his store on East Walnut Hills to William Lakamp, formerly at Seventh and Custer streets, Cincinnati.

AROUND THE GREAT LAKES.

CHICAGO VETERAN DRUGGISTS' ASSOCIATION'S ANNUAL.

Trip to Fox Lake—Begins in Rain but Plenty of Sunshine—Presentation to T. N. Jamieson—Officers Elected.

Chicago, June 23.—Rain threatened to dampen spirits at the annual reunion of the Chicago Veteran Druggists' Association, held on Tuesday, June 22, but the members are well seasoned, and it was only the physical exterior that suffered a slight discomfort.

The occasion was a combination reunion and outing trip to Fox Lake. Safely arrived there, the party embarked in a steamer and surveyed the lake and its attractions. At two o'clock a banquet was served and the real business of the meeting began.

President Jauncey delivered a brief address, secretary Bodemann submitted his report and then proceeded to the event of the day, the presentation of a full set of photographs of all the veterans to T. N. Jamieson, the host of the day. Said Mr. Bodemann: "In the days of Abraham, Jacob and Moses, love, respect and thankfulness were shown by means of sacrifices upon the altar. This box is our altar; our sacrifices are in this altar—not on it. It is fitting that the decorations should be burnt into the material of the box, symbolizing the affection and love that you have burnt into our hearts. My daughter, the artist, begs you to accept the box as her appreciation of your large-hearted generosity to the Veterans, and as a feeble record of her fathers' and her own love for you. The photographs are the result of an assessment levied by the two secretaries Promios without warrant or authority, but I ask the authority of the C. V. D. A. to have your photo-

ETNA CHEMICAL CO., New York, U. S. A.

J. W. LAUER, Winona, Minn.

President of the Minnesota Ph. A.

The successor to Mr. Eckstein is a wholesale and retail druggist of Winona. Mr. Lauer was born in Milwaukee, Wis., in 1853. He was educated at Winona and Milwaukee and entered the drug business in 1880 as clerk for Ed. Pelzer of Winona. He may be depended upon to furnish a wise, vigorous administration as head of the Minnesota pharmacists the coming year.

ograph taken for every member, at the expense of the association."

Officers elected were: President, W. F. Blocki; vice-president, H. Biroth; treasurer, T. N. Jamieson; historian, A. E. Ebert; corresponding secretary, J. Blocki; recording secretary, W. Bohmann.

Papers of personal reminiscences were presented by Messrs. Blocki and Bohmann, that of the latter gentleman appears in full in another part of the present issue.

The time of departure found the meeting still far from adjournment, and the session was, therefore, continued on the special car on the homeward trip. After sessions by Messrs. Jamieson, Englehard and Forsyth, it was ordered that every member of the C. V. D. A. proceed at once to write down his reminiscences of the trip, and that lists be drawn to determine which reminiscences shall be read at each quarterly meeting. The reminiscences are to be prepared at once, "for" and one of the members, "history written by contemporaries is simply irremediably when lost or not attended to as soon as the historian is still on earth. What the best of us has done amount to nothing."

The City Engineer, Commissioner of Public Works has called the Association and asked it to form a party on his flag to inspect the pipes in the city water system in July. Druggist Ed. Harwood of the Carter Harrison job.

TOP NOTCHERS OF MANY CONTESTS.

Pharmacists, Ph. A. Minn. at. How, the some of the association held at the residence of J. A.

Double Grandee, First prize, Mr. W. W.
 Second prize, Mr.
 Third prize, Mr.
 Fourth prize, Mr.
 Fifth prize, Mr.

Duck on steam—First, Mrs. Ripley, five pounds Allegretti chocolates, second, Miss Titus, two pounds Lowmyer's; third, Mrs. Garver, box of gum; fourth, Mrs. Harbinson, chamois toilet set.

Potato race—First, Ben Smith, three quarts liquor; second, W. A. Parker, 50 cigars; third, Mr. Fisk, toilet case; fourth, Frank Herr, nine bottles liquor.

Egg race—First, T. Moratz, six quarts rye; second, Mr. Webber, ten gross corks; third, L. F. Smith, two dozen Bromo Seltzer; fourth, J. Kneer, two dozen Boney of Tar; fifth, Mr. Boehm, one dozen Malt Cream tablets.

Jockey contest—First, Miss Shrieve, manure set; second, Mrs. Harbinson, toilet set; third, Mrs. F. Bohmer, chamois toilet.

Fat Men's race—First, Mr. Green, 100 weather charts; second, W. T. Shortnose, half gross Cascara; third, T. W. Dudley; fourth, C. S. Harvey, one pound Kitro; fifth, W. C. Burleigh, one pound Kitro.

SUCH A GOOD TIME!

Detroit, June 30—With blowing bands and flying banners three steamers laden to the waterline with people and outfit stuff steamed to Bois Blanc Park from Detroit. The people were Parke, Davis & Co.'s employes and their guests, 5,000 strong.

It was the thirteenth annual outing given by this liberal firm to its employes. Laboratories were shut tight. Leon C. Fink, secretary of the board of control, perched high on deck—he is always on deck—mangled things as though at the head of his fire department. J. M. McDonald won fame that should be international as referee of sports.

A handsome silk banner had been offered to the department of the laboratories having the largest proportion of employes present. It was won by the tablet department, every member of which was in line with the pill department in second place. In addition each member of the two winning departments received a souven-our flag pin.

The athletic sports, always a feature, had a large list of entries and participants full of enthusiasm. The events were under the direction of J. W. Tonge and R. L. Thompson. The judges were J. W. Tonge, C. H. Wright, Daniel Dow and C. J. Kaullack, J. H. Webster was timekeeper and R. L. Thompson starter.

*After many races an exhibition game of base ball between the P. D. team and the Twenty-first Essex fustliers, company No. 1, resulted in a victory for the former team by a score of 21 to 23. Another game between the Parke, Davis & Co. nine and the River Rouge Maecabee tent team resulted in another P. D. victory.

A fish supper was served in the cafe for those that were not provided with basket lunches. The party reached the city about 9 o'clock, happy and tired and all vowing they never had a better time.

GRADUATES OF U. OF M. SCHOOL OF PHARMACY.

Ann Arbor, June 29.—Following is a list of the graduates as pharmaceutical chemists at the University of Michigan this year:

Anthony E. Block, Mary L. Boynton, Alfred X. Carpenter, Lester H. Carrigan, Robert J. Colgrove, Ph. G., Detroit College of Medicine; Thomas H. Dexter, Elgar O. Eaton, Fred J. Fruch, Kent K. Gimmy, Sidney Hauenstein, Benjamin H. Hauz, John Helfman, Perley W. Hickman, James R. Huber, Frederick J. C. Klocke, Earl W. Salisbury, Charles A. Schurrer, Louis E. Schurrer, M. D., Western Reserve University; Harry M. Vandeburg, Lewis E. Warren.

Robert J. Colgrove and John Helfman also received bachelors' degrees in science.

REMARKABLE RESULT OF LORD, OWEN SALE.

Chicago, June 30.—The sale of the Lord, Owen & Co. drug stock was completed last Saturday afternoon. In results it was remarkable. It will be remembered that Judge Kohlsaat refused the offer of \$80,000 for the stock in bulk, and accepted the offer of Auctioneer Samuel Winternitz, who guaranteed to realize for the estate at least \$85,000, and thought he would be able to turn over more than that. The results of the sale have more than justified his judgment. He has turned over almost \$125,000 to the receiver.

With the amount realized from this sale and with the other assets of the company, it is said that the receiver will be able to pay fifty cents on the dollar to all creditors.

AT CHAIN O'LAKES, SOLDIERS' HOME.

Waupaca, Wis., June 29.—The annual meeting of the Wisconsin Ph. A. will be held this year at the famous "Chain of Lakes," near this city, 130 miles north of Milwaukee. The dates set for the convention are Sept. 1, 2, and 3. Charles A. Spencer, local secretary of the Waupaca association is in charge of the arrangements and firms who intend to make exhibitions at the convention will do well to correspond with him.

MARRIAGES IN THE BADGER STATE.

Milwaukee, June 20.—H. J. Stoltz of Milwaukee, was married last week to Miss Clara Roth of the Parler Pharmacy. The marriage of F. E. Yahr to Miss May Blatzek, both of this city, was solemnized at the St. Charles Hotel on last Thursday. Mr. Yahr is connected with the Yahr & Lange Drug Co. Frank E. Stemple of Johnsons Creek was united in marriage to Miss E. McIntyre on June 11.

CHICAGO COLLEGE OF PHARMACY ALUMNI NOTES.

—Oscar F. Fritz, president of the class of '03, and C. H. Schafer, an honor man of that class, were among the successful candidates for registration at the last meeting of the Ohio board. Mr. Fritz has purchased a drug store in Cincinnati, while Mr. Schafer has returned to the employ of J. W. Dysle at Marietta, O.

—Lewis L. Albire, '03, recently passed the Colorado examination and has taken a position with A. W. Scott of Fort Collins, Colo., secretary of the board of pharmacy of that State.

—Walter Holderread and Miss Nannie Southard were married at St. Louis, Mo. The groom is a graduate of the class of 1900, and has a prosperous drug business at Divernon, Ill.

—Miss Carolyn F. Beardsley, the only woman graduate in the class of '03, is studying medicine at the College of Physicians and Surgeons, Chicago.

NOTES FROM ILLINOIS.

Kremls Sued for \$20,000 for Alleged Mistake—Waiters'

Strike Embarrasses Diners at Drug Trade Club—

Foucek Broke His Finger and Will Travel.

—On account of an alleged mistake in selling subacetate of lead for lime water suit has been filed for \$20,000 damages against Otto A. Kreml, Dr. Charles E. Kreml and Frank J. Kreml, Sr., druggists at 900 West Twelfth Street, Chicago. The plaintiff is Cecilia M. Miles, a child, who sues through her father. After having taken the subacetate of lead the child, it is said, suffered intense pain and has become partially paralyzed.

—Alferman Charles G. Foucek, the well-known druggist of Chicago, in an encounter with a sneak thief, broke the third finger of his right hand. He now shakes hands carefully. Mr. Foucek will leave about July 1 for Europe on a business trip. His immediate destination will be Prague, Bohemia. Returning he will visit other points of interest in Europe.

—It is reported that William A. Dyche, member of the board of pharmacy and formerly connected with D. R. Dyche & Co., Chicago, is slated to succeed Dr. Robert D. Sheppard as business agent of the Northwestern University. Dr. Sheppard has announced his intention to resign.

—Reported that T. O. Musser has bought Charles Wittig's drug stock at Freeport, and that Miss Susie Terry will have charge of the store. Rising & Clineheard's new drug store in Champaign, was formally opened on June 13.

—A meeting of the Chicago section of the American Chemical Society was held at the Drug Trade Club last evening. Prof. A. W. Palmer of the University of Illinois read a paper on "Water Analysis."

—James Henderson of Henderson Bros. Drug Co. and Mr. Todd, of Wanger & Todd, Waterloo, Ia.; and H. H. Coit of Mason City, Ill., were among the druggists who visited Chicago last week.

—The waiters' strike which has prevailed in Chicago for some days has tied up the dining room of the Chicago Drug Trade Club. It is said that service will be resumed, however, in a day or so.

—Mr. and Mrs. H. A. Henson have bought the drug store building on the corner of the late George Carter, and have moved to a new building on the west side of the street in Chicago. Mr. Henson was associated with Mr. Carter for some time.

—C. H. Kneass, for several years drug buyer for Knappton, Pittman & Co., has resigned. He has several prescriptions to read but is not yet sure what he will take.

—H. J. Hart has bought the Patton drug store in Washington at Chicago, Ills. The new owner has been purchasing of Clary's for a number of years.

—Professor C. S. N. Hillberg of the Chicago U. P., was given the honorary degree of M. D. by the Harvey Medical College on June 26.

—Oliver Davidson will erect a new drug store in Birmingham. The contract for the building has been let.

—C. P. Gilten succeeds A. E. Oldander, 5,500 Wentworth avenue, Chicago.

—Dr. Davis has bought the store of the Githens' Drug Co. at Naples.

—Board of pharmacy will meet in Chicago on August 11.

WISCONSIN.

The members of the Milwaukee Ph. A. have entered an agreement with the four wholesale drug firms of the city whereby no orders are to be sent to the wholesalers later than 4 p. m. on week days, Saturdays excepted, when orders are to be received before 11 a. m. In return for this courtesy the wholesalers agree to fill all telephone orders the day received.

—Fred G. Welchman, who graduated from the Milwaukee Medical College is now with King & Kloutz, 1110 N. Frank Robinson is now at Barr's Omaha street, Mil. Milwaukee—Karl Seifert of Madison, is with Theobald's pharmacy, Sobejano, T. D. Rowe, Dodgeville is clerking at Igby Bros. store at Fort Atkinson.

—Milwaukee alumni of the University of Wisconsin College of Pharmacy have started a movement for the establishment of a pharmacy fellowship and are sending out notices to fellow graduates with the object of raising a fund of \$400 for the first year.

The McDonald Drug Store of Marinette, Wis., will be moved into the new Menominee River Brewing Co. building about June 29. Mr. McDonald has fitted up a new store room and will have one of the finest stores in the city.

—McDonnell's drug store at Rio, has been bought by W. F. Taylor. The Ellis Drug Co. succeeds Lewis 1201 N. Kenosha. W. E. Barringer of Baraboo, is now manager of the Wisconsin pharmacy, Madison.

—E. Stawiller, formerly with Dadd & Sons, Milwaukee, has purchased the Wells street drug store of H. Emerson. D. B. Graf has purchased the Silver City drug store from Dr. E. W. Reed.

—C. J. S. Johnson, formerly clerk in Broomlee's Pharmacy at Hingham, Wis., has purchased a drug store at Amanda, North Dakota.

—W. H. MacDonnell, Chicago, has succeeded John Sweeney at Jerome. Peterson & Kuhntz's, Milwaukee.

—The firm of Lawson and Natwick has dissolved. Mr. Natwick continues the business.

—M. E. Benson is now ready for moving 118 drug store, Olive Street, Wis., to 194 W.

MICHIGAN NOTES.

—Frank Paine, a recent graduate of Benton Harbor U. P., has used 42 years. Mr. Paine lived in Decatur up to the year 1861 and was a former graduate of the College. He is now residing in Benton Harbor.

—P. W. Green, for the past year, has been superintendent and of the Lewis & Jackson establishments, Jackson,

has resigned to accept a position with the Central City Oil Company.

—Berand Schroeder of Grand Rapids will install fine mahogany fixtures, also a new soda fountain, at the Central drug store.

—Frank Cookman of Kniff's drug store, Port Huron, has resigned. His successor will be Wellington Travis.

—The Star Drug Co. of Benton Harbor, capital stock \$5,000, has filed articles of association at Lansing.

—Fred Eastbough of Belding succeeds C. B. Bower at Haver's drug store, Mendon.

—CHARFNE E. THAYER, druggist at Cochinuate, Mass., is dead at the age of forty-one years, and after an illness of only a few days. He was born in Randolph, Mass. As a boy he worked as an assistant in Fitchew's drug store. Mr. Thayer was a member of the Loyal Arentum and the Masons. A wife and daughter survive. The funeral was strictly private and the body was cremated.

WEST OF THE MISSISSIPPI.

NEBRASKA.

—N. A. Kuhn and Charles S. Sherman, Omaha druggists will take a unique vacation in July. They will go by rail to Denver where they will engage horses and make a trip on horseback across the mountains to Salt Lake City. Last summer Mr. Kuhn made a horseback trip to Tanager Mountain, a journey of over 400 miles. Over the mountains of Colorado and Utah these two gentlemen will find great chance to test their endurance.

—Dr. F. Simons of Oakland was a visitor in the Omaha jobbing district. So were Creed McDaniels, manager of the Wyoming Drug Co., Rawlins, Wyo. P. S. Tazgart, Greta; W. P. Sampson, Blair; Frank Patrick, Exeter; Dr. Simon, Oakland; Dr. Muirhead, Central City; W. F. Cook, Underwood, Ia.; G. P. Shinkle, Geneva.

—R. E. Crandall has just opened a new store in Chapman. C. W. Root of Wallace, has sold to Norton Bros. The Patrick pharmacy has succeeded C. E. Nash, Exeter. Mrs. Harry Westveer, Schuyler, is recovering from a severe illness. Wilber W. Amess of Dunbar, is recovering from a siege of mumps and typhoid fever.

—C. E. Pollock is building a very fine residence in Columbus. Mr. and Mrs. L. A. Farnsworth of Grand Island, are making an extended trip through the east. H. E. Dietrich, head prescription clerk for W. G. Boyer, York, married Miss Mary Newman of that place.

—C. A. Seifert of the prescription department of the Sherman-McConnell Co., Omaha, is making a strong effort to secure the nomination for appointment on the State board of pharmacy. Mr. Seifert was a member of the California board from 1897 to 1901.

—The Goodrich Drug Co. of Ord, will dissolve. F. Retzmann of Alma, has admitted M. H. Bates and the store is now F. Retzmann & Co. Hickey & Gibney have started at Hlona. J. E. Anderson of Scott's Bluff, has sustained a fire loss.

—A. W. Atwood, of Plattsburgh, has given a bill of sale upon his stock for \$2,121 to G. W. Gilman, formerly of Tallmire. The Ganoing Pharmacy Co. of Lincoln, has sold to A. Gaiser.

—C. C. Moore and family, St. Anthony, Ida., were in Omaha a few days ago on their way to visit relatives in Missouri. Mr. Moore is a member of Watson & Moore.

—Mrs. P. G. Frandsen of Ellor, is passing the summer at Hot Springs, S. D. Homer Bowen has succeeded J. C. Fraught at Phillips.

HEARD IN IOWA.

—Will W. Haygarth & Co. of Mason City, succeed C. F. Bell at Oelwein. The H. C. Ady Drug Co. of Grandy Center, has sold. F. L. Colgan has bought out Kenefick & Gorman at Titonka. W. E. McAlpine of Whittemore, has given a bill of sale. The Grand Avenue Pharmacy Co., Des Moines, has given a bill of sale. O'Malley & Thornburg, succeeds John E. O'Malley at Perry.

—Drug stock and fixtures of D. B. Sigworth at Anamosa, have been sold to M. P. Sigworth, Jr., and H. Dorgeloh, D. B. Sigworth, former proprietor, retiring. New firm will be known as Sigworth, Dorgeloh & Co.

—E. Brugman & Co. have bought the Bender Palace Pharmacy at Dickens and have likewise acquired George B. Bender's business at Everly. Johnson & Zimmerman succeed C. F. Zimmerman at Gowrie.

—J. L. Simecke has succeeded Lon Smith at Lennox. The firm of Algyer & Armstrong, Sanborn, is now Algyer & Rentz. Scott & Godels succeed G. H. Casavaw & Co. at Sac City.

—W. T. McKnight of Dunlap, is figuring upon the purchase of the Demisson Drug Co.'s store. G. F. Elliot, of Boone, has been succeeded by Elliot & Thorson.

—Eckhoff & Co. of Lime Springs, have traded their business. Ralph H. Harris has sold at Muscatine.

PENNSYLVANIA BOARD GRANTS LICENSES.

Harrisburg, June 29.—Secretary Charles T. George announces the results of the meetings of the State Pharmaceutical Examining Board, held at Harrisburg and Pittsburg, April 18, 1903. The Harrisburg meeting was conducted by Paul W. Houck, George W. Davis and Charles T. George. One hundred and eighty-six persons appeared at this meeting for examination, 108 for registered pharmacist's certificates and 78 for that of registered qualified assistant pharmacist's certificates. Thirty of the first named and 45 of the last named succeeded in passing a favorable examination.

The Pittsburg examination was conducted by Louis Emanuel and Henry C. Porter. At this meeting 175 persons presented themselves for examination, 94 for registered pharmacist and 81 for registered qualified assistant pharmacist. Thirty-seven of the first named and 55 of the latter succeeded in passing a favorable examination.

The successful registered pharmacists are: Wayne M. Keet, Harrisburg; M. Luther Keller, Steelton; James Blaine Keener, Middletown; John M. Lefever, York; Edward R. Bradley, Gallitzin; Samuel S. Wendle, Newberry; Frank W. Jordan, Bedford; Maurice S. Brubaker, Clyde H. Cooper, William Groff, all of Lancaster; Stephen Stevens, Kingston; M. J. Spotanski, Nanticoke; Richard F. Foote, Archibald; Freeman G. Lithgow, DuBois; John A. Wood, Old Forge; William H. McLanahan, Tyronne; Charles F. Goldsmith, Mt. Pleasant; William L. Hagen, Port Allegheny.

Leon S. Marshall, Millville, N. J.; William E. Reamer, Charles Wagner; John T. Harbold, A. G. Spriessler, Andrew N. Hecker, William H. Ort, Leonard G. B. Batfield, Clarence Gaertner, John H. B. Leaman, James G. Reed, Boyd V. Claybaugh, all of Philadelphia; Henry Marsden, Towanda; Charles F. Mascher, East Palestine, Ohio; Jesse C. Stillee, Hope Church; Samuel L. Donaldson, Kittanning; W. Kyle George, Lisbon; Elizabeth Brown, Kittanning; Harry R. DeWolf, Chicora; Paul H. Earl, Ridgeway; H. W. Scott, Johnstown.

Daniel H. Beck, Sharon; B. H. McQuiston, Butler; Joseph M. Spatz, Robert W. Nevin, Braddock; James L. McAnlis, New Castle; Robert G. Kerr, Slippery Rock; H. C. Henderson, Titusville; Norbert H. Johnston, Bradford; Anna J. McGill, Oakdale; Mary E. Atkinson, Conway; George M. Nonnan, Meadville; Robert W. McMun-

trie, Donora; Harold L. Guthrie, Frederick W. Hersche, both of Allegheny; Asbury Swinley, Leopoldus A. Starcyaski, W. Russel McCutcheon, S. Day Myers, George S. Sunderland, Charles F. Oyer, John Albert Duffort, Edward H. McCool, George R. Benjamin, H. S. Kossler, Ralmond E. Heiber, J. L. Patterson, all of Pittsburg.

The successful registered qualified assistant pharmacists are: Stanley G. Smith, J. Raymond Snyder and William David Burgoon, of Harrisburg; Andrew E. Spalding, Troy; Charles E. Schomo, Hamburg; Francis T. Elliott, Camden, N. J.; Horace F. Brubaker, Raymond B. Wissler, Harry Mundorf, Fred W. Steigerwalt, all of Lancaster; Paul P. Allen, Chambersburg; Melville D. Nesbit, Lewisburg; Patrick A. Loan, Bak; Joseph A. Shrom, Carlisle; Robert W. Scheuing, Glenside; Charles H. Ewing, Wilmington, Del.; James T. Kenney, Scranton; William E. Thomas, Olyphant; William Chester Pungate, DuBois; John I. Harvey, Tremont; Luther A. Craver, York; Howard George Sylvester, Wind Gap.

Nelson L. Yeakel, Perkasio; Howard E. Walker, Milton; Charles J. Gallagher, Wilkes Barre; Henry Shapira, William E. Gaspell, John Tensola, Charles M. Diller, Frederick M. Snyder, William H. Baessler, Wilbur C. Strawinski, Herman C. Grim, John A. Betts, Franklin W. Earl, George A. Gaskill, William E. Lucas, Lewis H. Hausmann, Jr.; William Kennedy, John H. Gross, Nachmin Koppel, Mary J. Sauter, Thomas E. Hughes, Jacob S. Keyser, William A. Keller, all of Philadelphia; Henry E. Mathias, B. Leonard Lamb, William T. Moore, of Washington; John J. Florey, Jeanette.

Charles H. Smith, Homestead; Fred C. Johnston, Ellwood City; J. M. Gilmore, New Castle; Earnest F. Woodward, Johnstown; Joseph R. Coltorrez, Jefferson; William R. Chapman, Tarentum; Charles D. Blair, Conneaut Lake; David A. Tennant, Sharon; John C. Carnakan, East Liverpool; Harry R. Hogsett, Dearth; Walter L. Ludwick, Piteairn; Frank W. Goldsmith, Tarentum; Agnes J. Rynd, New Kensington; Samuel J. Blackmore, William J. Forcht, Robert A. Garrard, of Butler; Guy R. Eddy, Glassport; Frank M. Carothers, Uniontown; Harry D. Diefenderfer, Stephen A. Stright, Jr., of Braddock; William T. Hoffman, Vandergrift; Charles M. Patterson, Rochester; William A. Gray, Leechburg.

Charles E. Willets, New Kensington; Clarence C. Miller, Charleroi; J. Arthur Young, Sharpsburg; Richard J. Gasford, Chicora; Walter A. Katzenmeyer, Frank N. Hayson, Lewis C. Gerould, Robert B. Winkett, George C. Habel, Joseph H. McGarr, all of Allegheny; John L. Blessinger; A. Lloyd Brawdy, Charles G. Wiegell, Meyer P. Seezman, Thomas E. Wall, Joseph B. Harver, Edward Kinch, Abraham Canter, Harry I. Buchner, Floyd Taylor, Jacob E. Holsooper, Samuel L. Pauly, L. Edward Greenawald, Frank Kaminski, Albert E. Kearny, Charles J. Beebe, all of Pittsburg.

The next meeting for the examination of applicants will be held at Williamsport on Tuesday, July 21.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment.

Seven Laboratories.

Twelve Teachers.

Thorough Courses.

NEXT TERM BEGINS SEPT. 7, 1903.

Address inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

HONOR TO THIS WOMAN.

Tracy Weeks (1839) of Salem, Ore., was appointed by the Governor of the Oregon State

board of pharmacy for a term of five years succeeding L. W. Moody of Portland. Miss Harbord is a native Oregonian, born in 1875. At the age of seventeen she began the study of pharmacy, later she took a three years' course at the Philadelphia C. P. where she graduated in 1901. Miss Harbord is a self-made woman whose collegiate education was attained by her earnings as clerk. She is the first woman in Oregon to be honored with an appointment of this kind. Governor Chamberlain is to be congratulated.

DRUG BUYERS SAVE MONEY.

As always when I read the expression, "He is making money in real estate of his business," which is taken to mean that the advertiser referred to is a good buyer, as well as a good salesman. The statement can also refer to the large man who watches the advertising pages of the Era.

Here are some of the good things mentioned in last week's issue.

HART'S ALIMENTARY ELIXIR contains the stomachic juices and salts of hart, with no fat. This preparation is made by F. J. Hart & Co., Ltd., New Orleans, La., and the price is \$7.50 per dozen. They also make a similar combination of Medicated Bismuth Salts which is indicated wherever the Salts of Bismuth are indicated, and is called Laro-Bismo, put up in two sizes, 4 oz., \$3.50 per dozen, 16 oz., \$12.00 per dozen.

HAMPREAVS MEDICINE CO. want you to have one of their cabinets for their "sell their goods" to you in your advantage. There is always a demand for Hampreav's goods the year round; put yourself in touch with the demand by writing to 111 William St., N. Y., for free cabinet offer.

MELLEN'S FOOD—This food is used only in glass bottles and keeps perfectly any length of time, in any climate. The perfect condition of every bottle is guaranteed. Write to the Mellen's Food Co., Boston, Mass., for a free sample.

TACELIS—H. K. Potter, 18 Spruce St., N. Y., a dealer in specialties, has a class Private and Special Prescriptions made, and his tablets have an excellent reputation for their accuracy, solubility, and uniformity.

QUININE CHIVEL, made by Besenraun & Sons, Inc., Vienna, Pa. This firm are experts in the combination of quinine with such salts as Magnesium Sulfate, Potassium Sulfate, and Potassium Iodide. It will give you a free sample.

BOTTLE STOPPERS, COMPLETE RUBBER MOLDERS, MOUTH SYRINGES, and other good things. Bottles made by the best of A. H. V. Co., 19 and 21 South 4th St., Phila.

DRUG MILLS—The Brooklyn Dispensing Co., 400 Broadway, N. Y., has a line of A. G. V. Tablets, prepared from the best of quality and in the best of the latest style. Each one 1000, 500, and 250, and you can get them in any quantity.

PIAL DOUBTS—The Brooklyn Dispensing Co., 400 Broadway, N. Y., has a line of A. G. V. Tablets, prepared from the best of quality and in the best of the latest style. Each one 1000, 500, and 250, and you can get them in any quantity.

DERMAL MEDICATION.—Schering & Glatz of New York, are sole agents for Steifel's Medicated Soaps. They should be a part of every drug stock, and are for sale by all jobbers. Literature furnished on request.

QUALITY & PURITY.—The New York Quinine & Chemical Works use these two words "QUALITY and PURITY" as emblems to represent the character of the products they sell.

TULLAR'S VAGINAL SPRAY—Progressive drug stores are making handsome window displays and sales of Dr. Tullar's Vaginal Spray. Write to the Tullar Co., 23 Union Sq., N. Y., and they will send you a sample prepaid for \$1.00, which retails for \$2.00. They have some cuts of window displays of their goods made by prominent New York City druggists which you should see.

OBITUARY.

ANDREW G. WEEKS, formerly senior member of the well-known Boston wholesale firm of Weeks & Potter, which later was the Weeks & Potter Co., died on June 25 at his summer residence, Guilford, Vt., at the age of 63 years. Death was due to heart difficulty and was not unexpected. Mr. Weeks was born in North Yarmouth, Me. At the age of sixteen he secured a place in the drug store of Frederick Brown. In 1841 he entered the store of South & Bowle, and ten years later went into partnership with Warren Potter, in the wholesale firm of Weeks & Potter. Mr. Potter died in 1899. Not long ago the firm was wound up. Mr. Weeks is believed to have left a very large fortune. His wife, two sons and a daughter survive him.

EDWARD M. PHELPS, who is druggist at Foxboro, Mass., was one of the prominent citizens and officials of the town, died from a complication of diseases. He was born in Foxboro in 1858 and clerked in his father's pharmacy, of which he later became the proprietor. In 1890 Mr. Phelps was elected to the office of town treasurer and had served as such ever since. He also held many other important offices of trust. He was a loud leader in Democratic politics. He left a wife and three children.

RICHARD CASSEBERR, who formerly owned drug stores in this city and Mount Vernon, and was a member of the well-known family of Casseberr in this city, died on June 22 at the Petrie Hospital, from the effects of an operation for cancer. He was forty-seven years of age and a 74 graduate of the New York C. P. His brother, Herman Casseberr, has a pharmacy at Forty-second street and Ninth avenue.

OSCAR DAHLGREN, 59 years old, employed at Lumber Plain, Boston, as a druggist, committed suicide by cutting his throat with a razor.

FEW PRICE CHANGES AND THEY FAVOR BUYERS.

New York, June 30.—Although inquiries have been confined for small parcels, the aggregate volume of business has continued of last average proportions and dealers have shown no inclination to complain. A majority of the fluctuations in values have favored buyers but the changes are more in the way of revision than actual declines.

OPPIUM—A continued tame and uninteresting market is reported without further change in values and jobbers are quoting \$3.25@3.40 for 9 per cent. and \$3.25@3.50 for 11 per cent. Powdered is moving slowly in small lots at \$1.25@1.50 for 13 per cent., \$1.75@5.00 for 16 per cent. and \$1.80@5.00 for granulated.

MORPHINE—A continued active jobbing business is in progress with quotations steadily maintained at \$2.50@2.60 for eighths in ounce-boxes, \$2.45@2.55 in 2½-oz. boxes, \$2.25@2.35 in ounce-vials and \$2.20@2.30 in 5-oz. cans, as to brand and quantity, less the usual rebate on purchases of round lots.

QUININE—There have been no further developments since the decline noted last week and the market has ruled quiet with jobbing quotations nominally unchanged at 23@23½c. for bulk in 100-oz. tins, 23½@24c. in 50-oz. tins, 24@24½c. in 25-oz. tins, 25@25½c. in 15 or 10-oz. tins and 30@30½c. in ounce vials, according to brand and quantity.

MEXICAN BLS.—Competition among importers has had a depressing effect on the market and jobbers have reduced quotations to \$8.00@8.50 per lb. and 60@65c per ounce.

SENEGA ROOT.—Values continue to show a declining tendency and jobbing quotations have been further reduced to \$1.10@1.20 for whole and \$1.20@1.30 for powdered.

ARICA NUTS.—Supplies are more abundant and jobbers have marked quotations down to 20@25c. for whole and 25@30c. for powdered.

HEPAC.—Rio is easier and jobbers are willing to sell at \$1.70@1.85 for whole and \$1.80@2.05 for powdered, according to quality.

UNION SALAD OIL.—Manufacturers prices are 2c. higher and jobbing quotations show an advance to 55@58c. by the barrel and 47@47½c. for less.

OIL SPEARMINT.—Jobbing prices have been reduced to \$1.00@1.25, according to size of order.

OIL WORKWOOD.—Trading has been light and import and revised jobbing quotations show a reduction to 8@25@7.00 for best and 85.75@6.25 for good.

BALSAM TOLU.—Lack of demand and a consequent easier market have caused a decline in jobbing prices to 30@32c. for 50-lb. cans, 31@34c. for 10-lb. cans and 37@42c. for less.

THYMOL.—Foreign markets are lower and spot and jobbing quotations have been reduced to \$2.50@2.75 as follows:

MOSES.—This Cape are exceedingly scarce, the stock of being almost exhausted, and jobbers have advanced prices to 22@27c. for whole and 27@32c. for powdered.

BICHE LEAVES.—Short are slightly easier with prices of 11@12c. showing a decline to 30@36c. for 10-lb. and 11@15c. for powdered.

JAPAN WAX.—Foreign markets are called lower and quotations on this commodity have been reduced to 20@21c.

BLEU VITRIOL.—Standard are offered more freely and prices are advanced to 2½@3c. for 50-lb. cans, \$7.10 for smaller quantities.

SPIRIT CELL.—Revised quotations show a decline to 70½c. for 1-lb. and 21½c. for cakes.

PERKLY ASI PERRIS.—The market is better and revised quotations stand at 30@35c.

PEPPELY H BARK.—P for a molar 1½lb. and 1½lb. 1.50@1.60 for whole.

HIM BARK.—Standard are offered more freely and revised quotations are 20@22c. for 10-lb. and 30@32c. for 5-lb. cans.

PUMP SEED OIL.—Standard are offered more freely and revised quotations are 10@12c. for the best and 10@12c. for the second best.

BUSINESS NOTICES.

A HELP IN PRESCRIPTION WORK.

There are a great many things that the average dispenser can't remember, and there are as many more that he shouldn't try to remember—it isn't safe. These things come up in prescription filling when time is an important factor and accuracy is strictly essential. There are questions about dosages, dose equivalents, percentage solutions, specific gravity, incompatibilities, metric and thermometric equivalents, meanings of Latin, French or German terms. These things are all tabulated, or figured out, handy for instant reference, in the Era Dose Book (Third Edition, Revised and Enlarged). Price 50 cents, postpaid.

Is pharmacy a business or a profession?

The highly educated pharmacist who tries to conduct a store without a knowledge of business details will inevitably fail.

In the same way will a business man who tries to run a pharmacy without some knowledge of the profession inevitably come to grief.

Speculation as to the relative values of the two classes of knowledge is useless—both are necessary.

There are good business men who make poor pharmacists, and good pharmacists who make poor business men.

If you belong to the latter class, we feel sorry for you, if to the former there is a remedy, The Era Course in Pharmacy.

Write to The Pharmaceutical Era, No. 8 Spruce Street, New York, N. Y., for a prospectus.

HARD CASH AND NO NONSENSE.

There has been a tendency of late years to exalt the bread and butter element of pharmacy at the expense of every other feature of the calling. Every movement and proposal has been subjected to the test, "will it pay," and there has been a very common inclination to sneer at everything in which a direct profit is not apparent. It is quite proper that the commercial side of pharmacy should receive a large share of attention, for upon that depends the welfare of the individual members of the calling, but it is well to keep in view the American propensity of carrying things too far. Men must have bread and butter, but in keeping our eyes too closely fixed upon the material we run the risk of missing immaterial rewards of far greater value. In its glorification of the commercial, pharmacy merely shows the influence of the times. Commercialism has invaded all walks of life, and colors our every thought and motive. In itself, and kept within bounds, this spirit is not unwholesome. It tends to remove the shams and false sentiment which are apt to conceal the things in life that are really worth while. But we can not afford to permit it to destroy the ideals that men in all ages have valued above mere gold. The care of the suffering and the cure of disease are services to humanity which should call out the most noble and unselfish qualities in men. Let us see what the reduction of the healing art to a hard cash basis has done. To give as little as possible and to get in return as much as possible, is the basic commercial principle. The logical result is a market flooded with quack nostrums, the disgrace of the pharmacist and the despair of the physician. What we need is not less of the vague something that the commercial world is pleased to call "nonsense," but more sentiment of humanity and unselfish devotion to the higher aims.

THE HISTORICAL ELEMENT.

Sentimental and unremunerative devotion to calling are not dead in pharmacy, although the spirit manifested at some recent gatherings would lead one to think so. There are even flourishing associations which could not be made to yield one cent of profit. The society of veterans in Chicago is entirely without any bread and butter features, and yet it inspires

more influential than any commercial association in the country. One of its enterprises promises much for the improvement of the professional pride and efficiency that American pharmacy so sadly lacks. It is the collection of historical material and the preparation of papers by men who have helped to make history. Mr. Ebert is doing a work which is of the greatest importance to the generations of pharmacists who are to follow him. As a lasting achievement the historical work of this association is likely to rank far higher than the saving of a few pennies on a secret remedy. And the work is not by any means all self-sacrifice. Mr. Ebert finds reward enough, for we are told that he occasionally neglects his business to dig historical facts out of books and old papers. The historical committee of the American Pharmaceutical Association is doing similar work, but on a larger scale. Instead of one city, its field of inquiry includes the entire country. The committee has begun the collection of historical monographs for the use of future historians, and is ambitious to establish a national pharmaceutical museum at Washington. The fulfillment of this ambition may be several years off, but the most certain way to secure the desired result is to begin collecting now. Sections of the committee are collecting files of pharmaceutical journals and preparing life histories of the periodicals; compiling accounts of the work of the various U. S. P. revision committees; gathering data relative to pharmaceutical education, preparing histories of local associations, etc. This work is entirely free from the taint of commercialism. It can never pay, and must be followed purely for the love of it. Still we are convinced that the historical section of the A. Ph. A. will always receive as much attention as sections promising dividends, for we know that in spite of its apparently stolid spirit, the calling is not wholly given up to dollar pursuing.

DRUGGISTS ARE ALWAYS TRUTHFUL.

When the philosophers have figured out in their comfortable armchairs that the world is fast going to the bow wows, something will invariably turn up to show that things are not beyond repair by any means. The intense commercialism of the present time has caused many apprehensions. It has often seemed to students of the times that honor were at a discount. Now, all unexpected, comes a decision of a justice of the Supreme Court that a salesman must tell the exact truth about his wares. He ordered a firm to pay the complainant a large sum of money because "the statements made by the defendant were grossly untrue in fact and not mere expressions of opinion. They were untrue, deliberately made with the knowledge of their falsity, and with the intention to defraud and deceive the plaintiff." In other words the merchant in the business lie, and the judge trying to consider it a while ago. Deceiving customers were deemed desirable, to be contrary to law. It is possible that this decision will do more for the confidence of the country than has been called the best policy of any country and government, but there are a number of something else to which it is a sad and dead weight. The merchant has been the custom to excuse the customer's expense in payments, by saying that

everybody is liable to make a slip in the heat of barter. If it is true that this ancient principle is to be given up, it must be that the world is growing better. We do not, however, expect the millennium to come at once. Adulteration, substitution and the watering of stock are still very popular and profitable. Much water will flow through the mill before all salesmen will have lost the art of "saying the thing which is not," and all advertisements will be statements of carefully authenticated fact.

PATENT MEDICINE TAKING, A SYMPTOM OF INSANITY.

A Boston millionaire has died and, as usual, the heirs are trying to break the will. The reason given for setting aside the will is also the usual one, insanity, but the proofs are sufficiently unusual to attract the attention. It seems that the poor man had odd, though not extraordinary, notions about therapeutics. For instance, he considered sand a sure cure for dyspepsia, and occasionally refreshed his friends with doses of this valuable drug. But the main proof of the heirs, is the testator's fondness for patent medicines. He kept hundreds of bottles in his room and was fond of preparing evil-tasting mixtures. The case is still pending and the judge is probably having an interesting time preparing his decision. Whatever, that may be, we have our own opinion about the man's sanity.

WITHOUT ANY HABITS WHATSOEVER.

One philosopher says that, man is a bundle of habits, another that habits form character. A Trenton druggist seems to have discovered that in a drug clerk all habits are entirely useless and reprehensible. The Philadelphia Press recently contained an advertisement for "a registered pharmacist in New Jersey without any habits whatever."

THE STOMACH PUMP STILL USEFUL.

We do not know whether superstition has anything to do with it or not, but people still seem to have the primitive notion that every medicine is a sort of benevolent spirit that exercises a curious sovereignty over all ills, and will do no harm if it does no good. It is only in this way that it is possible to explain certain forms of carelessness in the use of drugs. A Boston woman recently suffered a severe headache and took the first remedy that offered without so much as looking at the label. It happened to be a solution for removing corns and required the vigorous attention of physicians and a stomach pump.

WHEN IN DOUBT, BLAME THE DRUGGIST.

A Washington correspondent sends us the following story, and inquires facetiously whether, in addition to the many indignities already heaped upon him, the long-suffering druggist is now also to be called to account for every iniquity that occurs outside his store as well as inside. A man standing in front of a drug store was knocked down by some one who escaped unseen, and the druggist being the only person in sight when the victim regained his feet was accused, as a matter of course. At the trial the pharmacist put in the best possible plea, namely that "he didn't do it," and was acquitted, triumphantly, be it said in justice to all concerned. It came out that the man deserved the chastisement which the real assailant cheerfully confessed to having administered.

POPULAR SCIENCE.

We have frequently heard it remarked that the writings of scientific men are not popular because they are written in a dull, uninteresting style. There is no doubt some truth in this statement, for men of science are by reason of their training and habit of thought, prone to devote much attention to accuracy and very little to grace of diction. The popular mind demands that its tastes and habits be very carefully considered—if it is not amused it wanders—and this is precisely what the man of science can not and will not do. He considers only the observed phenomena, and the accurate recording of his observations. But the fault does not all belong to the man of science. We have recently had a number of exploitations of the sort of science that the popular taste will endure, and it is pretty poor science. The trouble seems to be that the popular mind is essentially unscientific, and can be brought to accept anything of a scientific nature only by means of startling facts and adventurous speculations. The people care nothing about the fundamental laws and truths which are the important portion of science. What is wanted is something sensational, something unheard-of in common experience, and yet stimulating to the imagination. There have lately been many popular discussions of the more spectacular of recent discoveries—some studies in biology and the strange behavior of radium. Are the real wonders of the phenomena held up to an admiring public? Not at all. The successful popular science writer "plays up" some unimportant feature or wanders off in some unwarranted speculation—in other words, follows the exact tactics of the sensational journalist. The resemblance between the so-called science printed even in our most conservative magazines and the daily outpourings of the yellow press is startling—the same hysterics, the same inaccuracy, and the same omission of essential details!

ERA COURSE IN PHARMACY.

Graduates for June, 1903.

Matriculation No.	Name	Grade	Per cent.
2949	Archie W. Armstrong, Dwight, Ill.	96
3509	A. M. Parker, 222 Ohio St., Chicago, Ill.	96
348r	Sister Agatha Barrett, Maryland General Hospital, Baltimore, Maryland.	98

The above graduates will receive diplomas within a short time. A large and very handsome engraved diploma, printed on artificial parchment, with the graduate's name engrossed, especially suited for framing will be furnished to all who request it for the sum of \$2.00. Those who desire the latter should forward the necessary fee at once to the Pharmaceutical Era.

The Grindstone Goes on Turning.

"I can't abide to see men throw away their tools i' that way the minute the clock begins to strike, as if they took no pleasure i' their work, and was afraid of doing a stroke too much. I hate to see a man's arm drop down as if he was shot, before the clock's fairly struck, just as if he'd never a bit o' pride and delight in 's work. The very grindstone'll go on turning a bit after you loose it."—George Eliot.

Minding One's Business.

Minding one's own business is all very well, but the clerk of today, who loses no opportunity of learning something about the other fellow's work, may be the manager of tomorrow.—Spatters.

DOES NOT AGREE WITH THE ERA ABOUT NATIONAL BUREAU OF FOODS AND MEDICINES.

Forest Hill, N. J., July 1, 1903.

To the Editor:—I request the privilege of briefly discussing your comments upon the proposed National Bureau of Medicines and Foods, on the first page of your issue of June 18. I am sure that you will not consider it disrespectful for one who has assisted in working out the "mass of necessary details" to which you refer, to say that had you possessed sufficient time to have understood these details you would have recognized the inconsistencies of some of the ideas expressed in your editorial.

1. The practicability of successfully operating such a Bureau can not seem more doubtful to you than it did to us when we first considered it. We have reached a different conclusion because we believe that we have found a practical solution of every difficult problem which has presented itself to us, as it does to you. We think it highly improbable that you or others will think of any important difficulty which has not been considered in the three years of study which the plan has received, because we have enjoyed the criticisms of practical people throughout. This consideration should suggest the probability that our conclusions may be correct and should entitle the enterprise to a full discussion.

If I interpret your views correctly, you recognize in general the legitimacy of the field of operation of the Bureau, in view of existing conditions. I have met scarcely anyone who does not, and I think it is also true that the desirability of accomplishing, in some way, the purposes contemplated by the Bureau, is very generally conceded and need not be discussed. The practicability of the plan is the subject of discussion.

2. You say: "This board is to fix standards of identity, purity, quality and strength not in conflict with the U. S. Pharmacopoeia, etc." The Pharmacopoeia has already established these standards for the great majority of the preparations, so far as drugs and medicines are concerned, with which it would be the intention of this Bureau to interest itself. In the case of any article for which these specifications are not given in detail by the Pharmacopoeia, it would be the purpose of the Bureau to adhere as closely as possible to its principles and spirit.

3. Your comments on the failure to accomplish the desired results by Government act are very mild. Let me add that the most recent attempt failed through the operations of what has been declared to be the most wealthy and powerful lobby maintained at Washington in twenty years. The Government has been authorized to rigidly restrict foreign adulteration of goods to be sent here, but it was forbidden to interfere with domestic adulteration of the imported articles after they get here. Is the fact that our manufacturers, thus represented, have virtually demanded and secured a monopoly in the degradation of goods, entirely without significance? I may view this case wrongly, but I certainly state my view correctly. If it is wrong, it is in order for you or those who see the error to point it out conclusively.

4. You say: "Under existing conditions it can not pay even a majority of the manufacturers of the country to abandon every trick of production, legitimate and otherwise, and to adopt absolute sincerity in advertising methods while their rivals employ all the

Members of the Connecticut Pharmaceutical Association, Beachside Inn, 1903, Annual Meeting.

omogenous devices which years of keen competition have developed. Non-interference has been the slogan of the opponents of pure food legislation, and the same principle will determine most manufacturers to leave the National Bureau of Medicines and Foods severely alone."

The error in this argument seems to me to lie in the supposition that the other houses will continue in their perverse course, as you assume. Those who have studied the situation, while in doubt on many points, are no longer so regarding certain others. One of the latter is the attitude of physicians and, to almost as great an extent, that of pharmacists. Just as soon as pharmacists become informed of the possibility of securing an article the official quality of which is guaranteed by so responsible an authority, it would be to their interest to educate their medical friends to this fact, so that the latter, influenced by the testimony of manufacturers' representatives, would not longer compel them to keep several different brands of the same article one brand bearing the Bureau's certificate would be as good as another. And just as soon as the physician secured the same information he would demand goods bearing the Bureau's certificate to the rejection of all others, from whatever source. The views of medical men have been sufficiently conveyed to make us sure of these facts.

Perhaps my view of the matter can be most clearly stated as follows: At the present time the competition of a very few and relatively insignificant houses enables a large number of manufacturers, at various points in process of an quality or in both, because there is no reliance upon which they can fall back in presenting their adherence to the principle of good quality to the public, from coming to the heads of the law who are bent on supplying poor goods to the public. If it is a simple matter of daily necessities, such as toilet articles, they must either yield or lose the business. And the same applies to the influence which will be exerted by the Bureau, if it could. A very few countries, such as Germany, with the Bureau's certificate, would make their usual toxic methods become good samples, even though the latter were present.

As you say, "The same can be said of that a manufacturer's adherence to the standard is far from the truth, and that the Bureau, from and that the only way to secure a better standard is to have a law of its own."

a valuable acquisition." There is no such inference! Let us assume that every word stated by every manufacturer is true (and it would not be the Bureau's intention to say otherwise), and the situation is still just the same as it would be if all they said were untrue. It is through the manufacturers' own action that they are distrusted. Each manufacturer maintains a force of travellers whose business it is to make physicians and pharmacists of the United States believe that all other manufacturers are saying what is not true. Is it not to be expected that each of these will meet with a certain degree of success? We do not believe that any considerable number will distrust the statements of the representatives of the two national associations, when once the organization is understood. You may imagine for yourself the effect of such a situation as the following: The Bureau refuses its certificates for a certain lot of an article. Only the manufacturer concerned is advised of this fact. He objects to the Bureau's findings and states that his own chemist has reached a different result. He is thereupon respectfully referred to a certain sample analyzed by his own chemist at the Bureau's request, on a certain day and under a specified number, and is informed that this sample represented his own goods and that the Bureau's findings were those of his own chemist. Or, one manufacturer may express doubts about the certificate given to another's goods and then find in like manner that the result advertised by the Bureau is that reached by himself and others who have reported under number only, on the goods in question.

Concerning your closing paragraph, we can only repeat in earnest and with absolute knowledge of the facts, what you say in sarcasm regarding physician's distrust of manufacturers' advertising literature. Possibly you are thinking of journal advertising, whereas we are thinking of the persuasive circulars, the throwing of which into the waste-basket consumes a large and disagreeable portion of the physician's leisure time.

I really think Mr. Editor, that you know this as well as I do, and that you would not be willing to make a serious and explicit denial. I am cautionsure that the Bureau's statements, when the manner of their origin is understood, would not meet with a similar fate.

H. H. RUSBY, Chairman.

SHOP TALK

THE C. P. HAS A LETTER WHICH THE DRUGGIST AND THE CLERK PROCEED TO ANSWER.

"I have a letter here," began the C. P., "that you will, please, think about a moment."

"Some more standard nonsense?"

"Hardly! The soda fountain!"

"That sounds promising."

The sage carefully adjusted his spectacles, spread a letter post-marked "Chicago" on the show case, and read:

"Has the C. P. ever meditated on the fact that many people mix up cause and effect, profit and loss, gross revenue and net revenue, apparent profit and real profit?"

"The journals are full of articles on 'How to make the Fountain pay.' Here is a very, very, very plain question, and yet I think very few fountain druggists have ever asked themselves that question, 'Do the fountain men figure on interest and the wear and tear?'"

"I have seen it stated and figured out that the usual interest and the usual wear and tear just about wipe out a plant (apparatus) in seven years. That is, if you pay \$3,000 for a creation of an apparatus, inside of seven years you do well to get an expressman to haul it away for what he can get out of the mess—and you are out your interest.

"Has the C. P. ever run a fountain? Does he know what the ice, the ice-cream, the napkins, the soda crackers for free lunch, the flowers, the fans, the electric current for fans, the light, the extra light for extra hours, the extra wages, white jackets, etc., cost? And then sell a glass of 10-cent ice cream for 5 cents, and have people monkeying around the soda bar for ten minutes?"

"Yes, I said bar, Mr. C. P. Law and order leagues thunder against knockout drops at the regular bars. What about the pharmacy soda bar, where, according to official reports, the white winged harkeeper interprets the wink of a young gentleman and slings a dose of gin fizz dope into his young lady friend's glass?"

"Does it pay financially? Does it pay morally to run a bar in the pharmacy? Let the C. P. who solves many questions that are hanging fire between heaven and hell settle this, or try to settle this problem!"

"The question of shorter hours is a pressing one. Most people are glad to quit at 10 p. m., but the fountain makes it necessary to keep open shop on warm nights, just when rest in the open air is most desirable.

"What is there fascinating about the dashed thing? Why do so many fools believe that every cent coming in over the fountain counter is clear net profit? Ask them, man to man, and few will have the cheek to even claim one cent profit. All admit the eternal bother, nuisance, cost of material, repair, long hours, etc., and yet they hang on to it—so does a moth hang around a flame until it hugs the deadly fire in a last fatal embrace."

The old man looked at the druggist over his spectacles. "Well, why don't you say something?"

"It's up to you to settle it."

"Pretty strong language! What do you think?"

"If your friend feels that way about it, he is right, of course."

"You mean, if he finds it all bother and no profit, he had best leave it alone?"

The druggist nodded. "You see, the fountain is like everything else—it depends. If the conditions of locality, neighborhood, etc., are right, and the druggist cares to go in for that sort of thing, it can be made profitable. But if the pharmacist is a conservative gentleman with a professional reputation on a

quiet street, a soda fountain would not add greatly to his peace of mind."

"The fountain is not exactly an ornament to the profession."

"Perhaps not; but it is an ornament to a drug store and a good advertisement, too."

"What do you think of my friend's remarks about 'knock out drops at the fountain bar?'"

"That is a serious matter as far as the calling is concerned, but it should not keep an honest druggist from having a fountain. It is the black sheep that do these things, and it isn't fair to lay it all to the fountain."

"It does not necessarily lead a man to break every moral and civil law."

"Of course not! Lots of Sunday school superintendent bank clerks skip with the stuff, but I'm not prepared to blame either the banks or the Sunday schools for the skipplings."

"All right! Now about the paying part of it."

"Charley, here, can tell you about that. He used to be a soda expert. Does it pay?"

"It does if you sell enough and get enough for it," said the clerk. "In that it is like everything else. In a big store like Riker's, where they have six men and sell \$300 worth of drinks a day, the net profits are just about fifty per cent. In a smaller store it is less, but not necessarily in proportion. It is a small store where they can't sell at least 200 glasses a day. At that rate the cost of materials ought not to be more than 48 per cent of the total receipts. That is, if you use the best material and charge ten cents for ice cream and egg drinks."

"Ah, if you charge ten cents!"

"Yes. There is no profit in selling good ice cream soda for less—at least in this city—and it doesn't pay to sell poor stuff at all."

"But can you get ten cents?"

"Of course you can! There will be no difference in the number of sales either. There are a heap of small five cent places and there is no excuse for them at all. I am speaking only for New York."

"How about interest on the fountain, and deterioration?"

"That doesn't amount to much. A fountain need not cost so much. I know a druggist who sells \$1500 worth of soda a month out of a fountain that costs about that much. A decent apparatus ought to last a life-time. Nothing to wear out but the plumbing, and that can be replaced for a fraction of the cost of setting up in the first place."

"But the interest!"

"Take a \$1500 fountain. The interest is \$60 a year, or distributed over the 30 warm weeks it is only \$3 a week. Compared with the other expenses and total sales it is nothing. Of course it would be foolish to sell five-cent ice-cream soda at a \$10,000 fountain on a back street. You've got to take these things into consideration. A fountain needs a place where lots of people pass, and it's got to be pushed like everything else."

"Are you certain of your figures?"

"Sure! They are recent too. Got them of my friend Hanson up in Sixth avenue. He has changed a sleepy outfit into a paying one by hiring a Chicago expert and displaying things. He has two experts now, and uses the same little old fountain. It isn't the looks of the fountain that does it."

"Why Chicago expert?"

"Because the best mixers are mostly from Chicago. There are only three cities in the United States where they mix soda properly—Chicago, St. Louis and Boston."

C. S. HANKS, Newark, N. Y.

An ex-president and present secretary of the Wayne Co. (N. Y.) Branch, N. A. R. D.

"Missionaries from these places teaching the rest of the world, eh?"

The clerk laughed. "They are missionaries that have got to hustle, all right! It all depends upon how a soda business is run. It is foolish to get an expensive outfit and then not hustle things along."

The C. P. looked at the druggist. "So you see, it is a matter of hustle again. Can't we ever get away from that word?"

"Not as long as you want to keep up with the procession. When you're dead you may get a rest."

"I doubt it!" said the sage gravely. "But at any rate it isn't real pharmacy, you know."

"What isn't?"

"The soda fountain."

"No, perhaps not! But it looks well in a pharmacy."

"Besides," remarked the clerk, "Hanson says you can estimate the direct profit on the soda, but the advertising by bringing people in no one can estimate. And who is better qualified to make good syrups than the pharmacist?"

"Oh, you fellows are so horribly commercial!"

WHEELS WHIRLED BY TOOTH-WASH!

"What makes the wheels go round?—Vetter's Tooth Wash" is a brand placarded in C. E. Vetter's window uptown in Madison avenue. Just where the connection comes in between wheels and Mr. Vetter's dentistry is hard to understand.

No Rules for Advertising.

There are advertisements to be wise, but no rules here as yet been found which it would not at times be wise to disregard. Every advertiser must be a law unto himself. He must shape his own policy and make his own laws. His own experience will be worth more than the conjectures of all the rest of the advertisers in the world. It is not to say that he shall ignore the methods and announcements of all the other advertisers. Nothing that he can gather on the subject is useless, but in the practice or art of advertising, there is no such thing as a "copy-book."

SHOP NOTES AND DISPENSING HINTS.*

By W. A. DAWSON, Hempstead, N. Y.

Difficult Prescription.

The following prescription has caused me much annoyance! It is from a consulting specialist of great reputation, likewise great fees, it has been repeated many times and as doctor and patient seem perfectly satisfied with it, I suppose that I ought to be. Still, one feels that the turning out of such a ghastly looking mess, were, somehow, a reflection upon the professional skill of the dispenser.

Magnesium sulphate lb. j
Acid sulphuric ss
Alcohol benzoic gr. xv
Alcohol q. s. ft. solut.
Water q. s. ad ʒij

I have tried all quantities of alcohol up to two ounces, beyond which I thought best not to go on account of therapeutic effect, but the benzoic acid immediately crystallizes out when the alcoholic solution is added to the salt solution.

The acid is unevenly distributed through the contents of the bottle as it stands at rest, some at the bottom of the bottle, some floating on the surface of the liquid and the rest suspended at various points throughout it.

Naphtalin in Suppositories.

I recently received the following prescription:

Naphtalin
Cera flava na. gr. l
Ol. theobromatis q. s.

Mix and divide into 10 suppositories.

The combination was new to me, and on reading the prescription I questioned if the prescriber had not ordered too much wax, or if he intended to have an insoluble suppository. But when I came to make up the mass, I found that the naphtalin had a softening effect upon the wax and cacao butter, even more so than chloral and the mass instead of being hard, was, in fact, softer than usual when quite cold.

As the prescriber specified no particular weight for the finished suppositories, I must perforce follow the rule and make them fifteen grains each; thus allowing of the use of but fifty grains of cacao butter and making the prescription equal parts of the three ingredients. I afterward found that this was what the physician intended.

In dispensing the prescription, the naphtalin was first rubbed down to fine powder in a mortar, the wax and cacao butter carefully melted with the least amount of heat possible and poured over the powdered naphtalin in the cold mortar, triturated quickly until stiff enough to handle; rolled out on a pill machine, divided with the cutter and the suppositories formed with the fingers, the board, mass and hands kept well dusted with corn starch to facilitate handling the soft and sticky mass.

Balsam Peru in Ointments.

The well-known tendency of Peru balsam to clot and stick owing to the rapidity with which it parts with some of its volatile constituents, during manipulation with spatula or pestle while endeavoring to incorporate it with an ointment, can be avoided by stirring the balsam into the ointment base after the latter has been softened by the application of a gentle heat.

The following prescription seems a very simple one, but I have seen several experienced dispensers make a mess of it:

Zinc oxide 1 ounce
Balsam Peru 2 ounces
Benzoinated lard 1 ounce

Make an ointment.

A ground glass ointment slab was heated by burning alcohol upon it and the zinc oxide and lard well worked together upon it with a broad heavy ointment spatula, until smooth and fine. The still soft but barely warm ointment was then transferred to an eight-ounce pot, the pot and contents balanced upon the

* Read before the N. Y. State Pharmaceutical Association at Pflanz, June, 1903.

scales and the two ounces of Peru balsam weighed directly into it and incorporated by quickly stirring it in with a stick. The resulting ointment is a beautifully smooth preparation.

Methylene Blue and Essential Oils in Capsules.

This is the kind of prescription that one would rather the patient had taken to his rival in business to have prepared. In fact, it is quite likely to make the dispenser feel blue if it comes in, as this one did, on a Sunday afternoon just as the lone dispenser, "dressed in his best suit of clothes," had sat down to enjoy the quiet part of the day with the Sunday paper.

Methylene Blue,

Oil Nutmegaa. gr. 40

Oil Santalwoodgr. 80

Divide into forty capsules.

Soft capsules would have been the thing, the ingredients mixed with sufficient olive oil to fill the capsules, but the pharmacy in question had neither soft capsules nor filling apparatus.

Had the clerk but known it, there is a ready-made capsule of this formula on the market, and the customer might have been "stood off" until they could be procured.

Little realizing the hard proposition that he was up against, the clerk started in to mass the ingredients and fill into hard capsules while the customer waited.

When I arrived upon the scene about an hour later, even the air of the laboratory was blue and the clerk was talking softly to himself, the burden of his lament being something about the folly of the physician who gives his patients laundry blue in place of medicine.

Licorice and other absorbent powders had been added until it would have been impossible to get the mass into the largest OO capsules. The contents of the mortar were thrown out and a fresh batch started; a few grains of soap and a fair amount of licorice was added and the mass was made up with a few minims of water and a little honey. The mass was very soft and, as the pastry-cook would say very "short," but it clung together enough to enable us to stuff the greasy blue boluses into the capsules. The customer had long since departed, after leaving instructions to send him the capsules next morning. As the dispenser surveyed the wreck before starting in to clean up he remarked, that it was the bluest Sunday he had ever experienced.

Correct Dimensions of Powder Paper.

To fold and fit correctly, the powder papers should be $3\frac{1}{4}$ times the depth and $1\frac{2}{3}$ times the length of the powder box in which they are used. That is, for a box 3 inches long and one inch deep, the powder papers should be $3\frac{1}{4} \times 5$ inches. The first fold or lap, should be $\frac{3}{4}$ the depth of the box in width, the second fold coming to the exact center of the finished powder, and the turned over ends of equal length and with a space between these ends of the same length. That is: in folded powder 3 inches long, each folded over end would be 1 inch long and the space between these ends 1 inch also.

The Paste Pot.

The best of all receptacles for label paste, is the old-fashioned turned in edge soda-water glass—the old original soda tumbler of Matthews invention. The paste made with the finest wheaten flour with ten per cent. of white dextrine added and well cooked, and the brush a one-inch flat, bristle varnish brush, "water-proof fastened." A place for the paste-pots in use is made by boring a hole with an extension bit, in a shelf wherever convenient; the hole being of a diameter that will admit the lower half of tumbler. Covers slightly larger in diameter than the top of the tumblers are cut from very heavy cardboard boxes the centre scored star-shaped and the handle of the brush pushed through it, the points of the star holding the brush handle at any desired height.

Their superiority over any patent paste pot is their cleanliness; a small amount of paste, only enough to

last a day or two is placed in the glass and when this is used up or the pot becomes soiled, it is replaced with fresh paste in a clean glass with a clean dry brush and a new card cover. And the dirty glass and brush is put to soak, afterwards cleaned and dried and placed with the reserve stock of tumblers and brushes, those in reserve being equal in number to those in use.

A Reminiscence.

These old-fashioned soda tumblers recall to my mind, my early 'prentice days in an "up State" city. The big "Drug Store"—there were few "pharmacies" then—with its hand-made shell-ware with the labels painted on the sides of the bottles; and the big "Puffer" fountain with its combination faucet, my especial pride. Here, on hot nights I took my stand with both hands on the throttle not removing my hands from the faucet for a moment during the next three or four hours. A big rubber apron wound around me to protect my clothes, one boy washing glasses and placing the clean ones under the spout and another boy taking orders and making change, we jerked soda out of that combination faucet faster than I have ever seen it done before or since. With our system and the combination faucet we drew more soda during the rush hours than a twenty-footer with three or four attendants can do to-day. Those were the profitable days of soda-water; there were no fancy drinks, no ice cream, no eggs to break, lemons to squeeze or crushed fruits to mess with. It is curious how things change about; then people were quite content to wait an hour or two for a prescription but wanted their soda as quick as you could draw it. Nowadays, they fume and fret and stamp up and down the floor when they have to wait a few minutes for a prescription, but when they pay five cents for a drink they expect a five minute exhibition of juggling with bar paraphernalia by a "soda-expert" as a prelude to the serving of their glass of soda.

Poison Bottles.

Every once in a while some enterprising chap tries to run a poison-bottle bill through the State Legislature. As it always costs the pharmacists of the State some little money to send representatives to the capitol to defeat such measures and there is always a possibility of a bill slipping through, wherein some fellow's patented bottle is designated as the legal container for poisons, it seems to me a good idea for the Association to formulate a poison-bottle measure and endeavor to have it passed.

There is now no so-called poison bottle in use that serves the purpose for which it was designed, because there is no law designating it as the legal container for poisons and making it a misdemeanor for any one to use it for any other purpose.

As matters now stand, the careful pharmacist dispenses poison in suitable bottles, the patient uses up the liquid, washes the bottle out and takes it to the careless druggist to be filled with some harmless remedy for internal use. Thus we frequently see special poison bottles with labels for paregoric, syr. Squills, witch hazel, and the like upon them.

As regards the shape of a poison bottle, I would suggest a broad-based squat design, similar in appearance to an ink bottle, as being a shape that long usage has taught people to regard as being a container for liquids that are not used internally.

"Tapping a Patient."

THE CONTRACT SYSTEM.

Charles H. Landell, President of the Bayonne, N. J., Druggists' Association, Tells How a Pernicious Burden was Thrown Off.

Charles H. Landell delivered the following address at the last annual meeting of the New Jersey Ph. A. Mr. Landell's city, Bayonne, suffered under what many other cities of New Jersey and of the entire Union are enduring today:

My subject is what is generally known as the Contract System, in other words, the relation of the pharmacist to the various beneficiary organizations.

For an adequate understanding of the subject it will be necessary to go back some ten years, when there developed in our city a craze for the forming of various beneficiary societies. First came the Junior Order of American Mechanics, then three distinct branches of the Foresters, the Daughters of Liberty, and lastly the Patriotic Sons of America. At first these several orders flourished very successfully.

But after two or three years, membership competition became more keen. Organizations began holding out additional inducements to the prospective candidate. One of these inducements was free medical advice, as well as all the medicine needed.

This made it manifestly necessary for the organization to make some arrangement or contract with the physician and the pharmacist. Well, that was very easily arranged, and the rate was standardized throughout the city at \$1.00 per capita. In other words a society or lodge, having a membership of, say two hundred, was required to pay to the physician and pharmacist the sum of \$200 a year, less the number of delinquents, which usually comprised about 20 per cent. of the total membership, and received no benefits.

Everything progressed very satisfactorily for several years; then, like all good things, abuses began. Fortified with the assurance that they were immune, so to speak, from fees to physicians and pharmacists, many members began petty impositions, which speedily became as unbearable as the plan itself was illogical. These impositions naturally fattened upon the acquiescence of the physicians and pharmacists, and soon attained alarming proportions, physicians were required to prescribe for such serious ailments as sunburn, and the druggist had no alternative but to compound the prescription. If the brother had had to pay for such a preparation, he would have gone without it or have used some domestic remedy. It is a fact that during the last year of the contract system its privileges were abused to such an extent that the pharmacists of the city were obliged in self defence to adopt drastic measures. A conference was held with the physicians, who also had a grievance and had previously concluded to dispense with all contract work.

Following closely upon the heels of that conference, the Bayonne Pharmaceutical Association, of which I have the honor to be the president, held a special meeting at which the following resolution was unanimously adopted:

Resolved That we members of the Bayonne Pharmaceutical Association do hereby and hereon agree and promise not to accept any contract work from any society, lodge, or beneficiary organization, and to resist the effect on January 1, 1903, We will, upon notice, and demand to every organization to do so. The physician did likewise.

We will not discuss with these resolutions were carried, thanks to you! Indignant meetings were held in our city and protests were made by all of the members of the city. The physicians and pharmacists were very angry, a most severe trial, and the physicians that I mentioned were the best of an excellent profession. The reporting for the contracting of contract work, between the pharmacist and physician, on one side, and the society or lodge, on the other, was as follows:

President of the Bayonne Pharmaceutical Association, in the title of the

The beneficiary organizations, balked of what they regarded as their legitimate prey, resorted to desperate tactics in the effort to "make good." They advertised for a physician and a pharmacist to locate in the city. This consummation, however, I regret to say, was not reached, for it was made unnecessary by the defection of one of our brethren and one of the physicians.

This was expected to smash the "Doctors' and Druggists' Trust" as the press named us. I am inclined to believe that we have not been very seriously smashed after all, despite the fact that this physician and pharmacist are getting the work of all these organizations in the city with a single exception. The trade amounts in the aggregate to the munificent sum of about \$1,000 a year.

Neither the physician nor the pharmacist has as yet bought any brown stone fronts, but the game is young. At any rate they are welcome to what they get out of it even if it should be a few dollars more than their expenses.

These are not the times of the black draught and the gambogine pill, these are the days of advanced pharmacy and business methods.

Putting one's self at the mercy of any lodge brother for the paltry sum of \$1 a year is a very short sighted business arrangement.

The independent stand, gentlemen, that we have taken down in our city, has proved a success. Why? Because it is born in common sense, matured on business logic, and nurtured on the broadest principles of justice and equity.

THEORY AND PRACTICE

REACTIONS OF SYRUP OF TOLU.

A. Astruc and J. Camille (Journ. Pharm. Chim.) have devised a method of distinguishing between the different varieties of syrup of tolu, which appears in three forms in continental pharmacy. The three syrups differ in the process of preparation, one being prepared according to the official process of the French Codex by digesting the balsam in water, another by precipitating tincture of tolu with simple syrup, and the third by mixing a distillate of tolu balsam with simple syrup. The varieties have been found to behave differently toward reagents. The syrup prepared according to the official process liberates iodine from a solution of potassium iodide while the other varieties do not. Both the official syrup and that prepared from the tincture give a greenish-yellow tint with alkalis, while the syrup prepared from the distillate gives no color.

COLOR REACTION FOR ALCOHOLS AND ETHERS.

Gavard (Journ. Pharm. Chim.) has developed a new color test for alcohols and allied bodies, the reagent employed being a 5 to 20 per cent. solution of potassium nitrate in concentrated sulphuric acid. When a little ether is carefully placed upon the surface of a few C. of this mixture an intense blue color is produced. The color disappears upon shaking, but reappears after standing and continues to form after several shakings. The temperature most favorable for the reaction is between 15 and 30 degrees C.; at very low temperature no color is produced. The reaction is obtained with many alcohols, esters, sugars and similar bodies. The test is most successful with liquids. With solids, a small particle is floated on 2 or 3 C. of the reagent and before charring can occur a few drops of water are added. The color develops upon standing but is less intense than that obtained with liquids.

PHOSPHORESCENT BACTERIA.

Considerable success has been attained in the production of light by means of micro-organisms. Ex-

periments with micrococcus phosphoreus have been so successful that Prof. Hans Molisch of Prague (Kais. Akad. Wiss.) states that cultures of these phosphorescent organisms may be employed as a source of light in powder magazines and store rooms containing inflammable vapors and gases. A one or two litre flask containing a culture of the micrococcus in a suitable medium emits sufficient light to read the time as shown by the hands of a watch and to see the end of the mercury column of a thermometer at a distance of one or two meters. On a clear night a flask of this kind is visible at a distance of more than sixty paces. The flasks may be sealed and it has been suggested that they might be lowered into the water and used to attract fish instead of bait.

THE PREPARATION OF OINTMENTS.

Astruc and Robert (Rep. d' Pharm.) describes a method of incorporating powders in ointment bases that seems to possess advantages. The medicinal powder is rubbed in a mortar to remove mechanical adhesions and passed through a sieve. The mortar and pestle are heated by burning a few C. c. of alcohol in the mortar and after wiping with cotton about to grams of the ointment base are added and thoroughly rubbed into the sides of the vessel. The finely divided powder is then added in small portions and thoroughly incorporated, after which the remainder of the excipient is added and mixed in. The heated mortar softens the excipient thus rendering the incorporation less difficult, and by covering the inside of the mortar with the excipient before adding the powder, adhesions to the vessel are avoided.

METHOD OF ADMINISTERING QUININE.

Borde (Gaz. des hopitaux) employs a method of administering quinine sulphate that overcomes the repugnance caused by the bitter taste. One gram of quinine sulphate is mixed in a mortar with 8 grams of olive oil. A table spoon is partially filled with sweetened milk and the oily mixture placed in the center. Children experience no difficulty in swallowing the milk and oily mixtures, and if the dose is followed by a drink of water or wine no bitter taste is developed.

SOLUBILITY OF PHOSPHORUS.

C. Stiek (Pharm. Zeit.) has determined the solubility of phosphorus in various liquids. Almond oil, 100 parts, dissolves 1.25 parts of phosphorus; the same quantity of oleic acid, 1.06 parts; liquid paraffin, 1.45 parts; water, 1.0003; acetic acid, .105 parts. Phosphorus dissolves very slowly in most of its solvents, frequent agitation for weeks being in some cases required before saturation is affected.

GLYCOLATE OF MENTHOL.

Menthyl glycolate is a newly patented product said to possess the therapeutic properties of menthol without any irritating effects upon the lining of the stomach. It is an ester prepared by treating menthol or its derivatives with glycolic acid or its derivatives. It is entirely without taste and possesses the advantage not found in other menthol compounds of being completely decomposed by the alkaline fluids of the intestines.

HYDRASTININE REACTION.

Jorisen (Ann. Chem. Analyt.) finds Nessler's reagent a means of distinguishing hydrastinine from most alkaloids. A few drops of the reagent added to an aqueous solution of hydrastinine hydrochloride produces an immediate black precipitate of mercury. Morphine and apomorphine are the only bases that also produce more or less reduction. The glucoside, picrotoxin also reduces Nessler's reagent immediately in the cold.

SANTHÉOSE.

M. Huchard (Le Praticien) describes a combination of theobromine manufactured in France. The preparation is mixed with various medicinal agents such as sodium phosphate, lithium carbonate, etc.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulae and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Solution of Albuminate of Iron.

(A. W. P.) The following formula is printed in the last volume of the Proceedings of the A. Ph. A. as one of those formulas which have been accepted by the Sub-Committee on Construction of Formulas of the N. E. and recommended for adoption:

Egg albumen, liquid.....	40 grams
Dialyzed iron	200 Cc.
Alcohol	120 Cc.
Aromatic elixir	400 Cc.
Solution of soda, distilled water,	
of each a sufficient quantity	
to make	1000 Cc.

Dissolve the albumen in 200 Cc. of distilled water; strain the solution through muslin and add the dialyzed iron previously diluted with 200 Cc. of distilled water. Dilute 12 Cc. of solution of soda with 100 Cc. of water and cautiously add a sufficient quantity of this fluid to the iron mixture to exactly neutralize it, as shown by the precipitate, which at first is light and fine, becoming flocculent and settling to leave a clear and nearly colorless supernatant liquid. (An excess must be carefully avoided). Wash the precipitate rapidly by decantation with distilled (or with freshly boiled and cooled) water until the washings give but a slight cloudiness with silver nitrate test solution. Drain the precipitate on a muslin strainer, transfer to a porcelain dish, immediately add 14 grams of solution of soda and while stirring add distilled water (not exceeding 150 Cc.) until the precipitate is dissolved. Then add the alcohol and aromatic elixir, and enough distilled water to make 1000 Cc.

Waterproof Polish for Shoes.

(A. H.) Try the following:

Beeswax	18 parts
Spermaceti	6 parts
Oil turpentine	66 parts
Asphalt varnish	5 parts
Powdered borax	1 part
Lampblack	5 parts
Prussian blue	2 parts
Nitrobenzol	1 part

Melt the wax, add the powdered borax and stir till a kind of jelly has formed. In another pan melt the spermaceti, add the asphalt varnish, previously mixed with oil of turpentine, stir well, and add to the wax. Lastly add the color, previously rubbed smooth with a little of the mass. Perfume with nitrobenzol and pour into boxes. Apply in small quantities with a cloth and brush. Use only once a week.

The following formula is also presented with the statement of the National Druggist that it makes a brilliant and excellent blacking:

Ivory black	40 parts
Sulphuric acid	10 parts
Fish oil	10 parts
Sodium carbonate, crystallized.....	18 parts
Sugar or molasses.....	20 parts
1/2% d. zinc, prepared as below.....	20 parts
Water	sufficient

... glue in 40 parts of ...
 ... melt with a gentle ...
 ... 80 ounces of the liquid glue add ...
 ... sodium carbonate in sufficient ...
 ... saturated solution in the cold (it ...
 ... three parts of water at (60 degrees F.) ...
 ... Next in an earthenware vessel moisten ...
 ... black with a very little water, stirring it ...
 ... with a wooden stick, and add the sulphuric acid, ...
 ... the mixture until a thick paste or dough is ...
 ... Next add the fish oil (any kind of animal, ...
 ... or even cod-liver oil will answer but it is best to avoid ...
 ... and incorporate by agitation, adding ...
 ... sufficient of the saturated solution ...
 ... to cause effervescence, but ...
 ... until effervescence ceases, then add the molasses or sugar, according ...
 ... as you want a soft, damp paste or a drier one, and, ...
 ... finally, add a little at a time, under constant stirring ...
 ... sufficient of the glue solution to make the paste of ...
 ... the desired stickiness. The exact amount of the latter ...
 ... must be learned by experience. It is however, a most important item, as it gives the ...
 ... a depth and brilliancy that it otherwise could ...
 ... not have (and in which most of the blackings on the ...
 ... market are sadly deficient). Besides this, it renders the ...
 ... leather soft and supple.

Brown Coloring Agents.

(H. L. S.) We know of no dye, and so far as we are aware, there is no substance more "powerful" or so satisfactory as caramel for coloring syrup, pharmaceutical preparations, etc., a dark brown. The soft extract of licorice has been employed but cannot be classed with caramel for general efficiency. Aniline dyes have also been recommended.

Blanching Almonds.

(Student). Almonds are to be blanched by pouring hot water over them and permitting them to remain till the skin is soft, when a slight squeeze between the thumb and finger will cause the almond to slip out of the skin. No unnecessary heat should be continued longer than is required to soften the skin.

Who Can Tell Him?

(J. B. D.) asks: "How can the gum from "Tangle-foot" be removed from furniture without injuring the varnished surface?" Who can tell him?

GATHERED FORMULAS.

Elixir of Saw Palmetto and Sandalwood Compound.

- Saw palmetto berries..... 8 ounces
- Corn silk 8 ounces
- Sandalwood 2 ounces
- Sugar 6 ounces
- Alcohol 2 pints

Water, each enough to make..... 2 pints
 Mix 12 fluid ounces of alcohol with 36 fluid ounces of water. With this menstruum moisten the previously ground drugs and macerate during 24 hours. Then pack firmly in a percolator and pour on the remainder of the menstruum, allowing the percolate to drop slowly. In this dissolve the sugar by agitation. Finally pass sufficient water through the exhausted drugs to make the finished elixir measure two pints. Carmine may be added if the color is not deep enough. Each fluid ounce represents about 120 grains of saw palmetto berries, 120 grains of corn silk, and 20 grains of sandalwood.

Fumigating Pastilles.

- Benzoin 1 ounce
- Myrror 4 ounces
- Mastic 1 1/2 ounces
- Essential oil of 1 1/2 pints
- Oil of 1 ounce

Oil of cloves 5 ounces
 Potassium nitrate 2 ounces
 The benzoin, cascarilla, and myrror are to be separately powdered, and mixed on a sieve with the charcoal, the potassium nitrate is then to be dissolved in a mucilage of tragacanth, with which the whole is to be made into a paste and divided with a pastille mould, and gradually dried.

The mode of using pastilles is to place a piece of glazed paper over a glass of water, and to stand the pastille upon the paper for ignition. As soon as it is sufficiently consumed it will burn a hole through the paper and be extinguished by falling into the water.

Almond Cream.

- Spermaceti 4 drams
- White wax 2 drams
- White castile soap 2 drams
- Blanch'd sweet almonds..... 4 ounces
- Alcohol 6 fl. ounces
- Rose-water 16 fl. ounces
- Oil rose 6 drops

Rub the almonds with the water, then melt the wax and spermaceti by means of a water-bath; mix the two, then slowly add the alcohol in which the oil of rose has been dissolved, and finally strain through cheese-cloth. Put in six-ounce short Blakes, label to cover front and sides. Cap the cork with kid, and tie with very narrow ribbon.

(Without Almonds)

- Powdered castile soap..... 5 grams
 - Powdered boric acid 1 dram
 - Powdered tragacanth 50 grains
 - Glycerine 6 fl. ounces
 - Water 2 pints
- Mix and macerate for 24 hours; strain and add:
 Tincture of benzoin..... 2 ounces
 Oil of neroli..... 2 drops
 Oil of bitter almond..... 4 drops

Tooth Soap.

- Medicinal soap 20 parts
- Salicylic acid 1/2 part
- Oil of anise 1 part
- Glycerine sufficient
- Carmine sufficient
- Eosine, of each sufficient

Color the soap to suit with carmine and eosine, add the oil of anise, and then the salicylic acid, dissolved in enough glycerin to give the resultant mass the consistence of a paste.

Renovator or Cleansing Fluid.

- Castile soap 4 ounces
 - Water, boiling 32 fl. ounces
- Dissolve and add:
 Water 1 gallon
 Ammonia water 8 fl. ounces
 Ether 2 fl. ounces
 Alcohol 4 fl. ounces

Fumigating Powder.

- Frankincense 4 ounces
- Benzoin 4 ounces
- Amber 3 ounces
- Lavender flowers 1 ounce

Mix. This is designed to be ignited upon coals, a stove, or hot iron to diffuse an agreeable aroma in an apartment, and incidentally to destroy noxious effluvia.

Complexion Jelly.

- Tragacanth 25 grains
- Glycerin 1 fl. ounce
- Boric acid 10 grains
- Alcohol 4 drams
- Water 7 1/2 ounces
- Spirit of lavender 1 dram
- Spirit of bergamot 1 dram

Dissolve the boric acid in the mixture of alcohol and glycerin; to this the tragacanth is added, followed by the water and perfumes, the whole being allowed to stand until of the proper consistency.

NEWS DEPARTMENT.

COMMERCIAL TRAVELERS

A Dose of Tar and Feathers—John Sprague Tells Plans—Changes Galore.

A man named Thomas and traveling for the Van Vleet-Mansfield Drug Co. of Memphis, Tenn., was treated to a coat of tar and feathers recently by a crowd of angry citizens at Wynne, Ark. From all accounts it seems that Thomas was a party to a plot to abduct another man's wife and when he with another man named Ward got off the train to carry out their designs, they were met by a good many of the determined people who live in Wynne and got what they are said to have deserved. Thomas got rid of his new dress as soon as possible and went to Memphis where he unfolded a harrowing tale to the police, but as the affair happened in another State the department could not help him. It is said that in future Thomas will not call on the drug trade in Wynne.

Thomas J. Farrell and Mr. Shaw, two popularly known McKesson & Robbins men, left their desks long enough to make trips respectively to Providence, R. I., and Bridgeport, Conn.

L. W. DeZeller has for the last few weeks been getting acquainted with Seabury & Johnson's Jersey patrons and making frequent short excursions from his Manhattan territory where he has many retail friends.

The kindest sympathy of a host of retail friends in Jersey and his brothers in the traveling fraternity is with J. W. Melick, of Lazell, Dalley & Co., who has been sick since January. He left his home in Maplewood just long enough to spend a few hours at the recent New Jersey Th. A. meeting, but was unable to stay through it. A. H. Witschieben of the office force, is taking orders in Mr. Melick's place until his recovery.

A. F. Strayer is the name of a prepossessing young man who has been sent into New York State and Pennsylvania territory by Paul Rieger & Co., the California perfumers.

Sharp & Dohme will be represented in Wisconsin by W. R. Saddaby. W. L. Beach, formerly representing Lord, Owen & Co. in Southern Wisconsin, is now representing Morrison, Plummer & Co. in the same territory. W. J. Crane, also with Lord, Owen & Co., will represent the firm in the Northern part of the State.

Some of the far-away representatives of local houses blew in recently and more are coming. Among them are: H. D. Bell, Lehu & Fink's man in Louisville territory, and H. Kaufholz, who was hard hit by the recent Southwestern floods; R. C. McCall and T. B. Maddox, general Southerners for McKesson & Robbins; S. P. Watson, Schieffelin & Co.'s representative in Atlanta fields, and that firm's San Francisco trade rustler, H. D. Dietrich.

J. M. Moss, formerly with Eli Lilly & Co. has gone to work for J. S. Robinson of Memphis. W. A. Freeman, formerly with J. S. Robinson, is now traveling for Parke, Davis & Co.

G. B. Dalton has virtually admitted that there is no

such thing as "single blessedness." His bride was Miss Anna Guntlach. Mr. Dalton is an Eastern Pennsylvania man for Johnson & Johnson.

John Sprague, the good looking head of Sharp & Dohme's popular bunch of boys, says that as long as the druggists of North Carolina are going to meet in Moorehead City this week, the "bar" association might as well also. So he and Dr. M. C. Cornell, Texas; W. W. Curtis, Tennessee; R. L. Winchester, St. Louis; J. F. Christian, Ohio; B. W. Hunter, North Carolina; J. Y. McKae, Virginia, and Fred and Mrs. Stumpf, New Jersey, are going down. The lid will be taken off the pot (this refers to poker) and either some of the North Carolina druggists will have to mortgage their stores or else Sharp & Dohme will be paying salaries in advance. The fact that the association met three weeks ago does not harm the story any.

Paul Rieger, the California perfume man, is in New York going around with his local representatives.

HISTORICAL COMMITTEE OF THE A. P. H. A.

Prof. Edward Kremers, chairman of the recently established historical committee of the A. P. H. A., has just issued an announcement regarding the work to be undertaken by the committee, which consists of a chairman and a secretary, and such members of the association as the chairman may select.

Fourteen sub-committees have been provided, as follows: Retail Druggists and Drug Stores, Local Associations, State Associations, N. A. R. D., A. P. H. A., N. W. D. A., Manufacturers, Legislation, State Boards, Adulteration, Journalism, Literature and Libraries, Drugs and Medicinal Plants, Education. The first named committee has for members one representative from every State, including the provinces of Manitoba, Nova Scotia, Ontario and Quebec. The other committees are each made up of from two to five well-known members of the association, most of whom are specialists in their respective fields.

Under suggestions for work Prof. Kremers says:

While historical monographs are the greatest need at present, in order that the future historian may be enabled to write a comprehensive history of American pharmacy in all of its aspects, erudite treatises of this kind will scarcely command general interest on the part of the membership of our association. However, objects of historic value will interest every one who loves our calling, as was demonstrated last September at Philadelphia.

We ought, therefore, to look forward to the establishment of a national pharmaceutical museum at Washington. It will take years before such an institution can be realized, yet the only way to effect its organization in a not distant future is to begin the work of collecting now.

It is in this connection that every member of the committee can do something at once. Let, e. g., every member of the first committee send the photograph of one of the oldest druggists of his State, with a biographical sketch, or of a drug store with its history, or of some historical feature concerning pharmacy of his section. Photographs and manuscripts are less bulky than most other objects of historical interest and can be stored away more conveniently.

The above suggestions, which might be extended almost indefinitely, make it apparent that we all can contribute documents of some kind, be they photographs, journals, proceedings, books, price lists, college or association programmes, newspaper clippings, etc. If the document is not self-explanatory, it should be accompanied by as full an account as possible.

It is also expected that some of the members will present important papers to the meeting. Those who have material for such a paper on hand and who have

C. A. MOORE, Lyons, N. Y.
Treasurer Wayne Co. (N. Y.) Druggists' Association.

time and inclination to write one are not in need of suggestions. It is to be hoped that everyone who has valuable historical information to be deposited in the proceedings of our association will not wait until he is personally urged to do so.

E. J. Kennedy of this city is secretary of the committee.

THE CRISIS PASSING?

A Correspondent Believes that the Retail Drug Trade is Throwing Off Conditions that Have Impoverished It—Three Classes to Blame, He Says; They Are Impecunious Students and Licentiatees, Their Friends and Shylocks, and the Jobbers.

To the Editor—Within six weeks, unless retail drug conditions marvelously pick up, no less than 40 stores in New York City will go under. There were six during the last week.

To anyone but a close student of the situation the assertion that a great change for the better is begun in the retail trade will seem chimerical. But the readjustment, forced by economic conditions, has been as sure in its coming as fate and though halted briefly as it will be at times by sporadic increases in trade, it should not end until business insanity has given way to common sense and continuous depression in trade is replaced, because of fewer stores, by comfortable security to the large majority.

There are too many stores in New York. Probably not one retailer in the city will dispute it. The reason is plain, or the reasons, for there are several. But there are two that predominate.

The first class are primarily the cause. Business insanity has been used to describe the fault with the commonest of names. Probably the term is too harsh. At least it is lacking in business sense. This class is made up of professors in pharmacy—the impecunious graduates and their associates.

The other class is sane in its methods. It desires to sell goods. When a retailer or the retailers in a certain section refused to handle its goods the only way was to put in a new store. So some poor victim of the first class was backed, under a cruel mortgage, and a new store was launched into the ever overcrowding trade. This class is, of course, the jobbers.

Another class, secondary perhaps in importance, is composed of money lenders and friends of the first class, whose ready cash, with malicious design or foolishly, respectively as to whether it was the money lender or the friends that advanced it, was put with the scraped earnings of \$200 or \$500 of the poor student and "invested" in a drug store.

These conditions have constantly grown worse for years until they have reached their maximum—their limit. Now, it is the economic nature of things in the life of an established trade that they disappear. Eventually trade will be better off because they have existed and died, for it is past a crisis, a disease that had to be encountered, but, because where money is concerned lessons are learned, should not trouble again. Trade after this crisis will never resume its early adolescence, but it will be steady, secure and comfortable.

Now the manner in which these classes, the students, their friends and the jobbers have hurt conditions.

A school or schools perhaps, the New York and Brooklyn colleges, turn out combined nearly 200 graduates in a year. Most of them stay in the city and those who do not are more than replaced by dozens of others who pass boards or become juniors or come from other States without college training. The annual increase then amounts to perhaps ten per cent. of the total number engaged in the trade.

This despite the fact that cheapened prices, higher expenses, loss of old sources of revenue, have depreciated conditions faster than increasing population has appreciated them. There is one result—a congestion.

There are far more applicants than positions. If one doubts this he can by judicious advertising for a clerk, get 100 applications in 24 hours. But he will not meet a high average of ability. Good clerks are scarce perhaps, but the other kind is not. But good and bad, without work or working at starvation wages, their lot is unenviable.

The young man, tired of looking for a job or tired of working under a "boss," and possessing a few hundred dollars of his own, allured by the vision of being his "own boss," undismayed with the prospect, because he is only an inexperienced, credulous boy, finds a friend willing to install him in a \$5,000 store (worth \$1,000), providing he will invest his own \$500, or a jobber desiring to break into a neighborhood, and he becomes a proprietor—"his own boss," mind you.

What is the result? He demoralizes trade. He may find his telephone bills unpaid and the instrument gone, his gas shut off and finally his stock sold at auction. But, more likely, because he is single and sleeps on the floor, like a barnacle he hangs on, eking out a miserable existence for himself and taking away from his competitor profits enough to pay his own rent. The writer knows of more than one young "proprietor" who is literally living on crusts.

And the money lender has sold his \$1,000 store for \$5,000 and the jobber is selling his goods and the young druggist—why, he is "his own boss."

And so these strugglers hold on—while trade is normal.

But, like a mighty undertow dragging first one victim then another under is the unprecedented trade depression of the present time. Sales have fallen off 40 per cent. Druggists who are wont to average \$20 a day are elated—and it seldom occurs—if they take in

fourteen. Is it any wonder the strugglers are going under?

The depression is due to very natural causes. In the first place, such a healthy summer as this has not been known for years. Again, the health department with its elaborate district work, in inspecting and coaching and eliminating of dangers and the various missions and charitable organizations are doing a work that, no matter how beneficial it may be to the public is cutting into the trade of the druggist.

Mothers know how to care for their children. They clothe them better, bathe them more and give them sanitary food. There are no contagious, no summer complaint epidemics.

Then there is the building strike with its depressing influence, and the depopulation of the city for the summer months. Finally, there is the indisputable drawing in of trade by the notably large stores, whose sales certainly are not falling off nearly as much as those of the smaller stores.

The jobber is ceasing to issue credit to new stores. Farsighted, he saw the certain trend of things some time

ago, and is keeping on the safe side. It takes every mouth wider and wider gilt edges on securities before the jobber takes a risk. The time will come when golden references will be necessary before he gives credit.

Of course, the failure of 40 stores as predicted in the opening paragraph, will far from clear matters and bring good times. But these days are adding straws to other stores, to supply a new object in the proverb, that when the crop of straws of next summer's depression comes, will break. And so the eliminating process will go on and on.

Of course, the congestion of clerks is not being relieved by this change. But that is another question. Wages are very low. The biggest store in New York pays licensed men \$15 to begin with, and the unlicensed men get \$12, and it is able to keep its full quota of help.

There is no prospect of higher wages in this city. Indeed, the trend is the other way. But there is always a place for a good man. And in other states, Pennsylvania and New Jersey, for instance, the demand is so incessant as to be almost painful.

A PHARMACIST.

NEW YORK AND VICINITY.

CIRCULARS AGAIN.

This Time They Are Signed—Drs. Brundage and Bartley Did Not Present the Charges in Them to the Censors, However—What They Amount To.

Again have the members of the Kings County Ph. Soc. been circularized. This time the attack is not anonymous but is avowedly made by Drs. Albert H. Brundage and E. H. Bartley, former members of the faculty of the Brooklyn College of Pharmacy, an institution that they are now attacking in a poorly veiled attempt to injure one man, Dr. William Muir.

The circular, like all campaign literature of the stamp, appeared a day or two before Dr. Muir's reelection to the board of pharmacy. It contained no charges of "grafting," as was hinted at the recent annual meeting of the society. It simply declared fervidly that a former convict had been granted a diploma, that one student was graduated after perjuring himself, that another was graduated who could not read or write, that another was graduated under age. Then it recited the sorrow of the two professors at these awful things, and leads to believe that they caused their resignations.

The charges have been investigated by the Era. The young man who had been a convict was already a licensed pharmacist. He was then living an honest life. He was a capable man. Conferring a diploma on him gave him no privilege he did not already possess. Withholding it would have stamped him before his classmates as a thief. This was in 1902.

The sponsors of the circular did protest against granting a diploma, but their objections were overruled as inhuman. Neither the objectors nor the trustees knew at the time the exact particulars of the crime. That they are given in the circular is only because Dr. Brundage looked them up after he and Dr. Bartley had signed the diploma and the incident was, except politically, closed.

The young man in question is known to the Era. His name will not be published. His employer, a prominent pharmacist, congratulates the college for passing him.

As to the perjury case: An honest man had a tiff with an employer and left. When it came time for his graduation another pharmacist with whom he was then employed vouched for his four years service by adding the time spent in the other store to his own. It was the employer's fault, not the boy's. But Dr. Brundage and Dr. Bartley signed the diploma.

The fact that a graduate was one month under age was noted commencement night. That it had gone as far as that was because the clerk of the college had failed to see Dr. Muir's marking for a certificate instead of a diploma. The diploma was taken back and held until he became of age. Dr. Brundage had signed it.

The only one ever applying to the college who could not read or write was a Japanese, brought there by Dr. Bartley and turned down by the trustees.

Those are the "charges." And instead of being presented to the board of censors of the college they were hurled into print. As a result one of the trustees who formerly stood with the gentlemen who take this unparalleled way of preferring charges has turned from them.

As to the resignations of Drs. Bartley and Brundage: Dr. Bartley's resignation was handed in a long time ago. He was urged to reconsider it, later handed it in again, reconsidered it, and so forth, until finally he took a decided stand and left, contrary to the wishes of the trustees. His reason was insufficient time to properly fulfill his college duties. There was no trouble at all.

Dr. Brundage's resignation, as professor of physiology, toxicology and hygiene was accepted by the board of trustees at the college, as reported in the Era at the time, at the annual meeting, in May.

In spite of the fact that daily papers say that Brooklyn druggists will be split into factions over the circular, the band of dissentients grows ever smaller and harmony increases.

WILMOT CASTLE COMPANY,
26 Elm Street, Rochester, N. Y.

SECRETARY FABER ON RECENT BOARD ELECTION

In the *Faber*—As your issue of July 2 casts certain reflections upon the president of the State board of pharmacy in regard to the late Eastern branch election, I want a few days to correct the statements made, and to state my own views.

In all counties the president of the general State board, Dr. Brudage fixed the date, time and place of election. It was one of his duty to post up the legal notice at each of the voting place and to define as to who was eligible to vote, watch, acting under legal counsel he did. His duties would have ceased there but that he was asked to cooperate at the election and did so. He was asked to secure ballot boxes from the police department and those were brought by a police officer, who also took them away after the election. At no time did Dr. Brudage assume charge of the balloting or even appear to do so; nor intimate in any manner that he intended to run things.

The duty of presiding at the branch election rests upon the chairman of the respective branch where the election occurs, and who may appoint a substitute from among the branch members, if unable to be present. In this instance, Dr. Diekman was appointed by the chairman, but not in response to a circular letter signed by three members, as you have it. It has not been the custom for the president of the general board to preside at branch elections. At the election in Manhattan last year, Dr. Brudage presided, also at the request of the chairman, who was then a candidate for reelection. The election in Brooklyn Borough this year was modelled after that in Manhattan last year.

According to your article, any other than Kings Co. Pharm. Society members would have been challenged had they attempted to vote. Two firms of lawyers, both counsel for the board, decided that Brooklyn and Staten Island members of the German Apothecaries Society and of the Manhattan Ph. A. were entitled to vote, as they were entitled to vote somewhere. A notary for Kings county was present, and two members of the German Apothecaries Society, residing and practising pharmacy in Kings county swore in their votes upon being challenged.

Both the last mentioned organizations do not limit their membership to any one borough, but embrace the whole city. As the law specifically requires residence in the boroughs for which members are to be elected, it follows logically that unless such members can vote for a candidate from the district they reside in, they could not vote at all. If they reside in either Long Island or Staten Island and be declared from voting for a candidate from these counties, they could not vote in Manhattan on account of not residing in either Manhattan, Bronx or Westchester county.

SHINEY FABER.

New York, July 1, 1903.

ANOTHER G. A. S. OUTING THIS FALL.

Its last meeting before a vacation of two months was held last week by the German Apothecaries' Society.

One of the members, in trouble because of an alleged unethical and person mistake, will be defended by the legal aid committee, which has decided that the motive of the case is blackmail. A charter that will enable members to legally start a cooperative insurance fund was explained by Emil Roller.

The death of Julius Bauer, "one of the Old Guard," in the Fritz Bauer Home, Union Hill, N. J., was referred to feelingly by President Henry Limhof. The president who, in the absence of Felix Hirsoman, reported briefly the recent State Ph. A. meeting. It was particularly interesting to say that the country pharmacists who formerly opposed the prerequisite clause voted

for it. He complimented Mr. Hirsoman's work at the meeting and called for volunteers from whom to appoint three to assist S. V. B. Swann on the committee of arrangements for next summer's meeting.

New members elected were Albert Koehler, Joseph T. Roudiger and Curt Chnassen, the latter of Brooklyn. Dr. H. Elberth, formerly of Seventy-ninth street and Second avenue, who has become a dentist, resigned. William Gregorius' resignation as chairman of the entertainment committee, presented because of his removal to Bayside, L. I., was not accepted, but S. V. B. Swann and Mr. Diehl were appointed as his assistants. As recommended by the *Apotheker Zeitung* the banquet feature of the next ball, on January 21 at Terrace Garden, will be missing. Instead of the usual entertainment this Fall another outing will be held. The last one was a huge social and financial success and was immortalized in a poem written by Emil Roller.

The benzine question blazed up again when it was reported that some pharmacists were being denied permits while others received them. Mr. Schur, chairman of the mortuary fund, gave a check for \$139 to Julius Laber's friend and former clerk, Mr. Renne. The next meeting will be held on the first Thursday in October.

NEW YORK NOTES.

—Troy and Albany druggists were lined up against each other at a base ball game at Albany recently. Albanians—H. R. Hayward, F. H. Havens, J. E. Huested, S. F. Smith, R. F. A. Fish, T. S. Bwyer, Charles C. Spehr, George D. Albee, C. L. Clark, W. A. Peth, L. C. Bontier, J. T. Beale and E. F. Hunting. The Trojans—John J. Healy, Edward Kennedy, James Magill, E. Strait, Thomas Kenna, H. Millington, J. Sullivan, M. P. Cavanaugh, John Killelea, F. Schneider.

—John J. Keller & Co., the aniline and dyestuffs firm, have transferred their entire business to the Geigy Aniline & Extract Co., New York, recently organized for the purpose. There will be no change in the management and the entire staff of the old house will be retained. The officers are Robert J. Keller, president; Alfred Kuebler, vice-president; John C. Garnauss, secretary; Alfred D. Keller, treasurer.

—A happy tour was that taken by William T. Blair of Thirty-third street and Ninth avenue. He came back on Monday night from the South. It should be unnecessary to add that his pretty bride was with him. She was Miss May Runtzohler and they were married in St. Michaels Catholic Church, Ninth avenue. G. Abrahamson looked out for things in Mr. Blair's absence.

—Nathan Naumoff, druggist at 20 Rutgers street, this city, is being sued for \$25,000 damages for breach of promise by Miss Lucy Von Polkow, an artist of considerable distinction, and daughter of a lieutenant-colonel in the German army. Process servers are still hunting Mr. Naumoff who is headlined by the daily press as "a millionaire druggist."

—Some wholesale visitors to wholesale regions were James E. Davis and Henry Baker of the Michigan Drug Co., Mr. Baker being spending a few weeks with his wife at Atlantic City; William Baker, of Nelson, Baker & Co., Detroit; H. K. Miford of Philadelphia; George Merrell of the W. S. Merrell Chemical Co., Cincinnati.

—Peter Van Schanck and Mrs. Van Schanck of Chicago, passed through here on their way to Atlantic City. William E. Leech, senior member of James Lee & Co., commission merchants, is spending the summer at Williamstown, Mass. John A. Stevens, vice-president of the National Lead Co., is back from a long Western trip. —Applicants for membership to the drug trade club have been made by: Felix Jollenik, William W. Lawrence, Herbert W. Lockwood, John Brodell, Clement W. Jones, Raymond Platt, all of New York; Howard Mac-

MORRIS G. KANTROWITZ.

Born in Russia, son of a Jewish orthodox rabbi, student in college of the City of New York, the Hebrew Theological Seminary and the New York C. P., is, briefly, an account of the monting days of Morris George Kantrowitz, secretary of the New York R. D. A. and proprietor of a pharmacy at One Hundred and Fifteenth street and Parke avenue. His position as owner disqualifies him as president of

the Drug Clerks' Circle, where he was succeeded by Mr. Epstein. He is well known in the State and city pharmaceutical circles.

Sherry, Newark, N. J.; A. L. Bailhache, Racine, Wis., and George X. Gardiner, New York.

—Frank C. Bone, manager of the James L. Constant pharmacies in New Rochelle and Larchmont, was taken to his home in St. Catherine's, Ontario, suffering from temporary insanity. It is said that he imagined that the police were after him. Overwork.

—Nearly every prominent wholesaler in the city signed a petition to Secretary of the Treasury, Leslie M. Shaw, to reinstate Dr. George W. Jewett, who recently resigned after thirty-seven years of service as examiner of drugs in the seventh appraiser's division.

—Cupid laid for popular James M. McCullough, the White Plains druggist, and got him. The lady is a popular young woman of White Plains and the wedding itinerary included the Thousand Islands.

—W. S. Mersereau of Schieffelin & Co., has gone to Keen Valley, Adirondacks, with his family for a vacation, and W. T. E. Mersereau is with his children at Point Pleasant, on the Jersey coast.

—The following officers of the United Lead Co. have been elected: President, Barton Sewell; vice-president, E. R. Hoyt; chairman executive committee, T. J. Phillips.

—The Mount Morris pharmacy at One Hundred and Twentieth street and Madison avenue, has been purchased from Samuel Elk by David Browd.

—Trade is worse than ever before in New York. Retail trade is estimated to be off 40 per cent. and the wholesalers are also loudly complaining.

—Saturday, remember, is the date of that outing of the Retail Druggists' Bowling Association and the place—gay and festive Coney Island.

—Charles Kiwan of White Plains, and Dr. Leslie W. Weedon, formerly of the Weedon Drug Co., Tampa, Fla., were in town last week.

—Mr. Pfander, formerly of Schultz & Pfander, Ackley, Ia., is opening a palatial new pharmacy at White Plains, this State.

—William Gregorius, son of George Gregorius, has purchased the Bayside pharmacy at Bayside, L. I., of Dr. C. B. Story.

—Dr. D. A. Cassella, the Pearl and Park street druggist, has a new store near the ferry in Roosevelt street.

AROUND SYRACUSE.

—Frank A. Robinson has been working with Druggist Rufus Smith on a new machine, which, it is expected, will be of great value in manufacturing pharmaceutical supplies. It fills conicals or wafers. The pa-

tent covers sixteen claims. The machine has a capacity of 150 wafers a minute and can be operated by hand. It consists of a hopper to contain the powder, and a stock pan, a slide with a righting device, a wetting device and an automatic folding and sealing chain. —Larned & Barker make kunyess fresh every day. A new remedy is "acetanoforn" for headaches and other ailments. They have just issued a circular giving the prices of everything they keep in the drug and supply line.

—Various church societies are asking the druggists to donate the use of their soda fountains for one day and several have consented.

—An effort is being made to have every drug store in town closed up the day of the annual outing on Skaneateles Lake.

ROUND ABOUT BUFFALO.

—M. L. Albright, a recent graduate of the Buffalo C. P., has entered the employ of A. M. Palmer, Olean. O. E. Dake of Cattaraugus, has moved his store to Springville. W. H. McCoach, formerly with Adon Rice, 485 Porter avenue, has entered the employ of C. J. Dwyer, Elk and Louisiana streets.

—Dean B. Crawford, formerly with Stoddart Bros., but now with Dr. Moffitt, 1614 North Second street, Philadelphia, is visiting friends in Buffalo and Gowanda. Herman Schaafsma, who has been with Stoddart Bros., has gone to St. Louis, seeking a new field.

CHARLES ALTENHAIN, who for more than thirty-six years was a familiar figure in Schieffelin & Co.'s general offices, where he was known to hundreds of druggists, died on June 8 and was buried two days later, the services being held at his home, 11 Reservoir avenue, Jersey City. His death was caused by cancer of the liver. A wife and two daughters are left.

LOUIS B. EPSTEIN.

When Louis B. Epstein came from Russia in 1896 the first question he asked on landing was whether the factory laws were being observed in drug stores. Receiving a negative answer he incorporated a plank on the subject in a platform which he had gotten up on the way over. His work as "boy" for N. Fetter, at 103 Lexington avenue, and a course at the Brooklyn C. P. and his present position as manager for Dr. Robert Theyson, 180 Avenue C, did not change his principles. From sergeant-at-arms of the Drug Clerks' Circle, which he helped to organize, he has been advanced by his associates to the presidency. He is a member of the State and Manhattan Ph. Associations.

MULFORD'S pre-Digested Beef contains the entire nutritive value of fresh lean beef, pre-digested, in a form ready for immediate absorption. Special inducements are made to live druggists to handle this preparation. Write us for particulars, sending a correct mailing list of your physicians.

H. K. MULFORD COMPANY,

Philadelphia.

JOHN B. EBBS.

JOHN A. LEVERTY.

CHARLES A. RAPELYE.

There is no reason why these three men should be said to constitute the Connecticut Ph. A. triumvirate. It is hard to get pictures of three better men on one page. Mr. Leverty, in the center, is president—the first Bridgeport has had. He was first vice-president last year. He is very popular. Mr. Rapelye of Hartford,

is serving his fourth term as secretary and they refused to let him retire under any consideration, showing wisdom. He was president in 1895 and a member of the board of pharmacy for six years. Mr. Ebbs of Waterbury, treasurer, was also re-elected to a position that he graces.

NEW ENGLAND.

QUEER METHODS.

The Manner of Handling the Cases Looks Very Much Like Persecution—"Spotters" Furnish the Evidence—Heavy Penalties Imposed.

Brookton, July 7.—Liquor raids upon drug stores and arrests of the owners and clerks have made things lively in Brookton. John F. Walsh and Hugh Caffrey were arrested at the same pharmacy at Main and Harvey streets. A search brought to light considerable whiskey. Walsh is proprietor and Caffrey, clerk. In court it was shown that officers employed a man to go in to make purchases of liquor. This "stool" has been used in several similar cases by the police, who, however, never produce him in court. He "disappears" when it is convenient. Both defendants were found guilty, fined \$75 and both appealed.

Another Brookton victim was Jeremiah J. McCarthy, who in the Superior Court was fined \$100, on appeal. He also was sentenced to one month in the House of Correction. Still another case is that of Louis Sheehan, drug clerk at the Temple pharmacy, Campello. It was charged that he failed to register the sales. The case is not yet settled. George J. Brownrigg's store when raided showed no liquor on the premises, yet he was arrested for alleged keeping and exposing liquor. The chief witness against him was the missing spy of the officers. Zechariah B. Tower, another Brookton druggist, was in court on a liquor charge and spotters furnished all of the testimony against him. They received a severe handling on the part of the druggist's lawyer. A verdict of guilty was found and Mr. Tower paid a fine of \$75.

In Long River, J. Eugene Arsenault was on trial on charges of selling liquor. Sales had been found not guilty.

SHOOTING AT DRUGGIST'S HOME.

Lowell, Mass., July 7.—The home of Dr. Constant Henotte, druggist in Lowell, was the scene of a startling shooting affray.

A young woman and her sister, guests of Dr. Henotte's family, were followed by an obtrusively attentive young man. One of the sisters entered the house while the other remonstrated with the man for following them. It ended in his shooting both her and Dr. Adelard Payette, son-in-law of Dr. Henotte—a bridegroom of only two months—who came to her assistance.

The assailant escaped. The young woman died. Dr. Payette is on the road to recovery. He is employed at Dr. Henotte's drug store. Louis Goddin, brother of the murdered girl, is a drug clerk, formerly in Boston and Winchester.

TURNED OUT TO BE HIS PARTNER.

Dorchester, Mass., July 7.—On the charge of stealing nearly \$200 worth of druggists' supplies from his store, Dr. James H. Sexton, 395 Norfolk street, Dorchester, had his young "clerk" arrested. In the latter's rooms the goods taken were found.

The prisoner was honorably discharged. According to Dr. Sexton the defendant had been employed for the last three months. When goods began to disappear, Sexton kept watch. It was brought out in court, however, that the defendant was a partner of Sexton, and had a right to do as he pleased with certain of the goods. He did not deny taking the drugs. Sexton insisted that the clerk was not a partner, but an application for a liquor license with the names of the clerk and Sexton both signed to was produced in evidence.

THE BAY STATE.

—A recent visit by Simon B. Harris, agent for the State board of pharmacy, to the store of Mr. Clement Froehette, Leominster, resulted in a summons to explain in court his liquor business. Dr. Froehette pleaded guilty to not recording his "liquor sales" and by agreement the case was continued for sixty days with the understanding that it will be placed on file if he will go out of business. He is not a registered pharmacist.

and the point raised was that because he is not registered, he has no right to sell alcohol.

—A late June wedding was that of Charles William Perry, 3d, of Newburyport, and Miss Blanche S. Thurlow, at the home of the bride's parents. Guests were present from many cities. An elaborate reception was given by the bridegroom's parents at their residence. Many handsome gifts were received. Mr. Perry is connected with the pharmacy of Karl Castle-hun, Newburyport.

—The funeral services for Andrew G. Weeks, long prominent as head of the house of Weeks & Potter, brought together many leading members of the drug trade. The Boston Druggists' Association sent a delegation. The business houses of the jobbing trade of the city were closed during the services.

—Notwithstanding the efforts made to have Mayor John W. Weeks, the "druggist mayor" of Newton stand as a candidate for re-election, he positively declines to run for another term. Several hundred leading citizens have appealed to him and his re-election would be an assured fact.

—The marriage is announced of Frederick A. Brandes, druggist in Webster, to Miss Anna A. Miles of Springfield. The ceremony was performed by Bishop Thomas D. Beaven. Mr. and Mrs. Brandes went on a wedding tour to Boston.

—Five years in the drug business has satisfied Frank G. Warren in the employ of F. E. Mole, pharmacist at Adams, that he has had enough, so he has resigned and accepted a position with the Hoosac-Valley Street Railway Co.

—On the charge of breaking into the store of McVey Brothers, Summer and Cottage streets, East Boston, two men have been arrested. It is alleged that they stole money, postage stamps and other articles.

—Cleansing fluid was taken in a hurry by a Beverly woman who mistook it for medicine. She swallowed a generous dose which made necessary a doctor, a stomach pump and antidotes.

—Oscar Rydestrum, druggist at Buffalo, N. Y., has been the guest of friends at Conway, in the Berkshires of Massachusetts. He is accompanied by Mrs. Rydestrum.

—Improvements in Stevens & Low's pharmacy in Haverhill will make it almost a new store.

CONNECTICUT.

—It has just come out that the Waterbury Drug Clerks' Association withdrew from the Central Labor Union because the members were opposed to supporting the striking trolley-men who showed no inclination to work after five months idleness. The clerks were obliged to contribute 25 cents a week to a cause in which most of them did not believe.

—There are ten drug stores on the main street in Middletown, and there are not over 15,000 people in the town. Of the ten druggists not more than three belong to the State association. Four are to become members soon. Considerable competition by grocers who deal in patent medicines is being met by cutting prices.

—The State board granted licenses to the following: Henry R. Rhodes, 1 E. Southmayd, H. P. Lehr, and J. A. Johnson, New Haven; J. K. Stevenson, West Haven, and C. Gustafson, Jr., Brooklyn, N. Y.

—R. A. Bronson of the E. L. Washburn Co. of New Haven is spending a two weeks' vacation in Atlantic City.

PROFESSOR WILLIAM ELDER of the department of chemistry at Colby Institute, Waterville, Me., died of heart disease. For thirty years he had been a professor at Colby. He was born in Nova Scotia. His age was about sixty years. He is survived by a wife and a daughter.

PENNSYLVANIA.

NEED "BROADER HORIZON."

Philadelphia Wholesaler Moralizes on Pettiness of Retailers and Cites a Case in Point.

Philadelphia, July 7.—These words of a prominent wholesaler will amuse:

"The trouble with the Philadelphia retail druggists is that they have been educated with a grain weight. They must broaden the horizon under their vision and sink their petty differences before they can even hope to accomplish much. They are too narrow. A case in point: A store refused to sign or line up to the new price list. A committee went there, made threats, and were laughed at. They then called on the wholesaler who was selling goods to the store and threatened him, to receive only the same treatment. The committee then squabbled among themselves, owing to a few hot-headed members, and finally tried to get the association members to boycott the wholesale house. The funny end of the matter is, that not ten per cent of the members buy from the house in question, the bulk of their trade connection laying outside of the city and State."

WILL BE A HANDY MAN IN PRISON.

Philadelphia, July 7.—George C. Courtwright, president of the Alba Dentists' Co., and Dr. William Powell, a licensed dentist and manager of the business, were convicted of conspiracy to employ students who were not licensed dentists and were sentenced to one year and to three months respectively.

Apothecaries here chuckled gleefully when they received the above information. The "Alba" people manufactured many things for the teeth and they were famous for telling their patients the "terribleness" of the stuffs sold by druggists.

Courtwright is the man who, in trying to push a malt extract several years ago, drove a pair of white ponies around the city with a sign on the wagon: "This pair of white beauties to be presented to the next president's wife." He "loaded" every man in town with that wonderful extract.

OTHER HAPPENINGS.

—George B. Evans of Philadelphia was being driven over to the Country Club in a coach. The horses ran away and the coach turned completely over. Mr. Evans while not seriously hurt, had his scalp so severely lacerated that he was driven to St. Timothy's Hospital for repairs.

—The regular meeting of the P. A. R. D., to be held July 3, was postponed on account of the proximity of the national holiday, to July 10. The executive committee possibly thought that some of the members might bring firecrackers to the meeting.

—Miss Minnie M. Lentz and Walter Rothwell were united in marriage by Rev. Arthur D. Hilton at the home of the bride's parents, Hatboro. Walter Rothwell is proprietor of the Hatboro pharmacy and of two drug stores in Philadelphia and is a member of the Philadelphia Wholesale Drug Co. He is also a member of Hatboro town council. After a trip through the South Mr. and Mrs. Rothwell will make their home at "The

E. I. Santal Perles

Bottles of 50, with yellow wrapper

Write for Samples and Prices

BILLINGS CLAPP CO., - - Boston

Maple, the home of Mrs. Rathwood's parents, while Mr. Rathwood's remains are being completed.

Two such cases are reported in embryo for the future quarters. Philadelphia. One at Eleventh and Arch streets and one on North street, below Catherine.

—**Deaths.**—P. Lorenz and Isaac Hoffman, Pittsburg, Pa.; Thomas C. Watson; and Elmer Mole, Erie, were a **PHARMACEUTICAL** on July 4.

—**Adverse Suits.**—"For July 4—A 'pkg. of absorbent cotton and a bottle of witch hazel for 10c.'"

—**Suit on an uptown drug store.**—"This Place has Cheated Hand, Feet and Brains."

LITTLE MORE PRESSURE REQUIRED.

Brandywine Springs, Del., July 7.—The State board of pharmacy was instructed, at the recent annual meeting in this city of the Delaware Ph. Soc., to use a little pressure in enforcing the pharmacy law. This was after N. B. Danforth, chairman of the legislative committee had reported failure in the attempt to pass a new law.

The attendance was very good. President E. L. Clark read his address, Thomas B. Cartmell presented an interesting trade interests report, and, at his motion, a committee was appointed to draft resolutions endorsing the N. A. R. D.

Secretary T. W. Fenn reported 80 members, the largest roll yet. William T. Starkey, of Milton; J. Frank Sterling and Levi Scott, of Dover, and John O. Bosley, of Wilmington, were selected new members.

Secretary F. W. Fenn reported 80 members, the Philadelphia College of Pharmacy, a former Wilmingtoman, on "College Work"; Herbert J. Watson, on some new quinine compounds; and Professor Robin, bacteriologist for the water department, on "Water Filtration." H. L. Stiles spoke as a delegate from the Pennsylvania association and Dr. Worthington of Wilmington, from the State Medical Society.

The new president is Francis E. Gallagher, Wilmington. The other officers are: Vice-presidents—J. Ferris Belt, for New Castle county; Levi Scott, Kent county; R. M. Kauffman, Sussex county; secretary, Frederick W. Fenn, Wilmington; treasurer, Oscar C. Draper, Wilmington; executive committee—Dr. C. M. Almond, E. L. Clarke, W. A. Joster; for presentation to the governor for choice of two to the board of pharmacy—Dr. J. Harvey Spruance, Dr. Willard Smith, Dr. G. Burton Pearson, J. Ferris Belt, James T. Challenger and Joseph P. Williams.

CHARLES H. BURKETT, formerly of Kirby & Burkett, died suddenly of heart disease at his home in Montclair, N. J., aged 63. He leaves a widow. Mr. Burkett was for many years in the employ of Weaver & Sterry. About thirteen years ago he formed a partnership with Mr. Kirby to mill drugs, but the firm went into liquidation in a few years.

Its Forty-fourth Announcement.

The forty-fourth annual announcement of the Chicago College of Pharmacy has just been issued and from it we learn that the next annual course of instruction will begin September 29 and continue for seven months, closing on April 29, 1904, the date of the commencement exercises. The names of the members of the faculty are the same as last year and full information is given of the system of teaching, which includes lectures, demonstrations, recitations, written and oral examinations, and thorough laboratory practice. A new feature introduced this year is the offer of the Becker Prize, consisting of a chemical cabinet, with a full set of reagents and apparatus for pharmaceutical testing, to be awarded to the senior student who attains the highest standing in pharmacy. The college building is located at 465-467 State street, close to the center of the business district of the city.

THE SOUTH.

REMARKABLE PROFITS.

That Earnings of the Emerson Drug Co. were 145 Per Cent. of Capital Stock Last Year is Brought Out in Suit to Restrain Company from Merging.

Baltimore, July 7.—The Emerson Drug Co., manufacturers of Bromo-Seltzer and other preparations, is being sued to prevent the transfer of the capital stock, property and business of the company to the Emerson Drug Co. of New Jersey.

As told some weeks ago in the Era, the Emerson company is having erected in New Jersey extensive laboratories for manufacturing on a large scale. It is reported to be the intention to produce acetanilid, tartaric acid and other heavy chemicals used in the composition of the company's finished products. These articles are also to be disposed of to the general trade. In order to work most advantageously the Baltimore company, it is said, was to be consolidated with the New Jersey corporation, and it is this alleged intent which the suit brought is designed to prevent. Incidentally some interesting information was brought out relative to the profits earned by the company, which must be regarded as one of the most prosperous in the country.

The petitioner is Lucius S. Hall, who asserts that he owns seven shares of the Emerson Drug Co., and the suit is filed on behalf of all other stockholders desirous of becoming parties to it. The defendants are the Baltimore and New Jersey companies and Isaac E. Emerson, John F. Waggaman, Joseph F. Hines, Jr., and Parker Cooke, directors of the Baltimore company. The latter corporation, the bill of complaint states, was incorporated March 23, 1871, with an authorized capital stock of \$250,000, divided into 10,000 shares of a par value of \$25, all of which has been paid up. The business has been so profitable, the bill states, that on two occasions the company declared and paid special dividends to the stockholders greater than the total capital stock. The profits for the year ended December 31, 1902, it is asserted, were \$32,273, or sufficient to pay a dividend of 145 per cent. on the capital stock. Of these profits, \$279,432 was paid to the stockholders, and the balance of \$83,334 was carried to the surplus account. The total assets of the company on December 31 last are alleged to have been \$372,400, not including the good will of the business.

Mr. Emerson and Mr. Waggaman, two of the defendants, are said to control the policy of the company by virtue of owning 90 per cent. of the capital stock. They are alleged to have controlled the election of directors and to have had themselves elected president and vice-president, respectively. The Baltimore company, it is charge, is about to turn over its capital stock, property and business to the Emerson Company of New Jersey, as explained in a circular letter sent to its stockholders dated June 1. The proposed transfer, it is claimed, is illegal under the laws of Maryland. It is alleged that the contemplated transfer would be a fraud upon the rights of the stockholders.

Judge Dobbler, in Circuit Court, signed an order requiring cause to be shown within five days why the injunction asked for should not be granted.

Mention has already been made in the Era of extensive improvements to be commenced shortly at the parental residence of Mr. Emerson on Butaw Place. One of these additions is the laying out of handsome Italian gardens, for which Mr. Emerson gathered ideas during his recent vacation trip in the Mediterranean. He arrived home several days ago and talked interestingly of

what he had seen, outlining also in a general way the plans formulated with respect to the projected gardens, which will be full of fine statuary.

While abroad Mr. Emerson also closed a contract for a new steam yacht to be over 300 feet long and of high speed. She will be sufficiently large to be available for cruising in any sea and under all weather conditions. The vessel is to be completed and delivered within one year.

NEW LIFE FOR RICHMOND ASSOCIATION.

Richmond, Va., July 7.—The Richmond P. A., after a slumber of more than a year, now starts upon a new life with an apparently bright future and with much work to be done. William F. Warinner has been made president and Gordon Blair secretary. The organization will probably for the present hold its meetings at the Y. M. C. A. or at the T. P. A. headquarters, both of which places are under consideration.

Aside from the authorized statement that the druggists of the city want to meet socially it is learned that the immediate object is to arrive at a fixed schedule on proprietaries. For several years T. A. Miller, president of the Virginia pharmacy board, owner of two stores, has been selling at cut-ates. Others have tried to hold full prices, but the great inroads made by Mr. Miller and the Tragle Drug Co. another cut rate store, had a demoralizing effect. Mr. Miller politely declined to join the association. T. Elwood Tragle has also been invited to a conference on rates. The invitation, it is understood, will be accepted, though Mr. Tragle, not being a druggist, will not be a member of the association.

N. A. R. D. PRICE LIST OUT.

Baltimore, July 7.—The minimum price list of the newly organized Baltimore retail druggists' associations, which are affiliated with the N. A. R. D., has been issued in neat pamphlet form. A facsimile of a sales-man's card is attached.

All 5 and 10-cent goods are to be sold full price or 6 or 3, respectively, for 25 cents. Fifteen-cent goods are also to be full price or 2 for 25 cents; 25-cent goods full price with a number of exceptions; 35-cent articles at full price with 3 exceptions where 25-cents is to be the minimum. Fifty-cent articles are to be 40 cents for the exceptions, with 35 cents for Swamp Root and a few at 45 cents. Seventy-five-cent goods are full price with few exceptions, while dollar sizes are fixed at not less than 70 and 85 cents.

RATHER HARD ON THE DRUGGIST.

Richmond, July 7.—Drug stores of Richmond felt the strike very much. When the street car men went out cash sales began to fall off greatly. All labor organizations were drawn into the fight. Several druggists who lived far from their stores were promptly informed that unless they stopped riding there on the cars their names would be placed upon the "black list." They had to swallow the pill. J. M. Blanks, member of the City Council, and owner of two stores, was told that his business would suffer unless he discharged a clerk who had been riding. This he refused to do.

NEW ASSOCIATION OF COLORED PHARMACISTS.

Richmond, Va., July 6.—The colored pharmacists of the State have organized. They met recently at the home of Dr. J. M. Benson, 26 West Leigh street, Richmond, and, forming the "Virginia Association of Colored Pharmacists," elected the following officers: President, George A. Thompson, Richmond; first vice-president, W. S. Fields, Petersburg; second vice-president, E. J. Bass, Portsmouth; secretary, James E. Jackson, Richmond; treasurer, N. T. Pennell, Staunton. The object is to promote the interests of colored druggists.

MARYLAND.

—A fire damaged the drug store of Dr. Oscar E. Ross, 108 East Baltimore street, Baltimore, to the extent of \$7,000, while the wholesale drug firm of Muth Bros. & Co., 15 East Fayette street, which occupies the upper portion of the building, sustained a loss estimated at \$5,000. Both losses are covered by insurance and occasioned no interruption to business.

—D. G. Wayne, Jr., has taken a position in the retail pharmacy of George C. Bunting, 6 West North avenue, Baltimore. C. W. Miller, formerly a clerk for Charles E. Sonnenburg, Baltimore and Green streets, has bought out John C. Eichner, Lexington street and Arlington avenue, Baltimore.

—Dr. Luther B. Benton has purchased the stock and fixtures of Snowden & Cowman, West Fayette street, Baltimore, which were sold last week at public auction. Dr. Benton formerly conducted stores at Laurens and McCall streets and at North and Druid Hill avenues.

—Among the visitors in Baltimore last week were J. N. Simonson and wife, Crisfield, and C. H. Holtzman and wife, Cumberland; D. M. Ragan, Conowingo; J. A. Williamson, Frederick; J. B. Chandler, the Coco Cola man, Atlanta, Ga.; C. L. Henry, Cambridge.

—Druggist W. A. Pryor, of Greenmont avenue and Madison street, Baltimore, has been missing from home since June 30 and his wife is much concerned about him. His financial affairs are in excellent order, and he had no worries, as far as can be learned.

—William Ryan, a druggist at Falls road and Third avenue, Baltimore, is a hero. He rescued a man from drowning at a Bay resort last week and then found to his disgust that the man was so drunk as to be oblivious to his danger.

—Martin Brandmiller, connected with Muth Bros. & Co., for a number of years, has recently purchased a handsome cottage at West Arlington. Mr. Brandmiller is indirectly one of the beneficiaries under the will of his father-in-law.

—William P. Taylor, head clerk for E. Warfield, Jr. Alexandria, Va., was married on June 29 to Miss Florence Louisa Irwin, at Washington and visited Baltimore on his wedding tour, proceeding later to Atlantic City.

—John S. Stillman, popular clerk for Dr. Oscar E. Ross, who was compelled to stop work on account of impaired health, has gone on a long vacation to Pine Plains, N. Y., the former home of his father.

—Joseph Eliades, a Greek, who clerked for Druggist John Ayd, Washington and Monument streets, Baltimore, is succeeded by William H. Thornton, formerly with L. M. Becker.

—George C. Vogel, formerly a clerk in the employ of George Weller, Sharp and Hill streets, has opened a store at Hebble, near Baltimore.

—L. B. Sasser, a retail druggist of Wilmington, N. C., who was married on June 24, visited Baltimore with his bride.

—B. A. Lillich has left the employ of Joseph Ayd, Monument and Aisquith streets, Baltimore.

Put up in One Ounce Bottles Only.

Powdered.....Per ounce \$1.00
Pink Top Capsules.....Per ounce 1.00
Tablets, 2½ grain only.....Per ounce 1.00
ETNA CHEMICAL CO., New York, U. S. A.

THE CAPITAL CITY.

—At a meeting of the Registered Drug Clerks' Association the following were elected: President, H. T. Dodge; first vice-president, S. Beckmann; second vice-president, S. J. T. Wells; recording secretary, F. T. Hafefinger; financial secretary, F. B. Ketchum; treasurer, A. J. Hussey; guardian, W. E. Hunt, and guide, W. T. Howard. The annual excursion will be held July 28 at Marshall Hall.

—Fred T. Hafefinger, secretary of the clerks' association, has written to the commissioners, asking that the association be given equal representation on any commission that may be appointed to revise the pharmacy laws of the district. Health Officer Woodward replied that if such a commission be appointed it will be eminently proper for a representative clerk, or clerks, to serve on it.

—Henry A. Johnstone, secretary of the Board of Commissioners of Pharmacy, asked the district commissioners whether the present pharmacy law covers the homeopathic pharmacies. Dr. W. C. Woodward, health officer, replied that he could discover no distinction between the two classes, but referred the matter to the corporation counsel for consideration.

MEMPHIS AND VICINITY.

—Avant Quinn, for several years connected with the Van Vleet-Mansfield Drug Co., is home again. While only seventeen years of age, he has, within the last two months, crossed the ocean and traveled over a considerable portion of his native land. He now says that he will never leave home again.

—H. Y. Lambert, the popular young pharmacist of Lyndeale street, was recently married to Miss Clyde Drake of Memphis. Only one or two of the couple's intimate friends knew anything about it until Mr. and Mrs. Lambert had left the city on their honeymoon.

—Friedrick W. Mayo, formerly connected with the laboratory of the Van Vleet-Mansfield Drug Co., has purchased the Chelsea store, for many years operated by McArthur & Winston Bros. Mr. Mayo secured the stock, invoiced at \$4,000, for \$1,350.

—R. M. Hammer, of Hammer & Ballard, has returned for a pleasure trip to the gulf. His health much better. H. Bortwell, formerly with Hammer & Ballard, has gone to California to work.

—R. N. Stahle has bought the drug store of J. C. Treherne, corner Vance & Hernando Sts., Memphis. Mr. Stahle recently returned from his honeymoon.

—Lewis Bendall, formerly with Conger, Kahn & Gibbs, Shreveport, La., now has charge of the city department of the Van Vleet-Mansfield Drug Co.

—The Fortune & Ward Drug Co., recently enhanced the beauty of their store by adding new fixtures.

Make Hay While the Sun Shines.

The soda season has been backward but is rapidly coming to the front. Are you in a position to keep your soda clerks busy drawing soda water for customers? In order to make your fountain pay, they must be busy serving soda, every minute during the warm season, and they can be, if you use first-class syrups, extracts, crushed fruits and juices. If you are in doubt as to where you can obtain good ones, write to the old and trusted firm of John Matthews, 333 East 26th St., New York; they can supply you with anything you need to the best and are offering at the present time, the finest that is made in Concentrated Fruit Syrups at \$1.40 per quart, gallon or 10 gallon lots at \$1.25 per gallon.

OHIO RIVER VALLEY.

DON'T UNDERSTAND DOW LAW.

Columbus, July 7.—An application was made for a re-hearing of the "Bishop beer" case in which the Supreme Court's recent decision has apparently extended the Dow law and taxes to all soda fountains, drug stores and cross roads stores that sell patent medicines. The application cannot be heard before late in September, as the court has adjourned. It is possible that a stay of judgment will be granted until the re-hearing.

W. R. Ogier, secretary of the board of pharmacy, has asked the attorney general for an opinion as to whether proprietary medicines containing a high per cent of alcohol must be sold under the Dow law. Attorney General Sheets replied that the sale of malt extracts and other medicinal compounds, sold exclusively for medicinal purposes, does not subject the dealer to the Dow tax. The question of fruit syrup used in soda water has not yet been decided.

NO MORE BEER BY KEG—SODA WATER NOW.

Indianapolis, July 7.—Indianapolis has for years stood pre-eminent as an ice cream city. In many respects it has continued to be a place of neighborhoods, a collection of villages, and has not yet fused itself into a complete city. The neighborhood dissipation is ice-cream and soda water and the neighborhood drug store is busy.

A city political campaign is now opening and the manager of one of the contesting parties has given out that, different from former campaigns, the dispensing of beer by the keg will be given up; that this will be "a soda-water campaign" to enlist the help of the better class of citizens. This carries happiness to the hearts of the retail druggists.

OTHER HAPPENINGS.

—A clever trick was worked on a Cleveland druggist a week or two ago. The "blim-bam" man tried it a second time, and was caught. He was a "dope fiend," with a fondness for laudanum, though he had no money to buy it. He entered a drug store and ordered a pint of laudanum, together with several other drugs, and then, when they were all wrapped up, proceeded to tie up all the packages in one bundle, utilizing some newspapers he had brought with him for that purpose. He did this while the clerk was making out his bill. Then he discovered he hadn't enough money, and stepped out to get it. Two hours passed, and the clerk, becoming suspicious, opened the big bundle and found that the bottle of laudanum was missing.

—Cocaine got a Cleveland druggist into trouble a few days ago. A colored woman entered the "Gem" pharmacy on Superior street and wanted to buy some. The clerk refused to sell it, as she had no physician's prescription. The woman grew quarrelsome, and, going outside, threw a brick through a fifty-dollar plate-glass window. She had the brick in her pocket, apparently, but had never before used it for that purpose.

—At the last regular meeting of the Cleveland druggists a new schedule of prices was adopted, in some cases raising prices. The advance varies from 1 per cent. to 5 per cent., according to the nature of the goods. The schedule is printed, went into effect on July 1, and is followed by nearly all of the Cleveland druggists, though only about one-half belong to the association.

—While driving in a carriage with two friends a month ago, Christ F. Toedtman, druggist on Wade Park avenue, Cleveland, accidentally ran over a retired business man named C. P. Evans, inflicting fatal injuries. Toedtman was arraigned for manslaughter, but was dis-

charged, the judge holding that the killing was entirely accidental.

—The annual meeting of the Northern Ohio D. A. will be held in Cleveland on July 29 at the rooms of the Cleveland Ph. A. Officers will be elected for the ensuing year, a social program will be rendered, and plans discussed. At present J. A. Bartlett is president, William F. Kuder secretary and Louis Hopp treasurer.

—Suit has been brought in the United States Circuit Court against Daniel Myers, of Benton, Myers & Co., a big wholesale drug firm of Cleveland, by Harvey D. Cummings, of Chicago. The suit is an outgrowth of trouble with the Manhattan Fire Insurance Co. The plaintiff asks for \$13,500.

—Only five druggists in Ottawa county have taken out the \$15 license required for cigarette dealers. Four are at Put-in-Bay and Middle Bass, and one at Port Clinton. It is said that fewer cigarettes are handled in Ottawa county than in any other county in the State.

—The Ohio Ph. A. at Toledo asked Governor Nash to select as board of pharmacy member either Julius Greyer, present incumbent, Cincinnati; J. H. McMann, Toledo; Frank Amann, Portsmouth; Alfred DeLang, Cincinnati, or G. F. Girard, Circleville.

—A Berea druggist named Peter Nelson was arraigned before the mayor on a charge of violating the Beal local option law. Members of the Law and Order League say that if a conviction is secured other prosecutions will follow.

—Cincinnati was chosen as the next place of meeting of the Ohio Ph. A. It may not be located on the "unsalted seas," but it has a Coney Island, nevertheless. It has no vineyard to inspect, but remember the "malt extract."

—Druggists of Cincinnati are giving the United States Telephone Co., which will shortly seek a franchise, their moral support. Business telephones will be furnished at \$60 a year.

—The new board of control of the Ohio Ph. A. is composed of Alfred DeLang, Cincinnati; J. H. Beal, Seio, and John Wendt, Toledo.

INDIANA.

—The most notable event in the trade is the recent purchase by Henry Huder of the "Pharmacopoleum," 22 West Washington street, Indianapolis, of the Sloan Drug Co. Mr. Huder has begun remodelling this old stand which is in the very heart of the city.

—The old firm of Blount & Egbert at Wabash, has been succeeded by Fowler & Thompson. Louis Reinkert of Indianapolis, who has been in business for 25 years, has sold out to D. M. Maroney, a young man.

—The Weber Drug Co., recently opened in the new Claypool Hotel, is already doing a fine trade. It said to be the handsomest drug store in Indiana.

—In Indianapolis a new store is being opened by Hoskins & Miller.

MINNESOTA PH. A. AFTERMATH.

St. Paul, July 3.—One of the leading features of the recent meeting at New Uln was the reading of papers in competition, for which prizes had been offered. H. W. Rietzke of St. Paul, took the first prize, his paper being entitled "Proprietary Preparations." The second prize went to Stewart Gamble of Minneapolis, former president of the association, whose paper was on the subject of education of apprentices.

A pleasant feature of the entertainment program was an exhibition given by the New Uln Turnverein.

AROUND THE GREAT LAKES.

MICHIGAN NOTES.

—There are 225 druggists in the city of Detroit, and of these only six have this year filed bonds, while two pay the tax required from those who sell liquor as a beverage. In the county outside of Detroit there are twenty-three druggists, and of these four have filed bonds. A loud wail is heard from liquor dealers who have to pay their \$500 annual tax and to furnish bonds, and there is talk of seeing if the druggists cannot be forced into doing the same. The saloon men claim the druggists dispense almost as much liquor as they do, and think they should be made to pay for the privilege.

—E. T. Jones, for the last two years a prescription clerk with Loranger & Culver, Saginaw, has resigned, having purchased a drug business at Chatham, Ont., his old home. Wm. F. Lount has resigned from the Post Tavern pharmacy, Battle Creek, to accept the head clerkship with Loranger & Culver.

—Battle Creek has a new pharmacy which will be known by the popular title of the "Three Freds." Fred Parker is the proprietor, and he has secured the services of two of the city's most popular young druggists, Fred Ashley and Fred Larmour.

—The American Drug Co. is the name of a new firm at Traverse City. They are fitting up a magnificent pharmacy at 219 East Front street. Peter Tunnellier of the Battlement Drug Co., Benton Harbor, is the principal stockholder.

—A cigar stub was responsible for a fire which destroyed over \$20,000 worth of property in Maple City. One of the sufferers was Dr. G. W. Fralick, whose pharmacy got a severe scorching.

—L. E. Boeckes, pharmacist with G. J. Noteware of Bellaire, took his family out for a little picnic recently and they ate dinner on the river bank. Contact with poison sunac made all ill.

—L. D. Labadie of South Bend, Ind., is a new clerk at the Converse drug store, South Haven. E. Falette of Coral, has purchased the drug stock of Chas. Snyder at Morley.

—Benton Harbor has a fine new establishment under the name of the Star Drug Co. The incorporators are A. H. Burger, Ed. C. Sisson and George L. Dater.

—The Karmasen Drug Co. is the name of a new firm at Bangor.

WISCONSIN.

—The Board of Pharmacy passed eleven of thirty-three applicants as follows: Pharmacists—George A. Shields, Mazomanie; Isaac C. Thomas, Sheboygan; Edward N. Fernholz, Jefferson; Erich A. Krueger, Wausau. Assistant pharmacists—Charles R. Canghey, Milwaukee; William A. Braun, Milwaukee; Elmer J. Falk, Stoughton; Edmond R. Hass, Fond du Lac; Sidney A. Denis, Grand Rapids; Victor J. Bellerue, La Crosse; Thomas H. Dexter, Milwaukee. Next examination at Milwaukee, August 18-21.

—McKnight & Co., a new firm, composed of L. A. McKnight and H. O. Lengelsen, have purchased the Standard stock at Rosendale. Theodore Mueller, a Milwaukee

A BRIGHT PHI CHI QUINTETTE.

H. E. ERICKSON.

Beta Chapter, Phi Chi Fraternity, North-western School of Pharmacy, wishes to introduce to Era readers five of its most highly valued members. H. E. Erickson, secretary, Chicago, and Edward Everett Stacy, Tuscola, Ill., were honor men in their class this year. Owen C. DeVine, Marenna, O., is Worthy Master of Arms. L. Arthur Pepin, Chicago, Worthy Chief Counsellor, and Frank Milne, Worthy Prelate, of Morrison, Ill., complete this bright quintette.

druggist, has opened a new store in his own building just erected at West Allis.

Joseph Bachman, of Fort Atkinson, has accepted a position in the retail department of Willson Bros.' pharmacy at Edgerton. C. M. Allen of Wheeler has removed to Calfax, where he will open a drug store.

The drug firm of Hurley & O'Reilly at Merrill dissolved partnership, Mr. O'Reilly continuing. Frank Goodland has sold his drug store at Thorp to Frank Meiland & Co., and will retire from business.

The Model drug store at Galesville is to be discontinued, Mr. Francar having purchased the Galesville pharmacy, to which he will add the stock of his other.

The sale of the stock of the Pigeon pharmacy at Green Bay was to Gus Cauwenbergh, for \$700. It is now being removed to the store of the purchaser.

The press report giving the loss on Corbett & Ackerman's drug store at \$15,000 in the big fire at Plymouth is incorrect. The adjusters settled it at \$4,613.

The firm of Kradwell, Thiesen & Co., druggists of Racine, has dissolved. T. W. Thiesen retiring. The concern owns five drug stores.

FROM ILLINOIS.

The Searle & Hereth Co., manufacturing pharmacists, Chicago, has lately concluded negotiations with Ross, Flowers & Co., of Chicago, manufacturers of toilet articles and pharmaceutical specialties, whereby all of the stock, good will and accounts have been purchased by the Searle & Hereth Co., which also assumes all of the liabilities. The line of toilet articles and specialties formerly marketed by Ross, Flowers & Co. will hereafter be marketed by the Searle & Hereth Co.

Mr. and Mrs. H. Y. Hensley have bought the store belonging to the estate of George Corder in Clinton, and will continue it in the same location. Mr. Hensley was associated with Mr. Corder for nine years.

Burn & Zimmermann, well-known druggists of Oshkosh, have taken Dr. Carter into partnership and hereafter the style of the firm will be B. F. Burn & Co.

P. J. Bortchell is erecting a new drug store in Peoria, at First and Spencer streets.

ROBERT E. EDEN, a young drug clerk of Williams-Curtis, Brookton, and son of Dr. Samuel Eden, died last week under pathetic circumstances. Returning home late one day, he, by mistake, a drink of carbolic acid which was intended in a bottle near another bottle containing medicine prescribed for him by his father. He was 19 years old.

WEST OF THE MISSISSIPPI.

WASHINGTON A. C. SCHOOL OF PHARMACY.

Pullman, Wash., June 25.—Commencement exercises of the school of pharmacy of the Washington Agricultural College and School of Science were held here last week, the address to the graduates being delivered by Hon. Francis W. Cushman, member of Congress from this State. President E. A. Bryan conferred the degrees. Following are the names of the graduates and "honor men": Thomas J. Anders, Jr., Olympia; Arthur B. Annis, (Honor), Spokane, Edwin Rogers Doughty, Lind; Dayton Burt Garrison, (Honor), Olympia; Mrs. Cora Harvey, Colville; Bert Logan Jones, Surance; Edward Lloyd Jones, Spokane; William Lasher, Cheney; David Hughes Lewis, (High Honor), Welch; Manford E. Peck, Olesssa; Milton M. Reid, (High Honor), Pullman; James William Ries, (Honor), Roy; Henry Rosenoff, Ritzville; Owen Boyd Shelton, Walla Walla; William Alden Wallis, (Honor), Pullman.

MINNESOTA CLERKS' FIRST PICNIC.

St. Paul, July 3.—The Minnesota Retail Drug Clerks' Association held its first annual picnic at Wildmoor, White Bear Lake, near St. Paul, on June 26. Prof. Carl Rothfuss, instructor of the Y. M. C. A. athletic classes, St. Paul, was in charge of the programme of track and field events. Prof. Rothfuss prepared a card of twelve events for women, twelve for men and four for children. The contests were open only to drug clerks and traveling men and their wives, sisters, children and women friends. A ball game between teams representing the St. Paul and Minneapolis drug clerks was played.

MISSOURI.

Locally the prices on fountain beverages and concoctions are higher than in former seasons. A "sundae" costs a dime at most places, the price having climbed from a nickel. The "25-cent department store ice-cream soda" has vanished, and druggists say there is no perceptible falling off in fountain sales.

Edward Young, drug clerk for W. R. Grant, St. Louis, has bought J. B. Meukhaus' pharmacy at 4000 Easton avenue. Mr. Young is a graduate of Apothecary Hall, London, and has previously owned, either individually or as a partner, stores in New York, Arizona and Kansas.

Ere long, Wolff & Wilson's drug store, Sixth and Washington avenue, will present an entirely new aspect. This concern has a vast volume of new business. Their cigar booth, recently conducted along new lines, is responsible for a large amount of new trade.

Frank Krueger, formerly of Kansas City, Mo., has

OWEN C. DEVINE

EDWARD E. STACY.

FRANK MILNE.

L. ARTHUR PEPIN.

purchased the Union Avenue Pharmacy of the Evans Drug and Chemical Co. for about \$12,000. Mr. Krueger formerly owned two stores in Kansas City, one of which he conducted for seventeen years.

ENTERTAINED VISITING DRUGGISTS.

Toronto, June 30.—The second annual meeting of the Divisional Association of the Ontario C. P. for the counties of Middlesex and Elgin was held at St. Thomas. There was a large attendance, President C. McCallum of London, occupying the chair. Papers on subjects of trade interest were read by Frank Holman, London; J. L. Luckham, Glencoe, and G. H. Small, St. Thomas, and addresses delivered by J. F. Roberts, district representative, and others. The election of officers resulted as follows: J. F. Roberts, Parkhill, honorary president and district representative; C. McCallum, London, president; E. C. Harvey, London, vice-president; N. I. McDonald, London, secretary-treasurer; J. H. Cairncross, W. T. Strong, J. F. Shuff, and J. Callard all of London; W. A. Foster, St. Thomas; W. H. Stippler, Strathroy, and J. L. Luckham, Glencoe, executive committee. The visiting druggists were entertained at luncheon by the local members.

CANADIAN NOTES.

—J. L. Warwood of the Kennedy-Suffel Drug Co., Green Bay, Wis., was married in Hamilton, Ont., to Miss Myrtle W. Stewart, daughter of Andrew Stewart of that city, at the residence of the bride's parents, Rev. T. J. Bennett officiating. A number of guests from Rochester, Detroit and Buffalo were present. The newly married pair left for Buffalo en route for their new home in Escanaba, Mich.

—Delegates representing the thirteenth Division of the Ontario C. of P. met at Windsor, Ont., and elected the following as a committee to confer with other druggists' associations in fixing standards of education and pay for apprentices: W. R. Graham, Ridgetown; W. R. Johnston, Sarnia; H. O. Fleming, Windsor; F. J. Miller, Walkerville, and W. H. Wilson, Dresden.

—The Munyon Homeopathic Home Remedy Co., Limited, with a capital of \$100,000 and head office in Toronto, has been incorporated to do a general business in homeopathic remedies, the provisional directors being J. M. Munyon and Duke Munyon, of Philadelphia, and J. J. Gibbons, of Toronto.

—G. W. Bartlett, druggist of Winnipeg, Man., was married to Miss Annie McFarlane, daughter of Rev. A. McFarlane, of Clearsprings, Man., the ceremony being performed by the father of the bride. The happy couple went East to spend their honeymoon.

—Vernon W. Meek, druggist with Cairncross &

Lawrence, London, was united in marriage on June 17 to Miss Mabel O'Neil, daughter of J. H. O'Neil of the same city, the ceremony taking place at the residence of the bride's parents.

—"Dr. T. A. Slocum, Limited," has been incorporated with a capital of \$100,000 to take over the business of the T. A. Slocum Chemical Co. of Toronto. The provisional directors are Lawrence Solman, H. E. Trent and L. S. Levee, all of Toronto.

—F. W. Judd, London, purchased the drug business of H. F. Spencer at St. Thomas, Ont. W. H. Bartram, druggist of Parkhill, Ont., made an assignment to C. S. Smith. G. S. Ostrander, druggist of Minto, Man., has sold.

—A new industry for Canada is being undertaken in Montreal in the preparation of raw sponges for the market. A portion of the building erected for the Ozo Company will be utilized for the purpose.

—S. Dunn & Co., a new firm, have opened a store at Portage avenue and Young street, Winnipeg.

—Robert West of the Hudson's Bay Drug Co., Winnipeg, is on a trip through the Eastern States.

—H. Day has bought the drug business of John Wood, Lucknow.

—J. A. Riekey, druggist of Ottawa, has sold to J. H. Malloy.

—A. H. Esch, druggist of Kaslo, B. C., is closing out.

Do You Know the Taste of a Ripe Pineapple?

We wonder how many druggists in the United States have ever tasted a naturally ripened pineapple. If one could only get hold of such, it would be a revelation to him. A pineapple requires about 18 months to ripen thoroughly on its own root. The pineapples we are familiar with are picked green and ripened afterwards, very often under unfavorable conditions, and the taste is entirely different from the naturally ripened fruit.

There are no better pineapples in the world than those grown on the Malay Peninsula. The Singapore Planting and Packing Company, a very large corporation whose headquarters are at Singapore, have placed on the market this season a grated pineapple put up with a small amount of sugar and no other preservative, right on the ground. They claim to use only the ripest and soundest fruit, thus insuring all its delicacy and flavor. It is put up in scant two pound cans, and packed four dozen in a case. Robert Stevenson & Co., 92 Lake St., Chicago, are marketing it in this country. It is sold to the trade at \$2.40 per dozen cans, or \$9.00 per case. For crushed fruit, the proper proportion is one part of Singapore Pineapple and two parts of Rock Candy Syrup; for Pineapple Syrup, one part of the Pineapple to four parts of Syrup, with a little fruit acid added to suit the taste. In neither case is heat required. For the time being, a sample can will be sent free to any druggist who will send thirty cents to pay for packing and express charges, and mention this notice.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories.
Twelve Teachers. Thorough Courses.

NEXT TERM BEGINS SEPT. 7, 1903.

Address inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

WITH OUR DOWN TO DATE ADVERTISERS.

Some of the new ones which appeared in last week's

ANGOSTURA BITTERS.—See C. W. Abbott & Co.'s advertisement on page 21.

THE HER CHEMICAL IMPORTING CO.—This firm are located at 14 Platt St., New York, and are exclusive importers of all kinds of chemicals. Note their ad on outside of back cover.

CORKS.—When you see a cork, A or B in a circle, your mind turns to "Circle A" and "Circle B" Prescription Corks, for you know them as among the best. Armstrong Cork Co. makes them and all jobbers sell them.

FOAMOLINE.—Prepared for manufacturers of Ice Cream, Sorebets, Fruit Frosts, and Water Ices. More about it on page 22. Read it.

LEEZY.—A first-class Prescription Filling Cabinet called the Boykin Fi Leazy, supplied by E. B. Read Son & Co., Baltimore, Md. See the illustration on page 20.

H₂O, 3 per cent. "The kind that keeps." This is what the Oakland Chemical Co. claim for their Hydrogen, and if it's a good kind you're looking for, one that you can depend upon, stock this kind.

AQUA DESTILLATA.—Always ready when you need it, if you have "The Sanitary Still." See the ad at end of the A. H. Peirce Mfg. Co.

MASSAGE CREAM.—Made by the Pompoian Mfg. Co. of Cleveland, O. Put up in 2 and 6 oz. Egyptian Glass Stoppered Jars, cost \$4.00 and \$8.00 a dozen, and positively removes blackheads, pimples, tan, sunburn, etc. Now is the time to stock it.

FOR SODA FOUNTAINS.—The San Gabriel Valley Essential Oil Co. have many testimonials for their Soluble Concrete Oleo Resin of Orange and Lemon, for making Soda syrups. You can read them on Page 7.

STAINOFF.—Write to D. M. Steward Mfg. Co., 8 Jay St., N. Y., or 57 Washington St., Chicago, Ill., for a sample card and particulars.

DRUGGISTS' TINWARE.—The American Can Co. manufacture everything the druggist needs that is made from tin. They have offices at New York, Chicago, Baltimore, and San Francisco. This firm makes a specialty of Seamless Tin Boxes.

WINE OF CARDUI.—A female remedy of merit, costs \$8.00 per dozen, less the cash discounts made by the Chattanooga Medicine Co., of Chattanooga, Tenn., offices also at St. Louis, Mo., and San Francisco, Cal.

ANTIPHLOGISTINE.—Made by the Denver Chemical Mfg. Co., 57 Lighthouse St., N. Y., and prescribed by the leading practitioner for every type of inflammation. You can make an extra 5 per cent by ordering \$24.00 worth in small or assorted sizes.

Have You Noticed It?

If you haven't noticed the advertisement of The Humphreys' Homeopathic Medicine Co. on another page of this issue, it will pay you to do so. It contains a cut of the Cabinet which "sells the goods." It is a conceded fact that Humphreys' Homeopathic Remedies have done and will do all and more than the manufacturers claim for them. The public know the value of them, and are bound to have Humphreys'. Have you a Humphreys' Cabinet? If not, can you afford to be without one? People have been known to go several blocks in order to procure the Humphreys' Remedies from a cabinet. The reason is plain, they had seen the cabinet, and knew in which drug store they had seen it. They also knew the goods would be more apt to be had from such a cabinet. Don't you think it would pay you to go to 111 William St., N. Y., for a Humphreys' Cabinet offer?

"McCormick Means Merit."

McCormick & Co. of Baltimore, Md., who are said to be the largest importers and graders of Spices in the South, have recently taken possession of their new plant, which is considered one of the finest Drug and Spice mills in this country. This firm have been wonderfully successful in the past 14 years, having been obliged to seek larger quarters, ten times within that period. They attribute their phenomenal success to the fact that they have firmly adhered to the principle of supplying the trade, with not cheap goods, but good goods cheap, and by so doing have made the name McCormick & Co., a by-word wherever they are known at all.

The terse expression "McCormick Means Merit" appears in many of their advertisements, and both the consumer and the dealer who know their goods, attest to the truth of this statement. They would be glad to send you generous samples, and quote prices upon anything in their line which interests you. Address all correspondence to McCormick & Co., Dept. E., Baltimore, Md.

The Babool Tree of India.

The babool tree, which is the Indian species of the gum arabic tree, will amply repay any care and trouble spent on its systematic culture. There is scarcely a single part of it which does not serve some economic use. The gum which exudes from its bark serves the purpose of calico printers, and when pure is used as a substitute for real gum arabic. The tender leaves, beaten into a pulp, are administered medicinally as an astringent, the bark, too, being similarly employed. The fine powder of the latter, mixed with gingely oil, is given externally in cancerous affections. It is also used for tanning, giving a buff tinge to leather, and is added to arrack during manufacture to modify the quality of the liquor. Last, but not least, a decoction of it, as well as of the pods, makes a very good native soap. From the bark of the tender twigs a coarse fiber is extracted that does well for ropes and rough paper, in the manufacture of which it is successfully employed in the Punjab. In Bengal the young fresh twigs are converted into tooth powder. The young thorny twigs serve for fences, while, as is pretty generally known, the leaves, seeds and green pods are of great value in hot seasons as food for cattle when other fodders fail. The green pods yield a fairly good ink as well as a dye. Such are some of the economic purposes to which the babool tree can be turned, and although these uses are not being pointed out for the first time it may be well to enumerate them again.—Capitol, Calcutta.

Keeps His Eye on the Gun.

An unappreciative employer is certainly discouraging, but as the intelligent clerk realizes that his own interest is bound up for the time with that of his employer, he does not falter but keeps his eye on the gun.—The Ad-Writer.

PATENTS.

Issued June 30, 1903.

- 732,038.—Woodbridge H. Birchmore, Brooklyn, N. Y., assignor of one-half to Clarkson A. Collins, New York, N. Y. Siphon bottle.
- 732,065.—Nicholas Glab, Dubuque, Iowa, assignor to Frank C. H. Strasburger, Chicago, Ill. Bottle-filling machine.
- 732,123.—Adolph Schneider, Chicago, Ill. Bottling-machine.
- 732,135.—Charles A. Tatum, New York, N. Y., assignor to Whitall-Tatum Company, New York, N. Y., a Corporation of New Jersey. Atomizer.
- 732,203.—George A. Lowry, Boston, Mass. Apparatus for charging fluids or the like with carbonic-acid or other gas.
- 732,323.—Albert H. Stone, Boston, Mass. Depilatory and process of making it.
- 732,481.—William C. Wiederseim, Philadelphia, Pa. Bottle sealing device.
- 732,506.—Leon F. Bizouarne and Emile Kugler, Paris, France. Non-refillable Bottle.
- 732,539.—Samuel Fyfe, Birmingham, England. Filling, corking and labeling bottles.
- 732,565.—George H. Klemm, Fowler, Colo. Insertible closure for liquid receptacles.
- 732,592.—Horace V. Scott, San Francisco, Cal. Re-filled bottle detector.
- 732,620.—Joseph A. Hankley, Anadarko, Okla. Drug-gist's dispensing oil-can.
- 732,656.—John F. Schneider, New York, N. Y. Bottle-tin-foiling machine.
- 732,678.—Eliot E. Ford, Rahway, N. J. Bottling apparatus.
- 732,689.—Frank A. Liftchild, Brooklyn, N. Y. Medicine-dropper.
- 40,673.—Medicine to prevent seasickness. W. Fred. Steinmetz Co., Philadelphia, Pa. The words "Unpleznt Kumpnee."
- 40,674.—Medicine for cure of nervous diseases. Lucius R. Williams, Chicago, Ill., and New York, N. Y. The representation of an ideal head, etc.
- 40,675.—Remedies for kidney diseases in tablet form. Wells & Richardson Co., Burlington, Vt. The representation of a circular field inclosing a boy astride a dolphin, the boy holding a streamer in his hand.
- 40,676.—Uric acid remedy. Leonard S. Nicholson, Washington, D. C. The word "Le Nard."
- 40,677.—Remedy for certain named diseases. Isidore L. Rosendorf, Selma, Ala. The word "Dys-sinxoa."
- 40,678.—Remedy for certain named venereal diseases. Henry W. Dicker, Cleveland, Ohio.
- 40,679.—Remedies for diseases of the skin and scalp. Alonzo Frank Richardson, New York, N. Y. The word "Zemacream."
- 40,680.—Remedy for stomachic disturbances. Kalle & Company, Beibrich-on-the-Rhine, Germany, and New York. The word "Bismontoid."
- 40,681.—Cod-liver oil. Peder Devold, Aalesund, Norway. The letters "P. D." inclosed in a rectangular border.
- 40,682.—Wash for tender or sore feet. William J. Govan, Atlanta, Ga. The representation of a human foot and leg extending through a crown.
- 40,683.—Hair-tonics. Mattie Elizabeth Ellis, Curve, Tenn. The representation of a full face picture of a woman, etc.
- 40,684.—Liquid extract of smoke. Hiisom Remedy Company, Lincoln, Neb. The hyphenated word "Py-ro."
- 40,685.—Tooth-wash, tooth powder and tooth paste. Eugene B. Morris, Paris, Tex. The word "Arbutol."

DESIGNS.

- 10,146.—Title: "Face Base Elmire." (For skin-food and massage-cream). Laura G. Fixen, Chicago, Ill.

LABELS.

MARK ADVANCE IN SANTONINE.

York, July 7.—Dealers report a fair average demand with small lots to meet current needs receiving the larger share of attention. Prices have fluctuated within narrow limits, an advance of 25c. per lb. in manufacturers' quotations for santonine being the principal exception.

OPIMUM.—Primary markets have developed a stronger undertone owing to reports of heavy rains in growing districts, and the import cost is fully 5c. per lb. higher, but jobbers are still quoting \$3.25/3.40 for 9 per cent. and \$3.35/3.50 for 11 per cent. Powdered continues to move slowly in small lots at \$4.25/4.50 for 13 per cent., \$4.75/4.90 for 16 per cent. and \$4.80/4.90 for granulated.

MORPHINE.—The movement into consuming countries continues of a satisfactory character and quotations are well sustained at \$2.50/2.60 for eighth in ounce boxes, \$2.45/2.55 in 2 1/2-oz. boxes, \$2.25/2.35 in ounce vials, and \$2.20/2.30 in 5-oz. cans, as to brand and quality, less the usual rebate on large purchases.

QUININE.—There has been no improvement in demand and the market remains quiet in the absence of new features, with quotations nominally steady at 23/60 per cent. for bulk in 100-oz. tins, 23 1/2/24 1/2, in 50-oz. tins, 23 1/2/24 1/2, in 25-oz. tins, 25 1/2/26 1/2, in 15 or 10-oz. tins and 30/31/32 per cent. in ounce vials, according to brand and quality.

SANTONINE.—Owing to scarcity and higher cost of raw material manufacturers' prices are 25c. per lb. higher and the revised jobbing quotations are \$8.00/8.25 per lb. for crystals and \$8.25/8.45 for powdered. The former in ounces is held at 60/61/62c. and the latter 62/63/64c.

CHINESE BONE.—Keen competition among importers has weakened the market and jobbers have reduced quotations to 21/62/28c. for whole and 28/63/32c. for powdered.

GUM GUAIAC.—Values are a shade easier with softness in a jobbing way at 28/63/33c. for good, 33/64/38c. for extra select and 28/64/35c. for powdered select.

SARAPARILLA.—Mexican is in reduced supply and firmer with jobbing quotations advanced to 21/62/26c. for whole; 23/62/28c. for cut or crushed and 25/64/31c. for powdered.

SENEGA ROOT.—Prices are still tending toward a lower basis and quotations show a further decline to \$1.00/1.10 for whole and \$1.06/1.20 for powdered.

PEPPERMINT.—Slow trading and weaker primary markets have caused a decline in local jobbing quotations to \$3.20/3.35 for Western, \$3.45/3.70 for Wayne Co. and \$3.10/3.35 for either redistilled or H. G. 11.

PENNSYLVANIA.—Supplies are offered more freely and jobbing quotations have been reduced to \$1.60/1.75.

ROSE.—Crop reports from Turkey continue favorably to a liberal yield and jobbing prices show a decline to \$5.00/5.25 for Kissanlik and \$6.00/6.25 for extra.

WORMWOOD.—Jobbers have further reduced their quotations to \$5.00/5.25 for ordinary and \$5.75/6.00 for best.

CANADA SNAKE ROOT.—Owing to lack of demand the market is easier and jobbing quotations have been reduced to 70/65/70c. per ounce.
TARTAR PREPARATIONS.—Continued strong markets are reported for all descriptions and the ruling quotations are 21/62/21 1/2c. for sal Rochelle in lbs., 22/64/22 1/2c. in 50 lb. boxes and 25/64/26c. for best, 17 1/2/61/62c. for best mixture in lbs., 19 1/2/62/63c. in 50 lb. boxes and 20/62/21c. for best. Tartar emetic is held at 32/63/35c. for powdered.

WHITE LEAD.—Quotations for either dry or in oil have been reduced to 74/75c. in kegs and 64/66c. for extra. Prices are quoted for red lead and litharge.

SHELLS PIPERINE.—The market is slightly firmer and jobbers have advanced quotations to 54/64/65c. for best and 60/61/62c. for smaller quantities.

In the Front Row.

Every druggist in the country undoubtedly has a good sale for Effervescent Lullin Tablets, and when speaking of good ones that are the perfection of manufacture and therapeutic effect, always mention those made by Wm. R. Warner & Co., their tablets give absolute satisfaction to the prescriber, dealer and patient, and may always be found in the front row on the shelves of all the first class drug stores.

BUSINESS NOTICES.

A HELP IN PRESCRIPTION WORK.

There are a great many things that the average dispenser can't remember, and there are as many more that he shouldn't try to remember—it isn't safe. These things come up in prescription filling when time is an important factor and accuracy is strictly essential. There are questions about dosages, dose equivalents, percentage solutions, specific gravity, incompatibilities, metric and thermometric equivalents, meanings of Latin, French or German terms. These things are all tabulated, or figured out, handy for instant reference, in the Era Dose Book (Third Edition, Revised and Enlarged). Price 50 cents, postpaid.

Is pharmacy a business or a profession?

The highly educated pharmacist who tries to conduct a store without a knowledge of business details will inevitably fail.

In the same way will a business man who tries to run a pharmacy without some knowledge of the profession inevitably come to grief.

Speculation as to the relative values of the two classes of knowledge is useless—both are necessary.

There are good business men who make poor pharmacists, and good pharmacists who make poor business men.

If you belong to the latter class, we feel sorry for you, if to the former there is a remedy, The Era Course in Pharmacy.

Write to The Pharmaceutical Era, No. 8 Spruce Street, New York, N. Y., for a prospectus.

THE ERA AND THE NATIONAL BUREAU OF FOODS AND MEDICINES.

Last week we printed a letter from Prof. H. H. Rusby in which he disapproves of the views expressed in these columns on the proposed National Bureau of Foods and Medicines. The communication unfortunately arrived too late for comment in the same issue, and we take this occasion to defend our position. Our esteemed correspondent seems to have gathered from our remarks that our chief objection to the proposed bureau was the impracticability of the outlined plan of operation; and he hints that our deductions are based upon insufficient information, that if we had given the subject proper study all doubts would have disappeared. We admit that we have not mastered all of the immense number of details given in the report, but it seemed to us unnecessary to discuss methods of operation while it seemed so extremely unlikely that the committee or board would ever have anything to operate upon. No doubt the plan of conducting the bureau has been carefully prepared, and might be, or at least with some modification, might be made effective; but before the best of plans can be useful, it must have work to do. The discussion of the best method of preparing a rabbit stew seems somewhat profitless while the conditions are such that in order to make this savory dish it is first necessary to catch your rabbit. It is in the way the gentlemen of the committee have set to work to catch their rabbit that we have found the greatest weakness. They seem to have taken it for granted that this astute animal, so extremely necessary to the success of their plan, would voluntarily walk into the pot.

WHY THE MANUFACTURER IS WARY.

The main purpose of the proposed National Bureau of Foods and Medicines seems to be an excellent one. Many abuses have crept into the drug trade as the result of too keen competition between retail manufacturers, and the removal of these evils would be very welcome to the retail pharmacists, and would go far to restore the calling to its former dignity and attractiveness. But the abuses—some of them are only perversions of legitimate business policies—are practically all to be found in the manufacturing branch of the trade. The purpose of the movement is frankly to regulate the affairs of the manufacturer who is ex-

posed to submit voluntarily to such regulation. It is, therefore, obvious that the scheme must be made acceptable to him or all the beautifully wrought plans are destined to remain permanently idle. The inducement in the form of a certificate seems to have no attraction whatever for the manufacturer, and in reliance is left to give up his freedom and independence in the use of his carefully devised weapons of trade? Have the learned gentlemen who prepared the report the assurance of even one manufacturer that he is prepared to cooperate with them in their laudable efforts? One of the most powerful and reputable manufacturing firms in America, one that has done much for the development of scientific pharmacy, and one whose products are prepared with the most scrupulous care, has expressed to the Era the most vehement disapproval of the bureau plan. If the reputable firms are unwilling, what can we expect of their less scrupulous rivals who slave a profit from low-priced and inferior materials? Prof. Rusby states that the last pure food and drug bill was defeated by a most powerful lobby. Are the forces behind this lobby likely to sit calmly by while the very control to which they have raised such vigorous opposition is brought about by moral suasion? The interests of this powerful and important element all seem to lie on the other side of the fence.

ONE OR TWO SERIOUS OBJECTIONS.

On the objects of the bureau is to create uniformity of standards and preparations, so that the druggist will not be obliged to keep in stock similar products of a dozen or more manufacturers. Have the members of the committee ever inquired why there are so many different kinds of elixirs, tonic extracts and cathartic pills on the market? It is to the commercial advantage of the manufacturer to make his preparations different from all others in order that they may possess a real or assumed superiority, the text of all advertising literature. Can any firm afford to give up the advantage, the very motive power of his business, without a lively struggle? The bureau is also expected to bring about, at one glorious sweep, the publication of all secret formulas, "a consummation devoutly to be wished," but also a consummation that will be resisted even unto the last million of the proprietary men. These are only samples of the many obstacles which to us seem to be insuperable, and which must be overcome by the national bureau committee before any plans and details need be seriously considered.

RIGHTS OF ASSOCIATIONS TO CONTROL PRICE. ANOTHER DECISION

Courts and judges are still having trouble—or is it fun?—with the principle of controlling prices by means of association agreements to withhold goods. Have the associations the right to compel individual dealers to respect their wishes by interfering with commercial sources of supply? This is a question upon which there seem to be as many opinions as lawyers. There have been many famous cases involving this principle during the last two years, and as many conflicting decisions. The point at issue is an important one to the drug trade, for it is the foundation stone in the tripartite plan to bear to the hearts of the stal-

warts in the N. A. R. D. The cut-off principle has had its victories in the courts, notably in the famous Park case and more recently in the case of R. H. Macy & Co., and the book publishers association, but there have also been numerous defeats, and it seems now that the principle will have to be abandoned, at least as a practical working basis of price-control. During the past week the Appellate Division of the Supreme Court has reversed the decision in the Macy case, which was hailed with a joy by the associations only a few weeks ago. The latest opinions hold that the association has no right to restrain retailers from selling a manufactured article at a price which they see fit. The court declared that the associated booksellers in preventing the department store firm from obtaining supplies acted under an agreement which is against public policy and is illegal and void. The decision is not unanimous, the court being divided three to two, but it is sufficiently definite to very seriously impair the usefulness of the principle. A plan that can be enforced only in the face of tedious and expensive litigation, the outcome being moreover extremely uncertain, leaves much to be desired. We doubt whether the N. A. R. D. at its next annual convention will reaffirm its faith in the tripartite plan. It seems probable that more of the association's energies will be devoted to extending the direct contract plan, which has never been successfully assailed in the courts. The pity is that this could not have been done two or three years ago while the trade was still in a hopeful and experimental mood.

IS IT TRUE THAT THE AVERAGE DRUGGIST IS "SMALL POTATOES."

The remark the Philadelphia wholesale druggist quoted in last week's Era is worthy of a moment's reflection. He said that the trouble with the retail druggists is that they have been educated with a grain weight. He accused them of narrowness and advised them to widen their horizon. Now, we do not in the least agree with this gentleman about the incidents which called forth his display of very evident ill-will, nor do we believe that druggists are, as a rule, small-minded, but is there not just a grain of truth in the remark? Are not nearly all the difficulties and differences and heart-burnings and recriminations which mark the proceedings of so many local druggists' associations due directly to narrowness of vision? A speaker at a meeting in England recently discussed the business difficulties of the pharmacist and analyzed some of the causes. He said that the professional duties of the dispenser, in which small accuracies were essential, tended to limit the field of vision. He considered it highly necessary for the pharmacist to cultivate the ability to take a comprehensive view of things, for a broad grasp of conditions is essential to business success. The life of the American druggist is very different from that of the British chemist, and we also know that many of our most thoroughly informed and liberal minded citizens are retail pharmacists. But when we contemplate the small bickerings about dues and the narrow distrust of others that so often hinders the wheels of progress we are also tempted to say "Hold up your head and look beyond!"

SHOP TALK

VACATION WEATHER.

"Sizzling! And its only nine o'clock."

The C. P. Dropped into a chair, removed his wide straw hat and mopped the shining dome which is his chief pride and ornament.

"Keep cool!" said the druggist. "It's only begun yet. You mustn't mind a little spell like this."

"How about a vacation about this time?" suggested the clerk.

"Theoretically I don't take much stock in vacations" said the sage. "But this hot weather—I don't know. The weather ought not to influence a man's thoughts, at least if they are logical and have a sound basis—somehow things look a bit different now. I figured it out in the cool brisk weather of early spring. I may have to change my mind. I'm open to conviction—yes, quite open."

"Made up your mind that vacations are all foolishness, eh?"

"Not quite that! I figured out that this talk about the absolute need of vacations is all bosh, and what people are after is pleasure, that's all. I don't blame a man for taking his pleasure. It's what we are all after in this world, but to say he needs a rest—I don't know!"

"It may be overdone, but there is something in it. Some men do work hard enough to need a rest."

"Mighty few! And those that need it seldom get it. Why is it that the man who works the shortest hours, gets the longest vacations. The Wall Street magnate goes to work at eleven and quits at three and takes all summer off, while the foreigner with a pick digs in the street every day if he finds it to do, and is on good terms with his stomach at that."

"But, they are different."

"Why, different? It seems to me that about nine men out of ten draw so slightly on their energies in their daily work, that their machinery is only barely kept limbered up. Why give the rust an extra chance to get in its work? Take the thousands of clerks in the city. Do you mean to say that they are in danger of wearing out?"

"Huh! It's easy for you to talk," snorted the clerk. "What do you know about a clerk's need of rest?"

The druggist laughed. "They don't go away to rest. They come back all petered out, and aren't good for much for a week afterward."

"I'm not saying that the average clerk shouldn't have a vacation, but his needing it—that is another matter."

"Do you think we don't enjoy a little letting down of the fiddle-strings as well as anybody?" retorted Charley. "Are you going to keep all the good things for the old codgers like yourself, who have forgotten how it feels to buckle down to it day in day out? What do you know about getting down to the store on the minute every blessed day? This being always in harness is enough to kill—"

"Ah! The harness. That's it, is it? It's freedom you want. Freedom is sweet, very sweet—but is it necessary?"

"Don't ask me," said the druggist. "I haven't had any experience for so long. The only vacation I get is a day or two snatched here and there. But freedom from care! No, I don't know what that is. But don't you think you enjoy that more than we do?"

"Perhaps! But don't dodge the question. Is it necessary? In my day we didn't think of an outing at regular stated intervals, and people lived about as long too and did quite as much work. There are lots of people who still thrive in the same old way. Do you know what our friend, P. W. Ray, the veteran druggist of Brooklyn, says?"

"Is he thinking of a vacation?"

"He says that he wouldn't have lived to be eighty-seven, if he had taken a vacation every year. He says people only go off to the mountains to worry about things that would settle themselves at home."

The clerk looked disgusted and remarked: "He missed lots of fun."

"Don't be too sure of that! You see, he might not care for the sort of fun that you like. Some men are interested in their business and feel uncomfortable away from home. Fixed habits are the most comfortable in the long run. A pleasant monotony—"

"You mean that it is comfortable to get into a rut and stay there?"

"Yes, a well-worn rut is a mighty comfortable institution."

"And mighty deadening," said the clerk. "Deliver me from such a life as that! I want something more than comfort."

"Oh, I don't approve of too much monotony and contentment. Ambition is a sort of discontent, you know, and if a boy becomes contented and comfortable too early in life, he doesn't rise very high. The trouble with most young fellows is that their ambition runs too much to vacations and not enough to business, and this everlasting talk about working too hard gives them an excuse to play lazy."

"What do you mean by 'playing lazy'?"

"Well, call it playing tired if you want to. Billy Smith is a case in point. Old man Smith has tended store every day for years. Mrs. Smith, like most wives and mothers, never had a day off and never expects to get one. That cub, Billy has been pampered and petted until he thinks he deserves all the soft things. But the world isn't built that way. Billy struck his first snag when he tried to get through college by touching only the soft spots. His mother said the professors were down on her poor boy. Then he decided to be a business man—education didn't amount to much anyhow. The old gentleman got him a job, but his jobs don't seem to stay got. For the last six months Smith, Sr., has been chasing jobs pretty regularly. A few weeks ago he told me he finally had the boy well placed—a place where they appreciated ability, and a bright boy could rise."

"Any vacation?"

"I saw Billy last night. He said he was going up to some place in Nova Scotia. 'Got a job there?' said I. He looked tired and said, no, he was all run down; he was going to take a good long rest."

"What did his parents say?"

"They are plugging along as usual, trying to give the darling a chance. There is mighty little prospect for a vacation in that direction."

"Old people don't need a rest so much," ventured the clerk.

"Young man!" blazed the C. P., "when you get old, you will think you need rest all the time. If you need two weeks, your mother needs two years. The selfishness of the modern youngster is something outrageous!"

"Say!" whispered Jimmy, the errand boy. "Don't you want to cool off some. You get de boss to let me off, an' I'll show you de peachiest swimmin' place—"

"Look at that! There is the whole thing in a nutshell. The small boy likes to quit work to go fishing or swimming and he doesn't put up any bluff. He says he wants to go, and is willing to run a mile on a day like this to get into the swimming-hole first. He doesn't pretend to need a rest. Older people want to go on a vacation for pretty much the same reason, only they are not quite so honest about it. They put

up a bluff about being run down and needing a rest."

"Don't you think swimmin' ain't no good?" inquired Jimmy.

"Don't! Look here, Junny! I'd give just about all I've got to be a boy something like you and within two miles of that old swimming-hole. I shouldn't mind the loss of a few square inches of skin on the old raft ether, nor the nettles, nor the thistles, nor the mosquitoes!"

"Better go camping with me," said the clerk.

"When?"

"Second week in August."

"Too late! I'm going tomorrow morning."

"What?" said the druggist. "Do you need a rest?"

"Who said 'rest'? I'm going for fun."

WHEN A MAN'S HAIR TURNS GRAY.

An uptown pharmacist and officer of one of the local pharmaceutical associations had a hair-bleaching experience a few months ago that he never will forget.

It was while blackmailing schemes were rife and after many druggists had been made to suffer for real or alleged mistakes. Our friend was compounding a prescription in the early hours of the forenoon when the telephone bell rang.

"Hello, is this —'s pharmacy?" some one called. "Yes, sir."

"Well, this is Dr. ——. Did you refill two prescriptions for me yesterday?"

"I don't know, I did not myself. But I was out part of the day and my clerk may. Hold the wire a moment while I look."

The druggist was troubled. Doctors don't usually call up that way unless something is doing. He looked at his files, and, sure enough, the refills were there. He hastened back to the phone.

"Hello, Doctor. Yes, your prescriptions are here." "Well, you sent morphine instead of calomel tablets, and the child is dying."

"My God, Doctor, it is impossible. It can't be! The morphine is in another part of the store in the poison closet. That door can't be opened without a gong ringing. No clerk could possibly be stupid enough to make that mistake. I must see you, Doctor. I'll come right over!"

"Can't see me until three o'clock; I'm going out. If the child gets any worse I'll put the case in the coroner's hands."

The doctor rang off.

"I felt my hair going gray" said the druggist. "I turned the city upside down. Every friend I knew I called up imploring some means of help. I saw the bars of prison. When a policeman passed I dodged out of sight. Then I locked the store and started for the doctor's office. It was only twelve and he said he would be out until three.

"I got the doctor's route and rushed from place to place after him and had two friends trying to head him off. But I could not find him.

"Before three I was back at the office. He had just come in and several patients were waiting in the reception room.

"You'll have to take your turn," he said to me.

"I won't!" I shouted. And I grabbed him with both hands by the collar and thrust him back into his office and slammed the door.

"He thought I was crazy.

"Doctor that mistake was impossible. Is the child dead? My God —"

"What child?"

"Why, the one you said I gave morphine for —"

"I don't know anything about morphine nor about your child."

"I collapsed. 'For the love of Heaven!' Then it dawned on me.

"It was the first of April.

"I went rapturous with joy. The first fellow I met, a drug clerk, I began telling my awful case. I had hardly started when I noticed he was convulsed with laughter. For the second time that day something dawned on me.

"I gave that clerk the worst pounding a man ever got in his life. To this day I wonder that I did not kill him. He had dropped in the day before to see my clerk and, finding him rushed, had helped him out by refilling those two prescriptions."

A CHAPTER ON DOCTORS.

An up-town pharmacist does not like doctors. To use his expression, he "chases them all out of the store."

"I don't mean to say," he explained, "that I have no friends among the doctors. But I do not bow and scrape and prostrate myself before them. They are no 'sacred cow' to me.

"I have fought for months, tooth and nail, with some doctors. Why? Because not only are they always borrowing articles from my stock, which they never return, but they have taken them without so much as asking leave; they are in the way, puttering around in the prescription department, peering into this and that, barely excepting the till; they continually harp on commissions, and, worse than all else to a man of independence, they gloat in reminding you that you couldn't get along without their assistance. When a doctor intimates anything of that sort, just once, out he goes if I have to throw him out.

"One chap where I used to have a store began telling me how to conduct my business one day. I didn't agree with him, whereupon, like many people in argument, he became abusive. He told me that I would starve if it wasn't for him. I told him to get out and stay out or I would break his head. He replied that he would ruin me and I retorted to 'go ahead,' that for every customer I lost he would lose three patients.

"Well, we fought for a year and he was sorry before I got through with him. He didn't succeed in hurting me appreciably but I smashed his practice.

"If a doctor is a gentleman, I want his friendship, but if he is a grafter or a boaster then he had better keep away from this store."

WHERE SOME OF THE REVENUE GOES.

"Importers of drugs and jobbing houses are constantly the victims of thieves," said an employe of one of the big New York wholesale firms whose duties are largely those of a detective or special agent. "It is a fact," he continued, "that many firms have regular losses every year that often reach considerable of an aggregate.

"The most frequent leaks occur while imported goods are in bond." An instance was cited in which two of the large firms each lost several thousand dollars' worth of opium about eight years ago. "Our firm lost sixty ounces of cocaine only a short time ago. The thief, an employe, was caught. Cocaine and opium are stolen very often because they are so costly that a pocket full is worth quite a figure. Ginseng is another article that is lost every day. This usually occurs in some express office. Truck drivers are frequently not above suspicion, and especially those who have been discharged."

A Brooklyn department store allows \$10,000 annually to cover losses by theft. It is asserted that these unwelcome customers have a habit of returning the goods the next day and exchanging them for cash or other articles.

"Outside Application"

Dr. Snyder's Handsome Pharmacy at Lewisburg, W. Va.

This is the Lewisburg drug store, Lewisburg, W. Va., one of the handsomest and best stocked in the South. The furniture is cherry, richly carved, with mahogany finish. The wall cases have sliding glass door, the floor cases French bevel plate mirrors and the ceiling is of steel. The main part is 28x70 feet with prescription and office rooms in the rear.

An onyx fountain and marble counter add beauty

and help to advertise. Alongside the main room is a room for stock, specially manufacturing and paint, oil, glass and chinaware display. A big cellar gives more room.

Lewisburg is the county seat of Greenbrier county, rich in farms and lumber. The store's success is attributed to fair dealing. The second figure on the left in the picture is H. Harry O. Snyder, M. D., proprietor and manager.

ELECTROLYTIC DETERMINATION OF ARSENIC.

At a recent meeting of the Chemical Society in London Dr. Thorpe described the method for determining arsenic in brewing materials adopted by a committee appointed for the purpose of devising a process more satisfactory than the old Marsh test with zinc and sulphuric acid. The use of zinc possesses many well-known disadvantages. Even when pure zinc can be employed the results are not entirely satisfactory, as some zinc does not yield all of the arsenic in gaseous form. In order to avoid the use of zinc an electrolytic method was proposed some time ago and developed by Bloxam. At the suggestion of Lord Kelvin the committee has studied and modified Bloxam's method and has devised a process which is believed to be entirely satisfactory. The apparatus consists of an inner bottomless glass vessel provided with a thistle tube and a large conical platinum electrode. This is placed inside a thin porous vessel, which in turn is surrounded by a glass beaker, through the walls of which a platinum electrode which surrounds the porous vessel is fixed. The whole is surrounded by water or ice to prevent a rise in temperature. Pure sulphuric acid is placed in the inner vessel and a moderate electric current applied in such a direction that hydrogen is liberated from the inner electrode. When the air has been driven out of the apparatus the jet of hydrogen passing through a tube of standard diameter is lighted and the solution to be tested added through the thistle tube. Arsenous hydride is liberated if arsenic is present and a mirror is obtained by heating a

portion of the tube in the regular way. The whole operation can be completed in about twenty minutes. The test is of great delicacy, one part of arsenic being detected in two and one-half million parts of material.

OIL OF TUBEROSE FLOWERS.

A. Hesse (Berichte) shows that the essential oil of tuberoses flowers undergoes considerable change in the process of extraction. The perfume of the flowers is extracted on the industrial scale by a process known as enfleurage. The blossoms are spread upon glass plates, covered with fat and allowed to remain for three days. After having been employed in this way from 30 to 36 times the fat is saturated with the essential oil. The author has compared the oil extracted from fresh flowers and that obtained by the enfleurage process, and finds that the treatment with fat develops the perfume in a marked degree. The fresh flowers when extracted directly yielded only a small fraction of the quantity of oil obtained by enfleurage. The oil from the flowers contained only 1.13 per cent. of methyl anthranilate while the oil produced by the ordinary process yielded 5 per cent. of that ester, showing an increase to 56 times the amount contained in the flowers before treatment.

Street Scene in Jerusalem.

JERUSALEM.

Pharmacy in the Holy Land.—Jews Predominate in Profession and Population, But there are Scores of Other Nationalities, and All are Picturesque.

MONOTONOUS drouth and semi-isolation is always made bearable by the picturesque in Jerusalem and the pharmacist in that holy city has much to be thankful for in the cosmopolitan character of his associates and patrons, relieving as it does the tediousness.

Less emphatically is New York cosmopolitan here, excepting some of the Chinese and an occasional Oriental, drab sameness of attire merges people in two classes, light and dark.

In Jerusalem a curb gathering of twelve persons may contain twelve nationalities and as many costumes. Jews predominate, furnishing about 70 per cent of the population. Turks are next in numbers and then come Greeks, Arabs, French, German, Spanish, Italian, English, American and dozens of other people, every one religiously garbed in tradition of his nation and tribe—tight or flowing, somber or flamboyant.

Pharmacists are mixed in about the same proportion as the patients, one being Arabian, seven Turkish and Grecian and the rest Jewish. Besides these, every leading country except the United States has a hospital with its dispensary.

There is not a whole lot of money in running a Jerusalem drug store. The poor get their medicine free at the dispensaries, the Turks yield to new such as the Arabs or Bohemians to none at all. Your only hope is Sir Turk if allowed to you regularly dose him with quinine. When the Bohemian wanderer at the doors takes to the sick bed he expeditiously dies and his place with it. With the substantial proportion of the population eliminated as far as drug store patronage is concerned the part left is hooked either by an overwhelming number of drugs.

Prescription trade is small. Your Jerusalemite is likely to know or to think he knows what he wants when he is ill and he gets it and keeps it in store as our grandmothers did catnip and mullein. Quinine is the staple, every child knows it and knows when he needs it. Twenty grains are often taken at one dose so accustomed has its use become. Likely as not a customer will ask for a cent's worth of quinine or a half cent's worth of castor oil. Drugs are very cheap and come from France and Germany. Druggists have no taxes to pay.

Professional instincts are as insurmountable as the wall of Jerusalem was designed to be. It is drugs—nothing else. German and French pharmacopoeias are used. There are no pharmacy laws and poisons are never demanded for suicidal purposes. Inspectors are unknown quantities.

Authority to practice comes from the Turkish Government and is vested in a diploma granted after a two years' course at the college at Constantinople or its branch, the Beirut college. Foreign diplomas must be signed by the faculty of the main college. With intermissions of ten minutes every hour school keeps from seven in the morning to six in the evening every day in the week except Saturday.

Jerusalem pharmacists are the best versed in the languages of any in the world. Every customer rings the changes in speech, Spanish, Arabic, German, French, Turkish, Greek, Italian and English are acquired by the pharmacist as a matter of course, and smatterings of less prevalent tongues.

One of the most prominent and at the same time most interesting old Jerusalem families is that of Rosenthal. It left Germany for the Holy Land 120 years ago. The older generations were jewelers, and the younger druggists. America is the new home of this family. Julius and Salomon Rosenthal had a pharmacy at 23 avenue D which is now owned by Salomon, Julius designing to become an M. D.

These men are full of reminiscences of the Holy Land. To them it was always a well-spring of interest and to it they owe their splendid linguistic abilities.

Their father was a friend of the Prince of Wales

Dispensary of Hospital near Jerusalem.
Julius Rosenthal is Seen Behind the Counter Filling a Prescription.

before he became king and while he was a visitor for some time at Jerusalem. Their grandfather, the rabbi of Jerusalem, was a correspondent of the Prince's. It was in Jerusalem that the Prince secured a pass from the powers at Constantinople to visit the tombs

Solomon Rosenthal in Bedouin Costume.

of the Fathers, where lie Abraham and Sarah, Jacob and Leah and Isaac and Rebecca. The Prince walked around in the mosque which the Turks have erected on Hebron, the site of the tombs, and enjoyed himself immensely. When he was ready to go out he was blandly informed that his pass was only good to get in, not to get out, and he would have to stay in. It took a message to Constantinople to secure his release.

Julius Rosenthal is shown in a picture of the Jaffa hospital dispensary, where he was manager. The teaching of English to Germans in a language school in Jerusalem is one of this young man's past experiences.

PRACTICAL FORMULAS FOR SYRUPS.

By GEORGE A. MATTHEWS, Buffalo, N. Y.

FROM time to time numerous comments have appeared on the manufacturing of syrups and it seems that druggists experience considerable trouble in making them. It has been found that a simple syrup prepared from the U. S. P. formula, with heat, does not keep for a long time, while one prepared by the cold process will keep indefinitely. Following are given a few pointers to those in need of them. The writer has carefully tried all methods, but has met with splendid success with these.

Simple Syrup.

Take of refined, granulated sugar, 14 lbs., distilled water, one gallon. Select a small sponge, one of the cheap variety, ordinarily sold as slate sponges will do, provided it be conical-shaped and has small pores. (I would suggest that you select several from your stock and put them aside for percolation. They can be thoroughly washed after using, laid away in a dry place and used repeatedly.) Wet the sponge well, being careful to squeeze out any excess of water. Place it snugly into the neck of percolator, and holding the percolator in an upright position, pour in the sugar, tapping the sides of the percolator gently with the hand to get the sugar evenly distributed. Place the percolator in position and pour on the distilled water. If the flow be too rapid it can be regulated by reaching up into the neck of jar with a long pair of tweezers and pulling the sponge down until the flow is graduated. Return the first filtered portions to the percolator until the fluid shows clear. Add enough distilled water to dissolve the sugar, bringing the volume up to 2 gallons.

By using distilled water and following these directions, the product will be a nice, heavy syrup, which will keep indefinitely under ordinary temperature. To produce a perfect preparation of

Aromatic Syrup of Rhubarb.

Aromatic fluid extract of rhubarb, 3 ounces
Distilled water, enough to make, 2 pints
Carbonate of magnesium,4 drams

Mix and let stand about 12 hours, occasionally agitating, and filter, adding distilled water through the

filter to make filtrate measure 1 pint. Now proceed as in the formula for simple syrup, placing the dampened sponge in the percolator neck. Put in granulated sugar 3½ pounds. Pour on the filtrate and return the first half pint to percolator, adding distilled water to bring up to one-half gallon.

The above will produce an elegant syrup, which does not become cloudy on standing.

Syrup of Licorice.

Powdered extract of licorice, ʒviii
Glycerine ʒxvi
White sugar, ʒxxiv
Ammonia water, ʒiv
Distilled water, enough to make, ʒiv

In a mortar of convenient capacity rub the extract of licorice with the glycerine and one pint of distilled water. Add the ammonia, pour into an evaporating dish and place on a stove over a slow fire until the fumes of ammonia are driven off. Now add the sugar and bring to a boil, remove from fire and strain while hot. When cold add the flavor as follows:

Ess. anise, ʒss
Ess. caraway, ʒss
Ess. wintergreen, ʒss
Ess. coriander, ʒss

The essence of caraway oil is composed of oil of caraway, one-half dram, alcohol, enough to make one ounce. Essence of coriander is prepared by adding oil of coriander one-half dram to alcohol enough to make one ounce.

Syrup of Myrrh.

Any of the syrups can be prepared in this manner. Syrup of myrrh may be made as directed by the U. S. P. for syrup tolu.

Gum myrrh, ʒi
Calc. phosph precip, ʒi
Alcohol ʒi
Sugar ʒss
Water q. s., ʒi

Proceed as in the syrup of tolu formula, and use the percolator as in preceding formulas for dissolving the sugar.

Prescription in Arabic.

One of the Languages the Polyglot Pharmacist of Jerusalem Uses in His Business.

Other Syrups.

There are many other syrups that the druggist will be called upon to prepare, for which he has no given formula. By using the requisite amount of fluid extract, distilled water and magnesia, and filtering as in the direction given for aromatic syrup of rhubarb by the percolator and sponge process, he will find that he will be delighted with the successful products. I favor distilled water for making all syrups, as it is absolutely pure, and there is not the slightest chance of the animal matter which common water contains decomposing and spoiling the syrups.

To Mask the Taste of Quinine.

There is quite a trick in getting a good syrup that will mask the taste of quinine sulphate. The majority of syrups prepared for that purpose are a sufficient disguise only when the dose of quinine is small, but if the drug is to be given in three to five grain doses, it is a difficult problem to mask the bitterness. Here is the formula for an aromatic syrup of yerba santa, with which I have the best of success and which will be found serviceable for quinine mixtures where no other vehicle is preferred.

Fluid extract of yerba santa.....	4 oz.
Solution of potassa.....	1 oz.
Oil of wintergreen.....	2 drams
Oil of cinnamon.....	2 drams
Fullers' earth.....	2 oz.
Caramel.....	4 drams
White sugar.....	28 oz.
Distilled water, enough to make.....	2 pints

Mix the fluid extract, solution of potassa, the oils of wintergreen and cinnamon and fullers' earth with one pint distilled water in a quart bottle and shake well. Allow to stand 24 hours with occasional agitation. Filter through a double filter, returning the filtrate until it runs clear and add enough distilled water for one pint. Place the sugar in a percolator as in the simple syrup formula and pour the filtrate on it, returning the first four to six ounces to the percolator until it becomes clear. Lastly, add enough distilled water to make two pints.

"THE PROPRIETARY PREPARATION."*

By H. W. RIETZKE, St. Paul.

The question with the retail pharmacists at the present day is: "How far will the prescribing of proprietary preparations extend?" Its growth is most alarming, and it behooves the pharmacist to bestir himself and maintain his position, or consider his pharmaceutical education wasted. To have his shelves filled with a lot of proprietary preparations of several manufacturers, even though there may be absolutely no difference in their therapeutic value, is certainly not to be looked upon with much gratification to him as a pharmacist, to say nothing about the loss of profit it may incur.

The physician will prescribe a proprietary preparation and specify some one's particular make to be dispensed in its original container. Several of our leading pharmacists in going over their prescription files during a month of the present year, found that the percentage of proprietary preparations was far greater than they had any idea of. From six different pharmacies in different sections of the city the percentage was 27, 32, 4, 5, 33, 1, 3, 33, 30, 4, 10, and 44. Part of these were from pharmacies where a great number of prescriptions were filled and part from the resident sections of the city. Think of it—at least one third of your profit going to the proprietary manufacturers. Is it not possible to show your physician that you can prepare a much better and fresher medicine for him at home than the preparation which he can obtain from foreign pharmaceutical manufacturers, and

which is possibly from one month to two or three years old?

Suppose we follow a proprietary preparation from its beginning to the patient. We will say that it is prepared in one of the eastern cities, the source of most of the proprietaries. From there to the jobber. (We take it for granted that it is fresh when it leaves the original house.) The jobber has it on his shelves all the way from one month to six months. If its sale is slow it may be as many years before it reaches the retailer for dispensing.

The retailer receives a prescription say for four ounces. He cannot buy less than a pound. He dispenses the four ounces, gets about one-half the original cost on this first prescription and then must trust to the persuasive eloquence of the representative of the house that manufactures this preparation to have more physicians prescribe it, and so dispose of the balance. Perhaps he will in a few days, but possibly the representative has just been through the city and done what they call "detailing the physicians." By this time along comes the representative of some other pharmaceutical house, with possibly a similar preparation, therapeutically I mean. His is prepared in some special manner, which makes it more elegant and palatable than the other, so he says.

He is going to detail the physicians and expects you to give him an order so as to be able to fill the prescriptions as they roll in. In the meantime the former preparation has been forgotten—till six months or a year—when along comes a representative of the first house, again to detail the physicians with the result that we may fill one or two prescriptions from this first bottle which was opened a year ago. Now what change may have taken place since it was first opened, only the chemist of the house that prepared it can tell. Does it contain sufficient preservative or has it lost its original physiological properties or become totally inert?

We mean no reflection on the physician, for this is the day of elegant preparations and the representatives of the pharmaceutical house usually couch their arguments in such forcible and eloquent language that one almost believes every word as gospel truth. Take, for instance, the many so-called "tonics" on the market. If the physicians were shown the great amount of alcohol they contain they would throw up their hands in astonishment. These "tonics" are prescribed the most and in quite large and often repeated doses.

Then consider the inconsistency of these pharmaceutical houses. In detailing the physician they are meek and humble, but insist that he specify their make, otherwise the meagre apothecary will substitute. This word "substitute" they hold over our heads as a sort of halo, under which they would make martyrs of themselves before the physician. But let them go to the meagre apothecary to display their wares and you will be astonished to see that they have prepared and offer for sale a substitute or imitation for every well-known proprietary preparation on the market. Really it is laughable. These poor men, so much abused, turn out to be the very consummation of substitutes. The less they have to say about substitution the better their chances in the next world.

It will not require much persuasive eloquence on the part of the pharmacist to show his physician that he would have a much better and fresher preparation dispensed for him, from his own prescription and he would obtain infinitely better results, than to be so very much at the mercy of the pharmaceutical house—as to the merits of his goods.

The proprietary man may say, "This would retard progress and stand investigation." The very fact of their being secret preparations shows very little spirit of philanthropy, and gives them no ground for argument. Let every retail pharmacist make it his individual effort to prepare his prescriptions in the most elegant manner possible, and if he can, suggest to his physician any way to have them pleasant to the taste do so.

*Read before the Minnesota State Pharmaceutical Association at New Ulm, June 17, 1903, and awarded first prize. (Mr. Rietzke was not aware that prizes had been offered in the competitive reading until after he had presented his contribution.)

The physician will thank him for the suggestion and assure him he would rather use his product. If through incompetency or indifference the pharmacist will not exert himself to so little effort he would better embark in some other vocation, for he certainly is no credit to the profession.

A FEW PRACTICAL SUGGESTIONS.*

By B. M. OVERTON.

THE following suggestions and devices, while not all original, have this in their favor, that I myself have used them and found them of practical value, and I, therefore, bring them to your notice in the hope that they may prove of some service to you:

The first thing of which I will speak is a scheme for filling the little two-ounce pomade bottles with witch hazel jelly, or preparations of a similar consistency and composition.

Take a gallon funnel and fit over the neck a piece of rubber hose about three inches long. Then get two corks which will fit into the hose, and bore a hole about one-half inch in diameter in each cork, fitting into one piece of cork a tin cylinder (the spout from a glycerine can works nicely). Now slip the cork, without the spout attached, into the hose, and then put in the cork with the spout. Where the two pieces of cork meet leave a space sufficient to admit a spatula through an incision. This acts as a valve to start or stop the flow of the contents of funnel.

Now cut a circular hole in a board large enough to hold the funnel securely, and adjust the height by means of two boxes at either end of the board, and you are ready to begin filling, which can be done rapidly without waste of material or soiling of the container.

A somewhat similar arrangement is very useful for filling such liquids as are put up in little containers, the necks of which are very small. Take a gallon or any size funnel desired, and fit into the neck a cork into which has been fitted a piece of glass tubing about one-fourth inch in diameter, slip a piece of rubber tubing about two feet long over the glass. Now use the same board as above to hold the funnel, and grasping the rubber tube between the thumb and forefinger, begin filling the vials, stopping or starting the flow of liquid by means of pressure on the tube. A clamp like those used on fountain syringes acts nicely to stop the flow of the liquid permanently.

The following system of labeling and marking stock is a great saver of time, and a wonderful help to one taking a position in a strange store:

Take the ordinary gummed tags, and upon them write the following items: Cost, per pound or pint; selling price, per pound or pint; number, blank. Paste one of these on every bottle, box, drawer or container in the store. Now arrange a label cabinet large enough to contain labels for everything in stock, and divide it into small apartments to suit sizes of labels, numbering each apartment consecutively.

The next step is to get a little book with index, and alphabetically arrange all the labels in the cabinet, hanging this book on the side of the cabinet. Then place the labels in the cabinet, arranging them so that the numbers on the containers correspond with those in the cabinet. It now becomes an easy matter for even a stranger to get a label for anything in a few seconds and without aid from any one. For instance, he sells two ounces spirits of camphor. On the back of the bottle containing the camphor he finds the following data: Cost per pint; selling price per pint; number 73. Going to label cabinet he opens drawer and looks for apartment No. 73, which contains the label for spirits of camphor; and then, too, without any inquiry or bothering any one, he is able

from the information on the bottle to tell the customer the price of the article. The little book is simply a help in case one fails to note or forgets the number on a container. He can then look in the book and find the number opposite the name of the article to be labeled.

This scheme of numbering can also be applied advantageously to such small articles as patent pills, ointments, headache powders, etc. Arrange a certain space to accommodate these articles, and make each shelf about six inches in height. Have boxes made of heavy card board, with tops, about sixteen inches deep, seven inches wide, and six inches high to fit the shelves. Now number these boxes consecutively, and have a little indexed book hanging on the side of the cabinet, arranging in it alphabetically everything in the cabinet, and place the number of the box containing the article opposite the name in the book. You can put several items in one box, and divide the box into as many spaces. It is an easy matter now to get any article by referring to the book, which gives the number of the container. This, besides being a rapid way of getting at the article wanted, enables one to always keep a line on the stock on hand.

One often has occasion to remove an old label from a bottle, and the most simple as well as most rapid way of doing this is, to wet the label and then hold it over a gas jet or other flame for a few seconds, when it can be removed without any trouble.

I will now bring this matter to a close by describing one of the simplest yet one of the handiest arrangements that has proved of value to me—is a bottle which I use in making deodorized tincture of opium. After exhausting the opium and reducing the percolate to the required amount, the ether is added and the whole placed in a bottle to be shaken. The ethereal solution separates upon standing and the Pharmacopoeia instructs us to pour it off. Here is where this bottle serves its purpose.

About one-quarter inch above the junction of the ethereal and the aqueous solutions bore a hole, by means of a rat-tail file and turpentine, large enough to admit a No. 3 cork. (Of course, this bottle when so arranged will answer only for the same quantity each time.) Into this cork fit a piece of glass tubing about two inches long, closing the outer opening with another cork.

Now fit the cork containing the glass tubing into the bottle, and after shaking sufficiently let stand until separation takes place, when, the outer cork being removed, the ether will nearly all drain out, and the aqueous contents will not be at all disturbed, which is almost an impossibility if you attempt to separate the two layers by pouring off the ether.

Extend a General Invite.

It is as important to have "Invitation" written all over the outside of your shop as to have fresh goods, new styles, and brightness inside. People must see the outside; you've got to get them inside. So make the first impression good, and it will count in your favor when money is being spent.

A well-dressed man is generally taken for a successful man, and a shabby sign is, in the public mind, a sort of index to the quality and quantity of goods on sale or the service to be rendered. The great public associates a shabby shop front and dull sign work with decreasing trade, old stock, and cobwebs. In days gone by a man could do business in a cellar or on a box, but those days are gone. You know who you are, and what good things you have to sell. The public don't. You've got to tell them, and the first talk with them is from your own shop front.—Booklet of E. G. Bartlett, Leeds, England.—Printers' Ink.

Waiting.

Waiting for goods to sell themselves and waiting for something to turn up are equivalents. One is as likely to happen as the other.—Spatters.

*Read before the twenty-fifth annual meeting of the Kentucky Pharmaceutical Association.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Syrup of Lactophosphate of Lime.

(T. R.) We know of no satisfactory formula for the preparation of syrup of lactophosphate of lime directly from the salt and without the intervention of a chemical reaction. Lactophosphate of lime as found in the market is by no means of uniform composition, some samples having been reported to be nothing more than mixtures of calcium phosphate, calcium lactate and lactic acid. As you are probably aware the U. S. P. 1890 process prepares calcium lactophosphate by dissolving calcium carbonate in lactic acid and subsequently adding phosphoric acid. The formula of the French Codex follows:

Lactophosphate of lime.....	12.50 grams
Syrup lactic acid, sp. gr. 1.21.....	1.25 "
Distilled water.....	14 grams or q. s.
Sugar.....	7.0 grams
Tincture of lemon.....	.630 grams
Tincture of lemon.....	.10 grams

Tincture of lemon is made by macerating 1 part of the fresh peel in 2 parts of alcohol.

Harness Dressing.

(T. P. L.) Harness dressings are in many instances similar to shoe dressings and blackings, and many preparations used for the latter purpose may be used for application to harness. Here are some formulas:

Blacking.

(1) Mutton suet.....	2 ounces
Beeswax.....	6 ounces
Melt and add	
Sugar (in fine powder).....	6 ounces
Soft soap.....	2 ounces
Lampblack.....	2½ ounces
Indigo (in fine powder).....	¼ ounce
When thoroughly incorporated, add turpentine, 4 ounces, and pour into tins or other receptacles.	
(2) Oil of turpentine.....	8 fl. ounces
Yellow wax.....	2 av. ounces
Prussian blue.....	3 av. ounces
Lampblack.....	4 av. ounces
Melt the wax, add the turpentine, a portion first to the finely powdered prussian blue and lampblack, and then with constant stirring.	
(3) Oil of turpentine.....	8 fl. ounces
Yellow wax.....	2 av. ounces
Prussian blue.....	3 av. ounces
Lampblack.....	4 av. ounces
Melt the wax, add the turpentine, a portion first to the finely powdered prussian blue and lampblack, and then with constant stirring.	

Vaseline Composition

(4) Prussian blue (in fine powder) ¼ ounce; lampblack 4 ounces; soft soap 2 ounces; soft soap, 2 ounces. Mix together in a large mortar, previously warmed and add Vaseline 6 ounces; ceresin, 5 ounces; yellow resin ¼ ounce; melted together, then sufficient turpentine to give the composition the proper consistency. Mix thoroughly.

Varnish or "Reviver"

(5) Dissolve in about half a pint of methylated spirit 2 ounces of shellac, ½ ounce of Venice turpentine, and 1 ounce of gum benzoin. Stir in a sufficiency of a mixture of 4 parts drop black, and 1 of indigo blue, to form a deeply colored varnish, then make up with spirit to the measure of 1 pint. Apply with a sponge or soft brush.

Soda Water Sundae.

(Soda clerk) The following formulas have been published:

Boston Nut Sundae.

One dipper of ice cream, sliced orange cut in diamond shaped pieces, sliced pineapple cut in triangular shape, whole English walnuts, maraschino cherries. The nuts and fruits to be arranged artistically. No syrups used.

Caramel Nut Sundae.

Mix equal parts of pecans, English and black walnuts, pignolia and pistacio nuts. Chop together and mix with an extra heavy caramel syrup over plain ice cream and you have a delicious sundae.

Chocolate Fruit Sundae.

Strawberry syrup, 10 ounces; vanilla syrup, 10 ounces, raspberry syrup, 8 ounces; chocolate syrup, 4 ounces. Pour a ladle of this sauce over plain ice cream.

Mint Sundae.

Pour over ice cream one ladle of rich mint syrup and decorate with two sprigs of mint and a blanched almond.

Central Sundae

Two pounds English walnuts, two pounds pecans chopped together with one-half pound of powdered sugar; add enough simple syrup to suit taste.

Oridental Sundae.

Equal parts of seedless raisins, currants and English walnuts. See also April 23, 1903, Era, page 424.

Tablet Manufacturers.

(Dr. F.) writes: "Please tell me where I can get the following tablets manufactured:

Extract serenoa serrulata.....	gm. 20.00
Phosphatis ferri.....	gm. 4.00
Nitratris styrenidii.....	gm. 0.68
Phosphori.....	gm. 0.05
M. ut fiat tabulo No. 130.	

I understand the prescription very well but I do not find it practicable to put it up in tablet form. The customer who presented it paid an advertising specialist \$3 for it."

Tablets having similar formulas are listed by nearly all of the large pharmaceutical houses like Parke, Davis & Co., Detroit, Sharp & Dohme, Baltimore, Frederick Stearns & Co., Detroit, Nelson, Baker & Co., Detroit, and others, any one of whom can probably supply you with just what you want. Combinations of saw palmetto, phosphorus, etc. have been recommended in the treatment of functional impotence and this formula has all of the earmarks of the advertising specialist who claims to be able to make "weak men strong."

Face-Black for Actors.

Best lampblack.....	1 dram
Cacao butter.....	3 drams
Olive oil.....	3 drams
Oil of neroli.....	2 drops

Melt the cacao butter and oil, add the lampblack, and stir constantly as the mixture cools, adding the perfume towards the end.

Hair Stimulant.

Ambrosia water.....	½ ounce
Tincture of cantharides.....	½ ounce
Eau de cologne.....	1 ounce
Water to.....	8 ounces

Apply to the thin parts of the hair morning and evening. Said to be a very effective lotion to prevent falling out of the hair.

NEWS DEPARTMENT.

COMMERCIAL TRAVELERS

What Has Become of Dr. Dye, Asks Mrs. Dye—Parke, Davis Picnic—Cotterill is Married.

James W. Maitland has taken the place of Ralph W. Jerman in the sundry department of Jerman, Pfingner & Kuchmsted Co., Milwaukee, and Mr. Jerman is now Bauer & Black's scout in Nebraska and South Dakota.

H. D. Bell, who has gained hosts of friends as the representative in Southern States at different times of F. R. Arnold & Co., and Meyer Bros. Drug Co., has joined Lehn & Fink's sundry salesmen and will occupy his old territory.

St. Louis drummerdom notes: Milton Culbertson, city salesman for the Moffitt-West Drug Co., is off for a vacation in the Ozarks. S. B. Simpson, assistant manager of Meyer Bros. Drug Co., is now back from a two weeks' vacation. Charles Lyle will take a position as traveling salesman with the Moffitt-West Drug Co. in Western Tennessee and Kentucky on July 15.

Frank Tupper of Fox, Fultz & Co., is spending a vacation at his home in Nova Scotia, and will later make a tour of the province.

Round Lake, Ill., was the scene of the third annual picnic of the Chicago house of Parke, Davis & Co. Pharmaceuticals and picnics are the twin alliterative specialties of this establishment—the pharmaceuticals cure the picnic aftermath and create the picnic desire.

The boys, while making and selling drugs, are disciples of physical culture, as is shown by some of the wonderful records made at the races. The winner of the hundred yard dash touched the ground only nine times during the sprint and then only upon the loftier eminences; the tape line showed that his footprints were thirty-three feet, three and one-quarter inches apart. The ninth step carried him a little short of the mark and he had to take ten. He was stopped with a lasso and tied down to work off his exuberance in rooting for the other athletes. The winner of the hurdle race was charged with wearing a balloon under his vest; the charge was not substantiated, however. Jealous competitors charge that he was punctured after the race by one of his friends. At any rate he did not wreck any of the hurdles.

The base ball game between the office and the order departments was long and strenuous, but the office men finally won. The order hustlers say that the office men keep dumb bells in their desks and do hot foot work after dark to keep in condition for the annual game. Manager Bartlett is the only man who is qualified to be umpire, because he is the only one whose life is safe in the performance of that office. There wasn't any fat men's race, because there aren't enough fat men in the house to make a race. After the games were over the musicians tuned up and Terpsichore ruled in the seat of Mars. There were seventy-five people there and every one was glad.

The wife and children of Dr. James W. Dye, at 217 Garside street, Newark, N. J., are very much concerned

about his disappearance some three weeks ago. Dr. Dye had been representing the American Peroxide & Chemical Co. of this city, in Baltimore, until they discharged him recently. He was last seen at Hiverside Park, Baltimore. Since then not a trace of him has been discovered. His wife has written to the Baltimore police, asking them to search. Dr. Dye was a man of clerical appearance and about fifty-five years old.

A. N. Gerecke, T. H. Wiley, J. W. Fisher and C. K. Weller, representatives of the Richardson Drug Co., Omaha, visited headquarters recently to secure instructions for the fall campaign.

J. P. Hommel, representing the Sherwin-Williams Co. in Nebraska and South Dakota, is in the far East for a five weeks' visit.

Charles Alfred Cotterill and Mrs. Henry Garland were married on July 4 at Rockville, Md. Mr. Cotterill has been the Washington representative of Parke, Davis & Co. for the last thirteen years. He is prominent as a correspondent of the Associated Press. The bride is the young widow of Rufus Garland, son of the former attorney general in President Cleveland's cabinet, and is considered one of the handsomest women in Washington.

With John F. Sprague, manager of the traveling department, this city; R. L. Winchester, St. Louis; William Whitney Curtis, general Southwestern man; Dr. M. C. Cornell, general Texas man, and B. W. Hunter, North Carolina representative, all at Morehead City, N. C.; and with Dr. P. J. Fagen, special New York City man, resting up the State, and A. M. Eastland, Texas, here with Mrs. Eastland, and E. T. Curtis, Tennessee and Kentucky, also here, with Mrs. Curtis, Sharp & Dohme's traveling boys may be said to be taking a vacation.

"Sid" Carragan, head of P. D. & Co.'s traveling service, shouted himself hoarse with the Mystic Shriners at Saratoga. Miss M. E. Tucker, Mr. Carragan's secretary, whose sunshiny ways have cheered many a knight of trade away from reciting tales of woe, is in Europe, spending a long vacation in several of the principal cities.

Robert Welrlin is now out after trade in this city for Britt, Loeffler & Weil. He was formerly employed by Eugen C. Diez.

A Dry Battery Fan.

The Perfection Dry Battery Fan which J. Jones & Sons, 68 Cortlandt St., New York, advertised in last issue will be appreciated at this time of year. It can be moved from place to place, requires no chemicals, makes no smell and no noise, it is always ready for use, and will run from 400 to 500 hours on one charge. The uses to which such a fan can be put are innumerable, and it will be fully appreciated by druggists who have poorly ventilated stores, or who want some such appliance to drive the flies from their soda fountain. Twenty-five per cent. discount is allowed to druggists.

CORNELIUS P. FLYNN, Boston, Mass.
President Massachusetts Ph. A.

Mr. Flynn, after his school days in Portsmouth, N. H., kept books with a Boston firm for six years. Then he entered the pharmacy of his brother, succeeding him at his death, six years later, in New Mexico. For ten years Mr. Flynn has been a foreful worker in associations and to support this assertion and show his popularity also, it is only necessary to say that he is president of the Massachusetts Ph. A., president of the South Boston D. A., president of the Apothecaries' Guild of Boston and vicinity, secretary of the New England R. D. Union, member of the executive committee of the Boston D. A., and trustee of the Massachusetts College of Pharmacy.

SODA FOUNTAINS.

Some Figuring on the Trade in New York City Shows

Sales of 189,000,000 Glasses of Soda a Year.

—Facts and Points About the
Trade in General.

Careful figuring enables the Era reporter to announce that this year's output of drinks of various degrees at the different soda fountains of Greater New York will reach 189,000,000 glasses. This allows 47½ cooling draughts to every inhabitant. But, like all other things, probably some plethoric chap gets away with a thousand or so while some other poor individual gets none, or else—takes beer for his.

Making comparisons in the male gender may be criticized by some, but, in New York, it is a fact that the men drink two-thirds of the soda concoctions drawn, to say nothing about their paying for most of the other third.

The soda trade here is interesting because it is enormous, 1,800 druggists and 1,200 confectioners and other dealers dispense soda from fountains ranging in cost from \$100 to \$20,000 and in quantities from 20 to 8,000 glasses a day.

The basis on which the total amount drunk in a year was figured is:

What should be a fair average of the sales was found in a druggist who keeps a soda clerk and a half—the other half is junior clerk. This man's sales for the three hot months will amount to \$600 a month. One half of this figure is from 10-cent drinks. So he sells 3,000

10-cent and 6,000 5-cent drinks a month for three months. Multiplying his 9,000 drinks by the 3,000 stores makes 27,000,000 drinks for one hot month.

The sales during the three next warmest months will equal two-thirds of those of the three warmest. The sales during the six coldest months will also equal two-thirds of those of the three warmest. So that sales for the year are seven times those of one hot month, or 189,000,000. As half of these are 5-cent drinks—enough are 15 and 20 cents to make the average more than fair—the income for the year is \$12,000,000 and for one of the hot months is \$1,800,000.

The drug trade's share of this income is about one-half, or \$6,300,000 a year. This makes \$900,000 a hot month and an average to each druggist for a hot month of \$100.

But, like the plethoric drinker and his antithesis who goes without or takes beer, several druggists get from \$8,000 to \$15,000 every thirty days during the rush season while others get nothing to speak of.

Mighty many variations in New York's soda trade. Soda with a stick and without, for 5 cents with ice cream, for seven cents, for ten, and up as high as you wish to go, according to the extra "dashes" of this or that, the number of cherries or rinds and the locality of the store. Some of the stuff is very good and some—!

Along Broadway all drinks are 10 cents or more; excepting plain waters. Kunyss is a great seller, growing more popular every day. Sunders of every conceivable name abound. The conditions of Broadway are also to be found in the better residence sections and in other richer localities, the principal differences being in the smaller business done and in the fact that most of these stores have seats.

The stores that advertise their fountains in their windows, setting out new drinks regularly, are the ones that are doing the business.

The theatre trade is an immense factor with some of those stores in the theatre district and prices are high there.

In the poorer parts of the city 5-cent ice cream sodas are to be had at almost every store, both drug and confectionery. In the fairly good boarding house and flat neighborhoods both prices are to be found, but the movement is ever toward the better one. Dispensers there say that their people are being educated up to better prices and better soda. And there is room for education along the latter line, for some of the stuff sold is horrible. The confectionaries and ice-cream "parlors" are the worst offenders. Lean juices, acids, ice cream, no part of which ever knew a cow's influence, and glucose for sweetening. Not all of the department store stuff is first class. At some "parlors" one may buy ice cream that will keep a year—it won't melt. Dr. Deglucie, chemist of the health department, says he "can't help it," as the law does not define what shall constitute ice cream.

But the trend is steadily for better soda and more liberal dealing by the proprietor.

There are some wonderful fountains in New York. George Kuenper, druggist at 263 Broadway, holds the record for one day's sales—7,000 glasses. Hegeman & Co., 200 Broadway, will probably pass far beyond that mark this summer with their new \$20,000 fountain. A big automatic carbonator barely keeps up with the dispensers. They are using 50 gallons of ice cream a day now. Riker's sales are enormous and there and at Wilson's many of the fancier drinks are sold. Hutnott's, a bottle fountain, is a model of elegance and its trade is ultra-exclusive.

But do the fountains pay? That is the question.

They do, Charles A. Hanson of 244 Sixth avenue, had little attention to his soda business last year, the drug clerks easily caring for the fountain. At his son's

earnest solicitation he decided to push his fountain this year. He got two good men from Chicago and pays them \$127 a month. One does junior work when not dispensing, thus doing away with a \$50 junior clerk. The fountain was decorated and all sorts of new drinks placarded. The result was a raise in sales from \$254 in last June to \$450 in June, this year, cold as the month was. At the present pace the July and August sales will reach \$1,000 for each month.

The ruling prices is ten cents. It is easy to get it, Mr. Hanson says. His policy is the best of everything. His ice cream costs 85 cents a gallon. He selects the fruit and makes the preserves—just as mother does, pound for pound. His deductions as to profits are not hazards—he figures every cent. Flowers, fruits, spoons, ice, everything except salary, is charged to cost. And the cost equals exactly 48 per cent. of the income. In July his profits should be, counting salaries and all costs, \$403. The fountain is a small one, which has been in use for seven years. Talk about deterioration, Mr. Hanson says, is largely hosh.

Hegeman's profits on the income are greater, so are Riker's. The former probably clears \$250 on many days. Their ice cream costs less than 50 cents because of the larger quantities they buy. In the smaller stores the best ice cream costs \$1.00.

But for 5-cent ice cream soda dispensers there is no direct profit if good materials are used. As an advertisement, a rattling good service is most excellent. Direct profit may be found if poor material is used but the advertisement is lost.

OBITUARY.

DR. BOSWELL WARD, president of the Ward Bros. Drug Co., Indianapolis, and who was the oldest Indianapolis wholesale druggist with the exception of the venerable Augustus Kiefer, died last Thursday at Winona Lake near Warsaw, Ind., where he had gone with his family to spend the summer. He had been an invalid for nearly three years. Dr. Ward was born in 1830 near Connersville, Ind. He was graduated from Rush Medical College, Chicago, and, in 1867, removed to Indianapolis where he opened a retail drug store, taking into partnership his brother, Marion Ward. In 1890 the business was made exclusively wholesale and was removed to 120 South Meridian street. He left two daughters, Miss Belle and Miss Stella Ward, and a wife. He was a member of the Masonic fraternity and of the Presbyterian Church.

WILLIAM L. TRUE, a druggist of Waterville, Me., while visiting relatives in Portland died almost without warning, from heart trouble. He was thirty-eight years of age. The deceased just before his death went into the drug store at Preble and Portland streets, Portland, where he talked a few minutes with the clerks, and sat down in front of the soda fountain. He rested his head in his hand and the clerks went about their customary duties, but soon noticed that Mr. True did not seem to move. On examination it was found that he was dead.

WILLIAM M. FRANCIS of Monerief & Francis, druggists at Troy, died on July 7 after a long illness. Mr. Francis was widely known and greatly respected. He was an exempt fireman, secretary of the Arba Read Steamer Co. and was a life member of King Solomon's lodge, Apollo chapter, Apollo commandery, Bloss council and Oriental temple, Nobles of the Mystic Shrine. He was also a member of the local and state pharmaceutical associations. He is survived by his mother and a brother, Samuel H. Francis.

DR. G. DALTON HAYS, who was the gold medal man at the New York College of Pharmacy in 1878 and afterward was instructor in the college for several years, died in Tenally, N. J. His father, David Hays, was vice-president and treasurer of the college for several years.

JAMES F. TAYLOR, a clerk at W. C. Presnell's pharmacy, 3001 N. Illinois street, Indianapolis, was drowned on last Thursday night while bathing in Fall Creek. He was 23 years old, a graduate of Purdue University, and a young man of great promise.

FRANK H. ALLEN, a Massachusetts druggist, died in Beverly, aged fifty. In recent years he had been in the drug business in Worcester, but returned to his former home in Beverly some time ago, on account of ill health. He leaves a widow and one son.

PAUL L. VIALON, Sr., president of the Louisiana board of pharmacy, died at Bayou Goula, La., on July 3, aged 60.

MARIA C. HEINITSH, wife of S. W. Heinitsh, Lancaster, Pa., died on July 8, aged seventy-seven.

P. W. STARR of Brownsville, Ore., one of the best known druggists in that part of the State, is dead.

MARTIN H. WEFEL, druggist at 1920 Hanna street, Fort Wayne, Ind., died aged 37.

DR. F. E. BROCARD died in New Orleans, La., aged forty-nine.

DR. LEWIS R. FORD died at Waynesboro, Ga.

NEW INCORPORATIONS.

Manhattan Pharmacy Co., New York; \$15,000; Harvey W. Hall, Catherine E. Schrenkeisen, Arthur I. Schrenkeisen.

Swaine's Antidote Syndicate, Camden, N. J.; \$300,000; George D. Swaine, Henry S. Hyatt, Frank T. Lodge.

B. G. White Co., Louisville, Ky., to manufacture chemicals; \$100,000; William G. Rork, William G. White, J. R. Watts, William W. Watts.

Catapathy Association of New York City, to manufacture chemicals, drugs, etc.; \$250,000; E. O. Roessler, Harry Taylor and C. T. Willard, of New York city.

Whitlow-Williams Drug Co. at Fayetteville, Ark.; \$50,000; Dr. J. P. Hight; W. H. Whitlow, W. L. Stuckey, T. C. Skaggs.

Pino Lyptol Chemical Co. at New York, to manufacture disinfectants, etc.; \$10,000; Richard Tebbs, Bradley S. Osborn, Harold W. Gould, all New York city.

The New York Drug Packing Co., at New York, to manufacture alkaloids, drugs, etc.; \$25,000; Alfred H. Teller, Louis A. Espinal, Rafael E. Farraga, all New York city.

Werner Drug & Chemical Co., at New York, to manufacture drugs and chemicals; \$20,000; John M. Boland, Daniel J. Rourke and Francis H. Boland, all of New York city.

ANY BABIES IN YOUR NEIGHBORHOOD?

ARNOLD MILK STERILIZER AND PASTEURIZER

for nearly every baby. Let us send you free literature to distribute, with your name.

WILMOT CASTLE COMPANY,

26 Elm Street, Rochester, N. Y.

NEW YORK AND VICINITY.

DEDICATION OF THE RICE MONUMENT.

On Tuesday afternoon, July 7th, less than a half a hundred friends and admirers of the late Dr. Charles Rice repaired to Woodlawn cemetery and proceeded to dedicate the monument erected to his memory by the contributions of the pharmacists of the United States.

The dedicatory exercises were opened with the singing of "Nearer My God to Thee" by a quartette consisting of Messrs. F. L. Berger, Gust. Holm, F. Freytag and F. Hummel, members of St. Patrick's Cathedral choir. Then followed reading of bible texts and a short prayer by Rev. St. George Young, for many years chaplain of Bellevue Hospital and an intimate friend of Dr. Rice. Mr. Young closed his remarks by a touching reference to the fortitude of the dead scientist, his self-sacrifice and truthfulness.

In the absence of S. A. D. Sheppard of Boston, chairman of the memorial committee, who had been detained at home by sickness, Prof. Jos. P. Remington of Philadelphia, chairman of the revision committee of the Pharmacopœia, related the story of the work of the memorial committee in its efforts to erect a suitable monument to Dr. Rice, whose life in eloquent words he eulogized. He said that Charles Rice was one of the noblest of men and that the monument to his memory rested in the hearts of the pharmacists of the country.

Prof. Virgil Coldeitz made a formal transfer of the monument to the general committee of the board of trustees of the Pharmacopœia convention, and described the architectural features of the monument. In the base of the monument, he said, was a copper box containing a statement of the object of the memorial, the names of the members of the memorial and monument committees, and the donors to the memorial fund. The box also contains a copy of a translation from one of the oldest Hindu poems by one of Dr. Rice's former Snapsert students, Miss Rudolph, of Cleveland, Ohio.

Charles E. Dolme of Baltimore, Ewen McIntyre, the oldest living graduate of the N. Y. C. P., and a life-long friend of Dr. Rice, and Dr. H. M. Whelepley of St. Louis, in the order named, made short addresses, each attesting his appreciation of the noble character of the remarkable man whose fame, Mr. Dolme stated, "would be forever perpetuated by the volumes of the 6th, 7th and 8th decennial revisions of the Pharmacopœia." "Integer Vitæ," a selection from the Odes of Horace, in the original Latin, sung by the quartette, concluded the exercises.

The monument, built under the direction of the memorial committee of the U. S. Pharmacopœia convention, is of Barre granite, classic in form, and measures 6 1/2 feet by 3 feet 11 inches at the base, and 5 feet 8 inches in height. There are two bases, the second bearing on the front side the name "Rice" in raised letters. On the back of the monument are two panels separated by a wreath and an inverted torch curved in relief. The front panel bears this inscription: "Charles Rice, Ph. D. Born, October 1, 1811. Died May 13, 1901. Erected by his friends in grateful appreciation of his eminent services to medicine and pharmacy."

SIDNEY FABER RESIGNS FROM BOARD.

Secretary Sidney Faber has resigned from the Eastern branch of the board of pharmacy. The resignation was a big surprise to the other members, to whom it was announced in a letter giving his reasons, at the routine monthly meeting of the branch, last week. Mr. Faber was asked to reconsider his resignation. He

compromised by taking one week to think it over, but that time has passed finding him adhering to his original intent.

The appointment of a man to succeed Mr. Faber now devolves upon President Albert H. Brundage and probably will be from the German Apothecaries' Society. Who will be selected is uncertain, though Charles S. Erb, Felix Hirsman, and several others are mentioned. Mr. Faber has requested Dr. Brundage to hasten the appointment. An election will then have to be held for a secretary to take up Mr. Faber's duties, and Dr. George C. Diekmann will in all probability be selected.

Mr. Faber told the Era that he resigned because he was dissatisfied with the workings of the board and to give himself more leisure. The letter to the board will not be made public until the resignation has been finally acted upon. Mr. Faber has worked hard and earnestly both as general secretary of the State board from the beginning of its duties in 1901 until his withdrawal in favor of Warren L. Bradt of Albany, early this year, and as secretary of the eastern branch.

WHERE ARE THOSE COMBUSTIBLE REGULATIONS?

Where are those new combustible regulations that were prepared by the municipal explosives commission after a conference with the wholesale and retail druggists? Mayor Low has had them before him for his signature for a long time now. An illustration of the queer methods of Commissioner Murray of the fire department:

Sidney Faber applied for a permit specifying, among other things, benzine, naphtha and gasoline. He sent in his fee of \$2. He learned that the permit was granted but it did not appear. He demanded it and was astonished to learn that it had been delivered to him by a "fireman." He insisted on meeting the fireman, but no one in authority could remember who it was. Upon insisting further he was sent a paper, that might answer for a voucher for the lost permit and which had appended a permit form not containing benzine, naphtha or gasoline. And paint stores in his neighborhood are selling it promiscuously. Mr. Faber promises to find out yet what went wrong with his permit.

THE OWL A LA BUNYAN.

Wm. R. Laird, druggist of Jersey City, and his wife are home after a much enjoyed trip to California. They passed through the Kansas flood district at fortunate times. Mr. Laird was asked if he saw anything of pharmaceutical interest. His manner of telling makes one think of the style of Bunyan:

"I found that they have a retail drug clerks' union in San Francisco," said Mr. Laird. "It belongs to the Federation of Labor. I also learned that they have a schedule of prices there and the only store that does not follow that schedule is one they call the 'Owl.'"

"I walked up the street and saw a great many people in front of this Owl and I stopped to see what was the matter and I saw a man walking up and down before the store and calling out:

"This store is not in sympathy with union labor. It advertises the best goods and the cheapest prices in the city and there is not another store in town that does not have the same goods at the same prices. Do not buy at a store that is not a friend of union labor."

"A policeman stood there as if to guard the man,

but it may be that he would have stopped him if he said too much. The clerks were all looking out from the windows. Not many people went in. That man would not have done that long in the East."

A HEAVY LOAD FOR NEW JERSEY DRUGGISTS.

The condition of Jersey druggists has never been made any better by nearness to competition in New York City. Anything like good prices cannot, of course, be maintained, but when a New York retail pharmacy sends to every housekeeper in the Northern part of the State such as the following the load is too heavy to bear:

June 25th.

"We think it will interest you to know that we have arranged to deliver goods direct to your town. The delivery will be made free of charge on the day following the receipt of the order.

"We thus bring to your door the most completely equipped drug store in New York City.

"You will be charged the same prices upon mail orders as if you bought in person.

"Any excess in your remittance will be returned to you by the next mail.

"We assume that you know our store. We will not, therefore, talk of prices, quality or methods.

"This letter simply to tell you about the free delivery to your town. That is new; the rest of our story is old.

"We invite questions by letter. A one cent postal card may save you a dollar."

Your very truly,

This innovation, if it proves to carry trade away from the New Jersey druggists, will have to be met with lower prices.

AMENDMENT UNCONSTITUTIONAL SAYS COUNSEL.

The dispute in the Manhattan Ph. A. over the legality of the proceedings by which the salary of the secretary was raised from \$100 to \$200, after a published proposed amendment to make the salary \$150, will probably be amicably settled.

The contention by one party, it will be remembered was that the amendment could not be adopted in any other than its published form, while another party asserted that it could under parliamentary usage. President Charles S. Erb supported the latter claim. Bitterness arose and finally, at the last meeting the legal committee was instructed, by vote, to consult the association's counsel, Cantwell & Moore.

Messrs. Erb, Secretary S. V. B. Swann, George E. Schweinfurth and F. O. Collins visited the lawyers. Mr. Cantwell said emphatically that the proceeding was unconstitutional and that parliamentary law had nothing to do with it. The constitution was the law and protection of the members, he said, and the secretary's salary is still \$100.

At the September meeting a new amendment for \$150 will probably be proposed as though there had been no former one, and will be voted on at the October meeting. But party lines have been drawn and there is much conjecture as to the fate of the amendment. There is no denial that Secretary Swann, whose work is of the highest order, amply earns a great deal more than he receives, but the treasury, it is asserted, does not warrant payment of a high salary.

NEW YORK NOTES.

—Seen down town: E. A. Gilliland, assistant buyer for the Spurlock-Neal Co.; Nashville, Tenn., dropped around from Boston on his way to Philadelphia. John Ferguson of Ferguson Bros., Philadelphia, was a drug trade caller. William P. Redington of Redington & Co., San Francisco, stopped here on his way home from Europe, where he has been since early March. He left

his family in Paris. Mr. Thompson, stockman of Eastern Drug Co., Boston; Mr. Wray of Wray Drug Co., Yonkers; E. Martin, Millington, Tenn.; R. L. Palmer, Atlanta; Luin B. Switzer, Southport, Conn.; A. E. Pickard, Roslyn, L. I.; R. C. Tuthill, Middletown, N. Y., who came loaded with trout caught on a fishing trip; F. L. Selby, Selby & Reed, Martin's Ferry, O.; W. L. Cliffe and Dr. N. H. Saxman, Philadelphia.

—As soon as a derelict association proceeds or two are heard from with their appointments Vice-President S. V. B. Swann of the State Ph. A., will call a meeting composed of three members from each of the local societies to organize for the entertainment of the State meeting at Brighton Beach next June. The fifteen committeemen will be organized with chairman, secretary, treasurer and sub-committees, and their names will be printed in the proceedings of the last meeting. This is starting right because it is starting early.

—Albert E. Johnson, a former Detroit druggist and graduate of the Detroit C. P., called in the city on his way to Detroit to visit his aged father who is ill. Mr. Johnson went to Cuba shortly after the declaration of war against Spain, enlisting as a hospital steward. After the close of hostilities he received his discharge, locating in the province of Pinar del Rio, where he married and where he is now engaged in raising tobacco on his big plantation.

—W. F. Rex, a New York C. P. '01 boy, is spending his vacation from medical studies at Cornell in working at the Kaaterskill pharmacy, Kaaterskill, N. Y. He was a city scholarship winner. Clifford J. Vars, another '01 boy, came down from Hornellsville where he is in his father's store, for a few days' visit. Roy Duckworth, '06, is in Caswell, Massey & Co.'s prescription department Newport.

—Some vacations: J. J. McEntee, Caswell, Massey & Co.'s book-keeper at 1122 Broadway; William K. Driver, of the Park Avenue Prescription Pharmacy, is at home in London, Ont., Can. Hiram Schwartz, of the Long Ace pharmacy, is in Chicago. Meyer Blum, J. N. Hegeman & Co., 1218 Broadway, is in Albany. Albert F. Veider, of Kellogg & Co., 1031 Sixth avenue, is in Lyons, N. Y.

—Drug Trade Club guests—H. N. Voigt, Chattanooga; George Read Voigt, Jeffersonville, Ind.; Sam Snarrenberg, Cincinnati; E. Kircher, Cincinnati; W. H. Arnold, Chicago; Mr. and Mrs. John P. Cobb, Kansas City.

—Business increases compelled the Bioplasm Company to move from the St. James Building to the wholesale drug district. Their offices are at 100 William street.

—G. H. Ankerson, druggist at Park and Prospect avenues, Mount Vernon, and his charming wife recently entertained many friends at their woden wedding.

—Wanted: To know why there are only four drug stores on Broadway from Chambers street to Fourteenth street, more than thirty blocks.

—Joseph Lascoff, with Leon J. Lascoff, 1228 Lexington avenue, is back from his wedding trip receiving congratulations.

—B. P. Leshner, manager of the Greenawalt Drug Co., Broadway, is in Pennsylvania mountains in search of health.

PROTAN is a definite chemical product, formed by the synthesis of tannic acid with nucleo-proteid. It is entirely insoluble in the stomach and its astringent properties are not obtained until it reaches the intestines, where the diarrhoea exists. It is the only astringent known that can be given to children and bottle-fed infants without impairing digestion or interfering with the digestive functions of the stomach. We have special inducements to offer for introducing it to your physicians. Write for particulars, giving us a correct mailing list of your physicians.

—Adolph Werner has succeeded T. E. Davies at 543 Third avenue.

AROUND SYRACUSE.

The Syracuse D. A. has issued a blue book containing the constitution and by laws and other interesting information about the association and its work. There are sixty-six members, ten of whom live in the surrounding towns. The objects are: The encouragement of good fellowship, the discussion of questions for general good and advancement of the calling, to establish a scale of prices, to conduct business for mutual benefit and the advantage of members. The agreement, signed by all the members, is very binding, and provides for the forfeiture of \$25 for its infraction.

—Druggists are taking their vacations as rapidly as possible. One at a time is the rule for every store as help is scarce. Holden Pratt of Weston & Cook, is at the Thousand Islands. George E. Thorpe will leave in a few days with his family for Michigan, where they will spend several weeks. C. G. Soldan, of Soldan & Hubbard, has returned from the North woods. R. E. Horner, with the same firm, will spend his vacation at his cottage on Onondaga Lake. Mrs. Robert Bodden will spend a time at Asbury Park.

—G. Frank Curtis of Curtis Bros., Cazenovia druggists, has gone to Tacoma, Washington, where he will assist his brother in putting up big coal houses in various cities along the Pacific coast. Curtis Bros. own valuable coal mines and have "struck it rich" as the saying goes.

—Dr. H. H. Pringsheim, who for a year past has been a chemist in the employ of the Solvay Process Co., has resigned to become a lecturer in the department of chemistry at Harvard.

—The marriage of T. Fred Williams, a Clyde druggist, and Miss Mabel Medrick of Lyons, will be performed at Grace Church, Lyons, on Tuesday, August 4.

ROUND ABOUT BUFFALO.

The Western division of the board of pharmacy, at Jamestown, July 7, granted licenses to: Pharmacists—Peter G. Bronner, Buffalo; Carl J. Nies, Salamanca; Joseph D. Taylor, Buffalo. Druggists—Ralph B. Aylsworth, Leo A. Borgst, Otto E. Taubhauser, Fred S. Geotjan, William Naish, Louis Josephs, William R. Scoway, all of Buffalo; Lawrence L. Stevenson, Niagara Falls; Justin W. Gram, Rochester. Granted licenses on exchange for old ones—C. A. Swanson, Jamestown; E. A. Swanson, Jamestown; W. C. Riddell, Buffalo.

Says a Buffalo daily of Thomas Stoddart: "Mr. Thomas Stoddart hasn't accepted a Democratic tender of a Republican nomination. The Courier says he is 'doing his own time' that is what he is entitled to take. Mr. Stoddart is good enough timber for a higher office than treasurer. He may well consider whether that office is a step or a shelf. Mr. Stoddart is useful in the Council at present. There's more to do there, for a progressive and energetic man, than with the name of the treasurer's office."

—A conflagration which started in one of the hall ways of the building occupied by the Empire State Drug Co. on the evening of July 4, caused a loss of \$2,000 in the stock fully covered by insurance.

—S. H. Stone Derr formerly with Curson's pharmacy is now with J. H. Hansen, Fifth and Madison streets. W. C. Lewis, owner of the employ of C. J. Dwyer, Elk and Lombard streets.

—Charles Stoddart, of Stoddart Bros., is enjoying a

FROM JERSEY TOWNS.

—The New Jersey board of pharmacy lays claim to having more luxurious and elegant examination surroundings than any board in the Union. They use the assembly chamber at the State Capitol at Trenton. It contains sixty desks arranged like the spokes of a half wheel. Rich easy chairs are at every desk and there is a broad gallery, where the members may walk and look down on the candidates, and retiring rooms and all of the other conveniences enjoyed by the State Solons.

—Mayor Fagan of Jersey City, has had a conference with the police commissioners in reference to opening free dispensaries for the summer and it is probable that they will be opened about July 15, in various drug stores. They will be under the supervision of the police commissioners and in charge of a physician.

—The Pacific Coast Borax Co., Bayonne, gave an outing to its employes recently. There was an excursion to Whitestone, L. I., where there were base ball and other athletic contests. The New York Letter Carriers' Band furnished the music and there were 350 persons in the crowd.

—Thomas G. Graham, manager for William R. Laird, 503 Jersey avenue, Jersey City, has gone for a long expected trip of two months to the land of his boyhood, Ireland. Thomas Anderson, clerk for J. E. Moore, 154 Newark avenue, Jersey City, is another vacationist on the "old sod."

—Burglars entered two drug stores in Mainfield in one day. E. S. F. Randolph's store in North avenue was entered while the sun was high and \$16 was taken from the till. Nagle's pharmacy was also honored with a visit.

—The store of the late W. H. Kinsella, Paterson, is now operated by the new Kinsella Drug Co., in which are interested his daughter and his brother C. P. Kinsella.

—Colgate & Co., stir up the real estate sharps in New Jersey every few days by purchase of land. Three different parcels adjoining their factory were recent acquisitions.

—Bayonne and Elizabeth druggists are all ready for that ball game. Strauss, Whitehead and Landell have been playing on the Ministers' team lately and are in fine fettle.

—A woman who took acouite instead of headache medicine left this mundane sphere. It was a mistake on her part—mistake in the medicine.

—"Worse than the opium habit" say Jersey City merchants of trading stamps and all classes of retailers are combining against them.

—John E. Waterson, druggist at 419 Grove street, Jersey City, is seriously ill. His recovery is anxiously hoped for by many friends.

One Month Free.

M. P. Gould Co., drug store and medical advertisers, in the Bennett Bldg., New York City, are offering to give one retail druggist in each territory a new system of advertising for \$2.00 a month. They furnish profitable copy for newspaper advertising, booklets, circulars, pamphlets, letters, blotters, announcements, store placards, window signs, street car cards, labels, and all other forms of advertising.

As a special offer to druggists sending in the coupon cut from their advertisement in this issue, they will mail their new pamphlet explaining this new system, and if, after learning all about it, you contract for the system, they will credit you with \$2.00 to pay for the first month's service. Sending in this coupon does not obligate you to contract for this system. Write them for a large descriptive pamphlet.

NEW ENGLAND.

RHODE ISLAND.

Semi-Annual Meeting of the State Association, Annual Onting, and Meeting of Board of Pharmacy All at Once.

Providence, R. I., July 14.—The Rhode Island Ph. A., held its regular semi-annual meeting and its twenty-ninth annual outing at the Warwick Club, near Providence, on July 8. The attendance was the largest in the history of the association, the members and their guests numbering 70. At the same time and place the Rhode Island C. P. held its first annual meeting.

President Gilbert L. Parker presided at the meeting of the R. I. Ph. A. Edward T. Colton of Providence, was admitted to membership and then after a session lasting two minutes the meeting adjourned.

Immediately afterwards the annual meeting of the R. I. C. P. was called to order by President James O'Hare. The treasurer reported all bills paid and a balance of more than \$800. The report of the faculty showed that during the year eighty-three regular and six special students had been enrolled. The graduating class numbered twelve.

William O. Blanding of Providence, a member of the corporation, offered to establish a scholarship, the winner of which will be enabled to take a post graduate course and qualify himself for the degree of Ph. G. The offer was accepted.

The following board of trustees was elected for the year: James O'Hare, Providence; A. W. Claffin, Providence; C. A. Gladding, Providence, A. J. Johnson, Jr., Pawtucket; W. O. Blanding, Providence; S. W. Himes, Phenix; Enoch W. Vars, Niantic; A. W. Fenner, Providence; F. A. Jackson, Woonsocket; B. F. Downing, Newport; H. A. Pearce, Providence; George C. Lyon, Providence; E. P. Anthony, Providence; Geo. S. Morgan, Pawtucket; P. J. Gaskin, Valley Falls. The board must meet within ten days and choose officers.

After voting its thanks to President O'Hare for his work in behalf of the institution the meeting adjourned and the members entered the dining hall to join their fellow druggists in discussing an excellent dinner. Following the dinner a determined, but unsuccessful attempt was made to coax and then force N. F. Reiner, H. L. Swindells and Treasurer Daggett into making speeches.

The committee in charge of the outing were H. L. Swindells, Providence; A. W. Howe, Providence, and N. F. Reiner, North Providence.

The board of pharmacy re-elected Norman M. Mason of Providence, president and Howard A. Pierce of the same city, as secretary and registrar.

SOME MORE DRUGGISTS IN BAY STATE.

Boston, July 14.—Those who passed the Massachusetts board during June were: Peter G. Chagaruly, Lowell; Reuben Harris, Boston; Charles L. Heffner, Cambridge; Saul Harris, Boston; Clifford S. Hunt, Worcester; Edward Edwards, Somerville; Albert W. Kidder, Cambridge; Andrew W. McConnell, Worcester; Frank W. Ring, Charlestown; James A. Bird, Cambridge; James H. Carr, Clinton; Walter M. Coombs, Bath, Me.; Donald J. Grenier, Worcester; John J. Madden, Worcester; Walter H. Newton, Gloucester; George B. Gunn, Uxbridge; Warren B. Wilson, Dorchester; Francis J. Barry, Beachmont; Howard D. Brewer, Worcester; Frank C. Brockelman, So. Boston; William G. Brooks, Wollaston; Frank N. Jaques, Newburyport;

Chester E. Tracy, Everett; Arthur E. Best, Roxbury; Frank P. Lombard, Cambridge.

There were 80 candidates examined. There will be no examinations until fall.

FROM THE BAY STATE.

From Wild West Drug Clerks to Soda Fountains.— Changes and Fires.

—By the term of the will of Andrew G. Weeks, his widow and children receive the bulk of his property. There are bequests of \$1,000 to the St. Luke's Home for Convalescents, Roxbury; and the same amount to Emmanuel Church, Boston. \$20,000 is to be held in trust by Andrew G. Weeks, a son, for the benefit of a sister at whose death the principal is to be paid to the widow, Mrs. Harriet P. Weeks, who now receives one-third of the residue of the state, while the other two-thirds go to the children—Warren B. P. Weeks, Andrew G. Weeks and Mrs. S. Reed Anthony.

—A drug clerk whom most employers would not care to have is Joseph Becker, a young German who has been employed in Klein's drug store, Boylston and Tremont streets, Boston. When shutting-up time came the other morning, the cash box showed a deficit of \$50, which one of the partners accused Becker of taking. The young man coolly drew a revolver and fired it at his accuser, but the shot hit the soda fountain. The man was sentenced to serve three months for larceny, and a life term for the shooting. He appealed.

—Fire recently caused damage of \$1,000 in the basement of Green's drug store, Springfield, where was stored a quantity of alcohol, bay rum, etc. It is thought that the fumes of these things ignited when L. W. Knight, a clerk, went into the basement with a light. He was burned, but not seriously. The loss is covered by insurance.

—George H. Packard, a Boston drug clerk, is a voluntary petitioner in bankruptcy, having debts to the amount of \$511 and assets of only \$25. E. H. Shortes, a Malden drug clerk, also is in bankruptcy, owing almost \$1,500 and having no assets at all.

—Friend of Patrick Andrew Cunningham, of Travis & Cunningham, South Framingham, are congratulating him on his recent marriage to Miss Annie Teresa Condon of the same town. Mr. and Mrs. Cunningham went away on a short wedding journey.

—Ward Rees, the junior partner of A. W. Hitchcock, a veteran druggist in Westfield, has bought the senior partner's interests. His advanced years decided Mr. Hitchcock to go out of business. H. C. Brackett, of Huntington, is to be chief clerk.

—While J. A. M. Richards, a Fall River druggist, was standing near the soda fountain in his store, recently, a stray bullet was fired through the transom, burying itself in the woodwork. Narrowly missed his cranium.

—B. O. & G. C. Wilson, old-time Boston chemists and botanic druggists, have just installed a large soda

Eff. Lithia Tablets

Send for sample and special net prices on our carton package Aluminum Cap Bottles with your name on them.

Our Tablets made by a new process are very satisfactory.

BILLINGS CLAPP COMPANY, Boston, Mass.

fountain as a feature of their new place of business at 40 Canal street, a radical departure for them.

—A can of chlorate of potash exploded at H. & J. Brewer's drug store in Springfield, and an alarm was rung in. As the result, it is asserted, of setting the chemicals in the hot sun. The fire was slight.

—Mr. and Mrs. Carl Miller, whose marriage was a June event, have returned from their wedding trip and have gone to housekeeping in Lenox, where Mr. Miller is manager of the Hageday pharmacy.

—Joseph Touhey, druggist, Fall River, recently entertained a jolly company of other druggists and physicians at his summer cottage. Following dinner, all hands played base-ball.

—Irving A. Darling, proprietor of the Elm pharmacy in West Springfield, has purchased a desirable home, and will bring his family down from Turners Falls.

—Ralph Farum of Uxbridge, has been given a position as clerk for Caswell, Massey & Co., the New York drug firm, in their Newport, R. I. store.

—W. S. Forbush, druggist in Teele Square, West Somerville, has been enjoying a vacation trip to various places in Maine.

—A new store will be opened at South Acton, by Frank H. Willard, who comes from Lebanon, N. H.

FROM MAINE.

—Because the courts in Bangor announced that sentences of imprisonment would be imposed on druggists convicted of illegal sales of liquor, the trade have agreed not to have any liquors in stock at all and not to even fill physicians' prescriptions calling for liquors or spirits. The druggists are not renewing their United States tax certificates, for to do so may be construed by the court as evidence that they intend to sell liquors. On the other hand, if a druggist is now caught he is liable not only to sentence from the local court but to prosecution by the Government.

—At the last examination of the board of registration, the following passed: Walter M. Coombs, Bath; E. R. Bowers, Lewiston; Richard G. Raymond, Cumberland Mills; J. L. Beckwith, Saco; W. D. Anderson, Portland; Eugene C. Webb and E. P. Carswell, Portland; J. R. Kittredge, Rockland; E. G. Goodale, Falmouth, Mass; George B. Gunn, Uxbridge, Mass.

—Thomas O'Brien, for several years employed at Woodman's drug store in Westbrook, has betaken himself to the Gardner Drug Co., Boston. Ernest Files, recent graduate from the medical department in Bowdoin College, has entered the employ of H. M. Wilshire, Gorham.

—As the result of a liquor raid upon the store of William Holland, Portland, the proprietor and his clerk were asked to come into court to explain a few things. John Hammond, Portland, also experienced a recent raid. His case was continued.

—E. J. Forbes, the North Deering druggist, is ill.

A Throat a Mile Long.

Everybody wishes his throat was a mile long when drinking the delicious, refreshing beverage Coca Cola. Every year since the introduction of this drink it has gained in popularity throughout the country. No fountain beverage increased in public favor more rapidly; if you do not dispense it, you should order it once, as no drink will draw any more customers to your fountain. Address The Coca Cola Co., Atlanta, Chicago, Dallas, Philadelphia, or Los Angeles.

PENNSYLVANIA.

THOSE OLD LAWS.

Poor Wilkensburg in Throes of a Funny Dispute Between Goody Goodies and Druggists.

Pittsburg, July 14.—Much interest is being given to the agitation that has been going on for weeks in our neighboring borough of Wilkensburg, divided only from us by a paved street.

In the old days of the Pennsylvania constitution, shelved in 1872, a special law forbade the sale of intoxicating liquors within the then township of Wilkins. Wilkensburg, situate within that territory, is a residential neighborhood, somewhat "upish" in inhabitants, and "goody-goody." Among its people there is a considerable element that is arrayed against any such wordly thing as merchandising on Sunday, even though men and animals die of thirst. Hence the election two years ago of a "blue-belly" burgess who kept the town in constant agitation. Last February another like him was elected.

A month ago all druggists and purveyors of fruits, confections and soda water were notified that they would meet the utmost penalties of the law—\$25 and costs—if they dared to sell soda water or any thing else that slakes the thirst of the ungodly on the Sabbath. Some closed, but commonly the notice was ignored and the ignorers were arrested and fined. As the magistrates have summary jurisdiction, there was no alternative but to pay. Then the druggists held a meeting; organized to test this worm-eaten law. They also resolved to apply the law of negation to the inhabitants for the purpose of arousing indignation, and closed their places on the following Sunday. No drinks, no medicines, no cigars, were sold in Wilkensburg. Those who had not provided themselves on Saturday had to deny themselves or come into the city to secure them. Thus, while the local druggists were willy nilly closed up, their neighbors, over the municipal line were flourishing.

But to see customers driven away in wholesale was too much. Petitions were prepared and customers who do not think it a sin to breathe on the first day of the week were asked to sign. They did so to the extent of substantially 80 per cent. of the adult population. Then a joint meeting of druggists and deacons was held. Arguments were made, facts were cited, illustrations drawn and prophecies enunciated. Then a new factor developed in some of the merchants who handle cigars and found that their sales on Saturday night had materially increased since the drug stores had been closed on Sunday. Hence these were opposed, as members of the church board, to any compromise.

That's the story of how interesting it is to keep a drug store in the town of Wilkensburg, which commercially and socially is a portion of the ungodly city of Pittsburg.

BOARD OF CENSORS FOR EDITOR.

Philadelphia, July 14.—The regular monthly meeting of the P. A. R. D. was held on July 10. The grave members were attired principally in their shirt sleeves because of the excessive heat. A goody number signed the register and the meeting lacked none of the vim and snap usually displayed.

An ovation was given Chairman Cliffe of the legislative committee who, backed by the P. A. R. D., received the appointment to the pharmacy board. A minute of thanks was adopted for transmission to Governor Pennypacker. The governor had been told that

a certain senator would vouch for Mr. Cliffe as "all right." "True," said the governor, "but what does Senator _____ know about pharmacy?"

The executive committee reported six applications for membership, one of them being an old member who had dropped out. The financial secretary reported a balance of nearly \$800.

The editor of the association's newspaper, selected from the executive committee, has heretofore been allowed full responsibility, but a new amendment to the by-laws has changed this and makes it obligatory for the editor to submit all material to the committee as a board of censors. Mr. Strunk, the former editor, is succeeded by H. C. Blair.

President Leedom announced that Messrs. Lowe, Cliffe, Potts, Stiles and Baer would act as delegates to the American Ph. A.

ABSOLUTELY DESTITUTE OF ACERBITY.

Philadelphia, July 14.—The executive committee of the P. A. R. D. through its chairman, Mr. Potts, takes sharp exception to the article published in the Era of July 9. As the meetings of the committee have ever been provocative of harmony, it is a grave mistake to insinuate that any of their gatherings have been lacking that necessary adjunct. The committee feel that they know the source of information and inspiration and think it in bad taste that, after the controversy had been given careful attention, the wholesaler should "speak his little piece." The subject matter as well as the man referred to are so well known that there is no question about the authenticity of the interview. One thing the committee does insist: Their meetings are always harmonious and absolutely destitute of acerbity.

OTHER HAPPENINGS.

—One of the Philadelphia schedule signers opened a new store on the national birthday, and celebrated its establishment by making a vigorous "cut" along the lines of the list. It made quite a noise in the neighborhood, principally among his competitors, but was stopped the day following. It was long enough to bring several inquiries to the schedule committee—why if one man should have a special day, i. e., bargain day, why should not others be allowed the same privilege?

—A druggist in West Philadelphia who is fortunate or unfortunate enough to be opposite a large church institution that cares for the aged, was surprised to receive a deputation from the board of managers. Their visit was to give notice that then and thereafter he was forbidden to sell anything to any of the inmates, for any purpose whatever. He is wondering why, as are many of his friends and acquaintances. Will he have to obey?

—Joseph A. Heintzelman, Jr., Philadelphia, was the victim of three footpads a few evenings ago. He was going along the North College Wall when a knight of the road asked him the time. As he told him his watch was snatched, being something of an athlete he tried to punish the man, but two confederates came to his assistance, the result being more losses and a bruised head.

—Druggist Fry of Eighth and Catharine streets, Philadelphia, had a call for ice cream soda a short time ago from a couple who were apparently transients. While the girl drank hers, the young man tried to add zest to a really good glass by drawing a revolver and shooting her in the back. She's just out of the hospital, the gunner is under bail and Druggist Fry is a witness.

—Vigorous improvements and alterations are going on at Eleventh and Arch streets, Philadelphia, for George C. Taggart's new store; at Tenth and Arch streets,

where Dr. Brown is remodelling, and at Camac and Harris streets for Charles Rehffuss.

—Swellenburg's latest department store advertisement gives Philadelphia's ice cream soda "As fine and pure and refreshing as anybody sells at any price—delicious. Two hundred favors," at four cents a glass.

OHIO RIVER VALLEY.

"GREEN FIRE" WRECKS LABORATORY.

Cleveland, July 14.—G. M. Grosse, a West side druggist, had a narrow escape from death on the Fourth. He was mixing some "green fire" in a mortar—a composition almost precisely similar to that which blew up the Thor ammunition factory on Orange street two months ago and killed several people. He had placed a pound of chlorate of potash in the mortar, and was just about to add the other ingredients. There were three pounds of chlorate of potash and a lot of other explosives standing beside the mortar. Suddenly the chlorate for some reason began to crackle. Mr. Grosse and others in the laboratory hastily picked up the loose material and ran. It was just in time. The chlorate exploded with such force as to shatter the big mortar into a thousand pieces and blow the bottles, vials and other articles of the laboratory into an unrecognizable mass. Mr. Grosse was slightly cut by the flying glass.

OHIO HAPPENINGS.

—C. B. Harper & Co. of Akron, have purchased the store formerly owned by E. Steinbacher, now deceased. It is not the intention of the new firm to do a jobbing business, as did its predecessors, but to conduct a first-class retail store.

—After an absence of several years in conducting a drug store in Detroit, Fred Mayer has returned to Cleveland and opened a store at Cedar avenue and Logan street, buying out E. F. Kramer, to whom he formerly sold.

—Thomas Ritter, a clerk employed by Benton, Myers & Co., wholesale druggists of Cleveland, is away on his wedding trip. He was married two weeks ago.

—A. T. Hambley, who has been a clerk for several years for Paul Feuer of Cleveland, has opened a drug store in Lorain.

OUR CANADIAN LETTER.

—The Toronto branch of the Retail Merchants' Association of Canada is making great preparations for the holding of a monster picnic at the Industrial Exhibition grounds, Toronto, on July 15. The druggists, who are strongly represented in the association, have the following members on the various committees: A. E. Walton, G. E. Gibbard, Isaac Curry, T. F. Carey, John Hargreaves, G. D. Reid, W. J. A. Carnahan, P. W. McLean, W. A. Willis, J. F. Taylor, G. M. Petrie, and George Bingham.

—Elmer E. Featherston has opened a new store in R. C. Balmer's old stand, Oakville. J. J. Bannon, druggist of Norwich, Ont., has assigned to T. Brown.

CALVERT DRUG CO.

The Story of the Marvelous Growth of This Cooperative Buying Concern and Personal Sketches of Its Officers.

Baltimore, July 11.—Pharmacists of Baltimore deemed it necessary and expedient some years ago to meet increasing competition and enlarge their profit margins. Accordingly, about six years ago the Calvert Drug Co. was organized by half a dozen prominent retailers, who secured a very liberal State charter, which permitted them to deal in and manufacture all kinds of drugs and chemicals, patent medicines, etc. The principal object was to secure the popular selling patent preparations at first cost so as to be able to meet the prices of the cutter.

After three years along co-operative lines the system of distributing goods was found unsatisfactory; one of the members would want certain goods, when the others were not ready to order. So the company decided to establish a supply house of their own. After several conferences twenty of the prominent stores were pledged. The charter of the Calvert Drug Co. was acquired and the company was reorganized on a strictly wholesale basis. At first goods were ordered in modest quantities. The depot soon proved too small and an extension was made. But even this in a short time was inadequate and last June the present location at 30 and 32 Light street was secured. It was thought that this would do for several years, but the directors now find that it will not.

The benefits are open to the entire retail drug trade of the city; the rebate plan on goods is strictly adhered to and articles are distributed at a small margin above cost to cover the expense of handling. All business is done on a strictly cash basis. The company is managed by a board of seven directors: Dr. A. J. Corning, president, David R. Millard, vice-president, John G. Beck, general manager and treasurer; Owen C. Smith, secretary, John B. Thomas, William M. Pouch and Harry F. Lindeman.

Dr. Corning is a graduate of the Union C. of P., Baltimore, and came to Baltimore 25 years ago as chemist of the Baltimore sugar refinery. He later opened a pharmacy at Bolton and Master street, and became permanently identified with the A. P. A., the Maryland P. A., and After Bedou. He is a former president of the Baltimore R. D. A.

David R. Millard is a prosperous and energetic

young pharmacist of East Baltimore, a graduate of the Maryland C. P., secretary of the State board of pharmacy, and has a store at Collington avenue and Baltimore street.

John G. Beck, is also a graduate of the Maryland C. P. He has been very active in local pharmaceutical circles. He is vice-president of the City Savings Bank, president of the Germania Country Club, president of the Baltimore R. D. A., treasurer of the Municipal League, treasurer of the Northeast Baltimore Improvement Association and director in a number of other concerns. In recognition of valuable services the stockholders of the Calvert company last August presented to him a magnificent chest of silver.

Owen C. Smith, the secretary, is too, a graduate of the Maryland C. P. He has been proprietor of the store at Pennsylvania avenue and Hoffman street, since 1897 and recently bought another pharmacy. He was the second secretary of the Baltimore R. D. A., chairman of the executive committee of the Maryland Ph. A.

in 1900 and was elected secretary at the annual meeting in 1901, a position which he still holds. He is chairman of the executive committee of the Wedgewood Club.

John B. Thomas is the senior member of the firm of Thomas & Thompson, one of the best known retail firms in Baltimore. His business qualities and good judgment have been an important factor in the progress of the Calvert company.

OWEN C. SMITH.

Mr. Lindeman is a member of the first branch of the city council and enjoys great popularity.

TENNESSEE.

—Another wholesale drug concern which has just taken out articles of incorporation in Memphis will be known as the Memphis Drug Co. and will do a general wholesale and jobbing business with a capital of \$50,000. The incorporators are Edwin L. Randle, R. H. Chapman, J. C. Greer, George H. Koen, J. H. Crank, and C. D. M. Greer, all prominent business and professional men of Memphis. Mr. Randle, who is slated to be at the head of the new concern, has held an important position with the Van Fleet Mansfield Drug Co. for a number of years.

JOHN B. THOMAS.

DAVID R. MILLARD

—Ernest Monnier, for a number of years one of the leading pharmacists of Memphis, filed a petition in bankruptcy. Mr. Monnier's place was right up in the centre of the business portion of the town, and it was thought he was doing a paying business. The liabilities amounted to \$5,000. The assets included \$25 in cash. The store is closed pending action of the court.

—The city council of Memphis is wrestling with a "pure food" ordinance, and the matter is receiving considerable attention on all sides. The use of adulterants and preservatives is positively forbidden, special attention being given to formaldehyde. The ordinance is scheduled to come up for final passage in the course of the next week.

PRICES CONSIDERED AT C. R. D. A. MEETING.

Chicago, July 14.—Drugists of Chicago this week received notice of the third quarterly meeting of the Chicago R. D. A. The meeting is to be held at the Northwestern University Building, Lake and Dearborn streets, this afternoon. The announcement recites that the maintenance of prices in the uptown district and the probabilities of establishing more satisfactory conditions in the downtown districts will be reported upon by the executive board, which has been working to bring about the best results through the careful handling of a difficult problem. It is said that a strong desire is manifested by druggists throughout Cook county for closer organization and more thorough work in practical co-operation and that "the splendid results heretofore attained in this way are thoroughly appreciated by druggists has been demonstrated in the last few weeks in a way not to be misunderstood." The election of a president to succeed John I. Straw, resigned, will be an important item of business.

NEBRASKA.

—Omaha visitors: P. A. Gaiser, manager of the Gannuz pharmacy, Lincoln; A. W. Scott, president of the Colorado Ph. A., Collins, Colo.; Joseph Simecek, Milligan; Dr. Clark of the Clark Drug Co., Craig; G. W. Gilman, Plattsmouth; Mr. Wallin of Anderson & Wallin, Wallia, Ia.; G. A. Pulley, Cody, Wyo.; Ed. Hall, Elkhorn; W. M. Tonner, for five years secretary of the Nebraska Ph. A.; Dr. F. Simons, Oakland; Creed McDaniels, manager of the Wyoming Drug Co., Rawlins, Wyo.; P. S. Taggart, Gretna; F. E. Long, St. Joseph, Mo.; T. P. Hickman, Linman, who was on his way to his old home in Iowa.

—W. H. Tonner of Lynch, played a joke upon himself by refusing to accept the appointment for a one year term as secretary of the board of pharmacy because he had been strongly recommended for the long term. Now it develops that his appointment to the short term was made with the express understanding among the members that when the short term expired he should be re-appointed to the long one of five years. His declination brought to the front Messrs. Kuhn of Omaha, Dort of Auburn and Schnpbach of Columbus, who had been recommended for the short term.

—Mrs. Pohl, wife of Otto Pohl & Sheppard, Fremont, is visiting in Boston. H. S. Weller, secretary of the Richardson Drug Co., Omaha, with his wife, are taking a two months vacation on the Pacific coast. Mrs. Hermann Bauman of Grand Island, is visiting in Chicago.

—Oscar Damman disposed of his interest in the firm of H. Schwake & Co., Nebraska City, to Mr. Schwake and will hereafter represent the Porter-Ryerson-Hoobler Co. of Omaha.

—D. W. Butler of Alliance, is closing out. H. L. Harper of Beatrice, has secured the appointment for the long term on the State board of examiners. J. E. Hill has opened at Boone.

—Homer Bowen succeeds J. C. Fraught at Phillips. C. W. Root of Wolbach, who recently disposed of his store, is in Omaha recently looking up a new location.

—C. F. Weller, president of the Richardson Drug Co., accompanied by his wife and daughter, attended the Colorado Ph. A.

—George H. McClintock, formerly of St. Edwards, has purchased the stock of R. G. McKibben, Newman Grove.

—L. B. Van Dyke, popular clerk for A. Huntsman, Hebron, married Miss Jennie M. Ball at Oglesby, Ill. —Otto Pohl of Fremont, is the first Nebraska druggist to purchase an automobile.

Grape Juice.

In 1869 Dr. Welch manufactured the first unfermented grape juice put up by any one for any purpose. From that start of a few bottles a large industry has grown.

At first there was much opposition, some said there could not be such a thing as "unfermented wine" as the product was then generally called. But after thirty-three years of steady growth the popularity of Welch's Grape Juice speaks for itself.

It is refreshing to find such a product as Welch's Grape Juice that from the very first has held to the highest standard of excellence. Other food products have started with this idea but cheap quality competition made them change or perhaps their manufacturers put a second quality of goods on the market. Not so with Welch's Grape Juice, no expense has been spared to get the best quality of grapes and to perfect the process of transforming the juice from the luscious cluster to the bottle. The effect has been to better the product, not to cheapen it.

There are cheap grape juices—they have come and gone—but the manufacturers of Welch's Grape Juice believe that the people want the best when it comes to a beverage which is also food and medicine. There is no doubt where the physician stands. And the growing demand for Welch's proves this idea.

Five years ago the Welch Co. moved to Westfield, N. Y.; two years later they doubled the capacity of their plant, which was already much larger than the one used at Vineland, and now there is in process of construction an addition to the factory which will again double the capacity. The old plant with 200,000 gallons output in a year was much the largest of its kind, and the new plant, with 400,000 gallons capacity, testifies to the wonderful popularity of Welch's Grape Juice.

Compare Welch's Grape Juice with any other kind and you will know why the great buying public, the particular physician and the careful druggist takes Welch's. Perhaps it is unnecessary to add that Welch's Grape Juice is absolutely pure and is fully guaranteed by the manufacturers.

CHARLES D. JORDAN, Monticello, Ga.
President Georgia Ph. A.

The youngest president of the Georgia Ph. A. ever had is Mr. Jordan, also a member of the board of pharmacy. Beginning as a clerk at Monticello at eighteen, when nineteen he and a friend bought the business. Less than two years later he was the sole owner. He has filled all the vice-presidencies in the State association and is director of the Jasper County Bank. A friend says of him: "There are two characteristics that stand above others in this young man. They are an inexhaustible energy and a congeniality that makes him never too sick to laugh and never too busy to welcome you."

HOW SHALL THE DRUMMER APPROACH THE BUYER?*

THE subject—salesmanship—is a broad one and susceptible of widely varying treatment. It is too far reaching to be gone into, in detail, in the limited time allowed a paper on an occasion like this, for the manner of approach is as varied as the dispositions of men. A few general remarks and a suggestion or two, sufficient to give an outline of the subject, is all that will be attempted.

Facts About His Goods.

In the first place the travelling man, commonly termed a "drummer," must not only have confidence in himself, but unlimited confidence in the line he carries, and be a good judge of human nature. Thus armed let him approach his prospective customer as he has gauged his disposition. Always with a pleasant word; ever ready with the facts about his goods, and not afraid to state them with confidence and emphasis, if necessary, but not too aggressively, showing the buyer where his goods are superior, rather than how inferior than those already on his shelves.

He should never run down a competitor's goods. By so doing he casts a reflection on the judgment of the merchant in buying them and creates an unpleasant feeling which is very apt to react, and may deter him of the order he is so anxious to get.

It should be the drummer's aim to gain the buyer's confidence and, having done so, never, under any circumstances, to violate it, for a mere temporary advantage. If the merchant says "No" and the drummer feels he means it, give him credit for being honest.

*Read by G. S. Hazard before the Kentucky Pharmaceutical Association, 1903.

est in his refusal, accept it with the best grace possible, and leave him, hoping for better luck next time.

The Cyclone Method.

Unfortunately many buyers make a practice of always saying "No," thus compelling the salesman to beg an order. This is demoralizing as well as humiliating, and as a result many fall into the habit of over-insistence, and some never know when to stop. They forget that with some men "No" means "No." There is room here for the exercise of considerable judgment and should be given careful attention.

The correct judgment of human nature is an ever present necessity. For instance, a drummer enters a store, as it were, like a Kansas cyclone, approaches the proprietor with a slap on the back, and a "Hello, Old Man!" "How are they coming?" (We have all seen him do it.) If he has judged his man correctly, or knows him of yore, he very likely gets an order, prices, etc., being right. Now let us follow him across the square and try the same tactics on the dignified old gentleman with gold eye glasses. As the hand comes down on his back, see him shrink back and draw within himself like a turtle in his shell. Does the salesman get an order there? Well hardly. The cyclone style does not fit this case and he perhaps all unconscious of giving offense, wonders why he is turned down, possibly for all time. If he gets an order at all it is probably because he handles a monopoly, the "snap" all drummers sigh for.

Bear Baiting.

When the man with the grip runs up against what is commonly known as a "bear" and they are found in all walks of life—an opportunity occurs for showing his finest skill. If he has patience and tact perhaps he will succeed where many a poor fellow has gone down to ignominious defeat. Let him put his pride into his pocket, pack away his finer feelings in cotton, or some other soft material, and sail in. After each rebuff come up smiling no matter how it hurts, charge up the damaged feelings in the expense account, and at him again, and perseverance may win out. Sometimes, however, a strong "bluff" worked with discretion will do wonders, but he must know his man. Here again the good judge of human nature has the advantage.

In regard to this latter class let me pause to remark that the old saying that "present company is always excepted" applies here also, for the drummers, whose pleasure it is to call on the members of the Kentucky Pharmaceutical Association have no fear of running against the genus bear among them. Fortunately for us they always know how to be gentlemen if they cannot always be buyers.

How to Leave Gracefully.

And now, to digress a little from the subject in hand, let me say a few words as to how he should leave him. Leave as you came with a pleasant word for all, whether successful or not. It may be difficult in the latter case, but it pays. Never give way to your temper, throwing samples back in the grip and slamming the door to with a bang, as the writer has several times seen men do. The feeling left behind is apt to be one of satisfaction that "I turned that man down." There will be little use for him to come again. Had a different course been pursued the feeling might have been one of regret for the inability to give so agreeable a fellow an order, and a determination to do something for him the next time, if possible.

Be a Gentleman.

To sum up the whole matter; approach the buyer with confidence, be honest with him, let him feel that he can trust you, and that you will respect his interests, as well as your own. Of all things and at all times be a gentleman. Nothing pays so large a dividend for the amount invested as politeness. It helps to smooth over the rough places, and like charity covers a multitude of sins.

In conclusion, I will say to the drummer, don't

talk of your troubles, reserve that topic for the policeman. Always be cheerful. Laugh, joke, jolly, even flatter, if you must, but don't croak. No one likes a grumbler, as Ella Wheeler Wilcox so aptly puts it: "Laugh and the world laughs with you.

Weep and you weep alone.

For this brave old earth must borrow its mirth
It has troubles enough of its own."

GATHERED FORMULAS.

To Protect and to Remove Rust from Instruments.

(1). Place the instruments over night in a saturated solution of zinc chloride. The rust disappears through reduction. On removing the instruments, rinse them with clear water, place in a hot soda and soap solution, and dry. It is also advantageous to polish with absolute alcohol and chalk.

(2). Dissolve one part of paraffin oil in 200 parts of benzine. Wash the instruments dry in a current of warm air, and dip them into this solution, moving the different parts (scissors, tongs, etc.), and then lay on a plate in a warm room to dry.

(3). Instruments or other articles of polished steel, iron, nickel, etc., will remain indefinitely unattacked by rust or corrosion, if left in a 2 per cent aqueous solution of either carbonate or bicarbonate, benzoate or borate of sodium. Dr. Marechal of Anvers states that although sodium benzoate is insoluble in alcohol, if the articles be placed in that liquid in the presence of the benzoate, they will never rust.

Tooth Wash and Powder.

To prevent decay of the teeth it is important that the mouth should be kept free from organic matter during sleep, or fermentation is sure to result, with consequent damage to the teeth. For procuring asepsis of the mouth the following wash may be used:

Phenol	1 dram
Eucalyptol	15 minims
Menthol	8 grains
Thymol	2 grains
Alcohol (90 per cent.)	3 ounces

Mix a teaspoonful with two tablespoonfuls of hot water and use as a mouth-wash.

A good antiseptic-powder to use in conjunction with the mouth-wash is:

Solol	1 dram
Phosphate and carbonate of lime, of each	5 drams
Light magnesia	5 drams
Bicarbonate of sodium	4 drams
Perfume	q. s.

Typewriter Ink.

Alcohol	2 ounces
Aniline color	$\frac{1}{4}$ ounce
Water	2 ounces
Glycerin	4 ounces

Dissolve the aniline in the alcohol and add the water and glycerin.

Castor oil	2 ounces
Oil of cassia	$\frac{1}{2}$ ounce
Carbolic acid	$\frac{1}{2}$ ounce

Warm them together and add one ounce of aniline color.

Indelible typewriter inks may be made by using lampblack in place of the aniline, mixing it with soft petrolatum and dissolving the cooled mass in a mixture of equal parts of benzin and turpentine.

Freckle Lotion.

Potassium carbonate	1 dram
Spirit of camphor	1 ounce
Tincture of benzoin	1 ounce
Essence of musk	10 minims
Water	7 ounces
Eau de cologne	to 30 ounces

Dissolve the potassium carbonate in the water, and add to the other ingredients previously mixed. Let stand several days and filter.

Mosquito Tincture.

Eucalyptol	10 parts
Acetic ether	5 parts
Eau de cologne	40 parts
Tincture of insect powder (1 to 5 alc.)	30 parts

For sponging the skin a mixture of 1 part of this with 3 to 6 parts of water may be used. The tincture is said to be also useful for spraying in apartments; for this purpose one part may be mixed with 10 parts of water and used in a spray producer.

Japanese Furniture Polish.

Linsed oil, 16 ounces; strong infusion of green tea, 16 ounces; albumen of 2 eggs; spirit of salt (muriatic acid), 2 ounces. Mix, and shake well together each time the polish is used. Apply a few drops, using a wad of cotton covered with a bit of linen as a pad, and polish by rubbing with an old silk handkerchief. For lacquered articles this is said to be the best polish known.

Varnish for Paper.

Pyroxylin is the basis of the best paper varnishes. It gives an elastic, impermeable coat which will not crack. The following formula has been recommended:

Soluble cotton	4 parts
Mastic	2 parts
Sandarac	1 part
Camphor	1 part
Acetone	8 parts

Mix and allow to stand three weeks before using.

Ink Eraser.

Citric acid	1 part
Water, distilled	10 parts
Concentrated solution of borax	2 parts

Dissolve the citric acid in the water and add the borax. Apply with a delicate camels' hair pencil, removing any excess of water with a blotter. A mixture of oxalic, citric and tartaric acids in equal parts, dissolved in just enough water to give a clear solution, acts energetically on most inks.

NINTH ANNUAL PROCEEDINGS OF THE MANUFACTURING PERFUMERS' ASSOCIATION. We have received from secretary James E. Davis, Detroit, Mich., a copy of the volume of proceedings of the 9th annual meeting of the Manufacturing Perfumers' Association of the U. S., held in this city, February 5 of the present year. From this report we learn that the association has 59 active and 55 associate members and is in a flourishing condition. What seems to us to be the most valuable portion of the book is that found in the sixty pages under the caption of "List of Trade Names used by Manufacturing Perfumers." Secretary Davis informs us that great pains have been taken to make this list authentic and complete, and it certainly is all that he claims for it. About 1515 trade names are listed, nearly three times as many as appeared in the first edition published but a short time ago. The volume, substantially bound in red cloth, and well printed, reflects great credit upon Mr. Davis under whose editorial supervision it was prepared.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories.
Twelve Teachers. Thorough Courses.

NEXT TERM BEGINS SEPT. 7, 1903.

Address Inquiries to

PROF. OSCAR OLOBERG, 87 Lake St., Chicago.

BE UP TO DATE.

Glance over the following interesting ads. in our last week's issue, and note the good things that should be in every up-to-date drug stock:

TOOTHACHE GUM.—The kind that cures; put up in handsome 10 cent packages at \$2.50 per gross. The Stereal Chemical Co., Oceanus P. O., New York City, upon receipt of 35 cents in stamps will send you a sample dozen on an elegant show card. They also quote astonishingly low prices on all non-secrets. Write them for estimates.

PHENALGIN.—An analgesic which is growing in favor with physicians and pharmacists, put up in one ounce bottles by the Eina Chemical Co. of New York City. The price is \$1.00 per ounce in Powder, Pink Top Capsules, or in 2½ gr. Tablets.

FLY BUTTONS.—This is a poisoned fly paper made by The Fly Button Co. of Maumee, O., the circular form of the sheets suggesting the name "Fly Buttons." The advertisement on page 20 will undoubtedly interest you as the manufacturers offer some good premiums which will pay you for pushing the goods.

GLYCERIN.—There is a demand at all seasons for Glycerin. Why not stock the good kind, it costs no more? Gordon's "Chemically Pure" is the oldest brand on the market. It is manufactured by the W. J. M. Gordon Chemical Co., Cincinnati, O., and is absolutely pure and always uniform.

WALTZING MICE.—Window advertising pays, and anything in motion draws more attention than a stationary article. J. A. Kleppisch of Burlington, Iowa, a large importer of Japanese novelties, is offering "Japanese Waltzing Mice" as the latest and best thing in window attractions. Write him for circulars.

LISTERINE TOILET SOAP. made by the Lambert Pharmaceutical Co., is bound to be popular. The preparation, "Listerine," stands so well with the public that any article containing it is sure to sell. Are you ready to meet the demand?

PREDIGESTED BEEF.—It contains the entire nutritive value of fresh, lean beef, pre-digested in a form ready for immediate absorption. The H. K. Mulford Co. of Philadelphia offer special inducements to live druggists to handle this preparation. Write them for particulars.

PERUNA.—Have you seen the cut of the Peruna Drug Mfg. Co.'s new Italian Renaissance Administration Building on advertising page 6? Don't fail to see it, and also notice the opportunity to save \$6.00 on a gross of that great seller, "Peruna."

SANTAL PERLOIDS. made by H. Planton & Son of New York, and claimed by them to be "The Best by every test." They cost \$1.75 per dozen in vials of 30.

CORKSCREWS. The Chung Corkscrew Co., Alton, N. H., will send you free samples of all sizes. Write them.

LOZENGES. The London Hospital Throat Lozenges, formula of Sir Morrell MacKenzie, are manufactured by The Roworth Mfg. Co., 85 Maiden Lane, N. Y. Note their advertisement on page 11 for other goods which they make.

WATERS. Carl H. Schultz of New York City, is one of the leading manufacturers of Artificial Vichy, Seltzer and Carbonic Waters. Correspond with him.

SPONGES. It is hard to get hold of good sponges. Write King & French Co. of Philadelphia, Pa., claim that you can order to necessary to prove that you get a quantity of genuine value when you buy of them.

BRIE G MILLS. Not ordinary meat cutters, but some that cut Vanilla Beans, Guttain, Chinchona, Arabic Gum, and all gummy, oblong and hard

substances. A. W. Straub & Co., 3737 Filbert St., Philadelphia, offer this kind of mill for \$3.20 each, or \$4.00 on ten days' trial.

KLIP-KLIP.—A very popular pocket manicure which trims, files and cleans the nails, made by the Klip-Klip Co., 575 S. Clinton St., Rochester, N. Y., and retails at 25 cents. Ask your jobber or write.

No Morphine in Piso's Cure.

The Piso Company, Warren, Pa., by its secretary and treasurer, W. A. Talbot, has called our attention to three formulas for Piso's Cure for Consumption published in the Era Formulary on page 107. Morphine is given as one of the ingredients in each formula, which Mr. Talbot says is a mistake as Piso's Cure does not contain any morphine whatever.

For the past year the Piso Company have been engaged in a law suit with certain counterfeiters of Piso's Cure, and during the trial it became necessary for them to establish their claim that Piso's Cure contained no morphine at all, and they did establish it. They proved further that it contains no preparation of opium, nothing which will induce a habit, nor any deleterious substance whatever. The formulas given in the Era Formulary on pages 79 to 117 inclusive, were compiled by us and published in response to insistent demands at that time (1898) from retail druggists. We gave them as we found them in the pharmaceutical papers of the time and in other contemporary publications, and in nearly every case we gave credit to the source of our information.

We also stated in the Formulary, and in the Pharmaceutical Era since the publication of the Formulary, that we specifically disclaimed any responsibility for the correctness of the formulas in question, and we are now pleased to make public the fact that the Piso Co. has proved the absence of morphine from Piso's Cure for Consumption.

James A. Hearn & Son.

When you visit New York City do not fail to call at the dry goods emporium of James A. Hearn & Son on West Fourteenth St. This firm handles no drugs, groceries or liquors, but is recognized among the leaders in the dry goods line, and it would be worth your time to spend a half day seeing its fine stock and method of doing business. Do not arrange to visit this store on Saturday during the summer months, as it does not open its doors to the public from Friday night until Monday morning. It closes on Saturday for the benefit of its employes, giving them one holiday each week, which allows for a day of rest on Sunday.

OPIUM ADVANCES IN VALUE.

New York, July 14.—An advance of 20c per lb. in values of opium is the principal change during the past week and the general market has remained seasonably quiet with transactions mainly in accordance with consuming requirements, which are light and unimportant.

OPUM.—As a result of the stronger tenor of reports from primary sources of supply, referred to last week, the local market is decidedly firmer and prices show an advance of 20c per lb., the revised quotations being \$1.45@1.70 for D per cent, and \$1.55@1.80 for 11 per cent. Powdered as correspondingly higher and jobbers now quote \$1.35@1.60 for 13 per cent, and \$1.85@1.50 for 10 per cent.

MORPHINE.—Consuming channels are absorbing a liberal amount of stock and the market is firm in sympathy with the stronger position of opium, but prices have not yet been advanced and jobbers continue to quote \$2.50@2.90 for eighth in ounce boxes, \$2.45@2.55 in 2½-oz. boxes, \$2.25@2.35 in ounce vials, and \$2.20@2.30 in 5-oz. cans, as to brand and quantity, less the usual rebate on large purchases.

QUININE.—Dealers report an improved demand with the tone of the market firmer, but supplies are still available at the old range of 23@23½c for bulk in 100-oz. tins, 23@24c in 50-oz. tins, 24@24½c in 25-oz. tins, 25@25½c in 15 or 10-oz. tins and 30@30½c in ounce vials, according to brand and quantity.

MENTHOL.—The market is somewhat unsettled and values are lower, the revised jobbing quotations being \$7.75@8.25 per lb. and 58@63c per oz.

CACAO BUTTER.—Dutch is easier in sympathy with primary markets and spot jobbing quotations have declined to 32@33c.

COTTON ROOT BARK.—Owing to extreme scarcity jobbers have further advanced quotations to 20@25c for whole and 25@30c for powdered.

GUM KINO.—Supplies are more abundant and jobbing prices have been reduced to 50@60c for whole and 70@80c for powdered as to quantity.

ARROWROOT.—A revision of jobbing quotations shows an advance in Bermuda to 35@37c in kegs and 15@20c for less. St. Vincent is easier and obtainable at 15@20c.

OIL PEPPERMINT.—The market continues to resist weakness and jobbers have further reduced prices to \$3.25@3.50 for Western, \$3.00@3.05 for Wayne Co. and \$5.50@5.50 for other redistilled or H. G. H.

ROSE LEAVES.—Red are in better supply and easier with jobbing quotations showing a decline to \$1.25@1.15 for whole and \$1.35@1.15 for powdered.

PRESLATE OF POTASH.—Yellow is firmer and jobbers have advanced quotations to 22@27c as to quantity.

GAMBIR.—Primary markets are lower and spot jobbing prices have been reduced to 63@67c by the late and 10@12c for smaller quantities.

STROPHANTHUS SEED.—A slightly easier feeling has developed and jobbers have reduced quotations to \$1.35@1.15 for whole and \$1.45@1.55 for powdered.

BELTLE LEAVES.—Long are a shade easier with jobbing quotations obtainable at 100@110.00 as to size of order.

TANNIC ACID.—Jobbing quotations for crystals in bulk have been reduced to 62@70c in bbls. and 75@80c in pound cartons.

CINCHONIDA.—Revised jobbing prices show a decline to 20@21c in 100-oz. tins, 25@25c in 5-oz. tins and 30@32c in ounce vials.

COD LIVER OIL.—Newfoundland is firmer and jobbers have advanced quotations to \$3.25@3.50 in 100-oz. tins and \$3.75@4.00 for smaller quantities.

OLEO CAR.—Market firmer with quotations showing a decline to 1.45@1.50 per gal. in bbl. and 10@15c per lb.

LENS-ED OIL.—Values are slightly lower. Raw is quoted at 1.10@1.15 in bbl. and 50@55c for less. Refined is quoted at 1.10@1.15 in bbl. and 50@55c for less.

It Holds.

Army and Navy Liquid Glue made by the Wachtler Mfg. Company of Baltimore, Md., and claimed by them to be the best and strongest glue that money, experience and brains has produced, is not a fish glue, but a pure animal glue which will not sour, mold, get brittle, brush or crumble, stands hot and cold, smooth as oil, and is always ready for use; put up in all sizes of cans with friction tops. The manufacturers would be pleased to quote prices and send you a trial order. Write them now and be ready to supply the demand.

BUSINESS NOTICES.

A HELP IN PRESCRIPTION WORK.

There are a great many things that the average dispenser can't remember, and there are as many more that he shouldn't try to remember—it isn't safe. These things come up in prescription filling when time is an important factor and accuracy is strictly essential. There are questions about dosages, dose equivalents, percentage solutions, specific gravity, incompatibilities, metric and thermometric equivalents, meanings of Latin, French or German terms. These things are all tabulated, or figured out, handy for instant reference, in the Era Dose Book (Third Edition, Revised and Enlarged). Price 50 cents, postpaid.

Is pharmacy a business or a profession?

The highly educated pharmacist who tries to conduct a store without a knowledge of business details will inevitably fail.

In the same way will a business man who tries to run a pharmacy without some knowledge of the profession inevitably come to grief.

Speculation as to the relative values of the two classes of knowledge is useless—both are necessary.

There are good business men who make poor pharmacists, and good pharmacists who make poor business men.

If you belong to the latter class, we feel sorry for you, if to the former there is a remedy, The Era Course in Pharmacy.

Write to The Pharmaceutical Era, No. 8 Spruce Street, New York, N. Y., for a prospectus.

POLITICS IN THE DRUG STORE.

It has frequently been remarked that druggists as a class take but little interest in politics, though to be sure there are not a few instances where individuals have achieved high political preferment. We believe the druggist should be well posted in politics, and take his share as a good citizen in political affairs. His standing in the community is such that his opinions and influence in matters political should have more weight than attaches to those of other business men.

But while he should know and discharge his political duties, he should not allow politics to invade his store and his business to a harmful extent. No self-respecting druggist should or will allow himself to become engaged in a heated political discussion or encourage anything of the sort in his store. He ought to have decided views upon such subjects as come up, and at the proper time discuss them with intelligent people for the purpose of gaining information, but he should be very careful about allowing politicians (?) to use his store as a rendezvous.

Outside of politics, the druggist ought to take an active part in public life. The advantages from doing so are numerous; broader views, a larger circle of acquaintances, a wider knowledge of men and affairs. He should not shirk committee work, in whatever organization or capacity it is presented. He will find an ever-increasing sphere of usefulness and success from adopting liberal and comprehensive ideas of life and business. The druggist should no longer allow himself to be denominated as "small potatoes."

IN THESE PLANS LIES THE REMEDY.

The plans for a co-operative insurance company, reasonable in demand and national in scope, outlined on another page, are interesting, even if they are never realized. If they are not realized it will not be because such a plan is not needed. Insurance rates everywhere are unreasonably high. This is apparent at a glance. But when actual figures are in evidence that the big companies are netting a profit of ninety-five per cent or better on their retail drug store policies, the need of a remedy looms imperative. The druggist should not go unprotected from fire losses. And yet, so exorbitant are the rates for this privilege, that there are

many uninsured pharmacies in this city. The big companies are combined—no better terms are to be secured from any one of them—so the only remedy does seem to be in a co-operative company like the one proposed. Then, the question comes to the possibility of forming such a co-operative company. The energetic committee of the German Apothecaries Society have evidently surmounted or evaded all legal obstacles. Upon the reception of the plans by the society or by enough other pharmacists to secure the amount of underwriting desired rests their fate. At present the outlook is very rosy. And, if the company is once organized, its protection and low rates will doubtless make it just what is hoped, nationwide in scope. The plan to extend the insurance to physicians is fraught with possibilities of a better fraternal feeling between the two classes, and will help to move down the rate. The saving to patrons, averaging at least \$5 on each \$1,000 of insurance, would be immense in the total. Altogether, advantages of this proposed company would seem to be great.

WILL THIS MAKE US STOP USING TOBACCO?

Now that Dr. Wiley has done with boric acid he and his class will devote their time until October, when salicylic acid experiments are taken up, to tobacco. His inquiry, information is, will be pursued along the same lines as in food products. He will take pure tobacco and note its effects upon smokers and chewers when used moderately and to excess. Then adulterated and flavored tobaccos will be given a chance to show their effects upon human systems. Regular smokers will be examined as to heart, lung and stomach functions while using tobacco under normal and abnormal conditions and while not using it at all. Pretty good idea as far as acquiring of certain—allowing that it is certain—knowledge goes. But how will it benefit? Lives there a tobacco user but knows its effect upon himself? Is there one who is not preached at baselessly and vigorously from the threshing his father gave, to supplement that first awful sea-sick feeling, to adurations of sweetheart, who admires while she pouts; mother, who sighs of had example to her grandchildren, and wife, who kicks about smoke and ashes and then—buys you a bargain box of—oh, dear! But God bless her. We all know what it does to us. When our throats feel like shingles in a droutn, when the "gone" feeling presses both hands on our stomach pit, when eyes water from straying smoke, and when we know that ten, twenty, fifty cents a day, at compound interest for fifty years, equals various magnificent sums, we know more than Dr. Wiley's experiments on some other fellow will ever tell us. Of course we may learn that such or such a tobacco does least harm, and vice versa. But when we get eight dollars a week we buy three-for-fives, and save every blessed cent. A twenty-five-dollar salary permits us for a quarter and three for the same on Sunday. And so on. It is the amount in our jeans that determines the quality we smoke, and, after that, different varieties of that quality are matters of taste, of the pretty cashmer to pay our checks to, etc., without end. Then atop of our feeling that we are contributing so little to a few months or years of our long, long, long wood, along come centenarians from

everywhere who buy Hiawatha fine-cut by the wooden painful and Standard long-cut by the yellow-papered, 20 cent pound and plug by the plug, and wouldn't know adulteration if it reared its awful shape from the pipe bowl and cuspidor, and whom tobacco never hurt, no, sir, by gum! Yes, we all know what it does to us—except the centenarians who say it doesn't—even down to coffin nails. But, will we quit? Guess not! Though we venture a good many chaps would like to help Dr. Wiley smoke up all that nice tobacco. And we wonder whether he will learn the effects of cigarettes on ladies?

MR. CROLY DOES NOT AGREE WITH "A PHARMACEUTIST."

"The crisis is not passing, but coming," writes Mr. C. C. Crolly whose letter appears in another column this week. Mr Crolly does not agree with "A Pharmacist," who, in an article in the Era on July 9, explained that the present hard times among the retail druggists of New York City, causing many of the new and small stores to close, is only a crisis that, in passing, will leave conditions better than now, though not as good as in days gone by. The main difference between Mr. Crolly and "A Pharmacist" is that Mr. Crolly prophesies our demolition, as it were—we have "got to go"—while "A Pharmacist" does, charitably, leave us a few rays of hope that we may still live, though in diminished number; and that Mr Crolly sweeps the whole army of pharmacists under consolidation's iconoclastic march while "A Pharmacist" looks not beyond the one division, Greater New York.

THE MAN WHO STOPS IS NOT A SUCCESS.

The Era may not agree with "A Pharmacist," but it certainly cannot agree with Mr. Crolly. It is not fatuous in belief that the pharmacist's condition here or anywhere is, was, or ever will be ideal. Idealism is not so easily reached else there were no field for ambition. Were idealism prevalent it would be a rut and we would step beyond in search for something better. But things ideal are set a long way ahead of human possibility. Recognizing this fact and that there is emolument and honor to reward us proportionate to our attainments in its direction we are made somewhat content, yet not too content, because ambitious. So we go on, or strive to go on; the man who stops is not a success; the man who goes back is a failure. Now, to take up Mr. Crolly's letter: "When improvements come they come in the country first; the cities follow. When I passed out my kerosene lamps I did not go to gas, but to electricity." Were they not already using electricity in the cities, Mr Crolly? Perhaps the part quoted is not quite germane to the real purpose of your letter, but—we follow. "I saw that the pharmacist had to go. By pharmacist I mean individual producer." But, Mr. Crolly did not "go." He remained an individual producer as far as compounding of prescriptions went and became the agent for a few other things. He simply enlarged. He probably still would exist had he not added other lines, but he was only doing what 98 per cent of his brother pharmacists are doing and have done, more or less, for years, carrying other lines—agents, if you will—of toilet articles, refreshments and bath towels. But, whether they carry these lines or not, even though they run a farm as well as a pharmacy, they remain individual

producers, and the trouble is, according to "A pharmacist," not that they are bound to go, but that they are multiplying too rapidly. And that is the trouble and the reason that profits are smaller and incomes correspondingly less. It is because competition is more crowded and keener and not because the man is showing his ability not only to be an individual producer, but a little more. His methods may not conform to those of the man who believes in being strictly professional but both classes have their shining lights who are contented because they are doing their work as they wish it done and are prospering. And both are producers.

THE MANUFACTURER CANNOT EXIST WITHOUT RETAILER.

Mr. Crolly points out that we have to rely upon the wage earners, and then he alleges menace in that other "84 per cent. of surplus wealth" that the manufacturer invests in reaching the consumer. But the "84 per cent." is a surface figure and the very little bit of it that is left after the manufacturer has deducted his living expenses and pleasure and factory rent and machinery and fuel and advertising—and sometimes there is none left—is not, except in remote cases, being invested to reach the consumer direct. In fact, in the drug trade the tendency of the manufacturer is always to encourage the jobber, and, as far as the retailer is concerned, without him as a side line distributor the manufacturer cannot exist. The 8,000 new doctors will only drop into the places of those who die. The rest will fail or find inducement in other work, perchance as agents between the manufacturer and jobbers and retailers. Doctors—those who survive—increase no more rapidly than the population, and the tightening of qualifications is a constantly growing limitation of their production. Their prevalence, however, can in no way be a menace to the pharmacist. Their power and disposition to harm wanes every year. They no longer like to bother with drugs themselves and the laws grow stronger in preventing them. As far as the distributing of tablets by a few individuals goes—if they do they won't last, for, when a doctor's success depends upon the cure he makes, tablets will not advertise him. That is a condition—a very trifling one—that will right itself as we progress.

A BAD MOVE IS RIGHTED.

It is encouraging to note that the Chicago Retail Druggists' Association is back to the price schedule. There seems to have been little excuse for their having dropped it, even temporarily, to fight some obscure cutter, as seems to have been the motive. When the Chicago schedule was laid aside a few weeks ago enemies of the N. A. R. D. began to crow. They saw in the price war that followed the defeat of the association's cherished plan in its stronghold, Chicago. Even good and long-tried friends of the N. A. R. D. grew discouraged and pointed sadly at the "smashing of the N. A. R. D. in Chicago" and predicted its failure in Philadelphia and New York, and, in fact, everywhere. They will take heart in the evidence of the last C. R. D. A. meeting that the situation is as well in hand, apparently, as ever. The fact that the schedule is resumed cannot be too well advertised.

THE CRISIS COMING ?

Mr. Crolly Writes that It Is Not Passing, and He Prophesies the End of Pharmacists, Because the "Trend of the Times Crushes the Individual Producer."

To the Editor—"The Crisis Passing" appeared in the Era on July 9. The crisis is not passing but coming. When improvements come they come in the country first. The cities follow. When I passed out my kerosene lamps I did not go to gas, but to electricity. Years ago I found out the trend of the times and I adjusted myself to it. I saw that the pharmacist had to go.

By pharmacist I mean an individual producer. I now run a full-fledged drug store as a side line to my department store. Some fine young man, who thought he knew more than the old man, came to wipe me out of the drug business; but he found out that it was conditions that confronted him and not theories.

Now what are the conditions? They are, simply: We have to rely upon the class of people who are workmen, or wage-workers. The wage workers of this country form the mass of the people. They carry the balance of power in business. Turn to your statistics in Washington and you will find that the working class receives \$16 for every \$100 of merchandise it produces. The jobber and retailer divide the profits on the part they can sell to the working man, that is the 16 per cent. The manufacturer, in order to employ the 4 per cent. surplus wealth, invests it, perforce, and is simply getting down to the consumer. By doing so he crowds out the jobber and retailer.

Our doctors here in the village buy a bushel of compressed tablets and distribute them themselves. They are simply manufacturers' agents, the same as the itinerant paperhanger is an agent for the wallpaper mill. Take the prescription business out of it and you take the heart out of the retail pharmacy. A man may be an ice cream disher, a soda water slinger, a rum seller, he may keep a shooting gallery or a photographic studio, but, if his prescription business is gone, forget it that he is a pharmacist. The doctor mills turn out 8,000 more young lads to prey upon suffering humanity than needed. The increased competition among these will annihilate the prescription business in the cities also. What then?

Respectfully,

C. C. CROLLY,
Pleasantville, N. Y.

Life.

For years are like milestones. They tell how far—not how fast—how well, or how ill one has gone; and truly, how far is the last part of the journey. Life, men have long since decided, is not to be measured by length of days. "Forty days!" Stevenson quotes from De Bouillers, "Forty days! that is almost the life of a man if one counts only the moments worth counting!" The partition of the threescore and ten into Youth, Manhood and Age, with an approximate number of years assigned to each, is acknowledged to be merely a matter of convenience. We confess the makeshift daily when we say of one that at heart he was always a boy; of another that she is only a woman in years, or, in all but years; of a child, that he is old beyond his years.—Joslyn Gray, in the Atlantic Monthly.

Interior of J. A. Lessing's Pharmacy, the Smallest of Its Kind in Greater New York, if Not in the World.

CAN THIS BE BEATEN ?

If This is Not the Smallest Pharmacy in the World
the Era Would Like a Description and Pictures
of the Others.

Where is the smallest drug store in the world? Inconspicuously enough, it is in one of New York's giant sky scrapers, the Commercial Cable Building, 20 Broad street, in the innermost heart of the financial district. If anyone wishes to dispute the assertion that it is the smallest pharmacy in the world the Era will be very glad to hear from him, with pictures. He will have to beat a total of 56 feet of floor space.

The proprietor is a boy twenty years old. He is J. A. Lessing, whose father, M. Lessing, formerly had a drug store at Sixty-second street and Lexington avenue, but who has sold out and now is a dry goods manufacturer. The store runs under the style of M. Lessing & Son.

Next door to the Stock Exchange, Mr. Lessing's customers are mostly bears and bulls, which would sound peculiar to one not conversant with the financial interpretation of those terms. But Mr. Lessing knows what the terms mean and never fears even a stampede in his direction. When one comes he takes a position exactly in the center of his "store," and, with a single step in either direction and a corresponding sweep of an arm—rather long for a young fellow—he plucks the article called for from its resting place. Even though it be in the remotest corner, the single step and sweep reach it.

Last summer the Era told about D. F. O'Connell's diminutive store in the Manhattan Life Building and omitted it was being the smallest store in the city.

Its top shelf may be a trifle lower but the store is said to occupy nearly 60 square feet of floor space, while Mr. Lessing's only uses 56.

Mr. Lessing was only 17 when his store was established. In three years he has learned the faces and drug and soda tastes of hundreds of men whose names are famous all over the world. William C. Whitney leans easily over the soda bar and sips his calisaya regularly. Mr. Stetson, J. P. Morgan's partner, and Mr. Sprague of Mr. Morgan's counsel, are familiar customers. Ex-District Attorney Wise appears and before he has time to open his mouth his beverage is ready, because Mr. Lessing and J. Maude, his clerk, know what he will order. Clarence W. Mackay, owner of the building, patronizes his young tenant, John A. Drake often "buys" and has treated John W. Gates there. Thomas Barker, recently paroled in New Jersey for shooting the Rev. Mr. Keller, will be greeted at the pharmacy, where he was just getting acquainted when the shooting occurred, upon his return to work in the building.

The rent costs \$1,200 a year. Bromo seltzer and pick-me-ups for denizens of the district returning from raids and other things bring in far more than that. The sales for the day run all the way from \$25 to \$70. The hot-the soda fountain, the carbonator of which is so small that it was made to order, has established its record of 1,400 glasses in one day. There are four wall cases covered with sliding glass doors, seven shelves high and three and one-half inches deep. The stock is mostly for emergency and braeug purposes. Prescriptions are sent out. Light, heat and motive power for the carbonator are free. Hours are from 8:30 A. M. to 5:30 P. M.

Mr. Lessing does more business than many a store ten or twenty times as large. Several interested brokers have offered to back him in a larger store, but he declines. He may become a broker himself some day, he says. In the picture Mr. Lessing is shown in the center.

SHOP TALK

The Average Druggist had hit on something new—a window display so different from the hackneyed old kind that it attracted interest at once. It was an education on the subject of toothbrushes. The purpose was to show the various materials used in the manufacture, how they were put together, the difference in workmanship in various grades—the whole history of toothbrushes.

On the floor of the window were piles of bristles—the fine white "lilies" from Russian wild boars, bristles colored and bristles bleached, and the cheaper grades from the Western slaughter houses, fibre from horn, sisal hemp stubs, split bamboo, and various, vegetable fibres used in cheap brushes. Each pile had behind it a card giving the name of the substance and telling what quality of brush each was used for. Other piles of materials used for handles, were scattered around, all labelled. Hanging in front, up against the glass, were toothbrushes sectioned to show the way the bristles were put in, each having a card explaining its quality, defects or advantages, and price. All around were various styles of brushes, with cards telling their advantages and disadvantages. On a neat rack behind, other samples were hung, lightly stitched to white price cards. The color of the drapery and background—a dark blue—brought out every point.

The A. D. was wrapping up three nice brushes as the Era Man stepped in. "Thanks," he replied to praise of his window. "Yes, it's pretty good, and I don't begrudge a bit of the time it took. Cost a lot? Not a bit of it. Most of my raw materials I got from manufacturers on loan and they were mighty glad to give me everything I wanted; it helps them as well as me." "Effect?" "Well, I've had it in only two days, but it has already begun to get in its good work; did you see me wrapping up a dollar's worth of the kind that pays me 50 per cent. profit as you came in? However, the window is only a supplement to my little pamphlet in which I call attention to the display. Here's a copy, what do you think of it?"

The booklet was two-colored, well gotten up and of pocket size. The title in Gothic type, was "Facts About Toothbrushes," and it read:

"While the toothbrush is indispensable, few people know how to tell a good brush from a poor one except by price. In fact, many druggists are as badly informed and depend on the assertions of the salesman or the reputation of the manufacturer; yet the distinction between good and poor is not difficult. We have learned how to judge by study and experience and we will tell you how. We are perfectly willing to have you judge our brushes by the standards we name; we use them in buying.

"The quality of a brush depends on the bristles—although the best bristles can be so badly handled that the brush is unfit for use—its durability depends on how the bristles are secured to the handle.

"The best bristles are from the half-wild hogs of Russia and Poland; the bristles from our own hogs coming next. Cheaper grades are prepared by bleaching the coarser colored bristles, which are most abundant. This bleaching greatly impairs elasticity and strength. Tough, stiff fibres of the sisal hemp plant, bamboo fibres, softened and shredded out; whalebone, stiff hairs from horses, cows and other animals, are also used. But there is only one article that will give a good toothbrush—bristles—and a good quality must be used then.

"No other substance has the strength, elasticity and durability of prime hog bristles, nothing else will so

resist the action of moisture, powders or soaps and remain so sweet and clean. The hard sheath of the bristles is waterproof, while vegetable fibre substances take up secretions of the mouth and retain them in their pores. They may look well in a new brush, but they are poor makeshifts. Very soon the water and alkali soften them, they bend and mat together and become no more effective than a rag.

"Hold the brush up to the light and you can almost see through the good bristles. Bleached bristles are dense and seldom translucent. Good bristles are elastic and springy and can be bent double without breaking. When buying a brush test the bristles by bending and pressing them out and see if they come together again. Never buy a toothbrush made out of anything but bristles; such a brush is dear at a cent.

"The cheapest brush we can get that is fit to use we sell for 15 cents, but the bristles are bleached—not first quality. The brush we sell for 25 cents has good domestic hog bristles—will give good service. The brush we really want you to buy is 35 cents—as good in three months as when you buy it; people get a year's use out of them with care.

"After the bristles examine the handle to see how they are put in; here's where cheap brushes are detected. In making good brushes holes are drilled to the proper depth in the flat end, then each row of holes is drilled through the bottom—from the outer end of the 'flat'—a tiny round shaft connecting all the holes of each row. The proper number of bristles for a tuft are doubled in the middle and the bent end stuck into a hole; then the other holes in the row are filled with its tuft of bristles, and thin tough wire is inserted through the shaft and run through the loop of each tuft, bent at the end, brought out and the ends twisted. This process is repeated with each row until all are filled. The bent ends of wire are snipped off and tucked in and the ends of the shafts filled with waterproof cement. The ends of the bristles are then trimmed. Bristles put in this way will stay.

"In cheap brushes this expensive method is not followed. Holes are drilled into the 'flat', a tuft of bristles is forced in with a small tool, the end first having been dipped in some cement, and the glue or cement, with the expansion of the end of the tuft by the filling tool, is relied on to keep the bristles in place. Some cheap Japanese brushes have wooden or bamboo handles in which the alleged bristles are held in with cord or twisted bamboo fibres. Another kind of brush has the 'flat' in two parts; the lower half has the holes drilled all the way through and the bristles are wire-fastened on the inner side, the top being glued on afterward. While an improvement over the 'glued in' brushes it is likely to smell of glue and lose its top when the glue is acted on by the water. It is poor economy to buy any but a wire-fastened toothbrush. The bristles fall out, become lodged between the teeth, cause irritation or even appendicitis by lodging in the appendix after being swallowed.

"The handles are made from many things. Bone is the best; wood absorbs moisture, swells and often splinters off.

"It is surprising what a story many common things have—but we wanted to bring out only two things—what is the right kind, and, how to pick it out. We will be glad at any time to demonstrate these little points to you. You will find in our window display illustrations of our talk. If you are like us the lesson of the window will be, Never buy a Cheap Toothbrush."

BE A GOOD MACHINE—CUT OUT THE LOST MOTION.

"When I begin coaching a young man the first thing is to tell him and show him how and harp on the advantages of making every motion count," said an old druggist.

"I always had a knack that way myself—no false motions. I guess it came by me honestly enough, for there were never two people in this world more capable of making their every motion accomplish something than my father and mother.

"Father was a small man in size, 'but, oh, my!' as mother used to say. His five-foot-four used to be the landmark in the fields, whether it was haying, sowing or digging potatoes. Folks used to remark, 'No one but a Perkins could do that,' when they saw him digging and picking up a hundred bushels of potatoes, husking sixty five bushels of corn, or cutting three and a half cords of four foot wood in a day. I can't say he always did it in the easiest way—perhaps that's why he got it done so quickly. Probably he might have used a wedge and maul more in splitting up a tough block of wood, it may be he might have taken hold of the potato fork a little higher up and not bent his back so much, and he could have mowed easier with less angle between the scythe and snath, but he would have been at it longer.

"Mother was the same way—four-feet-ten she was. When her washing was hung out before the rest of the women had their's in the first rinsing, and when she maybe churned and baked and ironed the white clothes all that same day, 'n then had time to get the meals for five good appetites, her's included, and read a spell, folks wondered how she did it. People sometimes don't believe in women working so hard, but she didn't think it was working hard; she wasn't tired to speak of, because she had saved her notions. Besides, she didn't have it to do next day.

"The secret was just and only in making every move count. Father didn't go out digging potatoes and carry his fork along and leave his basket behind and have to waste half an hour going back after it when he got ready to pick up the potatoes. He didn't think it necessary to throw every old dried potato stalk in a nice row between the hills. He didn't mix and carry his plaster and Paris green in twenty-five pound lots when he went out to poison bugs; he mixed 'em at one time and took it with the horses.

"Mother didn't let the fire go out. When the morning was finishing, the dinner had begun cooking, and before dinner was over the flat irons were heating and while the ironing was going on so was the bath.

"When I got old enough to do the chores I just naturally fell into the habit. Father had not reasoned the theory all out in his head as I have. So he didn't read me any theses. But if I went out with a pail of swill for the pigs and then came back after the milk pails and then came back again after stuff for the hens, he would probably say: 'Why didn't you take them when you did the swill?'

"I didn't use to make a trip to the barn to throw down hay from the mow for the cows, and then go out to the granary after oats for the horses, and then back to the barn to throw down some more hay for the cows, and then back to the granary again to get corn for the pigs. No, sir! I threw the hay down all at once and into the mangers, and got my corn in one half-bushel and my oats in another at one trip. Maybe I carried a bigger load at a time than the other way, but I had those chores all done before breakfast.

"And I carried the pail of milk and the empty swill pail, and inside of that the empty chicken-feed dish, and inside of that the eggs when I went to breakfast.

"I saved the motions—made every one count.

"Now, that same thing applies to teaching school and engineering and working in a drug store. A good look for a bottle, 'nother trip back for a cork, and then another one back for a label perhaps then forgetting the price or having the cork don't fit, don't count. Here's a little right to your hand when you fill the

bottle, or, if there is no room or you have to fill the bottle in another part of the shop than usual, bring your accessories at one trip, or carry your bottle to them.

"Don't sweep out the store and then take your broom into the back room and then come way across the store again to shut the front door.

"It would be as much sense to walk around a package while you are putting a string on it.

"Some fellows tell me that this is system, machine work. Well, we are all machines of work. Why not be a good one as well as a poorly-working one? And we are getting away from the common reproach of the term because we are using our brains more to direct our work.

"When you are a machine, be a good one—cut out the lost motion."

A MAN OF MANY BUSINESSES.

We all have heard about the country storekeeper who also was the undertaker and the liverman and the postmaster and the notary public and, probably, a farmer, as well. But here is a druggist who has a side line or two himself. He is Geo. M. Fairweather, Dorchester, New Brunswick, and he sent an order to Simpson Bros. Co., Limited, wholesale druggists at Halifax, Nova Scotia, who forwarded it to the Era. The order is on a robin's-egg blue, private postal and on the front is recited that Mr. Fairweather has the central office of the New Brunswick Telephone Co., that he is agent for fountain pens, paints, sewing machines, shoe dressing, soap, gramophones and flowers, naming the makes of each line. But on the other side of the card is this list: Drugs, groceries, fruit, confectionery, cigars, tobaccos, books, stationery, fancy goods, cutlery, watches, clocks, jewelry, silverware, souvenir goods, Japanese china. Not so bad, you say. But, read on! Sporting goods, store and plough fittings, stores, furnaces, ammunition, tin, iron and enamel ware; paints, oils and varnishes; sewing machine fittings, county produce and livery stable! Does he have his country produce in glass cases, we wonder? And is the livery stable next to the prescription department?

WHEN WE HAVE A WELL OF LEMONADE.

The old stone well at Barnes' drug store, Syracuse, has gained such fame that last week a man came from Georgia and several have stopped over a train to see it. There is nothing wonderful about the affair except its originality. A well is built in plain sight at the end of the soda fountain. The lemonade is ladled out with a dipper. Mr. Barnes, in selling for five cents a glass, was taking a big risk. The lemonade is the "real thing," no acids or adulterations. The first year the well lost money, as it was new and there was not business enough to warrant buying lemons in large quantities. The next year, however, the well had become noised around pretty well and it became a habit for hundreds to "go over to Barnes" and get a pint of lemonade for a nickel. Trade was now big enough to buy lemons at right prices and the well began to pay. To sell a pint of good lemonade for five cents and make a profit is quite an achievement.

JONES A COMMON NAME.

Advertising brains are shown in a fetching booklet distributed by the Daniel R. Jones Co., Wells Building, Milwaukee, entitled "Jones—A Common Name for an Uncommon Drug Store." The most impressive and seasonable argument is a complete price list of all drinks served at the soda fountain, comprising some two hundred and fifty separate beverages, ranging from plain soda at a nickel to tonics, mineral waters and fancy lemonades at twenty-five and thirty-five cents. There are also arguments for pure olive oil, toilet soaps, perfumes, sunburn remedies, as well as a good word for the prescription counter and telephone service. Another effective piece of literature for the same store is a mailing card sent to all tenants in the Wells Building, which contains fifteen floors of offices.

PROPRIETARY PREPARATIONS VS. THE NATIONAL FORMULARY.*

By DAVID H. GALLOWAY, Ph. G., M. D.

AT first sight this subject is likely to cause some surprise to the average physician. Can it be possible that there is a rivalry between the preparations of the National Formulary and those of the proprietary manufacturers for the favor of the doctors?

By proprietary medicines I infer is meant those medicines put up ready for sale to the public or for dispensing on the order of physicians, who are so thoughtless or short-sighted as to prescribe them, and the composition of which is secret. I will leave out of the discussion the large class of synthetic preparations the formulas of which are published, the names of which are copyrighted and the drugs themselves patented. I believe, however, that patents should not be allowed on any drug or chemical, nor a perpetual copyright on the name of any such preparation. Let the process of manufacture and a fancy name, if desired, be protected by patents and then when the patent expires the process and the name as well will become public property.

Physicians who Allow Manufacturers to do Their Prescribing.

But to return to the secret preparations. I believe that most physicians would be astonished if they could look along the shelves of the average drug store and note the number of bottles of "patent medicines" which have been opened and a portion of the contents used to dispense on the prescriptions of physicians. It is appalling to know what a large portion of our profession are too lazy, ignorant or incompetent to do their own prescribing and who are willing to allow the manufacturers do their thinking and prescribing for them; manufacturers to, in many cases, who know little of pharmacy and less of medicine.

Medicine is supposed to be an altruistic profession and the physician an altruist or, at least, as near to it as frail humanity can readily come, and I believe that the majority of its members are actuated by the best of motives and the highest ideals. There are very few of us who would not shield a patient from diphtheria or scarlet fever if we could, though by so doing we deprive ourselves of the fees that would accrue from the care of the patient during the course of the disease.

Fostering Self-Medication.

If self medication on the part of the patient is an evil, then the prescriptions of many physicians by fostering this habit are doing harm and not good. Since in this case at least the good of the physician and the advantage of the doctor are identical, it is hard to understand the latter's action. The manufacturers are not sucking doves, but some of us in guilelessness would seem to be twins of that astute fowl, that we allow these same manufacturers to use us as cat's-paws to rake their golden chestnuts out of the commercial fire.

How the Patient Dispenses with the Services of the Doctor.

The maker of the nostrum usually marks his preparation carefully "to avoid mistakes," that is, to avoid the mistake of failure to let the patient know what the medicine is, so that he can thereafter procure it of the druggist direct without the intervention of the doctor. This redounds greatly to the advantage of the manufacturer because the patient will not only use it on less urgent occasion but he will also recommend it to his friends with the assurance that it is a good thing, "for my doctor prescribed it for me." Finally, the patient, not to mention his friend, can dispense

with the services of the doctor even for diagnostic purposes.

How the Doctor Introduces his Successor.

The insinuating agent, or the manufacturer himself—by circular—confidentially imparts the information to the doctor that "our make" of simple syrup is a great discovery, and that discovery stopped when this one was made, but lest the rascally druggist substitute "something equally good," which is worthless, the doctor should not fail to prescribe an original bottle. Not only, then, does the doctor allow the medicine maker to tell him what he shall prescribe but to indicate the size of his prescription. The poor, busy, unsophisticated, unthinking doctor does as he is told—by suggestion of course—and he does not even think, should he discover that the wily manufacturer has his name—and probably the name of the preparation also—"blown in the bottle," so that there can be no mistake when the patient wants to get it again without consulting the doctor.

You thus have introduced into your practice your successor. You have not required him to furnish recommendations and you have not received anything for your "good will." The next time your patient has similar symptoms he will go to his druggist and show his bottle, to avoid mistakes, and ask for another bottle of "Fakem's Tonic." The alcohol it contains will cause an exhilaration which makes him think that it is doing him good—though he may be a teetotaler—and he will recommend the medicine to his friends instead of recommending the doctor.

Conditions in Chicago and Elsewhere.

But the druggists of Chicago can congratulate themselves that the conditions are not nearly so bad as they are in many cities of smaller size. I have recently taken a trip through the country and, as I have many acquaintances among the druggists, I called at a great many drug stores and talked with the druggists, and this subject came up in several places. Of course there is no danger of such deplorable conditions prevailing in a city like Chicago, a city of medical schools and pharmacy schools, of medical journals and medical societies.

Proprietary Medicine Prescribers Benefactors!

There are certain things in nature which only seem to be evil. For instance it has been said that even tuberculosis is a factor for the building up of a fine and vigorous human race. By weeding out the weaklings and the otherwise unfit, it leaves a race which improves much faster than it would if the victims of tuberculosis were allowed to mature and leave a progeny to inherit their weaknesses. So it may be that our proprietary medicine prescribers are benefactors of their patients in that they turn them over sooner or later to the tender mercies of the manufacturers, in whose hands they may fare better than they do in the hands of these practitioners of medicine. The doctor being to this extent simply a middle man, a distributing agent, so to speak, and the elimination of the middleman will be an advantage in point of economy at least.

Why Not Become Familiar with Official Preparations?

But, soberly now, why should we not each get a Pharmacopoeia, a National Formulary and a dispensatory, make ourselves familiar with the preparations which can be made for us by any competent pharmacist and use these preparations to the exclusion of the secret nostrums, the composition of which we do not know, and the therapeutic properties of which may be changed at the will of the maker and without our knowledge? Instead of "anti-pain" for headache why not try compound powder of acetamid and so on, ad libitum?

Assistance from the Druggist.

Get better acquainted with your druggist and you will get more intelligent assistance from him about

* Read before the Hyde Park Druggists' Association of Chicago and at the request of the association contributed to the Era for publication.

F. W. R. PERRY, Detroit, Mich.

Local Secretary, 1903 A. Ph. A. Meeting, Mackinac Island, Mich.

the preparations you wish to prescribe than you will from the manufacturer's agent whom you have listened to too long. The druggists as a class start out with a better equipment for their work than we do for ours, for they are required to get their experience, or a good deal of it, before they get their diplomas, while we get our diplomas first and our experience afterward.

Experiences in Professional Life.

I wish now to pay my respects to our hosts by relating two incidents in my own experience. I called on a patient and wrote a prescription (not for a secret preparation and not written in secret signs) but there was no one in the house who could conveniently go to the drug store to have it filled. I asked who their druggist was and volunteered to leave the prescription at the store and have the medicine delivered. As I stepped up to the drug store counter I was met by a large sign which advised in large letters "Doctor yourself. Omon's remedies always cure." There was a lot more of it which I did not stop to read. As I handed the prescription to the druggist I took occasion to say that I was very glad that I did not send the patient if that was the kind of advice he dispensed with my prescriptions. She might have taken his advice instead of my medicine, and then I might have been out of an occupation. Hereafter I would try to see that all my prescriptions which came to him were brought by myself or by a messenger who could not read.

The other case happened in this way. I had written a prescription for a patient and a young woman was to go for the medicine. Before starting she consulted me about a headache from which she was suffering. The headache was, in my opinion, due to constipation and I advised her to get some salts from the drug store and take a dose that night before retiring. She went to the druggist's and stopped to look into his beautifully lighted window. The window was dressed in brilliant colors and several hundred times repeated was the name of a proprietary preparation which was advertised as a sure cure for headache and various other ills. She thought that it would be easier and quicker than the salts, so she bought a package and took it home with her. She took one powder and

as the headache did not stop instantly, nor in a few minutes, she repeated the dose, for she was given to understand that the powders were harmless. How many times she repeated the dose I do not know, but some time later her mother found her in bed and, to all appearances, dead. I was called in hot haste, and I did not wonder that they thought her dead for her appearance was such as to warrant such a belief. I spent most of the night there and she lived and will probably let patent headache powders alone in the future.

THEORY AND PRACTICE

ROOMS DISINFECTED WITH MERCURIC CHLORIDE.

E. Bertavelli (Apot. Zeit.) finds that practically no danger is incurred in occupying rooms which have been disinfected with mercuric chloride, particularly if care be taken to remove the disinfectant as completely as possible. After spraying the walls with a solution of the salt no mercury remained suspended in the atmosphere of the room. In a series of experiments, in the case of only one individual out of thirteen could a minute quantity of mercury be detected in the urine. With mice confined in a box previously disinfected with a one per cent. solution of sublimate, mercury was found in two cases out of fourteen, but if a strong metal gauze were placed several centimeters above the floor all the mice remained free from mercury poisoning.

PURIFIED COCOANUT OIL.

The Pharmaceutische Centralhalle describes a process for purifying coconut oil, converting it into a very acceptable table oil. The material is first agitated with dilute acid and then treated with powdered lime. At a gentle heat, 50 to 60 degrees C., the lime neutralizes the free acids of the oil, forming a lime soap. The neutral oil is separated from the soap by filtration. The oil thus prepared, still possesses a disagreeable odor. This is removed by agitation with an aqueous solution, 2 in 100, of alkali carbonate and heating at 100 degrees until all peculiar odors disappear. The alkali carbonate is removed by washing with water. The resulting product is a neutral oil, without either odor or taste.

INFLUENCE OF CARBOHYDRATES UPON DIGESTION.

A German medical journal reports the result of a series of experiments intended to determine the quantities of different products of digestion formed within a short time after eating various foods. The stomach of an adult healthy person was found to have rendered soluble at the end of an hour a series of albumenoids without the secretion of any hydrochloric acid. After the consumption of rice with the meat, the quantity of albumen rendered soluble during the same length of time was increased by at least 10 per cent. The experiment was repeated a number of times and invariably gave evidence of the favorable influence of the carbohydrate.

ACTIVE CONSTITUENT OF ALOES.

M. I. Wilbert (Amer Journ Pharm) states that the different varieties of commercial aloes may be divided into two classes, one containing barbaloin with little or no isobarbaloin, and the other containing considerable quantities of isobarbaloin in addition to the aloin. He thinks that ultimately a preparation will be found which will represent the cathartic principle of aloes more satisfactorily than aloin.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Storing Distilled Water.

(G. E. B.) The Pharmacopœia directs that distilled water shall be kept in glass-stoppered bottles, rinsed with hot distilled water immediately before being filled. Another very excellent arrangement is to adopt a white earthenware bottle of several gallons capacity; the bottle should also be labeled and used for no other purpose. This suggestion comes from Mr. Umney, an English pharmacist, who states that the supply of water when so kept is found in a uniformly good condition. For keeping large quantities (20 or 30 gallons) of distilled water, for a short time only, we presume there would be no serious objection to storing it in an oak barrel, well paraffined on the inside, though this procedure is hardly necessary when one can very easily procure glass tanks or containers of almost any capacity and so made that the contents may be entirely protected from the air. The Appert Glass Co. of this city, manufactures such containers. Distilled water should not be kept in copper tanks.

Some years ago Dr. J. N. Hurty of Indianapolis, gave the following directions for keeping distilled water: Prepare an empty carboy by boring with a rat-tail file a hole in the shoulder; through this hole introduce a glass siphon, made air tight at the point of contact with the carboy by slipping over the siphon tube a piece of rubber tubing, and, on the longer arm, tubing about four inches long, provided with a pinch-cock. Into the mouth of the carboy fit a perforated cork, holding a glass tube filled with cotton; this is to be inserted as a stopper, the tube filled with cotton acting as a vent. All the air entering the carboy will be drawn through the cotton, thus being filtered perfectly free from motes. It is these motes, or dust particles, among which the seeds of the confervæ exist, that cause the ropiness which we wish to avoid. When the carboy is full insert the perforated stopper carrying the tube filled with cotton; start the siphon, and now, if the stopper is not removed, the entire contents may be used, as required, and not a single fleck will form therein.

Premature Gray Hair.

(S. H. R.) As a rule nothing can be done to permanently restore the color to gray hair. If the malady is due to neuralgia, the cure of that difficulty will sometimes be followed by restoration of color. The administration of iron, phosphorus, and sulphur, has been advised on theoretical grounds, and may be tried if the "whitening" seems to be due to physical disability. In the way of remedies, cases have been reported in which the hair has grown darker under the use of *pl. c.* continued use of jaborandi by the mouth, or iocogaine subcutaneously. Acetic acid has also been recommended as having a decided tendency to increase the pigmentation of the hair. Whatever method of treatment be adopted, the rules of the hygiene of the

scalp should be enforced. According to Jackson, all that can be done for this difficulty is to artificially restore the color by means of hair dyes, and their use is to be strongly advised against. Plucking the white hair is worse than useless. From another authority we quote a formula for dyeing gray hair black:

- (1) Bismuth citrate 1 ounce
Alcohol 5 drams
Rose water, distilled water,
of each 2 ounces
Ammonia a sufficiency

Apply in the morning.
(2) Sodium hyposulphite 12 drams
Distilled water 4 ounces
Apply thoroughly in the evening.

Electrolysis for the Removal of Hair.

(S. A.) Most of the medical colleges having courses in electro-therapeutics include instruction in the use of the electric needle for the removal of superfluous hair, electrolysis of tumors, warts, naevi, etc. We know of no particular school which makes a specialty of this kind of instruction. The J. Kidder Mfg. Co., Waite & Bartlett Mfg. Co. and George Tiemann & Co., all of this city, manufacture electric machines and galvanic batteries which include equipment for various minor surgical operations. The removal of hair by electrolysis is performed about as follows: Connect the small platinum needle with the negative pole of the galvanic battery and introduce it into the hair sack, using the hair as a guide. The point of the needle should be carried to the bottom of the sack. The positive pole of the battery should be connected with a sponge electrode, which can be placed on the skin near the hairs to be removed; when electrolysis has been carried far enough the hair bulb can be easily pulled out. Use from 4 to 6 cells of the battery. After the operator has had a little experience he will know the time required and number of cells to use. Jackson's "Diseases of the Hair and Scalp," published by E. B. Treat, this city, contains considerable practical information on this subject.

Bird Lime.

(L. B. T.) Bird lime is a thick, soft, tough and sticky mass of a greenish color, has an unpleasant smell and bitter taste, melts easily on heating, and hardens when exposed in thin layers to the air. It is difficult to dissolve in alcohol, but easily soluble in hot alcohol, oil of turpentine, fat oils, and also somewhat in vinegar. The Techno-Chemical Recipe Book states that the best quality is prepared from the inner green bark of the holly (*Ilex aquifolium*), which is boiled, then put in barrels, and submitted for fourteen days to slight fermentation until it becomes sticky. Another process of preparing it is to mix the boiled bark with juice of mistletoe berries and burying it in the ground until fermented. The bark is then pulverized, boiled and washed. Artificial bird lime is prepared by boiling and then igniting linseed oil, or boiling printing varnish until it is very tough and sticky. It is also prepared by dissolving cabinetmakers' glue in water and adding a concentrated solution of chloride of zinc. The mixture is very sticky, does not dry on exposure to the air, and has the advantage that it can be easily washed off the feathers of the birds.

We do not know to what extent artificial bird lime is used in the manufacture of sticky flypaper.

Tints for Face Powders.

(C. T.) Various suggestions for tinting face powders have been printed in the Era. However, carmine and eosine are usually employed for giving to face powder a flesh color. The former is best triturated with talc, in the proportion of 1 part of carmine to 3 of talc, and a sufficient quantity of the mixture incorporated with the face powder to produce the requisite tint. It depends upon the mixture of the constituents how much of the mixture would be required. This quantity, however, may be easily de-

MARION A. STOUT, Bluffton, Ind.
President Indiana Ph. A.

terminated by experiment. If cosine is used, it should be dissolved in a little water (about 1 in 20) and a sufficient quantity of this added to the powdered talc to impart to the latter a deep tint. This tinted talc can then be used for mixing with the face powder. To make the "desh" tint produced by these colors more natural add a certain proportion of aniline orange. By increasing the quantity of orange a brunette color may be produced. Other pigments used are carthamine, various lakes, Spanish and Venetian reds, ochre, etc.

Bitters.

(L. & H.) The following formulas are from the Era Formulary:

(1) Grind to a coarse powder 4 ounces of cinchona or chiretta bark, 2 ounces of sweet orange peel, 1 ounce of lemon peel, 1 ounce of bitter orange peel, 1 dram of cinnamon, 1 dram of nutmeg, 1 dram of cloves, and 30 cayenne seeds. Infuse for about 10 days in 4 gallons of 65 per cent. alcohol, and then filter off into bottles.

(2) Bitter orange peel, ground, 4 ounces; gentian root, 3 ounces, nutmeg, 1/4 ounce; cloves, 1/8 ounce; cinnamon, 1/2 ounce; syrup, 6 ounces; St. Croix rum, 1 gallon. Macerate for 7 days; express and filter.

(3) Golden-seal root, tulip tree bark, bitter root, of each, 1 dram; prickly ash berries, saffrairs, capsicum, of each 1/2 dram; sherry wine, sufficient, or enough to make 3 pints. Exhaust the drugs by maceration or percolation with enough wine to obtain 3 pints of "bitters." Label "wine bitters"; dose from 1/2 to 2 fluid ounces.

Essence of Ratafia.

(A. L. W.) "Ratafia" is a term applied to a flavoring essence the basis of which is essential oil of bitter almond. According to one authority, peach kernel are properly the source of ratafia, but any of the other substances yielding bitter almond oil is used. The name "ratafia" is also applied in France as a common generic term to a variety of liqueurs composed of spirit, sugar and the odoriferous and flavoring principles of vegetables, more particularly to

those liqueurs containing the juices of recent fruits, or the kernels of apricots, cherries or peaches. De Brevan says the term is applied very loosely, but almost all of the liqueurs made by infusion are known under the name "ratafia," this method of preparation being applied to some substances, where it is impossible to extract the perfume by distillation with either alcohol or water.

Removing Gum of Sticky Fly Paper from Furniture.

(J. B. D.) "C. H. L.," Bayonne, N. J., writes that you can remove the gum of sticky flypaper (Tangle-foot) from furniture with oil of turpentine and not injure the varnished surface.

GATHERED FORMULAS.

Weather Forecaster.

- (1)
Cobalt chloride 1 part
Gelatin 10 parts
Water 100 parts
- (2)
Copper chloride 1 part
Gelatin 10 parts
Water 100 parts
- (3)
Cobalt chloride 1 part
Nickel oxide 0.75 part
Gelatin 20 parts
Water 200 parts

These solutions may be painted on the insides of windows, or on calico, and in fine weather No. 1 appears blue, No. 2 yellow, and No. 3 green. When wet weather approaches, the colors disappear.

Solder for Glass.

A compound of tin (95 parts) and zinc (5 parts) melts at only 200 degrees C., and can then be firmly united to glass. An alloy of 60 parts of tin and 10 parts of aluminum melts at 300 degrees C., adheres, like the preceding, to glass, and is equally brilliant. With either of these alloys glass may be soldered as easily as metal, in two ways. In one, heat the pieces of glass in a furnace and rub a stick of soldering alloy over their surfaces. The alloy will melt, and can be easily spread by means of roll of paper or a slip of aluminum. Press the pieces firmly together, and keep so until cool. In the other method a common soldering iron, or a rod of aluminum, is heated over a coal fire, a gas jet or a flame supplied by petroleum. The hot iron is passed over the alloy and then over the pieces to be soldered, without the use of a dissolvent. Care should be taken that neither the soldering iron nor the glass be brought to a temperature about melting point of the alloy, lest the latter should be oxidized, which would prevent it from adhering.

Fly Paper.

- Chloride of cobalt 4 drams
Water, hot 16 ounces
Brown sugar 1 ounce
- Dissolve the cobalt in water, and add the sugar. Saturate unsized brown paper in the solution and hang the paper up to dry.

- (2)
Potassium bichromate 10 parts
Sugar 30 parts
Oil of pepper 2 parts
Alcohol 20 parts
Water 120 parts
- Mix thoroughly, digest for several days and filter off the liquid. In this solution soak unsized absorbent paper, allow to dry, and again soak and allow to dry.

Perfume for Ballroom Floor-Gloss.

- Oil of lavender 1/2 ounce
Oil of verbena 20 minims
Oil of neroli 20 minims

NEWS DEPARTMENT.

COMMERCIAL TRAVELERS

Rosenthal Got Married in a Matter of a Half-Dozen Hours—A Wedding Present Was the Bounce.

George F. Stackhouse comes to this city as manager of the local branch of The Phelps Company of Buffalo, the "chocolate chips" people. He is a premier insurance man and was once a Pinkerton special investigator.

The boys are piling away on vacations these days. Grant J. Woolston of Holton & Adams, and the Mrs. are away in the Adirondacks, where Grant, with \$1.93 worth of fishing tackle is laying in a stock of yarns. Mr. and Mrs. Woolston occupied rooms next to John Lane, Schieffelin & Co.'s Massachusetts man, and Mrs. Lane, at the Connecticut Ph. A. meeting. It was cold and Grant tore up newspapers and put them on the bed. Mrs. Lane said: "Someone's tearing paper off the wall, John; I wish you would, too." But John wouldn't.

W. L. Anderson of Pewaukee, Wis., has accepted a position as traveling salesman with Henry Thayer & Co., Cambridgeport, Mass., his territory being Wisconsin. G. C. Lemhard is now traveling for Frederick Stearns & Co., Detroit, in Minnesota and South Dakota. Charles Duro, formerly with Jermia, Pfeuffer & Kuhmstedt, Milwaukee, and later with Lord, Owen & Co., Chicago, has charge of the sundry department of the Yahr & Lange Drug Co., Milwaukee, succeeding August Fien, who goes on the road for the firm in Minnesota and Iowa.

Fred B. Taylor has sold out his interest in Bowman & Co., Oakland, Cal., and was in this city rigging up with a line of Oakland & Johnson specialties to take back and sell.

Sidney J. Brister, for many years traveling salesman for Strong, Cobb & Co., Cleveland, has resigned his position to undertake the management of a bank at New Philadelphia, O. His place is taken by J. S. Marquis of Lisbon, O., formerly in the employ of Hance Bros. & White of Philadelphia.

L. D. Worden, the genial representative of W. H. Schieffelin & Co., was in Buffalo last week calling on the trade. He has fully recovered from an accident which befell him a few weeks ago at Liberty, where he sustained a badly sprained ankle.

A traveling salesman, who, until his wedding, represented Henry Thayer & Co., of Cambridgeport, Mass., must be awarded the palm for doing things up quickly. The man is Dr. Jacob S. Rosenthal and he represented his firm in Indiana. In Indianapolis he met a young woman who was employed in the local telephone exchange. That was at nine o'clock in the evening. Two hours later they were engaged. Another two hours and Rosenthal had secured his marriage license. At two in the morning the "happy couple" aroused a justice. A letter from Rosenthal's employers was on its way at the time of the wedding, informing him that he was out of a job.

An impostor, representing himself to be an agent of Colgate & Co., has been going the rounds of Washington, D. C., offering to give a chair away with a certain number of bottles of perfume. The police are now on his "scout."

COMMERCIAL SECTION A, PH. A.

Thos. V. Wooten, chairman of the commercial section of the A. Ph. A. has addressed a letter to members of that organization asking for contributed articles to be read at the Mackinac Island meeting. Here is a list of the topics suggested:

"1. What in your opinion is the greatest of all obstacles to the commercial welfare of the retail pharmacist? What is the best method of removing this obstacle?

"2. Is the practice of self-dispensing by physicians increasing or diminishing? To what extent are reputable manufacturers of pharmaceuticals blamable for this practice?

"3. What is the best means of preventing physicians from prescribing Never-say-die-ine and the thousand and one secret remedies (?) physicians are talked into using by smooth-tongued canvassers, which preparations druggists, at much trouble and financial loss, are compelled to stock? Has the distribution and use of the epitome of the National Formulary been of advantage to this end?

"4. Has the plan of druggists holding conferences with their physicians in a body been tried in your city; if so, with what results?

"5. Is it your observation that cooperative manufacturing by pharmacists is a success?

"6. Aside from ethical considerations, is it your belief that the selling of just-as-good preparations in lieu of advertised proprietaries, when the latter are demanded, is good business policy?

"7. Does not the plan of druggists adopting a mutually satisfactory schedule of prices for the selling of counter goods, as well as proprietaries, materially increase their profits? Has this plan been tried in your community? (See copy of schedule recommended by N. A. R. D. sent you under another cover.)

"8. Would a reduction in the number of drug stores, by combining two or more under one management, yield better financial returns, and is this plan feasible in ordinary conditions?

"9. What is the best means to prevent the multiplying of drug stores whereby the number of clerks is decreased to the disadvantage of the older stores, no financial advantage being gained by the proprietors of the new unneeded stores, they being better off as clerks?

"10. To what extent would the teaching of a comprehensive business course in the various colleges of pharmacy lessen the number of druggists leading a hand-to-mouth existence, making no money themselves and preventing others from doing so?

"11. Does not the handling of a considerable number of side lines, scattering as it does the energies of the druggist, tend to hurt rather than to help his business?

"12. Determined by your own experience and observation, what side lines are most profitable and at the same time detract least from the business of filling prescriptions and dispensing drugs and medicines?

"13. What are the most effective means of creating a demand for one's own remedies?

"14. Would not cooperative window dressing be advantageous to druggists, lessening the expense and making it possible for druggists to use to better profit windows for which they pay heavily?

"15. What is the best means of inducing druggists to leave their stores and mingle more with men in the outside world so as to become less unapproachable on business propositions vitally affecting their own interests?"

Liberal Arts Palace, Home of Pharmacy, World's Fair, St. Louis.

PHARMACY AT WORLD'S FAIR.

As at Paris, Chemistry and Pharmacy Will be Classified with the Liberal Arts, Instead of with the Manufactures, as at Chicago.

Pharmacy at the World's Fair, St. Louis, next summer, will be cared for in the Liberal Arts Palace, as pharmacy is properly a liberal art. The many equipments, processes and products will be shown. The palace will cover nine acres of ground and be 525x750 feet in size, in the form of an elaborate rectangle, each of its four facades presenting a rich and impressive succession of pavilions and colonnades, in pairs, including logias of rare grace and beauty.

There were few exhibits of chemicals at the Chicago World's Fair. They were classified as manufactures. At Paris, in 1889 there were many interesting exhibits, the United States having 34 exhibitors. There, for the first time, the great and growing importance of chemistry as a factor in the industrial life was fully recognized by its classification in liberal arts, a step in advance of manufactures. France, with her characteristic progressiveness, made a most interesting display which should certainly be eclipsed by the United States in 1904. The historical exhibits at Paris were not the least in interest. There was the balance of Lavoisier, the products of Chevreul, the apparatus of Gay-Lussac and the products of the investigations by Sainte-Chaire Deville, Berthelot and Moissan, all of exceeding interest. France and Germany will be fully represented at St. Louis.

There seems to be, at the present time, excellent reason for the American chemist to show the manufacture of calcium carbide, of carbonyl, the electrolysis of salt with the production of caustic soda and chlorine, the preparation of sodium carbonate and other characteristic and important branches of the chemical industry. Laboratory apparatus manufacturers may also show every device for use in the chemical industry, as well as the manufacturer of machinery and utensils used in the production of chemicals and drugs.

The chemical industry and pharmaceutical arts comprise the largest group in the liberal arts department.

It is designed by Colonel John A. Ockerson, chief of the department, to have as much of the machinery and processes in this exhibit in operation as possible. Electric power, water and gas are in the liberal arts palace, and readily obtainable. It will be possible, therefore, to have actually shown the processes used in treating waste water from factories, the method of compression and liquefaction of gases, and the making of artificial textile fabrics, the making of pills, of paint grinding, and all other classified processes.

The enormous production of drugs and pharmaceutical products of all kinds in this country find representation in group 23, not only in the raw material of pharmacy, the equipment of the manufactory, but the product, both simple and compounded. Following is the classification of group 23:

Class 102—Laboratory apparatus and utensils; enameler's lamps, blow-pipes; presses, drying ovens, filters, electric furnaces.

Class 103—Apparatus and instruments for making industrial and commercial analyses.

Class 104—Equipment and processes used in the chemical treatment of animal substances, with their products; superphosphates, soaps, candles, glycerine.

Class 105—Apparatus and processes for the production by electrolysis of hydrogen peroxide, chlorine, hypochlorites, chlorates, soda, bleaching materials, and various other chemicals.

Class 106—Equipment and processes used in the manufacture of vegetable essences, varnishes, commercial rubber, substitutes for India rubber and articles of gutta percha.

Class 107—Equipment and processes used in treating the mineral substances used for lighting, heating and lubrication; coal, shale, petroleum, ozocerite, etc.

Class 108—Equipment and processes used in treating wash water from factories (by chemical or electrical methods) with a view of permitting their return to water courses.

Class 109—Equipment for charcoal works and the production of various derivatives, methylated spirit, acetone, acetic acid, tar.

Class 110—Apparatus and processes for the compression and liquefaction of gas. Liquefied gases.

Class 111—Apparatus and processes for the manufacture of artificial textiles.

Class 112—Apparatus and processes used in the manufacture of pharmaceutical products.

Class 113—Acids, alkalis, salts of every kind. Sea salt and products of the treatment of the mother waters.

Class 114—Refined sulphur and derivatives from sulphur.

Class 115—Equipment and processes used, and products obtained in the manufacture of phosphorus and matches.

Class 116—Hydrogen peroxide; ozone.

Class 117—Various products of chemical industries; tanning materials, waxes, essential oils, glue and gelatine; perfumes and extracts; disinfectants, various glazes, printing ink, blacking.

Class 118—Commercial India rubber; gutta percha.

Class 119—Dye stuffs, paints, pigments, varnishes and fillers.

Class 120—By-products obtained from the treatment of mineral substances used for lighting, heating and lubrication. Refined petroleum and paraffine.

Class 121—Products of charcoal burning.

Class 122—Alcohols modified for industrial purposes.

Class 123—Equipment and appliances for producing calcium carbide, and for the liberation and use of acetylene gas.

Class 124—Artificial textile fabrics.

Class 125—Raw materials of pharmacy; drugs, simple and compounded.

Class 126—Explosives, pyrotechnics, bombs, signals; ammunition of all forms.

THE PARCELS POST.

Eleven-Pound Consignment From France or Germany Has Advantage of \$7.10 Over a Package of Same Weight From United States, Besides Making Better Time and Being Better Insured.

The advantages that pharmaceutical exporters of France and Germany have over this country in trade with Western Spanish America, and very particularly with Colombia and Central America, were told to an Era representative last week by Dr. Leandre Echemendia, manager of Sharp & Dohme's Spanish department. Mr. Echemendia has just returned from an extended business trip through the countries of which he spoke.

Colombia and Central America have the benefit of the parcels post, an institution of the German and French postal service, which the Era has long urged for adoption in this country.

The benefits of the parcels post to consignees, in time, cash, and insurance, are so great that American drug exporters are almost out of the running as far as securing trade in Colombia and Central America is concerned and are entirely out of it when the weight of the consignment is small. To explain:

Parcels post rates are 12 cents a pound and the maximum limit to a package is 11 pounds. Consequently, an eleven-pound package costs \$1.32 for postage. In addition, an eight-cent stamp affixed to each package registers it, insuring it until it is delivered into the customer's hands at the post office, where it is opened and the duty paid. Of course, a firm may send as many packages as it chooses. So, five 12-pound packages, registration and all, cost only \$7. Liquids may not be sent by parcels post.

But when our American exporter wishes to send an 11-pound package what does it cost? The minimum freight is \$5 for any weight up to 200 pounds. So he pays \$5 for freight, \$2.50 for consular invoices at the sending point, \$1 for entrance to the country, and then, in addition to that, a custom house broker has to be hired at the other end to make three copies of the invoice. One of these copies remains at the custom house, one goes to the minister of the interior and the other goes somewhere else. Altogether the expense to the port has been \$8.50 on eleven pounds! Besides that the duty remains to be paid. So, on the package, the American exporter is under a disadvantage of just \$7.10 as compared with his German and French competitors.

Nor is that all. The parcels post, as said before, in-

sure to the consignee's hands. American goods are insured only to the port. In addition to all of this handicap, which it seems impossible that any American firm could overcome, the parcels post goes from exporter to importer with all of the expedition of any mail, while our freight casually lies around on the Isthmus of Panama, sometimes for two months. When expedition is desired, and it usually is in drugs, this means another terrible disadvantage and this applies equally to Peru, Chili, Bolivia and Ecuador. If this is not enough to compete against, be it added that the Isthmus is very liable to absorb part of the contents of many boxes of freight. Of course, it may not be stolen, but it "disappears" and adds trouble in getting transportation companies to make good.

Another deterrent to American export trade to these countries is largely American fault. It lies in poor packing, insecure and foolish packing. Americans, as a rule, box with three-fourths-inch boards and nail poorly. Germans and French box with one-half-inch stuff, better wood, and nail securely. As the consignee has to pay duty on gross weight he pays that much more for an American box. And the American box, tossed around, loaded and reloaded, gets far more than its share of handling and banging, and, unfit to begin with, frequently gives out. Mr. Echemendia finds that the only way for him to do is to assure his customers that his firm knows how to pack their goods.

It is not so hard to get orders of large weight from these countries if the customer can wait for the slow American delivery and will take his chances on American packing. But the rub comes on smaller quantities, and even large orders are more reluctantly given when the customer knows that if he forgets something he will have to stack up against that \$5 minimum freight rate, the circular invoices, the delay and all the rest.

At present Panama is congested with freight and movements are slower than ordinarily.

In the first sentence of this article the pharmaceutical exporters of France and Germany were named as having an advantage. Of course, drug and chemical exporters of those countries use the parcels post also, but that does not affect America so closely because the United States is unable, or, at least, does not compete with those countries in prices on crude drugs, except a very few native to us, nor in chemicals, with the exception of a few, like quinine and morphine. Our competition is limited to pharmaceuticals, and then to Peru, Ecuador, Bolivia, Colombia and Central America. Germany gathers in Chili and Argentina.

Pharmacy in these countries is coming up to American ideas, though slowly, Mr. Echemendia said. Lima, Peru, has some very good stores. Guayaquil, Ecuador, was burned about a year ago and is being rebuilt; the cocoa industry insures its complete resurrection. Peru and Ecuador are in good condition and pharmacy in a corresponding position, while Bolivia is in a very bad way owing to the bulonic plague—incidentally, Mr. Echemendia was lost to his firm for seven weeks while quarantined from the plague in Guayaquil. Colombia is swamped completely under its terrible exchange rates—a box of ordinary pills costs \$30—and is in a fair way to remain so until after the canal treaty is signed.

NEW YORK AND VICINITY.

BIG INSURANCE COMPANY.

Committee Appointed by the German Apothecaries' Society Plans a Lloyd Insurance Company for Druggists and Doctors of the United States.

—The Plans and Situation.

Plans for a cooperative fire insurance company, to be underwritten by retail druggists in this city, and which, it is hoped, may extend very low rates to druggists and physicians throughout the United States, are now in the last stages of completion by a special committee appointed for the purpose by the German Apothecaries' Society.

The fact that plans of such a nature were being worked out has been hinted at in the *Era* news columns several times. Their incompleteness, however, prevented the full account being given, which is now done for the first time.

New York druggists know and outside druggists probably remember that, last fall, a general protest by the pharmaceutical societies of the Greater City secured a decrease in the rating recorded retail druggists from \$1 to 75 cents. The 75-cent rating had been the original one a few months before but had been advanced, because, "retail drug stores are such bad risks." The utter foolishness of this assertion was shown at a meeting between representatives of the various pharmaceutical societies and the members of the fire insurance exchange. Figures compiled from 243 stores of the German Apothecaries' Society showed these averages for 1902 years: Insurance carried, \$5,600; premiums paid, \$523; damages by fire, \$23. Comparing the premiums and losses the gain of the insurance companies for each member was nearly 36 per cent.

When the Plan First Appeared.

At the December meeting, last winter, of the G. A. S., Emil Roller, of Fifty-sixth street and Ninth avenue, urged the society to learn whether it were not advisable to carry their own insurance, mutually. H. A. Herold, a lawyer-member, opposed the plan as unfeasible, involving too much capital. But Mr. Roller refused to give up, and again, in the January meeting, when the decrease in rating to 75 cents was announced, made a motion that a committee be appointed to find out how the members could carry their own insurance. Mr. Roller was appointed chairman of the committee. George Frogrorius and George Kleinman were named with him, and Mr. Roller appointed E. C. Goetting and A. Wortman.

The committee went right to work. A constitution was outlined and submitted to the society's lawyer, who in turn, submitted it to the insurance commissioner at Albany. Here they were informed that the statutes require 100 members, each worth \$5,000, and enough policies written for \$200,000 in premiums, which had to be deposited with the insurance commission. That plan was too heavy and was dropped.

Couldn't Be Mutual—Then Something Else.

But Mr. Roller proceeded to demonstrate that he is a lawyer. He began again, inquiring in financial circles consulting lawyers on his own responsibility and at his own expense. He was told generally that his idea was splendid, if it could be carried through with less outlay. So he kept looking for a means. An insurance could be worked without a charter, but this would make every individual member responsible for the whole amount. Finally a corporation lawyer was

found who advised that if a charter of any insurance society, founded before 1892, could be bought, all obstacles would be overcome, as, before 1892, when the present restrictions had not been lobbied through by the big insurance concerns, private individuals could combine for protection against fire losses, make their own constitution and by-laws, operating under the Lloyd system. This system is popular in England and its charters are recognized in this State, where several societies are operating under them, and are approved by the attorney general.

But, though existing Lloyd charters are not affected by the legislation against mutual insurance since 1892, no new Lloyd charters may be issued. So the plan hinged on the ability to find and buy an old Lloyd charter. Finally a society was found which has given up its business but still holds its franchise. This charter was negotiated for and the price asked was lightened down to \$7,000.

A list is now circulating among the members of the G. A. S. to learn how many will be willing to become underwriters if the plan is endorsed at a special meeting, to be held soon. About 100 members have already signed. The number desired is 200—this will make each signer an underwriter to the extent of \$25—and, as the plan is popular, there is little doubt that the signatures will be early obtained.

Every Member is An Underwriter.

Every member will appear on the charter as an underwriter and each will be liable for part of the insurance; the size of the fraction, of course, is determined by the number of underwriters. The underwriters will divide any profits at the end of each business year. It is not the idea of the G. A. S. to make money, however, but to obtain lower premiums, quicker adjustment in fire claims, avoiding red tape and delay, at the same time giving the same security as the big companies.

The company will have the right to insure everything that a regular fire-insurance company does. They can fix their own rates, probably at 50 cents—one-half per cent—to begin with. It is hoped that this rate may be lowered to 40 cents and perhaps even to 30 cents, as it will be if the fire losses are anywhere near as low as the statistics quoted above show them to have been for the last 19½ years.

The insurance will not be limited to G. A. S. members, nor even to New York City. In fact, it is planned to extend the low rating to every druggist in the United States, either on his home or on his store, making no distinction between wood and brick buildings, nor between localities, but only limiting to retail druggists and to policies of not more than \$5,000 or, possibly, \$6,000. Physicians will probably be granted insurance also. This, it is thought, will tend to bring closer relations between the two professions.

An Attorney Will Direct Routine.

The control of the company will likely be vested in a board of finance. This board will elect a president and other officers. The secretary probably will be a lawyer, who will write the policies, collect, adjust, and attend to or supervise all of the clerical routine. It is also likely that the company will be reinsured, or bonded, thus practically doubling the security of its patrons.

Just as soon as the company is organized it is hoped to take the plan before the New York and other State associations for endorsement. Following that it is expected that policies will be written for druggists in

every State in the Union, the committee believing that the rate and the security offered will make it an object for druggists to come in, apart from fraternal reasons.

Evade "Imposition of Fire Insurance Trust."

Said Mr. Koller: "We will fix our own rates and the profession at large will have the benefit of the high salaries and dividends paid out by the big companies to their stockholders.

"Progress might be faster if the season were not the hot one when people look for recreation more than for business. Probably all preliminaries will be completed before October when the society resumes its regular monthly meetings, and then, or at a special meeting before then, it will be decided whether the underwriting of a Lloyd insurance company will be by G. A. S. members alone or be shared in by members of other pharmaceutical societies. About this the committee has to depend upon the decision of the society and it is to be hoped that in one way or the other this undertaking is founded, for mutual benefit and independence, thus evading the imposition and overcharge of the fire insurance trust."

It must not be supposed that no druggist in New York pays more than a 75-cent rate. That is the minimum rate. Many reinsured before the decrease last winter and were unable to secure a rebate. But the conditions must be very favorable to secure the 75-cent rate. Many are paying \$1, where the location is deemed to make the risk bad, and even higher. The Era knows of one man who is paying \$1.53.

Big Companies May Retaliate.

Looked at in connection with actual loss figures, these rates are certainly outrageous and make the formation of a co-operative company advisable, even necessary, for self-protection. That the rates will go higher again to retaliate against the proposed new company is expected by the committee. But, Mr. Koller says, such a move would only drive druggists into the new company.

But New York is not alone in exorbitant fire rates. The Era has instructed its correspondents in several of the other larger cities to find what rate the retail druggist is paying there. Whether conditions are worse, or retail organization is less formidable is not known, but it is certain that New York is very well off compared with many other cities.

Rates in Other Cities.

Our Boston correspondent writes: "At the insurance bureau, investigation showed that druggists pay \$1.25, \$1.35, \$1.40, etc. In two cases I could not determine wherein the risk appeared to be greater in one than the other, yet the insurance men have so determined it. All retail druggists are limited to one gallon of naphtha and like stuff that they may carry in stock. I send herewith the only printed information obtainable, received from the Boston bureau. On page 8, under "Apothecaries," you will find a minimum rate of \$1, yet I cannot find on record cases of actual payment lower than \$1.25.

In Philadelphia the rates vary greatly as to conditions. The regular rate in brick tenements is 50 cents. When the whole building is occupied the rate goes up to \$1.25. These figures apply to normal risks and are much higher in various less favorable localities.

In St. Paul the minimum is \$1 and the rate runs all the way up to \$3.

In Baltimore, retailers down town in congested localities pay an average of \$1.25. "In the other sections," writes our correspondent, "the rate is as low as \$1."

Three Other Druggists' Insurance Companies.

So far as known to the Era there are three companies organized by retail druggists for mutual fire insurance. Ohio has what is known as the Retail Druggists' Insurance Association, operating under the auspices of the Ohio Ph. A. and managed and directed by its members, all of whom are retail druggists. Wisconsin has a similar organization, called the Druggists' Mutual Fire Insurance Co., whose principal office is in Janesville. The South Dakota Mutual Fire Insurance Co., operating under the direction of the South Dakota Ph. A., was organized in 1895. Insurance is limited to \$5,000.

DOUBLE YOUR MONEY IN TWO YEARS.

The Post Office inspectors are investigating the Armour Drug Co., of 136 Liberty street, this city. But the "company" disappeared six weeks ago, leaving their office fixtures behind.

The company is a South Dakota corporation, and, in circulars, advertised that they had taken over the Oil of Pine Medicine Co., of Cincinnati. George L. Davis of Cuba, was in charge of the New York office. W. A. Leach was in charge of the Cincinnati office and Charles A. Stephens of the Park Row building, a patent lawyer, was president.

Trouble first came to the Armour Drug Co. when Armour & Co., the big Chicago firm, through Philip B. Adams, their attorney, protested against the use of the name, Armour, when no person of that name was connected with the company. Armour & Co. promised prosecution unless the name was changed. The company soon disappeared, and shortly afterward Charles M. Parsons of Sandy Hook, Conn., wrote to the post office authorities. Mr. Parsons had invested in \$200 worth of "stock." In March he received \$4 in dividends, and in April, 88. But May did not materialize, so, along about the middle of June, he began to suspect.

The prospectus of the company is full of wonderful inducement. A copy was given to the Era by Post Office Inspector William A. Brown, who is conducting the investigation. It says that it is the "intention to absorb other companies now paying handsomely. As an inducement we shall place this stock before you for the next twenty days at 25 cents a share. The stock has a par value of \$1 a share, fully paid and non-assessable. Your investment will be doubled in dividends in two years. Four per cent. a month on your investment is assured from the past earnings of the Oil of Pine Medicine Co. We are not a trust." Then attention is called to millions made by well-known proprietary concerns.

Mr. Stephens said, when seen by the Era man, that his connection with the company lasted only until he had arranged their incorporation details, when he withdrew. He believed the purpose was more to sell medicine than stock and professed his belief in their honesty, ascribing their failure to the threat of Armour & Co., their lack of knowledge of the immense sums necessary to advertise as they promised, and the failure of a certain "man with \$10,000" to make good. He disavows any knowledge of Davis' present whereabouts.

The mail of the company, which has accumulated in large amount since their apparent decease, will be opened by the United State postal authorities.

SOMNOS is a definite synthetic product, known chemically as Chloroethnal Alcoholate. It is the only hypnotic known that is without effect on the heart and general circulation, and it can be safely administered even to patients suffering from chronic heart disease. We have special inducements to offer to those druggists who desire to aid us in introducing it to physicians. Write for particulars, sending us a correct mailing list of your physicians.

H. K. MULFORD COMPANY, - Philadelphia.

Retail Druggists' Bowling Club.

From left to right, standing—Fred. Wichelns, George E. Schweinfurth, George H. Hitechock, R. H. Timmerman, Bruno R. Dauscha. Sitting—Otto Boeddiker, J. Maxwell Pringle, S. V. B. Swann and Charles H. White.

THIS SWINDLER GOES TO JAIL.

A clever swindling idea, bunglingly carried out, landed its user, Geo. W. Glueck, who asserts that he is a physician and that he came here from the West, in durance vile last week. At least three wholesale houses were operated on.

Eimer & Amend were the only ones victimized, as far as known. Goods were obtained from them on a forged order to deliver to bearer on which was pasted a label of a local retailer. Flushed with success here and perhaps in other instances, Schieffelin & Co. were next tried. A man walked in presenting an order for \$12 worth of drugs. The order was not on a letter head, but upon a plain sheet of paper, on the bottom of which was pasted a label of Joseph Ostrowicz, druggist, at 548 West Broadway. The forged signature to the order was spelled differently than the name on the label. James Gray, to whom the order was referred, noticed the mistake and, after the man went out, promising to call back for the drugs, he called up Mr. Ostrowicz, who disavowed the order. A detective was called in but the fellow did not return.

Then he went to Lohn & Fink's, where he presented an order for \$25 worth of iodids of potash, codeine, antikanium and cocaine, to which the name of Reuben R. Smith of 901 Seventh avenue, was forged. Joseph Plant of the firm, thought it strange that Mr. Smith should be out of those four particular drugs at the same time, called him up and then gave the man the goods and had him arrested.

But the fellow proved to be only an innocent messenger of Glueck whom he was to meet and deliver the goods to at Fifty-seventh street and Broadway. He delivered the goods on schedule time and Glueck was nabbed. Mr. Plant appeared against him in Special Sessions, where he was sentenced to 30 days, after he made a "fine offense" plea. He was recently discharged for cure from Bellevue Hospital where he was connected with his associates.

They are being caught by wholesale firms every day. Only a few days ago Lohn & Fink had a truckman arrested obtaining him with stealing \$300 worth of

goods. A day or two later an elevator man was discharged because some of the firm's goods were found in his pockets.

MANY RETAIL STORES FAIL.

More failures in the retail drug business in this city were reported during the last few weeks than for any like period in years. There are many more failures scheduled, those conversant with the affairs and troubles of the trade say. Some of the recent ones follow:

Adolph S. Katzman of One Hundred and Twenty-second street and Second avenue, whose store was new two years ago, assigned last week to Bernard Shaw of 280 Broadway. Mr. Katzman is a son of the druggist at Fifthieth street and Second avenue.

A. Friedberg of 797 East One Hundred and Thirty-eighth street, has assigned to Paul Armstrong.

H. Cook of 341 Ninth avenue, left suddenly and his fixtures were sold at auction by E. Dreyfuss, in behalf of the mortgagee, Dr. Daniel S. Dougherty. This store was formerly owned by William Schmitt. E. Fuchs of One Hundred and Fifty-ninth street and Melrose avenue, was also sold out at auction by Mr. Dreyfuss.

Emil H. Keidantz, mortgagee, foreclosed on the store at One Hundred and Nineteenth street and Lenox avenue, which he recently bought from George Carpenter and sold to Ernest Meyer. Mr. Keidantz also foreclosed on the store that was soon to be opened at 1036 East One Hundred and Sixty-ninth street by Mr. Meyer. Alfred Ford, now at Canal and Forsyth streets, will close his store and will run the store at 1036 East One Hundred and Sixty-ninth street.

The store that Charles P. Evans opened in January at One Hundred and Thirty-ninth street and Lenox avenue, was sold at public auction by Auctioneer Dreyfuss, and so was H. G. Besthoff's store at 350 Second avenue, which was established twenty years ago and has had several owners.

The store at 247 Court street, Brooklyn, was sold on foreclosure at public auction last week.

The stock of Otto Sames, Washington avenue and One Hundred and Seventy-second street, was sold by the sheriff, to satisfy European claims, to A. Friedman, who disposed of it at public auction.

NINE "KIDS" ON AN OUTING.

"I'll tell you, Mr. _____," said S. V. B. Swann to the Era man, "when we get out that way we forget our dignity and act just like kids."

Mr. Swann referred to the outing of the Retail Druggists' Bowling Association at Coney Island, Saturday before last.

In Luna Park is a queer animal. It is attached to Bestock's show. Mr. Swann heard loud laughter and looking around, saw the animal and a sign on his cage reading, "Mr. Spitzer. Introduce your friends." "Guess I'll let George investigate," thought Mr. Swann. "Here, George, what is that? It looks like a camel, yet it—?"

"Guess it's a llama," said Captain Schweinfurth, drawing near. Then Mr. Spitzer spat straight into his examiner's face. Capt. Schweinfurth called Maxwell Pringle, Jr., the treasurer, up. Mr. Pringle's face was covered, and he, not averse to getting even on some one else, called up George H. Hitechock, who ducked in time to get his allotment on top of his head. The animal was trained to kill druggists on sight.

It is reported that Otto Boeddiker fell out of the "chutes," that R. H. Timmerman, who is president of the club, was ready to leave home for one of the Esquimaux girls, that Charles H. White got fondered eating sweetened popcorn, that Bruno R. Dauscha had his Van Dyke singed by a rocker and that Fred H. Wichelns, vice-president, thought the Ingoon in Luna Park was the best. This is not on Mr. Swann's authority, any of it, but is authentic.

PLANS FOR THE BIG JOINT MEETING.

The committee on arrangements of the N. W. D. A. and the P. A. A. announces that the Hotel Somerset has been secured for September 7 to 12, the date of the joint meeting in Boston. The room rates without bath are \$2.50, for one person or \$3 for two. With baths the prices are \$3.50 and \$4. This is without board. Rooms will be assigned in order of application to Alfred S. Amen, manager Hotel Somerset.

The business sessions have received first attention, and arrangements have been made to give all the time needed for the full and complete consideration of all the business affairs. Each association is to have its own meeting-room, and the sessions of both are arranged so as not to conflict. The entertainments, which are to be carried out at times not interfering with the business meetings, have been admirably planned, and the social enjoyment of all in attendance is assured.

A ladies' committee has been selected, which will insure the usual perfect comfort and entertainment of the visiting ladies.

CHARLES S. ERB NOW ON PHARMACY BOARD.

Charles S. Erb's appointment to the place in the board of pharmacy, made vacant by the resignation of Sidney Faber, secretary of the Eastern branch, caused universal satisfaction. Mr. Erb is very popular. His store is at 121 Amsterdam avenue. Since his graduation from the New York C. P., in 1886, he has become a force in fraternal and association work. He has been a trustee of the college for seven years, is president of the Alumni association and of the Manhattan Ph. A. and is a member of the State Ph. A. and of the German Apothecaries' Society. He will hold office until next June, when an election will be held for the position. His re-election is practically assured, however. It is probable that he will be elected secretary of the branch at the next meeting. Dr. George C. Diekman declining to become a candidate.

NEW YORK NOTES.

—Seen down town: G. H. Chapman of Chapman & Rogers, Philadelphia, perfumers; Albert Hart, manager of the sponge department of Smith, Kline & French Co., Philadelphia, who cannot stand an uninterrupted rest at Atlantic City; Mr. Edell of Freeport, L. I.; Mr. Doster of the Doster Drug Co., Birmingham, Ala.; P. May of Pittsburg, who sailed for Europe with his family; D. W. Bury of Parke, Davis & Co.'s Montreal branch, who is spending his vacation here; Arthur Bosque, druggist in Havana, Cuba.

—The competitive examination for the N. J. Ph. A. scholarship in the New Jersey C. P. will take place at the college rooms, 224 Market street, Newark, on Friday, September 4, 9 A. M. Credentials showing an apprenticeship of two years and good moral character must be presented. For full particulars apply to Geo. H. Horning, chairman executive committee, Elizabeth, N. J.

—Byron C. Gould, business manager of the M. P. Gould Co., drug store advertisers, left on July 16 for a six weeks' fishing trip in Minnesota. Mr. Gould took his family, and they will visit friends in Indiana and Kansas before going to Minnesota. Mr. Gould is an expert rifle shot, but he wants to know the "feel" of the Minnesota muscullonge and bass.

—Assistant Secretary Orange J. Griffin of the New York C. P. has a dandy new naphtha launch. He has named it the "Nance," his pet name for Mrs. Griffin, and his insignia is an orange on a blue field. The "Nance" is making herself well known on the Sound,

just now, to the great enjoyment of the Commodore's—they used to call him Judge—friends.

—The Philippines Commission has tabled both the opium bills. The first provides for the creation of an opium monopoly in the archipelago and its sale to the highest bidder. The second makes the importation of opium unlawful except by pharmacists and permits the disposal of the drug on a physician's certificate.

—Strikes held up extensive improvement for Holton & Adams, 54 Beekman street, and have kept Bayer & Black out of their new Fulton street home. Wm. R. Warner & Co. have surmounted most of their difficulties and their new place on Fulton street is fast assuming a handsome, convenient look.

—Arnold Jersawitz has disposed of his store at One Hundred and Twelfth street and Lexington avenue, and opened a new store at 129 Edgecombe avenue, the Segall Drug Co. having moved from there to Eighth avenue and Thirty-first street, where they have opened a new store.

—Dr. Walter Bryan, assistant professor of materia medica, botany and pharmacognosy, Brooklyn C. P., has been chosen to fill the chair of professor of toxicology, physiology and hygiene made vacant by the resignation of Dr. Albert H. Brundage, as well.

—A "shake-up" at Hegeman & Co.'s new Broadway store let Albert P. Corcoran, head soda man and several other soda and drug clerks out. Frank Murray, whom Mr. Corcoran succeeded, has the position back again.

—Milhaus's, 183 Broadway, has three new clerks in Robert Gregory, L. A. Lotz and E. Falk, the last two coming from Brooklyn. William Zinnell and Irwin Schur have left the store.

—T. E. Delano of the C. N. Crittendon Co., is back from a visit at East Hampton, L. I. Charles J. Lynn, New York manager for Eli Lilly & Co., visited Scranton and Boston last week.

—Frank Yager of 303 West One Hundred and Forty-fifth street, has sold his store to Ira Ullman, who used to be in Columbus avenue. Mr. Yager will embark in another business.

—Dr. George Hoffmann has sold his pharmacy at 103 Grand street, Brooklyn, to Edward DeZurko, and has bought another one at Fifth avenue and Garden streets, Hoboken, N. J.

—The Apothecaries' Bicycle Club runs to Rockaway Beach, L. I., today, meeting at the East Thirty-fourth street ferry at 9:30 A. M. Dinner will be at Schilling's Atlas Hotel.

—George Lloyd, former general manager of the Swanson Rheumatic Cure Co., Chicago, is now New York manager for Andreas Saxlehner, the Hunyada Janos man.

—Nathan Chris has sold his store at 35 Broome street, and Joseph Hymson has bought Henry Glassmann's store at 226 Broome street.

—D. K. Brown has bought Samuel Elk's store at One Hundred and Twentieth street and Madison avenue.

—Dr. J. Herbert Lawrence has moved his store from 108 Roosevelt street to Wood Haven, L. I.

—Coney Island and Long Island trade is booming far beyond past records this year.

—Otto P. Zeiffuss has sold his store at 784 Washington avenue, to Charles Greenberg.

BILLINGS CLAPP CO. - - **Boston**

AROUND SYRACUSE.

—H. L. Passage, proprietor of the South avenue pharmacy at 201 South avenue, fell in front of an automobile last Friday and the rear wheel of the machine passed over his neck. The automobile was a light Oldsmobile driven by H. L. Conde of Oswego, Mr. Passage who was crossing the street saw the automobile approaching from the south and crowding near a standing street car placed one foot on the running board to make room for the auto. The car started up and threw Mr. Passage directly in front of the automobile. He was picked up in a dazed condition and taken into a hotel where it was found that aside from bruises he was not badly hurt.

—Many druggists are on vacations. H. K. Chadwick of Charles Hubbard Sons & Co., is at Thousand Island Park. Miss S. L. Snow, bookkeeper at Brown & Dawson's, has returned from Henderson Harbor. George A. Walsh of Brown & Dawson, has left for a week at Thousand Islands. Miss Minnie Gustine, bookkeeper at Larned & Barker's, is at Buffalo. John Norton of Larned & Barker's, will take his vacation the first week in August.

—G. Frank Curtis of Curtis Bros., druggists of Canastota, has gone to Tacoma, Wash., where he will assist his brother, Charles H. Curtis in putting up big coal receivers. Their miners at Chehalis, Wash., recently struck a fire brick clay which is as valuable as the coal. The company also owns a large tract of timber land.

—E. S. Dawson, Jr., secretary of the New York Ph. A., is busily engaged in getting out the minutes of the Union meeting. He expects to have them in the hands of the printer by August 15. There will not be quite as many pages as last year.

—David Stolz of this city, Philadelphia C. P., '02, who since has been working in a drug store in Philadelphia, has accepted a position with George E. Thorpe, this city. S. A. Smith, clerk at Thorpe's, will go on the road about September 1.

—Louis J. Barker of Larned & Barker, visited the vaccine and anti-toxin farm of Dr. H. M. Alexander & Co., Marietta, Pa. He left here Wednesday and returned Saturday.

'ROUND ABOUT BUFFALO.

—The case of Hong & Co. of Middleport, was presented before Justice Kruse by the board of pharmacy. The charge was violation of the State pharmacy law in running a drug store without a licensed pharmacist in charge. The judge reserved decision.

—Jubus E. Belding's pharmacy on Lovejoy street, was robbed last week by a band of young boys who emptied a case of brushes and toilet articles while Mr. Belding was in a rear room.

—W. H. Blake, the veteran druggist of Utica, has formed a co-partnership with his head clerk and two junior clerks and the firm name is now to be the William Blake Co.

—H. N. Church has assumed charge of the pharmacy of F. C. E. Sievert, Fredonia, during Mr. Sievert's absence in Europe for his health.

KARL L. BEHRENS, a well known Brooklyn druggist, who owned stores at 234 DeKalb avenue and at 97 South street, that city, died in Palmyra, Catskill mountain, last week of pulmonary typhoid. Mr. Behrens had gone to the mountains only a few days before because of rheumatic trouble.

PENNSYLVANIA.

AFTER THAT HOUSE.

The Proposed Chapter House for Philadelphia C. P. Students Likely to Become a Reality This Fall.

The eighty-third annual announcement of the college has just been issued and 31,000 copies have been sent out. Matriculations are coming in and all signs point to a new large fall class.

The scarcity of clerks still keeps up, the acting registrar, Mr. Stroup, being overwhelmed with applications, the bulk now coming from New Jersey, all wanting registered men.

The matter of the students' chapter house, agitated in the spring and told exclusively in the Era, has taken good shape. A committee of ten has been appointed, five each from the board of trustees and the alumni association, respectively Messrs. Remington, Kline, French, Runney, and Sadtler, and Baer, Shinn, Cook and Oettinger. A 40-room house on Arch street is under consideration. It is well located, the apartments large, and contains eight baths. If found suitable it will be made ready for occupancy this Fall.

James Alfred Patch, son of Professor Patch of the Massachusetts C. P., inspected the Philadelphia institution, making a thorough investigation of its plan and equipment. Mr. Patch is assistant professor in chemistry at Beirut, Syria, at an institution that will shortly be turned into a university.

DEATH OF JOHN E. STANTON.

Philadelphia, July 21.—A meeting of the Philadelphia Drug Athletic Association was held on last Friday evening to take action on the death of John E. Stanton. The following resolutions were adopted:

Whereas, in view of the loss we have sustained by the decease of our friend and associate, John E. Stanton, and of the still heavier loss sustained by those who were nearest and dearest to him, be it:

Resolved, That it is but a just tribute to the memory of the departed to say that in regretting his removal from our midst we mourn for one who was, in every way, worthy of our respect and regard.

Resolved, That we sincerely condole with the widow of the deceased on the dispensation with which it has pleased Divine Providence to afflict her and commend her for consolation to Him who orders all things for the best and whose chastisements are meant in mercy.

Resolved, That this heartfelt testimonial of our sympathy and sorrow be forwarded to the widow of our departed friend by the secretary of this meeting.

Committee. {
Wm. A. Johnson,
John J. Kelly,
L. W. Rehbohn, M. D.,
H. J. Hackett,
John Duffy.

Geo. R. Townsend, President.
Edward T. Hahn, Secretary.
A. T. Pollard, M. D., Treasurer.

Mr. Stanton was a young druggist at Twenty-sixth street and Lehigh avenue, Philadelphia. He was married only two weeks ago. While the same priest who performed his marriage ceremony was reading the funeral rites his body was lying in the Municipal Hospital in a hermetically sealed casket. He died of small-pox. Mrs. Stanton believes he caught the small-pox from church fair books he took from infected households.

OTHER HAPPENINGS.

Mrs. Henry C. Blair, widow of the Philadelphia druggist of that name and mother of H. C. Blair of Eighth and Walnut streets, member of the executive committee of the P. A. R. U., mistook carbolic acid for eye-drops at her country place in Edgewater Park, N. J., and may lose her sight as a result. Mrs. Blair took the wrong bottle from a shelf. The intense agonies she suffered appraised her of her mistake. Doctors ap-

plied soothing lotions, but it will not be known for several days whether permanent injury was inflicted.

—H. K. Mulford & Co., the large manufacturers of vaccine and anti-toxins, have, in view of the recent determined efforts of the health board to stamp out small-pox, ordered every employe in their service, both in and out of the city, to submit to immediate vaccination or jeopardize their position. This rule has been followed by two of the largest department stores issuing similar orders. At the request of the board the city hospitals will refuse to admit any case that cannot show recent evidence of successful vaccination.

—The Wilkinsburgers are still contending with the Presbyterians, and all but two of them have been arraigned before the Burgess and fined under a special law that imposes a fine of \$25 and costs in Allegheny county, while in all the other 66 counties of the State the fine is only \$4 and costs. A determined opposition is being organized, and an appeal to the legislature, at its next session, is to be made for a repeal of this obnoxious law.

—The Beaver, Pa., Times gives a column account of the new drug store in Rochester, Pa., of William T. Gordon. His store proper is 20x75 feet in size, steel ceiled, finished in white, with pink trimmings and green border, with white and blue tile floor. Fixtures are of elegant quartered oak. A big onyx fountain and a 15x20 prescription room are also described.

—J. K. Freeman of Sixteenth and Race streets, Philadelphia, and Miss Mull of Philadelphia, were married and left for a trip to Atlantic City. On their return they will be at home at 2306 Columbia avenue.

—Recent visitors to Philadelphia included Marsden P. Williams, Charlottesville, N. C.; C. N. Johnson, Uniontown; William E. Weiss, and Peter F. Wallace.

—Herbert M. Highfield married Miss Schultz of Clayton.

NEW ENGLAND.

THE BAY STATE.

Mr. Brandes is Given a Surprise Reception—Liquor Raids Still Coming—Druggist Attempts Suicide.

—The police force of Quincy raided the drug store of G. L. York and secured a small quantity of alcohol. Then they went to Brown's drug store, in the same street, where they seized a miscellaneous lot of brandy, gin, rum, alcohol, wine and some empty bottles and jugs. In both instances the druggists asserted that these things were kept and used only for medicinal purposes. At Mr. York's the amount of alcohol seized was not more than half a pint and he has a United States license.

—The "Young Druggists," a base ball team in Lowell, made up of the younger drug clerks, defeated the Lowell "One Price" team. The latter club, vain of other conquests, challenged the drug clerks and bragged how easy it would be to "do 'em up," but the boys simply covered themselves with glory, beating their opponents in a score of 20 to 2. The drug clerks were captured by Dennis O'Brien. Their pitcher, McCarthy, is a wonder.

—Druggists of Brookline are in arms about selling stamps. They are "bothered to death" by people who seek stamps on Sundays and evenings after the post office has closed. The people of the town are circulating a petition for the establishing of a branch post office. There is just a possibility that the druggists have been prevailed upon to quit the stamp business in order to boom the petition for the branch office.

—In Brockton, the local board of health has established two culture stations, at Dudley's and Braconier's pharmacies. It has been done especially for the benefit of physicians, who will have use at these places of complete outfits for study of traces of diphtheria and kindred diseases. For keeping diphtheria anti-toxin, stations have been established at C. B. Hillberg's pharmacy and at the Franklin pharmacy.

—A suit for \$5,000 damages has been brought in the Superior Court at Springfield, by a man in Palmer against John Wilson & Co. of that city. The plaintiff asserts that he sent a woman to the store to get Rochelle salts but that she was given saltpetre instead. These were administered to the plaintiff who afterward was made very sick, so it is alleged. The case has not yet come to trial.

—At the store of James J. Keaney, Malden, Frank Keaney of South Boston, has been added to the force of clerks. William Bonner is a new clerk at Hudson's store, Marlboro. Leon Field is a newcomer among the employes at the Washington street pharmacy, Stoughton. E. A. Webster, druggist of Springfield, has taken a position in the prescription department of W. L. Suller, that city.

—A midsummer wedding was that of Frederick A. Guertin, a leading druggist of Fall River, and Miss Graciella Bualme. The wedding took place in Waterloo, Quebec, Canada. A wedding journey round and about the Lake Champlain region, to Albany and down the Hudson river for a few days' stay in New York, followed the ceremony.

—When F. A. Brandes, a Webster druggist, returned from his wedding trip, he and his bride were given a cordial welcome by the business men of the town, who hired a large hall for a reception. The affair was entirely a surprise. Mr. and Mrs. Brandes were presented with a full dinner service of fine china.

—Depressed by business matters, Frederick Hazard, a druggist in New Bedford, attempted to end his life by inhaling gas. Of late he had been absent much of his time from his store, which he purchased not very long ago, leaving the place under the charge of Irving Shaw, head clerk.

—Druggists in Boston and the nearby suburbs are having considerable business just now because of the general pest of gypsy moths, which have especially invaded Malden, Medford, Winchester and other places in Middlesex county.

—Drug stores in Massachusetts continue to be favorite places for thieves to break in. The store of Thomas F. Gaffney & Co., Lynn, was robbed of a large quantity of cigars, about \$15 in money and a few other articles.

—The old established drug business of the late James S. McGillivray, Broadway, Chelsea, has been bought by Justin F. Bartlett of that city, who for several years has been at Garrett's drug store, Chelsea.

—The stock and fixtures of the store of the late Samuel K. Harding, Revere, have been sold at public auction. The store of Ralph G. Perkins, Somerville, has been bought by Alonzo George.

OHIO RIVER VALLEY.

CLERKS VERY SCARCE IN OHIO.

Cleveland, July 21.—There is a great scarcity of drug clerks in Ohio. Says a prominent jobber of Cleveland: "I do not remember when there has been such a dearth of clerks. This is true all over the State, but especially in Cleveland. The demand for registered pharmacists is far in excess of the supply.

"There is less inclination here than there used to be for men to engage in the drug business. They have found other fields of enterprise more remunerative. Young men, also, have found the work in a drug store arduous, the hours long and the pay insufficient. The business is in a somewhat demoralized condition, due partly to the effects of cut rate drug stores. Few druggists, after years of hard work, can command a competency. There ought to be a strong, organized effort to put the business on a better footing. It is in need, above all else, of bright, enterprising young men."

OHIO HAPPENINGS.

—A soda fountain in the store of John H. Morris, a Youngstown druggist, was wrecked last week by the explosion of a carbonic gas drum that was defective and rather highly charged. One of the clerks was struck and badly bruised by a flying piece of marble, and the shelves in the vicinity of the soda fountain were wrecked. No one was seriously hurt, however.

—The number of all night stores in Cleveland is rapidly increasing. At present there are four in the vicinity of the public square. They do a good business, even at late hours in cigars and soda water. Several others have recently been opened in outlying districts, and have been found to pay well.

—The brick building which had become a landmark, long occupied by the Sells Pharmacy Co. at Pearl & Lorain streets, Cleveland, is being torn down. The company has moved across the street.

—C. A. Goldman, for twenty-seven years an attaché of Strong, Cobb & Co., the Cleveland wholesale firm, is spending his vacation in Mercer, Pa.

—Benton, Myers & Co. of Cleveland, have bought the stock of B. P. Kramer, Logan and Cedar avenue, who has made no assignment.

INDIANA INCIDENTS.

—The firm of Kerlin & Scott, Kokomo, has dissolved, with L. Scott succeeding to the business. Rauch &

Turman, Logansport, have dissolved, Lee Turman succeeding.

—The oldest drug store in Greensburg, that of Alexander & Co., has gone into bankruptcy. The assets are about \$20,000; liabilities about the same.

—Patrick H. Ward and Mathias J. Ward, under the firm name of Ward Brothers, have opened a new store at Otterbein, with a \$3,000 stock.

—The Piercy drug store at Greencastle, the oldest drug store in that place, has passed into the ownership of Broadstreet & Vestal.

—A. A. Schroek, formerly a clerk in a Columbus pharmacy, has purchased the store of T. L. Potts in Pearl street, Cleveland.

—Four months ago, at Bremen, Thomas W. Lytle sold his drug store to J. M. Ball. Last week he bought it back again.

—Dr. E. H. Schildrick, long a practising physician in North Royalton, has engaged in the retail drug business in that city.

—W. B. Cousins, a druggist of Hudson, is spending the summer in the Lake Superior region and at his old home in Iowa.

—A former Cleveland druggist, Fred W. Mayer, has returned from Boston and opened a store on Cedar avenue.

—Shoemaker & Williams at State Line, have dissolved, A. R. Shoemaker succeeding to the business.

—E. E. Green & Son, of Elwood, have dissolved. The son, Fred W. Green, will continue the business.

—E. E. Drake, located for many years at Patricksburg, has removed his store to Spencer.

—W. M. O'Brien has sold his store at Monticello to J. W. Meiser of Medaryville.

—At Medaryville, August Rosser has sold to H. F. Massey.

—Smock & Harris have opened a store at Rockyfile.

What a Difference.

There is probably no drink served at the soda fountain which varies as much in taste at the different fountains as does chocolate. What a difference! Some fountains serve the kind which makes you want to get right back before you are a block away. Why don't all dispensers serve the good chocolate, it's easy to get and the price is right. Runkel Brothers, 445-151 W. 30th St., New York, can furnish the good chocolate in powdered form put up in five pound cans at 10 cents a pound. Larger quantities, prices and samples may be secured upon application.

THE SOUTH.

MARYLAND.

State Meeting a Great Success.—Much New Legislation is Urged.—N. A. R. D. is not Indorsed.—W. R. Brown Elected President.

Ocean City, Md., July 21.—The annual meeting of the Maryland Ph. A., at Ocean City, July 14 to 18, proved to be one of the most successful gatherings in the history of the organization in attendance and from professional and social standpoints. A live interest was especially manifested in the discussion of legal matter, the enactment of a State pharmacy law at the session of the Legislature in 1902 having concentrated attention upon the subject, and the operation of the statute since it went into force having been carefully watched.

The meeting was called to order in the afternoon of July 14 at the Hotel Plinthumoon, by President J. Welb Foster, who, in his address, said:

"There should be a law compelling manufacturers to put at least the approximate dose upon the label.

"Our patent laws should be at once changed, not to protect the finished product, but the process by which it is evolved, since in our country under our laws we have to pay a price in excess of that paid in other countries for the same article.

"All legislation in pharmacy in our State should emanate from pharmacists whose ability and honor are unquestioned. The pharmacists are the only ones who understand the needs in this particular. A poison law was passed by our last legislature that is highly unsatisfactory, being in fact a police regulation that almost legalizes the sale of poisonous drugs so long as a record is kept, but not allowing the druggist to discriminate nor putting restrictions upon him to regulate the sales. The conscientious druggist refuses to sell such articles as morphine, cocaine or their salts, or chloral, unless ordered by a reputable physician. The one who does sell them indiscriminately to drug users must have a fight with his own warped conscience. The association should see that proper poison laws are passed.

"A pure food bill is a necessity and should by all means be made complete.

"The pharmacy law in our State has been in operation for more than a year, and while we can appreciate its virtues we also notice its defects, which should be remedied at the next session of the legislature. New amendments should be asked for that will make the law less stringent and give better protection. In the opinion of many there should be an amendment preventing the selling of drugs in towns of 800 or over by anyone except registered pharmacists."

The reports of the secretary and treasurer showed the growing usefulness of the association and that the finances are in excellent condition. There will be a balance of more than \$300 in the treasury after all bills have been paid. Twenty members were dropped during the year for non-payment of dues and thirty-one were admitted, a net gain of eleven.

There were many different papers related to pharmacy, Prof. Daniel Base contending for instruction in regular colleges of pharmacy and laboratory practice and presenting a paper on the use of commercial glucose for the preservation of iron iodide. He showed that the decolorizing effects of glucose was due to the presence of sulphites as an impurity, and advocated hypophosphorous acid as a better preservative.

The association favored the erection of a memorial

at Washington to the late William Procter, the father of American pharmacy, a native of Maryland.

Prof. Henry P. Hynson, chairman of the committee to confer with medical societies, reported that the efforts of the committee to establish close relations with medical bodies had not been met with a receptive spirit by the Maryland Medical and Chirurgical faculty, and recommending that hereafter no committee be appointed. Professor Hynson also submitted the draft of a bill intended as a substitute for the present pharmacy law and asked its endorsement by the association.

The enactment of a law against substitution was favorably commented upon and that relating to the sale of poisons was severely criticised as non-effective. The committee invited the earnest co-operation of the State association in the fight against the indiscriminate sale of habit forming drugs and presented in this connection the report on the subject read before the A. Ph. A. Reference was also made to the code of ethics adopted by the Maryland association, of which an outline was given at the time in the Era, and the formation of a section on materia medica, pharmacy and therapeutics, like that of the A. Ph. A., was urged.

The report of the committee on the president's address was followed by an extensive discussion. Most of the recommendations contained were endorsed but the one that the Maryland association affiliate with the N. A. R. D. was ignored. The committee was composed of Louis Schulze, J. F. Hancock and H. P. Hynson.

The proposed amendments to the pharmacy law also elicited a prolonged debate and got in the main a favorable reception. One of the most important referred to the privilege of assistant pharmacists to biennial registration and providing funds for the expenses of the board of pharmacy.

The following officers were placed in nomination by a committee composed of Dr. A. R. L. Dohme, H. P. Hynson, Louis Schulze and W. C. Powell, and were elected:

President, W. E. Brown, Baltimore; vice-presidents—Owen C. Smith, Baltimore; Albert Lapouraille, Baltimore; H. Howard, Brookville; secretary, Louis Schulze, Baltimore; treasurer, H. R. Rudy, Hagerstown; executive committee—H. Lionel Meredith, Hagerstown; Charles Morgan, Baltimore; Thomas Holland, Centreville; social committee—J. Edwin G. Hengst, J. E. Bond, Charles J. Baker and George A. Sohl, all of Baltimore.

Plenty of diversion had been provided by the committee. The Merck prize, for the best paper, was presented to W. J. Lowrey, Jr., of the Pharmaceutical Journal Club of Baltimore, all the members of which became members of the State association. The subject of Mr. Lowrey's paper was "Ferrous Carbonate in Pills and Tablets." A large party took a sail on Sinepuxent Bay, on Thursday, while others remained at the hotel to bowl.

David R. Millard, Charles Morgan and H. R. Rudy were appointed a committee on time and place of the next meeting.

OFFICERS R. D. C. A. OF LOUISIANA.

A. J. FERRY,
Secretary.JOHN J. GRASSER,
2nd Vice-president.JOHN J. PAQUETTE,
Treasurer.HUGH A. BROWN,
1st Vice-president.

A SET OF LIVE MEN.

The Retail Drug Clerk's Association of Louisiana claims to be the first association of its kind to be incorporated under the laws of any State. Thus far, it has confined its efforts to matters of internal organization, only taking a hand in such outside affairs as demanded immediate attention, and in both it has been eminently successful. The shorter hours question will come up soon. The membership is about \$5, but it is expected that the association will shortly number a large majority of the clerks in the State.

Wm. H. Voelker, president, has been in the retail drug business in New Orleans for over thirty years. He was one of the originators of the State Ph. A. He is a Druid, a Woodman of the World, a Knight of Honor, and a Knight of Pythias.

Hugh A. Brown, first vice-president, one of the younger class of prescription clerks, is employed at L. L. Abbott's, Felicity street. When President C. P. Fielder resigned in 1902, his duties devolved upon Mr. Brown, and his faithful work during that time endeared him to every member.

John J. Grasser is second vice-president. Several years ago he graduated from the New Orleans C. P. and is now doing relief work. He is a member of the State association and of several committees in that organization.

A. J. Ferry is secretary, a position he was compelled to accept. Mr. Ferry comes of an old creole family of New Orleans. He studied pharmacy and then took a special course under Prof. Metz in Tulane University. He is now at Chretien's pharmacy, where, for two years, he has been head prescription man.

John J. Paquette, treasurer, is one of the younger set. He is now doing relief work. He was one of the founders of the association.

MARYLAND.

The active members of the Baltimore Drug Trade Bowling Club are beginning to look toward next month, when officers are to be elected preparatory to resuming contests. The composition of several teams is a matter of uncertainty. Andrew Baumgartner, captain of McCormick & Co., has severed his connection with the firm and his future business movements are unsettled. The bowlers from Gilpin, Langdon & Co., from which firm he had three on his list, seem disposed to think veterans should be won under their name and not under that of another firm. That the line-up will be considerably different is likely.

—The Northern section of Baltimore was the central point of a typical tornado, when the funnel-shaped cloud formed by the meeting of two storms dipped down in a depression and wrecked several hundred buildings. Among them was the pharmacy of Charles Doeller, Broadway and Eager street, the roof of which was lifted off, the walls of the upper story being also destroyed. The rain fell in torrents. Mr. Doeller's loss is estimated at \$2,500. At the same time the house in East Eager street, occupied by Druggist William H. Otto, was unroofed, and \$700 damage caused.

—Mr. George Muth, senior member of the wholesale drug firm of Muth Bros. & Co., has returned from a trip to New York, Boston and other points.

—Parr Bros., druggists on York road, have bought a large lot there and will shortly erect several buildings on it, among them a store.

TENNESSEE.

—Ernest Finch, formerly with Spurlock-Neal Co., Nashville, has succeeded to the business of Pierce & McGough, Petersburg.

—Noble & Neal have succeeded the R. L. Eves Drug Co., of Nashville. These enterprising young men are to be congratulated on having secured one of the best stands in the city.

—John J. Inglis of South Pittsburg, will shortly open a new drug store at that place.

—P. W. Hager of Hager Bros., Hartsville, is spending a vacation in Colorado.

MINNESOTA.

—George W. Walstrom has returned to Lake City from a trip to the Pacific coast.

—Fred Kuyler has removed from his old store in Duluth to a much more central location in East Superior street.

—A. C. Halgren has bought out L. T. Olson at Kensington. M. C. Kemp & Co. succeed Gibbs & Kemp at Oliver. J. T. Jensen is closing out at Avoca. John P. Scholten of Delavan, has sold. R. H. Ehrenberg has started at Marietta.

W. H. VOELKER,
President
Louisiana R. D. C. A.

AROUND THE GREAT LAKES.

BACK TO SCHEDULE.

Chicago R. D. A. Finds Its "Cutting-All-Along-the-Line" Scheme Was a Poor One and Gets Back to Prices.—Charles H. Avery Elected to Presidency for Unexpired Term.

Chicago, July 21.—A new price schedule will soon be in effect in Chicago. Such was the decision reached at the last meeting of the Chicago R. D. A., on last Tuesday. The attendance was about sixty.

T. V. Wooten called the meeting to order and after the minutes of the previous meeting and the report of the executive committee were read, the discussion plunged at once into the business in hand. John I. Straw objected to the adoption of a certain portion of the minutes of the executive committee, saying that the committee had exceeded its authority and had assumed the right to revise the instructions of the association. He moved to accept the report with the exception of the portion relating to the point he raised. After discussion, by vote the report was accepted as a whole.

The action of the association at a previous meeting in declaring the schedule off was gone over and it was declared that the plan of forcing the fight into the enemy's camp had been a failure. Mr. Straw declared his conviction that had the matter been taken up by the members of the association and the plan carried out, it would have resulted in the ultimate defeat of the cutters. There is nothing, he said, like the power of organization if the whole force of an association can be brought to bear upon a given object. If every druggist in the city had cut prices for only a short period it would have resulted in a lesson to even the largest of the cutters and everyone would have been glad to get back to price schedule again.

A representative of one of the North Shore districts arose and asserted with emphasis that whatever the instructions of the association were on cutting, neither he nor the members of his auxiliary district would obey any order of the association which instructed them to cut prices.

William K. Forsythe said that the association is one whose primary purpose is and has been the elimination of cut rates; he thought it a wrong policy for the association, in view of that fact, to order a cut.

A member interrupted with a query reflecting upon Mr. Straw's sincerity. Walter H. Gale took up the discussion and defended Mr. Straw with considerable force. The member then rose and explained that his remark was not intended to reflect upon Mr. Straw's good intentions, but merely to question the good policy of the plan he had advocated.

George R. Baker said that he had been a druggist in the downtown district a good many years, and that until the druggists themselves began cutting prices he had gone along and sold goods at good prices, paying no attention to the department stores. When, however, his neighbors began cutting tactics, he was forced to follow or lose business. The down town men have never been able to get back where they were before they began cutting. He favored, he said, the policy of ignoring the department stores entirely, adopting a schedule for drug stores and sticking to it, letting the department stores do what they pleased and fight it out among themselves. Not all the druggists in Chicago, in his opinion, are able to fight the organized millions of the big stores and it would be suicidal to attempt it.

It was moved and seconded that the association go

back to the old price schedule in effect before the general cut was ordered. Mr. Straw moved to amend the motion by ordering a general cut all over the city. The amendment was lost. Charles H. Avery moved to amend the original motion by instructing the executive board to formulate and adopt a minimum price schedule. This amendment was adopted.

During the course of the discussion the fact was brought out that very few of the druggists of Chicago had obeyed the fiat of the association to cut prices or the advice of the executive committee to that effect. The plan, therefore, not receiving the support of the rank and file, upon whom absolutely depended the success of the movement, fell of its own weight.

Charles H. Avery, one of the leading association men and a prominent druggist in the Fourth auxiliary district, was elected president of the association to fill out the unexpected term of John I. Straw, resigned.

HARRY D. BERRY, formerly of Jackson, Mich., died at his home in Mt. Sterling, Ky., of consumption. He was formerly clerk for Henderson & Co., of Jackson, and left ten weeks ago for his home on account of ill health.

A Center for High Grade Grape Juice.

In this issue of the Era, on page 7, the reader will notice the attractive advertisement of the Naboth Vineyards, Brocton, N. Y., who manufacture the well-known brand of Naboth Grape Juice. Brocton is located in the extreme westerly corner of the Empire State, and on Lake Erie. It is in the center of the far-famed Western New York and Chautauqua grape belt. Grapes grown in this section have always a superabundance of the natural sweetness peculiar to the fruit, and Brocton has been, and probably always will be, a great center for high grade grape juice. Grape Juice has been manufactured in this part of the country for many generations, and every generation has striven to bring the product to a higher degree of excellence than those which have gone before. The result has been that Brocton Grape Juice is known far and wide, and a substantial business is carried on even in foreign countries.

The Naboth Vineyards are justly entitled to the far-reaching constituency that is theirs. Perhaps no higher testimonial could be cited that that of various hospitals which prescribe their product to the exclusion of all others.

This season has been an unprecedented one for Naboth Grape Juice, for more has been sold than during any previous season. The Era had the pleasure of a call from the president of the company, F. C. Lewis, last week. He was in the city arranging with one of the largest exporters to handle their products on the continent, and he tells us that their plant in Brocton is now undergoing changes which will more than double its capacity for next season.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories.

NEXT TERM BEGINS SEPT. 7, 1903.

Address Inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

KNOWLEDGE IS WEALTH.

You may secure a goodly amount of both knowledge and money by carefully perusing the advertising in this issue. Name also some of the following excellent offerings which were in our last week's issue:

PRUNETTA—A combination of the St. Catharine France with mild and pleasant laxatives, claimed by the manufacturers to be a magic relief for constipation, order through your jobber, or from the Prunetta Pharmaceutical Co. of New York.

LANOLINE—Victor Koedel & Co. of this city are sole agents and licensees for the United States. Their ad. on page 17 will undoubtedly interest you.

SYRINGES—Parker, Stearns & Sutton of this city, manufacturers of the famous Alpha and Omega Syringes, have a splendid new catalogue of photographs which they send free on application. A postal card to them will get you one.

PILLS—Lippin's Pills have reached the pinnacle of success. They cost no more than the solid kind.

ANTITOXIN AND VACCINE—John Wyeth & Brother, Inc., Philadelphia, Pa., announce that in response to the requests of their large clientele among physicians and pharmacists, they have, after very careful sanitary and critical examination of methods and procedure, associated themselves with Dr. H. W. Alexander & Co. as authorized general distributors of the latter's biological products. More information on page 7.

THE TILDEN CO. call your attention to the proper discounts on goods listed in the different parts of their price list. Their advertisement is on the inside of the first cover.

FORMATAN, a tasteless, non-toxic, intestinal-astringent and antiseptic which is insoluble in the mouth or stomach, a new and certain remedy in typhoid fever, dysentery, cholera infantum and all inflammatory conditions of the intestines accompanied by diarrhoea. Prepared by Henry K. Wampole & Co. of Philadelphia, Pa., who furnish literature upon request.

EFF. LITHIA TABLETS—Billings Clapp Co., Boston, Mass., want to send you a sample and special net prices on their carton package aluminum cap bottles with your name on them. They are making their tablets by a new and very satisfactory process. Write today.

NEW MEDICINES—On page 76 you will find a list of Dr. David Kennedy's new medicines, which are being manufactured by The Cal-Cura Co. at Rondout, N. Y. The demand for them is sure to be large.

GALLICURE, made by the Bickmore Gall Cure Co., Old Town, Maine, reliable and a sure seller. Samples and a trial order for the asking.

SODA AND MINERAL TUMBLERS—Note the advertisement of Whitall Tatum Company on page 5; all varieties and prices right for the good quality.

SHOW CASES—Write to the Grand Rapids Show Case Co., Grand Rapids, Mich., for catalogue "A". Their business is making show cases. See the cut of their druggists' sundries case on inside of back cover.

GRADUATES—Guaranteed to be absolutely accurate by the manufacturer, J. F. Lehman, 70 Warren St., N. Y. If your jobber can't supply you, secure them direct.

PAN-DETTIC ELIXIR, an appetizing tonic digestive which prevents, assists and often cures indigestion. Also put up in tablet form. Manufactured by Sharp & Deems, Baltimore, Md., offices at New York, Chicago, St. Louis and New Orleans.

Apollinaris Good Enough for Him.

"This is the time of year when men experiment with some palatable summer drinks," said the clubman,

as he gazed wearily into the depths of a long glass of Apollinaris water and groaned in an agony of spirit. "But no more for me. I'm done with the experimental stage. Yesterday morning I met 'Billy' Smith. 'Come have a Smithsonian cooler,' he said. 'It's my own invention, and it's the greatest ever.' Well, we had a couple of Smithsonian coolers, as he called 'em, and I left him. Pretty soon I met 'Tom' Brown. 'Come and have a Brown stout cocktail,' he said. 'You never tasted anything like it in your life.' I pledge you my word I never did, and never hope to again. When I met 'Sam' Green, a little later, and he suggested a drink of his own invention I was inclined to balk, but in the end he persuaded me, and I dallied with a couple. By that time I was determined to dodge all my friends, but 'Jim' Jones yanked me from the back of a trolley car and dragged me in to try a punch that he had just discovered. After that I didn't care what happened, and every time anyone suggested a new drink of his own invention I braced myself, said 'go as far as you like,' and took my medicine like a little man. When I woke up in the Turkish bath this morning I made up my mind that Apollinaris would be good enough for me for the rest of my natural life."

The Great Health Drink.

The value of fresh grapes as a food has long been recognized. Unfermented grape juice has been upon the market and has been advertised extensively for medical

purposes for several years, but to the Chautauqua Fruit Co. of Ripley, N. Y., credit is due for further advocating its use as the "Great Health Drink." This firm are the manufacturers of the now famous Randall's Gold Medal Grape Juice, which is being served at all up-to-date soda fountains and is used extensively in American homes as a delicious table beverage. The scene here pictured is an every day one and simply goes to prove that a Randall Grape Juice Fountain is a silent but a sure salesman, very seldom losing a customer. Any druggist can secure one of these Fountains by handling Randall's Grape Juice in sufficient quantities, and these quantities are so small that any druggist can afford to have one. Write to the Chautauqua Fruit Co. and hear their unique proposition, also secure illustrated advertising matter and samples.

Few retail druggists realize that one of the most important departments of a drug store is the prepared food department. This is not only important, but it is one of the most profitable branches of the druggist's business if he handles it right. This idea is carried out in the plans, and especially in the advertising, of the Wells & Richardson Co., who just now are pushing Cereal Milk very hard. This delicious prepared food has acquired its popularity by good results, and hard, persistent advertising, placed where the mothers and the physicians could see it, has put Cereal Milk in the front rank of scientific prepared infant and invalid foods. In other words, Cereal Milk has become a recognized staple. In addition to the advertising which the Wells & Richardson Co. are doing to create a demand, they have not overlooked the demands of the druggist for advertising matter, and are now sending out a very handsome window display on quantity orders of Cereal Milk which the retailer may place with his jobber; and the quantity is so small—812 or 824 worth—that any druggist may avail himself of it. This window display, by the way, is one of the most handsome pieces of advertising matter that any food concern has put out.

INDEX TO THIS NUMBER.

OPIMUM REGISTERS PRINCIPAL CHANGE IN QUOTATIONS.

New York, July 21.—Seasonably quiet conditions continue to prevail in nearly all departments with transactions limited mainly to actual current requirements of consumers, and a further important advance in values of opium is the principal change in quotations during the past week.

OPHIM.—Foreign markets have continued to harden under the influence of reduced estimates of the new crop and spot jobbing quotations have been further advanced 15c. per lb. to \$3.69 1/2 to 5c. for 9 per cent, and \$3.70 1/2 to 3 3/4 c. for 11 per cent. Powdered also is higher and the revised quotations are \$1.50 1/2 to 4 1/2 c. for 13 per cent, and \$1.60 1/2 to 5 1/2 c. for 16 per cent.

MORPHINE.—Consumers continue to purchase freely in view of the stronger position of opium and the tendency of values is decidedly upward with an early advance expected. Meanwhile jobbers offer cautiously at the old range of \$2.50 1/2 to 3 c. for eighth in ounce boxes, \$2.45 1/2 to 2 1/2 c. for 2 1/2-oz. boxes, \$2.25 1/2 to 2 1/4 c. for ounce vials and \$2.20 1/2 to 2 1/4 c. in 5-oz. cans, as to brand and quantity, less the usual rebate on large purchases.

QUININE.—A continued steady improvement in the continuing demand is reported, with the tone of the market firm, and a general advance in prices is looked for after the Amsterdam bark sale on Thursday next. The ruling quotations are 23 1/2 to 25 1/2 c. for bulk in 100-oz. tins, 23 1/2 to 24 c. in 50-oz. tins, 24 1/2 to 24 1/2 c. in 25-oz. tins, 25 1/2 to 25 1/2 c. in 15 or 10-oz. tins, and 30 1/2 to 30 1/2 c. in ounce vials, according to brand and quantity.

TOUR GRASS.—Supplies are more abundant and jobbing quotations have been reduced to 15 1/2 to 20 c. for cut. **SENDEIA ROOT.**—New crop is coming in more freely and the market is easier with jobbing prices showing a decline to 30c. to \$1.00 for whole and \$1.00 1/2 to 1.10 for powdered.

LOBELIA SEED.—Holders are more willing to sell and prices in a jobbing way have been reduced to 62 1/2 to 72c. for whole and 72 1/2 to 82c. for powdered.

SERIPENTARIA ROOT.—Owing to extreme scarcity the market is stronger and jobbers have advanced quotations to 52 1/2 to 62c. for whole, 55 1/2 to 65c. for ground and 57 1/2 c. for powdered.

PLASANTILLA HERB.—The tone of the market is easier and jobbing prices have declined to 30 1/2 to 40c. as to quality and quantity.

BETSWAX.—Liberal receipts have had a depressing effect to the market and jobbers have reduced quotations to 10 1/2 c. for city and 38 1/2 to 43c. for country.

ALOES.—Barhades in grounds are scarce and firmer with jobbing quotations showing an advance to 12 1/2 to 15c.

ACONITE ROOT.—Supplies are offered more freely and the market is easier with jobbing prices reduced to 20 1/2 to 25c. for whole, 23 1/2 to 28c. for ground and 25 1/2 to 30c. for powdered.

ELM BARK.—Stocks continue light and in consequence the market is firmer with jobbing quotations advanced to 5 1/2 to 7 1/2 c. for select in bulk and 3 1/2 to 3 3/4 c. for 5 lb. bundles.

WILLOW OIL SOAP.—Values are a shade easier, the revised jobbing figures being 51 1/2 to 52c. in 5-lb. and 50 1/2 c. in smaller quantities.

GLYCYRR.—The market is weaker and jobbers have reduced quotations to 5 1/2 to 6 1/2 c. by the bale and 10 1/2 to 11c. for 5 lb.

GLYCYRR.—Market firmer in sympathy with corresponding conditions abroad and jobbers have advanced prices to 14 1/2 to 15c. for whole and 10 1/2 to 11c. for powdered.

MADE.—Under a smaller influence jobbing quotations have been advanced to 13 1/2 to 15 1/2 c. for whole and 10 1/2 to 11c. for powdered.

SULLIAC.—Receipts are steadily hardening and all prices and values continue to show an advance to 60 1/2 to 65c. for 1 lb. and 10 1/2 to 11c. for Native.

PURITS PLUMPTIME.—Produce markets are stronger and prices are advanced to 1 1/2 to 2 1/2 c. for 100-lb. and 1 1/2 to 2 1/2 c. for smaller quantities.

Avoid Errors.

It is so very easy to make a mistake, especially in numbering prescriptions. There are very few systems that can be used without errors. The safest way is to use a numbering machine, and there are many of these on the market that are far from being correct. The Follett Numbering Machine, made by the Cushman & Denison Mfg. Co., at 210 W. 23rd street, New York City, is one of the few good ones at a reasonable price. This machine has six wheels with steel figures, printing from one to one million, and numbering consecutively, also duplicates, triplicates, or repeats, at will. The manufacturers send one on approval to responsible parties, or upon receipt of the price \$5, will send one prepaid.

BUSINESS NOTICES.

A HELP IN PRESCRIPTION WORK.

There are a great many things that the average dispenser can't remember, and there are as many more that he shouldn't try to remember—it isn't safe. These things come up in prescription filling when time is an important factor and accuracy is strictly essential. There are questions about dosages, dose equivalents, percentage solutions, specific gravity, incompatibilities, metric and thermometric equivalents, meanings of Latin, French or German terms. These things are all tabulated, or figured out, handy for instant reference, in the Era Dose Book (Third Edition, Revised and Enlarged). Price 50 cents, postpaid.

Is pharmacy a business or a profession?

The highly educated pharmacist who tries to conduct a store without a knowledge of business details will inevitably fail.

In the same way will a business man who tries to run a pharmacy without some knowledge of the profession inevitably come to grief.

Speculation as to the relative values of the two classes of knowledge is useless—both are necessary.

There are good business men who make poor pharmacists, and good pharmacists who make poor business men.

If you belong to the latter class, we feel sorry for you, if to the former there is a remedy, The Era Course in Pharmacy.

Write to The Pharmaceutical Era, No. 8 Spruce Street, New York, N. Y., for a prospectus.

THE SOCIETY OF CHEMICAL INDUSTRY TO MEET IN NEW YORK.

While industrial chemistry and pharmacy have drifted rather widely apart, our readers will still be interested to learn that in 1904 the Society of Chemical Industry will meet in New York. This great international body of men, devoted to the useful application of the most useful of sciences, will find much of interest in our country where conservatism has seldom blocked the wheels of progress. It is proposed to hold the meeting in New York, but much of the visiting chemists' time will be spent in sight-seeing excursions to the larger cities and manufacturing centers. Two points of unusual interest to members of the society are Pittsburg, the immense laboratory where a large proportion of the world's iron undergoes its numerous chemical changes, and Niagara Falls, where the application of electricity to chemical manufacture has enjoyed such spectacular development. Both of these places as well as many others will be visited, but many of the most interesting processes are still carefully guarded secrets, and the visitors may be compelled to content themselves with a view of the surroundings and the outer walls of the plants. Still, being trained observers, they will doubtless learn much of profit to themselves and the world at large, and in any case they can scarcely fail to have a good time.

WAR CLUB METHODS, WITH DISASTROUS RESULTS.

The lack of a very little cool, careful judgment in the management of the Drug clerks' association in Chicago has spoiled, for the time being at least, all the promising plans of that ambitious body. The drug clerks of that part of the country have for some time been busily organizing and agitating for better conditions. Hitherto they have always enjoyed the good will and encouragement of the employers, but recent events have caused a decided change in sentiment. Either the members of the clerks' association are all extremely young men or they have permitted hasty and untried heads to do their thinking, for the management of their affairs has certainly fallen into very unsafe hands. The Chicago druggists were recently called upon to consider a number of extraordinary demands officially presented by representatives

of the "order" committee. In addition to recognition as a responsible body and sound conclusions as to wages and working hours, the proprietors were requested to employ members of the clerks' union throughout every clerk in the city to become a union man or seek other employment. The rejection of this proposition, demand seems to have incensed some of the lights in the ranks, for a circular presently appeared charging the druggists with oppression and wholesale law-breaking. This naturally caused considerable commotion, setting the employers' sensibilities on edge, and leading to counter demands for the punishment of the circular's authors. It now appears that the publication was entirely unauthorized and was issued by persons in ill favor with the association. The net results are a very serious loss of sympathy for the clerks' association, and nothing what ever gained. The entire disagreeable proceeding appears to have been a miserable mistake, and illustrates the danger of hasty resort to force. The times are not ripe, and it is to be hoped that they never will be—for war club methods in the drug business. He who undertakes to employ force to gain his ends does well to consider carefully the opposition to be overcome. Everyone finds it natural to yield to gentle methods, but force is invariably met with force.

SCHOLARSHIPS IN SCHOOLS OF PHARMACY.

An important departure from the beaten path has been inaugurated by the authorities of the Philadelphia College of Pharmacy. The college offers for the year 1903-04 one free scholarship for a full three years' course to each of a number of public schools of Philadelphia including high schools, normal schools and manual training schools. Each student to whom a scholarship is awarded is required to agree to follow pharmacy as a profession. The object of the movement is to promote the cause of public education and to encourage young men and women of higher education to undertake the study of pharmaceutical science and to make the practice of pharmacy their life work.

THEY MUST BE A SET OF RASCALS.

What a chance for a sarcastic rejoinder to the virtuous horror of the medical fraternity at the awful depravity of druggists, instanced and bemoaned in the recent New York City health department phenacetin crusade farce! The department last week summoned ten Brooklyn doctors to answer charges of incompetence, exonerating two and reserving decision on the other eight. They were accused of reporting scarlet fever patients out of danger too soon. Now then, will the drug associations please arise and preach? Can we not have a few sensational articles in the daily press? Isn't this indisputable proof that all doctors are rascals, and incompetent?

A TONIC FOR THE BUSINESS.

The trade as a general rule seems to be having a pretty good time just now. Many frolicsome "kidlets" are out gambling in mountains, woods and surl with their sweethearts and it may be hard to recognize in them retail druggists and their wives. The sun is helping to coax the wrinkles out and the head clerk can change things at home. And years are adding to love and sweetness to nature's. Something new to

think about. Bushels of time to loll around and convalesce from overwork. Who can't afford it? Isn't a vacation after all an asset? The druggist who can find time to mount a wheel and ride away once a week, or take a fishing trip now and then is the man who has a good store and a good trade, usually, and the trips contribute to the causes of his good trade. There is a tonic through the man for the business in these outings. Certainly he who throws care to the winds once in a while is far more agreeable to meet.

NOT ALL FOR MERE EXISTENCE.

The thing is sized up about right by Mr. George C. P. Stoltzenberg, one of the inveterate wheelmen of the Apothecaries' Bicycle Club. Some would say Mr. Stoltzenberg loses about two days out of seven. He doesn't think so. "I come back from these rides with something to think about," he said, "the country, the funning, the people we saw. I have something to anticipate in the next ride. And, oh, the fresh air we get, the country we see, and the cares we shake off. Afford it? Yes, sir! Business? Oh, I have a relief clerk." Mr. Stoltzenberg will live longer and get more out of every week of life. That man is best off who gets the most—enjoyment—out of life. Our stores should not be both our means and our end. Rather make them a means to an end and that end not mere existence, but joy of life.

ONE OF THE GOOD RESULTS.

There is another feature about the outing business that is very valuable. It was illustrated in that Coney Island trip of the Retail Druggists' Bowling Club, told of in the Era last week. Those nine men, self-admitted "kids" for the time being, chummed together, all day, just as they have many days before and will many days again. But, those men are all neighbors—competitors! Not only that, but a fair share of them were the leading partisans on either side of the recent salary-amendment misunderstanding in the Manhattan Ph. A. Yet, there they were, eating and joking, bowling and shooting the chutes together all day. Business rivalry and parliamentary disputes had no place in their thought. They were good fellows together, and, because they are good fellows, association differences and shop were alike buried out of sight. The coming burial of the salary dispute is all due to just this liberality of mind. And a powerful association passes a real crisis in its existence.

A DANGEROUS KIND OF PLANT.

Certain intances in the present prevalence of failures and foreclosures in the local retail trade have a suspicious look. It is possible that some of the unfortunates were victims, that their inexperience and credulity were preyed upon by what may be a legitimate—because within legal bounds—yet heartless practice. There are persons who make a comfortable living by "planting" stores. Drug stores take very readily to this practice and young aspirants to proprietorship and "independence" are often very susceptible. A store is installed somewhere, anywhere, be the neighborhood likely or bad, and some young chap who has raked and scraped together a few hundred dollars is induced to purchase. Up goes his cash and he gives a generous mortgage on the stock and fix-

tures, a mortgage that often could cover two stores like the one bought and then not be overworked. Usually the young proprietor fails and the store is sold over again and some one else has a try at living on crusts and trying to pay two prices for an undesirable property. The Era knows of one young fellow who invested \$1,000 in such a store. He starved for two years. Then, recently, he locked up the store one day and went to clerking. Look out for plants!

THIS IS A REAL OPPORTUNITY.

It is hard to see why a druggist can't be a millionaire. Look at his opportunities! In witness, this, that a Rochester pharmacist has embraced unto himself. Let his advertisement tell it: "Don't scorch in the sun when our black walnut oil and turpentine will do the work just as well and absolutely without pain; applied to the face and hands with a brush." Now, isn't that an idea? If he only would take it to Philadelphia, where it is an actual fact that scores of families solemnly announce their departure to the seashore for the summer and then lock themselves in the house, blinds drawn, until it is fashionable to come back. What nice coats of tan this inventive Rochesterian could furnish with which they might silently testify to the splendid times they had "on the shore." On this line, why wouldn't a pallor-producer be a good seller, for instance, with a baseball enthusiast who had buried all of his grandmothers?

Keep Busy to the End.

J. Pierpont Morgan is sixty-six years old and "just as young as he used to be."

Don't run away with the idea that age brings premature age. It's misuse that does that, and wears out the instruments through which vitality must act. The life principle is as strong at eighty as at eight years of age; the difference being the condition of the physical medium involved in the application of active life forces. You may keep young by proper employment of your mind and body. You will sooner rust out than wear out, if you hold to certain fallacious ideas on this subject.

Exercise the faculties to maintain them in normal activity. You keep your clock a going if you want it to continue in service after your own life-time. You don't neglect to treat it well, to supply it with oil, but you know it will last longer if you don't let it run down or remain idle on the mantelpiece.

Human mechanism, equally, was intended for continued use, and in it finds its supreme purposes fulfilled. Do not give up work because you hear the clock of time ticking away the last years. Fill them with the splendor of the setting sun, which sheds its greatest glory just before it drops behind the western clouds.—Business World.

Mention Prices.

Advertising that does not mention price, possesses only half of its possible value. The reader believes the price is withheld because it is high enough to scare away inquiries, or because the policy of the advertiser is to name to each inquirer the outside figure obtainable, regardless of the value of the article. And they are very often right. If you're ashamed of the price, don't advertise the article.

Let your ads be descriptive, brief and bright, with prices, and they will draw.—The Ad-Writer.

A Good Article to Advertise.

One can't do good advertising, unless he has a good article to advertise.—Printers' Ink.

AUGUSTUS KIEFER,

The Venerable Indianapolis Wholesale Druggist.

The oldest wholesale druggist in Indiana in the number of years continuously engaged in trade is Augustus Kiefer of Indianapolis, the head of the A. Kiefer Drug Co. He is not merely the nominal, but the actual head, and every day finds him at his place of business. This keen-eyed, alert veteran of the drug trade was born at the little town of Muenchweiler, in the Rheinpalz, Germany, and will be 75 years old next September. He came as a boy 16 years old to Miamisburg, O., where he went to school to learn the English language. He next went to Cincinnati and clerked in a grocery, and, in 1846, we find him in Dayton, O., clerking in the drug store of Dr. Koerner. In 1848 he removed to Edinburg, Ind., and soon after bought the retail drug store of Dr. Rush. While in Edinburg, in 1858, he was elected as a democrat to the Indiana legislature. He never, however, could be prevailed to accept office of any kind thereafter, though it was repeatedly offered to him, and recently his name was placed on a ticket from which he peremptorily withdrew. He was for years a valued counselor of his party and such leaders as Vice-President Hendricks and Senators Turpie and McDonald often asked his advice.

In 1863 he came to Indianapolis and began an exclusively wholesale drug trade.

To Mr. Kiefer is due the credit for having made it possible in 1876 to organize the N. W. D. A. At his suggestion there were called to Indianapolis by the wholesale drug firms of Cincinnati representatives of 102 firms, houses all in the territory between Pittsburg and the Missouri river. These representatives met at the Grand Hotel in Indianapolis, and the many conflicting interests were by tactful diplomatic handling molded into a community of interest which has been of incalculable value to the wholesale drug trade.

Give them a Hearing.

Subordinates find it rather depressing to be treated like unknown subjects whenever they appear with a new idea calculated to benefit the concern, or with an appeal for the correction of some fault that customers are talking about.—Printers' Ink.

A GRAPE JUICE WINDOW.
Pharmacy of Barrett Bros. Co., Camden, N. J.

"HOW TO BECOME A SUCCESSFUL PHARMACIST."

Under the above title a paper by Stewart Gamble, of Minneapolis, former president of the Minnesota State Pharmaceutical Association, was read at the annual convention at New Ulm and was awarded the second prize. The paper follows:

As a general thing I find young men in early life apt to forget their future needs and requirements, especially during their school years. Their only thought and desire seems to be to get through the graded schools, stop there, and then take up some business. I know without doubt that there are many young men compelled to do this, owing to circumstances that may make it necessary for them to aid either themselves or their parents, but I am also sure there are hundreds of young men who could just as well as not at least take a high school training, and often times even more than that; and could these young men only see what a help and power such learning and training would be to them in their future business career I am sure extra efforts would be put forth by them to obtain it.

I write the above in order that you may see my position more clearly, in what I consider the foundation of a successful career in the drug business. The young man who desires to enter pharmacy should have at least a high school training or its equivalent, and I would advocate that when he leaves school he put in say two or three years in some good drug store; this gives him a very practical knowledge of drugs, etc., a knowledge he will find invaluable later on. Then I would urge him to take a course in pharmacy. When he has done this, I believe he will find himself fitted to pass the State board of pharmacy.

The foundation has thus been laid for a successful and honorable business life, and though the young man be obliged to begin at the bottom of the ladder in some one else's business house, if he be a young man of good habits, quick to learn, prompt and courteous, and having his employers' interest at heart, he will soon advance and eventually find himself at the head of a like establishment, and the advisor and employer of other young men.

Now I believe it is necessary for the pharmacist in business for himself to be up-to-date, he must keep

himself well informed on all drug questions and be able to impart this information to others when called upon to do so. He should make it a point to employ good help; he will find it necessary to success to be always prompt himself, and he should also require his clerks to be prompt. He should keep a well regulated store, striving as far as possible to keep in stock what his customers call for, should be prompt and courteous as well in waiting upon them. His store should be clean and I think a different window display, say every week, would add to his success. Then I believe the druggist should put up good remedies of his own, and push their sale when others are not called for. Another point of merit, is discount your bills.

Try some judicious advertising and keep before the public as a man of honorable business integrity, as well as a man of knowledge in drugs. A man must have the confidence of the public to be successful. Always live within your means, and I am sure if the young man follows this advice and these suggestions he will be surprised at how soon he will be able to thoroughly establish himself in any community.

I think every pharmacist should connect himself with his local association, as well as the State body, and it seems to me he should lend his push and energy to the advancement of not only his own interests but the interest of the drug business in general.

CATALYTIC MEDICINAL AGENTS.

Dr. Pouchl (Nouveaux remedes) ascribes the physiological effects of a number of drugs to a catalytic action. He states that without the catalytic interference of some substance oxygen could not combine with the blood at the ordinary temperature of the body and life would be impossible. Spermine is extremely favorable to oxidation processes. Metallic magnesium, benzoic aldehyde and salicylic aldehyde have a similar action. Chloroform, carbonic oxid and illuminating gas have an opposite action. Spermine belongs to the class of positive catalysers in respect to oxidation processes while poisons like chloroform belong to the negative catalysers. The author shows that cerebrine exerts a favorable influence upon respiration. Thyroidin and adrenalin are also catalytic agents, adrenalin possessing an action contrary to that of spermine.

SHOP TALK

AVERAGE DRUGGIST UNAFRAID OF MUSEUM.

The Average Druggist's window still carries out his scheme of educating customers. Dental preparations now, arranged along the same lines as the tooth brush display.

The background was devoted to his own dental preparations, two washes, three tooth-powders, a tooth whitener—nothing more than peroxide of hydrogen. Tastefully grouped in the different sizes and styles, careful attention was given to the general color scheme. Each group had a card with a brief description of the article, its ingredients, uses, advantages, prices. For instance, "Orsiline—Unusually pleasant and efficient tooth powder. Made in our own laboratory, of English prepared chalk, Florentine orris root, imported castile soap and just the right amount of refreshing perfume from fresh natural oils."

In front, on floor and on raised steps covered with dead black smooth paper, was an exhibit of materials used in making dental preparations—the good A. D. used and the bad others used—in large and small jars and bottles. The explanatory notes told the name of the article, source, country, uses and virtues, or summed up impurities, and ill qualities. The A. D. used these contrasting exhibits to point the moral of his week's booklet. As he entered the first thing the Era man noticed was a small showcase at one of the soda-water counters containing the major part of the toothbrush window of last week. The A. D. explained:

"Between you and me, I thought that window full of toothbrush sense was too good to lose, so I fixed it up in the old candy case and am going to keep it right up front. It is the kind of ad that gives best results by being kept constantly before people. I got the idea from a customer, where a druggist can get some of his best pointers.

"I encourage customers to talk without letting on that I am pumping. Some of their comments on stores would surprise a man.

"No, it didn't cost much to fix up the permanent exhibit. A lot of the raw materials from manufacturers, a little I had to buy, and the odds and ends of "samples" I had already.

"You see I have kept samples of every line and price of tooth brushes in the case, all carded. The case sold a fifty-cent brush just now. The man came in for a glass of vichy and got interested while drinking it.

"I'm selling plenty of twenty-five and thirty-five cent brushes every day now, and I am more certain than ever that you can sell a thing that gives you a fair profit if you can only show that it is worth your price.

"I intend fixing up a series of small showcases, to contain the salient features of such of my window displays as warrant it, and will keep them on top of the long showcases, instead of sticking a lot of patent medicines there.

"It wouldn't do to fix up a lot at once, the strong point is to let the exhibit grow. I intend reserving a special showcase for the exhibits of the week before, and will keep it up front here on the end of the soda counter.

"Take up all of my room? Make my store look like a museum? Well, don't you worry about that. In the first place, no exhibit will be big—a foot, or at most, two feet of running space will be all one will take up—and I am going to put a long, high, narrow showcase on top of my present ones to accommodate them.

"You see that I now have the tops littered up with

bottles and a lot of miscellany. I'm simply going to replace this trash with something worth the space. As for the museum part! I'd rather have a museum that will be a standing demonstration of the quality of my stock than a side show of weird picture cards filled with chewing gum, tooth-ache wax, corn remover, breath perfumers and such. Don't you worry. If I get the dollars and reputation I'll run the risk of being known as a museum."

THE "DEADLY SHRUG" DISCREDITED.

A few weeks ago Shop Talk explained how one of the St. Paul druggists managed to discourage the sales of proprietary goods put out by houses whose methods he did not approve, and in which process he employed the Deadly Shrug with telling effect. Another druggist in the Minnesota city, after carefully weighing the question, concludes that such tactics will not do.

"When a customer comes into my store," said he, "and asks for a certain preparation, I might persuade him to take something else, but in that case he is bound to go away not entirely satisfied. He generally wants what he calls for. The next time he desires a preparation of this kind he will be very apt to seek it in some other store. Then, again, if a druggist during the 'rush' hours stops to dally and negotiate with a customer to induce him to buy something he didn't come to get, that druggist will be wasting valuable time and the first thing he knows a few customers will slip away and make their purchases at another store. The principle on which I conduct business is to keep a complete stock, no matter what grievance I may have against this or that proprietary house. I am thus in position to supply the demands of any purchaser who comes in, and do so without hesitation. This, it seems to me, is the best policy."

All of which by no means implies that the druggist quoted is not a fighter "from way back." On the contrary, he is full of resources wherewith to bring unfair manufacturers and jobbers to repentance.

ALL HIS DOUBTS WERE REMOVED.

W. P. Poytress, Richmond, Va., was the maddest man on a recent Saturday night that ever retained his polite bearing and did not explode. Mr. Poytress' store is on Main Street near Tenth, near the post-office. For years it has been doing a postoffice business on its own hook—all for the love of it. On the Fourth the postoffice window was open for the sale of stamps only two hours. From noon until 11 that night man after man came and informed Mr. Poytress that "The postoffice is closed; please sell me a stamp." Mr. Poytress heard it twenty times. The twenty-first was the last straw. Whirling the druggist said: "I have heard that only twenty times today." The man innocently replied: "Well, didn't you know it was so? It is closed, I've just come from there. An' you didn't believe it? Well, well, sur!" The kind heart of the pill-maker broke. He said gratefully: "Thank you very much, sir. I am very glad to have all doubts that it removed."

TRYING TO KEEP HIS WORD.

A tired-faced man wandered into a Euclid avenue, Cleveland, drug store the other day and asked for some hydrogen sulphide.

"What do want it for?" asked the druggist.

"Well," he replied, "you see I have a wife and four daughters who want to go to the sulphur springs, and I can't afford to send them. I promised them I'd get them some mineral water just as good, and I'm going to keep my word."

SOME PROMINENT KANSAS PHARMACISTS.

Snapshot taken at Chamute Oil Fields during the recent meeting of the Kansas Ph. A. From left to right—G. Gehring, Wichita, president; Ed. Lair, Topeka, secretary; J. W. Conkson, Kingman, an ex-president of the association, and W. E. Sheriff, Ellsworth; W. A. Evans, Iola, and F. A. Snow, Topeka, members of the board of pharmacy.

PLAIN SODA AND GLASS EYES.

A veracious account of what happened in a Philadelphia downtown drug store:

A wall-eyed man entered the soda department of a downtown store last Sunday, and, after calling for a glass of plain soda, sat down to chat with the dispenser. After the usual talk about the rain and chances of again seeing the sun, he remarked that sane people had to put up with many petty annoyances, himself among the number. He drank half of the soda with a sigh, then with a quick "scoop" took out a glass eye, saying that "the d—d thing was an awful bother", washed it off in the soda, polished it with his handkerchief, put it back in the vacant socket, and then drinking the balance of the soda, laid down his nickel and, with a courteous adieu, walked out. The druggist has since recovered.

ROOSTERS AS SODA FOUNTAIN BARKERS.

Handsome, strutting roosters, motherly, clucking hens, and fluffy, yellow chickens made their home in a big Boston retail drug store window last week. Their coop was at one side and baskets of eggs demonstrated their use. Jars of rich cream—the cow was not in the window—also stood around and boxes of luscious red, red strawberries. Then there were photographs of life on the company's own farm. Small wonder people blocked the sidewalk! It was all to show what was used at "our soda fountain." Of course, the chickens are not a requisite at fountains, but their mission was to make attention calling doubly sure. Raspberries have replaced the strawberries now, and peaches come soon. But the hens—they go on forever.

TOOTH BRUSH CLOCK.

Mutual Drug Co., 422 Third avenue, has an attractive clock dial in the window, the numerals made with tooth brushes. Tooth powder bottles surround the base.

Decide Promptly.

Don't quibble. Decide promptly after weighing the evidence, then say yes or no and stick to it. An occasional wrong decision persevered in, is better than vacillation. Never retract a decision until you are thoroughly convinced that you are in the wrong. Then do it promptly and frankly.—Ad-Writer.

THE LITTLE GREEN STAMP OVER THE CORK OF BOTTLED WHISKEY.*

Its National Significance and the Protection It Gives to Physician, Druggist and Consumer.

By J. W. GAYLE, Frankfort, Ky.

THE general term "whiskey" is used in America by many to cover two distinct classes—the genuine and the artificial. Both are often sold under similar labels, and the public has been perhaps more imposed upon in the matter of this commodity than in connection with any other article of commerce.

Whiskey is made in this country by the fermentation of grain—principally corn and rye. The mash is then distilled and the vaporization of the alcohol condensed. The resultant product consists of water, common alcohol, and a series of alcohols which are not common alcohol, but amyl and butyl alcohols which are contained in the fusel oil peculiar to new whiskey. The distillations, when new, contain essential oils, which maturation—or aging through years of storage—alone can oxidize into odorous essences and ethers. As stated by Dr. H. W. Wiley, chief chemist of the U. S. Bureau of Chemistry, in his testimony before the committee on manufacturers appointed by the 56th Congress to investigate food adulterations:

"The crude alcohols are not fit for drinking. The product is raw whiskey. It is colorless—water white—and has an unpleasant taste, and in order to make it a beverage it must be improved. This is done by aging. In the course of a few years, instead of having a mixture which is bad to taste and smells badly and irritates, you get a whiskey which has a delightful odor and taste, and which is soothing and not irritating. You get a whiskey fit to drink, instead of raw whiskey."

Maturation a Costly Process.

Now, experience has shown that the oxidation which eliminates the bad taste and the poisonous alcohols is Nature's province, and that time alone can convert whiskey into a palatable beverage, conducive to health and of great medical value. This aging process takes years. The raw whiskey is put into oak barrels charred on the inside and then stored in the U. S. bonded warehouses on the distillery premises to rest in privacy until it matures. During the process of maturation, the distiller has a costly investment. Season after season, the bulk of his volatile product becomes less and less by evaporation, and the costs of storage accrue.

While the legitimate distiller was keeping this product of his labor through years of anxious solicitude and patient testing, on storage in the bonded warehouses, the premium on the evasion of the expensive aging process demoralized so many astute merchants that a bogus, artificial, or "make-while-you-wait" species sprang up on all sides, until the markets were flooded with misbranded substitutes, masquerading as genuine whiskey. These continued to multiply until the people, and especially the medical fraternity, lost confidence. All sorts of concoctions were represented as whiskey, under the most attractive labels the lithographer could evolve.

In evading the expensive and all-important aging process, the maker of "artificial" whiskey begins with cologne spirits, which he gets in a few hours by rectifying high wines—the object being to eliminate all the alcohols, except ethyl. Perhaps enough genuine old whiskey is added to give a flavor. Coloring matter—burnt sugar, etc.—is put into the mixture. Essences from the chemical laboratory are added to imitate the evaded work of years, and in a few hours, by a tour de force, the alleged whiskey is produced—whiskey.

* Read before the Kentucky Ph. A. at Estill Springs, June, 1902, and contributed to the Era for publication by the author.

which, as Dr. Wiley says truly, has no right to be called whiskey, under the real meaning of the term.

The-Bottling-in-Bond Act.

It was to devise some method by which the genuine whiskey, so jealously guarded from adulteration by the Government during every step of distillation and maturation, could be actually placed in the hands of the consumer that Congress passed the Bottling-in-Bond Act. The act provides that the distiller whose genuine whiskey has ripened for four years or more in the ricks of the Government bonded warehouse on the distillery premises where it was made can have affixed over the bottles in which it is put (under proper Government authority) the little green stamp of the United States Government, as a pledge to the consuming public that it is absolutely free from adulteration.

The Little Green Stamp.

The act provides that the distiller, upon setting apart a bonded warehouse for bottling in bond, can have his whiskey put up under the watchful eye of a special Government officer. This bottling-house storekeeper, as he is called, must receive each barrel of mature whiskey from the U. S. gauger, who himself has secured it from the storekeeper of the bonded warehouse where it has matured. The method of transfer keeps the whiskey under supervision in its passage to the bottling-house, and this transfer must be covered by proper official permits. The steps in the process of bottling in bond are laid down in the internal revenue regulations formulated by the Department under the act. Every step is taken with a view to making the little green stamp which is affixed over the cork of each bottle at the close of the bottling operations, the Government's absolute pledge that the whiskey is unadulterated. The Government officer in charge of the bottling must see not only that the whiskey is unadulterated, but that the stamp affixed is the proper one, for it must describe in each case the particular contents in the particular bottle. It must tell the date the whiskey was made, the proof (100), the name of the distiller, the location of the distillery as to State and internal revenue district, the measure of contents, and the date bottled. Each stamp goes out on the market over the cork of its particular bottle, telling the essential facts to the consumer under imprimatur of the U. S. Government. These stamps are engraved at the bureau of engraving and printing at Washington. They can be issued only by the commissioner of internal revenue, with the approval of the secretary of the treasury.

Growing Interest in the Act.

Six years have passed since, in March, 1897, the Bottling-in-Bond Act became a law of the land. As it was not compulsory, only a few distillers at first began to bottle under its provisions. The method is expensive, and the masqueraded article—the "artificial," or "made-while-you-wait," whiskey—continued to be floated by vast advertising campaigns, which the bottlers of the genuine article could not afford. The public has been gradually learning more and more of the method, however, and with the current year the press of the country seems to have taken up the matter as of public news and interest, and the increase in the demand and the extent of the operations are matters of constant comment in Kentucky. No longer ago than two weeks, one of our leading metropolitan dailies stated that in the present fiscal year, now drawing to a close, the bottling-in-bond operations of the United States had increased 50 per cent. over those of last year, and that in the month of March alone the State of Kentucky had put up 42,400 gallons of this unadulterated whiskey under the little green stamp—two-thirds of the total output of the United States. Pennsylvania came second for the month in question, with 20,256 gallons; Illinois next, with 3,283; Ohio next, with 2,580, while Indiana put up 796 gallons.

Operations of the Act Not Sectional.

The act is national in its scope. It favors no section or locality. A New York physician can prescribe whiskey, and the New York patient can go to the New York drug store and get the genuine unadulterated article, just as if he had purchased it from the bonded bottling-house. The druggist who sells it to the New York patient has the satisfaction of knowing that he is giving his customer just what he wants to give him. The druggist has the little green stamp of the Government to do the recommending and guaranteeing to himself, as well as to the patient. There is a fixed standard of proof for New York, Kentucky and every other State alike. Quality will, of course, vary according to the brand—its method of manufacture, the care in its maturation, will cause this; but the essential feature which makes the bottling of whiskey in bond of interest to the druggist is, that the Government's absolute guarantee is behind it. It gives whiskey in the eyes of the physician a value which it had altogether lost, because of the ubiquitous substitute by which druggists themselves were often duped; for the substitute often tastes like, and analyzes like, the genuine, while its physiological effect is deleterious.

Significance of the Stamp.

The sooner the people begin to recognize the national significance of the little green stamp over the cork, the better for the public health. From the hospitals, the house of the invalid and the physicians has long come the question, "Since we must use whiskey, why can we not get it unadulterated?" The druggist has attempted to answer this question, and taken every precaution to furnish what was desired, but he has too often been unable to do this. Congress has now answered with the Bottling-in-Bond Act. The little green stamp is over the cork, or it is not there.

Both the druggist and the customer can distinguish it at a glance.

THEORY AND PRACTICE

ESTIMATION OF IODINE IN OILS.

L. Lafay (Bull. des Sciences Pharm.) states that the iodized oils of commerce usually contain much less iodine than advertised, and frequently hold in solution a considerable quantity of chlorine. For determining the quantity of iodine either alone or in the presence of chlorine, he recommends the following method: One gram of the oil is saponified and evaporated in a nickel, iron or copper crucible with 5 or 6 grams of caustic potash free from chlorine, and 5 or 6 Cc. of alcohol. When the residue begins to darken the crucible is covered and the heat continued until the mass froths up and the organic matter is destroyed. The residue is exhausted with water, and the solution acidulated with sulphuric acid and transferred to a 500 Cc. flask. Twenty or thirty Cc. of carbon disulphide, previously washed with potassium permanganate, and a few drops of concentrated solution of sodium nitrate are added, and the mixture well shaken for five minutes. The aqueous solution is transferred to a 2-litre flask and the traces of iodine still remaining removed by washing with fresh portions of carbon disulphide. The iodine is determined by titration with hyposulphite solution. To determine both iodine and chlorine, the calcined residue is treated with nitric acid, and both halogens precipitated with silver nitrate, the chloride being separated from the iodide by means of a solution of sesquicarbonate of ammonia.

SUBSTITUTES FOR MEAT EXTRACTS.

H. Zehner (Chem. Centr.) has studied the yeast extracts which have appeared on the market as substitutes for meat extract under the names, "Siris," "Ovus" and "Wuk." These three preparations are obtained from beer yeast. In preparing "Ovus," the yeast is steamed and the fluid mass obtained concentrated in vacuo until it has reached the required consistency. The product has a faint odor, dissolves in cold water to a turbid liquid, reacts faintly acid, and has a strong saline taste. "Wuk" is obtained from yeast suspended in an equal volume of water at 60 to 70 degrees C. and forms a light brown extract having a faint odor. "Siris" is prepared by the action of ether on yeast and concentrating the extract obtained. An analysis of this product by Fresenius gave the following results: Water, 29.54 per cent.; ash, 17.29; nitrogenous organic substances, 49.5 (ammonia, 3; albumoses, 84; substances precipitated by cupric hydroxide, 5.74; and nitrogenous extract substances, 42.6), gum, 3.65; substances extracted by ether, .07 per cent. The author thinks that yeast extracts can satisfactorily replace meat extracts as far as flavor and odor is concerned, but that they do not contain the valuable extractive matters and stimulants of genuine meat extracts.

FORM OF SILVER IN COLLOIDAL STATE.

M. Hanriot (Comptes rend.) is of the opinion that collargol and probably also other forms of colloidal silver are not merely metallic silver in a peculiar form, but salts of an acid, collargotic acid. When a solution of collargol is subjected to electrolysis, the black deposit formed on the positive pole is not metallic silver but a precipitate of this acid. The acid dissolves in alkalies producing a characteristic red color. Precipitation formed by metallic salts in solutions of collargol are never pure silver. Observers have noticed that it is impossible to obtain colloidal silver in an absolutely pure state, 68 per cent of silver being found the highest degree obtainable; when this is exceeded the result is ordinary metallic silver. The author has also isolated collargotic acid by treating collargol with acetic acid.

THE IODIC ACID TEST FOR MORPHINE.

N. A. Orlov (Farm. J.) states that the decomposition of iodic acid by morphine in acid solution is irregular and that the well-known qualitative reaction can not therefore be employed for quantitative determination of the alkaloid. The reaction is influenced by the amount of acid present, the temperature and the duration of action. Concentrated solutions of morphine cause immediate reduction with the separation of iodine, while in weak solution the reduction takes place only after standing, but is accelerated by the addition of sulphuric acid and still more by heating the mixture. The separated iodine seems to combine partially with the alkaloid.

POISONING BY CARBON DISULPHIDE.

H. G. Haupt (Chem. Zeit.) has studied the toxic effects of carbon disulphide employing, for the purpose of studying its effect on animals, subcutaneous injections of a solution in olive oil. In frogs 1.25 to 3.7 C. c. per kilo body weight was a fatal dose. No apparent effect was produced upon the blood except the darkening of the liver blood. Mammals showed signs of asphyxiation. Various organs were affected, the liver most so. Carbon disulphide is absorbed by the blood in the lymph glands and the veins. It decomposes the blood, an aqueous solution containing 5 to 8 parts per 1000 dissolving haemoglobin and producing so-called haemolysis and a precipitate of unknown composition.

CHLOROFORM IN THE PREPARATION OF CALF LYMPH.

In place of the fermented beef vaccine A. B. Green, of a paper read before the Royal Society, recommends the use of a vaccine from which extraneous bacteria have been eliminated by the use of a saturated solution

of chloroform in distilled water. It is stated that the extraneous bacteria are eliminated in from one to six hours, but the specific germ remains fully potent for vaccination. After the chloroform has done its work, it can be evaporated off entirely, and another advantage is that the vaccine could be distributed within a few hours of its collection from the calf—Pharm. Journ.

COMPOUND GLYCERIDES IN OLIVE OIL.

D. Holde (Berichte) has isolated from olive oil a mixed glyceride which by the action of Huhl's iodine solution yields a crystalline addition product. It contains oleic and palmitic acid radicals, in the proportion of one to two molecules. It is suggested that the presence of these compound glycerides may aid in explaining why oils which yield a large proportion of acids of high melting point do not solidify at corresponding temperatures, these mixed glycerides remaining fluid at ordinary temperatures.

RODAGENA.

A diet of goats' milk derived from animals whose thyroid glands have been removed is one of the most effective means of treating Basedow's disease (Pharm. Central.). To avoid the nausea which is the result of this treatment, a preparation called rodagena and containing the solid constituents of this special goats' milk and an equal quantity of lactose has been prepared. It is given in daily doses of 75 to 150 grams, and is said to possess all the therapeutic properties of the milk without disturbing the stomach.

OIL OF THE MONARDAE.

J. W. Brandel and J. J. Beck (Pharm. Rev.) gives some of the properties of the oils of different species of Monardae. Oil of Monarda didyma has a sp. gr. of .902 and an optical rotation of minus 10 degrees. It does not contain thymol or carvacrol. The yield is about 14 C. c. from 100 pounds. The oil from the corolla of Monarda fistulosa has a specific gravity of .958 and contains carvacrol, thymoquinone and thymoquinone. The oil from the leaves of the same plant has a specific gravity of .924.

SYNTHETIC HYPNOTICS.

Fischer and Mering (Pharm. Zeit.) find that the alkyl substituted acetyl and malonyl ureas possess very powerful hypnotic properties. The di-ethyl and di-propyl derivatives are the most effective, the ethyl-methyl compound having but a slight effect and the dimethyl derivative practically no action. A typical compound of this class is veronal, a crystalline substance soluble in water, having a slightly bitter taste and melting at 191 degrees.

ATROPINE METHYLBROMATE.

Methylbromate of atropine is a new salt of the alkaloid which has markedly less effect upon the heart than the free alkaloid (Jour. de Pharm. d'Anvers). It forms white crystals which are soluble in water and in dilute alcohol. Two drops of a one per cent. solution applied to the eye, produce dilatation of the pupil which disappears in four hours. It is also employed in doses of one tenth grain at night to check excessive sweating in phthisis.

ADULTERATION OF CITRONELLA OIL.

C. P. Hayley (Chem. and Drug.) states that oil of citronella containing as much as 15 per cent of petroleum will pass Schimmel's test. The statement of Parry and Bennett that resin spirit is used as an adulterant is disputed, the opinion being given that the adulterant used is Russian kerosene which can be easily and cheaply obtained by the natives who prepare the oil.

APOMORPHINE.

R. Pechorr (Berichte) shows that both of the two oxygen atoms of apomorphine are present in phenol-hydroxyl groups, and that the compound is a derivative of a phenanthrene group. This is contrary to the generally accepted view that one of the atoms has an etheral function and the other a hydroxyl

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Spavin in Horses.

(G. E. D.) The following treatment is recommended: During the inflammatory stage let the animal have rest, and apply cooling, evaporating lotions to the parts. The attached formula is said to produce a good application for the purpose:

Acetic acid	4 ounces
Water	2 pints
Diluted alcohol	2 ounces
Common salt	3 ounces

Apply as follows: Take a piece of sponge, slightly concave, corresponding as nearly as possible to the form and size of the hock, dip it in the mixture, and by means of tape secure it to the inside of the hock. After this keep the sponge constantly moist with the lotion. The inflammatory symptoms will soon subside, and anchylosis—which appears to be the only cure for spavin—will progress in a slow, yet favorable manner, without the usual pain and irritation. This treatment is recommended by a well-known veterinary surgeon as coming within your requirement, that the hair must be not removed.

"Veterinary Counter Practice" states that "the treatment of spavin commonly adopted is that of blistering and rest, with, if possible, a run at grass or three months in a straw yard. In blistering for the cure of bony growths we should always advise biniodide of mercury of a strength varying from 1 to 7 to 1 to 12 of vaseline, or lard, or lanoline. Some veterinarians prefer goose-grease as more penetrating, and having in itself a mollifying influence upon stiff joints."

Physiological Effects of Fusel Oil.

(Druggist) Fusel oil is said to produce the peculiar nervous and dyspeptic symptoms of those consuming large amounts of alcoholics; according to some authorities, the rapid intoxication produced sometimes being attributed to this body, occurring as an adulterant. Small doses are said to produce a tensile pain in the head, while in excessive quantities insensibility and profound narcosis result. Among the poisonous symptoms which have been reported are giddiness, staggering, headache, diplopia, unconsciousness, reduction in temperature, rigidity and subsequent relaxation of the muscles, marked cyanosis and death.

In this connection the authors of the National Dispensatory quote the record of a case in which about four ounces of the oil were swallowed. The respiration ceased, but the heart continued to beat. Life was revived by stimulants, including hypodermic injections of ether. The breath, etc., exhaled a strong fruity odor. According to the experiments of Rabuteau (Allen's Commercial Organic Analysis) amyl alcohol, the principal constituent of fusel oil, produces intoxicating effects of a similar kind to those due to ethyl alcohol, but fifteen times as intense. The researches of other observers have shown that the

physiological effect of the alcohols increases with the number of carbon atoms. Brockhaus who personally investigated the effects of propyl, butyl, and amyl alcohols on the system, found the disagreeable symptoms to increase with the molecular weight of the alcohols, and amyl alcohol itself proved to be a very violent poison.

Wood Filler.

(D. V. M.) The agent to be used for a "filler" depends much on the quality of the wood and the experience of the user. The following formulas have been recommended:

(1)
Four parts of white wax are added to three parts of oil of turpentine and the whole is heated in a flask or bottle, immersed in hot water, until the wax is liquefied and almost dissolved. It is then allowed to cool, and when it begins to turn white and harden, two parts of strong alcohol are added, under stirring. This mixture is applied by means of a woolen cloth, and thorough friction. The alcohol may be increased to four parts, but the friction must then be continued for a longer time.

(2)
One pint of linseed oil, together with 2½ ounces of alkannin root, are heated to boiling in a clean pot over a slow fire, and kept at a gentle boil for about two hours. When cool, the mixture is applied in a thin layer to the wood, and after the lapse of 24 hours, well rubbed in.

(3)
The best polish, particularly for fine woods, is milk! After all dirt and dust has been carefully removed, good fresh milk is applied to the wood, and well rubbed in with a woolen rag, until all moisture has disappeared. This must be repeated several times, and in the case of new utensils should be done once a week. Milk has this preference, that its fatty substance answers the same purpose as linseed oil, and its other constituents act as a filler, while it leaves no disagreeable flavor. For some light colored woods sublimed sulphur with boiled oil make a very good filling.

Marrow Pomade.

(A. B. B.) Try one of the following:

Beef marrow	16 ounces
Beef suet	8 ounces
Palm oil	8 ounces

Heat them together on a water bath for half an hour, then strain with pressure and perfume suitably.

Prepared lard	4 pounds
Prepared suet	2 pounds
Oil of lemon	1 ounce
Oil of bergamot	½ ounce
Oil of cloves	3 drams

Melt the fats and add the perfume.

(3)
Oriental Pomade.—Benzoyated lard, 6 pounds; benzoated beef-tallow, 2 pounds; oil of bergamot, 2 ounces; oil of cloves, 1½ ounces; oil of neroli, 5 drams; tincture of musk, ½ dram. Color red with alkannin or eosin.

(4)
Piesse gives the following formula for the "pomade called 'bears' grease':"

Rose oil	½ pound
Orange-flower oil	½ pound
Acacia oil	½ pound
Tuberose and jasmine oil	½ pound
Almond oil	10 pounds
Lard	12 pounds
Acacia pomade	2 pounds
Oil of bergamot	4 ounces
Oil of cloves	2 ounces

Melt the solid greases and oil together by water bath, then add the oils. Bears' grease thus prepared is just hard enough to "set" in the pots at a summer heat.

C. W. PETERS, Sharpsburg, Ky.
President Kentucky Ph. A.

Mr. Peters who was elected president of the Kentucky Ph. A. at Estill Springs last month, was born in 1852 in Bath County, Ky., went into the drug business in 1874 as clerk at Owingsville, and removed to Sharpsburg in 1882 where he has been engaged in the drug business ever since. Mr. Peters is very popular and has a large and increasing business.

To Preserve Garlic.

(G. E. D.) The usual way to preserve garlic is to hang it up in a cool, dry place. This method, however, only applies to preserving the bulbs from one season till the next. To keep the bulbs longer, the following plan was recommended in 1864 by A. P. Sharp in answer to a query of the A. Ph. A.: At the proper season carefully select the quantity needed, and after depriving the bulbets of their superfluous leaves, stems, etc., place them in a bottle provided with a good stopper, and pour upon them a small quantity of alcohol, say about two ounces to a quart jar. The vapor of the alcohol is soon absorbed by the bulbs and destroys their vitality, and, in consequence, their tendency to germinate. Garlic thus treated can be kept, it is said, for years, with all its virtues unimpaired!

Lactis Recentis.

(S. B.) I received a prescription recently reading as follows:

R. Lq. calens
Lactis recentis.....aa3ij.

M.

What is "lactis recentis" and what is the formula? "Lactis recentis" is the Latin for "fresh" or "new milk," from "lac," milk, and "recentis," fresh, new or recent.

As a remedy in nausea or vomiting, either alone or attendant on other disease, milk associated with lime water, in doses according to the severity of the case has long been considered most valuable.

Raspberry Sugar.

(Pounded.) An old formula for raspberry sugar follows: Put a bushel of sugar up side down, and pour, in small quantities at a time, well fermented filtered raspberry wine containing a little citric acid. Then let dry in a warm place. Repeat this operation if considered necessary. Dry and cut. Other fruit essences may be made similarly.

GATHERED FORMULAS.

Glue Paint for Kitchen Floors.

To three pounds of spruce yellow add one pound or two, if desired, of dry white lead and mix well together. Dissolve two ounces of glue in one quart of water, stirring often until smooth and nearly boiling. Thicken the glue water with the yellow and white lead after the manner of mush until the mixture will spread smoothly on the floor. Use a common paint brush and apply hot. This will fill all crevices of rough floor. It will dry soon, and when dry apply dry linseed oil with a clean brush. In a few hours the floor will be found dry enough to use by laying papers or mats on for a few days. When the floor needs cleaning, use hot suds.

Poultry Spice.

- (1)
Capsicum 1 dram
Lentils 2 ounces
Bray 2 ounces
Oatmeal 4 ounces
- (2)
Capsicum 1 dram
Gentian 1 dram
Foenugreek 2 ounces
Licorice root 6 ounces

The former preparation is recommended for fattening fowls and stimulating egg-laying; the latter is a general tonic and said to be a stimulant to egg laying during cold weather.

Paste for Patent Leather.

Melt pure wax over a water bath, place on a moderate coal fire, add first some olive oil, then some lard, and mix intimately by stirring, next add some oil of turpentine, and finally some oil of lavender, fill the resulting paste in boxes, where, on solidifying, the necessary consistency will be acquired. To restore the gloss of the leather, apply a little of the paste and rub with a linen rag. This will keep the leather soft and prevent cracking.

China Cement.

- Isinglass 1 ounce
Mastich (in powder) 80 grains
Glacial acetic acid 4 ounces
Water 2 ounces

Soak the isinglass in the water, and when all has been absorbed, add the acid previously mixed with the mastich. Heat gently till a clear solution is obtained.

Excessive Sweating of the Hands.

- Boric acid 5 parts
Gorax 15 parts
Salicylic acid 15 parts
Glycerin 60 parts
Dilute alcohol 60 parts
- To be rubbed on three times a day.

Carpet Cleaner.

- Sonp 6 1/2 pounds
Sul soda 3 pounds
Water of ammonia 1 quart
Methyl alcohol 1 pint
Water 12 quarts

Sea Salt.

- Salt 20 parts
Sodium bicarbonate 1 part
Magnesium sulphate 4 parts

This mixture will not become moist and can be put up in cartons or paper packages.

Blue Bed Bug Poison.

- Corrosive sublimate 1/2 ounce
Alcohol 12 ounces
Spirits of turpentine 4 ounces
Blue aniline 5 grains

NEWS DEPARTMENT.

NEW YORK AND VICINITY.

VACATION DAYS ARE HERE.

And We Are All Going Away on More or Less Extended Trips to Sea, Lakes, Mountains and Woods.

Vacation announcements are beginning to be heard, though many are staying in the city later than usual because of the cool weather. But when August moves in many of our druggists, both wholesale and retail, will move out. Some retail recreationists:

Charles A. Hanson, 244 Sixth avenue, will drop down to Atlantic City with Mrs. Hanson as soon as his "boys" get back from their vacation. Clarence O. Bigelow and his family are living at Allenhurst, N. J., during dog days.

George E. Schweinfurth, Charles H. White and Otto Boeddiker are away for a fishing trip in the Pocono mountains, Pa. Each insists that he wants to fish, anyway, whether the others do or not.

R. Schenck of the Schenck Drug Co., Broadway, is getting dreamy over a trip to Europe next month, which he makes every year to buy chemical specialties and have a rest. John Kiehl, 105 Third avenue, tries Monticello, N. Y., in August. F. O. Collins, just above Mr. Diehl on Third avenue, will take his family to Dingman's Ferry, Pa., late next month. Mr. Collins does not design to fish, but to rest, and he puts in hours swinging under the trees in a hammock reading "something light." Zachary T. Benson, 2334 Third avenue, is now beside country forests and streams and will stay there until the end of August. Of course, his family is along.

Mr. Caswell of Caswell & Massey, is in Newport with his family. Mr. Massey's vacation is interspersed with business all summer and he makes trips nearly every week to Montreal, occupying Friday, Saturday and Sunday. Last summer was his first real vacation in years, when he went to Europe. William G. Greenawald of the Greenawald Drug Co., Broadway, will make a bee-line for London, his favorite European city.

John B. Sawdon of Cameron & Sawdon, Broadway, went to London, Ont., Can., with his family. London is his old home. Fred Borggreve, manager of the Bates pharmacy, Forty-second street and Sixth avenue, is just as popular in White Plains as here. They have gotten on to his faculty for getting up entertainments and he says it is almost as much work there as at home in the store. Emil Koller of Fifty-sixth street and Ninth avenue, will have a fishing and hunting vacation in August, staying with friends in Nyack, this State.

George A. Hitchcock of Kellogg & Co., 1031 Sixth avenue, will join his family at Conoshaugh, Pike county, Pa., in a week or two, and will have it easy for a couple of months. C. L. Kellogg of the company, is just back from a long rest in Homer, Portland county, this State. Charles S. Erb and Sidney Faber both had a few days in Philadelphia. Mr. Faber gets many pleasant days aweek, as do several other of his friends, so with them long vacations are not so popular.

Of course, Dr. William Muir is up in the Catskills as is usual in summer. Frederick P. Tutbill's

family is there with Dr. Muir's and Dr. Tutbill runs up semi-occasionally.

The A. Ph. A. in northern Michigan will be the mecca of many vacationists. R. R. Lampa, head of Lehn & Fink's traveling department, is looking forward with pleased anticipation to the trip. Dr. William C. Anderson and Mrs. Anderson will go. Dr. E. A. Sayre of Seabury & Johnson, is bound for there and has been hustling for weeks getting his work in shape to leave.

Some other vacations, well deserved, are those of J. J. Kane, general pricer at McKesson & Robbins, who has been at his post without absence for several years; D. Costello, manager of Caswell, Massey & Co.'s store at 1122 Broadway, who goes to his home in Indianapolis; S. Wyzant, manager of the prescription department of the same store, who tried Newport; Harry Hebblewhite, also of the same store, who went to the Pennsylvania mountains.

Will R. Anderson, who is well known as a member of Sharp & Dohme's office staff and as the writer of "Tessie" the "Silver Slipper" song hit, and other hits, is spending his vacation in the Catskills.

C. A. Atkins of Millau's, Broadway, is back, nicely bronzed, from a duck-shooting vacation in Charleston, S. C. William J. Gesell of Lehn & Fink, is just back from his trip abroad.

S. F. Haddad, the retailer at 89 Broad street, is having a good time in Lake Champlain regions for a few weeks. Gustave Ramsperger, one of the two surviving charter members of the German Apothecaries' Society, is having a long vacation in Europe, as is Carl E. Kessler, of 621 Second avenue, another good G. A. S. member. President Henry Imhof of the G. A. S., is away with his family in the country as is usual with him in summer.

Samuel Owen of Kress & Owen Co., the patent medicine people, has gone for his summer vacation in Europe. M. J. Breitenbach of the M. J. Breitenbach Co., is another New Yorker in foreign climes, as is George J. Seabury of Seabury & Johnson, who took in the international rifle match with his usual enthusiasm before moving on.

J. LeRoy Webber of Webber-Pepsin fame, for some years past associated with Bristol, Myers & Co., sailed on July 16 via North German Lloyd S. S. Bremen, and will make an extended European tour. His main objective points are London and Paris.

Ernest Stauffen, secretary-treasurer and general business manager of Sharp & Dohme, sailed on the 16th, also, for a month abroad. Louis Dohme will be in general charge of the New York office until his return.

At the Plaza Hotel, Asbury Park, A. Major, the popular Major's cement man, may be seen almost any evening now. Accompanying him are Mrs. Major and Lillian Dyott Major. Spencer Robinson of Hamill & Gillespie, is rusticiating up in Sullivan county nowadays.

F. Ehrmann of Lehn & Fink, locked up his desk this week and he and Mrs. Ehrmann are on board the Hamburg line S. S. Bleecher. Four weeks in Switzerland and then a trip along the Rhine will occupy their ten

PROFESSOR CHARLES EDWARD CASPARI.

The St. Louis C. P. elected Professor Charles Edward Caspari as professor of chemistry. Dr. Caspari is the son of Professor Charles Caspari, Jr., professor of pharmacy at the Maryland C. P., and secretary of the A. Ph. A. He was born in Baltimore and received his early education in the public schools of that city. In 1893 he entered the Johns Hopkins University and in 1896 received the degree of B. A. Continuing the study of chemistry under the guidance of Professor Remsen, he took four years of post-graduate work at Johns Hopkins and in June, 1900, received the degree of Ph. D. During his last year at the university he was Professor Remsen's assistant. From 1900 to 1901 he taught organic chemistry at Columbia University, New York City. In September, 1901, he entered the employ of the Mallinckrodt Chemical Works of St. Louis, where he has since been active in conducting their research work and directing their analytical department. Professor Caspari having grown up in an atmosphere of pharmaceutical chemistry, will prove a very valuable addition to the teaching force of the college.

weeks' vacation. F. Wichelns, the Greenwich street druggist, is making frequent visits at Mount Kisco, where his family is summering.

Every afternoon at 4 o'clock when the Asbury Park leaves her dock there are to be found in one corner Edward E. Wells of the M. J. Breitenbach Co., Brent Good of the Carter Medicine Co., who both live at Monmouth Beach, N. J., and Herbert B. Harding of the Humphreys Homeopathic Medicine Co., who lives at Highland Beach in summer. They put in most of the time singing anthems. Mr. Wells, who is deacon in the Rev. Dr. Abbott D. Kittredge's church, and his pastor play golf most of the time when at home. Arthur A. Stilwell is also an Asbury golfer, though Mr. Harding, who wields a stick himself, insinuates he is better at high balls than low ones. By the way, Mr. Harding has a little new grandson whom he is already talking of as a caddy. Albert Hunt of Lahn & Fink, goes down on the boat also, and so do John and Clement McKesson of McKesson & Robbins, and Moritz Bener, the Hoff's Malt Extract man. Mr. and Mrs. John McKesson are awed a great deal.

Charles H. Fletcher of the Century Co., is at Belmont, N. J., but is not well. Joseph Leeming of Thos. Leeming & Co., has a cottage on the Hudson, opposite Spavon Duvois, and is not going moosehunting this year. Samuel A. Bowne of Scott & Bowne, is in Europe.

The girls employed by the Humphreys' Homeopathic Medicine Co. get two weeks each and, if they desire, they are entertained free of expense at "The Helen Humphrey Rest," Copake, in the mountains of this State. The rest is connected with the Church of Heavenly Rest, this city, and was founded by the late Dr. Frederick Humphreys.

Dr. Virgil Cobbletz and family spent July in camp in the woods at Allens Mills, Farmington, Me. Raymond J. Nestell, instructor in analytical chemistry, New York C. P., and wife are at Constable, this State. President Charles F. Chandler of the college, is in Europe, part of his mission being attendance upon the meeting of the Society of Chemical Industry. Oscar M. Read, well known to McKesson & Robbins patrons, is at Cold-Springs-on-the-Hudson. Richard Hodnut, the druggist and perfumer, is at Narragansett. Colonel J. W. George, likely the best acquainted man in the jobbing trade and not the least popular, has deserted his desk at Schieffelin & Co.'s, and is taking life easy on Block Island, where every sailor knows him. Mayor J. J. Riker, senior member of J. L. & D. S. Riker, manufacturers' agents, left on Saturday for a three weeks' trip abroad.

Horatio N. Fraser, president of the Fraser Tablet Triturate Mfg. Co. and head of Fraser & Co., is just back from a trip through Europe. F. W. Kinsman, druggist at One Hundred and Twenty-fifth street and Eighth avenue, is having a \$5,000 cottage built in the Roach river region, Maine, where he spends his holidays. Dr. N. W. Hoffman, the N. A. R. D. organizer for this city, is in the New England States visiting and incidentally doing some organization work.

TRANSPORTATION TO BOSTON.

The usual concession of one and a third fares for the round trip to all persons attending the conventions, of the N. W. D. A. and P. A. of A. during the week of September 7, at Boston, who hold certificates from the ticket agent from whom tickets are purchased at the starting point, has been granted, so that the reduced rate will be available from all points east of the Rockies. Tickets not to be purchased earlier than September 3, nor later than September 9. Return tickets good for three days after adjournment, not counting Sunday.

Full fare must be paid to Boston and one-third fare will be charged for the return to those who present the certificate properly indorsed by Secretary J. E. Toms and the agent of the passenger associations, who will be in attendance at the convention on September 9 and 10. A certificate must be procured for every ticket. If going on the N. Y., N. H. & H., baggage is to be checked to Back Bay station. Boston & Albany R. R. baggage should be checked to Huntington avenue. The committee on transportation is composed of: Thomas P. Cook, chairman, New York; John M. Peters, New York; Frank A. Faxon, Kansas City, Mo.; I. A. Solomons, Savannah; P. P. Van Fleet, Memphis; H. Behrens, Waco, Tex.; C. H. West, St. Louis; L. L. Pope, Cleveland; A. M. Reid, Atlanta; E. H. Buehler, Chicago; Romaine Pierson, Chicago; Adolph Mack, San Francisco; William M. Warren, Detroit; E. J. Conger, Shreveport, La.

VERY SPECIAL

A limited number of five druggists in the larger cities will hear of an attractive proposition, by communicating with

J. N. FERRIER

P. O. Box 71. NEW YORK CITY

STATE PH. A. COMMITTEES.

President William C. Anderson of the New York Ph. A., has appointed the following committees:

Legislation: William C. Anderson, Brooklyn; William H. Rogers, Middletown; William Miller, Brooklyn; George Kleinau, New York; George E. Thorpe, Syracuse; Warren L. Bradt, Albany; Thomas Stoddart, Buffalo.

Transportation: George Reimann, Buffalo; J. A. Kreizer, Salamanca; William R. Mandelbaum, New York; Albert Hamilton, Elmhurst; James E. Huested, Albany; Clark Z. Otis, Binghamton; Rufus E. Smith, Syracuse; C. S. England, Utica; Charles H. Butler, Oswego.

New remedies: Thomas J. Keenan, New York; Willis G. Gregory, Buffalo; George C. Diekmann, New York.

Pharmacy and queries: Frederick P. Tutthill, Brooklyn; Burr E. Nelson, Binghamton; William A. Dawson, Hempstead.

Adulterations: Henry W. Schimpf, New York; Edgar L. Mayo, Elmhurst; Charles D. Hibley, Syracuse.

Commercial interests: Judson E. Todd, Ithaca; Thomas W. Dalton, Syracuse; Osear Goldman, New York; Daniel J. Wood, Amsterdam; Osear C. Kleine, Jr., Brooklyn; Ulrich Wiesendanger, Yonkers; S. A. Grove, Buffalo; Byron M. Hyde, Rochester; Silas W. Tobey, Jr., Hudson; Gordon L. Hager, Rome; Peter J. Lutz, Elmhurst; Charles F. Brown, Cortland; Carman R. Lush, Hempstead; Joseph A. Downs, Ithaca; Charles F. Fish, Saratoga Springs; John E. Wynnan, Gloversville; A. S. Van Winkle, Hornellsville; R. C. Tutthill, Jr., Middletown; Orrel T. Larkin, Plattsburg; Clinton E. Williams, Ogdensburg; Edgar C. McKellar, Binghamton.

President Anderson also appointed the following delegates:

A. Ph. A.: Thomas Stoddart, Buffalo; Clay W. Holmes, Elmhurst; Casewell A. Mayo, New York; A. B. Huested, Albany; W. C. Anderson, Brooklyn.

N. W. D. A.: George J. Seabury, New York; S. H. Carragan, New York; W. J. Walker, Albany; J. L. Hopkins, New York; Charles Hubbard, Syracuse.

Pennsylvania Ph. A.: A. S. Van Winkle, Hornellsville; George E. Thorpe, Syracuse; Victor S. Cole, Corning.

New Jersey Ph. A.: W. R. Mandelbaum, New York; Mrs. B. G. Rutherford, Brooklyn; Clarence Miller, Newburg.

Massachusetts Ph. A.: Osear Goldman, New York; A. B. Huested, Albany; A. W. Rice, Hudson.

Connecticut Ph. A.: Warren L. Bradt, Albany; A. L. Goldwater, New York; G. H. Hitchcock, New York; Ohio Ph. A.: Gottlieb Bastian, Dansville; Joseph Weinstein, New York; E. A. Swanson, Jamestown.

Delegates to the N. A. P. D. will be appointed as soon as it is decided how many the State association is entitled to.

AND THEY ALL WENT OUT AND PLAYED.

Wednesday was a big day for the Rochester Ph. A. It was the third annual outing and there was a very large attendance, the druggists, their wives and sweethearts going in tallyhos to the Newport House, on the shore of Irondequoit Bay, where the affair was held. On the way down the tallyhos created interest. On the sides were immense pictures of the skull and cross bones, and the object of the outing was announced to be to extract pleasure from the fleeting hours.

A small rain interfered somewhat with the athletic features, and the baseball game between the East and West Sides, captained respectively by E. E. Chilson and H. B. Guilford, was postponed. The high jump was won by W. H. Gram, but there was no tape long enough to measure the leap. H. B. Guilford was a close second and C. E. Nagle third. Guilford was in the winning stride for the broad jump, and won a case of wine; D. H. Moore, second. The ladies strove manfully in the hundred yards' dash, and Miss Maple got first prize, Mrs. Hendrick second and Mrs. Lutt third. H. Hallock proved to be the best hop, step and jumper, while Moore came in second. Miss Maple was the best long-distance ball thrower, form also being considered. Miss McBay was second and, to keep it in the family, Mrs. McBay was adjudged an easy winner of third prize.

In the shoe race, Hallock won first, O. Moore second, and Guilford third. The fifty-yards dash for ladies was an exciting affair, with victory for Mrs. McBay. Mrs. Hadwick was second and Mrs. Guilford third.

The jollification was increased by the thoroughly-satisfying dinner served by Landlord William Sours. The committees for the affair were: Arrangements—H. B. Guilford, J. A. Vanderbelt, D. H. Moore; prizes—George L. Page, C. E. Nagle, William R. Hall; games—George Hahn, Oscar Lutt, H. B. Newman; reception—Mrs. W. T. McBay, Mrs. H. B. Guilford, Mrs. H. B. Newman, William T. McBay, George A. Mitchell, C. E. Nagle.

SOME NEW YORK COLLEGE ALUMNI.

John W. Patton, '98, and Mrs. Patton came up from Birmingham, Ala., and renewed acquaintances.

A. J. Palmer, '97, Americus, Ga., has been chosen to fill the chair of theoretical and applied pharmacy in a new college in that State.

John B. Luther, '03, has been appointed assistant to Prof. J. S. C. Wells, quantitative and analytical chemist at Columbia University.

William H. Wilson, '99, is now chief chemist for the Franklin Iron Works, near Utica, this State.

Miss Edith Morris, '02, has resigned as apothecary at the General Hospital, Paterson, N. J., because of ill health. Her place will be taken by Miss Lillian L. Levine, who has resigned for that purpose from St. John's Riverside Hospital, this city.

Dr. Fanny Robinowich, '00, is now a Mrs. It is said that her father bestowd \$30,000 and a house on her as a dot.

Miss Adele M. Thayne has resigned from the Eye and Ear Hospital, Twenty-third street and Third avenue, this city.

Max Levy has returned from his position as assistant chemist for the American Borax Co., at Daggett, Cal. Too hot there he says.

Guy H. McCoy, '96, is now assistant treasurer of the Hamilton Bank & Trust Co., Smethport, Pa.

Miss Eva Watson, '03, is clerking now at Wray's pharmacy, Yonkers, N. Y.

NEW PHARMACISTS IN THIS SECTION.

The following thirty-seven were granted pharmacists' licenses at the last examination by the Eastern branch.

Charles Banson, Victor Feitsen, Jos. S. Gross, Chas. E. Heyl, Clarence Y. Hubbs, Arnold Lewinsohn, Henry F. Nielson, James A. Orr, Max Oshlag, Jay R. Putnam, Wm. J. Quinn, Herman A. Schwarzwalde, Max Silverman, Charles J. Ipiess, August Stoff, Henry M. Thompson, Leon J. Trophy, Raphael Wiberg, Charles Wilhelm, Jr., Benjamin A. Betts, J. Francis Burt, Harry R. Clayton, Harlow E. Dunton, Herman Ilo, Jacob Kahn, David Katz, Elbert Laue, Denis J. McDonald, Morris Perla, Charles Rosentover, John P. Taylor, Katie Tulch, Le Roy D. Webster, Anna Weindrug, Samuel Weiss, Abram R. Witt. Homeopathic pharmacist: Fred W. Schaefer.

WILMOT CASTLE CO.,
26 Elm Street, Rochester, N. Y.

ELIZABETH—IN THE NECK.

At last!

It is settled.

The Bayonne, N. J., druggists' base ball team and the Elizabeth, N. J., druggists' base ball team have met. A local paper said it was the first time in the history of the national game that teams composed of pillmakers had contested. The local paper has another guess.

Bayonne's frisky apothecaries had been telling what they could do to Elizabeth for months. They practiced with the preachers'; the lawyers', the doctors', the married men's and the unmarried men's teams and with the small boys. Then they would buy silence as to scores by setting up the soda water. But the game was finally arranged for last Thursday. Every druggist in Jersey who could get away was there.

Nine full innings; 12 @ 11; Bayonne wins. This was the line up:

Bayonne.	Elizabeth.
J. Cadmus, 3 b. p.	Rogers, c.
William Whitehead, p. 3b.	Eggers, c.
Dunne, c.	E. W. Parsons, l. f.
Gannon, 1 b.	Frank C. Stutzlen, 1 b.
C. H. Landell, s. s.	Israel Strauss, s. s.
N. Cadmus, 2 b.	William R. Richart, r. f.
Max W. Strauss, c. f.	Wimmer, c.
John N. Peterson, l. f.	Epstein, p.
J. H. Burball, r. f.	George H. Horning, 3 b.
	V. Richart, c. f.
	Palmer, c. f.
	Fantz, c. f.

Score by innings:

Bayonne	2	0	2	1	4	0	0	2	1	—12
Elizabeth	0	0	0	3	3	1	2	2	0	—11

Two-base hits—J. Cadmus, Dunne, N. Cadmus, Eggers, W. Richart, F. Richart. Three-base hit—F. Richart. Left on bases—Bayonne, 5; Elizabeth, 10. First base on errors—Bayonne, 6; Elizabeth 5. Struck out—By Whitehead, 8; by Cadmus, 2; by Epstein, 8. Time, 2:40. Umpire, Druggist Lewis W. Brown.

The game was for blood. Every decision was protested. All conch-like fiends. Umpire Brown is now in the funnyhouse. At the beginning of the ninth the score stood 11 and 11, Elizabeth to bat. Cadmus went in to pitch. Strauss singled, Richart and Horning fanned and Epstein was thrown out at first. Then Bayonne went in and the crowd stood up. Landell, first up, hit safe. He went to third on N. Cadmus' drive and scored on a passed ball.

A return game will be played in Elizabeth. Today, according to arrangement, the Bayonne druggists are playing the doctors. The fever is spreading and Henry Heineman, clerk for Druggist C. H. Bose, is organizing a nine of Bayonne drug clerks and is ambitious to arrange the first game with the drug clerks of Elizabeth.

JERSEY CITY'S FREE DISPENSARIES.

Jersey City has opened her free dispensaries again. This is the second season and is the continuance of a scheme that was found to be very successful last summer. Each dispensary is in a drug store and has a physician who remains on duty from 5 to 6 p. m., and from 8 to 9 p. m. every day. The board of finance pays for the dispensaries under an appropriation.

The first ward dispensary is at W. R. Laird's Washington near York street. It is near the tenement section and several big industries. Mr. Laird says there are no experiments of race suicide around him and that he had hardly get ready for business the first day before the store was full of mothers with ailing youngsters. Next and tenth James Goruley, 599 Grove street, also has many babies. Charles Zoller, 158 Central avenue, W. J. Cadmus, 229 Newark avenue, and Joachim Bru, 587 Broad street, also have dispensaries.

INFANT BUYING CLUB ALMOST WEANED.

The Brooklyn Consolidated Drug Co., in the name, hustowed last Friday, on the newest of the retail druggists' buying concerns.

The company will be incorporated in a few weeks, as soon as the constitution, on which John G. Wischerth and C. Dynn, the temporary—and probably permanent—president and secretary, are working, and business will be in full swing by September. At the meeting on Friday Albert E. Marsland was appointed chairman of a committee to appoint trustees, and these trustees will elect the officers, at the next meeting, when the stock book will be ready for subscriptions. The capitalization will be for \$10,000, or 100 shares of \$100 each. Nearly seventy-five Brooklyn druggists have already applied for stock and the required number will be easily secured. Mr. Wischerth will have charge of the store room, which will adjoin his pharmacy at Bedford and Green avenues, and the handling of goods will be patterned after the methods of the New York Consolidated Drug Co., the distribution being on a basis of about 3 per cent.

NEW OFFICERS OF THE NEW YORK R. D. A.

New officers elected at the last meeting of the New York R. D. A. were: President, Joseph Weinstein; first vice-president, Peter Diamond; second vice-president, Joseph Bakst; recording secretary, Charles H. Klysker, financial secretary, Samuel Bernstein; treasurer, Joseph Pick; trustees—Charles Bornstein, L. Marmer and I. Frieman.

The board of pharmacy, was criticized in the assertion that positive proof was in the possession of the association that the board had declared below standard samples which did not come from the stores credited with them at all.

FOUR DAYS AWHEEL.

Several enthusiastic members of the Apothecaries' Bicycle Club boarded a train for Poughkeepsie the other day. Then they mounted their wheels. A visit was paid to Vanderbilt's Hyde Park. Rondout and Kingston came next and the latter place was selected for the night's rest. Next morning they rode to Allenville and Port Jervis via Glenarie Falls. A trip to Delaware Gap on the third day was prevented by rain. On the fourth day the return trip was made. Another long trip will be made in a few weeks.

Charles L. McBride, the Kingston druggist was visited. Mr. McBride is getting full prices. Those in the party were Sidney Faber, Leon Wernert, Hugo Kantrowitz, Mr. Wander, George Leimicker, and Mr. and Mrs. George C. P. Stolzenberg.

NEW YORK NOTES.

—A certain individual, notorious for his attempts to seek notoriety in his attacks upon honest men and institutions, now claims credit for Sidney Faber's resignation from the board of pharmacy. Another incident, which bears inspiring resemblance to this fellow's methods, was the sending of anonymous postal cards to the daily press, asking them to call upon Mr. Faber for his "spicy reasons" for resigning. Needless to say, the torch lighted no conflagration, and the newspapers failed to find sensationalism in the "reasons."

—James R. Crawford, druggist at Ralph avenue and Mason street, Brooklyn, was much surprised when, after having a woman he knew as a Mrs. Nicholson, arrested for retaining property belonging to Dr. George Chappell Crawford, his son, who died three weeks ago, she revealed in court that she was his son's wife. She exhibited her marriage certificate, dated April 28, 1902.

—Charles S. Erb was elected secretary-treasurer of the Eastern Branch of the State board of pharmacy,

at a meeting of the branch held on Friday afternoon, vice Sidney Faber, resigned. Mr. Erb now walks around with a copy of the pharmacy law in his hand. If he masters it this year he is to be congratulated upon the possession of singular acuteness.

—While a cargo of fusel oil was being unloaded from the hold of a vessel the other day, two kegs of it broke. The effect upon some of the crew who were near was worse than any seasickness at which they ever laughed, and one is still in the hospital. Some would have died from the fumes except for the prompt work of ambulance surgeons.

—The factory of the Hayden Chemical Co., manufacturers of essential oils, near Passaic, N. J., was gutted by fire, causing a loss of \$250,000. During the fire, tanks of wood alcohol and essences exploded, and nearby residents deserted their houses for several hours. The factory was formerly owned by Fritzsche Bros. of 37 Barclay street, this city.

—Ten physicians of Brooklyn were summoned to appear before President Lederle of the board of health to answer charges of incompetence. Two gave satisfactory explanations. Decision was reserved in the other eight cases. The doctors were accused of reporting scarlet fever patients out of danger when they had not fully recovered.

—H. Koch's Sons' mineral water plant on First avenue, between Twenty-sixth and Twenty-seventh streets, had a small fire which caused \$2,000 damage to the Koch works and about \$200, by water, to John Matthew's Sons' mineral water factory, next to the Koch place.

—James Kerr, druggist at West New Brighton, this city, has been enjoined and restrained perpetually from selling or dispensing any pharmaceutical preparation, not manufactured by Fairchild Brothers & Foster, in imitation of or in substitution for Fairchild's Essence of Pepsine.

—A certificate was filed in the county clerk's office at Troy by the John L. Thompson, Sons & Co. drug concern, showing that all of the capital stock, \$200,000, has been paid in. The certificate is signed by W. Leland Thompson, Harry D. Cowee and H. Lewis Waterbury.

—Dr. Frank A. Bigelow, manager of the Koch Lung Cure Co., 50 West Twenty-second street, was held in \$200 bail for trial in the West Side police court on a charge that he had registered a false death certificate.

—Members of committee representing five pharmaceutical associations in Greater New York met at Brighton Beach, Coney Island, on Tuesday afternoon to organize for the entertainment of the State Ph. A. next year.

—Charles H. Candler has been succeeded in the management of the New York office of the Coca Cola Company by William B. Reeves, and is now in charge of a department at the main office in Atlanta.

—George S. DeLacey will be retained as clerk of the Eastern branch of the board of pharmacy. Mr. DeLacey personally and in his work has the commendation of every member.

—George Watman has sold at 28 Stanton street to Davidson Bros. of Eighty-ninth street and Third avenue. Mr. Watman has another store at 94 Avenue A.

—Horace Porter, druggist at Fulton street and Clason avenue, Brooklyn, overswan at Coney Island last week and was pulled out, nearly "gone."

—The Westchester Ph. S. had an outing at Rye Beach and ate, played games and saw the sights.

—Charles H. Lipscomb, 1299 Nostrand avenue, Brooklyn, has sold to Russell H. Marsh.

FROM JERSEY TOWNS.

—Frank C. Stutzlen of Elizabeth, secretary of the State Ph. A., has broken the record, with the assis-

tance of the publication committee, in getting out the proceedings. The meeting adjourned on June 11. On June 24 the publication committee had a meeting. On July 3 the query committee met. Both the proceedings, all printed, and the queries were mailed on July 27.

—State Senator and Druggist William T. Brown of Madison, has lost his race for the postmastership. Lewis Albert Waters, a member of the local council, gets the place. Mr. Brown put up the liveliest fight, and really was entitled to the office as he was a candidate when the former postmaster got it.

—Colgate & Co., the perfumers, are now going to utilize the land they have been acquiring lately by erecting upon it, at Grand and Greene streets, a new five-story and basement building, 100x76 feet in size. It will cost \$63,500.

—Jersey City man was arrested selling cigars and mint jubes on the street. He confessed that he had stolen both, because he was "starving." Police are trying to find out what druggist lost the jubes. Man got 40 days.

—A well-equipped pharmacy is being opened at Central avenue and Bowers street, Jersey City, on the heights, by Herman Roder of Roder & Rausch, druggists of 355 Central avenue.

—The American Chiclé Co., or the chewing gum trust, met in Jersey City and declared \$900,000 in dividends, leaving undivided profits of \$776,000.

—John G. Gallagher, Grove street, between Fourteenth and Fifteenth streets, Jersey City, has one of the new city dispensaries in his store.

—The Delaware Valley R. D. A. held its summer meeting at Belvidere. The fall meeting will be at Washington, on October 13.

—Burglars carried away a lot of stock from the pharmacy of Edward Deitman, Clinton avenue, Newark, the other day.

—A new store at Ramseys is one soon to be opened by S. I. Vanderbeck. It will be in the new Journal building.

AROUND SYRACUSE.

—In preparing a cockroach eradicator on last Friday, druggist J. H. Coogan came near burning up his house in Wayne street. In making the concoction Mr. Coogan was stirring it over the kitchen stove, when it ignited. When the firemen arrived the eradicator was pouring out of doors and windows in the shape of smoke and the cockroaches in the vicinity were laughing in their sleeves. The flames were soon extinguished.

—During July and August the country trade falls off as farmers are harvesting their crops and cannot get to town. One part of their trade which most druggists consider undesirable is in Paris green. In the first place they cannot sell the pure article and meet the prices of certain hardware stores which offer it to the farmers for 15 cents a pound, which is as cheap as druggists can buy it at wholesale.

—Ginseng growers experience great trouble with thieves. On Saturday night some one broke into Dr. J. E. Salisbury's ginseng bed and stole 1,300 roots worth \$300 and destroyed seed to the value of \$150. The thieves took the oldest and best roots in the bed.

OUR new price list is now ready for general distribution, and a copy will be mailed upon request. We have special inducements to offer to the up-to-date druggist that will enable him to save considerable money in his purchases. It will pay you to correspond with us.

H. K. MULFORD COMPANY, Philadelphia

ROUND ABOUT BUFFALO.

—Notwithstanding that druggists have been saying gravely that business is fine, there has been a very quiet season during the last two months. Concealing Buffalo to be the healthiest city on the map may show cause for the small consumption of medicines and explain the desicled slump in trade. However, a general visit to all sections of the city now shows a much more hopeful condition.

—Three ingenious boys executed a clever and daring scheme in order to steal from the pharmacy of Julius Bellini on Lovejoy street, near Gold street. They entered the store to buy ice cream soda. After eating their ice cream they arose, and in passing out one of the boys cut the wires connecting an electric bell with the door.

When the proprietor returned to the rear of the place they quietly opened the door, entered and stole several toilet articles and a quantity of patent medicine from the show window.

—Thomas Stoddart and family are spending a short vacation in Canada, visiting Mr. Stoddart's mother, who is 91 years of age. They return at the end of this month and leave again for Magnolia Beach for the remainder of the summer.

—J. H. O'Hara is to open a new store at Corning about August 10.

NEW ENGLAND.

SOME BUSINESS CHANGES.

Many Stores Change Hands.—Warren Smith Has Big Fire.—Barrel of Alcohol on a Rampage, And Other Fires.

Boston, July 28.—The Dean Medical Co. in Worcester, has sold to Frank W. Lavoine and his father, Napoleon A. Lavoine. Both have been identified with the company since it was incorporated in 1899.

Michael J. Heagney, formerly in the drug business in Clinton, has bought a drug store in Rochester, N. H. F. H. Ware's pharmacy in Turners Falls has been bought by H. E. Tucker, a Worcester druggist. Mr. Ware will remain in charge of the store for the present, and later intends to go into business in Boston.

William F. Roy, a Fall River druggist, has bought out a drug business in Woonsocket, R. I., and soon will take charge of the place. A new store to be opened in Worcester early in August will be that of Dr. G. E. N. Bohemier, in the Allen Block.

James O'Connell is the new proprietor of a store in Eastern avenue, Boston. R. C. Hovey, Emerson and Tremont streets, Melrose, has sold to W. J. Schoof of Melrose Highlands. Mr. Draper formerly conducted both the Schoof and the Draper stores and now Mr. Schoof will have charge of them both. Mr. Hovey retires on account of ill health and will spend the summer at Moultonboro, N. H.

CONNECTICUT.

—Alfred B. Norcross, who for several years has been the manager and owner of the Union pharmacy, one of the largest drug stores in New Haven, has sold his interest and has opened a small summer store at Woodmont by the Sea, where Col. John W. Lowe has been running a store for several seasons. Mr. Norcross thinks he will retire from the drug business at the close of the present season. Col. Lowe has opened his summer store but he is of the opinion that this will be his last season in the drug trade. Eugene E.

Mayer, for some time with Willis Mix of New Haven, is in charge of the Union pharmacy.

—Hubert F. Pierce, owner of the Bridge pharmacy, South Norwalk, went swimming at Roton Point and came back minus all his money and his gold watch. Mr. Pierce was grateful to the thieves that he didn't have to come home in his bathing suit. He was with a party of friends. The whole crowd went into the water but when Mr. Pierce came back to the bath house the pockets of his clothes were found wrong side out.

—The following drug druggists have been elected associate members of the State association: Bertrand S. Green, New York; E. J. Dowd, Boston; Robert E. Smith, New Haven; Fred W. Crocher, New York; S. H. Carrigan, New York; H. J. Droeke, New York.

—C. H. Talcott's old warehouse in Hartford, is being pulled down in the construction of the new Connecticut River bridge. The building has almost disappeared and the firm has moved into new quarters.

—The basement of L. H. Goodrich's store, New Haven, has been completely overhauled and the basement has been fitted up as a chemical laboratory.

—Dr. Tanner's new store at Park and Wadsworth streets, Hartford, is the seventh drug store opened on Park street.

—R. H. Kimball of Hartford, and Eli Mix of New Haven, are on a vacation trip to Ashbury Park, N. J.

FROM MAINE.

—A curious discovery was made at Williamson's pharmacy, Portland, at Congress and Free streets, when, in making repairs, there was brought to light an old-time sign bearing the name of "A. K. Carruthers, Apothecary." One of the old inhabitants recalls that early in the forties Mr. Carruthers was the owner of a drug store on this corner, succeeding a Dr. Sturtevant. In time Mr. Carruthers was succeeded by Dr. M. S. Whittier. Following him came Dr. Williamson, the present owner.

—Notwithstanding the announcement of future rigid enforcement of the prohibitory laws, in some places in Maine, where the unique "Bangor plan" has flourished, there still is much intoxication. Liquors still are sold by somebody. Possibly the druggists are not concerned at all. They nearly all surrendered their United States licenses and this gave a semblance of compliance with the laws.

—R. H. Marks, who formerly lived in Augusta, and who now is identified with the Ordway Medicine Co., Camden, has been visiting Augusta friends and old haunts.

Chemistry and Therapeutics of Ferrose.

"Ferrose, Its Chemistry and Therapeutics," by Raymond L. High, A. M., P. D., and Edward M. French, Ph. B. M. D., is the title of an interesting brochure issued from the research laboratories of Henry A. Wampole & Co., Philadelphia. Ferrose, one of the products of this enterprising firm, is stated to be a synthetic compound made by treating certain nucleins and proteins, in an autoclave, with acids and formaldehyde, the resulting compound being synthesized with a ferrie salt, the product containing ten per cent. of inorganic iron. Ferrose is a red-brown powder, insoluble in water, acid solutions or gastric juices, but is entirely soluble in an alkaline pancreatic, biliary and intestinal secretions. It is claimed to pass through the stomach chemically unchanged, but is gradually dissolved during its descent in the intestinal tract, where iron in a readily assimilable form and formaldehyde are liberated. Clinical experiments conducted by the authors seem to establish the manufacturers' claim that Ferrose is a "distinct organic compound, bearing a very close relationship to the iron bearing food stuffs."

PENNSYLVANIA.

NEW STATE ASSOCIATION APPOINTMENTS.

Lancaster, July 28.—William O. Frailey, president of the State Ph. A., announced the following appointments:

Delegates to A. Ph. A.—H. L. Stiles, Philadelphia, chairman; Charles L. Hay, Dubois; John F. Patton, York.

Committee on membership—David Horn, Jr., Harrisburg, chairman; Theodore Drake, Philadelphia; John Doll, Erie; John B. Haley, New Castle; William Dice, Allegheny; Henry B. Siegfried, Pittsburg; Charles Schron, Clearfield; H. S. Faulkner, Scranton; Stacy M. Hay, Philadelphia.

Committee on papers and queries—Dr. Julius A. Koch, Pittsburg, chairman; Dr. C. B. Lowe, Philadelphia; Louis Emanuel, Pittsburg; E. M. Boring, Philadelphia; Henry Kuhl, Manheim.

OTHER HAPPENINGS.

—An epidemic of robberies has been going on in the lower part of Philadelphia and the police finally rounded up three lads about 17 years of age as the principals. In each case the places were entered by forcing open a rear window or door with a jimmy. P. Keenan of Seventeenth and Mifflin streets, lost \$14.50 in cash and stamps, John Keenan, Fifteenth and Ritner streets, \$53, and George Keene, Seventeenth and Wharton streets, \$40. In addition to this inside raiding, about twenty slot machines on the outside have been rifled, and, in some instances, carried away.

—The Intercollegiate Y. M. C. A. through its executive secretary, Carl C. Rutledge, has promised its assistance to the committee for the proposed Philadelphia C. P. chapter house. There two bodies have met and elected Mablon N. Kline chairman of the joint organization. A third committee, consisting of Messrs. Kline Shinn and Remington, has been constituted to solicit funds.

—New Castle drug stores have stopped selling soda water on Sunday. Not knowing that the blue laws are strictly observed there, a horse broke loose from its stall and made a dash towards a drug store a considerable distance up the street. The animal walked through the plate glass window. It was with some difficulty that he could be induced to leave his position near the fountain.

—Wm. C. Van Dyke, goes to the Wingohocking Pharmacy, Germantown, Philadelphia; Frank A. Bunting to Souderton; John S. Wilson to Leedom's Twentieth and Cherry streets. David S. Snyder to Allegheny, and Charles A. Light to Greensburg.

—Pittsburg drug salesmen will be interested in one of the want advertisements which appeared in last week's issue of the Era.

—At the meeting of the Kentucky Board of Pharmacy, held at Dawson Springs, July 14, a class of seventeen was examined. The following passed: Thos. B. Bone, Madisonville; Chas. B. Fraser, Lafayette; John A. Moesker, Covington; William Rogers, Paducah; Anthony R. Williams, Pikeville; Rufus E. Hunt, Woodburn. The next meeting will be held at Winchester, October 13. Those intending to appear for examination should file their applications with J. W. Gayle, secretary of the board, at Frankfort, at least ten days before the meeting.

THE SOUTH.

IN OLD VIRGINIA.

They Talk About Poison Laws at the State Ph. A., and They Play Innumerable Games for Prizes.

Richmond, Va., July 28.—The Virginia Ph. A. closed the most interesting three-days' session in its history at Buckroe Beach. It was the twenty-second annual meeting. The attendance was excellent and almost every minute of the time was given over to pleasure.

President R. C. Petzold of Newport News, called order at ten o'clock on Tuesday, the first day. His annual address was read on the second day, when Dr. George E. Barksdale of Richmond, in a paper on the State poison law, suggested many improvements and better protection to all classes. He offered a rough draft bill, which was referred to a committee.

The president and other members of the Peninsular R. D. A. reported that one of their members, Joseph E. Johnson of Hampton, had been unjustly put on the cut-off list and had been very badly and discourteously treated by some of the N. A. R. D. officers. The following resolutions were unanimously adopted:

Whereas, this association has learned that Joseph E. Johnson of Hampton, a member in good standing, has been put on the "cut off" list by the N. A. R. D. and that Garnet & Hall have been taken off; and,

Whereas, letters secured by the police of Newport News show that this action was taken by the direction of the N. A. R. D. on account of a personal difficulty between Mr. Johnson and Mr. Keyser, the traveling representative of the N. A. R. D.; and,

Whereas, a respectful petition from the Peninsular R. D. A. of Newport News and Hampton, setting forth the facts and asking Mr. Johnson's restoration has been refused; be it,

Resolved, that the Va. Ph. A. regard this treatment of Mr. Johnson as exceedingly unfair; and be it,

Resolved, that the secretary be instructed to communicate these resolutions to the N. W. D. A. and request them to use their influence to have Mr. Johnson taken off the "cut off" list.

On Thursday it was decided that the next meeting shall be at Chase City. The following officers were elected:

President, G. T. Mankin, Falls Church; first vice-president, T. Ashby Miller, Richmond; second vice-president, George Farrar, Clifton Forge; secretary, C. B. Fleet, Lynchburg; treasurer, Dr. A. W. Ely, Suffolk; executive committee—R. C. Petzold, retiring president; C. L. Wright, Richard Gwathmey.

One vacancy occurs each year in the board of pharmacy. The association recommended five members to the Governor from which to make a selection, as follows: T. A. Miller, C. H. Lumsden, B. F. Hughes, E. L. Roly and W. W. Friend.

On Thursday night prizes offered in the various contests were awarded as follows:

Bowling contest for ladies—First, Miss Margaret Jackson; second, Miss Grace Wisheart; third, Mrs. T. A. Miller.

Rag dummy contest—First lady's, Miss Maude

Eff. Lithia Tablets

Send for sample and special net prices on our carton package Aluminium Cap Bottles with your name on them.

Our Tablets made by a new process are very satisfactory.

BILLINGS CLAPP COMPANY, Boston, Mass.

DR. JOHN H. ZWARTS.

Dr. John H. Zwarts, aged 60 years, proprietor of the Zwarts' Homeopathic pharmacy, Fourth and Locust streets, and one of the oldest registered pharmacists in St. Louis, died of malignant carbuncle, after an illness of two weeks.

Dr. Zwarts was proprietor of the Fourth street establishment for fifteen years, and, previous to that, was for twenty-five years connected with the Luytjes' Homeopathic Pharmaceutical Co., as secretary. He was born in Amsterdam, Holland. He was graduated from the St. Louis University. He was at one time president of the Catholic Knights of America and of the St. Vincent de Paul society. A widow and the following children survive: Frank N., Lilly, Charles, May, and Dr. John H. Zwarts, Jr.; Mrs. M. C. H. Arendes and Mrs. H. W. Luecke, all of whom reside in St. Louis. Dr. John H. Zwarts, will succeed to his father's business.

Pluckett; second, Mrs. C. L. Wright; first gentlemen's, J. S. Howell; second, R. C. Petzold.

Running high jump—First, S. H. Arrington; second, T. A. Harrison; third, C. H. Dorsett.

Swimming contest—First, T. A. Harrison; second, R. Y. Hulby.

Rule shooting for ladies—First, Miss Bessie Jackson; second, Mrs. R. C. Petzold.

Bowling gentlemen—First, Fred F. Allen; second, T. A. Harrison; third, G. T. Mankin.

Peanut push—First, W. F. Friend; second, Joseph Johnson; third, A. E. G. Klor.

Fifty yard dash—First, G. T. Mankin; second, T. A. Harrison; third, W. H. Washington.

Croquet ladies—First, Mrs. Parish; second, Mrs. M. L. Church.

Fielding—First lady's prize, Mrs. R. G. Petzold; second, Mrs. Bessie Jackson; first gentlemen's, J. L. Ayle; second, J. M. Trotter.

Games party—First lady's prize, Mrs. Petzold; second, Mrs. F. A. Miller; first gentlemen's, T. A. Miller; second, G. T. Mankin.

Prize mental quiz—First, T. A. Miller; second, A. E. G. Klor; third, G. T. Mankin; fourth, C. B. Fleet.

IN TENNESSEE.

At a Very Pleasant State Meeting Several Interesting Papers were Read and there were Many Sports.

Monteagle, Tenn., July 28.—The eighteenth annual meeting of the State D. A. at the Monteagle Hotel, was in every way a successful one. There was an attendance of about one hundred, and much interest was manifested. A trip to the Monteagle Wonder Cave was taken on Friday, and there was a banquet that night.

The address of welcome was delivered by E. W. Holcomb of Monteagle. President Eves delivered the annual address. Three papers were read on the subject, "Can a Pharmacist Manufacture His Own Non-Secret Preparations with Financial Success to Himself?" Those handling this question were I. B. Clark of Nashville, J. Goldbaum of Memphis and C. M. Greve of Chattanooga. A paper on "The Best Method of Preparing and Preserving Syrups of Iodide of Iron and Hydriodic Acid," was read by A. B. Rains of Columbia.

Outdoor amusements afforded much merriment, and included a hen race, which was won by C. L. Cook of Nashville; a nail-driving contest for the ladies, the prizes won by Mrs. E. F. Trolinger, Bell Buckle; Mrs. C. M. Greve, Chattanooga; Mrs. B. F. Crane, Tullahoma; Miss Violetta Weems, Nashville. The egg and spoon race for ladies was won by Mrs. Jarrell and Miss Lillian Roly of Shelbyville. A ball was given in honor of the visitors.

Officers were elected as follows: J. H. Wilson, Martin, president; Ira B. Clark, Nashville; W. G. Butler, Hallow Rock, and S. F. Dorris, Tracy City, vice-presidents; E. F. Trolinger, Bell Buckle, secretary, D. J. Kuhn, Nashville, treasurer.

The association will meet at Lookout Mountain on the third Wednesday in July, 1904.

At the banquet sixty-four plates were served. E. W. Holcomb was toastmaster and speeches were made by Dr. Drake, Monteagle; Dr. J. H. White, Bell Buckle; C. S. Martin, Nashville; E. F. Trolinger, Bell Buckle; President J. H. Wilson, Martin, and Dr. George Sunny, Monteagle.

MARYLAND.

—Among pharmacists in Baltimore last week were: W. C. Downey, Washington, D. C.; Fred. S. Boyd, Winchester, Va.; Dr. J. N. Simonson, Crisfield; E. M. Forman, Centerville; John Clugston, of Mentzer & Clugston, Waynesboro, Pa.; William Ireland, Dale & Co., York, Pa.; W. R. Rudy, Mt. Airy; H. C. Rudy, Hagerstown; Fred. Boesse, Annapolis, N. R. Tunstall, Stateville, N. C.; Dr. Levin D. Collier, Salisbury; James Forthman, Waynesboro, Pa., and J. B. Doster, Birmingham, Ala.

—The annual reunion and Grand Lodge convention of the Elks, in Baltimore last week, brought a number of druggists to the city. They had a big time. Bright red paint was liberally scattered. Among druggists present were: I. Paul Fletcher, Harrisonburg, Va.; N. H. Strabler, York, Pa.; Dr. Smith, Concord, N. C.; J. W. Cook, Hagerstown, Md., and O. L. Harris Fredericksburg, Va.

—J. C. Muth, of Muth Bros. & Co., Baltimore, is at Atlantic City, communing with the wild waves there and enjoying himself otherwise. Like Ulysses, he took precautions against being tempted by mermaids and other sirens by taking Mrs. Muth along.

—Prof. H. P. Hynson, of Hynson, Westcott & Co., found the sessions of the Maryland Ph. A. at Ocean

City so arduous that he deemed it expedient to go on a vacation trip.

—H. B. Gilpin, of Gilpin, Langdon & Co., is making arrangements to go on a protracted trip next month, probably to Europe.

LOUISIANA.

—The Louisiana Drug Clerk's Association is conducting a vigorous fight against persons practicing pharmacy without the requirements of the law, and have called the attention of the State board to a number of instances where unregistered persons have compounded prescriptions. Fifty dollars or sixty days was the fine imposed in one case. Another offender will be up for trial next week. The association is determined to stamp this evil out.

—The Parker-Blake Co., Ltd., wholesale druggists, New Orleans, gave an outing to their employees. Two especially chartered coaches, besides a car for edibles and refreshments, took the happy party out. A delightful day was spent at Magnolia, Miss., a beautiful little summer resort about eighty-five miles from New Orleans, by more than a hundred persons. This firm has thus established a precedent here, which will likely be followed by other houses.

—At the late meeting of the Louisiana Drug Clerks' Association five new members were elected, and eight applications for membership were read.

—F. L. Bernius, proprietor at Tulane and Lopez streets, New Orleans, has disposed of the business to Jule Sangarson.

MISSOURI.

—The St. Louis Retail Druggists' Society, clerks and proprietors, gave a delightful river excursion on the steamer Corwin H. Spencer, on the evening of July 23. These excursions are given almost every month, and the last one is said to have been the most enjoyable of them all. The boat with about 2,000 druggists and their friends went down the Father of Waters to Montesane Springs, twenty miles below St. Louis, returning at midnight. A vaudeville entertainment and band concert on board were among the entertainment features provided. Oh Yes! There was lots of dancing too.

—The Cook Avenue pharmacy, Vandeventer and Cook avenues, ranking as one of the finest in St. Louis, was purchased by George Wagner from Dr. Gideon C. Lyda, whose increasing medical practice forced the sale.

—A. A. Flanders, proprietor of Flanders' pharmacy, St. Louis, with his family is taking a Tennessee river trip of about two weeks.

—J. J. Holscher bought out Herman Fischer, at Whittier and Easton avenues, St. Louis.

BARON WILLIAM ERNEST DE BUSH, the chemist and head of W. J. Bush & Co., the European oil and perfumes supplies house, who have a branch at 5 Jones Lane, this city, disappeared from the sleeping saloon car of an express train in England, during the temporary absence of his wife, who was Miss Clara Pauline Joran, of Freeport, Ill. He was picked up unconscious on the track and died shortly after without speaking. Baron De Bush was born in 1860 and devoted his life to the study of chemistry. He was especially well known for his work in odoriferous principles, ethereal substances and the distillations of essential oils. In 1885 he served as British juror for the chemical section at the Antwerp Exhibition. He had a similar post in the exposition at Brussels in 1888 and 1897 and at Edinburgh in 1890. He was created, in 1889, a baron of the Duchy of Saxe-Coburg and Gotha, and received permission some years later to use the title in England.

AROUND THE GREAT LAKES.

DRUG CLERKS AGITATE.

A Set of Resolutions, Angustly Condemning the C. R. A., is Later Repudiated by the Drug Clerks' Association of Illinois.

Chicago, Ill., July 28.—Shortly after the recent meeting of the Chicago R. D. A. a series of resolutions appeared, purporting to have been issued by the drug clerks' association, taking the C. R. D. A. to task for not having taken up the cause of the drug clerks with sufficient vigor or formally acceded to the demand for shorter hours. These resolutions were at once repudiated by the clerks' association. It is asserted that the resolutions were gotten up by I. B. Kronberger, an influential member of the drug clerks' association. A meeting of the executive committee of the C. R. D. A. was held on last Friday at which a committee of the clerks' association appeared and formally repudiated the Kronberger resolutions, and it is said, promised to discipline Kronberger. The resolutions follow:

Whereas, the C. R. D. A. at their quarterly meeting repudiated the agreement between its executive board and the Drug Clerks' Association of Illinois, tending to reduce the hours of labor;

Whereas, drug clerks being subjected to labor from 15 to 18 hours a day, that such strain and confinement is nothing more nor less than slavery and contrary to public policy, in the performance of duties called upon, affecting the health of every man, woman and child;

Whereas, the Chicago druggists repeatedly have declared themselves against organized labor, and

Whereas, many Chicago druggists openly are defying the laws regulating the practice of pharmacy and child labor, notwithstanding the efforts on the part of the board of pharmacy and factory inspectors:

Be it resolved, that the Drug Clerks' Association at once submit to the executive board of the C. R. D. A. new articles of agreement, similar to those adopted and in full force in Lynn, Mass., reducing the hours of labor to 56 hours a week.

And be it further resolved, that the D. C. A. appeal to the Chicago Federation of Labor and all affiliated unions for moral support; and that a copy of this resolution be submitted to the Chicago press for publication.

These resolutions were sent out with a letter of the same nature signed by John J. Sorenson, secretary of the D. C. A., urging attendance at the next meeting. The meeting was the one at which the resolutions were repudiated.

It is asserted that the resolutions were a flat-footed reversal of what did actually take place at the C. R. D. A. meeting. "Whereas," No. 3 is a sweeping indictment of the entire trade and the friendly relations between the D. C. A. and the C. R. D. A. were considerably changed it.

FROM ILLINOIS.

—Chicago druggists opposed the granting of a charter to a new telephone company. The ostensible purpose was to get a new company into the field and by competition reduce the telephone rates; but it was feared that a new ordinance would serve to fetter unlimited privileges more firmly than ever. The franchise of the present company, according to a decision of the Supreme court, limits the rental. A new franchise might do worse, and probably would not be acceptable to the

ETNA CHEMICAL CO., New York, U. S. A.

promoters of a new company if it did better for telephone users. It is reported that there is little hope of the new franchise.

—The following item is from a Freeport paper: "Hoyt Bros., who opened a drug store in the McNamara building a few weeks ago, have decided to quit business here and are packing their stock of goods, which they will ship back to Chicago. They found the drug business here well represented by the old established firms, and it was a hard matter for them to get a foothold."

—Charged by the board of pharmacy with keeping a drug store without being registered or employing a registered pharmacist and with selling medicines without affixing proper labels, Dr. N. Rex, 438 Dearborn street, was fined a total of \$90 on four counts. He appealed.

—R. W. Hull has just opened a handsome new store at 1299 Sheridan road, Chicago. Mr. Hull has been connected with several stores, and was manager of F. E. Stolze's store at Clark and Addison street. Recently he was with J. C. Belauke, at Clark and Wrightwood streets.

—The Illinois food inspectors are abroad in Chicago sampling soda fountain syrups in drug stores. The results of their analyses will be published. They should print the good reports as well as the bad, in order to be fair to all concerned.

—About thirty-five druggists and their families from Illinois have registered their intention of going to the annual meeting of A. Ph. A. at Mackinac Island. The party from Chicago will start on August 1 via the Steamer Manitou.

—It is again rumored that a new wholesale drug house will be opened in Chicago. This rumor is periodic and recurs every few months. The annual story about poisonous germs in soda fountains will be due early in September.

—The introductory portion of Mr. Eberts' history, of the Chicago drug trade and firms from 1830 to 1840, will be published in the forthcoming volume of the Illinois State Historical Library.

—F. C. Penley has moved into handsome new quarters in the Frederick block in Pekin, where he has a neat, up-to-date store.

—The drug store at Bardolph, near Macomb, has been sold to N. H. Jackson, who has taken possession.

—A. L. Leviton has bought the drug store of S. Aronson at Taylor and Loomis streets, Chicago.

—O. G. Rahlfs has succeeded Behrens & Rahlfs at 615 West Twelfth street, Chicago.

MICHIGAN NOTES.

—Young Lansing drug clerk and best girl, out driving, got stranded by lame horse. So the clerk went to a farmer and asked for a place to stay all night. The farmer asked him if he was a Woodman. The drug clerk said he was not, but that he was a Mason. The old farmer finally consented to let the couple stay. Next morning when they departed the farmer charged the young man \$1.50—50 cents for the lodging and \$1 for not being a Woodman.

—Bivins & Rhodes of Alma, have by mutual consent dissolved partnership, Charles G. Rhodes continuing the business. E. A. Bivins has purchased the H. S. Webb store building and stock. Mr. Bivins settled in Alma in 1865, taking charge of the store then owned by C. E. Miron. Mr. Webb will retire from active business on account of ill health and will give attention to his farm.

—The Central and City drug store mines of Manistee played a tie game on July 13, with scores of 20. The City team declined to play another inning and the umpire awarded the game to the Centrals. It is reported that the errors were as numerous as grains of sand in the dunes along the lake.

—F. H. Scott opened a new store on August 1 at Battle Creek, in the West end. D. D. Brown is putting in new fixtures at the Central store, Kalamazoo. J. C. West of Grand Rapids, will build a beautiful home at Pisk lake, near the eastern suburbs of the city.

—"Church's ginger ale, the popular drink," is the way Church & Son, the Flint druggists are talking now. They have just installed machinery in their Saginaw street establishment for making this refreshing drink, sometimes known as "belly wash".

—O. J. Parker is again proprietor of the drug store at Howell, having bought of William A. Reid his old stand there. Mr. Parker has been dispensing drugs and medicines in Howell for the last eighteen years.

—The drug store at the corner of Fifth avenue and Water street, Bay City, has been reopened and the business will be conducted by Fred V. Wilkin and Phil. A. Ralson, under the firm name of Wilkin & Co.

—Bugbee & Roxburgh of Traverse City, will move into new and more commodious quarters about August 1 and will be known in the future as the Bugbee & Roxburgh Co., Ltd.

—"Duke" Travis with J. S. Haggart of Owosso, has accepted a head clerkship with C. N. Ware at Alpena. F. J. Cochean has resigned from the Central drug store, Port Huron.

—Sam Robinson of Charlotte, who has been having merry whirls with the local optimists of Eaton county, has closed up his establishment, and is storing his stock.

—Jonia has a firebug, who set a match to a pile of oil barrels in the rear of W. B. Cutler's drug store. The block was saved and officers are looking sharp for the bug.

—The Eckel Drug Co. of Petoskey, has issued a handy folder for use of its resort trade, showing the times of arrival and departure of the U. S. mails.

—D. D. Pattie of Big Rapids, has gone to the Gibbs' drug store at Coral, and L. P. McQuillin has returned to the City drug store at Howard City.

—C. N. Woodworth succeeds to the business of the Eaton Drug Co. at 565 Cherry street, Grand Rapids, taking possession on August 1.

—C. L. Smith, pharmacist at E. S. Peterson's store, Decatur, is taking a vacation, with H. W. Andrews of Adrian, taking his place.

—Koomtz & Philips of Carson City, have formed a partnership and put in a drug stock in the Caldwell building at Crystal.

—Will Manning, a pharmacist in Jonesville for the last fifteen years, has opened a notion store in that village.

—C. A. Avery, formerly with Thompson & Gries, Allegan, has accepted a position in Bay City.

WISCONSIN.

—Albert Czerwinski, who conducts one of the largest drug stores in the Polish district on the South side, Milwaukee, last week had three young boys arrested on the charge of stealing soda water spoons. Later it was discovered that the boys in question were not guilty and their parents have entered suits for damages against Mr. Czerwinski. All efforts to settle the case have proved unsuccessful.

—The Wisconsin Drug Clerks' Association held its second annual trolley ride and ball on Thursday night at Tippecanoe, a suburb just south of Milwaukee. Dancing was enjoyed until midnight, Clauder's sextette furnishing the music. Seventy couple were present. The arrangements were in the hands of Joseph G. Otten, George Hartheim and Edward Schmidt.

—A. J. Strauss of Wauwatosa, has accepted the management of Billing's pharmacy on Chestnut street, Milwaukee. Carl Runkel, formerly of the pharmaceutical department of the University of Wisconsin, is now with the National Distilling Co. Frank J. Janda has left Molstad's drug store at Rio, for Menominee Falls.

—Yahr & Lange, the Milwaukee wholesale druggists, have purchased an Olésmobile runabout for the use of the city salesmen of their cigar department. The paneling of the auto is decorated with advertisements of the different brands of cigars for which the company acts as distributors.

—C. Russel of Sturgeon Bay, is now with John A. Dadd & Son, Milwaukee. Karl Schuri of the Wisconsin pharmacy, Madison, has accepted a position with T. W. Thiesen, who has resigned from the Kradwell-Thiesen Drug Co. at Racine, to open a store at Sheboygan.

—Alderman A. Weissenborn has purchased Hilmanthal's pharmacy on Fon du Lac avenue, Milwaukee. E. H. Cornwell has purchased all outside interests in the South Milwaukee Drug Co. J. A. Seaton has purchased the interests of Dr. Ennor at Potosi.

—James Hurley succeeds O'Reilly & Hurley at Merrill. Gold & Natwig have purchased Erickson's store at Soldiers' Grove. L. Krenitz has sold his interest in the firm of M. A. Dietz & Co. to M. A. Dietz, Milwaukee.

—George Jones, a drug clerk of Milwaukee, was arrested for sending improper matter through the mails. Arraigned in the district court before Judge Seaman, Jones entered a plea of guilty and was sentenced.

—W. A. Runge of Merrill, has become the proprietor of the Wausau pharmacy at Third and Washington streets, Wausau. Mr. Runge has the reputation of being a hustling young man.

OHIO HAPPENINGS.

—A large number of Cleveland druggists expect to attend the A. Ph. A. meeting at Mackinac Island. Lewis C. Hopp of the Mayell & Hopp Co., president of the Ohio Ph. A., is organizing a party to go on the D. & C. boat next Saturday morning. He wishes all those of Cleveland and vicinity who can join the party to send him their names.

—The Ki Ki Remedy Co., manufacturers of a nerve tonic in Cincinnati, with an office at 261 Broadway, New York, made an assignment to Bernard L. Finkelstein. The liabilities are less than \$10,000.

—K. C. T. Schneider, Prospect street, Cleveland, has sold his stock and fixtures to Charles Laub, who will open a store on Wilson and Payne avenues.

—Benton, Myers & Co., Cleveland jobbers, are extending and enlarging their office building to afford room for their increasing business.

—The Cleveland retail druggists will hold their annual outing on July 29 at Manhattan Beach. At that time the association will elect officers.

—Robinson & Hambley have opened a store in Lorain. Mr. Hambley was formerly a clerk in a Cleveland pharmacy.

WEST OF THE MISSISSIPPI.

IOWA HEARD FROM.

Its Annual Ph. A. Meeting, with Nearly Six Hundred Druggists in Attendance, Was a Big Event.

Council Bluffs, Ia., July 28.—Between 500 and 600 of the 3,000 druggists of Iowa attended the annual meeting of the State Ph. A., at Lake Manawa, near this city. The sessions were pronounced the most enthusiastic ever. The opening session was presided over by President Howard S. Baker. Whaley's orchestra enlivened the occasion with music and Mayor Morgan welcomed the visitors to the city. Frank Gressler of Chapin, responded, after which the president delivered the annual address. He urged the examination of college graduates and the abolishment of the \$1 annual fee for renewal of registered certificates.

In the discussion the majority favored the recommendations. Nebraska druggists present said that Nebraska laws were far more strict than those of Iowa.

Finally Professor Teeters of the State university, who had opposed the measure with regard to examinations won out with a compromise that:

"The present pharmacy law be so amended as to register graduates only from schools and colleges whose course of instruction meets with the requirements of the educational section of the A. Ph. A. Such graduate to be entitled to registration, shall have had at least two years' actual experience in a drug store, making four in all—certified to by the preceptor and bearing the seal of a notary public.

"In case such graduate lacks the required drug store experience he shall be entitled to an apprentice certificate until he has had at least twelve months' drug store experience, properly certified by preceptor and bearing the seal of a notary public. We further recommend that the board of pharmacy make all possible effort to secure a place in which to conduct a practical laboratory examination."

The following officers were elected:

President, Mayor Dell G. Morgan, Council Bluffs; first vice-president, George M. Pederson, Harlan; second vice president, J. Lindley, Winfield; third vice-president, M. F. Mullan, Pomeroy; secretary, Fletcher Howard of Des Moines; treasurer, J. B. Webb, De Witt; executive committee, E. B. Tainter, Carroll; F. J. Gressler, Chapin; Oscar H. Brown, Council Bluffs.

Delegates to the N. A. R. D.—E. B. Tainter, Carroll, George M. Pederson, Harlan, Dell G. Morgan, Council Bluffs.

Delegates to the A. Ph. A.—Gus Sherling Sioux City; F. J. Gressler, Chapin; Fletcher Howard, Des Moines; Howard S. Baker, Sioux City; A. A. Lenoecker, Oakland.

There were many exhibits of drugs by the wholesalers. There were trolley rides for the ladies to Manawa and Omaha, besides the ball at the club house and reception by the citizens of Council Bluffs. The next meeting place was not decided upon but it is thought that it will be somewhere in the Eastern part of the State.

These passed the examination of the board of phar-

many during the convention: Dan Wikoff, W. D. Craig, Richard Kuchery, S. Pearlmatter, P. T. DeWitt, J. C. Berry, Silvio M. Wearather, J. H. Eide, Lee Howarth, Frank Zastera, John L. Beann, Harry L. Swilart, Harry E. Aldrich, Charles J. Welker, D. Fitzpatrick, Edgar L. Scarr, Orin B. Wilson, B. W. Miller, Harry Schweusen, Roy Harshbarger, George C. Hanson, F. W. Stark, Eliza Troy, Council Bluffs.

The druggists of Council Bluffs were severely criticised the last day of the meeting because, with one or two exceptions, all stores were closed from 1 to 6 p. m., while employers and clerks attended the outing of the association at Lake Manawa. Many prescriptions, some of them urgently needed, were compelled to wait until evening.

IOWA'S BIG CLASS OF '03.

Des Moines, Ia., July 28.—Highland Park College, Des Moines, will turn out this year one of the largest classes of pharmacists ever graduated in the State. The following are the members of the big class of '03:

Ph. G.—Fred Leslie Ankrum, John Biesnecker, C. S. Berryman, George L. Coleman, Porter C. Cornell, Ray Chittick, F. B. Crook, John Elmer De Ford, J. W. Dunlap, G. M. Dunshee, Ernest H. EdBanks, W. A. Felker, Theodore L. Grady, John J. Gilsdorf, Howard T. Jensen, Winfred Kintner, William Arnold Kennedy, Arthur S. Knudson, Samuel T. Knox, J. B. Lyons, Stanley G. Miller, James F. McCreary, Mabel M. Meeker, P. N. Nysoe, Worth H. Ostrander, John L. Prezler, Sidney E. Ryan, E. M. Riedorf, Beryl V. Sands, Perry G. Sheer, William H. Sturges, J. C. Stickel, O. J. Severid, G. T. Simmons, Oscar Tunis Thompson, D. E. Tewey, James B. Tonner, J. P. Wingert, J. H. Wicks, Claude B. Walthall, Matthew J. Zender, Charles W. Botsford, Charles S. Boor, W. D. Ball, George A. Cotton, T. J. Cavanaugh, E. J. Carr, M. E. Canlanin, D. A. Dykstra, E. A. Downing, Leroy Doty, J. F. Elgin, Joseph Albert Goodrich, B. S., Otto H. Grauel, J. D. Hoffer, Albert William Johnson, James B. Kile, Lewis J. Kingsbury, C. B. Kain, Joseph E. Lindstrom, Alonzo T. Mellaffie, B. Mamer, Leroy Monroe, J. H. Musser, F. J. Naeck, George William Pugsley, H. A. Perriton, Joseph G. Roberts, Harlan Rupp, Guy R. Swan, John F. Sullivan, H. B. Shereans, C. Sydness, Walter Stickfort, G. M. Triplett, Willoughby M. Thompson, Ernest V. Thomas, Clifton H. Whitten, Chas. S. Wingate, F. L. Wicks, J. F. Yoeman, Frank L. Stoughton.

Ph. C.—J. Raymond Chittick, H. H. Hartman, N. H. Davis.

HEARD IN IOWA.

—The following pointed speech of Police Judge Silvarn of Des Moines, to a pharmacy student who appeared before him and pleaded guilty to being drunk a few days ago, caused considerable local comment: "You will find that you cannot afford to monkey with the liquor that you will be dispensing to other people. You had better learn that the Iowa State board has one requirement which you cannot fill and drink liquor. A pharmacist must keep sober because no man has to have a better head than a mixer of drugs."

—Des Moines drug clerks will organize and affiliate with the local Trades and Labor Assembly in the near future. No grievance has been suggested in the matter of wages but the clerks are complaining bitterly of long hours. The proprietors are disposed to grant the demands and recognize the union. A druggists' club will in all probability be organized to protect the interests of employers but there is no prospect of trouble.

—Webb Sourers, one of Des Moines' oldest druggists, has announced that he will dispose of his Sixth avenue store and organize a wholesale drug company. The new house will be known as the Iowa Drug Co., and will endeavor to cover Western Iowa, Nebraska and North Missouri. Salesmen will be put on the road in a few weeks.

—The wholesale drug house of the Harle-Haas Drug Co. at Council Bluffs, has moved into a new building at 117, 119 and 121 South Main street, occupying a three story and basement building with a total floor area of 30,000 square feet. The firm was established in 1872 and has outgrown three previous establishments.

—Alderman E. F. Whitney turned his business over to the clerks this week and spent his time hurrying for the Des Moines fire company at the Sioux City State tournament. Druggist Whitney represents Lee township in the city council and is a member of the fire committee. He asks a re-election.

—C. Moncreif's drug store in Muscatine, was recently sold to A. G. Bestenbender of Gladbrook. Earl Brinson has bought the drug store of Charles Bondann at Bayard. H. C. Ady, a Grande Center druggist, has retired and is succeeded by two young men, Messrs. Heibarger & Ladage.

—Druggists of Council Bluffs have combined and raised the price of drinks. Hereafter sundaes will cost fifteen instead of ten cents and frozen phosphates will have been raised from five to ten. It is said that other drinks may also follow the upward trend.

—A number of Des Moines pharmacists have their eyes on the twelve new towns which are to be opened up soon on the Great Western extension between Fort Dodge and Council Bluffs. Several good country trading points will be established.

—The Wood Drug Co., headed by I. C. Wood, of Logan, has purchased the C. L. Carstensen & Co. pharmacy at Perry. Manager Sager took charge last week. Mr. Wood had formerly been a member of Carstensen & Co.

—Reported that Raessler Bros. have opened a new drug store at Anthon. Ray Smith of Waukon, has gone into partnership with W. H. Grimm in the drug business at Traer, and it is now Grimm & Smith.

—The Salem Drug Co., Salem, has given a bill of sale. C. Traver & Co. of Stuart, have sold to Lon Smith. Frank Wheeler of Conrad, is selling out, and A. R. Weaver of Salem, has already done so.

—Miss Eda Kallenberg of Carroll, the very popular woman pharmacist employed by the E. R. Tainter pharmacy for the last five years, was married to S. R. Someland and will reside at Covington, Tenn.

—J. Jennings succeeds J. H. Wyman at St. Charles. S. E. Whaley & Co. Council Bluffs, have sold to the Allshense Drug Co. W. W. Townsend has acquired the business of T. B. Eslick of Renton.

—H. D. Smith is successor to Wilson & Co. at Bradgate. A. W. Cowles, salesman for the Des Moines Drug Co., is back at work again after a two weeks' vacation.

—The Iowa Drug Co. will erect a \$30,000 building in Locust street, Des Moines. Reported that J. F. Cochran will open a drug store at Columbia.

—E. D. Hully & Co. have bought out W. J. Wood & Co. at Elliott. Nelson & Maren of Guthrie Center, are succeeded by Charles H. Nelson.

—The Branson Drug Co. succeeds C. B. Doulina at Hayard. Earl Branson, formerly of Irwin and Scranton, will have charge of the store.

—C. A. Diddy of Bedford, and Mrs. Diddy have been travelling in Colorado this summer in the hope of benefiting Mrs. Diddy's health.

—Ed Dosh of Guthrie Center, is in Colorado. He was compelled to take a vacation on account of a severe attack of hay fever.

—M. E. Sherwin, manager of the Des Moines Drug Co., is spending a three weeks' vacation at Lake Minnetonka, near Minneapolis.

—John McClusky of Glenwood, has moved to Des Moines and is working for J. J. Ulrich on the Southeast side

—H. D. Harle, of the Harle-Hass Drug Co., Council Bluffs, is suffering from a slight stroke of paralysis.

—William A. Marean of Guthrie Center, has purchased the Mrs. I. F. Trumbull store at Adair.

—Dr. C. W. Williams has sold his pharmacy at Allendale, Missouri, to Dr. W. A. Robertson.

—The Coyne pharmacy at Ames has been sold to C. C. Gamble of Knoxville.

—Lon Smith of Lenox, has purchased the C. Traver & Co.'s pharmacy at Stuart.

—John W. Hass of Anthon, has been succeeded by Bert Hart.

—May & Parker recently opened a drug store at Dubuque.

OWL SUES SIXTY-FIVE DRUGGISTS.

San Francisco, July 24.—A test is to be made in the United States Court of the legality of a boycott on the Owl Drug Co., this city. This company had cut the price of proprietary medicines, and the wholesale and retail druggists united to boycott it. The company now sues sixty-five druggists for \$5,000 each for damages, and, if it succeeds, will also bring criminal suits.

The complaint declares that all the wholesale druggists refuse to sell to the Owl company, even when cash is tendered. As the articles which the company can't buy are manufactured outside of California and imported by the wholesalers, the complaint is made that the monopoly of the drug market created by the combine is a conspiracy contrary to the Sherman Anti-Trust law.

The plaintiff seeks to recover \$5,000 from each defendant, but under the law, the court may treble that amount if it so wishes. Counsel fees in \$2,500 are also asked.

COLORADO'S ANNUAL MEETING.

Cascade Canon, Colo., July 28.—At the fourteenth annual meeting of the State Ph. A. there were present about 175 delegates and 150 visitors. These officers were elected: President, Charles Clayton, Denver; vice-president, Mr. Love, Fort Collins; secretary, Charles E. Ward, Denver; treasurer, S. L. Bressler, Denver; local secretary, Dan Y. Wheeler, Denver.

HAWAII'S NEW BOARD OF PHARMACY.

Honolulu, H. I., July 14.—Governor Sanford B. Dole, carrying out the provisions of the pharmacy act recently enacted by the legislature of this Territory, has appointed as members of the board of pharmacy Dr. W. L. Moore, H. B. Reedy of the Hobronn Drug Co., this city, and S. S. Peck, a graduate of the California College of Pharmacy and now assistant in charge of the Hawaiian sugar planters' experiment station.

The new law requires that the board shall hold at least two meetings each year and such additional meetings for the examination of applicants as may be necessary. Honolulu is designated as the meeting place. The members of the board, which consists of one physician and two pharmacists, serve without pay and are

subject to removal by the Governor for cause. Application for license to practice pharmacy accompanied by a fee of \$10, must be made to the treasurer of the Territory who, in turn, is required to send a written request to the board to duly examine the applicant in "open meeting" as required by law. On recommendation of the board the treasurer then issues a license. Licenses may be revoked by the treasurer for "professional misconduct, gross carelessness or manifest incapacity on the part of the licensee" and the treasurer's action in such cases is final and not subject to appeal or review. The new act contains a number of provisions not to be found in the pharmacy laws of the older states.

OBITUARY.

GEORGE C. STILLSON of the Stillson-Powell Drug Corporation of Norwalk, Conn., one of the largest drug companies of the State, died very suddenly of heart failure. Mr. Stillson was in the drug store until a few minutes before his death. When the local telegraph manager came into the store for a drink of soda Mr. Stillson jocularly asked him if he wasn't "afraid of dropping dead this kind of weather." Mr. Stillson then left for his home, and was sitting on the porch talking to a friend when he suddenly lay back in his chair and died. He learned the drug business in Detroit when a boy. For thirty-two years he conducted the Stillson-Powell Corporation of which he was president. He was sixty-two years of age. He leaves a widow.

ELI M. MAYNARD of Geneva, N. Y., died on July 15, aged 85 years. He was at one time a prominent merchant and member of the drug firm of Maynard & Loring. He was a prominent Republican and had been honored by election as coroner of Ontario county three times, overseer of the poor and tax collector.

GEORGE S. BISCHOF died at the family home, 1008 Main street, Buffalo. Mr. Bischof, for many years was associated in the drug business at 606 Clinton street with his brother, Charles T. Bischof. He was 43 years old. He was born in Philadelphia, but spent the early years of his life in New York City.

WILLIAM O. GAUDELET, who for a long time was prominent as a druggist in Newton, Mass., died of cancer, in his fifty-third year. In more recent years he had been engaged in the manufacture of pocket-books. His wife and four daughters survive.

MRS. GEORGE A. KIMBALL, the widow of a former leading and well-known druggist in Haverhill, Mass., is dead, after a long illness.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories.
Twelve Teachers. Thorough Courses.

NEXT TERM BEGINS SEPT. 7, 1903.

Address inquires to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

ONE MOMENT, PLEASE!

You may have overlooked some of the following goods advertised in last week's issue:

GLASS SYRINGES.—Special low prices may be secured upon glass syringes, medicine droppers and hypodermic vials by corresponding with the Chesapeake Glass Co., 117-121 Mercer St., Baltimore, Md.

TWEEZERS.—The Coe Mfg. Co., 50 Warren St., New York, will mail, upon request, a catalogue showing assortments of their "Perfect Point" Tweezers which they claim are the only kind made with ground points.

THYCALOL.—The standard mouth wash antiseptic made at the Elwin Laboratory, Poughkeepsie, N. Y., which is said to be used and prescribed by dentists, physicians and trained nurses everywhere. It retails at 50c. and 1.00. Write for literature.

HAIR BRUSHES.—Solid block, waterproof hair brushes, the kind that look and wear well, made by the Grand Rapids Brush Co., Grand Rapids, Mich.

LABELS AND PAPER BOXES.—David Heston & Sons, Frankford, Philadelphia, solicit correspondence. This firm have been long and favorably known to the trade.

PURE CASTLE SOAP.—The La Primera brand made by the Home Soap Co., 68-70 Clarkson St., this city, is a pure olive oil castile soap which is marketed in ten-cent bar cuts packed 180 in a box, each bar in a red and yellow carton.

TABLETS.—The Paine Chemical Co., Rochester, N. Y., make a full line of standard tablets and tablet triturates. Note their adv. on inside of front cover.

BOTTLE STOPPERS.—An absolutely air-tight bottle stopper called the "Perfection" is made by the Perfection Bottle Stopper Co., 290 Clark St., Chicago. It ought to be a very useful article in any drug store, and a first-class seller. Your jobber has them.

PUSHKURO AND COLD PUSH.—Two excellent remedies which Dr. Chas. A. Pusheok, 1619 Diversey Blvd., Chicago, Ill., is advertising very extensively in both German and English papers. See his adv. on inside of back cover.

VERNAL SAW PALMETTO BERRY WINE.—Made by the Vernal Remedy Co., 101-107 Seneca St., Buffalo, N. Y., who are pushing it in every way. They want to make you a proposition. Write to them today.

STEEL FURNITURE.—A 1903 product of the Yeshera Mfg. Co., Toledo, O., made of Half Oval Steel, elegantly finished in nickel or copper, cleanly, handsome, noiseless and lasting. Cuts may be seen on page 19. This firm send samples at their own expense.

VENDING MACHINES.—The Apex Vending Machine is something new and attractive. It vendes chocolate, chewing gum and salted peanuts in fancy penny packages, and yields a net profit of more than 100 per cent without taking any of your own or your clerk's time. Write to the Curtiss-Williams Co., Chicago, Ill., "Dept. E.", for a descriptive circular.

Angostura Bitters as a Trademark.

A decision in the proceedings undertaken by Dr. J. G. B. Siegert and Sons, Trumbull, B. W. I., manufacturers of Angostura Bitters, to stop the sale of the article alleged to be put up fraudulently by C. W. Abbott & Co., Baltimore, is early expected. In the several cases the complaining company has instituted to protect its trademark rights its contentions have been upheld. In its case against A. Bauer & Co., the defendants alleged that they used as principal ingredient angostura bark and, therefore, the name described their bitters. The court decided, however, that an article not shown to possess medicinal virtues or to be the main ingredient of the

finished product from which the latter derived its characteristics, could not be used as a pretext for infringing a well-known trademark.

In the case against A. & B. Goodman of Memphis the defendants claimed the words could not be exclusively appropriated on account of their descriptive and geographical significance. The court, however, decided that Messrs. Siegert & Sons were the exclusive owners of the trade name "Angostura Bitters," and granted them an injunction against the defendant company. Another interesting decision on this point was also rendered last month by Judge Kohlsant in the U. S. Court, Chicago, on a motion for a preliminary injunction brought by the Siegerts against Andrew McAnsh and others.

The 20 Mule Team Brand of Borax.

The value of borax as a detergent and disinfectant has long been recognized by the better informed class of people, but in the last few years the masses have come to know it as a hygienic necessity in the home. It is used for the toilet, in the nursery, in the kitchen, in general household work, and in the sick-room; in the latter case it is vitally necessary that it be strictly pure. Owing to the large demand for borax at the present time, there is a considerable quantity of the adulterated article on the market, and it is necessary for the retail druggist to test the borax he stocks unless he is sure of the source. The Pacific Coast Borax Co. are selling immense quantities of their 20-Mule Team Brand of chemically pure Powdered Borax for the simple reasons that druggists know it is pure without testing it, and it is well advertised. This firm have offices at New York, Chicago and San Francisco. They are supplying handsome window displays and pamphlets for distribution. If you haven't the 20-Mule Team Brand in stock, better write for particulars today.

Druggists' Rings.

We wish to call the attention of our readers to the advertisement of our old friends, the J. Arthur Co., 18-20 Colonial Arcade, Cleveland, Ohio, on page 21 of this issue. This firm are offering druggists' rings made of sterling silver, oxidized, with ruby or emerald eyes, at the exceptionally low price of \$2.50, which they will send prepaid to any address upon receipt of the price.

HARRY WOOD, aged 37, Council Bluffs, Ia., fell from the fourth story window of the Richardson Drug Co's building, Omaha, and died while being taken to the hospital. His neck was broken. No one knows how the accident occurred as Wood was alone in the wholesale liquor department of which he was the manager. But it is supposed that he climbed onto the window sill for the purpose of closing the window. Wood had been in the employ of the company for fifteen years, but had been in charge of the liquor department only two years.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued July 21, 1903.

- 734,030.—Frank S. Young, Norristown, Pa. Process of producing magnesium and calcium carbonates.
- 734,039.—Louis Brand, Los Angeles, Cal. Non-refillable bottle.
- 734,063.—John G. Hauck, Columbus, Ohio. Bottle-washing machine.
- 734,177.—Joseph V. Hull, Brooklyn, N. Y., assignor to Harry C. Blye, New York, N. Y. Safety-closure for bottles or jars.
- 734,191.—Albert T. Otto, New York, N. Y., assignor to Harry T. Blye, New York, N. Y. Bottle-stopper.
- 734,213.—Joshua Barnes, Smithtown Branch, N. Y. Hot-water bag.
- 734,323.—Frank M. Pratt, Decatur, Ill. Process of extracting oil from cotton-seed.
- 734,323.—William Harrison, Redhouse, W. Va. Bottle-closure.
- 734,325.—Otto Hess, Höchst-on-the-Main, Germany, assignor to Farbwerke, vorm. Meister, Lucius & Bruning, Höchst-on-the-Main, Germany, a corporation of Germany. Green anthraquinone dye and process of making same.
- 734,459.—George H. Gillette, New York, N. Y., assignor to Aluminium Bottle Cap Company, a corporation of Maine. Bottle-sealing device.
- 734,480.—Thatcher, P. Wilson, Easthaven, Conn., assignor of two-thirds to Jacob P. Goodhart, New Haven, Conn. Water-still.

- 40,793.—Blood and nerve remedies. The Powers Manufacturing Company, Philadelphia, Pa. A monogram composed of the letters "H", "M", "C", and "O" inclosed by a sylvan wreath.
- 40,796.—Chemical combination of double salt of lithium and sodium. Lith-Alkin Chemical Company, Pierre, S. D. A shield associated with the words "Lith-Alkin 'Wells'".

LABELS.

Registered July 21, 1903.

- 10,196.—Title: "Kola Celery and Pepsin." (For Kola Tonic Wine). Edward J. Cobean, Toronto, Canada.
- 10,198.—Title: "Colein." (For medicine). Benajah T. Davis, Huntington, W. Va.
- 10,199.—Title: "Shawmut Sure Cure for Rheumatism." (For medicine). H. N. Burch & Co., Perry, N. Y.
- 10,200.—Title: "Keynon's Wonderful Spasmodic Colic Cure for Beasts." (For medicine). W. D. Keynon, Bosworth, Mo.

PRINTS.

Registered July 21, 1903.

- 769.—Title: "Erdman's German Herb Cure." (For medicine). Erdman & Co., Philadelphia, Pa.
- 770.—Title: "Nu-lectric." (For medicine). Nu-lectric Chemical Co., Nanticoke, Pa.

A Valuable Curative Dietetic Article.

Kumyss is prepared by the action of various ferments on milk, and when correctly made, it possesses an undoubted value in all debilitating diseases. In the last few years many poor brands of Kumyss have been placed upon the market, so many of them, in fact, that the physician and the ordinary layman have begun to lose faith in the value of Kumyss as a curative dietetic article. This state of affairs should not exist. Good Kumyss is one of the most valuable remedies in digestive disturbances, and also rapidly increases body weight after disease. The good name of Kumyss should therefore be protected, and this can easily be done by selling and using Brush's Kumyss, a thoroughly reliable article and one which may always be depended upon. The New York depot for Brush's Kumyss is at 217 W. 123rd St., telephone 639 Morning-side. If you have any trouble in securing what you want, drop a line to Dr. E. F. Brush, Mount Vernon, N. Y., and your wants will have immediate attention.

TRADE-MARKS.

Registered July 21, 1903.

- 40,787.—Quinine and cantharides hair-tonic. Weaver's Pharmacy, Phillipsburg, N. J., and Easton, Pa. The representation of the body of a lion, etc.
- 40,788.—Tonic. Giuseppe Citro, Hoboken, N. J. The representation of a pestle and mortar having the initials "G. C." arranged in a monogram thereon, etc.
- 40,789.—Tonic. Joseph Saldmark, Ludington, Mich. The word "Alphosco."
- 40,790.—Diuretics. Nelson, Baker & Co., Detroit, Mich. The hyphenated word "Ze-an."
- 40,791.—Curative oil for certain named diseases. Alphonzo Marble, Penn Yan, N. Y. A bust portrait of the registrant with his autograph signature arranged thereacross.
- 40,792.—Remedies for blood and skin diseases. Charles B. Knox, Johnstown, N. Y. The word "Spim".

FURTHER ADVANCES IN PRICES OF MORPHINE AND QUININE.

New York, July 28.—There is no perceptible improvement in the general consuming demand and continued seasonally quiet conditions prevail in nearly every department, with the materialization of the expected advance in values of morphine and quinine, the more noteworthy changes.

OPUM.—Business in a jobbing way has been less active during the past week, but foreign markets have continued to rule firm owing to unfavorable crop conditions, and spot quotations are steadily maintained, at the recent advance to \$2,066/3.85 for 9 per cent, and \$3,709/2.35 for 11 per cent. Powdered is finding at a moderate jobbing outlet and prices continue firm at \$1,566/4.75 for 13 per cent and \$5,066/3.25 for 16 per cent.

MORPHINE.—Values have hardened under the influence of the stronger position of opium and the expected improvement in values has materialized, manufacturers having announced an advance of 10c. per oz. The revised jobbing quotations are \$2,436/2.70 for eightles in ounce boxes and \$2,566/2.65 in 2½-oz. boxes, \$2,356/2.45 in ounce vials and \$2,306/2.40 in 5-oz. cans, as to brand and quantity.

QUININE.—Immediately after the Amsterdam bark sale last Thursday manufacturers advanced quotations, but per oz. and jobbers now quote 246/23½c. for bulk 1c. per oz. (ins., 21½c/25c. in 5-oz. oz. (ins., 256/25½c. in 10-oz. (ins., 266/26½c. in 15 or 10-oz. (ins., and 316/25½c. (ins., 266/26½c. in 15 or 10-oz. (ins., and 316/25½c. in ounce vials, according to brand and quantity.

GUAIACUM.—Lower primary markets and increased spot supplies have caused a reduction in jobbing quotations to 106/70c. for whole and 606/70c. for powdered.

ANGELICA ROOT.—An easier feeling has developed among holders and quotations in a jobbing way show a decline to 226/27c. for whole and 276/32c. for powdered.

GILL CALEPT.—Native is decidedly stronger in sympathy with corresponding firmness at producing points, and jobbers have advanced quotations to 80/600c.

OIL PEPPERMINT.—Continued weakness is a feature of the market and jobbing quotations have been further reduced to \$3,366/3.55 for Western, \$3,156/3.70 for Wayne Co. and \$3,706/3.95 for either H. G. H. or red-stalk.

STROPHANTHUS SEED.—An easier market is noted for the Koube variety and jobbing prices have declined to \$1,256/1.35 for whole and \$1,356/1.45 for powdered.

SILVER NITRATE.—Manufacturers' prices are 1c. per oz. higher and jobbers have advanced quotations to 416/46c. for crystals, and 436/48c. for fused.

VANILLIN.—Keen competition among manufacturers has influenced a weaker market and jobbers have reduced quotations to 806/95c.

ARNICA FLOWERS.—Unfavorable crop reports have caused the market to harden and quotations for jobbing quantities have been advanced to 186/22c. for whole, 226/25c. for ground and 286/30c. for powdered.

GLYCYRRHIZA.—Supplies are more abundant and the tone of the market is easier with jobbing quotations showing a reduction to 356/81.05 for whole and \$1.05 for powdered.

SERPENTARIA ROOT.—Spot stocks are light and quotations for jobbing quantities have been further advanced to 556/65c. for whole, 586/68c. for ground and 606/70c. for powdered, according to size of order. **PECUAC.**—Rio is lower abroad and the spot market is weaker with jobbing quotations reduced to \$1,706/1.95 for whole and \$1,806/2.05 for powdered as to grade and quantity.

BELLSAWN.—Laboral receipts from producing districts have weakened the market and jobbers have reduced quotations to 376/42c. for country and 396/44c. for city.

BUSINESS NOTICES.

A HELP IN PRESCRIPTION WORK.

There are a great many things that the average dispenser can't remember, and there are as many more that he shouldn't try to remember—it isn't safe. These things come up in prescription filling when time is an important factor and accuracy is strictly essential. There are questions about dosages, dose equivalents, percentage solutions, specific gravity, incompatibilities, metric and thermometric equivalents, meanings of Latin, French or German terms. These things are all tabulated, or figured out, handy for instant reference, in the Era Dose Book (Third Edition, Revised and Enlarged). Price 50 cents, postpaid.

"Education does not make fools, it develops them," writes the pork-packer to his son.

The Era Course in Pharmacy was not prepared for fools. It can do them no good.

But the same merchant informs his son that education also develops the opposite of fools.

Therefore, if you are wise—which, of course, you are—education will do you good, and the Era Course is suited to your needs, provided that you need development in the knowledge of pharmaceutical science.

Perhaps a college course would do you more good, but cleverness is, unfortunately not always blessed with an abundance of means, and the Era Course is much less expensive than a college course.

If you need a pharmaceutical education and have little time and money, write to the Pharmaceutical Era, No. 8 Spruce St., New York, for a prospectus which will tell you all about The Era Course in Pharmacy.

THE AMERICAN PHARMACEUTICAL ASSOCIATION.

The association which represents the professional side of American pharmacy is now in session at Mackinac Island. The attendance is probably not disappointing to the veterans who have seen many similar gatherings, but when we consider that this body is practically the only one in the country concerned with the promotion of the scientific side of the calling, the comparatively small representation of the thousands of persons financially interested in the calling is not gratifying. Perhaps many others would have attended if time and the essential for traveling expenses were not so woefully scarce, still we feel that a very much larger number of druggists could attend these meetings if they were sufficiently interested. There is at present a tendency to look upon the professional side of pharmacy as a more or less ornamental feature of the drug business, and to connect such meetings as that now assembled with the luxuries and refinements of life. In our opinion the importance of these matters in the every day life of the pharmacist is greatly underestimated. If the science of dispensing is of no practical importance why insist upon education and examinations?

"THE HIGHER AIMS."

The Western Pennsylvania Retail Druggist—this sprightly publication would be quoted much more frequently if its name were a little less formidable—thinks that we are in this column inclined to appeal to the "higher aims" prematurely. It says in effect that the higher aims should wait until more important matters are attended to, and quotes Mr. Bode-mann's famous remark, "To H— with raising the standard when we can't raise a living." This remark is characteristically picturesque and forceful, and it contains a very large element of truth, but we doubt very much whether its author intended that its principle should be applied indiscriminately. As a doctrine for the edification of the young, it is distinctly dangerous. It would be a sad world if the pursuit of all ideals and higher aspirations were put off until all the bodily wants are satisfied. Besides, we have always had a notion that "the standard" and living returns were related in some way. As a rule, the higher the intellectual qualifications and the popular

of a profession the more comfortable the remuneration. We still think that the hard cash principle of being overworked. We believe that "higher wages" and the "standard" might be made to pay good dividends.

MORE ABOUT THE NATIONAL BUREAU OF MEDICINES AND FOODS.

We print upon another page two letters in which are presented certain amendments to the plans recently proposed for the formation of a national bureau for the control of manufactured foods and medicines. The purposes of the amendments are to remove all suspicion of commercialism from this gratuitous governing body, and to turn over some or all of its duties to a department of the U. S. Government. All of which is very sensible and very commendable in every way, but it is difficult to see how this can render the proposal a particle more acceptable to the reluctant manufacturer than it was before. The producers of prepared solids and liquids intended to be applied to the internal economy of mankind are still blandly invited to come in and have their affairs regulated to meet the ethical standards of a body of gentlemen whose interests are purely humanitarian. Humanity and profits are not always closely related—more is the pity—and the average manufacturer being frankly out for profits, it seems a bit unreasonable to expect him to enter into an arrangement which might seriously interfere with the pursuit of margins. Everyone not financially interested will gladly admit that the manufacture of foods and medicines should be governed in some way, so as to prevent the practice of fraud upon a helpless public. There is no question of the desirability of such regulation, but the great difficulty is, how. If the manufacturing interests of the country have successfully resisted all attempts at legal restriction for fifteen years, it would seem to be a waste of time to try to accomplish the same desirable end by means of a body absolutely without authority of any kind. The regulation of great industries is, moreover, purely a government function which can not be lightly assumed even by national associations. Instead of devising plans and methods which involve such great responsibilities, it seems to us far more profitable to follow the line of action suggested in amendment A in the letter to Dr. Wiley: To devote all the combined energies of the pharmacists and physicians of the country "to secure the enactment of a pure food and drug bill such as was pending before the last Congress."

ENTERPRISING CLERKS.

The organization of drug clerks into associations separate and distinct from druggists' societies goes bravely on in spite of vigorous protests and frequent explanation that the interests of the pharmacist and his clerk are identical. Perhaps the proprietor and his employe are equally interested in the advancement of pharmacy as a profession, but in other ways. It is not always true that "what is good for the druggist is good for his clerk," and no one is better acquainted with this fact than the clerk. Whether the drug clerk is in any greater need of protection than the pharmacist is an open question, but at any rate

he has recently shown an earnestness in organizations and a vigor in presenting his demands that might serve his superior as a wholesome example. One of the most ambitious of these associations of young pharmacists is the Minnesota Retail Drug Clerks' Association. This society was formed less than two years ago, and in a handsome souvenir booklet recently issued we find the courageous statement, "We expect to enroll every drug clerk in the State by the beginning of next year." What State pharmaceutical association has similar hopes and expectations? The members of this clerks' association are organized for mutual and social protection, they admit to their ranks only registered pharmacists and they are not affiliated with labor unions. One of the most important of the society's many activities is assistance in enforcing the State pharmacy law. This is accomplished in an interesting manner. Violations of the law requiring the employment of registered men are cautiously investigated by secret committees of single members selected and appointed by the president. The evidence thus obtained is put in order and turned over to the board of pharmacy. The clerks are not upholding the law from purely unselfish motives. They derive very substantial benefits from the convictions. A druggist is, for example, convicted of leaving his store in charge of an unregistered man. He is promptly fined, and to avoid a recurrence of the disagreeable experience he immediately sets about securing a properly registered clerk. The result is, a new vacancy to be filled by the clerks' employment bureau, greater demand and higher wages. During the last year twenty-one positions have thus been rendered available. It is quite evident that the next generation of Minnesota druggists will be thoroughly alive to the benefits of organization.

CIVILIZATION AND ORGANIZATION.

The Minnesota drug clerks have enjoyed their association only a short time and are naturally enthusiastic believers in the benefits to be derived from organization. There are also in the ranks evidences of remarkable powers of clear thought. A statement in their souvenir pamphlet is so suggestive that it calls for comment. After calling attention to the perfection of modern organization, the writer says, "In fact, one might say, civilization is organization." In the sense that both involve the subordination of the immediate desires of the individual to the good of the many, this statement is no doubt true. There is, however, a marked distinction between civilization and voluntary association of individuals with similar interests. The civilized man bends his neck to the yoke of law and social custom because he is compelled to do so, while the member of a modern association lends his support to his organization consciously, voluntarily. In the growth of modern social conditions men have exerted themselves in the interests of humanity mainly because they were forced to do so by stress of circumstances or superior power, and still the aggregate of good to the many has been very large. It is reasonable to suppose that if every individual member of society realized fully that his efforts were directed toward a definite advantage to himself and consciously exerted his energies to that

end, the net result might be much more considerable. This is the dream of the socialists and an actual possibility in modern industrial organization. The members know what they are working for, and know what they expect to gain by concerted action. If civilization has done much for humanity, conscious, voluntary organization may do as much and more.

WHAT CAN A POOR DRUGGIST DO?

Our neighbor, the Druggists' Circular, spreads nearly two columns of alarm about a couple of curious decisions rendered by anti-alcoholic judges. These legal lights proceed upon the principle that whatever is capable of producing intoxication is to be utterly condemned, and refuse to recognize any distinction between an alcoholic mixture used as a beverage and one employed as a medicine. One of the cases which have caused all this trepidation is that concerning malt extracts, recently declared by the Supreme Court of Ohio to be intoxicating beverages and to be sold only by dealers who have paid the regular liquor tax. The other decisions are from Maine judges who class such remedies as beef, iron and wine and Jamaica ginger with intoxicating liquors. One judge held that the only questions at issue were whether the liquors were intoxicating and whether they were offered for sale. Our esteemed neighbor states that if this opinion is upheld any druggist "who keeps, sells, gives away or otherwise disposes of any one of a numerous class of articles he now deals in, will be subject to the penalties of the liquor laws of all prohibition States and all regions where local option obtains." This is all very true, but "it" is one of the largest words in the dictionary. To prohibit the sale of all essences, tinctures and fluid extracts is not the intent of any prohibitory liquor law, and we feel certain that these interpretations will never receive such sweeping application. A law or an interpretation of a law without a strong backing of public sentiment is of small account, and we have sufficient confidence in the good sense of the people to have no fears about the final result. People all need medicine occasionally, and they will take good care that the druggist who supplies these necessities will not be "cast into outer darkness." It will be a long time before the druggist finds himself compelled to limit his sales to tablets and vinegar bitters.

A SUGGESTION FOR ADVERTISERS.

An incident which recently occurred in Boston suggests an infallible scheme for thrusting wares upon the attention of the public. It might be a little difficult to apply it successfully in some cases, but it is certainly worthy of the attention of advertisers of the boundless-enterprise sort. A large express wagon laden with cases of a tonic of world-wide fame and bearing its name conspicuously emblazoned on the boxes, "got stuck" on a railway track. The team was disabled by a trolley car and blocked all car traffic for a long time. Meanwhile the passengers in the stalled cars made many remarks unfit for publication, and the tonic came in for much comment. The impatient passengers swapped opinions regarding its merits, and before the line of cars resumed their customary whir the panacea had received some of the most excellent advertising imaginable.

F. C. SAVAGE.

Mr. Savage was born in Paris—Illinois—in the first year of the War of the Rebellion. His first manual labor was in a Government blacksmith shop in Missouri. Then he was a schoolboy in Texas, a ranchman in the Chickasaw Nation territory, a high school graduate in Arkansas and a benedict there also, marrying the daughter of Judge William Hunter. Then he tried pharmacy, in Hackett, Ark., and politics, serving three terms as a republican city clerk in a democratic community. In Hartshorne, L. T., we now find him. He was vice-president of the Territorial Ph. A. in 1902 and now is president.

THE NATIONAL BUREAU OF FOOD AND MEDICINES.

New York, July 30, 1903.

To the Editor:—I was formerly very much interested in the idea of a National Bureau of Medicines and Foods to control the manufacture of foods and medicines, with a view of preventing fraud and dangerous ingredients without that fact being made known plainly on the label. In other words I have always believed that goods should stand on their merits and that the label should always plainly indicate the exact composition of the product in the package.

After the committee formulated their plans I was opposed to it because I believed that several ideas which they advanced were not judicious, and I have unhesitatingly opposed the proposed bureau, possibly without having carefully considered the fact that any error could be eliminated before the organization went into effect.

Since the meeting of the American Medical Association in New Orleans last May I have been conferring with Dr. Wiley, chief of the United States Bureau of Chemistry and I am convinced that certain amendments which he has suggested to the committee are good and that if they are adopted the proposed bureau would have the support not only of the

INTERIOR OF CARLTON C. SMITH'S PHARMACY, PATERSON, NEW JERSEY.

Like men, there are drug stores that stand at the head. Such a one is reproduced on this page. It arose from the ashes of the old C. P. Kinsella store, which was swept away in the great Paterson fire, two years ago. The new store belongs to Carlton C. Smith, who climbed from the position of clerk in Mr. Kinsella's employ to be his manager and then his successor.

The store was built after Mr. Smith's ideas. He says it is full of "cranks." The fittings are richly dark, the onyx, marble and silver fountain is heavily mirrored, and the soda incidentals are of silver and cut glass. Along the side are store and stock rooms, bi-

cycle room, night clerks' room and toilet rooms for ladies, the latter an innovation. A big cellar, contains several vaults.

Mr. Smith has the largest force of clerks with one possible exception—Petty of Newark—in New Jersey. The store acquired an enviable name under Mr. Kinsella's ownership and the present management is calculated to keep it intact. Mr. Smith's manager is Mr. Emerson. Mr. Smith is leaning on the end of the counter at the left, just to the left of the tall man with a hat on, and Mr. Emerson is behind Mr. Smith. Both are bareheaded.

medical profession but of pharmacists and legitimate food manufacturers and that the medical and pharmaceutical press should sustain their efforts.

I enclose a copy of a letter which I wrote to Dr. Wiley on July 24 and it shows in brief that the committee is now in harmony with Dr. Wiley and with those of us who have endeavored during the past few years to sustain the admirable work he has been doing in this line.

You may possibly see fit to publish these communications as it will be a further contribution to the subject which has been discussed so admirably recently by Dr. Kusby and your editor in the columns of the *Pharm.*

C. C. FITE.

The Letter to Dr. Wiley.

My Dear Dr. Wiley:—I wish to thank you for your very clear letter in reference to the proposed National Bureau of Medicines and Food. Since I received your letter I have had the pleasure of discussing the matter at length with Dr. P. M. Jones and I am convinced that the committee having the matter in hand agrees to the essential points suggested by you and I will say that I fully endorse them as follows:

A. The American Medical Association and the American Pharmaceutical Association in conjunction with the committee to make an earnest effort to secure the enactment of a pure food and drug bill as was pending before the last Congress.

B. The bureau to accept the standards for foods as fixed under the law by the Department of Agriculture and that any further standards so fixed shall be in every harmonious with the work of your depart-

C. That the bureau, if organized, shall be free from the objections that would pertain to a commercial enterprise.

I understand from Dr. Jones that the committee will fully endorse the above amendments to their proposition. Such being the case the proposed bureau will have my hearty endorsement and I will do all in my power to assist the committee in perfecting their plans.

The subject of some method of controlling the manufacture of foods and medicines in such a way as to prevent fraud, has had the support of practically every thoughtful sanitarian and humanitarian in this country for many years. But it goes without saying that while many have theorized you have acted, and I would consider any effort to work without your support and co-operation as worse than useless, because I might in a degree destroy the very important work you have built up after so many years of conscientious and ceaseless industry.

I am very glad indeed to see that everything now looks favorable to a consummation of some plan of harmonious action between the proposed bureau and your department. The question of this proposed bureau of medicines and foods is by no means a simple one and I trust that the opposition I have recently expressed to it will be understood to have been to certain features which are now eliminated, as it now stands, it is all right and should have the support of every physician, manufacturing pharmacist and druggist in the country, for, if these professions hold together, they can overcome any opposition which may arise from interested parties who prefer fraudulent to honest methods of business.

SHOP TALK

THE CURB PHILOSOPHER DISCOVERS A FEW MORE FAULTS.

"Got back safely, I see!"

"Why shouldn't I?" snapped the C. P.

"Tut, tut!" said the druggist. "Your trip doesn't seem to have agreed with you. What's the matter?"

"Trip was all right," returned the sage examining the tip of his sun-burnt nose with a pocket mirror. "But I didn't have the time I expected to have."

"Of course—of course! Nobody ever does. It's yourself that is always moralizing about the illusions that continually attract and disappoint mankind. You can't expect to find things exactly as you expect them to—o—"

"Ha! A fine paradox you've got yourself into. But I know what you mean. No, no! That's not the trouble."

"Didn't the fish bite at all?"

"Mighty poor fishing of the kind I was after! You see, it's like this. I, as general critic of the pharmaceutical world, am really interested in the calling. I hoped to exchange views with druggists in different towns on the broad, big questions of the day."

"That ought to be easy enough at this season. Wouldn't they talk?"

"Talked freely enough about politics and baseball, and horse racing and religion, but when it came to pharmacy, they'd look bored and change the subject."

"Perhaps you tried to do all the talking yourself," suggested the druggist.

"I don't know," said he sage reproachfully. "It might be, but I was very careful. Of course I had to do some talking of the corkscrew sort, but they ought to be used to that. I tried all sorts of ways to worm an opinion out of some sleek-looking chaps. They didn't seem to care a rap about the past, present or future of the calling that gave them a good living. Supreme indifference was the rule. In some cases, after I had cut my way into the attention of the drug man with a cold-chisel, so to speak, I found nothing there. Never seemed to have had any thoughts on the subjects that interest me. One chap—seemed to be fairly prosperous too—thought the A. Ph. A. had something to do with the Chinese in San Francisco. Another had never heard of the educational standard—wanted to know what was the use of educating the druggist anyway; after he had his certificate he was all right."

"About that time you looked bored."

"I felt like educating that fellow with a brick. Then I tried to find out about the pharmacy laws. 'Yes,' said a leading citizen druggist, there is a law in this State. It's a good one too, they say.' 'Well, what about it?' said I. 'Oh, I dare say, it's—' all the right. Ask old man So-and-So. He knows about those things."

"A law-abiding citizen need not trouble himself about laws, you know!"

"I can't say that the druggist I am talking about is so all-fired law-abiding, either. But he didn't care a hang about it."

"He must have been a commercial pharmacist. The law didn't directly touch his profits. Did you try him on the N. A. R. D.?"

"Yes, he had heard about that. Said an organizer had been around and fixed up a schedule."

"Did he live up to it?"

"Oh, yes! He had even paid his dues. But he wasn't particularly interested. He had never heard about the working of the plans in other places. I asked him what he would do if some one were to begin cutting. He said he didn't know—nobody did cut so what was the use of bothering about it."

"I say! He had you there, you know. What earthly

good does it do you, for instance, to bother about all these things?"

"Suppose everybody were to think that way! Where would pharmacy be then? What would become of the thing, if everybody were to leave everything to drift along? How long do you suppose it would take the pharmacist's natural enemies to gobble his little all?"

"Why didn't you fire those questions at the chap you've been speaking about?"

"I did. He said that there were plenty of cranks to attend to those things."

"Something of a humorist too, eh?"

"Perhaps he was. Measly kind of a joke anyhow! I spoke about some of the odd things that happen in the drug line and are snapped up by the journals."

"Missed your point of view?"

"Possibly! He didn't read any journals. I inquired about the drug papers that came to the store."

"Didn't approve of your favorite, I suppose."

"Worse! He didn't have either approval or disapproval. Said, oh, yes, several journals came to the store. He forgot which. He offered to call the boy to hunt one up and see—plenty of them lying around somewhere."

"Doesn't he read at all?"

"About like the average individual, I suppose—a dab here and there at the daily papers, the head lines, the jokes and a startling tale, here and there, an occasional magazine article, and the latest novel which nobody can escape."

"He's an exception!"

"Not so much as you think. At least half of the druggists are that way. You can't reach them in any way. They won't read the journals, they don't attend association meetings."

"What interests in life have they?"

"Local interests, like everybody else. Spend ten hours a day, gassing with cronies hanging around the store—the ball game, the short-comings of the preacher—principally gossip."

"What are you going to do about it?"

"Can't do anything! Pride of calling and interest in the future of the trade is largely a matter of education, I suppose. A man doesn't realize the possibilities in the business until he has spent time and good hard cash in studying the science of the thing."

"It ought to improve then. Education is looking up."

"It is improving. A much larger proportion of druggists are awake than even ten years ago. The colleges, the associations and journals are gradually having some effect. But it's slow—oh, how slow!"

"You're not discouraged?"

"N—no! But I have a tremendous respect for the leaders. It is as hard to arouse a bit of enthusiasm in that sort as to look a hole through that marble slab. Do you wonder that it is difficult to push reforms. I wouldn't blame the leaders if everyone of them were to throw up the whole business in disgust."

"Better fish for perch next time!"

"Hold on! I met the other kind of druggist too. The trip wasn't entirely without profit. I have a new stock of ideas about things, and several bran new schemes."

"For instance?"

"Of that later! There comes my car."

IF YOU CAN'T "GET ON TO" THESE WONDEROUS PSYCHOLOGICAL CURVES, USE PLAIN COMMON SENSE.

According to Dr. Silas S. Neff, of Philadelphia, a poor salesman can become a good salesman if he only exercises mental influence on the buyer. In other words, salesmen should be psychologists.

Said he in an interview—

"Abstain from all negative influences. Do not think of evil, crime, anger, hate, revenge or worry. Let your mind dwell on hope, ambition, love, friendship, sympathy, art and music."

"There are three predominant types of women shoppers—intellectual, the woman who thinks; emotional, the woman who feels; volitional, the woman who decides."

"This is the way to tell them apart:—Intellectual woman—logical in mind, fixed expression of face and not volatile; emotional woman—a mellow, varying voice, large, sympathetic eyes, shows outward influences; volatile woman—firm walk, talks quickly, decides quickly."

"If the woman belongs to the intellectual class she must be shown the advantage of the purchase. She must be convinced by reason. If she belongs to the emotional class she is a 'sure sale,' as things which appeal to the eye and the emotions catch her."

"All the talking in the world and all the winning smiles in the universe won't make the volitional woman buy a penny's worth more than she wants. Her mind is made up, and the clerk will employ his time better by devoting his attention to the next customer."

"How would you advise a salesman to treat a woman of wealth?" was asked.

"The woman of wealth is proud of the fact that she does not need to inquire the price, and the clerk who falls in with her idea of independence will be the most successful. He may talk style, quality and everything, but omit the cost."

"The woman of limited means is dangerous. Be accommodating, and she will buy what she needs."

"And the woman who is undecided?" was another question.

"In that case the will of the salesman must decide for her. If he has judged her correctly he can lead her to a decision."

"What about the bargain hunter?" was the last question asked.

"Show her the best bargains and recommend them."

Man seems to be built along the general lines of woman, as far as shopping goes, only not so much shoppy. So treat him psychologically also, in respect to his intellectual, emotional or volitional attitude of mind.

ADMIRE THE ADVERTISEMENT.

The wife of a well-known Grand Rapids, Mich., druggist assisted him one Saturday night, when his soda fountain clerk was away on a vacation. When business was over, and all made ship-shape for the night, they found it was after 12 o'clock.

"Now I'd better see you home," said the druggist, "and then come back to get shaved, for I can't go over Sunday like this. Or would you mind waiting in the store?"

"No, I'd rather do that," she replied. "I'm so tired I'll be glad to rest a little before walking home."

Thereupon she was locked into a darkened store, and settled herself comfortably by an open window to rest.

But suddenly she woke with a start and saw a man's face peering at her through the open window. No sooner had she jumped than the man himself gave a startled bounce, and exclaimed,

"O—g—g—g—you alive?"

"Well, I guess so," said the frightened woman. "Or I was until you scared me to death," she added, showing courage as she saw the policeman's uniform the man wore. And then she explained the situation.

"Well, it that don't beat all!" exclaimed the officer. "I thought at first it was somebody in here that had no business here after lock-up time, and then as I came nearer I thought Mr. Blank had put up a new advertising picture in the window, and I was n't wondering how in the world anybody could make a pic-

ture so natural. I thought it was an awful pretty picture, anyway."

This sufficed to soothe the ruffled feelings of the weary woman.

WE CALL THEM OUT WITH A BAND.

The majority of Syracuse druggists say that sales are now behind those of the corresponding period last year. One reason is that more people are away on vacations. Merchants are getting up all sorts of schemes to drum up business. One of the most successful so far is the band concert on Saturday nights in front of the drug store of R. E. Smith & Co., South Salina and Jefferson streets. The merchants in the vicinity paid the expense by making up a purse. Gaylord's band of 25 pieces furnishes the music. The streets are crowded with strollers and as a result R. E. Smith & Co., Hanna & Coling and W. H. Bissell do a rushing business throughout the evening. On the North side of the canal the merchants also had a band which did not play from a stand but marched up and down North Salina street. The concerts will be held every Saturday night.

BUT A PIANO IS USED IN THIS CASE.

South Haven, Mich., is a summer resort town, and the merchants do all kinds of things to draw trade. It remained for J. L. Congdon & Co., druggists, to introduce an innovation in drug trade drawing devices. They installed a piano in their store and secured the services of an artist from Detroit to "thump" it all summer.

The "Can't-Be-Done" Man.

Did you ever see the "can't-be-done" man? He is the agreeable individual who always has a pitcher of ice water ready to drown out every spark of enthusiasm that some other man may have kindled for the business. He is the man, who, when he sees some other man getting in shape to make a long pull for trade, stiffens his knees and pulls back on the traces so that the other fellow may not possibly accomplish anything. He carries a hammer constantly and uses it vigorously on any business idea advanced that does not happen to coincide with his own, the supposition being probably that he has beneath his hat the concentrated wisdom of the ages. The "can't-be-done" man is a barnacle, a drag, deadweight. His tribe is numerous, and the business afflicted with his influence deserves sympathy.

And this reminds us of a comment once made by an expert who was called in consultation by a large eastern corporation to see if he could find why they were losing money every year. After spending some weeks going over the details carefully he made an exhaustive report and advised several radical changes. The "can't-be-done" man was there to interpose his usual objections to anything that savored of progress. Finally the exasperated expert, addressing the president of the board, said: "I find to my chagrin, sir, that the most important recommendation I can make for your business is one that I have entirely overlooked until just now, but with your permission I will make it. What you need here most of all, gentlemen," and here the directors craned their necks to catch every word, "is an able bodied undertaker. I bid you good afternoon."—The New Idea.

Attention to the Waiting.

It does not take a person long to get tired waiting if no attention is paid him. On the other hand, a word or two from a salesman apologizing for the delay, will suffice to make him feel that he is not neglected and he will willingly wait his turn. A little thoughtful tact on the part of a salesman will often do more than pages of advertising, toward giving a customer a good impression of the store—Merchants' Record and Show Window.

The Wild Poppy.

THE ESCHSCHOLTZIA CALIFORNICA.

By A. C. ZEIG, Ph. C., San Francisco, Cal.

OF the different varieties of poppies growing wild in California the *Eschscholtzia* is unquestionably the most common and the most conspicuous. Its beautiful orange-yellow flowers cover large areas, virtually converting the landscape extending from the roadside in all directions into a yellow sea of bloom.

Named by the noted botanist, Adalbert von Chamisso, after his esteemed friend and companion, Dr. J. F. Eschscholtz of Dorpat, both members of the Russian exploring expedition which, under command of Captain Kotzebue, arrived in San Francisco Bay in the year 1816 in the ship "Rurick", after having explored part of the coast of Alaska, this extremely beautiful yet simple, golden-colored flower possesses more than ordinary interest both to native Californians, and the tourists that visit the State during the winter or spring time of the year. Owing to its distinctive brilliant coloring and satin-like texture, and by effect of its prolific growth, it surpasses in beauty the myriads of wild flowers which adorn the foot-hills, meadows and country road-sides throughout Central and Southern California.

In her book, "The Wild Flowers of California," Mary Elizabeth Parsons says concerning the *Eschscholtzia*: "It is difficult to exaggerate the charms of this wonderful flower. When reproduced in countless millions its blossoms fairly cover the earth, and far away upon distant mountain slopes bright patches of to the sun. Though cultivated in many parts of the world, one can form no conception of it; pale and languishing in a foreign garden, one must go to its native hill-sides to get an idea of its prodigal beauty."

Few flowers have been favored with as many names as the golden poppy. Long before Chamisso and his friend Dr. Eschscholtz beheld the plant in its flower, it had become a favorite with the Spaniards of the early Spanish missions of California, and it had been favored by them with a number of poetic names such as "Copa de Oro" (cup of gold); "Calce de Oro" or Calcedora (chalice of gold); "Amapola", "Dormidera", "Torosa", etc.

The Argonauts of '49, who often sent home pressed specimens in their letters, called it the "California Gold Flower."

The names used by the different tribes to designate the plant and its flower are many—too numerous to mention.

In the southern part of the State the blossoms begin to appear early in February, while in the central

part they do not unfold their golden petals until March, and appear in greatest profusion during the months of April and May. The writer has seen some stray blossoms along the roadside in October and November, the stray flowers, of small size, making their appearance after the autumn rains.

Inasmuch as the noted Chamisso and his esteemed friend, Dr. Eschscholtz, arrived in San Francisco Bay on October 2, spending about a month exploring the peninsula, undertaking several expeditions to Mission San Jose, Monterey and Bodega, it is not likely that the landscape presented a great variety of wild flowers at that time of the year, or that the flower in question was seen at its best, and it is probable that the specimens which the two naturalists collected, while not necessarily confined to the sand-hills bordering on the bay, were but small stray blossoms, which appeared after the first autumn rains.

The pale stems of the plant are from 6 to 20 inches long, being usually shorter when growing on sand-hills and mesas unsheltered to the ocean breeze than when growing among tall grasses of the lowlands or meadows of the interior. In the latter case, the large orange-colored flowers, perched upon an erect stem 16 to 20 inches in height, peeps out above the grasses in order that it may obtain its share of sunlight. In this respect, the *Eschscholtzia* is distinctively sensitive, for, unlike the wind poppy, it does not seek shady places, but revels in the bright sunlight and depends upon the sun to display its beautiful golden petals.

The juice of the stem is watery, and possesses a characteristic odor; the same is true of the juice of the root, which is of a yellowish color.

The leaves are finely dissected; each tiny leaf particle is tipped with deep red coloring, as is also the torus, or rim of the cup shaped receptacle upon the upper and inner surface of which are borne the calyx, corolla and stamens.

The flowers, varying in color from a deep orange-yellow to white, have four petals of fine satin-like texture, which generally measure two or three inches across, though the writer has seen exceptionally large specimens (var. *crocea*—*E. crocea*—Bentham) growing among tall grasses in the vicinity of San Jose, measuring five and one-quarter inches across.

The tightly-rolled buds are enclosed by a pale-green calyx, shaped like a pointed fool's cap, and when the bud is ready to unfold to the touch of the sun's rays, the tightly-fitting cap parts from the receptacle, and is pushed off by the expanding petals. The flower unfolds its golden cup when the day is well advanced, and as the sun sinks low on the western horizon it again curls itself up for the night, while if the day be cloudy or rainy, it droops its head, and draws its velvety petals even tighter. Some insects take advantage of this behavior, and seek shelter within its satin folds during the night, and, if the day following be cloudy, are made prisoners within the tightly-clasped petals. It is probable that the insect becomes a willing prisoner under its mild soporific

The Poppy in Its Habitat.

Field of Poppies at Base of Mt. Echo,
near Pasadena, Cal.

influence, drawing the spirit of the poppy from the walls of its san prison.

All parts of the plant are of interest pharmaceutically, because of the presence of alkaloids to the extent of 0.5 per cent in the dried drug, and it is to one or more of these alkaloids that it owes the mild analgesic and soporific action ascribed to it.

The plant was analyzed many years ago by Professor Walz who reported (*N. Jahrb. d. Pharm.* 1844) besides the usual constituents of plants, the presence of sanguinarine and two other alkaloids, which he designated as "bitter" and "acrid" alkaloids. In 1862 Walz reported (*N. Jahrb. d. Pharm.*) as the result of another analysis of the plant, the presence of aecic acid.

Wittstein and Dragendorff are also mentioned as having investigated the *Eschscholtzia* alkaloids, the former as having isolated chelerythrine; the latter, however, is non-committal, and refrains from definitely naming any constituent of the plant.

Considerable interest was manifested in the plant both in medical and pharmaceutical circles, when subsequently Bardet and Adrian reported (*Journ. de Pharm. et Chem.* 1888) the presence of morphine together with another alkaloid and a glucoside. The announcement of the discovery of morphine in the plant was regarded by conservative chemists, with a degree of uncertainty—perhaps bordering on a doubt, as it seemed strange that the presence of such a well known alkaloid should have been overlooked for so many years, and much more so that its presence should have escaped the attention of previous investigators, such as Professor Walz, Dragendorff and Wittstein.

The report of Bardet and Adrian soon led to other investigations of the plant. Rueter reports (*Pharm. Zeitung* 1889) the presence of two alkaloids neither of which, however, proved to be morphine. In 1890 Dankwort reports (*Monat. Diss. Marburg*) as the result of his investigations the presence of probably five alkaloids, but, like Reuter, was unsuccessful in his research for morphine. One of the alkaloids isolated by Dankwort having a melting point of 204 degrees he concluded from this, as well as its behavior toward alkaloidal reagents, that the alkaloid isolated was identical with protopine.

Battandier reports (*Comptes Rendus* 1892) having discovered fumarine in the plant and considerable quantities of chelerythrine in the root, the author drawing his conclusions solely from color reactions. Subsequently Wintgen undertook an investigation of the plant, and reports (*Monat. Marburg* 1898) as having isolated protopine and *B. homochelidonicum*, the identity of which he determined both by their melting points and color reactions. A third alkaloid isolated by him having a melting point of 242 degrees he was unable to identify.

Recently R. Fischer and M. E. Tweeden have undertaken an exhaustive study of the alkaloids of the plant and report (*Pharm. Archives*) the presence

of probably seven alkaloids, their investigations not being fully completed. Among the alkaloids isolated by the authors are Protopine B and G Homochelidonine, Sanguinarine, Chelerythrine and two other alkaloids differing in their properties from any of the alkaloids hitherto known.

Under the microscope the petals present a striped appearance not visible to the naked eye except when they are dried. This is due to yellow bands of color stretching across the petals and somewhat parallel with each other. The yellow bands consist of elongated parenchyma cells of irregular outline, almost completely filled by large droplets of yellow oleoresinous substance. (E. Schrenk *Bull. of Pharm.* 1888). The small round droplets which partly fill some of the cells, are of an orange color, and seem to differ from the oleoresinous masses in being less soluble. The striped appearance is due to the fact that the zones alternating with the bright yellow bands contain very little of the colored oil. The oily substances constituting 7.5 per cent. by weight of the dried petals, are soluble in ether, alcohol, chloroform, benzene, benzole and carbon disulphide and saponify readily with the alkalis. Ether and chloroform extract them from the dried petals together with the alkaloids. The percentage of total alkaloids contained in the petals is identical with that found in other parts of the plant.

For the first clinical reports concerning *Eschscholtzia* we are indebted to Stanislaus Martin (*Bull. Gen. de Therap.* 1887) who recommended them as a substitute for opium preparations. Subsequently Dr. Ter-Zakariant (*Gaz. Med. de Paris* 1889) states that the alcoholic extract acts as a depressant to the respiratory organs; also as a narcotic, affecting in toxic doses the spinal chord. Duardin-Beaumetz is also mentioned as having experimented with the extract of the *Eschscholtzia* and as a result of his observations concludes that it is a mild calmative, soporific and analgesic.

It is said that the San Luis Rey Indians chew the leaves with gum, also that the Spanish Californians prepare a hair oil by frying the plant in olive oil or bear grease, and adding perfume. It gives the hair a glossy appearance and is said to stimulate its growth.

The writer was informed that many years ago during a famine caused by a long drought, the Mariposa Indians and other Indian tribes subsisted almost entirely on the poppy for several months. The herbage was boiled for some time, and the resulting decoction containing the bitter poisonous principles (alkaloids) poured off and thrown away. After being boiled a second time it was used as the principal article of diet, while the famine lasted.

The Placer County Indians are said to treat the herb in the same manner, and then eat it as a green. Instead of boiling it, it is sometimes roasted on hot stones and placed in water afterward.

Of late the species *Eschscholtzia Californica* has been divided into quite a number of new species which, on account of their close resemblance are somewhat difficult of determination. There appears to be little or no reason for the division into numerous new species, inasmuch as the slight difference or modification in the plants and their flowers may be the result of the varying conditions under which the plants grow in different sections of the State. The first specimens from which the species were originally described by Chamisso being of the sand-hill form, common to the San Francisco sand hills and places in the immediate vicinity of the ocean, this form and the form common to the valleys and foot-hill region of the interior are that in the former the stems are short and the yellow flowers small with a narrow rim to the receptacle while in the latter or interior form, var. *coelestis* (E. crocea-Bentham) the stem is tall and robust, the flowers large and of an orange color with a conspicuous broad rim to the receptacle.

Concerning this form, Prof. W. L. Jepson in his

work. "Flora of Western Middle California," says: "In the latter part of May and June the tips of the petals become yellow, and by autumn the species produce wholly-straw-colored flowers, so that the dry-season forms simulates very closely the form common to the sand hills which is exposed to adverse conditions near the sea. Although the various large-flowered forms have been described as distinct from the original seacoast form, there is really not the slightest constant distinctions to be had; there are not only gradations between the forms, but the gradations are so numerous and moreover, topographically considered, cover such extensive areas of country that they are quite as likely to be found as the extremes. The maintenance of such forms as artificial species on the ground of convenience would in this case have no point whatever. Even in San Francisco county, arge-flowered forms with a broad rim to the receptacle are common."

Assays made of true specimens of the sand-hill form gathered on the Mission Hills of San Francisco, and also of the large-flowered form of the interior show in either case a total alkaloid content of 0.5 per cent. The alkaloids were extracted with ether and chloroform (3 and 1), the ethereal solution shaken out repeatedly with diluted hydrochloric acid, the acid solution rendered alkaline with ammonia, and shaken out with ether, and ether and chloroform (3 and 1) the ethereal solution evaporated. The alkaloids, completely soluble in acid, were finally dried and weighed.

Because of the distinctive beauty of the flower, and the fact that it is common to nearly all sections of the State, its abundant growth and rich yellow coloring, emblematic of the gold, sunshine and oranges, the Eschscholtzia was almost unanimously chosen some years ago by the members of the State Floral Society as the state flower, or floral emblem of California, since which time its popularity has steadily increased, and as a result the golden poppy has been woven into prose, poetry and design.

Prof. Emory E. Smith, in his book, "The Golden Poppy," which is a compilation of the records of the poppy, says: "Few flowers have a history so rich in incident, and no other in later years has so charmed the poet's muse and quickened the artist's touch."

THEORY AND PRACTICE

FLUORESCENCE AS A TEST FOR QUININE.

G. Deniges (Journ. Pharm. Chem.) states that the fluorescence of a solution of quinine sulphate affords a delicate test for the base in extremely dilute solutions. In applying the test the fluorescence is rendered more evident by means of the light of burning magnesium. In this way two parts per million may be detected directly, and smaller amounts by extracting and concentrating with immiscible solvents. To detect quinine in urine, 10 G. of the sample are rendered alkaline with 10 drops of ammonia, and shaken with 15 G. of ether. The ethereal layer is removed, filtered and shaken with 10 Cc. of 5 per cent. sulphuric acid. The acid liquid is then observed by the light of a burning magnesium ribbon held 6 to 8 centimetres from the lower part of the tube. One-half milligram of quinine per litre produces a distinct fluorescence. Bile and saliva are treated in a similar manner, care being necessary to avoid emulsification, and using a larger proportion of ether. The fluorescent bodies which bile normally yields to ether do not interfere, for they do not enter the acid solution. In the case of blood, 10 Cc. are first treated with oxalic on hydrofluoric acid, and then with 10 to 15

Cc. of 5 per cent. sodium metaphosphate solution and 3 to 5 Cc. of 5 per cent. sulphuric acid with enough water to make 25 Cc. The mixture is agitated, heated for a few moments on the water bath, and filtered. The filtrate is then shaken with ether and the acid extract of the ether observed as described above. Milk is treated in a similar manner. In making the observations the eyes should be protected from the bright magnesium light by means of suitable screens or spectacles.

ESTIMATION OF ACONITE.

A. B. Stevens (Pharm. Archiv.) has studied the chemical and physiological methods of assaying aconite, and finds that the decomposition of aconitine by heat does not produce the same compounds as those formed by natural decomposition. The products of the former neutralize acids, while those of the latter do not. The quantity of the drug necessary to kill a frog was found to be entirely unsuitable as a basis of standardization. Although valuable as a means of determining the quality of aconite preparations, Squibb's physiological test is not so useful for purposes of standardization as the chemical assay. The ordinary chemical method gives very satisfactory results when applied to the assay of the root or preparations which have not been subjected to heat, but is not reliable in the assay of the extract.

A FAT SAPONIFYING FERMENT.

Constein, Hager and Wartenberg (Berichte) suggest an improved method of preparing fatty acids by which bodies of greater purity may be obtained than those prepared by means of chemical processes. It had previously been shown that when oily seeds are crushed in water the liquid acquires an acid reaction, and fatty acids are liberated. The authors confirm the hypothesis that this change is due to a distinct ferment which is only active in an acid medium, the acid combining, with the ferment and splitting up the glycerides. This change takes place in nature during the germination of oily seeds and is analogous to the alteration of starch by diastase in seeds containing that substance. The ferment is extracted from the residual press cake after extracting the oil by pressure.

TO KEEP BATTERY ZINCS AMALGAMATED.

C. N. Turner (Model Engineer and Electrician) has devised a method of keeping the zinc rods employed in the common Leclanche battery thoroughly amalgamated. A disk of thin sheet zinc is soldered to the bottom of the rod and the edges bent up as to form a sort of cup. The cup and soldered portion are painted with Brunswick black and the cup filled with mercury. Capillary attraction causes the mercury to creep up the surface of the rod, thus keeping it uniformly amalgamated. When the zinc is replaced with a new rod the mercury is simply transferred to the new cup, so that there is absolutely no waste.

TITRATION WITH FEHLING'S SOLUTION.

S. A. Vasey (Lancet) makes the end reaction of titrations of sugar solutions with Fehling's solution more distinct and sharply defined by adding to the measured solution about two teaspoonfuls of an inert white powder, precipitated calcium carbonate or barium sulphate. The mixture thus prepared is raised to the boiling point, stirring constantly with a glass rod, and the sugar solution run in. The reduced cuprous oxide is deposited on the particles of chalk or barium sulphate which rapidly subside so that the color of the clarified supernatant liquid can be easily seen.

PROCESS FOR FORMING EMULSIONS.

A process for preparing fats and oils that they may be readily formed into permanent emulsions with water has recently been protected by a French patent. The process consists in adding pure cholesterol or wax alcohols to the fat or oil. The mixtures form permanent emulsions with water.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Etching on Glass.

(T. D. S.) Fancy work, ornamental figures, lettering and monograms are most easily and neatly cut into glass by the sand-blast process. Lines and figures on tubes, jars, etc., may be deeply etched by smearing the surface of the glass with beeswax, drawing the lines with a steel point, and exposing the glass to the fumes of hydrofluoric acid. This acid is obtained by putting powdered fluor spar into a tray made of sheet lead and pouring sulphuric acid on it, after which the tray is slightly warmed. The proportions, will, of course, vary with the purity of the materials used, fluor spar (except when in crystals) being generally mixed with a large quantity of other matter, but this point need not affect the success of the operation. Enough acid to make a thin paste with the powdered spar will be about right. Where a lead tray is not at hand, the powdered spar may be poured on the glass and the acid poured on it and left for some time. As a general rule, the marks are opaque, but sometimes they are transparent. In this case, cut them deeply and fill up with black varnish, if they are required to be very plain, as in the case of graduated vessels. Liquid hydrofluoric acid has been recommended for etching, but is not suitable, as it leaves the surface on which it acts transparent. The agent which corrodes the glass is a gas which does not remain in the mixture of spar and acid, but passes off in the vapor. The following formula has been published under the title of

ETCHING INK

Ammonium fluoride 2 drams
Barium sulphate 2 drams

Reduce to a fine powder in a mortar, then transfer to a lead dish and make into a thin writing cream with hydrofluoric acid (some make use of fuming sulphuric acid). Use a piece of lead to stir the mixture. The "ink" may be put up in bottles coated with paraffin which can be done by heating the bottle, pouring in some melted paraffin, and letting it flow all around. The writing is done with a quill, and in about half a minute the ink is washed off.

Extreme caution must be observed in handling the acid since when brought in contact with the skin it produces dangerous sores very difficult to heal. The vapor is also dangerously poisonous when inhaled.

Powdered Camphor in Permanent Form.

(M. C.) A method of "reducing camphor to a powder which will not become lumpy or run together again" recommended by a number of writers, is the following:

Put the camphor in the usual manner with the addition of a little alcohol. When it has nearly reached the proper degree of fineness, add a few drops of cold petroleum and immediately triturate in the manner a powder as fine as flour is

obtained which does not cake together. This powdered camphor may be used for all purposes except for solution in alcohol, as it will impart to the latter a faint opalescence, owing to the insolubility of the petrolatum in the liquid.

A similar method recommended some years ago by John K. Williams, an English pharmacist, consists in taking equal parts of stronger ether and alcohol to reduce the camphor to powder, the claim for this method being that it only takes one-half of the time required when alcohol alone is used, and the camphor dries quicker. Before sitting add one per cent of white vaseline and 5 per cent of sugar of milk. Triturate fairly dry, spread out in the air, say fifteen minutes, then pass through a moderately fine wire sieve, using a stubby slaving brush to assist in working it through.

Ink Erasers.

(T. D. S.) Various formulas for ink erasers have been published in previous volumes of the Era. However, inks made with nutgalls and copperas can be removed by using a moderately concentrated solution of oxalic acid, followed by use of pure water and frequent drying with clean blotting paper. Most other black inks are erased by use of a weak solution of chlorinated lime, followed by dilute acetic acid and water, with frequent drying with blotters. Malachite green ink is bleached by ammonia water; silver inks by potassium cyanide or sodium hyposulphite. Some aniline colors are easily removed by alcohol, and nearly all by chlorinated lime, followed by diluted acetic acid or vinegar. In all cases apply the substances with camel's hair brushes or feathers, and allow them to remain no longer than necessary, after which rinse well with water and dry with blotting paper.

Examinations, New York Board of Pharmacy.

(J. W. A.) The New York Board of Pharmacy is composed of three branches for the eastern, western and middle sections of the State. Each branch is required by law to "conduct examination of applicants for licenses monthly, when so determined by the board, except in July and August, and not less frequently than once in three months." For specific dates we suggest you write to the general secretary of the board, Warren L. Bradt, 55 Washington avenue, Albany, N. Y.

Removing Gum of Sticky Fly Paper from Furniture.

(J. B. D.) In further reply to your query, this journal July 6, page 26, J. C. Allan, 761 Woodland Hills avenue, Cleveland, O., says he can give you information about a "cleaner" that will remove gum of tanglefoot flypaper from furniture without injuring the varnish.

Formula Wanted.

(W. A. A.) Dr. Skene's "puly. ac benzoic"?

FORMULAS.

Glycerin and Cucumber Jelly.

Gelatin (160 gr. to 1 ounce) 240 grains
Boric acid 240 grains
Glycerin 6 fl. ounces
Water 10 fl. ounces

Perfume to suit

The perfume must be one that mixes without opalescence, or otherwise it mars the beauty of the preparation. Orange flower water or rose water could be substituted for the water if desired, or another perfume consisting of—

Spr. vanillin (15 gr. per oz.) 2 fl. drams
Spr. coumarin (15 gr. per oz.) 2 fl. drams
Spr. bitter almonds (80) 8 minims

to the quantities given above would prove agreeable.

NEWS DEPARTMENT.

ON THE UP TRACK.

State Associations Are Prospering—Membership Gain for Forty-Three Associations Will Average About Sixty—Features of the Meetings.

When the returns are all in it likely will be seen that this has been the banner year for State associations. Eight associations are yet to report, but they cannot hurt the general average. They are Michigan, Montana, North and South Dakota, Oregon, Vermont, Washington and Wisconsin. And a study of these assembled reports is interesting.

The associations are growing not only in membership but in breadth of work. A better realization of their suasive power with legislators and the examples of victories for organization in notable instances is inspiring all. The social leaven is working and the educational value of these gatherings is becoming more apparent. This year has emphasized the assertion that this is the era of organization. In a very few years the State druggists' associations will be conspicuously at the front of all other commonwealth societies. The pharmaceutical press, bringing to each member of each association the experiences, deliberations and work, be it along social, educational, legislative or commercial lines, of all the associations, is no small stimulant in the march to this desirable position.

In a short time from now the retail druggist who is not an association man—a State association man—will be conspicuous. As a partaker in the fruits of others' efforts this conspicuousness will brand him as a sponger. He will be "small potatoes" indeed. Already the wholesaler or manufacturing firm that does not belong to one or both of its national associations is of small consequence.

Twenty-seven States and two Territories have held their annual meetings thus far. Mississippi and Wyoming are new-comers to the assemblage and start off with a vim. New Jersey, the oldest—thirty-two years is its age—true to past record, is in the front in an attack upon product patents and finds its action popular with the others. A reduction in the alcohol tax is the formal request of nearly every association. New Jersey, Massachusetts and Connecticut lampoon their State boards of health. The boards of pharmacy are generally in high favor, though Texas' sixty-four boards make a pitifully inefficient total, and Delaware requests a little more "elbow grease" from her board. The Connecticut board finds no violations, because, its members assert, there are none. Connecticut pharmacy should have a monument.

Social features grow more prominent. New Jersey refused contributions from manufacturers for this purpose. Colorado seems to have staked her all on a grand vaudeville entertainment. Base ball and three-legged races are everywhere indulged and the ladies are always provided with chances to exploit their skill in athletics. These entertainment features undoubtedly are a great card at the meetings and make them a relaxing outing. At the same time a live presiding officer can make way for a wonderful lot of business and instruction in the formal sessions. The annual reports and the press save much that social events crowd out.

Talking about those annual reports, why are they usually so slow in appearing? Publication committees

and secretaries should note that the Missouri and New Jersey reports were out last month, Missouri first, although the former State did not adjourn its meeting until June 12 and the latter until June 11. Secretaries H. M. Wheelpley of St. Louis, and Frank C. Stutzien of Elizabeth, should issue a brochure on how to do it. Six of the societies met in May.

The cocaine question was urged for legislation by many of the States, most earnestly by Illinois, Indiana and Minnesota. Louisiana comes to the front with a "code of ethics" for its members. Oklahoma and Indian Territories have had the first joint meeting. Louisiana and South Carolina were the first to meet, both in the second week of May, and Oregon will be the last, in October.

Pennsylvania met "above the clouds." A remarkable feature was the infusion of barrels of new blood. Carlods, perhaps is a better expression, for there was accomplished the very remarkable feat of electing 414 new members! New York had 130, Kansas 72, Louisiana 57, nearly every one from New Orleans; Connecticut 52, Minnesota 47, Nebraska 41, 37 of whom were brought in by Mr. McFadden of Bryan's town, who received a china closet as a prize, and Little Rhode Island 1. But Rhode Island had an attendance of 70 at her semi-annual meeting, and she has a balance in the treasury of \$800, too. The average gain for the 43 States and Territories having associations is 60, making 2,580 in all.

The Western States have all the honors in attendance. Iowa and Minnesota with 600 each, are at the head. Nearly every association reached its "biggest yet" stage in attendance. It is interesting that New York, Missouri, and Ohio were celebrating their silver jubilees. It was especially a silver jubilee with Secretary Hopp of Ohio, who received a handsome silver service in token of his twenty-fifth year as secretary. Dr. R. H. Land of Augusta, and Dr. E. C. Durban of Augusta, were "caned" by the Georgia Ph. A. Probably Nebraska had the most papers, though several others were well up, especially Missouri and Kentucky.

The travelers' auxiliaries were out in several instances. In Illinois it was their first time. New York, Missouri and Minnesota also had such meetings, and the last State will have a woman's auxiliary. Connecticut and several other States have associate memberships for the traveling boys.

Alaska, Arizona, California, Florida, Idaho, Nevada and West Virginia have no associations. The district of Columbia meets bi-monthly.

NOTES ABOUT OUR ARMY BOYS.

Among the recent arrivals from the Philippines on the transport Thomas were Joseph Dykstra, H. W. Riess and Leo E. Kennedy, sergeants first class, Hospital Corps, U. S. A.

H. W. Riess, sergeant first class, is spending a two months' leave at his home in Washington, D. C., and upon expiration will report to Fort Leavenworth, Kas., for duty.

Jason D. Byers, has been sent to the P. I. for duty; he is assigned in the C. S. O. of Dept. of Luzon, in Manila.

W. J. Donahay returned to the U. S. sick and ia

T. A. MILLER,

President of the Virginia Board of Pharmacy.

now under treatment at the Presidio, San Francisco General Hospital.

We note the discharge from the service of Robert Leighton after a two years' term in the Islands.

The following assignments to U. S. A. transports are filed: "Summer," K. G. Kincaid; "Thomas," H. Meade; "Logan," B. L. Jacobsen; "Sheridan," P. Haughey.

Christopher Herman, has been assigned to Fort Lawton, Wash., for duty.

The Hospital Corps School of Instruction at Washington, D. C., with Sergeants, first class, Newport, Thomas and Leidinger, are attending the manoeuvres at Ft. Gretna, Pa.

Sergeants Lathrop, Fair and Fontegne have applied for service in the Tropics again instead of being ordered to duty in the U. S.

G. W. Muller, at Fort Leavenworth, Kas., is ordered to the Presidio General Hospital, at San Francisco.

C. M. Shaw still holds down the old Hospital No. 3 at Luneta Barracks, Manila, P. I.

Fourteen applicants for the grade of hospital steward with the rank of sergeant are on file at the surgeon-general's office, all being from the P. I.

Gus. J. Westerdahl, recently at the large military hospital, Holo, P. I., is ordered to the U. S. and will arrive on the next transport.

Recent changes in the P. I.: R. M. Walker, to Nueva Caoceros, South Camarines; Isaac C. Clarke, Binua, Laguna; Otto Schimann, Taal, Batangas; Theodore Solomon, Santa Cruz, Cavite; James C. Gunn, Cuyayan, Mindanao.

Of the sergeants, first class, on duty at or around the capital are Franz Luwe, H. Harberas, F. M. Marshall, Oscar Gabich, and J. B. Copping.

A daughter was born to the wife of sergeant, first class Patrick Looby, at Fort Mott, N. J.

The new uniform recently ordered for the pharmaceutical branch of our army is slowly being introduced, but at most points the old blue lingers yet. The emblems take the place of the red cross and the color of facings is changed from green to maroon.

COMMERCIAL TRAVELERS

Now Jones Can Say He Pays the Freight—There Are Wedding Bells—and Belles—for Messrs. Tupper and Dodd.

A mackerel, weighing 750 pounds, dressed and cooked, escaped from John F. Sprague, the manager of Sharp & Dohme's traveling department, and the rest of the boys at Monroehad City, S. C. There is some secret thing about that fish that Mr. Sprague cannot be induced to tell.

W. P. McGehee, Colorado, and Dr. M. C. Cornell, Texas, Sharp & Dohme men, are in town.

C. Crawford, salesman for the Hazeltine & Perkins Co., Grand Rapids, has been "crippling" about with rheumatism for some time. He still manages to see the trade.

C. B. Edwards, genial representative of Gilpin, Langdon & Co., called upon his Buffalo friends last week. He is enthusiastic in his praise of the good-fellowship of the Rochester druggists. He was a guest of the Rochester Ph. A. at their third annual outing. George Moore was in Buffalo last Thursday, calling in the interest of Dodge & Oleott. Mr. Whitman, with Merck & Co., New York, was in Buffalo on the same day.

J. C. Wolfinger, traveling for the Miles Medical Co., is spending the summer vacation at his home at Sturgis, Mich. In order to escape any suggestion of ennui he is assisting in Tobey's drug store, while Mr. Tobey and family are keeping cool in their summer cottage at Klinger Lake.

George Schaub, the Cleveland representative for Parke, Davis & Co., has gone for a trip up the lakes on his vacation.

John Paul Jones, Sharp & Dohme's state man, may now use the phrase "John Paul Jones—He pays the freight." Some time ago he was enjoined from using it by former Lieutenant-Governor Jones of this State, who asserted that the phrase was his, by priority of use. Now Mr. John Paul Jones has a letter of permission from the former L. G.

We may congratulate Charles E. Dodd, Parke, Davis & Co.'s representative in Spanish America, who is here engaged in honeymooning at Center Moriches, L. I. She was Miss Carolyn Elizabeth Mitchell of Albany, N. Y.

In a changing automobile, Dr. W. R. Clements, Brooklyn detail man of Sharp & Dohme, is off for a trip to Virginia with a party of friends. H. S. Kendall, that firm's Pennsylvania man, is resting for a short time in this burg.

E. Plummer, city representative of Parke, Davis & Co., is at the annual reunion of the "London Boys," Brooklyn detail man of Sharp & Dohme, is off for a trip to Virginia with a party of friends. H. S. Kendall, that firm's Pennsylvania man, is resting for a short time in this burg.

The Era is pleased to announce the marriage of Frank E. Tupper, of this city, at one time an Era scribe and now the State representative for Fox, Fultz & Co. Mr. Tupper's bride was Miss Maude W. Pugsley, of New Glasgow, Nova Scotia. The young people sailed for Boston and this city.

VERY SPECIAL

A limited number of live druggists in the larger cities will hear of an attractive proposition, by communicating with

NEW YORK CITY

NEW YORK AND VICINITY.

FOR NEXT YEAR.

Plans Already Well Under Way for Entertainment of State Ph. A. at Brighton Beach, Coney Island, Next Year.

Representatives from the pharmaceutical societies of this city, called by S. V. B. Swann, who wisely deemed it best to get an early start, met at Brighton Beach Hotel, Coney Island, last week to organize for the entertainment of the State Ph. A. next year.

Dr. William Muir of the Kings County Ph. Soc., was elected chairman of the executive committee; Peter Diamond of the N. Y. R. D. A., vice-chairman, S. V. B. Swann of the Manhattan Ph. A., secretary; Carl Schur of the German Apothecaries' Society, treasurer. The other members of the executive committee are Dr. A. L. Goldwater of the G. N. Y. Ph. Soc., and Dr. Joseph Kahn of the Drug Clerks' Circle. Other committees are:

Finance—Oscar Goldman, chairman; Dr. F. P. Tutthill, Thomas P. Cook, Charles S. Erb, Max Mariamson, Joseph Weinstein, Louis B. Epstein.

Entertainment—Fred Borggreve, chairman; A. Bakst, Arthur C. Searles, David Kantor, Henry Imhof, Isajah Lewin, Andrew E. Hegeman.

Printing—A. B. W. Firman, chairman, E. C. Goetting, M. G. Kantowitz, Oscar C. Kleine, Jr., G. Pfingsten.

Badges—Oscar C. Kleine, Jr., chairman, George H. Hitchcock, Dr. F. P. Tutthill.

Press—The pharmaceutical papers.

Ladies—Mrs. William C. Anderson, chairman; Mrs. Oscar C. Kleine, Jr., Mrs. Felix Hirsman, Mrs. A. L. Goldwater, Mrs. Thomas J. Keenan, Mrs. Joseph Kahn, Miss Muir, Mrs. Peter Diamond, Mrs. F. P. Tutthill, Mrs. Joseph Weinstein, Mrs. Charles S. Erb, Mrs. Adolph Tsheppe, Mrs. Hugo Kantowitz, Mrs. Henry Imhof, Mrs. Carl Schur.

Reception—Dr. F. P. Tutthill, Theodore Weicker, Timothy L. Woodruff, Horbert McKesson, W. J. Schiefelin, Thomas P. Cook, Clarence G. Stone, W. O. Allison, P. O. Haynes, A. R. Elliott, Edward G. Wells, George J. Seabury, R. W. Johnson, H. N. Fraser, Emil Levi, Albert Plaut, Carl Brucker, Eimer & Amend, Mr. Wackerberg, Joseph Weil, J. Stend, William H. Griffith, Col. Elmer W. Fitch, Wm. P. Ritchey, Dr. Ernest Stauffen, Wm. R. Warner, Jr.; Dr. E. H. Squibb, C. W. Meinicke, and others.

It was recommended to open the meeting on Monday, June 20, at 2:30 p. m., by an informal reception. Dances and greetings will occupy that evening. On Tuesday, Wednesday, Thursday and Friday the business sessions will be from 9 o'clock to 1. The travelers' auxiliary will have charge of transportation matters, subject to approval of executive committee. All actions of the sub-committees will also be subject to the executive committee's approval.

If a souvenir book is issued it will not be by outsiders, and any contributing jobber is entitled to an advertisement.

The Brighton Beach Hotel, a model one, will be headquarters. Rates will be: American plan, \$3.50 a day; European plan, with one person in room, \$2 a day; with two in room, \$3. Separate dining, committee, ball and reception rooms will be free. Landlord E. Clark King will send a booklet to every member of the State association.

SOME MORE WHO CHOOSE TO REST.

A few of the recent vacations: Colonel Elmer W. Fitch, manager of Parke, Davis & Co.'s New York house, is temporarily a resident of Nova Scotia, where he likes to loat and fish at this season of the year. William J. Carr, superintendent for the same firm, is

at Asbury Park with his family, and varies salt bathing with bowling. William B. Kaufman, manager of the export department, is at Saratoga Springs.

Joseph Weinstein, president of the N. Y. R. D. A., is living at Seabright, Coney Island, with his family for the summer. A. Bakst of Bakst Bros., was at Rockaway for a few days' outing. C. H. Bernstein, the Hester street druggist, is in the Catskills with his family.

E. H. Holton of Holton & Adams, 54 Beekman street, tries his fishing skill in Orange county late this month. Commodore Charles H. Tompkins, of Schieffelin & Co., has gone out on the briny for a few days. Then he will go to the Catskills to view the interesting places his wife has there discovered during the summer, and then, inveterate yachting enthusiast that he is—his title was well earned—he comes down to see "Sir Thomas lift the cup."

McKesson & Robbins' wholesale plant is nearly depopulated just now. T. F. Farrell, southern trades manager, is cooling in the breezes of Block Island; William E. Jennings, manager of the export department, up the State; Charles Weiss—everybody knows him—in Norway, Me.; Herman Breiting, German salesman, who also owns a pharmacy at 2393-5 Broadway, is somewhere; William Burnett of the jobbing department, Rhode Island, and Benson McManus of the export department, in Sullivan county.

John G. Wischerich of Bedford and Greene avenues, Brooklyn, will join his family at Lake George soon.

CRUDE DRUGS FROM A NEW SOURCE.

A number of common plants, occurring in some cases as weeds, furnish, when properly collected and cured, crude drugs such as are now imported in large part from Europe and elsewhere. The bureau of plant industry of the United States Department of Agriculture is now engaged in the preparation of a farmers' bulletin pointing out the desirability of satisfying the demand for these drugs from domestic sources. The bulletin will contain descriptions and cuts of the plants, and methods of collecting, handling, and curing will be given.

In order to increase the effectiveness of the bulletin it is thought necessary to bring the prospective collector in touch with buyers. Therefore, circular letters are being sent to dealers in drugs asking if they wish to be included in the list of firms to whom the bureau is authorized to direct those wishing to submit samples and get prices.

PURVEYORS TO A STRANGE ORGANIZATION.

Hoboken, N. J., druggists are the purveyors to a club, the likes of which may not exist anywhere else. Indeed, the report that there was such a club in Hoboken was long scoffed at. But it is now known to exist and it is named the Hoboken Suicide Club. Poison is the favorite manner of taking off, and the druggists,

WHEN YOU HEAR OF A BABY

Think of the dollar you can make selling us

ARNOLD MILK STERILIZER AND PASTEURIZER

We will supply you with free literature with your name to distribute on application.

WILMOT CASTLE COMPANY.

26 Elm Street, Rochester, N. Y.

whose responsibility ends when they have complied with the poison laws in selling, are much in evidence at coroners' inquests. They do not like the notoriety, but it is well known that no blame can be attached to them.

A man bought Paris green at G. C. L. Maes' store, 151 Oakland avenue, last week. In a few minutes another man rushed in with the information that the Paris green had gone into the purchaser's crop. Mr. Maes advised dosing with mustard, and the severe retching that was brought on saved the would-be suicide's life.

A man named Rock got rough on rats at William S. Branner's store, 110 First street, Hoboken, and carried it to a saloon, where he and a friend divided it into two glasses of liquor and bumped glasses, draining the contents. Rock then staggered back to the drug store and sat down, soon rolling to the floor, whereupon the clerk dashed out for the ambulance. It was at Branner's that Ruello of the suicide club, bought carbolic acid a few weeks ago. Two other fellows, tired of life, bought carbolic acid at Willow avenue and First street, in a drug store, recently. It was designed for three, but one backed out.

NOW WE KNOW WHERE WE ARE AT.

July 28, 1903.

Hon. Seth Low,

City Hall, New York City.

Dear Sir—Many of our readers are enquiring why the regulations endorsed by the druggists at their meeting with the municipal explosives commission have not been signed by you. Will you kindly advise us when they may be expected?

Yours very truly,

THE PHARMACEUTICAL ERA.

July 29, 1903.

The Pharmaceutical Era,

8 Spruce St., New York:

Gentlemen—In reply to your letter addressed to the Mayor, I beg to say that the Mayor signed the regulations submitted by the municipal explosives commission, covering drugs and chemicals. You can obtain a copy and particulars from the secretary of the commission, 157-9 East Sixty-seventh Street, Manhattan.

Respectfully,

JOHN C. CLARK,

Assistant Corporation Counsel,

Office of the Mayor.

NEW JERSEY PH. A. COMMITTEES.

New committees announced by President George S. Campbell of the New Jersey Ph. A., for the year are:

Trade interests—S. D. Wooley, Ocean Grove; E. T. N. Stein, Jersey City; W. F. Ridgway, Atlantic City.

Query—Henry Schmidt, Elizabeth; David Strauss, Elizabeth; Herman J. Lohmann, Jersey City.

Membership—Clarence P. Smith, Newark; Charles E. Williams, Orange; T. S. Armstrong, Plainfield.

Procter memorial—Charles Holzhauser, Newark; William C. Alpers, New York; George M. Beringer, Camden.

Dr. Charles Rice Memorial, presentation—Herman J. Lohmann, Jersey City; George M. Beringer, Camden; Edward A. Snyder, New York; Frank C. Stutzlen, Elizabeth; James Foulke, Jersey City.

The county committees to form local associations are: Albany—W. F. Ridgway, H. H. Donkeyne, A. D. Calkoden; Middlesex—G. W. Parson, S. S. Rust, Charles Drake; Bergen—Eugene M. Fadden, L. Rockefeller, A. D. Miles; Monmouth—S. D. Wooley, D. H.

Hills, J. H. Rosell, Jr., Burlington—H. P. Thorn, H. B. Weaver, George F. Denon, Morris—William T. Brown, H. M. Smith, James A. Goodale, Camden—George M. Beringer, Jochim R. Moon, Lewis H. Wilson, Ocean—Charles A. Rye, W. J. Harrison, C. B. Mathias, Cape May—W. R. Wales, Cumberland—Charles W. Darr, O. K. Whipple, Henry A. Jordan, Essex—Charles Vinograd, L. L. Stuehle, Clarence S. MERCK GETS HERF & FRERICHS CHEMICAL CO.

Merck & Co. of this city have announced their purchase of the works of the Herf & Frerichs Chemical Co., St. Louis, excepting the ammonia plant, which that firm will continue to operate. The main offices of Merck & Co. will remain in this city and their works at Rahway, N. J., and Darmstadt will remain as they are, but the branch house at Chicago will be removed to St. Louis.

VACATION THAT COST NOTHING.

Two young women, employes of the Humphreys Homeopathic Medicine Co., went to Niagara Falls for a few days' vacation recently, prepared to spend about \$40 apiece on the trip. Their train had a collision, hardly jarring them. They went on, undisturbed, had their time and came home, when they were immediately visited by an agent of the railroad company, who paid them \$40 each for resigning any claims for damages. No doubt he thinks his employers got a bargain; the girls know they did.

NEW YORK NOTES.

—Among the week's visitors: E. B. Norton, the famous cutter of Birmingham, Ala., and children, who are often on the new board walk at Ashbury Park; George P. Norzgren, druggist of Sherburne, Minn., and Dr. R. C. Farrish of the same town, who were on their way home from a European trip; Adolph Suro, the Ponce, Porto Rico, druggist, who came on an annual buying trip; J. M. Tague, buyer for the Van Fleet-Mansfield Drug Co., Memphis Tenn., and his wife and two daughters; Justin T. Smith, Scranton, Pa., who was on his way East to see relatives; R. L. Palmer, Atlanta, on his annual buying trip; George Worley of T. R. Worley & Son, Covington, Ohio, who was buying for that store and for Worley & Albaugh, Franklin, Ohio, and Branson & Worley, Piqua, Ohio.

—The venerable William Blaikie of Utica, accompanied by his daughter Margaret, sailed on last Saturday morning for a six weeks' visit to Scotland. They will go direct to Glasgow, and will make such trips through Scotland as Mr. Blaikie decides upon when once he reaches the other side. William Blaikie is president of the St. Andrew's Society in Utica and twelve or fifteen of its members gathered at the depot to bid him good-bye and wish him a pleasant journey and safe return. The members surrounded their president and sang the concluding stanza of "Auld Lang Syne" in true Scotch style.

—"Umpf!" said the assistant cashier of the Chemical Bank, 270 Broadway. "That story came out first in a New Jersey country paper. This concern organized to manufacture chemicals with a banking charter.

When we began banking we soon reorganized, and dropped chemicals. That was a hundred years ago—almost." The story was printed in a drug paper last month that the bank, compelled to do so by its charter, still retained a little shop where castor oil might be obtained by the astonished patron of the bank.

—John C. Stubenrauch, drug salesman of No. 944 Trinity avenue, Bronx, filed a petition in voluntary bankruptcy; liabilities, \$10,516.41; assets, \$100. Among the creditors are: Howard Menn, Forest avenue and One Hundred and Sixty-fifth street, \$6,193.37; Schieffelin & Co., \$474.87; Fred C. Anthes, 125 East Eighty-third street, \$1,000; C. N. Crittendon Co., 115 Fulton street, \$475. Stubenrauch once had a wholesale trade. He failed in business several years ago.

—Dr. George W. Jewett, examiner in the Seventh division of the Government appraisers stores, this city, whose recent dismissal by Secretary of the Treasury Shaw is severely criticized by the wholesale druggists, will be reinstated, the proceedings against him begun over again in accordance with civil service rules and his discharge ordered. The druggists, who are a unit in supporting Dr. Jewett, may take their plea for his retention to President Roosevelt.

—The drug store of Julius Finklestein, Forty-seventh street and Eighth avenue, which is only half a block from the police station, was robbed by thieves who entered through a rear window, which is a foot wide and two feet high. The cash register was broken and \$30 taken, but a bank book, in which were \$110 in bills and a diamond ring, was overlooked. The thieves also took two ounces of cocaine.

—Members of the New York R. D. A. deny that there was serious talk of mandamus proceedings because of the recent appointment of Charles S. Erb to the board of pharmacy. The feeling that their association should have been drawn on for the appointment prevails, but there is no question of the legality of Mr. Erb's appointment.

—Rudolph A. Witteman of Witteman Bros., importers of bottlers' supplies and soda water fixtures at 188 William street, was arrested charged with making fraudulent entries at the Custom House. It is alleged he misrepresented the value of thirty-seven cases of metal capsules and defrauded the Government of \$20,000.

—Sixty trained nurses made Parke, Davis & Co.'s Maiden Lane laboratories and offices look like a teachers' institute one day last week. They were shown the big stocks of pharmaceuticals and crude drugs, were sampled with toilet and dietetic preparations, and because it was warm were cooled with ices.

—And then the cold weather came along and lumped our soda water story of July 16, in which it was shown that there should be 189,000,000 glasses of the beverage sold this year because there should be 27,000,000 sold in each of the three hot months. But there are no hot months.

—W. R. Sayer, druggist at 2308 Third avenue, bought the stock of Adolph S. Katzmann of One Hundred and Twenty-second street and Third avenue, who assigned recently, of the assignee, Bernard Shaw of 208 Broadway. Mr. Sayer will use the stock in his own store.

—Paul Armstrong has privately sold the store at 797 East One Hundred and Thirty-eighth street, which he recently received by assignment from A. Friedberg. The stock will be used in opening a new store somewhere in the city.

—There will be no meeting of the committees appointed to solicit funds for raising the New York C. P. debt

for two weeks. Prospects are that the total gathered will amount to \$15,000—1 comfortable decrease in the debt.

—Frank A. Gundlach, who recently sold his pharmacy at Columbus avenue and One Hundred and Sixth street to Paul Nicolai, is now secretary-treasurer of the Lineman's Supply Co., this city.

—The Apothecaries' Bicycle Club pedals to Giffords, S. I., today, to fish, meeting for the start at the West Twenty-fourth street ferry and dining at Fitzgerald's.

—The pharmacy of the H. L. Hasenohr estate, 466 Grand street, has been bought by J. Cherey & Co. of 464 Grand street, and the two stores will be combined.

—The Frederick Hauck pharmacy at 169 Bushwick avenue, Brooklyn, has been purchased by J. Rothmann, lately with W. E. Golden at Freeport, L. I.

—Dr. Herman Seaton, 104 Canal street, was sold out on a mortgage at public auction on July 28. E. Dreyfuss being the auctioneer.

—Reid & Veonius have doubled the size of their store at 752 Union street, Brooklyn, by taking the building adjoining.

FROM JERSEY TOWNS.

—The five free dispensaries in Jersey City have been rushed during the last week. Altogether 488 prescriptions were put up. At Charles Zoeller's store, 458 Central avenue, 37 cases were treated; W. R. Laird, 250 Washington street, had 50 cases; John G. Gallagher, Grove and Fifteenth streets, 69; Cadmus', 229 Newark avenue, 211; and the Newman Rescue Mission, 91 cases. Dr. Saur of the city board of health, says that skimmed milk is causing a large part of the illness and some of the deaths among the children.

—William Herd has left the employ of George Hoffman, Garden and Fifth streets, Hoboken, to clerk for C. F. Atherton, Flatbush and Church avenues, Brooklyn. S. N. English, lately with Davidson & Buckley, Brooklyn, is now clerking in Asbury Park. James C. A. St. James, New York C. P., '03, has gone to Colorado for his health, resigning his position with George W. Parisen, Perth Amboy.

—The Bayonne Druggists' Base Ball Club, with Congressman Benny as catcher, tried conclusions with the doctors' team the other day. The score was tied at nine to nine. Captain William Whitehead received a soak on the jaw from a pitched ball, but hung until the end of the game.

—The Employes' Mutual Aid Society of Colgate & Co., Jersey City, will have a picnic at Greenville Schutzen Park on Saturday, September 5. More than 1,000 tickets have already been sold. There will be souvenirs for ladies.

—Edward Smith, formerly an expert in the works of the New York Glueose Co., has gone to Greenport, L. I., to take charge of the Laurel Hill General Chemical Company's plant.

—Druggist Bollie Weisman of North Hudson, was arrested for selling liquor without a license. After a hearing his case was set over until Wednesday of this week.

—The Atlantic City retail druggists have organized and affiliated with the N. A. R. D.

MULFORD'S pre-Digested Beef contains the entire nutritive value of fresh lean beef, pre-digested, in a form ready for immediate absorption. Special inducements are made to live druggists to handle this preparation. Write us for particulars, sending a correct mailing list of your physicians.

H. K. MULFORD COMPANY,

Philadelphia.

AT ROCHESTER.

—The drug clerks of Rochester have been approached by an outsider who endeavored to interest them in a scheme to form an organization to secure shorter hours. On all days except Saturday they now work until 9:30 p. m., and on Saturday until 10:30. They would be willing to work Saturday nights, some of the clerks say, if they could only get away the other nights. The man who broached the plan did not stay in Rochester long enough to give the clerks a chance to hold a meeting. The owners would be willing to close early if all stores adopted the plan.

—J. K. Post, whose business was established by his father in the old Smith's Arcade in 1838, and who was brought up in the store and has conducted it since his father's death, was recently obliged to remove, owing to the proposed razing of the Smith block to make way for a modern structure. Mr. Post was fortunate in getting quarters in a larger store at 17 Main Street east. Asked how he liked his new store, Mr. Post, who was hunting for a bottle of something or other, frowned and said: "Don't like it at all; can't put my hand on anything."

—At Guilford's "Cut Rate Drug Store," corner of State and Andrews street, they are making a run on wines. This sign attracts attention: "Realizing the fact that wines and liquors should be obtainable other than at the saloons, we have added a fine stock of wines and liquors, which we sell at cut prices in any quantity less than five gallons. No prescription required."

—The Grocers, with their numerous fruit and candy stores located in the center of the city, have cut into the soda water business until now they almost control it. This is partly the reason why the downtown drug stores do not all sell soft drinks.

—Ilyron M. Hyde of the State board of pharmacy, has been away for a week. Mr. Hyde has doubled the size of his store this summer by leasing the store next door.

—The Paine drug store on Main Street east, established in 1872, is being entirely renovated. The company is working more into the wholesale business.

—M. I. Baldwin, druggist of 90 Reynolds Street, has gone exclusively into the manufacture of soda syrups.

—C. F. Maid, whose drug business is at 379 Lyell avenue, is ill in one of the local hospitals.

—William Oberly, a clerk of I. Barrowbough, on Main Street west, has resigned.

'ROUND ABOUT BUFFALO.

—Some changes in clerks—John Buetner, formerly with C. J. Dwyer, Elk and Louisiana streets, is now with Leo A. Borget; Joshua Stillberg, to C. J. Dwyer, Broadway and Michigan street; H. G. Stillwell, to the 1316 pharmacy, Niagara street; Max C. Salehow, to R. K. Smith, 588 Niagara street; W. H. McCoach, to H. C. Cleveland, 242 Forest avenue; F. S. Grotjan, to F. Sponer, 1985 Niagara street; R. B. Aylsworth, to A. J. Werner, 316 Elmwood avenue; William Naish, to Smith & Thurston, 281 Bryan street; G. E. Tammhauser, to W. Theobald Rose, 1164 West avenue; W. R. Schooley, to E. H. Brockton, Chenango and Massachusetts avenue; H. S. Vaughn, to H. M. Grove & Co., Batavia.

H. M. Grove & Co. have bought the drug business of W. S. & J. J. Patterson, Batavia. C. R. Taylor has bought the pharmacy of Webber & Gardner, Middleport.

George Remann, secretary of the Western branch of the State board, and Mrs. Remann went to Mackinac Island and the A. T. A.

NEW ENGLAND.

A TROUBLED MORTAR AND PESTLE.

The Road Commissioners Persecute Wilcox's Sign Again—Robberies Galore—Vacations—The Notes Contain Marriages, an Elopement, and Many Other Interesting Items.

Boston, August 4.—Era readers may recall the controversy two years ago between the board of selectmen and the road commissioners of Chilton. It all came about through an illuminated mortar and pestle sign, of colored glass, suspended in front of the store of Merchant & Wilcox. An order was issued for its removal on the ground that it was objectionable. But the druggists, backed by the selectmen, refused to take it down. Then the valiant superintendent of streets mounted a ladder and removed it himself, carrying it off, and was arrested for theft, found guilty, and fined \$15. He appealed, but the trouble was settled privately. Now, the board of selectmen has again given permission to hang out the sign on the ground that it illuminated and may be classed as a street light. The town solicitor says that the selectmen are right. But the road commissioners say not, and they have notified H. A. Wilcox, the present proprietor, that injunction proceedings will be instituted if he again puts up the sign. The end is not yet.

BURGLARS MANY IN MASSACHUSETTS.

Boston, August 4.—In Lynn, Haverhill, Worcester and Brockton, burglaries have taken place in drug stores within a week and the epidemic is spreading. In Lynn, the Bulfinch pharmacy, Lewis and Cherry streets, was entered and robbed of \$10 in cash, cigars and other articles. In Haverhill, Fred E. Stevens' and Frank M. Breed's stores were visited. At the first place razors, postage stamps and Turkish cigarettes were confiscated and Mr. Breed lost \$10 in money, two watches and cigarettes and cigars. In Worcester, a fourteen-year-old boy was convicted of stealing money from Green's store and the court sent him to the State reform school. Three boys in Brockton were caught at Frank Randall's store one afternoon while taking the key to a rear door.

ON OUR VACATION LIST.

Boston, August 4.—J. H. Potter, druggist in the Roslindale district, is enjoying a vacation in Maine, J. H. Wellington assuming his duties. Romauld Fernier, clerk for A. J. Brunnelle, Fall River, is also in Maine. Clifford Ramsdell, a New York drug clerk, employed by a prominent wholesale house, is having a vacation at the home of his mother, Mrs. Rebecca Ramsdell, in Whitman. Thomas Wallowork, clerk in Grover's pharmacy, Winchester, has started for a three months' vacation at North Andover. It is ill health in his case. Wallace Courtney of Dana's drug store, Franklin, is at Boothbay, Me. After a vacation of a fortnight, Herbert Dow, of Hunking & Christie's store, Haverhill, has returned from Hampton Beach, N. H. H. H. Parkis of the Garland pharmacy Gardner, is in Nova Scotia for rest and change. Robert Barrett of Lowe's drug store, Andover, is on a vacation. Richard Cooper, clerk at the Quimby pharmacy, Palmer, is convalescing from illness in New Hampshire.

CHARLES HERBARD, severely scalded early in July by the explosion of a tank of acid at the Avery Chemical Works, Littleton, Mass, died at a hospital in Boston. His home was in West Acton.

ROY E. MAYO, Pres. R. D. JUDD, Sec.
Officers of the Worcester (Mass.) North Pharmaceutical
Association.

FRAUD ORDER AGAINST CROWN MFG. CO.

Boston, August 4.—The mail fraud order issued by Postmaster General Payne against the Crown Manufacturing Co. has been sustained by the United States Circuit Court. L. V. Cushman, manager of the company, applied through his attorney for an injunction to restrain Postmaster Hibbard from denying the company the use of the mails. It was contended for the company that the statute governing the case was unconstitutional. This was not acquiesced in by Judge Colt. By his ruling the use of the mails is denied the company. The alleged grounds for the issuance of the fraud order is that the company, which handles almond cream and stamping outfits, has been misrepresenting its business to the public through the mails.

THE BAY STATE.

—A barrel of alcohol exploded with force and noise in the basement of Green's drug store, Main street, Worcester, and only exceedingly courageous and prompt work on the part of the clerks prevented a more serious result. Loss was \$100, covered by insurance. A carelessly-thrown lighted match caused explosion of a five-gallon tank of alcohol in Currier's pharmacy, Pittsfield, setting fire to the basement. The fire was extinguished after an hour's work. A clerk, Otis Covey, was severely burned on his arm. Fully insured. Work of renovating Green's store, Springfield, after explosion damages on the night before the Fourth, has begun.

—Recent raiding of the store of Joseph Thibeault, Broadway, Lawrence, brought to light the fact that the proprietor is not a druggist at all, but a plumber. He did not have a registered pharmacist in his employ. At the raid he ran into the rear room, apparently to warn two men, who were found with half-finished bottles of beer. In Thibeault's coat pocket was found a small bottle of whiskey and also a small quantity under the soda fountain. He admitted that he was caught "hands up," when placed under arrest. Thibeault was fined \$75 and paid promptly. He had an alternative of serving a sentence of three months.

—At Klein's pharmacy, Tremont and Boylston streets, Boston, Harvey S. Garcelon, for years owner of a store in West Somerville, has been made night manager. William Christy is an addition to the force at F. E. Berry's store, Beverly. William Boyle, formerly clerk at Thompson's, Shelburne Falls, has returned there from a local railroad office. At the C. E. Ball Company's pharmacy, Holyoke, Miss Anna Parker has been engaged as clerk. Michael Dillon, Jr., is a new clerk at LeGiro's, Palmer.

—People of Newton are somewhat excited over the

elopement of Harry S. McDaniels, clerk for Dr. Paine, with Miss Edith McMann. She is said to be pretty and accomplished. In the temporary absence of the bride's parents they went to another town and were married. Mr. McDaniels for some time was a drug clerk in Boston, before going to Newton. When Dr. Paine heard of the runaway marriage he promptly demanded Mr. McDaniel's resignation, and now no one knows where they are.

—A new scheme of swindling has been tried with success in East Bridgewater. A well-dressed man entered a store where the proprietor's wife was in charge. He looked like a traveling salesman, grip in hand, and tried to induce her to buy some new headache powders. He induced her to sample one, rubbing a white powder on her forehead. She lost consciousness and when she revived the contents of the money drawer were gone.

—To study methods used in the preparation of antitoxin and vaccine virus, Dr. Theobald Smith of Boston, and of the State board of health, has gone to Europe. He has had charge of the manufacture of antitoxin for the State at the Bussey Institute, and it is expected that his investigations will be of marked value to the board of health which has been given authority to manufacture antitoxin and vaccine virus at the institute.

—Thieves continue to break in and steal. C. E. Cain, Summer and Church streets, Lynn, lost \$6 in cash and sundries. Two attempts were made to enter the Gilman pharmacy, Wakefield. In Fall River burglars got into O. G. Polvert's Maplewood pharmacy by forcing a large front show window. Four or five hundred cigars, a small amount of money and a few other things were taken.

—Fire almost cleaned out the store of Warren Smith, Exchange street, Chicopee, involving a loss of \$10,000, fully covered by insurance. The cause is believed to have been spontaneous combustion of chemicals in the rear where there was a quantity of ammonium chloride and chloride of lime. Firemen swept everything from the shelves with water.

—Thomas J. Hartnett, clerk at Hanover and Salem streets, Boston, made several attempts to take his own life with morphine. The last time a woman customer engaged in a struggle to thwart him after he had informed her of his purpose. On the technical charge of drunkenness, he was arrested and held pending investigation.

—William Strong, a Fall River clerk, had boasted of his success in catching fish. He could put all stories of rival anglers in the shade. While people were waiting for him to come triumphantly home with a big string the other day he quietly came around the back way through the woods, not saying a word.

—Daniel Driscoll's store in Malden is to be removed to another location because of grade crossing improvements. M. L. Proulx has removed his store in Fall River to the store John A. Tuite's old stand at East Main and Peckham streets. The Elm Park pharmacy, Groveland, is undergoing renovation.

—Stanley B. Weld of Falmouth, has withdrawn from his connection with Ticketts & Banks, expert chemists, assayers, etc., to become a member of the firm of Polke

E. I. Santal Perles

Bottles of 50, with yellow wrapper

Write for Samples and Prices

BILLINGS CLAPP CO. - - Boston

& Parmelee, engaged in the same business in Denver, Colo., where he succeeds Edwin C. Pohl.

—George L. Dauphinee, clerk for Lewis & Co., Washington street and Cornhill, Boston, has gone to Waltham as clerk at the Bacon & Sawyer pharmacy, where he succeeds Frank Bacon, who has been appointed to the United States internal revenue service.

—Two suits have been instituted against the White Perfection Handage & Supply Co. at Brockton, one by the Insinger Company of Philadelphia, and the other by Charles Sweetser of Lowell. In each case an attachment of \$1,000 has been placed.

—Theo. F. Rice & Co., druggists at South Framingham, have engaged Horace J. Sloan of Lowell, as clerk. John Gulligan, employed at the Goldthwaite store in Whitton, has been transferred to the same proprietor's pharmacy in Taunton.

—Charles E. Rogers, druggist, disappeared from his home in Roslindale, early in July. He gathered up all his clothing on the plea of sending it to a tailor to be cleaned. His wife believes that he went to Cuba. He bore a good reputation.

—Frank Parrott has resigned as clerk for the C. E. Hall Drug Co., Holyoke, and his place is filled by John A. Quigley. Messrs. Blight and Blake, for some time at Hendry's pharmacy, Boston, have both left the drug business.

—Edwin F. Leonard, a Springfield retail druggist, has purchased a large brick block situated at Main and Sargent streets in that city, for investment purposes, paying about \$80,000. This shows that he has been prosperous.

—James C. Butler, druggist in Gloucester, has gone and got married. The bride was Miss Grace E. Wood of Derry, N. H., and the ceremony was in Haverhill, the home of the bridegroom. They will live in Gloucester.

—Explosion of carbolic acid placed near a fire in H. S. Richardson's store, Concord, caused a blaze in which disaster was averted through prompt use of a hand extinguisher by the proprietor.

—In old Marblehead, the Atkins drug store has been opened with Dr. Kelley and Ernest Snow of Boston, in charge. P. J. Donahoe's new drug store in Milford is about completed.

—A rumor is current that Fred A. Tarbox, the Newton chief of police, who during the last year has made great war on druggists whom he thought sold liquors illegally, has resigned.

—Henry Maloney, clerk at the Weeks-Hill pharmacy, Quincy, narrowly escaped being drowned while bathing at Nantasket Beach. Several small boys went to his rescue just in time.

—Hon. Charles L. Denn, mayor of Malden, senior member of the wholesale drug firm of Denn, Foster & Co., Boston, has been on a vacation in Stafford Springs, Conn.

—John H. Cronin, druggist in Lawrence, went to Baltimore for the annual convention of the Benevolent and Protective Order of Elks.

—Louis P. Collet, a Worcester drug clerk, is still a patient at the City Hospital as the result of taking morphine. He is much improved.

—Arthur H. Millette, a well-known Brockton clerk, is now attached to the regular army hospital corps at Long Island, Boston Harbor.

—The American Chemical Co., Danvers, may remove to Worcester, where there is felt to be larger opportunity for enlarging the trade.

—In a fire in Wheeler's Block, West Brookfield, loss was incurred by C. H. Clark, a druggist. The damage was chiefly from water.

—J. E. Robillard, a Gardner druggist, has just met

with the loss of his father, Jean Baptiste R. Robillard of Montreal.

—Friends of Harry M. Church, a New Bedford druggist, presented him with a handsome large Howard clock.

—Andrew McConnell, who recently passed the board of registration, intends to locate in business in Worcester.

—In Lowell, cholera morbus and summer complaint are keeping the druggists busy.

RHODE ISLAND.

—The courageous presence of mind of James Murphy, a clerk in the employ of T. Roswell Parker, Providence, prevented a serious explosion and fire at his employer's place of business. The young man picked up a gallon can of benzine, ablaze on the outside, and threw it into the yard. Murphy's hands were severely burned and he will be unable to work for some time. The benzine was kept in a room in the rear of the store. A small quantity had been drawn from the can a few minutes before and Murphy, returning to the room, found the can in flames, supposed to have been caused by stepping on a match.

—The trustees of the Rhode Island C. P. have not yet elected officers for the ensuing year. At the recent meeting there was one short of a quorum and an adjournment was taken. The illness of President James O'Hare has since prevented the calling of another meeting. It is understood, as a matter of course, that the old officers will be re-elected. It is proposed to add one or two new courses to the curriculum. President O'Hare has gone to Sharon Springs, N. Y., to recuperate.

—S. Winfield Himes of Phenix, manages to get away from his store from Friday to Monday morning every week and spend a few days with his family at his summer cottage at Matunuck.

Summing up the Advantages.

We want to say a little something upon a subject which interests the majority of the public, viz., court plaster. Everybody is familiar with old style court plaster, its advantages and disadvantages, and the disadvantages, we are inclined to think, offset the advantages. It only acts as a protection at the best, and then only when it adheres closely to the wound, an accidental dampening or profuse perspiration causing it to wrinkle or peel off, and in case of severe laceration it is apt to irritate. To the Carpenter Chemical Co. of Detroit, Mich., we are indebted for a new kind of court plaster with all the foregoing disadvantages eliminated. It is called Carpenter's Water Proof Liquid Court Plaster, and in summing up its advantages and qualities the manufacturers say it is an invisible, absolutely water proof plaster which is pliable and elastic, will not break, wrinkle or wash off, can be applied instantaneously, hardens quickly, is highly antiseptic, and is guaranteed to contain no collodion, acid or gun cotton. This preparation is put up in 10c and 25c collapsible tubes, and may be secured from any jobber.

Not in the Trust.

In the advertisement of the Savage Manufacturing Co. on page 11 of this issue, attention is especially called to the fact that this firm are "not in the trust," but they are nevertheless large manufacturers of all kind of decorated tin boxes, and livery. Their factory is equipped with all the latest and best machinery, and we would suggest you correspond with this firm, whose address is Richards & Coffey Sts., Brooklyn, N. Y., before buying elsewhere, particularly if you want something in the line of special designs.

THE NEW PHILADELPHIA COLLEGE HOUSE.

Philadelphia, August 4.—With the development of colleges and universities there has arisen a need for the protection of students by improving their environment, surrounding them with the comforts of home, and strengthening their characters by providing means for the closer association of kindred and congenial spirits. When a college is located in a large city, many young men from a distance, finding themselves suddenly thrown upon their own resources, yield to the fascinations of city life and are confronted with grave dangers.

The Philadelphia C. P. committee recently furnished the Lucas mansion, a fine, large, four-story, brown-stone structure at 1913 Arch street, as a modern apartment house. It contains on the first floor, parlor, reception and toilet rooms, a dining room, 18x45 feet, and two kitchens, with hotel range. On the second, third and fourth floors there are twenty-six sleeping rooms. There are nine bath-rooms, complete fixtures, latest sanitary plumbing, and tiled floors and walls. There is an electric elevator, and a fire escape on the outside. Every room has steam heat. A large tank on the roof insures a uniform supply of water to the bath-rooms, and an independent hot water apparatus in the cellar furnishes an abundant supply of hot water. A well equipped laundry in the basement is also a part of the permanent fixtures.

A better location for such a purpose could not be found. It is within easy walking distance of the college, in an excellent neighborhood, while two trolley lines on Arch street, give, in inclement weather, quick transit to and from the college.

A similar, although smaller house, was occupied last year by the students of Jefferson Medical College. The Intercollegiate Y. M. C. A. will have charge of the running of the house. The success which they had in taking charge of the Jefferson College house fully

justifies the committee in entrusting to them this part of the work. A nominal board is charged each student, much less than he would have to pay for much poorer accommodations elsewhere.

Students will use their rooms for study, but on the first floor a reading and recreation room will be provided, with a piano, and every effort will be made to establish and promote home life with attractive surroundings. Of course, some regulations will be necessary, but it is not the intention to restrain the students in any way.

The leasing of this house marks an era in college life, and doubtless will lead to the establishment of other houses of the same character. A college club will undoubtedly be formed.

PENNSYLVANIA.

President Frailey Appoints Delegates—Pure Food Law Violations—Vacations—Blue Law Troubles—Soda Sales—Fines.

Lancaster, August 4.—These are new appointments made William O. Frailey of Lancaster, president of the State Ph. A.

Committee on legislation—William L. Cliffe, Philadelphia, chairman; J. R. Redsecker, Lebanon; Mahlon N. Kline, Philadelphia; Charles T. George, Harrisburg; C. N. Boyd, Butler; J. M. Baer, Philadelphia; H. W. Zeamer, Columbia.

Trade interests—Charles Leedom, Philadelphia; chairman; Edwin E. Frontz, Williamsport; J. H. Knoutz, Pittsburg; Fred S. Nagle, Wilkes Barre; Frank T. Wray, Apollo; Frank E. Dennis, Carbonate. Adulterations—D. J. Thomas, Scranton, chairman; J. W. Rewalt, Middletown; D. M. Krauser, Milton; R. H. Lackel, Philadelphia.

Delegates to N. W. D. A.—Miers Busch, Philadelphia.

Delegates to N. A. R. D.—William McIntyre, E. E. Heck, Pittsburg.

Delegates to Medical Society of Pa.—Professor Joseph P. Remington, Philadelphia chairman; J. R. Redsecker, Lebanon; Dr. J. A. Miller, Pittsburg; E. A. Cornell, Williamsport.

OTHER HAPPENINGS.

—A dose of castor oil went astray in Bryn Mawr. Three men fail to see the joke. One wanted the oil and didn't get it; another had no desire for it and took it, and the third, Charles White, salesman at Moore's pharmacy, mixed the medicine and the other men. A man with a pain asked Mr. White to fix up a palatable dose of castor oil. While waiting the customer became interested and moved away. Man No. 2 appeared. Mr. White completed his labors. He had not particularly noted the appearance of the first man, so he set a foam glass of soda water down in front of the other one, and remarked, "Drink it right down; it will do you good." Man No. 2 was surprised, but thinking that it was "on the house" did as he was bid. A painful explanation was up to Mr. White. He made it, but he does not consider the affair funny.

—Thirty-six Western Pennsylvania grocers, were arrested, charged with violation of the pure food laws of the State. All Pennsylvania will be gone over in a

PHENALGIN

ETNA CHEMICAL CO., New York, U. S. A.

cleaning out of this crime. Lard, jelly, honey, spices, etc., are the articles involved. The inspectors were wont to stroll innocently in market basket on arm, and make supposed family purchases. Forty-three of 57 samples analyzed were found to be adulterated. Some were let go on the plea that the manufacturer was to blame.

—The crusade against the sale of soda water in drug stores on Sunday in the borough of Wilkinsburg, near Pittsburg, under the old blue laws, took a peculiar turn on Sunday. The druggists had representatives at the churches, and suits were filed against all of the paid singers who appeared. They were arrested and gave bail for their appearance. Sunday, the druggists defied the burgess, sold soda water, and paid their fines on Monday.

—In Philadelphia: Business dull, everybody kicking, clerks away, proprietors home, trade flat. No other department store has followed the lead of the one lonely clothing and dry-goods emporium that installed drugs a few months ago. The scarcity of clerks continues, 41 stores asking, 12 men offering being the advertising record for one day.

—Harry C. Hughes, clerk at the Eagle pharmacy, Plymouth, is spending his vacation at Mount Pocono. Druggist F. S. Naglo and wife of Wilkes Barre, spent their vacation in Columbia county. W. D. White, druggist on the public square, Wilkes Barre, was a loser through the robbery of his cash register.

—Charles F. Hulber, who has been manager of the Joseph Riessenman pharmacy in Liberty street, Franklin, has resigned to accept a similar position in the Crystal Palace pharmacy, Liberty and Market streets, Pittsburg.

—H. G. Craig of St. Petersburg, has assumed the management of the Third ward pharmacy for the Franklin Drug & Chemical Co., Franklin.

THE SOUTH. COLLEGE CHANGES.

T. Ashby Miller Resigns Management of College— Maryland Is After Drug Adulterations.—Other News of the South.

Richmond, August 1.—T. Ashby Miller has resigned the management of the department of pharmacy of the University College of Medicine to take effect upon the election of his successor. The faculty announces the election of Roshier W. Miller, M. D., Ph. D. as professor of theory and practice of pharmacy and chairman of the department of pharmacy. Dr. Miller for several years occupied the chair of pharmaceutical chemistry. Great things are expected of his administration. The faculty accepted T. A. Miller's resignation with expressions of deep regret and at once elected him emeritus professor of theory and practice of pharmacy. He gave as his reason for retiring that the rapid growth of his various drug stores has made it necessary for him to devote his entire time to them. He has agreed, however, to deliver during the coming session a series of special lectures on "Store Management."

Dr. E. Govan Hill, long connected with E. W. Weingart's store in Manchester, has been elected to the chair of pharmaceutical chemistry. For several years Dr. Hill has been an adjunct professor in this department.

"The good old summer time" is a bad one for the druggists as far as making window displays is concerned. The C. I. Hood Co., call attention to this fact in their advertisement.

WELL, CAN YOU BLAME HER?

Baltimore, August 4.—Owen C. Smith, prominent in the retail drug trade of this city, and secretary of the Maryland Ph. A. was the hero last Wednesday morning of an exciting adventure, or rather, he would have been, but his wife didn't let him. He had to content himself with firing three shots from his blunderbuss—all the charges the weapon contained—out of the front window of his bed-room, which brought the police and a number of neighbors and relieved his better half of all fears for his personal safety.

The cause of the excitement was the smashing of two large front windows in the Mr. Smith's drug store, 1501 North Fulton avenue. He sleeps just over the store and was awakened by the crash of the glass. At first he thought burglars were in the sleeping apartment. When he found that the noise was down stairs and started to investigate, his wife would not let him leave the room, and he did the only thing he could under the circumstances. The only articles stolen were two bottles of medicine.

TO PROSECUTE DRUG ADULTERATION.

Baltimore, Aug. 4.—The discussion at the State Ph. A. meeting on a paper by Dr. A. R. D. Bohne on the adulteration of borax and mustard resulted in the adoption of a resolution to appropriate a sum not to exceed \$100 to enable the committee on adulterations to continue actively on the examination of adulterated drugs and food products of the State. This committee is to report all cases of adulteration to the board of health, which is to prosecute. But little is done in Baltimore and less in the State in this direction, and adulteration is practiced to a large extent.

MARYLAND.

—Considerable misapprehension prevails with respect to that part of Retiring-President J. Webb Foster's address at the annual meeting of the State Ph. A., which related to the N. A. R. D. It was proposed that the State organization again affiliate with the N. A. R. D., and this recommendation was not reported favorably by the committee on the address. The report of the committee being adopted, it appeared as though the association was hostile to the N. A. R. D., which is said not to be the case. It was explained that, as the association is a body composed of wholesalers and manufacturers as well as retailers, it could not be expected to affiliate with an organization made up only of retailers.

—Paul Lotz, son of Druggist William H. Lotz, Warner and Conway streets, Baltimore, is ill with typhoid fever. Druggist William Lauer, Edmondson avenue and Schroeder street, Baltimore, has gone on a two weeks' vacation trip to Atlantic City.

—Ernest Hasenbalg has accepted a position with Joseph B. Hall, North avenue and Aisquith street, Baltimore.

—Druggist George Vogel has opened his new pharmacy at Helldville, a suburb of Baltimore.

VIRGINIA.

—Dr. H. N. Stephenson of Tanno, has leased one-half of the first floor of the new bank building there and will in the next few weeks open a drug store, the first at this growing town. The unique fact about it is that Dr. Stephenson will be allowed under a law passed last winter to compound drugs without ever making a special study of pharmacy or holding a certificate from the State board of examiners. The law says that any regular practitioner of medicine, who lives a certain number of miles from a registered pharmacist

may himself compound drugs. No registered pharmacist is nearer than Williamsburg, ten miles distant.

—The wholesale and retail firm of Owens & Minor, Richmond, have added another store to their chain which now almost surrounds the city. Their latest acquisition is the commodious brick stand at Pine and Albemarle streets, owned by the John Gross estate. For twenty years a family drug store has been in this building. The price paid was \$3,400. Improvements are to be made and John W. Rison & Son will lease it. The number at the sale and the spirited bidding was indicative of the fact that drug-store property is in demand in Richmond.

—Edward C. Schefer, one of the younger pharmacists of Richmond, of Warriner's store, and Miss Lillian Jenkins were married last week. Mr. and Mrs. Schefer left immediately after the ceremony for Hot Springs, Va. One of the bride's presents was a chest of silver given by the friends of the groom who have met him about the store.

—The druggists of Staunton, have decided during the summer months not to keep open all day Sunday. The hours decided upon as most convenient to the public were 9:30 A. M. to 10:30 A. M. and from 5 to 6 P. M. One firm, F. W. Bell & Co., did not go into the arrangement.

—Roy Childrey, manager of the Broad street, Richmond, store of the Polk Miller-Coleman Drug Co., has been admitted to the firm, succeeding the late H. A. Coleman. The corporation commission has authorized a change of name to the Polk Miller-Childrey Drug Co.

—T. A. Miller is having extensive improvements made to his store on Broad streets, Richmond. The entire front has been taken out and a new French plate glass front is being put in.

AROUND THE GREAT LAKES.

BETA-EUCAIN A SUBSTITUTE.

Though It Has None of the Stimulating Properties of Cocaine, Its Agents Say.—But Illinois Board of Pharmacy Will Put Purveyors Through a "Course of Sprouts."

Chicago, August 4.—"Beta-eucaine, Shering—a safe and efficient substitute for cocaine," is the beginning of a circular sent out by E. Shering, manufacturing chemist of Berlin, Germany, through his agents, Schering & Glatz, New York. The circular is well worded, and doubtless the preparation will accomplish what is claimed for it, but that is not the issue in Illinois, where a peculiarly stringent cocaine law has just gone into effect.

The enormity of the cocaine traffic on the levee districts of Chicago and elsewhere in the city was beyond belief. One levee druggist is reputed to have made something like \$25,000 a year from the sale of cocaine and "dope." He bought 1,500 ounces at a time, it is said, and sold an average of 500 ounces a month. Another concern which had to give notes and a mortgage on its store to start in business on the levee, made so much money the first year that it paid all its debts and bought a handsome branch store in a residence district, paying cash down. How this was done, of course, nobody can testify but the owners.

But along came the anti-cocaine law, drawn so as to include other forms of "dope" as well, and empowered the board of pharmacy to revoke the certificates of those druggists who sold the stuff in violation of the statute, at the same time imposing other penalties. That

struck at the root of the matter and those who have been notorious as purveyors of narcotic drugs for "fiends" have generally discontinued the practice. The board of pharmacy gave out that certificates would be revoked without mercy; that the practice must stop and stay stopped or somebody would have to move out of the State to practice pharmacy. "Why," said one of the best known druggists in the city, "the night after that word went out the fiends came in here, although they knew we never sold the stuff to them, and offered us dollars in ones, twos and fives for cocaine in any quantity, and begged for it. They couldn't get it at their old haunts and tried their luck here. It was remarkable and gave me an insight into the enormity of the traffic such as I had never had before."

Now, to return to the beginning of the story: The manufacturers are, apparently, putting out their preparation in good faith, but it is positively charged that there are representatives of wholesale houses canvassing the trade with the suggestion that it will be a substitute for the dope fields to use and will bring back the trade again. It is even said that the suggestion has been made to mix eucain and cocaine, and the chemical constituents being similar, it will be almost impossible to tell the cocaine in the mixture, thus evading the law and fixing things again for the fiends and the crooked druggists. The board of pharmacy is awake to the situation and promises to put the eucain purveyors through a course of sprouts to the full limit of the law, looking upon eucain as in the same category as cocaine. Any druggist who appeals a decision against him on the eucain charge will have to be prepared for a long, expensive fight, for the board will not rest until it gets an expression from the highest court in the State, if necessary.

New York, August 4.—Carl F. Stiefel of Schering & Glatz, this city, sole American agents for beta-eucain and other of Schering's chemical products, said there was no such thing as the "eucain habit." In the literature his firm sends to physicians and pharmacists it is stated on the authority of prominent physicians and surgeons that beta-eucain is devoid of the stimulating properties which render cocaine, especially when used in the nose and throat, so seductive a drug. It produces no exhilaration and is recommended as a perfect substitute for cocaine only in the sense that it is an absolutely safe and non-irritating local anaesthetic. Antidotes are unnecessary, it is said, even when two or three times the maximum amount allowable for cocaine are employed.

LOTS OF PEOPLE AND LOADS OF FUN.

Cleveland, August 4.—The Northern Ohio D. A. had its annual outing at Manhattan Beach, near Cleveland, on July 29. The picnic was unusually well attended. Druggists from Cleveland and vicinity with their wives and children, nearly five hundred in all, were present. They arrived shortly before noon and did not leave until late at night. It was intended to hold the annual election, but immediately on the arrival of the picnic party numerous little coteries of merry-makers were formed and all were enjoying themselves so well that business was out of the question. The election was

therefore postponed until the next meeting, on the first Friday of August.

An elaborate and fruitful programme was carried out under the direction of a committee consisting of O. R. Goodyear, chairman, William Emrich, L. Herold, J. H. Sberling and Eugene Selzer. There were ball games, tugs of war, running races for men, women and children, indefinitely. Various prizes were donated by Cleveland firms. The picnickers spread over the grounds in families and partook of luncheon. Then came the contests, with boating and swimming in Lake Erie, until evening. During the evening there was dancing and refreshments.

ONLY THREE GALLONS AT A TIME.

Detroit, August 4.—Van Buren county is run on the local option plan, and the druggists are having a decidedly strenuous time of it. There are sundry individuals who go about all the time with that "dark brown taste" and it must be satisfied. It seems to have fallen to the lot of the druggists to assume the role of good Samaritans and relieve sufferings.

But minions of law cannot see it in that light, and as a result one or more of the profession are before the bar of justice nearly every week. The latest to face a charge are John H. Charles and Ed. B. Longwell, Paw Paw pharmacists, who were arraigned before Justice Lowland at Paw Paw. They gave bail to appear for trial in September. The charge is selling liquors in quantities of more than three gallons or more than twelve quart bottles to the same person or persons at one time, and so becoming wholesale dealers under the general liquor law of the State.

CHICAGO NOTES.

—Otto Schick, who lives at 924 Marshfield avenue, on Thursday last declared himself to be insane. He has been committed to the detention hospital. For twenty years, it is said, he has been in the habit of visiting his insane mother at the Kankakee asylum. He informed the court before which his examination was conducted that his father had committed suicide. Otto Schick was at one time a well known druggist, but has not been in the business for several years. He is about fifty years of age. Many old time friends and acquaintances in Chicago will be pained to learn of his affliction.

—"The new organizer of the Chicago R. D. A.," said Mr. Wooten, "is going about his work in a quiet, yet capable manner, and is getting results. We hope to have the association in good shape. Mr. Avery, the new president, is himself thoroughly in touch with the work and is one of the most capable men in the city. From this time onward publicity will be the watchword. We intend to have the druggists know what we are doing, and you will find Mr. Avery ready at any time to give you whatever assistance he can in the line of information about the doings of the association."

—A receiver was appointed for the W. H. Heegard Co., cigar and tobacco dealers, Lake and State streets. Lord, Owen & Co. handled their brands. They made the "El N. A. R. D." and the "Chicago Retail Druggists' Association" cigars.

—Over fifty druggists left Chicago on Saturday via the steamer Manitou for Mackinac Island and the A. Ph. A. They came from all sections of the South and West, as well as from Chicago. Albert E. Elbert was one of the number.

—The Fifty first street pharmacy, at Fifty first street and Indiana avenue, Chicago, is the name of the concern which recently succeeded C. S. Terrell & Co. at that address.

—Oscar Leatner, manager Western office of William L. Strauss & Co., New York, has just returned from a successful trip West.

—Chicago jobbers say that country trade is ahead of city business and that buyers from out of town are ordering liberally.

—E. W. Von Delden has sold his store at 686 West Taylor street, Chicago, to the Lucille pharmacy.

—Hattenhauer & Anderson, Streator, have been succeeded by Hattenhauer & Co.

Cod Liver Oil.

The greatest gain, a buyer of any class of goods can possess is the ability to correctly estimate the future demand and to purchase in advance the correct quantities for supplying that demand. In this instance, we wish to suggest to the buyers in the drug trade that they estimate their future demand for cod liver oil and secure their supply at once, as the yield of oil this season has been very light and only the larger dealers have been able to secure any considerable quantities. By reason of this scarcity the price will necessarily advance with the season, and it will pay the druggist to secure his supply at the present price. We take pleasure in calling attention to Parke, Davis & Co.'s Advertisement on the outside back cover of this issue. This firm can fill all orders with the new crop of either Norwegian or New Foundland cod liver oil, and will be pleased to furnish samples and quote prices. Address the Importing Department at 90 Maiden Lane, New York City.

They Are Thoroughly Antiseptic.

In the advertisement of the Florence Mfg. Co., Florence, Mass., which appears on another page of this issue, is a cut of a "Keepclean" hair brush full and running over with money, and from our knowledge of "Keepclean" brushes we assume that the stream of money flowing from the brush flows directly into the pocket of the druggist who sells them. It certainly is not the fault of the brush if the druggist does not make money selling them; it is his fault for not having them to sell. The "Keepclean" line includes hair, military, hat and clothes brushes, all made in an entirely new design with solid wood backs, aluminum faces and composition bristle settings which render them impervious to moisture and dirt. Since the advent of "Keepclean" brushes upon the market, they have come rapidly to the front, as they are sold at popular prices and it pays the druggist to handle them, both from the monetary point of view and the satisfaction afforded the customer. Write to the manufacturers and receive some profitable information on good brushes that yield nice profits.

Bioplasm (Bower).

With this issue we are pleased to introduce to our readers a practically new product which is being advertised very extensively to the medical profession, Bioplasm (Bower), manufactured by the Bioplasm Company, 100 William St., New York, who state that it is a wonderfully effective enzymic product, sustaining Dr. Sajou's evidence that adrenoxin in the blood is the foundation of vitality. Every retail druggist knows what an unfavorable impression he produces when he tells the physician he has not the article in question, and perhaps his best customer gets into the habit of calling at his competitors for the very reason that the competitor keeps up with the times. At any rate, we think there is going to be a good, healthy demand for the Bioplasm products, and we believe it will be to the druggist's advantage to stock them. More information and prices may be found on the inside of front cover.

OUR CANADIAN LETTER.

Toronto, Canada, August 4.—At the meeting of the council of the Ontario College of Physicians and Surgeons in this city, the special committee on legislation presented a voluminous report suggesting a number of amendments to the medical act. Among other restrictive measures proposed was one against "counter prescribing by druggists who undertake to advise their customers as to what proprietary articles or medical prescriptions are best suited for their ailments." The following recommendation was made as to patent medicines: "Regarding patent medicines, containing not only large quantities of alcohol, but sometimes poisonous doses of drugs, the public could be benefitted if every bottle or package was labelled with the formula or, at all events, the names of the constituent substances. The executive committee of the council was recommended to call the attention of the Provincial legislature to these suggestions. The report was adopted.

At the first meeting of the new Council of the Pharmaceutical Association of the Province of Quebec, in Montreal, the following officers were elected: S. Lachance, Montreal, president; J. E. Tremble, Montreal, first vice-president; A. E. Du Berger, Waterloo, second vice-president; W. H. Chapman, Montreal, treasurer. A resolution of condolence with the family of the late Hon. Mr. Duffy was passed.

The Robert Greig Co., Limited, has been incorporated with a capital of \$65,000 to take over the business of Robert Greig & Co., Toronto, and deal in druggists' and grocers' supplies. The provisional directors are William Cooke, Robert Greig, Ella Moir Greig, William B. Aikins and Samuel Bastedo.

The chattel mortgage on the stock of Whitesell & Co., druggists, Newmarket, Ont., was foreclosed and the stock sold at auction.

A meeting of the drug clerks of Toronto was held on Friday evening in the Medical Building, about 125 being present. The bylaws and constitution previously drafted were adopted and an organization effected by electing the following officers: President, Charles Wilson; vice-president, Stanley M. Tarrant; secretary, I. Blake Cook; treasurer, J. F. A. Wylie; chief of employment bureau, R. B. Cameron. A resolution was adopted that the officers should constitute a committee to wait on the council of the Ontario College of Pharmacy and urge that there should be no interference with the present educational standard required from apprentices. The objects of the association are union for social and business purposes and especially to assist members in obtaining employment.

Harry L. Bury of the inland revenue service, Port Dover, Ont., has been appointed Government analyst for Parke, Davis & Co., Walkerville. Albert Grant has purchased the drug business of R. W. Shaw, Springfield, Ont.

The monthly report of the Canadian Department of Trade and Commerce for the month of May, just issued, shows imports for home consumption of drugs, dyes, chemicals and medicines to the value of \$714,457 as compared with \$609,156 in May, 1902. The returns for the eleven months ended May 31, are \$5,224,436 for the current year and \$4,935,803 for 1902. The imports from the United States were as follows: May, 1903, \$303,431; May, 1902, \$209,446; eleven months ended May, 1903, \$2,937,206; eleven months ended May, 1902, \$2,780,181.

The exports of drugs, dyes, chemicals and medicines of home production were as follows, May, 1903, \$60,263; May, 1902, \$40,146; eleven months ending May 31, 1903, \$624,937; corresponding period of 1902, \$540,756. Exports to the United States were: May, 1903, \$14,031; May, 1902, \$16,946; eleven months ended

May 31, 1903, \$286,662; corresponding period last year, \$265,397.

James A. Scott, druggist of Tavistock, Ont., has sold his business to Mr. Brawn. W. W. Loucks has purchased the drug business of J. H. Colling, Clarksburg, Ont.

The drug store of A. T. Budd of Arnprior, was badly damaged by fire. His loss is covered by insurance. W. W. Homing, druggist, of Swan River, Manitoba, has disposed of his branch business at Grand View in that province to Mr. Priest of Toronto.

THEOPHILUS SMITH, an old-time Boston pharmacist, died at his home in New Bedford, Mass. Mr. Smith was born in South Dartmouth in 1841. At the age of 15 he went to sea on his father's vessel, the Tropic. When 17 he became an apprentice in the drug store of the late Thomas L. Jenks of Boston, and some two years later became clerk for Orlando Tompkins of Boston. When war was declared, in 1861, he promptly enlisted in the famous "Boston Tigers." Returning, he purchased the drug store at Shawmut avenue and Canton street, Boston, and soon after bought the famous "Z. Sampson" store, Court and Hanover streets. In 1875 he located at Broadway and D street, South Boston, and in 1887 opened a modern store in New Bedford. Failing health compelled him to retire permanently from active business life in 1895. He leaves a wife, a son and two daughters. Mr. Smith was very well loved. He and H. G. Shaw of McKesson & Robbins, this city, were school boys together.

PERCY COLLINS died in Brooklyn, N. Y., aged twenty-three years.

ROBERT I. DAY died in Somerville, N. J., aged fifty-nine.

Cystogen, Indicated in Surgical Treatment of the Urinary Tract.

Cystogen, manufactured by the Cystogen Chemical Co., St. Louis, Mo., is said to be of great value in the treatment of acute and chronic gonorrhoea, cystitis, prostatitis, urethritis, phosphaturia and as a solvent of uric acid. The manufacturers claim that Cystogen is indicated before, during and subsequent to any surgical treatment of the urinary tract, as it will flush the urinary passages from the kidney to the meatus with a dilute solution of formaldehyde, and thus render the urine aseptic. We believe the manufacturers, in placing this preparation upon the market, have simplified the treatment of diseases of the urinary tract, and as Cystogen is being extensively advertised to the medical profession, there will undoubtedly be a large demand for it. The progressive druggist probably already has it in stock.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.
Unsurpassed New Equipment. Seven Laboratories.
Twelve Teachers. Thorough Courses.

NEXT TERM BEGINS SEPT. 7, 1903.

Address Inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

DO IT NOW!

Look over the advertisements in this issue NOW. You may get in on something good ahead of the other fellow. Perhaps you missed something good in last week's issue. Glance over the following and be sure:

ALCOHOL.—The old reliable Webb's Alcohol, made by James A. Webb & Son, 165 Pearl St., New York, who quote it F. O. B. Chicago or New York.

POMPEIAN MASSAGE CREAM.—An elegant toilet preparation which is being extensively advertised by the Pompeian Mfg. Co., 1063 Pearl St., Cleveland, O. For sale by all jobbers. Are you ready to supply the demand?

DIOSGENIN—H₂O, 3 per cent. "The kind that keeps." Made by the Oakland Chemical Co., 161 W. Broadway, New York, and sold by all jobbers. Why not stock the good kind, it makes friends for your store.

SPINOLIUM SICULUM.—An organic vegetable iron compound marketed by the Fischer Chemical Importing Co., 14 Platt St., New York. See their adv. on inside front cover.

WINE OF CARDUI.—A female remedy of value. Made by the Chattanooga Medicine Co., Chattanooga, Tenn. Costs \$5.00 per dozen.

AN ATTRACTIVE PROPOSITION.—J. N. Ferrer, P. O. Box 71, New York City, has one to offer to a limited number of live druggists in the larger cities. Are you one of them?

PURE RYE WHISKY.—Made by Clarke Bros. & Co., Peoria, Ill., established since 1896, in itself a guarantee of good goods.

RIPE PINEAPPLE.—Have you secured a sample can of that delicious "Sultan" grated pineapple, which was thoroughly ripened on its own root and put up with a small amount of sugar on the plantation where it was grown? If you haven't, better send 30 cents today to pay for packing and express charges, and secure a can before the offer closes. It is far and away ahead of the pineapple picked green and ripened in transportation. Robt. Stevenson & Co., 32-34 Lake St., Chicago, Ill., are the distributors in this country.

ANTIPILOUSINE.—Prescribed by the active practitioner for every type of inflammation. An extra 5 per cent may be secured by ordering \$24.00 worth. The Denver Chemical Mfg. Co., 57 Lighthouse St., New York, or of any jobber.

CONCENTRATED FRUIT SYRUPS.—Made from selected ripe fruit at Sandusky, Ohio, by the Duroy & Haines Co., and known to the trade as standard goods which draw trade to any fountain. Write for samples and prices.

KENT'S BRUSHES.—Made by G. B. Kent & Sons, Ltd., London, England. Every brush warranted. They add prestige to any store. McKesson & Robbins of this city are selling agents for the United States.

WITCH HAZEL.—Get the kind that keeps. E. E. Dickinson & Co., Essex, Conn., make it; a distillation of young twigs, pure spring water and the finest quality of grain alcohol.

MRS. W. C. SIMPSON died at Vienna, after a two months' illness. Mr. Simpson is an examiner of the Illinois board of pharmacy and has many friends among Illinois druggists who will be grieved to hear of this great loss. Mrs. Simpson was a lovely woman who had a host of friends.

CAPT. THOMAS G. FORWOOD of Behair, Md., died on July 29 of injuries received in a driving accident. He was 41 years old. He was commander of Company D First Regiment, M. N. G., and took a prominent part in military matters. For a number of years he con-

ducted a drug store at Behair, but later took up farming.

MRS. H. BIDDLECOMBE of Detroit, wife of a well-known pharmacist, passed away on July 22. Mrs. Biddlecombe's illness dates back 25 years, and was borne with the greatest patience and fortitude. She was 63 years old.

HENRY COHRT, Gladbrook, Iowa, died last week. His business will be closed out by an administrator, Mr. Cohrt had been in the drug business in Gladbrook for ten years.

MRS. C. A. DUDDY, wife of the Redfield, Ia., pharmacist, died last week in Colorado and was brought home to Iowa for burial. Mr. Duddy had taken her to the Centennial State in the hope of bettering her physical condition.

A Perpetual Injunction.

The Pisco Co., Warren, Pa., have, at a great expense to themselves, proved to the satisfaction of the courts that "Pisco's Cure for Consumption" contains no opium, morphine, or any other dangerous or deleterious ingredient. For the last year the Pisco Co. have been engaged in a law suit with certain counterfeiters of Pisco's Cure, and in the course of the trial it became necessary for them to establish their claim that Pisco's Cure contained no morphine at all. This they did by calling to their aid many of the leading chemists of the country, who, after careful analyses, testified to the truth of the Pisco Co.'s representations. On top of this testimony came that of several physicians and a multitude of customers who told of absolute cures of consumption in its earliest stages by Pisco's Cure. The effect of all this valuable testimony was a decision by the court pronouncing the counterfeiters' defence baseless and unsubstantiated, and granting the Pisco Co. an injunction perpetually restraining the infringers. The result of this case will be gratefully received by the drug trade, which has always been friendly to Pisco's Cure on account of its quick-selling properties and general satisfaction to customers.

The offer of the Standard Remedy Co., 123 Liberty St., New York, is an attractive one, and we call attention to the letter they have received from a pleased stockholder which was published in their advertisement last week. They issue preferred stock to the druggist to the amount of goods he buys, and guarantee minimum dividends. The general manager of the company states that they intend to give their profits for the next four years to the dealers who sell their goods, believing that this very liberal policy will pay in the long run. The Standard Remedy Co. have just been obliged to move into larger quarters, formerly situated in the same large building which they have heretofore occupied.

Dr. Kennedy, Rev.,

ROUNDOUT, N. Y.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued July 28, 1903.

- 734,501.—Edward Bansch and George Hommel, Rochester, N. Y., assignors to the Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York. Microscope.
- 734,545.—Robert A. Hall, Baltimore, Md., assignor to the Crown Cork and Seal Company, Baltimore, Md. Bottle-closure.
- 734,551.—Heinrich Helbig, London, England. Cork.
- 734,561.—Herbert D. Jones, Chicago, Ill. Bottle-cap.
- 734,636.—Louis B. Truslow, Great Neck, N. Y. Fly-paper holder.
- 734,663.—William Bower, Olney, Ill. Ointment or pill slab.
- 734,753.—Julian H. Rivers, St. Louis, Mo., assignor to the U. S. Fiber Stopper Company, St. Louis, Mo., a corporation of South Dakota. Closure for receptacles.
- 734,804.—Alfred Boisleire, Belt, Mont. Bottle.
- 734,809.—William E. Brown, Los Angeles, Cal., assignor to Brown-Winstanley Manufacturing Company, Los Angeles, Cal., a corporation of California. Bottle-filling machine.
- 734,849.—Gustave Gin, Paris, France. Process for making sulfuric acid.
- 734,881.—Fred Jost, Susanville, Oreg. Non-refillable bottle.
- 734,929.—Robert W. McGowan, Queenstown, Tasmania, Australia. Device for unstopping aerated-water bottles.
- 735,031.—Henry Campbell, Baltimore, Md., assignor to Keystone Cork Seal Company, Camden, N. J., a corporation of New Jersey. Stopper.

TRADE-MARKS.

Registered July 28, 1903.

- 40,818.—Certain named toilet preparation. Orator F. Woodward, Leroy, N. Y. The hyphenated word "Easy-shave."
- 40,819.—Cough tablets and drops. William I. Nichols, Bridgeport, Ct. The word "Menthoelm."
- 40,820.—Remedy for disorders of the spine and nerves and general disabilities. The word "Spinine."

LABELS.

Registered July 28, 1903.

- 10,205.—Title: "Dr. James English Cooling Powders." (For powders). The Dr. James English Cooling Powder & Remedy Co., Philadelphia, Pa.
- 10,206.—Title: "Mexican Disinfectant, Deodorizer & Germicide." (For disinfectant, deodorizer and

germicide). Mexican Disinfectant Company, Carrollton, Ill.
 10,207.—Title: "Mister Skeeter." (For a preparation to keep away mosquitoes). P. C. Bilisoly, Norfolk, Va.

Not Guilty.

The Van Stan's Stratena Co., Ltd., Philadelphia, is sending out to the trade the following notice:
 Philadelphia, June 22nd, 1903.

To Whom it may concern:

In view of the character of the notices, which were sent out to the trade, in reference to the libel case, brought against our manager personally, by an individual against whom he was contending, in defense of our Trade Mark and Trade Name interests, officially, we deem it fit that information should be given of the final result of this proceeding.

In the Court of Oyer and Terminer and Quarter Sessions of the Peace for the City and County of Philadelphia.

Philadelphia, June 17th, 1903.

Commonwealth vs. Robert L. Pettet

libel
 I hereby certify, That on 17th day of June, A. D. 1903, The within named case was submitted to a jury and a verdict of Not Guilty rendered.

C. H. Good, Jr., Clerk.

Our Trade Mark litigation is still pending. In view of an unsatisfactory decree in the Court of Common Pleas No. 2, we will appeal the case to the Supreme Court.

Respectfully,

VAN STAN'S STRATENA CO., Lim'td.
 No. 1211 N. 60th Street, Philadelphia.
 Per R. S. Pettet, Manager.

Manufacturers who want representation in a western territory, can secure the services of an experienced gentleman with means, who would, if desired, take stock in the concern. Notice the advertisement in this issue.

BUSINESS COMPARES FAVORABLY WITH THE SAME PERIOD LAST YEAR

New York, August 4.—Prices are firm generally, the market is fairly active, conditions are satisfactory and business is as good, if not even better, than for this period last year. The city retail trades is not contributing to these favorable conditions, for it was never so poor, but country trade is remarkably good, seashore and mountain resorts, though not overpopulated in these cool days, still are doing well by the retailers and swelling the volume of business done in every branch.

OPUM—There is no quotable change, though trade is moving faster. Jobbers are asking \$3.60 to \$2.85 in small lots, as wanted, \$3.50 a pound will buy a case. These prices are for 3 per cent, and a ten-cent advance a pound will give the price for 11 per cent. Powdered, 13 per cent, is worth \$1.75 and powdered 16 per cent is quoted at \$5.25, with none selling.

MORPHINE.—Values remain hard and the good position of opium keep them there. After the advance of 10 per cent, an ounce last week there has been no change, and the revised jobbing quotations are \$2.00 to 2.70 for eighths in ounce boxes, \$2.55 to 2.65 in 21-oz. boxes, \$2.35 to 2.45 in ounce vials and \$2.50 to 2.40 in 5-oz. vials, as to brand and quantity.

QUININE.—Prices remain as after the 1 per cent advance two weeks ago, and jobbers quote 24 to 21 1/2c for bulk in 100-oz. tins, 24 1/2 to 25c in 50-oz. tins, 25 to 25 1/2c in 25-oz. tins, 26 to 26 1/2c in 15 or 10-oz. tins, and 41 to 51 1/2c in ounce vials, according to brand and quantity, but demand is small.

COCOAINE.—There is only an ordinary demand, but prices are very firm, owing to the strong position of the crude material. Such business as is transacted is principally in the shape of deliveries on contracts.

WOOD ALCOHOL.—A decline of 10c per gallon was announced, quotations now bring 65 to 80c per gallon.

COD LIVER OIL.—Indications point to a continuation of the prevailing high prices, though the demand is quiet as usual at this season.

MEXICAN SARSAPARILLA.—Prices were advanced to 20 to 28c, a pound, cut, and 25 to 31c, powdered.

CATTLEBUSH BONE.—It is more or less in demand on account of good, warm competitors among importers. Nominal quotations are 24 to 28c.

SERPENTARIA ROOT.—The supply for jobbing delivery is light, nevertheless, the price is firm at 55 to 65c. A new crop is said to be offered at lower than 55c in the West.

CITRIC ACID.—Has been reduced 2c per pound by manufacturers, and the revised quotations are 25 to 41c for crystals, per pound, and 38 to 46c for powdered.

JAPAN WAX.—Stronger primary markets make it firmer, and spot quotations have gone up to 24 to 26c, as to quantity and seller.

CITRONELLA.—Owing to scarcity citronella is firmer, if the quality be strictly prime, and the quotations are 5 to 9 1/2c a pound, inferior qualities lower.

IOWA DON'T WANT TO BE A DUMP.

Des Moines, Ia., Aug. 4.—Iowa druggists want the repeal of a section of the State law which permits pharmacists from any recognized school with a diploma to register with the State board. They say that such a law exists in few other States in the Union and that it is the means of making Iowa a dumping ground for all "leg" clerks from recognized colleges who may have been able to get a diploma but who are unable to pass the State examination at home.

NEW OFFICERS OF THE A. P. A.

(Special to the Era.)

The election of officers at the annual meeting of the American Pharmaceutical Association in session at Mackinac Island resulted as follows: President, Lewis C. Hopp, Cleveland, Ohio; first vice-president, William C. Alpers, New York, N. Y.; second vice-president, Albert H. Rodrig, F. S. N. Hospital, Stapleton, Staten Island, third vice-president, Otto F. Chaus, St. Louis, Mo.; treasurer, Samuel A. D. Sheppard, Boston, Mass.; secretary, Chas. Caspari, Jr., Baltimore, Md.; reporter of progress in pharmacy, C. Lewis Diehl, Louisville, Ky. The new members of the council are: Leo Elbel, South Bend, Ind.; George F. Payne, Atlanta, Ga.; and Eugene G. Eberle, Dallas, Texas.

BUSINESS NOTICES.

A HELP IN PRESCRIPTION WORK.

There are a great many things that the average dispenser can't remember, and there are as many more that he shouldn't try to remember—it isn't safe. These things come up in prescription filling when time is an important factor and accuracy is strictly essential. There are questions about dosages, dose equivalents, percentage solutions, specific gravity, incompatibilities, metric and thermometric equivalents, meanings of Latin, French or German terms. These things are all tabulated, or figured out, handy for instant reference, in the Era Dose Book (Third Edition, Revised and Enlarged). Price 50 cents, postpaid.

"Education does not make fools, it develops them," writes the pork-packer to his son.

The Era Course in Pharmacy was not prepared for fools. It can do them no good.

But the same merchant informs his son that education also develops the opposite of fools.

Therefore, if you are wise—which, of course, you are—education will do you good, and the Era Course is suited to your needs, provided that you need development in the knowledge of pharmaceutical science.

Perhaps a college course would do you more good, but cleverness is, unfortunately not always blessed with an abundance of means, and the Era Course is much less expensive than a college course.

If you need a pharmaceutical education and have little time and money, write to the Pharmaceutical Era, No. 8 Spruce St., New York, for a prospectus which will tell you all about The Era Course in Pharmacy.

TO INCREASE THE PROFITS OF THE DRUG STORE.

The report of Chairman Thos. V. Wooten of the A. Ph. A. section on trade interests presented at the Mackinac Island meeting last week, is a notable document which deserves a careful reading by every one interested in retail pharmacy. It goes to the root of things in the discussion of, not one but pretty nearly all of the evils which are destroying the retail druggist's peace of mind. Certainly, no one is better qualified to speak of these matters than the secretary of the N. A. R. D. and he has marshalled facts and summarized conclusions in a manner indicative not only of great breadth of view, which is his by reason of his office, but also of careful study and deep thought. Mr. Wooten admits that the present commercial status of the pharmacist is not altogether satisfactory, but he thinks that there is a tendency to howl calamity too loudly. The facts of the case are bad enough, and they should be looked squarely in the face, but continual lamentation and wagging of heads about the dislocated times is not only useless but also vicious, for it discourages efforts to correct matters that are not absolutely beyond repair. There are some evils that can not be helped; it is wholesome to examine all sides of these carefully so that we may avoid them. But there are others that admit of cure, or at least of an acceptable modification, and it is certainly not wise to destroy faith in the remedy before it has been fairly tried. Nearly all the remedies proposed depend for success upon organized effort. He who discourages organization helps to block all attempts to improve the druggist's condition.

THE EXCESSIVE NUMBER OF STORES.

The greatest hindrance to success in retail pharmacy, is according to the report, the excessive number of stores. Drug stores have not only multiplied out of all proportion to the population of the country, but the total demand for drugs has fallen off. Christian science, osteopathy and other forms of faith therapy, as well as improved sanitation, free dispensaries, hospitals and sanitariums, have cut into the druggist's trade which has been further reduced by the tablet and proprietary dispensing physician. The causes of the undue increase of stores are clearly shown to be the hard lot of the drug clerk, the inducements offered by wholesale houses and the glittering hope of

cutting a wide swath as one's own boss. To prevent the addition of still more stores to the struggling one and already in the field, it is suggested that clerks should receive such treatment as to make them satisfied to remain clerks. Mr. Wooten thinks this might be accomplished by providing more comfortable sleeping quarters, shortening working hours as much as possible and possibly by adopting profit-sharing methods. It is further suggested that concerted action on the part of druggists already in a given territory might prevent jobbing houses from encouraging clerks to open new stores. The disturbing element at the bottom of the greatest hindrance to the success of retail pharmacy is, therefore, the discontented clerk. To keep him contented and to move the jobber to stop stirring him up to discontent then seems to constitute the druggist's chief hope for the future. This and the fact that clerks are very generally scarce in spite of the large number of graduates annually furnished by the colleges, seems to show that the position of drug clerk is a peculiarly unpopular job. And still the veterans are constantly telling us that the position is much less irksome than formerly. Does this signify that the condition of the wage earner in general has improved amazingly or that the present generation of graduates is a singularly perverse one? However that may be, we must admit that the present generation of proprietors is equally perverse, for extremely few ever return to the subordinate position of clerk after they have once experienced the vicissitudes of ownership.

TO INCREASE THE VOLUME OF BUSINESS.

After pointing out that the principal trouble with the drug business is over-crowding, Mr. Wooten proceeds to discourage the would-be druggist most thoroughly. He says plainly that the ideal of almost every young man who graduates from a school of pharmacy, to conduct a purely professional establishment, is out of the question. The demand for the professional services of the pharmacist is wide-spread, but only in very few localities is it of sufficient volume to support an unmixed establishment. The druggist must carry side-lines in order to secure a living volume of patronage, and it rarely pays to employ professionally-educated salesmen to handle general merchandise. It is necessary to increase the volume of business of each store so that less expensive salesmen may be employed for unprofessional service. Several plans are offered for securing this increased trade, one being little short of startling, namely, the consolidation of several drug stores under one management so that the different branches of the business could be segregated into separate departments. The writer admits that this conversion of the drug store into a miniature department store will be unpalatable to the average druggist, but he points out that the tendency of the times is in that direction, and that it is useless to try to stem the tide of commercial development. It is a significant fact that Mr. Wooten does not point to price-cutting as the only or even the greatest of evils in the drug trade, but calls attention to a long list of abuses for each one of which the only remedy that promises any measure of success is organization.

FIRE INSURANCE AND DRUG STORES.

It is not only in correcting abuses that organization is useful. It offers positive as well as negative advantages. Druggists find it profitable to club together not only for the purpose of defending their own rights and privileges, but also to invade other fields of industry and gather some of the rewards there offered. The Era has during the past few weeks been stimulating interest in a very promising enterprise now being brought into form by the German Apothecaries' Society of this city. Fire insurance is a thoroughly legitimate business, and is one of the great blessings of modern civilization. For the real service rendered it is proper that there should be a substantial reward; but when the powerful organizations which now in a very considerable measure control the insurance business arbitrarily increase this reward without reason or justice, a counter-organization may profitably step into the ring and relieve them of their duties. Insurance men and people in general have an insane idea that the drug store, because its stock is composed largely of "chemicals," is peculiarly explosive and combustible, and the premiums demanded of druggists are, therefore, out of all proportion to the risk involved. Drug stores are not more liable to damage by fire than other buildings; they are, in fact, much less so, for the very good reason that the stock is not very combustible in itself, and is mostly protected in small containers. The best of materials for putting out fires are, moreover, always at hand, and there is almost always someone on the premises who knows how to use them. Druggists are commonly asked to pay much more than their share of insurance premiums, and as an article in the news columns of the present issue clearly shows, can effect a very considerable saving by organizing companies among themselves. We hope every one of our readers will consider carefully what pharmacists who have tried the plan, have to say upon the subject. The saving of thousands of dollars to the comparatively few druggists of South Dakota shows what may be done elsewhere. A dollar saved is a dollar made. Saving should be quite as agreeable to the average pharmacist as making, and a chance to show the way is a privilege for which we are always grateful.

LAWS THAT ARE IGNORED.

Laws that restrict the performance of an important public duty to a class of specially qualified individuals tend to add dignity to the persons thus favored and raise them in popular esteem. Pharmacy laws and regulations for the exercise of proper precautions in the sale of poisons are enacted for the protection of the public, but a secondary effect is an increased respect—and respect pays—for those privileged to perform this important service. It would seem, therefore, that the pharmacist should be foremost in upholding these laws which are so clearly to his own advantage. One would naturally suppose that he would guard his special privilege as he would any commercial advantage. Is this the attitude of New York druggists toward the law? Secretary Erb of the board of pharmacy informs us that the statute requiring the registration of poison sales is very generally ignored. No one encounters much difficulty in

purchasing poisons of any kind and in almost any quantity without being required to answer so much as a single question. In one store no sale of poison had been registered in more than ten years! If the druggists have so little respect for the law what must the people think of the pharmacist who ignores it? In other countries pharmacists recognizing the care and supply of poisons as their chief professional duty, are making constant efforts to increase the stringency of the poison laws. Can the druggists of New York afford to permit their law to become a dead-letter. If the pharmacist is not to be trusted to surround the sale of these dangerous materials with every possible—not to say, necessary—precaution, why should he be granted a license or receive any consideration not also extended to the dealer in groceries or hardware?

HAS CONFIDENCE BEEN MISPLACED?

The forty-three gentlemen who were appointed on the collection committees for raising the college debt accepted with their appointment high responsibility. Their appointment was a compliment to them, a recognition of their past work, of their loyalty to alma mater, of their influence, of their ability to hustle. Is their enthusiasm manifest in the results thus far obtained? Have they shown either their loyalty to alma mater or their ability to hustle? At first thought it is not encouraging, and one is led to wonder if confidence has not been misplaced and if the interest of the trade at large in the New York College of Pharmacy has not been overrated. When the appointments were made we were told that the purpose was to raise the entire debt of \$125,000, and that that purpose might be—surely, almost would be—accomplished during this summer. The season is well along toward the last days now and one-eighth only of the project has been accomplished.

IT SEEMS NOT, BUT THERE SHOULD BE A BRACE-UP.

But we feel that the confidence of those who selected the committees has not been misplaced. All that is needed is a brace-up, a stimulus. It is time for the committees—those that have not already done so—to “get a move on.” Human nature is too prone to postponement to the last moment. The hot months find many out of town, someone else is known not to be working, another sees no rosy prospect of getting very much money, another procrastinates for some other reason—and the whole machine lags. This is not the way great things are accomplished. The success of this movement as of any other depends upon every individual. The man who holds back does no inconsiderable amount of harm. Because some one else is not working does not excuse you. Take your brace together. Everyone is not out of town. Get after those in reach and get after them in earnest. Then, after the vacationists return you are free to approach them. Your work will be well in hand. You will have given it the honest, earnest attention expected of you and will not be left at the last moment with your district half covered. There will probably be an average of seventy-five druggists in every district. A certain number you may depend upon to contribute without special effort on your part. The remainder do not make an appalling number.

Your work isn't so hard after all. A fair amount of enthusiasm will carry you through it before you know that you have been at work.

FROM THE ECONOMICAL SIDE OF THE QUESTION.

That debt should be raised. It has hung, an incubus, on an institution that does not deserve to be thus hampered for a long time. Interest keeps on adding, and every year's interest is that much money lost. A few years of that lost money would raise the debt. To leave the debt unraised is only that much waste. But the waste will have to be paid and paid by the druggists of Manhattan, largely. Isn't it cheaper to get down to work now and wipe out that debt? Since we are on the economy side of the question: You realize the power of money. Do you realize the persuasive power \$50,000 or \$75,000 would have in asking philanthropic—outside—aid? There are influential men on your committees and rich men within their circles. It is not only possible, it is highly probable, that with nity or seventy-five thousand dollars raised by one good, rapid effort a rich man or rich men, from philanthropic motives and by the aid of influence that could be brought to bear, would come forward with the balance. Then you could rest and take a long breath of pure satisfaction. Then, again, with a disposition shown to do something for yourself, shown by a decent sum collected, small contributions would be obtainable from other outsiders—customers. A neat letter, such as your chairman, Ewen McIntyre, could write, placed in the druggists' hands, would bring speedy results from customers. The Era has personal assurances from good druggists with wealthy trade that such a letter would certainly be cheerfully referred to their customers.

DROP FREAKS, GET TOGETHER, AND PULL!

Fifteen thousand dollars is already raised. And how? By hard work? If any perspiration appeared there were only a few who showed it. You see what a very little hard work has done. Then why not put on all available steam and have it no longer said that New York, the biggest and richest city in the United States with more pharmacists than any other city in the world, permits one of her colleges of pharmacy to struggle under a load that not only is almost unbearable but that sadly hampers the high stride our better professional instincts demand. Do not let this movement drag along a weary way with Ewen McIntyre, your oldest graduate—whose old age holds no dearer wish than to see the debt liquidated—and your alumni president, Charles S. Erb, and Clarence O. Bigelow and a dozen or so others struggling, almost unassisted, to do the work. Drop hippodrome ideas. Get together, gentlemen, and give a long pull and a strong pull, and something will give. On September 3 the Era will again announce results by committees. And we anticipate a gain.

The Reposeful Employee.

Probably the most aggravating person on earth, to the active, progressive business man, is the sloppy employe, male or female, who attempts to assume the “reposeful” air, praised by the general magazine writers. Reposeful is usually another name for impertinence and laziness combined.—The Ad-Writer.

DR. LEANDRO ECHEMENDIA.

WHERE BUSINESS IS DONE ON A FRIENDSHIP BASIS.

There is plenty of time in Latin America. Don't be in a hurry. Nature is partial of big demonstrations, and Spanish-American blood heats into many overgrown feuds. But beyond those things, which it is hoped the drug salesman doesn't get to monkeying with, go easy.

If you are wise you don't rush in, slap your prospective customer on the back, hurriedly ask what he wants today and rush out again. You go at it differently. This is the method of a salesman, who is experienced in dealing with the people of Central and South America and Mexico, when he enters a new town, according to Dr. Leandro Echemendia, manager of Sharp & Dohme's Spanish department:

Perhaps he gets in at noon. After settling in his hotel and eating, he starts out for a stroll, without grips or samples of any kind, and, perchance, drops into a store. In an ordinary way he begins conversation with the proprietor, after handing him a card. Perhaps they sit down and talk, sometimes for several hours, about the weather, the political situation, the plague, if there is one, but nothing of the salesman's business.

When he leaves it is with a promise to come in again. In a day or so he does for another chat. But business, though the drummer's blood may be at fever heat to approach it, stays in the background until curiosity or friendly interest on the pharmacist's part makes that gentleman broach the subject, perhaps in chat on viewing goods and samples. Then, he turns salesman, with sundry shruqs, compass, of course only a friend, not to get business; mind that. He keeps his enthusiasm within bounds or lets it wax over the professional value of his goods, not on prices, discounts and selling qualities. He will get an order, and a good one.

It is a friend that makes the sale, not prices. The average Latin American pays no heed to the price, sure as a rule. With the German pharmacist in Spanish America it is different. He compares price lists. But the American travelling man cannot sell medicine anyway, as he buys all of his goods from Germany.

It's an old chest maxim for beginners, "Never make a move without a well thought-out object." This applies equally well to business. The Ad Writer.

JACK TAR'S DRUG STORE.

By IAMINO.

I wonder how many people, who think frequent visits to their apothecary one of the essentials of life ever stop to think how the sailor on his long voyages of from four to five months manages to exist without the luxury of a drug store. He is not, however, entirely bereft in this respect. Every merchant ship carries what is known as the "medicine chest," a time-honored institution, which conservatively clings to the good, old-fashioned remedies our grandfathers knew, and leaves land-lubbers to coddle themselves with new fangled notions.

The captain is pharmacist, physician and surgeon all rolled into one, and his knowledge of the healing art is picked up from the medical works on board. Some captains show a surprising aptitude in this direction, and the results of their treatment of severe cases of illness, or setting broken bones is often quite wonderful when one considers the scanty sources of information at hand.

The medicine chests of the average merchant ship are all equipped on pretty much the same plan, their stock in trade consisting mainly of such staples as epsom salts, calomel, friars' balsam, quinine, rhubarb powders, piceac, sweet spirits of nitre, etc., some forty or fifty mixtures, splints and bandages. With this scanty stock in trade the captain is often called upon to battle with the most dreadful diseases that afflict mankind, contracted in foreign ports.

"How do you know what to prescribe, Captain?" I enquired.

"When a man comes aft and tells me he's sick," said the captain briskly, "I enquire what's the matter. If I think it's simply a cold I give him a dose of 'black draught' and tell him to stay below one 'watch.'"

"And does that cure him?" I asked.

"Well," said the captain with grim humor, "I guess so, for he never comes back to ask for another dose."

"But where are your scales, etc., for dispensing?" I enquired.

"Scales!" said the skipper scornfully, producing a jackknife well encrusted with tobacco, "that knife, sir, is all the scales I need. That knife has been in the business so long that it knows the dose a sailor needs to a grain, and never was known to make a mistake."

I was silenced if not convinced.

One might naturally conclude from this that there is little shaming among sailors to escape from work, and even the prospect of an extra "watch below" in bad weather will not compensate for the nauseousness of the doses dealt out to them, for sailors are perfect babies when it comes to swallowing medicine.

Probably the disease most frequently contracted in foreign ports is fever in some form—yellow fever being the most dreaded. For fevers the common remedy is a fever mixture composed of:

Nitrate of potash 11/2 drams
Sweet sps. nitre 3 drams
Add water to 6 ounces

Dose 2 tablespoonfuls.

This is administered three times a day, and the patient kept on "slop diet," and after the fever has abated he is given a dose of quinine three times a day for a week.

While as a rule sea captains are a wide-awake and intelligent class of men, yet no doubt there are some ignorant and careless members of their class who make as absurd blunders as the story of the old salt who could find in his medicine chest no number 11 mixture such as the medical work prescribed for a certain malady, and very promptly got over the difficulty by mixing together mixtures number 5 and 6. And yet the sailor patients usually pull through, not because of the treatment they receive but in spite of it, their tree life in the invigorating sea air giving them splendid physiques which can withstand hardships the mere recital of which makes a landsman shudder.

SHOP TALK

TIME—MONEY—COLLEGE—FRIENDSHIP.

"I feel sorry for the man who has never been to college," remarked the C. P.

"Feel sorry for him! And that after all this talk about wasting valuable time?"

"Valuable time be hanged! These fellows who pretend to see no good in higher education, figure on time as so much commodity to be turned into cash. As a purely money-making proposition a college course may pay or it may not, but I consider it a good investment. Anyhow I pity the poor chap who feels that he has got to cash in all his moments."

"Time is money, you know!"

"Time is a heap more than money," replied the sage, "You can spend time in getting a lot of things that money can't buy."

"Money can't buy! What, pray, will money not buy, these days?"

"Most of the things that really make life worth living."

"Well, don't talk to us! Nobody in this crowd shows any sign of becoming disgustingly wealthy."

"There is a tendency at present," continued the old man, ignoring the druggist's cynical remark, "to overestimate the value of money. The advice of the successful man is to get money first and buy anything you want afterward at your leisure. But the wise man gathers all the joys of life as he goes along. There are some things that must be cultivated in youth before bank accounts have such an overpowering importance."

"For instance?"

"To mention only one, friendship. The most sincere and lasting friendships are formed when we are young, before we have worn out our stock of altruism and faith in human nature, not in childhood—then our habits and tastes are still unformed—but at about the time boys go to college."

"Is that why you believe in colleges?"

"That is one of the advantages. I did not say that it is the only one. Speak to any one of the old college boys about his student days and you will see his eyes

kindle and his sober old face put on a smile that no dividend or stock deal could bring out. You will never hear a graduate who has spent years in the common pursuit say that he is sorry he wasted two or four years in college. Not one of them would sell his experience."

"Why? What started you on that tack?"

"Did you ever hear of the Damon and Pythias of pharmacy?"

"They were Philadelphia C. P. men. Do you remember who they were?"

"Are, you mean! That sort of thing does not come to an end. Class of 1872; one is my friend McIlhenie of Brooklyn and the other Mr. Cave of Philadelphia."

"Which was Damon and which Pythias?"

"I don't believe anybody ever takes the trouble to figure that out. There isn't much doubt about it, when you know the hero of the small-pox episode."

"Do you know?"

The sage nodded, "I promised not to tell, and the sentiment of it all is so pretty that I am not going to."

"These boys—they were boys then—met in Philadelphia in the autumn of 1870. One came from Ohio and the other from England, both in pursuit of pharmaceutical knowledge. Just how it happened nobody seems to remember—anyhow these two young men were thrown together and became fast and inseparable friends. They roomed together and studied together, and no doubt sat up late nights, planning the future as college boys will."

"During their second year at college, one of the friends was laid up and quarantined with small-pox, then more common than now but dreaded quite as much. The other promptly dropped his work and became sick-nurse, and I'll bet he made a good one and a jolly one. You can't hire that sort of a nurse. This hospital business intertered with studies of course, but our Damon and Pythias fared better at examination time than they expected. I wonder if the professors knew the circumstances—and I wonder if

1872.

A PHARMACEUTICAL DAMON AND PYTHIAS.
Messrs. Thos. D. McIlhenie and Joseph Cave, the latter gentleman standing.

these students could pass those same exams now, over almost a third of a century."

"Is that all?"

"All! That was in the beginning of things. The story is not going to end. They are Damon and Pythias now. Although they live in different towns, they continue to meet on convivial occasions, and you can fancy how they enjoy talking over old times.

"If you will call upon one of this interesting pair, he will show you a series of photographs valued as a priceless possession. One picture shows the young apothecaries on the eve of graduation in 1872. Another the same friends in precisely the same attitudes, now after twenty years, grown prosperous and lightly stout. In a third photograph the friends, again in the same postures, are shown as they appeared in 1902. Time has mellowed them somewhat and it is easy to see that all of the inevitable little differences are now forgotten. It warms the cockles of your heart to see the pride and satisfaction in their mutual life-long friendship in the faces of this last picture. It is more apparent than in any of the others."

"Another exception?"

"I wish you would stop talking to me about exceptions." Of course it is an exception. That is why I speak about it, and that is what makes it so pleasant and refreshing."

"I mean to say that it is not fair to give the college all the credit."

"And I did not intend to. Many pass through college without so much as arousing a kindly feeling in anyone, but it is nevertheless true that after our student days are over we suddenly realize how extremely scarce thoroughly congenial people are. To make friends requires a number of admirable personal qualities, generosity, adaptability and a few others, including some luck. All good men are not blessed in this way, but if a friend sticks to you for thirty years, the chances are that you are a pretty fine fellow."

WILLIAM MADE IT PAY.

William is a clerk in Rochester, and this is the way the perfume case makes dollars for the house, while until a year ago it didn't make cents:

"One of the firm members was always growling why cigars made more money for us than perfumery, when the latter is a staple of the drug store. One day, when he appeared to be in good humor, I asked permission to make perfumes pay a better profit.

"Do you mean to say that you can?" he asked.

"Why, yes," I replied, "otherwise I wouldn't have asked you."

"How you going to do it, boy?" he asked, good-naturedly, looking at me suspiciously. "Why, we've had perfume here for twenty years and we don't often get a call for it. It doesn't pay us even to keep it."

"I'll make it pay," I exclaimed, and perhaps my enthusiasm caused him to remark:

"Go right ahead, son; you can do it your own way and I won't let anyone interfere."

"I had been with the house but a short time so I thought to myself that here I make or break. I was bound to succeed and felt confident that I would."

"Look out, Billie," one of the men said, "better not try to improve things here, or you'll get into trouble."

"I said I would take my chances, and speedily had all the perfumery out of the case which stood in an obscure place, and was at work cleaning bottles and putting bright ribbons on the largest of them. I asked for a window and of course got it. It was up to me to make the scheme a paying one. At night when the other men were away I drew down the curtain and made my perfumery window. Some beautiful advertising matter helped me out, and I had been permitted to spend \$50 for flowers. I bought flowers like the parrot, and our ad appeared in startling type in the morning announcing the special sale of perfumes. I had written it, spending several nights on the wording, and I am not an expert ad writer. It was allowed, for the member of the firm whose interest was now aroused, to go in both morning papers, and by 8

o'clock our store front was crowded. I sprinkled about a pint of perfume on the carpet near the new perfume case, in plain sight from the door, and had a clerk dressed to represent a figure on one of the bottles. I also scattered perfume on the sidewalk. I had heard of saloon men spilling whisky this way to draw trade, and—well, it succeeded with me. Our store was crowded all day, and to those who did not come in to buy perfume we gave away little sample bottles, several gross of which I found in the dirt back of a counter. My reward came when the proprietor said as I started for home:

"William, we've sold more perfume to-day than in the last ten years. Can you make cigars sell too?"

What are You Working for?

A boy or a man who works simply for his salary, and is actuated by no higher motive, is dishonest, and the one whom he most defrauds is himself. He is cheating himself, in the quality of his daily work, of that which all the after years, try as he may, can never give him back. If I were allowed but one utterance on this subject, so vital to every young man starting on the journey of life, I would say: "Don't think too much of the amount of salary your employer gives you at the start. Think rather of the possible salary you can give yourself, in increasing your skill, in expanding your experience, in enlarging and enabling yourself." A man's or a boy's work is material with which to build character and manhood. It is life's school for practical training of the faculties, stretching the mind, and strengthening and developing the intellect, not a mere mill for grinding out a salary of dollars and cents.—Success.

To-Day.

So many of us make the mistake of wasting the time of today by planning ahead for tomorrow.

Frequently opportunities are lost to us because of this habit. We are so busy planning that we are blind to what might be done this very hour.

A wise adviser says: "To-day is, for all that we know, the opportunity and occasion of our lives. On what we do or say to-day may depend the success and completeness of our entire life struggle.—San Francisco Examiner.

DO YOU WONDER WHY WE SIGH!

The drug clerk laid his head,

With toil and trouble worn,

Upon his humble bed

As midnight turned to morn.

At 1 o'clock he woke,

And went with many a groan

To give some thoughtless bloke

A chance to use the 'phone.

The tower clocks struck two,

And then he rose again

To ease a fellow who

Was writhing with a pain.

At three to wake he had

From dreams phantasmagoric,

Because a frantic dad

Demand'd paregoric.

He slept in peace 'till four,

Then from his lofty camp

He heard some fellow roar,

"Come down and sell a stamp."

The clocks struck five, and lo!

He had to rise because

Some boozier wished to know

What time of day it was.

And when at six the day

Of toil once more began,

He heard the druggist say,

"What made you late, young man?"

—Council Bluffs Nonpareil.

THE AMERICAN PHARMACEUTICAL ASSOCIATION AT MACKINAC ISLAND. FIFTY-FIRST ANNUAL MEETING.

About the Usual Number of Members Find Pleasure and Profit on the Picturesque Island in the Strait—Vigor and Exhilaration in Northern Breezes—Overcoats and Blankets in Demand—Record Number of Scientific Papers—Large Accession of Membership—Government Asked to Provide Standard of Antitoxin—Draft of Anticocaine Law Adopted—First Meeting of Historical Committee—Substitution Calls Forth Vigorous Remarks—To Meet Next Year in Kansas City.

FIRST GENERAL SESSION.

Monday P. M., August 3.

It was late in the afternoon of August 3 when President Payne of Atlanta, called to order the first general session of the fifty-first annual meeting of the American Pharmaceutical Association in the Casino connected with the Grand Hotel, Mackinac, a delightful place for gatherings of any kind. In a few words the president introduced Dr. J. R. Bailey of Mackinac Island, one of the oldest druggists in Michigan, who delivered an address of welcome and presented to the association the keys of the historic old fort which successively served to guard French, English and American interests. Dr. Bailey told something of the traditions and early history of the island, now a public park in charge of the Michigan State Park Commission.

Prof. Jos. P. Remington of Philadelphia, responded to Dr. Bailey's welcome. He spoke of the plan of the association in selecting its places of meeting so that all sections of the country might be visited. He contrasted Mackinac with other places and said that many in the East were apt to forget that it was as early as 1634 when Jean Nicolet, the French explorer discovered the island. "Michillimackinac, the home of the giant fairies of the Michsawgvegan is a wonderful strategic point commanding the narrow waters between the two greatest lakes—Michigan and Huron." Professor Remington thought that no American had fully lived until he had seen Mackinac.

Oscar W. Berhea, an eloquent young Southerner from Meridian, Miss., responded on behalf of the younger members of the association.

Frederick T. Gordon, pharmacist, U. S. N., and Messrs. A. M. Roehrig and Henrik Gahn of the U. S. M. Hospital Service, followed as representatives and official delegates of their respective branches of the service. Lyman F. Kebler, chief of the drug laboratory at Washington, also spoke, stating that the department of which he was the delegate needed the cooperation of the association. All of the Government representatives spoke highly of their respective chiefs. Mr. Gordon said that Surgeon General of the Navy Rixey wanted to secure twenty-five more pharmacists for the

navy and also to raise the standard to that of full warrant officer.

Thos. P. Cook of New York, and L. C. Hopp of Cleveland, spoke on behalf of the N. W. P. A. and N. A. R. D., respectively, and after Vice-President W. L. Cliffe had taken the chair President Payne proceeded to read his annual address, which is summed up in the following recommendations:

Recommendations.

1st. That the names of all committees to be appointed by the president for each year be arranged in a complete separate list by the general secretary before the close of each annual meeting and a copy of the same be given the incoming president, preferably at the close of the last general session or as soon thereafter as practical. The general secretary is very familiar with all the standing committees and can have them written out in advance with space between to insert any new committees which may be formed. This will prove a saving of time taken up in correspondence between the general secretary and the new president and will enable the president to arrange his committees with much more promptness and satisfaction to himself. A president only has a few months to serve and such a full list would save much time which is now unnecessarily lost in looking up these matters.

2d. That the committees appointed by the president be printed together in the proceedings and not mixed up

Old Fort Mackinac.

with Mass. of the committee, that the committees to be appointed by the president may be seen by him at a glance and more easily studied and provided for.

3d. That the various professors of colleges of pharmacy and members of State boards of pharmacy present be requested to unite in a joint conference at some convenient time during our meeting for an interchange of ideas and views in regard to what should be first—The generally adapted requirements of those who come before State boards of pharmacy for examination to secure license to practice pharmacy. Second—What should be the proper character of board examinations. Third—What should really constitute a standard college of pharmacy.

4th. That the names of all those who have secured new members for the present meeting be published as a roll of honor and the number of new members secured by each be given. The first name of indorsement on each application blank to be given credit for that new member.

5th. That an index to his report be prepared each year by the reporter on the progress of pharmacy and attached to the work.

6th. That a committee of five be appointed by the president, to whom members of the association and other pharmacists may communicate any systematic disparagement of pharmacists which may come under observation and any information at their command as to the source of such detrimental matter. That members of the association and all other pharmacists may know something of the animus of these scurrilous attacks upon our honorable calling.

7th. That the exhibit feature which was omitted at this meeting on account of the distance from any large city, be again resumed at the next meeting, as it is far too valuable in its instructive features to be discontinued.

8th. That a committee of ten or other convenient number be appointed to draft a model poison law along the lines suggested.

9th. That a committee of ten be appointed to draw up a preamble showing the absolute necessity for the use of alcohol in pharmaceutical preparations and in the dispensing of prescriptions and, whereas, these conditions exist that they also be instructed to draw up a model State act giving to pharmacists the right to sell and dispense liquids containing alcohol without paying a tax for so doing, under such conditions as will completely prevent the sale of any alcoholic medicinal preparation which can be used as a beverage, except under such circumstances as it is established that such use is not intended.

10th. That the work for a lower tax on alcohol be actively continued.

11th. That the name of the auxiliary committee on membership be changed to that of general committee on membership. It being a very important independent committee the latter name seems more appropriate.

12th. That a committee be appointed to investigate the feasibility of publishing formulae for domestic remedies.

The address was referred to a committee, consisting of E. G. Ryan, Detroit, Mich.; J. E. Patton, York, Pa., and J. W. Baird, Boston.

Secretary of the Council Whelpley presented 150 applications for membership, which were ordered posted and by subsequent vote the applicants were invited to complete their membership. This announcement was received with applause. The names of the members of the organizing committee selected by the various State delegations were announced as follows: Arkansas, W. L. Dewdney, California, P. M. Jones, R. G. Shoults; District of Columbia, L. E. Kebler, F. T. Gordon;

Georgia, R. B. Gilbert, G. F. Payne; Indiana, F. W. Meissner, Leo Eliel; Illinois, W. K. Forsyth, T. C. Loder; Iowa, W. J. Testers, Fletcher Howard; Kansas, L. E. Snyre, M. Noll; Kentucky, C. Lewis Diel; Maryland, Daniel Rase, C. E. Dohme; Massachusetts, S. A. D. Shoppard, J. W. Baird; Michigan, W. H. Burke, W. A. Hall, Mississippi, J. W. Botham, Missouri, William Mittelbach, J. M. Good; Nebraska, P. M. Myers, C. R. Sherman; New Jersey, Chas. Holzhauser, G. W. Parisen; New York, C. A. Mayo, W. C. Anderson; Ohio, G. W. Voss, T. W. Benfield; Pennsylvania, E. M. Boring; Geo. Gargas; Texas, E. G. Eberle; Wisconsin, H. G. Eberle, Ed. G. Kettler; Ontario, J. E. D'Avignon, M. Darby; delegates at large, A. E. Ebert, H. M. Whelpley, J. S. Smith, W. D. Allison and C. R. Lowe. These delegates subsequently convened and elected a sub-committee of seven to select the names of the officers to be reported by the general committee.

Messes, E. G. Eberle, O. F. Chaus, W. L. Cliffe, J. W. T. Knox and C. S. N. Hallberg were selected as a committee on time and place of next meeting. Adjourned.

SECOND GENERAL SESSION, TUESDAY, A. M., AUGUST 4.

After reading the minutes of the previous session Dr. Whelpley read the report of the secretary on membership, which showed that of the 284 persons proposed last year 271 had completed their membership. Fifty-four members dropped out and seventy-five were liable to be dropped this year for non-payment of dues, etc. The present active contributing membership is 1282, which, added to the number of life members (117) and honorary members (10), makes a grand total of 1409.

Secretary Whelpley also read the resolutions passed by the council referring to the work of the late George W. Kennedy, which were adopted by a standing vote. C. S. N. Hallberg, chairman of the delegates to the section on materia medica, therapeutics and pharmacy of the American Medical Association, read his report. This included the resolutions passed and subsequently presented to the house of delegates, the governing body of the A. M. A. as follows:

On Dosage of Liquid Medicines.

Resolved, That teachers of medicine and pharmacy, editors of medical and pharmaceutical journals and authors of text books are respectfully requested to give precedence to the metric method in the writing of all medical formulas and that for the administration of doses of less than a teaspoonful the quantity be stated in drops delivered from a standard medicine-dropper or pipette, of three millimeters external diameter, which will deliver twenty drops of water at 15 degrees C., which will measure one cubic centimeter when dropped at the rate of one per second; and that the teaspoonful be considered as equivalent to five cubic centimeters and that the tablespoonful be considered as equivalent to fifteen cubic centimeters, and.

Resolved, That the orthography, abbreviations, etc., of the international bureau, or as revised by the National Bureau of Standards at Washington shall also be recommended for adoption in medical and pharmaceutical publications; and.

Resolved, That a copy of these resolutions be transmitted to the committee of revision of the United States Pharmacopoeia for 1900, with the request that they be incorporated as far as possible in the United States Pharmacopoeia.

The report also included a list of the papers read before the section, with special reference to the paper read by Dr. William J. Robinson on "The Composition of Some of the So-Called New Synthetics." The report took the usual course.

Then came one of the most important subjects considered by the association—the report of the joint investigating committee on a proposed National Bureau of Medicines and Foods, read by the chairman, Dr. H.

Some of those in Attendance at the Mackinac Island Meeting of the A. Ph. A.

H. Rusby, who asked that the following resolutions be adopted:

Whereas, The foods and medicines supplied in the United States do not so uniformly agree with proper standards of purity, quality and strength as they should, and

Whereas, A degree of distrust and want of confidence concerning the quality of such foods and medicines prevails to a discouraging extent, therefore it is

Resolved, That a more perfectly organized system of remedying the above mentioned condition than that now existing should be devised and put into operation, and

Resolved, That the A. Ph. A. and A. M. A., acting in harmony with the U. S. Government authorities, constitutes the most important and trustworthy means of obtaining the object named, and

Resolved, That the A. Ph. A. shall co-operate to this and with the above mentioned institutions, provided, that a plan be devised satisfactory to these institutions, and that the committee of this association be continued and instructed to report to the council in the event that a plan satisfactory to the council of the association be reported to them previous to the next meeting of this association. Said council shall be authorized to elect from the members of the A. Ph. A. a board of directors consisting of five members to act with a similar board in the event of the appointment of the A. M. A. and with the U. S. Government authorities in the establishment of a National Bureau of Medicines and Foods, and the council shall immediately upon the election of such board, report the same to the president of the A. M. A.

Resolved, That in carrying out these resolutions the following general principles shall be adhered to:

(1) That neither this committee, nor the proposed board of directors, shall have authority to draw upon any funds of the A. Ph. A.

(2) That the methods employed of obtaining the object stated above may include a combination of worthy ones as both may devise, provided that said methods of condemnation do not in any way involve the A. Ph. A. in legal responsibility.

(3) That nothing to be undertaken by such bureau shall be in conflict with the spirit of the U. S. P. or with the U. S. Government authorities.

(4) That the operation of the proposed board shall be free of any attempt to secure financial profit from

any of the institutions named herein or for any of their members or agents, but said bureau is authorized to employ proper means for securing the funds necessary to defray its legitimate expenses.

Ringing speeches in support of the resolutions were made by Dr. Rusby and Dr. Philip N. Jones, who reviewed the legal questions involved and maintained that the questions of practicability and financial responsibility were settled. Various motions to dispose of the resolutions were offered and withdrawn and finally the whole matter was referred to the council for action.

Caswell A. Mayo, chairman of the delegates to the N. W. D. A., and of the committee to communicate with the Carnegie Institute at Washington, D. C., read his reports. The Carnegie Institute stated that at the present time it did not find it expedient to establish an advisory committee on pharmaceutical research. Kansas City as the place of next meeting was reported by the committee and all reports were adopted.

F. G. Ryan, chairman of the special committee on weights and measures, reported that the bill providing for the adoption of the metric system in all departments of the Government was withdrawn from the House of Representatives when it became apparent that it could not pass the last session of congress. It is proposed to again introduce it in both Houses of Congress next December. He said the most active opposition to the bill comes from mechanical engineers because of changes which would be made necessary in standard tools, screw threads, etc.

Prof. L. E. Sayre then introduced the following resolution:

Resolved, That it is the sense of the A. Ph. A. that a standard for determining the strength of anti-diphtheritic serum be provided for this country.

That the A. Ph. A., respectfully requests the Public Health and Marine Hospital Service to establish and maintain such a standard for the use of investigators, manufacturers and individuals who may have need for such.

Some discussion by Prof. Sayre and others followed but no opposition was made to the resolution and it was passed by a unanimous vote. Adjourned.

COMMERCIAL SECTION.

Tuesday P. M., August 4.

Thos. V. Wooten of Chicago, chairman of the section, presented a strong address discussing in extenso the many evils besetting the drug trade. The greatest hindrance to the success of retail pharmacy, he thought, was the excessive number of stores, approximately 28,730, or 1 to every 1967 of population. The address was referred to the publication committee.

Mr. Wooten presented the following resolutions which were taken up seriatim, discussed and finally adopted:

Resolved, That the commercial section recommends to the association the adoption of the following resolutions:

Resolved, It is the sense of this association that retail pharmacists shall advance their individual interests and the interests of pharmacists as a whole by making the working hours of clerks as few as possible consistent with the proper conduct of their respective stores, also by providing clerks with healthful sleeping quarters and by liberality in the matter of compensation, the end sought being to bring into the profession of pharmacy a greater number of capable and ambitious young men who will otherwise be deterred from entering it.

Resolved, That it is the sense of this association that the several schools of pharmacy ought to include in their curricula a course of commercial training comprehensive enough to insure that the student is fully capable of properly managing a retail drug business, being prerequisite to graduation.

Resolved, That it is the sense of this association that retail pharmacists will greatly increase their prospects of success as business and professional men by inaugurating occasional conferences between their respective local organizations (of which there ought to be one in every community) and the physicians of their localities, in which conferences there are brought up for discussion the relation between the physician and the pharmacist and of both to the public, it being confidently believed that such conference will benefit all concerned.

Resolved, That it is the sense of the A. Ph. A. that price cutting on proprietaries and other goods, inaugurated and carried on for the specific purpose of gaining an advantage over one's fellow pharmacist, is wrong in principle and subversive of the association's effort to foster which this organization was formed.

Resolved, That the organization deprecates the feeling said to exist in some quarters that the A. Ph. A. is not in as hearty accord as it should be with the efforts which the retail pharmacists of the country are putting forth to improve their financial status.

Resolved, That the association heartily commends all such endeavors and cordially urges upon pharmacists the desirability of identifying themselves closely with their local and State associations, the N. A. R. D. and the A. Ph. A., the commercial section, of which devotes itself exclusively to subjects of vital interests to those engaged in conducting retail drug stores.

Prof. Sayre thought it was a mistake to ask colleges of pharmacy to give training such as is given by business colleges. He thought that ten weeks' instruction of two hours a week was about all any college could well give. Leo Elbel said that a business man was born, not made, and he thought colleges of pharmacy should require of students an entrance examination equivalent to that required for high school graduation before beginning the methods followed by the Philadelphia O. P. in commercial instruction, and lay down the proposition that any college has the ability to instruct in any line that will make the student a successful pharmacist. Mr. Caspari told of the work in the Maryland C. P., under the instruction of Prof. Francis. Laboratory methods were employed and the laboratory called for six hours a week. Commercial prices were used in buying and selling goods and for the

limited time the course was in operation it had been extremely successful.

Mr. Ebert thought the old-fashioned method of educating the apprentice was the only true one. The clerk brought under this instruction was not up in the tricks of cutting in this commercial age. Mr. Hopp agreed with Mr. Ebert and W. L. Dewoody did not believe in kindergarten methods in commercial training. Mr. Baggett of New York, said "things have changed since Hannah died," and some business training was absolutely necessary. Messrs. Loehr, Bartells, Hallberg and others joined in the discussion which reminded one of the debates on the old question of "experience before and after graduation."

A number of papers were read. A paper by B. M. Overton, "Bottling Whiskey in Bond," and a similar one by W. J. Taylor, were read by title and referred to the publication committee with instructions to investigate. With the election of the following officers the commercial section stood adjourned; W. L. Dewoody, Pine Bluff, Ark., chairman; Robert C. Reilly, St. Louis, secretary; associates—C. R. Sherman, Omaha, Chas. R. Roth, Canton, O., E. M. Boring, Philadelphia.

SCIENTIFIC SECTION.

First Session, Wednesday A. M., August 5.

The section was called to order by the chairman, J. O. Schlotterbeck of Ann Arbor, Mich., who, after the appointment of Edward Kremers as secretary, proceeded to read his address. This was an able paper and related to the investigations upon the mydrinate alkaloids, atropine and hyoscyamine, which have been recently completed.

Julius A. Koch, Pittsburg, chairman of the committee on the Ebert prize, presented a report which stated that the prize provided for by the Ebert fund had been awarded to Dr. Frederick B. Power for his paper presented at the Philadelphia meeting on the "Chemistry of the Stem of *Derris ligiosa*."

In the absence of Prof. E. L. Patch of Boston, E. H. Gane read the report of the committee on drug adulterations. This report was the cause of much discussion which later developed. It contained the following resolutions which the association adopted:

Resolved, That it is the sense of the A. Ph. A. that great good would be accomplished if the secretary of the treasury would confer with the secretary of agriculture for the purpose of making suitable arrangements with all of the U. S. port chemists to place at the disposal of the bureau of chemistry all those analytical methods bearing on drugs and chemicals and the data they obtain in the examination of imported goods from time to time.

Resolved, That the interests of medicine and pharmacy would be advanced by the appointment under the direction of the Association of Official Agricultural Chemists of a referee on medicinal plants and chemicals.

Reference was also made in the report to the substitutes for cod liver oil, now being freely offered in the New York market. The basis of these substitutes is a specially refined seal oil, and in some instances pure seal oil is offered for "mixing" with Norwegian oil.

The report was accompanied by a number of spurious or largely adulterated samples of aristol, trional, phenacetine, etc., referred to in an address by Prof. Virgil Colden as chairman of the New York section of the Society of Chemical Industry, and presented by him to the committee, which suggested that the association forward them to the drug laboratory at Washington to form the nucleus of a permanent collection for future reference.

Such a resolution passed but was rescinded at a later session when it developed that one

of the sample packages bore the label of Geo. M. Beringer, Camden, N. J., chairman of the committee on practical pharmacy and dispensing. Mr. Beringer in a stirring speech later on asked the association to have the alleged adulterated sample analyzed by three expert, disinterested chemists and he would stand the expense for such analysis. The samples were given into the custody of General Secretary Caspari. In the absence of R. G. Eccles the report of the committee on the revision of the U. S. Pharmacopoeia was read by C. M. Reilly of Alton, Ill. This report stated that the work of the revision committee was progressing and that the new Pharmacopoeia would contain a number of titles absent from the present edition and will probably appear early in 1904. The report was accepted.

After some discussion on the standards used in this country for determining the strength of antitoxin serums by E. M. Houghton, A. B. Lyons, C. S. N. Hallberg and others, the section proceeded to nominate officers for the ensuing year. Papers were read by Dr. H. H. Rusby on "Jaborandi," illustrated by specimens of official and non-official varieties; Rodney H. True, "East Tennessee Pink Root;" Geo. M. Beringer, "Tests for Phenacetin and Acetanilid." Of 182 samples of phenacetin examined by Mr. Beringer, acetanilid in small quantities was found as the chief adulterant or impurity. One sample was a mixture of acetanilid and sodium bicarbonate and another sample hailing from Baltimore was found to be pure boric acid. L. F. Kebler presented an abstract of a paper he had prepared on acetanilid and the whole subject of the patents on synthetic products was discussed by Messrs. Kebler, Lowe, Noll, Beringer, Good, Hallberg and Todd. The patent on phenacetin expires in March, 1906.

Second Session, Thursday Evening, August 5.

At the first session of this section Joseph W. England, W. A. Puckner and M. I. Wilbert were placed in nomination for the office of chairman. Both Messrs. Puckner and Wilbert had declined the nomination but friends of Mr. Puckner would not accept his offer and he was again renominated by Dr. Ed. Kremers, Prof. C. B. Lowe speaking in favor of Mr. England. William Hauenstein and J. W. T. Knox were appointed tellers and the election was ordered. Of the 74 votes cast Mr. Puckner received 43. Mr. England 29, and Mr. Wilbert 2. E. H. Gane of New York, was elected secretary of the section.

The report of the committee on chairman's address was scarcely read before Geo. M. Beringer moved that the motion adopting that part of the report of the committee on adulterations referring to thymol iodide, aristol, etc., be reconsidered, and that the samples accompanying the same be referred to a committee of experts for investigation and analysis. Carried.

A long and spirited discussion followed the consideration of this resolution over what should be the character of the work reported by the committee on drug adulteration. Mr. Beringer thought the results worked out by members only should be reported. Prof. Remington said members of the committee should be very careful about the subject of adulteration. One act of injustice will do much injury to the association. The members want facts only; they do not want to injure anyone. The association is a responsible body and can be sued, therefore care is extremely necessary.

Dr. A. B. Lyons and William C. Alpers spoke on the resolution. C. S. N. Hallberg outlining the plan for collecting samples in Germany and Mr. D'Avignon explaining the methods employed in Canada.

The chairman announced that forty papers had been

received, the greater number of which are named below:

Dr. A. B. Lyons, "Physiological Assay of Cannabis Indica" and "An Improved General Method for the Assay of Alkaloidal Drugs;" L. E. Sayre, "Greater Accuracy in the Description of Crude Drugs;" W. A. Puckner, "Nux Vomica Assay;" L. A. Johnston, "Iron Peptonate;" Geo. M. Beringer, "Tests for Phenacetin and Acetanilid;" M. I. Wilbert, "A New Metric Glass;" Otto Raubenheimer, "Uses for Carbon Tetrachloride and Tests for Its Impurities;" J. W. Baird and Flora E. Sleeper, "Chemical and Physical Constants of Oil of Datura Stramonium;" E. H. Gane, "The Benzoin of the Pharmacopoeia;" J. M. Gordin, "On the Crystalline Substances of Prickly Ash Bark;" C. W. Johnston, "The Action of Oxidizing Agents, Particularly Potassium Permanganate and Iodic Acid upon Turpentine;" L. D. Haigh, "Mixtures of Ethyl and Methyl Alcohol;" R. S. Denniston, "Structure of the Stem, Root and Leaves of Escholtzia (California)"; M. I. Wilbert, "Personal Name Synonyms in the U. S. P.," J. H. P. Remington, "Acetic Acid Fluid Extracts;" J. O. Schlotterbeck, "Microchemical Differences of Atropine and Hyoscyamine and "Chemistry of Chelidonium"; Raymond H. Pond, "Measurements of Meshes of Wire Sieves"; Rodney H. True, "East Tennessee Pink Root"; E. G. Eberle, "Mesquite and Mint, Their Early History and Modern Commercial Developments"; L. F. Kebler, "Geranium Oil and Its Substitutes"; C. S. N. Hallberg, "A Lost Art—Plasters;" Edward Kremers, "Glycerophosphates" and "Heavy Oil of Wine"; H. L. Johnston, Resin of Podophyllum or Podophyllin"; Geo. M. Beringer, "An Examination of Commercial Phenacetin."

SECTION ON PRACTICAL PHARMACY AND DISPENSING.

First Session, Thursday A. M., August 6.

The chairman of the section, George M. Beringer, after a few introductory remarks called Dr. C. B. Lowe of Philadelphia, to chair, and proceeded to read his address, entitled: "The Cry of Substitution." Want of space prohibits the publication of Mr. Beringer's paper which referred to the attacks on the drug trade by journals looking for sensational features, cartoons, etc.; particularly the unfortunate publication by the New York board of health of a report of its examination of phenacetin sold in the metropolis. Incorporated in the address was a summary of the examination of samples of phenacetin purchased by Mr. Beringer at various places throughout the country, which showed that of the 182 samples collected 148 were pure, 27 were grossly adulterated and 7 only slightly contaminated. An unusual amount of sophisticated phenacetin is now on the market and druggists should be on their guard. The owners of the American patent on phenacetin were held to be primarily responsible for the present condition of affairs in that they have taken advantage of a construction of our patent laws that could never have been intended by the enactors, viz: charging \$1 an ounce for an article they are supplying to the druggists of other countries at 25 cents an ounce.

At the close of the address Robert R. Lampa of New York, lead off with a speech in which he stated that much of the distrust against the pharmacist was due to the medical profession wanting the dollar which belongs to the pharmacist, and it was time to call a halt.

Messrs. Hupp, Holzbauer and Eliel were appointed a committee to award the Dr. Enno Sander prize.

A paper by Otto Raubenheimer on "Permanent Syr

J. W. T. KNOX, Detroit, Mich.

Retiring Chairman, Section Education and Legislation.

up of Hydriodic Acid" was read and sharply criticized by various members. The question was asked: "Is it proper to call a preparation 'syrup of hydriodic acid' which contains no sugar whatever, being made with glycerin"? The chairman answered in the negative and said it should be called a "glycerole." Various phases of the manufacture of the official syrup were discussed by Messrs. Ebert and Koch, the latter stating that the darkening of the syrup is largely due to the caramelization of the sugar.

Mr. Ebert exhibited an almond grater made in Germany and showed how it might be used to granulate opium. He also exhibited a sample of the eucathone resin of opium which had been removed with purified benzoin. He called attention to the acetic acid extracts of opium which he said were the ideal preparations, whose characteristics were known in the days of Homer and Paracelsus, and exhibited at a later date in the old "Lancaster drop."

M. I. Wilbert exhibited a circulatory apparatus for making solutions of iodine and Frank E. Fisk read a paper on "Circulatory Displacement as a Pharmaceutical Process." Nominations were next in order, and the section adjourned to meet as scheduled in the afternoon.

Second Session, Thursday P. M., August 6.

C. Lewis Diehl, chairman of the special committee on National Formulary, read his report in which it was stated that the work was closely connected with the U. S. Pharmacopoeia and at the present rate of progress the N. F. would be completed simultaneously with the U. S. P. Decision on some of the formulas would have to be withheld until the committee found out what action the revision committee of the U. S. P. took on the same or similar formulas. Prof. Diehl read the reports of the subcommittee on additions to the N. F., which included formulas for powders, capsules, lozenges, pills, coating pills, granules, etc. The new formulas practically agreed upon include a disinfecting solution, super-saturated acid, alkaline antiseptic solution, germicide, soothing ointment, comp. syrup of phosphates with opium and strychnine, magnesium magma, solution of phosphate of iron and manganese, elixir of

terpin hydrate and its combinations, syrup of bromides, etc.

The report on correction of formulas by Prof. A. B. Stevens was read by Prof. Diehl and gave a list of the formulas which needed slight corrections, as the formulas for chloral camphor, adjuvant elixir, etc.

L. C. Hopp criticized the present formula for elixir of iron, quinine and strychnine, and said it was too strong in quinine. A discussion of the manufacture of soluble hypodermic tablets brought out the information that an organic acid and sodium bicarbonate were employed. Pure cane sugar was also stated to be all that was necessary as a basis for these tablets.

Among the papers presented were: "Should Methyl Alcohol be Recognized by the U. S. P., or Is Its Use Allowable in Any Medicinal Preparations," by H. B. Dunning; "Some Incompatibilities of New Remedies," E. A. Ruddiman; "Carbon Tetrachloride and Safety Benzine," Otto Raubenheimer; "Weights," William Mittelbach; "Pharmaceutical Fragments," W. W. Kerr; "Dispensing Hints," L. C. Hopp.

The officers elected for the ensuing year were duly installed as follows: Chairman, W. H. Burke, Detroit; secretary, E. A. Ruddiman, Nashville; associates, F. T. Gordon, U. S. N., Washington, D. C.; William Mittelbach, Booneville, Mo., and D. F. Jones, Watertown, S. D. Adjourned.

SECTION ON PHARMACEUTICAL EDUCATION AND LEGISLATION.

First Session, Friday A. M., August 7.

Chairman, J. W. T. Knox called J. M. Good to the chair and proceeded to read his address. He thought fewer pharmacy schools and better ones were needed, and fewer schools would mean better ones because of concentration of students, income and teaching ability. Entrance examinations should be required for admission to colleges of pharmacy and probably the high school requirement is not far off. Reciprocal registration was a necessity and he saw no reason why it should not be reached by voluntary arrangement. The adulteration and substitution crusade of New York was mentioned and pharmacists should assist to make laws where existing laws are inadequate. Druggists should have a hand in any legislation affecting the trade rather than leave it to their enemies.

The address was referred to the publication committee, and the secretary of the section, H. B. Mason, read his report which contained these interesting statistics:

There are now about 92,150 registered pharmacists in the United States, and 8,799 assistant pharmacists. During the year 4,262 persons were granted certificates of registration as pharmacists; of these 3,171, or 74 per cent., passed the examination, in 522 cases, or 12 per cent., graduation in pharmacy was accepted in lieu of the examination; in 99 cases, or 2.3 per cent., graduation in medicine was singularly accepted; and interchange of board certificates accounts for nearly all of the remaining 470 cases. Concerning assistant pharmacists, 1,134 were registered by examination and 70 without examination, during the year. So far as the statistics go, they indicate the presence of only 722 women among the army of nearly one hundred thousand registered pharmacists in the country.

Mr. Mason also presented a review of the legislative year of 1902-3. No fewer than ninety-eight bills were introduced in the various States, and territorial legislatures, nineteen of which found a place upon the statute books. As a whole the legislation registered a distinct advance in the enactment of a number of laws of real importance and necessity, and the year has altogether been one of progress.

The report of the committee on patents and trademarks, F. E. Stewart, chairman, was read by title and Chairman E. G. Eberle presented in abstract a report of the committee on acquirement of drug habits. It was shown that the sale of narcotics is not restricted to any section of the country nor confined exclusively to the fallen and lower class. This report provoked an interesting discussion and the section passed a resolution asking the association for reprints for general distribution.

The draft of a model law "to provide against the evils resulting from the traffic in certain narcotics and to regulate the sale thereof," was presented by Prof. J. H. Beal and, after discussion, was adopted substantially as first submitted. Following is the text of the proposed bill:

Model Cocaine Law.

Be it enacted by the General Assembly of the State of

Section 1. That it shall be unlawful for any person, firm or corporation to sell, furnish or give away any cocaine, salts of cocaine or preparations containing any cocaine, salts of cocaine or morphine, salts of morphine or preparation containing morphine or salts of morphine, or any opium or preparation containing opium, or any chloral hydrate or preparation containing chloral hydrate, except upon the original written order or prescription of a lawfully authorized practitioner of medicine, dentistry or veterinary medicine, which order or prescription shall be dated and shall contain the name of the person for whom prescribed, or, if ordered by a practitioner of veterinary medicine, shall state the kind of animal for which ordered and shall be signed by the person giving the order or prescription. Such written order or prescription shall be permanently retained on file by the person, firm or corporation who shall compound or dispense the article ordered or prescribed, and it shall not be re-compounded or dispensed a second time except upon the written order of the original prescriber.

Provided, however, that the above provisions shall not apply to preparations containing not more than 2 grains of opium or not more than $\frac{1}{4}$ grain of morphine, or not more than 2 grains of chloral hydrate or not more than 1-16 grain of cocaine in the fluid ounce or if a solid preparation, one avoirdupois ounce. Provided also that the above provisions shall not apply to preparations received in good faith for diarrhoea and cholera, each bottle or package of which is accompanied by specific directions for use, and a caution against habitual use, nor to liniments or ointments when plainly labeled "for external use only." And provided further that the above provisions shall not apply to sales at wholesale by jobbers, wholesalers and manufacturers to retail druggists, nor to sales at retail by retail druggists to regular practitioners of medicine, dentistry or veterinary medicine, nor to sales made of proprietary or pharmaceutical preparations for the use in manufacture of such preparations, nor to sales to hospitals, colleges, scientific and public institutions.

Section 2. It shall be unlawful for any practitioner of medicine, dentistry or veterinary medicine to furnish to or prescribe for the use of any habitual user of the same, any cocaine or morphine, or any salt or compound of cocaine or morphine, or any preparation containing cocaine or morphine or their salts, or any opium or chloral hydrate, or any preparation containing opium or chloral hydrate.

And it shall also be unlawful for any practitioner of dentistry to prescribe any of the before-mentioned substances for any person not under his treatment in the regular line of his profession, or for any practitioner of veterinary medicine to prescribe any of the before-mentioned substances for the use of any human being.

Provided, however, that the provisions of this section shall not be construed to prevent any lawful authorized practitioner of medicine from prescribing in good faith, for the use of any habitual user of narcotic drugs, such substances as he may deem necessary for the treatment of such habit.

Section 3. Any person who shall knowingly violate any of the provisions of this act shall be deemed guilty of a misdemeanor, and, upon conviction for the first offense, shall be fined not less than \$25, nor more than \$50, and upon conviction for the second offense shall be fined not less than \$50 nor more than \$100, and upon third and all subsequent offenses shall be fined not less than \$100 nor more than \$200, and shall be imprisoned

in the county jail for not more than 6 months. It shall be the duty of the Grand Jury to make presentments for violation of this act.

Section 4. This act shall take effect, and be in force from and after the ___ day of ___ 19__.

The nomination of officers was the next order of business and the section adjourned.

Second Session, Friday Evening, Aug. 7.

The nominations made at the previous session were ratified and the following officers were elected for the ensuing year: Chairman, Harry B. Mason, Detroit; secretary, W. L. Cliffe, Philadelphia; associates, E. J. Kennedy, New York; D. F. Jones, Watertown, S. D., and F. T. Gordon, U. S. N., Washington. Prof. J. H. Beal, chairman of the committee, presented the draft of the model poison law which had been referred to a sub-committee of which he was chairman. This was taken up clause by clause, slightly amended and provisionally adopted as given above. Copies of the draft were ordered to be sent to pharmaceutical journals for editorial criticism and also to the large dailies. The criticisms will be compiled and presented at the meeting next year.

Geo. Reimann of Buffalo, Geo. H. Voss of Cleveland, D. R. Jones of Watertown, S. D., and Fletcher Howard of Des Moines, Ia., and one other were appointed a committee to arrange a conference of members of boards of pharmacy to be held in Kansas City in 1904. A number of attempts of this kind have been made but none of them have proved successful.

C. S. N. Hallberg read a paper on "High Class Druggists and Others," which provoked much discussion, especially the reference it contained relative to certain well-known proprietaries. These were called to the attention of the editor of the proceedings and Mr. Hallberg graciously gave his permission to print the paper with the specific names of the proprietaries omitted.

F. T. Gordon followed with a timely paper on "Suggestions for Increasing the Members and Influence of the A. Ph. A." Other papers presented were R. B. Gabie, "From Strength to Strength"; L. E. Sayre, "Plant Analysis as a Part of a Pharmacy Course"; H. M. Whelpley, "Conference of Board of Pharmacy Members"; W. D. Bigelow, "Drug Legislation"; Gustav Wolt, "Necessity of Legislation Concerning Sale of Narcotics," and "Reciprocity in Pharmaceutical Registration"; W. A. Dawson, "A Step Toward Interstate Registration"; Jos. Feil, "Union Examinations"; W. R. Ozier, "Making a Profession by Law"; John F. Patton, "Practical Education"; A. E. Ebert, "Lines on Which Pharmacy Laws Should be Drafted"; M. I. Wilbert, "Problem of Proprietary and Trade Names"; A. J. Eckstein, "Pharmaceutical Education and Legislation." Adjourned.

LAST GENERAL SESSION.

Saturday A. M., August 8.

Minutes of the preceding general session were adopted and also the minutes of the various sessions of the council. These contained among other things a resolution to make the salary of the official stenographer \$200 a

ANY BABIES IN YOUR NEIGHBORHOOD?

A word from you to parents and you can sell an

WILMOT CASTLE COMPANY,
26 Elm Street, Rochester, N. Y.

year, to print the picture of the late Geo. W. Kennedy in the next volume of proceedings, to amend the by-laws so that hereafter the council may elect members to the association.

The council took no action on the plan of the proposed bureau of foods and medicines, although it adopted the preliminary resolution that some trustworthy means of establishing reliable standards was desirable. September 5, 1903, was ratified as the date of the next meeting to be held in Kansas City, and J. G. Worthman was announced as the local secretary and chairman of the committee of arrangements. His name will be printed in the proceedings with the other officers.

Geo. F. Payne reported on the status of pharmacists in the public service and resolutions of thanks were ordered sent to Surgeons-General Hixey of the Navy and Wynman of the Marine Hospital service and Chief Chemist H. W. Wiley of the Department of Agriculture for officially recognizing the association by detailing delegates to attend its annual meeting.

C. S. N. Hallberg exhibited copies of the new Epitome of the National Formulary compiled by C. Lewis Diehl, and John F. Hancock presented a letter, read by the secretary, relating to the Wm. Procter memorial. The plans recommended were referred to the council for action.

The announcement made by Secretary Whelpley that 190 names had been added to the roll as new members was received with applause.

The report of the nominating committee was confirmed by the election of these officers:

President, Lewis C. Hupp, Cleveland, O.; vice-presidents—Wm. C. Alpers, New York City, A. M. Bohrig, U. S. Public Health and Marine Hospital Service, Staten Island, N. Y., and Otto F. Claus, St. Louis; treasurer, S. A. D. Sheppard, Boston; secretary, Chas. Caspari, Jr., Baltimore; reporter on progress of pharmacy, C. Lewis Diehl, Louisville; members of the council for three years—Geo. F. Payne, Atlanta, Ga.; Leo. Ebel, South Bend, Ind., and E. G. Eberle, Dallas, Texas.

Local secretary F. W. R. Perry of Detroit, was made the recipient of a special vote of thanks for the able manner in which he directed the local affairs of the association during the meeting. It was stated by one of the officers that "this was the first time the association ever paid for all of the entertainment features of any meeting and had something left to its credit."

THE HISTORICAL COMMITTEE.

Space will not permit to give in detail the proceedings of the historical committee's first meeting on Tuesday evening. The chairman, Dr. Edward Kremers, in an able address outlined the scope of the committee's work, which might well embrace sketches of local organizations, colleges, old stores, collection of drugs, etc.

Papers presented were—A. E. Ebert, "Historical Sketch of the Chicago College of Pharmacy" illustrated by photographs; Dr. A. B. Prescott, "Silas H. Douglass—Professor of Chemistry and Pharmacy in Michigan"; M. I. Wilbert, "Daniel B. Smith, First President of the A. P. A."; Wm. C. Alpers, "Justus Von Liebig"; H. B. Moore, "The First Drug Store in Detroit"; H. M. Whelpley, "George Dugestion and William Beaumont." The paper was of interest as it referred to the treatment of the wound of the abdomen in the famous case of Alexis St. Martin by Dr. Beaumont, who lived on the Island of Medicine.

CONFERENCE OF FACULTIES.

The American Conference of Teaching Faculties held two sessions. A general invitation was extended to members of boards of pharmacy to organize a similar conference to meet annually during the meeting of the A. P. A. and also to arrange for joint sessions with the conference of faculties. The officers elected are Prof. H. H. Rusby, New York C. P., president; Geo. B. Kauffman, Ohio University, vice-president; Willbur L. Scoville, Massachusetts C. P., secretary-treasurer, executive committees—H. M. Whelpley, St. Louis C. P. (chairman), Chas. Caspari, Jr., Maryland C. P.; J. O. Schlotterbeck, Michigan University, W. A. Puckner, Chicago C. P., and E. A. Ruddiman, Vanderbilt University.

MICHIGAN UNIVERSITY ALUMNI.

The Michigan "boys," about twenty strong, held a reunion and dined together on Wednesday night. Dr. A. B. Prescott, Prof. A. B. Stevens and other prominent alumni were not present to enliven the exercises, their absence causing much regret. Those signing the roster were A. B. Lyons, '68, Detroit; Jos. F. Gosler, '80, New York; J. W. R. Perry, '80, Detroit; C. W. Parsons, '81, New York; E. J. Kennedy, '82, New York; J. W. Baird, '83, Boston; Wm. Hansenstein, '83, New York; W. H. Burke, '84, Detroit; E. A. Ruddiman, '86, Nashville; J. O. Schlotterbeck, '87, Ann Arbor; W. C. Kirchbussner, '89, Grand Rapids; Lyman F. Kehler, '90, Washington; E. M. Houghton, '93, Detroit; James Seymour, '94, Norman, Okla.; Willbur J. Teeters, '95, Iowa City, Ia.; J. W. T. Knox, '95, Detroit; L. E. Sayre, '97, Lawrence, Kans.; Philip Kephart, '99, Berrien Springs, Mich.

DR. LOUIS D. KASTENBINE, one of the foremost chemists and educators in the South, died at Louisville, Ky., aged 64. He was born in Louisville. While at high school he was particularly fond of chemistry. He studied medicine at the University of Louisiana and enlisted in the Federal army as a medical cadet. After the war he occupied chairs in the Kentucky School of Medicine, the Louisville College of Pharmacy and the Louisville College of Medicine. He was called on almost all important questions of analysis in the South. He was an examiner of drugs for the Government at Louisville. He leaves a wife and one daughter.

JOHN FREDERICK HUNTER, a well-known drug clerk and former member of the board of health of Syracuse, N. Y., died on August 2. Mr. Hunter had been for twenty-one years clerk for C. W. Snow & Co. and for the last three years at Bibben's store in the West End. He was 47 years old. A widow survives and one son and one daughter.

WILLIAM F. BAKER, aged 37, a well-known Detroit druggist, died at Harper Hospital from the result of a bone growth on the inner section of the skull and next to the brain. He had been employed at Doty Bros. store, Clifford and Sibley streets, Detroit, for a number of years and was exceedingly popular. He is survived by a widow.

WILLIAM KENNY, employed by Halsey Bras., homeopathic pharmacists and wholesale druggists at 44 Kinzie street, Chicago, was killed on August 3, by becoming entangled in the electric wires in the basement of the store. Kenny was twenty years old and the only support of a widowed mother.

NEWS DEPARTMENT.

NEW YORK AND VICINITY.

GREAT INTEREST.

The Proposed Druggists' Lloyd Insurance Company Finds Many Friends—What Other Companies Are Doing—New Lloyd Forming in Illinois.

Great interest is being shown by the retail druggists of the United States in the proposed new cooperative fire insurance company planned by a special committee of the German Apothecaries' Society of this city and published exclusively in the Era on July 23. The plan is hailed as a means of relief from an unhappy condition—the exorbitant rates of the existing big companies—and the Era is in receipt of many communications enthusiastically favorable to the Lloyd charter idea.

In the several opinions offered and sought by the Era this week not one was doubtful. The comprehensive knowledge of their ground shown by Ernst Roller, chairman, and his fellow-committeemen in charge of the plan was praised. Instances of scores of successful Lloyd companies were cited. The saving of at least one-half of the average premium now paid is an argument that cannot fail to reach attention. The promise of an increase in fraternal feeling between druggists themselves and druggists and physicians is another inducement. The strength and worth of the good old German Apothecaries' Society also claims instant respectful consideration of any plan they may be discussing.

Briefly, for the benefit of those who may not have read the earlier article, the plans comprise:

The purchase of a Lloyd charter, its underwriting by members of the G. A. S.—more than 100 have already advanced—or by members of the various city societies; each underwriter to be liable to the extent of \$25 to a fraction of any loss; the limiting of policies to \$5,000, or possibly \$6,000, on store and goods; the securing of the endorsement of the plan by this and other State associations and the extension of the privileges to all parts of the country and to physicians. Rates will be first fixed at 50 cents, and afterward, if possible, at 40, or lower. The average losses in 241 stores in this city for 13½ years on an average policy of \$5,600 is \$23; average premium paid, \$523. But the rates during those years were lower and now the average premium on a \$5,600 policy for 13½ years would be \$756, while the risk is no greater.

The company will be governed by a board of finance, the secretary of which will likely be a lawyer who will have charge of details.

There are two eminently successful druggists' mutual fire insurance companies in existence now. Of the Druggists' Mutual Fire Insurance Co. of South Dakota, Secretary I. A. Keith of Lake Preston, who is a pharmacist, writes to the Era:

"In compliance with your request I enclose herewith our last annual statement and a copy of our articles of incorporation and by-laws. On the back of the enclosed card, you will note statistical information regarding our company. The management of this company congratulate themselves upon the success which has

been met. We have conducted a conservative and careful business and saved to our policy holders \$32,634.52.

"The success of mutual insurance, in my opinion, depends upon judicial and economical management; when this is accomplished and the people have confidence in the honesty and integrity of the management of a mutual concern there can be no doubt of success."

At the time of its last report this company showed:

Net insurance in force on 707 policies, \$593,930; expense ratio to premiums, 14.1 per cent; loss ratio to premiums, 37.8 per cent; net surplus, \$14,267.65. The summary of results since the date of organization, October 24, 1895, showed: Whole number of policies issued, including renewals, 2,965; amount of premiums at full premium rates, \$65,931.19. Expenses for entire period of 6½ years, \$12,270.26. Fire losses for period, \$21,026.41. Total, \$33,296.67. Net saving to members (or premiums refunded), \$32,634.52. Cost of carrying risks for the entire period, 50½ per cent. Expense ratio to premiums, 18.6 per cent. Loss ratio to premiums, 31.9 per cent. Number of fire losses, 58; average fire loss, \$362.52; highest losses, S. C. Lacy & Son, Aberdeen, \$1,500, and R. R. Jones, Britton, same amount. These were total losses, and the highest insurance carried is \$1,500.

The company was organized through the efforts of the trade interests committee of the State Ph. A. to overcome extortionate rates. The results attained during the first year's existence were so satisfactory that merchants in other lines began to apply for insurance and it was decided to enlarge the field of operation by accepting good risks on all classes of merchandise and business buildings. Were pharmacies the only class insured the average losses would be lower, as most of the larger losses are not on drug stores. The officers are selected from the policy holders, and the object is "protection, not speculation."

The officers are: President, James Lewis, Canton, salary, \$300; secretary, I. A. Keith, salary, \$900; treasurer, H. C. Bockoven, Clark, salary, \$150; vice-president, J. M. Cotton, Tyndall; directors—F. G. Stickle, Mollette; H. C. Bockoven, Clark; W. J. Hull, Alexandria; R. M. Cotton, Tyndall; James Lewis, Canton; I. A. Keith, Lake Preston; L. H. Lohr, Estelline; E. C. Bent, Dell Rapids; F. D. Bailie, Webster.

Secretary John Weyer, Cincinnati, of the Retail Druggists' Mutual Fire Insurance Co., of Ohio, sends his annual report, read before the State Ph. A. in June. It said:

"Because of the general advance of rates ordered all over the Central and Western States, upon mercantile and factory risks, a considerable number of druggists voluntarily decided to forego the profits from the trade of their local insurance agents or solicitors, and

PROTAN is a definite chemical product, formed by the synthesis of tannic acid with nucleo-proteid. It is entirely insoluble in the stomach and its astringent properties are not obtained until it reaches the intestines, where the diarrhea exists. It is the only astringent known that can be given to children and bottle-fed infants without impairing digestion or interfering with the digestive functions of the stomach. We have special inducements to offer for introducing it to your physicians. Write for particulars, giving us a correct mailing list of your physicians.

H. K. MULFORD COMPANY,

Philadelphia.

place insurance in this company. Many of these had been visited by us and their insurance solicited, but only the 25 per cent advance on their rates induced them to let go the local agents.

"The following embraces the business of the company for eleven months, from July 1, 1902, to June 1, 1903: Insurance in force July 1, 1902, \$894,325; full premiums on same, \$9,646.45. New business written during the year, \$170,175; full premiums on same, \$1,663.97. Risks cancelled or expired during year, \$41,990; full premiums on same, \$161.95. Risks in force June 1, 1903, \$1,022,590; full premiums on same, \$11,177.58. Net gain during eleven months, \$128,175; full premiums, \$1,531.12.

There were twelve losses in eleven months, amounting to a total of \$3,467.41. The highest was \$2,881.43, and the next highest \$220. The average loss, per claim, for three years was \$178.22. Of losses, one in ten are total.

E. B. Helmsstreet, Jamesville, secretary of the now-dead Wisconsin Druggists' Mutual Fire Insurance Co., writes:

"I am very much in favor of a retail druggists' insurance company, and have no doubt of its success. We started one here in Wisconsin a number of years ago and would have continued it but for the fact that the regular insurance companies changed and gave us very favorable rates; and we reinsured all our risks with regular companies and let ours drop. Now the rates have been advanced until they are higher than ever before. I kept track of fire losses in Wisconsin for ten years and the retail druggists of this State would have saved about 10 per cent, if they had kept their mutual company working.

"I certainly am pleased with this movement and trust it will not be allowed to drop."

As an instance of another success: The Workingman's Fire Insurance Co., was organized here by 44 carpenters, eight years ago. Eight hundred dollars was fixed as the maximum risk and every member was required to deposit one per cent, to be returned to him if he withdrew. There are now 16,000 members; and the highest assessment the members ever had to pay for one year was \$1, two years ago, at the time of the big Paterson fire.

News has just come in of the formation of a Lloyd company in Illinois. Owing to legislation favorable to "old line" companies which passed the legislatures of New York and Illinois during recent years, the formation of mutual companies is not feasible. Practically the same result may be obtained by operating under the Lloyd system, popular in England, Canada and the United States.

Here are a few opinions:

Albert Plant of Lohm & Fink, who is chairman of the insurance committee of the N. W. D. A.: "It is a splendid idea. There is a lot of room for such a company."

Oscar C. Kleine, Jr., president Kings County Ph. Soc., said he was very much interested in the plan and believed it to be a very good one.

Joseph Weinstein, president N. Y. R. D. A.: "I like the plan very much. Such a company should be a great success, and it certainly is needed."

Dr. A. L. Goldwater, president Greater N. Y. Ph. Soc.: "Well, I am ready to go into such a thing at once, if the proper men are behind it. I am paying \$1.40 on one of my stores now and \$1.20 on another one, for twelve years I have paid premiums to amount to six times the two losses I have had."

George Gregorius, a member of the committee which is planning the new company, whose opinion is often sought on important pharmaceutical matters, is enthusiastic in expressing confidence in the value of the proposed company.

William F. Maas, president of the East New York Ph. A.:—"There certainly should be a splendid success ahead for this company. Our fire insurance companies today constitute a monopoly from the word go. Their methods are nothing short of highway robbery. I did pay \$1.66 here." Mr. Maas bluffed the rate down to 98 cents; but his neighbors are not so well off."

Charles A. Kunkel, president Bushwick Ph. A.:—"It is one of the best things we can do. It can be successfully carried out. The people in charge will hear from us."

Mr. Kunkel's endorsement was given on Monday. That evening his society, after a comprehensive explanation of the plans by C. Mittenzweig, who belongs both to that society and to the G. A. S., endorsed the scheme. This is the first society, because it is the first one to meet since the plans were announced, to act on the matter.

William O. Frailey, president Pennsylvania Ph. A.:—"I am a firm believer in mutual insurance. I have had thirteen years' experience as secretary of a local fire insurance company and know that much money can be saved and great economies secured by mutual insurance. I further believe that class insurance is growing and that in the future every business or class of mercantile trade will have its mutual insurance company. The exorbitant cost of insurance comes from expensive management and variety of hazard, one class of hazard often being depended on to pay the indemnities on other classes. I have always felt that the old-line stock rating placed drug stores and stocks in a much higher class of hazard than was warranted by either experience, risk or statistics."

S. V. B. Swann, secretary Manhattan Ph. A.:—"The thing that surprises me is that this was not done long ago. Why I have paid out fourteen hundred dollars in the few years I have been here, without a cent of loss. Emil Koller deserves a great deal of credit."

Charles S. Erb, president Manhattan Ph. A.:—"Is the plan a good one? Certainly it is."

George H. White, president New Jersey board of pharmacy, is much interested in and favorable to the plan.

John A. Levery, president of the Connecticut Ph. A., writes:

"I have read with interest your story on co-operative insurance. In my humble opinion, if properly officered and conducted, all risks receiving the most careful and thorough consideration, there can be no question as to the feasibility or the ultimate success of such a company. While not a firm believer in mutual insurance I feel certain that if the principle of carrying only druggists' or physicians' and druggists' insurance be strictly adhered to a mutual company of this character can write policies at a greatly reduced rate, pay all losses promptly and by reducing the expense of carrying on the business to the minimum, still have left a good surplus for division among its underwriters. As a matter of information to you would say, that the druggists of this section are paying a rate of from \$1.65 to \$1.90; have never paid less than \$1.25. Thanking you for the opportunity of expressing my views on the subject."

Mr. Koller in the last few days has received many communications from pharmacists in this and other States, all showing substantial interest, by asking to be either permitted to come in as underwriters or as customers.

VERY SPECIAL

A limited number of live druggists in the larger cities will hear of an attractive proposition, by communicating with

J. N. FERRER

P. O. Box 71.

NEW YORK CITY

AT HIS WORK.

Mr. Erb is Inspecting Stores and There Will Be No Innocuous Desuetude for the Board of Pharmacy

Just Yet—Some Mistaken Notions.

People who imagine that the eastern branch of the State board of pharmacy will lapse into mere ornamentation now that Mr. Faber is out may be surprised to learn that the new secretary, Charles S. Erb, is going at this with his usual animation and energy.

Mr. Erb has visited 100 pharmacies since taking hold. In twenty-five of these he found violations. He does not reason from this that one-fourth of us are law-breakers; he says it is largely ignorance—ignorance born of carelessness, or vice versa. Two of the twenty-five instances meant prosecution.

"I told those I visited that I was there for a purpose," said Mr. Erb. "If they wished to ask information I was at hand. Some threw up their hands with, 'Oh, I know all about that!' and there you are. Those are the men who must look out for trouble in the future."

One man had not registered a poison sale since 1890.

A point that pharmacists will do well to remember is that when a manufacturer gets a verdict against a retailer for substitution it is the sworn duty of the board—and it may be demanded by the plaintiff—to step right in and secure another verdict on that evidence.

The Era learns that very many stores in this city are selling coal tar cresote, the principal constituent of which is carbolic acid, instead of the wood cresote prescribed by the Pharmacopoeia. It is a fact that an astonishing number of druggists are perfectly innocent in this, either not knowing that their commercial stuff is off, or that there is such a thing as a pharmaceutical cresote. It is well to get right on this at once.

Another thing that needs correction: Bichloride and like tablets, whether in original packages or not, must bear the retailer's poison label, Section 198 of the pharmacy law distinctly says:

It shall be unlawful for any person to sell at retail or furnish any of the poisons named in the schedules hereinafter set forth, without affixing or causing to be affixed to the bottle, box, vessel or package, a label containing the word "poison" distinctly shown, with the name and place of business of seller, all printed in red ink, together with the name of such poison printed or written thereupon in plain, legible characters.

The druggist who blunders into the idea that anything he sells in original package is at wholesale and not at retail, and thus does not come under the law, should change his mind at once. The affixing of labels, besides, is a custom that gives the druggist advertising.

THIS WILL BE "THE TIME OF YOUR LIFE."

The Erie County Ph. A. members and their chums and wives and children will have their summer outing on August 21, down at Edgewater on Grand Island, in Niagara river. Barge Twentieth Century has been chartered, to leave foot of Ferry street, Buffalo, at 9.30 a. m. Lunch on boat. Foam blowers have usual allowance. Competitive games at the grove and prizes. Pharmacists of Buffalo and pharmacists and physicians outside of Buffalo will play ball. Dinner at six, then light fantastic. If you miss the boat, swim down. Chairmen of committees: Executive, A. Keller; refreshment, P. M. Lockie; music, Harry Scheck; printing, C. E. Anthony; prize, W. H. J. Smith; dance, A. J. Werner; games, H. M. Anthony.

CHARGE AND COUNTERCHARGE.

Lower Broadway is stirring with scenes of carnage and prices are being slaughtered indiscriminately. M. Dlugasch, head of the Broadway Drug Co., says Hegeman & Co. began it. The others say Dlugasch is to blame. Anyway, Mr. Dlugasch is in a merry conflict.

For three years the Drug Merchants' Association kept prices on schedule. Mr. Dlugasch came into the territory, but did not join, though he promised to keep the schedule. A few months ago, piqued because Millhan was giving trading stamps on unrestricted goods he began cutting. The others waited a while.

Said Mr. Ramsay, head of Hegeman & Co.: "It is all Dlugasch's fault. I saw him and told him that we had been going along amicably for three years with good prices and asked him to stop cutting. He refused. Wilson, Millhan and I began then. We don't advertise, but every time he cuts we go below him."

Mr. Dlugasch said: "It is all Hegeman's fault. We were charging 74 cents for Peruna here and only 69 cents up town. I thought we were too high and dropped off 5 cents. Mr. Ramsay came to see me; so did Julius Kalish and J. Jungman. I refused to stop. I can stand it as long as they can. In fact, it has helped me. I hear Mr. Ramsay will withdraw from the association. Now is that right?—just because an outsider cuts prices? They sell 100 calomel tablets on prescription for 10 cents. Yet they drop their schedule when an outsider cuts 5 cents on Peruna."

Over the door on the Broadway Drug Co. store is this sign: "Save 100 per cent. on prescriptions. Not containing patent medicines, 25c. Peruna is now down to 57. Pinkham's, 58; Warner's, 58; Carter's, 12; Menmen's, 12; Listerine, 59, etc." The front of the store looks like the first page of a yellow evening newspaper.

NEW YORK NOTES.

—A few weeks ago the Era asked why there were only four stores on Broadway from Chambers street to Fourteenth street. A new one opens next week at 409 Broadway. Its nearest competitor on either side is half a mile away. Harvey W. Hall of Cincinnati is president, and Catherine and Arthur I. Schrenckheisen are vice-president and secretary-treasurer respectively. J. E. Doring, who has been with the Haas pharmacy and Daggert & Ramsdell, will be the manager. The name will be the Manhattan pharmacy.

—Apothecaries' Bicycle Club are having a time as we read this. They went this morning by train to Elizabeth, N. J. From there it will be awheel to Plainfield, Bound Brook, Somerville, Lebanon, Clinton, Washington, to Easton, Pa. They will stay there over night, ride to Bethlehem and go through the steel works tomorrow. Then come Allentown and Hamburg on Saturday, with side trips through Delaware Water Gap. Train to Philadelphia on Sunday morning when places of interest will be visited. Train back home in evening.

—C. E. Tankin, Brooklyn representative for Schiefelin & Co., and Mrs. Tankin are in Nova Scotia on vacation. Matthew G. Hopworth, manager, and F. G. Leslie, drug department manager of Hegeman & Co., 200 Broadway, are away for a fortnight, the lat-

Eff. Lithia Tablets

Send for sample and special net prices on our carton package Aluminum Cap Bottles with your name on them.

Our Tablets made by a new process are very satisfactory.

BILLINGS CLAPP COMPANY, Boston, Mass.

ter in Ontario, Can. Harry E. Scott, clerk for Otto Boeddiker, Sixth avenue, went to the Catskills for two weeks.

—Cora S. Tanner, the actress, was married on Monday evening at the rectory of the Church of the Mediator in Kingsbridge, to Charles Allen Reed of "Reedholm," Kingsbridge, vice-president of the Iroquo Chloralum Co. Miss Tanner and Mr. Reed have known each other for ten years. Their engagement, however, was sudden. Mr. Reed's mother died only a few months ago.

—A very prominent druggist uptown sold his first carboic acid to a woman the second day after buying his store. She said she wanted it for a wash for her husband's feet. The old clerk demurred when the new proprietor ordered him to register the sale. "She has bought such stuff here for six years," he said. In an hour the woman was dead, but the sale was registered.

—A West Side druggist stays entirely out of his store during these days of strikes. His reason is that he thus avoids requests for trust and loans made by the workmen who probably may not be able and perhaps would not wish in better times to settle up. His clerk, of course, refuses all such importunities, because "Mr. — is out."

—Several Sixth avenue druggists make it a practice to send for their mail on Sunday. The result is that many prescriptions, sent in by customers now out of town, are received, filled and mailed, reaching their destination early on Monday, a day earlier than expected. Customers often express appreciation of this promptness.

—The Heyden Chemical Works, recently damaged by fire at Garfield, N. J., have resumed operations. An amicable separation of interests with Merck & Co. has been effected and the Heyden company now sells directly to the trade their products which formerly were sold through Merck & Co.

—The Bushwick Ph. A. is cooking up entertainment schemes for August 27, when its members and all their families are going to Chapell, Queens county, for the annual outing. Bowling, ball playing, games for the ladies and children and a dinner are among the attractions promised.

—Commissioner Murray tells us now that the new explosives regulations will not be effective until Aug. 24. Copies obtainable at 157-9 East Sixty-Seventh street. Five gallons of benzine may then be kept in four-ounce bottles, not filled on the premises.

—Man in Brooklyn inhaled fumes of cyanide of potassium while cleaning a bed. He was deaf and dumb, but the experience made him able to talk. It also turned the upper part of his body black, blue and green. This is according to the daily papers.

—Deputy Sheriff Fogarty received an execution against Joseph E. Talson, druggist at 481 Sixth avenue, for \$667 in favor of Brann, Ritchey & Co., and made a levy at the store. Mr. Talson has been in business on Sixth avenue for 25 years.

—Schedules on the assignment of the K) Ki Remedy Company, manufacturer of a nerve tonic, at 261 Broadway, this city, and at Cincinnati, show liabilities, \$5,203, nominal assets \$6,139, and actual assets, \$1,307.

—Pharmacist W. F. M. Smith of Pine Hill, married Miss Marie Wolcott on July 27. The ceremony was performed by the Rev. J. M. Cornish of Kingston, an old friend and school mate of the groom.

—Uptown druggist says soda fountain doesn't pay corner sales as better than \$10 a day. Reasons: Greater cost of supplies bought in small quantities and waste of left over and spoiled supplies.

—Otto Boeddiker's cat shed several hairs on a visitor's coat. Mr. Boeddiker explained that it was be-

cause he had used some of George E. Schweinfurth's hair restorer on her.

—Inadvertently, Mrs. S. V. B. Swann's name was left out of the ladies' committee in the story, last week, of the preparati^ous for State Ph. A. entertainment next summer.

—The Seliger pharmacy at One Hundred and Twentieth street and Madison avenue was sold at auction last week.

FROM ROCHESTER.

—John Esterheld, formerly a druggist of Hudson avenue, has accepted the position made vacant by the resignation of William Oberley in the Powers Hotel drug store. Albert Miller, with J. A. Vanderbilt, Monroe avenue, has gone to Keuka Lake vacationing. William Hall of Hall & Burchill, owners of the old Dewey pharmacy, Monroe avenue, is on a pleasure trip.

—N. Barrowclough of the Powers Hotel drug store, received \$10, as one of four winners of prizes given by the Frog-in-the-Throat Co., for one of the best windows. His window was recently photographed by another patent medicine company because it was declared to contain the best trim of their specific.

—Wheaton Matthews will shortly have an inviting store in a new block at Genesee street and Bronson avenue, the builder being Mr. Matthews' father. Mr. Matthews' present drug store is on the opposite corner.

—W. J. Hicks of R. J. Strassenburgh Co., 160 Main street west, is atodus for a week. William DeVisser, night clerk at Guilford's, State street, is away on his annual vacation.

—Mr. Houghton of Strassenburgh & Houghton, 418 West avenue, is ill and to recuperate has gone into Pennsylvania to visit friends.

—M. S. Lundy of the Bryan drug store, 961 Main street west, is in Canada visiting his parents.

—Fred Marshman of Strassenburgh & Houghton, is spending his vacation at Conesus Lake.

AROUND SYRACUSE.

—Some vacations: C. G. McElwaine, Shonnerd and Oswego streets, a month's trip to California; William G. Daggert of Thorpe's, on a two week's vacation; Bert H. Gifford of T. Bruce Furnival's store, at Thousand Islands for ten days; Rufus E. Smith, tripping to Boston; Henry Hageman of Newton's East Genesee street store, at Penn Yan; Willet Brown of Brown & Dawson, several long automobile trips.

—The Syracuse D. A. met on Friday night to talk over a proposition to close all stores for a few hours on Sunday afternoons. If the innovation goes through it will not take effect until about October 1.

—Larned & Barker are displaying these medicines in their window: "To Get Fat," 90 cents a bottle; "To Get Thin," 80 cents, and "To Get Ambition," 30 cents.

—C. A. Passage, who was run down by an automobile, has sufficiently recovered to go to Thousand Islands to recuperate.

—Bert H. Gifford, clerk for T. Bruce Furnival of Syracuse, is spending a couple of weeks at Sylvian Beach.

An Announcement.

In another column will be found the announcement of Reed & Carrick, 42 Germania avenue, Jersey City, N. J., in regard to recent changes in their price list. To meet the demand for smaller sized packages of Zymocide, Peptenzyme Tablets and Protomucem, they have placed a 25-cent size of all three of these popular preparations upon the market. Please note that they have also discontinued the Cod Liver Oil Milk preparations.

NEW ENGLAND.

VISIT TO GOVERNOR.

He is Asked to Appoint Pharmacist on Board of Health—Vacations and Changes.

Boston, August 11.—Following annual custom the State sent a delegation on last Friday to Governor Bates to present three names of candidates for appointment to the State board of registration in pharmacy. The men selected for the candidacy were: F. A. Hubbard, Newton; A. G. Guyer, Hyannis, and Thomas B. Nichols, Salem. There will be a vacancy in October, due to the retirement of F. H. Butler of Lowell, whose term of office expires.

The delegation was headed by C. P. Flynn, president, and brought to the attention of the governor another matter. At the recent annual meeting of the association, it was the general opinion that the pharmacists should have representation on the State board of health. The Governor requested that the matter be placed in proper shape for formal presentation in the fall.

THE DRUG CLERKS' VARIOUS CHANGES.

Boston, August 11.—At the Theodore Metcalf Drug Co., Boston, George A. Brooks is added to the force. He comes from Darling's, West Springfield. Harry H. Butler, Boston, goes to Walter H. Newton's, Gloucester. Harry E. Tucker, who recently bought out F. H. Ware in Turner's Falls, leaves the employ of N. R. Scott & Son, Worcester, where he has been for five years. Frederick C. Tolman of Fitchburg, has been engaged to be head clerk at Henry Adams & Co., Amherst. Lewis J. Whitney of Ware, has gone to a Franklin pharmacy. Louis P. Standley is a new clerk at DeLaney's, Beverly. Daniel P. Knowland is an addition at William Goodwin's, Marblehead. At Guillo's, Salem, Frank Horton has been engaged. Edward West is new in Goldthwaite's, Brockton. Frank J. McGuire, Monson, changed from G. L. Keeney's to F. S. Chapman's. At Le Gro's, Palmer, M. J. Dillon, Jr., is a new clerk.

IN THE GOOD OLD SUMMER TIME.

Boston, Aug. 11.—Many employers and clerks are having a change from routine business cares. Charles S. Bird, a Lynn druggist, has started for the Pacific coast and Los Angeles, San Francisco, Seattle and other places in that region. Herbert E. Brier, manager for W. B. Hunt & Co., Malden, is spending his vacation in Winterport, Me. John Kershaw, clerk at J. P. Murphy's, North Andover, is in Portsmouth, N. H. William Sweeney of Dr. D. F. O'Sullivan's pharmacy, Lawrence, is at Salisbury Beach. S. L. Grenier, employed at Favreau's, is in Nashua, N. H. Henry J. Pughard, druggist of Grafton, has gone to West Dresden, Me. Walter H. Fiske, an Upton drug clerk, is away and his place is taken by W. H. Baker. Roy Hayward, of the Washington street pharmacy, Stoughton, is on his annual. Walter Bower, of Frederick & Bower, Methuen, has been visiting in Haverhill. Frank Young, clerk at H. R. Call's, Lawrence, has returned from Interwale, N. H. Oscar Kaoppel, employed at W. B. Chandler's, West Springfield, has been in South Hadley. Albert F. Doyle, clerk in C. R. Hillberg's, Campbell, spends his outing in New Hampshire. Harry Hall, of Goldthwaite's, Winterton, has chosen New Hampshire. Edward J. McCaffrey, clerk at Wilcox's Clinton, is at Lake Wachann, and George Fox, employed at Henry A. Burditt's, in the same town,

is also away. P. H. Matthews, at Shaw & Childs', Middleboro, has gone to Sandwich on Cape Cod. Levi H. Boyle of Porter's, Randolph, is at Old Orchard, Me.

THE BAY STATE.

—Druggists, clerks and doctors of Holyoke all joined merrily in an annual clambake at a grove near that city, and had the "time of their lives." There was provided all that the most insatiable appetite could crave. Clams, lobsters, fish, green corn, watermelon, chicken. After the perfect gorge, those not incapacitated lined up for baseball in which the druggists defeated the doctors, 13 to 10.

—Although E. E. Wilkins', Pittsfield, suffered from fire in last February, the insurance has never been adjusted. It has been agreed to settle upon the amount due by means of arbitration, the board of which is made up of George A. Hastings, North Adams, chairman; Edward T. Scully, Pittsfield, and Robert Cooley, Boston. —John Cowan, pharmacist in the office of the medical inspector at the Charlestown Navy Yard, has been ordered to the Naval Magazine, Iona Island, N. Y., to relieve Edwin T. Morse, who not long ago was transferred there from Charlestown Navy Yard. There Mr. Morse may come back to Charlestown.

—The Colonial Chemical Co., in Medford, has been closed, probably permanently. Except such employees as are needed to complete some work all hands have been discharged. The plant has been in operation for about 20 years, producing soda ash.

—Lovell lately has been troubled considerably by a "Peeping Tom," and to Richard Donohue, clerk in Ellingwood's, belongs the credit for his capture. He saw the man peering into windows of private residences, chased and held him.

—Druggists of Western Massachusetts are going through the periodical competition with travelling medicine companies. Must druggists fall into line and give free mustard and like shows in order to boom trade?

—Raids on two unlicensed drug stores in Hyde Park resulted in the seizure of a quantity of wines and hard liquors from Andrew W. Frost and Samuel A. Oppe. Mr. Frost's residence contained more wine.

—The Society of California Pioneers of New England, Boston, recently greeted the president, Gorham D. Gilman of Gilman Bros., druggists. He had just returned from Nantucket.

—J. T. Wetherald, treasurer of the United Drug Co., Boston, has returned from several weeks abroad. Mr. Wetherald will spend the balance of the summer at Beach Bluff.

—At the Colonial drug store, Salem, to introduce a toilet soap, a banquet lamp is to be given to the one guessing nearest to the number of peas in a large bottle.

—John K. Moulton, Dalton, has placed in his pharmacy a fine collection of mounted birds and wild animals shot in the country 'round about.

—William Flynn, popular clerk in North Attleboro, has announced his engagement to Miss Victoria Semoski. Wedding at an early date.

—Dr. Eli Barnaud, druggist in Worcester, is trying

Put up in One Ounce Bottles Only.

Powdered.....Per ounce \$1.00
Pink Top Capsules.....Per ounce 1.00
Tablets, 2½ grain only.....Per ounce 1.00
ETNA CHEMICAL CO., New York, U. S. A.

Charles H. Bose.

Charles H. Bose, druggist at 411 Avenue D, Bayonne, N. J., died last week at Monticello, Sullivan county, New York, where he had gone in search of better health. Mr. Bose had owned his store for years and was very popular. He was a member of the State and local drug associations, and the members of the latter attended his funeral in a body, contributing a floral piece. Mr. Bose leaves a wife and two children.

to effect a satisfactory settlement with his creditors, to whom he owes about \$1,000.

—Lamp exploded in the drug store of A. R. Vincent, Holyoke. Little damage. In West Brookfield fire injured C. H. Clark's pharmacy.

—C. Eliot Woodward, formerly cut-rate pharmacist in Boston, is now book agent for Wanamaker.

NEW HAMPSHIRE.

—During a severe thunder shower in Exeter, William O. B. Little, employed at the Exeter drug store, received an electric shock. He was drawing soda. Leon Foster, clerk for C. M. Collins, Exeter, was knocked senseless.

—At the store of the P. J. Noyes Drug Co., Lancaster, Fred Carpenter of Rutland, Vt., is a new clerk. At L. O. Shurtleff's, Whitefield, Jesse Noyes of Lisbon, has just started in as clerk.

—The mayor of Franklin has warned all druggists to be careful how they sell liquor. This is because one or two bragged openly that they bought their liquor at drug stores.

—Since May, when in many towns and cities the people decided upon license, the commissioners have granted 213 of the fifth class to druggists.

Enterprise and Prosperity.

The wonderful success achieved by the New York Quinine & Chemical Works, Ltd., in the last few years can be accredited to enterprising business methods coupled with the sale of pure chemicals. Their products have gained the good will of the careful pharmacists throughout the length and breadth of the land for the reason that they are always of such quality and appearance that they satisfy the most querulous. Progress once begun with this firm became rapid, and they find themselves today among the leaders in their line. If you are one of the few druggists who have never used their products, we advise you to try them.

PENNSYLVANIA.

BACK IN GRACE.

Aschenbach & Miller, Philadelphia Jobbers, in Good Opinion of N. A. R. D. Again—Parke, Davis & Co. Protest That They Sell to No Department Stores.

Philadelphia, Aug. 11.—The regular meeting of the P. A. R. D., with President Loedon in the chair, plainly showed the advent of dog days, but the bare quorum present made up with snap and vim for absentees.

The first gun was fired in a letter from Parke, Davis & Co., referring to the advertisements of Philadelphia's lonely department store in mentioning their goods among those handled and cut. They insisted that they have not sold nor will at any future time sell to any department store, and that any of the goods in stock at that place were procured irregularly. A communication was also read from Secretary Wooten, giving notice of the restoration to good graces of Aschenbach & Miller, the Philadelphia jobbing house.

S. W. Strunk, chairman, handed in his resignation from the by-laws committee. Like all comparatively new associations the by-laws are open to difference in interpretation and he felt that a new chairman might be able to frame something less liable to continual amendment. Mr. Strunk has been a most valued member of the committee and is very active in the association.

There were eleven new members elected. Vice-Chairman Eppstein reported on the advisability of affiliating with the Retail Merchants' Association, a body composed of the retailers in all branches of trade, whose aim is to better conditions in every way. Among other advantages they claim a list of hard-pay people—a copy of which is sent to each member. A small per capita tax is charged and, while the matter was not taken up for action, it seemed to be the opinion that the move would be a good one.

The usual cut-rate discussion came up. Goods are being sold in this city in direct violation of the tripartite agreement and while nothing has been done, the executive committee expects that before many days they may be able to have useful information.

OTHER HAPPENINGS.

—Another story of the dry goods drug shop, Philadelphia: "Any prescription that others would charge 50c., 75c. and \$1.00 for, we will fill for 25c.," said the ad. So the man took a prescription calling for 8 d. ozs. of liquor sedans. After the usual wait, it was satisfactorily filled. The next day another was taken, identical with the first. Price for that, 50c. A protest was filed, reference being made to the previous day's price and the advertisement. "Oh yes," said the affable "drug" clerk. "That is very true for that time—but that is yesterday's advertisement and was only for an hour!"

—Philadelphia grows in grace and reputation—either as a law-abiding or much persecuted town. Secretary Reese of the local association, received a letter from Dr. Noel of the N. A. R. D., enclosing a communication from J. L. Ormsley of Springfield, Miss., calling attention to a prosecution of one of their druggists for violation of the Sunday laws, and asking whether the association affiliated with the N. A. R. D. could give them any decisions bearing on the case at point. Dr. Noel thought of Pennsylvania and her troubles over the old blue laws, and promptly sent the letter there.

—A prominent Philadelphia up-town druggist visited a fellow craftsman at a late evening hour last week. It being warm, he became thirsty and went to the ice-box and helped himself to a bottle of beer. "How did you like it?" queried the host. "Very nice beer indeed, but a little thicker and redder in color than usual. Have you changed the brand?" Investigation followed. "Heavens, Sam," said the entertainer, "that was a bottle of tomato catsup you drank."

—Upon further consideration it has been decided to place the running of the new Philadelphia C. P. house under the charge of a joint-committee selected from the board of trustees, the alumni association and students residing in the house. The same influences will be brought to bear upon the students as if conducted under the auspices of the intercollegiate committee of the Y. M. C. A., as was earlier intended.

—"Do you think we could prosecute them for obtaining money under false pretenses?" This was the burden of a letter received a short time ago. It referred to a cut rate store selling quinine pills, 2 grains, at 12 cents a hundred. An accurate count revealed just 96 pills to the package. Result, the letter.

—Down in the southern part of Philadelphia there is an association known as the Southwestern Business Men's League. Mutual aid and protection. One of their best cards is the paying of all fines for violation of the blue laws. The druggists in that section are going in, as the protection is no myth.

—The next meeting of the State board for examination will be in the Girls' Commercial High School, Broad and Green streets, Philadelphia, and in Bellfield School House, near Hotel Schenly, Pittsburgh, both on Saturday, October 17, between the hours of 12 and 5 p. m.

—Dr. George C. Taggart, who contemplates opening a new store at Eleventh and Arch streets, Philadelphia, finds himself considerably delayed. The entire corner is being rebuilt and the usual trouble is had with the structural iron work.

—J. R. Smyser, Forty-first and Lancaster avenue, Philadelphia, druggist and common councilman, fought successfully against the placing of a horse fountain near his store. His opponent was the S. P. C. A.

—P. P. Kirlin of Shenandoah, will locate in Philadelphia. E. F. Bauer, Philadelphia, goes to Pittsburg; Robert Masters to Columbia, R. E. Renine and B. Max to New York.

—Wharton & Co. is a new Philadelphia brokerage firm whose exclusive business will be the buying and selling of drug stores.

THE SOUTH.

WAR ON BANEFUL DRUGS.

Baltimore, August 11.—Attention is called to the alarming increase here of the use of habit-forming drugs. At the annual meeting of the State Ph. A. the adoption of restrictive measures was strongly urged. The evil was also discussed at the meeting of the jail board and a committee was appointed to draft a bill to regulate the sale of such drugs. The warden, in his monthly report, said that in 1902, 120 persons addicted to morphine and 98 victims of cocaine were treated at the jail. These figures represented only those in the advanced stages of the practice. The cocaine habit was confined almost wholly to negro women. The warden said the drug was put up by some druggists in 10-cent packages ready for sale to anyone who called for it. The imposition of a heavy penalty for the sale of such drugs without prescription will probably be made a feature of the bill.

CLERKS HELPING BOARD OF PHARMACY.

Baltimore, August 11.—Those interested in raising the standard of pharmacy have received aid from the Retail Drug Clerks' Association, affiliated with the Federation of Labor, which bids fair to prove a most energetic and persevering agent for the enforcement of the pharmacy law enacted by the last Legislature. Largely through the association, the board was able last week to bring about the conviction of Eugene Bonner on the charge of serving as clerk in a drug store at 2338 Lanvale Place, Northeast, Baltimore, without being registered. \$25 and costs. This is the first conviction under the law, and the intention of the State board is to make a systematic campaign.

ANOTHER COCAINE PLAIN.

New Orleans, August 11.—One of the evils of New Orleans is the indiscriminate sale of supposed cocaine to negroes and the lower class of white persons, by so-called druggists. There is more acetanilid in the mixture than cocaine. When the name of the person who sells this drug in this way can be found out he will be vigorously prosecuted. A few weeks ago one was fined \$50. This was his fourth fine for the same offense. Many of these fellows have drummers out in the "coke" district to peddle the article from door to door.

MARYLAND.

—Among the visiting druggists in Baltimore last week were A. C. Huber, Gettysburg, Pa.; J. C. Simmons, Crisfield; Joseph B. Boyle, Westminster; Dr. Louis Dielman, New Windsor; Percy E. Lewis, of McCarrish & Lewis, Norfolk, Va., and J. W. Entwisle, Alexandria, Va.

—Dr. R. E. Lee Hall, druggist, attorney, and man of affairs generally, is a candidate for the legislature. He rendered valuable assistance in the passage of the new pharmacy law and will have the undivided support of druggists.

—The election of Professor Charles Caspari, Jr., as secretary of the A. Ph. A. for another term gives much satisfaction here, where he is widely known and highly esteemed.

—James Hancock, a pushing and popular young drug salesman, is up in New England placing the goods of John F. Hancock, his father, with much success.

LOUISIANA.

—John T. Larsen, for a number of years in charge of the laboratory of The Parker-Blake Co., Limited, New Orleans, has resigned to accept the managership of P. L. Cusachs, Limited, one of the Crescent City's pharmacies. Mr. Larsen is yet in his twenties. He now has entire charge of the establishment in which he got his first knowledge of medicines as a boy.

—The jobbing druggists of New Orleans are preparing for the trip to the N. W. D. A. at Boston. There will be a large delegation from Louisiana. A motion will be made to have the next national convention held in New Orleans, and it is confidently asserted that it will be carried through.

—A special meeting of the executive committee of the Orleans Ph. A. was called on August 5 to revise

the schedule of prices and make a slight increase. The movement met with favor and, at the next meeting, a new schedule will be adopted.

T. N. Blake, the popular vice-president of the Parker-Blake Co., Limited, wholesale druggists of New Orleans, who has been quite ill for four or five months, will resume his duties on September 1.

More cases of violating the law by employing unregistered pharmacists were up in the courts of New Orleans in the last two weeks. An employer was fined \$50. Each will be prosecuted.

A. S. Pickens, the veteran collector of the Orleans Ph. A., who was at one time one of the foremost druggist of New Orleans, has resigned and will spend his remaining days in quiet.

AROUND THE GREAT LAKES.

GETTING USED TO IT NOW.

Grand Rapids, Mich., August 11.—Officers from Paw Paw, the county seat, were in South Haven today and "pulled" seven drug store proprietors on charges of violating the local option law. They were: Frank Bruen and Solon Nevins, Colonial pharmacy; Charles Conners, Converse store; Charles Hessey, Hessey Drug Co.; J. C. Condon and William Remans of the Red Cross pharmacy and the Clifton pharmacy; Myron Wakemum Crown Drug Co. The only stores escaping the sweep this year are Van Ostrand's, Abell's and Meann's. This is the annual round-up and the raids fail to create much excitement there now.

ILLINOIS.

C. W. Gilbert has opened a new drug store in the Murray Building at Waukegan. Mr. Gilbert, it is said, has one of the most richly equipped drug stores in the State. Fixtures are of mahogany and gold. Art glass lights in the rear partition and plate glass mirrors enhance beauty. A row of tables with heavy plate glass tops extends through the center. Beneath the glass tops is a space for displaying goods.

Murray & Flournoy have succeeded I. R. Woolley at Sixty-ninth street and Union avenue, Chicago. The new firm is composed of R. S. Murray, formerly a member of A. C. Williams & Co., 1700 West Sixty-third street, and A. S. Flournoy, recently with the Midland pharmacy, Kansas City, Mo. Mr. Murray sold out to his partner A. C. Williams some time ago.

Justus G. Cotes, a former Englewood druggist, is reported to have disappeared. It is said that Cotes was identified with George J. Hammond, who is indicted for embezzling \$10,000 of the funds of the Combination Investment Co. On Cotes' testimony Hammond was indicted and on his testimony will depend conviction. The State wants Cotes.

W. W. Hinkley of the Searle & Hereth Co., president of the Illinois Ph. Travelers' A. has just returned from an Eastern trip, and W. C. Shurtleff, credit manager of Morrison, Plummer & Co., is back from a five weeks' visit with his family among relatives and friends in Iowa.

Burglars robbed Carl J. Klocker, Jackson boulevard and Center avenue, Chicago, securing cigars and other merchandise to the value of about \$100. The robbery was accomplished only after the watchdog, a hound named Buff, had been drugged.

Albert B. Hunt, manager of the city sales department of the Fuller & Fuller Co., Chicago, left with his men for a three weeks' fishing trip at Elk Rapids, Minn.

C. W. Shotwell, druggist in the Revere House, North Clark street, is reported to have transferred his interests. Said to be financial difficulties.

The firm of Stewart & Fish have succeeded Ferguson & Stewart at the new thriving town of Indiana Harbor, Ind., near South Chicago.

Epidemic of marriages in Hotel Luzerne, Chicago, new microbe bacillus matrimonialis, caught William Klein, pharmacist's chief assistant.

W. M. Colwell, who represents Morrison, Plummer & Co. in Indiana and Illinois, is just back from a vacation lake trip.

Reported that a new store will be opened on August 15 in the Clark Building, Alton.

R. Klarkowski has opened a new store at 146 West Blackhawk street, Chicago.

Mann & Robinson opened a new store in Freeport on August 1.

MICHIGAN NOTES.

L. C. Clark, the Jefferson avenue, Detroit, druggist, met with loss in a peculiar manner. Pain's "Fall of Rome" was giving an exhibition on the large vacant square in front of his store and when it came time for Rome to fall there was a terrific bombardment. The concussion jarred a bottle of Duffy's Malt Whisky from a high shelf through an expensive plate glass window, shattering it. Clark is trying to see what he can get out of the Roman emperor, in recompense.

L. Sizer, in charge of Dr. Manley's store, Carrier street and College avenue, Grand Rapids, closed up his place. He is an old man and in some manner incurred the ill will of some neighbors who made it unpleasant for him.

The firm name of J. D. Birney & Co. of Eaton Rapids, has been changed to Birney & DeGolia. J. N. McAllister has accepted a position as prescription clerk at Bricker's, Port Huron.

Crawford & Altenberg of Ithaca, have dissolved partnership. H. J. Crawford continuing the business. Mr. Altenberg has gone into business at North Star.

It pays to be a druggist in Clare. Dr. John W. Dunlop, leading druggist and ex-mayor of the town has accumulated enough to open a bank.

A. E. Chantler, the Grand River avenue druggist, Detroit, has taken a home on Rosedale Court for the summer.

A. B. Wooton, the Bellaire druggist, has added a new line to his business, that of a jeweler.

CRUSADE AGAINST STIFF GRAPE JUICES.

Des Moines Ia., August 11.—Druggists in Iowa and Nebraska who have been handling "unfermented grape juice," which turns out to be 4 per cent. alcohol have about decided that the game is not worth the candle. Revenue officers have evidenced a most remarkable activity the last few weeks and "grape juice" has disappeared from show windows at an alarming rate. Many of the tradesmen have been called upon to permit an analysis of their wares. The amounts charged by the revenue collectors vary according to the length of time the fluid has been handled. In some cases it will reach nearly \$25, or the annual tax, and fifty per cent. of the revenue due is added in case of failure to report. Omaha and Des Moines wholesalers who have been handling grape juice have letters from their clients, who are threatening to deduct from their bills enough to square themselves with Uncle Sam's collectors.

WEST OF THE MISSISSIPPI.

NORTH DAKOTA AGAINST LIQUORS.

St. Paul, August 11.—The North Dakota Ph. A. held its annual meeting at Fargo on Tuesday and Wednesday of last week. It was the most largely attended in the history of the association and the time was devoted strictly to the discussion of the bona fide interests of the profession. The recommendation of President Porterfield, in his annual address, strenuously recommended that the association have nothing whatever to do with the contesting of any of the State laws relating to the sale of intoxicating liquors as he believed it in no way came within their province, being entirely outside the druggists' profession. He recommended that the association go on record as being in favor of the move to secure the reduction of the tax on alcohol. He also paid a glowing tribute to the work accomplished by the N. A. R. D. and believed it was a power for good. He expressed appreciation for the very valuable work done in the schools of pharmacy at Fargo and Grand Forks. He urged, even now, more general interest in the business sessions of the association and that members work in perfect union for the general advancement of the profession in this State.

The old officers were all re-elected, as follows: President, W. P. Porterfield, Fargo; vice-president, W. J. Camdon, Wallhalla; secretary and treasurer W. S. Parker, Lisbon; local secretary, R. H. Tenney, Fargo; Mr. Griffith, Grand Forks.

On Thursday the association members went to Detroit Lake Minn., for the annual jollification.

DRUGGISTS THUMPING AT STREET FAKIRS.

Des Moines Ia., August 11.—Druggists in Des Moines expect to secure soon the passage of an ordinance through the city council governing the sale of notions and sundries upon the streets. It is proposed to make the license for street fakirs so high that they cannot afford to sell stationary, perfumes, toilet articles, etc., at cut-throat prices. Fakirs, by paying a nominal fee, have been able to pull up in front of drug stores and undersell on many articles. They pay no rent or taxes and are never on hand when it becomes necessary to help out public enterprises. The druggists contend that this competition is unfair.

DEAN EMIL L. BOERNER RESIGNS.

Iowa City, August 11.—Professor Emil L. Boerner, dean of the College of Pharmacy at the Iowa State University, this city, handed his resignation to the faculty, to take effect at once. It will be accepted and Dr. L. W. Andrews recommended to the State board of regents as dean. Professor W. J. Teeters will be recommended as professor of pharmacy at the State institution. Pressure of private business necessitates the withdrawal of Dr. Boerner, who has been dean of the university school for a number of years.

HEARD IN IOWA.

—Monrad Oelsson, proprietor of the Sixth avenue pharmacy, Des Moines, has returned from a two months' tour of Europe. During his absence he visited his parents in Norway, and many points of interest in Sweden, Germany, France and London. Mr. Oelsson left Des Moines thinking that he was making a race with death to see his father. Fortunately he was able to see and leave him in much better health than he expected.

—C. E. Haynes, pharmacist of the City Drug Co., Kanawha, has bought the store. C. H. Davis has sold

his interest in the drug store at Wayland to his partner, W. F. Barnett. Laurel Drug Co., Alfred Moe, manager, recently took charge of the store at Laurel, near Marshalltown.

—Gus Repperts, with V. W. Sylvester & Co., Battle Creek, Mich., has accepted a position with A. B. Lasee, Lake City. M. W. Maxey, formerly with Alexander & Co., What Cheer, is now with V. W. Sylvester & Co., Battle Creek, Mich.

—Fred T. Hoagland, head clerk for E. F. Whitney, Des Moines, has been sick for three weeks at Mercy Hospital. Typhoid fever. M. Pillio of the Grand avenue pharmacy, Des Moines, spent last week in Hastings, Neb.

—D. R. Schmuecker of Des Moines, is in the Okiboji Lake county enjoying a vacation. His partner, Col. Loper, will leave next week for Council Bluffs to attend a session of the Uniform Rank Knights of Pythias.

—A. F. Frelch of Titonka, and A. H. Glaze have bought the Zieger store at Buffalo Center. Dr. Parriott will open a store at Yorktown. A. F. Shinn has bought Dr. A. J. Salts' store at Ceruing.

—R. L. Harris of Muscatine, has sold. Mrs. J. F. Trumble of Adair, has sold her jewelry stock and will devote her whole time to drugs. G. E. Wendell of Smithland, suffered a fire loss of \$1,500.

—J. B. Atkins, Council Bluffs, is suffering from a severe attack of rheumatism. J. C. Webster and wife, of Shenandoah, have returned from their wedding trip throughout the West.

—There were forty-four prospective druggists before the State board this week at Des Moines. Charles Phillips says: "It is the smallest class we have had in several years."

—J. J. Uleh, the Des Moines South Side druggist, spent last week in Chicago. Earle C. Fisher, clerk for Webb Souers, Des Moines, is taking a two weeks' vacation.

—The Striegel drug store was recently opened in Manchester. V. L. Bedler & Co., druggists at Mt. Ayr, have bought a drug store at Ellston.

—The Warford-Campbell Co., purchased the W. T. Overton pharmacy at Geneva. This company also owns a store at Applington.

—The Ellwood Drug Co. of Tipton, has sold. O. O. Harlan & Co. of Storm Lake, are succeeded by Felton, Penny & Co.

—Rudolph Mohr has traded a saloon, butcher shop and adjoining barn to E. H. Mauritz in Kiron, for his drug store.

—John W. Cloe, III, has retired from his Knoxville pharmacy and Mrs. Minnie Cloe will manage it for the present.

—Charles Blaeser has sold the Blaeser & Co. pharmacy at Cherokee, to Neils Mikkellson and Walter Blaeser.

—A. W. Rader, salesman of the Des Moines Drug Co. is visiting his parents at Huntington, Ind.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories.
Twelve Teachers. Thorough Courses.

NEXT TERM BEGINS SEPT. 7, 1903.

Address Inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

THE KANSANS.

A recent decision of the Topeka police judge is of interest to Kansas druggists. A clerk was arrested in a pharmacy on the charge of selling liquor unlawfully. The policeman who made the arrest had no warrant. This point was brought up at the trial and the clerk was released, the court deciding that a warrant is necessary in case of arrests at a drug store where the proprietor holds a State permit.

Ottawa druggists are up against it \$1000 worth each. So many Ottawa people are troubled with coughs, colds, general debility, and snake bites that the sale of liquor from the drug stores has been pretty heavy. The "city fathers" observed this, and at a late meeting of the town council passed an ordinance levying a special license tax of \$1000 a year on stores holding State permits to sell liquor.

Charley Hines, who has for several years conducted the Opera House drug store in Topeka, sold to Kansas City parties, J. W. Bryant of Ness City, disposed of his store and is looking for another location.

E. T. Price of Price Brothers, Burlingame, finds time after he gets through with drugs to act as secretary of the county fair association.

C. V. Pyle of Hiawatha, has sold to Waldo & Syster of Concordia. Mr. Waldo gave up a position in Concordia to go into business for himself. A. M. Syster, the junior partner, has been court stenographer for Cloud county for some years, but resigned to devote his time to business.

A. W. Benson of Council Grove, has sold to Frank A. Robbins. The Metropolitan Drug Co. of Topeka, has been succeeded by J. W. Kreamer. B. M. Kendall of Elk City has sold out to H. G. Jones and has bought the Boothby store in Coffeyville.

Robert Haines of Niota, announces an early retirement from the drug business in order to attend to other interests. Pattison & Son of Oxford, are among those who are to retire from the trade. A death in the family is given as the reason.

The Gatlin Drug Co., which is an old timer in Hutchinson, will open a wholesale and retail business in the Devlin block, Topeka. After that date the Gatlins will act as distributing agents in Kansas for the W. S. Merrill Chemical Co.

A. Arshaw, formerly with the Pugh drug company of Independence, has gone to Coffeyville and the Rammel company. Charley Ely, head salesman for the Rammel store in Coffeyville, has gone into the oil business.

Barber Bros. at Lawrence, were too far uptown to suffer from the Kaw flood, but the elements got even with them the other night when a terrific wind took the roof from their building.

The Arnold Company's wholesale house in North Topeka, which was put out of business by the Kaw flood, is showing up in its old time form.

A. B. Carter, formerly in the drug business in Hiawatha, is now with the City drug store, Effingham.

MISSOURI.

William C. Herndon of Fulton, has sold an interest in his business to Mr. Nichols and the firm name is now Nichols & Herndon. The Hawkins Drug Co. has succeeded the firm of Robinson & Hawkins in Wausau, Kan. C. F. Brown & Co. have succeeded Walker Roy in Antville. F. L. Drake of Coa, has taken in a couple of partners and organized F. L. Drake & Co. The Grove Springs Drug Co. of Grove Springs, has sold to J. R. Simmons. Burton & Wolf have succeeded J. B. Foster at Clinton.

J. C. Wirthman, Sixteenth street and Grand avenue, Kansas City, had his troubles with thieves last week. Some one pushed through his back door and

got away with \$16 in money, \$40 worth of entery and a lot of cigars. Two days later a policeman returned to him his fine driving horse which had been stolen from pasture.

T. J. Radford's store at Ninth and Locust streets, Kansas City, was robbed by a nery thief who climbed over the transom of a side door in the full glare of an electric light. Only some small change to the amount of \$22 and a quantity of cigars were taken. The thief was captured.

A recapitulation of July wholesale trade in Kansas City shows an increase of about 20 per cent over last year, breaking all July records. August opens strong in both wholesale and retail and promises to break another record.

J. A. Gallagher of Faxon, Horton & Gallagher, will be that firm's representative at the N. W. D. A. convention in Boston.

NEBRASKA.

The following have been appointed officers of the Ladies' Auxiliary of the State Ph. A. for the following year: Mrs. H. H. Barth, Lincoln, president; Mrs. P. Strausbaugh, Omaha, vice-president; Mrs. A. W. Buechert, Grand Island, secretary.

C. K. Weller and T. H. Wiley of the Richardson Drug Co., have returned from vacations and are again on the road. L. W. Loomis, who has charge of the laboratory of the same company, has returned from a vacation in Detroit.

Charles Youngstedt and Miss Christine Hallner of Wahoo, were married on July 24. The bridegroom is a member of Planck & Youngstedt.

H. E. Brown, Louisville; P. L. Arrasmith, Shelby, Ia., and H. A. Brown of the Long Pine pharmacy, Long Pine, were Omaha visitors.

W. D. Alexander and wife of Milford, are making an extended tour of Colorado. C. E. Clark of Lincoln, is in charge of the store.

L. G. Graves of Atwood, Kas., stopped in Omaha on his way to Chicago. J. L. Bean of Audubon, was in Omaha last week.

Albert B. Hedblom of Stromsberg, who has been carrying both a grocery and drug stock, has sold the former.

W. M. Tomer, Lynch, has accepted the short term appointment on the State board of examiners.

The store of G. C. Roscoe at Swanton, was robbed of jewelry and razors valued at \$250.

L. A. Bates has again opened his store at Springfield.

OSCAR LOVELL, who formerly was interested as a partner in the White drug store, Greenfield, Mass., died, aged thirty-six, while visiting relatives in Providence, R. I. He leaves a wife and two children.

OBITUARY.

STEPHEN GALE, a Boston druggist, who for years conducted a pharmacy at Washington street and Massachusetts avenue, died suddenly at his home in Roxbury, Mass. His age was fifty-four years. Mr. Gale came to Boston from Portland, Me., when a young man.

CHARLES HUBBARD, who was severely scalded early in July at the Avery Chemical Works in Littleton, Mass., where he was employed as chemist, died in the Boston Hospital. He was forty-three years of age and unmarried.

JAMES WILKINSON, a druggist at Roanoke, Va., committed suicide on August 4 by blowing out his brains. He had been despondent for some time past. He leaves a wife and three children.

MRS. ENGLAND, wife of T. E. England, the Gilmore City, Iowa, druggist, died last month.

SEVERAL CHANGES—CONFUSION IN PEPPER-MINT—FAIR TRADE.

New York, Aug. 11.—Business is moderate, but is as good or better than last year. Several advances have come, senega root and nitrate of soda being perhaps the most conspicuous. For a few days their prices took a step upward every day. Reports of all sorts concerning peppermint are heard, first, that the crop is good, then, that it is bad, so there is confusion, but nothing in price changes. Coal liver oil inquiries become daily more active, but the only result is a firm maintenance of price. Menthol is weak because of competition among those who have cornered nearly all that is available.

OPPIUM—It is quiet in brokerage parlance, but the prices are strong and there may be a raise before long, though none has materialized yet. The crude product is in a strong position and the present prices are considered low when prices at producing sources are compared. Jobbers ask \$3,600/3.85, small lots, \$3.50 in case for 3 per cent. On 11 per cent, the prices are ten cents in advance. Powdered, 13 per cent, is worth \$1.75, and \$5.25 is asked for 16 per cent.

MORPHINE.—Demand is fair, prices are firm and unchanged and that tells the whole story. Jobbing quotations are \$2,600/2.70 for eighths in ounce boxes, \$2.55/2.65 in 21-oz. boxes, \$2,350/2.45 in ounce vials and \$2,300/2.40 in 5-oz. cans.

QUININE.—Inquiries are looking up. Prices have an upward tendency, but stay where they were. Jobbers ask 210/22 1/2c. for bulk in 100-oz. tins, 210/22 1/2c. in 50-oz. tins, 250/25 1/2c. in 25-oz. tins, 260/26 1/2c. in 15 or 10-oz. tins, and 310/31 1/2c. in ounce vials, according to brand and quantity.

WOOD ALCOHOL.—Another decline. Prices now are 600/62, a gallon in barrels and 700/75c. in less quantities.

PEACOCK.—There was a slight decline late last week. The root is now quoted at \$1,600/1.75 a pound and the powdered at \$1,700/1.80 a pound, as to quantity.

SENEGA ROOT.—It is very scarce and advanced several times within the last few days. Holders in the Northwest do not care to sell, waiting for further advances. Many wholesale druggists can obtain none at all, no matter what the price is offered. The present prices are very unusual. They are 900/0/1.00 a pound in the foot, 950/0/1.05 ground and \$1,000/1.10 powdered.

PRICKLY ASH BARK.—The decline was considerable, being from 350/40c. a pound to 250/30c.

SCYTHOPHIDUM.—An advance was made because of scarcity and even at the new figure it is very hard to obtain, 650/70c. a pound is now quoted by jobbers.

CAMPHOR OIL.—Prices were advanced and are now 750/80c. a pound.

MANNA.—Good supplies bring the flakes down, price 30c. large 700/75c. a pound, small, 150/50c. a pound, 120/48c. a pound.

COLLIMBIAN SHIPPERS.—Prices declined slightly. —Lossing with wind method. In barrels the prices are 81,000/1.12 a gallon. In 5 and 10 gallon lots, \$1,000/1.15 less \$1,000/1.70.

UNSLIPPED OIL.—A decline is to be noted. American price is 100/1.12 a gallon, 500/550c. for less. Bold price is 120/11c. a barrel and 550/600c. for less. California price is 700/72c. and 800/85c. for less.

OIL OF RAPSEED.—Prices went down slightly. In barrels, 110c. now 700/75c. and \$50/50c. in less quantities.

It Has Captured the Ladies.

Dr. Tullar's Vaginal Spray has taken hold of the ladies' trade with a furor. It is made entirely of rubber of high quality and finish, and has no metal parts to corrode, has the new patent ball spray top, also the new elliptical shield and soft neck octagon bulb with a capacity of nine ounces. This douche is made by the Tullar Co., 23 Union Square, New York City, who will send a sample, which retails at \$3.00, for \$1.00, or they may be secured from any jobber.

A Progressive Company.

The many friends of the National Lingerie Co. will be interested in the announcement they make on another page. This firm are now manufacturing their different brands of stick lories, including the famous Scudder, Y. & S., and Mellor & Rittenhouse brands, all under one roof in the new and commodious factory recently erected for them in the Borough of Brooklyn. This plant, with all its modern facilities, will fully double their capacity and enable them to execute all favors without delay. The National Lingerie Co. are to be congratulated upon their success, which is entirely due to the quality of their products and the unremitting efforts they have used to please their customers.

DR. GEORGE H. GREENE, proprietor of the leading drug store of Marshall, Mich., is dead. He was 65 years old. Dr. Greene was formerly mayor of the city and had ably served in other municipal offices.

BUSINESS NOTICES.

A HELP IN PRESCRIPTION WORK.

There are a great many things that the average dispenser can't remember, and there are as many more that he shouldn't try to remember—it isn't safe. These things come up in prescription filling when time is an important factor and accuracy is strictly essential. There are questions about dosages, dose equivalents, percentage solutions, specific gravity, incompatibilities, metric and thermometric equivalents, meanings of Latin, French or German terms. These things are all tabulated, or figured out, handy for instant reference, in the Era Dose Book (Third Edition, Revised and Enlarged). Price 50 cents, postpaid.

"Education does not make fools, it develops them," writes the pork-packer to his son.

The Era Course in Pharmacy was not prepared for fools. It can do them no good.

But the same merchant informs his son that education also develops the opposite of fools.

Therefore, if you are wise—which, of course, you are—education will do you good, and the Era Course is suited to your needs, provided that you need development in the knowledge of pharmaceutical science.

Perhaps a college course would do you more good, but cleverness is, unfortunately not always blessed with an abundance of means, and the Era Course is much less expensive than a college course.

If you need a pharmaceutical education and have little time and money, write to the Pharmaceutical Era, No. 8 Spruce St., New York, for a prospectus which will tell you all about The Era Course in Pharmacy.

IS PROFESSIONAL STATUS RESULT OF PHARMACY LAWS!

In a paper under the title, "Making a Profession by Law," presented at the Mackinac Island meeting of the A. Ph. A. by Mr. W. R. Ogier, is a statement that will bear a little close scrutiny. It is: "The reason for legal restraint of this art (pharmacy), is in its capacity for injuring the people, and it is the legal regulation which has given it such impetus toward the status of a profession as it has so far attained." With the conclusion reached in the paper, that it is useless to seek to obtain by legislative enactment a higher educational requirement in pharmacy than demanded by popular sentiment, we have no quarrel, nor with the line of reasoning employed; but the cynical assertion, that a calling which has done so much for humanity is indebted for such shreds of dignity as it still possesses, to laws intended for the restraint of the unskilled and unscrupulous, is too strong even for our well-seasoned stomach. Pharmacy is an ancient calling, while the laws regulating dispensing are of comparatively recent date. If legal restrictions can add dignity to the pursuit, the professional plane of the modern druggist should be far more exalted than that of the apothecary of fifty years ago. If this is true, all our veterans who have experienced both the old and the new are woefully mistaken, for they are constantly telling us that the status of the pharmacist has suffered a very serious decline during the last few decades. No, the standard of a calling does not depend upon laws governing the vicious and unfit, but upon the character of the men who follow it, and the importance of their work in the community. We might say with equal justice that the appreciation of an honest citizen is directly proportional to the stringency of the laws against thievery.

"COLLEGE PROFESSORS AND SCIENTIFIC FELLOWS."

The remark of Mr. F. T. Gordon, that the average druggist thought of the A. Ph. A. as a sort of close corporation composed of "college professors and scientific fellows," has led to an examination of the roll of members present at the Mackinac Island convention. The following are the interesting if not highly significant results: Of 181 names on the roll, 77 belong to retail druggists. The party contained

50 women—presumably managers of pharmacists rather than pharmacists. The roll contained the names of 23 college professors, and there were at least three on the Island who for reasons sufficient unto themselves did not register. The manufacturing branch of pharmacy was represented by 18 persons, and the pharmaceutical press by 12. Of physicians, chemists and representatives of the U. S. Government, there were 7. Mr. Gordon's average druggist seems not to have been far wrong as regards college professors, for the proportion of one professor to three druggists is considered rather high in the trade. As far as the "scientific fellows" are concerned the opinion of the philosopher in question may also be correct, for barring limitations of sex, it would not be a great mistake to place every member registered in that category. That the doings of the A. Ph. A. has not the slightest bearing on his interests, as the reflective druggist also asserts, is nonsense, for the association is occupied wholly and exclusively with pharmaceutical matters. In our opinion, the American association is more like an institution of higher learning than a close corporation, an institution admirably equipped with highly efficient teachers and apparatus, but a bit shy in the matter of scholars.

THE PHILADELPHIA C. P. HOUSE.

The P. A. R. D. Bulletin for August contains an appeal to alumni and friends of the Philadelphia College of Pharmacy for aid in establishing and putting in order the college house described in the Era two weeks ago. It seems that the sum of \$5,000 must be raised at once. It is quite possible that the entire amount will be subscribed before this paragraph reaches its destination, for we are informed that contributions from friends and generous-minded druggists are coming in with surprising liberality. If any one has it in mind to add a mite to this admirable enterprise, he will do well to be about it, before others finish it off without him. College houses, where boys of similar tastes, hopes and ambitions can flock together in the wholesome atmosphere characteristic of healthy boys, appeal strongly to the imagination. The memory of college days is a delight to everyone who has ever experienced them; the stirring events of the classroom and campus remain with us to the end. The college house, if properly managed, should intensify all these delights and add to the radiance of student days. The gentlemen who make the appeal do not say these things—they call attention to the fact that the boys will be better cared for and more cheaply housed than elsewhere—but in our opinion, the inevitable fun of student days with its wholesome freedom from the morbid, should not be forgotten. It is not the least important nor the least lasting of college influences. High spirits are a valuable possession and they should be cultivated and preserved, for a time come in every life when they are sorely needed.

WORK OF THE N. A. R. D. IN LARGE CITIES.

The N. A. R. D. Notes—they have unfortunately been scooped out of our column during the last few weeks—recently contained a discussion of the work of the organization in large cities. A letter had been circulated among the druggists of Los Angeles an-

nouncing the utter failure of the national association to accomplish any results in the larger towns of the country. This assertion—no proof was given—the Notes undertakes to refute, and it does so in a manner which is as convincing as it is clear and concise. A plain, conservative statement of the actual conditions prevailing in the thirty-eight largest cities is given, free from all unnecessary adjectives and trumpet play. The absence of all glittering prognostications gives the brief report an air of sincerity that will win for it the respectful attention of the most cynical. When failure has been encountered this fact is frankly stated. Thus, under "New York" we find: "Conditions demoralized, though schedule among largest dealers exists. On account of attempting to accomplish the impossible with the tripartite plan in 1901, the result was a miserable failure." But although weakness is so openly confessed, reports of failure are extremely few. Conditions in at least thirty of the towns are highly gratifying. Boston reports an advance of 14 per cent in about twenty-five of the leading patents, and Buffalo, that the N. A. R. D. is worth \$50 a year to every druggist in the city. In Kansas City and Indianapolis the trade in patents is still demoralized, in the former place the druggists having made the mistake of adopting too high a schedule which proved an irresistible temptation to a department store. But these cases are only exceptions which prove the rule of increased prosperity in all towns where organization has been effected. Whether the improved prices are due to the tripartite plan or to local agreements makes very little difference. The main thing is that there is actual improvement as the result of organization, and that in most cases neither organization nor agreement would have been possible without the N. A. R. D.

RADIUM STILL DISCLOSING MYSTERIES.

Our ideas about the ultimate composition of matter are still very unsettled. There was a time when we felt comfortably certain about one thing, that matter was composed of atoms and that atoms were indestructible and to be depended upon to remain as a foundation of all things. But since this prying into the revolutionary behavior of radium and its relatives began, we have been rudely jostled out of our snug belief in the stability of things. As a rule we can trust our eminent men of science to settle mysteries of this kind with ease and despatch, but the mystery of radium emanations seems too much even for the mighty intellects who we always supposed, could solve a fresh scientific mystery as easily as we can do a simple sum in arithmetic. Our confidence in the solidity of our foundations is thus shaken in more ways than one. The leaders of science are groping in darkness almost as dense as our own. A number of explanations have been offered, but most of them are so extraordinary that they have even increased our sense of insecurity. One eminent physicist suggests that atoms are not even reasonably stable, and that they are undergoing a process of evolution just as we vertebrate animals are doing, and our relatives, the plants. Another thinks that the ultimate particles, which flock together temporarily to form atoms, are nothing more substantial than little whirling manifestations of energy, what-

ever they may be—in other words that there is no such thing as matter distinct from energy, and that the one may change into the other under conditions of which we are hopelessly ignorant. In the meantime every worker who can obtain possession of a bit of the wonderful element, is revealing fresh marvels. In Canada the emanations were recently collected in much the same way as we would collect a gas, but the strange properties in regard to electric phenomena and luminosity gradually disappeared, and finally there was nothing left, not even a residue. It has also been reported that the inert gas, helium, is one of the products of radio-activity. Thirty years ago the world had made a very few discoveries in science, and concluded that it was wondrous wise—wise enough to sneer at folks who obstinately continued to believe what they could not see. At present we are becoming more modest. Radium alone is enough to knock the wind out of a century of scientific arrogance. We are just beginning to catch a glimpse of Nature's unfathomable depths.

THE DIRECT CONTRACT AND SERIAL-NUMBERING PLAN.

In the official notice of the N. A. R. D. convention to be held in the first week of October, we find the following: "In view of the association's success in establishing during the year now closing the feasibility of the direct-contract and serial-numbering plan as a remedy for business demoralization, the action taken in October with reference to extending the operations of the plan to all proprietaries handled by members of the association will stamp the Washington convention as even more epoch making than the 1902 gathering at Cleveland, where the plan was given official birth." From which it appears that the direct contract plan will loom large in the coming convention. With all its imperfections the plan does maintain prices, and in the brief time during which it has been in operation it has answered a great many arguments. Human nature is weak and prone to break promises, especially when the cash-box is involved; the plan stiffens the will by means of a penalty. Wise-acres have been telling us that the present age is the age of price-cutting, that people will not pay full prices, and that a dollar-for-dollar-goods policy will kill any preparation; the sales of the remedies thus far sold under the plan have increased in a remarkable manner. It was asserted that the labor involved in recording and numbering would swamp any ordinary establishment; but we have heard of no strikes among clerks nor nervous prostration among managers due either directly or indirectly to the plan. No doubt the details can and will be modified so as to simplify its operation, and in the end the largest penalty will be suspended over the individual most richly deserving it. If the assembly can hold out inducements so desirable or make demands so emphatic that a general adoption of the plan will follow, the cut-rate problem will be solved.

The Difference.

"Of course," said the optimist, "if a man gets into the habit of hunting trouble he's sure to find it."
"Yes," replied the pessimist, "and if he's so lazy that he always tries to avoid it it will find him. So what's the difference?"—Equitable Record.

"THE CRISIS" PAST.

To the Editor—"The Crisis Coming" appeared in the Era on July 23. The crisis in this section is not passing, not coming, but past. Some three years since, when the "nice young man" came to town, the drug business was run on an antique basis, and the pharmacist a typical Rip Van Winkle.

Shelves and bottles covered with dust, boots and shoes the chief stock; is it any wonder the physicians had to "buy a bushel of compressed tablets and distribute them themselves?" The "nice young man" opened an up-to-date pharmacy, treated the physicians right and consequently got *K's* in return.

The working-man was treated as an equal and not told "a thing was too expensive for him to buy" or that his wages were too low.

The "nice young man" made friends, increased business, and has not been worried over a crisis of any kind. The Rip Van Winkle woke up, and realized a crisis was at hand, started to be an ice-cream dipper himself; got the dust off the shelves, put in a better stock and, in fact, passed the crisis safely.

The "old man" was not winded out, but young timber puts a hustle in things.

F. Allen Brooks, Ph. G.

Manager for Russell & Lawrie, Pleasantville, N. Y.

Sayings.

Make yourself necessary to the world and mankind will give you bread.

Ignore that which you do not want to grow within you—love or hate grows.

Genius is only great patience.

Forgive thyself little and others much.

A good man does good merely by living.

He who frets because riches come not his way is a fool. Riches end at the grave, but the wealth of good deeds and a pure heart begins in Heaven.

Be true to yourself and others will be true to you.

Learn to place value.

He who won't be advised can't be helped.

The easiest way to expand the chest is to have a large heart in it.—Burt's Box Bulletin.

ERA COURSE IN PHARMACY.

Graduates for July, 1903.

Matriculation No.	Grade
3484—A. J. Gindry, care Finlay, Dicks & Co., Ltd., New Orleans, La.	94
3511—Harry Paul, 734 120th St., Chicago, Ill.	98
3401—H. W. Riess, 919 P St. N. W., Washington, D. C.	96
3428—Bertha McKay Wiegand, Truxton, N. Y.	96
3479—A. S. Hair, Brachville, S. C.	98
3724—Chester C. Hensel, Camac & Norris Sts., Philadelphia, Pa.	96

The above graduates will receive diplomas within a short time. A large and handsome engraved diploma, printed on artificial parchment, with the graduate's name engrossed, especially suited for framing will be furnished to all who request it for the sum of \$2.00. Those who desire the latter should forward the necessary fee at once to the Pharmaceutical Era.

J. P. HAYTER,
Deatur, Tex.

GEORGE W. NORRELL,
Houston, Tex.

JACOB SCHIRODT,
Terrell, Tex.

If you go to a Texas Ph. A. meeting three men you will be sure to meet, and like immensely, are the three above, who, from left to right, are the first vice-president, the secretary-treasurer and the second vice-president.

THE MAN WITH A SYSTEM.

W. C. Alpers' Card Index Systems as They Are Applied to the Filing of Both New Prescriptions and Repeats—Elaborate Checking.

Though the man with a system may not be able to break the bank at Monte Carlo, yet, when we come to pharmacy, the man with a system is a hard one to beat. Such a man is William C. Alpers. He calls it the card library index system, and it applies not only to the filing of prescriptions and their renewals but to the keeping of accounts and the buying of stock. The result is that you cannot ask Mr. Alpers a reasonable question, about a prescription for instance, that he cannot answer in a moment's time.

A study of the systems shows that they take no more if as much time as the ordinary slipshod ways. Besides, Mr. Alpers has reduced his system to a minimum of work and a maximum of expedition. The benefits, then, which are undeniable, are clearly on the credit side. The prescription index will be the only one told of this time.

First, the cards. There is one for each prescription, consecutively numbered in printing. They are eight inches long and seven and one-half inches wide or high, of thin, white pasteboard. Across the lower end, one inch from the bottom, is a perforated line, making a small strip which is divided by a second line or perforations into two halves. Both bear the same number as the main card, and the one on the left has blanks for the name of the customer and the price. The right hand strip says: "Present this check when calling for your medicine."

The main part of the card is divided by a black line into two unequal parts, the smaller one three eighths of an inch. This is for the time stamp which has blanks to show who prepared the prescription, by whom it was approved, who or, price and remarks—whether put in a drug bottle made up with an emulsifier, etc. The larger half is for pasting on the prescription.

A prescription is handled in this manner. The small strip at the lower right corner is torn off and given to the customer as a check to be returned when the medicine is called for. If the medicine is delivered the messenger brings back the check, which is kept for a time as a receipt. Then the time stamp is placed on the right side of the main card by a clock stamping machine, showing date, hour and minute. The prescription is put in the card and goes to the prescription clerk. If the customer gives a copy he gets it. If he wishes to change a prescription he gets that and the store keeps a copy on one of the cards. In both cases

whether the copy leaves the pharmacy or not—a stamp is placed on it, reading: "Copy of prescription No., copied by" The date line is filled by the time stamp.

After the prescription is prepared it is checked by a second clerk. To properly do this all weights and measures are put before the container from which the respective article is taken. For instance, the prescription may read:

Quin. Sulph.	5ij
Acid Sulph. Arom.	℥. 5ii
Strych. Sulph.	gr. i
Liq. Pol. Arson.	℥. 5iv
Syr. Zingib. q. s. ad.	5vij

Two drachms of quinine sulphate are weighed and the two-drachm weight put before the bottle from which the quinine was taken; the same is done with the one-grain weight after the strychnine sulphate has been weighed. These weights must not be used again for the same prescriptions—even if the same quantities of some other articles are wanted. In the same way two fluid drachms of aromatic sulphuric acid and half a fluid ounce of Fowler's solution are measured and put before the bottles from which they were taken, using a clean graduate for each liquid. Before the ingredients are mixed, a second clerk is called to verify. This clerk enters his name in "Approved by" and the other blanks are filled, "remarks" being used for registering any difficulties or peculiarities that were encountered, such as the size of capsules, coating of pills, excipients used. The bottle is wrapped and then the strip at the lower left hand corner comes off and is attached to the package as a means of identification.

Renewal cards are even more simple. There is one card for a day, or if that is filled—there is room to register thirty-four renewals on it—another one is taken. The number of the card is written—not stamped—in the upper left corner and is always the number that the first prescription card of the day would have. That is, if the last prescription card of the night before was numbered 2000, the renewal card of the next morning would be 2001 and the first prescription card that day would be 2002.

The renewal card remains on the desk a day and is filed with the other cards in the place its number entitles it to at night. The card is printed into two like halves. The only entries made for a renewal after the date of the day is put on, as the old number, the doctor and the price. In addition to this card on the back of the original prescription card the date is written every time it is renewed. So the clerk can tell at a glance whether he is filing the first or the fifth renewal of that prescription. The renewal cards are of the same size as the prescription cards.

SHOP TALK

ON THE RETAIL DRUGGIST AND THE A. PH. A.

"I don't see your face in this picture of the A. Ph. A.," remarked the C. P.

"What picture?"

"I mean the photograph of the people at Mackinac Island last week."

"A. Ph. A. at Mackinac, eh? I had forgotten about that. No, I don't go to those things. Mighty pleasant and improving, I suppose, but—"

"But, what? Don't you know that the A. Ph. A. is practically the only association trying to develop the professional side of your business?"

"The professional side of my business! That's good! Why, man, it keeps me so busy hustling to get any business at all that I haven't time to remember about any professional side."

"Still it has a professional side, you know, and it needs developing."

"Oh, yes, I dare say! You mean the prescription business, of course. But if only \$2 worth of prescriptions, mostly hand-me-downs, come in a day, and I can't afford to pay a great deal of attention to the fine points of prescribing without neglecting more important things."

"You haven't got the proper spirit."

"Perhaps not! Maybe if I had more of the dispensing to do, I'd have more of the spirit too."

"And then again if you had more of the spirit, you might have more of the dispensing to do."

"That's what the journals and the college people are always telling us. 'Be up in science,' they say, 'and show the doctors and the people that you know a thing or two, and you will have the respect of the community.'"

"Well!"

"I've got the respect of the community, all right, but that doesn't pay the rent."

"Nor your fare to Mackinac Island."

"Exactly! I've got a microscope in the back room that has not been used for months, and an analytical balance that has rested for years. Now, if I could sell those, and if I had time and if Charley didn't have to have a vacation, and if the children didn't need school outfits next month, and if there weren't so many bills that I haven't seen my way to meet yet, and if—Oh pshaw! What's the use!"

"Well, cancel all those 'ifs.' What then?"

"Then I might have gone to Mackinac. That is, if you include all the other 'ifs' that I didn't mention."

"There are some difficulties in the way, I admit," said the C. P., thoughtfully. "But how about the druggists who did go? They didn't worry about any difficulties."

"That's it! It's only when a man gets beyond his difficulties that he can attend those meetings and take an interest in the development of pharmaceutical science."

"You mean that a pharmacist with difficulties wouldn't go there to get them fixed up."

"Precisely! Pharmaceutical science is a beautiful study, very interesting and all that, but it's like art or literature or pure science. It must be cultivated for its own sake. You've got to have time and money to spare."

"I don't believe it, and I won't believe it!" shouted the sage, waving his arms with such energy that his hat rolled half way across the floor. "You are one of those ice-water pessimists, who are helping to keep pharmacy from taking its proper place as the noblest of all professions."

The druggist looked at him a moment from between half-closed lids. "Come down!" he said. "Come down to practical, solid earth. You're away up there

among the clouds. Take a sedative. It is several years since you quit the business and have forgotten."

"Nonsense! I have just as much sense as ever. Those druggists who went to Mackinac, went there because they had cultivated the scientific spirit and had made it pay. Else how could they afford to go? I couldn't afford it myself, and I have lots of time."

"Look here!" said the druggist. "How many of the folks in that picture are actively engaged in the retail drug business?"

"What do you mean? They are all more or less closely connected with it—"

"Of course—of course! Otherwise they wouldn't go. But, let's look at it. Do you think more than fifty per cent. are real druggists?"

"Why, certainly! Who ever heard of such a thing?"

"Not so fast! Here are about two dozen college professors, pretty nearly twice as many manufacturers and wholesalers, the usual quota of traveling men, some analytical chemists, a bunch of press representatives and a number of ladies. Take all these out of the picture and see how many you have left."

The sage said nothing, but scowled at the picture. "Nice looking people, aren't they?" said the druggist.

The C. P. seemed oblivious to everything. He stared every member of the group out of countenance in turn. Finally, with the effect of an explosion, he exclaimed:

"What's the matter?"

"With the A. Ph. A., do you mean? Nothing! It is doing noble work. The science and profession of pharmacy is very much indebted to the association."

"But why don't druggists take more interest?"

"I don't feel competent to figure that out," said the druggist. "It all seems so far away from the every-day drug business."

"It ought not to be far away," replied the sage.

"If druggists are far away from science and their own profession, so much the worse for them. The science of pharmacy is not going to decay. It's got to advance and it is going to in spite of you—you mossa-backs."

"Thank you!" said the drug man, bowing with mock gravity. "I'm glad to know that the fault is all ours. I thought it might be that the science of pharmacy, while not in process of decay, had left the retail end of it and had gone visiting the other branches of the trade."

"Eh?" said the sage. "I don't understand."

"Much of the science is connected with the preparation of remedies, and you know that is now done mostly on a large scale."

"Ah! I see. But there is still much manufacturing that the pharmacist could profitably do himself."

"True! But does he?"

"N-no! Perhaps not. It is so much easier to buy ready-made."

"That, I think is the true reason for the growing distance between the A. Ph. A. and the practical druggist."

"Which is to blame, the association or the druggist?"

"Neither. They have developed naturally along different lines. Plenty of plans have been proposed for bringing them together. Even advertising has been suggested. But it won't work. The proceedings are valuable to the druggist and might be made more so, I have a set covering a number of years."

"Worn out, I suppose."

"I never use them, and have never more than skimmed through any article in any of the volumes."

"You ought to be ashamed of yourself."

"Yes, I dare say. But you see, that is the way it

"And the future?"

"The A. Ph. A. will continue to be a power in matters pertaining to the chemistry and botany of soap, and there will be enough and even an increasing number sufficiently interested to make a success of

"And the retail druggist?"

"He will go to the meetings occasionally, when he can afford it and has time."

"The A. Ph. A. is all right?"

"Who said it wasn't? At the same time, there are a lot of things that are all right, as you say, which the average druggist can't afford."

AVERAGE DRUGGIST'S "DENTAL BOOKLET."

Average Druggist's "Dental Booklet" was uniform in style, type and arrangement with his previous one on "Toothbrushes." The subject was "The Nature, Uses and Necessity of Dental Preparations."

"Last week," it began, "we tried to tell our customers something about toothbrushes. This week we want to tell you something about the natural accompaniments of toothbrushes—toothwashes, tooth powders, tooth soaps, etc., etc."

"Our window this week illustrates what we tell you in this booklet. You will find there not only samples of all the kinds and sizes of dental preparations of merit—our own make and those of reliable manufacturers—but also specimens of the raw materials that go into the final preparations. It seems hardly necessary to tell any one that there is serious danger of ruining the teeth by using poor dental preparations, yet very few people stop to consider that there is a limit of price below which good material cannot be used and are deceived by gay colors and strong perfumes that are used to disguise the rankness of cheap stuff. Our business motto is: 'Don't buy anything that is offered you at less than the cost of good materials. Such cheap trash costs the most money in the end!'"

"In dental preparations 'cheap bargains' mean eventual ruin of the teeth and, at the least, the spoiling of their appearance. The chalk used as the base is full of grit and scratches and wears off the enamel, but worse even than the chalk is the pumice stone, emery, marble dust, etc. that are put into some powders that are highly lauded for 'whitening the teeth.' They do whiten them—at the cost very often of the tooth itself. Some toothwashes for whitening the teeth gain this property from the addition of an acid, which soon corrodes the teeth, others are simply highly scented mixtures of the cheapest soap and alkali—still others have no virtue above that of plain water. There is equal imposition in tooth soaps and pastes—the bargain kind have as their chief ingredients miserable stuff that you would never think of putting near your nose, let alone your mouth, if it were not for the strong scent that covers the natural properties of the materials."

"And, after all, there is no excuse for the use of fraudulent and fraudulent materials in dental preparation. Poor grades imply either fraud, in making you pay the price of genuine materials, or ignorance, in lacking knowledge what is right and proper to use. The best and purest drugs and other materials that go into dental preparations are easy to get if one wants to get them and knows how. We have learned where and how to buy the best grades of such articles and have a laboratory in which we test them after they are bought, to see if they come up to our standard, as well as the quality of the article made. Neither is there any mystery about the making of tooth washes, tooth soap and such like, nor are there any wonderful ingredients unknown to the man of science that are secreted in the claim of quacks notwithstanding. If you are interested in the manufacture of these things, stop in any day this week at 2 p. m. and see in make our dental preparations—we devote an hour each afternoon to making up small lots of various

articles right where our customers can see everything we use and how we go about it.

"And now a little about our goods. First our tooth-powder. The basis of the several varieties we offer is the finest English prepared chalk, the so-called 'precipitated' chalk is liable to be crystalline and gritty, and to scratch the dental enamel. To the chalk we add powdered orris root—the finest scented Florentine orris only—then other ingredients are added according to the kind of powder, such as camphor, castile soap, myrrh, charcoal. Then the desired perfume, peppermint, wintergreen, rose, etc. For ordinary use we recommend our Saponaceous Dentifrice; for those who do not like the taste of soap, our Myrrhine dentifrice.

"Then we have a camphorated tooth powder, good when gums are tender or the breath is bad, and an antiseptic tooth powder that contains menthol, is excellent for preserving the teeth. The Saponaceous Dentifrice is the best for most purposes. The mild alkaline action of the soap neutralizes the acids often found in the mouth and also destroys many kinds of germs that cause decay. We do not think you will find the soapy taste offensive, as we use a very pure grade of Castile Soap and have hit upon a combination of aromatics that completely masks what little taste this soap has. Don't forget that we can give you any of these kinds of powders flavored with rose, teaberry, or mint, and if you order a pound at a time we will add to it any flavor that you desire.

"We recommend as the handiest way of buying tooth powder our 25-cent bottles with sprinkler top, our half-pound and pound sprinkler top cans, costing 50 and 75 cents, respectively. We have neat little boxes of our powders which we sell for 10 cents, and we can sell you as little as 5 cents worth of the standard kinds—but this is wasteful.

"Our 'Orrisine Dentifrice,' we believe is the result of years of experiment and study and consultation with the highest authorities on the care of the teeth, and every bit of material in it is of the best quality. It will not whiten old yellow or discolored teeth, but it will keep your teeth sound and white if you use it properly before they are too far gone. The basis of Orrisine is pure castile soap, dissolved in a mixture of alcohol and water (the alcohol to preserve the solution), to which is added the most approved antiseptics and an aromatic and sweetening elixir. You will find the 25-cent size—holding two full ounces—in a sprinkler topped bottle the most convenient size. In bulk we sell Orrisine at a dollar a pint, sixty cents the half-pint, and we furnish the bottles. We also have a tooth wash in which myrrh and borax are used, good when the gums are tender and shrunken, and an antiseptic dentifrice containing borax, eucalyptus, menthol and camphor that we recommend for use when the teeth are badly decayed or the breath offensive.

"Our Tooth Soap is really nothing but our best toothpowder worked up with pure castile soap and glycerine. We make it chiefly for such of our customers as like a handy, portable dentifrice combining the virtues of both a tooth wash and a tooth powder. This we have in only two sizes, a neat little ten-cent cake in an aluminum box and a 25-cent size in an aluminum case. Our tooth paste is very like the soap, only softer and in a collapsible tube."

Be in Earnest.

Earnestness is potential success. A thoroughly earnest man never failed. In the nature of things he cannot fail. If a man fails he is not earnest enough. You say, count the circumstances. I do take account of the circumstances. That is what makes me say it, because a man or woman who is sufficiently in earnest is the mightiest of circumstances. I admit circumstances—they are real—but the mightiest circumstance is the rounded man or the rounded woman. No weapon has ever been forged, nor ever can be forged, that will play successfully against the earnest man or the earnest woman—Burt's Box Bulletin.

JUSTUS VON LIEBIG.*

By WILLIAM C. ALPERS, Sc. D.

JUSTUS VON LIEBIG was born May 12, 1803, at Darmstadt in the Grand-Duchy of Hesse, where his father earned a moderate living as dealer in groceries and dye-stuffs. The desire to produce new colors for his paints made the father try a variety of mixtures and experiments at which the son willingly assisted, and thereby already in early childhood acquired a liking for experimenting with chemicals. The natural aptitude of the boy for such work and his desire to know more about the nature of the changes of the mixtures induced him to read all books on chemistry and pharmacy that he could find, and in his fourteenth year he had not only studied all the works of the ducal library that related to these subjects, but also tried the experiments described therein as far as his means allowed him to do so. No wonder that in such private studies he neglected his regular school lessons, was considered a lazy dreamy scholar, and often reproached on account of his "ridiculous notions and hobbies."

In order to satisfy his inclinations to experiment with chemicals, Justus Liebig was, in his fifteenth year, sent as apprentice to an apothecary in Heppenheim, as the only place to perfect himself in chemistry. Thus this great chemist started his career in a pharmaceutical laboratory and, although he soon looked for a larger field of usefulness, he never forgot his first occupation, and devoted a great deal of his later labors to the elevation and perfection of the pharmaceutical profession.

Already, before his departure for Heppenheim, Liebig had made repeated experiments with fulminic acid and silver fulminate and continued them stealthily in his apprenticeship. But the shop of a country apothecary was not the proper place for the instruction of this ambitious youth, and when one of his experiments ended with a violent explosion, his apprenticeship came to a sudden end, and young Liebig returned to his father's home.

The next year, 1810, he attended the lectures on chemistry of Professor Kastner at the University of Bonn and afterwards at Erlangen. It did not take him long to discover that he would never succeed in his efforts without first acquiring that general broad education that he had neglected in his former years and which is the foundation of all scientific success. Besides his studies in natural science and chemistry he therefore devoted a great deal of time to perfecting himself in these neglected disciplines, and in this way he succeeded in obtaining the degree of Doctor of Philosophy as early as 1822, his nineteenth year.

In these efforts to acquire a thorough general education, young Liebig appears as a shining example, particularly to the leaders of many American colleges, who stubbornly adhere to the delusion that young men can be taught to be accomplished physicians, lawyers, or pharmacists, without possessing a thorough preliminary education.

The doctor's gown, however, was not the goal of Liebig's ambition. His eyes turned towards Paris, the Mecca of chemistry at that period. Here chemistry had been taught at the end of the eighteenth century by such masters as Lavoisier, Morveau and Berthollet, and at the beginning of the nineteenth century their places were occupied by Proust, Chevreul, Thenard, Dulong and, above all, the immortal Gay-Lussac. Supported by a stipend of the Granduke of Hesse, Liebig went to Paris. Again he continued his experiments on fulminic acid, and we cannot help admiring how the thought that he conceived when a boy pursued him ceaselessly, and his mind could not rest until he had completed the invention and thereby made an important step toward the foundation of organic chemistry.

Already in the following year, 1823, Liebig suc-

ceeded in obtaining permission to read a paper on silver fulminate before the Paris Academy of Science. How the heart of the young reformer must have beaten when he undertook to develop and prove new principles in chemistry and expose himself to the criticism of the old infallible professors! But this lecture, the result of his thoughts since his childhood, became the mark-stone of his life. When the excitement and admiration of the courage and ingenuity of the young scholar had abated an elderly man approached him. His mild, clear eye looked at young Liebig with benevolence, and with a friendly voice he inquired after his home, education, means for studying and other private affairs. Liebig answered him willingly and in his confusion over the friendly interest of the stranger he forgot to ask his name. This sympathetic scholar was the great Alexander von Humboldt, who by mere chance had attended the meeting of the academy, listened to Liebig's paper and henceforth became his most loyal friend and patron. His quick eye and sharp judgment had discovered in the young, pale referee the mental giant who was destined to create a new era of science.

Recommended by Humboldt, the famous Gay-Lussac took the young student into his private laboratory as his assistant. For one year Liebig remained in Paris and, under Gay-Lussac's guidance, learned all the chemistry of those days. Then he returned home in order to make use of his excellent knowledge and begin the great reformatory work that filled his soul.

But many obstacles stood in his way in his little native State, where smallness of mind and jealousy seem to have been the leading elements in all public affairs. In the first place the University of Giessen in Hesse refused to recognize the degree of doctor obtained in Erlangen, and Liebig had to pass a second examination before he gained recognition. This bitter experience induced him later, when his influence had become a power, to agitate in every possible way against such narrow-mindedness, and it is owing principally to his efforts that equal freedom and mutual recognition of all diplomas reign today at all German universities.

Here in America we are apt to smile at such smallness and petty jealousy, and yet we practice them in the same, if not a worse degree. A physician or pharmacist who obtains his license in New York, cannot practice his profession at the other side of the Hudson River, for the dignity of the independent State of New Jersey might thereby be impaired; and nearly all other States of the Union live in the same narrow relation. When will the American Liebig arise?

In the year 1824, at an age of only twenty-one years, through the influence of his friend Alexander von Humboldt, Liebig was created extraordinary professor of chemistry at the University of Giessen and two years later ordinary professor.

We might think that herewith the aim of his ambition had been reached, and that from this time he could, without disturbance and in comfortable circumstances, devote himself to his work as a teacher. But far from this; for his worry and troubles had only just commenced.

"A professor of chemistry," exclaimed the old-school professors in disgust, "a mere youth of twenty-one years without name and reputation! And what is chemistry? Nothing but useless experimentation!"

Thus they spoke, and refused to recognize the "prince's favorite" as their fellow, and Liebig had to fight from the first day of his professorship with envy, jealousy and disfavor. Nor was this all. As one of the conditions of his new position he had demanded a laboratory, and he received a room with four bare walls, the rest he might arrange himself. His yearly salary was 800 florins, about \$400, and half of this sum he spent at once for the equipment of his laboratory, adding yearly to it an equal sum, so that when after many years' privation and labor his world-renowned laboratory was completed, nearly every apparatus was his personal property. But in spite of all obstacles, in spite of envy and jealousy, the young reformer

* Read at the meeting of the American Pharmaceutical Association, Mackinac Island, Mich., August, 1903.

pursued steadily the great work that he had made the task of his life, and the small University of Giessen, little known before that time, soon became the gathering place of a band of chemistry, and students flocking were not only from all parts of Germany, but also from England, France, and America.

Liebig received many tempting calls to larger fields of work at other universities, but he steadily declined them, preferring the modest surroundings of his native home. But finally, when the cavils of his superiors became more and more unbearable, when he was repeatedly refused an increase of his niggardly salary and not a penny was granted him for his world-renowned laboratory, he accepted in 1852 an honorable call to Munich, where he remained to the end of his life. In accepting this position he made it a condition that he should hereafter be free from the practical instruction of his students, leaving this work to his assistants, while he himself could now devote his whole time to research and scientific work. Thus he could not only live free from care, but full recognition of his merits became his well-earned reward.

In 1845 the Grand Duke of Hesse had invested him with the hereditary rank of Freiherr with the title of Baron; in 1860 he was president of the academy of sciences and general conservator and guardian of all scientific collections of the kingdom of Bavaria. He received decorations from many German princes, and scientific societies at home and abroad made him their honorary member, among others the Philadelphia College of Pharmacy.

Liebig died April 18, 1873, in the seventieth year of his age. His native city of Darmstadt honored his memory with a bronze bust, the German Chemical Society in conjunction with his many friends and pupils erected in 1883 in his honor a marble statue at Munich, and in 1890 a monument was dedicated to his memory at the University of Giessen.

To enumerate the many essays, treatises and books with which Liebig enriched the literature of chemistry is beyond the scope of this paper. During the twenty-six years of his professorship at Giessen he contributed more than two hundred papers to various scientific journals, most of them written by himself, some the joint work with other investigators, principally with his friend Woebler of Göttingen. In 1832 Liebig, with Professor Geiger of Heidelberg, founded the "Annalen der Chemie und Pharmacie," and for many years conducted this excellent journal. There is scarcely a volume without some important paper by him. He also was for many years editor of the "Jahresberichte der Chemie." In 1839 he contributed his "Handbuch der organischen Chemie" as a part of Geiger's "Handbuch der Pharmacie," and in conjunction with Poggeendorff he published from 1847-64 his famous Dictionary of Chemistry (Handwörterbuch der feinen und angewandten Chemie).

In 1840 his great work "Organische Chemie in ihrer Anwendung auf Agricultur und Physiologie" (Organic Chemistry in Its Application to Agriculture and Physiology) appeared and marked an epoch in the development of chemistry. It can be said that from that day chemistry ceased to be a mere experimental art, and was recognized as a science by even its strongest opponents and critics. Soon after, in 1842, he published "Die Thierchemie oder organische Chemie in ihrer Anwendung auf Physiologie und Pathologie" (Animal Chemistry, or Organic Chemistry in Its Application to Pathology and Physiology) which was soon followed in 1847 by "Chemische Untersuchungen über das Fleisch und seine Zubereitung zum Nahrungsmittel" (Chemical Examination of Meat and Its Preparation for Food), and in 1848 by "Die Ursachen der Saurebewegung im thierischen Organismus." Soon after in 1855, appeared "Grundsätze der agricultur Chemie" (Elements of Agricultural Chemistry) which was supplemented in 1856 by "Theorie und Praxis der Landwirtschaft" (Theory and Practice of Agriculture). His best known work probably is his "Chemische Briefe" translated into English under the title of "Familiar Letters on Chemistry" (1844) in which he explained chemistry and its processes in popular manner

to the lay and spread understanding and interest in his new science among the public. These letters were translated into nearly all languages and gave their author renown and popularity all over the world.

Liebig's greatness and his influence on the development of chemistry can be classified under four headings: (1) The Effect of His Giessen Laboratories; (2) Improvement in Methods of Investigation and Apparatus; (3) Discoveries of New Facts and Development of New Theories; (4) Application of Chemistry to Physiology, Agriculture and the Arts.

To fully understand the importance of Liebig's laboratory in Giessen, we must recall the deplorable condition in which chemistry existed before his time. The only place where a young man was supposed to perfect himself in chemistry was the apothecary's shop, and chemistry was then little more than a very subordinate adjunct to the general pharmaceutical education. It is true, some distinguished teachers, like Kastner, Gay Lussac and others had private laboratories. But these were often little more than a room in the cellar with a large hearth, or a part of the domestic kitchen in the professor's household, and wherever they assumed large proportions, they were jealously guarded and entirely excluded from the use of the public or even the students. When therefore, Liebig undertook to create a general laboratory in which every student should have equal opportunities, we can imagine what objections were raised, what obstructions put in his way, and to what criticism and ridicule he exposed himself.

If in spite of these obstacles the young scholar carried his enterprise to a successful end without any means but his niggardly salary, we must admire his never-tiring energy, his persistency of purpose, his grand confidence in the ultimate outcome. And when finally his laboratory in its completion was commanding the admiration of the world, and Giessen became the gathering place of all students of chemistry, Liebig showed no pride nor jealousy in guarding the results of his efforts for himself. Nothing can show his total disinterestedness and devotion to science better than the zeal with which he encouraged other universities to also establish similar institutions and the willingness with which he put his experience at the disposal of others.

The young men, however, who had sat at the feet of this great teacher, went out from Giessen like a host of missionaries, and carried the enthusiasm and earnestness of their master all over the world. It was therefore the crowning satisfaction of his useful life to see at nearly every university in Germany one of his scholars active as teacher, and not only in Germany, but also in the United States of America. At the celebration of the anniversary of his birth that the Chemists' Club of New York arranged last April, there were seven professors of chemistry at America's high schools present, beside a number of practical chemists who had listened to Liebig's lectures. Thus Liebig made the teaching of chemistry possible, and as a just tribute there should be a bust of this great reformer in every chemical laboratory.

But it is questionable if energy and persistency alone would have brought success to Liebig's enterprise if he had not also possessed a wonderful definiteness and inventiveness. No sooner had the first step to the establishment of the laboratory been taken when Liebig recognized the necessity of finding better and more practical apparatus than was known at that time. His inventive genius busted itself with every detail of the laboratory, and new devices and apparatus were produced incessantly. If we read his contributions during the first ten years of his professorship at Giessen, we are amazed at the productiveness of his great mind; hundreds of small apparatuses and methods for using them, that today every student finds ready on his entrance to the laboratory, were new at that time and first introduced by Liebig. It is impossible to enumerate them here, mention may only be made of his condenser, the Liebig condenser, now an every-day apparatus everywhere, the gas-bottle (Gas Krug) which later developed into the well known

siphon for carbonated water, his accurate method for determining urea in a solution, the methods of analysis of natural alkaloids and the discovery of their determination by means of their chloroplatinates. Liebig's greatest invention, however, in the line of new chemical apparatus, was the combustion stove for elementary analysis which is used today in almost the same form in which he invented it. It may well be said that if Liebig had done nothing else but give this apparatus to chemistry, his name would on that account alone be immortal.

It is natural that a man of such creative mind should not only use his qualities to invent new apparatus, but also enter deeply as a discoverer and explorer into the unknown fields of the science that he created. This discovery of new facts and the development of new theories were therefore the natural outcome of his mind. We owe Liebig the method of analysis of mineral waters, and the separation of cobalt and nickel, as well as the establishment of hundreds of other facts. He experimented with the action of chlorine on alcohol and discovered chloroform and chloral, not thinking that these articles would a generation later be manufactured in thousands of pounds. The theory of ether formation, and the discovery of aldehyde was his work, as well as the discovery of hippuric acid, kreatin, tyrosin and many other substances. But all these discoveries, important as they are, were overshadowed by the greater one—the foundation of organic chemistry.

In conjunction with his friend Woehler, Liebig established as the first one the fact that carbon and hydrogen compounds, so-called radicals, form the basis of all organic bodies. The idea itself was not new. Already Lavoisier had hinted at such a possibility, and Gay-Lussac and Ampere had written a number of papers on this subject. Davy also experimented in this direction, and the analogy of ammonia in its resemblance to alkaline metals was a powerful incentive for every investigator. But none succeeded as Liebig and Woehler did, who, during their experiments with oil of almonds showed that the compound benzoyl, as they called it (C_7H_5O), was a constant part, or radical, of a great series of compounds. When this discovery was announced to the world, the great Swedish chemist, Berzelius, proposed the name "orthin" (from the Greek word meaning dawn) for it to indicate that a new day in science had begun.

The question has sometimes been raised whether Liebig or Woehler deserves the name of father of organic chemistry. Neither made this claim during his lifetime, and it may justly be stated that they both are entitled to this distinction. Their joint paper on benzoyl will give them undisputed places among the immortal giants of science.

After the year 1840 Liebig turned his thoughts to the practical side of chemistry and his later years were mostly employed in the application of chemistry to physiology, agriculture and the arts. As in every branch of science that he grasped, so also here he not only became expounder and instructor, but reformer. The well established truth that every living organism needs nitrogenous and carbonaceous food in proper proportion and will suffer more or less if one or the other is deficient is a trite doctrine today, taught to children in every school. Not so in Liebig's time. Pathology and medicine in general were greatly influenced by pure philosophy and it little occurred to the physician of those days that diagnosis must be the result of observation. It was Liebig's influence that banished philosophical doctrines from medicine and revolutionized the whole science. It may well be stated that without Liebig, medicine could not have made the gigantic strides of the last fifty years, nor would chemistry have been called upon to furnish medicine the means for such progress.

Liebig put his teachings at once into practical use and his "Meat Extract," his "Infant's Soup," his "Health Bread," and other preparations, were the result of his new doctrine. Even if some of these preparations have since disappeared and others did not fulfil the expectations in every respect, they served to

make the nourishment of children and patients a subject of study and thought, and to shatter the old erroneous conception of nutrition and digestion.

His investigations on nourishment, however, did not stop here; he also drew the growth and development of plants into his sphere. And here again he became a reformer whose reforms may better be called a revolution.

American agriculturists who have lived all their lives on the naturally fertile rich soil of the Mississippi valley often express surprise that the small area of European countries like Germany, France and England should be sufficient to produce even the necessary garden products and vegetables for the large population that lives on them. It is true these countries could not produce what they do if the wasteful methods of our Western farmers were adopted. But since Liebig, the European farmers apply chemistry to their work and provide the soil with the correct material for the production of the desired crop. Liebig showed that the air as well as the soil furnish the plant with nourishment; from the atmosphere are drawn water, carbonic acid and ammonia, while the mineral constituents, as potash, soda, lime, iron, manganese, sulphuric acid, phosphoric acid and silica come from the soil. The former furnishes an unlimited supply, but the resources of the soil are limited and therefore can be exhausted. When this is done the soil becomes barren. Liebig demonstrated that the absence of even one of the necessary substances of a plant, however minute it may be, will render the soil unproductive as far as that plant is concerned. He showed the advantage of rotation of crops and recommended artificial manure to restore whatever had been removed by last year's growth. By these teachings, Liebig made the soil more than twice as productive as it formerly was. The German agriculturists fully realized the valuable services that Liebig had rendered them and honored him repeatedly by donations and dedications of various kinds.

It can be understood that a man of such vast gifts and such mental productiveness should be attacked and have ample opportunity to defend his discoveries and theories. In his arguments Liebig was clear and convincing, as a critic he was unsparring and sometimes bitter, but he always paid the greatest respect to truth and candor. He was a master of scientific initiative and possessed the high power of generalization united to indomitable perseverance.

When Liebig demonstrated his combustion apparatus for elementary analysis for the first time to a number of scientists he closed his remarks with the words: "In this apparatus there is nothing new but its simplicity and thorough trustworthiness." In this description of his greatest invention he had at the same time given a description of his own character. There were two qualities that secured his success: simplicity and reliability. Hospitable, courteous, and kindly in his daily intercourse, he led the simple, quiet life of a German professor, and assumed no airs of superiority even when he was generally recognized as the greatest authority on chemistry. His genius was versatile, his products various, but he never proved false to the two requisites of science—simplicity and reliability. He was an enthusiast as to America, whence some of his best and most devoted scholars came, and where he had more readers than in any other country; it is said that at one time he even entertained the idea of making the United States his residence.

"Split" His Chances.

"I split the whistle," said the smart young man, as he rushed from the office while the noon whistle was still blowing. "Likewise your chance for promotion," remarked the manager, as he entered the name of a duller, but more faithful clerk at his desk for an important position recently vacated.—The Ad-Writer.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries to this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Frosting Glass.

(Z. G. J.) The appearance given to window glass by roughening the surface may be imitated by painting ordinary glass with lead acetate ground in linseed oil. The paint is applied as any other.

The Era Formulary gives the following formulas for permanently "obscuring" glass:

Tip a piece of flat marble into glass cutter's sharp sand, moistened with water; rub over the glass, dipping frequently in sand and water. If the frosting is required very fine, finish off with emery and water. As a temporary frosting for windows, mix together a strong, hot solution of Epsom salt and a clear solution of gum arabic; apply warm. Or use a strong solution of sodium sulphate, warm, and when cool, wash with gum water. Or daub the glass with a lump of glazier's putty, carefully and uniformly, until the surface is equally covered. This is an excellent imitation of ground glass, and is not disturbed by rain or damp.

Imitation Ground Glass.

Sandstone	2½ ounces
Mastic	1 ounce
Ether	21 ounces
Benzine	16 to 18 ounces

This mixture is to be painted on the glass.

Glass may be etched with hydrofluoric acid as described in the Era of August 6, 1903, page 140. "Hoar-frost" glass, so called from the pattern made upon it, which resembles the feathery forms traced by frost on the inside of the windows in cold weather, is said to be made as follows:

The surface is first ground either by sand-blast or the ordinary method, and is then covered with a sort of varnish. On being dried either in the sun or by artificial heat, the varnish contracts strongly, taking with it the particles of glass to which it adheres; and, as the contraction takes place along definite lines, the pattern retrieved by the removal of the particles of glass resembles very closely the branching crystals of frostwork. A single coat gives a small, delicate effect, while a thick film formed by putting on two, three or more coats, contracts so strongly as to produce a large and bold design. By using colored glass, a pattern in half tint may be made on the colored ground, and after decorating white glass, the back may be colored or gilded.

Lysol: Solution of Cresol.

(N. I. G.) According to Collyett ("Newer Remedies") the fraction of coal tar which boils between 160-230 degrees C. is dissolved in fat, and subsequently saponified. It forms a clear, brown, syrupy liquid containing 50 per cent of the cresols; it is miscible with water, forming a clear, saponaceous, frothing liquid. With all other solvents it is miscible in all proportions. The strength of the solution employed is usually 0.3 to 0.2 per cent.

A series of formulas for the preparation of solutions

of cresol are in existence. The following are those appearing in the report of the Sub-Committee on Construction of Formulas, read before the recent meeting of the A. Ph. A. and recommended for adoption in the forthcoming edition of the National Formulary:

Solution of Cresol (or disinfectant):	
Cresylic acid.....	625 grams
Potassa	18 grams
Resin	125 grams
Water to make.....	1000 grams

Heat the cresylic acid and resin together in a suitable dish until the resin is dissolved. Dissolve the potassa in eighty grams of water, add to the resin solution and boil until the latter is completely saponified, and the liquid has become clear. Cool and add enough water to make 1000 grams.

Saponated Tincture of Cresol.

Cresylic acid.....	350 grams
Soft soap, U. S. P.....	450 grams
Alcohol, a sufficient quantity to make	1000 Cc.

Dissolve the cresylic acid and soap in the alcohol, filter and add enough water through the filter to make 100 cubic centimeters.

"Liquor Cresoli Saponatus" is official in the German Pharmacopoeia.

Syrup of Poppies.

(W. A. S.) The formula of the Italian Pharmacopoeia of 1876 for "syrupus papaveris" directs that 1 part poppy capsules, without the seeds, be made into an infusion with 8 parts of water at 60 degrees Reaumur, the resulting liquid strained and filtered and to which are added 4 parts of sugar, the mixture being then evaporated to the consistency of a syrup. An alternative process is also given in which an alcoholic extract is dissolved in simple syrup. Neither of these formulas is to be preferred to that for the National Formulary preparation, which does not so readily ferment. In our own experience we have found the formula of Prof. Procter to be as satisfactory as any. It follows:

Poppy heads.....	16 ounces
Diluted alcohol.....	4 pints
Sugar	30 ounces

Deprive the poppy heads of their seeds; bruise them thoroughly, macerate them in twice their weight of diluted alcohol for 2 days, express powerfully, add the remainder of the diluted alcohol; and after 24 hours again express; evaporate the liquid to 1 pint, strain, and add the sugar, and dissolve by the aid of gentle heat.

Colored Sand.

(S. A. L.) The Techno-Chemical Receipt Book is authority for this information: Sift fine white sand from the coarser particles and color it as follows:

1. Blue—Boil 100 parts of sand and four of Berlin blue with a small quantity of water, stirring constantly, and dry as soon as the sand is thoroughly colored.
2. Rose colored sand is obtained by mixing 100 parts of white sand with four of vermilion.
3. Dark Brown Sand—Boil white sand in a decoction of Brazil wood and dry it over a fire.
4. Black Sand—Heat very fine quartz sand, previously freed from dust by sifting, and add to every ½ pound of it six to eight spoonfuls of fat. Continue the heating as long as smoke or a flame is observed on stirring. The sand is finally washed and dried. This black sand will not rub off.

Colleges of Pharmacy in New York City.

(F. H. M.) There are two colleges of pharmacy within the territory of Greater New York. The College of Pharmacy of the city of New York, 115 West Sixty-eighth street, New York, and the Brooklyn College of Pharmacy, 205 Nostrand avenue, Brooklyn. The Collegiate year of the former begins September 30; that of the latter September 25. The fees for the junior year are given in the catalogues of the colleges as follows: New York, \$100; Brooklyn \$85.

NEWS DEPARTMENT.

COMMERCIAL TRAVELERS

Francis Engaged.—Siller has Another Chance at that \$5,000.—Herman Gets His Grips Back, Minus the Drinkables.

Rawley Galloway of Reedsville, N. C., and well-known in the South, is on his way to Colorado to sell Sharp & Dolme goods. John L. Prior, S. & D.'s general Southern man, and Julius Foerster, general New England man, were in town last week, the latter having just returned from five weeks in Europe.

D. V. Hennicke, traveler around Cincinnati for McKesson & Robbins, is in town. He is said to be the only man who comes into the office every day on his vacation.

James Crombie, an "old timer" with Nelson, Baker & Co.'s Kansas City house, has returned from a couple of months' visit in New York and Atlantic City, and is again doing business on his Colorado run.

E. B. Wilkins, who does Western Kansas, or the "Shortgrass" run, for the Kansas City branch of Nelson, Baker & Co., and P. W. Seaton, who does South-eastern Kansas for the same firm, are taking their vacation together in Detroit. Incidentally, they are supposed to be getting in touch with "the powers that be."

Judge Rich of the Supreme court, Rochester, has granted a new trial in the case of Charles Siller, a salesman for Bruen, Ritchey & Co. of New York, against a railroad company which he wishes to hold responsible to the extent of \$25,000 for the loss of his right arm. The accident happened about five years ago and was the result of a fall. Mr. Siller ran for a train that was moving out of a station and stumbled and fell under the car wheels. His arm was amputated below the elbow. The case was tried before Judge Rich and a jury, and the latter threw the case out of court. A new trial was granted after an argument on appeal. Mr. Siller has just returned from a pleasure trip to some of the summering places near New York.

"Bart" Ross, popular traveler for Mack & Co. of San Francisco, in the Coast counties, severed his connection with the firm a short time ago to accept a position with a leading liquor house of San Francisco. But "Bart" felt lonesome away from the odor of drugs and has returned to his former employers.

P. B. Haimer was the way he gave his name in the station house at Lancaster, Pa., where he was held over night, it was alleged, that he might sober up. He said he was a drug agent and turned up at the station with a badly cut head and a story that he had been beaten and robbed by people that he did not know.

The engagement has been announced of W. H. Francis, a traveling salesman for the Langley & Michaels Co., San Francisco, to Miss Shepherd of Ventura, Cal.

Ned Clark has resigned his position with Samuel Felt of Watertown N. Y., to become the travelling representative of John Wyeth & Bro. in their Southern Territory.

The J. Elwood Lee Co. of Conshohocken, Pa., have brought Dr. Bell, their Denver representative, into Eastern territory. His present address is Philadelphia.

F. L. Herman, traveling salesman for the Des Moines Drug Co., Des Moines, Ia., missed two sample cases off the train last week near Perry, Ia. He had been traveling with a company of ball players, and 'phone messages were sent back along the road for officers to stop the players and recover the grip if it could be found. Druggist Shannon of Jamaica, learned of the loss and also remembered seeing a farmer load two sample cases in his buggy after the evening train came in. He chased the farmer into the country, where the grips, minus all the liquor samples, were found and returned to the owner.

THE BIGGEST BOTTLES IN THE WORLD.

Last week our esteemed contemporary, the Oil, Paint & Drug Reporter, said that what are claimed to be the largest glass bottles ever blown were made for exhibition at the World's Fair and that the capacity of each was 45 gallons.

In the picture below are two bottles, each holding 65 gallons. They were cast by the Whitall, Tatum Co. and are, unquestionably, the largest in the world. One of them stands in a window in their New York office, 47 Barclay street. Beside it is another bottle holding four drops. It is of the same shape as the large one and has to be filled with a hypodermic syringe. It took longer to make than the large one did.

The bottle is shaped like a nursing bottle. It is a trifle less than five feet high. The man who blew it at the Millville, N. J., factory could comfortably sleep inside of it. He exceeded by only half an ounce his instruction to blow a sixty-five-gallon bottle. The firm asserts its ability to blow a 100-gallon bottle.

Sixty-five-Gallon Bottles.

NEW YORK AND VICINITY.

SALOON MEN ANGRY.

They Get Out Warrants for Twenty Atlantic City Druggists and Have Eight Arrested—All Done for Discipline.

Atlantic City, N. J., druggists were surprised last week to learn that twenty blank warrants had been issued at the instigation of wholesale liquor men for their arrest for selling liquors in pints and quarts and in lemonades without having gone through the formality of securing a license from the city. The arrest of eight of the most prominent pharmacists followed.

The men arrested were: Harry B. Leeds, S. N. Hayes, Leeds & Deemer, William Wright, J. Shedaker, Francis H. Brennan of the Academy pharmacy, Charles E. Keeler, and H. C. Albert & Co.

The disposition is to arrange the hearings to suit the druggists. The liquor men do not want to be too hard on them, it is said, but only want to keep them from poaching on their preserves. They charge that the druggists have had the effrontery to label the bottles they sold containing liquor with their names and addresses. While the attorney for the wholesale dealers announces that the only wish of his clients is that the druggists quietly stop up and pay their fines and then discontinue the traffic as a side business the drug men are not taking kindly to the situation and are making open threats of retaliation. It is likely that the druggists will now employ agents to seek violations on the part of the saloon men. There are twelve more warrants that will likely be served soon. This means the arrest of two-thirds of the druggists in Atlantic City.

The above action is in line with an editorial in the liquor dealers' organ, Justice, the other day calling excise inspectors of New Jersey to task for not prohibiting trafficking in liquors by unlicensed druggists and grocers and calling for raids.

EVAN F. LILLY IS DEAD.

In the death of Evan F. Lilly, secretary and treasurer of Eli Lilly & Co. of Indianapolis, the trade has lost a man to whom it looked up. Mr. Lilly will be missed by those who knew him. And his circle of friends was a large one. Strong in personality and character, forceful yet genial, of clear insight into trade conditions and of excellent judgment, positive in ideas and tolerant, and, moreover, identified with the direction of a great house, it is not strange that he will be missed. The announcement of his death came as a shock to his intimate acquaintances in this city.

A native Kentuckian, his first pharmaceutical experience was gained in a drug store in Lexington, that State. Almost from its inception he had been identified with Eli Lilly & Co. Eli Lilly was his uncle and Eli Lilly's son, Joseph K. Lilly, the present president of the firm, is his cousin.

For nearly a year Mr. Lilly's bad health kept him from active work. This summer he and Mrs. Lilly made their accustomed trip to the Mackinac Island region, to their summer cottage. Just before the A. Ph. A. convened, Mr. Ridgely, superintendent of the company, visited him. He found him in such bad shape that he decided to remove him to Indianapolis at once. He was operated on for Bright's disease, by the new method, on Thursday, August 8. He recovered from the anæsthetic and the shock nicely but the poison had been so generally disseminated that he could not live, and he died the following Saturday. He was 48

years old and had never used stimulants nor tobacco. Besides his wife two children are left.

PLANS FOR THE N. A. R. D. CONVENTION.

The fifth annual convention of the N. A. R. D. will be at Washington on October 5-8. It should be the most important gathering of druggists ever held in this country. Many matters of vital interest will be considered.

Railroad rates are one and a third fares for round trip. Headquarters will be the Raleigh. The rates are \$1.50 to \$3 a day, European plan only. Other hotels selected are the Arlington, \$1 a day; Ebbitt House, \$2.50 to \$3 a day; Riggs House, \$3 a day, all American plan; and the Metropolitan, \$1 a day, and the St. James, \$1 to \$4 a day, European plan. Those who contemplate taking immediate steps to secure accommodations should write Secretary Wymond H. Bradbury of the D. C. R. D. A., 467 C street, N. W., Washington, D. C.

Every local affiliated association is entitled to one delegate for every twenty-five members or fraction and every State association to one for each 100 active members or fraction. Delegates all to be actively engaged in the retail drug business. No association in arrears for dues is entitled to representation. Dues should be paid at once to Rudolph S. Vitt, 3800 South Broadway, St. Louis, Mo.

A TOUGH CUSTOMER BREAKS LOOSE.

How would you, Mr. Druggist, like to have a huge rattlesnake lying around somewhere in your store for four weeks, while you and your clerks were on the verge of nervous prostration in the fear that the pesky varmint might make a snap at your finger or your shin at almost any time?

That may sound overdrawn, but it about describes conditions for nearly a month in the pharmacy of Charles W. Meuk, 106 Market street, Newark, N. J. The reptile escaped from one of the show windows, where it was used to advertise an oil. Where it hid no one knew. There were sleepless nights. The assistants drew pictures in their nocturnal wanderings of what they would do to that snake when they saw it. Then, the next day, they would walk around on tiptoe for fear of angering his unblushd majesty. Every corner was a sink hole of foul suspicion.

But, last week, John George Meyer, fourteen years old, general utility clerk, spotted the snake just as he was climbing up the cellar stairs leading to the street. John George Meyer yelled for the other clerks. A scoop, a net and a wire-covered box, and Mr. Snake is back in the window.

DR. GEORGE J. FERRELLER, druggist at 432 Hamburg avenue, Brooklyn, died in Lake Huntington, where he sought health. He was born in Altenburg and was a veteran of the Franco-Prussian war and was decorated with the iron cross. He leaves a widow. He was 53 years old. He was a member of the Kings County Ph. Soc.

VERY SPECIAL

A limited number of live druggists in the larger cities will hear of an attractive proposition, by communicating with

J. N. FERRIER

P. O. Box 71.

NEW YORK CITY

THE NEW SECRETARY.

Charles H. Klyachko is the able young and new secretary of the New York R. D. A., being elected at the last meeting to succeed M. G. Kantrowitz, whose removal uptown made it inconvenient for him to serve in that capacity any longer. Mr. Klyachko formerly owned a pharmacy at 41 Essex street, but sold out and is now clerking in a drug store on the West Side. He is enthusiastic and one of the workers.

NEW YORK NOTES.

**Board of Pharmacy Looking for Unregistered Stores—
Various Store Changes—Brooklyn Buying
Club is Incorporated.**

—Col. J. W. George of Schieffelin & Co., is famous on Block Island, where he spends his annual vacations. A recent issue of the Block Island Wireless daily told how he and a few other companions caught a 400-pound sword fish, 12 feet long, off the wireless station. It took one and a-half hours of hard work to pull the fish into the boat. In the same issue we find an editorial about the feat and another item telling that the Colonel played progressive whist that evening.

—Four Apothecaries' Bicycle Club members—Messrs. Sidney Faber, George C. P. Stoltzenburg and Wander and Mrs. Stoltzenburg, took a four days' trip via Reading, Easton, Allentown and Philadelphia, Pa., last week. Hugo Kantrowitz of the club was not along, as he and Mrs. Kantrowitz and their little daughter were on a vacation in Philadelphia, their old home. The club goes to Kenosha, beyond White Plains, today, having dinner in the woods.

—Another new Broadway pharmacy. This time it is at 71 Broadway, in the arcade of the Empire Building, at the rear, near Rector street. Robert E. Lane, who owns a cigar store in the arcade, is the proprietor and C. E. Carritte, manager of the Johnston Drug Co., Twenty-fifth street and Third avenue, will have charge. Charles Koch, who has been with the Johnston Drug Co. for five years, will succeed Mr. Carritte.

—The Brooklyn Consolidated Drug Co. was incorporated last week for \$10,000, to buy and deal in drugs. The incorporators were: John G. Wischerth, John O'Halloran, Thos. D. McElleney, Thos. J. France, Chas. F. Dyna and Gustav Brandus, all of Brooklyn. A meeting to elect officers and perfect business arrangements will be held tonight and everything will be in full swing early next month.

—It will be news to some that the Eastern branch of the State board of pharmacy recently collected \$2,000 in fines on sales of morphine tablets not properly poison-labeled. Had the cases all been pushed the prosecutions would have netted \$10,000. It is asserted that 90 per cent. of the retailers are selling at retail bichloride tablets without personal poison labels. This is contrary to law.

—Fire in the basement of 133 William street one night last week was kept from making sad history in the wholesale drug trade by the prompt action of the firemen, who tore up Eli Lilly & Co.'s floor to get at it. An asbestos-lined ceiling also helped. Besides Eli Lilly

& Co., Evans & Sons, Ltd., and the Grape Capsule Co. are in that building.

—Alexander Campbell, a Winnipeg, Can., druggist; George T. Miller of Pantin & White, Duluth, Minn., and T. M. Benjamin of M. F. Benjamin Sons, Riverhead, L. I., were down town visitors. So was S. A. Grove of Buffalo, who was getting some new points for board of pharmacy examination posers.

—Marcus F. Bender, the Fourteenth street druggist, is at Lake George on a vacation. Dudley T. Larimore of Fifth avenue, is doing country stunts at Plattsburg.

—Trade is "awful." No other word will describe it. Strikes and customary out-of-town conditions, good weather, etc., all contribute.

—Those who note that George H. Hitchcock is on the badge committed for the meeting here of the State Ph. A. next year wonder if it is in recognition of his having won every medal for five years in the Retail Druggists' Bowling Club. We learn that there is no connection between the two facts.

—Louis Hogrefe, who recently went from Detroit to Mexico to a responsible position, is back in this city. Mr. Hogrefe is a '97 boy, University of Michigan school of pharmacy and is also a member of the bar in Michigan and Arkansas. He has held several high political and professional places.

—Inquiry about the Columbia Drug Co., formerly at 300 Broadway, revealed the fact that they have moved to parts unknown. A complaint had been filed at Topeka, Kan., with a view to depriving them of the use of the mails for alleged failure to keep a premium promise.

—Ernest Stauffen, secretary-treasurer and general business manager of Sharp & Dohme, is back in his New York office after several weeks abroad. John J. Molloy, too well-known from his McKesson & Robbins connections to need introduction, is away for two weeks.

—Eight siphons of seltzer went off almost simultaneously in the prescription room of Bellevue Hospital dispensary. Several nurses had a panic and William Hayes, assistant apothecary, has a ragged gash torn in his forearm. Seven of the bottles were set off by the eighth.

—Hugo Simon, one of the prescription clerks with Eimer & Amend, has returned from a vacation at Sag Harbor, L. I. He reports good fishing and is much improved in health, to the satisfaction of his fellow clerks and members of the "Prosit" Club.

—Secretary Charles S. Erb of the Eastern branch of the State board of pharmacy, has personally inspected 250 pharmacies since his appointment. He has three regular inspectors besides. Just now they are looking up unregistered clerks and stores.

—David Weisberg, proprietor at 461 Amsterdam avenue, and his former clerk, V. Sapro, have opened a fine store at One Hundred and Twenty-second street and Seventh avenue, in the place recently given up by Druggist Herman Heineman.

—Druggist in College Point sold poison on prescription to board of pharmacy inspectors. The store was unlicensed, neither the proprietor nor the clerk who sold the prescription had licenses and there was no poison book.

DOCTORS WILL HELP YOU

Where there is a baby, there should be an

ARNOLD MILK STERILIZER
AND PASTEURIZER

You can sell many of them if you let us supply you with free literature with your name. Address,
WILMOF CASTLE COMPANY, 26 Elm St., ROCHESTER, N. Y.

Drug Clerks' Circle met and listened to addresses by Dr. Joseph Kahn, President Louis B. Epstein, Mr. Beck and Dr. Albert H. Brundage. Shorter courses and sanitary conditions in drug stores were discussed.

—J. E. Vetter, 1766 Madison avenue, has sold to M. T. Cooper & Co. Mr. Vetter retires from drugs to go into the real estate and building business at Richmond Hill, L. I. He had owned the store for fourteen years.

—Mrs. Lavy, the young druggist at 521 Sixth avenue, and sister, are spending the Summer season at Saratoga, where her husband will join her to take a trip to Lake George for two months.

—Isaac B. Seeley, surgical apparatus manufacturers of 36 East Twenty-third street, was badly beaten in his office last Friday by two widow cleaners, after his refusal to set them up in business.

—The store formerly owned at 521 East Twelfth street by S. M. Robinson, which was recently burned, has been reopened by Mendel Scheinberg.

—Don't forget that next Thursday is the annual outing of the Bushwick P. G. A. at Chadli's Queens Park Hotel, Queens, L. I. Good time.

—Louis Jacobson has bought the store of H. G. Printing, 1679 Seventh avenue. Mr. Jacobson was formerly manager for Hoykendorf.

—Charles J. Lynn, manager New York branch Eli Lilly & Co., went to Indianapolis to attend the funeral of Evan T. Lilly.

—Stephen Cisin, 772 Halsey street, Brooklyn, had two boys held in jail for robbing his store of \$133 in cash and stamps.

—There is a rush of prospective licentiates these days. Preparing to come in before the prerequisite laws are passed.

—Joseph H. Krause, formerly owner at 1146 First avenue, has opened a new store at 124 Wilbur avenue, Brooklyn.

—How about the man who in three affidavits before the board of pharmacy has as many dates of birth.

—Robert B. Wilson's store in Atlantic avenue, Brooklyn Hills, has been sold to Francis Clendenning.

AT ROCHESTER.

—The Crave Cure Co. has been organized here with \$10,000 capital. Application has been made for papers of incorporation. The officers are: President, L. B. Mattison; secretary and treasurer, C. E. Meade; manager, DeVillo W. Selve, all Rochester men. They expect shortly to place their specialties in drug stores.

—The store of the Paine Drug Co., wholesale and retail druggists, has been entirely renovated. A balcony has been erected extending all around the store, and a truss room built over the office. Rosewood cases have taken the place of the antiquated ones, and the woodwork of the offices, railings, etc., is mahogany.

—Two Rochester druggists recently were victims of burglars. The first instance was at the store of Hall & Birchill, where a quantity of small articles and a small amount of cash was taken. At Louis Klitzing's a quantity of brushes, cigars and perfumery disappeared.

—The new drug store of Whenton Matthews, Bronson avenue and Genesee street, will be opened next week. It is likely that Mr. Matthews will hold an informal reception. The work of removing from the old store to the new has begun.

—Mr. Hall of Hall & Birchill, is away on his annual vacation. Albert Miller, with J. A. Vanderpool, has gone to Kenka Lake. C. F. Maud, druggist at 379 Lyell avenue, who has been dangerously ill, is improving.

A BELGIAN HARE WINDOW IN SAN FRANCISCO.

Boerick & Bunyon of 231 Sutter street, have of late been making some of the catchiest displays ever seen in San Francisco. The accompanying photograph shows their unique manner of drawing attention to hair brushes of superior quality. This is but one of a number of displays in similar lines. A recent one was a copy of the Constitution draped in an American flag. Beside it was a card bearing the legend "The Constitution is all right and so will your's be if you use _____ tonic." The one of last week was particularly attractive. The window was decorated entirely in blue and in the background was a figure looking through blue goggles. A card in one corner bore the inscription, "Things would not look so blue if he used _____ tonic."

"We always strive to drive some point home," said a member of the firm in speaking of the success his advertisements had brought, "and we do it in as pithy and catchy a manner as possible."

FROM JERSEY TOWNS.

—The Bayonne Druggists' Base Ball Club will play the return game with the Elizabeth druggists at the latter's ground on August 27. In case of their defeat the "rubber" will be played at Bayonne. In all the games the proceeds go to the hospitals of the two cities. The Bayonne druggists played and defeated the Big Men's team last week, by a score of 10 to 7. A. Schleimer and Samuel Weidenheimer are new members of the Bayonne team.

—William Jones, porter in the employ of Reed & Carnrick, manufacturing pharmacists of Jersey City, was arrested for stealing a quantity of drugs from his employers. Jones' landlady tried to sell the drugs to George Bower, druggist at 578 Newark avenue, Jersey City, and Mr. Bower brought about the arrest of the pair. The case was not prosecuted.

—Dodge & Olcott, the essential oils and perfumers' supplies firm of New York City, have bought four and one-half acres of land at Bergen Point, Bayonne, and archedecks are at work and tracks are being laid preparatory to erecting a big factory that will employ 100 men, and which, when completed, will supersede the firm's present factory in Brooklyn.

—George W. Frutchey has bought the store of the Bayard Pharmacy Co. at 130 Broad street, Westfield, from the receiver, G. W. V. May. The Bayard company included J. Louis Oliff, Henry C. Wilbur and William C. Younger. Mr. Frutchey also owns a store at Boonton and a half interest in one at Jersey City.

—Charles Stuckert, the Trenton pharmacist, and W. E. Burke of Marsh & Burke, Princeton, are spending several weeks of the summer at Asbury Park. Jasper

Cadmus and wife of Bayonne, are also staying there for a long vacation.

—At the Jersey City free dispensaries in the last week 687 cases were treated and 600 prescriptions filled. Laird had 93, Newman Rescue Mission, 83; Zoeller, 63; Gallagher, 145, and Cadmus 306.

—Edward Braecklein, the Paterson druggist, gets down to Rockaway occasionally where his wife and daughter are spending the summer.

—The many friends of Harvey G. Rue, the Hightstown druggist, will be sorry to learn of the death of his son, last week.

—H. H. Wouters, the Grove street, Jersey City, druggist, returns this week from a five weeks' vacation in Europe.

NEW ENGLAND.

FOR RECREATION AND REST.

New England Is Having a Good Time, It Seems.—And Diminutive George Washingtons Need Not Tell A Lie, for They are Applauded.

Boston, August 18.—Thomas Allen of A. J. Hayman's Brookline, is on the coast of Maine, Edwin Whalen, Cambridge drug clerk, is at his parents' home in Somerworth, N. H., Herbert P. Rice of Nazie's, Charlestown, goes to his former home, Bear River, Nova Scotia, for his vacation. Morris Whalen of the Stacey pharmacy, Charlestown, is at Benedicta, Me. Miss Evans, clerk at Hall & Lyon's, Waltham, has returned from a vacation of several weeks. Ernest E. Hunt of Weldon's, Chelsea, has gone to Hudson for his annual. Daniel Twohig, clerk at the People's drug store, Malden, is on his annual vacation. Philip McGibbon, druggist in Edgeworth, is making his home for the summer in Dorchester. William Brixy, a Melrose druggist, is at Bath, Me., visiting his brother.

Walter J. Burke of Harrity's, Clinton, has taken up his duties again, after a vacation at Washacum Lake, Sterling. W. A. Allen of E. M. & W. A. Allen, Andover, has returned from a fortnight's trip through the Provinces. Otto Muller, a Lawrence druggist, is summing at Welch's Pond. Humphrey Burtou, clerk in J. J. Desmond's, Lawrence, spends the last part of August in camp on the Merrimac. Arthur Smith of the Weir Drug Co., Weir Village, had a vacation in Newport. Albert Doyle of Hillberg's, Campello, has returned from New Hampshire. Joseph Borland of Goldthwaite's, Brockton, spends the latter part of August at Wiscasset, Me. William Webb, employed at Foster's, Brockton, is having a vacation in Natick. O. A. Gould of Whiting's, Great Barrington, is at the seashore. Henry F. Chase of the Plainville pharmacy, Attleboro, is at Harwich, his place being filled by A. W. Griffith. Wilson B. Chandler, a west Springfield druggist, is on a White Mountain trip.

WHO IS TO FURNISH THE POISON BOOK?

Hartford, Conn., August 18.—There is war between the State board of health and the Connecticut druggists because of the new poison law which was to go into effect on August 1, but which the druggists, according to the health officers, have so far disregarded. The latter were instrumental in getting the law through and now they propose to see that it is enforced. It prescribes that druggists shall register in a uniform book all poisons sold, with the name of the purchaser and the amount.

The catch is over the book. The druggists refuse to furnish their own book. The health authorities are en-

deavoring to have the board of pharmacy furnish the books but that body refuses because of lack of funds. As the health officers neglected to have an appropriation made for the books, it looks as if the druggists would continue their old way of handling poisonous drugs. The health board has appealed to the attorney-general to settle the question.

WHAT COLOR MUST OUR STOMACH BE?

New Haven, Conn., August 18.—Prof. E. H. Jenkins of the Connecticut agricultural experiment station, has been making a thorough examination of the soda water syrups sold in this State and in his report he has this to say: "In Connecticut nearly all of the 500 apothecaries have soda fountains and in some cases soda water is a more important source of revenue than drugs. Of 113 syrups examined, 16 contained artificial flavors, 44 coal tar dyes, 6 cochineal, 1 an unidentified color, 31 salicylic acid and 11 benzoic acid. Out of a total of 211 samples examined 85 contained coal tar dyes. The quantity in a glass of soda or in the syrup sufficient for a glass of soda was in many cases sufficient to dye a six-inch piece of nun's veiling a most brilliant color—scarlet, magenta, crimson, orange or green, according to the dye."

IN PRISON FOR ALLEGED LIQUOR OFFENSE.

Providence, R. I., August 18.—John E. Collins, the Westerly druggist, was given ten days in jail and compelled to pay a fine of \$20 last Wednesday for illegally selling liquor. The alleged infraction of the law was committed three years ago. Since a verdict of guilty was found Mr. Collins has been out of the State. He defaulted his bond, reimbursing his sureties. When he returned to Westerly and gave himself up to the sheriff, it was agreed that half the costs of the count should be remitted.

When the case was tried before a jury nearly three years ago, a bottle seized by the officers and kept as evidence was found. When opened in court it was found to contain nothing but a mixture of witch hazel and brown sugar.

WILL BE WEARING HATCHETS AGAIN.

Boston, August 18.—A most remarkable raid by school children! It was in historic old Salem.

Advertising signs and billboards proclaiming the merits of a certain patent medicine and a notable brand of soap disfigured many a historic spot, revered in the "Old Witch City." Yea, Salem teems with the spirit of olden times. The children are taught in schools to venerate the spots which have helped to make history. Those signs advertising medicines and soap! Faugh! In several squads they demolished the signs. They were armed with small hatchets—these diminutive George Washington-Carrie Nations. The kindlings and kidlets were applauded.

THE BAY STATE.

—Thomas Walton, acting for Mrs. Elizabeth Thompson, owner of a drug store in Chelsea, in the settlement of property valued at several thousand dollars had occasion to go to Omaha. From Omaha, the story comes that Mr. Walton while there a year ago secretly married a young woman, Mrs. Thompson, who was said to be engaged to Walton, pursued him, as the story goes, and caused his arrest. Then she relented and they returned East. Mr. Walton denies the arrest and the marriage, is the Boston report, while the Omaha report says that Mr. Walton and his bride, who was a Miss Leisig, have a child, and that Mrs. Thompson has given her blessing, a half interest in the drug business and \$50, to make up for the annoyance the arrest caused the bride.

—Albert F. Doyle, clerk for C. R. Hillberg & Co.,

Avon, spent his vacation at the Intervale, N. H. With several other young men he started to tramp over one of the mountain ranges. They heard unusual sounds in the night and in the morning came across a big bear which took to flight. At the edge of a high precipice they fired at him, wounding him. Then, to make sure of not being hurt themselves, they took poles and pushed poor Bruin over the edge, killing him in that way.

—The pharmacy of Dr. E. Barnaud, Worcester, recently raided for intoxicating liquors, has been closed and the proprietor had to pay a fine of \$50. Since the store was closed, burglars entered. The doctor, in notifying the police, said that in the last three or four years his place has been robbed several times, of a total of over \$1,200 to \$1,500 worth of goods. Strangely, he never had informed the police before. Dr. Barnaud's assignees will conduct a sale.

—At Lowell, an epidemic of poisoning of dogs and cats, some valued highly, resulted in the arrest of William H. French, charged with having given them poisoned meat, or at least having left it where the animals could easily get it. He gave \$500 bail and acknowledged having tried experiments with meat and poison "for killing woodchucks." He was for more than thirty years a druggist in Lowell. He is almost seventy years of age.

—Payment by Alonzo C. Durgin, a Winchendon druggist, of a fine of \$50 on the charge of not properly recording his sales of alcohol, has given rise to the statement that a great many other druggists in the State are in the same boat. The law requires all druggists to enter such sales with the name of purchaser and place of residence with street address. Mr. Durgin left out the street address.

—In Quincy, George L. York, whose place was raided some time ago, was arraigned on a charge of violation of the liquor laws, but was declared not guilty, and the liquors were returned. Paul J. Brown, a druggist at Atlantic, was charged with selling liquor on an old prescription. The court determined that the prescription, never having been presented, was still good, and Mr. Brown was discharged.

—Robert W. Graham, for several years connected with Sawyer's pharmacy, Tremont and Hollis street, Boston, has been engaged for the coming season as a member of the Chester De Vonde Stock Company, playing week stands in repertoire, Mr. Graham as light comedian. Mr. Graham was graduated from the New York C. P. in 1895.

—In Peabody there have been lively hearings before the selectmen because of a petition from the Peabody Extracting Co. for permission to store naphtha in large quantities. It is proposed to sink to a depth of thirty feet an iron tank, sixty feet in diameter. There are remonstrances against the plan, the natives fearing explosion.

—A factory plant for the manufacturing of sanitary belts is to be established in North Brookfield. The enterprise will be under the proprietorship of Harry H. Atherton of New York. Miss B. A. Collins will be manager.

—Blossom's store in North Adams has been selected by the street railway company in which to establish a waiting room. This will bring many passengers into the drug store, which ought to profit.

—The Weeks-Hill Pharmacy Co., Quincy, dissolved by mutual agreement of the two partners, Benjamin J. Weeks and Hallock H. Hill. The business is to continue under Mr. Hill's ownership.

—The referee in bankruptcy in the case of James H. C. Pratt, druggist of North Adams, has au-

thorized a sheriff sale at public auction of the stock and fixtures.

—Herman F. Hawthorne, last year graduated from the Massachusetts C. P., has opened a fine pharmacy in Cambridge, Massachusetts avenue and Creighton street.

—In the seventeenth annual report of manufacturers in Massachusetts, there is shown an increase of nearly thirty-three per cent. in the manufacture of perfumes.

—Salem is to have another pharmacy. I. W. Moody of Boston, will open it at Washington and Norman streets.

—Fred C. Beane is the new owner of the store formerly conducted by the late Clarence E. Thayer in Cohuituate.

—Salisbury Beach, a New England resort, now rejoices in a drug store, conducted by Casey & Goodridge.

—George A. Gilmore, druggist of Epping, is to marry, in August, Miss Mary A. Prescott of that town.

—Stockholders of the Walker Drug Company, Boston, have voted to discontinue business.

—Fire in Great Barrington damaged the store of J. T. Harper, druggist.

CONNECTICUT.

—Numerous vacations this month, though most of the proprietors are waiting until September. George M. Benedict of the Medicine Shop, New Haven, is enjoying two weeks at Atlantic City, and J. M. Jacobs of the C. S. Leece Co., has just returned from the Catskills.

—One of the most important drug changes of the year was the recent sale of the Parker pharmacy of Bridgeport, to W. J. Watson also of that city. Mr. Bushnell, the former owner, has not made known his future plans.

—A. P. Rogers, who has been with A. P. Gillespie at Medicine Shop, New Haven, has gone to New London and the drug firm of Nichols & Harris.

—A. Boeanda, a new druggist of Connecticut, has opened an Italian drug shop at 643 Grand avenue, New Haven.

—Earl D. Gray of Bridgeport, has opened a new drug store there. It is quite a handsome place.

—DR. GOTTHOLD PAPE of 131 Garden street, Hoboken, N. J., formerly a druggist there, for thirty years a practicing physician and a member of the New Jersey Ph. A., died at his home, aged 61. Dr. Pape came to this country from Germany after he was graduated from the University of Gottingen. When the Civil War broke out he joined the New York Independent Battery of Light Artillery and left the service a lieutenant.

—WILLIAM JOSEPH SCHAEFFER, a retired druggist, died last week at Pressett, Pa., and was buried from his home in Philadelphia. He was 61 years of age, and, until his retirement a year ago, had a store at 1327 East Susquehanna avenue, Philadelphia. He leaves a widow and three children.

—WILLIAM J. KISKADEN, a prominent druggist of Etna, Pa., died, aged 45. He had been in the drug business for twenty-five years and was a leader in politics.

—JOHN E. WATERTON, the druggist at 419 Grove street, Jersey City, is dead. He had been ill for some time. He was once a drug traveling man. A widow survives.

—OWEN F. GARRIGAN, the Newark, N. J., druggist, died last week. He leaves a widow and three children.

PENNSYLVANIA.

HAD THEMSELVES ARRESTED.

That's the Way Wilkensburg Druggists Who Violated the Sunday Blue Laws Got Ahead of a Church Committee That Had a Like Design.

Pittsburg, August 18.—The druggists had themselves arrested in Wilkensburg. It came about this way: The druggists had all joined in violating the blue law and had kept their soda fountains and cigar stands open in defiance of their Presbyterian opponents. The latter were waiting till the hour of midnight should have passed—for revenge. The druggists got to the Burgess first. They swore out information against S. S. Colville, W. S. Stont, J. C. Pauly and W. L. Smith, all druggists, and seven clerks employed by them, for selling soda water on Sunday. In a few minutes the church committee were after warrants, too, but were too late. The hearings were held later in the week, and fines were remitted. The druggists could not be prosecuted again for that Sunday's work.

To make their soda water unnecessary the church committee placed nice tanks of ice water on the street corners. Some one poured whiskey in all of the tanks. Needless to say, a good many did not like that water, and, needless also to say, there were some who were pulling at it all day.

One way of getting around the law has been proposed and that is to sell quinine pills for ten cents each and give free a glass of soda water with every pill.

PHILADELPHIA DRUG A. A. OUTING.

Philadelphia, August 18.—Through the kindness of Charles Willis of John M. Maris & Co., the Phila. Drug Athletic Association were invited to the Orchard, Essington, for an outing. Exercises opened with base ball. Charles Willis' nine scored 12 runs and Frank Miller's nine 8 runs. The special feature was the pitching of B. F. Davis, batting of Otto Kraus, Jr., and the fielding and one hand catch by Dr. Cramp. The 100-yards dash between Frank Apple and Dr. Holtzhauser was won by Mr. Apple by one yard. Mr. Apple was the only starter in running the bases to beat the record; time 20 seconds.

After the field sports closed the party adjourned to the club house and enjoyed a great supper. Otto Kraus, Jr., gave several fine selections on the piano. Dr. Holtzhauser's song, "A Little Bunch of Whiskers on His Chin," and Frank Apple's recitation, "The Boy Stood on His Grandmother's Neck," gave the guests stomach ache. "Hiawatha," was sung by Dr. L. W. Rehbein. W. A. Johnson recited by request a selection from Bill Nye. Charles Willis closed the exercises by making a few remarks on the small margin of profit in glassware this season and said the best method to prevent the breakage of soda water glasses would be to use stone mugs. Mr. Willis' kind hospitality was much appreciated.

A HUNDRED YEARS AGO.

Philadelphia, Aug. 18.—A local paper publishes each day a column reprinted from its columns of a century ago. This was printed on August 15, 1803:

PHILADELPHIA DISPENSARY.

The expenses of this institution have been considerably increased by the negligence of the patients in not returning their Vials; and many instances have occurred of their selling them.—The words Philadelphia Dispensary are on all the Vials, and it is earnestly requested, that if any such are offered for sale, they may be stopped and returned to the Dispensary in Fifth street.

Our fellow citizens are again informed, that old linen rags are much wanted for the use of the patients; and will be thankfully received at the Dispensary.

By Order of the Managers,
WILLIAM WHITE, President.
The institution referred to still survives.

OTHER HAPPENINGS.

—Just what the cocaine feuds are going to do now that the lines are drawn so closely, is a question. In certain localities the law is working well; in others, a few of the regular customers are obtaining a supply at advanced rates "to pay for the extra risk." There is some talk of a regular account being kept of the packages leaving the wholesaler, and a further examination of the prescription files of such parties suspected of disposing of the material unlawfully.

—Just why the second, third and fourth wards of Philadelphia should be singled out for providential discrimination, the unfortunate down-town druggists would like to know. While typhoid fever, small-pox and other kindred troubles have been rampant, and while vaccine and disinfectants galore have been sold uptown, the fellows in "The Neck" are absolutely without any of this interesting trade.

—The Panther Creek Ministerial Association has put into effect what has been styled the "blue-law reign" in Lansford and the surrounding towns. It has ordered that all confectionery stores, ice cream and soda water parlors and cigar stores close on Sundays. Drug stores are allowed to keep open two hours on the Sabbath to fill prescriptions, but the sale of cigars, etc., is prohibited.

—William L. Spear of Seventh and Carpenter streets, Philadelphia, has been in New Jersey for the last few weeks. George Y. Woods of Tenth and Spruce streets, is in Canada for an extensive stay. Wallace Procter is in charge during his absence. Thomas H. Potts and S. W. Strunk, close up-town neighbors, have returned from a fishing trip. They are successful anglers.

—Because of the high price of cod liver oil and the prevalence of diseases in Philadelphia in which it is needed, much complaint is made about the "rapacity" of the average apothecary. One daily paper has done good work, however, in setting the matter right, having published a long article on the subject, explaining the high prices that are bound to prevail for another year.

—Edgar H. Frantz, twenty-one years of age, a drug clerk of Lancaster, killed his eighteen-year-old wife last week, afterward taking morphine himself and dying. Frantz was only married in last April. They were living at his father's home and the latter found them in each other's arms, dead. He had shot her through the heart and brain. Jealousy.

—F. S. Nagle, wife and daughter of Wilkes Barre, spent a two-weeks' vacation in Columbia county. Chester Rudisill, a Philadelphia clerk, spent his vacation at Marietta with his parents. John R. Hatten of Edwardsville, took a week in Pittsburg as a vacation preparatory to going to Brooklyn, N. Y., to become manager of a pharmacy there.

—It is alleged that it has been discovered that 100,000 cigars bearing counterfeit labels are sold in Pitts-

E. I. Santal Perles

Bottles of 50, with yellow wrapper

Write for Samples and Prices

BILLINGS CLAPP CO., - - Boston

burg every week. It is said that Pittsburg is the dumping ground for spurious labels and that hundreds of retail druggists, including several druggists, will be prosecuted.

—The M. Keo drug store, New Castle, had a visit from a more experienced man the other day. He came in late in the day and tendered a \$50 bill in payment. When it could not be changed he presented a \$5 waitress' check, receiving the change.

—Father J. Schroeder of Schroeder & Hinkle, Columbia, went as a delegate to the State convention of retail druggists at Hazleton and visited his parents at Danville before returning.

—New stores are reported for Eighth and Norris streets, Philadelphia, Columbia avenue west of Twenty-sixth street; Thirtieth and Oxford streets, and Ninth and Carpenter streets.

—P. N. Davidson of Morrisdale, J. J. Kuefe of Pittsburg, Arthur Jackson of Allegheny and Dr. Parr, formerly of Corry, were Philadelphia visitors during the last week.

—Shoemaker & Busch, Philadelphia, have made large additions to their pharmaceutical laboratory. It is now one of the most complete in the trade.

—Franklin P. Albright and Milton G. Briggs have been spending part of the summer at Holland, this State.

—William Evans, clerk for Farrer, Peck & Roberts, Pittston, is signed to become a machinist's apprentice.

—The Tazewell County Ph. A. held a meeting last week at Wilkes Barre.

AROUND THE GREAT LAKES.

THREE CLASSES.

Those Who Will Not Sell Cocaine or Its Compounds, the Indifferent, and the Rogues.—Determined Crusade Against the Habit.

Chicago, August 18.—With his characteristic energy, W. Bodemann, president of the State board of pharmacy, is leaving no stone unturned in enforcing the new cocaine law. "As long as I am at the helm," says Mr. Bodemann, "I shall administer the law and law to the line, regardless of whom it hits. I think they all have fair warning—those who read; and those who don't, deserve to reap the benefit of their indifference."

A report on the situation made to the board by W. H. Sage, the board's agent:

The law is being complied with by most of the reputable druggists and many of them are assisting the board very materially in its enforcement.

In the "leaves" districts where the cocaine business had grown to be very lucrative, many of the druggists have stopped selling it entirely, while some are still selling to the habitual users or "fiends" whom they know, making it difficult for us to detect them. However, we have secured evidence against a number and are bringing new suits every day.

We have some trouble in convicting druggists of selling cocaine, as persons who make a business of violating the law do not hesitate to perjure themselves on the witness stand.

The two worst violators we have prosecuted, both swear positively they had not made a sale, when, as a matter of fact, our agents have purchased cocaine and preparations containing cocaine of them on numerous occasions.

The preparations containing cocaine that have the largest sale here state specifically on the labels the proportion of cocaine contained therein.

Two other preparations widely sold prove on analysis to contain cocaine, but neither have any men-

tion of containing cocaine on the label as the law requires. Section 14 reads as follows: "That it shall not be lawful for any druggist or other person to retail or sell or give away any cocaine hydrochloride, or any salts of or any compound of cocaine, or any preparation containing cocaine, or any salts of or any compound thereof, excepting upon the written prescription of a licensed physician or licensed dentist, licensed under the laws of this State, which prescription shall only be filled once, and must have written plainly upon it the name and address of the patient."

Many certified powders on the market contain cocaine, and are more vehicles for cocaine, and should be looked upon with suspicion by all law-abiding druggists.

Said Mr. Bodemann: "We are in the very midst of the crusade. We have found some queer conditions. There are three classes. The majority don't sell cocaine at all nor its entarrh snuff compounds. Some even take interest enough to persuade fiends to quit the habit and I say, 'God bless them for this streak of humanity.' Another class, the indifferent—and what a class that is—sell, unintentionally, all sorts of entarrh snuffs containing the cursed stuff. The third class are in it for all there is in it, hire so-called doctors to prescribe five cents' worth of dope. And that class will get all there is in the law as long as I am connected with the prosecution."

HOW MUCH CANDY MAY A CLERK EAT?

Mr. Merriam said Sorenson Smoked Enough and Ate Enough Candy to Offset the \$24 in Back Wages.

—Sorenson Says Not and Judge Sustains Him.

Chicago, August 18.—The case of Sorenson vs. Merriam is unique in the annals of pharmacological controversies. John Sorenson is secretary of the Drug Clerks' Association, and was a clerk for Lee Merriam at 582 West Madison street. When Sorenson left Merriam's employ he claimed a balance of \$24 due for back salary. Merriam asserted that he did not owe his former clerk any money, because the latter, during his term of employment, had reached into the cigar and candy boxes so frequently for his own gratification, that the \$24 was more than offset. The case came up before Justice Olson, who decided in favor of the former clerk. The question as to what extent a clerk may go in abstracting smokeables and confections without putting the price into the cash drawer remains still undecided. Sorenson says he did not abuse his privileges. Other drug clerks censure Sorenson. Many clerks in Chicago pay wholesale prices for their cigars. One clerk said: "A fellow, if Sorenson's plan was followed, might smoke ten 15-cent cigars a day. Indeed, he might carry off the whole stock."

FROM ILLINOIS.

—John E. Voigt, a popular druggist at 156 Center avenue, Chicago, is spending a few weeks in Wisconsin. William Schloizer, manager of the Englewood pharmacy, Sixty-third street and South Halsted, has returned from a tour of the West. O. J. Freeman, North Clark street and Sheffield avenue, got back the other day from two weeks on the Atlantic seaboard.

—James Ruzika has been arrested on complaint of the Dyche Drug Co. at State and Randolph streets, Chicago, charged with having stolen \$2,000 worth of drugs from the store. J. Bert Galloway, Van Buren street and Marshfield avenue, a druggist, was also arrested, charged with having received the stolen goods.

—Arthur Dawson of Robert Stevenson & Co., leaves soon for Denver, Colorado Springs, Manitou and Salt Lake. Mr. and Mrs. I. Giles Lewis of the same firm,

CHRISTIAN GARVER.

President of the McLean County (Ill.) Ph. A. for twelve years and second vice-president of the State Ph. A., the subject of this sketch began active life doing chores on his father's farm near Monticello. Then he taught county school. When 19 he owned a drug store himself. Now he is prosperous in Bloomington. It was to his untiring efforts that the State meeting went there this year, and he, as local secretary, and Mrs. Garver will always be affectionately remembered by those who attended.

are putting in two or three weeks at Mackinac. Mr. and Mrs. Robert Stevenson, Jr., are summering at Spring Lake, Mich.

—Mrs. Lena D. Dyer, widow of the late E. L. Dyer, a prominent Waukegan druggist, is running the store and is said to be doing an excellent business. Mr. Dyer was a prominent Mason and was master of the Kenosha lodge when he died.

—It is reported that the Willard pharmacy, 1714 North Halstead street, Chicago, F. W. Richardson, proprietor, has been sold at auction. C. H. Chimelfe has opened a store at Fifty-fifth street and the Alley "L."

—J. Willard Spencer, a Seymour, Conn., druggist, passed through Chicago this week on his way to Colorado, where he is interested in some mines.

—Lee Pettigo, the well-known drug clerk, was married recently and his many friends are giving him congratulations.

—A new store has been opened at Western avenue and Augusta street, Chicago, by C. N. Storkan.

—Charles Paus has opened a store at Lawndale and Armitage avenues, Chicago.

MISS MARY DAVIDSON died at her home, 407 Jackson boulevard, Chicago. Miss Davidson was a sister of James A. and Clarence A. Davidson, the well known druggists' sundries dealers. She was forty-eight years old.

MICHIGAN NOTES.

—J. J. Sourwine, pharmacist and mayor of Escanaba, is being boomed for congress. An exchange in speaking of his candidacy, declares that "he is not as sour as the first part of his name indicates," and hopes that he "will not stop with the mayoralty, but plant himself in one of the congressional chairs at Washington, where the druggists are sadly in need of a representative."

—A nervy thief entered the drug store of Dr. D. S. Hallock in Woodmere, and after taking \$1 from a till proceeded up stairs where he relieved the doctor's trousers pocket of \$2.45 and his gold watch. The fellow undoubtedly kicked himself when he learned from the daily papers that the till which he touched for \$1 contained a large sum of money that he overlooked.

—Dr. Chas. E. Goodwin, for many years a prominent druggist of Ithaca, has sold to his nephew, Theron A. Goodwin, and will permanently retire on September 1. He will take a post graduate course in Chicago and engage in the active practice of medicine. Theron A., the new man, is not new at the business, having served for eight years at the prescription counter.

—William C. Kirchgessner of Peck Bros., Grand Rapids, attended the A. Ph. A. convention at Mackinac Island. Grand Rapids has only four druggists who are members of the association, which does not indicate a very intense local interest in the broader phases of the profession.

—Smith & Hough of Royal Oak, have purchased the S. E. Osborne store in Warren and will install a first class stock. M. Brooks, late with J. H. Hodges of Utica, will have charge of the store. Mr. Smith is a brother of Congressman Sam Smith, and travels for the Michigan Drug Co.

—Chas. Finnan is assisting E. L. Sargent at Boyne Falls. Sid Erwin will erect a two-story brick building on S. Jefferson avenue, Battle Creek, and will fit up the ground floor in fine shape for his store.

—Burglars attempted to force an entrance into the store of J. W. Armstrong, Middleville, but found Ross, the night man, all ready to give them a warm welcome. They broke for the tall timbers.

—Tony Piotrowski, proprietor of the City drug store at Manistee, grew tired of sewing on his own buttons. He was married to Miss Anna Jazgar on August 13 at St. Joseph's church.

—The Dow Chemical Co., which has a plant in process of construction at Mt. Pleasant, suffered a severe loss by fire on August 12. Insured.

—W. H. Price has purchased the drug stock of Dr. Mills at Webberville, and will continue the business.

—H. E. Leece of Saginaw, has accepted a position with G. W. Milligan, the Bay City druggist.

—The board of pharmacy will meet on August 25 and 26 at Houghton for examination.

—L. H. Taft has opened a new drug store in the Hotel Phelps block, Greenville.

—Frank Brainerd of Eaton Rapids, is now clerk at West's, Grand Rapids.

PHENALGIN

ETNA CHEMICAL CO., New York, U. S. A.

INDIANA.

—C. R. Hatch of Lafayette, has bought the store of Harry E. Glick in a suburb of that city. Mr. Glick, who is secretary of the State board of pharmacy, still has a pharmacy in Lafayette.

—Earl E. Ensley, who has a store at 149 South Illinois street, Indianapolis, has bought the store of Moffett Brothers at Ellettsburg, one of the oldest retail houses in Central Indiana.

—Bynum & Coombs of Lebanon, have dissolved partnership. The business will be continued by Fred Coombs. A. M. Powell of Williamsport, has sold to B. F. Winger.

—At Cambridge City, J. L. Richey has bought the drug business of the late James McCaffrey who had been in the trade at that place more than 30 years.

—At North Vernon, J. M. Dils has succeeded to the business of M. H. Andrews & Co., one of the old established stores.

—G. W. Bakhaus at Anderson, has taken into partnership J. R. Callahan. The firm name is Bakhaus & Callahan.

—Dr. J. F. McKee of Indianapolis, has bought the Harbrook pharmacy, 502 East Washington street, that city.

WEST OF THE MISSISSIPPI.

SOUTH DAKOTA PH. A.

This Association Has an Unparalleled Record, Containing Every Resident Druggist in the State

Canton, S. D., August 18.—The State Ph. A. held its annual meeting here Tuesday, Wednesday, Thursday and Friday, last week. The attendance was large.

The convention was called to order by C. W. Peaslee of Redfield, president, who congratulated the organization upon its unparalleled prosperity, saying that every resident druggist in the State is now a member of the association, which is in better condition than ever before.

At the evening meeting I. M. Helmev presided and James Lewis delivered an address of welcome. John McLean of Tripp, responded.

Professor E. J. Wulling of the Minnesota university, delivered a fine lecture on "Pharmacy, Retrospective and Prospective."

The principal feature of Wednesday was the annual meeting of the Druggists' Mutual Fire Insurance company. A new board of directors was elected as follows: James Lewis, Canton; I. A. Keith, Lake Preston; R. M. Cotton, Tyndall; C. H. Lohr, Estelline; H. C. Backoven, Clark; F. C. Stieckles, Mellette; W. J. Hull, Alexandria; L. C. Ramsdell, Bersford; E. C. Bent, Dell Rapids. The new officers of the company are James Lewis, president; R. M. Cotton, vice-president; I. A. Keith, secretary; H. C. Backoven, treasurer.

This druggists' mutual was the first mutual fire insurance company to organize in the State. It was organized in March, 1895, and has been conducted successfully for eight years. During the last year the ratio of expense has, according to Secretary Keith's books, been 11.4 per cent of the cash premiums paid in, and the loss ratio has been kept down to 34.5 per cent, which means that the company has cash on hand for the year's business without calling for an assessment. In fact, during the eight years of its existence, this company has called for but one assessment of 25 per cent of the notes given for that amount. During that time it has paid its members \$27,531.93 for losses incurred and the cost for carrying risks has been 502 for that same period.

In the afternoon the members attended a baseball game, were driven about the city and visited the Government Indian insane asylum. In the evening came an excursion up the Sioux river on the steamer Sioux Queen. Among entertainments were athletic contests of various kinds, for good prizes and purses.

Thursday was devoted mainly to the reading of prize papers. The election of officers went over until Friday, the convention being extended a day beyond the original program.

On Friday these new officers were elected: President, F. G. Stieckles, Mellette; first vice-president, I. M. Helmev, Canton; second vice-president, Mrs. J. H. Ferris, Mitchell, secretary, E. C. Bent, Dell Rapids, treasurer, W. A. Nye, Salem; local secretary, S. H. Stallin, Mitchell; assistant local secretary, L. O. Gale, Mitchell. The meeting will be held at Mitchell next year.

OMAHA DRUGGISTS' MINES AND CATTLE.

Omaha, Neb., August 18.—Omaha druggists are not men of one affair; for instance:

N. A. Kuhn, is president of the Omaha-Wyoming Oil Co., having about 1,200 acres of oil lands in Uinta county, Wyoming, on both sides of the Union Pacific. They have four producing wells. C. E. Bedwell, L. M. Hoyt and E. E. Bruce & Co. are among the other lucky holders in the drug line who are figuring whether they shall buy automobiles or content themselves with private railroads, out of the profits they have unbanked.

Mr. Kuhn is also treasurer of the Gold Placer Mining Co. and the Gold Run Mining & Development Co., which have over 200 acres of patented ground producing crasse gold. It is situated on the East Nanook river in Montanama county, Col., quite near the prehistoric cliff dwellers' mines. Mr. Kuhn is also treasurer of the Northwestern Copper Mining Co., which has 120 acres of copper land in the Battle Lake district, Col.

Laev E. Peyton, the Leavenworth street druggist, made quite a "spec" in the Lord Byron gold mine in Clear Lake Canon, Col. He and J. H. Merelant, also an Omaha druggist, are still active in the management of the company.

S. A. D. Shilling, who formerly owned a drug store in Lincoln, is largely interested in the Battle Lake district and is reported to be doing well in copper.

Henry Gering of Plattsmouth, has retired from mining and is investing his capital in oak timber land of the Ozark range, Missouri.

Charles Faulnan, formerly with the Richardson Drug Co., saved his money and formed the Weiser Land & Fruit Co., which owns fruit ranches in Weiser county, Ida. He is also promoting gold and copper proposition at Sumpter, Ore., operating in the Pearl district, Ida., and is also interested in the Thunder Mountain.

Charles H. Brunner of the drug firm of Magaoun & Brunner, of Fremont, has probably struck it the richest of any Nebraska druggist. He and a lot of his Fremont friends discovered the original Mercury mine in Utah and much of Fremont's prosperity is due to dividends from it. Since the first of the year Mr. Brunner has been devoting all his time to the Mercury except such as he puts in looking after his copper properties in the Battle Lake district. From the latter he expects even greater returns than from the Mercury, as copper mining is much surer than gold.

John Abbott, formerly head clerk for N. A. Kuhn, is reaping a harvest from cattle and coal at Hanna, Wyo.

H. COHET, head of H. Cohet & Co. of Gladbrook, Ia., is dead.

MISS DORA C. FISHER.

Miss Dora C. Fisher is manager of the city drug store Centerville, Kas., and was the Kansas University pharmacy honor graduate in her year. She is twenty-nine, one of fourteen children. She is vice-president of the pharmacy alumni association, assistant secretary of the State Ph. A., and was a delegate last year to the A. Ph. A. and the N. A. R. D. Notwithstanding the enviable position she holds in her profession she still finds time to do work along religious and educational lines. She is at present making a successful effort in interesting the women pharmacists of Kansas in a uniform dress to be worn in the drug store.

OMAHA C. P. GRADUATES TWENTY-EIGHT.*

Omaha, Neb., August 18.—The following large class was graduated from the Omaha C. P., on August 12:

Frank Flood, Darlington, Wis.; E. H. Coza, Clarkson; Ira Ashley, Hyannis; W. R. Beckley, Tildon; R. C. Bellamy, Arapahoe; E. E. Cathcart, Tahmaga; John Cornils, Columbus; Roy M. Erway, Valley; C. B. Fricke, Madison; John Holst, Jr., Omaha; Miss Margaret James, York; Charles Janecek, Schuyler; Bert Locke, Central City; Thomas Larsen, Hindley; Miss Lois Pope, Red Cloud; K. L. Patrick, Exeter; A. W. Peterson, Marquett; Bert Bay, Walnut, Iowa; Reinhard Rieland, Norfolk; Maxey Smith, Tekamah; Frank Stava, Bruno; Ed. J. Stava, Bruno; H. D. Vickrey, Bartley; W. W. Willard, Alexandria; G. G. Wiederandus, Gothenberg; Frank X. Wright, Delavan, Ill.; Mrs. Rinnie Wilson, Atkinson; C. A. Miller, Kearney.

A class picnic was held at Lake Manawa, Ia., on August 11, and a banquet was given by the graduating class on the evening of August 12. On that day all graduates passed the State examination.

Charles Fricke of Madison, took the highest grade in the college and in the State examination. He will go to the Philadelphia C. P. for a post graduate course, intending to fit himself for teaching pharmacy. Some of the others have disposed of themselves as follows:

E. H. Coza has gone into business for himself at Newman's Grove. R. C. Bellamy has gone into business with his father in Arapahoe. E. E. Cathcart has purchased a store in Meadow Grove. John Holst will clerk for his father in Omaha. Bert Lock will engage in business with his uncle in Central City. K. L. Patrick has purchased a drug store in Exeter. W. W. Willard has gone to Great Falls, Mont., as a clerk. Mrs. Rinnie Wilson will engage in the drug business with her husband in Atkinson.

The fall term of the college will open on September 1.

MORE WERE CALLED THAN CHOSEN.

Des Moines, Ia., August 4.—Of twenty-three persons who took the State examination before the board of pharmacy last week, ten were successful. They were: Harvey E. Aldrich, Croston; W. D. Craig, Henderson; Franklin T. DeWitte, Berea; F. W. Storek, Sheffield; Elmer E. Sear, Avoca; Harry E. Swihart, Des Moines; Charles J. Welker, Des Moines; Orin B. Wilson, Sioux City; Don Wikoff, Hamburg; J. Heide, Roland.

"Why is it that only ten passed?" was asked of Fletcher Howard of the board.

"They didn't know enough," was Mr. Howard's reply, as he laughed good-humoredly. Men who have nothing but college experience may miss the prescription examination; they haven't had the actual experience. Then students taking the examination before they have been in school a year. Some take the test a half dozen or dozen times before they are successful."

HEARD IN IOWA.

—Out of forty-four candidates before the State board last week the following were successful: John A. Ba., Gladbrook; J. C. Barrie, Belmont; George H. Borwey, Eagle Grove; William F. Danaburger, Pella; Leo Edwards, Dunlap; George Fleagle, Royal; Harry F. Hanna, Oskaloosa; Fred Heyle, Lemars; Hattie E. Kennedy, Hancock; Charles Spavin, Clarion.

—The store of J. W. Dunning of Chillicothe, has been partially burned. An incendiary did L. Swenson, the druggist, a bad turn the other night. He cut a hole through the building into an oil tank and burned not only the drug store, but a bank and general store. F. J. Nachtwy succeeds Nachtwy & Co. at Lansing.

—Fletcher Howard has received from the printers the advance sheets of his biennial report which will be submitted to Governor Cummins in a few weeks. The report this year will show an unusually large number of changes, removals and deaths.

—Thomas H. Clark of Frautz & Clark, has bought out his partner and will continue in business alone. A. W. Hanson is succeeded by Hanson & Orin at Hantlontown. Irvine & Co. of Reinbeck, have admitted W. H. Sweetzer to partnership.

—A. K. Weaver has purchased Marion S. Tague's store at Martello. Harry Boam has succeeded Brown & Son in Anamosa. W. M. Pile of Ft. Dodge, is reported as intending to close out his business on September 1.

—J. M. Henderson & Co. of Milton, have dissolved and J. M. Henderson will continue the business alone. Ross & Co. of Pochontas, recently suffered a total loss by fire. O. O. Harlan, of Storm Lake has sold.

—The following have been selected delegates from the Iowa D. A. to the N. A. R. D. at Washington, D. C., in October: E. B. Tainter, Carroll; George M. Pederson, Harlan; Dell G. Moran, Council Bluffs.

—M. F. Mullan, third vice-president of the State Ph. A., is the oldest druggist in Pomeroy. He is forty-eight years old, vice-president of the Pomeroy State bank and president of the Pomeroy Canning Co.

—The Des Moines Drug Co. has announced the intention of erecting a new building in Des Moines.

Always insist upon having

ABBOTT'S THE ORIGINAL
Angostura Bitters.

C. W. ABBOTT & CO.,
Baltimore, Md.

Architects are working on the plans but the site has not been definitely decided upon.

—Fred Ryan of the Ryan pharmacy, Des Moines, has returned from a two week vacation at Colfax Springs. Willis Wolf has removed from Lorimer to Clinton, Mo.

—W. J. Henry of Winterset, has sold his pharmacy to the Piper Drug Co. The new company includes G. M. Violet of Winterset, and John Piper of Dexter.

—Otis Hannin and Charles G. Miller have purchased the Kelley store at Earley, from E. E. Roe and John M. Kelley, and give a \$300 mortgage.

—Dr. A. E. Hunt of Melbourne, who suffered severe loss by fire last April, has decided to open a new store. He is erecting a fine brick block.

—There is some talk of organizing an official journal of the Iowa Druggists' Association.

—The Tom Rice Drug Co. of Norwalk, has been succeeded by Paul Jones.

MINNESOTA.

—R. H. Nichols is leaving Fairbault, where he has been for some years past, for a short vacation, after which he will commence his engagement with Duncan McNab at Moorhead. E. N. Schmitz of Stewart, has discontinued. George Walstrom has gone to the Lyceum pharmacy, Duluth. The owner of this pharmacy, Mrs. Green, will put a drug stock into the Metropolitan Opera House on West Superior street. Theo. Gummy has purchased the B. L. Gummy & Co. business in Annandale.

—Herman Haueter has bought Hamre & Co. at Hauley Falls. E. L. & S. W. Jewell are to start at Wauaningo. George Zeimer has bought T. W. Donovan at Waltham. J. S. Eckhoff of the same town, has sold.

—The county equalization board at St. Paul has added \$201,000 to the original assessment of \$180,000 of Noyes Bros. & Cutler, the St. Paul wholesale druggists.

—Fred A. Conger of Conger Bros., St. Paul, has gone to Acton, Ont., on a visit to his old home and will spend two months there.

—W. E. Rumble, with Noyes Bros. & Cutler, St. Paul, is out of hospital after a prolonged siege of illness.

MISSOURI.

—Faxon, Horton & Gallagher, who have been doing business in the "bottom" wholesale district of Kansas City for the last twenty five years will desert their present quarters on Union avenue and move up town in December. The move has been contemplated for some time, but it is likely that the flood which covered the "bottoms" a few weeks ago has had something to do with the determination to get out before next spring.

—Paul Hess of Hess and McCann, 804 Walnut street, Kansas City, is taking a rest and accumulating sunburn in Kansas. Charles Zinn, secretary of the Kansas City Drug Club and proprietor of two Independence street pharmacies has returned from a vacation, plus a happy smile and ten pounds of flesh. I took two weeks at Eldorado and Excelsior Springs to do it.

—H. D. Faxon, buyer for Faxon, Horton & Gallagher, and editor of the Drug Record, has gone into retirement among the Northern lakes, where he says he will devote his time to getting back some of the flesh he has lost in hard work since the flood.

—Joseph Griffith, one of Kansas City's "veterans" has sold the Palace drug store at Twelfth and Main streets, to William G. Federman. This gives Mr.

Federman two stores, the other being his old stand at 904 Main street.

—Kansas City Drug Club reports say that the July retail business is far ahead of the average for that month.

NEBRASKA.

—B. F. Vandolah of Lincoln, has sold to Sam Linch, Alfred Lewis and wife of Valentine, have given a warranty deed for \$300. E. M. Schapp & Co. have succeeded D. M. Atchison at Brady Island. A. G. Curtis is putting in a new stock at Fort Calhoun.

—A. M. Westover of Lake City, Ia.; M. E. Schultz of Beatrice; D. M. Atchison of Kearney; C. E. Hopping of Beaver City, E. L. Wilson of St. Paul, and E. J. Tucker of Pender, were Omaha purchasers last week.

—The Omaha C. P. classes visited the wholesale drug establishments and were shown through the different departments recently.

PACIFIC COAST.

THE CALIFORNIANS.

College Has Big Class for Next Year.—Hymen Busy Among the Druggists.

—Board of pharmacy met at San Francisco. C. H. Rowley of Santa Barbara was elected president, and John Calvert was re-elected secretary.

The following were registered by examination: F. W. Allen, E. Batt, L. E. Carpenter, Sister M. J. Crowley; J. C. Foster, S. A. Goldman, H. B. Stanton, W. W. Stephens, A. Raymond and E. R. Weinspach. Assistants—D. McBrille, J. T. Seow, W. B. Bunsmore, B. R. Taylor, E. J. Shier, T. J. Feeley, C. E. Velguth, B. F. Moore, Kath. Nolan and C. Quilty. An opinion of the attorney-general was read to the effect that the fee must be paid for each examination, and that hereafter the custom of the board in allowing a second examination without payment of another fee must be discontinued. The next meetings will be in Los Angeles, on October 6, and in San Francisco on October 13.

—S. E. Buswell filed a complaint against the World Drug Co. of San Francisco, in which he asks for \$5,000 damages. He alleges that he bought a certain hair tonic and dandruff cure. Whenever he laid on the fluid, he says, blisters immediately rose. He thereupon saw Dr. John J. Richardson, the consulting physician at the drug store, who treated him with internal remedies to counteract the effects of the dandruff cure. Buswell claims he became salivated and suffered from blood and skin disorders, owing to the internal medicine. His nut brown locks now are streaked with gray.

—The summer months in California and the West generally witness the drug trade at a low ebb. Wholesale reported business only fair during June and early July, but during the last week in July a turn for the better manifested itself. With the ripening of the fruit crop comes a big demand from the orchardists throughout the State for such chemicals as sulphur, glycerine and extract of log wood. Sulphur particularly is in big demand and dealers who sell to the San Joaquin valley, Santa Clara Valley and coast regions have been hard put to fill the big orders.

—The University of California C. P., San Francisco, has issued its announcement for the thirty-second annual session. On August 1 applications for entrance were received. The number seeking to enter is reported as greater than ever before in the history of the institution. On August 7 the entrance examinations were

W. H. EDELMAN.

This young man should know the Wild West by heart, for since his birth in Henderson, Minn., in 1868, he worked at drugs for Dr. J. A. Freeborne in Big Stone City, S. D., for \$50 a year, working up to \$18 a month in his third year in that city. Next we find him as Northern Pacific R. R. Hospital druggist at Brainard, Minn.; then at odd jobs in Billings, Mont.; then at Red Lodge running a store for a dentist, then at Sheridan, Wyo., first as partner in a pharmacy with E. L. Mills, next as sole owner. He now has a \$20,000 stock and a position as president of the new State board of pharmacy.

held and regular work will begin on August 26. F. W. Fish, who has heretofore given only his spare time to the college, will now give his entire attention to it. He will be instructor and assistant in pharmacy and vegetable physiology.

—The annual meeting of the Union Drug Co. was held in San Francisco, on August 5. The concern does a wholesale and retail business in eight stores in widely separated parts of the California metropolises. It was decided to follow the same conservative policy in the future. The officers of the organization are: W. M. Searby, president; Charles Barrington, general manager, and George Dolbin, secretary.

—Dr. F. W. Martin, who styles himself the Herb King and who has practiced medicine and sold drugs in several towns in California without a license, and who at various times has been prosecuted by associations of physicians and druggists, has at last come to grief. He was convicted in Visalia of a heinous crime and was sentenced to 30 years in the penitentiary.

—The new officers of the Oakland Drug Clerks' Union are: President, W. Hansen; first vice-president, George Greishe; second vice-president, L. Mackin; financial secretary, G. H. Haffee; recording secretary, U. L. Schafer; guardian, A. F. Johnston; guides, George Atwood, J. C. Schiner.

—After an absence of four months P. C. Rossi, pharmacist at 318 Montgomery avenue, has returned to San Francisco. Mr. Rossi represented California at the international agricultural convention in Rome. While in Italy he was voted a special medal of honor by an Italian society.

—The association of druggists of Napa county, has done much to advance pharmaceutical interests in their section. Regular meetings are held and the local field

carefully watched. The officers are C. W. Armstrong, Calistoga, president; W. H. Smith, St. Helena, vice-president.

—The fight against the Owl Drug Co. in San Francisco goes merrily on. It is now learned that the purchase of the W. T. Hyde store in Oakland, by the No Percentage Company was for the purpose of carrying on the war against the Oakland branch of the Owl company.

—The Druggists' Association of the Peninsula, which includes from Mountain View to San Mateo, Cal., was organized with a small membership. Now every town in the territory of any size is represented. Its president is Benard Mayer of Mayfield.

—The third annual picnic of the San Francisco Drug Clerks' Association will be held on August 9 at El Campo. The committee in charge comprises William H. Adair, J. H. Hubachek, W. H. Seay, D. L. Perrone, and Al. Hoag.

—W. H. Gourley, formerly with Boericke & Runyon, 231 Sutter street, San Francisco, has been placed in charge of the company's establishment in Los Angeles. Walter Moltzen, a clerk for the Union Drug Co., Sutter street, is in Seattle.

—Pharmacist R. J. Bennetts of Nevada City, accompanied by two friends, spent a few days on a fishing tour in the Greenhorn district. Bennetts was able to verify his tale of great luck by producing the fish.

—The Sacramento County Association now has a membership of twenty stores. Its officers are H. S. Hammer, president; T. W. McAuliff, vice-president; J. T. Quinn, secretary and treasurer.

—There has been some further talk this week of a large chemical factory for San Francisco. T. A. Blakeley of San Bernardino, is the promoter, and New York people are said to be interested.

—M. D. Barrett, proprietor of the Horning drug store, Marysville, has just returned to his home after a honeymoon of some weeks. His bride was Miss Viola Griswold of Chicago.

—Louis Doerr has been made manager of the Wolff Drug Co. of San Jose. J. A. Cummings of San Francisco, has secured part interest in the Mount Shasta pharmacy of Sisson.

—Perrone and Hardy, a new firm, has entered the San Francisco retail drug field and opened a neat establishment at Greenwich street and New Montgomery avenue.

—Valentine Schmidt and his two sons, Edwin and Albert Schmidt, all three prominent druggists of San Francisco, have just returned from a week's outing at Cazadero.

—Carl Triest, member of Haas, Baruch & Co., druggists of Los Angeles, will be married during the month to Miss Rosenbaum, daughter of a wealthy merchant of Stockton.

—The Retail Drug Clerks' Union of San Francisco now boasts a membership in excess of 400. E. J. Molony is president and J. M. Eitel, secretary.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories.
Twelve Teachers. Thorough Courses.

NEXT TERM BEGINS SEPT. 7, 1903.

Address inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

The drug store at Mission and Eleventh streets, San Francisco, recently owned by Dr. W. H. Robertson, has been purchased by E. A. Lion.

The "No Percentage" Company of San Francisco, has purchased the Hyde Drug Co. of Oakland, and will enlarge the stock.

Keller E. Watson, a prominent druggist of Orange, was married to Miss Olive McCarthy of Orange, in Los Angeles.

H. W. Hendricks has purchased his partner's interest in the firm of Hendricks & Stafford at Whittier.

OUR CANADIAN LETTER.

Apprentices May Now Register at Ontario C. P. Without Matriculating in Any Two Subjects, Provided They Make It up in Two Years.

Toronto, August 18.—The Council of the Ontario C. P., convened in Toronto for its midsummer session. The election of officers resulted as follows: President, W. R. Graham, Ridgetown; vice-president, Edward W. Case, Picton; registrar-treasurer, Isaac T. Lewis; auditors—James Watt and James H. Mackenzie. The report of the registrar-treasurer showed assets of \$61,959 over liabilities, and a credit balance for the year of about \$2,500. A deputation of the Drug Clerks' Association of Toronto presented a petition against any lowering of the educational standard for apprentices. President Graham assured the deputation that their wishes would be considered. Henry Walters of Ottawa, introduced a resolution permitting apprentices to register without having reached the required standard in Latin and algebra, provided they passed the required examination in those subjects within two years of such registration. The motion was broadened to cover any two of the subjects upon which apprentices are required to pass an examination, instead of limiting it to Latin and algebra, and was passed.

A pharmaceutical research committee was appointed, consisting of John Hargreaves, W. A. Karn, R. A. Harrison, Henry Watters and E. W. Case. The divisional committee recommended that the council seek amendments to the pharmacy act so to regulate more stringently the sale of narcotics and approved of the price restrictive plan. Adopted. The pharmaceutical research committee recommended that a book of formulas be issued to secure uniformity in the preparations put up by the trade. Adopted.

A special committee appointed to enquire into charges made by the Ontario College of Physicians and Surgeons as to the unprofessional conduct of druggists in counter-prescribing brought in a resolution to the effect that it was impracticable to make a thorough enquiry at this session, but regretting that any member should compromise the reputation of the druggists by unworthy business methods, and protesting against such a serious charge being directed against the drug trade in general. The resolution was adopted. J. S. Armitage of Paris, was appointed examiner in materia medica.

The drug store of F. W. Jeffs, Wallaceburg, Ont., was considerably damaged by fire.

O. E. Bennie was elected secretary of the Toronto Drug Clerks' Association in place of Blake Cook, who is leaving Toronto to accept a position in the United States. W. Wright succeeds S. Tarrant as first vice-president.

Fralenz & Abercrombie, druggists of Fort Francis, Ont., have dissolved partnership.

There is widespread complaint on the part of the trade throughout Ontario as to the difficulty in obtaining apprentices, which is generally attributed to the action of the Ontario C. P., two years ago, in obtain-

ing legislation compelling all apprentices to pass the junior matriculation examination. Supply prospects are rather better since the council of the college provided that apprentices may pass examinations in two of the matriculation subjects within two years after the beginning of their apprenticeship.

DO AS YOU WOULD BE DONE BY.

You expect the public to read your advertising. Do you read the other fellow's? You might make more money by doing so. The following were good hints in last week's issue:

ABSORBENT COTTON—Three qualities all prepared under strict pharmaceutical rules, by the Maplewood Mills at Fall River, Mass.

DIOXOGEN—Made by the Oakland Chemical Co., 464 W. 87th St., N. Y. City. Non-explosive, correct percentage, right volume and price, handled by the best trade.

DRUG MILLS—Mead & Co., 19th St. and M. C. R. R., Station B, Detroit, Mich., will grind samples of any material sent, and will return with statement of the time consumed in grinding. This they do to prove that they sell the best drug mills. Note their ad. on page 15.

PHENALGON—Made by The Etna Chemical Co. of N. Y. City, put up in powder, pink top capsules, and 2½ grain tablets. It is well advertised. Are you ready to meet the demand?

STAINOFF—A sample cake and full particulars may be obtained by applying to The D. M. Steward Mfg. Co., Chattanooga, Tenn., 8 Jay St., N. Y., or 57 Washington St., Chicago, Ill.

LOZENGES—All the old reliable kinds and many new ones. See the Roworth Mfg. Co. ad. on page 11.

CONCENTRATED CREAM CHOCOLATE—The good kind for hot or cold soda. Their ad. on the back cover contains more information on this subject.

CORKSCREWS—The Clough Corkscrew Co., Alton, N. H., will send free samples of all sizes.

ANGOSTURA BITTERS—C. W. Abbott & Co., Baltimore, Md., claim to make the original. If you insist your jobber will supply you.

WINE OF CARDUI—33 1/3 per cent. profit for the druggist in this preparation; larger quantity purchases, lower the cost and increase the profit. Write the Chattanooga Medicine Co., Chattanooga, Tenn., St. Louis, Mo., or San Francisco, Cal.

CORKS—The kind that don't break off. Circle A & B made by the Armstrong Cork Co. Your jobber sells them.

TOOTHACHE GUM—It sells in any store. Buy the kind that gives satisfaction and yields a living profit. The Steratod Chemical Co. put it up in handsome 10c. packages. The price is \$2.50 per gross.

COCAINE ADVANCES.

New York, August 18.—General business continues of moderate volume but of fair seasonable proportions and dealers appear to be satisfied with existent conditions. The advance of 50c an oz. in manufacturers' quotations for cocaine is the principal change in values during the period covered by this review.

OPTIM—The jobbing market remains quiet and the bid-tender is slightly easier mainly on account of competition among leading importers, but quotations are unchanged at \$3.00/3.85 for 9 per cent. and \$3.70/4.35 for 11 per cent. Powdered is selling fairly in small lots with prices ruling steady at \$4.75 for 13 per cent. and \$5.25 for 16 per cent.

MORPHINE—Dealers report a continued fair routine demand with prices ruling steady at \$2.00/2.70 for eighths in ounce boxes, \$2.55/3.25 in 2½-oz. boxes, \$2.55/3.25 in ounce vials, and \$2.80/2.10 in 5-oz. cans.

QUININE—A gradual improvement in demand is noted and the market is fairly firm in tone with jobbing quotations maintained at 2.16/2.14c for bulk in 100-oz. tins, 2.12½/2.25c in 50-oz. tins, 2.50/2.25c in 25-oz. tins, 2.06/2.03c in 15 or 10-oz. tins, and 3.10/3.11c in ounce vials, according to brand and quantity.

MENTHOL—An easier feeling has developed owing to keen competition among importers and jobbing quotations show a reduction to \$7.50/8.00 a lb. and \$5.60/6.00 an oz.

COCAINE—Owing to increased cost of raw material manufacturers have advanced their prices 50c an oz. and the revised jobbing quotations are on the basis of \$1.75 for bulk.

COTTON ROOT BARK—Extreme scarcity has caused a further advance in jobbing quotations to 25¢/30¢ for whole and 20¢/25¢ for powdered.

HEPAC—Foreign markets are easier and local jobbers have reduced quotations to \$1.50/1.75 for Rio and \$1.35/1.55 for Carthagena. Powdered is quoted 10c above the prices for whole.

CASCARA SAGRADA—The market shows a hardening tendency and jobbing prices have been advanced to 28¢/35¢ for whole, 33¢/38¢ for ground and 35¢/40¢ for powdered.

CITRIC ACID—Manufacturers' prices are 2c per lb. lower and jobbing quotations show a decline to 33½¢/34c in lbs., 34¢/31½c in kegs, and 106½¢ for broken lots. The citrates have been correspondingly reduced.

MANNA—New crop large flake is more abundant and jobbers have reduced quotations to 70¢/75¢.

SUMATRA BARK—The market is easier under increased supplies and jobbing quotations show a decline to 60¢/70¢ for whole and 65¢/75¢ for powdered.

PERUKIA ASH BARK—Under a similar influence jobbers have reduced their quotations for this article to 32¢/35¢ for whole and 37¢/42¢ for powdered.

GI M KINO—Jobbers offer more freely and jobbing quotations have declined to 106½¢ for whole and 50¢/55¢ for powdered.

STROPHANTHUS SEED—The market is slightly weaker with jobbing quotations showing a decline to \$1.25/1.35 for whole and \$1.35/1.50 for powdered.

CERYBERY SEED—Foreign markets are firmer owing to short crop news and local jobbers have advanced quotations to 15¢/20¢ for whole and 20¢/25¢ for powdered.

WALNUT ALICURATOL—Jobbing prices have again been revised and show a further decline to 55¢/56c in lbs., and 65¢/75c in smaller quantities. Columbian spirits in lbs. \$1.75, and less \$1.60/1.75.

BROMIDES—Lower quotations are named by manufacturers and the revised jobbing figures are 15¢/50c for potash, 52¢/57c for soda and 55¢/60c for ammonium. (41.) **HEMLOCK**—Supplies are more abundant and jobbing prices have been reduced to 70¢/80c.

"Success? If the Thing is Unjust Thou Hast Not Succeeded."

I may be all wrong in the conviction that the great mass of the American public invariably recognize and are always ready to support any enterprise worthy of support that has behind it a fixed honesty of purpose. I am conscious of the fact that there are instances in modern life which to some—and sometimes to many—are proof positive to the contrary. Enterprises of unstable purpose do undoubtedly succeed, or, perhaps to be more strictly accurate, seem to succeed. But I have yet to have pointed out to me one single instance where success has been gained, and where success has been maintained for any given time, by any enterprise behind which there was other than a fixed policy of honest dealing. It seems to me to be a matter quite beyond the possibility of doubt that upon a dishonest purpose no true success can ever be built.—Edward W. Bok in Printers' Ink.

A HELP IN PRESCRIPTION WORK.

There are a great many things that the average dispenser can't remember, and there are as many more that he shouldn't try to remember—it isn't safe. These things come up in prescription filling when time is an important factor and accuracy is strictly essential. There are questions about dosages, dose equivalents, percentage solutions, specific gravity, incompatibilities, metric and thermometric equivalents, meanings of Latin, French or German terms. These things are all tabulated, or figured out, handy for instant reference, in the Era Dose Book (Third Edition, Revised and Enlarged). Price 50 cents, postpaid.

"Everything in education should conduce to understanding, just as everything which conduces to understanding is education."

Some undertake the study of pharmacy in order to obtain a thorough understanding of the science, others merely to fit themselves to pass a required examination.

While a desire to scramble past the board is not the best incentive to study, it still leads to a considerable amount of understanding and often to study of a more serious sort.

For a thorough grounding in the science of pharmacy, the larger colleges are undoubtedly the best means.

But for a beginning, and an aid in passing the board, correspondence courses, such as the Era Course in Pharmacy, are highly effective, and, moreover, inexpensive.

THE PHARMACIST AND THE DRUG HABIT.

The report of the committee on the acquirement of drug habits, a portion of which is printed in the present issue, is of all the papers presented at the last meeting of the A. Ph. A. the most interesting to the trade. It deals with a question laden with the most serious consequences to pharmacy as a calling, a question that must be fairly met by the more influential element in the trade before it involves all in a common disgrace. The report shows that the abuse of narcotic drugs has assumed enormous proportions and is rapidly increasing!

Science has given the world a large number of substances which have a definite action upon the human organism, and when properly applied are useful in the relief of suffering. It is the physician's duty to apply these reagents to the body, and that of the pharmacist to keep them in stock and supply them when required. It is the humanitarian side of these callings that has endeared them to the people and has won for them special privileges and respect.

Unfortunately nearly all the materials employed to restore disturbed vital functions to a normal activity are also capable of producing abnormal conditions in the normal organism and therefore offer a means for the satisfaction of unnatural and degrading appetites. Nearly every one of the useful drugs may thus become, instead of a blessing, a curse to humanity.

What will be the effect upon the dealer if the materials which form his stock in trade are permitted to be diverted from beneficent to vicious uses? The answer may be read in the history of the liquor dealer. The dramshop is despised and looked upon as a curse and the actions of its proprietor are regulated by innumerable laws as if his purposes were purely criminal. And yet the saloonkeeper deals in only one of the many potent medicinal agents, and its possibilities for evil are mild as compared with some of those found upon the druggists' shelves.

The quantities of opium and cocaine consumed to satisfy the cravings of the vicious are already very large in proportion to those employed for legitimate purposes. Are the pharmacists of the United States content to allow their occupation to degenerate into a curse to humanity, while their ancient humanitarian duties are monopolized more and more by the physician?

SOME INTERESTING DETAILS.

The report contains a table of statistics collected by means of cards and letters from all parts of the country. The table is necessarily very incomplete, for certain details are difficult to obtain. Many interesting details are given, of these we can quote only a few:

"General reports indicate that the sale of narcotics is not restricted to one section of the country nor confined exclusively to the fallen and lower classes."

"Alabama reports out of about 150 drug habitues, eight with heroine habit."

"Maryland reports the sale of cocaine by disreputable physicians, the purchase by one retailer of \$500 worth of cocaine during six weeks, and another dealer who purchases on an average 25 ounces a week."

"Minnesota reports a case using several large bottles of effervescent salts a week, cases of addiction to chloroform, ether, chloral, cocaine and morphine and chronic users among the theatrical profession."

"Ohio reports sales of robbers to a few druggists only which aggregate 600 ounces of cocaine a month."

"Pennsylvania reports several heroine cases, and the purchase by a small retailer of 100,000 one-fourth-grain morphine pills at a time."

"Virginia reports 10 per cent growth of cocaine habit among negroes."

Concerning institutions devoted to the treatment of drug habitues we find that, "in almost every city of say, 100,000 inhabitants, there are places of this kind indicating the extent to which the evil exists, even among those who are willing to be cured if possible."

"There was an increase of \$77,750 in the value of cocaine imported in 1902 over that for 1901, of \$67,115 for the equivalent of the nine months of 1903 reported. Assuming \$3 an ounce as the value of the cocaine, this gives us an increased importation of 25,920 ounces in 1902, and 22,372 ounces for nine months of 1903—a fact that speaks volumes in itself!"

"There was an increase of 34,411 pounds in the amount of smoking opium imported during the portion of 1903 reported, this drug seeming to be steadily increasing in amount consumed here."

HOLD UP THE HANDS OF THE WORKERS.

Even the most optimistic must admit that the traffic in drugs that enslave is a very serious problem in pharmacy. The abuse has assumed alarming proportions, and it is useless to try to ignore the evil. Drugs are obtained in drug stores and the druggist forms a spoke in this wheel upon which moral and physical humanity is broken. Pharmacists in Kansas and other anti liquor localities know to their sorrow how quickly respectable drug stores can become associated in the popular mind with the despised "joint", and how unpleasant is the result. A shop—we will not call it a drug store—that piles up profits by pandering to the cocaine habit is in some respects infinitely more damnable than any saloon, and when the fact that such places exist in most large towns becomes fully known to the public, there will be a sweeping denunciation beside which the recent anti substitution campaign will seem mild to say the least. The matter must be taken in hand and reputable members of the trade, in taking the initiative in dealing with the question are

servicing their own best interests. The druggists of Illinois, Ohio and other states have already secured legislation which, it is hoped, will serve as a check, and the New York State Ph. A. has taken steps toward a similar end. But the legislature can only furnish the means; the real work is the enforcement, and in this every well-meaning pharmacist can do his part. The enactment of a law is only a signal for the real struggle to begin. The fierce battle now raging in Chicago gives a hint of the difficulties to be overcome. Unfortunately the work falls chiefly upon a devoted few who expend their time and energy for the common good, often without a word of thanks or encouragement. That the burden is at times almost too great to bear, we know from personal observation and assurance. These men do not, of course, expect an adequate reward for their services, but an occasional word of encouragement and an intelligent interest in their work is the least of the recognition due them, from the rank and file, and we know that it would be appreciated.

THE LOVE OF THE UNCLEAN.

We are sorry to see that the brightest and best of our contemporaries has fallen into the disgraceful policy—journals have no habits—of printing doubtful stories, supposed to be humorous, but which, for lack of wit, have been fashioned out of unclean allusions. Everybody understands what we mean—the evil-smelling yarn commonly known as shady and risqué, and of which we blush to think in the presence of women and children. In everyday life we masculine Americans cannot escape it; we hear and endure it everywhere, but it is fortunately not often thrust under our noses in print. We are the more grieved at these cesspools in an excellent publication, because we had discovered in its pages evidence of a very pretty taste for literary form, a quality somewhat rare in drug journals. We can excuse the masquerade of indecency as wit in such worthies as Aristophanes, Rabelais and Chaucer, and even Voltaire and Swift; civilization had not then covered much of the world's necessary filth with a merciful mantle of silence. But deliberately to spread filth upon a clean white page in beautiful modern type for the amusement of a few degenerates—we can not believe that many readers enjoy that sort of thing—is almost unthinkable. Not that we are of the prunes and prisms gentry; we believe in calling a spade a spade when occasion requires. The present issue contains sentences suggestive of matters sufficiently shocking, but they present facts of vital concern to the druggist, and we have, therefore, placed them with such dignity as we could command. It is the exploitation of the unclean merely for the love of the thing in the columns of a journal which must find its way into the hands of women and children that we find so utterly beyond the pale. We find upon one page the portrait of a beautiful and refined lady and upon an adjoining page a disgusting tale about a suspensory bandage. How would the editors like to have the subject of the portrait walk in upon them some fine day and discuss their journal with them?

Collect the Debt.

If a man feels that the world owes him a living, the best thing to do is to hustle and collect the debt.—Spatters

SHOP TALK

ON THE UNPROFITABLE HABIT OF "SAYING THE THING WHICH IS NOT."

"He'll have to go," said the druggist with a sigh. "There's nothing else to do."

"Who's got to go?" inquired the C. P.

"That boy, Jimmy."

"Jimmy! I thought everybody liked him. What's the matter with him?"

"Can't trust him."

The old man whistled. "That's bad—for Jimmy. Take things?"

"Oh, no; not that! I don't think there is anything vicious about him. It just seems to be more natural for him to lie than to tell the truth. Whenever he's late, or something goes wrong, he is always ready with a fine excuse. I don't know when to believe him or not. The drug store is no place for a boy like that."

"Why don't you reform him?"

"How?"

"By simply showing him that it doesn't pay. When he lies to you once, let him feel that you don't believe a word he says for a week afterward."

"It isn't worth while. I have had clerks who would lie to me up and down about little blunders. It's a fatal defect. They're no good at all. The only thing is to get rid of them. Now, Jimmie, I have become quite attached to him. If it wasn't for his bad habit of lying—"

"I prefer to say that he never learned the habit of telling the truth."

"What's the difference?"

"Telling the truth is an acquired habit; lying is natural. The boy's education has been neglected, that's all. There is hope for him."

"I don't know. I believe that honest men, like poets, are born, not made."

"Nonsense! If anything is inherited it is to be wary of the truth. It is one of the natural weapons of the weak. It's as natural to lie as to dodge a blow. When you were one of a group of little boys and accidentally hit a hulking bully of a big boy behind the ear with an applecore, you knew somebody would get hurt, if he found out. You instinctively sang out, 'I didn't do it, I didn't do it' as you ran. All savages lie readily and fluently, and animals as well."

"Animals! What next?"

"Not in words of course, but most lying is not spoken. We all do most of our lying without saying a word."

"We all do?"

The sage nodded. "You and I and everybody else." "You'd get hurt if you were to say that to some people. I'm curious to know how animals lie."

"Did you ever startle a mother grouse with her brood of pretty brown chicks? As quick as a flash the old bird is fluttering about in a way that says as plainly as day: 'Why don't you run after me? Don't you see that I can't fly? My wing is broken.' In the meantime you couldn't find one of the little fellows with a microscope, and the mother bird is fluttering farther and farther away. When she has led you far enough, she lets you know that it was all a lie by rising with an insulting whirr and making off like a bullet."

"If you call that—"

"What else is it? It is only after the individuals of a tribe or race become adjusted to each other so that they can trust one another that they begin to tell the truth."

"Of all things, to hear you who are always digging away at insincerity, upholding the most cowardly of vices!"

"I'm not upholding it. I'm merely showing that a man need not begin to condemn others and feel that he is of different clay, simply because he has no reputation as a liar. Truthfulness is a purely artificial habit."

"It's a mighty good habit, anyway."

"It is quite indispensable in business, and that is why the commercial world is more ethical in this respect than the world of society, art or—"

"You dare not say, religion. That is one of the strong points. Lying is the subject of one of the ten commandments."

"Yes, and that is the particular commandment upon which people insist the most and which they all break the most frequently."

"A little child who tells a fib to get a piece of sugar is made out to be a mighty sinner, while its mother covets the whole earth all the time and is quite proper. Besides, it does not say, 'Thou shalt not lie.' The words are, 'Thou shalt not bear false witness.'"

"That means the same thing."

"It may or it may not. It may mean only perjury, or it may mean putting up your sarsaparilla in bottles of the same shape as the other fellow's."

"And just now you were saying that truthfulness was necessary in business."

"Verbal truthfulness, yes! Absolutely!"

"Why?"

"Because you've got to be trusted. Trust means credit. The banks won't have any lying, and the system has become so refined that it is foolish. The books show up a man at once. That's why Jimmy will come out all right. He has too much sense to keep on hurting his credit. Business is a mighty complicated piece of machinery in which you've got to fit pretty nicely or you will be ground to atoms."

"The world has no use for liars."

"Out and out verbal liars, no. But there are other kinds about which it is not so squeamish."

"For instance?"

"Their name is legion. There is a great class of successful advertisers. I have already referred to your baldness cure that wouldn't cure a bald-headed baby; then there are the doctors. They can't tell their patients quite everything, you know. It is part of their policy not to tell the truth about prescriptions. And then society conventions—you can't be absolutely truthful, otherwise you would hurt everybody's feelings."

The druggist glared at our old friend for a moment, as if he were some strange, dangerous animal. "I say," he said, "take my advice. Let up on it. You'll get into trouble. It isn't safe to call the whole world a liar."

"Pooh! The world is no fool. It knows it as well as I do."

"Well then! Don't be so d—d truthful about it. The world used to burn up cranks; now it puts them in psychopathic institutions."

THIRTY MINUTES WITH YOUR EYES OPEN.

This is what a visitor saw in thirty minutes in an up-town pharmacy:

A West Indian negress drawlingly imparted the information that she wanted a nursing bottle, "with printing on both sides." It couldn't be found. She wouldn't take it, because "I broke the other, and I want one just like it so the misses won't find out."

Another West Indian negress wanted a postage stamp to send a photograph. "A two-cent one will take it," said the druggist. "No, I'll take a five-cent one; I don't want this picture all smashed up." She

A. A. Gracey's Fine New Drug Store at Fifty-second Street and Haverford Avenue, Philadelphia.

The above store, recently opened by A. A. Gracey, is situated at the junction of three streets, on one of the very few corners in Philadelphia where double trolley tracks cross. The room is triangular in shape, with high ceiling and a great abundance of light, both natural and artificial. Fine large bulk windows, illuminated by gas and electricity, give the building great prominence and help make it the centre of the business section. The main entrance to the store is at the front angle of the building at Fifty-second and Haverford avenue. There are side entrances on the Haverford avenue side, and on Fifty-second street. The fixtures are of quartered oak. There are 250 square feet of mirrors. The windows are beautifully decorated with brightly-colored swing show bottles, supported by heavy brass fixtures. Mr. Gracey has secured the rear of the property next door on the Fifty-second street side to make room for the prescription department. A brilliant electric sign and clock are being constructed for the main entrance. The roof is illuminated by a large electric sign which can be seen for miles.

got it, put it on, and—posted the photograph without addressing it.

Messenger came from a neighboring pharmacist and asked for a gallon of ethyl and a half-gallon of wood alcohol mixed. Wonder what it was wanted for?

Excited man—very angry—rushed in and shouted: "You're a thief; you've been robbing me!" Our friend the pharmacist, went white, but he remained cool. "What do you mean?" he demanded. "I mean that you robbed me! Here are my three money order receipts and here is a letter saying the money never was received! You stole it!"

"Johnny," called the druggist to his porter, "I'm going to send for a policeman. I'm going to have you arrested," he said to the fellow.

The latter was plainly scared. He came down from his high horse and begged to know why.

"Well, you've been trying to blackmail me," said the druggist. "There are your money orders, those things you call receipts; why didn't you send them?"

The fellow had, sure enough, kept the orders. The druggist had been scaring him for fun.

A New Jersey man strolled in and asked all about a society the druggist was a prominent officer of. The latter, showing curiosity as to what the investigation was all about, was astonished by this frank reply:

"Well, you see, I've read in the pharmaceutical papers all about your success, and the honors you have won in these societies, and I thought I'd join some myself and see if I couldn't get up like you."

"Where!" That was a compliment that was unexpected for sure," said the druggist when his visitor had departed.

THE DOCTOR WHO IS "SHY" A CENT.

"I never intended to run a cut price drug store," remarks the owner of a pharmacy in a Rhode Island

country town, "but I found a day or two ago that one of my customers had found a way to make me shave my prices 30 per cent. or so without much trouble.

"I don't know whether the plan adopted was original; I've respect enough for the members of the medical profession to believe that few practitioners would resort to such low-down methods of saving a cent as the plan adopted by a doctor.

"He began in this way. Coming into the shop one day when I was in charge and the clerks out to dinner, he asked for an ounce of Dover's powder. The price was ten cents, but the doctor had only nine cents in change and, after fumbling about in all his pockets, he put down the nine pennies and said he 'would owe me a cent.'

"I replied that 'that would be all right, and said something about 'letting it go at that,' and he promised to look in and pay me later. The next time, he had occasion to buy the powder from one of the clerks and he told the boy that I had made the price 'nine cents an ounce' to him and so he got it as a matter of course. Later on he was shy a cent again and got his powder from the clerk for eight cents, and by that sort of manipulation finally brought the price of Dover's powder down to seven cents an ounce. I knew nothing about it until he began to work the same game on other things.

"One day I heard him arguing the matter of price with one of the clerks and made some inquiries when he left. I was 'put wise,' as the boys say, about a whole lot of things. That doctor doesn't buy things in my shop any more. I told him I didn't want his trade and by ginger, I didn't! But that same doctor is taxed for more than any other physician in my town, and it is dollars to doughnuts that he isn't taxed for half what he ought to be.

"And I can't help wondering if he got his money by his medical practice, or by his 'sharp practice'."

A DOSE OF RHEUMATIC CURE FOR CANADA.

This is the story of how the Canadian customs house got a double dose of medicine—one dose belonging to a Yankee and another of its own kind:

A Detroit man went to Ontario to spend his vacation. While out fishing he got a wetting. In due time Gen. R. Heumatism began operations. The sufferer remembered that his druggist in Detroit had at one time given him a 25-cent bottle of a lotion which had relieved him of his misery. So he wrote a hurry-up card for another bottle.

After waiting for several days, the vacationer received a postal card from the customs service like this: "Dear Sir—There is held in this office a package addressed to you and valued at 25 cents. The duty will be six cents. Entry fee 25 cents additional. Total, 31 cents."

"Dear Sir" reflected. The duty on the medicine would bring its cost up to 56 cents. By waiting a couple of days longer he could procure another bottle for 25 cents, save a little money and beat the detested customs authorities. So he grinned and bore his pains until his return to Detroit, when he carried out his intention.

Now the Canadian customs service must unwind about fourteen yards of red tape to get rid of that 25-cent bottle of medicine. A dozen entries must be made in big ledgers by high-salaried clerks. Their time and the ledger space will probably cost \$2. Then the medicine must be stored for a year or so. After that an auctioneer must formally yell himself hoarse trying to sell a bottle of medicine that no one will dare buy. And while the Government is perspiring the original owner will continue to chuckle over the clever way in which he gave it a dose of his and its own medicine.

TWO SEATS AND \$1.98 AHEAD ON A JOKE.

A certain well-known theatrical manager who can not write so very legibly had the tables nicely turned on him by a druggist. The manager was on a tour with his company when a tradesman in one of the towns wrote to him asking for a couple of seats. The "order" was undecipherable. A friend to whom the manager showed it said that it looked exactly like a doctor's prescription. So a wager was made and the paper was taken to the druggist and handed over. The latter looked it over, made up a bottle of medicine and said, "Two dollars, please." The amount was paid, and that is where the joke came in. The chemist read the order at a glance and saw that he was being hoaxed. So he determined to hoax in return. The contents of the bottle cost him nine cents and he had the two dollars, and, as appreciation from the manager, a couple of the best seats in the house for himself and wife.

NOT EXPENSIVE CLOTHES BUT CLEAN ONES.

"Clothes do not make the man," said a Rochester druggist the other day, "but they go a long way toward a clerk's success in a drug store. I do not mean that he must wear expensive clothes. All I require is that he be neat and clean. I am very particular about this—maybe I'm a crank. I do not believe that a person who is waited upon by a clerk with dirty hands, disheveled hair, or in shirt sleeves, will return to that store a second time. I endeavor to set the example."

CATCHING FLIES AND CUSTOMERS WITH ONE IDEA.

Fly paper served two purposes in a Rochester store recently. The days were hot and the flies were thick. The druggist remembered that he had fly paper for sale. An idea to push it and, at the same time, get rid of his own flies struck him. He made a fly paper window, rolling some sheets into cornucopia shape, with flags in the small upper end. A large sign on heavy white card-board read: "Death to the flies—are You troubled? Two big sheets, 5c." The flies as well as the passersby were caught by the proposition.

DRUG ABUSE AND ITS REMEDY.

Extract from the Report of the A. Ph. A. Committee on the Acquirement of the Drug Habit.

By F. T. GORDON and E. G. EBERLE.

Opium and Morphine.

CAREFUL study of data personally collected and from reliable sources forces the conclusion that the habitual use of opium in its various forms is increasing and that this increase is confined to no one class or occupation. A majority of the class known as "habitual criminals" and those men and women whose offenses against law and morality bring them often into the police courts, seem to be drug habitues, according to the testimony of police authorities and hospital surgeons. The fact that most of these people become users of drugs after they join the ranks of the "under world" does not lessen the danger to society of the situation. The testimony is almost unanimous that a criminal or a member of the class that preys on society who is a "drug fiend" is the hardest to reform, more often slips back into a criminal life and, even after a period of respectability, will commit crime to obtain money to purchase the favorite drug if out of work and unable to procure it. The use of narcotics also blunts their moral sense so that few even desire to reform, being satisfied with any kind of life that permits them to get and enjoy their drug. So serious is this feature of the question of drug abuse that the writer earnestly urges that legislation be secured to entirely prohibit the sale of narcotic drugs to certain classes of people—such as the demi-monde, known criminals or those in certain localities in large cities certainly learn to decide what a man is by looking at him, but druggists in certain localities in large cities certainly learn to know the class of their customers.

The weight of evidence seems to be that a habitual drug user is more apt to succumb to temptation than a non-user, his moral sense is blunted and an exaggerated sense of selfishness and personal gratification causes him to place his desires or seeming welfare above all else.

While it has not been practicable to obtain exact figures, it can be stated that the drug habit is alarmingly increasing among the men of our army and navy. The number of men using opium in the army has greatly increased since the occupation of the Philippines, many "opium smokers" acquiring the habit there from the Chinese or natives. The smoking of opium by the men of the navy does not seem to be as prevalent as in the army, gum opium "pills" or morphine being the way in which the drug is mostly used by sailors. Quite a number of enlisted men have been discharged from both army and navy during the last year because of their being detected as habitual users of opium or morphine—probably several hundred per cent. more during the last five years than for any ten years previous. To the best of the writer's knowledge—and he has carefully inquired into the facts—practically all the cases of drug habitues in both army and navy arise from the men learning the habit from natives of foreign countries or from lewd women and men in this country. Not a single case of drug habit coming from the prescribing of an opiate by a medical officer can be recalled, opium and allied drugs being very guardedly and carefully used by army and navy medical officers. A goodly percentage of the cases are men who have acquired some drug habit prior to enlistment, while a few—sad to say—are from the men of the hospital corps who drifted into the habit from constant opportunity and handling of the baneful drug.

At present, it is calculated that there are over a million opium smokers in the United States, the importation of opium for smoking purposes being double that for medicinal uses, amounting to more than 500,000 pounds last year, valued at \$3,500,000!

Cocaine.

The trifling effects of cocaine on users of this very "delicious" have been so often and graphically told that it is hardly necessary to retell the story. One peculiar feature of the cocaine habit noted by the writer is that one of the first signs of the use in a person is that the habitue loses all care for personal appearance or neatness, and a man formerly the pink of neatness soon becomes noticeably slovenly in dress and appearance. There does not seem to be anything yet discovered that has as baneful an effect on the user as does cocaine. The writer has seen this drug literally turn a bright, high-principled man into a sneak-thief and liar, absolutely without regard for morality or principle. One redeeming feature there is; the habitual use of cocaine seems to lessen both sexual desire and ability, so there is less danger of its transmission by heredity.

The evidence seems to point to the startling fact that nine-tenths of the cocaine habitues have fallen victims to its influence through use of prescriptions or patent medicines containing the drug. Those who deliberately begin the use of cocaine mostly seem to do so through example of teaching of others or from having read accounts of the wonderful stimulating properties cocaine has on the mind and the body. The use of cocaine seems to be rapidly supplanting in part the use of morphine among men and women of the "under world," and the writer knows personally of two cases of men who acquired the cocaine habit from lewd women they visited habitually. A very common form in which cocaine is used by this class is that of a "snuff," the cocaine being finely powdered and diluted with some inert powder, this being a conveniently portable and easily used form. A powder containing fully fifty per cent of cocaine is sold in large quantities to a certain class of men and women—the "powers that prey"—under the name of "Brighteye," from the effect of the drug in giving the eyes a temporary brilliancy.

Most of the cocaine used by these people they buy undisguisedly as such, there being plenty of drug stores where they can buy cocaine, morphine, etc., as easily as epsom salts. The writer knows of one drug store in Philadelphia where regular customers can enter and get cocaine without any formality but the payment of its price. Holding up one finger means the person wants a "five-cent powder"; two fingers, ten cent's worth; three, fifteen cents, and so on, the mere holding up of the fingers in the initiated way being enough! This druggist buys cocaine in too-ounce lots—from a supposedly reputable (?) manufacturer! Personally, the writer is sorry to be forced to admit that the majority of drug stores will fill a prescription calling for cocaine, even in unusual amounts, with little remark save saying "the price of this will be a little high." In one large Eastern city, out of about twenty-five stores visited only in four was there any question as to having a prescription calling for fifteen and twenty grains of cocaine "to be used as directed, in eyes," etc., put up and handed him. Not even a word of caution as to the nature of the drug was vouchsafed. This is not an accusation or a sensational assertion, it is simply the statement of actual experience.

It has seemed to the writer after a little delving into the facts of the supply of drugs to habitues that the retail druggist is far less to blame than the manufacturer or wholesale dealer. While many druggists are careless in selling drugs and save their conscience when selling to a "fend" by saying "If I don't see one else will," very few retailers actually make a practice of supplying drug habitues or bidding for their trade. On the other hand when a manufacturer or jobber supplies a small retail store with pounds of morphine and cocaine every month, can it be said he does not know the reason for such unusual orders? One store in Philadelphia, a store doing little prescription and hospital business, buys cocaine in too-ounce lots about monthly. What must be the moral prin-

ciple of the wholesaler who supplies such a drug store with such a criminal purchase? Before we punish the little fellows we should begin higher up and put behind the bars the criminals who make it possible for the little fellows to carry on their nefarious trade. They can only plead ignorance by acknowledging themselves unfit to deal in such articles, but their real excuse is that they "want the money."

If it is possible to enact laws to prevent the retail sale of narcotic drugs except under certain conditions, it certainly seems feasible to enact a law that will prevent persons in the guise of retail druggists obtaining cocaine, morphine, etc., in quantities utterly beyond reasonable needs of their business. It might chafe some to be compelled to show how much of a certain article they used in their legitimate business, but it is already done by the National Government in one form in the manufacture and sale of alcohol and tobacco, and any one who has studied the question of drug abuse at all realizes that alcohol is fast becoming a far feebler power of evil than narcotic drugs. The writer may be emphatic, but he has seen enough of the evils coming from the abuse of drugs to make him fear that, unless very stern and speedy action is taken now, the people of the United States will pay dearly for their neglect in the not distant future. And he has little faith in an appeal to the moral sense of the men who are to-day supplying the retail drug stores with all the drugs they can sell, nor to the class of druggists who supply the "dope fiends." There is but one appeal to such men and that is through fear—fear of their pocket-books or fear of jail—and the only way to stop them from continuing their practice is to make the penalty severe enough to be adequate to the danger of their crime and then administer it unsparingly. A murderer who destroys a man's body is an angel beside one who destroys that man's soul and lets the body live for crime.

And there is another feature demanding our attention, that is, the recognition by the law of the fact that many drug fiends delight in teaching others the use of their favorite drug and the enactment of some legal means for checking this danger by adequate punishment of the guilty. The writer has learned of too many cases where persons have learned the use of a drug from a habitue, and he believes that this factor in the increase of drug abuse has not been properly considered. It is certainly worthy of careful study and prompt action to prevent its effects from becoming still more alarming.

It may seem pessimistic, but the facts certainly seem to bear out the assertion that the only remedy for the present widespread increase in the use of narcotic drugs is in the enactment of stringent laws to throw as many difficulties as possible around the obtaining of such drugs for any purpose, the provision of exceedingly severe penalties for the sale of narcotic drugs for any purposes but medicinal and for any device, practice or teaching that will cause non-users to become habitues, and rigid enforcement of every penalty to its full extent. When one considers the number of ruined lives and homes caused by our loose laws and practices, the price of a little inconvenience or annoyance in the obtaining of some drug for lawful purposes seems a very small one to pay.

THE LLOYD REACTION FOR ALKALOIDS.

L. F. Kebler (Amer Journ Pharm) has carefully compared the sulphuric acid oxidation color reactions for strychnine and a mixture of morphine and hydrastin made famous by Prof. J. U. Lloyd in his story of Kentucky hie. The author finds that the mixture does not dissolve in pure sulphuric acid without coloration as pure strychnine does; strychnine which has not been properly purified may, however, also produce a colored solution. The colors produced by treating strychnine dissolved in sulphuric acid with potassium bichromate are not the same as those obtained with the mixture of morphine and hydrastine, although in some respects they are similar.

A LOYAL BUT NEGLECTED SERVANT.*

By RALPH B. GABLE, New York.

THE store window is the right hand of fellowship extended to the passer-by. It is the smile of welcome to him who would enter. This, let me say, is not putting a sordid construction on the office of the window. It is simply a recognition of the fact that the fabric of present day pharmacy is not unlike those of which our garments are made—it has two faces.

It is not my purpose here to delineate window displays or to propose a series of plans for filling windows with novel and attractive arrangements of goods. My sole object is to bring conviction to you that in the window placard you have a loyal but neglected servant. The placard is the one medium through which the average pharmacist can tell store news from day to day, from week to week. Except in a relatively small number of cases he cannot use the newspapers, and the folder or booklet is issued so seldom that the advertiser finds it rather difficult to infuse the all-important element of timeliness into his bit of printed matter.

The "Skeleton" Card.

I want to commend the man who uses placards relative to his various simple home remedies and the toilet helps that he prepares. At the same time I am constrained to protest against the skeleton type of placards so often seen. What I mean by "skeleton" is a mere name printed or painted on a card. Let us have flesh and blood placards; let us have evidence of life. I suppose my idea can be most strongly emphasized by asking you to imagine that you see a card bearing these words in a window: "Choice Perfumes." A little farther on your eyes catch this message: "Climax Violet Extract. Dainty and sweet as the flowers with dew still in them" Or, perhaps, the words before you are, "Climax Rose Extract. A wealth of summer sweetness in every drop." Which card, may I ask, would make the best impression on you?

Advertising is, broadly speaking, notification, information, suggestion, and your placards should comply with this definition. If they do, and you use them regularly and systematically, they will do effective service.

Examples of Success.

In conjunction with the prediction contained in this last clause, I want to mention a few examples of successful window advertising. A druggist located in one of our large western cities became interested a few years ago. He tried them and before long had tangible evidences of results. The volume of his business increased and he created a sale for a number of special preparations. Nine years ago he was doing a fairly profitable business, but to-day it is twice as large as it was in 1894. In order to prevent any misconception as to the character of his business let me say that this pharmacist has a thoroughly equipped laboratory; that he makes a large line of pharmaceutical preparations, and is prepared to make analytical and microscopical examinations for physicians. His prescriptions during 1902 numbered 12,000. He advertises in various ways to the medical profession, but the public he reaches chiefly through placards.

A few years ago a firm opened a pharmacy in the down-town district of New York. The bulk of the advertising thus far done has been by window cards. The window in question is a very large one, and a great variety of goods are usually shown at one time. Sometimes there are as many as thirty placards used at one time. And they are read. One can go to the store at any time from 7 a. m. to 7 p. m. and find an interested group in front of the window. The business is steadily growing.

Numerous instances might be cited in support of

A. M. ROEHRIG,

Of the U. S. Public Health and Hospital Service, Stapleton, S. I., N. Y., and third Vice-President of the A. Ph. A.

my belief that window cards comprise good advertising for the retail druggist. But such illustrations would not necessarily prove helpful to the men who might be casting about for new methods of advertising. So I will pass on to other considerations.

What to Say.

Talking points or what to say may puzzle some pharmacists. In fact the writing of bright, snappy placards may seem so difficult that many will hesitate to try. Let me repeat here, therefore, some remarks that I made on another occasion in reference to the value of persistence.

"Dexterity in any art or in any phase of business can only be accomplished by careful, painstaking work. Watch an experienced pharmacist as he wraps a package for a customer. He makes the folds of the paper and the end flaps of the package quickly and neatly. He deftly adjusts the string, ties it, and the package is finished. There are no creases in it showing repeated efforts; there are no unsightly wrinkles, no broken corners. That package is at once the envy and despair of the apprentice. He knows nothing however, of the failures, perhaps the humiliation, of past years in doing just such work. He knows nothing of laborious practice at odd moments in the early days of that pharmacist's career.

"What we have just said regarding the junior clerk and wrapping packages may apply to the druggist who thinks he bungles fearfully when he tries to write an advertisement, and who wishes he could express himself clearly and aptly as one of his competitors does. That druggist forgets the saying so often quoted that, "Ease is the lovely result of forgotten toil." He forgets how he perspired when he first began to make pills and how he worried about faulty packing of percolators. Time has removed the sting of failure. He has forgotten that sometimes he had to make a half-score of efforts before the results were even passable. So we would remind our readers that the writing of good advertisements means careful work; it means revision and change; it means frequent failure. But patience and persis-

*Read before the American Pharmaceutical Association at Mackinac Island, August, 1903.

tence will bring capability in advertising just as it will in any other which comes to hand.

Subjects.

We come now to a few suggestions about subjects for placards. One of the primal elements of value in placards is that they can be made suggestive of immediate needs. In a cold snap in winter you can refer to hot-water bottles, lotions and creams for chapped hands and to a preparation for coughs, if you make one. If your store is equipped with an apparatus for hot soda, a drop in the temperature in the cold months may be a favorable time to display cards about hot drinks, and reminders about atomizers may not be out of order at the same time. Mouth preventives have their season, and the same may be said of sponges, chamois, disinfectants and other household cleaning helps. Spices are most largely in demand in summer and fall, and paraffin, for sealing jelly, would find a ready sale at the same time. Flavoring extracts are used all the year 'round, but most largely in holiday times. Seasoning herbs are likely to be called for around the time of the winter holidays. Fug dyes have their special season and soda water is the beverage of millions all through the warm months. Then there are some topics that should be regarded as perennially appropriate. Prescription work is one of them; others are the following: Hair brushes and various lotions, tooth brushes, washes, powders and paste; toilet waters, perfumes, cigars, cameras, photographic chemicals.

Some of the articles or classes of goods here mentioned may seem trifling. My only excuse for offering them is that they go to make up the stock of many thousands of pharmacists. If you exclude all the trifling things from your window advertising, you will take away certain possibilities in telling store news. Your cards will soon become monotonous, stale and unprofitable.

Style.

The next point to be considered is the style of conveying your message. I know full well that many drug stores decline to consider placards because of the expense involved. It is a source of satisfaction, therefore, to bring before you a plan whereby expense is reduced to the minimum. You can be as economical or as luxurious as you like in carrying it out.

Go to a sign letterer or a picture frame maker and have him make for you six to ten mats of heavy cardboard. These mats are to serve as frames for the placards. The mats should carry all the decorative or eye-catching features, and should be cut to inclose cards of various dimensions. The sides of the elongated parallelogram comprising the mat should be from 1 1/2 to 3 in. wide. Your mats should be of various dark tints—grays, browns, blues, and greens. This series of mats is, in a sense, the groundwork of your placard work, for each mat in its turn may play many parts. For a national holiday, fasten a tiny silk flag in one corner of a mat and, ranking down the other side, place a "cut-out" in colors of the benign figure that stands for our country—Uncle Sam. At Christmas time let several of your mats carry sprigs of holly. For a tooth-wash mat get a smiling face. For amusement use a picture of a football player. For soda-water beverages have a sign painter make you several pictures of glasses of soda water. See that the frame is made particularly heavy and in it cut a small slit into which you can insert a straw. Pictures of berries and fruit will also serve you well in arranging mats for soda water. A picture of a lily, a shield, a lawyer in armor, or a policeman will help you in selling up a card for disinfectants. Gibson girls will be a valuable service in cards about talcum powder, sachets, or toilet waters. A small ear of corn placed in the corner of a card may help to have your message read about corn cure. Pictures of feet in various poses and sizes may also answer the same purpose. A few bars of music printed on the side of a card may be used as an accompaniment to your message of the kind music that you have in the store as a feature program. These suggestions are suffi-

cient, I think, to show that the possibilities of decorative features are practically unlimited. Discarded lithographs, popular periodicals which print half-tones on heavy paper, used colored plates, old illustrated catalogues of various kinds will be of great help in affording ideas as well as material for making placard frames attractive. Pictures are a universal language. They tell some stories without a word of explanation. The cards on which the wording appears should be ordinary white, light-weight bristol board. Use only black ink in lettering your cards and no fancy or involved forms of letters. Avoid long bewildering curves and scroll work. Go to your local printer and have him give you samples of printing in French Old Style or Elzevir type. Better still, have him print several selected paragraphs for you in which all the letters of the alphabet occur. Then you can have models of letters before you at any time.

A Few Successful Placards.

Once more I want to sound a note of warning about the way you put window cards. Try to make them bright, crisp, persuasive, timely, suggestive. I'm going to read the words of a few placards that I know have been used with good results:

"It is easy to train a child to watch the teeth; buy our toothwash."

"Thin hair makes you look old. Why not try Laverder Lotion."

"Smoke 'Di Bazan' if you're tired of heavy cigars."

"Good vanilla extract is rare. You can get it here."

"The missing link to comfort—our corn cure."

"A ticket to Comfort costs 5 cts. At the soda fountain."

"There's a man inside waiting to quench that thirst."

"Fortunate is the child taught to use our tooth wash."

"Every lover of dainty odors will like our Violet water."

"Choose blindfolded from our stock of tooth brushes and you'll be safe."

"We have every kind of a hair brush but a poor one."

"It's easier to put on a chamois vest than to put off a cold."

"Chemical helps for amateur photographers."

"We ought to be selling more hot-water bottles this kind of weather."

"Silver toilet needlids. None so high as to be extravagant; none so cheap as to shut out goodness."

"Keeping faith with our public has built up our business."

These various wordings are presented not as models of elegance, but all, I think, have the merit of not being perfunctory or conventional, and they serve to emphasize my injunction against the skeleton form of placards.

THEORY AND PRACTICE

IODIDE OF CODEINE AND TWO IODINE DERIVATIVES.

L. Union Pharmaceutique discusses the substance recently employed with good effect in the treatment of bronchitis and tuberculous, and known as biniodide of codeine, iodide or iodo-hydrate of codeine. These three names applied to a single substance, in reality belong to three different compounds. Biniodide of codeine is obtained by the substitution of two atoms of iodine for two atoms of hydrogen in the alkaloid, its crystalline in the form of golden yellow needles, and is insoluble in cold water, soluble in hot water with decomposition and soluble in warm alcohol. The moniodide has not been described, but its existence is possible. The iodo hydrate of codeine, which is obtained by the union of hydroiodic acid and the alkaloid, is an addition product. It crystallizes in long white

needs when pure, but the crystals are apt to show a yellow color when the hydriodic acid employed in its preparation contains free iodine. It is soluble in 60 parts of cold water, readily soluble in boiling water from which it crystallizes upon cooling with one molecule of water, slightly soluble in cold and very soluble in warm alcohol. The properties of the last compound are identical with those of the remedy in question and experiments show that the substance is in fact the iodohydrate of codeine, the other names being improperly applied.

THE RELATION OF PURE CHEMISTRY TO PHARMACY.

Professor Partheil (Apot. Zeit.) states that the relation which pharmacy bears to chemistry at the present time is very different from that existing in the beginning of the last century. Chemistry has gained an independent position, and since the pharmacist has largely ceased to make his own preparations, the pharmacy laboratory is no longer the nursery of the young chemist. Because the production of pharmaceutical preparations has passed into other hands, it is more necessary than ever that the pharmacist should be in the position to test these materials and determine their medicinal value. He must be an expert analytical chemist and botanist. Under the present condition the pharmacist requires a more thorough training in chemistry and physics than has hitherto been the case, but for the practicing pharmacist the chemistry taught by the "pure" chemist is not sufficient. He requires a knowledge of chemistry applied to pharmacy, and this can be taught only by a man who has acquired his knowledge by observation and practical experience.

PRESERVATION OF BOOKS IN HOT CLIMATES.

Frank Browne (Pharm. Jour.) gives some advice to those who wish to preserve books from the ravages of insects, moulds and fungi which in hot climates cause rapid deterioration. To guard against moulds and fungi the volumes should be kept on open, airy and well-lighted shelves and not allowed to remain in stagnant damp atmospheres. To prevent the ravages of cockroaches and all other insects which prey upon books, the following varnish is recommended: Dammar resin and mastic, each 2 ounces; Canada balsam, 1 ounce; creosote, $\frac{1}{2}$ ounce, and spirit of wine 20 fluid ounces. Macerate with occasional shaking for a few days if wanted at once, but for a longer time when possible, as a better varnish will result after a maceration of several months.

SALOPHENE.

The properties of acetylparamidophenol salicylate, known as salophene, are described in the Revue Pharmaceutique as follows: It is a crystalline, odorless and tasteless powder of a yellowish white color, insoluble in cold water, slightly soluble in hot water and soluble in alcohol and ether. Heated with caustic soda the compound is separated into salicylic acid and acetylparamidophenol. From the mixture obtained salicylic acid may be separated by acidulating and dissolving out with ether. The solution formed by heating salophene with dilute caustic soda in the air, acquires a blue color passing into yellow, red and again becoming blue after cooling and shaking.

BORAX AS A PRESERVATIVE OF TINCTURE OF IODINE.

A. Clasat (Jour. Pharm. Chem.) states that the addition of borax to alcoholic solutions of iodine is an effective means of preventing the formation of hydriodic acid and also for removing this acid when it has formed after long standing. The borax is added in the proportion of two parts to every five parts of iodine present. The formation of hydriodic acid is a serious change in tincture of iodine for it not only removes the free iodine, the chief medicinal agent, from the solution, but it also introduces in its place free acid which may cause severe pain and burning followed by desquamation and excoriation.

ACTION OF BISMUTH PREPARATIONS.

G. Fuchs (Deut. Med. Woch.) considers the favorable action of bismuth salts due to the fact that in the stomach they are reduced to the bismuthous condition and in this form penetrate the ulcerated tissue and thus serve as a protective agent. This is contrary to the usual statement that the salts of this metal act merely in a mechanical capacity forming a superficial protective layer. The secretion of mucus caused by bismuth preparations is due directly to a specific action of the compounds. The experiments show that the most easily reduced compounds of the element are the most effective.

CARBOHYDRATES IN THE ANIMAL BODY.

Bach and Battelli (Chem. Zeit.) have traced the changes to which carbohydrates are subjected in the animal system. Glucose is first converted into lactic acid, which is separated into alcohol and carbon dioxide. The alcohol when formed is oxidized into acetic acid by the oxygen of the blood in the presence of oxydases, the acetic acid being in turn decomposed into methane and carbon dioxide. The hydrocarbon is oxidized to formic acid and this is split upon into carbon dioxide and hydrogen, the latter being finally oxidized to water.

FISH LIVER OILS.

J. C. Umney and C. T. Bennett have examined a sample of non-freezing fish liver oil which, in many respects, responded to the pharmacopoeial tests for cod liver oil. The refractive index and the percentage of free fatty acids were found to be the most valuable tests for purity, the fish oil showing over 3 per cent. of the latter. The B. P. nitric acid test has also been found to be useful for excluding fish oils from cod liver oil when time is not a matter of importance.—(Chemist and Druggist through Pharm. Jour.)

COMPOSITION OF MAPLE SYRUP.

R. O. Brooks (Report of Laboratory of Hygiene of New Jersey) states that chief adulterant used in the sophistication of maple syrup is liquid glucose. Of 45 samples examined, 40 were found to be pure containing from 50.1 to 64.2 per cent. of sucrose. In the remaining samples the percentage of glucose varied from 4.0 to 34 per cent. Pure maple syrup gives a reading on the cane-sugar scale of about 60, and a higher reading indicates with certainty adulteration with liquid glucose.

ACTIVE PRINCIPLE OF KOUSSO FLOWERS.

M. Chevalier (Nouveaux remèdes) states that although a number of compounds have been isolated from koussou flowers it is still impossible to assert positively which of these various substances possesses the anthelmintic action which renders the drug valuable. He recommends the use of an ether alcohol extract in gelatin capsules instead of the formula found in the French Codex.

REACTION OF PYRAMIDON.

Waldheim (Journ. de Pharm. et Chim.) ascribes the blue color produced when gum arabic is treated with pyramidon to the action of an oxydase present in the gum. The color is also produced by other substances such as hydrogen peroxide and chlorine water when the reaction is not too energetic, otherwise the color is destroyed.

DETERIORATION OF ANTIDEPHERITIC SERUM.

M. Chiadini (Jour. de Pharm. Chim.) states that antidephertic serum seems to keep well for two years, and that the presence of antiseptics or exposure to light under ordinary conditions exercises little influence upon its alteration. It becomes inactive after four years, while its activity is considerably diminished after three years. The activity may be lost without any apparent change in the appearance of the liquid.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Bleaching Agents.

(Subscriber). Agents used by manufacturers for bleaching fibres and textile fabrics are listed by Sadler ("Industrial Organic Chemistry"). This arrangement of these substances is presented below and is one, we think, contains just the information you are seeking.

Chloride of Lime ("Bleaching Powder") the most important agent for bleaching purposes, is produced in immense quantities by acting on dry slaked lime with chlorine. It occurs in commerce as a white powder possessing a characteristic odor resembling that of chlorine, and it exposed rapidly absorbs moisture. The real strength depends upon the amount of available chlorine obtainable—ranging between twenty-two and thirty-five per cent. Solutions of the above sold under fanciful names are met with in the trade varying in strength from five to eight per cent. "Chlor-oxone" is a product considerably used, and is essentially a solution of sodium hypochlorite.

Permanganate of Potash ($K_2Mn_2O_8$) although not strictly a bleaching agent, is mentioned on account of its very high oxidizing properties. It is manufactured from manganese dioxide by heating with chlorate of potassium and caustic potash, leaching out the mass, filtering, and evaporating to crystallization. It finds some application in connection with the manufacture of imitation furs—being employed to discharge the body color from the tips of the fibres to produce whites.

Hydrogen Peroxide (H_2O_2) is a colorless, odorless liquid obtained by the action of hydrofluoric acid upon barium peroxide in a lead-lined tank. The operation is conducted at as low a temperature as possible, and with continuous stirring; in about twelve hours the reaction is over, and the supernatant liquid drawn off and preserved. The residue, barium fluoride, is decomposed with sulphuric acid, and the hydrofluoric acid recovered. It is customary to refer to the strength of hydrogen peroxide as being of so many volume capacity, six, ten, etc.; this means that one volume of the peroxide will yield six, ten, etc., volumes of oxygen gas.

Soda Ash (Na_2CO_3). This is the commercial anhydrous carbonate of soda, used principally in scouring. It is generally contaminated with varying percentages of caustic soda, sodium chloride, sulphate, etc. Its value depends upon the amount of Na_2O contained.

Soda Crystals ($Na_2CO_3 \cdot 10H_2O$) is a much purer and more expensive carbonate; it contains no caustic soda, which renders it well suited to scouring.

Caustic Soda ($NaOH$). It comes in trade in iron drums solidly filled or in a coarse powder. It is obtained by treating carbonate of soda with milk of lime, whereby the carbonate is decomposed with the removal of calcium carbonate, when the clear liquid is

drawn off and evaporated down to the solidifying point.

Carbonate of Potash (K_2CO_3) is not used in the dye and bleach works to the same extent as soda, although for silk and wool-scouring it leaves the yarns, etc., with the better "feel," and when used in soaps, it does not cause colors to run or "bleed" to the same extent as soda. Its value depends upon the percentage of carbonate.

Acids. The mineral acids are used in bleaching chiefly to neutralize alkalis or to cause a disengagement of hypochlorous acid in the so-called "Sours," and reference to their production is unnecessary. Hydrochloric acid of commerce is yellow in color, due to impurities. The general strength is 21° Be. (specific gravity 1.17). Nitric acid, used in conjunction with the above for silk bleaching, and largely in the preparation of some mordants is bought with a gravity of 17.7 Be. (specific gravity 1.49). Sulphuric acid (H_2SO_4) is obtained by the burning of sulphur and conducting the gas into lead chambers, and in contact with nitrous vapors and steam. It is a heavy oily-looking liquid, and when pure is colorless. It is ordinarily sold at 66 Be. (specific gravity 1.84).

Soaps. The soaps employed in bleaching, etc., embrace tallow, rosin, and olive oil (for silks), although others are used, but mainly for special purposes.

Sodium Peroxide. Mention should also be made of this substance which has recently come into use as a bleaching and oxidizing agent. It contains about 20 per cent of available oxygen.

Removing Sticky Fly Paper Gum.

(J. B. D.) B. E. Hoekert, Hartford, Conn., writes that sticky fly paper spots may be easily removed from furniture by the use of benzine. He says he has used it many times and it works nicely.

Recent explosions in making colored fires in drug stores, Mr. Hoekert writes that they can be avoided by proceeding in the following manner: "Separately sift all of the ingredients through a No. 30 sieve, then put them all on a large sheet of paper and mix with a piece of cardboard, i. e., a playing card. Mr. Hoekert says he has used this method many times with good results and he thinks without any risk of explosions.

Formula Wanted?

(W. A. A.) "Skene's Powder (Pulv. Acid Benzoic Co.)?"

Ink Eraser.

(J. W. H.) See August 6, 1903, Era, page 140.

FORMULAS.

Favorite Depilatory.

Barium sulphide.....	50 parts
Starch.....	25 parts
Zinc oxide.....	25 parts

Mix with water so as to form a soft paste, and spread upon the face. In ten minutes' time it is scraped off and the skin is now found to be smooth.

Sterling's Spray for Hay Fever.

Eucalyptol.....	1 ounce
Glycerin.....	1 ounce
Tincture of opium.....	2 drams
Distilled water to.....	6 ounces

Use with atomizer 3 or 4 times a day

Cocoa Toilet Cream.

Alcohol.....	13 gallons
Castor oil.....	11 gallons
Cocunut oil.....	2 pounds
Oil of lavender.....	3 ounces
Oil of bergamot.....	3 ounces
Oil of lime, white.....	1 ounce

Melt the cocconut oil and then add the castor oil, warm the alcohol over a water bath, add the oils, stir until cold and then add the perfume

NEWS DEPARTMENT.

N. A. R. D. NOTES.

Wanted: \$5,000 in Dues and Donations.

Retailers, the N. A. R. D. is in urgent need of cash, at least \$5,000 in amount, because the 1903 dues have not been forthcoming in such a degree as to keep the treasury in a healthy condition. The executive committee has, through Notes, given the field fair warning, time and again, that the obligations placed on the membership by the delegates at Cleveland must be taken more seriously to heart than the evidences up to that time indicated and that action in making payment of the \$2 per capita would have to be considerably accelerated, or the work of the national association could not continue at full speed.

These repeated warnings, we are sorry to say, have not been heeded, and as a consequence enforced retrenchment is being considered as a matter of dire necessity. Unless there is a radical change in the situation within the next few days it is the purpose of the executive committee to call in at once all organizers and thereafter conduct the organization work as best it can from national headquarters by means of correspondence. This is acknowledged to be a dishearteningly poor substitute for the personal work of a dozen wide-awake, tireless and resourceful workers, and this step, if imperative, will be taken with the greatest possible reluctance. Curtailment in the activity of other departments of the national work will be made, and thus will the expenses of the association be brought within the range of its all-too-slender resources. The national association cannot be expected to do more than the means provided it will permit. The workers at national headquarters are ambitious to do all that the needs of the affiliated associations require; but of course they cannot coin results out of "blue sky." They have returned and will continue to return, in effective service on behalf of better business conditions, many dollars for every dollar placed in their hands; they cannot undertake to do more.

The decision to curtail activities all along the line was reached at a conference held Wednesday at national headquarters, and retrenchment measures are ready to be put into effect at an instant's notice. At the last moment it was decided that the field—friends of the N. A. R. D. among the retailers, wholesalers and manufacturers—should be given one more chance. It's up to you, now. Retailers, can you supply some of those delinquent dues at once? If so, get together, ascertain the amount and send them at once. If any retailer, jobber or manufacturer desires to help the N. A. R. D. over its present crisis by making a donation, he may be sure of its being gratefully received, but national headquarters should be notified at once. The executive committee will hold off for a few days—no longer. Let the beneficiaries of stable conditions in the drug trade, members or non-members, retailers or friends of the retailers, now come forward and show their appreciation of the good work done in the past and save the association the humiliation of being compelled to abandon plans that mean so much to all branches of the trade.

THINK IT OVER QUICKLY. THEN ACT!

The Money and How It Has Been Spent.

Treasurer's Vitti's cash balance at the time of the Cleveland convention was \$220.56. Since that time and

up to August 15, 1903, he has received dues, donations and organization fees amounting to \$34,392.82, making a total of \$34,613.38 as available cash so far this year.

The following shows the disbursements up to August 15:

Organization department (\$1,425.71 of this was in repayment of a loan made by Thos. V. Wooten previous to the Cleveland convention last year; the money was used to pay the salaries of organizers; the actual expenses of the department for the current year are \$19,397.12).....	\$20,912.86
Secretary's salary.....	2,171.45
Office assistants (including editor of Notes).....	1,556.99
Expenses of Executive Committee and Treasurer Vitti.....	1,522.96
Legal services.....	1,229.55
Postage (exclusive of that for Notes and alcohol petitions).....	1,127.31
Printing (exclusive of that for Notes and alcohol petitions).....	1,036.95
Repayment of loan from Sterling Remedy Co.....	1,000.00
Amount placed in Secretary's hands to meet current expenses.....	1,000.00
Assistant Secretary's salary.....	807.50
Rent, towels, water and ice.....	431.25
Secret services.....	357.65
Furniture, typewriters and repairs.....	218.00
Telegrams and telephone.....	134.55
Expenses of Cleveland convention.....	122.85
Legislative work.....	51.93
Express.....	40.29
Fidelity bonds.....	40.00
Petty office expenses.....	34.50
Files, books, etc.....	25.53
Exchange and bank charges.....	7.02
Miscellaneous.....	95.05

\$34,521.69

In addition to the above the secretary has received \$1,854.69 for subscriptions to Notes. The expense of publishing and mailing this journal (exclusive of salary of editor) has amounted to \$2,117.20.

The secretary has received \$1,515.40 from various associations, committees, firms and individuals which has been spent in their behalf.

For lists of partial benefits secured from the expenditure of this money, see last two issues of Notes.

Questions by Jobber Answered by Retailer.

The president of a far-Western jobbing firm, who questions the ability of the N. A. R. D. to accomplish beneficial results by means of organization, price schedules, salesmen's cards, etc., and is bold enough to claim that its work is productive of more harm than good, writes an Eastern jobber for information. In his letter the N. A. R. D.'s critic submits something like the following questions, to which he received in substance the answers appended, the letter having been turned over to a live, well-posted retailer for reply:

Question. "To what extent is the N. A. R. D. responsible for improving the price conditions with the retailers in your community?"

Answer. "By co-operation with loyal jobbers and manufacturers our local price-schedule has been maintained.

Q. "To what extent have the selling prices of the staple proprietary articles in the drug line been advanced because of the work of the N. A. R. D.?"

A. "Over former prices the advance up to this time has been 12 per cent.

Q. "Was it necessary before results could be ac-

"DELL" G. MORGAN.

Besides being president of the Iowa Ph. A., "Dell" Morgan is a politician who has been honored by his constituents by being elected mayor of his home city, Council Bluffs. Mr. Morgan has also served as president of the Council Bluffs school board. Ever since his graduation from the High School in 1880 he has been a druggist.

complicated to seek the good offices of the jobbers in order to properly influence the aggressive cutters?

A. "It was in several instances.

Q. "Did jobbers in your community refuse to sell goods to any retailer in your city in the exercise of their good offices, and if so, was such action productive of good results?"

A. "They were, with the result that not one dealer in this territory refused to recognize our schedule.

Q. "Did the refusal of the jobbers to sell goods to any retailer influence the said retailer to fall in line?"

A. "It did, in almost every instance.

Q. "Were there any cases where refusal by the good jobbers to sell goods to aggressive cutters that the aggressive cutters became more aggressive and defiant?"

A. "There were, but every one was finally tamed down and all are now satisfied to keep in line.

Q. "Were any of the aggressive cutters brought into line through means other than the influence exerted by the jobbers? (a) If so by what means?"

A. (a) "There were. (b) By moral suasion and by gentlemanly tactics.

Q. "Are department stores or aggressive retail druggists political factors that must be reckoned with in handling the cut rate question?"

A. "Both. The trouble usually begins with the department stores, the druggists being dragged in by the aggressive advertising of the former."

The above question, it should be borne in mind, is that of a doubting jobber who is now out of his money with the N. A. R. D. and N. W. D. A., and the answers are those of one of our ablest local secretaries.

It may be noted that this jobber has recently informed letters from druggists in thirty of the larger cities of the country who clearly establish the fact to any reasonable mind that the N. A. R. D. is

successful in its campaign on behalf of better conditions for the retailers in the larger centers of trade. This jobber some time ago, we understand, admitted that the N. A. R. D. had benefited the country druggists.

Pass Up the Free-Trip-to-St. Louis Scheme.

Retailers, pass up the free-trip-to-St. Louis scheme! It is the trading stamp imp in a new disguise. Do not cut prices by indirection, because this will certainly lead sooner or later to a direct cut. If you offer free-trip-to-St. Louis inducements to attract new trade to your store, your competitor will be forced to do the same, and both you and he and the other dealers in your community will soon be in the midst of a merry price war. Pass up the scheme!

So much for general principles, but how about the concern which proposes to stand behind you in making the free-trip-to-St. Louis offer? Who knows anything about the Standard Embossing Company of Chicago? Inquiry was made at three of our leading banks and they had never heard of the S. E. Co. The city directory does not contain the name, neither does the telephone directory. It is a long while before the railroad tickets are to be forthcoming, and meanwhile you must rely upon the responsibility of the Standard Embossing Company. It is claimed that a bond of \$50,000 has been deposited with John S. Butler, in the Stock Exchange to indemnify coupon-holders. But who is John S. Butler and how much cash would the bond realize in case of failure of the S. E. Co. to redeem the coupons? These are leading questions that careful retail merchants must consider in order to make sure they are not being deceived.

A Notes representative learns that Mr. Butler is the lawyer who organized the Standard Embossing corporation, and enough has been uncovered to arouse suspicion as to the worth of the indemnifying bond. Keep out of the scheme unless this bond is gilt-edged—take no chances, and if the bond is impregnable keep out anyway on general principles.

Pay your own way to St. Louis, Mr. Retailer, and give your customers the glorious privilege of paying theirs, then all will be on safe ground.

NEW IN JERSEY RANKS.

These passed the last examination before the New Jersey board: Herbert Spencer Anthony, Joseph Battisto, Edwin Lawrence Bower, Charles Frederick Boettcher, Walter Brooks, Charles L. Bernardo, Harry Balinky, Henry Bloch, William James Benjamin, Benjamin Burstein, William A. Evans, Charles Adam Emmerich, Maurice Mandel Feinberg, William Henry Farley, Harry Goldfarb, Amelia Susan Hooker, Augustus E. Heilman, John T. Harbold, Max D. Kupersmith, Julius Kramer, George W. Ksner, William H. Lindemann, Charles Langer, Prentiss I. Minton, Walter Ball Matlock, Frank Fisher Moore, Anthony Mast, Bertalan M. Michany, William L. O'Brien, Louis Gould Oliver, Frank Pearlson, Frank Permer, Walter Robert Rieck, Isaac Sigel, John Henry Sterner, Ferdinand T. Schmidt, Howard Sutphin Smith, Louis Schneider, Jr., William Ernest Schoeffler, James Wilber Van Dyke, Joseph R. Walters.

Registered assistants: Edwin Howard Bennett, Daniel Willson Mason, Charles Molt, Ernest L. Magie, Albert G. Penciltoold, Chester Bland, Oscar Armand Schraft, Charles Berenda Weimberg.

NEW YORK AND VICINITY.

TRANSPLANTED.

A Grecian Pharmacy in New York City and a Talk With Its Proprietor About Conditions "At Home."

How would you like to be a pharmacist in Greece, you sticklers for professionalism, where it would be a violation of ethics to have your store photographed and suicidal to your trade to cut off your mustache?

There are many things about Grecian pharmacy that are admirable, some safeguards between the physician and the druggist and again between the druggist and the public that might well be emulated here.

In Greece a man does not happen in the profession; he vigorously prepares for it, says John Giralfo, who has a Greek pharmacy at 44 Madison street, this city. Four years at Athens in the college and one year in a store precede the diploma. This gives its holder a footing as a manager, but there are other things still to be reckoned with before he becomes an owner. One store to every 1,000 meters is all that the Government allows in the cities. In smaller towns two scores to every 5,000 inhabitants is the quota.

Board of health and board of pharmacy supervisions do not exist. There is something more startling and possibly more efficacious. The inspectors there are a part of the autocracy of the Government and their activity is both inspired and inspiring.

Their attentions are divided between restaurants, butcher shops, groceries and pharmacies and are liable to be directed toward a proprietor at any moment. Sceldom does a week pass without two visits. When suspicion is strong these visits may become daily. The word that Mr. Giralfo, who is an American Greek, used to define that for which they seek was "rotten." Bad meat, eggs, bread or drugs are objects of continual hunt.

When something "rotten" is found the druggist or butcher is not haled away to court, except, perhaps, he be persistent and particularly dishonest, when it may mean prison or heavy fines, even forfeiture of his franchise. But ordinarily he is thoroughly advertised in the local papers. This is the severest punishment imaginable, for a little of it goes a long way in ruining a man's business and reputation.

Drug stores are taxed two per cent. every year.

Greeks are not always good prescription customers for they like to mix their own medicines. The physicians, however, do not have this privilege, and one who is caught dispensing is liable to a \$1,200 fine. Druggists probably stand closer to the public than physicians for a man in that part of the world often lives to a good old age. During all this time he may never have showed his tongue or money to the doctor though the druggists must have received some of the benefits of his indispositions.

If the traveller in Greece wishes a cigar he does not seek it in a drug store—at least not more than once. He must confine his purchases to the apothecary's original and old-fashioned sphere—drugs.

Coming away from the Old World to the New, we have settlements of Greeks among us in this city, the largest one being in the vicinity of Madison and Oliver streets, on the lower East-side. Not entirely Greek, yet distinctly Greek are the pharmacies here. Like the owners themselves the stores have imbibed many of the local fashions. The proprietor's black hair is no longer covered with a fez nor his waist girdled with a sash. Boots and robes are replaced by the less picturesque shoes and trousers. The love of color has

been subordinated to convention. The mustache, even, is perhaps no more. So with the store. Distinctive chiefly is the feanness of patent medicines, and the celluloid window lettering, spelling nothing to the uninitiated and, to the initiated, names that are fearfully un-Anglican.

Mr. Giralfo is Americanized even to the extent of shaving the mustache—a deed that prevents him sending his latest photograph to his old father at home. He is a handsome fellow, even in the unpicturesque New World dress, but somehow the feeling obtrudes that he should not have discarded the garb of his fathers.

The clientele of this pharmacy is largely Greek, with a sprinkling of other nationalities, chiefly Italian. On one window the celluloid-letter sign is in Greek, and on the other, Italian.

MR. JOFFE WON.

The "Dope" Swindlers Had Figured It the Other Way, But They Couldn't Pick the Druggists Who Would Lose.

The next time sheet-writing "dope" swindlers go out with an elaborate scheme to victimize druggists they will keep away from Julius Joffe of 919 Second avenue. But maybe they won't start out again, for of more than a score of pharmacists visited, only one bit to any extent, and he just enough to qualify in his appearance against the rascals.

Two men, one Mike Dempsey, sheet writer at the race tracks, and the other "Dr." Davis, an alleged veterinary surgeon, began operations on last Monday, early. Mr. Joffe was one of many in his vicinity upon whom they called. They inquired of him how strong his nitro-glycerine solution was and then handed him the following prescription:

Cocaine	100 grains
Sol. Nitroglycerine (one per cent.)	.2 drams
Strychn sulph.3 grains
Sugar of milk, enough to make	100 capsules.

"Gracious," thought Mr. Joffe, "what strong medicine." His curiosity prompted him to ask what it was for. The men hesitated. Then, in great confidence, they whispered to him that with it they were going to "dope" a certain well-known horse who was to run the next day. One that was running that day had already been "doped." He would be sure to win with some of that medicine in his "inners" they said. Then they bought a nice lot of choice cigars and left, promising to come back after the prescription later.

"Now," thought Mr. Joffe, after they had gone, "I'll fool them." So he requested that some detectives join him in awaiting their reappearance. The men returned before the detectives showed up, however. But Mr. Joffe was all there. Of course he had not put up the medicine. But he told them he had. And he got a lot of ½-grain quinine capsules in a box and showed them. They displayed monster rolls of money. (Mr.

WILMOT CASTLE CO.,
26 Elm Street, Rochester, N. Y.

PART OF THE WEST SIDE BOWLING CLUB.

Druggists' bowling clubs will persist in going on outings and the Era insists on repaying their indiscretions by printing their pictures. The four gentlemen above are not the only members in the club but they are the ones who broke away from the rest of the West Side, or, as is sometimes called, the Friday Bowling Club, at the recent outing at Clifton, S. L., for a stroll to South Beach. At the rear, standing, is Hugo Kantrowitz of the Apotheker-Zeitung. Sitting down in the center is August Drescher, a whole-souled, able pharmacist of 108 Bowery street, Newark, N. J., and beside him on the right is F. W. Bruckmann, druggist at 1719 Third avenue, and, on the left, is Robert Hasselbach, pharmacist, at 2323 First avenue. We will get the rest of them some day.

Joffe thinks maybe that was druggists' losings, but none can be found to admit having lost. Then they asked Mr. Joffe if he didn't want to place a nice bet with them on the horse they were doping that day. Mr. Joffe didn't. So they jollied a while longer, buying cigars and leaving in his care some electrozone they had with them. Then they played their last card—offered a log check in payment of the medicine. Again Mr. Joffe was wise. "I haven't a cent in the store," he said. They went away, leaving the medicine behind.

Mr. Joffe sent his boy to follow them, thus locating them for the tardy detectives. "I sold the electrozone, too," Mr. Joffe told the Era man, chuckling. "Besides, there were no those nice cigars."

Druggist Jacobson of Third avenue, actually did fill one of the prescriptions. The Codify Medical Society promises to go after the fellows for ordering prescriptions they did not take. Others from whom prescriptions were ordered were John Bogathy, 1024 Second avenue; A. S. Katzman, 964 Second avenue; Carl Kiefer, 813 Third avenue, and George C. P. Stoltzberg, 981 Second avenue.

The men were clever enough to pick a horse that would win and thus make their "dope" story look plausible. But they were not clever enough to pick the druggist who would lose.

APPARENTLY A SCHEME TO BLACKMAIL.

August Hitzel, the druggist at 712 Courtlandt avenue, Bronx, has been sued for \$10,000 for damages, alleged to be due for a mistake in selling carbolic acid in the place of chloroform liniment.

Mr. Hitzel was recently visited by a man who taxed the clerk with the mistake. The fellow demanded "satisfaction," not specifying what shape that article should assume, but leaving the impression that money would answer. He said that his wife had been injured by using the acid. Later he produced a young man, as the one who had purchased the stuff, on August 6, who asserted that he knew the clerk intimately and had chatted with him for half an hour at the time the purchase was made. Neither Mr. Hitzel, who has been there for sixteen years, Mrs. Hitzel, nor the clerk had even seen the youth before.

In the affidavit filed against Mr. Hitzel it is alleged that a woman bought the stuff. The affidavit is signed "Chitty," though the name on the plaintiff's doorbill is "Chatty."

Mr. Hitzel believes it is a case of blackmail, and his friends, who know the conscientious care with which he conducts every detail of his business, say it is extremely unlikely that any such mistake was made. "Both the clerk and myself were in the store at the time the young man said he bought the fluid," said Mr. Hitzel, "and he certainly did not come in here. When Chatty first came to see me I demanded his proofs, but he showed none. I understand the bottle did not have my label on it, but did have the label of one of my neighbors."

Mr. Hitzel's friends say that he is almost a crank on the subject of labelling and registering sales. The woman who is supposed to have suffered from using carbolic acid for liniment shows no visible traces of the alleged error now.

FUN ON THE NIAGARA RIVER.

The Erie County Ph. A. had a very enjoyable river party yesterday. Two hundred or more druggists of Buffalo and vicinity with their friends made a trip around Grand Island in the forenoon, and in the early afternoon stopped at Edgewater for pastimes and athletic games of all kinds.

Of the events, the egg-rolling contest for women was the most laughable. The fat men's race, was won by F. M. Griesheimer, secretary and treasurer of the Pharmaceutical Drug Co. W. H. J. Smith was chairman of the committee on games.

The baseball game between the Buffalo druggists and outside druggists was exciting. It was umpired in a very fair manner by "Heavy" Griesheimer, and resulted in a victory for the Buffalo team by a score of 8 to 4, seven innings being played. The batteries were: Buffalo druggists, Smith and Anthony; outside druggists, Bradley and Kobler.

NEW BUYING CLUB IS WORKING.

The Brooklyn Consolidated Drug Co., the new buying club, met on last Thursday night and elected officers. The charter has been secured and the warehouse, which adjoins John G. Wischerth's pharmacy at 1026 Bedford avenue, is being put in shape and will also be the headquarters of the board of directors. The business of buying has already begun. Mr. Wischerth will have direct charge of the details.

The officers elected were: President, William C. Anderson; vice-president, Thomas J. France; secretary, C. Dyna; treasurer, John G. Wischerth; directors—Julius Neergaard, Albert E. Marsland, William C. Anderson, J. H. Hellfuss, R. J. Owens, Thomas J. France, Joseph J. Better, Henry J. Scheidt, Jared L. House, John B. Mill, Emil T. Wagner and Henry J. Krombs.

GENERAL CHEMICAL COMPANY BURNED OUT.

The General Chemical Company's works at Camden, N. J., were destroyed by fire last week. The loss is estimated at \$25,000, fully insured by the company's own insurance fund. The blaze was one of the most stubborn the local firemen ever had to fight, and the Philadelphia department went to their assistance. The neighborhood was for a time threatened with depopulation by the continued burning of acid, even after the buildings were razed. Nearly 100 horses were saved, through the personal efforts of Superintendent Benjamin Lawton.

Throughout the fire a big American flag waved merrily from the top of a 200-foot stack on the power house amid the sparks and smoke as though flaunting above the carnage of battle.

As a result of the fire there is likely to be a renewal of the petitions to Camden city councils to compel the chemical companies on Cooper's Creek, which have several times been declared nuisances on account of the noxious fumes, removed to the suburbs. The business people in the vicinity of the factories discussed the matter and will likely present such a petition at the next meeting of City Council.

MRS. WILLIAM C. ALPERS DEAD.

The many friends of Mr. and Mrs. William C. Alpers of this city, will be shocked to learn of Mrs. Alpers' death on August 17.

For twelve years Mrs. Alpers has accompanied her husband to meetings of the A. Ph. A. where she was held in high esteem and popular. This year was no exception. On the way back, in Detroit, one week before her death, Mrs. Alpers became ill. Upon being hurried home she took to her bed, never rising. Five of her six children were with her when she died, the oldest, a son who is in the drug business at Salt Lake City, being unable to arrive in time. The funeral was on Thursday, last week.

CAN YOU TELL HER?

Mrs. Catharine Resag, Vogt street, 18, I, Bremen, wishes to know the whereabouts of Dr. Carl Eduard Resag, who emigrated to this country in 1870, and, when last heard from was in Wilmington, Del.

NEW YORK NOTES.

—Morris Brodtkin, manager and former owner of Naitove's pharmacy, Forty-eighth street and Second avenue, was victimized in a funny way recently. A man came in representing himself as a building inspector. He figured and squinted and marked an X on the floor with chalk. Mr. Brodtkin followed him outside and saw him mark another X on the sidewalk. "This store don't lay right," muttered the "inspector." Mr. Brodtkin wondered why. When he later found \$28 missing from the cash drawer he understood. A confederate had slipped in through the hall. The fellows had \$20 changed there shortly before, and that is what the two Xs stood for.

—Changes are again being made on the northwest corner of One Hundred and Eighteenth street and Park avenue. Some time ago a Mr. Horwitz went bankrupt trying to run a pharmacy there. Then a Mr. Gordon tried it and gave up, removing to the Bronx. Now Halpern & Hoffman have brought the stock back to the old stand, installing what they are pleased to call a wholesale and retail drug store. They are not pharmacists and Fisher & Matzewitz, two young men, who have made a success in East Houston street, are going to try running it for two months, with Mr. Fisher in charge. It is called the Columbia pharmacy.

—Muddy roads decided the Apothecaries' Bicycle Club to take the train last Thursday. Sidney Faber, George Leinecker and wife, Hugo Kantowitz, George C. P. Stoltzenburg and wife, Leon Werner and F. W. Bruckman were along. Today the club goes by rail to Long Branch, N. J., and will wheel from there to Elberon, Asbury Park and the famous deserted village of Allaire, and George Leinecker's famous "Oftstretton" may be made at either Freehold, Monmouth or Trenton.

—Frederick E. Smith, proprietor of the Hoffman Arms pharmacy, 610 Madison avenue, makes frequent short vacation trips to New Haven, Conn. A. J. Reeder, of Reeder Bros., Thirty-first street and Madison avenue, went for a rest in the Hilderberg range, between the Catskills and Adirondacks, last week, the day after his brother, G. T. Reeder came back from his vacation at Sea Cliff, L. I.

—It is said that the reason that a Lexington avenue druggist recently moved his goods out in the night and disappeared was because a suit had been brought against him in behalf of a girl to whom he sold a freckle lotion. The skin went with the freckles. The fleeing druggist opened a new store in the Bronx, where he has been discovered by the plaintiff.

—The schedule in bankruptcy of the Union Wholesale Co. includes among its creditors: Charles Pfizer & Co., manufacturing chemists, 81 Maiden Lane, \$180,223; Dodge & Olcott, essential oils, 86 William street, \$120; W. S. Gray, wood alcohol, 76 William street, \$233.25, and Antoine Chiris, 18 Platt street, \$400.22.

—Dr. George W. Jewett has been reinstated as examiner of drugs at the Government appraisers' stores, this city. He is now given opportunity to answer written charges and know upon what grounds he was so summarily treated. He will be suspended, pending investigation of the charges.

—The Fetter pharmacy at 185 St. Nicholas avenue, was sold last week to Charles Frank, formerly manager for George Watman at 94 Avenue A. Mr. Fetter has owned several stores in this city, but had only been established there for a short time. He intends to retire from the drug business.

—S. Abraham, druggist at One Hundred and Eighteenth street and Madison avenue, goes with his family to Atlantic City this week for a vacation. Charles M. DuGay, Thirty-Fourth street and Third avenue, has taken one and will take another short vacation at his Canadian home.

—P. C. Magnus of Magnus & Lauer, essential oils, is back from a Canadian business trip. John A. Stevens, vice president of the National Lead Co., has concluded a vacation on his Maine farm. W. W. Lawrence, treasurer of the firm, has gone with his mother and sister for a trip abroad.

—J. L. Hopkins of J. L. Hopkins & Co., and John M. Peters, of W. J. Matheson & Co., Ltd., have been on an outing in the White Mountains with their families. John L. Riker and Major J. J. Riker of the J. L. & D. S. Riker Co., returned on the same steamer from European vacations.

—No matter whether the strike is settled soon or not, this will be a hard winter on those pharmacies that cater mostly to the middle class, as it will be a long time before the conditions of their customers become anything like normal again.

—A surprise was caused last week by the sale at auction, under orders of mortgagee J. Dobkin, of the big pharmacy at West Fourth and Bank streets, recently sold by Julius Hammer to Leon Leskes. E. Dreyfus conducted the auction.

—Mr. and Mrs. Bruno R. Hanscha of 1291 Madison avenue, are just back from a vacation at White Lake,

where they ran across Hugo Schmelz, who is with his father at 350 Lenox avenue, and was also resting there.

It is said that M. T. Cooper, who bought C. E. Vetter's store at 1766 Madison avenue recently, paid \$9,000 for it. Mr. Cooper was formerly apothecary at Mt. Sinai Hospital, this city.

—W. S. Millner, owner of a fine pharmacy at Spencerport and another at Holley, intends to locate also in Williamsport, Pa., in the near future, where he has bright prospects.

—Harry Noonan, manager of the New York office of The Norwich Pharmaceutical Co., is enjoying a well-earned rest and vacation at Chenango Lake.

—M. G. Kantrowitz will move from 81 East One Hundred and Fifteenth street across the street to 82 East One Hundred and Fifteenth street.

—Henry Mauer, formerly with W. H. Borget, Buffalo, has bought the pharmacy of William Diefenbach, 691 William street, this city.

—The Segal Drug Co. has a new store at 210 Eighth avenue, in charge of Mr. Caplan who formerly was with Samuel Ackerman.

—Frederick Hauck has sold his store at 169 Bushwick avenue, Brooklyn, to Isaac Rothman.

—F. J. Collins has sold his store at 174 Smith street, Brooklyn, to Samuel & William Strawgate.

AT ROCHESTER.

—The Eastman Kodak Co. of Rochester, in 1898, contracted with Charles Cooper & Co., of New York, manufacturing chemists, for dope used in the manufacture of photographic films. The dope consisted of soluble cotton and wood alcohol. The contract made it necessary for the cotton to be of a standard that 22 pounds would dissolve in 74 pounds of alcohol. The Eastman company alleged that the cotton was not up to standard and that not enough alcohol was used to dissolve it. Suit was brought to compel Cooper & Co. to make good this shortage, the amount claimed being \$8,000. By referee's decision, just made, the Eastman Co. is awarded a judgment of \$8,125.46.

—C. E. Nagle of South avenue, is home from his vacation trip to New York. Elmer E. Chilson of 200 Alexander street, who has been at New Bedford, Mass., and in New York, is home. J. A. Vanderbilt of 64 Monroe avenue, has returned from a much needed vacation.

—John Jardin's store, State and Brown streets, is being improved by a new handsome plate glass front with prism glass top. Other improvements will be made.

—Matthew R. Casey, who recently purchased the Gould drug store in Seneca Falls, having made some improvements, will open the store at once.

—The costly new fountain recently placed in the store of the Hyde Drug Co. is said to be one of the most beautiful ever erected.

—W. T. McBay of 350 Monroe avenue, attended the celebration of the "Old Boys" in Hamilton, Ont., Can., last week.

—Dr. Emil Hertel, a Wilmington, Del., druggist was arraigned in the Municipal Court charged with selling cocaine contrary to the recently enacted ordinance which prohibits the sale of such drugs except on prescription. The chief of police was the complainant. Dr. Hertel replied that he sold the cocaine in his own prescription and to his own patients only. Two charges were dismissed and a fine of \$25 was imposed on the third one.

—Dr. Moore will succeed Dr. Taylor on the board of pharmacy, Honolulu, H. I.

NEW ENGLAND.

MANY EXCURSIONS.

Entertainment Planned on a Lavish Scale for Joint Meeting in Boston Next Month of the N. W. D. A. and the P. A. A.

Boston, August 25.—Local committees have now nearly completed the full arrangements for the annual meeting in Boston, next month, of the N. W. D. A. and the P. A. A.

Mayor Collins has promised to give an address of welcome at the opening joint session on Tuesday, September 8. On the day of arrival a ladies' afternoon tea and reception will take place. There will also be a sight-seeing trip to Harvard College on that day, under the guidance of students. "Seeing Boston by Trolley" will delight the ladies while the men are in business session on Tuesday, and that evening, at the Somerset, a general reception will be given by President W. A. Hozer of the N. W. D. A., and President H. B. Harding of the P. A. A., both of whom will be assisted by their wives.

A four-in-hand drag ride along the North Shore will be the feature on Wednesday. At the Oceanside Hotel, Magnolia, luncheon will be served. That evening at Boston, the entire party will visit the theatre. A carriage drive through Boston's great park system will occupy Thursday afternoon, and on that evening will take place the formal banquet for the men, in the Empire ball room of the Hotel Somerset. The ladies will meanwhile have dinner in the smaller ball room, and then adjourn to the larger ball room for the post-prandial exercises of the druggists' dinner. An all-day South Shore pilgrimage is scheduled for Friday. Going by train to some attractive point of historic interest, possibly Plymouth, the party will spend the day there, returning by steamer. On Saturday there will be short sight-seeing trips to points of historic interest in and about Boston.

As the association has not been to Boston since August, 1887, the local committee and others having a part in the general arrangements are determined that the visitors shall take home with them lasting and delightful impressions.

SOME WISH TO JOIN THE UNION AGAIN.

Waterbury, Conn., August 25.—The Drug Clerks' Association of this city is in trouble, trying to decide whether it shall unite again with the Central Labor Union or continue as an independent association. A small number of members, sufficient to hold the charter, want to ally with the Union. During the trolley strike, which lasted several months, the association withdrew from the Union because there was a serious difference of opinion as to the advisability of supporting the striking trolley men. It looks now as if there would be soon two clerks' organizations here. W. C. Wheeler, the national organizer of the Labor Union, has been in town for some time trying to straighten out the difficulty.

THE BAY STATE.

—Montrose Evans, long in the employ of E. R. Smith, an Ipswich druggist, has resigned to take a rest after which he will enter business in Boston. Frank Donoghue leaves Ball's, Holyoke, where he is succeeded by James Daniel. The new store opened at Holyoke by Patrick J. Flynn, Simon A. Flynn and Charles E. Bardwell, conducted as the Flynn-Drugg Co., is to be under the charge of Mr. Flynn. E.

ISAAC H. LEVY.

S. L. SALISBURY.

Mr. Levy is the treasurer and Mr. Salisbury the first vice-president of the New Haven, Conn., R. D. A. Both are successful pharmacists in New Haven.

F. Mulvihill, who leaves Dr. J. T. Harper's pharmacy, Great Barrington, for Bridgeport, Conn., is succeeded by F. Morris of Stamford, Conn.

—William Rourke of Lang's, Lowell, is spending his vacation in Fitchburg, his old home. J. A. Beckwith, manager for Jaynes & Co., Boston, is on a vacation at his former home in Danvers. A. C. Adams, employed at Glover's, Lawrence, goes to Concord, N. H., for his annual vacation. Albert Bryson of the same pharmacy, had a fortnight at Old Orchard Beach, Me.

—F. M. Pease & Co., Lee, in the Berkshires, are making a showing of their books, containing 95,000 prescriptions—no mean number for so small a town. The firm was established in 1860. Another exhibit of prescriptions is in the windows of Stevens & Dow, Haverhill, where 65,000 are shown, the accumulation of less than twenty years.

—Harold B. Hayward of Emerson's, Stoneham, is in Wakefield, N. H., for a brief change. Lawrence Dugan of Campbell's, Webster, has returned from Nova Scotia, giving a chance for J. H. Groh of the same store, to spend a fortnight at Revere. Charles Rafferty of P. H. De Lee's, Maynard, is at his home in Marlboro.

—People in Maynard are signing a petition to the board of selectmen asking that the druggists be granted liquor licenses. Last spring the town voted no license. After considerable deliberation, the license commissioners of Pittsfield have granted a liquor license to the drug firm of Dravney & Murphy.

—William A. McCormick, drug clerk, employed in Foster's, Brockton, and owner of the sloop yacht "Venture," took a party of young men out for a sail, which was so prolonged that they were all given up for lost. On the return they were befooled for two days and a night without food, or drink.

—Philip McGibbon, manager of the Alma pharmacy, Malden, has been on a vacation in the Berkshires. James N. Moore of Kimpton's store, Malden, spent the last month at Island Pond, Vt. Charles Gallagher of the Belvidere pharmacy, Lowell, is in Canada on a vacation trip.

—Friends of E. C. Tozier, a prominent druggist in Haverhill, are trying to persuade him to stand as senatorial candidate in a contest for a successor to Senator How. In city politics Mr. Tozier has been active and his record such that he has a strong following.

—On the common law assignment made for the benefit of creditors by Dr. Elie Barnaud of Worcester, Thomas H. Sullivan is assignee to represent the creditors and J. F. Jandron assignee representing the druggist.

—Jeremiah J. Desmond, druggist in Lawrence, is

spoken of with favor as a possible candidate for the Democratic nomination for senator from his district, which in the past he has ably served as representative.

—James O'Leary of Warren E. Sibley & Co., Baldwinville, is in Clinton enjoying a rest. P. A. Brosseau, owner of a Fall River store, has gone to Dubuque, Ia., partly for a vacation and as a delegate.

—In the bankruptcy sale of the stock and fixtures of Pratt's drug store, North Adams, the price secured was \$3,900 and the buyer was Fred F. Dowlin, who announced the purchase to be for himself.

—There was a small fire in M. F. Flynn's store, Haverhill, caused by an overturned lamp in the basement, from which two of the employees had difficulty in escaping. Damage was small.

—Burglars recently entered the store of J. Clarence Oxley, Reading, and secured various articles as well as all the money the cash register contained.

—A new pharmacy in Salem is called the Depot drug store. Manager Moody, was formerly at the Webster pharmacy, that city.

—At Harry M. Church's store, New Bedford, extensive alterations have made it practically a new store.

CONNECTICUT.

—Willis Mix of New Haven, secretary of the State board of pharmacy, is planning an extensive trip abroad in the Fall. He will probably sail sometime in October. He will visit Rome and Venice and will go as far East as Athens if not to Constantinople. Then he will cross over into Switzerland and up through France, making a tour of the principal cities, and then take in Scotland, England and Ireland. Mr. Mix goes with a friend who is thoroughly conversant with the field.

—New Haven druggists have been welcoming back to the city the last week John Mautie, who, ten years ago, was one of the brightest drug men of that city. Since leaving he has been up against various misfortunes. He wants to settle down in the Elm City and go into the drug business again. Several concerns are advertised for sale and it is possible that he may buy one.

—Boecagna, the Italian druggist of New Haven, who opened a new store in that city recently, has taken unto himself a partner and the firm is now Ferrioli & Boecagna. It is understood that Mr. Ferrioli will furnish the capital. Mr. Boecagna passed recently a very high examination before the State board.

—Lewis D. Tucker of Southport, has gone to New York to engage in business. His place in the Southport pharmacy is taken by John W. Parker. Harry Rhodes of the C. S. Leete wholesale house, New Haven, is in Washington with a party of friends.

—The Jennie Hamilton pharmacy, Bridgeport, large and popular, has just moved into new quarters about a block from the old stand. The new store's window displays have attracted considerable notice among druggists and travelling men.

—William Umberfield of the Willis Mix pharmacy, New Haven, has just returned from a vacation in camp. Percy Norcross of the Spalding pharmacy, New Haven, has returned from a trip to Boston.

Send for sample and special net prices on our carton package Aluminum Cap Bottles with your name on them.

Our Tablets made by a new process are very satisfactory.

BILLINGS CLAPP COMPANY, Boston, Mass.

PENNSYLVANIA.

THEIR TRUMP CARD.

The Druggists of Wilkensburg, Long Suffering, Had One of Their Persecutors, a Churchman, Arrested.

Pittsburg, August 25.—The controversy between the druggists of Wilkensburg and the committee of twelve, which represent the arm of the law (Blue 1797) and which has been sensationally set forth by the daily papers for the past several weeks seems to have dropped into a lethargic state, and each side seems now to be playing a waiting game. The druggists played their trump card, however, when they caused the arrest of the manager of a local ice company, and an active member of the committee of twelve, for operating his plant on Sunday. He was convicted before a justice of the peace and fined the usual amount, which he refused to pay and appealed the case to court. This put a quietus on the movements of the Sunday closing crowd, and it seems likely at this writing that the whole matter will be dropped, and that the druggists will continue to welcome their thirsty patrons on the seventh day.

DRUGGIST'S CONTENTION PROVEN BY HIS DOG.

Pittsburg, August 25.—L. I. Lora, a prominent Pittsburg druggist, owns an English setter valued at \$200. It was stolen one day last week and a few days later Mr. Lora met a man on the street leading the dog on the end of a chain. He claimed his dog and a fight started, which landed both men and the dog in jail. When brought before the magistrate, the stranger showed a license only two days old for the dog. Mr. Lora had one some days older. The magistrate, however discharged the prisoners, and sent them from the room by different doors at the same time turning the dog loose. He bounded after Mr. Lora, who is now setting up cigars to his friends as he relates his famous anecdote of "When I was in Jail."

OTHER HAPPENINGS.

—J. Freeman F. Stroup, acting secretary of the Philadelphia C. P., reports a large advance in registration for the coming year. Mr. Stroup gives up his temporary connection with the office on September first, leaving the city for a well-earned vacation. Jacob S. Beeten, a graduate of the college, who for a long while conducted a large wholesale and retail establishment in Wilmington, Del., has been elected to fill the vacancy.

—The Druggists of Western Pennsylvania are facing a prescription bottle famine. The factories, which closed down rather early in the season, have not resumed their fall work, and the comparatively small stocks on hand have been entirely depleted. Jobbers are being besetted from all sides to try and fill orders, a matter which, excepting a few odd sizes it is impossible to do.

—Paradoxical as it may seem, the prosperous condition of affairs in Western Pennsylvania is responsible for a dullness in trade not equalled in years. More people are taking vacations now than ever before, because they find they can afford it, and as a result many druggists had the shutters up on more than half the houses of their regular customers.

—Dr. William H. M. Fadden of Philadelphia, Mrs. M. Fadden and one Earl are at Cape May for the season. E. R. Parry is at Atlantic City. J. P. Hemington and Robert Anders are in the inlets at Ocean City on a party boat. R. Bonner and J. F. Oakley, with a party, are enamped on the Perkiomen.

—T. Clyde Cochran, formerly manager of Cochran's pharmacy at Apollo, is opening a new store at Ambridge. E. S. Allen, formerly of South Fork, who recently bought the Murphy pharmacy on the South Side, Pittsburg, has just sold to P. C. Schilling & Co. and will locate at Brushton station, Pittsburg.

—A unique feature in advertising was seen in an uptown Philadelphia, druggist's window during the yacht races. On a trolley the Shamrock and Reliance were strung, and, news being received over the telephone every few minutes, the yachts were moved to conforming positions.

—Fire in Race street, Philadelphia, burned off the roof of the Whitall, Tatum warehouse and threatened to destroy the whole building. A fierce fight saved the structure, though damage from fire and water was heavy. Robert Shoemaker & Co. are located across the street.

—Druggist W. F. Pauly of Apollo, is spending his vacation in Pittsburg and is finding relaxation in selling real estate for his brother, who is agent for a local plan of lots.

—Among Philadelphia firms reported as exhibitors for the St. Louis fair, are the Charles E. Hires Co., Smith Kline & French Co., and H. K. Mulford Co.

—David McMurtrie, formerly of Honora, is now assistant prescription clerk at W. A. Showalter's, Latrobe.

—A new store, to be known as the Davis pharmacy, has just been opened in Conemaugh.

OBITUARY.

CALVIN T. DAVISON, president of the Davison Chemical Co., Baltimore, died at the Union Protestant Infirmary last Saturday of typhoid fever, after an illness of six weeks. He had begun to improve, when a relapse occurred, and after that he sank rapidly. Mr. Davison was 55 years old and his company, which was founded after the death of his brother, Garland H. Davison, owned works at Canton and Hawkins Point. It manufactures sulphuric acid and other chemicals.

J. P. ALLEN, the Wichita, Kans., pioneer druggist, died at his home last week. He had been in ill health for two years. He established his business in Wichita 33 years ago, and had been in business continuously from that time until his death. Beside being the leading druggist, he was a town builder. He served as mayor of the city from 1888 to 1890.

DR. C. F. HILDRETH of Manchester, N. H., died in his seventy-second year. He was for some years a member of the State commission of pharmacy, and was once for a long time surgeon at the New Hampshire State prison and also had served as surgeon in the United States Navy.

FREDERICK A. THAYER of Toronto, Ontario, western traveler for the Toronto Pharmaceutical Co., died at Vancouver, B. C., from appendicitis. He had taken his family to the Pacific Coast in the spring, intending to stay there until Fall.

SHELTON HAINES, druggist of Rosendale, Mo., committed suicide last week, by shooting himself through the head. Domestic difficulties is the cause assigned.

GEORGE WEEKS, for the last 37 years a druggist at Anguine, died from paralysis, aged 68 years. He leaves a wife, daughter and son, the latter a student at the Detroit Medical College.

AROUND THE GREAT LAKES.

ROBERT STEVENSON DEAD.

The Well-Known Wholesale Druggist Expires Very Suddenly.—Mayor Van Schaack of Kenilworth, Fined for Speeding.

Chicago, August 25.—Robert Stevenson, the pioneer wholesale druggist, died suddenly on Saturday night, of heart trouble, while visiting a friend. Two physicians were called and the family was notified by telephone. His sons, Charles and James, hurried to the West Side and were with their father before he breathed his last. Three other sons and his only daughter, Sarah, are in Michigan. A few hours before his death Mr. Stevens went with his daughter to the boat which took her to Charlevoix. His brothers, John, a Yale student, and Richard, have been at the Michigan resort for several weeks. Robert, Jr., and his wife are at Gross Lake.

Robert Stevenson was born in the north of Ireland nearly seventy years ago, the son of a Presbyterian minister. He came to Chicago when a young man and about forty-five years ago engaged as a clerk with the wholesale drug firm of Penton, Robinson & Smith. A few years later the firm became Smith & Dwyer and Robert Stevenson was admitted as a member. When Mr. Smith sold out the firm's name was changed to E. P. Dwyer & Co., Mr. Stevenson being the company. A few years after this the firm became Van Schaack, Stevenson & Reed. In 1886 the firm of Robert Stevenson & Co. was formed. The remaining active members of the firm are I. Giles Lewis, Arthur Dawson and Charles and James Stevenson.

THE MAYOR OF KENILWORTH FINED.

Chicago, August 25.—Robert Van Schaack, the wholesale druggist, is Mayor of Kenilworth and a leader in the Reformed Church of that suburb. He also owns a handsome red automobile. Recently he and two other gentlemen, equally well known for sobriety and dignity, were appointed by the congregation of their church to go to Kenwood, a South Side suburb, to listen to the preaching of a minister there and decide whether or not to give him a call to Kenilworth. The mission duly performed, the three gentlemen, in Mayor Van Schaack's bright new puff wagon, returned along the lake shore and entered the classic shades of Evanston at a sedate pace. Hardly had they gone a half-dozen blocks, when a policeman stepped out from among the bushes at the wayside and, with uplifted club, stopped the mayor of Kenilworth and his party and notified them that they were under arrest for speeding. In vain they protested that they had been going at a snail's pace, that they were pillars of the church, on a religious mission, that one of their number was mayor of Evanston's next door neighbor. They had to go to the police station and be booked, and the next day Mayor Van Schaack appeared and liquidated a \$20 fine.

A NEW RUG FOR THE EBERT PARLOR.

Chicago, August 25.—As a result of an experience which Mr. A. E. Ebert, of this city, had during his recent trip to the Northwest, Mrs. Ebert is to have a handsome bearskin rug. A younger brother of Mr. Ebert is manager of a lumber company in Northern Michigan and an official of the thriving town of Blaney. One day the two brothers, driving home from Blaney, heard shouts and grunts and growls from the underbrush near the road and immediately a bear emerged, pursued by woodmen. The bear was wounded and was shortly killed, but it became necessary for Mr. Ebert to

get out of the wagon to hold the horse, which was very nervous, rearing and plunging, dragging the veteran druggist off his feet and causing the wind to sigh through his facial hirsute adornment with a sound as of a summer zephyr in a pine forest. Finally brin was loaded into the wagon. All hands swore that he weighed a ton, but he shrunk rapidly, registering later 125 pounds on the scales. There was bear steak for dinner that night and there will be a new rug in the Ebert parlor in a few days.

AT THE LAST ILLINOIS EXAMINATION.

Chicago, Ill., August 25.—At the examination held by the State board of pharmacy in Chicago, August 11-13, the following passed: Registered pharmacists—C. Anderson, N. C. Beck, L. M. Briel, J. W. Blackledge, B. C. Chapman, A. L. Duplantis, M. C. Empey, C. W. Gerner, H. J. Gill, H. A. Gilmore, J. W. Hoover, L. S. Helfrich, C. R. and M. Leonard, E. Lye, J. A. Levy, W. C. Magoon, J. A. Meikle, J. M. Newman, J. L. Nicholai, C. D. Rogers, J. T. Spiker, H. E. Stadelmann, W. F. Schmidt, F. W. Sills, W. O. Slater, R. A. Totten, L. A. Watkins, F. P. Wray, J. Wood, all of Chicago; E. S. Rouman, Bement; J. H. Bordeaux, Sycamore; E. V. Breed, Savanna; J. F. Brighton, Blue Mound; E. T. Brown, Macomb; F. C. Coyner, Rockford; C. A. Dodson, Park Ridge; F. W. Fountain, Quincy; K. K. Gimmy, Carrollton; H. B. Hoeveler, Woodstock; W. D. Lacey, Peoria; L. Muffly, Quincy; J. R. Neal, Jr., Springfield; W. S. Schweitzer, Blue Mound; F. H. Shriver, Virden; D. G. Swannell, Champain.

Assistants—J. H. Christmann, C. W. Cady, J. E. Hjelte, T. W. Johnson, W. N. Key, A. S. Keir, W. A. Lamborn, W. J. Leiner, F. J. Meyer, L. N. Merz, C. R. Roth, B. Schultejan, F. Voss, all of Chicago; R. C. Ittlinger, Joliet; W. Hobart, Alexis; A. W. Reinhardt, Rockford; R. E. Stevens, Rochelle; S. F. Trendt, Granville; E. S. Webster, Benton; C. W. Wagner, McLean. The next meeting for examination will be in room 3, State House, Springfield, October 13.

THE LAST INDIANA EXAMINATION.

Fort Wayne, Ind., August 18.—At the last meeting of the board of pharmacy, the following officers were elected for the year: President, C. E. Creelius, New Albany; secretary, Harry E. Glick, Lafayette.

Certificates were issued as registered pharmacists to: Stewart William M. Ruch, Ft. Wayne; Otto DeRoy Mitchell, Eaton; Herman Alonzo Bell, Ft. Wayne. Certificates as registered assistant pharmacists were issued to: Mahlon V. Boyatt, Brownstown; Robert Allen Morris; Noblesville; Edwin W. Orahoad, Camden; Lawrence H. Luken, Richmond; Ruel Loomis Hopkins, Arcadia; Arthur Tinsley Benton, Ewing. The next examination will be in Evansville, October 15-16.

NOTES FROM ILLINOIS.

—The Chicago Directory Co. will discontinue the distribution of directory slot machines. They have not been profitable. Of the 275 distributed, 135 failed to produce enough to pay at all. Druggists would prop them open, or would give away the slugs with which they were provided for opening the directory for their

Put up in One Ounce Bottles Only.

Powdered.....Per ounce \$1.00
Pink Top Capsules.....Per ounce 1.00
Tablets, 2½ grain only.....Per ounce 1.00

ETNA CHEMICAL CO., New York, U. S. A.

R. L. VILLERE, New Orleans.
Second Vice-President Louisiana Ph. A. and Secretary
New Orleans Ph. A.

own use. About 140 machines gave good results, a few making as high as three to four dollars a month. The entire results, however, left a loss to the directory company. Directories will now be furnished at the rate of \$7 each and if the druggist desires a penny-in-the-slot machine for it, he may have one by an additional payment of \$5.

County Commissioner J. P. Garner, a druggist of Austin, nabbed a confidence man. A well-dressed stranger stepped into the store and asked for a ten-cent cigar. He offered a \$5 bill in payment and, as he was handed the change, suddenly discovered that he had ten cents. Then he asked the druggist to give him a \$5 bill for the change he had just received, passing the \$5 bill he held in his hand. Then he wanted a ten-dollar bill. Instead of passing over the ten, Mr. Garner retained all the money and called the police. The stranger left with precipitancy, and the druggist is five dollars ahead.

Long Brothers, who own a drug store at Maple avenue and Foster street, Evanston, recently donated one-third of a day's receipts of their soda fountain to five young ladies, members of the Epworth League, to assist in the raising of a church debt. The young ladies donned caps and aprons and presided over the ice cream and soda department. The store did a record breaking business on that day and at night the girls were made happy by receiving \$25 as their share of the day's receipts.

The business of Charles W. Shotwell & Co., retail druggists in the Revere house on North Clark street, Chicago, was put in the hands of a receiver on August 17. The following creditors petitioned the United States District Court to have the concern declared bankrupt. John J. Williams, receiver of the estate of Lord, Owen & Co., \$706; S. A. Crowe, \$128; and H. L. Bravley, \$15. C. Minot Jones has been appointed receiver, authorized to reopen the store. It is said that Shotwell was worth considerable money at one time, but that he opened one or more banks at the same and lost all he had. It is reported that both Mr. and Mrs. Shotwell have left town. Shotwell has written to his creditors that he will try to pay every dollar he owes.

The membership committee of the Chicago Drug Trade Club is very active and has been unusually successful lately. At a recent meeting of the directors it was decided to broaden the scope of the organization to include proprietary manufacturers, members and representatives of chemical houses and pharmaceutical and technical writers.

Robert Van Schnack of Peter Van Schnack & Sons, Chicago, went to Michigan on Saturday. He will return Monday to start for the Atlantic coast where his family are spending the summer. Harry Patterson of the same firm, left last Monday for St. Paul and vicinity, where he will spend his vacation.

Joseph G. Petters, vice-president of the Fuller & Fuller Co., Chicago, is spending his vacation with his family near Cape Ann, Mass. J. Walker Seofield of the same company, has just returned with his family from a trip to the Yellowstone National Park.

S. F. Frank has opened a store at Forty-first street and Ellis avenue, Chicago. He has put in a complete stock.

Grove Cochran has bought the Fricke drug store at 1714 North Halsted street, Chicago.

MICHIGAN.

E. E. Calkins of Ypsilanti, will make some fine improvements in his State street store soon. The walls will be redecorated, and mahogany fixtures and a new soda fountain installed. Under the present arrangement only 25 people can be accommodated at the fountain at the same time, while under the new plan 58 may be seated.

John Dykema, the 32-year-old son of C. G. Dykema, the West Leonard street, Grand Rapids, druggist, caught a black bass weighing four pounds and two ounces, while fishing at Ottawa Beach recently. A prize of \$10 is offered each year for the biggest bass captured there and as this fish beats all previous records the lad will probably get the money.

Hart & Shaw have improved the appearance of their store at Adrian by putting in a new plate glass front. This is the oldest store in the city, having been established in 1842. Charis G. Hart and Byron L. Eshaw compose the present firm.

Dr. A. W. Olds, druggist at No. 180 Butterworth avenue, Grand Rapids, has sold to Chas. E. Armstrong.

WISCONSIN.

The household of C. L. Lien, a prominent druggist of La Cross, furnished a weirdly strange marriage last week. That the last wish of her mother might be obeyed before her body was laid away in its last repose, Miss Agnes Lien, the pretty daughter of the pharmacist, was married to J. H. Sarles beside her mother's coffin. The groom is a leading lumberman of Hillsboro, N. D. When it was realized that Mrs. Lien was dying, Mr. Sarles was telegraphed for. When he arrived Mrs. Lien had been dead ten minutes. The same day Mr. Lien had been elected president of the board of education to fill a vacancy.

E. B. Heimstreet, former secretary of the board of pharmacy and secretary of pretty nearly everything pharmaceutical in the Badger State, recently made a trip to Zion City, the Hub of Dowisism. He denies that he will embrace the faith, however. Drugs and Dowis are among the incompatible substances. When brought into contact of juxtaposition the Dowie part explodes with a loud report. Some of the phenomena of radium are here presented, for energy may be given off in this manner continuously without apparent loss of power or diminution of substance.

Frank Van Wart, a well-known druggist of Beloit, has been very busy this week acting as master of cere-

monies of the Rock County Fair, held in this city. The management presented him with a handsome half-Arabian steed, caparisoned in true Texas style, to be used by him during the week.

—Col. A. H. Hollister of Madison, has consolidated his drug store with the Rocky Mountain Tea Co. and has incorporated the business under the name of the Hollister Drug Co.

—Mr. Thiesen of the Kradwell-Thiesen Drug Co., Racine, has disposed of his interests and will devote some time to the recuperation of his health.

—The Ellis Drug Co. succeeds Lewis & Ellis at Kenosha. Mr. Lewis sold out, and, it is said, went to Chicago to take charge of a bicycle factory.

OUR CANADIAN LETTER.

Toronto, Ont., August 25.—G. M. Petrie, druggist of Avenue Road, Toronto, is building a handsome new store opposite his present place of business.

Charles McCurry of Toronto, who died on August 17, at his residence, 270 Ontario street, had been for sixty years in the service of the Lyman Bros. Co., wholesale and manufacturing druggists. Three years ago in consideration of his long and faithful service the firm granted him a pension.

W. J. Clarke, druggist of Port Arthur, has disposed of his business. W. R. Inman & Co., druggists of Winnipeg, are removing from their premises on Main street to their new store on William avenue.

The drug store in the new King Edward Hotel, Toronto, has been taken by William H. Lee of 68 Wellesley street. It is very handsomely fitted up. Mr. Lee still retains his Wellesley street establishment.

B. A. Mitchell, druggist of London, Ont., celebrated the fifty-sixth anniversary of his business career on August 8, receiving the congratulations of a large number of friends including many members of the London "Old Boys" association, then visiting the city.

J. Higinbotham & Son of Bowmanville, have sold to Roderick Mitchell & Co.

THE SOUTH.

NEWS OF MARYLAND PH. A.

Baltimore, August 25.—The next annual meeting of the Maryland Ph. A. will be somewhere near Baltimore, and negotiations have been opened with the management of the Chattolanes Hotel in the Green Spring Valley, Baltimore county. The annual report of the proceedings will be ready much earlier this year than ever before. Secretary Louis Schulze has all the material in the hands of the printer. The standing committees for the next twelve months have been announced as follows:

Legislative—Dr. A. R. L. Dohme, chairman; D. C. Aughinbaugh, E. J. M. Button, William Campbell, A. J. Corning, Aden Davis, Jr., W. J. Elderdice, J. Webb Foster, J. E. Hancock, Dr. C. B. Henkel, J. E. Henry, J. T. Holland, H. P. Hynson, Dr. Harry Jarvis, Thomas H. Jenkins, R. S. McKinney, C. H. Michael, D. R. Millard, George E. Pearce, W. C. Powell, Eli T. Reynolds, Louis Schulze, M. A. Toulson, Bode H. Wall, A. H. Wells, John H. Wright, E. A. Zeidler, E. H. Henning.

Pharmacy—John J. Lowery, Jr., chairman; William Campbell, H. L. Troxel, E. M. Forman, Horace Burrough, Jr.

Laws—John A. Davis, chairman; B. E. Cockey, J. G. Beck.

Adulterations—H. A. Brown Dunning, chairman; Dr. A. R. L. Dohme, Prof. Daniel Base.

Deceased members—Robert S. Kinney, chairman; W. H. Lefler, M. A. Toulson.

Trade interests—Charles H. Ware, chairman; W. R. Rudy, H. P. Lindeman, A. M. Lichtenstein, J. B. Thomas.

Membership—H. P. Hynson, chairman; Wilfred R.

Jester, J. N. Gilbert, Benjamin W. Woolford, Guy C. Wisotzki.

Medical societies—W. C. Powell, chairman; George Kohn, J. Webb Foster, August Schrauler, A. H. Wells.

Entertainment—J. E. Henest, chairman; J. Emory Bond, Charles L. Baker, George A. Sahl.

Ethics—William J. Elderdice, chairman; J. J. Barnett, E. T. Hall.

Procter memorial—John F. Hancock, chairman; D. C. Aughinbaugh, Charles E. Dohme.

Delegations—A. Ph. A.—H. P. Hynson, J. E. Henest, Daniel Base, J. F. Hancock, Charles E. Dohme; Delaware Ph. A.—William M. Fouch, W. A. Alexander, Emory S. Wroth; Pennsylvania Ph. A.—Robert S. McKinney, David R. Millard, Harry E. Kinder; Virginia Ph. A.—J. F. Hancock, E. H. Bratten, J. F. Palmer; New Jersey Ph. A.—J. G. Beck, Harry Cameron, A. J. Corning.

MARYLAND DRUG CO. FAILURE.

Baltimore, August 25.—The Maryland Drug Co., Baltimore, is in a receiver's hands, on the complaint of the Maryland Bank, to which \$961.68 is due. Other creditors are John D. Park & Sons Co., \$2,200; Muth Bros. & Co., \$918.24; Parke, Davis & Co., \$861.24; Dr. Kilmer & Co., \$1,000; McCormick & Co. of Baltimore, \$29.16; Malay Remedy Co., \$1.80.

The Maryland company was incorporated last January at Dover, Del. with a capital of \$25. Mr. Muller, the president, was practically the whole concern. He had been connected for years with the Stanley & Brown Drug Company. He took an active interest in the Baltimore Drug Trade Bowling Club and was otherwise in close touch with the younger element. Some two months or more ago he made arrangements for taking over the Modern Drug Company of Washington, a cut-rate establishment on Seventh street, which he endeavored to supply from his wholesale place here.

SHARP & DOHME NEW JERSEY CORPORATION.

Baltimore, August 25.—The Sharp & Dohme Company, this city, has become a New Jersey corporation, the change having been decided upon at a meeting of stockholders, for the reason that Baltimore and Maryland authorities were too inquisitorial with respect to the affairs of the company. At the meeting, too, it was decided to dissolve the old company, a formality made necessary by the change, and the capital of the new company was made \$1,500,000, instead of \$500,000.

According to a statement made at the Baltimore office, there is to be no material departure in the manner of conducting business, and the officers are practically the same. Pursuant to the change, a petition was filed in the Circuit Court requiring all interests in the company to show cause why it should not be dissolved. Judge Wickes signed an order that unless cause to the contrary is shown on or before October 3, the petition will be granted. The corporation is stated to have no debts nor creditors and no incumbrances. The president, Louis Dohme, holds a majority of the stock. Of the 5,000 shares of the old company only 4,000 were issued, and of these Louis Dohme held 2,392, Charles E. Dohme, Dr. A. R. L. Dohme, Ernest Stauffen, of New York; John A. Wellington, of New Orleans; Charles E. Matthews, of Chicago; C. Louis Dohme and Cornelius

 C. W. ABBOTT & CO.,
 Baltimore, Md.

E. N. ROTH, Thibodaux, La.
First Vice-President Louisiana State Ph. A.

P. Bohme of Baltimore, and H. C. Matthews, of Chicago, also being stockholders.

As stated at the time, the company has in progress extensive improvements to the laboratories. There is said to be no intention to move the plant from Baltimore.

The new addition to the Baltimore plant fronts on Dover street and is similar in design to the other structures. It will afford much-needed facilities for laboratory work and will admit of a better arrangement of the machinery and other appliances. More storage room for crude and botanical drugs will also be gained. The Pratt street frontage will remain as it is for the present, though it is intended later to improve it by erecting a new edifice there also.

MARYLAND.

—William A. Stuart, Baltimore street and Fremont avenue, was robbed early last Sunday morning of postage stamps to the value of \$16 or \$17. Quandt Bros., Howard and Lombard streets, wholesale and retail druggists, were victimized to the extent of \$10 by means of a worthless check, passed by a young man who was afterward arrested in New York.

—Among visiting druggists in Baltimore last week: L. H. Wright, Church Creek, N. S. Purcell, Leesburg, Va.; F. G. Bland, Charlestown, W. Va.; W. Armstrong of Gilmore & Co., Pittsburg, Pa.; A. Morris of Goodwin & Co., Wheeling, W. Va.; C. R. Yoho, Belair, A. R. Millhorn, Hanover, Pa., and Dr. P. Fahmy, Frederick.

Baltimore druggists claim immunity from ordinary swindling game, however, with no immediate means detection, they say it is not strange if a bad check like, then in, but no New York "grafter" can take advantage of them, Baltimore druggists are sophisticated to the last degree.

—The firm J. Hynson, Westcott & Co., which maintains a good chemistry to drugs and hospital appliances, keep by the hundreds of minor articles, to making extensive

improvements in its laboratories over the pharmacy at Charles and Franklin streets, Baltimore.

—Dr. Charles Caspari, Jr., permanent secretary of the A. Ph. A., has returned to Baltimore from his western tour. After attending the sessions of the A. Ph. A. he went to visit his son in St. Louis, and spent a most enjoyable time there.

—The Ringgold-Reinhard Co., which owns a handsome drug store on Baltimore street, at Cumberland, has opened a pharmacy at 208, 210 and 212 North Eataw street, Baltimore, in a new building, and has been finely fitted up.

—Druggist Joseph B. Hall has sold his store at North avenue and Aisquith street, Baltimore, to L. F. France & Co. C. G. Lotterer, formerly a clerk for F. W. Schanze, will manage the place.

—Among visiting druggists last week: Joseph A. Jeffries, Warrenton, Va.; J. H. Westerhold, York, Pa.; W. R. Rudy, Mt. Airy, and H. W. Arnold, San Francisco.

—J. L. Waltz, pharmacist at the Johns Hopkins Hospital, Baltimore, has gone to Virginia, his old home, to spend a vacation of three months.

—Frederick Ullman purchased the pharmacy of William Dawson, Druid Hill avenue and Biddle street, for \$4,000.

—Druggist Samuel Y. Harris, Poppleton and Lombard streets, Baltimore, is on a vacation trip at Atlantic City.

—The Baltimore R. D. A. had an enjoyable excursion to Love Point and Queenstown, last Thursday.

—J. W. Westcott of Hynson, Westcott & Co., Baltimore, is on a vacation trip to Cape May.

—Frank Muth of Muth Bros. & Co., has gone to Atlantic City for ten days.

TENNESSEE.

—Spurlock-Neal Co of Nashville, have purchased the building formerly occupied by the National Biscuit Co., at the corner of Market and Clark streets. The price paid was \$25,000, and about \$20,000 will be expended in extending and remodeling the building and installing new fixtures. The capital stock has been increased from \$120,000 to \$150,000.

—The Eberhardt Drug Co. has opened a new store at Dickson, Tenn. Chas. Eberhardt, formerly of Nashville, is at the head of the new concern.

—W. M. Jordan, formerly of Winchester, has purchased a new stock of drugs, and will open at Waverly place, a suburb of Nashville.

—L. C. Brasfield of Greenfield, has placed his order for a new drug outfit, and will open for business very shortly.

—J. B. Mason & Co. have succeeded to the business of R. E. L. Smith at Doyle.

ERASMUS WEST, one of the oldest dispensing druggists in point of service in Baltimore, died of a complication of diseases due chiefly to old age. Mr. West came to Baltimore just before the outbreak of the War. He at first conducted a pharmacy and then obtained a position with the old firm of Coleman & Rogers, where he spent most of the balance of his life, through the several changes to its present ownership by Oscar E. Ross.

WEST OF THE MISSISSIPPI.

MEATS, OR LEG CUT OFF?

Mr. Kuhn Finds a Man of Many Professions and Trades, Who Can Accommodate you in Either Direction.

Omaha, Neb., August 25.—N. A. Kuhn who has returned from a leisurely trip through the mountains from Denver to Salt Lake City and northward through Montana, Wyoming and South Dakota, tells of an incident in Hot Sulphur Springs, Colo. Seeing a sign of "Drugs" on a window shade of a store he went in and asked for the druggist. He was confronted by a man slicing meat, who said:

"How did you know I kept drugs? They are over in the next room."

"I saw your sign on the front," Mr. Kuhn replied.

"Sign on the front. I have no drug sign there."

"Come out and see," the visitor rejoined, and, leading the druggist out in front, he showed him the word, "Drugs," plainly painted on the window shade.

"Well, I never," ejaculated the meat-cutting druggist, "That must have been painted before I came, for I never saw it before."

During the conversation which followed Mr. Kuhn found that Dr. Demman, the man he met, was well adapted for every exigency of life. His operating room adjoined his meat refrigerator, and when not operating he stepped around the partition and sliced meat—but not with the same instruments. He was the butcher, grocer, druggist, and practicing physician for the whole neighborhood, and at odd moments sold boots and shoes, hats, caps, clothing, etc.

SAYS DRUGGISTS SELL LIQUOR TO WOMEN.

Omaha, Neb., August 25.—There are to be no more high balls, no more strong "horses necks," Manhattans or gin fizzes for the ladies at Omaha drug stores. The edict has gone forth, issued by Chief of Police Donahue, who aims at remedying the drink habit of Omaha women by forbidding the sale of strong drinks to them at drug stores. He says:

"I shall not keep a watch on the drug stores of the city, which we know to be bona fide, but I have a list of all those which cater to the appetites of the weaker sex and within a few weeks the owners will be brought to time if they continue selling liquors. Not only will they, but their patrons also, be brought into court. I have a scheme by which I think I can secure the necessary evidence (involuntary on the part of the witnesses) which will not injure the business of the legitimate drug stores. I shall endeavor by every means to protect druggists in the sale of soft drinks, but I shall use every effort to bring into court those who are selling liquors without a license."

This action was taken on a resolution passed by the fire and police board last week. The W. C. T. U. has also taken the matter up.

ON DUTY TWENTY-FOUR HOURS A DAY.

St. Paul, August 25.—John O'Donnell, State labor commissioner, who returned this week from a tour of inspection in Northern Minnesota, gives a description of labor conditions as he found them. He gathered interesting data on the condition of clerks in drug stores. He says that in some stores the clerks are on duty twenty-four hours a day. They are required to sleep in the store, and the front door is provided with a night bell. The department has no law on which it can prosecute cases of this kind. Mr. O'Donnell will probably present the data to the next legislature with a view to securing sorely-needed legislation.

RETAIL DRUG CLERKS' PICNIC.

San Francisco, August 18.—The Retail Clerks' Union held a picnic on August 9 at El Campo. Three boats conveyed the crowds to the scene of the festivities. Dancing and games furnished amusement. Prizes furnished by the druggists of the city and friends of the young men, were ready for winners of the contests. The biggest one, a quarter of a ton a coal, was won by William Adair. Some \$300 was raised by the picnic to be used by the clerks in prosecuting their fight against non-union establishments. The committee in charge was composed of William H. Adair, J. H. Hubachek, W. W. Seay, D. L. Perrone and W. L. Perry. On the return from the picnic George S. Buckley rescued a woman, who had fallen into the water.

MR. ATKINS RETIRES AFTER FIFTY YEARS.

Council Bluffs, Ia., August 25.—After thirty-seven years of continuous and successful business in the same location, J. B. Atkins, the honored dean of Council Bluffs druggists, has announced his retirement by the sale of his stock to Robert E. Anderson. Mr. Atkins came to this city in 1866 and his first stock of drugs was hauled overland from the Northwestern track which terminated at Carroll. He engaged in business in a one-story frame building on the site at present occupied, but two years later built what was then the handsomest brick structure in Western Iowa. Mr. Atkins has been a druggist for fifty years, having begun in Michigan, going later to Burlington, Ia., and during the war he was in Idaho.

HEARD IN IOWA.

—William Morrison, druggist at Jamaica, who has been pitching for the Western League professional ball club at Des Moines for the last summer, is talked of as manager for the team. Morrison says that he will not give up the drug business but he may accept the position as manager and return to his drug business in the winter time.

—Druggist J. R. Hulburt and family of Des Moines, have been spending the last two weeks at Okiboji. C. W. Rogg, the Walnut street, Des Moines, druggist is entered in the contest for champion golfer of the State. He will play next week.

—Alexander & Co., have changed the firm name to Alexander & Silk, at What Cheer.

—The Hully Drug Co. has succeeded E. D. Hully & Co., at Elliot.

NEBRASKA.

—J. R. Everett has bought out P. K. Moore at Lush-ton. J. R. Easley of Alexandria has purchased his partner's interest and will conduct the business alone.

—A. G. Curtis has opened a drug store in Fort Cal-houn. W. H. Arness has purchased E. S. Lovely's store in Palmyra.

—Richard Wardlow has escaped from the State penitentiary at Lincoln and has not yet been caught.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories.

NEXT TERM BEGINS SEPT. 7, 1903.

Address Inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

Eight years ago he and a pal entered the drug store of H. H. Ingram at Twenty-fourth and Farnum and attempted a hold up. Mr. Graham resisted and was shot in the face by Wardlow, who was sentenced to ten years.

—W. W. Blake of Metz, was recently burned out. R. H. Wilson & Co. of Linkville, have succeeded Nick Connor. J. S. Williams has sold his store in Eolia.

—T. G. Dorsey of York, has given a chattel mortgage for \$150. R. M. Erway has opened his store in Valley.

OPPORTUNITIES. GRASP THEM.

Opportunity makes the man. Failure to take advantage of opportunities has left many a business man in the rear. This column offers good things every week, it's your fault if you don't take advantage of them. Did you miss any of these in the August 20 issue?

MELLIN'S FOOD—Its friends are numbered by the thousand. It keeps perfectly any length of time in any climate. A wholesale price list may be obtained from the manufacturers, the Mellin's Food Co., at Boston, Mass.

NABOTH GRAPE JUICE—Order this month and get one dozen 3-ounce bottles free with every case of pints and quarts. The Naboth brand is made by the latest improved methods and by men who know their business. The Naboth Vineyards, Bracton, N. Y., is the home of this surpassing grape juice. A sample may be had for the asking.

DRUG MILLS—The Bogardus Universal Eccentric Mill is claimed, by the manufacturers, J. S. & G. F. Simpson, 26 Rodney St., Brooklyn, N. Y., to be superior in that it will grind five times as much as any other mill, of the same size. Illustrated catalogue and price list furnished upon application.

FIVE BROTHERS—This remedy makes friends wherever it is introduced. It is made by the Swanson Rheumatic Cure Co., 160 Lake St., Chicago, Ill. This firm says that it may be safely recommended to cure rheumatism, neuralgia and kindred ailments. All jobbers handle it. Booklets and advertising matter may be had from the manufacturers.

BIOPHASM (HOWE)—Have you had a call for it? You will have. It is being extensively advertised to the medical profession. When the prescription appears be prepared to fill it. For prices and other information see the Biophasm Co. advertisement of the inside front cover.

TABLETS—A full line of the kind that may always be depended upon, finely finished, true to formula, and thoroughly soluble, they are made by the Paino Chemical Co., at Rochester, N. Y., who also make a specialty of private formula and bulk order work. This firm will quote prices and furnish a catalogue upon request.

SEAMLESS NIPPLES—The Miller Rubber Mfg. Co. of Akron, Ohio, are making a special offer in this line. Have you noticed it? They send one doz. tissue paper wrapped, and a supply of new and fetching advertising novelties free with a dozen order for their standard non-collapsible nipples. More information on Page 6.

DIAMONDS' RINGS—They are made of sterling silver and a dull setting having ruby or emerald eyes and are a handsome insignia of the pharmaceutical profession. Every druggist should have one. The J. Arthur Co. give on Page 21 complete cuts and prices.

LAC RINSMO—Better than Bismuth salts, is the best basis for this preparation by the manufacturers, L. J. Hart & Co. of New Orleans, La. This ounce

bottles are \$3.50 per dozen and 6-oz. bottles, \$12 per dozen. This preparation is rapidly gaining in favor with the medical profession and is worthy of a place in any drug stock.

DECORATED TIN BOXES—The Savage Mfg. Co., Richard and Coffey streets, Brooklyn, N. Y., is one of the successful independent firms who make a specialty of this class of work. If in doubt as to the design wanted they will originate one to suit you. They also make decorated tin signs of all styles and stock talcum cans. Their prices are right, workmanship the best, and delivery prompt.

Does It Pay?

We wonder if there is a druggist living who hasn't at some time or other had to sooth the wrath of a customer to whom he had hold a syringe that wasn't guaranteed. If there is one he is an exception, and may not agree with us, but we think the rest will, when we say it does not pay to sacrifice quality for price, but we believe it does pay to handle such syringes as the Alpha and Omega brand for they are each and every one fully guaranteed by the manufacturers, Parker, Stearns & Sutton of New York. These syringes are continuous flow and cost from \$3.75 per doz. to \$17.50 per dozen. The manufacturers will be pleased to furnish a splendid new catalogue of photographs upon application.

Pharmaceutical and Technical Chemicals.

In the year 1822 the firm of Rosengarten & Sons of Philadelphia, Pa., was established. To-day, they stand among the leaders in the manufacture of pharmaceutical and technical chemicals. Their present position is due to the quality of their products and their conscientious efforts to serve the best interests of the trade. Very few firms have enjoyed so many years of confidence and the record made by this firm only goes to prove that the drug trade is thorough in sympathy with honest products made by honest manufacturers. Any druggist who is dissatisfied with the brand of chemicals he is using or wants to be absolutely sure he has one that can be depended upon will never be disappointed, if he specifies "Rosengarten's."

The Lightest Chalk.

Parke, Davis & Co., 3034 Maiden Lane, New York, would be pleased to send samples and quote prices upon the George W. Nichols brand of English precipitated chalk. This brand is claimed to be the lightest English precipitated chalk upon the market, and it must therefore be one of the best. This last assertion is, by the way, entirely superfluous, for Parke, Davis & Co. handle only the best of everything. The Nichols brand of chalk is packed in 7-pound bags, kegs barrels and casks. When ordering, address the importing department.

Mallinckrodt Chemical Works vs. Department Stores.

This journal is in receipt of a recent communication which firmly establishes the position of the Mallinckrodt Chemical Works of St. Louis, Mo., as regards department stores. This firm say they fully realize that the operations of department stores are detrimental to the best interests of the drug trade and therefore avoid selling them directly or indirectly, and that, if any of these houses have their chemicals in stock, they have obtained them from sources unknown to the manufacturers, and entirely without their knowledge or sanction. The Mallinckrodt people have enjoyed the confidence of the drug trade for many years and this clean cut, honest position they take will undoubtedly be thoroughly appreciated by the majority of druggists throughout the country.

DR. GEORGE W. ROLERFORT, druggist at 242 Plane street, Newark, N. J., aged 63 years.

MRS. EDWARD HELSING, wife of a member of the firm of Helsing & Helsing, Wahoo, Neb., is dead.

OPIUM DECLINES.

New York, August 25. Continued satisfactory conditions prevail in nearly all departments, but the volume of general business is of only moderate proportions, although the outlook is favorable to early improvement. A reduction in quotations for opium is the principal change during the last week.

OPIUM—As indicated by the easier feeling noted in last week's report jobbers have reduced their quotations to \$3.50/3.65 for 9 per cent, and \$3.60/3.75 for 11 per cent. Powdered is correspondingly lower and the revised prices are \$1.40/1.65 for 15 per cent, and \$1.90/2.15 for 16 per cent.

MORPHINE—Routine business continues of fair volume with quotations unchanged and steady at \$2.00 *gr* 2.70 for eighth in ounce boxes, \$2.55/2.65 in 21-*oz*. boxes, \$2.35/2.45 in ounce vials and \$2.30/2.40 in 5-*oz*. cans.

QUININE—The consuming demand continues fair and the tone of the market is steady with jobbing quotations maintained at 24/24 1/2 *gr* for bulk in 100-*oz*. tins, 21 1/2/25 *gr* in 50-*oz*. tins, 25/25 1/2 *gr* in 25-*oz*. tins, 26/26 1/2 *gr* in 15 or 10-*oz*. tins and 31/31 1/2 *gr* in ounce vials, according to brand and quantity.

COLUMBINE—Values are easier under the influence of increased available stocks and the jobbing range has been reduced to 38/41 *gr* per *oz*. as to size of order.

THYMOL—Lack of demand and consequent dullness has had a depressing effect on the market and jobbing quotations have been further reduced to \$2.25 *gr* 2.45 according to quantity.

ALOES—True Caps are scarce both here and in European markets and jobbers have advanced their quotations to 25/26 *gr* for whole and 30/31 1/2 *gr* for powdered.

SENEGAL ROOT—Primary markets are stronger and spot jobbing quotations have been advanced to \$1.05/1.15 for whole and \$1.15/1.25 for powdered.

OIL ROSE—Favorable conditions for new crop have caused an easier feeling among local dealers and quotations have been reduced to \$4.75/5.00 for Kissauk and \$3.75/4.00 for extra.

BECHE LEAVES—Short are easier abroad and the spot market is dull with jobbing prices showing a decline to 33/34 *gr* for whole and 43/44 *gr* for powdered.

LYCOPodium—Light supplies and an improved demand have caused jobbers to advance quotations to 65/70 *gr*.

GRAINS OF PARAHSE—Supplies are more plentiful and jobbing quotations have been reduced to 20 *gr* 25 *gr* for whole and 25/26 *gr* for powdered.

GOLDEN SEAL ROOT—Owing to scarcity and higher primary markets, jobbers have advanced prices to \$0/9/10 *gr* for whole, \$0/9/10 *gr* for ground and 90/91 *gr* \$1.00 for powdered.

CANTHARIDES—Unfavorable crop news have caused an advance in jobbing quotations to \$6/9/10 *gr* for whole and 35/36 *gr* 45 *gr* for powdered.

SALTYRON—American is firmer under light spot stocks and strong producing markets and jobbers have advanced quotations to 15/16 *gr*.

GUM TREE—Primary markets are higher and jobbers have advanced quotations to \$7.00 per bbl. of 280 lbs. and 7/10 *gr* per lb. for smaller quantities.

PIVETTO—Values are higher abroad and the revised spot quotations for jobbing quantities are 11/12 *gr* for whole and 16/17 *gr* for powdered.

CASCIPUM—Under a similar influence jobbers have advanced quotations to 20/22 *gr* for whole and 23/24 *gr* for powdered.

CACAO BITTER—Jobbing quotations for cakes have been advanced to 32/34 *gr* by the box and 11/12 *gr* for lbs.

FINISHED OIL—Jobbers have reduced quotations for raw 11/12 *gr* 14/15 *gr* in bbls. and 15/16 *gr* for less, boiled 10/11 *gr* in bbls. and 5/6 *gr* 7/8 *gr* for less.

SPIRITS TERPENTINE—Values are higher in sympathy with primary market and jobbers have advanced quotations to 60/61 *gr* 62 *gr* in bbls. and 71/72 *gr* for lbs.

BUSINESS NOTICES.

A HELP IN PRESCRIPTION WORK.

There are a great many things that the average dispenser can't remember, and there are as many more that he shouldn't try to remember—it isn't safe. These things come up in prescription filling when time is an important factor and accuracy is strictly essential. There are questions about dosages, dose equivalents, percentage solutions, specific gravity, incompatibilities, metric and thermometric equivalents, meanings of Latin, French or German terms. These things are all tabulated, or figured out, handy for instant reference, in the Era Dose Book (Third Edition, Revised and Enlarged). Price 50 cents, postpaid.

"Everything in education should conduce to understanding, just as everything which conduces to understanding is education."

Some undertake the study of pharmacy in order to obtain a thorough understanding of the science, others merely to fit themselves to pass a required examination.

While a desire to scramble past the board is not the best incentive to study, it still leads to a considerable amount of understanding and often to study of a more serious sort.

For a thorough grounding in the science of pharmacy, the larger colleges are undoubtedly the best means.

But for a beginning, and an aid in passing the board, correspondence courses, such as the Era Course in Pharmacy, are highly effective, and, moreover, inexpensive.

Write to The Pharmaceutical Era, No. 8 Spruce street, New York, N. Y., for a prospectus.

"PROVIDENCE HELPS THOSE WHO HELP THEMSELVES.

Those who possess the enterprise to help themselves, receive aid; but those who from lack of energy or in pure laziness refuse to exert themselves to extricate their own cart from the mire, are allowed to sink deeper and deeper into the mud, and nobody wastes any sympathy upon them. This is a rule of the world and applies to druggists as well as to drivers of carts.

The N. A. R. D. was organized to increase the profits of the retail pharmacist, and those who doubt that it has succeeded have only to examine the reports published in the Era during the past few weeks. In more than one town the direct result of the association's operations has been a yearly gain to the retail trade of thousands of dollars, and the work has become more effective every year.

Many druggists who have shared in the profits, have done so purely by the labor of others. They have not lifted a finger to help. Do they feel grateful? Not a bit. They admit that the N. A. R. D. is a good thing, and hope it will get other manufacturers to adopt the contract plan; but when it comes to putting their hands into their own pockets, they are not to be found. Perhaps they argue that this is a matter of business, and gratitude has nothing to do with business. Let us grant that grateful hearts are out of place in the business world; is it good business policy to neglect to keep up payments in a paying investment? What druggist in the country has not sold a few bottles of the preparations now sold at full prices, due wholly to the efforts of the N. A. R. D.? The difference between the full price and the price formerly obtained amounts, even in the case of these few bottles, to many times the small investment requested. Is it not worth while to keep up your end of a business venture that pays such good profits?

A very large proportion of the druggists have neglected to pay their insignificant dues. Some have failed to remit simply because "they didn't have to." A curious commentary upon their business sagacity!

Last year at about this time the association was also in need of funds. At that time many of its beneficiaries refused to fulfill their obligations because they were suspicious. They remarked sneeringly: "Well, what have they done with all their money? It looks queer to say the least. Here only a few months ago

they had no many thousand dollars. It's a big sum they ought to do a good deal with it. What have they done? Where has it gone?"

This year there is no room for suspicion. The treasurer's report is printed in our columns last week. Everybody can see for himself what has been done with the money. It has been employed; it has accomplished results. Witness the full prices under the direct contract plan!

Last year when certain members of the trade heard of the \$20,000 given by manufacturers to carry on the war, they remarked, "Ara! Sold again! It's funny we can't have a retail association for the retailers!" Do these druggists wish their association to pass through this same humiliating experience again? If they do not give it proper support somebody else will, unless, of course, somebody else gets tired of making donations—a thing quite possible—when it will be necessary to suspend operations.

The N. A. R. D. has accomplished results. If its policy does not accord with your ideas, that may perhaps be remedied, but remember that it has accomplished results. The work will come to a standstill unless you do what you agreed to do either personally or through a representative of your own choice. The matter has been placed fairly before you. Will you apply a little muscle to your cart or will you abandon it at a time when it has already risen perceptibly out of the mire?

THE FUTURE OF PHARMACEUTICAL EDUCATION.

With all due respect to the body of able educators concerned with the training of the young druggist, we can say without fear of contradiction, that the educational side of pharmacy is at present in a much less satisfactory condition than that of other professions.

In medicine, the various branches of engineering, technical chemistry and law, the question of education resolves itself into a mere matter of excellence and quantity. In these fields the advantages of the most thorough training are so obvious, that the schools offering the most comprehensive and exhaustive courses of study attract the most students. The direction of growth stimulated by a healthy competition is distinctly upward, the development being steadily for better and more practical professional work.

It is the demand for higher and still higher education that has created the great institutions of learning of which we are so justly proud, and, in spite of what regents and faculties may desire, it is the demand that ultimately determines the character of our schools and colleges. There is no power that can say to our students, "this and that shalt thou know." The student is supposed to know what he needs, and it is the average mind of those seeking instruction that determines whether one course shall be strengthened or another abandoned.

This is the normal and natural method of growth, and it is doubtful if any power can alter its course in any essential detail. In which direction is pharmaceutical education driven by this inexorable law of supply and demand?

The Midland Druggist's editor speaks as one possessing authority for he has seen much service in the Ohio board of pharmacy—makes the following state-

ment: "Young men are not crowding schools of pharmacy now for the purpose of becoming accomplished pharmacists to serve in retail drug stores, but to pass examinations of State boards, and the school that can assist them to do this in the shortest time and at the minimum of expense is the school which secures the greatest number of students."

This statement may be tinged with pessimism, but it undoubtedly contained a kernel of truth. If the daily work of the pharmacist makes no use of the knowledge gained by the student, and the only apparent advantage which the student derives from this knowledge is the ability to answer the questions of the examiners, the minimum requirement will naturally become the maximum of education sought.

IS THE PHARMACY LAW A FARCE?

There is a strange lack of agreement between educational and board of pharmacy requirements and the provisions of pharmacy laws. Legislatures are requested to enact laws conferring upon the pharmacist the exclusive privilege of preparing the medicines ordered by physicians.

In return the druggist is expected to protect the public from errors in dispensing poisons, and to furnish materials of standard quality. These two duties, protection against errors and ensuring quality of drugs, are the foundation and framework of pharmacy laws. Without them there would be not the slightest excuse for either license or special privilege.

How does the privileged class perform these duties? The necessity for protection against the accidental administration of poisons does not seem to be taken seriously either by the public or the pharmacists, for physicians are allowed to dispense without the least precaution and the restrictions surrounding the sale of poisons in quantities far more deadly than those likely to be dispensed in prescriptions are extremely lax—they are, in fact, very commonly ignored. Nor does this duty require great technical knowledge, a memorized list of doses and proportions being quite sufficient as a real protection.

The other duty required by law of the registered pharmacist, that he furnish only materials of standard quality, demands a very high degree of technical skill and thorough training in science. Indeed, if it were conscientiously performed by druggists generally, there would be no lack of students in the more thorough schools, and university degrees in pharmacy would not be a useless and ridiculous superfluity.

The law holds the druggist responsible for the materials dispensed, be they of his own manufacture or purchased in good faith from the wholesaler, and the public also takes for granted that the pharmacist knows exactly the quality of medicines dispensed. This fact was made quite clear a few months ago when druggists generally were roundly abused because adulterated drugs had been sold, apparently in ignorance, by a few individuals.

How does the pharmacist regard this important duty implied if not directly specified in all pharmacy laws and more or less openly demanded by the public? The answer to this question reveals the false position of the druggist before the law, and also explains in a considerable measure the threatened decline of the educational standard. Extremely few druggists pay

the slightest attention to this duty, and by boards of pharmacy it is almost universally ignored.

The candidates are seldom if ever required to apply any tests for purity and strength, and in the examination the highly educated applicant finds no use whatever for his hard-earned skill in analytical chemistry and the use of the microscope. And in daily practice these costly accomplishments are still less likely to be called into action.

If the law has any meaning at all, the standard of the most exacting college in the country is not a whit too high, and the boards of pharmacy and the rank and file of druggists are sadly delinquent. If the law is a farce and the existing order of things is the proper one, the better schools are demanding of their students a criminal waste of time.

If the law is a farce why require any examination or any education? If it is merely a wall to keep the outsiders from grazing in an over-crowded pasture, why not make length of service the only criterion, increasing the experience requirement to six, eight, or even ten years?

IS PROFESSIONAL PHARMACY ENTIRELY OUT OF THE QUESTION!

No doubt most of our readers will declare that the testing of all materials dispensed in drug stores is impracticable. "How can we afford to examine everything," they will enquire, "when our profits are so small that we can barely afford to keep one clerk?" To this the logical answer is, if commercial conditions are such that a strict obedience of the law is impossible, the pharmacy regulations must be changed, so that the druggist will not be held responsible. In that case the students contemplating thoroughly scientific courses should be informed lest they waste their time and money. But is it true that a careful examination of materials dispensed is impossible? There are a few pharmacists who conscientiously follow this practice, and find that it pays. Another question: Is it not true that this very precaution is becoming necessary? Adulterated drugs are now so plentiful that it is sometimes difficult to obtain goods of standard quality. The dispensing of inferior medicines is at present shamefully prevalent. Inspectors of the board of pharmacy in this city find pure drugs almost the exception and not the rule. These conditions can not continue indefinitely. If the druggists will not examine their wares, the inspectors must, and the results will not be agreeable. A good microscope and a small qualitative laboratory are necessary in every drug store in New York. There is work in abundance for the scientific pharmacist, and if the law is strictly enforced there will soon be an active demand for his services. Perhaps it is in this way that professional pharmacy will again come into its own. Times may be hard for the sort of druggists, said to be plentiful, who have never heard of a pharmacopoeia or dispensatory; but if inspectors and pharmacists will do their duty, the science of drugs as a pursuit will again be worth while.

IS IT WORTH WHILE!

The celebration of our last national holiday resulted in 415 deaths from tetanus. More than 90 per cent. of the cases were ascribed to the deadly blank cartridge.

Labor Union Methods.

New York Stereotypers' Union No. 1 is sending the following letter to the advertisers in the Pharmaceutical Era:

New York, August 26, 1903.

Gentlemen:

We would respectfully call your attention to the fact that D. O. Haynes & Co., publishers of the Pharmaceutical Era and the New York Commercial, have positively refused to employ members of New York Stereotypers' Union No. 1, consequently, their stereotypers being union men, were compelled to leave their situations. The above publications have therefore been declared unfair by organized labor.

Any firm that patronizes these publications by advertising in them, or subscribing for them, cannot expect the patronage of union men. This matter will be thoroughly ventilated in every city, town and village throughout the United States and Canada.

Hoping you will give this communication your earnest consideration, and requesting a reply on the subject, we beg to remain,

Very truly yours,

New York Stereotypers' Union No. 1.

The facts in this case are these: D. O. Haynes & Company is a corporation and it owns and publishes both the Pharmaceutical Era and the daily New York Commercial. The company has operated a so-called non-union shop since June, 1901. In this shop the type only is set for the Era, and that paper has nothing whatsoever to do with the stereotyping department which is used only for the daily paper.

As the "Commercial" is the only non-union morning paper in New York its men are being constantly approached by the unions to try and persuade them to quit their jobs and cause the paper trouble. The gang of men who were doing the stereotyping work for the "Commercial" went over to the Union last week, and the above letter to our customers is a specimen of the work they are doing to try and force us into line.

In their letter above, the Stereotypers' Union tries to give the impression that the men employed in the Commercial's stereotyping department were union men and that they were compelled to leave their situations because the publishers refused to longer employ union workmen. All of these men were engaged as non-union men. Three of them had been with the paper through previous strikes, and all of them volunteered to put up from \$100 to \$200 each, only a few months since, to secure their non-union jobs. The publishers had no intimation of their going over to the Union until 6 o'clock of the day they went out, at which time they waited on the management with a committee from the Union and because the manager refused to listen to any proposition from the Union the men walked out.

In other words, the men had sold us to the union and we refused to deliver the goods.

Strictly speaking, the Era has nothing to do with this labor question, but we want our friends to know the facts. The "Commercial" has, for several years, taken a very decided position against the abuses of labor organization. We quote the following from a recent editorial in that paper:

"We are unalterably opposed to the methods commonly resorted to by labor unions in coercing em-

George E. Thorpe and Some of His Clerks in His Pharmacy at Syracuse, N. Y.

The above is the interior of the store of George E. Thorpe, president of the Syracuse P. A. It is located at 228 East Washington street and is called the Yates Pharmacy. Mr. Thorpe has been at that location for seven years. The store is 22,800 feet in dimensions and has a well-appointed soda fountain and cigar stand as may be seen in the cut. Mr. Thorpe is behind the counter towards the further end of the store. Fred

Young is behind the cigar case. Behind the fountain is Charles Clark and in front of him is David Stolz, the latest addition to the force. The other gentleman is a customer. It is not to be understood that this is Mr. Thorpe's only customer but he happened to be the only one in the store at the time the photo was taken. W. G. Daggett and E. Smith, clerks, were out when the photo was snapped.

plays because we believe in personal liberty and in equal rights to all.

"Further, we consider the pernicious influence of these organizations as the greatest evil that threatens the prosperity and happiness of all our people.

"We have no quarrel with labor unions as such. We recognize it as the duty as well as the right of all classes of citizens to combine for their mutual benefit, but none of them has the right to use such organizations for unlawful purposes or to infringe upon the rights of others.

"We shall continue without the slightest relaxation our battle for a release from existing conditions. The editors may tie up our editions, they may even temporarily stop the publication of the paper; or they may by threats and intimidations frighten some of our customers away but unless we are very much mistaken in our estimate of the American business men, they are not made of such weak material, and instead of deserting us for such reasons they will, on the contrary, be all the more willing and ready to lend us their support.

The Man of "Tomorrow."

Longfellow has said that "our unfinished tasks will wait like mendicants at our gate." The procrastinating man expects to accomplish tomorrow the work of yesterday and wastes today in vague plans for the future or allows himself to be turned from his work by callers or social pleasures. He has never felt the satisfaction of being abreast of his work or even of having his work well in hand. His desk is buried under an avalanche of unfinished business. He is reminded of something and wastes time in vainly looking for it. He intends to be honest but delays the doing of it until it is too late. He has the common sense "to think to do something." Not able to manage himself or his own affairs, he never becomes a successful manager of other men or the affairs of others.—Whitson, Trade Advocate.

IPECACUANHIC ACID.

T. Keimura (Pharm. Zeit.) finds no reason for the high reputation of de-emetized ipecacuanha as a remedy for dysentery. He has separated ipecacuanhic acid, and experiments show that it has scarcely any astringent action or any influence on the development of the bacillus of the disease. In chemical composition the acid seems to be a glucoside related to quillagic acid, but it does not possess the properties of a true saponin.

DRUGGISTS ARE ASKING WHY.

Lancaster, Pa., August 24, 1903.

To the Editor:—We are in this locality looking forward to the two coming conventions: Boston and Washington. The success of the serial contract plan is so sure, the results so beneficial to the wholesale and retail trade, that the fact that there is not a general adoption of the plan by the proprietors, is evidence that there is at work, some power against the plan. The proprietor's interests are so thoroughly safeguarded and enhanced by the contract plan that it is arousing the curiosity of the retail trade as to the aloofness of the manufacturers.

There will be a close watch on the events of the future, as the retailer was never before so alive to his own interest and never so ready to aggressively guard them.

WM. O. FRALEY,

SHOP TALK

ON THE GREGARIOUSNESS OF THE HUMAN ANIMAL.

"I suppose you don't allow loafers in your store," remarked the C. P.

"None but you," returned the druggist dryly.

"In that you are, of course, following the advice and rules laid down and double-riveted by the journals and those in the trade who are trying to build a reputation for wisdom."

"I don't know whether I am following anybody's advice," snapped the druggist. "They are a nuisance, and I don't believe in them on general principles."

"There are loafers and loafers."

"A loafer is a loafer always."

"Yes, but sometimes you call him by another name. When the judge or the minister or one of several doctors drops in and bothers you for an hour or so, you smile affably like a Cheshire cat, but when that young brother of Charley's inamorato hangs around for fifteen minutes to arrange about ball tickets, you remark that you detest loafers. Then when the Indian tribe from the alley tries to communicate with Jimmy, you threaten to call the police or turn the hose on them. What's the difference?"

"A whole lot of difference. The judge and the minister bring in trade while the others have no business here at all."

The sage shook his head. "No, that won't do. You knew very well that the minister wouldn't buy a thing; his boy works at Pillem's. You knew very well that he merely wanted to talk a while with an eye to a possible subscription to that fund to get the organ tuned. Charley's friends buy shaving soaps and cigars, and the nickels that blunder into Jimmy's tribal treasury nearly all come into your cash-box for soda or war-paint. You distinctly have another guess."

"Go away! You know the difference between a caller and a loafer as well as I do."

"You don't seem to be altogether clear on that point yourself. What is a loafer?"

"I'm no dictionary. I suppose you might say it is a person who unnecessarily occupies space where he serves no useful purpose."

"Then at least one-half the people are loafers on this earth."

"All right! The other half is all I care to have in this store."

"Look here! It depends upon the person, then, eh? Whether you like him or not! The fellow you like is not a loafer, but the fellow that Jimmy and Charley likes is."

"Oh, bother! This is my store, isn't it? I keep it open to do business. The best thing for me is to have people come in, state their wants, pay their cash and walk out."

"Not always! It might be if people were reversed penny-in-the-slot machines. That is the machinery of business, yes; but that is not all there is to it. People have other things besides well-defined wants and coins with which to satisfy them."

"Well, what of it, and what has that got to do with loafers?"

"Man is a gregarious animal," said the sage impressively leveling his finger at the druggist's waistcoat. "He hates to be alone. Where there are others, he follows; and what they do, he is likely to want to do. Do you like to go into a strange restaurant where all the chairs are empty?"

"I never thought of it. Perhaps not!"

"Nobody does! When you are at Coney Island and feel a vacancy best filled with solids, you stroll along and look into the eating places, one after the other, out of the corner of your eye. If you don't see any-

body, you pass on, and ten to one you will choose the one that has the greatest number of busy forks."

"And then?"

"There is no 'and then' about it. It's always that way. People avoid a deserted place. Customers bring customers."

"So, instead of being a loafer, standing there wasting my time and burning up my matches, you are in reality a valuable trade magnet. Is that your idea?"

"Something like that. Of course, I don't expect you to pay me a salary, and the thing doesn't hold good in all places, but in many cases it is a decided advantage to a drug store to be a resort for local wits."

"Like yourself!"

The sage eyed him scornfully. "It wouldn't do in a fine prescription pharmacy on Fifth avenue, but most drug stores are better off for a little human attractiveness. I know a druggist in a medium-sized town who bribed the two most popular men in town to drop in every night at about nine. He fed these fellows on cigars and soda, and they told stories, discussed the ball game and criticised Deacon Jones' new barn. Everybody knew everybody else, as is the comfortable way in places of that kind, and everybody who passed that way dropped in."

"He must have had a store full of them."

"What?"

"Loafers."

"If you choose to call them that, but the druggist I'm speaking about turned them into customers. That's where the gregarious and following instinct got in its work. To see one man smoke reminds the other fellow that he also needs a cigar. Then the others who don't smoke want an equivalent and many nickels pass over the counter in consequence."

"What if a lady had come in?"

"She need not have felt the least embarrassment. All loafers are not hoodlums. These were gentlemen as the average self-respecting American always is."

"I don't think much of your scheme. You mention only masculine, late evening trade. The best trade in soda and side lines is usually in the afternoon."

"You might encourage a few popular ladies to— I mean drop in of an afternoon, and about the close of school two or three bright school-girls might attract trade."

"And last week you were talking about legitimate pharmacy!"

"Isn't this legitimate? It's not noble, unselfish exercise of the healing art, to be sure; but it's a way to get people into the store, and that is what everybody is trying to do by every conceivable means, from trading stamps to a full-sized barn yard in the window."

"AVERAGE DRUGGIST" ON DENTAL HYGIENE.

"Average Druggist" followed up his booklet and window displays on dental preparations by a booklet and accompanying exhibit devoted to the hygiene and care of the teeth. Why had he not taken this up before? On general principles, almost everybody realizes that they must take care of their teeth.

"If I had begun on the care of the teeth first I would have lost a whole week's sale of my preparations," he said. "I have my permanent exhibit of what things to use all ready to clinch my arguments for using them."

"What do you think of this week's window?" he asked. "Isn't it rather unusual?" "It cost me but little more than time and thought. My old standbys, the manufacturers, you know most of them are only too

J. A. LOUKIE, Buffalo, N. Y.
First-Vice President, New York Ph. A.

glad to supply me with material. The whole show cost about a dollar and a half, a few spare hours during rainy nights last week and a little time and trouble hanging up things." This is what the Era man saw:

Nothing in the way of advertising or dental goods shown except what was necessary to bring out points here and there, fully justifying the title on a large card hanging directly in front: "The Hygiene of the Mouth and the Teeth." The whole scheme was based on plates and illustrations of those useful organs—large papier-mache models, carefully drawn black-and-white sketches and explanatory cards. The background for hanging was a heavy curtain of dark material stretched across the back of the window; means for hanging were rods, stretched across at proper intervals, of wood, rounded off and gilded, bought in bulk lengths at a wood yard for a cent a foot, and sawed to proper lengths.

Pictures and plates were framed in neat "cut outs" made of two sheets of plain white cardboard and hung by small gilt confectioners' twine from the rods. The cost of the frames was from three to five cents apiece and the A. D.'s wife had made most of them. The larger pictures were hung against the background; smaller sizes were on the side walls of the window. In front of the back curtain was a set of "steps"—four shelves, each six inches high, covered with white paper.

The large pictures and plates were a set of colored drawings showing the formation of teeth, gums and jaw, in various stages of decay, nerves and blood vessels. Just above the steps was a row of colored drawings made by the A. D. himself from plates in a text book belonging to his dentist friend upstairs.

These drawings were made by laying draughtsman's tracing cloth over the plates and copying with colored pencils of the right color, the tracing afterward being mounted on cardboard. A D. said this tracing scheme was a good one for the druggist, who could copy any tracing he might run across and use it in his window.

The "home made" pictures showed the effect of such gritty substances, etc., on teeth—discreetly exaggerated, of course—how particles of food lodge between the teeth and weird images of horrible microbes that cause the teeth to decay. These microbes were germs, and each in front of each told what it was. A

little of the sensational was a large glass jar half full of a yellowish liquid, labelled "Solution of a tooth dissolved in the acid used in a tooth wash that claims to whiten the teeth!" Glass-stoppered bottles containing various solids and liquids, labelled as acids, alkalies, grit, etc., used in cheap tooth powders and washes, stood on the shelves of the steps. Enlarged pen and ink sketches near some of the bottles showed the effects of these substances in corroding and destroying teeth. In a row in front were handsome bottles containing A. D.'s dental preparations, and a card saying: "This will destroy the germs that cause the decay." The least informed person could learn from that window all about his mouth almost at a glance.

In profusion on the floor were booklets written to explain the display. "The Hygiene of the Mouth" was printed on the cover, and an invitation to step inside the store and get one hung in the window.

PUT OUT ALL THOSE BIPEDAL SPONGES.

"This pay telephone business," says a St. Paul druggist, "has had the effect of bringing to my mind the plea: 'Father, forgive them, for they know not what they do.' Many, perhaps most of the people who grumble at the idea of putting a nickel in the slot whenever they use the 'phone suffer under the handicap of inability to see both sides of a question. Now just look back a year or two and remember the plight I was in. Here is my 'corner' in a thickly settled part of the St. Anthony Hill residence district. The telephone is in my little, tucked-up prescription room, which is supposed to be exempt from the curious gaze of the layman. The space is sufficient for the work it was designed for, but not for the purposes of a public telephone station. More than half the time it was full of people, mostly women, who in turn held protracted sessions of idle gossip with still more idle friends at the other end of the line. Not only was I compelled to elbow my way when filling prescriptions, but it became more and more difficult to get at the telephone myself when I needed it for my own urgent business purposes. I am probably as patient as any member of any class of the community, even druggists; but, in my case, long before patience ceased to be a virtue, as it finally did, it was transformed into a positive agency for the depletion of my own cash drawer. This would not do at all. No man should be asked to virtually 'dig up'—put his hand into his pocket and pay out good money for being imposed upon. When this constant, systematic drain upon my good nature had eventually so overwhelmed me with a sense of fatigue that I could stand it no longer, a pay telephone went in, and the bipedal sponges went out. Result: The public loves me just as well as it did before, if not better, and I am making money again—which is what we are all here for.

WITH THE PILLS IN FAIRYLAND.

In a miniature fairyland in the window of Louis Berdy, 1504 Madison avenue, proportions are strange, but perhaps that is an attribute of fairyland. Probably the crowd of admiring young maids and lads did not note the plagiarisms from scenes in this world nor smile that the occupation of all the fairy people, even the fairy arrivals, was in transporting little pink globes expressively known as pills. Venice in the background, allowed her gondoliers to pole under the Brooklyn Bridge, when their craft were bigger than the sea-going vessels found dangerously near the beach in front. Two Indians in a brave canoe that was longer than half the bridge span threatened to run down a ferryboat. The canoe's load of pills would have created disaster in a collision. A dove on a house built on the beach sands was in the act of swallowing a pill, while a cat crouched in an adjacent window. A baby in a perambulator had a coverlet of pills. Flying cupid carried pills. Dogs gambled with pills. Pills grew in the moss skirting the sands. Familiar were the landscape signs everywhere, in this case pill labels. Thousands of pills and scores of figures made a very pretty display.

GIVE 'EM A CHANCE TO BE EXTRAVAGANT.

"This talk about its being a good thing to size up customers is all right," said a reminiscent drug clerk the other day, "but sometimes you get badly left. It was during my first experience behind the counter in an up-State town that an incident happened which I took care should never be repeated. The door opened and in walked a man dressed in very old clothes and carrying a big stick. He looked more like a tramp than anything else.

"Young man," said he, "I want some good cigars. Those there will do. Give me about ten I guess." He pointed to the best we carried in stock. I thought he had made a mistake or else intended to get the cigars and run. "Why," said I, "those are worth 25 cents a piece. We have some very good cheaper ones." "What if they are worth 25 cents apiece, you impudent puppy, don't you think I can settle?" And he pulled out a roll of yellow-backs that would choke a horse. The twenty he handed me I couldn't change. He was pleased when I had to scurry around to neighboring stores. I breathed easier when he left, afraid he would hang around until the boss got back. I learned later he was worth a million dollars and was on one of his long walking trips for his health. That incident taught me that it is better to offer a prospective customer the best and let him do the coming down. Don't assume that he can't afford expensive things and offer him the cheapest. Even though you know the customer is poor, everybody has his extravagances and how do you know that he is not indulging one of them when he comes into your store?"

WE HOPE FEW CLERKS NEED THIS ADVICE.

A Rochester druggist the other day related an incident which may be a warning to clerks:

"I was working in my office one noon a few days ago when a woman entered and asked a question of the only clerk present. The clerk, a new one, required a watchful eye. He replied to the woman's question, which I did not hear, and turned to the shelves, frowning as he looked, and at last brought down a small parcel and turned to the woman. She nodded, and I heard her say, 'I said I wanted Dr. L.—'s Pills.' The clerk forced a smile and began to talk. I left my seat and walked toward him, keeping behind the counter. I heard him say: 'You must be mistaken—in fact there is no doubt about it—for these are the pills that we have kept in our store so many years and have given so much satisfaction. The name used to be Dr. L.—'s, but that has been changed and—' At this point the woman snappishly said she didn't believe it at all and started to go to another store. But I stepped forward and said: 'I beg your pardon, madam, but my clerk has made a slight mistake. We are out of Dr. L.—'s Pills, which you so frequently buy of us, but there are some ordered and will be here in a day or two. If you cannot wait until then I think you can find what you want at our neighbor's store up the street.'

"After the woman was appeased, and had made one or two purchases from me, I gave the new clerk a few words of advice.

ANTISEPTIC THERMOMETERS.

Stini (Bull. gen. d Therap.) describes a simple apparatus by which to avoid the danger of carrying germs hidden in the scratches on the glass of clinical thermometers from patient to patient. The device consists of a metal tube provided with a cap fitting sufficiently tightly to securely enclose an antiseptic liquid. The thermometer is enclosed in another tube not unlike that commonly employed, but perforated with numerous lateral holes to allow free access of the antiseptic liquid. The perforated tube containing the instrument is carried enclosed in the outer metal case which contains the liquid antiseptic. Any germicide may be employed. The author uses a 1 per cent. solution of phenosalyl.

MEZQUITE.*

By E. G. EBERLE, Dallas Tex.

The Mezquite is a tree or shrub, in accordance with the favors bestowed upon it by nature and aided by the hands of men. Coulter describes the Mezquite as a shrub or tree, often armed with axillary spines or spinescent stipules, with bipinnate leaves, one or two pairs of pinnae, usually numerous small entire leaflets, small greenish flowers in cylindrical or globose axillary pedunculate spikes, and a linear pod, which is compressed or terete, straight or falcate, or twisted, coriaceous and indehiscent, and with thick partitions between the seeds. There are said to be 20 species, and applying the distinguishing characteristics mentioned, we have three in Texas, viz: *Prosopis juliflora*, with an elongated straight or falcate pod, *P. pubescens*, with a thick twisted pod, and the *P. cinerascens*, with a similar fruit but much smaller leaflets.

Swartz describes the habits of the Mezquite as follows: Extending from "the southern border of the Indian Territory, Northern and Western Texas the Eastern limit defined by a line from the intersection of latitude 37° with the 100th meridian to Dallas; thence south to the Colorado River and southwestward within 20 and 30 miles of the Gulf, which is reached near the mouth of the Rio Grande River, into Northern Mexico. Also from the Southern borders of Colorado and Utah, through New Mexico, Arizona, and Southern Nevada to Southern California, the Western limit defined by a line from Tojon Pass over Los Angeles to San Pedro; in lower California; Western South America (Andean region to Chili); Argentina and Southern Brazil and Jamaica."

I know, however, that it grows at least fifty miles east of Dallas, in fact it is almost co-extensive with Texas prairies.

The name *Prosopis* is Greek, meaning a face. The name under which it is commonly known is Mezquite, is also spelled by substituting an s for the z, and even displacing the qu with the letter k. The variety *pubescens* is known also as Tomillo and Screw-Bean.

At the beginning I noted that the various forms or development were due to surrounding conditions, and these are so distinctive that it tempts the botanist to divide what is evidently the same plant into varieties. In localities where the soil is rich and deep the roots penetrate to a remarkable depth, and if the region is comparatively free from high winds it attains to a height of fifty feet or even more; in portion visited by frequent heavy winds it becomes a spreading tree. The trees have very great resemblance to fruit trees, and I remember my astonishment and embarrassment when I mistook a grove for an orchard in a region very sparingly inhabited. In regions where heavy winds are still more prevalent the tree grows along the ground and forms a thicket, and where the sand blows frequently, as snow does in winter in the Northern States, it becomes almost covered and is evidenced by the foliage peering through the sand mound. So it will be seen that the mezquite adapts itself to the conditions which surround it. The tree grown from the seed is hardy; its growth is always slow, naturally depending largely upon the moisture, which, in a great portion of the section in which the mezquite rules supreme, is not abundant.

Dr. Havard makes the statement that a trunk seven or eight inches in diameter indicates a tree about thirty years old and one of twelve inches in the neighborhood of seventy-five years. The life of the tree underground is estimated at about 35 years, while above ground they certainly attain the age of 100 years, trees having attained to a diameter of 30 inches. The wood shades in color from a reddish brown to a light yellow, very hard, dense and durable. Its specific gravity is .7652. As a fuel it is equal to hickory. It yields an excellent charcoal, and I quote from Bulletin No. 13, Arizona Agricultural Experi-

* Read before the American Pharmaceutical Association at Mackinac Island, August, 1903.

ment Station, its percentage composition: "Potash, 3.49; soda, 15; loss, 28.68; phosphoric acid, .68. The wood contains about 10 per cent of tannins.

The wood is the fuel of a large portion of the section wherein it grows and in some localities the exclusive source. The yield of wood derived from the underground growth of the mezquite to which I have referred is surprising; sometimes such a mound, hiding only one plant, furnishes several cords of wood. It is a novel sight to unfamiliar eyes to see in El Paso the Mexican coming to market with his burro loaded with two bundles of mezquite wood which he has dug out of the ground.

On account of the durability of the wood in presence of moisture, as well as necessity, it is largely used for fencing, foundations for buildings and railroad ties. The bark and wood are used both for tanning and dyeing. A decoction of the former is used as an astringent, and by the addition of salt a purgative draught is made and used by the natives.

In the arid region in which the tree grows it is a blessing in more respects than one. It furnishes a most delightful shade, due to the fact that the leaves, which are suspended upon slender petioles and the flexibility of the branches, permit the free passage of the breeze without affecting the shade. The leaves are eaten by cattle when no other food is to be had, but they cause the milk to become bitter. The composition of the leaves is very much the same as alfalfa hay, the amount of tannin, however, about 6 per cent, make them objectionable for fodder.

Under favorable conditions the mezquite produces two crops of legumes. These hang in clusters of from five to ten, and are from 10 to 24 c. m. long, about 8 m. m. wide and 12 m. m. thick. When ripe they are of a yellowish color, speckled with red, and have a fragrant sweetish taste. It is this yield of the tree that adds to its worth, for upon them the native and his stock largely subsist, and the American stockman has learned to appreciate their value for fodder. The pods constitute about three-fourths of the weight, and the seeds one-fourth; both are very nutritious and preferred by stockmen to oats and barley. In order to utilize the seeds, they must be ground into meal. Protein is present in very much larger proportion than in corn, and fat and carbohydrates in about the same proportion. Both cane and grape sugar are present in variable quantities, ranging from 10 to nearly 25 per cent, the former being largely in excess. Not only does the mezquite bean supply the wants of the native for his stock, but also his own and that of his family, in fact in some sections they constitute his food and luxury. The pods are ground into meal, baked into a bread which does not mould or harden for months, into cakes, and also served in the form of mush by boiling with water. The seeds are parched and then used in place of coffee. They are also used in making a beverage by allowing an infusion of the pods to ferment, this is known as *uswin*. The olla basketry with which some of you are acquainted are jugs used for making *uswin*. A delicacy is made of the meal, similar to our custards, which is flavored with fruits, vanilla or chocolate and known as *stole*.

Medicinally a decoction is used for kidney and bladder affections. The leaflets are used by the natives in the form of a poultice to allay inflammation. Internally an infusion of the leaves is used for fevers. They are also used by the Indians for tattooing the skin; a punctured with the spines, the leaves moistened and rubbed over the surface under treatment.

The flowers of the mezquite yield, through the intervention of the industrious bee, a very excellent quality of honey.

Pharmaceutically we are somewhat interested in a gum which exudes through the bark of this very interesting plant, and forms in veins of various rounded forms. It resembles certain varieties of gum arabic, the flow being perfectly white, with a tendency from an amber to a more or less brownish color. It differs from gum arabic in not being precipitated with lead subacetate ferric chloride and is not coagulated by sodium borate. The gum has about the same solu-

bility as acacia and, like it, its solution is slightly acid. Miss Virginia Brooks of Waelder, Texas, reports the following composition: arabin, 84.67; bassorin, .206; foreign matter, .236; ash, 3,000; water, 11.640. Its ultimate composition obtained by a combustion of the carefully dried gum in oxygen, first experiment: carbon, 43.10; hydrogen, 6.11; oxygen, 47.26; ash, 3. Second experiment: carbon, 43.10; hydrogen, 6.50; oxygen, 47.40; ash, 3. The amount of bassorin in the gum seems to vary. The allusion so far made is to the gum which exudes from the branches. This can replace gum arabic for all purposes for which the latter is used and in which the color is no objection. It makes a good mucilage, the taste reminds one naturally of mucilage of acacia. It is excellent—if any thing better than acacia—for emulsions. I am told that the *Acacia farnesiana*, which grows from San Antonio to the Gulf Coast, and the Lower Rio Grande, yields a gum identical with acacia. About ten varieties of acacia grow in Texas.

In Mexico exceptional medicinal qualities are ascribed to mezquite gum, and pharmacies are required by law to keep it in stock, the principal use for it medicinally, as far as I have been able to learn, is for certain throat affections. The gum exudes during July and August, and the most favorable time for collection is during the latter part of August. In one section of the State it is only gathered for individual use; neither do I believe that very large amounts are gathered anywhere at the present time. In 1872, it is stated that 24,000 pounds were collected, half of this amount coming from Texas, according to the report of the United States Commissioner of Agriculture. It is said to make very satisfactory gum drops, and is to some extent employed in laundries. By wounding the bark the yield can be very much increased; no specific amount can be stated as a yield from a tree, as the product varies with the season, conditions of shade, etc. Two kilos would be a good average. Boys gather it, receiving for it anywhere from ten cents to 25 cents per pound. Under existing conditions it is difficult therefore to state what the probable yield or cost might be in case there were a steady demand for it. The territory, however, in which the tree flourishes is so extensive that the supply could be made to meet the demand, if the industry were developed. A very impure gum, or perhaps better, dried sap, containing some gum, collects in deep cuts of the trunk and forms blackish masses, weighing often several pounds. This contains a large amount, 15 to 22 per cent, of tanning material and is used by the Mexicans and others for dyeing and also for making ink.

To sum up the collected data, we have in the mezquite a source of valuable fuel in a region which otherwise would be lacking in this necessity. The fruit is palatable to both man and beast, and could be utilized for these purposes commercially. The gum could replace acacia partially, if the industry were developed. The so-called black gum contains sufficient amount of tanning material to make it valuable. The suggestion of its use for inks, calico printing, dyeing, etc., is probably only of speculative value. The tree is a slow grower; it is not successfully transplanted, and prospers best when grown from the seed.

INCOMPATIBILITY OF CALOMEL AND PEROXIDE OF HYDROGEN.

D. Conson Lamosier (Bull. Commere) calls attention to the fact that peroxide of hydrogen has the general properties and incompatibilities of an oxidizing agent, and that its action is often more violent than that of all others. He states that the internal use of this substance may be dangerous in case the body already contains such substances as calomel which is by oxidation converted into mercuric chloride. Experiments with calomel and peroxide of hydrogen showed a distinct change in the mercury salt, although the oxidizing agent was little decomposed. It is nevertheless well to exercise caution in the use of these remedies for the conditions in the stomach are subject to very great variations.

THE NEW REMEDIES OF 1902-1903

Being the Introduction to the Report of the Committee on New Remedies of the New York State Pharmaceutical Association for 1902-1903.

By THOMAS J. KEENAN, Chairman.

During the year which has elapsed since our last meeting, your committee have made a careful study of the current periodical literature of pharmacy for the purpose of recording the new and novel introductions to the materia medica in all countries, and the subjoined paragraphs embody such details of pharmaceutical interests as are likely to prove informing, if not of practical utility. In accordance with the custom, we preface our report with a reference to the trend of work in the production of new remedies, which will indicate briefly but perhaps sufficiently the lines of activity followed by chemical manufacturers.

Although anti-rheumatics and uric acid eliminants in new and novel combinations have been produced in average volume during the period under review, there has been a somewhat greater activity displayed in the manufacture of substances intended for the treatment of pulmonary troubles, and we have consequently to note the appearance of a number of new therapeutical synthetics, the bulk of which owe their medicinal efficacy to guaiaacol. This body, which is the active constituent of beech-wood creosote, has proved so valuable a remedy in many disorders that numerous more or less successful attempts have been made to overcome its objectionable features, the result being a lengthy list of additions to the materia medica which have, however, in few instances only fulfilled the expectations of the makers. The widespread vogue which guaiaacol and its derivatives have attained within a comparatively recent period has influenced your committee to review the history of this medicament in its chemical and pharmaceutical bearings. The preparation, known commercially as guaiaacol, is the fraction of beech-wood creosote boiling at 200 to 205 degrees C. From this a purified product is prepared by recrystallization from either potassium guaiaacol or benzoyl guaiaacol; and a crystalline guaiaacol is also built up synthetically by methylating pyrocatechin, as well as from orthoanisidin by diazotating and boiling. Pure synthetic guaiaacol made by either of the two last mentioned processes is a colorless, crystalline body, melting at 28.5 degrees C. and boiling at 205 degrees C. It is readily soluble in alcohol, ether and sulphuric acid, and in 50 parts of water. It combines directly with numerous bases to form crystalline salts, and with certain acid radicals, some of which form valuable therapeutic agents. While most of these compounds are free from the objectionable characteristics of guaiaacol itself, it is, nevertheless, the fact that most of them are at the same time much inferior to the parent product in medicinal value.

The first substituted guaiaacol introduced into medicine was benzosol, or benzoyl guaiaacol, which dates from the year 1890. Soon after this there was produced in rapid succession a whole series of ethereal salts, guaiaacol carbonic acid and guaiaacol carbonate in 1891, guaiaacol biniodide in 1892, cinnamyl guaiaacol and guaiaacol salol in 1893, guaiaacol ethylenate, guaiaacol phosphate, and methyl guaiaacol in 1894, guaiaacol valerianate in 1896, guaiaacol phosphite and guaiaacol piperidine in 1897. About this time (1897) attempts were made in other directions looking to the production of new guaiaacol derivatives. Guaiaacol was sulphated, and from the guaiaacol-sulphonic acid several new compounds were prepared. G. H. Schaefer, the chemist of the New York Quinine & Chemical Works, introduced quinine-guaiaacol sulphate under the name guaiaquin, followed by other alkaloidal compounds, as well as the iron and bismuth salts of guaiaacol-sulphonic acid; but the quinine derivative appears to be the only compound

which has met with any special favor. The potassium salt of guaiaacol-sulphonic acid, which is made and marketed by Merck & Co. under the name of thioacol, is recommended highly and used extensively as a non-poisonous substitute for the parent substance.

It is noteworthy that within the past few years investigators have returned to the old lines, and we have seen introduced guaiaacol cacodylate, guaiaamar and guaiaasanol, besides numerous other direct derivatives of guaiaacol, such as those enumerated in the present report, under names, more or less, indicative either of their chemical make up or their intended therapeutical application. Interesting as all these compounds are, it is more so to note the fact that where the action of guaiaacol is desired, physicians express a preference for the old fashioned product, and claim to obtain better results from it, though compounds like creosol and duotal-creosote and guaiaacol carbonates, respectively—are still extensively prescribed and bulk largely in import statistics.

The increasing use and applications of organo-therapeutic substances have attracted attention during the year. Although the long line of extracts and preparations from the organs and glands of the animal body, which promised a few years ago to attain a great vogue, and were indeed largely employed, have fallen into disuse, increasingly new applications are found for a number of the active constituents of certain glandular bodies, and their chemical combinations. The products of the suprarenal the thyroid and the thymus glands have been tried alone and in their various combinations, and the claims put forward for them have been well substantiated in many cases. Epinephrin was the first of the active principles separated from the suprarenal glands, this having been effected by Professor Abel, of John Hopkins University, in 1896. A year later von Fürth disputed the claims of Abel, and asserted that epinephrin was merely an inactive foreign substance contaminated with the active principle isolated by himself, and which he named suprarenin; but von Fürth's product itself is not believed to be a pure chemical compound. In 1901 Jokichi Takamine announced the isolation of the active constituent of the gland in a stable and crystalline form, naming it adrenalin, and this is now being produced on a commercial scale by the firm of Parke, Davis & Co. It may be well to note, however, that Takamine's claim for the purity of the substance isolated by him is disputed by Abel, who regards it as a mixture of native and reduced epinephrin.

Numerous attempts have been made to isolate the active constituents of the thyroid gland, and it is believed that the substance termed thyroindine by its discoverer, Baumann, fully represents the physiological properties of the gland. The isolation of a soluble ferment bearing the name thyroindinase was announced this year; and it receives mention in our report, as does also a preparation named antithyroindin, which consists of a serum from herbivorous animals deprived of their thyroid glands several weeks previous to being slaughtered.

The year's production of new remedies includes a number of iodine substitutes, which bear witness to the fact that efforts are still being made to produce an antiseptic substance as powerful as iodoform, but devoid of its disagreeable odor, while the search for substitutes for the bromide salts used in the treatment of epilepsy, etc., has led to the production of several compounds which are claimed to be free from the disagreeable by effects of the ordinary bromides, and these are described in our detailed report.

In submitting this year's list of acquisitions to the materia medica it is a pleasure to note the evidences of a tendency among the members of the medical profession to scrutinize the claims put forward for new remedies. This finds adequate expression in the number of Squibb's Ephemeris for January, 1903, in the followings words, which may fittingly stand as a "Foreword" to the list of remedies brought to your notice:

W. H. McCUTCHEEN, Luthar, O. T.,
Assistant Secretary Oklahoma P. H. A.

It may be quite confidently stated that there has been during the past year a possibly slow but very decided revulsion in the medical profession, at least in some quarters, against the efforts of a few enthusiasts to press forward the claims of some new products. This apathy of the profession to their claims has had a wholesome effect in general, and yet cannot be claimed to have necessarily retarded investigations on rational lines. The medical profession is now judiciously looking back over the line of agents already tried and found of sufficient value, in order to continue its investigations with such as have been suddenly and unwisely dropped for the very much newer products which are loudly proclaimed by advertisement and otherwise to be efficient substitutes or "sure cures."

GATHERED FORMULAS.

Syrup of Mullein.

Flowers and leaves of mullein. 5 ounces
White sugar 2 pounds
White of 2 eggs. 2 pounds
Orange flower water. 2 fl. ounces
Coloring, if desired. q. s.
Boiling water 1 quart

Pour the boiling water on the flowers and leaves, and allow to macerate upon a waterbath for six hours. Express the fluid and allow to cool. Add the sugar and when dissolved the white of the eggs, well beaten. Heat to the boiling point and keep boiling briskly for five or six minutes; then filter through a flannel bag, with a sprinkle of animal charcoal. When cool, add the orange flower water and any coloring matter.

Carbolic Salve.

Carbolic acid 2 ounces
Camphor 5 ounces
Oil sassafras 1 ounce
Petrolatum 20 ounces
Beeswax 2 ounces

Mix the camphor, carbolic acid and sassafras oil together and stir occasionally until dissolved. Melt the petrolatum and wax together, and while cooling add the solution of carbolic acid etc. and mix thoroughly.

Lice on Cattle.

Green soap 10 av. ounces
Alcohol 3 av. ounces
Wood alcohol 1 fl. ounce
Crude naphthalin 2 fl. ounces
Water 10 fl. ounces

Heat the whole together until dissolved, and then stir until cold.

To use, rub the infested places on the animal thoroughly with the preparation, and wash off the next day with warm soda solution. When the animal is dry, repeat the operation twice. The lice generally die after the second application.

To remove lice from chicken coops make a mixture of carbolic acid, one ounce, and water, fifteen ounces, and wash the woodwork with this, sprinkling it also on the floor.

An Excellent Permanent Paste.

Wheat flour 1 pound
Water, cold 1 quart
Nitric acid 4 fl. drams
Boric acid 10 grains
Oil of cloves 20 minims

Mix the flour, boric acid and water, then strain the mixture; add the nitric acid; apply heat with constant stirring until the mixture thickens; when nearly cold add the oil of cloves. This paste will have a pleasant smell, will not attract flies and can be thinned by the addition of cold water as needed.

Bath Powder.

Borax 4 ounces
Salicylic acid 1 dram
Extract of cassia 1 dram
Extract of jasmine 1 dram
Oil of lavender 20 minims

Rub the oil and extracts with the borax and salicylic acid until the alcohol has evaporated. Use a heaping tea-spoonful to the body bath.

Excelsior Hair Tonic.

Castor oil 2 fl. ounces
Oleo-balsamic mixture 3 fl. ounces
Tincture of cathartides 3 fl. drams
Benzoic acid 135 grains
Tannic acid 1½ drams
Alcohol 8 fl. ounces

Mix and filter.

Transparent Glycerine Jelly.

Transparent soap 1 ounce
Water 4 ounces
Glycerine 4 ounces

Dissolve the soap in the glycerine and water by aid of heat, and while still warm, add 20 ounces of glycerine; when nearly cold perfume and pour into glass jars.

Cement for Metal Letters on Glass.

Copal varnish 15 parts
Lined oil varnish 5 parts
Raw turpentine 3 parts
Oil of turpentine 2 parts
Carpenter's glue, dissolved in water 5 parts
Precipitated chalk 10 parts

Brodie's Liniment for Asthma.

Oil of stibogian 1 dram
Oil of ricin 2 drams
Oil of lobelia 1 dram
Alcohol 1 ounce

Penny In the Slot Doctor.

Competition of a novel nature has recently sprung up in Holland. A number of highly original automatic machines, made to resemble an old doctor with a big wig, have been set up on several Dutch towns. By placing a penny in the slot various remedies for common ailments may be obtained—British and Colonial Druggist.

NEWS DEPARTMENT.

NEW YORK AND VICINITY.

VIGOROUS INSPECTION.

Board of Pharmacy is Hunting Out All Dishonesty and Its Sponsors Must Either Reform or Get Out of the Business.

"When dishonest pharmacists are found they need expect no mercy from the board of pharmacy," said one of the members the other day. "We will give the honest druggist protection by weeding out his dishonest competitor. This we propose to do by keeping after the violator with prosecution and penalties until he either radically mends his ways or gets out of business."

"There are some druggists who seem to be thoroughly corrupt," said another member of the board. "If they are allowed to exist the whole profession will soon be in disrepute. Publicity, we believe, is the best way to scourge these fellows, and we may begin giving their names to the pharmaceutical press."

"What will be the result if they are allowed to continue their miserable practices? The physicians will do their own dispensing. They will be forced to. What right has a druggist to put one thing in a prescription when another is called for? He may rail at product patents and copyrights, but, just so long as these things exist, and the articles are prescribed, it is his business and duty to supply them without deviation in any way."

"A doctor may prescribe a diuretic; perhaps sugar of milk would do better. The doctor may not know his business, but he has a right to get what he prescribes. The druggist knows his business, or is supposed to, and he has no right to give sugar of milk. If I were a physician and I ever caught a druggist tampering with a prescription of mine I would make it so uncomfortable for him with his patrons that he never would need another lesson. I would brand him."

"Of course, sometimes a druggist gets articles from his wholesaler that are not up to standard. He can't assay everything that comes into his store; his profits and time would all be taken. But there are some things he should know without assays; if he does not, he would better get out of the business. The manufacturer may land his alcohol as just as good as the regular article, but that is no reason for a druggist excusing himself to us by saying that he used a certain brand of wood spirit, and that the agents said it was the same and that he thought it the same as the ordinary kind. Either he is a liar or a fool."

"And why is it that he always errs on the side of cheapness? And the excuses that he makes; they are a positive insult to the intelligence of the man who receives them. One man, whose iodine was bad, said: 'My clerk left the bottle unstoppered and the iodine evaporated.' Think of that! Another charges that the inspectors took the spirit of camphor sample from the wrong bottle. One bottle he had for selling. The other was one in which the gum and alcohol had been dumped and the gum had not dissolved, remaining at the bottom, the sample only touching the top. 'How long had the gum been in the alcohol when the sample was taken?' he was asked. 'Two weeks,' he replied. Anyone knows that in two days the solution would have been made."

"Another man was found wanting on five different

articles. He said: 'Your inspectors take a sample one day, the next day, another, then another; in a month at that rate I will have to close.' 'That is just what we want,' we replied. 'Such a fellow as you has no business selling drugs.' The druggist who said he was forced to sell poor drugs because his neighbors did, was proven a liar when the inspectors found them to be all right. In the same class was the man who asserted that he and his neighbors had agreed to sell poor drugs. A dishonest man who was honest came in and said: 'By —, my fellows caught me. I always made my camphorated oil half strength. It is the only thing I can off on, and I'll give you credit. Here's my \$25 and I'll make 20 per cent. camphorated oil after this.'

"The druggist whose tincture of iodine is found to be a trifle off may be excused in that the iodine may have contained a small amount of foreign matter. But when it is down to three per cent. that explanation does not go."

"One druggist recognized the inspectors when he saw them coming. He hastened back of his counter and dumped a lot more iodine in his tincture. Smilingly he watched as a sample was taken. On the assay the tincture was found to be far above strength, but the fellow had forgotten that it was made up with wood alcohol!"

"Look at creosote! Half of the druggists in this city are selling the coal tar instead of the wood tar product. It is largely through ignorance. They do not know that there is only one kind of creosote in the Pharmacopoeia. They do not realize that the woman who gets her mouth burned by using impure carbolic acid, or coal tar creosote, has a splendid damage case against the druggist. Just as soon as patrons tumble to this there will be trouble, for the druggist has sold something not in the Pharmacopoeia, the standard governing the pharmacy law. Fifty drops of wood tar creosote may be safely taken internally by habitual users, or 500 drops a day. It only irritates. Coal tar creosote corrodes."

"If I owned a retail drug store I would have a stamp and would affix it to every article in drugs that I sold, however small. That label would say: 'This is in exact conformity to the provisions of the U. S. Pharmacopoeia.' If they kicked on the price I would say: 'Well, get it elsewhere, if you wish; but it won't be pharmacopoeial.' I would show them the Pharmacopoeia and the pharmacy laws; people like to know such things. And they want good drugs. They will shop, it is true, but not if they know that cheapness means inferiority. In drugs they want the best."

"Here is another thing: There is some faking in patent medicines. Not wishing to involve ourselves in charges of partiality to some manufacturer, as the board of health did in the phenacetine crusade, we have decided for the present to let this phase severely alone. But we probably will take it up later. For the present let it suffice to say that the manufacturer who gets a verdict from a retailer for substitution or imitation may bring his evidence to the board and we will exact another penalty."

"I am telling you all these things because it is not only interesting to New York pharmacists, but is inter-

JOHN G. WISCHERTIL, Brooklyn, N. Y.,
Treasurer and Manager Brooklyn Consolidated Drug Co.

esting in being more or less true of conditions all over the United States.

"Several cases are pending against druggists whose unregistered clerks compounded prescriptions, and several more against those whose stores are unregistered. Another point in the law that seems to escape many is that the owner's—not the manager's—name must be in a conspicuous place at the store. With an increased force of inspectors the Eastern branch is checking up every store in town."

Said Charles S. Erb, secretary of the branch: "There are two kinds of scidfitz powders going around now. The pharmacopoeial formula calls for 31 grams of sodium bicarbonate, 33 grams of potassium and sodium tartrate and 27 grams of tartaric acid in making twelve powders. This means 2½ grams of tartaric acid in every powder, but we find a kind that is not only short weight but has more sodium bicarbonate, making it more effervescent and apparently better. The manufacturers are to blame, perhaps, but we cannot touch them and must put it up to the retailer."

"Again, there is a great deal of epsom salts or effervescent sulphate of soda being sold for citrate of magnesium. This is according to the so-called "English style," and is all right if the article is so labeled, but we find that that provision is frequently ignored."

"Retailers should remember that when a store changes owners the labels should be changed to bear the name of the new proprietor. In many cases this rule is not observed and we have even found labels that are six years old being used where the store has changed hands a half dozen times in that period."

"We have also caught ten painters on the charge of selling oxalic acid, for which the fine is \$50, and six grocers have got into trouble by selling paregoric, opium pills, etc. Thus it will be seen that we are not unmindful of protection for pharmacists against encroachments by outsiders whom we protect them from their weaker brethren. But, I wish to say that conditions in the retail drug trade are vastly improving and druggists are acting more careful. With carelessness and

ignorance eliminated and the wilfully dishonest scoured into submission to law or driven out of business, New York City pharmacy will have a cleaner house."

Tincture of iodine, spirit of camphor, camphorated oil, blue antrion, etc., form the bulk of the samples now being collected. In a short time the number of articles inspected will be increased.

A LULL IN A RAPID CONTEST.

There is a lull in the price contest between Milhan and the Broadway Drug Co., in which the former, a member of the Drug Merchants' Association, and the latter, a non-member, though heretofore an adherent of the association's price schedule, made new price records last week.

When M. Dlugasch of the Broadway Drug Co., cut Peruna from 74 to 63 cents, Milhan went to 65. Then it went down—Dlugasch, 63; Milhan, 59; both, 57; Milhan, 50; Dlugasch, 43; Milhan, 45; Dlugasch giving it away with Plaud's Iron Pills. The latter condition lasted three days, and then both went back to 57 cents where they now are. Probably 60 cents will be ultimately reached, though the old price of 74 cents will not be resumed for some time at least.

Last week Milhan and Hegegan & Co. were going to drive Dlugasch out. Dlugasch said, "All hosh!" Mr. Evans of the Peruna company was plainly perturbed, plead for peace and visited Henry Klein & Co. to see if the rumor that they were supplying Mr. Dlugasch were true. They denied it. If the war is ended it looks as though Mr. Dlugasch had won. But, in view of the wealth of the opposing forces, amounting to millions, and their assertion that they would drive him out, it is only problematical whether the trouble is over or not.

JOHN R. PLANTEN HONORED.

John R. Platen of H. Platen & Sons, the well-known capsule firm of this city, has been made a commander of the Order of Orange-Nassau in recognition of his services to his government as Consul-General of the Netherlands at New York.

Mr. Platen has been connected with the consulate for thirty years. For ten years he was Vice-Consul and since 1883 he has been Consul-General.

Mr. Platen is a native of Holland. He was born in Amsterdam in 1825, and came to the United States when he was 23 years old. He was made an officer of the Order of Orange-Nassau some years ago, and has now been advanced to a higher class. The order was founded by the Queen Regent Emma, in the name of the Queen, in 1822. The insignia is a handsome decoration in blue and gold, surmounted by a golden crown and suspended from a red, white and blue ribbon, with a central medallion bearing a lion rampant and the motto "I Will Maintain."

CONCERNING THE JOINT CONVENTION.

The attendance from New York at the joint convention of the N. W. D. A. and the P. A. of A. at Boston next week will be very large. No special trains will be run, as the distance is so short. Already the Hotel Somerset, chosen as headquarters, has been filled and nearly all of the rooms in two other hotels are taken.

VERY SPECIAL

A limited number of live druggists in the larger cities will hear of an attractive proposition, by communicating with

J. N. FERRER

P. O. Box 71.

NEW YORK CITY

There is a settled, though hidden sentiment that "something will be doing" between the big associations. All is not serene in the feelings of the jobbers. There is much talk about their enforced observance of restrictions while the manufacturer goes over their heads and deals with the retailer himself. Some explanations may be asked. Generally the feeling prevails that a storm may break loose.

NEW YORK NOTES.

—Queer method of obtaining drugs this: New Harlem drug store going in received a consignment of \$250 worth of goods from a local wholesaler, C. O. D. "But," protested a man who appeared to be in charge, "I didn't want them C. O. D.; I told them I would send my check." "That doesn't make any difference to me," said the truckman, "I must collect." But I will send the check; I don't want to get goods C. O. D.," the "manager" retorted. "Go to the phone and call your office." No telephone had been installed in the new store. When the truckman returned from a nearby phone, being ordered by his firm to bring the goods back, lo, and behold, both goods and man had vanished, and other men around the store disavowed all knowledge of either. No arrests yet.

—The estate of Henry M. Schieffelin of Schieffelin & Co., who died in Yonkers five years ago, leaving \$2,000,000 to more than 100 heirs, is about to be divided. The principal obstacle to the settlement has been the numerous arrivals of new babies. The original suit to partition the \$2,000,000 estate was begun in 1898. The number of heirs was then 130. Two of these have since died and seven new heirs have been born. At each birth an order for a supplemental summons in the partition had to be applied for, resulting in undoing all that had been done before. The last heirs brought by the stork are two boy babies, a son born to Mathew H. Morgan, a resident of Dieppe, Germany, and a son born to William J. Schieffelin, a few months ago.

—Visitors to town: C. M. Shivers, Albany, Ga.; W. B. Davis, Madison, Fla.; James A. Lee, New Iberia, La.; Joseph Emmert, Freeport, Ill.; Jesse D. Holloway, East Liverpool, O.; George S. Campbell, Summit, N. J.; T. F. Armstrong, Plainfield, N. J., Charles Weller, buyer for the Richardson Drug Co., Omaha, and Mrs. and Miss Weller, who are on their way to the Boston convention and will afterward spend a few weeks in Maine; Charles C. Goodwin, Eastern Drug Co., Boston; Frank Henry, Williams Manufacturing Co., Cleveland; Peter Lance, head of William R. Warner & Co.'s traveling service, who is taking his usual summer rest here; W. B. Duryea of Duryea & Johnson, Freehold, N. J.

—Charles W. Robertson, N.Y.C.P., '03, who has been employed at Race's East End pharmacy, Bay Shore, L. I., for the summer, has left for a two week's vacation, after which he will enter Dartmouth College to take up the study of medicine. Mr. Robertson reports that of six druggists who have been employed at Bay Shore this season, five are N. Y. C. P. men. Ralph G. Herson, '03, who has been employed at Kinsman's One Hundred and Twenty-Fifth street and Eighth avenue, since college closed, has left for his home at Belgrade Lakes, Me. E. Bronstein, managing clerk for Alfred D'Annunzio, Ninth avenue, is away on a vacation.

—Alfred H. Kennedy of the C. X. Crittenton Co., is badly sunburned from a cruise on the waters of the St. Lawrence River. William A. Demarest, of the same firm, goes for a rest to his summer home at Allen-ville, Ulster county next week, and F. B. Waterman, second vice-president and secretary, is back from a vacation taken locally.

—In Emil Roller's store, at Fifty-sixth street and Ninth avenue, a lawyer, a minister and several others juggled for hours the other night trying to throw up a wooden cylinder and catch it upon the end of another one. The minister named the game "damnit" and Mr. Roller now has all his customers playing it. He says it draws a crowd.

—The greatest trouble with foreigners in board of pharmacy examination papers here is their tendency to spell phonetically. This, however, is no evidence of illiteracy, but only a proof of little preparation in English, which is, perhaps, the least phonetic of all civilized languages.

—Lewis Moes, formerly with George Bley, is now with Boris Kobosoff, Fifth avenue and One Hundred and Nineteenth street. James M. Blaine, clerk for H. E. Steinhilber, One Hundred and Forty-fourth street and Amsterdam avenue, is home from a month's vacation in Canada.

—Dr. H. M. Seem, manager of Sharp & Dolme's New York branch, has completed his vacation, most of which was spent at his home in Bayside, L. I. John F. Sprague, traveling department manager, is resting for two weeks at Morganton, N. C., his old home.

—Emil Roller, chairman of the committee appointed by the German Apothecaries' Society for the formation of a druggists' cooperative insurance company, has been invited to address the next meeting of the Bushwick Ph. A.

—The store at 1036 East One Hundred and Sixty-Ninth street, recently foreclosed upon by the mortgagor, Emil H. Keidantz, and which was to have been opened by Ernest Meyer, is now owned by Moses Werbow.

—Mr. Cantor, of N. Y. C. P., 1901, is spending his vacation of two weeks in Asbury Park. Leo Degenstein, manager of F. E. Roen & Co., will join Mr. Cantor on his vacation and remain till end of season.

—G. Scimeca Passantino has bought N. Caliva's pharmacy at 261 Elizabeth street, and Mr. Caliva has bought Dr. E. Danzi's store at 30 Spring street.

—Sydney H. Carragan, head of the traveling service of Parke, Davis & Co., was called to Saratoga by the death of his aged mother on Sunday.

—R. Burkhardt, druggist at Broadway and Greene avenue, Brooklyn, leaves on September 15 for a long tour of Switzerland and Germany.

—Theodore H. Sherwood, manager of McKesson & Robbins' fancy goods department, is on his vacation in Minniewaska, Catskill, New York.

—A. M. Roelrig, whose picture was published last week, is second vice-president of the A. Ph. A., instead of third vice-president, as printed.

—Meeting at the Erie West Twenty-third street ferry at 9:30 a. m. today, the Apothecaries' Bicycle Club will wheel to Summit, N. J.

—Otto Boedicker, prominent pharmacist at 954 Fifth avenue, has purchased the pharmacy at 636 Park avenue, of Matilda Hoyendorf.

—One of the biggest pharmacists in Harlem is under the notice of the board on five separate counts of adulteration.

—H. G. Shaw, McKesson & Robbins, will combine business and pleasure in a trip to Providence this week.

WHEN YOU HEAR OF A BABY

AND PASTEURIZER**

We will supply you with free literature with your name to distribute, on application.

WILMOT CASTLE COMPANY,
26 Elm Street, Rochester, N. Y.

A. E. MARSLAND, Brooklyn, N. Y.
Member Board of Directors, Brooklyn Consolidated
Drug Co.

FROM ROCHESTER.

—Chairman Elmer E. Chilson of the committee on prices of the Rochester Ph. A., has with other members of the committee visited the druggists of Rochester, all but a half dozen of whom belong to the association, and will report that the price of all dentifrices, such as tooth powder, talcums, etc., will go up in price in Rochester from 8 cents, the actual cost, to 20 cents. Some of the old partnership stores may demand the right to sell those for 19 cents. This report will be made at the monthly meeting tomorrow night, September 4.

—Burglars gained entrance through a collarway to the store of Flood Bros., druggists at 403 Campbell street, a few mornings ago, and stole \$200 from a secret hiding place under one of the counters. Nothing else in the place was disturbed. The secret hiding place was known to only a few trusted employes, all of whom stand high in the estimation of the firm. The police are trying to clear up the mystery.

—The pharmacist who advertised in the want columns of a local paper: "A show case and table for sale by a druggist with mulegany legs," evidently knows more about compounding prescriptions than about grammatical construction.

—The development of rural mail service, local druggists say, has greatly increased their out-of-town trade in patent medicines, advertised specialties, etc. Some dealers are advertising in the country papers especially to win this trade.

—J. W. Gram, former president of the local association, and of J. W. Gram & Co., has returned from a vacation trip into Canada.

IN SYRACUSE.

—Henry N. Gitt's head clerk in the Barnes & Barnes pharmacy was married on last Monday to Miss Margaret L. Near at the home of the bride, 107 Henry street, R. M. The wedding was quiet, only relatives being present. Upon the return of the couple from their wedding trip they will reside in the Reynolds.

—The directors of the Syracuse Chemical Society gave a smoker on last Thursday night at the University Club in honor of their president, John D. Pennock, who was appointed by Secretary of State Hay as one of two delegates to the fifth international congress of applied chemistry in Berlin.

—Mrs. Marietta Harmon, secretary of the S. D. A., has returned from a vacation trip through various European countries. W. B. Essell, the South Salina street druggist, is also back from his vacation in the North Woods.

—T. F. Quigley recently went conk hunting in the town of Marcellus with a party of friends. They treed two coons which were killed by their dogs. The animals were placed on exhibition in Quigley Bros. store in the University block.

—Roscoe Snow has bought George C. Gildersleeve's store at 221 Delaware street. Mr. Snow has heretofore been employed in the wholesale and retail store of C. W. Snow & Co.

NEW ENGLAND.

NEW ENGLAND PHARMACAL CO. WINDS UP.

Stock was Subscribed by New England Druggists, and Medicines were Manufactured.—Venture Did Not Pay.

Boston, September 1.—At a meeting just held, the New England Pharmacal Co. voted to wind up its business affairs and go out of existence. The company is not a paying success. It was incorporated in 1891 with the idea of making and selling to druggists everywhere, but especially in Massachusetts, various medicines and specialties under the name of "Nepco," taken from the initials of the company's name.

The capital stock was \$10,000, the par value of shares being \$25. Some druggists took only a single share, while others took four, and still others took many more than that number. It has manufactured various sarsaparillas, cough medicines, summer complaint mixtures, plasters and other things, all made from prescriptions of physicians and chemists. The business never has been a success, however, to the extent hoped for and expected at the start. Those who subscribed for shares were druggists in Massachusetts, primarily, and also in other New England States, though more in Connecticut and Rhode Island than in Maine, New Hampshire and Vermont. All debts are paid in full, but there is no surplus to pay to stockholders. F. M. Harris, Worcester, is president; William F. Sawyer, Boston is treasurer, and William C. Green of Ashmont, is the secretary.

THE "PERFUMER" TANNER SENTENCED.

Boston, September 1.—Final disposition has been made of the case reported early in the summer in which Edward C. S. Tanner was arrested on a charge of obtaining by false pretenses several hundred dollars from a man seeking a good investment. Tanner claimed to own a perfumery manufacturing business, and represented to his victim that he had controlling interest in the "Madame Campbell Company," having offices in Boston and a manufacturing plant in Worcester. The man who invested, after waiting in vain for promised dividends went to Worcester where he found little to back up Tanner's claims. Tanner was convicted some time ago and his lawyer appealed, without avail, however, for the court sentenced him to eighteen months in the House of Correction. Tanner is more than fifty years of age and of excellent personal appearance. His manner is such as to entirely disarm people. He was wholly unmoved when sentence was pronounced.

VACATIONS STILL DEPLETING RANKS.

Boston, September 1.—Vacations still continue to take druggists, their clerks and other employees away from the usual haunts and accustomed duties for a little change and rest, and many of the belated ones think they are likely to get some pretty good vacation weather from now on, to make up for the lack of real summer weather in New England. A. J. Hayman, a Brookline druggist, and his family are at Palmouth, Cape Cod. John F. O'Brien of the Boulevard pharmacy, Malden, spends his vacation in Providence, Newport and Bristol, R. I. P. J. Noyes, a Winchester druggist, is at Portland, Me., with his family. Ernest L. Noyes of the McLean store, Waverley, is on his vacation, with Charles L. Noyes of Crocker's store taking his place. George T. Bates of Meacom's, Saugus, is on his vacation in South Livermore Falls, Me. John W. Harvey of the Colonial drug store, Salem, goes to Wolfboro, N. H., for his vacation. While William L. Jenkins of William M. Martlet's, Salem, is at Alton Bay, N. H., for his vacation, his place is taken by Earl Flanders. Joseph Myerscough of the Allen pharmacy, Andover is in Maine for a fortnight. Frank Chaigun, analytical and manufacturing chemist at Clarke's, Lawrence, is in the White Mountains of New Hampshire. Henry A. Burditt owner of a Clinton store and son of the pioneer druggist of that town, A. A. Burditt, is enjoying a visit at York Beach, Me., accompanied by his wife. Thomas Gordon of the Merchant & Wilcox pharmacy, Clinton, spends his vacation at Lake Washacum, Sterling. Joseph Goggin, clerk at Hunter's pharmacy, Marlboro, is visiting friends in Providence. George L. Gelsean of Pushard's, Grafton, is in New Hampshire.

THE BAY STATE.

—W. B. Markell, a Chelsea druggist, has hit upon a novel scheme to bring patronage to his store and become widely known. A fine upright piano with a handsome case is to be given away under these conditions: Everyone making a purchase of ten cents or more in amount is entitled to vote on the result of the coming election for governor of Massachusetts. The customer guessing the exact vote or coming the nearest to it will walk off with the piano. On the week preceding election, the ballot boxes which have been set up for holding the coupons of guesses, will be sealed and, after the formal announcement of returns has been made at the State House, three leading citizens of Chelsea will sort out the guesses. The druggist helps people in making a guess by having on each card the vote of the State for the last three elections.

—The newest phase in the contest at Clinton between the selectmen and the road commissioners, regarding the placing of a large electric-illuminated mortar out in front of the pharmacy of Merchant & Wilcox, to be above the sidewalk, is the actual putting up of the mortar. For some time it had been stored in the police station. Several men were required to put up the heavy supports and then the mortar itself, and there was a large and interested "sidewalk committee" to watch the proceedings and give advice. The question now to be determined is whether the mortar serves in the capacity of a street light, to aid the weary traveller on his homeward way, or merely must be viewed as an advertising sign. On this point chiefly will rest its future—whether it be allowed to remain in position or be ordered down.

—H. J. Ramsey, an East Pepperell druggist, was the means through which an alleged "green goods" man was captured by the police of New York. Mr. Ramsey, when he received a circular from the man, offering to

sell him "the stuff" whereby he could make his fortune at little outlay of the real thing in the line of money, promptly communicated with the postoffice inspectors in Boston and they in turn tipped off the New York authorities. Mr. Ramsey arranged for a personal interview with the idea of purchase, under instructions of the inspectors.

—In Palmer, the clerks in Le Gro's have utilized a scheme proposed last summer by the Era, by rigging up an attachment which, joined to a bicycle, from which the wheels have been taken, does the work of turning the crank of an ice cream freezer. In this store they make their own ice cream for soda fountain purposes and a clerk can now mount the saddle and do the work with his feet. The clerks think it great fun, and now there is not kept such close tab as to whose turn it is to do the freezing.

—Charles E. Scallan has purchased the Bay street pharmacy, Cambridge and is making improvements. He has long been identified with the trade, having begun as a clerk in a pharmacy when he was only thirteen years of age. Later he was in one position—as clerk in H. C. Bispham's drug store in South Boston—for eleven years.

—In the District Court at South Framingham, Louis F. Hoffman and John Kennedy, who together carry on the drug business under the firm name of L. F. Hoffman & Co., have each been fined \$50 on the charge of maintaining a liquor nuisance. Each appealed and furnished bonds to the amount of \$200 for a later appearance.

—J. J. Hammers of Braintree, is to leave the Braintree pharmacy with which he has been identified many years and associated with C. M. Wesley, a man of experience in the drug business, will run a prescription store in Tremont street, Boston.

—In Maynard the people are signing a popular petition that druggists there be licensed to sell liquors, etc., under the usual restrictions. The townspeople find it often a menace to health not to be able to get something required under physicians' orders.

—In North Adams a new pharmacy is that of M. J. Quin & Co., which is an up-to-date place with entirely new fixtures and stock, a fine soda fountain, etc. Eugene Gaguere has been engaged as registered pharmacist.

—The Redfern pharmacy is a new place which Jesse A. Clarke has just opened in Fall River. He formerly worked in various drug stores there, but lately Mr. Clarke had been in the business in Providence, R. I.

—Mrs. Ralph P. Hoagland, wife of the well-known Boston dealer in drugs, paints, etc., won the first prize in the class of four-wheeled carriages, single hitch, at the coaching and floral parade in Swampscott.

—J. K. Morrill, official milk and vinegar inspector in Holyoke, is at present serving temporarily in the Glesmann drug store in South Hadley Falls, while the regular prescription clerk is on his vacation.

—Another chapter in the history of the drug store in Spencer, conducted for a long time by Dr. L. Verner, and now owned by Adelard Mathieu, will be added in the sale of the stock by auction.

—The stock sold by auction from the drug store of J. H. C. Pratt, North Adams, and purchased by P. F. Dowlin, has been sent to fit up a store in Troy, N. Y.

—G. B. Moulton, a Danvers druggist, is forced to find a new situation for his store. His present premises have been leased for savings bank purposes.

—A newly-opened store in Lawrence is at Broadway and Concord street, the proprietors of which are Alphonse Belle Isle and P. P. Lavoie.

—Alexander G. Child, Hyde Park druggist, is a vol-

CHARLES F. DYNA, Brooklyn, N. Y.,
Secretary, Brooklyn Consolidated Drug Co.

untary petitioner in bankruptcy, with liabilities amounting to \$1,470 and assets \$1,400.

—John A. Morgan has purchased the Gannage store in West Medford, which will make two pharmacies in that city of which he is owner.

—Dr. Bohemier, a physician in West Warren, intends to open a drug store in that town.

FROM MAINE.

—There is general hope on the part of druggists in the State that there may be brought about resubmission of the constitutional prohibitory amendment and that the matter will be brought up for consideration at a special session of the Legislature early in the fall. The druggists have been asked to subscribe toward the expenses of the movement and many are doing it, especially in the larger cities. The law as it now stands is viewed as a farce.

—They were pretty mean burglars who recently robbed Frank J. Brazdon's store in Portland. Not content with the money drawer and a slot gun machine, they stole the contents of a Salvation Army charity bank placed in the store, and six or seven boxes of cigars.

—In the supply department of the adjutant general's office at the State Capital in Augusta, A. M. Robinson, a Bangor druggist, has been examining the State's stock of drugs and medicines, etc.

—J. H. Daniel, a Portland druggist, and his four children had just seated themselves on a swan boat for a ride around the pond, when the thing turned turtle.

—Lewis H. Algeron, formerly employed at Pickett's, Portland, is now a clerk at the Woodman pharmacy, Westbrook.

VERMONT.

—A man who claimed to had from Montreal was arrested in Burlington for stealing small articles from the store of R. B. Stearns & Co. and E. Henry Parker. When arraigned in court, he pleaded guilty and said he must have been intoxicated and therefore not responsible for his actions at the time of the offence. He was

sentenced to serve from two to three months on each count.

—W. B. Reeves, who has a drug store in the Fitzgerald Block in Burlington, has reopened his renovated place, closed temporarily because of the recent fire in that block. It is much like a new store with new stock.

—J. M. St. Germain, a St. Johnsbury druggist is having a vacation at the home of his father, Napoleon St. Germain, Manchester, N. H.

—Dr. I. S. Brault has assumed charge of the prescription department at the West Side pharmacy, St. Albans.

—The Red Cross pharmacy has been opened in St. Albans by A. Bertram Kingman.

—Harry Moody of the Spalding company, New Haven, Conn., has gone on a vacation trip through the Berkshires. Arthur Rowe, manager for Willis Mix, New Haven, is spending August in Massachusetts.

PENNSYLVANIA.

THROUGH A CHUTE.

That is the Way a Philadelphia Woman Sends Her "Bay-bee" Downstairs to the Druggist-Physician.

There is an Italian tenement house in the southern section, new, up to date and with all modern conveniences. On the first floor a physician has a drug store. A few days ago one of the upper floor women rushed in to tell him about the baby. After the usual chat the doctor told her to send it down, that a sight was better than all the description, and, dismissing the incident, he turned to the regular business of the place.

Behind the prescription counter runs a chute, intended to empty the sweepings of each floor directly into the cellar. In the early part of the day the lower portion of the chute fills with refuse awaiting the janitor, otherwise this item might have been for the coroner. As the doctor was waiting in the rear, came a crash and a cry, and the door connecting with the chute flew open with a bounce—and, out tumbled a child. Totally forgetting his former visitor, the doctor grabbed the infant up to see whether it was hurt, when a cry up in the chute took his attention. "Hello Doc! Hello Doc! That's the by-bee—you see him how he is—I come down soon."

To save time the mother had absolutely sent the child through the slanting chute—and, much to the delight of the genial physician, not only was the child unharmed, but the wise mother did not follow that path, but came down the stairs in proper fashion.

POOR LETTER WRITERS OUT OF JOBS.

Pittsburg, September 1.—Much has been written about the scarcity of drug clerks in all parts of the country. The following is interesting:

A certain druggist located not far from Pittsburg advertised in two of this city's papers for a registered pharmacist, and in three days had sixteen applications, not one of which he accepted, because, as he told the writer, when he showed the applications, "I could not trust a man in my store who shows such evident carelessness as every writer here." A glance at the letters showed the wisdom of his remarks. Very few of them were written in anything like a legible hand, and the chirography of most of them was positively undecipherable. Everyone showed poor construction and worse grammar, and had an air of general carelessness that has no business in a drug store. In commenting on the lot the proprietor said that he always made it a point to

have his prescription labels written legibly and neatly and could not tolerate a clerk who would not aim to a point of excellence in this matter.

ROCKEFELLER'S COMPANY IN PITTSBURG.

Pittsburg, September 1.—Word reaches here from New York that "The Ava Chemical Co.," a recently incorporated concern, and one in which John D. Rockefeller is interested is shortly to establish a Pittsburg plant. The company, it is said, will engage in the manufacture of proprietary remedies and chemicals and in addition to its Pittsburg factory will operate two more in Pennsylvania.

OTHER HAPPENINGS.

—Since the infusion of new blood into the State pharmacy board many changes have been noticed. For years, the questions have been treated as something sacred, students being forbidden to take them from the room, and as for publishing them in any form, that was deemed sacrilege. All this has been changed, however, and after each examination the questions will be published in full. Doing away with the star-chamber method of ascertaining the candidates' fitness, and not surrounding the whole proceeding with mystery, has caused the liveliest approbation and favorable comment in pharmaceutical circles. Past methods of the board have been criticised severely. The new regime is apparently giving universal satisfaction.

—Great rejoicing is heard in the Mamayunk and Falls of Schuylkill districts of Philadelphia, over the breaking of the textile strike. The two districts depend entirely upon their huge population of mill-workers, who have been idle all through summer. Now that they are going back to work, the ubiquitous salesman is given the glad hand, stores are beginning to spruce up, fall stocks are going in, and best of all, prescription work is beginning to improve.

—Speaking of the dull business that Philadelphia has recently experienced, a collector called on a man, whose store, in a good neighborhood, has the reputation of doing a steady business. This man "kicked," however, and said that the previous day he had taken in \$2.68. Repeating the incident at another call along the line, the collector was greeted with "that all? I can beat that—I took in over \$4."

—Lane V. Collins has purchased John P. Frey's store at Fifteenth and Moore streets, Philadelphia. J. F. McDonnell has located at Jenkintown, having built and fitted up a store. J. B. Davis of Seventh and Oxford streets, Philadelphia, has purchased the balance of Dr. Randall's interest in the Tenth street and Girard avenue store. It will be run as a branch.

—D. Strode Jefferis of Twenty-second and Norris streets, has improved and added during the summer months. Geo. L. Holstein has gone to Lebanon. Dr. D. V. Reinohl to Erie, Charles E. Slocum to Denver, Colo., and David Stolz to Syracuse, N. Y.

—Clarence H. Campbell of Eighteenth and Market streets, Philadelphia, accompanied by his wife and sister, has returned from an extended trip on the great Lakes, as far as Duluth.

T. PARKE HAWLE of Manchester, Va., died last week. He had been in ill health for years, being forced to retire from active business some time ago. Then he went into a machine shop, working day after day to get back his health. He almost succeeded and for a time his friends were deceived. But it was unavailing and he took to his bed six weeks ago. He was of a very prominent Virginia family and was well loved.

THE SOUTH.

THE BOYS OF THE ARMY AND NAVY.

Washington, September 1.—It is possible that the pay of hospital stewards in the Navy may be increased from \$60 to \$70 a month. The former compensation was specified by law, but some other chief petty officers are now receiving \$70 by virtue of an executive order and it has been represented to the Navy Department that hospital stewards are entitled to like remuneration.

The surgeon general has authorized a new poster, urging the need by the hospital corps of men within a prescribed age limit and other qualifications of physique and character, "with some experience in nursing, cooking, pharmacy, clerical work, the handling of tools and care of animals."

List of thirty-one sergeants, Hospital Corps, who passed examination for sergeant, first class, and will be appointed to the thirty-one existing vacancies: Frederick M. Bell, Fort Sam Houston, Tex.; Ernest Vollmeyer, G. H. Washington Barracks; Earl F. Green, G. H. Washington Barracks; Edward R. Murphy, A. S. O. Washington, D. C.; Edgar S. Nye, Fort D. A. Russell, Wyo.; Paul Compton, Fort McPherson, Ga.; Marvin E. Malloy, Fort Sam Houston, Tex.; John Huff, Philippine Islands; Ernest C. A. Barber, Philippine Islands; Elmo D. Mathews, Fort Clark, Tex.; C. E. Yeager, Co. of Instruction 2, Ft. McDowell; Arthur C. Gwinn, Philippine Islands; Patrick J. Maloney, Fort Crook, Neb.; John Hodgins, G. H. Washington Barracks; Gustave Hahn, San Juan, P. R.; John G. J. Knust, Fort Hamilton, N. Y.; Frank O. Nicodemus, Fort Sheridan Ill.; Charles F. Eble, Fort Thomas, Ky.; William Kirschenbauer, Philippine Islands; William McFarland, Philippine Islands; Ralph E. Gregg, Fort Ethan Allen, Vt.; John C. Whitehead, G. H. Washington Barracks; James W. Forsyth, Columbus Barracks, Ohio; C. B. Leedon, Co. of Instruction 2, Ft. Dowell; Brown P. Atkin, Fort Leavenworth, Kas.; Richard W. Soper, Fort Brady, Mich.; Forest E. White, Columbia Arsenal, Tenn.; Willard M. Burton, Fort Clark, Tex.; Samuel W. Pennington, Fort McPherson, Ga.; Nelson A. Hoberg, C. S. O., San Francisco, Cal., and Walter L. May, Philippine Islands.

Some changes: Sergeant, first class, Patrick Haughey, from army transport Sheridan to Angel Island, Cal., to relieve Sergeant, first class, Arthur A. Chenay, who goes to the Sheridan; Sergeant, first class, Paul Connton, from Fort McPherson to Fort Bananas, Sergeant, first class, Patrick P. Vane, whom he relieves, going to Army Medical Museum and Library Division, Washington; Sergeant, first class, Ephraim Stevenson, from Fort Strong to Manila, P. I.; Sergeant, first class, Gustave Hahn, from San Juan, P. R., to Fort Strong; H. J. Smith, from Angel Island to Philippines; M. Neil, discharged; A. D. Tuttle, to Fort Levett, Me.; C. Herman, furlough to Ft. Columbia, Wash.; J. L. Henderson, discharged; J. N. Lathrop, to Ft. Lisicum, Alaska; M. T. Esterly, to Ft. McDowell, Cal.; Robert Leighton, discharged.

BILLINGS CLAPP CO., - - Boston

CHARLES H. LA WALL, Philadelphia, Pa.

Charles H. La Wall, prominent in college and student circles as the general assistant of Professor Joseph P. Remington, has severed his connection with the analytical laboratories of the Smith, Kline & French Co. His resignation, which takes effect October first, will be followed by association with Dr. Henry M. Löffmann, the private laboratory of the latter being much strengthened by the addition of Professor La Wall.

GOVERNMENT TO STUDY MINERAL WATERS.

Washington, September 1.—The mineral waters of New York State have been known and employed as remedial agents for more than a hundred years, and there is evidence that the red men knew and had recourse at times to these healing waters at least two centuries ago.

Sanitariums have been built and pleasure resorts have been developed at many of the natural springs. During the last quarter of a century the bottling of these waters and their shipment to all parts of the country has so increased that at the present time the annual proceeds of the sale of natural mineral waters found within the State of New York amount to more than a million dollars.

Many of these waters were analyzed 25 or 30 years ago. Few chemical studies have been made in recent years and but little is known of the origin or relations of these waters. Investigations along these lines have been rarely undertaken in this country. F. B. Weeks of the United States Geological Survey, has begun such studies of the mineral waters of the State of New York, and his report will be issued as one of a series of Water-Supply Papers published by the Survey. The extreme care necessary to determine the proportions of various rare minerals and the time required to make even a single accurate mineral water analysis render it impracticable to undertake new chemical investigations at this time. It is expected, however, that when these studies are completed considerable evidence will be forthcoming relative to the geographical and geologic occurrence and the origin of the mineral waters of New York.

KENTUCKY DRUGGISTS TO INSURE THEMSELVES.

Louisville, September 1.—Kentucky retail druggists propose to organize an insurance company of their own,

to avoid paying the rates charged by regular companies. A committee is working out the plan, which was first advanced in June.

MARYLAND.

—Cons. H. Hudson, of Hudson Bros. & Co., Edmondson and Fulton avenues, Baltimore, was much surprised last Tuesday evening to find reposing upon one of the show cases a lady's hat of fashionable design. Concluding that some fair customer had left it there, he put the dainty creation carefully away. Closing time came and no one appeared. The next day also passed and the hat was still there. He then advertised, and a reporter wrote a story, which was read with interest by the owner of the hat at breakfast. She had stopped there with her husband to get a glass of soda water. She admits that she would not have missed the hat until the next Sunday if she had not seen the story in the paper.

—Paul Mulder, president of the Maryland Drug Co., which went into the hands of a receiver recently, has sent out a circular to his creditors making a proposition with a view to settlement. He offers 25 cents on the dollar, it is said, and advances an alternative plan of adjustment. He also embodies a statement of assets and liabilities. Whether either of the propositions will be accepted is not known.

—The demand for competent drug clerks continues unabated, and firms in a position to make recommendations have applications almost daily. The same condition appears to exist over a large part of the South, inquiries being received here even from Texas.

—John S. Stillman, a popular druggist of Baltimore, has returned home after a prolonged vacation spent at his former home to recuperate, and is looking well. He says he has entirely recovered and is receiving the congratulations of his friends.

—Among the visiting druggists in Baltimore last week were L. B. Montague, Georgetown, S. C.; C. Robert Kopp, York, Pa.; A. J. Williamson, Frederick; Thomas Holland, Centerville, and Robert S. McKinney, Taneytown.

LARGEST AMMONIA PLANT IN THE WORLD.

St. Louis, September 1.—The St. Louis branch of the National Ammonia Co. has commenced the erection of the largest plant in the world for the exclusive manufacture of ammonia at the foot of Mallingekrodt street. The buildings will cost about \$200,000. The company has at present three other ammonia plants in operation in the city, one being at the Mallingekrodt chemical company, a second—the St. Louis ammonia company—at the foot of Mound street, and a third—the works of Larkin & Schaeffer—at 109 St. George street. These three plants will be discontinued when the new one starts up. Edward Mallingekrodt is president of the company and E. H. Larkin one of the directors. The remaining officers and directors are Eastern men.

J. C. Atwood, general manager of the National company in St. Louis, stated yesterday that the new plant would enable his company to largely increase its output here. St. Louis, he said, is the largest manufacturer of ammonia in the world.

C. O. PATTERSON, druggist of Heppner, Ore., was numbered among the victims of the recent disastrous flood in that State. He had been long established there. His wife and child were also drowned.

AROUND THE GREAT LAKES.

DRUGGISTS IN CRIB.

Several Dozen of the Most Prominent in Chicago Involved.—But Crib is Part of Public Water Works. —Public Services of Druggists.

Chicago, September 1.—The Chicago Veteran Druggists' Association met on August 26. The cribs of the city water supply were visited. The trip was made on invitation of Commissioner of Public Works W. F. Blocki, son of John Blocki. The city tug boat "Rose Jackson" was used. Those who went were: John Blocki, William Jauncey, Wilhelm Bodemann, Thomas Braun, William K. Forsyth, Anton Hattinger, Morris Kremis, Henry S. Maynard, T. H. Patterson, L. K. Waldron, Louis Woltersdorf, Fred. J. Schroter, William G. Morris, William G. Baxter, Paul J. Behrens, J. C. Borchardt, Judge James B. Bradwell, Albert L. Ebert, Charles E. Matthews, William M. Chase, A. D. De Pass and J. H. Spangler. At "Carter H. Harrison" crib dinner was taken, in the dining room, which is capable of seating fifty persons. After dinner the following toasts were responded to:

"The Veteran Association." Judge Bradwell; "The City of Chicago." Wilhelm Bodemann; "Our Host, Commissioner Blocki." Mr. Spangler; "Our Absent Members." John Blocki; "Mayor Harrison." A. D. De Pass of Mississippi. Remarks were made by W. G. Morris, ex-Alderman Anton Hottinger and by the historian, Albert E. Ebert. After this Captain W. G. Morris took a photograph of the group.

By reason of the absence of President William F. Blgki in Paris and Vice-President Birch, in California, Ex-President William Jauncey presided. During the discussions it was brought out that the first tunnel and crib were built under the direction of Chief Engineer William F. Clark, a member of the third drug firm in Chicago, his store having been established in 1835. The last tunnel and crib—the four mile crib—was built partly under the supervision of Engineer J. H. Spangler, the host's deputy, who had served a four years' apprenticeship in the drug business at Bethlehem, Pa., later becoming a civil engineer and chief of the engineering department of Chicago.

Former Alderman Anton Hottinger related an incident occurring during his term as a member of the city council, about 1863, showing that it was upon his recommendation that the northern part of the city cemetery was set aside for a city park, when it was proposed that it be sold for city lots to raise funds, becoming the nucleus of Chicago's present great park system.

VETERINARY SUES FOR PROFESSIONAL LIBEL.

Chicago, September 1.—Three lines in the Chicago Law Bulletin this week develop the following story, which illustrated how easy it is for even the best of scientific men and the most responsible of firms to be entangled in an expensive difficulty. A large proprietary manufacturing house, after extensive, and what was deemed conclusive, investigation and experiment, developed a supposed cure for anthrax, a fatal disease which attacks cattle. The remedy was put upon the market and a quantity was purchased by an Illinois veterinary surgeon for use in his practice. He used it extensively and asserts that all the cattle upon which he used the remedy died. His attorney says that the manufacturers paid for all the cattle that died, but that was not all the veterinary wanted. His professional reputation, he says has been hurt and he thinks that

\$15,000 will be about sufficient to repair the damages. Accordingly he has filed suit against the manufacturers for that sum.

The statement made above is substantially that of the plaintiff's attorney. Whether the medicine is in the nature of a specific or of an immunizing serum, he did not state. If a specific, to be given to cure stock already diseased, it would be difficult to determine whether the medicine or the disease wrought the havoc. The presumption would be that the latter and not the former was responsible. If, however, well cattle were treated, thinking to immunize those in the herd not already affected and the cattle so treated died, then the presumption would be against the remedy. The case is likely to be interesting.

THE LAKE STATES' TRAIN TO BOSTON.

Chicago, September 1.—The Chicago members of the N. W. D. A. will leave for Boston in special coaches attached to the New England express over the Lake Shore road at 2 p. m., Saturday, September 5. At Cleveland there will be a special car containing the Ohio delegation waiting to "hitch on". Members will be picked up at Albany, Syracuse, Rochester and even Pittsfield, Mass. The train consists entirely of Pullmans, and will reach Cleveland at 10.45 Saturday night, arriving in Boston 4.55 Sunday afternoon. Among those who will be on board are: James Morrison, Frank M. Bell, B. T. Van Allen, Romaine Pierson, Frank Hereth and wife, and H. A. Antrim, of Chicago; A. M. Haas, Philadelphia; W. H. Elbel, Minneapolis; J. A. Gallagher, Kansas City; J. R. Kathrens, Milwaukee; R. H. Bradley, Toledo; A. H. Beardsley and wife, Ekhart, Ind.; C. F. Yahr, Milwaukee; A. E. Whiting and wife, Cleveland; F. E. Holliday and J. E. Toms, Indianapolis; W. Howard Ogborn and wife and Miss Ogborn, Cincinnati; Dr. Hartman, Dr. F. N. Schumacher and G. W. Lattimer, Columbus. Romaine Pierson is in charge of arrangements.

OIL OF ALMONDS CAUSES DEATH.

Detroit, September 1.—Through the alleged error of a druggist, Mrs. Margaret Stewart of Ravenwood, is dead. Her husband, a carpenter, purchased on his wife's request last Tuesday a phial of oil of pine. Wednesday night, feeling ill, Mrs. Stewart took a liberal dose of the liquid, fell unconscious in an instant, and died after remaining wholly unconscious for 25 hours. Instead of oil of pine the bottle is said to have contained oil of bitter almond. The case is being investigated by Coroner Harrison.

MANY DOCTORS WERE THEIR GUESTS.

Detroit, September 1.—More than 350 members of the Canadian Medical Association, with their wives and friends, swelling the party to about 450, came to Detroit on Friday as the guests of Parke, Davis & Co., and spent the day visiting the firm's laboratories and sight-seeing, winding up with a banquet at the Russell House in the evening. The association was in annual session at London, Ont., and, Friday morning, at 8 o'clock, a

Powdered.....Per ounce \$1.00

special train left for Walkerville, where an inspection was made of the Parks, Davis laboratories. A steam-hoist and hoistway were provided the visitors.

FORTY PER CENT. OFFER ACCEPTED.

Chicago, September 1.—The majority of Lord, Owen & Co.'s creditors have accepted the receiver's forty per cent. offer.

TWENTY-FIVE SUCCESSFUL IN WISCONSIN.

Of fifty-six applicants before the Wisconsin State Board of pharmacy in Milwaukee, twelve secured registered pharmacists' certificates and thirteen received assistants' papers. They were: Registered pharmacists—Arthur G. Raiche, Marinette; John Brakke, La Crosse; Odm Johnson, Eau Claire; Sister M. Gregory Krenner, La Crosse; Mondus H. Stuelke, Milwaukee; Charles J. Norton, Oconto; Charles F. Rainey, Thorpe; George Koerner, Jr., Milwaukee; Frank Flood, Darlington; Herman Borge, Milwaukee; Ernest F. Wallner, Milwaukee; Carl L. Mootz, Milwaukee; William E. McKracka, Racine.

Assistant registered pharmacists—Edward H. Schweitzer, Racine; Cecilia J. Williams, Milwaukee; Michael J. Rice, Kewauano; F. L. Buening, Milwaukee; Charles E. Swartz, Reedsburg; E. A. Winkler, Oconomowoc; Alfred C. Reinmann, Milwaukee; Ward O. Gilbert, Jamesville; Adam Kading, Milwaukee; Albert C. Spurling, Milwaukee; Armin T. Roemheld, Milwaukee; Calvin E. Hess, Johnson Creek.

FROM ILLINOIS.

—Albert E. Ebert, has been appointed a member of the advisory board of the University of Illinois School of Pharmacy (Chicago College of Pharmacy). The appointment is made by the trustees and is for five years. Mr. Ebert has taken an active interest in the school for many years and under the old organization, held at various times nearly all the offices within the gift of the college. The other members of the board are Walter H. Gale and W. K. Forsyth of Chicago, Charles Ryan of Springfield, and George M. Bennett of Urbana.

—James A. Davidson and family have returned from an extended pleasure trip which found its western climax in the Catalina Islands. Mr. Davidson rose to the utmost heights of honesty when he declared that he caught a few fair-sized little fish while the other fellows corralled all the big ones. Business on the coast is excellent he says. The irrigation projects now under way in Arizona speak volumes for the commercial future of the territory.

—The funeral of Robert Stevenson took place last Wednesday at the late residence of the deceased, 525 La Salle avenue Chicago. Among those present were, O. F. Fuller, Peter Van Schanck, Robert Dawson, J. Giles Lewis, and members of the other wholesale drug house of the city and representatives of the several retail drug associations. The interment was at Rose Hill Cemetery.

—Harold Sorby, F. S. agent for the Pasteur Vaccine Co. and secretary of the Drug Trade Club, left last week for his annual business trip to Europe. He will be gone about five weeks.

—John Block of John Block & Sons, perfumers, Chicago, who, accompanied by Mrs. Block, has been spending some weeks in Colorado, has returned.

—C. W. Grassly, well-known Chicago druggist, member of the C. V. D. A., has gone up into the Lake Superior region on a fishing trip.

—Charles A. Develon has just left for a vacation in Wisconsin.

—Henry Birch of Chicago is summering in California.

MICHIGAN.

—A Lansing druggist introduced a novelty by scrubbing his floor with soda fountain syrup. The old gentleman is very near sighted, and at an early hour he appeared at the store to give the floor a good scrubbing, which he thought the young men had neglected. He rummaged around in the cellar and finally came across what he thought was a pail of water already drawn. He found a man and ascended to do the cleaning. True, the water seemed thicker than usual, but he wrung out his mop and went after the dirt in real old-fashioned style. About half an hour later one of the clerks arrived at the store and was surprised to find that the old gentleman was using a pail of newly made syrup for mop water. Then there was a real scrub to get off the syrup. Flies were thicker on the floor that day than usual.

—Sid Erwin and Will Murphy of Battle Creek, took a rapid ride in an elevator recently, the net results being badly burned hands for Murphy, who tried to stop the car by clutching the rope, and severe jolts for both, through the cage stopping so suddenly when it had reached the bottom. It was a hair-raising experience that beats the Sutherland Sisters by several points.

—E. L. Dodge, a popular clerk at L. G. Ripley & Co.'s store at Montague, will leave on October 1 to accept an outdoor position in Utah. Mr. Dodge is a great sufferer from asthma and he hopes to regain health in the dry climate of the West.

—There has been a change in the management of the Red Cross pharmacy at Saugatuck, C. W. Parrish retiring for a short vacation, after which he will go to Allegan. P. M. Grice returns to Saugatuck, after an absence of many years.

—G. V. Collins of Charlotte, the pioneer druggist of Eaton county's metropolis, was seventy-seven years old on Saturday, and he invited three fellow grey-beards in to dinner.

—The City drug store of Bughes, Roxburgh & Co. at Traverse City now occupies new and handsome quarters in a brick block across the way from the old location.

THE LAST STORE SOLD.

Indianapolis, September 1.—A few weeks ago as announced in the Era, the store at 22 East Washington street, owned by the Sloan Drug Co., was bought by Henry H. Under. The second and last holding of this company, the Denison Hotel pharmacy, has now been bought by Cyrus A. Smith who for several years was the Indianapolis representative of Parke, Davis & Co. The passing of the oldest and best-known name from the drug trade of Indiana carries with it some sad recollections. Dr. George W. Sloan, who died not long ago, had been in the drug business in Indianapolis continuously for 55 years, having begun as a boy 14 years old in the house of Craighead & Browning.

MRS. SOPHIA WEBSTER LLOYD, mother of Prof. J. U. Lloyd, the well-known pharmaceutical writer and author of Cincinnati, died on August 17 at his residence. Mrs. Lloyd was a direct descendant from the Noah Webster branch of the Webster family. Besides a beautiful life her poems endeared her to many.

JOSEPH MENDELSON of the Bisner & Mendelson Co., mineral water importers of this city, died at Fair Rockaway, L. I., aged 51. He had been a member of the firm for about twenty years and was highly regarded.

MRS. CATHERINE M. RAWLINS, mother of C. M. Rawlins, druggist at 1253 Euclid avenue, Cleveland, Ohio, is dead.

WEST OF THE MISSISSIPPI.

EARLY DAYS IN OMAHA.

The First Druggist Killed His Man and the Third One Moved Up from Missouri, Frame Building and All.

Omaha, September 1.—The first druggist arrived in Omaha in the spring of 1855 and achieved notoriety by "shooting his man," one George Hollister of Bellevue, over a disputed claim. This was Dr. Henry and on his second trial he was acquitted. Between his first and second trials he was locked up in a blacksmith shop at night and allowed his freedom during the day, as he was the only druggist in the place. Once he was even let out at night to attend to a special case. The cost of the trials lowered the doctor's exchequer and, as a means of raising it, he went down to an Indian village on the Platte River, laid out a town and went East to sell the lots. He showed his plot and on the representation that his town had 800 inhabitants (not mentioning that they were native born Americans) upon a navigable river (navigable for skiffs) he found ready customers. However, the rivalry for corner lots was not as bitter as he desired, so he visited some wholesale druggists in Chicago to whom he confidentially offered half lots on the river frontage in exchange for drugs. He soon raised the required amount of drugs and, returning to Omaha, erected a new building on Farnam between "Fenix and Eleventh. After a few years he sold out to "Jersey" Tuttle and migrated to California and degenerated into a lawyer.

The second drug store was opened in the summer of 1856 by Jones & Wood at 1420 Farnam. Eventually the stock passed into the hands of A. D. Jones, the first postmaster, and by him was sold to Dr. E. P. Childs. He transferred it to Allen & Donovan, who sold to C. F. Goodman who is still in the business on Leavenworth street.

The third druggist, James K. Ish, brought his store up from Booneville, Mo. This frame building after being moved about to several places still remains near the new federal building across the street from James Forsythe's old stand. Mr. Forsythe has the distinction of bringing the first soda water fountain to Omaha.

John W. Bell, now the longest in continual service in the city came to Omaha as a clerk for Mr. Ish in 1870 but after a year of clerking started in for himself.

FIVE HUNDRED MILES ON A BUCKBOARD.

Omaha, September 1.—N. A. Kuhn, recently returned from a trip overland from Denver through Colorado and Wyoming on a buckboard, gives some interesting drug gossip for the Era. He and two companions purchased a team and wagon in Denver, which they sold on their return for \$20 less than they paid for them. They were well equipped with winter blankets. In the middle of August at 9,000 feet above sea level they found ice half an inch thick in their water bucket.

At Empire, where the tourist ascends the Rockies to cross Burthod's pass, Mr. Kuhn saw a drug store sign and went in to have a common cholera mixture put up, but was met with the reply.

"O, we don't fill prescriptions here. Drugs is our side line. We depend on stamps and stationery for trade." Mr. Kuhn suggested that he would put up the prescription himself if given the drugs but found that the entire stock consisted of two-ounce bottles of laudanum, paregoric and castor oil.

Across the divide a drop is made into Rout county and at Yampa a very nice new store is conducted by J. A.

McKenny. Yamp is the Indian name for bear. The principal stock in the drug store is a fine line of fishing tackle. Notwithstanding, it is a peculiarity of Colorado that natives always assert that the good fishing is either eight miles back or eight miles ahead.

At Steamboat Springs Dr. Newman has a very neat drug store which was established by his father. At this place there are 152 springs and the place receives its name from one of these which puffs alternately from two orifices with a sound like the escaping of steam from a locomotive. James Killion also has a very cosy drug store at this place.

At Hayden, twenty-five miles west of Steamboat Springs, D. L. Sellers runs a paying drug store and post office and makes a specialty of buckskin gloves made from horse-hide—or at least he affirms they are.

Craig has a couple of well-kept drug stores. At Encampment, Wyoming, Henry W. Britt has lately started a new store. Mr. Britt is also interested in copper and stands a chance of being a millionaire from it before he is by drugs.

After a drive of 450 miles Mr. Kuhn left his companions, purchased a saddle horse, hired a guide and made a trip of 50 miles over the mountains to the Union Pacific road where he took the train for Omaha.

THE KANSANS.

—There is a young drug clerk in Troy who is sweet on a certain girl who likes soda. The girl also likes dogs, and has a little one which accompanies her every where she goes. The other day while the clerk and the girl were dallying at the fountain, the dog went on a tour of investigation. He wound up in the show window inside a particularly sticky piece of fly paper. The girl was in tears until a happy thought struck the clerk, and he carried the dog to the wrapping counter. The young lady emerged from the store a moment later with a big bundle that looked like a parcel of meat.

—After several years of persistent effort, the Woodward company of Lawrence has landed the seat chart for the local theatre. This has always been a good advertisement for the firm holding it, and has been eagerly sought after. For a number of years past, Dick Bros. have conducted the advance sales.

—One of the new Kansas houses is the Central Drug Co. at Independence. Clate Fair is manager. Reports say that the firm's prospects are the best. Among those who contemplate an early retirement from the trade are W. J. Cattell of Kiowa.

—Geo. Van Warden, who is one of the Wichita druggists who have had trouble in explaining the "why" of cocaine sales, forgot to appear in police court the other morning and the city is \$50 richer.

—F. W. Murray of Stafford, has sold to Rose and Stivers. F. J. Dittus, who formerly operated a store in Glen Elder, has made arrangements to put in another stock there within a short time.

—G. H. Ensign, who has stores in Topeka and its suburb, Oakland, contemplates disposing of the latter place in order to devote more time to his city business.

—Fred Baugh succeeds Louhie & Baugh, Edna. Lowman Bros. succeed P. J. Unbrite at Pittsburg.

Georgian Bay, where she was camping. The body was recovered. Miss Curzon was a graduate of Toronto University and for over ten years was assistant to Dr. W. H. Ellis, Dominion Analyst. She was the daughter of the late Mrs. Sarah Anne Curzon, well known as a writer.

—S. B. Seobell, druggist of Newcastle, Ont., has disposed of his business to W. Anderson, Wm. Cochran, druggist of Ottawa, has opened a branch establishment on Sussex street in that city. Lodingham & Co., druggists of Russell, Man., have dissolved partnership. The business will be continued by Dr. T. A. Wright.

—Mr. Wade, druggist of Kingston, has for some months been annoyed by a series of thefts of parcels from his store. Finally an officer was detailed to keep watch and last week a woman was arrested in the store on suspicion of being the guilty person.

—Philip McGregor of Toronto, was fined \$5 by the Police Magistrate on a charge brought by Thomas W. Crutenden, druggist, who purchased three gallons of fruit syrup from him and found it 122 ounces short in weight.

—Robert E. Reynolds, druggist of Hamilton, Ont., married Miss Katherine E. Hicks, daughter of Richard Hicks of that city.

TEN REASONS

Why I am a Member of the Pennsylvania Pharmaceutical Association.

Why should the druggist join the pharmaceutical association of his State? This question is answered by means of the following ten terse arguments published in the form of a neat booklet and distributed by the Pennsylvania Ph. A. The president of the organization, Mr. Wm. O. Frailey, says that it is his ambition to increase the membership to 1200 before the next annual meeting in 1904.

The Aims.

The aims of the Pennsylvania Pharmaceutical Association are to unite the educated and reputable Pharmacists and Druggists of the State; to improve the science and art of Pharmacy and so restrict the dispensing and sale of medicine to regularly educated Druggists and Apothecaries.

These aims form the basis and platform on which the Association was organized. By its work and influence the aims have been partially accomplished.

General Benefits.

"By their fruits ye shall know them." The fruits of this organization are the State Pharmacy Board; the recognition of its influence by the several associations and institutions of pharmacy. Membership establishes identity as a reputable and able pharmacist and an upholder of all that is true, scientific and ethical in pharmacy. Through its officers the craft throughout the State have been saved much annoyance from revolutionary upheavals by the averting of threatened legislation of a pernicious character.

Economies.

Some of the immediate benefits most recently accruing to the pharmacists of the State through the Association are; the saving of \$1.00 a year to each registered man in the State by the repeal of that section of the law requiring a re-registration and fee of \$3.00 every three years; the saving of from \$10.00 to \$20.00 a year to each store by the defeat of the bill requiring prescriptions for the sale of opium and its preparations; the saving of large sums by the defeat of the bill requiring the formula to be printed on the bottle of every unofficial compound.

Mutual Interests.

They are not idle for much work is accomplished. But that feeling of mutual interests and fraternity exists and prevails.

Fraternity.

As to the general commercial interests of the pharmacists of the State, it should be unnecessary to more than mention the fact that the Pennsylvania Pharmaceutical Association is affiliated with the National Association of Retail Druggists, is an integral part of that great organization, is always represented on the floor of that body, and some of the most aggressive workers are members of both associations.

Published Proceedings.

The reports of officers and committees, the papers read and the discussions on the same, the constitution, and by-laws and the full roster of members are all published in a volume of several hundred pages each year, which publication is a valuable contribution to pharmaceutical literature. Every member receives a copy of this publication, which alone is worth more than the annual dues.

Professional Identity.

Every pharmacist in the State, therefore, should, in order to ensure and maintain his identity and professional standing, be a member of the Pennsylvania Pharmaceutical Association.

Possibilities.

The activity, aims and field for its work, the possibility for incalculable good to be accomplished, indicate the necessity for the Association to be truly representative of the pharmacists of the State, not only from a scientific standpoint, but also in point of numbers, as the more largely representative the association is, the more wide and powerful its influence for good and the more respect its reasonable demands will inspire.

Social Contact.

The meetings of the Pennsylvania Pharmaceutical Association are held annually and the members secure the enjoyment of a hand-to-hand association with each other, that exchange of opinion and discussion of interesting topics and a social intercourse which is at once edifying, enjoyable and educating, and proves a very excellent contrast with and relief from the constant grind of every day routine behind the counter. At these meetings one receives food for reflection all the rest of the year. Ideas expressed evolve new ideas and some of the most fortunate campaigns in business have been instigated through the ideas and impressions gained at the annual meetings.

Equality.

Here every one is on an equal footing. Professors of pharmacy, manufacturing chemists, wholesale and retail druggists, traveling salesmen for large industrial concerns in pharmacy and the allied branches of trade, all meet together for a few days outing and the rigors and conventionalities of "shop" are for the nonce forgotten and every one has an enjoyable time.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories.
Twelve Teachers. Thorough Courses.

NEXT TERM BEGINS SEPT. 7, 1903.

Address inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

THE MALAY DRUGGIST.*

A Bit of South African Life.

DON'T be made of you are at all in a hurry, but the door of an immediate consultation you may care to enter. Be careful as you go through a few steps leading into the shop, or you may strike your head against the cross beam. The (real) room is situated in the basement because the rent is low, and the premises are more open to the light of day. When you enter you find the proprietor seated on his stool. He bows to you courteously, but makes no attempt to rise. This is only his way and you must not mind it. After a time he gets up and asks the nature of your business. The Malay druggist's stock consists largely of herbal remedies. Besides these he now keeps a fair assortment of the more prominent "patents." His principal customers are his own countrymen and Kaffirs, though a fair number of Europeans also deal with him. He sells at ridiculously low prices, and this counteracts the natural drawbacks to success with which he has to contend. Every evening, as the sun is setting, the priests come on to the square roofs of the temples and summon the faithful to prayers. Then the "Muezzin" rings out the warning note. When this occurs the druggist pushes anyone who may be unfortunate enough to be in the shop at the time outside, makes fast the door, and prostrates himself in prayer. When he has got through with his devotion he reopens the door. This praiseworthy attempt at following in the footsteps of his ancestors causes trouble at times, as strangers invariably object to such summary treatment. There are a considerable number of fast and fast days in the Malay calendar. On these days no body works. If you will visit the shop then you will find it closed, and a notice pasted up stating that the feast of Ramadan or some other high sounding name is in progress. Below in bold lettering is the polite invitation, "Come to-morrow." But with all these drawbacks to control the Malay druggist is going ahead. One valuable asset which helps him materially in his dealings with the Kaffirs is his look of preternatural gravity. The natives believe that a man who looks so solemn must be wise. When a Kaffir comes into the shop and states that he is suffering from some simple ailment, and asks for a remedy, the druggist invariably asks him one question, "How much money have you got?" The Kaffir always puts this down to the smallest amount he dares, but no matter how small the sum to be disbursed the druggist will find a remedy of that value. After the native has answered this question the proprietor points to the door, and the customer goes outside and sits on the steps until the article is ready for him. Europeans, of course, are not requested "to wait on the stoep." On a Saturday afternoon the steps and entrance to the shop are thronged with natives awaiting their turn to interview the proprietor. A great many of the herbal remedies sold in these establishments are old Colonial-Dutch remedies, and the druggist number among his clients many of the Cape Dutch, who are so much in evidence in the outskirts of the capital. At present Malay druggists have their places of business in the back parts of the town, and so far the law has had little terror for them.

BRUCINE IN MORPHINISM

A Tromm (Apoth. Zeit.) recommends the use of brucine salts as a remedy for the symptoms which follow the rapid decrease of the dose in the morphine habit. The remedy may be applied either hypodermically or internally. The dose to be employed must be determined by experiment in each case, the amount required varying greatly in different individuals and stages of morphinism.

*The Chemist and Druggist.

THE OLD TIME PHARMACY.*

It was not the "pharmacy" in those days, it was the "drug store" and the presiding genius was a "druggist." The time I speak of was away back, so far off, that I will decline to specify for fear you will imagine me to be an old man. I will, however, mention to you may get your bearings, that it was before "chlorate of potash," "glycerine" or "chloral" days, as I have seen all of these introduced. I paid Powers & Weightman \$75 for my first ounce of chloral.

The pharmacies of those days were not, as a rule, attractive in appearance. The one I have in mind, where I learned the business, was not even on a corner. It was narrow, with steps and pitfalls for the heedless. The ceiling was low, the shelving very plain, the shelf ware was common, lights very bad, everything dingy, and this in a large city. But in the very plain show cases was a first-class stock of brushes and sundries. In the very ordinary shop bottles were the best drugs money could buy or experience select.

In the back room was the laboratory, and tinctures were carefully made by macerations and expression, for this was before the arrival of the percolator, and fluid extracts were scarcely known.

Prescriptions were filled in the very best manner, with care andidelity. One of our best physician patrons wrote his prescriptions on a small scrap of paper. His range of remedies was very small. His only cough prescription for all patients was this:

Syr. Ipecac.....a. ʒ i
Syr. Scillaee Co.....a. ʒ i

Another doctor preferred all his prescriptions with the initials I. N. D. (In Nomo Dei.)

We did a small wholesale trade with grocers, castor oil, etc., in bottles being supplied upon order.

My duties as junior were of the usual kind. I was expected to open the store, build the fire, sweep, dust, clean and wash bottles. Then I was expected to go out and apply leeches either by the doctor's orders or otherwise, and I soon became an expert. Once I was sent with a vial of prussic acid to a patron's house to kill a cat, and the work was done in first-class manner.

This was a typical old-style pharmacy, but I venture an opinion that no plate-glass, tiled-floor, marble-lined, mahogany-finished shop will supply their customers with any better drugs or more honest and capable work than this old time pharmacy. I recall very many happy days there, and my very great and lasting respect for the proprietor.

I hope that in this hasty sketch I may interest some of the younger generation, and that they will not forget that honesty, and truth, probity, faithfulness and ability may dwell in an "Old Time Pharmacy."

ROUNDOUT, N. Y.

FAVORABLE OUTLOOK FOR BUSINESS THIS FALL.

New York, September 1.—Dealers report a gradual improvement from the various distributing and consuming trades and the outlook is favorable to a steadily increasing volume of business as the fall and winter season advances. Fluctuations in prices noted below show changes of more or less importance in several articles, notably wool alcohol, oil peppermint and cascara sagrada.

OPHINE.—Quotations are without further change and the market is quiet with routine transactions reported at \$3.50@3.65 for 9 per cent, and \$3.60@3.75 for 11 per cent. Powdered is finding a moderate consuming outlet at \$4.00@4.05 for 13 per cent, and \$4.00@5.15 for 16 per cent.

MORPHINE.—A fairly active jobbing market is reported and quotations are maintained at \$2.60@2.70 for eighth, in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials, and \$2.30@2.40 in 5-oz. cans.

QUININE.—Values have steady support and a good jobbing business is in progress at 24@24½¢, for bulk in 100-oz. tins, 24½¢@25¢, in 50-oz. tins, 25¢@25½¢, in 25-oz. tins, 26¢@26½¢, in 15 or 10-oz. tins and 31¢@31½¢, in ounce vials, according to brand and quality.

COCAINE.—Some of the larger manufacturers refused to follow the lead of those who recently advanced prices 50¢ per oz. and jobbing quotations for mirate have reacted to the basis of \$4.25@4.50 for bulk, according to size of order.

CASCARA SAGRADA.—Owing to reports of excited and higher primary markets the local situation is decidedly stronger and jobbing prices have been advanced to 30¢@35¢, for whole, 30¢@40¢, for ground and 37¢@42¢, for powdered.

PERUKIA ASH BARK.—Supplies are increasing and the market is easier with quotations in a jobbing way further reduced to 24@30¢, for whole and 30¢@35¢, for powdered.

WITCH HAZEL BARK.—Lack of demand and ample supplies have caused a reduction in jobbing quotations to 15¢@20¢, as to quality and quantity.

WOOD ALCOHOL.—Manufacturers' prices are 5¢, per 2½ lb. lower and the revised jobbing range is 50¢@60¢, in bbls. and 60¢@70¢, for smaller quantities. Columbian or Oriental brands are quoted \$1.25@1.30 in bbls. and \$1.25@1.55 for less.

SAW PALMETTO BERRIES.—Now crop are coming forward and with the recent stringency of the market relieved, jobbing prices have been reduced to 35¢@40¢, as to quality and quantity.

GAMBIDGE.—The market is better supplied and holders have reduced quotations to \$1.10@1.20 for orders and \$1.20@1.30 for either stock plus or powdered.

OIL PEPPERMINT.—Only a light consuming demand is reported and with more or less pressure to sell the market is easier with jobbing quotations showing a further decline to \$3.20@3.45 for Western, \$3.25@3.40 for Wavay Co. and \$3.00@3.20 for redistilled. The latter range is also quoted for U. G. H.

OIL PEPPERMINT.—Stocks are light and values firmer, with jobbing prices advanced to \$1.25@1.50.

COB MARIN.—The season supplies and keen competition have caused a further decline in jobbing quotations to 37¢@47¢, per oz., according to quantity.

BALSAM FIR.—Oregon is very scarce and considerable higher jobbing prices showing an advance to \$1.75 @2.00.

GOLDEN SEAL ROOT.—Under the influence noted last week jobbing quotations have been further advanced to \$2.60@2.80 for whole, \$2.60@2.80 for ground and \$2.80@3.00 for powdered.

SAFFRON.—American is again higher and the routine jobbing range is 55¢@60¢, as to quantity.

PARMIN.—Only a light jobbing market is reported and an advance in quotations for No. 10 to \$2.10@2.20 per lb. and 2.00@2.10 per oz.

Can be Opened Without Effort.

The saving of the cost and labor of using corkscrews is something in which all consumers of beverages are interested and they will be glad to learn that the Apollinaris Co. Ltd. is introducing the Crown Cork bottle, which can be opened without effort and without spoiling the contents. No corkscrew is necessary. Openers are contained in an envelope tucked under the lid of the original cases. Apollinaris, which is bottled only at the Apollinaris Spring, Neuenahr, Rhenish Prussia, Germany, and only with its own natural gas, is increasing in sale and this universally well known table water needs no encomiums.

BUSINESS NOTICES.

A HELP IN PRESCRIPTION WORK.

There are a great many things that the average dispenser can't remember, and there are as many more that he shouldn't try to remember—it isn't safe. These things come up in prescription filling when time is an important factor and accuracy is strictly essential. There are questions about dosages, dose equivalents, percentage solutions, specific gravity, incompatibilities, metric and thermometric equivalents, meanings of Latin, French or German terms. These things are all tabulated, or figured out, handy for instant reference, in the Era Dose Book (Third Edition, Revised and Enlarged). Price 50 cents, postpaid.

"Everything in education should conduce to understanding, just as everything which conduces to understanding is education."

Some undertake the study of pharmacy in order to obtain a thorough understanding of the science, others merely to fit themselves to pass a required examination.

While a desire to scramble past the board is not the best incentive to study, it still leads to a considerable amount of understanding and often to study of a more serious sort.

For a thorough grounding in the science of pharmacy, the larger colleges are undoubtedly the best means.

But for a beginning, and an aid in passing the board, correspondence courses, such as the Era Course in Pharmacy, are highly effective, and, moreover, inexpensive.

Write to The Pharmaceutical Era, No. 8 Spruce street, New York, N. Y., for a prospectus.

N. W. D. A. and P. A. of A.

At the present writing the most conspicuous event on the pharmaceutical horizon is the coming meeting of the wholesale and manufacturing branches of the trade. When this paragraph reaches the readers' eyes, these two associations will be busy making history. For the prevailing expectation is that this meeting will not be a mere social gathering with its chief business the graceful exchange of bouquets. Unless indications are utterly at fault there will be interesting proceedings. Only a complete failure of courage can prevent a thorough airing of grievances and the adoption of vigorous resolutions. The exact nature of the grievances is not now apparent, but, if we are not mistaken, they have more or less to do with broken promises, not to use a harsher word. It is an open secret that rebate and tripartite agreements have been too freely broken in some quarters to remain longer unnoticed, and pointed protests or even more radical measures are quite likely if not probable to make their appearance. Inquiries, explanations and readjustments seem to be demanded. The retailers are also beginning to ask significant questions, and signs indicate plentifully that there will also be "something doing" in Washington next month. It is not at all improbable that the present arrangement for the distribution of proprietary medicines will be superseded by something less likely to be disturbed by the lapses peculiar to human nature under stress of competitive trade. On the other hand the more conservative will do their best to preserve the existing order of things. They maintain that the present arrangement, while leaving much to be desired, is still accomplishing good results and is constantly becoming more effective as the trade is gradually being educated to the mutual concession policy. It is further suggested that all great and good movements are slow of growth and that the present plans have not yet been given a fair trial. Whether the more conservative element will prevail or the radical will be free to overturn things remains to be seen. At any rate there will be something besides festivities next week in historic Boston of the tea-party.

THE RETAILER IS RESPONSIBLE.

In considering the numerous reports of drug adulteration in this city, we have hitherto always supposed

that in the majority of cases at least, the druggists were merely guilty of negligence and not of conscious fraud. We had to be granted that the easy-going gentleman showed himself to be imposed upon, not deceived, by the wholesaler but by some one nearer the source of supply. But it seems that this view of the situation is entirely too charitable. We are forced to draw our conclusions against our will that the more recently reported violations of trust cannot be explained in this comfortable manner. Inspectors of the board of pharmacy have been gathering samples of common remedies prepared in the retail drug store and have found a shamefully large number that do not meet the pharmacopoeial requirements. Tinctures prepared with wood alcohol, camphorated oil and tincture of iodine below strength, and bisulphide salts mixed with prepared emulsion can not be accounted for with the plea of ignorance and inadvertence. The result of such sophistication is invariably a cheapening of the product. The druggist who dispenses them, does so with only one objection in view, he is guilty of a detestable form of fraud, and a disgrace and disrepute to every honest member of the calling. The number of so-called pharmacists who are willing to stoop to such disgraceful practices for the sake of a few pennies is almost incredible. If this is the logical result of free competition and the pursuit of the cheap, a thorough weeding-out campaign is absolutely necessary. Honest members of the trade owe it to themselves, merely as a means of self-preservation, to aid the inspectors in every way possible to remove this disgrace from the pharmacy of the city. Can we blame the public for being cautious about entering a drug store when there are so many sharks lying in wait behind the colored bottles to prey upon their helplessness?

THE BLAME CANNOT BE SHIFTED TO THE WHOLESALER.

Druggists when accused of supplying inferior drugs have frequently tried to shift the blame to the jobber by saying that the materials were dispensed exactly as received. There have been numerous hints that the inspectors might profitably look for fraud "higher up." This, while not a valid excuse—the retail pharmacist is, by reason of his license, alone responsible before the law—was still, under the anomalous conditions existing, capable of removing a portion of the disgrace. But even this plea is without foundation, for if the druggist receives inferior goods from his jobber he does so consciously, knowing very well that the best can not be obtained for the least money. As a matter of fact, reputable wholesale firms are much more scrupulous in examining and testing than the retail distributors. Practically every one maintains a thoroughly equipped laboratory. Crude drugs, as received are not all of superior quality, and it is a common and commendable practice to subject the contents of original packages to considerable sorting. The material are separated into various grades, the different qualities being, of course, sold at different prices. This practice is necessary in order to ensure the best result, and it is a practice that pays. A prominent member of the wholesale trade informs us that there is no lack of druggists willing to pay the highest price to obtain superior drugs. That the common grade article sold goes without saying,

and we have no fault to find with this perfectly obvious commercial necessity. Even if not suitable for the preparation of official remedies, the cheaper grades are useful for other purposes. If the druggist, in his demand for the greatest quantity for the least possible outlay obtains these inferior, cheap goods, or if he allows himself to be imposed upon by schemes possessing only a negative reputation, he has no one to blame but himself. And if he dispenses these materials or employs them in the preparation of standard remedies, he is wholly responsible for the result.

THE PHARMACOPOEIA AS AN OFFICIAL STANDARD.

With the increasing necessity for drug inspections and greater frequency of prosecutions for violations of pure drug laws, the U. S. Pharmacopoeia, the standard by which the druggists' wares are adjudged good or bad grows in importance. In prosecutions for adulteration the tests applied to the materials are, in fact, of greater weight in determining the guilt or innocence of the accused than even the opinion of the judges or the verbal details of the law. It is, therefore, essential that these tests should be absolutely fair and leave no room for doubt or uncertainty. Does the U. S. P. fulfill these conditions? It is revised only once in ten years, and the volume at present authoritative bears the date of 1890. It takes no account of the changes that have taken place in science during a decade, a long time in view of the very rapid progress which is characteristic of the present age of research. Some of the tests have long since been declared uncertain, and some of the requirements are far from those possible in actual practice. It seems that here is room for great improvement. It is necessary that there should be an official standard and no one is better fitted to prepare such a standard than the body of gentlemen now responsible for the contents of the pharmacopoeia, but there should be some way of keeping this extremely important standard up-to-date. The U. S. Government issues bulletins for the guidance of its customs officials at frequent intervals, and, whenever additional data are discovered, these are immediately rendered available. Certainly standards of purity in drugs are of as much importance as those governing the importation of textile fabrics, and there should be some means of bringing fresh discoveries more quickly into use. If it is impossible to issue yearly editions of the pharmacopoeia, why not publish addenda from time to time when these become desirable?

MORE JOURNALISTIC SCIENCE.

We have all marvelled, from time to time, at the eccentricities of newspaper science. When the expert journalist undertakes to serve up the wonders of nature to a jaded public he invariably converts the molehills into mountains, the meanwhile calmly ignoring every raging volcano on the map. Harper's Weekly and the N. Y. Sun, with the aid of Mr. Edison, have now unfolded the radium mystery. It is all as plain as day, and all accomplished with so little effort! A few months ago, the discovery that radium salts maintained a temperature higher than the surrounding atmosphere set the world of science agog. It immediately set in motion a train of experiment and speculation as to the source of this energy and the manner

of its transformation. There were a number of more or less plausible theories about the ultimate source of the energy, one of the most satisfactory being that the element converted some of the molecular motion of surrounding gases into heat. No one for a moment believes that radium could continuously create energy out of nothing at all. It is merely a little pinhole in some vast reservoir through which a little leaks into the open. Mr. Edison—sensible man—apparently recognizes this necessary assumption, and recently made a remark to this effect to a reporter. His theory does not differ greatly from those already published except that he proposes a new and unheard-of source of energy, which is quite unnecessary considering the many forms now floating about in the ether and mostly convertible the one into the other. Enter the expert journalist—great discovery by the great inventor—mystery solved! The perfectly obvious to any mind gifted with ordinary powers of thought and in reality explaining nothing, is hailed as a wonderful discovery. These dignified journals evidently supposed the scientific world to be in a situation similar to that of the historic Boston maid, who upon first observing a lawn-sprinkling arrangement in operation, exclaimed: "Who evah would have dwamed that such a diminutive appawatus could contain so much watah!"

Give the Best that is in You.

The best lesson in culture is to learn to give the best that is in us under all circumstances. He who is master of himself will be able to command his powers at all times. No matter how distracting his surroundings, how unfortunate the conditions under which he works, he will be able to focus his powers completely and to marshal them with certainty. If things go hard with the self-mastered man, he will be able to trample upon difficulties, and to use his stumbling-blocks as stepping-stones.

If a great misfortune overtakes him, he will simply use it as a starting-point for a new departure, a turning-point for more determined endeavor. He may even be weighed down with sorrow or suffering under discouragement, but he always starts anew with redoubled determination to do the thing he has set his heart upon.

The power of self-subjection of a determined soul is almost incredible. Imprison him, and he writes a "Pilgrim's Progress;" deprive him of his eyesight, and he creates a "Paradise Lost."—Success.

ERA COURSE IN PHARMACY.

List of Graduates for August, 1903.

Matriculation No.	Name	Grade.	Per Cent.
3327	L. A. Klenze, 726 W. 6th St., Davenport, Ia.	96	
3640	Leo Wathen, Morganfield, Ky.	95	
3576	J. M. Jackson, New Haven, Ind.	96	
3521	Duane S. Laucks, Mannsville, N. Y.	98	
3577	William E. Sharp, Box 241, East Bridge-water, Mass.	96	
3634	Edward M. Scribner, Monroe, Maine.	98	
3250	M. A. Hunsinger, 145 Erie St., Buffalo, N. Y.	98	

The above graduates will receive diplomas within a short time. A large and handsome engraved diploma, printed on artificial parchment, with the graduate's name engrossed, especially suited for framing, will be furnished to all who request it for the sum of \$2.00. Those who desire the latter should forward the necessary fee at once to the Pharmaceutical Era.

W. A. LESLIE, Morganton, N. C.
President North Carolina Ph. A.

AN APPRECIATION.

To the Editor:—I must thank you for the good lift you have given in the last two Eras to the crusade against cocaine. Mr. Eberle's report on the drug habit could not have come at a better time, and his observations are sound. He describes the fiend to a finish. Who ever saw them—as I did—can not but admire his diagnosis of the appearance of the poor victims.

We are issuing a circular on the cocaine traffic to be mailed in sealed envelopes to every R. P. and A. P. in the State.

The great difficulty comes in here: Druggists who willingly violate this law, know the fiend when they see him, and will not sell to any but fiends. They don't give them away; and when we drop in on them, they refuse us.

You see the cunning, fox-like tactics. As I said in my paper to the I. P. A. a year ago, "a murderer kills only the body, a cocaine vender lets the body die slowly, but kills the soul in the live body," and Mr. Eberle almost adopted the same language.

I hope some day the relatives of fiends will sue the vendors for damages. The verdict could not be heavy enough! The damage can not be repaired by money!

W. BODEMANN.

Chicago, Sept. 2, 1903.

THE MAXIMUM DOSE OF HERVINE.

Austrian pharmacists have apparently adopted a method for fixing the doses of drugs which is much less troublesome than the usual experiments with physiological action. As a result of recent discussions of the toxic properties of hervine, a committee of the pharmaceutical association recommended that the dose of this remedy be fixed at .003 gram for a single dose and .01 gram for the daily dose.

SHOP TALK

CUTTING A SWATH AND SAWING WOOD.

"I have a question here," remarked the druggist. "C. P. told me you would chuck into the bucket a few sagacious aphorisms and I am curious to see what would come out of it."

The sage beamed with pleasure, and rubbed his forehead expectantly.

"It can't be of any use," continued the druggist. "It comes from Chicago, where I must say there is a great deal floating around that is not all wind, by any means."

"Out with it!"

"It is this: Why do people spend a year thinking, planning and working to get up a top-lofty paper on some abstruse subject having only a spider web connection with the drug business, while, when it comes to the question of making a real success of pharmacy no one has anything to say?"

"What do you mean by 'success'?"

"Why, material success, of course. That is the universally accepted idea of it. There is mighty little glory or fame or satisfaction to be got out of pharmacy as a pastime. If you can't make it pay, it's no use."

"Lots of people do make it pay."

"Of course! That's what I say. But why don't some of these successful chaps hob up, in the A. Ph. A. for instance, and tell their associates how they did it?"

"Too busy sawing wood!"

"Nonsense! Nearly everyone present at these meetings has a very respectable thing of it, and they read papers, too, but always about something else—the past history and present status of the search for an active principle in some common weed or other, or the sad decay of the art of making chewing-gum—something that takes outside thought and research, but which does not come within a thousand miles of the store ledger. Why is it?"

"Too busy sawing wood!"

"It isn't that, I tell you! The men who read papers know how to saw wood as well as the inarticulate fellows, but they won't talk about the wood-pile nor the saw, nor their way of keeping it sharp, so that it will bite."

"In my opinion," said the sage, "the most successful sawyers are so busy when they are at it, that they haven't time to think of other things, and when they do get a chance to lay aside the saw, they are tired and go in for something else."

"Is the A. Ph. A. a sort of recreation, a relaxation?"

"I think it is with most retail members. With some others it may be a matter of business."

"I don't believe you have got hold of the whole of it. The most enthusiastic insist and insist upon the profitability of it."

"I dare say it is profitable, but I have yet to hear of anyone who ever went there a second time if he failed to extract pleasure out of his first attendance."

"But don't you think there are other reasons?"

"For what?"

"For the lack of bread and butter papers?"

"Oh, yes! The firm who is good at wood-sawing is not always good at telling others about it. And then he has a curious notion that in an association paper something extraordinary is expected of him. His business methods do not seem out of the common to him."

"And to really say a good deal to tell about?"

"Oh, sorry to say! But he doesn't know it. He is too busy to think about things and find reasons. He can't busy his own. His energy runs to action."

"I see! That is why you are not disgustingly wealthy?"

"I shouldn't wonder!" replied the C. P. slyly. "I have always been in the habit of figuring things out Good, careful judgment is all right, but you can't over-do it. Musing around too long about every little thing is not good business. There are lots of successful men who haven't the slightest idea why they succeed."

"A matter of luck, then?"

"No, I would not say that! You ask almost any old chap who has made his pile to tell you the secret of his success, and he will say 'Attending strictly to business.' How he attended to business is a matter he does not speculate about. He takes for granted that you know about that as well as he does."

"Perhaps that is all there is to it!"

"What?"

"Hard work and close attention."

"Yes, I dare say you are right. There is no secret of success. It is a matter of work, ordinary common sense and some luck. Energy and tenacity count more than intellect. Carnegie tries to tell the boys how to succeed, but his sermons are just about the same as those you and I preach."

"Then what's the use of talking about the way to succeed?"

"There isn't much—not in a general way, but in little details men who are placed in similar circumstances can be very helpful to each other. The members of such local associations as they have in Pittsburgh, Philadelphia and Brooklyn do help. They receive hints and stimulus, which is only another form of energy."

"Why don't they do the same thing in the big associations?"

"They try to, but somehow they are too formal for that sort of thing. People seem to think common talk isn't worth while at an annual meeting. They think when a man gets up at one of these big affairs he must cut a wide swath, so instead of walking on solid ground he soars away in the empyrean as the boy says, and not being used to soaring his flight is not always graceful."

"Oh, pshaw! Your liver is out of order again. You and the fellow who asked the question are both away off the course."

"What do you think about it, then?"

"They do read beautiful practical papers at the A. Ph. A. and you fellows are clumps not to see it!"

"Oh!"

A CHAPTER ON FROGS; WHAT FOR!

Rebert & Kimmey, druggists at Syracuse have a window which has attracted more attention than any of the interesting displays they have had. The center of interest is a small frog pond, around the mossy sides of which ten or a dozen immense bullfrogs go through various antics.

The first who stopped were two young fellows of about the High School age. "Say," said one, "they say all these suicide clubs keep them frogs on hand 'Suicide clubs' what for," asked his companion. "So they can croak easier."

"Oh, look here," sang out a Syracuse University co-ed, "look at these frogs!" "They ought to have a bullfrog there too," said co-ed number two. "What for?" "Then we could sing: 'O! The bullfrog on the bank, and the bullfrog in the —' The rest of the conversation was lost.

In came a farmer looking for Paris green for his potato bugs. He glanced at the frogs and smiled. Finally he broke into a laugh, and said:

"Seem' them frogs reminds me of a toad (he pronounced it 'tud') my pup got bolt of. He was at the calf age where he wanted to bite everything on the place. After a rain one day he saw a 'tud' hoppin' along and he went after 'im. He give one good bite and you ought to seem 'im. Ha! Ha! He jest put his tail between his legs and sneaked. It took a few hours to get the taste out of his mouth. It cured 'im all right. He wouldn't take bolt of another if he knew he would get a big chunk of meat for doin' it."

A fat man accompanied by a tall 100-pounder who looked as if he had been run through a flattener, then came up to the window. The fat man had evidently been acquainted with the beasts before. "D'ever see one of them fellers bite on a piece of red flannel," asked he. "Red flannel?" queried his companion in surprise. "Yes, that's no joke. You take a hook and bait it with red flannel and you can ketch 'em every time." While the thin man was still pondering over the statement and wondering whether to believe it or not, the fat man spoke up: "Sav, I got down on a man once and slipped a little frog down his throat before he could say Jack Robinson."

Two business men came into the store, ordered some vichy and turned to look at the frogs. "Like 'em to eat?—the legs I mean," asked one. "Don't care anything great about 'em," was the answer. "You would if you cooked 'em right," said the first man. "When I was a boy on the farm, I used to run the hay rake. I had a bag along and a club. The meadow was full of the critters and I used to get off the rake whenever I saw one and whack him over the head. By noon I'd have a bag full. I used to dress 'em, only the legs of course, and my mother would cook 'em for dinner. My stars! but they were good."

As the Era man moved away from the store he heard a Yale man say to his companion: "Lets make 'em give the Yale yell. These must be the 'Frogs' of Aristophanes. Brek, ek, ek, koax, koax!"

MORE TROUBLES THAN HE SHOULD BEAR.

"Tell your troubles to a policeman" has long been an expression when a man was bored by hearing the woes of another," said a drug clerk the other evening. "but if you would hear the woes of mankind hot from human lips just step behind the prescription counter and listen to the troubles I have to endure and the tales I have to listen to during my trick on duty."

After a man with a cold had imbibed his lemonade he returned to his first love—the drug clerk—and proceeded to pour out misery.

"Went to a dance the other night, you know," he began. "I'm a very smart young man, and after I had danced every number on the menu I proceeded to stroll into the cool and refreshing night air. Look at me now. Ain't I a dream of delight? Oh, I do such bright things! I suppose if the plumber would come along with a pail of hot lead I would dip my finger into it to see if it were really hot." The poor drug clerk had to listen and appear to like it.

"Mister, I want a nickie's wuth o' wepion salts for my mamma," chirped a youngster as he handed over an empty bottle and incidentally knocked over half a dozen bottles of perfume.

"Doctah, kin yo' tell what's good fo' a pluracy pain in ma side? Ah done had a mos' mis'ble time dis las' night; deed I has."

Old "mammy" held her hand on the offending side and groaned as the drug clerk proceeded to mix some brown sugar and water to give to her.

"How much is dis?"

"Oh, nothing; that will be all right."

"Thank yo,' sah."

The drug clerk looked across the store and saw an old man coming.

"Great heavens! Here comes another!" he groaned.

"Good mornin', doctor," groaned the apparition as it approached the clerk.

"Good morning, Mr. —. How do you feel today?"

That was all the patent medicine fiend needed to open up his tale of woe.

"Oh, tougher than the dickens, Charlie," he began. "Have you anything in the store that will stop an awful aching in my neck? And I've felt so numb all day today that I don't believe I can last much longer. I had an awful backache yesterday, but that's better to-day. Don't much more'n get rid of one thing till another comes. My teeth has been tryin' to worry me some lately, too."

The drug clerk handed him a small vial of tooth-ache drops and he ambled out.

A moment later the clerk got into an argument with a woman who was possessed of a small slip of paper.

"No, you can't work that off on me. A doctor never saw that prescription," the clerk said to her.

She muttered and walked out.

But the drug clerk does not hear all woe. He has to be polite to the woman perfume fiend. There are women in local society who delight in visiting drug stores for the purpose of sampling every make of perfume in the house. They sometimes buy a small bottle, but it is seldom. They will sniff at the bottles, try a little on their handkerchiefs and ask the price. Then they go to the next drug store.

The drug clerk—poor dog!—he has to know it all, hear it all and bear it all. If he doesn't, he is a bad drug clerk.—Adapted from the Tradesman.

A PUSHING CLERK.

"You must push matters a little, James," said the druggist to his new boy: "by calling a customer's attention to this article and that article, you often effect a sale."

"Yes, sir," responded the new boy, and then he hastened to wait upon an elderly person who wanted a stamp. "Anything else, madam?" inquired the ambitious boy, politely: "hair dye, cosmetic, face powder, rheumatic drops, belladonna, mole destroyer?" The elderly lady deals over the way now.—Philadelphian "Methodist."

One Way of Looking At It.

When a man discovers his house is on fire he goes tearing down the street yelling "Fire!" at every jump until he reaches the nearest station to turn in an alarm. If he hasn't any insurance he spends his time swearing at himself till the fire engine comes, and vows that henceforth he will carry all the insurance the companies will stand—if he has anything left to insure.

But when his business profits are exposed to the fire of cut-rate competition he thinks the wind is not in his direction, and the N. A. R. D. organizer who wants to write him an insurance policy for \$2 a year premium finds him stoically indifferent.

By and by he smells something burning and discovers that while he has been looking on at the other fellows his prospective profits have taken on the appearance of a Fourth of July celebration. Then with coat tails aflame he rushes to N. A. R. D. headquarters, yelling for help, and wishes he had taken out that insurance against cut rates when he could have got it cheap.

N.B.—The best time to get insurance is a few days before the burning shingles begin to fly.—The New Idea.

GRAPE STONES AN ADULTERANT IN PEPPER.

V. Paolini (Zeit. Nahr. u. Genussm.) has discovered a new pepper adulterant in the form of grape stones. Under the microscope this falsification is easily detected. The sclerenchyma of the grape stones is quite different from that of pepper. A thick membrane almost fills the cells of this tissue in grape seeds, this tissue forming to per cent. of the total. There are also other large cells which contain crystals of calcium oxalate and aggregation of crystals are also found in the aluerone cells of the grape. Starch, oil and resin are not present in grape seeds.

Some Pennsylvania Members of the A. Ph. A. who attended the recent meeting at Mackinac Island, Mich.

SAPU MOLLIS AND LINIMENTUM SAPONIS MOLLIS.

By GEORGE M. BERINGER.

THESSE preparations are but seldom prescribed by their present official titles, but are almost invariably ordered under the name of *Sapo Viridis* and *Tinctura Saponis Viridis*, by which they were designated in the 1880 Pharmacopœia. Their introduction into medicine was due to German dermatologists. These early users were supplied with a soft soap possessing a decidedly green color and yielding with alcohol a bright green-colored tincture. As hempseed oil alone yields a soap of such color I presume that this was the oil used in the manufacture.

A soft soap suitable for medicinal use should answer to the following requirement: A smooth, even soft unctuous mass, having a translucent, greenish-yellow color, soluble in alcohol and water to clear solutions and leaving only a minute insoluble residue, and the filtered solutions should be clear, and, while moderately alkaline, must not be irritant from excess of alkali, and must possess strong detergent action.

A number of formulas for medicinal soft soap have already been published, and the object of this paper is to present some experiments on the same subject. These formulas can be classified under two heads, namely those made by the cold process and those made with the aid of heat and generally with the addition of a moderate amount of alcohol.

The cold process formulas are well illustrated by the following, which was given under the title, "*Sapo Viridis*" in the first edition of the National Formulary:

Take of—

Potassa	8 parts
Water	12 parts
Cotton seed oil	21 parts

Dissolve the potassa in the water, and while stirring the solution add the cotton-seed oil. Stir occasionally during forty-eight hours, then transfer to suitable vessels.

The product of this formula is not green at all, and has no claim to the title given. Moreover, it is subject to the very serious objection that it is entirely too alkaline, and this objection necessarily holds true of all cold process soaps.

The official formula for soft soap was undoubtedly superior to that in the German Pharmacopœia. The

latter also recognizes "*Sapo kalmus venalis*," and the American market was formerly largely supplied with importations of this commercial grade. Hager (*Pharmaceutische Praxis*), states that "this commercial soft soap is a product of varying composition, being made from mixtures of rape seed oil with linseed oil, train oil, hemp oil, etc., with a large excess of alkali, and frequently colored artificially—by the addition of coppers, dyewood, indigo and other coloring materials to produce the color desired. Hemp oil produces a beautiful green without the addition of other coloring."

Following the official formula on a manufacturing scale, the writer was confronted with a practical difficulty, namely that linseed oil, per se, was not readily saponified, and in order to obtain a fair product, the amount of potassa and alcohol used was greatly in excess of that directed. Yet the entire replacement of linseed oil by some other oil such as cotton seed oil, which has been proposed, may be objected to on therapeutic grounds, even if the latter did not present some objection in that will be shown later.

Experiments were undertaken to determine the following points needed to establish a satisfactory formula; the oil, the correct amount of alkali to obtain a product sufficiently detergent, and yet not irritant, the proper temperature, and the amount of alcohol necessary to insure saponification and the yield.

My experiments led me to adopt the following formula:

Take of—

Linseed oil	40 grams
Malaga olive oil	40 grams
Potassa	19 grams
Alcohol	10 Cc.
Water	60 Cc.

Warm the mixed oils on the water bath to 70 degrees C.; dissolve the potassa in the water and warm this also to 70 degrees C. and add this to the oils and stir thoroughly. Now add the alcohol, and as soon as this is thoroughly incorporated stop stirring. Continue the heat at this temperature for a short time until saponification is complete, which is evidenced by the mass becoming clear and a portion dissolving in boiling water or alcohol without the separation of oil globules. The finished product will weigh about 140 grams.

If the above directions are followed, the resulting soap is an almost transparent, smooth, greenish-yellow mass, but if stirring is continued after the addition of the alcohol until the saponification is completely effected, then the resulting soap is opaque from included air.

Taking this as a fundamental formula, samples of soap were made by substituting various other oils and mixtures. Of these the following are worthy of exhibition and comment: Malaga olive oil saponified with 10 Cc. of alcohol, but cotton-seed oil, *Luca* olive oil, linseed and hemp oils each required 15 Cc.

The cotton-seed oil yielded a soap that was transparent and almost colorless and the liniment prepared from this in accordance with the official formula was pale yellow, almost colorless. Neither to this soap nor to its liniment would the official synonyms be applicable, yet these are the names used by prescribers.

The *Luca* olive oil soap and liniment were nearly identical in appearance with those from cotton-seed oil, being only a slight shade deeper in color.

The commercial or Malaga olive oil yielded a transparent, yellow soap, having a faint green tint, and the tincture was likewise yellow.

Linseed oil yielded a greenish-yellow soap, and the liniment, while yellow, had a distinct greenish tint.

A mixture of equal parts of linseed oil and Malaga olive oil, as recommended in the above formula, yielded a soap and liniment identical in color with those made from linseed oil.

Hemp seed oil yielded a transparent green soap and the liniment made from it was bright green. In odor and color this liniment closely resembled the tincture of green soap as originally imported.

*Read at the Fifty-first Annual Meeting of the American Pharmaceutical Association held at Mackinac Island, Mich., August, 1903.

Detergency.

As the soft soap and the tincture, or so-called liniment, are both chiefly used for their detergent value and not as a liniment or rubefacient, a comparison of the detergent strength of these tinctures was considered as an important factor in deciding the relative desirability of the soaps and the oil preferable for the formula. The writer was surprised to note the very marked difference in these tinctures in this respect; as, for example, .5 Cc. of the tincture from cotton-seed oil soap shaken with 100 Cc. of distilled water formed a foam which lasted only seven minutes, while .1 Cc. of the tincture from Lucea olive oil similarly treated formed a foam which persisted for five hours.

In order to make a comparative determination the following arbitrary test was adopted and the six samples of tinctures all prepared by the standard formula were subjected to exactly the same conditions:

To 100 Cc. of distilled water contained in a new, clean four-ounce vial, .1 Cc. of the tincture is added from a pipette and the vial corked and given five distinct shakes or jars with a wrist movement and then set aside at rest, and the persistence of the foam noted.

This simple test I believe to be practical, and to give a fair indication of the detergency. The results are stated in the inverse order of the strength exhibited by the samples.

The tincture of cotton-seed oil soap gave a foam which lasted only three minutes, and the water at once showed a cloudiness. After standing over night (12 to 14 hours) the water was quite cloudy, and on agitation failed to show any tendency to foam. The deficient detergent value of cottonseed oil soap should alone be sufficient to exclude it from official recognition.

The tincture from hempseed oil soap gave a foam which lasted for three minutes. The water was cloudy at once and this increased decidedly after standing twelve hours, when the solution showed only a slight tendency to foam.

Linseed oil soap held the foam for three hours, and after twelve hours standing the water had become somewhat cloudy but was still slightly frothy.

The tincture from Lucea olive oil soap gave a foam which lasted for five hours, and the next day the water, which was at first clear, showed some cloudiness, and only a slight tendency to foam.

With the tincture from Malaga olive oil soap the foam lasted six hours, and after twelve hours the water had become faintly cloudy, but gave abundance of foam on agitation.

The tincture from the mixed linseed oil and Malaga olive oil soap held its foam for ten hours, and after standing twelve hours longer showed but little cloudiness and gave very persistent foam.

All these aqueous solutions, after standing for twenty-four hours, showed some signs of decomposition, the water becoming more or less cloudy.

PROPRIETARY AND TRADE NAMES.*

By M. I. WILBERT,

Apothecary at the German Hospital, Philadelphia.

IF the several perplexing problems connected with the introduction and sale of the so-called new remedies, the proprietary right vested in the trade names is probably the most important. From the manufacturer's point of view, the coming of a conveniently short and easily remembered name is second in importance only to the fixing of a selling price that is sufficiently high to insure a liberal profit, after allowing for the necessary expenditures for salesmen and advertising.

The justice and importance of this, from the manu-

facturer's point of view, must be conceded. With him it is a business venture pure and simple, and he is lawfully entitled to all profits that may accrue to him. Without going into any further discussion of the problem from this point of view, it may be well to bear in mind that there are several kinds of proprietary rights in trade names. These may be defined as moral and legal.

I. For instance, a manufacturer in putting out a new or old compound chooses to coin for it a new name or title, this name or title is morally his property, and is usually considered as such. If, however, he, in addition, registers the same, as prescribed by the patent or trade-mark laws of the country, he has a legal right to the sole use of such title or name, and can restrain any and all persons from the use of such word, name or title.

The nuisance arising from this self-evident right is that we, particularly in connection with the medical and pharmaceutical professions, are being overwhelmed with a multitude of meaningless and in many cases misleading names. Many of these names are dangerously similar, and are likely to lead to serious misunderstanding and possibly fatal mistakes. The injustice to the public, as well as the pharmacist, is evidenced by the unnecessary duplication of names and titles for substances or mixtures that are not themselves covered by patents.

As an illustration of how this duplication of titles may be abused, we may cite the substance that is chemically known as hexamethylene tetramine. This is being sold and used quite extensively under different trade names. These we will say are A, B, C and D. If a pharmacist receives a prescription for hexamethylene tetramine as C, even if he has A, B and D in stock, he is morally not allowed to dispense either of them, despite the fact that he knows they are chemically identical. Nor would it be likely to avail him much if he were to ask the physician who wrote the prescription for permission to substitute A, B, or D for C—the reason for this being that the agent for C has recently visited the physician and has assured him that C is the original and only genuine preparation; its use is never followed by any untoward results, and it has in addition many and decided advantages over the numerous base and worthless imitations that the unscrupulous druggist is always ready to substitute for it. So that there is nothing left for the druggist to do but to lay in a stock of C, and thereby complete his line of this particular chemical, until some other enterprising manufacturer chooses to put the same thing on the market under still another name or title.

This is but one of dozens of similar instances that could be quoted, but is sufficient to call attention to the possibilities that may arise from this one particular phase of proprietary names. It is difficult indeed to suggest a remedy for this evil. Personal interviews on the part of the pharmacist subject him to being accused of being interested in one or the other of the cheaper preparations or substitutes. Some joint action on the part of different national associations might be feasible, but even this could hardly be made binding on their members. In the meantime there is probably nothing to do but to give the subject as much publicity as possible, with a view of calling attention to the injustice done to the public, and the actual menace that the practice must necessarily be to progress along professional lines.

ZINGIBER MIOGA.

C. Hartwich and J. Swanlund (Ber. d. Pharm. Ges.) describe the rhizome of *Zingiber mioga*, a plant cultivated in China and Japan and said to be very hardy. It differs in many respects from the official ginger. Its taste is less stringent and suggests bergamot. The shape of the starch grains is remarkable being greater in breadth than in length and having the hilum placed in a small projection from the broad side.

* Read at the Fifty-first Annual Meeting of the American Pharmaceutical Association held at Mackinac Island, Mich., August, 1903.

THEORY AND PRACTICE

THE ADMINISTRATION OF RADIUM AND THORIUM TO CONSUMPTIVES

Dr. Soddy (British Medical Journal, through American Journal) discusses the application of the elements radium and thorium to therapeutics. He states that a milligram of radium equals in radio-activity about a kilogram of thorium salt, but that the cost—about \$1000 of a kilogram of thorium nitrate, which can be obtained in ton quantities, is only two or three times as great as the cost of radium bromide. For medical application of the rays it is probable that the thorium salts can never be sufficiently powerful to replace radium in medicine. The following indirect method is therefore of interest. The cheapest and most convenient salt of thorium to employ is the nitrate, which is very soluble and is manufactured on a large scale in the Welsbach mantle industry. The salt is dissolved in water, the excess of nitric acid neutralized with ammonia, and the fairly concentrated solution placed in an ordinary gas-washing bottle, the vessel being filled as full as possible. This apparatus is used as an inhaler, a small caustic potash tube being attached to the outlet to remove moisture and prevent access of any unneutralized acid to the lungs. If large quantities are employed so that several bottles are required, these should be connected up in parallel and not in series. When not in use the inhaler is carefully closed by means of suitable stop-cocks to prevent the escape of the emanations, which are formed slowly. Inhalations are begun by drawing out a gas from a fairly large bottle containing 100 grains of thorium nitrate in solution. The mixture is retained as long as possible before being exhaled. If no evil effects follow the dose may be increased gradually until the entire gaseous contents of the bottle are taken into the lungs, a few bubbles at a breath, the treatment being repeated once every twelve or twenty-four hours. The powerful nature of the agent should, however, be borne in mind. The emanation from a few milligrams of radium bromide mixed with air glows quite brightly in a dark room. In an atmosphere containing oxygen the emanation possesses a powerful oxidizing effect upon carbonaceous matter.

CINNAMON CULTURE.

Stuhlman (Swiss Wochechr.) describes the method of cultivating cinnamon as followed in Ceylon. The industry is entirely in the hands of natives. The plant gives the finest product on the sandy soil of the coast region, but is also cultivated from the sea level up to a considerable altitude. Coast winds do not seem to injure the trees. The seeds are sown in beds and the seedlings set out about four to six feet apart, and when about two or three inches high the shoots are cut off. From the stumps a limited number of shoots are allowed to grow, a stump sixty years old bearing from six to ten. The shoots are cut off twice a year, the later crop yielding better cinnamon than that gathered earlier in the season. The shoots when gathered are deprived of leaves, and the upper thin portions used as "cinnamon chips" for the distillation of oil. The thicker portion of the shoots are then ringed in length of about two feet, and the bark slit longitudinally and removed with a knife. The outer bark is removed from the stems of bark with a sickle-shaped knife upon a wooden block. Several of the strips are then rolled inside another and the whole packed dry in cylindrical bundles.

PHOSPHORESCENCE OF COMMON SALT INDUCED BY RADIUM BROMIDE

W. Akeroyd (Nature) describes an interesting phenomenon easily performed at ordinary tempera-

tures and illustrating the curious property of radium salts of inducing phosphorescence in certain bodies. A wooden match-box is filled with table salt removed from the inner portion of a block, a tube containing radium bromide is pressed into the yielding mass and just covered with the substance. If it be now set aside for a few hours, say in a compartment of a chest of drawers, on opening the box in the dark the salt about the tube will be found to phosphoresce with a white light, but to glow zinc borate and barium platinumocyanide, the salt will continue to glow after the removal of the radium bromide tube. The portions of the salt around the tube are colored a faint buff or ochre tint.

BACTERIA WHICH YIELD THE FLAVOR OF STRAWBERRIES.

M. Lechholz (Schweiz. Wochehr.) has given the name *Bacterium papi* to an organism which he isolated from milk, which spontaneously developed the flavor of strawberries. It is one five-hundredth millimeter in diameter, has the power of movement, and in a number of different culture media it produces the taste of strawberries. It is propagated most readily on sugar of milk and gelatin, and peptonizes the albumenoids of milk. The aroma produced is most marked between the temperature of 14 and 18 degrees C., higher and lower temperatures retarding the action and higher than 75 degrees destroying the bacterium.

CASSAVA.

The Department of Agriculture of Jamaica has issued a bulletin describing seventeen species of cassava, a plant largely cultivated in tropical countries for its tuberous roots which serve as an article of food. The species vary considerably in the yield of tuber and the amount of hydrocyanic acid produced. The percentage of starch in the tubers was found to vary from 10.30 to 30.50 per cent. The poisonous, bitter cassava grown in Trinidad yielded .022 per cent of hydrocyanic acid, and the sweet variety .101 per cent, while the Colombian varieties yielded only one sixth of amount present in the Trinidad sweet cassava.

TANNATE OF PYRIDINE.

According to the Revue Pharmaceutique, tannate of pyridine is a uric acid solvent, which can also be employed as an intestinal astringent. It is prepared by pouring a solution of pyridine into a solution of tannic acid in excess, precautions being taken to prevent the rise of the temperature above 10 degrees C. The precipitate thus formed is washed with cold water and dried at a temperature of 20 to 25 degrees C. The product must be protected from the light.

EUMORPHOL.

Hirschhof (Journ. Pharm. d'Anvers) has given the name eumorphol to a serum obtained from rabbits and mice which have been kept for some time under the influence of morphine. It is claimed that an antitoxin is thus produced which not only serves as an antidote in opium poisoning but also offers a means for the treatment of the morphine habit. No symptoms either local or general have been observed after the administration of the serum.

PHTOOGONE.

Phtogone is described in the Bulletin Commercial as a mixture of 52 parts of acetic acid, 2 parts phenol, 2 parts menthol, 2 parts camphor, 2 parts oil of eucalyptus and 1 part oil of lavender. It is recommended as an antiseptic and for inhaling in certain diseases of the respiratory organs.

THE FAT ACIDS OF LECITHINE OF EGGS.

H. Cousin (Comptes rendus) has isolated from egg lecithine linoleic acid beside the fatty acids already reported, oleic, palmitic and stearic. The linoleic acid was precipitated from a saponified mixture of lecithine, with barium, and the remaining acids with lead salts.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

A Lot of Formulas.

(Z. G. J.) You should get a copy of the Era Formulary. Here are the formulas you request:
Cream of Roses.

Spermaceti	4 drams
Oil of sweet almond.....	2 ounces
White wax	1 ounce
Glycerin	4 ounces

Melt together the spermaceti, almond oil, and wax, with gentle heat and add the glycerin with constant stirring. Remove from the fire, perfume with oil of rose, and stir until cold.

Hair Oil.

Olive oil	32 ounces
Alkanet	2 ounces
Oil of lemon	1/2 dram
Oil of cinnamon.....	15 minims
Oil of cloves.....	15 minims
Otto of rose.....	5 minims

Color the olive oil by digesting the alkanet in it for an hour in a water bath, filter, and add the perfumes.

Face Powder.

Corn starch, 7 pounds; rice flour, 1 pound; powdered talc, 1 pound; powdered orris, 1 pound; extract of cassia, 3 ounces; extract of jasmine, 1 ounce. Mix.

Tooth Powder.

Precipitated chalk	4 ounces
Powdered myrrh	1/4 ounce
Powdered castile soap, white.....	1/2 ounce
Orris root	1/2 ounce
Oil of peppermint.....	q. s.

Sea Foam (Dry Shampoo).

Alcohol	7 ounces
Water	10 ounces
Ammonia water	1 ounce
Cologne	1 ounce
Tincture of green soap.....	4 drams

Use as a shampoo and wash off with clear water.

Fox Ointment.

(S. C. D.) A number of formulas have been published under the above title. One of them, contributed to the Bulletin of Pharmacy from your section of country (Minnesota) some months ago, follows:

Salicylic acid	1 part
Icthyol	2 parts
Bismuth subnitrate	2 parts
Starch	30 parts
Ointment of rose water.....	50 parts

It is said this formula was devised by Dr. Fox, the well-known dermatologist of New York, and is very largely used by some specialists in skin diseases. Creolin is sometimes substituted for the ichthyol. Another formula used in Massachusetts:

Salicylic acid	5 parts
Oil of eucalyptus.....	5 parts
Zinc oxide	25 parts
Starch	25 parts
Lard or simple oerate.....	40 parts

Some other formulas used by Dr. Fox in the treat-

ment of skin diseases were printed on page 350 of the April 2, 1903, Era.

Zinc Paste.

Mixtures of glycerin and zinc oxide employed with bandages are made after various formulas. Here are two of them: (1) Glycerin, 16 parts; starch, 8 parts; zinc oxide, 4 parts. Warm the glycerin and starch in a porcelain capsule until they form a jelly, and then stir in the zinc oxide. (2) Zinc oxide, 10 parts; gelatin, glycerin, water, of each, 30 parts. This constitutes the "zinc glue" recommended by Unna as forming a stiff surgical dressing.

Varnish for Paper.

(C. A. W.) A good varnish for paper and maps is made with gum mastic, 6 parts; sandarac, 3 parts, dissolved in a mixture of 3 parts of turpentine and 32 parts of alcohol. These ingredients, with the exception of the turpentine, are placed in a copper vessel tinned inside, and surrounded by hot water. The contents of the vessel are stirred for several hours until the gums are dissolved; the turpentine is then added, and the stirring continued an hour longer, after which the varnish is strained and set aside for use.

In attempting to varnish, the first and most essential operation is the proper sizing of the paper, as, if this be imperfectly done, almost any kind of varnish will penetrate the paper so as to make oil spots. Glue water of the proper consistency is the best protection against absorption of the varnish. It should be of the right strength, however. If, after being dried, the coating cracks in bending a corner of the paper, the solution of glue was not diluted enough. When dry the paper is coated with the above or any mastic varnish of the right consistency.

Another formula for a suitable varnish is: Gum mastic, 5 ounces; sandarac, 2 ounces; camphor, 1 ounce; alcohol, 95 per cent., 16 ounces.

Solution of Pepto-Manganate of Iron.

(M. M.) The following formula has been recommended for preparing a solution of pepto-manganate of iron:

(1) Dissolve 4 grams of citric acid in 500 Cc. of distilled water, and neutralize the solution with C. P. ammonia water.

(2) Dissolve 96 grams of iron peptonate, as fresh as possible, in 500 Cc. of distilled water.

(3) Dissolve 14.8 grams of manganese chloride in 500 Cc. distilled water.

(4) Add 30 Cc. of tincture of sweet orange peel, 15 Cc. of tincture of vanilla, and 10 Cc. of spirit of cinnamon to 500 Cc. of brandy, then add 500 Cc. of distilled water.

(5) Place 500 Cc. of distilled water into a suitable container, and add the solutions above indicated successively in the order in which they were obtained, shaking after each addition. The resulting solution is said to be a stable compound and may be kept without undergoing change.

Formaldehyde as Milk Preservative.

(W. D.) "Is the use of formaldehyde as a milk or cream preservative immediately dangerous, i. e., would one drop to a quart be apt to produce unpleasant symptoms?"

Probably not in the majority of cases. However, the use of formaldehyde as a milk preservative is opposed by physiologists and the food laws of the country generally. According to Halliburton, formaldehyde in a percentage of 0.5 renders gastric digestion almost impossible. Even in the small proportion formaldehyde is stated to be sometimes used in the milk trade, it greatly delays remnet action, and even minute quantities are said to produce injurious effects on the activity of the enzymes concerned in ordinary digestion. Under these circumstances it is obvious that formaldehyde should not be used as a preservative. Cold storage is preferable.

CARL ENGEL, Manhattan, Kansas.

Carl Engel was born in 1841 in Zorndorf, Neumark, Brandenburg, Germany. After attending the village school for six years his father's family emigrated to Watertown, Wis. When Fort Sumpter was fired upon he enlisted in the First Wisconsin Infantry, but, being under age, his father took him back to Watertown. 1864 found him working on the "Westliche Post" at St. Louis. The next year found Carl foreman and reporter on the first German daily published in Kansas. In 1866 he went to Manhattan, Kan., where he married and lives at the present time. About eighteen years ago he went into the drug business, and, in 1896, organized The Carl Engel Mercantile & Drug Co., the stockholders being members of the family, which consists of his wife and four sons and four daughters. He and two sons are registered pharmacists. The great Kansas flood last Spring found him at Chanute attending the annual meeting of the Kansas Ph. A., of which he is second vice-president. He managed to get home—traveling by rail, wagon, horse-back, on foot, and finally in a boat from the hills surrounding Manhattan. He brought the first news to Manhattan from the outside world after the flood. He found his store—along with two-thirds of Manhattan—under water. The "Grass-hopper Year" of 1872 was not in it. But after much hard work and expense he is again doing business at the same old place. At the age of fifty-nine he takes a six-mile walking exercise every day.

Hypodermic Tablets.

(N. I. G.) Hypodermic tablets are made with a basis of granulated sodium subphosphate, or cane or milk sugar the first named, according to MacLewan ("Art of Dispensing") being the best. Other diluents are used, sodium acetate being recommended for diluting morphine acetate.

According to Coblenz hypodermic tablets are made with cane sugar only, moistening with alcohol and using as lubricant a pure finely powdered boric acid, about 1 per cent being sufficient. The quantity of powdered sugar used depends upon the size of the tablet that is to be used, usually 50 to 75 grains are sufficient for one tablet. The tablets are made in the ordinary hard rubber moulds, the perforations being usually $\frac{7}{16}$ inch in diameter and $\frac{1}{16}$ to $\frac{1}{8}$ inch in depth. The product produces a tablet that can readily be placed in the ordinary hypodermic syringe, in which it is quickly dissolved upon addition of ten or fifteen minims of water and subsequent agitation. Sodium sulphate may be used as a diluent for cocaine sulphate.

Substitutes for Male Fern.

(N. I. G.) "What substitutes does the market supply for male fern?"

The rhizomes of other ferns, as *Oncoclea sensibilis*, are sometimes substituted for those of *A. Filix mas*. These substitutes may be usually known by the much smaller diameter of the rhizome proper, even when the attached stipes make them appear as thick as the genuine male fern. Flückiger and Hanbury ("Pharmacographia") state that as substitutes the rhizomes of *Asplenium Filix foemina*, *A. pidium Montanum*, Vogl., and *Aspidium spiculiforme* may be scarcely mistaken for those of *Filix mas*, and "practically no other indigenous fern than *A. Filix mas* affords a rhizome of sufficient bulk so as to be remunerative."

Ginger Ale Extract.

(W. McL.) See formulas, this journal March 19, 1903, page 299. A flavor of coriander or cardamom may be obtained by adding to the extract a suitable amount of oil of coriander dissolved in a little alcohol or tincture of cardamom, or, coriander or cardamom seeds may be employed in making the extract. Here is a formula for an

Aromatic Ginger Ale Essence.

Cinnamon bark	1 ounce
Cloves	3 drams
Cardamom seeds	$\frac{1}{2}$ ounce
Capsicum fruit	1 dram
Soluble extract of ginger	2 pints

Macerate four days and filter. Color with caramel.

Manufacture of Petrolatum.

(N. I. G.) "Soft" and "hard" petrolatum are both stated by the U. S. P. to be "mixtures of hydrocarbons, chiefly of the marsh-gas series, obtained by distilling off the lighter and more volatile portions from petroleum, and purifying the residue when it has the desired melting point." They are manufactured on the large scale by the filtration of oil residuums through heated bone-black. The process is described in most of the works on technical chemistry.

Coloring Paraffin.

(W. K.) Paraffin may be tinted red by first melting it and then adding eosin, alkannin, safranin or some suitable aniline dye. For blue use induline, 6 B., an aniline dye used for coloring ointments, soaps, candles, pomades, etc. A few experiments should enable you to determine the amount of dye necessary to produce the desired tint.

Weight of Linseed Oil.

(W. D.) The actual weight of a gallon (231 cubic inches) of linseed oil, sp. gr. 0.930 (U. S. P.), ordinary temperature, is 7,749 pounds (av.). In the trade, however, linseed oil is sold on the basis of 7 $\frac{1}{2}$ pounds to the gallon. This equivalent is sometimes referred to as the "commercial weight" of linseed oil.

Love Powders.

(Z. G. J.) Love powders are usually harmless substances, such as powdered sugar of milk, gum arabic, etc., which are sold by druggists who can stretch their conscience sufficiently to impose upon their customers.

Sweetened Castor Oil.

(S. C. D.) Saccharin is usually employed as the sweetening agent in the preparation of the so-called "sweetened" castor oil. For formulas see Fra of June 18, 1903, page 626.

Elixir Lactated Pepsin.

(J. M. T.) A typical formula under the above title is the "compound digestive elixir" of the National Formulary. Other formulas have been published in previous volumes of the Fra. Consult the indexes.

NEWS DEPARTMENT.

N. W. D. A. AND P. A. OF A. IN BOSTON.

Joint Meeting of Wholesale and Manufacturing Druggists Opens Under Most Favorable Auspices—Weather Superb—Arrangements Admirable—First Day Spent in Seeing Harvard and Getting Settled—Second Day Given Over to Routine Business—N. W. D. A. Officers for Ensuing Year.

Boston, September 9.—This self-sufficient town professes to dislike conventions, but its citizens possess such civic pride that when associations do select Boston as a place of meeting, they surpass in hospitality all other cities in the country. Such is the verdict of the delegates to the National Wholesale Druggists' Association and the Proprietors' Association of America who have been foregathering at Hotel Somerset here by the train-load, from all parts of the country since the joint convention opened on September 7.

New England, as if in sympathy with the wishes of its inhabitants, put on its very best appearance. Bright Italian skies and tempered breezes brought out most effectively imposing buildings and picturesque landscape, and rendered it equally enjoyable to exert one's self in the way of duty or to saunter under historic elms. The committees of arrangements headed by Charles F. Cutler and C. G. Stone, prepared a program which fills the week with alternate business and pleasure, in a manner that leaves not a moment unemployed for either pleasure or profit.

Monday was given over to pleasure. Early in the morning a party visited Harvard, 110 going in drags and tally-hos, barges and carriages. The students guided them through the classic shades. It was a merry party, and it got back barely in time for lunch.

Late in the afternoon tea was served in the parlors of the Somerset. The ladies of the receiving committee were Mrs. W. H. Hoyer of Denver, Mrs. C. C. Goodwin of Boston, Mrs. C. A. West of Boston, and Mrs. Charles F. Cutler of Boston. In the center of the parlors, a huge round tea table was set, and Mrs. Edgar F. Taylor of Richmond, Mrs. George F. Kellogg of Boston, Mrs. William O. Blanding of Providence, and Mrs. Clarence W. Fox of Boston poured. The room was set with palms.

That night the convention scattered about the city somewhat, and those who remained at headquarters indulged mainly in getting acquainted all over again.

The first business session of the N. W. D. A. was held in the Hotel Somerset yesterday morning. The Proprietary association also held its first session, although at a different hour. Both associations met together for the welcome, which was given by President Arthur W. Dolan of the common council.

President William A. Hoyer presided at the N. W. D. A. meeting. Charles F. Cutler of Boston, chairman of the committee on arrangements and entertainment, spoke briefly of what had been done for the comfort and pleasure of the visitors. Greetings and responses followed. M. Cary Peter of Louisville, responded in behalf of the association. A delegation consisting of Dr. V. Mott Pierce of Buffalo, R. E. Queen of San Francisco, and E. C. DeWitt of Chicago, was announced from the Proprietary association and Dr. Pierce spoke briefly, C. F. Shoemaker of Philadelphia, responding.

Henry Canning of Boston, representing the A. Ph. A., brought greetings from that body. The other delegates were A. L. Dickinson of Danbury, Conn.; W. D.

Wheeler of Boston, F. A. Jackson of Woonsocket, and F. H. Butler of Lowell. Thomas H. Main of New York, made the response.

Robert K. Smith, S. Charles Rehffuss, John C. Gallagher and Thomas V. Wooten represented the N. A. R. D., and Mr. Smith voiced the greetings of the 40,000 retailers which that association represents. M. N. Kline of Philadelphia, responded. C. F. Shoemaker of Philadelphia, brought the greetings of the Pennsylvania P. A. and William J. Walker of Albany, responded. Other pharmaceutical associations in New Jersey, Minnesota and Virginia presented credentials and extended greetings. President Hoyer made his annual address, followed by the reports of secretary and treasurer.

These are the nominations for officers of the N. W. D. A., for the coming year: President, C. F. Shoemaker, Philadelphia, first vice-president, M. Cary Peter, Louisville; second vice-president, Fred L. Carter, Boston; third vice-president, C. F. Michaels, San Francisco; fourth vice-president, James S. Morrisson, Chicago; fifth vice-president, A. D. Parker, New Orleans; secretary, J. E. Toms, Indianapolis; treasurer, S. E. Strong, Cleveland; chairman board of control, Lucien P. Hall, Cleveland.

The annual meeting of the P. A. of A. was called to order by President Herbert B. Harding of New York. In his annual address he called attention to the fact that at this present meeting the association had attained its majority. Of the 97 members who, in 1882, formed the association, only 30 now remain. He told of the first proprietary articles produced in this country, which sold for the sum of \$10 a bottle. President Harding's only recommendation was that the association memorialize Congress for a reduction in the tax on alcohol.

The report of the committee on trade interests, made by A. M. Hance of Philadelphia, was then read. He said that the chief feature of the year was the further development of drug departments in the great department stores and the continued advertising of cut prices, coupled oftentimes with the statement that the goods were bought direct from the manufacturers, which had a very disturbing effect upon the retail trade. He said that in very few instances, if any, were such claims correct. There had been fewer attempts at mischievous legislation, but he urged vigilance on the part of the association.

For the rest of the week, until Saturday night, the program is full, although most of the business will be finished Thursday. A list of those in attendance, as nearly complete as is at the present time possible, is appended. The names are printed as they were registered, some registering from their home city and others from the city containing their firm's headquarters:

NEW YORK.—R. D. MacLeod, A. J. Mausell, George R. and Mrs. Hillier, H. and Mrs. Schweitzer, Thomas F. Main, W. R. and Mrs. Robinson, C. S. and Mrs. Littell, W. N. Janvier, Thomas P. Cook, William James Evans, Henry Thornton, G. A. and Mrs. Fuller, H. J. and Mrs. Schell, W. O. and Mrs. Allison and Mrs. K. F. Allison, W. S. Douglass, E. G. and Mrs. Wells, S. Bigelow Haley, J. H. and Mrs. Stallman and the Misses Adele and Charlotte Stallman, A. A. and Mrs. Stilwell, E. W. and Mrs. Fitch, R. M. and Mrs. Hartwell, B. and Mrs. Lillard, H. T. and Mrs. Jarrett, O. Loretieri, Mrs. Kiecklaff, C. H. and Mrs. Ersie Camp, R. L. Tye, A. Van Zwilnburg, Herbert B. Harding, Thomas M. Curtiss, Joseph Leeming, C. W. Griffith.

ROCHESTER.—W. P. Anderson, A. G. and Mrs. Richardson.

ELMIRA, N. Y.—W. S. and Mrs. Gerity, M. F. Gerity.

BALTIMORE, N. Y.—E. N. Rowd, C. H. Rapprecht.
 BARNHARTMAN, N. Y.—E. L. McLean, C. McKellar.
 BIRNEY CITY, Mo.—L. C. Gallagher.
 BIRY, N. Y.—C. J. Mrs. and Miss M. E. Polk;
 J. E. and Mrs. Perry, F. W. Schneider.
 ALBANY—William J. Walker.
 NEW LEBANON, N. Y.—J. H. and Mrs. Cox.
 BELLEVILLE, Dr. V. Mort, Pioneer, Robert K. Sisson.

BOSTON.—John A. Gilman and Mrs. and Miss G. Anne Charles C. Goodwin and Mrs. Goodwin, Charles F. Kedge, J. F. Curvey, E. L. Surtivant, Howard S. Mrs. and Miss Mildred Fowle, W. J. and Mrs. Norcross, S. A. and Mrs. Tuttle, E. M. and Mrs. Overholser, Samuel A. and Mrs. Neill, F. L. and Mrs. Carter, Gustav Martin, M. W. Jessly, W. W. and Mrs. Cutler, S. W. Fowle, J. E. and Miss Mages, R. P. and Mrs. Houghtland, E. G. and Mrs. Foster, F. A. and Miss Davidson, Benjamin and Mrs. Levy, Charles F. and Mrs. Cutler, Charles A. and Mrs. West, George F. and Mrs. Cutler, B. Jenney, Jr., and Mrs. Jenney, E. F. Billings, C. W. and Mrs. Fox, Mrs. George Cutler, Mrs. R. L. Richardson, Miss L. B. Conn, Mrs. R. C. Fultz, Miss E. A. Kellogg, Miss G. M. Finch, Miss Davidson, Henry Canning, W. D. Wheeler.

LOWELL, MASS.—A. D. Sargent, C. J. and Mrs. Hood, F. H. Butler.

WILMUNSCHEP, Mass.—F. A. Jackson.
 LYNN, MASS.—A. W. Pinkham, C. M. P. and Mrs. Hunt, William P. Gove, Mrs. Lydia P. Gove, Mrs. C. H. Pinkham, Miss L. E. Pinkham, Miss M. P. Pinkham, W. H. and Mrs. Gove.

PHILADELPHIA.—W. W. and Mrs. Jayne, Charles A. and Mrs. Loring, P. R. and Mrs. Lance, William R. Warner, Jr., Mrs. Warner and the Messrs. Albert and Blanche D. Warner, M. N. and Mrs. Kline, J. C. Robinson, C. F. Mrs. and Miss Janie Shoemaker, C. S. and Mrs. Jones, J. M. Baird, Walter V. and Mrs. Smith, Adam P. Fromm, John and Mrs. Gleichmann, R. S. Pettet, William R. Warner, 3rd., S. Charles Rehfuss.
 AMBLER, PA.—H. V. and Mrs. Everham.

CHICAGO.—Romaine Pierson, Harry A. and Mrs. Antrim, C. Henry Cutler, Frank M. Bell, James W. Morrison, P. S. Herold, C. C. DeWitt, Thomas V. Wooten, E. F. Van Alen.

GRAND RAPIDS, MICH.—John M. and Mrs. Hindman, H. B. Fairchild.

DETROIT.—Sydney H. Carragan, Fred M. Odenn, George S. Mackay.

CLEVELAND.—Lucien B. Mrs. and Miss Amey E. Hall; W. A. Harshaw, Frank S. Henry, A. E. Whitney, L. L. and Mrs. Pope, E. L. Strong, Mrs. M. E. Harbaugh.

COLUMBIUS.—George W. Lattimer, E. C. and Mrs. Derby, F. W. Schumacher.

CINCINNATI.—W. Howard and Mrs. Oglorn, A. H. and Mrs. Evans, C. G. Merrill.

TOLEDO.—R. H. Bradley.

MILWAUKEE.—J. R. and Mrs. Kathrens, E. F. and Mrs. Yahr, Eugene T. Fabius.

MONTREAL, CAN.—Thomas and Mrs. Reid.

INDIANAPOLIS.—John N. and Miss Carey, C. J. Lynn, Joseph E. Tomp.

ELKHART, IND.—A. H. and Mrs. Beardsley, F. K. Fernald.

KANSAS CITY, MO.—H. W. Mrs. and Miss C. Evans; J. A. Gallagher, John P. and Mrs. Cobb, Miss C. M. Cole.

ST. LOUIS.—Theodore F. and Mrs. Meyer, Clarence G. Stone, A. C. Roper.

KNOXVILLE, TENN.—D. C. Chapman.

ATLANTA.—W. D. and Mrs. Lamar; A. M. Reid, Mrs. J. W. Rankin.

BALTIMORE.—James G. Stanley, Julius Forester, A. L. and Mrs. Carter, H. F. Baker.

LOUISVILLE.—M. C. Peter, C. C. Stoll, Charles P. Harlow, Charles G. and Mrs. Pickett, George A. and Mrs. Newman, C. D. Wallbridge, Charles P. Barden.

NELSON, KY.—J. N. and Mrs. Cole.

DENVER.—W. A. and Mrs. Hover, Tracy Hoover, BES MOINES, IA.—D. S. Chamberlain.

PORTLAND, ME.—Albert H. and Mrs. Hinds, E. A. and Mrs. Hay.

PROVIDENCE.—W. O. and Mrs. Blanding, Allen C. Blanding, A. W. and Mrs. Chaffin, Mrs. S. J. Briggs.

DANFORTH, CONN.—A. L. Dickinson.

RICHMOND.—A. J. Cavanaugh, Edgar D. and Mrs. Taylor.

SAN FRANCISCO.—C. F. Michaels, R. E. Queen.

OMAHA.—C. F. Mrs. and Miss Agnes Weller.

SPARTANBURG, S. C.—W. S. Tolleson.

NEW ORLEANS.—A. D. Parker.

CHARLESTON, W. VA.—A. C. Jeffords.

MINNEAPOLIS.—H. H. Engel.

DALLAS.—L. W. Leckband.

COMMERCIAL TRAVELERS

Enos Isham Dies at Railway Station.—Siller gets new Trial in His Damage Suit.—Several Changes.

A. E. Rennie, Chicago, manager for William R. Warner & Co., spent his vacation among the pine woods of Michigan. He took his grip, a couple of baskets of frogs and a lot of fishing tackle along. These were all that appeared on the schedule exhibited and sworn to as complete by Mr. Rennie. He frequents the same haunts each year. The principal point of vantage is that these haunts are fifty miles from doctors or druggists.

O. A. McNichol, who has represented Eli Lilly & Co. in Pittsburg territory for a number of years, has severed his connection with that concern in order to take up the study of medicine.

W. D. Lawton of Topeka, the popular salesman for the McVikes of Atchison, has resigned his position to take "something better" in New York.

C. W. Wilkins, who makes Northeastern Kansas for Nelson, Baker & Co.'s Kansas City branch, and P. S. Senton, who does Southeastern Kansas for the same house, are back from their trip to Detroit in their territory again.

Herman Ficke, formerly clerk with Zoeller, Jersey City, and later traveler for Bruen, Ritchey & Co., is now telling his customers that he is a Frederick Stearns & Co. man.

Enos Isham of Sacramento, Cal., a very popular commercial traveler for the Langley & Michaels Co., San Francisco, dropped dead at the Southern Pacific depot in Sacramento of heart disease. He was standing with friends and about to board a train when he suddenly fell, and, before medical aid could be summoned had passed away. A widow survives.

Dr. P. Whitney Davis, of William R. Warner & Co., has been transferred from Northern Jersey to Brooklyn. Dr. Morgan still covers Southern Jersey.

Eli Lilly & Co. have placed C. M. Raymond, formerly with Mulford, but lately with the medical end of Lippincott's publications, in Boston, succeeding E. F. Griffith, who leaves the firm. G. W. Cate, the Providence and vicinity man, is succeeded by F. H. Bentz, formerly a clerk in Elkhart, Ind.

Charles Siller has secured a new trial in his action for \$25,000 damages against the Bath & Hammondsport R. R., on the ground that the court mischarged the jury in the first trial. It was shown that the village of Bath had secured an injunction against the railroad preventing it from running trains through the streets at a speed of more than six miles an hour. The engineer of the train that cut off one of Mr. Siller's arms, testified that he was moving at a speed of 25 miles an hour. The new trial, it is thought, will result in a victory for Mr. Siller, who as a drug salesman, for Bruen, Ritchey & Co. of this city, is a well-known man.

VERY SPECIAL

A limited number of live druggists in the larger cities will hear of an attractive proposition, by communicating with

J. N. FERRER

P. O. Box 71.

NEW YORK CITY

NEW YORK AND VICINITY.

KINGS COUNTY PH. SOC. HAS NEW SECRETARY.

Because of his selection to succeed the late Dr. John Frederick Golding as professor of toxicology and assistant in theory and practice of pharmacy at the Brooklyn College of Pharmacy, Dr. Frederic P. Tutthill handed in his resignation as secretary of the college and of the Kings County Ph. Soc. on Tuesday, at the first meeting of the society after the summer vacation. There is an unwritten law that no officer may be at the same time a member of the faculty. Andrew E. Hegeman was unanimously elected from the second vice-presidency to the secretaryship and J. H. Rehfuss was elected second vice-president.

The resolutions passed by the faculty and endorsed by the society at Dr. Golding's death, beautifully engrossed and framed, were presented by the committee.

Drs. William Muir and William C. Anderson reported as delegates to the State Ph. A. and Dr. Anderson as a delegate to the A. Ph. A. Dr. Anderson said that, as president of the State association he has adopted a provision in the by-laws that the trades interest and membership committees may have the same members. An aggressive campaign for members will be made by these committeemen, who are appointed from different sections of the State.

Thomas E. Burchell and Edward William Steinicke were proposed for membership and John A. Roeder and Frederick C. Schmilbe were elected new members.

Dr. Tutthill has brought more members to the society than any other one member. His work during his nearly five years as secretary has always been enthusiastic, business-like and capable. On Dr. Muir's motion \$50 was appropriated to engross suitable resolutions of the society's esteem to be presented to him. They will be signed by a committee of fifteen, appointed from different sections of the city by President Kleine, and by the officers, ex-officio.

NICE WAY TO FILL PRESCRIPTIONS.

Occasionally—more frequently of late—when a physician finds one of his prescriptions filled in a manner that does not please him he goes to the board of pharmacy with it. Then the board gathers another sample and the druggist pays a penalty.

One of these displeased physicians brought a supposed bottle of iodoform to the board the other day. His analysis of the real contents were borne out in the analysis made by the board of both the physician's bottle and a sample taken from the druggist's shelf. They found that 55 per cent. of the contents were a mixture of lycopodium and other drugs.

In the same way another physician submitted a bottle of supposed bismuth subcarbonate. In analysis it proved to be pure precipitated chalk. The druggist at first denied the condition when accused by the board. Then he admitted it. But he asserted that precipitated chalk was just as good. "Yes, and it is only 36 cents a pound, while bismuth sub-carbonate is \$2.50 a pound," retorted a member of the board. "You fellows are mighty careful not to give a more expensive article than the one called for. Had that prescription been for precipitated chalk and you had, by mistake, used bismuth sub-carbonate, you would have sent in a panic for its return."

William Kaiser, 2386 Third avenue, and Dr. A. L. Goldwater, the latter on five charges, were defendants in board cases in court last week. Dr. George Ferguson, the chemist of the board, had not returned from his vacation, and the judge refused a postponement, throwing the cases out of court. There is much

inflammation because of this, as the board is a State body and should be accorded at least the scant courtesy that other litigants receive. The defendants were looked out for by a great array of legal talent, including Mazet inquiry lawyers.

TO TEST OWNER'S RESPONSIBILITY.

The board of pharmacy is watching with interest the outcome of an action brought by the board through Excise Commissioner Patrick W. Cullinan against John F. Burkhard, pharmacist at 680 South avenue, Rochester. Similar actions may be brought in other parts of the State if the decision in this case is favorable to the State. The point at issue is whether or not the proprietor of a drug store can be held responsible for the illegal acts of a clerk, when the clerk in question is acting against the orders of the proprietor.

It appeared from the evidence in the case that a trap was laid for Mr. Burkhard, and that the clerk fell readily into it. Henry C. Adeo, an agent of the State department, called at Burkhard's, and, in the absence of the proprietor, purchased a half-pint of brandy without a prescription. Immediately a charge was made against Mr. Burkhard and none against the clerk. Justice Davy took the position that the defendant Burkhard could not be held responsible, inasmuch as the agent was not acting in the capacity of agent or employee of the druggist when he did something the plaintiff swore he told him not to do. The excise department, through its lawyer, Albert O. Briggs, made a motion for a new trial, which has not yet been granted.

DRUGGIST DIES FROM SLEEPING DOSE.

William Weltwitz, aged seventy, for thirty-five years a druggist at 110 First avenue and a member of the German Apothecaries' Society died at Bellevue Hospital from morphine poisoning.

The druggist's wife was summoned home from Bath Beach, where she was spending the summer. She insisted that her husband go to the hospital. Before he left the drug store for the hospital the druggist was made a prisoner by Policeman Abouz W. Meyers who got it into his head that Mr. Weltwitz had meant suicide.

The clerk said there was no suicidal phase about the case. He said that Mr. Weltwitz, in trying to get his usual nap, took a sleeping powder, which had a little too much effect.

It was later reported in the Yorkville Police Court that Mr. Weltwitz had committed suicide. He had been arrested on evidence obtained by an agent of the New York County Medical Association, who had employed a young woman to purchase the forbidden drug from Augusta Dundeck of 39 East Seventy-seventh street. The evidence apparently implicated Weltwitz, as both were arrested. Mr. Weltwitz was on parole that he might obtain a bondsman when his death occurred. The woman was examined on Wednesday.

GUARDSMEN THREE.

On this page are pictures of three gentlemen who give weight to the purposes and life to the Rochester P. A. In the midst of this type is Fred W. Fickett, the president. John A. Vanderbelt is the first vice-president and William T. McRay is secretary. They are all pharmacists, live men, very good fellows, and the association is properly complacent in possessing them. Their association is a practical one and is noted also for its social affairs.

FRED W. FICKETT.

NEW YORK NOTES.

—Some town arrivals: E. A. Tolbot, buyer for the Braun & Ferguson Co. of El Paso, Tex.; Joseph F. Delaney, McKinney, Tex.; Gus. Katz, New Orleans; Edward J. Aul, Pittsburg, who is enjoying ocean breezes at Atlantic City; Frank I. Adams, Frank I. Adams & Co., Amsterdam, N. Y.; C. E. Roseman, manager of Gem Pharmacy Co., Cleveland; Mr. Rourke of Rourke Bros., Binghamton, N. Y.; Mr. Crutchfield of the Crutchfield-Tolleson Drug Co., Spartanburg, S. C.

—Drug Trade Club guests: J. M. Kessler, Philadelphia; P. Strange, London; W. D. Eastland, Oklahoma City; A. H. Rohrer, San Francisco; A. Schoonmaker, Chicago; J. H. McNulty, London; G. W. Ganong, M. P., Ottawa, Can.; Wendell J. Wright, Demorest, N. J.; Newton C. Smith, Waterbury, Conn.; Aaron Lucas, Norwich, Conn.; Lucus Gardiner, Short Hills, N. J.; C. E. Weller, Omaha; W. G. Tolleson, Spartanburg, S. C.; J. C. S. Northern, Boston.

—The Wood Products Co., at a recent meeting of the officials in Buffalo, decided to reduce the price on wood alcohol to 50 cents a gallon. This decrease will bring the price of wood alcohol to a lower figure than it has ever before been sold for, the reduction being made necessary in consequence of a large over-supply, according to a Pennsylvania newspaper, on the authority of Felix Stemberger of Bradford, one of the directors of the company.

—Bauer & Black are now installed in their handsome new quarters in William street. A. N. Alexander, formerly the city manager, is now drumming New Jersey and is succeeded by H. S. Edgerly, who comes from the West. H. R. Engle of Chicopee Falls, Mass., and F. A. Kelsey of the Chicago office, are new to the local office force. R. A. Jackson, the Jersey man succeeded by Mr. Alexander, left the firm's employ and has gone to Chicago.

—In fainting condition and suffering with acute heart disease, William A. Stone, a druggist, was arrested and taken to the West Side Police Court Monday for refusing to assist Patrolman Edward O'Neill of the West Forty-seventh street police station in handling a drunken man. Later Stone was removed from the station to Roosevelt Hospital. Stone is 41 years old, and lives at 363 Alberton avenue.

—Caleb E. Morris, who has been with Chuldbuck at Breezeway Beach all summer, will be back in Brooklyn next week. Nelson S. Kirk, druggist in Rededge street, Brooklyn, has been opening bottles of ginger ale (3).

Nelson Douglas Kirk, three weeks old Monday, was the cause.

—Dr. T. C. Lippman, employed at Miller's pharmacy, Eighty-third street and Amsterdam avenue, who graduated from Cornell Medical College this summer, will open an office at 200 West Eighty-third street. He is succeeded by C. L. Doty of Newark, N. J.

—Druggists along the subway are the only ones who tell of better trade. That is because the torn-up condition of the streets, now almost remedied, had completely demoralized their trade for many, many months.

—Frank W. Faulke, who has for the last twenty years been connected with the jobbing drug trade of Baltimore, has been placed in charge of their Eastern territory by J. L. Hopkins & Co., of this city.

—Roessler & Hasslacher obtained a judgment for \$68 against Charles H. Pleasant, 61 West Houston street. The National Drug Co. received a judgment for \$238 against Edward Parrish.

—Walter Lamar of the Lamar, Taylor & Riley Drug Co., Macon, Ga., and Mrs. Lamar were New York visitors. They have been on a vacation trip and may go to Boston before returning home.

—F. Avignone & Co. have temporarily removed a half block away from their corner at McDougal and West Houston streets, pending erection of their new building.

—Henry P. Crosher, bachelor of swindling of this city, it is recorded, has a judgment against him in the sum of \$48, procured by W. H. Kenzel, the face powder man.

—The Apothecaries' Bicycle Club will run to Babylon, L. I., today, meeting at the East Thirty-fourth street ferry at 9 o'clock. Next week the run will be to Lakewood.

—Harry A. Leonard, with Lamb's pharmacy, Brooklyn, was operated on last week for appendicitis, at the Smith infirmary, Staten Island.

—Thomas F. Raynow will open a pharmacy at Coney Island avenue and Beverly road, Brooklyn.

—M. Brandt has sold his store at 423 Second avenue to Henry Guelmann.

—A. H. Solotaroff has bought out Moses Squirsky at 71 Broome street.

AT ROCHESTER.

—The Rochester Ph. A. monthly meeting on Friday afternoon was well attended, with President Fickett in the chair. The price committee, Elmer E. Chissell, chairman, reported that a complete canvass had been made of the druggists of the city and that the attempt to secure the assistance of all to join in a movement for the reduction of prices on tooth and talcum powders had been unsuccessful. Duke & Co.'s large drug store

Wm. T. McRay.

J. A. VANDERBELT.

on Main street east, had "held up" the movement by refusing to sell at a profit. It was the purpose of the association to get twenty cents rather than the cost price of eight cents for these powders. It was decided not to send a delegate to the N. A. R. D. at Washington. The association is entitled to one delegate.

—"This is getting to be a trading stamp town once more," remarked a druggist the other day. "One thing is sure—they won't catch me again. I was in it once and I got all I wanted. Besides its being a nuisance I had to give stamps to old as well as new customers. I lost 20 per cent. on my sales and I don't believe the new business amounted to 5 per cent. It was shown to me as a great trade bringer, but I wish to say unhesitatingly that it was a farce and a fraud."

—C. H. Ven Nest, secretary of the R. J. Strassenburgh Co., is recreating at Long Pond on Lake Ontario. Vice-President H. F. Snyder is at the Toronto fair, as is also Manager F. M. McIntyre, of the retail store.

—Mr. Houghton, a part owner of the store of Strassenburgh & Houghton, is slowly recovering from a serious illness that has kept him away from business this summer.

ROUND ABOUT BUFFALO.

—Joseph M. Schmitt, who was for years in the employ of Stoddard Bros., and was winner of the Peabody prize at the University of Buffalo last year, has bought the drug store of W. R. Joseph, 650 Jefferson street. Mr. Joseph is going out West, where his folks reside, as chemist with a large manufacturing concern. Mr. Schmitt has made extensive alterations in the store and, as he is well known in that vicinity, his future looks very bright.

—Buffalo druggists were well represented at the reunion of the Knights Templar at Buffalo on last Tuesday. Among the out-of-town druggists in line were: J. B. Todd, Ithaca; J. C. Kruger, Salamanca; F. W. Palmer, Jamestown; R. J. Strassenburgh, Rochester. The Buffalo druggists in line who are Sir Knights were: H. J. Dimond, G. H. Thompson, C. N. Riggs, W. C. Dambach and George Reimann.

—In the Twenty-first ward Republican political sentiment seems to be almost unanimously in favor of the nomination of Supervisor James A. Menzies as the Aldermanic candidate in place of the late Frank Maischoc. Supervisor Menzies has represented the Twenty-first ward in the county legislature for the last 12 years. He is a druggist.

—Councilman and Druggist Thomas Stoddard has returned from his home at Magnolia Beach. He immediately announced his positive declination of the Republican nomination for city treasurer. He is as brown as a berry from his vacation, a little of which he spent in inspecting Boston's garbage plant.

—Michael J. Fitzmorris, formerly with Faxon, Williams & Faxon, is now with Stoddard Bros. Clarence E. Walters, formerly with T. S. Wilson, is now with E. H. Breckon, Military road. Henry Bloch, formerly of Brooklyn, is now with H. A. Dado, 408 Clinton street.

—The meeting of the Erie county Ph. A., called for last Wednesday for the annual election of officers and customary business matters, has been postponed until later in the month; date to be announced.

—William A. Fahrenwald has assumed charge of the pharmacy of Cole & Merriam at Niagara Falls.

FROM JERSEY TOWNS.

—At Trenton Vice-Chancellor Reed filed an opinion in the suit of the Ocean City Association to prevent Druggist William W. Chalfant of Ocean City, from selling soda water, candies and like merchandise on Sunday. The bill of complaint was dismissed on the ground that the complainants had waived their right to equitable assistance. The purpose of the suit was the enforcement of a restrictive covenant made by the association, which purchased several thousand acres of land on Peck's Beach and laid it out as a religious seaside resort, incorporating in all deeds that no business of any kind should be carried on on Sunday.

—In their second base ball game the Bayonne druggists were defeated by the Elizabeth druggists by ten to eight. The rubber will be played this month at Bayonne. The Bayonne team was sadly handicapped by the absence of Charles H. Landell and John Burchill, the places being filled by clerks. The proceeds went to the Elizabeth hospitals.

—John Doyle of Perth Amboy, has brought suit for \$10,000 against the Roessler & Hasslacher Chemical Co., alleging that his health has been injured by the noise and fumes which accompany work at the company's plant in that city, particularly at night. He lives across a narrow street from the plant.

—Atlantic City has gone after the druggists again and this time eight of them were fined \$150 apiece for selling liquors in flasks without having a city license. It will be remembered that they were arrested a few weeks ago on the same charge but were released because of a flaw in the warrants.

—Six men were injured in an explosion of a boiler in the rear of the chemical establishment of the Hanson & Van Winkle Co. at 219 Market street, Newark. Had the explosion occurred a few minutes earlier several would have been killed. The engineer died from his injuries.

—Several big groceries and a drug store or two in Paterson are in trouble on the alleged charge of selling liquors illegally.

—The Whittall, Tatum Co. will use gas in their glass factory at Millville this winter instead of wood, coal or oil.

—Bert Tiller, the Jersey City druggist, has gone on a two weeks' vacation.

Powdered and Ground Drugs for Percolation.

The attention of our readers is called to the advertisement of Gilpin, Langdon & Co., which appears upon the inside front cover of this issue. For many years this firm have been headquarters for powdered and ground drugs for percolation, and as they are so well and favorably known to the majority of the drug trade it is hardly necessary to say anything about the quality of their products, but for the benefit of those who have recently begun to do business we will just say, that if they want the finest quality of powdered and ground drugs for percolation, the kind that may be depended upon to produce standard preparations and correct results, the same may be secured from Gilpin, Langdon & Co., Baltimore, Md. Price lists are furnished to any one desiring goods of the above named quality.

NEW ENGLAND.

FOR HIGHER EDUCATION.

President Root of the Vermont Ph. A. Wants High School and College of Pharmacy Diplomas for Druggists.

Burlington, Vt., September 8.—The tenth annual meeting of the State Ph. A., took place in this city last week and was more largely attended than have been most annual meetings. Mayor James E. Burke gave a most cordial address of welcome to the visiting druggists, to which H. C. Pierce of Barton, ably responded.

At the first session, in his annual address, President W. F. Root of Baltimore, made a strong plea for higher and better education, urging that a higher standard of excellence be required from the start. The college of pharmacy student, he said, should be obliged to prepare himself in the high school for his entrance to the college, and only graduates should be privileged by the State board of pharmacy. In this way the standard would surely be raised. Laws are needed to better pharmacy conditions, he asserted. He urged that the educational end of the pharmacy business be a strong incentive with the trade and assured his hearers that the commercial success will then come naturally.

The election of officers resulted as follows: President, H. C. Pierce, Barton; first vice-president, E. H. Parker, Burlington; second vice-president, E. A. Brown, Barre; third vice-president, Charles S. Wilson, White River Junction; secretary, W. E. Terrill, Montpelier; treasurer, G. L. Harwood, Chester. More than fifty applications for membership were acted upon. In the evening, after an afternoon visit to Ft. Ethan Allen, papers were given by Dr. D. C. Hawley, on the "Relation of Doctors to Pharmacists"; J. H. Dow of Portland, "The Vanilla Bean and Vanilla Extracts," H. J. Dune of Northfield, "Drug Store Health," Z. B. Hopkins of Brandon, brought the session to a close with an interesting informal talk.

The program of the second day was given over to discussion of business matters. Then came a trolley ride and in the afternoon a steamboat excursion on Lake Champlain. This brought the party to Hotel Champlain at Bluff Point on the New York side of the lake, where the annual banquet took place.

FOR SHORTER HOURS.

Drug Clerks of Springfield Renew Enthusiasm in Their Effort to Obtain 65-Hour Schedule.—Bogus

Advertising Takes in Druggists.

Springfield, Mass., Sept. 8.—The Drug Clerks' Union is making efforts to infuse a bit more life into the organization, and is especially trying to bring about the adoption of a sixty-five hour schedule, under a reorganization plan, with new officers. A personal canvass from store to store will be made to get every druggist's consent to such a plan, or at least to find his reason for not assenting. The new officers are: President, W. H. Tuohy; vice-president, Marshall Johnson; treasurer, Thomas McCarthy; financial secretary, Frank J. Callahan; recording secretary, W. W. Bradbury. President Tuohy, Vice-President Johnson, Mr. Callahan, Harry H. Cook and Charles Adams are the delegates from the union to the Central Labor Union.

DRUGGISTS TAKE BOGUS ADVERTISING.

Boston, September 8.—Druggists in many Massachusetts towns, including Boston, Malden, Bedford, Cambridge, Lynn, Salem, Lawrence and Peabody, have been the victims of two clever swindlers. The method was to visit a store and present for inspection the prospectus of a handbook of some local labor union or similar organization. There was to be much reading matter they asserted, and they solicited ads. at pretty good rates. The circulation was to be among members of the organization named. The books, of course, never appeared.

WATERBURY CLERKS' DIFFERENCES SETTLED.

Waterbury, Conn., September 8.—The differences between the Drug Clerks' Association of this city and the Retail Drug Clerks' Union were adjusted last week at a meeting of the two parties. The latter association will continue as a member of the Central Labor Union and the Retail Clerks' International Protective Association, with a membership of about twenty, while the association will be a purely social organization and will have the thirty members who withdrew last spring from the union. All the talk of suit has been over the funds of the union of which the members of the association wanted a part, while the union members claimed that the money was paid into the union treasury and, as long as the charter held that the union could exist with seven members, the money in the treasury belonged there until the organization was disbanded.

The gentleman on the left is John H. Marshall of Manchester, N. H., secretary of the State association, and the other is Second Vice-President Lewis G. Gilman of Manchester.

It came out today that the main reason why a majority of the members of the union withdrew was because of the clerks' employers objected to their belonging to a body associated with the Central Labor Union and refused to grant the men any increase in wages as long as they were members of a labor organization. As a large number joined the body to secure by consolidation better wages and shorter hours, when they found that their employers refused to treat with them they got out.

According to the committee of the association a paper has been signed by members of both organizations who agree that the funds of the union have been equitably divided.

THE BAY STATE.

—Another new candidate for a position on the State board of registration is Fred. W. Connolly of Connolly & Davis, (C. H. Davis) who have three drug stores in Boston. Mr. Connolly has a fairly strong backing of friends who have urged him to stand as a candidate along with the three others presented by the committee of fifteen from the Massachusetts Pl. A.—F. A. Hubbard, Newton; Thomas B. Nichols, Salem, and Andrew G. Gayler, Hyannis. Mr. Connolly's eligibility appears to be in doubt, as he is a resident in the same district as George M. Hoyt, of Weymouth, present member.

—The recent opening of the new store of Smith & Murphy, Bolton road and Rivet streets, New Bedford, was on the date of the tenth anniversary of the launching of the firm in business. The new store received many floral remembrances from fellow druggists, customers and personal friends. The fixtures are of solid black walnut, at least half a century old, and have about them much elaborate hand carving. They were formerly in the pharmacy of Frank R. Hadley, and were carefully made over. Walter C. Chamberlain, comes from Taunton to be prescription pharmacist.

—Norman Rogers, popular druggist of Canton, has taken unto himself a wife. He and the bride-to-be rode away in a trim little turnout, ostensibly to see Lou Dillon make a record. But they went to Hyde Park where Miss Marion Sawyer, daughter of Freeman Sawyer, Jr., of Canton, became Mrs. Rogers. Then Mr. and Mrs. Rogers started off, still in the smart rig in which they travelled, on a wedding journey, an old-time custom for taking such a trip revived.

—C. E. A. Cameron, long a Springfield druggist, has sold. The purchaser was John D. Smith, pharmacist of Ware. Mr. Smith will retain in service the same force of clerks employed by Mr. Cameron, managing this new possession himself and leaving the Ware store to clerks. Mr. Cameron will devote his attention to the automobile business, becoming New England agent for a large company.

—An intoxicated Pole recently tried to break into Tucker's store in Turners Falls, where the only light in the village was burning. He got a heavy beam and smashed a hole in the plate glass big enough to walk through easily. Then he became frightened, but, before he could escape, was captured. He was fined \$10 and ordered to pay the expense of new glass.

—The Aya Chemical Company of New York—Rockefeller's company—are making plans for opening a manufacturing branch in North Adams. There also will be branches in Fall River, Springfield and Worcester and Bangor, Me. In other cities prominent chemists will be chosen to represent the company's interests.

—Simon B. Harris, State agent for the board of registration, has been in Leominster and finds that the recent agreement on the part of Dr. Clemente Fouchette to retire from the drug business has been carried

out. Dr. Fouchette was not prosecuted on the liquor charges in view of his retirement.

—At South Framingham, Louis F. Hoffman and John Kennedy, who not long ago purchased the drug business formerly conducted by ex-Senator Slattery, were found guilty of violation of the liquor laws, and fined \$50 each. They appealed, furnishing bonds of \$500.

—Wallace Briggs of North Adams, is to be added to the force of clerks at the Wilson House drug store in that city. John Mulhearn, leaves the Bristol County drug store, Taunton, to take a position at Frank Guillo's pharmacy, Weir Village.

—Raymond McGrath is an addition to the employees of William Curtis, Jamaica Plain. Lyle Lothrop, leaves Easton's, Rockland, to take a position with C. L. Rice & Son, Rockland. Harry Lane succeeds Mr. McGrath at the Easton pharmacy.

—In Melrose the druggists have no liquor licenses. A recent raid on the pharmacy of William J. Schoff aroused interest because the raiding officers captured about thirty gallons of whisky and twenty gallons of ale.

—Charles Blanchard, who used to be prominent in the drug business in Lowell, has recently spent so much time profitably on his farm in Wilton, N. H., that he may take up farming as a permanent occupation.

—F. H. Ware, the Turners Falls druggist who recently sold, is to give his time to the wholesale drug business in which he is interested in Boston. Just now he is enjoying a vacation at Chesterfield Lake.

—While at work in the laboratory of Hartwell's pharmacy, Southbridge, recently, S. F. Chase was severely injured in his right eye by the explosion of a bottle of ammonia. Prompt care saved the eye.

—It is probable that the druggists in Turners Falls will soon close on Sundays, except for a couple of hours in the middle of the day. There is a movement now on foot to bring this about.

—Ralph F. Norcross of the Norcross pharmacy, Beachmont, has just announced his engagement to Miss Madge Leona Gay, the daughter of Mrs. E. M. Gay of that town.

—To satisfy creditors' claims an attachment has been placed on the stock of A. H. Standish, Taunton, and a deputy has charge of the place.

—The stock of Dr. Elie Barnaud, the Worcester druggist who recently made an assignment, will be sold at auction.

—A. L. Cormier, formerly manager of the Cleghorn pharmacy, Cleghorn, is now a resident of Marlboro.

—A new drug store in Adams is that of M. J. Quinn & Co.

CONNECTICUT.

—George L. Ellsbree, for the last twenty-five years leading druggist of New Haven, filed a voluntary petition in bankruptcy this week. The town is much incensed that Mr. Ellsbree should be forced into bankruptcy because of insistent creditors, when, it is claimed, if given more time he could have met all his obligations. The liabilities are \$9,580.59, with assets of

855010. The hopes of Mr. R. Shee are liable to change, but it is certain that he will be able to pay for the catch. He is a member of the board of industry, has been a representative at the State legislature and has had prosperous offices in the town and city with credit. It is hoped that he may open up again to the same old site.

—Druggist Everett M. Roberts of Waterbury, is the envy of all the other pharmacists of the town since he came home from Naumk, L. I., and told about the great luck at fishing he had while on his vacation. He brought home an eel which weighed 11 pounds and was six feet long. This he placed in the window of his store as corroborative evidence that all his stories were not fishy. A. S. Barnes of Naugatuck, took a fancy to the fish and gave a dinner to his friends on it.

—While crossing the tracks of the New York & New Haven Road at South Norwalk, on September 1, an unknown man was killed by a passing train. Later the body was identified by his father as that of Edward F. Crowley of Meriden, a well-known drug clerk of that city. He is survived by a widow and one child. —John Hume, who has been with the Nichols & Harris Co., New London, as chief clerk for over twelve years, has left to engage in other work.

PENNSYLVANIA.

MIXED ON DELEGATES.

P. A. R. D. Didn't Know They Should Have One Delegate to Every Twenty-Five Members.—Western Pennsylvania R. D. A. Endorses Miles Plan.

Philadelphia, September 8.—The regular September meeting of the P. A. R. D. was held on last Friday, with an augmented attendance, men in good spirits, all officers present, and President Leedom in the chair. Cooler weather and possibly better business seemed stamped on the smiling countenances and only one man was observed without a coat.

At the last meeting, the Greene Co., Missouri, association, asked for data from the P. A. R. D. respecting the blue law prosecutions in this city. Mr. Reese having furnished the desired information, they wrote acknowledging it with a long history of their troubles—which seem to be about like other people's. Along this line came another invitation from the Retail Merchants' Association of Pennsylvania to affiliate with them and strengthen their hands in the fight being made against the ancient and modern ten "Blues."

A startling announcement was made by the secretary respecting the number of delegates to the N. A. R. D. It has been understood that the allowance was one to every fifty members or fraction thereof. A circular from Secretary Wooten tells that to equalize the number the quota is now one in twenty-five. None of the delegates present at the meeting of the N. A. R. D. could recall any authority for such a change and much discussion ensued, finally the delegates were declared delegates, and new alternates will be elected at the next meeting.

It was the same of the association that a delegate should be sent to the proprietors, and others' joint meeting to be held in Boston, and a well-laid plan to send President Leedom as that representative was promptly nipped in the bud by his declining. Then Samuel K. Strunk, the man who never knew when he "snickered," had devoted his effort.

A few general remarks were uttered out in an unceremonious and being the uttering of the financial statement of the association to be away with cheers

and similar schemes with their attendant evils. Many suggestions were made and a final committee of ways and means, consisting of Messrs. Lee, Ganno, and Shull, were appointed to consider and act upon methods. Another committee, Messrs. Rehms, Rees, Stiles, Perry and Larkley, were asked to hustle up the attendance for the fall N. A. R. D. meeting at Washington.

The executive committee reported one or two cases of cutting under the signed list, the matter being referred to the organizer. They also turned in six new applications for membership.

EMPHATIC ENDORSEMENT OF MILES' PLAN.

Pittsburg, Pa., September 8.—The Western Pennsylvania R. D. A. has addressed letters to proprietary manufacturers, saying of the Miles' serial numbering and direct contract plan:

"Its popularity with the trade is beyond dispute, and if you want to do business with the majority you will have to seek for it on our side. With those facts before you, fortified by proofs in the shape of personal letters from all the leading cities in the United States, we feel that we are justified in presenting to you the accompanying resolutions, which were unanimously adopted by this association at a regular meeting held August 26."

Resolved: That it is the sense of this association that it is the bounden duty of every proprietary medicine manufacturer to protect the retail price of his products.

Resolved: That such protection can be assured by the adoption of the direct contract and serial numbering plan of the N. A. R. D. by each individual proprietor, firm or company has been abundantly proven.

Resolved: That we hereby tender our hearty good will and honest co-operation to each proprietary house that shows its willingness to give us said protection.

Resolved: That we will endeavor in every honorable way to discourage the sale of the products of such proprietors as refuse to conform to our reasonable wishes by adopting this modern method of distributing their products.

Respectfully submitted,

B. E. PRITCHARD,

Secretary.

OTHER HAPPENINGS.

—W. J. Gilmore & Co. are putting up a substantial seven-story building in the rear of their present location in Seventh avenue, Pittsburg, which, when completed and added to the store they now occupy, will give them the distinction of having one of the largest exclusive wholesale drug houses in the country. The buildings are to be connected by arcades from each floor. The building will be fireproof and will have a cellar divided into different rooms, in which the walls, ceilings and floors will be of cement and concrete. Here will be stored oils, and inflammable materials. Automatic fire-proof doors will be used between each apartment.

—In the latest batch of presentations ordered by the pure food commissioners of the State the samples are four of lager beer preserved with salicylic acid, twelve of milk, in five of which an emulsifying fluid was used to dose them, one contained formaldehyde and one a lot of coloring matter, one of ice cream, doctored with boric acid; one of gelatin jelly, containing no quinine but made of glucose, starch and a very little pear juice, one of strawberry preserves, containing strawberry seeds, coal tar dyes, starch and cheap glucose, eight of lambing stick and sausage liberally supplied with aniline dyes.

—Dr. J. J. McAdden is opening a new store at Twenty-second and Morris streets, Philadelphia. W. Callart Roll has opened a branch in Bordentown, N. J.

A Catalogue

That Every Druggist Needs

To the busy retail druggist our catalogue is worth its weight in gold, yet it costs him nothing.

Our catalogue is a wholesale department store on paper. It lays before you practically every line of goods sold over the retail counter and names net rock-bottom wholesale prices on everything.

In especial it contains exceedingly strong lines of Druggists' Sundries, Notions, Stationery, Holiday Goods and other lines of prime interest to druggists.

It is a mine of merchandise suggestions—chockful of goods—hints for profitable “side lines”—for new ways to swell sales and profits.

It takes the market to you. Each month brings to our customers' desks a new edition, with new goods, new “specials” and up-to-date prices throughout.

Every quotation is GUARANTEED; “subject to change without notice” never emasculates our prices. They are guaranteed for thirty days—until a new book is issued.

Retail druggists who aspire to get out of their business all there is in it will find our catalogue a right hand.

FREE to merchants—we send it to none other. Ask for catalogue No. T473.

D. O. HAYNES & CO., Publishers,

8 Spruce Street, - - - - NEW YORK, U. S. A.

Mr. Ruff has four stores running in Philadelphia. J. J. Keenan is fitting up at Fifty-fifth and Thompson streets, the fourth store in his chain. George B. Evans will open his fifth store in a few days, having purchased Robert Young's place at Eighteenth and Chestnut streets, which is being re-stocked and refitted.

—Harry Hogenobler, clerk in the store of Dr. E. B. Herr, Lancaster, was held up in a dark place while returning from his work. He refused to hold up his hands until a revolver was poked into his face. Then he let the thief take \$1.92 away from him. Just afterward W. O. Frailey, president of the State Ph. A., came along, and to him the clerk told his trouble. Mr. Frailey shouted for the police, but the thieves escaped.

—Among those visiting the Pittsburg wholesalers last week was F. T. Wray, well-known druggist of Apollo. Mr. Wray has recently copyrighted and is now publishing a handy ledger, especially adapted for the small accounts of retail druggists.

—H. C. Horst, late manager of John P. Frey's store at Fifteenth and Moore streets, Philadelphia, has connected himself with Sutton & Rorer, the drug brokers and manufacturers. He will look after the drug specialty and of the business.

—A decided and radical improvement all along the line has characterized the week's business. Prescription work is better than it has been all summer, and the present outlook for a vigorous fall trade is most encouraging.

—The store of the late W. I. Moore of Homer City, has been sold by his executors to Sickenberger & Co. Mr. Sickenberger was formerly clerk for Robert Miliken of Indiana, Pa.

—Dr. A. A. Neheker of Twelfth and Ellsworth streets, Phila., is taking his family through California and the West. The trip will extend up to the first of October.

—George W. S. Keath, formerly with Dr. Backmann, later with Harrigan, has returned to Ninth and Catharine streets, Philadelphia.

THE SOUTH.

MARYLAND.

—Most of the attachments taken out against the Maryland Drug Co., Baltimore, it appears, will not prove of any advantage to those who obtained them, receivers having been named before they could be served, and the goods removed. Such claims will have to take their chance with the rest of the creditors. The stock on hand will be sold at public auction by the receivers on next Wednesday, and the establishment will be closed, the offer of Paul Muller, president, having been rejected, it appears. It is said that in his statement Mr. Muller placed the assets at only \$8,000, against \$30,000 of liabilities. What some of the creditors would now like to know is how, even if the company started without any cash capital, the assets could have shrunk \$22,000 in five months.

—Among the visiting druggists in Baltimore last week were: Dr. E. E. Wolf, Cambridge; E. M. Foreman, Centerville; T. J. Dabney, Orange Court House, Va.; H. R. Cameron, Port Deposit; J. E. Ballard, St. Louis, Mo.; E. F. Helb, Railroad, Pa.; Mr. Brown, of Brown & Hooff, Charleston, W. Va., and R. T. Petzhold, Washington.

—J. L. Walz, pharmacist at the Johns Hopkins University, has returned from a vacation trip of about four weeks. He reports having had a most enjoyable time.

—C. W. Miller, formerly with C. E. Souneburg, Baltimore, has taken a position with C. W. DeFrehn, in the Altamont Hotel.

—Henry Nordman has sold his retail drug store at Preston street and Harford avenue, Baltimore, to John A. Gerlach.

AROUND THE GREAT LAKES.

SHOULDN'T CARRY MONEY.

Chicago, Sept. 8.—Dr. Willis B. Holmes of the University of Chicago, has been made the object of totally unmerited suspicion recently among newsboys and small vendors. The doctor is not a "shover of the queer," he is a chemist, and has been conducting some experiments during the course of which quantities of hydrogen sulphide gas were liberated. The gas penetrated into his pockets and got busy with his silver money, turning it a nice, rich old mahogany hue. When he handed a quarter to a street car conductor, that individual expressed his doubts; a dime was flatly refused by a newsboy with the contemptuous ejaculation, "Dat's bogus money," and when the doctor made some purchases in a neighboring store and handed the clerk a dollar, the latter went to the rear of the store and rang it on the counter to make sure that the coin was good. "It is really a nuisance," said Dr. Holmes, "but if I clean the money, either by rubbing or with acid they will think it is counterfeit sure."

SWINDLED RELATIVES OF THE DEAD.

Chicago, September 8.—By the discovery of a large number of express packages directed to Chicago men who have died within the last four days officials of the United States Express Co. today uncovered a swindle which had for its victims the relatives of the dead.

Fifty packages were received today with "C. O. D." charges of \$5.40 on each. They were from room No. 326, Mercantile Building, Aurora, Ill., and on each parcel was the name of a Chicago man whose name has appeared in the death records this week. Inside the wrapper was a small bottle, containing a colorless fluid, marked "Prescription No. 16,747. Dr. Weyler, a noted drug company of Chicago. Take as directed."

FROM ILLINOIS.

—It is now reported that ninety per cent. of the creditors of Lord, Owen & Co., have acceded to the receiver's proposition to wind up the business on a forty per cent. basis. Twenty per cent. of the claims have already been paid and an additional 20 per cent. is ready, making up the forty per cent. offered. The rumor is that an attempt will be made to reorganize the business. The firm name, it is said, is still a valuable asset. This rumor is not credited among the wholesale druggists.

—The people of West Madison street, Chicago, and of Kensington, near Pullman, have recently been holding street carnivals. Druggists in these places as well as other merchants now wish their foresight had been

of 2002, as their insight, for in that case they would not have contemplated or contributed to the affairs. Dr. Rogers says that while the carnival crowds keep the fountain and cigar counter busy, the best part of the trade is likely to keep away because of the character of the crowds.

The State pure food commission has begun a crusade against luxury fountain flavoring syrups. More than a score of Chicago fruit dealers and confectioners have been arrested charged with selling adulterated strawberry syrup. A like charge was also preferred against two druggists, A. M. Levy, 352 Wabash avenue and H. J. Schulte, 190 Fifty first street. Mr. Schulte was charged with selling impure cherry syrup.

A. B. Hunt, manager of the city department of Fuller & Fuller Co., Chicago, has returned from his vacation and has buckled down to work with his usual Rooseveltian strenuousness. Charles E. Matthews, manager of the local branch of Sharp & Bohme, is back and is telling stories of the latest catch.

Business prospects are improving every day. In most localities the corn crop is considered safe. A drug traveler returning from a trip through Southern and Central Illinois says that merchants are feeling much encouraged and are disposed to be liberal in making their purchase for fall.

In Chicago for a few days were Theo. Hagenow, president of the St. Louis C. P., and L. A. Seitz of the executive board of the same institution. H. J. Stottle, treasurer of the J. S. Merrell Drug Co. of St. Louis was also called on his way "up the lakes."

S. Frank, who owned a drug store at Twenty-sixth street and Wentworth avenue, Chicago, and sold it with the intention of going West to better his health, has returned and opened a store at Forty-first street and Ellis avenue.

W. H. Sage, agent of the board of pharmacy, has bought Murphy's drug store at 591 East Fifty-first street, Chicago. Mr. Sage is the editor of the Registered Druggist, the publication of the Drug Clerk's Association.

John Bakkers, for fifteen years clerk for T. Schmidt at Rosebud, has opened a drug store at One Hundred and Ninth street and Michigan avenue, Chicago.

The Thornhill Drug Co., formerly at North Clark street and Sheffield avenue, Chicago, has moved to Grand boulevard and Thirty-ninth street.

Fred W. Scarff, manager of the Bromo-Chemical Co., Chicago, has just returned from a month's business and pleasure trip in the West.

George Thornhill has moved his store from North Clark and Sheffield to Thirty-ninth street and Grand Boulevard, Chicago.

I. Trace has bought out L. Leehman, at Fourteenth and Johnson streets, Chicago.

Latest Formula for Making Druggists' Paste.

Many druggists have experimented for years in an effort to produce a satisfactory paste, but it has remained for Mr. E. M. E. Scott, a progressive druggist of Ottumwa, Iowa, to be the first one to our knowledge, who has ever found a paste that can be guaranteed to be satisfactory. Elsewhere in this issue Mr. Scott advertises a paste which he says "is the stickiest thing upon earth, that it sticks upon any thing, is ten times stronger than non-sticke and can be relied upon," that is to say, he does not advertise the paste but he advertises to sell the formula for making such a paste for the small sum of 50 cents, and further, offers to refund the money if the purchaser is not satisfied. This ought to be an excellent investment for any druggist who needs a good reliable

PACIFIC COAST.

APPEAL TO MANUFACTURERS.

Los Angeles Retail Druggists Ask Manufacturers Not

to Recognize N. A. R. D. Listing of the Two

Los Angeles Jobbing Houses.

In an effort to defeat the N. A. R. D. in its "listing" of the F. W. Braun Co., and the Western Wholesale Drug Co., the drug jobbing houses that are supplying the Owl Drug Co. of Los Angeles, whose price-cutting main house in San Francisco has demoralized the retail drug trade there; the retailers of Los Angeles have sent circular letters to all of the tripartite manufacturers of the country protesting against any withholding of goods from the wholesale firms named. They ask for "non-interference" on the part of the manufacturers, expressing the fear that if the ban is not removed the now Utopian conditions in their city will be upset.

The letters, which follow in part, are believed to be the first appeal ever directed from the retailer to the manufacturer for such a purpose.

Los Angeles, July, 1903.

To the Proprietors of Tripartite Goods:

We desire to lay before you a few facts relative to the conditions in Los Angeles and in the immediately surrounding territory, as they pertain to the sale of proprietary goods handled by retail druggists, department stores, etc. At this time there are no aggressive cutters—as defined under the conditions of the tripartite plan—here, yet the Owl Drug Co. of this city, is bulletined as an aggressive cutter—by what authority we are not advised. The conditions have been harmonious since January 15 and proprietary goods are sold in all leading trade centers in Southern California under an "arrangement," at reasonable margins of profit. Non-cutting retail druggists, former aggressive cutters, department stores and grocers are parties to the arrangement. The results show a larger sale of all classes of proprietary articles than before. There is less substitution.

The arrangement does not bring goods that have been cut up to the price shown on the package; it is merely intended to do away with the ruinous cut-rate conditions that have existed for so many years.

Our experience during the last ten years with cut-rate conditions warrants us in making the statement that the only rational way to control the cut-rate evil is through the medium of an arrangement under which all parties in a given community will "give and take" with the idea of coming together on a basis that will permit of harmonious working; and such an arrangement we believe is possible in every community, if the matter is properly handled by an intermediary who is able to understand his men and to handle them with tact, discretion and judgment. On the other hand, we contend that the use of force to compel cutters to "fall in line," by cutting off supplies, is wrong in theory and wrong in principle. We know from our experience that no good is accomplished through such means, and that much injury is done to the trade as a whole by resorting to coercive measures. We also know that N. A. R. D. methods not only fail to produce good results, but actually cause heavy losses to the retail drug trade, as an attempt in this community to enforce N. A. R. D. rules and regulations actually augmented the disastrous cut-rate conditions, and resulted in the selling of nearly every proprietary article at from 10 to 40 per cent. below cost. In addition there is sometimes large expenses in defending suits at law, as happened here.

Now, since we all see and know the advantages of working under an arrangement effected by mutual concessions, and still have in mind the disastrous results of our efforts to employ coercive methods, we are apprehensive lest by placing the Owl Drug Co. on the "list" will be followed by a disturbance in local harmony.

We earnestly request that you pursue a consistent policy of strict non-interference in our affairs and we be-

Have the results will be beneficial to you as well as to ourselves.

Very truly yours,

The Retail Druggists of Los Angeles,
For Ernest S. Tauner,
Authorized Spokesman and Intermediary.

A later letter, under date of August 7, written because the N. A. R. D., under date of August 1, had complained of P. W. Braun Co. and the Western Wholesale Drug Co., both of Los Angeles, reviews past conditions. Three years ago the association followed N. A. R. D. advice in the treatment of cutters. The latter were shut off. The result was a "ruinous, unrelenting cut-rate war that never abated for an instant, although both the jobbers steadfastly refused to sell the cutters. Seeing the case was hopelessly lost, and that force measures resulted in defeat to everyone, the local retail druggists withdrew their demands upon the jobbers, and, as the N. A. R. D. had accomplished nothing in two years, the jobbers again recognized all alike."

Then came the "arrangement," bringing better prices than in eight years and the same prices to big and small dealers. The letter ends with an appeal to the manufacturers not to interfere.

This letter is signed by Samuel F. Bothwell, acting intermediary and spokesman of the Los Angeles retail druggists.

CALIFORNIA.

—The thirty-second annual session of the California C. P. opened on Aug. 26 in the hall of the Affiliated College in Parnassus avenue, San Francisco. Sixty-five freshmen, the largest class that has ever entered the college, were present. Among them were students from nearly every county in the State and from Nevada, Oregon and Arizona. After words of greeting by President G. E. Bacon, a masterful address was delivered by Professor Albert Schneider, who has been appointed professor of botany and pharmacology, entitled "The Point of View," Dean W. M. Searby said: "We now have more students than ever, though we are constantly raising the requirements. When students come to us poorly prepared, we advise them to pursue special work and wait a year or two. In fact we advise a full high school education."

—Pharmacists Brannigan and F. B. Hurling, two of the leading druggists in Third street, San Francisco, have a hatchet out for the board of public works of that city. The board has been paving Third street for three months, the street is shunned by pedestrians, and cars have been ordered off, and it looks like a back alley in the wilderness. Mr. Brannigan has allowed his clerks to take a couple of weeks off.

—The store of J. Askenasy, 501 Fifth street, San Francisco, has come prominently before the public in the case of Martin L. Bowers, whose death the police are endeavoring to lay at the door of his wife. Drug clerk J. C. Peterson has positively identified Mrs. Bowers' sister as the woman to whom he sold a quantity of arsenic a week ago.

—The members of the State board of pharmacy are greatly pleased with the law recently put into effect in California which aims to protect druggists against street fakirs and itinerant vendors. The law was framed by H. D. Fingar and is in line with a law passed a short time ago in Iowa.

—Lew Chase, who with his father conducted a pharmacy in San Diego, has accepted a position with the McEhonnell pharmacy of San Francisco. The McEhonnell pharmacy has moved its stock to its new quarters at 803 Market street.

—J. H. Miller, who until recently has been employed at the Ferry drug store, San Francisco, is on the staff at Boericke & Runyon's, Sutter street.

The Cacao Tree as Seen in Haiti.

IN THE WEST INDIES.

A Model Pharmacy in Haiti, and Pharmaceutical Conditions There and in the Bahama Islands.

A pharmacy that would be a credit to Broadway, or better, Fifth avenue, is what Dr. A. Herzfeld, New York C. P., '87, now a practicing physician at 224 West Twenty-fourth street, found in Gonaives, a little village in Haiti, West Indies. Under a tropical sun, in the lazy atmosphere of the palm and magnolia, among unprovident negroes, Herr Buch, an educated German, works in a splendid laboratory that would be the envy of most of the pharmacists of this country.

Herr Buch was born in Konig, province of Starkenburg, Germany. He was in the drug business there for fifteen years and then, with German fixtures, fitted up his Haitian store. He is one of the most able botanists in the Western Hemisphere and his contributions of botanical groups to various great universities have made a permanent and complete record of Haitian flora, which, until his appearance, was comparatively unknown.

Because of the heat and dust all of Herr Buch's wall cases are glass covered. Dr. Herzfeld said that he found all of the most recent drugs there, even those that have appeared within the last few months.

The laboratory was beautifully equipped and filled with large current and reserve stocks, arranged alphabetically. An alcohol distilling plant is going all of the time, making alcohol for all of the tinctures directly from the grain. Castor oil is made from the bean, and will compare favorably with any wholesale product.

Arne Kolbjornsen, a Norwegian, is a genial pharma-

Address inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

Haitians on Their Native Soil.

cist at Port au Pay. Edmond Rommain, a creole, who studied pharmacy and chemistry at Leipzig for eight years, lives in Port au Prince and assays mines for the government. Though a born Haitian, his German speech is beautifully classic and his English fine.

In Haiti all stores conduct a general prescription and retail business and some of the larger ones import for the smaller ones in the city and elsewhere on the island. The "Drogerie Centrale d' Haiti" is a wholesale house established by a German. Of the twenty-five drug stores in Port au Prince ten do a very fair business, but the standard is not high. Nearly all of the pharmacists are Germans.

Nearly all drug importations are from Germany and France, from which, it is asserted, they can be obtained more cheaply and on longer time. "If our wholesale houses," says the vice-consul-general, "would send representatives here and offer some inducements that are obtained in other countries, they would soon procure most of the trade here, as it would give importers a great advantage to buy in the United States and secure their goods in a few weeks, while from other countries it takes three months."

There is a considerable amount of French proprietary preparations sold, such as pectoral syrups, iron and quinine tonics, digestive preparations, mineral waters, pills, and many others, while the American preparations sold are very few. Some of Ayer's preparations, cod liver oil with hypophosphites—of which a considerable amount is used—are sold, being preferred to the French preparations. The vice-consul-general believes American proprietary men should circulate Haiti, and that fluid extracts would find a ready sale to take place of the articles prepared by the old methods.

Times are not very good for the pharmacist. Government conditions are in bad shape, and, though prescriptions are always being filled, money is not always easy to get. Tablets are seldom used, as it is claimed they are inaccurate. Gelatine-coated pills are in small favor.

Prescriptions must be numbered and registered. Every apothecary with a diploma from any school must pass an examination before the jury medical, composed of four physicians and one druggist appointed by the Government.

Many of our drugs are or may be obtained from Haiti. There are the jambul trees, the seeds of which are used for diabetes, and then there is, of course the cacao tree, and a great deal of logwood is exported. Coffee is another great staple export product, but as a duty of \$3 must be paid to the government for every 100 pounds that is taken away, the island is sadly handicapped in that industry. Everything in furniture is of mahogany; fine is too expensive.

The "Flindria," Captain Ed. Bode, stopped at the Bahamas on the way down. In that multitude of islands there is, excepting at Nassau where there are six druggists, only one doctor, who dispenses his own medicines, and no druggist. This doctor is at Inagua, and he is paid \$700 a year by the British Government, receiving about that much more from his fees. On the other islands the natives depend on any physicians who may have passage on the boats stopping there and the prescriptions are filled usually at Nassau or Port au Prince.

From Nassau no drugs are exported. The usual sundries and perfumes are kept. Goods are purchased largely from the United States, though some come from Great Britain. No druggists' goods are sold in department stores.

Prescriptions are never destroyed but must be kept on file. They may be renewed at any time. Any person desiring a license presents to the registrar a certificate, signed by a practicing physician, that in the physician's opinion, he is competent and that he has served a three-year's apprenticeship in a chemist's shop. Then he pays 10 pounds, or \$18.66, a year. A diploma from an American or English college of pharmacy would not be accepted as sufficient to procure a license under the laws of the Bahamas.

Dr. Herzfeld is enthusiastic over the island of Haiti, which presents, he says, more loveliness than any other land he has ever visited.

Practical Filing Devices.

The Reliance Cabinet File Co. of Cincinnati, Ohio, are advertising elsewhere in this number, one of the most practical prescription files we have ever seen. This file is in the form of a cabinet, each draw is fitted with the Reliance Company's patent arch files and has a capacity of five hundred prescriptions. The transfer cases which accompany the file have removable arch wires and each case will hold one thousand prescriptions. This device is not only quick and handy, but also saves much time and labor in referring to back numbers. No. 1010 Dayton is the street address of this company and they would be glad to mail, any interested person a catalogue containing cuts and descriptions of their line of filing devices.

- 41,043.—Soap, Colgate & Co., New York, N. Y. The word "Viodora."
- 41,044.—Hair-grower and dandruff cure, Younglove & Singer, Peoria, Ill. The monogram of the letters "Y. S."
- 41,045.—Powder for use in surgical dressings, The Dermogen Co., New York, N. Y. A coat of

- arms comprising a shield, a helmet above the same, a draped mantle about said helmet and shield, and a crown above said mantle, and having displayed in black letters on a diagonal line across said shield the word "Dermogen."
- 41,047.—Remedies for diseases of the eye. The Eye-Fix Remedy Co., Detroit, Mich. The hyphenated word "Eye-Fix."
- 41,048.—Remedies for certain named diseases. Hannah C. Martin, New York, N. Y. A rectangular panel in which are placed the registrant's initials "H. C. M.", this panel being enclosed by a larger rectangular panel of a color different from the first and in which is placed the hyphenated word "Dip-Scar."

NEW NAMES IN KANSAS PHARMACY.

Ellsworth, Kans., September 8.—Following are the names of those who passed the board of examination at Concordia last month: J. M. Reynolds, Parsons; C. C. Stillman, Morganville; Fred. D. Potter, Republic City; Jos. H. Hilton, Cottonwood Falls; Robt. G. Draper, Greeley; A. L. Wells, Neodesha; Ernest Rose, Emporia; C. T. Hamilton, Iola; Geo. E. Grimes, Severy; R. P. Briggs, Garnett.

Following were registered during the last quarter by virtue of being graduates of recognized schools of pharmacy: Earle Schaefer, Wichita; Edw. A. Sinclair, Troy; J. A. Searcy, Wellsville; P. E. Kaler, Topeka; Geo. D. Cochran, Lewis; R. H. Needham, Lawrence; Geo. W. Foulks, Kansas City; Guy M. Coffman, Erie; H. E. Stevens, Springhill; Guy Poe, Topeka; C. A. Wakefield, Howard; R. R. Smith, Wamego; W. E. North, Clay Center; D. W. Sheeler, Devon; Assistant Pharmacist: A. J. Clark, Lincoln.

Following were restored to the register since the last meeting of the board: L. E. Garrett, Chanute; H. V. Nichols, Liberal; Fred. O. Voss, Leavenworth; Richard Izek, Leavenworth; J. B. Mitchell, Robinson; John B. Paul, Abund City; J. E. Brogan, St. Paul; Geo. R. Bassett, Sterling; R. W. Wright, Oswego; J. M. Allison, Burlington; Eben Carlson, Lindsay; J. H. Chandler, Wellington; James E. Burke, Scammon; W. J. Conwell, Kansas City; E. B. Walker, Topeka.

The next meeting of the board will be held at Wichita, on November 18.

MARKET REPORT

INDEX TO THIS NUMBER.

Page

DECLINES IN OPIUM AND CAMPHOR; QUININE ADVANCES.

New York, September 8.—Further improvement in the general consuming demand is reported, and it is evident that preparations for the fall and winter season are in progress. The more important price fluctuations are declines in opium and camphor and an advance in manufacturers' quotations for quinine.

OPIUM.—Owing to keen competition among importers the market is more or less unsettled and jobbing quotations show a decline to \$3.46@3.65 for 9 per cent. and \$3.50@3.75 for 11 per cent. Powdered is correspondingly lower and the revised prices are \$1.30@1.50 for 13 per cent. and \$1.90@2.00 for 16 per cent.

MORPHINE.—Dealers report a continued active jobbing market with quotations maintained at \$2.60@2.70 for eighths in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.30 and 2.40 in 5-oz. cans.

QUININE.—Manufacturers have advanced prices 1c. per oz. owing to increased cost of raw material and the revised quotations are 25¢@25½¢. for bulk in 10-oz. tins, 25½¢@26¢. in 50-oz. tins, 26¢@26½¢. in 25-oz. tins, 27¢@27½¢. in 15 or 10-oz. tins and 32¢@32½¢. in ounce vials, according to brand and quantity.

GOLDEN SEAL ROOT.—Values continue to harden under the influence noted in previous reports and spot jobbing quotations have been further advanced to \$1.95¢. for whole, 90¢.@81.00 for ground and 95¢.@81.00 for powdered, as to quality and quantity.

CAMPHOR.—Refiners have reduced prices 1c. per lb. and jobbers now quote 55½¢.@56¢. for bulk in bbls., 56¢.@56½¢. c. in cases and 56¢.@55¢. for less. 1 ounces, 57¢. @57½¢. in cases and 62¢.@67¢. for less; 2½, 60½¢.@61¢. in cases and 65¢.@70¢. for smaller quantities.

LYCOPodium.—Foreign markets are higher and spot jobbing quotations have been advanced to 67¢.@75¢. as to quantity.

NITRATE OF SILVER.—Owing to higher cost of the metal, manufacturers have advanced prices, and jobbers now quote 43¢.@48¢. for crystals and 45¢.@50¢. for fused.

OIL PEPPERMINT.—A continued weak market is reported and jobbing quotations have been further reduced to \$2.85¢.@3.20 for Western, \$3.00¢.@3.25 for Wayne Co. and \$3.35¢.@3.60 for either H. G. H. or distilled.

OIL TANSY.—The market is easier and jobbers have reduced quotations to \$3.75¢.@4.00.

CANTHARIDES.—Unfavorable reports, from producing points in Russia have caused the market to harden and quotations in a jobbing way have advanced to 90¢.@81.00 for whole and \$1.00¢.@1.10 for powdered.

CASCARA SAGRADA.—Supplies are offered more freely from the Pacific coast and local dealers have modified their views somewhat. Jobbing prices have reacted to 27¢.@22¢. for whole, 30¢.@35¢. for ground and 32¢.@37¢. for powdered.

COLCHICUM SEED.—Revised jobbing quotations show a reduction to 55¢.@65¢. for whole, 60¢.@70¢. for ground and 65¢.@75¢. for powdered.

BALSAM COPAIBA.—Keen competition among dealers has caused a reduction in jobbing quotations to 45¢.@55¢. for Central American and 55¢.@65¢. for Para. **BALSAM FIR.**—Supplies continue light, but there is not much inquiry and jobbing prices have reacted to \$1.50¢.@1.75.

SALOL.—Manufacturers' prices are 10¢. per lb. lower and jobbers have reduced quotations to \$1.30 in pounds, \$1.35 in halves, \$1.45 in quarters and 12¢. per oz. in drums. For 5 or 10 lb. tins the quotation is \$1.75.

QUININE.—Owing to increased cost of raw material prices in a jobbing way have been further advanced to \$3.50¢.@3.75 per lb. for No. 10, and 35¢.@36¢. per oz.

BUSINESS NOTICES.

A HELP IN PRESCRIPTION WORK.

There are a great many things that the average dispenser can't remember, and there are as many more that he shouldn't try to remember—it isn't safe. These things come up in prescription filling when time is an important factor and accuracy is strictly essential. There are questions about dosages, dose equivalents, percentage solutions, specific gravity, incompatibilities, metric and thermometric equivalents, meanings of Latin, French or German terms. These things are all tabulated, or figured out, handy for instant reference, in the Era Dose Book (Third Edition, Revised and Enlarged). Price 50 cents, postpaid.

"Everything in education should conduce to understanding, just as everything which conduces to understanding is education."

Some undertake the study of pharmacy in order to obtain a thorough understanding of the science, others merely to fit themselves to pass a required examination.

While a desire to scramble past the board is not the best incentive to study, it still leads to a considerable amount of understanding and often to study of a more serious sort.

For a thorough grounding in the science of pharmacy, the larger colleges are undoubtedly the best means.

But for a beginning, and an aid in passing the board, correspondence courses, such as the Era Course in Pharmacy, are highly effective, and, moreover, inexpensive.

Write to The Pharmaceutical Era, No. 8 Spruce street, New York, N. Y., for a prospectus.

THE TWIN CONVENTIONS AT BOSTON.

We devote a considerable portion of the space in the present issue to the joint meeting of the National Wholesale Druggists' Association and the Proprietary Association of America. For this we owe our readers, the retail druggists of the United States, no apology, for the sessions were full to overflowing, of matters of vital importance to the retail trade. If we were asked to name the most conspicuous qualities characterizing the meetings, we should answer, "good-will" and "inertia." The assemblies abounded in expressions of sympathy and readiness to co-operate with other branches of the trade, directed especially towards the retail druggists as represented by the N. A. R. D. Before the matter came up for formal discussion there were numerous assurances that something must and would be done to save the retail pharmacist from the assaults of the aggressive cutter. The representatives of the retail association were invariably received and heard with applause, and Mr. Wooten's earnest and eloquent appeal made a profound impression upon every hearer. The wholesale association did endorse the contract and serial numbering plan, and that in no uncertain terms, but the present form of the resolution—destined to become famous in the history of the drug trade—was adopted only after tremendous exertion. A large proportion of those present had evidently come prepared to give vigorous approval to the retailers' chosen plan. Why then this hesitancy and reluctance to "come out strong" for the contract plan? The answer is embodied in the word, so aptly suggested by the retail druggists' able spokesman, "inertia." It is in overcoming inertia that the tremendous efforts put forth by the authorities of the N. A. R. D. are expended, and it is due to inertia, the reluctance of a body to change the direction of its motion, that progress has been so slow. Inertia is directly proportional to the weight of a body. A body of great weight is more difficult to move, but when once in motion its force is also more irresistible. The energy put into the movement is not lost, its results will become more and more apparent.

WHY IS IT SO DIFFICULT TO QUIET SUSPICION.

Some enthusiastic supporters of the N. A. R. D. have wondered why it is so extremely difficult to allay

suspicious which are so easily aroused. The great obstacle to be overcome in promulgating price-protection principles among the retailers is suspicion. A large number of wholesale druggists arrived in Boston with a firm conviction that the direct contract plan offered the long-sought solution of the cut-rate problem. On the way, and in the lobby and corridors of the hotel, they met others who suspected that the plan had not proved to be an absolute success. Instantly the old suspicions asserted themselves with all their original vigor. Why this timidity, and reluctance to try experiments? The answer is, that suspicion is one of the cardinal business virtues. In proportion to the magnitude of the merchant's interests is his wariness of new plans and schemes. The retailer who has taken some months to make up his mind to the value of the direct contract plan, should therefore not become too easily impatient when the jobber, whose capital invested is so much larger, hesitates somewhat long. Nor can he justly find fault with the proprietary association for failing to endorse the plan as a body. The proprietor has immeasurably more at stake in this radical change in the method of conducting business than either the retailer or jobber. The adoption of the contract method of distributing goods involves the discarding of systems and policies which are, perhaps, the result of the accumulated experience of years. The capital invested is large, and details must be largely left to subordinates, and it would not be flattering to his business acumen if he were to jeopardize his interests in hasty experiments. Capital is notoriously timid; it possesses great inertia, and its very existence depends upon conservative action in all things. The manufacturers must be given time. If the policy of price restriction is so profitable as it now appears to be, we can rest assured that the proprietors will gradually become convinced, and will adopt individually a plan which to the retailer seems so clearly to his interests.

THE PRICE PROTECTION PRINCIPLE.

It is not difficult to understand the reluctance of proprietors to adopt a detailed plan of distributing goods, but it is not so easy to explain why so many refuse to accept the principle of price protection. This principle is no new thing. It has been tried again and again with great success. Years ago manufactured articles were sold at fixed prices, and cases in which this has resulted in financial loss must be extremely few. At present the policy is applied to an immense number of articles, and almost invariably to those of the most highly esteemed of the respective classes of goods. Bicycles, fire-arms, cameras, sewing machines, and a long list of manufactured products are marketed in this way. Invariable prices are with many people a guarantee of quality, it would seem that in the case of medicines "the best is none too good for the sick"—fixed prices should be a valuable advertisement. The principle is not the result of recent experiment. It has been known and applied in ancient times and by primitive people. We even recollect a story of an African chief, who with a commendable desire to elevate womankind, stipulated that wives should not be sold for less than a certain fixed number of cows or their equivalent. If price protection does not pay, it should not be difficult to establish this fact. There

have been experiments enough to satisfy the most sceptical.

THE JOBBERS ALSO HAVE THEIR TROUBLES.

There were a number of the reports read before the wholesale druggists' meeting in Boston which show that if the jobber reposes on a bed of roses there are at least numerous crumpled petals which tend to disturb his rest. More than one committee called attention to the growing cost of everything in a wholesale drug business, and a decreasing percentage of profits. Evidently success of a middleman between the manufacturer and retailer is not gained without the exercise of great care and the expenditure of much energy. A crumpled rose leaf—if we may be permitted to apply this term to a hard commercial fact—which has peculiar powers of disturbing the jobber, is the buying club, and the injustice of encouraging the formation of these combinations, while the party of the second part is expected to adhere to the tripartite plan was frequently referred to. It has been shown again and again that the buying-club cannot pay, and that if it does prove successful it results in the gradual elimination of member after member until only a new wholesale firm is left. If these assertions are true the jobber need not be greatly troubled, for the disturbing factor will soon disappear. No doubt if inquiries were made it would be found that the manufacturers also have woes. These were, however, not very conspicuous at the twin conventions, for the P. A. of A. transacted most of its business behind closed doors, and exhibited to the public only its prosperous side—fine feather and contented countenances.

WHY SHOULD THE CITY FURNISH FREE ANTITOXIN?

The distribution of free antitoxin by the city authorities is still a source of considerable dissatisfaction to the drug trade of New York. The arguments used to defend this practice are all worn out, and are no longer of any weight. When it was difficult to obtain this remedy in proper quantities the health department may have been justified in expending some of the city's funds for the relief of suffering which there was no other means of mitigating. But since this indispensable remedy for checking the ravages of diphtheria can and is prepared in sufficient quantities and of the best quality by private firms at much less expense than that incurred by the board of health, there is absolutely no reason why the practice should not be discontinued at once. Some people say, "Oh, but the board of health only gives to the poor!" Very well, but why should this excellent institution produce the remedy in its own laboratory for this purpose, when the same or better material can be bought at less expense in the open markets? The city occasionally also distributes coal among the poor, but it does not maintain an expensive coal mine for this purpose. If the health department needs a biological laboratory for experimental purposes, the city can afford to supply the means. Manufacturing one article prepared by private enterprise, while thousands of others are bought and distributed in the regular way, is unfair competition, and is indefensible on any grounds, humanitarian, economical or political.

SHOP TALK

FRIEND "DOC" BEATS THE TWINKLER REPORTER.

"It beats all how some simple ideas in advertising pay," said a newspaper reporter. "There's my friend 'Doc,' for instance, of Kansas City.

"How do you do it 'Doc'?" I asked the other day. 'How is it that people come from all over town to buy a nickle's worth from you.'

"You're a bloomin' innocent for a reporter," returned 'Doc,' 'I use my head, same as you ought to.' "Thanks."

"Say," flashed 'Doc,' 'if I told you that in the next week I would work the Twinkler for three or four half-column write-ups, and would make the Theatre pharmacy the most talked of store in town, you would say I was a fool, wouldn't you?'

"I would!" I replied cheerfully.

"Two days later I saw in the Twinkler a half-column about a unique contest started by Dr. _____ of the Theatre pharmacy. I went over to ask 'Doc' about it. About this window was a constantly changing crowd of thirty or forty. In the soda room was another crowd. I pushed to the window, and this is what I read:

"Hello, Bill," said 'The Volunteer' to 'A Reuben in New York,' you look like 'A Deserted Bride' from the 'Land o' Cotton.' Have you been taking 'A Trip to Chinatown?' No, but I've had 'A Hot Old Time, 'Way Down East' trying to butt into 'The Smart Set.' Told them I was 'An American Gentleman' who served 'Under Two Flags' 'When Knighthood Was in Flower' and had made my pile 'At the Races,' but it didn't go, so I went to 'Sag Harbor' at 'Eight Bells' and saw 'Alphonse and Gaston' hitching 'A Texas Steer' to 'The Bonnie Briar Bush' for 'Herman the Great' to change into 'A Bunch of Keys,' 'The Girl from Sweden' was there with 'Two Little Vagrants' and she told 'The Two Sisters,' 'Beware of Men.' This tickled 'Eben Holden' more than a 'Comic Opera' or 'The Newest Comedy,' and when 'Little Johnny Jones' told 'Ole Oeson' to join 'Black Patti's Troubadours,' 'Harry Corson Clarke' had to turn the hose on 'Mr. Jolly of Joliet.' That night 'Al H. Wilson's Company' panhandled the doorkpeer and saw 'Lewis Morrison in Faust.' 'Fisher and Carroll' weren't invited and they got sore and said the whole bunch looked like 'Pi-kings from Puck.'"

"I found 'Doc' inside explaining the terms of the contest to a group of girls who were consuming soda and sundaes. All you've got to do is to get that list of attractions and string them together so that they will make sense. The one that gets the most out of it gets the finest box in the house on the 15th."

"'Doc's' store is now more talked of than ever. Everybody on the East Side went in on his contest, and the Twinkler gave him five notices on the strength of it, while the theatre gave the box to pay for the advertising they received.

THAT BADLY WRAPPED PACKAGE OF PEPPER.

"It seems to me," said an Indianapolis retired druggist, "that, taking the retail drug stores by and large, there is not as great attention paid to tying up packages of every day request making the package neat and presentable, as was demanded by employers of twenty years ago.

"For instance," he continued, "Here is a quarter of a pound of cream of tartar tied up by your clerk. It has no more shape than a sack of bran with a string tied around the middle. Then your clerk has neglected to label it. When I was a lad of his years in the drug trade it was a rule of the house to label every package whether in paper or glass.

"I recall a lesson given to me when I first went

behind a drug counter, a few years after the Civil War. My customer was the late Stoughton A. Fletcher, Sr., banker. I had tied up a package for him, a half-pound of sulphur, and had been rather prodigal in my use of paper and string. He called to my employer, and this is what he said:

"When I was a young man I kept a country store. A man came in and bought a half-pound of pepper. He went out and to another store, farther up the street, to make other purchases.

"Mr. Bates, the other merchant, caught sight of the package in the customer's basket, 'What's that?' he asked. 'Pepper? Let me have it, I'll put you up another package in its stead.' Then Hervey Bates brought that package to my store, 'Stoughton,' he asked, 'did you put up that package?' I acknowledged that I was the offender. 'Don't you see, what a botch you've made of it!—Twice too much paper, three times too much string!

"This," said the retired druggist, was the lecture given by Mr. Fletcher who at his death was worth more than a million dollars. Hervey Bates also died a very rich man."

MAKE A LITTLE GO A LONG WAY.

A retired druggist who had built up a remunerative business in Waterloo, Ont., Can., on a very limited capital gave the secret of his success:

"I spread my little capital and made it go as far as possible by buying a little of everything and not too much of anything. I made the wholesalers carry my stock. The great mistake which many druggists in a small town make is buying large lots of some particular line just because they get them cheap. They load up their shelves with articles for which the demand is limited, simply tying up so much capital, instead of having it where it can be turned over. It is better to pay more and carry no dead stock. I preferred to carry only a dozen or so bottles of a kind to buying a gross at bargain prices, to remain on my hands for years. I made it a point always to have the articles on hand, in however small a quantity, and never allowed my stock to run down.

Of, course, this plan kept me constantly sorting up, and I was at a good deal more trouble replenishing my stock. But I regarded the additional labor as all in the way of business, and, anyway, the trouble was much less than that I escaped by not having to meet bills for superfluous stock.

"I subscribed to all the trade journals I could get—and would recommend all druggists to do so. The pointers I got by a careful reading of even the least valuable of them were worth a great deal more to me than the subscription price. I always kept in touch with what was going on in the larger centers. The smaller the community, the greater is the need for a live druggist to get all the information he can as to up-to-date business methods and new developments in the trade."

DATE, REGARDLESS OF WEATHER.

The writer was in Utica in the early part of summer, or rather late in spring, and the day being tremendously hot—about 88 degrees Fahrenheit—he sought for a non-saloon drink. Anticipating a drink of cool and refreshing soda water or phosphate he entered a drug store.

"A glass of ice cream soda," was the order given. "We haven't started our fountain yet," was the reply.

"What have you a fountain for, and when will you start it?" the caller asked.

"We start it July 1. It seldom gets warm enough

WILLIAM C. FRAILEY, Lanester, Pa.
President Pennsylvania Ph. A.

before that time," said the clerk, wiping the perspiration from his brow.

Not a drug store in town had started its fountain. In the afternoon of the same day, however, on passing the store first entered, it was noticed that the marble shelf had been cleared of bottles and other merchandise and that more than a dozen people were waiting to be served. The druggist had taken the advice offered him in the morning.

Now, many druggists will be late with their hot chocolate, if they do not keep the weather in mind and not alone the time of year.

WITH A WEEKLY BARGAIN COUNTER.

Said a Main street drug store proprietor of Rochester: "One thing I have found of great help in drawing trade, and that is to maintain the year around a counter that is devoted entirely to the sale of articles at bargain prices. I let my trade know about this 'special' on a certain day each week through the newspapers and by my window. For instance, last week Friday I made a run on vaseline, which ordinarily sells at 5 cents. I offered the public two bottles for five cents, five for ten cents, or fifteen for a quarter. In my window I announced these prices on a handsome board resembling photographers' mounts, my sign appearing in the center, nicely printed, leaving a neat border of about two inches around the edge. This was supported on an easel. I had bought a big invoice of vaseline cheap, and I not only filled the bargain table but my window also. By night I had cleaned up the bargain table and a good part of that shown in the window. I made a good profit on the investment and had many bottles left to carry in stock. I have done the same with soap, perfumery and like articles with the same success."

Order in Business Life.

Strict order is indeed, one of the most important principles of business life—order about places—which is cleanliness and neatness; order about ways—which is doing things in the right way, and not any way; and lastly, order about time—which means activity and regularity. It saves time. It saves temper. And it means that the work shall be done both more easily and more thoroughly.

HOW SHALL THE BUYER MEET THE SALESMAN?*

By J. W. GAYLE, Frankfort, Ky.

BEFORE attempting to answer the query under consideration let us, if possible, get clearly before our minds who the salesman is, and whom he represents.

In the first place it may be said that he is the natural product of modern business contingencies and necessities, a natural accompaniment of the growth of modern business systems, being, so far, if you please, "the survival of the fittest" of the methods yet devised by which those who have goods to sell may approach those who would buy them.

Time was when the buyer sought the seller, but gradually the seller, being naturally, I almost said by necessity, the more enterprising character, with that aggressive and progressive spirit (alas for its rarity among retail druggists!) which is the real life of the business world, and without which our business lives would be both "stale and unprofitable," has found it absolutely essential that he come into closer personal relations with his customers. For however strong and skillfully executed the personal letter, however attractive the illustrated catalogues, or seductive the price lists and descriptive circulars, the personality of the up-to-date travelling salesman will invariably win the business. He is then the personality of the manufacturer or the jobber come to the door of the retail buyer, and it is difficult to say whether the buyer or the seller is most highly served.

Recognizing then this representative capacity, the buyer, whether he would or not, should meet the travelling salesman with that cordiality and eagerness which should and does represent the degree of enterprise with which his business is conducted.

The conservative buyer (and only this kind will be here referred to) will not, of course, allow his partiality for the personality of the salesman to induce him to purchase goods for which he has no use, nor, on the other hand, will he permit any prejudice which he may have conceived against the salesman to interfere with his making desired purchases. But the salesman should be received cordially, not only because he is the personal representative of his house, but because he, in every essential way, brings the market immediately to the buyer. Nor is this all. It not infrequently happens that the salesman by his intimate and thorough knowledge of the market, of the extent of the demands and possibilities of the supply, is in a position to render the buyer service, the value of which is incalculable, and can be obtained in no other way.

It may be remarked that the closer and more confidential are their relations, the greater is the benefit to the buyer. And the salesman should be received cordially, not only because he is a benefit to the purchaser, but because he has inherent right to be so received. His coming is legitimate, his motives are in every way laudable, and the buyer who would treat him either discourteously or in the slightest degree condescendingly, does not merit the respect which we like to accord every retail druggist. In a word, the buyer should meet the salesman as one enjoying equal rights and privileges with himself, with a view to that mutual benefit which should always follow the advantageous exchange of commodities.

Before closing let us take to ourselves a few good and wholesome lessons from the character of the salesman. Without discussing his vices, or even acknowledging for the time that he has any, let us call attention to, and attempt to imitate his virtues. Let us in parting with him note the ever prevailing cheerfulness of his manner, his perennial hopefulness in the face of discouragements, his indomitable perseverance, his minute tact, his progressive spirit, and his genial manner, and be pleased when he comes again, for rightly met he will do us good.

* Read before the Kentucky Pharmaceutical Association, 1903 meeting.

NUX VOMICA ASSAY.*

By W. A. PUCKNER, Chicago.

SOME time ago I published (Pharm. Rev., 16, 180, and 20, 457), a method for the assay of belladonna leaves. It was a modification of the method of Keller, and directed that maceration of the drug with the ammoniacal chloroform-ether mixture as directed by Keller, be followed by percolation, attempting thereby to exhaust the drug completely, and thus avoid the taking of an aliquot part of the chloroform-ether. I at that time expressed the opinion that in the assay of such drugs as nux vomica, ipecac, etc., where the amount of solvent in relation to drug and water used is large, the error introduced through the use of an aliquot part will be small, and may be neglected. And I proposed this modification for such drugs as belladonna leaves, henbane leaves and stramonium leaves, where the error would be greater on account of the small amount of alkaloid contained in the drug, its greater bulk and absorbent power, the weight of drug operated on must be increased, as also the water to be added, while a corresponding increase of chloroform-ether would render the process cumbersome.

Since then I have been gradually eliminating all aliquot parts from routine assay methods, less to avoid the error incidental to the taking of the aliquot portion, than as a matter of convenience. Thus, by eliminating the aliquot part the use of dry measuring vessels and their subsequent cleaning is avoided, the loss of volatile solvent by evaporation is of no consequence, and due care may be taken to obtain the chloroform-ether quite clear, and thereby avoid many a persistent emulsion. Also the time of maceration may be reduced to an hour or half an hour, while in methods where aliquot parts are taken, three, six, or even twelve hours maceration with frequent or even continuous agitation is directed.

Below are given some experiments relative to the extraction of alkaloids from nux vomica which may be of interest to those engaged in similar work. These results show that the aliquot part method gives correct results, apparently through a compensation of errors, that an hour's maceration and subsequent percolation may well be substituted, and that alcohol should here be added to the light chloroform-ether mixture usually used in the Keller method, since its addition facilitates the extraction of the alkaloids, and also prevents the formation of emulsions in subsequent steps of the determination.

A. To 5 Gm. powdered drug were added 40 Cc. ether, 10 Cc. chloroform, 2 Cc. ammonia water, and the mixture shaken occasionally one hour. It was then transferred to a small percolator, the percolate received in a separator; when the menstruum had all passed through, the drug was packed down and exhausted with a further 50 Cc. of the chloroform-ether. The chloroform-ether solution of the alkaloids was next extracted with 10, 10 and 10 Cc. normal sulphuric acid.

To the acid extractions a drop of cochineal T. S. was added, then an excess of ammonia water, and then the alkaloid abstracted with 10, 10, 10 Cc. chloroform. After the evaporation of the chloroform the alkaloidal residue was titrated with decinormal acid, cochineal being used as an indicator. In these determinations the chloroform extractions took much time, while shaking with chloroform did not produce a condition which could be called an emulsion, yet each time an hour or more often elapsed before the chloroform would separate completely and could be drawn off. In four determinations the alkaloidal resi-

due so obtained required a) 3.31, b) 3.49, c) 3.41, and d) 3.49 Cc. of the decinormal acid.

B, a. These determinations were carried out as those in A in every way except that the drug was macerated with 50 Cc., and later percolated with 80 Cc. of a mixture obtained by mixing 7 Cc. alcohol, 23 Cc. chloroform, and 70 Cc. ether. Here all separations occurred most promptly, and all liquids drawn off were perfectly clear. In four determinations the alkaloidal residue required a) 3.49, b) 3.53, c) 3.56, and 3.47 Cc. of decinormal acid.

B, b. Proceeding as in B, a, except that the time of maceration was extended to two hours, there was required a) 3.46, b) 3.47 Cc. decinormal acid.

B, c. Again proceeding as in B, a, but macerating two hours, decanting the clear liquid to the percolator, macerating the drug with a further 50 Cc. for two hours, then transferring all to the percolator, and then percolating with further 25 Cc. In this way there were required a) 3.54 and 3.50 Cc. decinormal acid.

C. To 10 Gm. drug were added 100 Cc. chloroform-ether, obtained by mixing one volume of chloroform with four volumes of ether and 4 Cc. ammonia water, the mixture shaken frequently for three hours, allowed to stand over night, shaken again, the drug allowed to subside and then decanted through cotton to obtain exactly 50 Cc. This aliquot part (part 1) was transferred to a separator, the flask rinsed with a little chloroform-ether, then the alkaloid extracted and determined as in A. The remaining chloroform-ether and the drug was now transferred to the percolator, through which the aliquot part had been decanted, and further 75 Cc. chloroform-ether used to complete the extraction. From this liquid (part 2) the alkaloid was again obtained as in A. Finally the marc was dried and then extracted according to B. The result was:

Part 1, 3.15 Cc. Part 2, 3.58 Cc. Part 3, 0.18 Cc.

Here again, as in A, the extraction with chloroform consumed much time.

D. Here the procedure in C was followed, except that to 10 Gm. drug was added 100 Cc. Prolium mixture (70 Cc. ether, 23 Cc. chloroform, and 7 Cc. alcohol) were measured into a flask, allowed to stand until cooled to room temperature, then 3 Cc. ammonia water added, shaken violently, and while the ammonia water was in suspension 100 Cc. measured out and added to the drug.) After decanting the aliquot portion, the exhaustion was completed with 100 Cc. of menstruum consisting of 70 Cc. ether, 23 Cc. chloroform and 7 Cc. alcohol.

For three determinations the results are:

	Part 1.	Part 2.	Part 3.
a.	3.51 Cc.	3.56 Cc.	0.15 Cc.
b.	3.49 Cc.	3.34 Cc.	0.20 Cc.
c.	3.45 Cc.	3.56 Cc.	0.08 Cc.

If the experiments detailed under B may be taken to show a practically complete exhaustion, then it may also be accepted that the aliquot part (part 1) in D, apparently through an accidental compensation of inaccuracies, gives equally correct results. In choosing one or the other procedure when extracting nux vomica, it should be borne in mind that in the aliquot part method, care must be exercised to add the exact volume of the ether-chloroform-alcohol-ammonia water mixture, and later to avoid all evaporation when obtaining the aliquot part. This is done away with in B, which, however, takes more time, owing to the percolation directed.

Below are given some determinations made on samples submitted from time to time, which show an exceptional concordance between the results obtained according to B, a, and the aliquot part (part 1) of C. Ce. of N/10 H₂SO₄ required for the aliquot part representing 5 Gm. drug a c to Method C.

1. a) 3.93 Cc. b) 3.90	a) 3.57 Cc.
2. a) 2.80 Cc. b) 2.82	a) 3.03 Cc. b) 2.81 Cc.
3. a) 2.48 Cc. b) 2.49	a) 2.39 Cc.
4. a) 4.24 Cc. b) 4.23	a) 4.19 Cc.
5. a) 2.81 Cc. b) 2.75	a) 2.81 Cc.

* Read at the Fifty-First Annual Meeting of the American Pharmaceutical Association held at Mackinac Island, Mich., August, 1903.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION, neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Doctor's Initials or Name on Prescription Labels.

(C. H. M. D.) "To settle an argument will you inform me what should be done in the following case: A doctor sends to a druggist a prescription which has printed thereon, at the top, his name, office hours, telephone number and street address. Below the prescription on the blank the doctor does not sign his name in full but writes only his initials. In writing the label should the druggist copy only the initial letter or write in full the physician's name as it appears printed at the top of the prescription?"

The pharmacist should always write the name of the prescriber on the label for the medicine the latter may prescribe. In the case stated, the fact that the physician signed the prescription by his initials would imply that he did so in the belief that his full signature was unnecessary because his name was printed on the blank he employed, a most desirable arrangement. Prof. Remington, in discussing the subject of "Prescriptions" says, "the name of the prescriber is rarely signed in full, particularly since the very general use of printed prescription blanks, which contain not only the full name and address of the physician but also his office hours. When printed blanks are not used, the name and address of the physician should be written in full." Following this statement to its logical conclusion the duty of the pharmacist in the case would seem plain. Of course, it is not to be supposed that any reputable physician would employ the printed blanks of another physician and thus mislead the pharmacist. It is also noted that in some of the States having special enactments for dispensing and selling cocaine, etc., the law requires that not only the name and address of the patient shall be written upon the prescription, but it must also be signed by the physician who is required to be a duly licensed practitioner.

Hair Grower.

(Mrs. G. S.) See this journal May 28, 1903, page

551

Here are some other formulas:

(1)	
Caster oil	2 fl. drams
Oleo-balsamic mixture	3 fl. ounces
Tincture of euntharides	3 fl. drams
Benzoin acid	2 drams
Tannic acid	1½ drams
Alcohol	8 fl. ounces
Mix and filter	

(2)	
Urine sulphate	15 grams
Cologne water	3 fl. drams
Bain	3 fl. ounces
Alcohol	4 fl. ounces
Glycerin	3 fl. ounces
Rose water	2 fl. ounces
Alkanthol, sufficient to color.	
Mix and filter (Diétrick)	

(3)	
Tincture of euntharides	1½ dram
Tincture of capsicum	20 minims
Glycerin	1½ ounce
Cologne water to	6 ounces

Many other formulas have been published in previous volumes of the Era.

Tincture of Iron and Listerine.

(G. W. R.) Asks criticism on the following prescription:

Potassium chlorate	2 drams
Tincture of ferric chloride	1 dram
Glycerine	1 ounce
Listerine	1 ounce
Water to make	4 ounces

When compounded the mixture becomes a purplish red, due to the reaction between the tincture of ferric chloride and Listerine, the latter being stated to contain, among other things, "the antiseptic constituents of gaultheria, benzo-boric acid, etc." In compounding, the tincture should be added to the other ingredients previously mixed. The yellowish colored liquid in the bottle brought to you to be refilled was probably some of the mixture which had been exposed to the action of the light for some time.

Suggestions for Window Displays.

(K. E. M.) The show window has been said to be the connecting link between the crowd outside and the store within, and hence the druggist should endeavor to make his window displays accord with the goods he has upon his shelves. This statement in itself is suggestive and you should be able to think of many seasonable goods you might advertise by making a suitable display. As a source of inspiration we suggest you refer to the volumes of the Era covering the past three or four years. These contain so many suggestions that we cannot spare the space to enumerate the list. The only book on the subject we know of is the "Art of Decorating Windows and Interiors," published by The Merchants' Record Co., 320 Dearborn street, Chicago, Ill. The price, we are informed, is \$3.50 per copy.

Books on Veterinary Medicine.

(F. W. M.) The following are standard books on veterinary medicine: Dun, "Veterinary Medicines, their Action and Uses"; Courtney, "Manual of Veterinary Medicine and Surgery"; Chauveau, "Comparative Anatomy of Domesticated Animals"; Fleming, "Veterinary Obstetrics"; Gresswell, "Theory and Practice of Equine Medicine"; Hays, "Veterinary Notes for Horse Owners"; Hill, "Principles and Practice of Bovine Medicine and Surgery"; Hill, "Management and Diseases of the Dog"; Smith, "Physiology of the Domestic Animals." A small and very useful book for druggists is "Veterinary Counter Practice," a treatise on the diseases of animals and the most suitable remedies for them.

Hair Curling Preparation.

(Houghton.) The following is a typical formula:

Powdered gum tragacanth	2 ounces
Borax	½ dram
Powdered soap bark	20 grains
Oil of rose geranium	½ dram
Oil of rose	3 drops
Oil of cinnamon	4 drops
Oil of bitter almonds	2 drops
Extract of musk, enough.	

This preparation is not used upon the hair, but may be kept on hand to prepare a "liquid curler" with water, as needed. About a dram of the powder to 8 ounces of water will produce a satisfactory preparation.

(F. W. M.) Address the New York Veterinary College, 141 West Fifty-fourth street, this city

N. W. D. A. and P. A. of A.

JOINT CONVENTION HELD IN BOSTON, SEPT. 7-12, 1903.

Two Branches of the Trade Meet at Hotel Somerset—Nearly Six Hundred Present—Fine Weather, Beautiful Surroundings and Brilliant Entertainment—Exhaustive Reports on Trade Conditions—Rebate and Tripartite Plans Discussed—N. A. R. D. Delegates Received with Cordial Welcome—Direct Contract and Serial Numbering Plan Endorsed with Certain Provisions—Theatre Party, Ball, Banquet and Excursions.

The joint convention of the National Wholesale Druggists' Association and the Proprietary Association of America, which met in Hotel Somerset, Boston, September 7, was one of the most successful in the history of the associations. Everything was favorable to a pleasant and profitable meeting. Nearly six hundred names were registered on the roll of visitors.

As reported in last week's Era, the first day was spent in visiting Harvard and getting settled in the various hotels. Tuesday morning both conventions opened formal sessions.

TUESDAY MORNING.

Both Associations Formally Open Sessions and Receive Representatives from Sister Organizations.

President Hoover called the assembled members of the National Wholesale Druggists' Association to order in the small ball-room of the hotel shortly after ten o'clock. There was a fair sprinkling of members of the Proprietary association and a number of interested visitors. The hall is an ideal one for a meeting of this kind, spacious, well-lighted and protected from disturbing noises.

In his opening remarks, the president complimented the committee of arrangements upon the success of their plans, the pleasant environment selected and the attractive program of entertainment provided. He introduced the chairman of the committee representing the wholesale organization, Charles F. Cutler of Boston.

The gentleman introduced extended a hearty welcome to New England. He had expected to be able to introduce Mayor Collins, who unfortunately could not attend. As a representative of the city of Boston he therefore presented Arthur W. Dolan, president of the Common Council.

Mr. Dolan welcomed the visitors on behalf of the municipality which he had the honor to represent, and referred briefly to the show places and historic scenes of the city. He spoke in hearty praise of the program which had been provided and said that in a number of years' experience he had never seen its equal.

M. Carry Peter of Louisville, accepted the welcome on behalf of the association and promised not to abuse the privilege.

Reception of Delegates.

After the roll call and the reading of minutes had been disposed of delegates of associated organizations were received.

Dr. V. Mott Pierce of Buffalo spoke for the Proprietary association. Referring to the fact that his association had met this year with the wholesale organization for the first time in many years, he said it was now time to kill the fatted calf. He thought the associations should always meet at the same time and place, and quoted the famous remark: "We must all hang together or hang separately." In response C. F. Shoemaker of Philadelphia referred to the return of the prodigal and hoped that in lieu of a fatted calf, the ban-

quet of Thursday night might suffice. He regretted that the associations had ever separated, and hoped that they might now remain together. He said that there were knotty problems to be solved, but trusted that the solution would be found.

Henry Canning of Boston appeared as delegate of the American Pharmaceutical Association and spoke of the grand old association—the mother of them all—which he had the honor to represent. He said that the spirit of unity seemed to be in the air, and expected good things from this meeting. It might be necessary to re-thresh some old straw, but he asked the assembly to remember that "the isle across the sea" had been threshing old straw for centuries and was just beginning to see day-light. He said the N. W. D. A. had set a good example for the retailers, and that if the latter were as solid they could demand anything they might please. In response Thos. F. Main extended a hearty welcome to the A. P. A. and referred to the extremely valuable services of this parent association.

For the N. A. R. D. the president, R. K. Smither, arose, and said he represented the youngest child of the grand old association. He could point to a record of but five years. There was no history to point to, but his association wished to make some. He and his associates were present upon important business. He believed that the N. A. R. D. had reached a crucial stage. He said that the tripartite plan had yielded as much fruit as it could, but that it needed reinforcement. His association was working for the benefit of all branches of the trade. He asked permission to present the needs of the immediate future. He hoped his hearers would not listen and then go home and sleep upon it.

In response M. N. Kline said that it was fitting that a body of business men should confer with men who "meant business." He said that all views offered as such should be taken seriously. He stated emphatically that the N. W. D. A. was not a "body of jolliers." His organization would do business in the old way. He had never yet seen the day when its retail friends had come for bread and had gone away without.

George W. Cobb appeared as a representative of the Massachusetts State Ph. A. In response C. P. Walbridge of St. Louis said he hoped the meeting would be rich in benefits. There were things which must be settled, and he hoped they would be.

C. P. Shoemaker said the Pennsylvania State Ph. A. which he represented was in a very prosperous condition, and believed that the condition of the retail trade in his State was better than it had been for years, a fact due to the work of the N. A. R. D. W. J. Walker welcomed the Pennsylvania association.

The Virginia Ph. A. was represented by Edgar D. Taylor.

President's Address.

After the reading of a number of letter and telegrams expressing regret at inability to attend the meeting in person, President Hoover delivered his address.

He said that it was sixteen years since the last meeting of the association in historic Boston, in many re-

CHAS. F. CUTLER, Boston, Mass.

Chairman N. W. D. A. Committee on Arrangements and Entertainment.

spects the most interesting of American cities. At that time the presiding officer was that splendid veteran of the drug trade, Daniel R. Noyes, of St. Paul, whose influence had always been a powerful factor in the deliberations of the body. The president and vice-president elect at that meeting were Dr. E. Waldo Cutler and Solomon Carter, both residents of the city, and belonging to a school and generation fast passing away.

The speaker referred to the pleasure of visiting the birth place of freedom, and said the scenes reminded him that it was in Boston that that popular function the "tea party" originated.

President Hoyer then referred to the readjustment in values of certain classes of property, and said that it was one of the marvels of the age that a shrinkage of \$1,766,729,000 in value had not materially affected the output of our factories or created any disturbance in commercial life. In view of the fact that further readjustments were bound to occur, he cautioned his hearers to be conservative in extending credits.

The increase of membership from 216, sixteen years ago, to 233 at the present time, of whom 115 and 179 were respectively wholesale druggists, was referred to as no great increase, but as sufficient to meet all the demands upon this branch of the trade in the interim.

The subject of securing more adequate returns for the work of the wholesale druggist next occupied the attention of the speaker. He referred to the numerous drains on the firm of increased taxation, greater cost of transportation and expense of labor, and urged the importance of composing a charge for boxing and cartage. He deplored the loss of profit in the sale of chemicals due to excessive competition, and recommended the adoption of a resolution requesting chemical manufacturers to manufacture special work. The question was asked, whether manufacturing chemists could not establish a society for promoting their products similar to that of the manufacturing pharmacists?

After discussing the P. A. of A. to the joint meeting, and referring freely to discounts upon proprietary articles, the speaker suggested that the disposition among wholesale buyers to become manufacturers and proprietors was due to the fact that so many of the preparations which they are carrying are sold at so small a profit

as to make it necessary to eke out their profits by preparing and distributing goods under their own label.

The practice of placing upon the market many sub-quantities was deprecated. The speaker urged the two associations to discuss these matters fully.

The actual capital invested in the wholesale drug business as represented by the N. W. D. A. was shown to be between \$23,723,000 and \$27,380,000. Annual sales were estimated at about \$94,241,680. Of this amount 51 per cent, or \$51,211,680 represents sales of proprietary articles. The expense of the association was a trifle over 1 1/4 of one per cent, of the total sales of proprietary articles, a sum insignificant as compared with the results obtained.

The speaker closed his address by calling attention to the willingness of the association to help the N. A. R. D. in every way possible, and said that in the discussion of the rights of these parties to the tripartite agreement, the following points should be borne in mind:

That the sale of proprietary articles constitutes from fifty-six to sixty per cent, of the jobbers' gross sales.

That the actual expense of conducting a wholesale business as shown by statistics, is from eleven to twelve per cent, of the gross volumes of sales.

That owing to the vast increase in the sales of proprietary articles in subquantity lots, the gross profits of handling these articles has been materially reduced and will not now average to exceed ten per cent., and in my judgment it will be even less than that figure.

That any plan which involves the expenditure of extra time and money to a degree that will increase the percentage cost of doing business without adequate compensation, is absolutely impossible from the jobber's standpoint.

Secretary's Report.

Secretary Toms reported an active membership of 231. He said that the associate membership at the beginning of the year was 176; there had been a net loss of seven, making the present membership 169.

Report of Treasurer.

Treasurer Strong submitted his annual report which showed that the receipts had been \$23,860.38, of which \$22,334.90 were from membership dues and other sources. The expenditures had been \$18,547.25, leaving a balance of \$5,313.15.

Mr. Strong supplemented his report with a few remarks. He said the association was so comfortably off because the voluntary contributions had been generous, and he urged some permanent plan of financing the affairs of the association, since with expenses reaching nearly \$20,000 the regular annual receipts, prior to this year, had averaged only \$15,000.

Before the meeting adjourned Secretary Toms read a communication from the Vermillion County (Illinois) Pharmaceutical Association, urging the organization assembled to adopt a plan for combatting the cut rate evil, similar to that now known as the Miles plan.

MEETING OF PROPRIETARY ASSOCIATION.

The meeting of the proprietary Association of America was called to order at 11 o'clock. President Herbert B. Harding made a brief address. He reviewed the history of the association since its beginning in 1882, and said that of 97 members in that year only 30 remain on the rolls.

Delegates from other associations were then received. C. P. Shoemaker extended the greetings of the N. W. D. A. and was responded to by J. P. Kathrus of the Pabst Brewing Co., R. K. Suther, president of the N. A. R. D., spoke in behalf of the plans of the retail association. His appeal was responded to by A. H. Beardsley of the Miles Medical Co., Geo. W. Cobb gave the welcome of the Massachusetts State Ph. A. and was answered by Dr. V. Mott Pierce.

Clarence G. Stone, chairman of the committee of arrangements, outlined the entertainments for the week.

In presenting the report of the committee on pharmaceutical preparations, Dr. V. Mott Pierce said that almost without exception the State associations had endorsed the direct contract and serial numbering plan of the N. A. R. D.

Secretary Joseph Leeming presented his report which covered 16 months, this long time being accounted for by the change in time of meeting from May to September. The members of the association at present number 152.

A. M. Hance of Philadelphia presented the report of the committee on trade interests. He noted the development of drug departments in department stores. He showed that the tendency in these stores to advertise their goods as coming direct from the manufacturer at prices which enabled them to sell at cut rates had disturbed the retail trade, but he thought the prevalent opinion concerning these department store drug establishments was not wholly fair. The committee suggested that members should co-operate with State inspectors in the enforcement of pure food laws, and also that a law similar to the New York confectionary act might be desirable.

The report of the committee on deceased members, read by secretary Leeming showed that there had been a number of deaths during the year.

THE MORNING'S ENTERTAINMENT.

While the two associations were listening to addresses of welcome and considering reports of committees the ladies enjoyed a trolley trip through Boston. Cars had been provided for the party which, embarked at 10 A. M. under the leadership of Mrs. Chas. A. West. The morning was spent in visiting places of historic interest and public buildings.

TUESDAY AFTERNOON.

After luncheon the N. W. D. A. alone transacted business, the proprietary organization having no session, the members either following their own plans in the city, visiting with friends in the lobby or listening to the proceedings of the associate body. In the assembly room of the N. W. D. A. the reading of reports was continued.

Committee on Credits and Collections.

The report of the committee on credits and collections was presented by C. F. Shoemaker. After considering the present conditions in the business world, the report stated as the belief of the committee that, the commercial interests of the country are on a firm foundation because as a rule they have not been subject to undue inflation.

The opinion was expressed that wholesale druggists should be extremely careful in encouraging the starting of new retail stores, especially when this is done by means of credit. The committee recommended the passage of laws in every State preventing the sale of stocks in case of failure without proper protection to creditors. The need of more elastic currency was dwelt upon at length.

Secretary Toms read the report of the committee on cases and cartage submitted by J. C. Eliel. The report recounted the history of past efforts to reimpose charges covering the expense of packing and shipping goods. No success had thus far been attained. The only hope of permanent results was shown to be the adoption of uniform methods in the East and West. The jobbers of the larger cities refused to join in the movement. In other places west of the Alleghenies and even in New England the members seemed to be willing. The committee urged the association to make other efforts, and suggested that a new committee consult with members of other trades namely, hardware jobbers and others.

Committee on Fire Insurance.

Thos. F. Main, presenting the report of the committee on fire insurance, called attention to the impor-

D. S. CHAMBERLAIN, Des Moines, Ia.
President Proprietary Association.

tance of the subject. He stated that there had been many changes and charges had been modified, but that rates were still excessive. He divided fire insurance companies into two classes—those carried on merely for the purpose of securing large dividends for their stockholders, and those formed for the distributions of the many for the benefit of the few.

If the companies are institutions for the distribution of losses, the report pointed out, that the insured had a right to expect that the business will be carried on economically. In many cases this is not done. The tax is enormous and disproportionate.

Concerning the kind of policy employed it was pointed out that no one standard policy could be made to cover every business risk. Businesses differ and different conditions must be added to fit each risk. The advisability of employing an insurance broker was considered, but in any case the insured was cautioned to scrutinize his policy.

The point upon which insured and insurer are most apt to differ was shown to be the question of rates and premiums. The careless merchant without provisions for putting out fires pays the penalty in high rates. Care will secure low rates. A series of examples showing the relation of rates to buildings of various characters, and uses, and equipped with different forms of apparatus were given. The rates varied from 50 cents to \$3.10, the latter in an old line company under the least favorable conditions.

The rebate principle as applied to insurance was shown to yield very satisfactory results. In this system the insured makes a deposit to cover emergencies, and his liability is limited to a certain amount. The subscriber is paid a yearly dividend upon his deposit which he is at liberty to withdraw after certain formalities. As an example the New England Factory Mutual was mentioned. It has educated its subscribers to build carefully, and has reduced the cost of insurance to 15 cents for a number of years, and last year to 7 cents. While it would probably be impossible to reach this figure in the insurance of drug houses, the present rates might still be materially reduced. Fire insurance still left much

HERBERT B. HARDING, New York, N. Y.
Retiring President Proprietary Association.

room for improvement. It had not been reduced to a science as was the case with life insurance. In settling claims the professional adjuster had come to be an important factor.

The report closed with a set of proposed resolutions to provide for the collection of statistics of losses and inquiring into methods of reducing hazards, organizing fire brigades, etc.

Committee on Trade Marks.

Charles H. Camp presented the report of the committee on trade marks.

The report emphasized the importance of protecting rights of individuals in trade marks, and urged vigorous action on the part of proprietors in striking at every attack upon their exclusive rights. Attacks upon infringements should not be made unless there are reasonable chances of success. In many cases it was not necessary to begin with litigation. A visit to the infringer with a clear statement of the rights of the lawful proprietor was often sufficient.

In the consideration of cases decided during the year a number of interesting decisions were given. The question of rights in proper names received considerable attention and brought out some curious rulings, in some cases a man being unable to use his own name. The protection of trade mark rights in foreign countries was shown to be a matter of some difficulty, especially in Cuba and Germany, where priority of registration often caused great annoyance and expense.

Committee on Legislation.

M. N. Kline presented the report of the committee on legislation, which had been active in promoting four bills.

The Jay bill for the purpose of reducing the tax on alcohol from \$1.10 to 70 cents a gallon had attracted comparatively little attention from the public and legislators. All indications seemed to show that it would receive more attention during the next session. Efforts have been unfruitful, and the result promises to be a reduction.

The Hepburn pure food and drug bill passed the House but failed in the Senate. A provision to prevent importation of impure drugs and foods had been added to another measure which had become a law. The inspection of samples and the examination of applicants

were provided for, and much work similar to that proposed in the pure food bill was already under way. Appropriations for the chemical investigation by the Department of Agriculture had been made. These provisions were originally a part of the Brosius pure food bill.

The history of the Lovering draw-back bill to provide for a draw-back of the tax paid on alcohol used in manufacturing articles for the export trade, was similarly discussed. An argument prepared by a special committee was read. It was shown the amount which could be claimed under such provision, had during four years increased from \$78,000 to \$125,000. Most of the alcohol was imported from Germany. The bonded warehouse law was shown to be inadequate. Not more than five or six firms were operating bonded warehouses. The measures could be modified to include domestic alcohol under the same provision. The difficulties of operation were shown to be much less than had been supposed.

The importance of proper legislation covering these difficulties was dwelt upon. Failure of our Government to provide a proper law had forced American manufacturers to establish factories abroad. The importance of the use of alcohol in the arts was urged. Under present conditions American manufacturers were unable to compete with those of other countries. A list of products which could be produced in this country in competition with other countries was read, and in considering the question of rebate on evaporated alcohol it was shown that the loss in the process varied from 5 to 20 per cent.

Outside of the business done by two firms, one in New York and one in Detroit, the report stated, we have very little export manufacture. With proper provisions on the part of our government the amount could be increased one hundred-fold.

Committee on Relations with Associations.

In the report of the committee on relations with local and inter-state associations, Geo. W. Lattimer urged the formation of local associations. Those bodies were shown

M. N. KLINE, Philadelphia, Pa.
Chairman Committee on Legislation, N. W. D. A.

to be of great value in correcting evil customs. Everything could be reduced to a matter of custom, and it was necessary to establish correct customs in the trade. The customs which needed correction were discussed. The relations between the different branches of the trade were not entirely what they should be, and thus could be much modified by association and free discussion. It was shown that the jobber is not ready to go. The retailers would make a great mistake if they attempted to discard the jobber. Buying clubs could not pay in the end, and the association was urged to educate the retailer to see this.

The speaker stated that the jobber was not to blame for the great number of retail stores, but he urged his associates to be cautious in encouraging new stores, to sell only in large quantities and only on good credit.

The relation between the jobber and manufacturer were also said to be strained, due to encroachment upon each others' chosen fields. The report advocated moderation all around, and called the jobber to account for a share of the trouble. Some firms entered all three fields. They should encourage the custom of remaining in one field. The retailer should be aided by means of more satisfactory arrangements between the jobbers and grocers, so that the latter could not undersell small drug stores. Physicians' supply houses were condemned, the trade of physicians being the retailers' exclusive right.

The report closed with a strong appeal for higher ideals, and the statement that the competition of former days is wrong; it is commercial surrender.

Committee on Transportation.

The report of the committee on transportation was presented by C. F. Weller, who stated that while many excellent reports had been presented by former committees, nothing had been accomplished by transportation lines. He said the transportation corporation no longer seemed to consider the wishes of the jobber. Charges were regulated to suit the carrier companies and not the shipper, and trains were run seemingly for the sole purpose of piling up dividends. The report suggested that a permanent committee be appointed to look after the associated members' interests, to inquire into freight rates, and if possible to secure a more satisfactory classification of goods in the drug line.

WEDNESDAY MORNING.

N. W. D. A. Listens to an Appeal by Thos. V. Wooten for Justice to the Retailer and to More Committee Reports—P. A. of A. Spends Most of the Morning in Executive Session.

The third session of the wholesale association was held on Wednesday morning, and was largely occupied by the reading of reports. The proprietary body spent the greater portion of the time in executive session.

The first business of the wholesale meeting was the consideration of the report of the committee on deceased members, by C. F. G. Meyer. The report was read by Secretary Toms and recorded the deaths of a number of members all of which have been noted in the columns of the Era during the past year.

Committee on Proprietary Goods.

John N. Carey, chairman of the committee on proprietary goods, read his report which was referred to the board of control without debate.

The report referred briefly to the changes of the past year and discussed the condition in the wholesale drug business. It showed that the cost of conducting the business is constantly climbing, and a large portion of the report was devoted to a discussion of the success of one of the most important means of maintaining the jobbers' profits—the rebate plan. Reports from whole-

sale druggists in different parts of the country on the situation in the various localities were presented. With few exceptions satisfactory adherence to the rebate and tripartite plans were reported. The chairman said that he realized that there were a few manufacturers who were not careful to adhere strictly to their pledges, but he believed that most of the prominent proprietors who sell their goods on the tripartite plan have been faithful to their pledges in this respect.

The present status of the tripartite plan was discussed at some length, and the history of the Miles plan and the famous conference of jobbers in Chicago recorded. The difficulties involved in distributing goods under the direct contract and serial numbering plan were briefly discussed and the necessity of additional compensation to the jobber pointed out.

The president then proceeded to a special order of business and extended an invitation to the retail friends of the association to present any proposals they might wish to offer. He added that he believed that a satisfactory agreement would be reached.

Secretary Wooten's Appeal.

Thos. V. Wooten, secretary of the N. A. R. D., responded to the call and held his hearers' closest attention, while he delivered an impassioned appeal for justice to the retail druggist.

Mr. Wooten said he thought everyone would admit that the present condition of the retail druggist was far from satisfactory. Thousands of retail pharmacists are through no fault of their own reduced to the narrow limits of a precarious living.

There are a few hundred more than 40,000 druggists in the country. Some are prosperous but all know that they are apt to be reduced to poverty at any time. The speaker stated that one enter in a locality is sufficient to upset all stable conditions.

Mr. Wooten said he did not appear before the assembly to ask sympathy. All he wished to ask was simply justice. He asked that proper recognition be given the retail druggists for their services to the very goods which were now killing them.

The retailers, continued the speaker, were not the only sufferers. The proprietors and jobbers also suffered. The degradation of pharmacy by lowering the moral tone of the profession was also the work of the aggressive cutter. "Yet," said Mr. Wooten, "we are told that nothing can be done. Cutting must go on."

"The N. A. R. D.," continued the speaker, "says that this course of infamy must be stopped. Our purpose is to call upon the proprietors and jobbers for aid, not once, but many times. Much has been done, and we are thankful. Much has been done to improve conditions in the drug trade, but much remains to be done."

Continuing Mr. Wooten said that at one time the tripartite plan was believed to be the solution. This plan is effective in many ways, but in one important particular it is weak. There is no way of following the course of goods to the cutter. The cutter boasts that he is safe, for there are always enough jobbers to keep him going. This boast is only too true. The tracing of goods is necessary. Serial numbering can be applied. This principal has already done wholesome work. In proportion to its cost the benefits to all branches of the trade has been incalculable.

Five years experience with the tripartite plan has revealed another weakness. A contract is necessary to give a definite penalty. All eyes have been directed to the success of the contract plan. The druggists of the country urge upon the allied branches of the trade the adoption of this modification of the plan, the need of which it has taken five years to demonstrate.

Mr. Wooten said that retailers long had confidence in the loyalty of the proprietor and jobber, but the boasts of

the cutter have aroused suspicions. Are the proprietors and jobbers sincere? The retailers want that question answered, and they look to this meeting to give an answer—not only an answer in words but in action in behalf of the common interest.

Continuing, the speaker said that the subject of substitution has been much aired. Much of what has been said was admitted to be true. But who is responsible? The cutter and through him the proprietor and jobber who have not discouraged cutting. For this reason the retailers insist that the meeting give this matter the closest attention. The three-party principle is so well recognized that it is unnecessary to discuss it. The situation is one of mutual dependence. What benefits one, benefits the other. Substitution is bad for the jobbers as well as other branches of the trade, and the indifferences of some of them to this practice is astonishing. In view of the importance of the question, the contention that any plan is too much trouble is astounding.

Mr. Wooten stated that the bulk of the retail trade is firmly convinced that the plan is practicable. They may be mistaken, but want to be shown why. He warned the jobbers not to stand in the way of retail success in the drug business, and his eloquent appeal had a visible effect upon his audience. He declared that it was not his desire to introduce discord into the meeting, but that it is better for the future to recognize these facts. If the meeting failed to come to the rescue, the association would be condemned in the eyes of the retail trade. Restlessness and suspicion against the jobber is already great and its tendency is to increase. Soon a tripartite plan will be impossible. The tripartite plan is fatally weak and must be strengthened.

Failure to secure the aid now so sorely needed appeared to the speaker inconceivable. In the last few days a proprietor had expressed his willingness to adopt the plan but did not because the jobber objected. "This," said Mr. Wooten, "we do not believe to be true. If it is true we are mistaken in you. Boston is sacred to the cause of the oppressed, and we call upon you in this historic city as friends and natural allies to help us in this undertaking."

The address was received with applause. At its close President Hoyer said that things of this kind were usually referred to the board of control.

M. N. Kline made a motion, which was adopted, to refer the matter to the committee on proprietary goods to be referred back to the meeting later as a special order of business, and that members of the proprietary association be invited to take part in the discussion.

Committee on Suits Against Members.

In the report of the committee on suits affecting the members of the association M. N. Kline discussed the Parks case, the Macy case and other suits.

Committee on Commercial Travelers.

Robert H. Bradley presented the report of the committee on commercial travelers. The report referred facetiously to the traveling man as a "necessary evil," an "expensive evil" and an "indispensable attachment" to the wholesale drug trade. The importance of the utmost confidence between the agent and his house was pointed out and emphasized with the statement that there must be "strength in the union of house and agent."

Concerning the remuneration of commercial travelers the report found it impossible to discover a method which could be uniformly adopted by all houses. The matter must vary with different houses and different conditions. Selling on commission was shown to be a great incentive to "good, hard work," but this system possesses certain disadvantages, and in the committee's opinion the best interest of the wholesaler in large sales districts point to the payment of salaries, as against commissions. In most cases, a stipulated salary seemed to be more prac-

ticable—something in which the agent can feel secure.

Committee on Paints, Oils and Glass.

Secretary Toms read the report of the committee on paints, oils and glass, which was submitted by William Scott of Indianapolis. The conditions existing in these lines of trade during the past year were discussed. An advance of \$15.00 a ton in white lead was noted and trade in mixed paints declared highly satisfactory. Linseed oil, the consumption of which during the year broke all records, declined steadily in price, and the available stock of linseed is very large. The market in window glass was disappointing, a condition for which the jobbers themselves were to blame.

Committee on Paris Green.

The report of the committee on Paris green, submitted by Alanson S. Brooks of Detroit was also read by Secretary Toms. It stated that Paris green had not been sold on the rebate plan although efforts had been made to bring about this desired result, but in five cities a schedule of prices had been arranged and employed. The consumption of this commodity was shown to have been very light during 1903, and Paris green was stated to be no exception to the rule: "Buy when you are in the market, as legitimate requirements demand."

The committee urged continued effort to induce manufacturers to sell upon the rebate plan.

Secretary Toms read by title the drug market committee's report. Upon request he read in full that portion referring to the duty on borax, which it was stated now operated to the advantage of the borax trust which was entirely English. The committee recommended that this issue be fought by the association in Washington.

Special Committee on Commercial Travelers.

A report by a special committee on commercial travelers by Frank S. Henry, of Cleveland, was read by Secretary Toms. It discussed the difficulties with which the commercial traveler was forced to deal. The various virtues and qualities demanded by the traveling man were dwelt upon in an instructive and entertaining manner. The salesman was cautioned not to talk politics, and to keep his powers of conversation well in hand. The practice of drinking "high-balls" was especially discouraged as unusually vicious and demoralizing.

Committee on Adulteration.

The report of the committees on adulterations by P. L. Hopkins was also read by the secretary. It stated in effect, that the cry of adulteration was much louder than the facts seemed to warrant. Reports of sophistication invariably dealt with specific instances the actual proportion of cases not being considered. In this way it was believed that the public had been given a false impression. The drug trade suffers to no small extent by the popular confusion of the goods which it handles with those known as "grocers' drugs."

The committee suggested that there should be some means of standardizing drugs. Dealers in drugs were confronted by the same conditions which govern those in other lines. There are always several grades, and the same standard has many disadvantages. Opium below certain strength of alkaloid is condemned by the government as below standard, but to manufacturers who em-

J. N. FERRIER

P. O. Box 71, NEW YORK CITY

ploy the gum for the extraction of alkaloid and themselves by this ruling deprived of a satisfactory raw material.

The ultimate consumption of most drugs is for therapeutic purposes, and the committee pointed out the desirability of adopting therapeutic standards, so that the retail druggist could be readily assured of the quality of everything he might buy.

THE PROPRIETARY ASSOCIATION.

The Proprietary Association of America went into executive session at about 9:30 and remained behind closed doors for nearly four hours. All business of the convention was disposed of and the meeting adjourned subject to the call of the chair.

Reports on legislation, transportation, advertising and infringement of trade marks were read and discussed.

Greetings were received from the Canadian Proprietary Association and suitable resolutions adopted.

The officers chosen for the coming year by the P. A. of A. are as follows: D. S. Chamberlain of Des Moines, president; William H. Gove of Lynn, first vice-president; F. W. Schumacher of Columbus, Ohio, second vice-president; Joseph Leeming of New York, secretary; Henry H. Good of New York, treasurer and Herbert B. Harding of New York, Dr. V. Mott Pierce of Buffalo, A. H. Beardsley of Elkhart, Ind., George A. Newman of Louisville, Dr. Chas. H. Stowell of Lowell and W. A. Talbot of Warren, Pa., executive committee.

WEDNESDAY AFTERNOON.

Nominations of Officers for N. W. D. A.—Reports Adopted.—Interesting Speeches.

When the N. W. D. A. reassembled after the recess for luncheon, the committee on nominations were found ready to report.

The following nominations were made: President, C. F. Shoemaker, Philadelphia, first vice-president, M. Cary Peter, Louisville; second vice-president, Fred L. Carter, Boston; third vice-president, C. F. Michaels, San Francisco; fourth vice-president, James S. Morrison, Chicago; fifth vice-president, A. D. Parker, New Orleans; secretary, J. E. Toms, Indianapolis; treasurer, S. E. Strong, Cleveland; chairman board of control, Lucien B. Hall, Cleveland.

Lucien B. Hall read the report of the board of control on the reports submitted by the various committees. These were all adopted with few changes.

M. N. Kline made a few remarks supplementary to the report of the committees on legislation. He quoted from a pamphlet issued by a New York firm of attorneys on the manner in which Germany had developed its industry by a wise provision for the use of alcohol. German industries consume 56,000,000 gallons of alcohol as against 10,000,000 gallons in the United States. While the population of Germany is only two-thirds that of the United States the consumption of alcohol in the arts is nearly six times as great, the only reason being that Germany recognizes two principles—low duty on alcohol and free alcohol for the manufacture of export goods. Mr. Kline said that he had been told that what this country needed was a provision for the use of denatured alcohol and not reduced tax.

The report of the committee on fraternal relations was called for. M. Cary Peter delivered, *viva voce*, what is probably the shortest report on record:

"Peace and Harmony Prevalent."

This report was adopted with a rising vote of thanks.

All the applicants for membership in the association which had been posted for twenty-four hours were elected.

The assembly adopted a resolution read by John N. Carey, and submitted by the P. A. of A., pledging mem-

bers to discourage the imitation of Van Stan's Strataem Cement.

Officers of Proprietary Committee.

After various committee reports had been disposed J. N. Carey of Indianapolis was elected chairman of the proprietary committee for the ensuing year, and F. E. Holliday vice-chairman of the same committee.

Resolutions on the Direct Contract Plan.

The proprietary committee rendered its report dealing with the N. A. R. D. appeal, and offered a set of resolutions pledging the N. W. D. A. to co-operate with the N. A. R. D. in every way possible. It stated that if the direct contract plan were found acceptable the association would lend its active support subject to a number of clauses and provisions.

Thos. V. Wooten, secretary of the N. A. R. D. arose to inquire why a clause suggesting unwillingness on the part of retail druggists to adopt the Miles plan had been inserted. He thought the clause entirely unnecessary. The fact that 34,000 druggists had signed the contract was proof sufficient. The tripartite plan would be fatally weak without the serial numbering features. He thought the resolution would be stronger if there were fewer provisos. The proposed form would arouse suspicion in the minds of the retailers. The latter are certain that the plan is successful. The resolution contained so many provisos as to impair its value.

M. N. Kline defended the resolution. He said it had been carefully prepared. If, however, it was not satisfactory it could be changed. Answering Mr. Wooten in detail, he pointed out that the first paragraph was a reiteration of the former position of the association. The members of the association occupied the position of middle men and were bound to abide by the decisions of the other branches of the trade. They disliked to assume that the plan would work even with certain endorsements. If the clause suggesting doubt was unnecessary, it was also harmless. The Miles trial was not enough to be convincing. Many retailers had signed the contract, but it was not entirely certain that many in the larger cities had not signed them because they were not selling the goods anyway. The trouble involved in the serial numbering feature is so great that the expense must be provided for, and the arrangement for this additional recompense was the purpose of the first proviso. The second proviso merely provided for consultation with a committee to arrange necessary details.

R. K. Smither, president of the N. A. R. D., said that he was disappointed with the proposed resolution.

JOS. LEEMING, New York, N. Y.
Secretary Proprietary Association.

He had hoped to receive a more helpful resolution. The history of the Miles campaign showed that it took an immense amount of effort to overcome inertia. He pointed out that there is in reality a great deal of opposition from the jobbers. These facts are well known and it was hoped that the N. W. D. A. at its meeting in Boston would endorse the plan "right out." He said that the proprietors are not a bit more reluctant than the jobbers. The jobber is now the principal factor involved. The proprietors say that, if the jobbers and retailers want the plan they shall have it.

Mr. Smither said: "We want a little more prestige from you. Boil the resolution down to a simple endorsement!" The proprietors, continued the speaker, are afraid, they have much at stake. But the jobbers have nothing to lose by the adoption of the plan. Why not come squarely out for it. They might, then, if desirable, tack on a little proviso for additional compensation.

M. N. Kline arose and said, since this was a matter of the utmost importance, he hoped there would be a full discussion.

Mr. Parker, of New Orleans thought the gentlemen from the N. A. R. D. did not fully understand all the resolution implied. It seemed to grant all the benefits asked.

C. F. Shoemaker said that, in his opinion, the association of business men could not strongly urge the adoption of any plan unless they were thoroughly convinced of its efficacy. The N. W. D. A. stands ready and has always stood ready to follow any plan which is best for all concerned. But that is the question. The vote of 31,000 druggists does not necessarily mean that 31,000 druggists will sign a dozen other contracts. The speaker wanted to state that he did not wish to discuss retail sales on the movement, but that the proof of success was to yet not forthcoming. He had asked some of the proprietors about an example of the bold, unhesitating, unhesitating course. "What are you doing with the Miles goods?" The reply was that so-and-so were selling the Miles goods at 60 cents although the

wrappers were mutilated. This was merely a casual illustration from the city of Boston, but it showed what might be going on in other places.

The jobbers, continued Mr. Shoemaker, are not the principal factors in this matter. The proprietors have the deciding voice. He was told that the druggists were looking with great hope to this movement. It had been suggested that some hidden power was keeping the proprietors back. He questioned the truth of this suggestion. The proprietor should be able to settle his own affairs. The wholesale association was not thoroughly convinced that this present plan is the solution. "This," said the speaker, "is a matter of business and not of sentiment." The retailers should remember that man is a creature of habit. The proprietor with capital is necessarily conservative.

Geo. W. Lattimer said he had come to the meeting from a place where sales of the Miles goods were large. He had come in full favor of the plan, but he had learned, in conversation with different members of the assembly, that the conditions with which he was familiar were not in force everywhere. He had been led to doubt whether all retail druggists really wanted the plan, and whether the association ought to endorse it.

John N. Carey thought that after a little scrutiny, the N. A. R. D. representatives would find that in the resolution they were getting exactly what they had asked. He said he was prepared to offer a motion to strike out that most objectionable feature. The wholesale association wished to give the retailers what they wanted in every way possible.

Mr. Wooten suggested that it might be a good plan to refer the resolution back to the committee and give his associates a chance to confer with the committee. In regard to the resolution's not being of assistance to the retail cause, Mr. Wooten explained the difficulties encountered in putting the Miles contracts into effect. There were an astonishingly large number of retail druggists who did not know anything about the movement. Contracts were thrown into the waste-basket with advertising matter. A great deal of education was necessary. The most effective method of education was by means of object lessons. If retailers are shown that their neighbors cannot obtain goods they will realize that there is a plan at work. "Heaven knows that the retailer is suspicious enough now," said the speaker. "Cast no further doubts!"

The name "Miles plan" was shown to be unfair. It was not fair to say that it had all been done for advertising purposes. Every proprietor had the same opportunity. Immense injury had been done the N. A. R. D. cause by representatives of wholesale houses in speaking cynically of N. A. R. D. hopes and prospects.

Mr. Wooten then offered a very simple remedy for the broken label referred to by Mr. Shoemaker. The proprietor could eliminate that factor at once by simply printing a notice on the bottle that he is not responsible for the goods if the package is broken. As to sales in large cities it was shown that one cutter could demoralize an entire community. The speaker stated emphatically that small sales in large cities are no proof that the Miles plan is unworthy of confidence.

As suggested the resolution was referred back to the committee to be reported again after a conference with the N. A. R. D. representatives.

In the evening the visitors repaired to the theatre where 500 sittings had been provided. In a large party they streamed up Massachusetts avenue where a long string of trolley cars stood waiting. The evening proved a pleasant one and the pretty costumes in the auditorium added no little to the success of the performance.

THURSDAY MORNING.

New Orleans Selected as Next Place of Meeting—Officers Elected in "Unbroken Lot"—Satisfactory Resolution Endorsing the Contract and Serial Numbering Plan, Adopted.

After the opening of the last formal session of the N. W. D. A. on Thursday morning, the committee on time and place of meeting reported that New Orleans had been selected for the 1904 meeting, the convention to be held the last week in October, or the first week in November, the exact time being left to the discretion of the local committee.

More reports were adopted. During the course of the routine business, Geo. W. Lattimer suggested that lines between wholesale and manufacturing firms should be more carefully drawn. He thought that in this work, local associations might be very helpful.

Upon the suggestion of President Hover, the officers nominated by the committee on nominations were elected in "unbroken lot, and not in one-twelfth dozen parcels."

The Resolution.

An expectant hush fell upon the assembly as John N. Carey arose to read the amended resolution relative to the endorsement of the direct contract and serial numbering plan. The proprietary committee had been in consultation with President Snithier of the N. A. R. D. and his associates, and had agreed upon the following resolution:

Resolved, That the National Wholesale Druggists Association in annual convention, met September, 1903, pledges its members now as heretofore to co-operate to the fullest extent with the retail druggists in the establishment and maintenance of any protective plan that is feasible, legal, and equitable for the betterment of their condition.

Resolved, That this association hereby approves of a direct contract and serial numbering plan of marketing proprietaries, and pledges its co-operation with the other branches of the trade in putting such plan into more general operation; provided that the proprietor or proprietors adopting the same will compensate the wholesale druggists for any additional labor involved in carrying it out; and provided that the details of such a plan meet with the approval of a sub-committee of five to be appointed by the chairman of our Committee on Proprietary Goods, of which he shall be chairman, which sub-committee is hereby authorized to consult with any proprietor or proprietors who adopt such a plan and with a similar committee selected from the executive committee of the National Association of Retail Druggists. We will not favor the promulgation of such a contract by any proprietor until such joint committee shall have agreed upon the terms of the same.

M. N. Kline in submitting a motion to adopt the resolution, deprecated very much the reports that had been circulated to the effect that wholesalers "are everywhere in a while putting up a job." He said the essence of these statements was that the wholesale druggists as a body are a "lot of jolliers." This was denied emphatically. The speaker thought there were a fair proportion of those who would say one thing and do another in all branches of the trade, but no one could look at the history of the trade and truthfully say that this had been the attitude of the wholesale trade. He said that they had proceeded cautiously, and for this reason the resolution had been put in the form submitted the day before. He hoped the resolution in its present form would do all that was hoped for it.

The tripartite plan, continued Mr. Kline, involves the principle of each branch of the trade helping and protecting the other two. He criticized the spirit which led to the formation of buying clubs. It was not consistent with the tripartite plan. In return for endorsing the plan he hoped there would be a willingness to do away with these clubs. He believed that the retailers could count on the active co-operation of a large proportion of jobbers.

LUCIEN B. HALL,
Cleveland, O.,
Chairman Board of Control,
N. W. D. A.

C. P. Wallbridge said he was especially attracted by the movement because it came from the many to the few, from the weak to the stronger. This was directly opposite to the principle of trusts. There could be no trust as long as the weaker members of the trade have confidence in the stronger.

The resolution was adopted unanimously, and Mr. Wooten thanked the assembly on behalf of the N. A. R. D. In regard to the buying club, he said that the lack of success of the tripartite plan was largely responsible for the idea. If the jobbers would co-operate to make the plan effective the buying club policy would soon die out.

One reason why the tripartite plan had not been more effective, continued Mr. Wooten, was because it was so hard to get evidence, and he asked the jobbers to co-operate with his associates in this work—not in finding evidence themselves, but in making it easier for the N. A. R. D. officials to get it for themselves. He spoke of jobbers who, when questioned about their competitors would not say a word.

Henry Canning stated that no authoritative organization had recognized the buying club. He thanked the assembly for the helpful resolution, and said the retail druggists had been groping for twenty-five years, and had at last found what they needed. He spoke of the scholarly, graceful and modest eloquence of his associate, Mr. Wooten, and said that a movement similar to the N. A. R. D. had been started in Boston twenty years ago. Plans had heretofore been based upon the principle that all men are honest, but he feared that success would have been greater if the opposite principle had been followed. It was impossible to make men honest by resolution and legislative enactment, but he thought the present plan answered as many objections as possible.

President Snithier extended the thanks of the N. A. R. D. for the courtesy and hearty response of the meeting, and President Hover responded with a few graceful remarks. He said, "anything that can be done for the retailers is directly in the interests of the wholesalers."

After adopting the report of the committee on time and place of meeting and a few fitting remarks from various members, the session closed.

The Banquet and Excursion.

The annual banquet was a fitting close to the sessions of the allied associations held during the week. A feature of the evening was a preliminary banquet served the ladies of the assembly in the large dining hall at 6 o'clock, which was attended by about 200.

It was after 8 o'clock when the members were seated at the round table in the ball room of the hotel. More than 300 guests sat down to the feast, and for nearly

DOCTORS WILL HELP YOU

two hours the good things presented were discussed. The after-dinner exercises consisted of a number of speeches by members of the association, and distinguished visitors. Among these practised and finished orators, President Harding of the P. A. of A., and President Hoyer of the N. W. D. A., acquitted themselves with great credit.

Friday morning the visitors set out upon the great excursion of the week, the trip to Braumwood, the country place of Thos. W. Lawson, of yacht, carnation pink, and copper fame. The day was fine, and the drives and scenes were all that could have been anticipated.

In the evening, the officers of the two associations were formally installed amid much pleasantry and many sallies of wit.

Saturday there were short sessions when a few matters, of unfinished business were disposed of. After this there were short excursions to places of note, and departure for home.

STRAY LEAVES FROM BOSTON COMMON.

Why Were They Late?

All the sessions opened late. Not once did the parliamentary train get away on schedule time. "What's keeping them?" was a common question. Some one suggested that they were wandering about, lost in the mazes of old Boston's crooked streets. Not a bad explanation in view of the fact that at nearly every convention held in the birthplace of freedom, some important officer rushes up late and breathless, and, thanking his stars "that he got there at all."

"Job Lots."

M. Cary Peter referred to the Somerset dining room as the "job-lots place," a phrase the aptness of which was instantly recognized by members of the trade familiar with the custom of grouping assorted articles in lots designated as "No. 1," "No. 2," etc., the menu being also curiously divided into groups in this way.

A Base Slander.

Friends of virtue and abstinence, were not a little pleased at the vigorous condemnation of the "high-ball" in Frank Henry's report on commercial travelers. And now some people are mean enough to say that the denunciation of this species of ball was not penned by Mr. Henry at all, but originated in the fertile brain of his whilom familiar and side-partner, the Depewesque Mr. Lance.

That Classic Pose.

In the lobbies and corridors of Hotel Somerset, when any one noticed numerous examples of that familiar pose, finger pointed Heavenward and eyes turned up in a beatific roll, he instinctively looked about for Dr. Munyon.

Patient Endurance.

A beautiful example of pure altruism was Clarence G. Stone, the maker of plans for others' enjoyment and the soothe of others' woes. Did a trunk fail to show up—ask Mr. Stone! Has a telegram gone wrong—"tell Mr. Stone, he'll fix it." And Mr. Stone's brow was always smooth and placid.

Had Not Far to Go.

The number of visitors at the twin conventions who had been summering on the Atlantic coast in the neighborhood of Boston was quite remarkable. Among these was Mr. Dobbins, formerly of John Wyeth & Bro., Philadelphia, who owns a fine place at Magnolia. Another was Theodore Meyer of Meyer Bros., Drug Co., St. Louis.

A New Pun.

A really good pun is as rare, that we should all be grateful when one is added to the repertoire of our pub-

lic speakers. Le Bar James, the attorney who has been active in the unravelling of the famous Park's case, deserves a vote of thanks. When told that the druggists were being shown the park system of Boston, he suggested that "the druggists had a Park's system of their own."

He was "It."

A pretty mot of President Hoyer's requires a bit of explanation. After the witty speech of Boston's president of common council, the presiding officer remarked that as to speech making, the corresponding official of the city of Denver was distinctly "not in it." Mr. Hoyer is, himself, the distinguished citizen of Denver thus maligned.

The Retort Courteous.

William Janvier, with a cheerful smile: "Good morning ——" Colonel Fitch, quick as a flash: "Yes, I have!" Mr. Janvier is the agent for Pears soap in the United States.

A Chance Encounter.

One of the acquaintances pleasantly renewed at the convention was that of the secretary of the N. A. R. D., and Colonel Fitch. When the redoubtable colonel first knew him of the fine presence and sympathetic voice, Mr. Wooten dealt in drugs in a small way at Smith's Grove, Kentucky, and obtained supplies at the Louisville house, Arthur Peter & Co., a firm of which Colonel Fitch was then a member.

Another Fraud Punctured.

The Boston girl has been vilely slandered. She is now completely vindicated by M. N. Kline. His story shows that appearances are sometimes deceitful, and the icy maiden may be icy only on the surface. The tale concerns a seat in a car, a Boston maid, a susceptible young man and a muff. The man and maid occupy the seat, and the muff lies upon the fair Bostonian's lap where it is held in place with one hand inserted. The young man inserts a hand into the other end of the muff. Pause. The maid, in a sharp, metallic, New England voice: "Young man! I'll give you just twenty minutes to take your hand out of my muff."

"A Rose by Another —"

During Wednesday and Thursday, Bunker Hill Monument wore a distinct odor of drugs. So say the people of Charlestown.

Another Inevitable Pun.

Another pun, which possesses the merit of novelty concerns a proper name. It has, no doubt, long since become monotonous to the person most concerned to answer the question: "Mr. P'fromm, where are you from?" or "Mr. P'fromm, where are you P'fromm?" It must be somewhat of a relief for him to get back to his accustomed haunts where he is more likely to hear: "Mr. P'fromm, where were you at?"

MRS. ELIZABETH INGHAM, wife of W. V. Ingham, the well-known Atchison, Kas., druggist, died last Tuesday. She leaves a boy aged two, and a girl aged 5. The body was sent to the old home in Leecompton for interment.

DR. ERNST HANTKE, aged 40 years, professor of chemistry and conductor of a brewers' school in Milwaukee, died suddenly of pneumonia. He was well known in German circles throughout the country.

MATT RUSH, who for a number of years had a store in Andover, Mo., died of heart failure. Mr. Rush was one of the most popular country druggists in Missouri.

NEWS DEPARTMENT.

TOM FRASER.

He is Back Again in Business, Preying Upon the Drug Trade.—"His Own Worst Enemy."

Poor Tom Fraser! In another interval of partial freedom from the stupor of liquor and drugs he has started in "business" again.

Tom Fraser was not a bad sort once. He is remembered with pity by his classmates of the N. Y. College of Pharmacy and by his associates in the old New York Society of Apothecaries, in a group picture of which, published in the Pharmaceutical Era on May 1, 1893, we find not only Fraser but G. A. Otgen, James C. Wagner, Frances B. Hays, W. J. Quencer, W. H. Madison, J. A. Rosenheim, Ferd. Lasear, Ed. Hammann, Thomas J. Keenan and Charles Michling, Jr. These men say of Tom Fraser that "he was his own worst enemy."

There is in Fraser none of Henry P. Crosher's smirking, impudent self-complacency over ill-gotten gains; none of P. L. Gerrish's smug and cowardly personality—we are told Gerrish passes for a pretty big business man among his wife's boarders up in Thirty-fourth street—Fraser has not Crosher's villany nor Gerrish's lack of intelligence, nor even the lustre of Algernon Granville, A. B., Oxford, whom the Era drove from State to State, and, finally and recently, from his oil well stealings in the South. For poor Tom Fraser is simply—"his own worst enemy."

In this office are scores of letters from manufacturers that Fraser swindled when he was in "business" at various times before. Fraser would be rich now—as Crosher says he himself is—had he saved the money from his ill-gotten gains. He was the star of them all.

The explanation is plain. There is a genuine Fraser & Co. in this city and their reputation and rating is splendid. It was a very easy matter for a manufacturer to make the mistake of thinking of Tom Fraser's 10, 30 or 60-day order was from this firm, especially as Fraser even imitated the real Fraser & Co.'s letter heads. He had a right to the name. Hence, if he made no definite false representations, simply getting quotations and ordering in the next mail, all he had to do was to keep the goods, once he laid hands on them, out of the reach of an attachment.

Fraser made his debut in swindling in 1897, as Fraser & Co., wholesale druggists and manufacturing chemists, 219 Greenwich street and 4 West Broadway. The "Co." was Charles J. Dwyer, who claimed to have inherited a few thousand dollars. Their swindling of a prominent thermometer house out of \$813 was one of their best jobs. An Indiana house lost \$210, and other losses run a few months' operations into several thousands of dollars. The Era drove Fraser out.

Later, in 1900, he bobbed up again, at 23 Duane street. It soon got too hot for him. A few weeks ago he was borrowing quarters, "touching" whomever he might. Today we find him at 22 Duane street, or 1 Chambers street, corner Park Row, directly opposite his old stand.

He is a legitimate "wholesaler" now, so he told E. Bangs, proprietor and inventor of the Primo-Syringe, of E. J. Hussey & Co., 80 John street. He typewrote a letter to the firm, asking best 10-day's discount on gross lots. Then he delivered the letter himself. "I told him he could have all the stuff he wanted if he was really in

the wholesale business," said Mr. Bangs, "if he could produce the cash from his jeans. He went out without ado."

Fraser's letter head reads: "Office of Fraser & Co., wholesale druggists, No. 1 Chambers St., No. 2 Duane St." On the bottom of his letter to E. J. Hussey & Co., were the letters "D. B. F., R. P. L. No. 225."

NEW ADMINISTRATION FOR D. C. C.

A special meeting of the New York Drug Clerks' Circle was held on last Wednesday evening, at the club rooms, 335 East Broadway. The election of new officers was brought to a successful issue, as follows: President, Phillip Lewy; vice-president, L. B. Epstein; treasurer, Dr. J. Kahn; trustee, J. Bernstein; financial secretary, J. Streiffer; corresponding secretary, B. Colle; recording secretary, William S. Sindey; sergeant at arms, J. Gallobin.

Mr. J. Beck, in a few well chosen words, installed the newly elected president, who, in turn, installed all the other officers, and appointed the following committees:

Arrangements—J. Beck, chairman; Dr. J. Kahn, J. Hertzgen, J. Streiffer, H. Boylsson.

Board of Health—B. Colle, J. Bernstein, Griefvance—Phillip Lewy, J. Gallobin.

Open Meeting—L. B. Epstein, chairman; B. Colle, J. Streiffer.

Social—J. Beck, J. Hertzgen, L. B. Epstein.

Spirit and enthusiasm prevailing through the meeting bore promises of a lively and successful administration.

WITH UNABATED ENTHUSIASM.

A well-attended and enthusiastic meeting of the New York R. D. A. on last Friday evening was presided over by President Weinstein. Owing to the fact that this was the first regular meeting after a recess of more than two months, several reports by various committees occupied considerable time. They were all encouraging.

It was decided to ratify President Weinstein's appointment, during the recess, of Messrs. Diamond, Bakst and Lewin to the joint committee for the entertainment of the State Ph. A. next year. N. A. R. D. matters were favorably discussed, and Mr. Weinstein was chosen a delegate to the next meeting. Messrs. Bakst, Bernstein, Diamond and Weinstein spoke interestingly of pharmaceutical matters.

BUSHWICK LUNCHEONS AND DISCUSSES.

When the Bushwick Ph. A. gathered around the table at their regular meeting on Monday night Emil Koller was the guest of honor. He told the members about the new co-operative fire insurance plan which his committee appointed by the German Apothecaries' Society, is planning, and was thanked by the association. Several other speeches, on board of pharmacy and professional matters, were made, demonstrating to visitors the

fact that the members can and do ride full tilt at one another in the heat of debate and forget it with the same unanimity.

NEW YORK NOTES.

—Inspector of Combustibles George E. Murray informs the Era that there is no truth in the report that an extra \$2 will be charged those having benzine privileges included on their old permits. He said: "If your readers will send their permits for the current year to this office we will put the amendment concerning sale of benzine on same without charge."

—John H. Allen, once a druggist at Nineteenth street and Second avenue, then of Millbrook, now world traveler, came back from Australia the other day with a new wife. She was his second cousin and is the daughter of a member of parliament and very wealthy real estate owner of Silney, Australia. Mr. Allen will live in Australia hereafter.

—The German Apothecaries' Society will hold an outing on October 8, at Bachman's Pavilion, Rose Bank, S. I., as many as possible to leave on the one o'clock boat. Arrangements have been made for seating 200 people at the tables. For the various prizes for games, \$30 will be distributed. This will be one of the usual good times of the G. A. S.

—Ruben R. Smith, pharmacist at 901 and 854 Seventh avenue, writes that he is not in any way identified with the R. R. Smith connected with the Manhattan Therapeutic Association, the recent incorporation of which was noted in the Era.

—Robert McLain, of the Grasselli Chemical Co., returned from a Canadian vacation, spent in playing golf in Canada. He won so many trophies that the customs authorities were almost determined to make him pay duty on them.

—Dr. Doderian & Sons Co., 73 Lexington Ave., this city, declares the Court of Appeals of the State of New York, are entitled to the exclusive use, within this State,

of the trade-mark "matzoon" for a preparation of fermented milk.

—Charles H. Gaer, the well-known pharmacist at 115 Nostrand avenue, Brooklyn, was married on Sunday at Progress Assembly Rooms, Manhattan, to Miss Amelia Podlasky, in a very pretty ceremony and among many friends.

—Sharp & Dolme have received a judgment for \$61 against Dr. Herman Seaton, druggist at 104 Canal street. The Norwich Pharmaceutical Co. obtained a judgment for \$124 against Ralph H. Goldberg.

—A man wrote to the board of pharmacy last week saying: "Noticed 'Vigorous Inspection' article in Pharmaceutical Era, September 3." Then he gave the names of two stores he believed needed inspection.

—Emil Keilantz now owns the store at 454 First avenue, formerly conducted by D. Ruzicka, who is opening a new store at 593 Bushwick avenue, Brooklyn.

—Frederick Barget of 764 Quincy street, Brooklyn, has written to the board of pharmacy for a license for a new store which he contemplates opening.

—Fred W. Stewart, a retail druggist of Oswego, filed a petition in bankruptcy. Liabilities \$7,000, and claims \$4,600. The assets are small.

—E. A. Talbot of Talbot Bros., drug brokers, Los Angeles, was in town. So was John Fergusson of Fergusson Bros., Philadelphia.

—Joseph Ostrowicz's drug store at 57 West Third street was damaged to the extent of \$100 by fire last week.

—At yesterday's examination by the board of pharmacy one candidate made his eleventh attempt to pass.

—Frank Avignone has sold his new store at 123 McDougal street to George Watman.

—J. J. Huether, 701, Brooklyn C. P., is opening a new store at Richmond Hill, L. I.

—Emmanuel Lieberman is now a pharmacy proprietor at 37 Chrystie street.

—M. Friedberg has bought M. Wesolek's store at 322 East Eighth street.

—The Manhattan Ph. A. meets next Monday night.

AROUND SYRACUSE.

—Syracuse has a curiosity in the person of D. Prentice Rhoades. Mr. Rhoades was in the drug business in Geddes, a suburb of Syracuse, in 1877. Business reverses came and like many others he failed. He said at the time that he would pay every dollar he owed, no matter how long it took him. His promise was fulfilled about a week ago, when he cleaned up the last dollar, although the debts had long since been outlawed. Mr. Rhoades is now square with the world. He is now in the health food business at 112 East Fayette street. Mr. Rhoades says: "I am glad I have cleaned up the score and feel amply repaid for doing it. A man never feels just right when he owes money he can't pay and when someone has lost through him, even though it be no fault of his own."

—The Syracuse D. A. has been accorded a high honor by the election of one of its members as president of the Automobile Club of Syracuse. The fortunate druggist is Willot L. Brown, of Brown & Dawson. Mr. Brown is the only Syracuse druggist, as far as the Era man can learn, who has a motor car. As a "choffer" he can't be beat. He has never been arrested for exceeding the speed ordinance, but it must not be inferred from this that his machine couldn't go faster than the law allows if he wanted to let it out.

—Bert H. Gifford, in the employ of T. Bruce Fernald, has accepted a position with C. H. Norton, at 259 James street.

NEW ENGLAND.

UNDER NEW STATUTE.

Springfield Druggist First to File Notice of Intended Sale of Retail Business.—The Statute.—Other News.

Springfield, Mass., September 15.—The first instance to be recorded in this city of acting under the provisions of a new statute passed by the legislature, was afforded a few days ago, when B. L. Umbertfield, Jr., sold his drug store at 619 Capitol avenue.

To the trade at large the provisions of this new statute are not familiar. Here they are:

No person who makes it his business to buy commodities and sell the same in small quantities for the purpose of making a profit, shall, at a single transaction and not in the regular course of business, sell, assign, or deliver the whole, or a large part of his stock in trade, unless he shall, not less than seven days previous to such sale, assignment or delivery, cause to be recorded in the town clerk's office in the town in which such vendor conducts his said business, a notice of his intention to make such sale, assignment or delivery, which notice shall be in writing, describing in general terms the property to be so sold, or delivered, and all conditions of such sale, assignment, or delivery, and the parties thereto.

THE BAY STATE.

—Considerable interest centres around the resignation of Caleb D. Kinner, who has been postmaster of Merrick, West Springfield, for more than twenty-two years. Mr. Kinner is one of the oldest living postmasters in length of service. He removed to West Springfield in 1876, when he started in the drug business. At the same time he began to carry mail from Springfield to a few subscribers in the town; and with the growth of the mail service, it was suggested that a post office be started. Then Mr. Kinner was made postmaster. In 1898 he was obliged to give up drugs.

—Among some excellent appointments just made by Governor Bates is that of Fred A. Hubbard to be a member of the board of pharmacy, succeeding Freeman H. Butler of Lowell, whose term had expired. Mr. Hubbard is one of the leading druggists of Newton and popular in the trade everywhere. He was formerly president of the Boston D. A., and served for a number of years as a member of the board of aldermen. He is a member of the Massachusetts Associated Board of Trade, the Massachusetts C. P., and his endorsement for his new office was given by the State Ph. A.

—Ernest L. Pinkham, proprietor of the Pinkham pharmacy, Clinton, some time ago decided to enter the drug business at Medford. A party of a dozen or more clerks in the town gathered at Bare Hill pond to participate in a very pleasant farewell party to Mr. Pinkham. When he takes his new store in Medford his chief clerk, Irving Howatt, will accompany him.

—An interesting case has been occupying the attention of the court in Worcester. The complainant is Hercule Vigneault, who claims to have been discharged from his position with a local manufacturing company because Druggist Duane W. Williams had trusted his wages. Mr. Vigneault's side of the story is that he was indebted to Williams for a bill for drugs. He said he thought the bill was excessive and declined to pay it.

—John E. Flynn, clerk for Mr. Lowe at Pittsfield, was bitten on the index finger of the left hand by a nasty little mosquito. He thought nothing of it at the time. But soon after the hand swelled to almost double its natural size. Then he called in a physician. Blood poison, and a very serious time.

—Currier & Co., proprietors of the Lawrence pharmacy, have dissolved partnership. Hereafter the two

partners will run individual stores, Mr. Currier continuing the business at the Essex street place, while Mr. Matthes will look after the fortunes of the store at Jackson and Berkeley streets.

—The many friends of George E. Linehan, the popular clerk in Conley's, Brockton, will be glad to learn of his engagement to one of the well-known young women of the city, Miss Nora Guerin. It is understood that the marriage will be in the latter part of this month.

—At the last quarterly meeting of the Worcester Ph. A. the principal matter of business was the selection of a delegate to attend the convention of the N. A. R. D. Peter B. Moriarty was unanimously selected. William H. Morse, was admitted as a new member.

—The quiet town of Concord, was visited by fire early Sunday forenoon and Druggist C. H. Whitney was burned out, almost every thing in the way of stock in the place being destroyed, entailing a loss of several thousands of dollars.

—The Eastern Drug Co., has brought suit against Joseph E. Hattery of Clinton, in an action of contract for \$1,000. The writ is returnable in the Second District Court of Eastern Worcester at Clinton in the latter part of September.

—James Begley, who for a quarter of a century has been operator and station agent at the South Spencer depot, has decided to operate a drug store and purchased the establishment heretofore run by Dr. Ishmael Verner.

—The Riverside pharmacy of Holyoke, conducted by Bardwell & Flynn was broken into by burglars. Nothing of special value was taken.

—G. B. Moulton, Lawrence, will not be able to continue in his present quarters much longer, as the building is to change hands.

PENNSYLVANIA.

RATHER DUBIOUS.

The Outlook for the Continuation of a Retail Syndicate of Philadelphia Not of the Best.

Philadelphia, September 15.—A peculiar state of affairs is said to exist in one of the drug concerns in Philadelphia. This particular syndicate, backed with what was supposed to be ample capital, has been making quite a splurge in local circles, and what it had so far accomplished was nothing to what it intended to do in the future.

The first rift in the lute came a couple of months ago when one of the main stays withdrew his capital and went out. This has now been followed by the placing of the majority of their stores on open market. One, however, as the former proprietor expressed it, had a "string tied to it," and when the concern liquidated, he "pulls the string" and takes it back. The experiment of syndicating a series of stores has been tried before, but this scale was a more ambitious one; for that reason a much closer watch has been kept on it, and more general interest displayed.

MANY PHILADELPHIANS WILL GO.

Philadelphia, September 15.—At the last meeting of the P. A. R. D., as reported in the last issue of the Era,

Powdered.....Per ounce \$1.00
 Pink Top Capsules.....Per ounce 1.00
 Tablets, 2½ grain only.....Per ounce 1.00
 ETNA CHEMICAL CO., New York, U. S. A.

L. L. WALTON, Williamsport, Pa.
First Vice-President Pennsylvania Ph. A.

Messrs. Rohlfuss, Rees, Stiles, Perry and Lackey, were appointed a committee on attendance at the Washington meeting of the N. A. R. D. Without wasting any time, they have been steadily at work, and while it is too early yet to know positively what the result of their labors will be, their reception so far has been most gratifying. The desire of the Philadelphia association is to take as large a delegation as possible, outside of the regularly elected representatives. Mr. Rees is preparing a circular letter which will be mailed to the members, urging them to take advantage of the low rates to visit the national capitol and encourage the parent body by their numerical strength.

OTHER HAPPENINGS.

—A number of drug clerks in the lower part of the city who have been in the habit of meeting every Sunday afternoon for purposes of mutual intellectual development, was dubbed by one of their members, the "Hebrew Association." The idea took root, the name has held, and there is now serious talk of chartering the gathering under the name of the Hebrew Drug Clerks' Association of Philadelphia. A committee has been appointed looking to that end.

—Among the thirty odd small dealers that the Law and Order Society caught last Sunday, were W. Gilbert Ruff of Thirteenth and Fitzwater streets, Philadelphia, and Harry Lee Barber of Tenth and Catharine streets. Ruff has appealed. Barber paid his fine.

—J. S. Beeten, the newly appointed actuary of the Philadelphia C. P., has taken hold of the trying position like an old hand at the wheel. He reports sixty more matriculants to date than for the corresponding period of last year.

—Charles A. Ritz, formerly of Seventeenth and Dauphin streets, Philadelphia, has purchased the store at Twentieth and Berks streets, from the estate of I. M. Sipple.

—W. H. Kroecker has bought the store of the late H. James Batdorf at Sixteenth and Dauphin streets, Philadelphia.

ADOLPH WALSER, a young druggist, died of consumption at the residence of his cousin, Druggist Paul C. Hauser, Poppleton and Fayette streets, Baltimore. He was only 27 years old and single. Among other pharmacies he had clerked for Downey, in Washington, D. C.

AROUND THE GREAT LAKES.

VERY SUCCESSFUL.

Michigan's State Ph. A. Meeting at Battle Creek was Full of Interest.—Drafting a New State Pharmacy Law.

Battle Creek, Mich., September 15.—The annual meeting of the State Ph. A., held here on September 8, 9, and 10, was the most interesting of any in recent years. Much enthusiasm was manifested at all the business sessions and when President D. A. Hagans of Monroe, in his annual address, urged the members to continue their affiliations with the N. A. R. D., the hall rang with cheers. President Hagans protested against the use of trading stamps and any relates to customers. At the opening session a paper by Charles F. Mann, of Detroit on "Where is Pharmacy Drifting?" created a great deal of talk and differences of opinion. William C. Kirchgessner of Grand Rapids, read a paper on "The Causes and Remedies of the Decline of the Prescription Business"; and J. W. T. Knox, Detroit, on "A Plan for laboratory Work in Connection with the State Examinations." There was also a warm discussion over the refilling of prescriptions; the opinion prevailing that no prescription should be refilled without the consent of the doctor issuing it. Dr. A. B. Prescott of the U. M., gave a very interesting talk on wood alcohol and Columbian spirits, their poisonous effects and means of detection.

At the second day's session the report of the secretary was read. It showed 3,243 registered pharmacists and 267 assistant pharmacists in Michigan. The committee on trade interests reported that the pharmacists of the State were enjoying their full share of the general prosperity, and that the most friendly relations existed between the retailer and the jobber. The prescription drug business is rapidly increasing, due to the fact that fewer physicians are now filling their own prescriptions.

The report of the committee on adulteration was brief, because only six members had sent in samples of drugs, and these contained such slight impurities as to be of no consequence. The committee had purchased samples from ten different drug stores in Detroit. In these there was only one instance of adulteration, and this very slight. This was considered a good report.

At the closing session it was voted to hold the annual meeting for 1904 in August in Grand Rapids. A. H. Webber of Cadillac, was elected delegate and J. Majer Lemen of Shepherd, alternate to the N. A. R. D., at Washington, on October 8.

The committee on legislation will draw up and present to the next annual meeting an entire new State pharmacy law, to be presented to the Michigan legislature of 1905. A draft of the proposed law was presented by C. F. Mann, chairman of the legislative committee.

The following officers were elected: President, A. L. Walker, Detroit; vice-president, J. O. Schlotterbeck, Ann Arbor; J. E. Weeks, Battle Creek; H. C. Peckham, Freeport; secretary, W. H. Burke, Detroit; treasurer, J. Majer Lemen, Shepherd; executive committee—D. A. Hagans, Monroe; Dr. George J. Ward, St. Clair, William A. Hall, Detroit, John D. Muir, Grand Rapids; H. J. Brown, Ann Arbor; trade interests committee—W. C. Kirchgessner, Grand Rapids; Stanley E. Parkhill, Owosso.

This closed the annual meeting. Thursday afternoon the visitors were given a trolley ride about the city and shown the big factories and manufacturing institutions.

The local secretary, Sid. A. Erwin, and the Battle

Creek druggists spared no pains nor expense in making the visit of the members pleasant," writes Secretary Burke, "and they will look forward to the time when they can return to Battle Creek and its hospitality. Taken as a whole, the meeting was the most interesting that has been held in several years."

WISCONSIN.

State Ph. A. at Chain o' Lakes Endorses N. A. R. D. and Has a Very Profitable and Enjoyable Time.

Waupaca, Wis., September 15.—The twenty-third annual meeting of the Wisconsin Ph. A. was held in the amusement hall at Grand View Hotel, Chain-o'-Lakes, Waupaca. With ideal surroundings—there is a chain of seven wooded lakes here famed for their beauty throughout the states of the Great Lakes, and a splendid attendance, the meeting was one of the most enthusiastic and profitable in years.

At the first session, in the morning, a plunge was taken at once into reports of officers and committees. In the afternoon the Mayor welcomed the visitors, R. M. Bell of La Crosse, responding. Dr. Edward Kremers, chairman of the historical committee of the A. Ph. A., presented an interesting report of their work. C. A. Wakeman, A. H. Waltersdorf, Otto J. S. Boberg, and George A. Gerrets spoke. Meanwhile the ladies auxiliary was holding an informal reception in the parlor. Later a steamer ride through the lakes was indulged in. In the evening the traveling men's auxiliary did the entertaining, assisted by Mesdames Eugene Yahr, Percy Sharp, C. Geisse, and A. P. Meding in vocal selections.

All regular business was completed on the second day. The afternoon was devoted to contests, including the reading of prize papers. Altogether 135 prizes were given. The women furnished amusement in the boat races, especially in one where they paddled with one oar, their husbands shouting instructions from the shore. In the evening a ball added lustre, though many were silver-haired, they felt young that night and the bald-headed and gray-headed bowed as gracefully "down the center" in the Virginia reel as in younger days.

Features of the meeting were the strong feeling shown toward price cutting by department stores, and against substitution. The N. A. R. D. was warmly endorsed in resolutions urging all druggists to join. The reduction of the alcohol tax was asked. Complaint of many flagrant violations of the poison law developed a desire that the board of pharmacy scrutinize matters more closely. J. H. Duhle of Williamsport, Pa., representing the N. A. R. D., gave an interesting talk on association matters.

These officers were elected: President, J. M. Farnsworth, Beloit; first vice-president, H. L. Schulz, Milwaukee; second vice-president, Fred Elwers, Neenah; secretary, Henry Rohlmann, Chilton; treasurer, W. P. Clark, Milton; local secretary, E. H. Huber, Fon du Lac; State representative, John Welber, Milwaukee. The next meeting will be at Fon du Lac. O. J. S. Boberg, Eau Claire, E. J. Huber, Fon du Lac, and Dr. Joseph Herb, West Superior, were recommended for appointment to the board of pharmacy.

After the close of the convention the druggists of Waupaca county held a meeting at which a county organization of the N. A. R. D. was formed and the following officers elected: President, W. J. Hocking, Waupaca; secretary-treasurer, W. A. Trayzer, New London.

GOOD TIMES FOR CHICAGO D. T. CLUB.

Chicago, September 15.—Members of the Chicago Drug Trade Club are greatly gratified with the reports

emanating from the meeting of the board of directors. There is no bonded or floating indebtedness, all bills are paid to date and there is a sufficient amount in the treasury to meet all possible expenses for many months. The attendance in spite of the hot weather, at the noon-day meal is twenty per cent. in advance of the same period a year ago.

The committee on club extension and new quarters has been steadily working away. They have a proposition from men who offer to remodel a good building in the heart of the business district, the lower floors were to be rented to firms in the drug and allied trades, and the upper floor, 12,000 square feet, to be devoted to the club parlors, dining rooms, the club's own kitchen, billiard room, gymnasium, etc. The plan was pronounced feasible by the directors and the committee will present details at an early date. Thirteen new members were admitted, all proposed by C. P. Van Schaack.

PACIFIC COAST.

THE RISE OF CASCARA.

The Great Advance in Price Makes Handsome Profits for Many Holders.—Where the Bark Comes From.

San Francisco, September 15.—From Oregon come wonderful tales of the rich profits being made from the sudden advance of cascara bark, that, were they not vouched for by the highest citizens of the state, might be discredited. The home of the product is at Corvallis, Ore. The sudden advance to 14 cents and over of the bark which a few years ago sold at 1½ cents and that last year brought 2¾ and 3 cents has started a business boom in the Oregon city. Dealers in Corvallis will ship this season ten carloads or more of the bark. It goes from there to Hamburg, Germany; London, the Eastern States and San Francisco. In fact, this little district comes very close to controlling the world supply of cascara bark.

The season opened at 4 cents as the prevailing quotation. That was in June, when peeling began. Two or three weeks ago it advanced to 5 cents and within a few days thereafter suddenly leaped to an open quotation of 12 cents, with dealers secretly paying even better figures. Within the last few days, some local dealers have trebled their money on big lots.

Early in the season a Salem druggist contracted for six tons at four cents, and can close out now at a profit of \$1,500 on an investment of \$480. This is but one example. Druggists throughout Northwestern Oregon are reaping a harvest.

Farmers in Oregon are now speculating over the advisability of planting chittim trees, from which the bark is obtained, for cultivation. It is learned that a chittim tree will reach a diameter of six inches in six years. Such a tree will yield a dried bark product of 10 to 20 pounds.

Various stories are afloat as to the occasion for the sudden jump in price. The most plausible is that the native supply is fast nearing exhaustion and the popularity of the bark for medicinal purposes is fast growing.

CALIFORNIA.

—Prof. W. M. Searby of San Francisco is trying to solve the rampant problem as to how a burglar could rob his pharmacy without getting into it. His till and a small bank were robbed, but the front door had not been tampered with and the back door has no outside lock. Professor Searby called in the police. It was discovered that the intruder had gotten out by the back door. The professor was anxious to learn how his caller got in. It was finally suggested that the marauder had been looked in by Prof. Searby. The professor removed his spectacles, smiled, and said: "I guess it's on me."

—Charles S. Burbans of the Miles Medical Co., Elkhart, Ind., has been touring California. He is at present in San Francisco and will remain a few days before returning to Elkhart.

—S. L. Rumsey of Benson, Smith & Co., of Honolulu, is spending his vacation in San Francisco. Mr. Rumsey was formerly with Richard Hudnut in New York.

—Among the new clerks at the Owl, San Francisco, are C. O. Brown who comes direct from the Public Drug Co., Chicago and Mat Rezan of Detroit.

—Natural bay branches spreading over small jars of bay rum were shown last week in the windows of Boericke & Runyon, San Francisco.

—M. S. Wise of the Statutory pharmacy, San Francisco, is spending a few days with rod and reel on Boulder Creek.

OUR CANADIAN LETTER.

Toronto, September 15.—The Ontario C. P. opened with 145 students, being twenty in excess of the number last year. The number of applicants has taxed the accommodations of the institution to their full capacity and rendered the securing of larger buildings imperative if the college is to satisfy future demands. At present, owing to the limited accommodation, the course only lasts for one year. With a view to increasing its capacity in the near future, an adjoining property has been purchased. As the site is extremely valuable for residential purposes, the plan for extension may involve the erection of a building elsewhere.

Dr. Laberge, medical health officer of Montreal, has announced his intention of bringing before the health committee the question of having the food inspection department of the city given extended powers to take action against persons adulterating drugs and food stuffs. At present the department has only power to seize food stuffs unfit for consumption and has no authority to enforce the law against adulteration. The city has no power to prevent the sale of dangerous drugs such as cocaine, morphine pills, etc. The Pharmaceutical Association of Quebec province has recently issued a circular, drawing attention to the fact that certain druggists have a bad reputation for selling perchloride tablets, morphine pills and cocaine to any one applying for them. It is urged that the use of certain entrench cases is responsible for the habit in many cases, and that the state of the law which permits the sale of dangerous drugs without restriction when in the form of a patent medicine tends to promote the evil.

—Importations into Canada of drugs, dyes, chemicals and medicines during the fiscal year, ending June 30, amounted to \$5,892,328, of which \$3,171,142 were from the United States. In 1902 the total importations were valued at \$7,147,545 and those from the United States amounted to \$5,905,296. Canada's exports of the same articles of home produce were valued at \$689,631 in 1902, as against \$621,137 in 1902.

—H. A. Wise, druggist of Winnipeg, Man., is fitting up his new store in the McIntyre block in up-to-date style. W. B. Wilson of Morrissey, B. C., has removed to Morrissey Mines, same province. The stock belonging

to the estate of Dr. Witt A. Martin, Kincairdine, Ont., is advertised for sale by tender.

—W. J. McKay, druggist of Cookstown, Ont., was married on September 1 to Miss Etta Mae Ross, daughter of D. K. Ross of Cookstown. They are spending their honeymoon at the Thousand Islands.

—The engagement of George W. McLeod, druggist of Kingston, Ont., to Miss Eleanor Mary Eade of Bay Ridge, Long Island, N. Y., is announced. They made each other's acquaintance on a voyage to Egypt.

—Reginald McN. Allworth, secretary of the F. F. Dalley Co. Hamilton, Ont., was married at that city to Miss Gertie Steven Hutchison, daughter of R. A. Hutchison, Hamilton.

—Marvin Brown, lately with Dr. McDiarmid of Hensall, Ont., has accepted a position with E. A. Goodman, Toronto.

OBITUARY.

DR. ADOELT H. SHAFHIRT, a prominent pharmacist and business man of Washington, D. C., was found dead Sunday morning at his home. Dr. Shafhirt had been suffering from Bright's disease, but the recent improvement in his condition made his death most unexpected. At the outbreak of the civil war Dr. Shafhirt volunteered as a hospital steward, and for his services in this capacity was appointed to the regular army as anatomist. He was detailed to the medical museum in Washington. A widow and two children survive him.

P. MOUTON, one of the best known pharmacists in California, died at his home in Sausalito. Mr. Mouton was sixty years of age and grew up with the drug business on the Pacific Coast. He opened his first pharmacy in 1865, and has since lived in most of the leading cities of Northern California. He conducted an extensive establishment in Eureka before locating at Sausalito. He occupied a unique position among Pacific Coast druggists and his death will be keenly felt. His business will be conducted by Dr. Mays.

JACKSON B. WOOD, the oldest druggist of Richmond, Va., died, aged 86 years. Mr. Wood was born in Spotsylvania county in 1817. He came to Richmond in 1843, after a successful career as druggist in Norfolk. He was offered a partnership with Mr. Gaynor, and accepted. When Mr. Wood's boys grew up the partnership was dissolved and the firm became Wood & Sons. One of the sons, Dr. Judson B. Wood, is now a retired capitalist.

MICHAEL J. LAUER of Baltimore, an old druggist and the father of a druggist, dropped dead while shaving. He was 60 years old. He was at one time with J. F. Perkins & Bro., and afterward became a partner in Lauer & Rontson, which is now owned by the junior partner. Lately he had been doing relief work. William G. Lauer, druggist at Edmondson avenue and Schroeder street, is his son.

HOWARD L. CLARK of Haverhill, Mass., once identified with the drug business, died recently at Haverhill. He was a native of Derry, N. H., and went to Haverhill at the age of sixteen, entering one of the best drug stores. His drug career, however, extended over a few years only, as he gave this up to engage in the shoe manufacturing business.

GEORGE H. DOUBLER, Philadelphia C. P., 369, died at Milton, Pa., of tuberculosis, in his twenty-seventh year. Until failing health compelled him to remove to Colorado, Mr. Doubler had charge of the laboratory of Finley, Acker & Co., Philadelphia.

THE BENZIN OF THE PHARMACOPEIA.*

By E. H. GANE, Ph. C.

COMPLAINTS have been made by chemists that it is difficult, if not impossible, to obtain petroleum ether of a fairly constant boiling point, and an investigation of numerous samples from various sources has shown that not only is the complaint justified, but that it is impossible to procure a product that will distill between any narrow limits of temperature. The reason for this is easy to see when the nature of the product is considered.

The liquid now sold as petroleum ether is generally the fraction of the light petroleum distillate taken from the stills at 60 to 65 or 70 degrees C. Some makers supply a product labeled as boiling at from 50 to 60 degrees C., according to the U. S. P. requirements. The specific gravity of a number of samples which have come under observation has ranged from 0.648 to 0.687.

The hydrocarbons found in American petroleum readily undergo, upon heating, the change known technically as "cracking," that is to say, they are changed either by dissociation or polymerization into bodies of different boiling point. So marked a feature is this of American petroleum that the "cracking" of heavy hydrocarbon oils for the production of lighter fluids is a well known detail in the manufacture of petroleum products. Just what causes the change is not well understood, but it can be readily observed to take place when portions of condensed liquid drop back upon the hot fluid in the retorts.

The U. S. P. describes petroleum ether or benzin as a colorless diffusible liquid, boiling at from 50 to 60 degrees C., and with a specific gravity of from 0.670 to 0.675. The commercial product is variously described as petroleum ether, petroleum spirit, benzin, naphtha, gasolene, ligroin or rhigolene. Originally these terms were applied to fractions of crude petroleum boiling at different temperatures. Thorpe's Dictionary of Applied Chemistry gives the following classification: Rhigolene boiling from 18 to 20 degrees C., petroleum ether 70 to 90 degrees C., gasolene 70 to 90 degrees C., naphtha 80 to 110 degrees C., ligroin 80 to 120 degrees C. and benzin 120 to 160 degrees C., but these distinctions have gradually been set aside and to-day each manufacturer adopts his own terminology. It may be noted in passing that a lighter distillate is sometimes supplied upon orders for rhigolene.

An examination of a large number of samples of the petroleum ether of the market gave practically concordant results, dissociation or polymerization upon heating being invariably noted. As all the samples examined gave nearly identical results, and the phenomena are the same in each case, it is unnecessary to do more than illustrate the behavior of petroleum ether on distillation by a typical sample. The sample was taken from a lot obtained from a leading chemical house and was labelled "Petroleum Ether, B. P. 60 to 65 degrees C." Its specific gravity taken with a Westphal balance was .671.

One hundred cubic centimetres of this sample was placed in an ordinary side-neck flask and distilled rapidly on a sand bath. The liquid commenced to distill at 35 degrees C. and the following table shows the result of the distillation:

Boiling at degrees C.	Cc.	Per cent.
35 to 40	20	20
40 to 50	35	35
50 to 60	20	20
60 to 70	10	10
70 to 80	5	5

The residue distilled all the way up to 110 degrees C. A further portion of 500 Cc. was then distilled in the same manner, but the distillation was carried on more slowly by means of a water bath. The result follows:

* Read at the Fifty-First Annual Meeting of the American Pharmaceutical Association held at Mackinac Island, Mich., August, 1903.

Boiling at degrees C.	Cc.	S. G.	Per cent.
30 to 50	60	.644	12
50 to 60	105	.6554	21
60 to 70	185	.6685	34
70 to 80	90	.6843	14

Distillation was continued on a sand bath and yielded results as follows:

Boiling at degrees C.	Cc.	S. G.	Per cent.
80 to 90	10	.7019	2
90 to 100	10	.7122	2

The small residue left in the flask was not recovered.

A third portion of 800 Cc. was then distilled on a sand bath using a Glynsky fractionating tube in order to obtain more perfect separation and to note the results obtained by slow distillation. The experiment furnishes an interesting comparison of the behavior of petroleum ether under varying conditions. The results are appended:

Boiling at degrees C.	Cc.	Per cent.
30 to 40	22	2.75
40 to 50	32	4.00
50 to 60	140	17.5
60 to 70	75	9.37
70 to 80	50	6.25
80 to 90	25	3.12

At this point the distillation became very irregular and the residual fluid in the flask, while gently boiling, was not carried through the fractionating tube except at intervals when the condensed liquid dropped back into the flask.

The thermometer dropped to various points ranging from 50 to 80 degrees C., and small portions of a very light distillate would come over. By varying the rate of ebullition it was possible to obtain fractions distilling at almost any temperature. The distillation was therefore not carried further.

Finally 100 Cc. of the fraction, from the last portion of 800 Cc., boiling at 50 to 60 degrees C. was taken rapidly distilled on a sand bath. It distilled thus:

Boiling at degrees C.	Cc.	Per cent.
30 to 40	15	15
40 to 50	30	30
50 to 60	15	15
60 to 70	10	10
70 to 80	5	5

The distillation was then stopped.

Consideration of the above results shows that "cracking" occurs with the lighter petroleum hydrocarbons almost as readily as in the case of the heavier oils, and explains the difficulty of procuring petroleum ether boiling within narrow limits. Correspondence with the manufacturers of this product showed that they were aware of the difficulty, and brought only the statement that "if you are not satisfied with the product furnished, we would rather be excused from supplying it."

Don't Procrastinate.

The world wants men who realize the importance of "Now." There is no "then," it exists only in imagination. It is only now any of us have to do what we ought to do. Act in the living present—don't procrastinate. "If there lives within you a purpose to do something worth while, do it now."—The Ad-Writer.

PROF. OSCAR OLOBERG, 87 Lake St., Chicago.

A ONE-HUNDRED DOLLAR PRIZE WINNER!

We present a reproduction of the window display made by Mr. J. T. Pepper of Woodstock, Ontario, Canada, which was awarded the first prize of \$100 by the Frog in Your Throat Company of New York in its window display competition for season of 1902-03. Mr. Pepper was awarded the first prize for the originality and up-to-date application of the Panama Canal, which was the leading International question under discussion and in the minds of the general public at that time, and also because he kept running in the daily papers, a three inch single column advertisement of catchy items.

A second prize of \$50 was awarded to the Keystone Drug Company of Nanticoke, Pa. A third and fourth prize of \$25 each were awarded to the Crescent Drug Company of Los Angeles, Cal., and T. J. Backes of New York City.

The following were awarded prizes of \$10 each: Rudolph & Bauer, Louisville, Ky.; A. P. Bentz, St. Louis, Mo.; R. W. Moore, Schenectady, N. Y.; E. C. Harvey, St. Thomas, Ont., Canada; H. H. Albers, Brooklyn, N. Y.; Masonic Hall Drug Store, Columbia, Ill.; Broderick & Curtin, Meriden, Conn.; Chas. W. Moody, Red Lion, York Co., Pa.; Douw H. Fonda Drug Co., Albany, N. Y.; John Metzger, Providence, R. I.; China's Drug Store, Sumter, S. C.; W. O. Steimeyer, Carlinville, Ill.; J. D. Christians, St. Thomas, Ont., Canada; Chas. Law, Guelph, Canada; C. H. White, N. Y. City, N. Y.; E. E. Edy, Brantford, Ont., Canada; Otto R. Kurz, Detroit, Mich.; Standard Drug Store, Mt. Carmel, Pa.; Eckel's Drug Store, Mechanicsburg, Pa.; Fred. Pratte, Boston, Mass.; P. Henry Fitch, Mendville, Pa.; Powers Hotel Drug Store, Rochester, N. Y.; C. J. Wenck, Brooklyn, N. Y.; Kirkland' Drug Store, Galt, Ont., Canada; Kulp & Cassidy, Braddock, Pa.; I. L. Walton, London, Ont., Canada; H. B. Taylor, Kingston, Ont.; C. M. Collins, Exeter, N. H.; E. A. Perrenot, Lan-

caster avenue, Philadelphia, Pa.; B. K. Davis, Philadelphia, Pa., and many more, too numerous to mention, received one dozen "Frog in Your Throat?"

We understand that the Frog in Your Throat Company have established two contests this Fall and Winter; one closing on December 31, 1903, and the other on April 30, 1904.

Full particulars will be furnished upon application

PATENT MEDICINE REVENUE INCREASES.

The London News says that the revenue derived from duties paid on medicines very considerably increased during the year 1902-3. The amount received by the Exchequer from this source during that period was more than £383,000, or an increase of about £30,000 on the previous year. From the fact that Scotland only contributed a little over £2,000 toward this sum, it would appear as if the canny Scot is in less need of physic than his "craggous" neighbor. Forty years ago the stamp on medicines brought in less than £41,000 annually, and the remarkable increase of recent years can only be accounted for by manufacturers of remedies preferring to claim a proprietary right, even though it involve the payment of duty.

Optical Goods, a Dignified Line to Handle.

The number of druggists who have added optical goods to a side line to their regular stocks, is constantly increasing. It is a clearly defined line to handle and for this reason as well as from the fact that it is an ever increasing business line, these goods are becoming more and more profitable. The South Bend College of Optics, Madison and Wayne streets, South Bend, Ind., whose advertisement appears on another page in this issue, conduct a correspondence course in optical work for

entire subject thoroughly from the first principles upward. They claim to omit nothing that will help their students to become skillful and practical opticians. Just at present they are making a special offer to druggists, having reduced their tuition fee from \$25 to \$7.50, which includes a diploma and the degree of Doctor of Optics. Full particulars regarding this special offer and their 64-page Prospectus will be sent on application. Please mention the Era.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued September 8, 1903.

- 738,219.—Joseph W. Madison, Brooklyn, N. Y. Machine for capping bottles.
- 738,230.—Charles B. Overbaugh, New York, N. Y. Closure for bottles and the like.
- 738,238.—John Reid, Belfast, Ireland. Means for preventing refilling of bottles.
- 738,239.—Isaiah L. Roberts, Brooklyn, N. Y. Process of making zinc and chromium hydrates.
- 738,274.—Jean Bardin, Brussels, Belgium. Process for making perfumes and disinfectants.
- 738,263.—William J. Shelton, Van Vleck, Texas. Holder for poison.
- 738,467.—George Morris, Pittsburgh, Pa. Bottle-closure.
- 738,481.—William C. Pope, St. Louis, Mo. Effervescent laundry bluing.
- 738,544.—Frederick H. Jones, Wakefield, Mass. Hot-water bottle.
- 738,603.—Haydn Brown, London, England. Syringe-nozzle.
- 738,622.—Samuel C. Miller, Louisville, Ky. Filling tube for bottle-filling machines.
- 738,679.—Hart Hatch and John O. Cricks, Tarentum, Pa. Bottle-closure.
- 738,686.—William E. Johnson, Spokane, Washington. Non-reillable bottle.
- 738,709.—Hermann Weiss, Hildesheim, Germany. Process of making glue and gelatin.

TRADEMARKS.

Registered September 1, 1903.

- 41,049.—Chemical compound poison for insects. Edward L. Downey, Middleport, N. Y. The word "Downey."
- 41,050.—Magnesium dioxide. The Biogen Company, New York, N. Y. A coat of arms comprising an heraldic shield surmounted by a helmet disposed in the midst of a lambrequin, and above which helmet is a winged griffin rampant and crowned.
- 41,051.—Certain named plaster. V. C. & C. V. King Co., New York, N. Y. The representation of an Indian in war attire, holding a tomahawk in one hand and a knife in the other.

Registered September 8, 1903.

- 41,077.—Lotions. Cosmetic Oriental Zibal, New York, N. Y. The word "Zibal."
- 41,078.—Tonic. The Berard Chemical Company, Chicago, Ill. The word "Kloviss."

- 41,079.—Soluble receptacles. Johann Schmidt, Nuremberg, Germany. The word "Crown."
- 41,080.—Medicine for liver and kidney complaints. Perrell-Kellam Drug Company of Baltimore City, Baltimore, Md. The word "Akernee."

LABELS.

Registered September 8, 1903.

- 10,327.—Title: "Courage Pills." (For medicine). Louis J. Barker, Syracuse, N. Y.
- 10,328.—Title: "Dr. John Stolze's Dinner Powder." (For medicine). John Stolze, Reading, Pa.
- 10,329.—Title: "Hilda's Lithagogue." (For medicine). Hilda Van Buren, Seattle, Washington.
- 10,333.—Title "Pomona." (For Unfermented Fruit-juice). Otto Carque, Chicago, Ill.

The Latest Style in Prescription Ware.

The cut here presented is an exact reproduction of the New King Oval prescription vial which has just been placed upon the market by the T. C. Wheaton Co., of Millville, N. J. This vial is the very latest thing in prescription ware, having been patented upon August 4th of this year by the above-named firm. It appears to be built upon entirely different lines from any we have ever seen, and as it is intended for the finer class of drug trade, all first-class druggists will no doubt see the advantages to be derived from the use of a bottle of this style. This firm also make a specialty of lettered prescription ware and plain and ground stoppered ware for perfumes. Any interested druggist may secure a sample of the New King Oval by sending 5c in stamps to T. C. Wheaton Co., Millville, N. J.

MARKET STEADY AND FLUCTUATIONS NOTED OF MINOR IMPORTANCE.

New York, September 17.—Business in a jobbing way continues to show increasing volume, and the general market movement is satisfactory to dealers, but during the past week no further change has occurred in prices of leading commodities, and most of the fluctuations noted below are of only minor consequence.

OPPIUM.—Political complications in Turkey have further unsettled the market, and holders in Smyrna, anxious to realize, have offered concessions to buyers, but while the present outlook is uncertain, the prevailing opinion is that the market will eventually improve. Meanwhle holders continue to quote \$3,400/3,450 for 9 per cent, and \$3,500/3,750 for 11 per cent. Powdered is finding a moderate consuming outlet at \$4,200/4,500 for 13 per cent, and \$4,800/5,000 for 16 per cent.

MORPHINE.—Continued activity is a feature of the jobbing market, and quotations rule steady at the old range of \$2,000/2,70 for eighth in ounce boxes, \$2,550/2,850 in 2 1/2 oz. boxes, \$2,550/2,850 in ounce vials, and \$2,300/2,40 in 5-oz. cans.

QUININE.—Values are without further change and the market has a quiet appearance with dealers quoting 250/251 1/2c for bulk in 100-oz. tins, 251 1/2/252, in 50-oz. tins, 250 1/2/251 1/2c in 25-oz. tins, 250 1/2/251 1/2c in 15 or 10-oz. tins, and 320 1/2/321 1/2c in ounce vials, according to brand and quantity.

ALCOHOL.—Grain is firmer in sympathy with stronger producing markets, and jobbers have advanced quotations to \$2,170/2,18 in bbls, and \$2,570/2,57 1/2 for smaller quantities. Colorless is correspondingly higher and the revised figures are \$2,400/2,52 in bbls, and \$2,62 1/2/2,72 for less.

COTTON ROOT BARK.—Owing to extreme scarcity the market is stronger and jobbers have further advanced quotations to 250/250c, for whole and 350/350c for powdered.

NITRATE OF SILVER.—Keen competition has caused prices to react 1/2c per lb., and jobbing parcels are obtainable at 421 1/2/417 1/2c for crystals and 441 1/2/436 1/2c for fused, as to quantity.

SPIRITACETI.—Producing markets are stronger and spot jobbing quotations have been advanced to 316/316c for lump and 320/315c for cakes.

BALSAM COPAIBA.—Central American continues easy on account of competition and quotations show a further slight decline to 120/15c, as to quantity.

SARSAPARILLA.—Mexican is firmer, under exceedingly light available stocks, and jobbers have advanced quotations to 120/15c for whole, 180/22c for cal or crushed, and 200/25c for powdered.

CARDAMOMS.—Quotations have been revised, and show a lower range. Aleppo are held at \$6,081,00, Malabar, 950/81,15, Managora, 81,100/1,50, shelled, 900/81,00 and powdered, 81,100/1,25.

ESSENTIAL OILS.—Business in this department has been satisfactory in volume, and the outlook is considerably favorable to further improvement as the coming season advances. Peppermint is firmer, and jobbers have advanced quotations 10c per lb. to \$2,950/3,20 for Western, 83,100/3,25 for Wayne Co., and 83,150/3,70 for other H. G. H. or reds; led. Bergamot is easier in sympathy with corresponding conditions abroad, and prices have been reduced to \$2,250/2,50 for best grade, and \$2,050/2,30 for good. Wormwood is lower, owing to a liberal yield of new crop, and yields have declined to \$5,250/5,50 for prime and \$4,500/4,75 for ordinary. Ender a similar advance Lembeck and spruce have declined to 650/750.

BENJAMIN R. JONES, an expert chemist, died at his home in Springfield, Mass. After graduation from Amherst Agricultural College he received the appointment of assistant chemist at the Hatch Experiment Station. Three years ago he became a professor in the Utah Agricultural College and resigned to return East to study law.

OUR TOTAL POPULATION.

The total population enumerated by the twelfth census was 76,303,387, but while the area of enumeration covered Alaska and Hawaii it did not include Porto Rico, the Philippines, Guam or Samoa. The population of these newly acquired islands has, however, been ascertained partly by estimates and partly by special censuses. Including these estimates, the total population of the United States and its outlying possessions in 1900 was as follows:

Area of enumeration, 76,303,387	76,303,387
Philippine Islands, 0,001,330	0,001,330
Porto Rico, 953,243	953,243
Guam, 0,000	0,000
Samoa, 0,100	0,100
Total, 78,258,060	78,258,060

The only countries surpassing the United States in number or inhabitants are the Chinese Empire, the British Empire, the Russian Empire, and probably France, with the inclusion of its African possessions. —From the Hon. W. R. Merriam's "Noteworthy Results of the Twelfth Census" in the September Century.

BUSINESS NOTICES.

Our experience in catering to the wants of druggists has taught us that they are especially interested in formulas for toilet preparations.

In the Era Formulary there is one department which alone contains something over 1,000 such formulas.

Toilet specialties are as important as any class of goods the druggist may sell—they appeal to the tastes of the refined and the rich—to the beautiful and those who wish to be—and they afford a good profit.

Why not awaken to your opportunities for a policy of trade extension by purchasing a copy of the Era Formulary? This book will enable you to become the manufacturing chemist of your neighborhood. Price \$5 per copy, delivered. Write to the publishers for information.

President Hadley of Yale, says that, "the two aims of education are training for knowledge and training for power."

Another eminent educator has the same thought in mind when he distinguishes between "teaching to know and teaching to think and do."

In pharmaceutical education this distinction probably does not obtain, for the training is purely a guide to correct action.

Still it is well for the student to select carefully so that his limited time and means produce the best results.

The Era Course in Pharmacy gives the maximum of practical training for the minimum expenditure of time and fees.

Write to The Pharmaceutical Era, No. 8 Spruce Street, New York, N. Y.

SOCIALISM—WHERE DOES THE DRUGGIST COME IN?

We quote the following from a communication recently handed us:

"President Lederle of the Department of Health of New York City, in a communication to the Mayor, dated July 7, 1903, says: 'It is our intention to recommend the distribution hereafter of department laboratory products gratuitously to all persons in this city. The laboratories will be maintained hereafter strictly from the public funds, and consequently every citizen is entitled to share equally in the benefits of these laboratories whether he be rich or poor.'"

At first sight, this proposal seems eminently fair; if the rich help to support this city's laboratories, they should also share the benefit. But let us see what it means! Antitoxin is a commodity regularly supplied in the market, and its preparation and sale is a source of revenue to a certain class of citizens, the druggists and pharmaceutical houses. No fault has been found with the manner in which these citizens have performed their duty. The city no doubt has a right to assume any of the duties performed by its citizens, and in cases of monopoly and extortion it may even become necessary. But this reason is not applicable to this case, for antitoxin of superior quality can be supplied for a third or less of the cost of the city laboratory product. Municipal ownership of water supply, gas and electric light and power systems has the support of a few eminent statesmen; the extension of this principal to ordinary articles of trade is advocated only by socialists. But even the socialists do not propose quite such extreme measures as Dr. Lederle. They contemplate the gradual absorption of the various industries by the authorities, while New York's chief health officer proposes entering into active competition with unoffending people and removing a respectable slice of their business without offering any recompense whatever. If we are to have socialism, let us have the real thing, which has at least a semblance of justice.

IF ANTITOXIN, WHY NOT QUININE AND—CABS!

The free distribution of antitoxin will perhaps be defended on the ground that the administration of this remedy is necessary to protect the public from the ravages of diphtheria, and that its supply, there-

lets, properly sold within the province of the city health officers. But why single out one remedy when others are also necessary? Malaria is a common and serious disease, and quinine is a necessary remedy. Why should it not be freely distributed to rich and poor alike as well as antitoxin. Mercury salts and the iodides are largely employed in the treatment of syphilis, always a menace to public health. Why are not these remedies included in the list, or for that matter, any of the specifics found upon the druggist's shelves? It is also highly essential to the safety of the public health, that those afflicted with diseases have early and effective medical attendance. This seems to us far more necessary than the supply of antitoxin, and yet, Dr. Lederle seems to have overlooked the necessity of robbing several thousand physicians of their means of livelihood. If free distributions in the interest of public health is to become a settled principle, it will also become somewhat difficult to draw the lines of demarcation. What is necessary for public health, and what is not? Can a person preserve good health and not become a menace to others, without proper food, clothing and lodging? It is not altogether wholesome, at times, to walk in the rain, and perhaps we may expect the city to supply us all with free cabs. At this point the deduction, of course, becomes absurd, but is it a whit more absurd than the underlying principle of Dr. Lederle's proposal?

THE ENTERTAINMENT FEATURES OF THE BOSTON CONVENTION.

The entertainments prepared for the visitors in Boston during the joint meeting of the N. W. D. A. and P. A. of A. were, according to all accounts, the most lavish and magnificent on record. It is needless to say that everything was in exquisite taste, for is not the Athens of America the center of all New World culture? There was none of the ostentatious display so distasteful to those who have left poverty far enough behind to understand the true uses of wealth. Still the arrangements did not merit the reproach of undue modesty; \$10,000 pays for a deal of fun, even of the better sort. Much of the committees' resources were expended in sight-seeing—which is never grossly material, and a fair portion went for eatables and drinkables, which, although material, are still capable of much refinement. The banquet produced the most interesting souvenirs, among others a program which is a veritable work of art. The artist drew upon the gently humorous side of New England's early history both illustrations and text being quaintly picturesque. In the warnings to the guests there is some curious and effective mingling of the modern with the ancient, as witness the following which is only one of many equally excellent:

Ye any of ye companie, in ye afternoon of ye morning of ye day following ye day following ye evening of ye banquet, have ye colick and call ye physician shall be at his own charge. Ye apothecary at ye sign of ye high ball will approve ye gingers prepared from ye rhubarb of Jamaica.

If ye all that there is a useful lesson we have not thought it unwell to be that some people have money to spend and that the members of the entertainment committee were equal to their job. From his "act

a pace" which other towns will find it difficult to follow. No doubt New Orleans is also rich in experience and will acquit herself with credit; but if, say, a raw western city had been chosen for next year's place of meeting, we should tremble for the result.

COCAINE TRAFFIC IN TENNESSEE.

We are indebted to Voigt Bros., of Chattanooga, Tenn., for a newspaper clipping which shows that the authorities of that city realize the importance of the cocaine question and are prepared to deal with it vigorously. In Tennessee the traffic in cocaine has been made a matter for grand jury investigation, and from a recent charge of Judge McReynolds to the jury we learn that there is sufficient cause for such action. He said: "From the reports that we have and the drunken and half-crazed condition in which we see some people on our streets, it is evident that this law is being violated. I am informed that the residents of certain portions of this city use the drug to such an extent that the place is called 'Cocaine Alley.' The effect of this drug is deadly, and the provision for this sale is a good law, and should and must be enforced." The law provides the cocaine can be sold to the public only on the prescription of a physician, the prescription to be filled only once, and the judge instructed the jury to inquire whether prescriptions are unlawfully used by druggists as a protection for violations of the law, and also whether physicians are abusing their privilege. Apparently conditions in that portion of our country have reached a serious state, and it is reassuring to note that matters have fallen into the proper hands. If the effects of cocaine are plainly visible in the city streets and the use of the drug is so widespread as this judge suggests, the evil has assumed proportions far beyond the control of the reputable exponents of pharmacy and their associations. It demands the attention of the most considerable force our system of government can afford, and that force is none too powerful.

NEW YORK DRUGGISTS AND LIQUOR SALES.

When the law permitting the sale of liquor in drug stores in pint packages bearing a stamp passed New York's legislative body, the measure encountered considerable opposition and there were many predictions that the privilege would be abused. Critics said that it opened the door to open competition with regular liquor dealers, and that the increase of quantity from eight ounces to one pint was a grievous blunder which allowed much more freedom than necessary. Many believe that alcoholic liquors are entirely out of place in the pharmacy and that any liberty granted the druggist in the matter is a step backward. It has also been asserted repeatedly that the liquor selling druggists of the State are mostly found in this city. It is, therefore, interesting to examine a set of figures which we have collected and which we give place elsewhere in this issue. It appears that during the first three months of the new excise law's operation, 228 stamp books were issued to druggists of Greater New York, and 703 to those in other portions of the State. Reports of the board of pharmacy show that there are 1110 druggists in the State, and of these 2,308 in this city. Hence, only one in ten of the pharmacists in the country are enough for the liquor trade coming their way

to purchase stamp books, while in the balance of the State the proportion is one in three. In proportion to the total number, three times as many pharmacists in the outlying districts are prepared to sell liquor under the new conditions as in Greater New York. Disregarding the few large pharmacies which possess regular retail liquor store licenses, it may, therefore, be said that druggists do not encourage or seek this class of trade. The number of stamp books issued also shows conveniently the approximate amount of liquor sold. Assuming that all these 801 books of stamps were used, leaving none uncanceled—which it is safe to say is not the case—and that each stamp was affixed to a full pint, the total quantity of liquor sold in drug stores equals 44,550 pints or 5,569 gallons, an insignificant amount as compared with the total sales of the State. The estimate is probably much too high, for many stamps are attached to bottles containing less than a pint, and many of the books have been only partially used. In fact, it is not improbable that the sales under the new law will not exceed two or three hundred barrels during the entire year. All of which shows that the druggist is not a willing competitor of the saloon men and that he bears his full share of the tax burden.

WHY THROW STONES!

The American Druggist laments rather plaintively because a neighbor has wickedly "lifted whole blocks of expensive tegraphic" association reports. Tut, tut! neighbor. Tegraphic matter two weeks old is no longer news. Besides, are "blocks" of desiccated association reports any more valuable than stray local items which also demand enterprise in the collecting and are quite as freely purloined? It is a bit dangerous to throw stones; so many houses in New York are largely built of glass.

Think to a Purpose.

Any faculty of body or mind can be developed to almost superhuman energy. The Indian can track his enemy through forests and over prairies, where the white man could see not the slightest trace of a human foot. He is trained to it. The scholar can weigh the stars, and mark out their orbits, though to the red man they are but specks of light that help him find his trail through the woods. The Indian's outer sense is trained, the thinker's inner sense; and each, by practice, doing the thing again and again, undiscouraged by failures, unwearied by repetitions, aiming at a mark that must be hit some time. Careful seeing develops sight. The long vision of the sailor, and the close vision of the watchmaker, illustrate this. Careful thinking develops thought. People think enough. We think as constantly, and as involuntarily as we breathe. The trouble is, we do not think steadily—to a purpose.

Goods are Newsy.

Everything consumed by the public is of interest to the public. There can be no doubt of this whatever. But the great difficulty is that there are so many advertisers who fail to realize that such is actually the case. The average merchant is too apt to regard his goods as being nothing more nor less than something that must be turned into cash with all possible celerity, and in taking this view of the matter he loses sight altogether of the public interest possessed by his stock. As a result, his advertising is not prepared with said interest as the guiding principle, and it loses much of its force in consequence.—Profitable Advertising.

B. E. PRITCHARD, McKeesport, Pa.,
Prominent Member Western Pennsylvania Ph. A.

A Hint from Philosophy.

Some old philosopher once said: "Things invisible deceive not." Of course, this ancient sage did not know anything about the art of advertising, and consequently his reflection could not have been intended as a reference to anything connected therewith; but nevertheless, that quartette of words forms a splendid suggestion for any business man.

"Things invisible deceive not."
In other words, a name that is advertised into the respect of the public will never depreciate in value like the tangible articles of commerce. All kinds of goods are deceptive—worth a dollar today and fifty cents tomorrow; but the reputation won by honest advertising does not deceive. It is worth just as much tomorrow as it is today, and its value cannot be transferred.

Verily, the above-mentioned philosopher was wise in his generation, and had he lived in this age of the world he would assuredly have been an advertising man.—Profitable Advertising.

A Census of Homoeopathic Physicians.

At or about the dawn of the twentieth century there were in the United States (exclusive of Alaska and other dependencies) 9,369 homoeopathic practitioners, or one in 8,000 of its population; in Barbados 5, or one in 38,000; in British America (including Newfoundland and all of Labrador) 87, or one in 64,000; in Uruguay 7, or one in 133,000; in Switzerland 22, or one in 151,000; in Australasia 29, or one in 155,000; in Spain 118, or one in 163,000; in Belgium 41, or one in 164,000; in France 211, or one in 192,000; in Germany 290, or one in 104,000; in Great Britain and Ireland 201, or one in 203,000; in Holland 17, or one in 300,000; in Denmark 8, or one in 306,000; in Mexico 32, or one in 423,000; in Brazil 33, or one in 428,000; in Italy 42, or one in 772,000; in Argentina 6, or one in 800,000; in European Russia 66, or one in 1,608,000; in Portugal 3, or one in 1,674,000. There were also 41 in India, 2 in China, 1 each in Cape Colony, Sweden and Venezuela, as well as 3 in the Hawaiian Islands and 1 in Alaska.

This indicates there are not less than 10,635 disciples of Hahnemann in the world, of whom 88 per cent. reside within the limits of the United States proper.—North American Journal of Homoeopathy.

SHOP TALK

ON OLD RUTS—EASY, COMFORTABLE AND NARCOTIC.

"Get a letter from our rival, Mr. Bodemann," read the card.

The druggist looked interested. "Fallen foul of some of your lop-sided ideas, I suppose?"

"Wrong!" He agrees with me on the advice question. He says "all that talk about how to succeed has helped one individual to success."

"I say, that's a bit hard on you, you know."

"Why, on me?"

"Because you're always doing that—always telling somebody how he ought to do things."

"I do no such thing! I merely try to show up both sides of a question, and get people to think for themselves. One side may turn out to be considerably heavier than the other, but I can't help that. They can take their choice. They always do anyway."

"Of course! Nobody wants to take orders or advice. 'Tis a free country."

"Besides, I don't feel competent to give much advice. It's a dangerous business. The most you can do for any one is to jostle him out of his rut, and then let him pick his way. His rut! That comfortable, soothing, easy, narrow, stupefying, seductive, deadening, sleepy old rut!"

"Where did you get all those adjectives?"

"They are not all mine. Some of them belong to Mr. Bodemann. He says he knows from various observations that one of the greatest obstacles to success is getting into a rut."

"What does he propose doing about it?"

"He doesn't say, but from what I know of him, I should say he would like to take people by the collar and jerk them out. It's a good way—if you've got strength enough, but it isn't my way. I prefer to poke them gently with a stick to make them look up; then if they want to, they can hop out themselves."

"Most of them don't want to."

"No, that's the trouble. I don't enjoy it myself."

"You?"

"Yes, I and you and everybody else. We're all in ruts more or less. Life's turnpike is pretty soft in spots, and a very little travel will wear grooves that seem to fit our wheels of thought beautifully. It's a deal easier traveling in a smooth old rut than on the rough surface."

"I don't see why."

"Because you don't have to watch where you're going. It may be as hard work, but it's less trouble. The tracks are well defined by those who have been over it before—by ourselves sometimes, for the most deadly rut—run in a circle. The fellow who drops into one of those circular affairs keeps plugging round and round doing the same old things over and over again. He thinks he is traveling along at a good pace, but he doesn't make any progress. The procession moves on without him. As Bill Davery says, he's a dead un."

"I don't see quite what you're driving at."

"I'm not driving at anybody or anything. Mr. Bodemann is right, but I hope he'll leave a few of my old fellows alone. When a man gets to be sixty, he has a right to his rut. He has earned it. What he's afraid of is getting the young fellows and make them get comfortable but there comes a time when a man ought to have a rest, and a smooth, tanbur old rut is no so comfortable!"

"It may be bad then—I know it! I know you'd do it. You always travel in the wrong direction like a man. You start out to leave up the rut and the

worst thing on earth for the druggist and here you are dead in love with it yourself!"

The sage nodded. "It's a pretty fine thing if you don't care to succeed in life. A placid existence is all right, but it's not success. Take those old chaps who live to be a hundred years and over, they dropped into ruts in early life—no worries, no ambitions—but you will notice that they are nearly all in the thirty alphas."

"Keep right on! You'll get there!"

"Success and comfort have nothing to do with each other," continued the sage, ignoring the druggist's remark. "Ambition is the divine unrest you know. If you have a hankering after success, and you feel yourself getting into comfortable ways or doing things you may be sure you are on the wrong track. It's time to pull yourself up sharp and get out of the rut."

"How is a person to tell?"

"By keeping his eyes open, and seeing how other people are getting on. He mustn't allow himself to become satisfied with the way he does things. There is always a better way."

"Do you know any druggists in this town who are traveling in ruts?"

"Lots of them," looking hard at his friend across the counter. "There's—but what's the use of mentioning names? You'll know who he is when I describe him to you. He knows as much about the science of pharmacy as he did when he left school, minus what he has forgotten. He is perfectly sure his way of doing things—the way he first learned—is the only one worth considering. Associations are a waste of time, and journals a waste of money—editors never find anything interesting anyway. Because he got six dollars a week when he first went to work in a drug store, he thinks his clerk ought to be satisfied with the same. If he advertises at all, he keeps the same little old notice he had in the papers for the last ten years. He dressed the window with his own hands five years ago—do you think he would trust an upstart of a clerk to improve upon it? His fountain and fixtures are nearly hidden behind patent medicine placards stuck up promiscuously—it's so easy to hang these things up, they keep coming along, and it gives a sense of real motion. There are cards and signs in his store that have been trusty landmarks to several generations of flies. Everything about the place is faded and dingy."

"Hold on! You're overdoing it! He generally keeps things clean."

"He may have got into a rut of dusting, but he does it in the same comfortable old way. He orders the same kinds of goods in exactly the way he's been used to for years. New things and new ideas disturb him. They don't fit into his rut."

"But he is comfortable!"

"Yes, in a negative sort of way, if he can escape the prods of his competitors. He has none of the joy or exhilaration one finds near the head of the procession. His peace is the peace of sleep, of death. You know we finally drop into a rut from which no one ever escapes. There's no struggle there; all is peace."

"You mean when we're dead. Excuse me! We'll all have plenty of that. I'd rather stay out of it as long as possible."

"Then don't invite being death and decay by allowing yourself to travel overmuch in ruts. Don't allow yourself to become too comfortable. The man who has a keen eye for the soft snags of this world is hard to miss the road to success."

"How about conservatism?"

"The perfectly conservative man is a dead man." "In other words, success means hard work and discomfort."

"As a general rule, yes! Luck has something to do with it. Some men deny themselves and slave to no purpose. But one thing is sure; men in deep ruts never win any races."

IS THIS TRUE OF OTHER CITIES?

The number of retail druggists in Baltimore, who "find no money in soda water," seems to be growing. Several years ago some of the retailers shut down their fountains because, they said, they entailed more trouble than the receipts warranted. This year several other pharmacists ceased to sell "soft drinks," and it is said on what appears to be reliable authority that others will drop out at the end of the present season.

"It pays the stores located on much frequented thoroughfares," said one of the druggists who has dropped soda water, "but in the purely residence sections the profits are too small. You are required to invest from \$300 to \$1,200 in a fountain, the receipts from which average not more for the outlying stores than \$3.50 a day. When you consider the ice, the extra clerk hire and various incidentals, the margin is either very small or disappears altogether. Fashions and preferences have changed. Formerly people would come in and call for soda water with a little syrup or perhaps milk or cream. Now the request is for ice cream soda, with the glass filled full of ice cream. To this is added syrup and just a dash of soda water. The latter, in fact, plays the least important part in the decoction. And lately, fruit mashed into a pulp is put on top of the ice cream and syrup, each of these ingredients being an additional cost, while the druggist gets no more.

"I was speaking to a druggist of my acquaintance recently, and he told me that the quantity of soda water he used this summer is just about 50 per cent. of last year's requirements, while the ice cream he has been called on to furnish has doubled."

According to the pharmacist quoted, several druggists in his section have found that there is no money in soda water, and that it fails to serve as a draw card for the sale of other articles.

MUST HAVE BEEN A CHRISTIAN SCIENTIST.

A Syracuse druggist tells this story on himself: "Not long ago a neighbor of mine bought some poison, thinking to rid himself of rats. I thought no more of the incident until he came in some days later and wanted his money back, saying the stuff was no good.

"I fixed up a nice piece of cheese with the poison," said he, "and put it where the rats would get it, and shut up my little girl's dog to keep him away from danger. In some way that dog got out and licked up every smell of the cheese, poison and all. There was a stirring in the family then. My wife sent me out to catch Fido, saying that if he had to die, it were better that he die at home, among friends. I captured the canine, but he didn't seem to have anything the matter with him. I took him to the rear porch and fixed up a nice cushion for him to die on. Bright and early next morning I got up to bury the remains, and, feeling sorry for the pup. There was the dog as lively as ever and tickled to death to see me. Now this stuff can't be good for much!

"Now I knew that that poison was all right and would kill every time, but I didn't argue with the man, and gave him his money back. I can't imagine what saved that dog's life."

HOW MANY PILLS IN THIS JAR?

A business-seeking Rochester druggist recently gave a "pill-guessing contest." He planned to secure as many new sales as possible by throwing out an extra inducement. He filled a small glass jar with pills, placed it in the center of the window, and over it suspended a card that read as follows: "How many pills are there in the jar? The person guessing

the nearest by August 30 will receive a gold watch, free; second, fountain pen; third, camera. A guess with every purchase."

The contest brought a rush of trade to the store and a usually dull month was made a bright and flourishing one. Over 12,000 guesses were made. The lowest recorded was 250, and the highest 36,639. The actual number was 867. A woman purchaser guessed 865 and got the watch. The judges were disinterested persons, one being a physician. The number of purchasers a year ago is not known, but the receipts increased by over \$900.

The pills were an advertised variety and the manufacturers gave the prizes, as it proved a big ad. for them as well as for the store.

RELICS OF ABORIGINES IN HIS WINDOW.

C. W. Ellsperman, Eleventh and Susquehanna avenue, Philadelphia, has for the past week had a unique display in his windows that has not only created much talk but attracted attention from many parts of the city. Some years ago, Mr. Ellsperman, who is an antiquarian and geologist of no mean merit, spent considerable time in the Ohio valleys. While there he personally made a collection of Indian relics and mineralogical specimens that is now placed on public view for the first time. The arrow-head display is particularly fine and contains several hundred shapes and specimens. The balance is made up of pendants, battle axes, various ornaments in copper and bronzes, and several well-preserved skulls. The collection has been visited by many prominent local scientists, who pronounce it the finest amateur effort they have ever seen.

Concentrate Your Orders.

It is very essential to get the bottom quotations, quality being considered, in the purchase of drug supplies, but it is very easy to lay so much stress upon single items that in the aggregate one's buying will be so much scattered that he will fail to receive the benefit which should accrue to him from the aggregate size of his purchases. It may happen that one's jobber may overlook some slight decline, and thus give occasion for protest on some one particular item, but it does not necessarily follow that it would be good policy for the druggist to immediately cut off his orders to this jobber. In the long run it is quite possible that his interest will be better served by sticking to his jobber and making a protest whenever any apparent unfairness in prices is noted. A good rule is to send orders in to one good house on staples, and not spend too much time with salesmen of such goods. By concentrating his orders, the druggist can get low prices upon his goods.—Drug Review.

Experience Teaches.

One of the strangest things about organizing the drug trade is this: "The more perfect the organization, and the more efficient it is in protecting its members' interests, the greater the certainty that some member will start out to "smash the schedule" sooner or later. Take a cohesive and active local association of a large city, let it gradually raise prices to where they ought to be and maintain them there for a few years. During this period the personnel of the trade has undergone numerous changes, and the newer members perhaps, having had only the prosperity and not the hardships of the drug trade, fail to appreciate the good they are receiving from the organization. Having read in ancient history of the money to be made by cutting, they throw prudence to the winds and it is the old story over—everyone slashes, no one making anything. The unborn child does not dread the fire, so perhaps it is as well to let him place his fingers on the hot part of the stove a time or two. After he does he will believe the warnings he has heard. The new cutter may have to learn the same way.—The New Idea.

A METROPOLITAN WINDOW DISPLAY.

MINT.*

Its Early History and Modern Commercial Development.

By A. M. TODD.

MINT was among the plants first recognized as of value by the ancients, and by them given a specific name; and many interesting references to it are found in the earliest known literature. Its extreme antiquity is attested by the fact that it was known in Greek mythology, where it was given a birth both romantic and immortal in connection with the amors of the gods. Mintha, a beautiful girl, had won the affections of Hades (Pluto), and in a fit of jealousy was transformed by Ceres into the plant which was then given her name; from which followed the Latin "Mintha," "Mentha" and "Menta." Evidencing the widespread belief that in this legend, there still exists under this same name of Pylas, the hill, Mount Mintha, upon which the transformation occurred; and at the base of the mountain was in ancient times a grove dedicated to Ceres and a temple to Hades. This romantic tradition is recorded by several classic writers, among whom are Strabo, (Geographia, liber 8), Julius Pollux, and others.

Probably the earliest reference to mint preserved in the writings of the ancients, is in the works of Hippocrates, the most celebrated physician of antiquity, born about B. C. 460, who among other things mentioned it as an excitant to amor. A very interesting reference is found in the writings of Aristotle, born B. C. 384, who mentions its well known cooling and soothing effects as well as its antiseptic properties. Dioscorides, the successor of Aristotle in his "Historia Plantarum" also mentions mint but under the name "Edmoia" (fragrant or sweet scented). As we are told by Strabo and other classic writers that the true name was given to some parts of the Greeks

desired the plant to have a name suggesting its fragrance; and the new name seems to have been adopted by most of the later Greek classic writers as well as in the Greek Gospels of Matthew and Luke. Pliny, however, in his "Historia Naturalis," states that the Romans preferred to retain the more romantic and ancient name.

One of the most interesting references to mint in ancient writings is the recorded utterance of Jesus, where, in Matthew xxii. 22, he says "Ye tithe the Mint, Anise and Cummin." The same passage in Luke xi. 42 reads—"Ye tithe the Mint and rue and all manner of herbs." In both the original Greek Gospels the latter name "Sweet-scented" is used. It is worthy of note that mint is the only herb mentioned in both Gospels, and it would hence seem to be the most prominent of all known herbs; and the fact that the laws provided for taxes to be paid in it would indicate that it may have been regularly cultivated in Palestine at that time.

A most interesting account of mint is given by Pliny (23-79 A. D.), in his "Historia Plantarum" (liber XIX, cap. 8), also in liber XX, cap. 14. Among other things he mentions the means of propagation; that on account of its pleasing odor it was used in banquets, and notes also its well-known medical virtues. Ovid ("Fasti" 2) speaks of mint as having magical power, "Obsutum menta torret in igne caput."

Unfortunately neither time nor space permits more than a very brief reference to the writers following the Christian era. The great physicians, Galenus² (liber VI), and Celsus (liber IV), who both flourished in the first century, Dioscorides, in the second century (liber III, cap. 35-36); and the celebrated Arabian, Avicenna (A. D. 980-1037); all were well acquainted with mint and recorded the virtues for which it is to-day prized. In his celebrated book "Liber de Arte Distillandi" (published in 1500 and which was

1 Theophrastus, *Historia Plantarum*, Liber de Latine, *Aristotelium*, Anno 1644. (Ed. 1900)
2 Galeni *Opera*, *Tabulae Venae*, 1503, 5 vols., 1st Edition.

followed with enlarged editions with very many rare plates illustrating the art of distillation and pharmacy), Braunschweig mentions five species of mint, but it is difficult to recognize them all with precision. He speaks of them as *M. Crispa*, *M. Aquatica*, *M. Rubra*, *M. Balsamica* and *M. Sarenica*.

The first printed allusion to mint in the English language which I have yet found, is in the famous "Breeches" Bible, printed in London in 1597 (which derives its name from the rendering of Genesis iii. 7, "They sewed figge-tree leaves together and made themselves breeches.") In this edition the utterance of Jesus already referred to in the Greek, reads "Ye tith Mynt and Annyse and Cummin." In the following year (1598) appeared the splendid folio edition of the works of Matthioli,³ which included the writings of Dioscorides, etc., with annotations. In this work seventeen species of mint are noted, and nine important species engraved: viz.—*Mentha*, *Mentha Altera*, *Mentha Crispa*, *Mentha Graeca*, *Calamintha*, *Calamintha magno flore*, *Calamintha Montana*, *Calamintha aquatica*.

Gerarde's "Herball"⁴ (London, 1633) gives a very interesting description of the various species known to the writer (pages 679-686), with engravings of nineteen varieties, including the "calamints." These are as follows:—*Menthasarivarubra*, Red Garden Mints; *Mentha cruciata*, *Sive crispa*, Croffe Mint or curled Mint; *Mentha Romana*, Speare Mint; *Mentha Cardiaea*, Heart Mint; *Mentha Spicata Altera*, Balfam Mint; *Mentha aquatica Sive Sisymbrium*, Water Mint; *Calamintha aquatica*, Water Calamint; *Mentastrum*, Horsemint; *Mentastrum niueum Anglieum*, Party colored Horsemint; *Mentastrum minus*, Small Horsemint; *Mentastrum montanum J. Clusii*, Mountain Horsemint; *Mentastrum tuberosaradice Clusii*, Turpin-rooted Horsemint.

In Parkinson's "Theatrum Botanicum or Theater of Plants,"⁵ published in London in 1640, very interesting descriptions of mints and their uses are given (pages 30-38), with engravings of twelve varieties named as follows:—*Mentha Romana angustifolia sive Cardiaea*, Hart Mint or Speare Mint; *Mentha Crucata*, Croffe Mint; *Mentha Crispa*, Seispe or Curled Mint; *Mentastrum hortense sive Mintha Sylvestris*, the Maured Wild Mint; *Mentastrum niueum Anglieum*, White Mint or Party Colored Mint; *Mentastrum montanum Sive Pannonicum*, Hungarian Wild Mint. The following specie are given under the heading of "Calamintha":—*Calamintha vulgaris*, Common Calamint; *Calamintha montana praestantior*, the greatest Calamint or Mountain Mint; *Calamintha arvensis verticillata Sive aquatica Bel.* Field Calamint with whorled coronets; *Calamintha minor incana*, Small Calamint.

The first reference to any of the mints under a name suggestive of "Peppermint" appears to be in the "Synopsis Stirpium Britannicarum," (2d Ed.) by Ray, in 1696, his attention having been called to the plant by Dr. Eales, who had noticed it in Hertfordshire. In this work Ray describes it as "*Mentha spicis brevioribus et habitioribus, foliis, Mentha fuscae sapore fervido piperis*;" and in his "Historia Plantarum" (1704, Tom III, 284) he refers to it as "*Mentha Palustris*;" "Peper-Mint." Afterwards Linnaeus gave it the name "*Mentha Piperita*," by which it is now universally known. It is stated that Ray's original specimen, which is still in the British Museum, agrees practically with that under cultivation.

Peppermint also appears to have been grown on

3. Matthioli Medici Casarei Opera quae extant omnia M. D. XCVIII. (Basle-Folio).

4. The Herball or General History of Plantes, Gathered by Iohn Gerarde, of London, Master in Chirurgerie, Very much enlarged and amended by Thomas Johnston, Citizen and Apothecary, London, 1633. (Folio).

5. Theatrum Botanicum: the theater of Plants, or an Herball of a Large Extent, collected by the many years travails, industry, and experience in this subject, by Iohn Parkinson, Apothecary of London, and the King's Herbalist, London, 1640. (Folio).

C. E. HOPPING, Beaver City, Neb.,
President Nebraska Ph. A.

the continent, at Utrecht, as early as 1771, having been mentioned by the botanist Gaubius,⁶ that year. It also was known in Germany and renewed interest was awakened in it through the writings of Knigge.⁷ It became first official in the London Pharmacopoeia in 1721, as "*Mentha piperitae sapore*."

It is well known that the mints have the power of modifying their botanic structure and the flavor of their essential oil by changes in soil, climate, the class of fertilizers used, and methods of cultivation. In this connection I might mention the fact that the Mitcham Peppermint plants, which I imported from England about twenty years ago have already commenced to show modifications in structure, and the flavor of the oil has in the meantime undergone a change approximating more closely that of the original American variety. When visiting the Yosemite Valley, California, famous for its magnificent scenery, a few years ago, I found a species of mint growing there indigenous, resembling *Mentha Canadensis*. No peppermint had ever been cultivated within a thousand miles of this valley, and it is interesting to speculate as to whether this may have been one of the earliest forms of the *Mentha* genus. The flavor of this plant resembled that of pennyroyal *Mentha Pulegium* rather more than peppermint.

The cultivation of mint appears to have been conducted in Japan centuries before the industry had assumed a commercial status in Europe; and though no authentic records to that effect are to be found, it is said to have been known in that country for over two thousand years. The methods of distillation are extremely crude and the variety of plant grown differs both in botanic structure and in the flavor of its oil from the true peppermint plant. The Japanese plant is *M. Arvensis*, and appears such as might be expected from a hybridization of *Mentha Viridis*, Spearmint, and *Mentha Canadensis*. The oil is very inferior in quality to that of *M. Piperita*.

(To be Continued.)

SOME INCOMPATIBILITIES OF SYNTHETIC REMEDIES.*

By EDSEL A. RUDDIMAN, Nashville, Tenn.

Agurin.

AGRIN is readily soluble in water, not very readily in cold alcohol but more so in hot alcohol. The solution is strongly alkaline to litmus.

Adding hydrochloric acid to an aqueous solution of agrin does not give a precipitate at once. A dilute aqueous solution gives a bluish-white, gelatinous precipitate with silver nitrate which is soluble in ammonia water, but not in alcohol; the silver is not reduced on standing for several hours. With copper sulphate it gives a blue precipitate. Tartar emetic with considerable agrin gives a white precipitate. Lead acetate and cadmium chloride give precipitates. With mercuric chloride, magnesium sulphate, barium chloride, or platinum chloride, it does not give a precipitate at once, but does on standing. Ferric chloride with excess of agrin gives a red-brown precipitate. Excess of tincture of iodine causes little or no precipitation at once, but if the agrin is in excess the iodine is decolorized and a yellowish, gelatinous mass or thick liquid results which slowly becomes thin again and deposits a white precipitate. Carbon dioxide produces a white precipitate. An aqueous solution of agrin darkens calomel at once. It reduces potassium permanganate to some extent. It is not readily precipitated by Mayer's reagent. It precipitates solutions of many alkaloidal salts. Many of these precipitations are due to the alkalinity of the compound and can be prevented by first neutralizing the alkalinity. Rubbed with chloral hydrate, carbolic acid or piperazin, it gives a mass.

Alumnol.

Alumnol is readily soluble in water but sparingly soluble in alcohol. The solution is decidedly acid to litmus. Adding ammonia to an aqueous solution gives a white precipitate which dissolves in excess of ammonia, giving a blue fluorescence. Potassium hydroxide acts like ammonia. Ammonium carbonate or sodium carbonate gives a white precipitate. With ferric chloride alumnol gives a deep blue color. It does not cause precipitates with lead acetate, silver nitrate, mercuric chloride, barium chloride, potassium mercuric iodide, or tincture of iodine. It precipitates albumin, the precipitate being soluble in excess of albumin.

Ammonol.

Ammonol is a white powder, part of which is soluble in cold water and part insoluble, soluble in hot water, not entirely soluble in alcohol even on boiling. It is alkaline to litmus, and when the bottle is freshly opened it has the odor of ammonia. If it is shaken with water and then filtered, the filtrate precipitates solutions of lead acetate, barium chloride, copper sulphate, silver nitrate, alum, ferric chloride, the precipitates being soluble on adding acids. This filtrate gives the odor of ammonia when heated with potassium or sodium hydroxide. Acids cause an effervescence. It probably contains ammonium carbonate. Most of the precipitations are due to the alkalinity and can be overcome by neutralization. When it is rubbed dry with resorcin, thymol, carbolic acid, or chloral hydrate it gives a mass or liquid. It does not reduce potassium permanganate appreciably.

Diuretin.

Diuretin is readily soluble in water. It is not readily soluble in cold alcohol, but is more so in boiling alcohol. It is strongly alkaline to litmus. The addition of acids to an aqueous solution causes a precipitation, probably of both theobromine and salicylic acid. Even carbon dioxide will give a precipitate.

When a solution of diuretin is added to a solution of copper sulphate a green solution results if the copper is in excess, but a green precipitate if the diuretin is in excess. Silver nitrate gives a white gelatinous precipitate which is soluble in ammonium hydroxide. Calomel is darkened at once by a solution of diuretin. Mercuric chloride slowly gives a white precipitate. Diuretin gives a violet color with a tincture or solution of ferric chloride if the iron is in excess, but a red if the diuretin is in excess; the iron is not precipitated in either case. It precipitates solutions of alum and lead acetate. Ammonium carbonate, sodium phosphate, or borax slowly gives a precipitate with solutions of diuretin, but ammonium hydroxide, potassium hydroxide or Mayer's reagent causes no apparent change. Tincture of iodine is decolorized at first, but added in excess it gives a precipitate. Diuretin precipitates aqueous solutions of alkaloidal salts. When diuretin is triturated dry with chloral hydrate or carbolic acid it gives a soft mass.

Europen.

Europen is insoluble in water, soluble in alcohol, glycerin, and fixed oils. Heat and light tend to liberate iodine, particularly in solution. The solution in oil is of doubtful efficiency, since the iodine slowly liberated combines with the oil. It is not advisable to prescribe it with metallic oxides or salts that have a strong affinity for iodine.

Heroine.

Heroine is sparingly soluble in water, soluble in alcohol, chloroform, benzene, less readily soluble in ether and still less in amyl alcohol. Mixed with water it gives an alkaline reaction to litmus. It combines with acids to form soluble compounds. It deports itself very much like alkaloids.

Heroine hydrochloride is very soluble in water, and is the salt most commonly used. Alkaline hydroxides or salts precipitate it from aqueous solution, but the neutral or acid salts do not generally do so. Tincture of iodine or an aqueous solution of iodine with potassium iodide gives a brown precipitate. Potassium mercuric iodide gives a white precipitate. Dilute solutions of heroine hydrochloride with mercuric chloride do not give precipitates, but an excess of concentrated solution of mercuric chloride gives a white precipitate. From not too dilute solutions it is precipitated by chlorides of gold and platinum. Heroine lessens the fluorescence which quinine gives with dilute sulphuric acid. It interferes with the dichromate test for strychnine when it is present in considerable proportion. Heroine hydrochloride and also the free heroine reduce potassium permanganate. Nitric acid gives a faint yellow which changes to green on standing, more quickly if warmed.

Ichthyol.

Ichthyol is miscible with water or glycerin, precipitated by strong alcohol, neutral or slightly acid to litmus. It is precipitated by ferric chloride, ferrous sulphate, lead acetate, copper sulphate, alum, zinc sulphate, barium chloride, calcium chloride, magnesium sulphate; probably as sulpho-ichthyolates of the metals. From dilute solution it is not precipitated by mercuric chloride, tartar emetic, potassium iodide or sodium phosphate. Ammonium chloride, ammonium carbonate and sodium carbonate give turbidities. Acids combine with the ammonium, precipitating the ichthyol-sulphonic acid. Silver nitrate slowly gives a precipitate. Ichthyol is decomposed by alkali hydroxides or carbonates, liberating ammonia. It precipitates alkaloids from solutions of their salts, forming sticky masses.

Phenocoll Hydrochloride.

Phenocoll hydrochloride is soluble in water. From not too dilute aqueous solution it is slowly precipitated by ammonia, ammonium carbonate and sodium carbonate; the precipitate may come down in flat crystals which refract light, but generally on standing the precipitate becomes brownish and amorphous. Mercuric chloride slowly gives a little white precipitate. Solu-

* Read at the Fifty-First Annual Meeting of the American Pharmaceutical Association held at Mackinac Island, Mich., August, 1903.

tion of ferric chloride gives a brownish-red precipitate, which becomes brownish yellow on standing; the precipitate is soluble in alcohol. Tincture of ferric chloride gives a deep red solution, which gets brownish-green in a few minutes, and some bubbles of gas are given off. Silver nitrate does not give a precipitate at once, but is reduced and deposited on the sides of the vessel in a few minutes. Gold chloride gives a dark brown precipitate at once, which gets nearly black; platinum chloride, slowly a green precipitate. Tincture of iodine in excess gives a brown precipitate, which redissolves in excess of phenocoll, and the iodine is decolorized. Piperazine sometimes gives a precipitate, probably due to the alkalinity of the piperazine.

Piperazine.

Piperazine is hygroscopic, soluble in water and alcohol, quite strongly alkaline to litmus. In aqueous solution it gives a brown precipitate with ferric chloride, a green one with ferrous sulphate, a white or nearly white with stannous chloride, mercuric chloride, tartar emetic, gold chloride, barium chloride or potassium mercuric chloride. Silver nitrate and platinum chloride give no precipitates. Tannic acid gives a white precipitate, which dissolves in excess of piperazine, giving a purplish color; adding more acid gives a permanent precipitate, but still more acid dissolves it with but little color other than that which the acid alone gives; if the solutions are dilute precipitation may not result, but there is a change of color. Piperazine precipitates many alkaloids from solutions of their salts. Many of the precipitates mentioned above are due to the alkalinity, and will not occur if the piperazine is first neutralized. Tincture of iodine gives a nearly white precipitate. Potassium permanganate is reduced. It forms a liquid or mass when it is triturated with acetanilid, antipyrine, phenol, chloral hydrate or phenacetin.

Protargol.

Protargol is soluble in water, almost insoluble in alcohol, slightly alkaline to litmus. In aqueous solution it gives precipitates with lead acetate, zinc sulphate, silver nitrate, alum, ferric chloride, mercuric chloride, dilute hydrochloric acid, dilute acetic acid or quinine bisulphate. It does not give a precipitate with Mayer's reagent. It decolorizes potassium permanganate. It gives no precipitate with sodium or ammonium chloride or albumin.

Salophen.

Salophen is nearly insoluble in hot or cold water, somewhat soluble in alcohol, or chloroform. The alcoholic solution gives a violet color with tincture of ferric chloride if the salophen is in excess, but if the iron is in excess a red-brown color is produced; if the solution of salophen is previously heated and then mixed with the iron it gives a violet at once. Salophen is said to be decomposed by the alkaline fluids of the intestines. Potassium hydroxide aids its solution in water, probably decomposing it.

Life Without a Purpose a Burden.

Systematized activity is one of the best preservatives against "dull care." Leisure is but a sauce of life which helps to make work more palatable and digestible—the one apart from the other soon becomes disgusting. Men of leisure, as they are called, are most commonly restless, fidgety, and unhappy men. The kindest thing which can be done to them is to deprive them, if possible, of the greater part of their leisure. At first sight it does not seem so, but a very short experience will prove that it is so. Much leisure infers the absence of a purpose, and life without a purpose is a perpetual burden.—Stray Thoughts.

THEORY AND PRACTICE

EXTRACTION OF IODINE FROM CHILI SALT PETER.

M. Newton (Journ. Soc. Chem. Ind.) describes the process employed in the extraction of iodine from Chili salt peter which furnishes almost all of the 300 tons of the element annually produced. The impure and moist nitrates are mixed with 15 per 100 parts of finely powdered charcoal. The mixture is formed into a sort of paste and burned. The cinders are extracted so as to form a saturated solution which is treated with a current of sulphurous acid gas which converts all the carbonates into sulphites. The liquor contains the iodine in the form of iodides. This liquor is added to the mother liquor of the nitrate and the reaction of iodides upon iodates causes the liberation and deposit of free iodine. The product is carefully washed and sublimed. The industry is said to be in the hands of an English trust, which maintains exorbitant prices.

FORMATION OF ESSENTIAL OILS.

E. Charabot and A. Herbert (Comptes rendu.) find that the presence of different inorganic salts in the soil exerts a considerable influence upon the formation of essential oil in the plant. In the case of pepperment they find that ammonium chloride produced the greatest effect in regard to both the weight of the crop and the yield of essential oil. Potassium and sodium chloride had but little influence. Sulphate, especially those of manganese, potassium and ammonium, sodium nitrate and disodium phosphate favor the production of the oil. Inorganic salts diminish the proportion of water in the plant, and also favor the esterification of menthol. There was shown to be a distinct relation between the diminution of the proportion of water and the esterification not only of the menthol but also of the volatile acids.

CONVENIENT PREPARATION OF CHLORINE.

Graebe (Berichte) describes a convenient method of preparing chlorine in small quantities. He utilizes the reaction of hydrochloric acid upon potassium permanganate. The permanganate is placed in a distilling flask, the side tube serving for the delivery of the gas. The hydrochloric acid is brought in contact with the salt, drop by drop, from a delivery tube. At first chlorine is formed in the cold, but as the quantity of liquid increases, a little heat is necessary. To obtain the maximum quantity of chlorine about 10 molecules of hydrochloric acid to each molecule of potassium permanganate are required. Ten grains of permanganate and 60 or 65 Cc. of hydrochloric acid of specific gravity 1.17, yield about 11.3 grains gas.

SOLUTIONS OF ALKALOIDS.

Rosenthal and Chonezen (Pharm. Zeit.) call attention to the disadvantages of certain solutions in oil of alkaloids, such as atropine, digitaline, cocaine, etc. The best solvent is shown to be in each case water, aqueous solutions being much more effective and less irritating to sensitive surfaces, a matter of some importance in applications to the eye. The action of the alkaloids upon the eye is also considerably hindered by the presence of oil. Other disadvantages of oily solutions are their tendency to become cloudy in a few days, and the solutions of atropine and cocaine in oil soon lose their efficiency.

ESTIMATION OF FREE OXYGEN IN WATER.

A. Kaiser (Chem. Zeit.) employs a solution of ferrous sulphate in boiled water and acidulated with sulphuric acid to detect the presence of oxygen dissolved in water. A quantity of this solution is introduced into a flask filled with the water to be tested with a pipette, an excess of caustic potash added and

the vessel stopped) and shaken. A little oxygen is present only a greenish precipitate of ferrous hydroxide is formed while much of the gas is in solution in the precipitate remaining in suspension immediately assumes a golden yellow color. With water free from oxygen the precipitate remains of a greenish-white color. Small quantities of nitrites and nitrates do not interfere with the test.

ANOTHER FERMENT IN ALMONDS.

E. Bourquelot and Herisse (Comptes rendus) concludes from a series of experiments that almonds must contain another ferment besides emulsin. They consider that the hydrolyzing action of the emulsin of almonds upon lactose described by Emil Fischer, is not due to pure emulsin but to another ferment accompanying it. Pure emulsin obtained from other sources, *Aspergillus niger* and the fungus *Polyphorus sulphureus*, has no action on lactose, while the impure emulsin prepared from bitter almonds, peach and apricot kernels, and apple seeds has a marked hydrolyzing action upon that sugar.

HUMAN FAT.

A. Jackle (Zeit. Phys. Chem.) states that the composition of human fat varies considerable with the individual. It consists of simple glycerides of oleic, palmitic and stearic acids, each molecule of glycerine being combined with three molecules of the same acid. The fat of infants a few months old contains less oleic acid and more of the lower acids than that of adults. The composition of the fat obtained from different parts of the body does not differ materially except in the proportion of lecithine and cholesterol present.

PHOSPHORUS IN PHOSPHORATED OIL.

W. Staub (Pharm. Zeit.) has devised a new method for the determination of phosphorus in phosphorated oil, based upon the reaction of the element with copper sulphate. Five Cc. of the oil are shaken with an equal volume of a five per cent. solution of copper sulphate. The color developed after standing varies from light brown to black and indicates the proportion of copper salt decomposed, and the quantity of phosphorus present in the oil.

DETERMINATION OF FORMALDEHYDE IN AIR.

Pers-boom (Hygien. Rund.) proposes the following method for determining the quantity of formaldehyde in the air of rooms which have been disinfected with this compound. A measured portion of the air is drawn through a flask containing an aqueous solution of iodine. The uncombined iodine is then determined.

ARTIFICIAL CIVET

Muehlethaler (Scienc. Zeit.) describes an artificial civet which although of only about one-fourth the bulk of the natural substance exactly reproduces the odor so widely used and valued by the perfumers. For perfume a 5 per cent. solution in 95 per cent. alcohol is recommended.

REACTION FOR CRYOGENTINE.

Mancaux (Reperaire) reports that when warmed with one or two Cc. of hydrogen peroxide cryogentine gives a deep yellow color, passing into orange and finally red. Although this compound is only slightly soluble in water the reaction is sufficiently delicate to indicate its presence in aqueous solution.

HYDRATED SALICYLIC ACID

Sclert (Pharm. Zeit.) shows that the compound sold upon the market by an Italian pharmacist as hydrate salicylic acid is nothing more nor less than the ordinary crystallized product of the market. The hydrated acid was highly recommended and sold for forty times the price of the ordinary compound.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION, neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the *Era*. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Polish for Copper.

(D. P. Co.) We do not make analyses of proprietary specialties. The following formulas have been recommended for metal polishes, and will probably answer your requirements:

	(1)
Oxalic acid	2 ounces
Potassium ferricyanide	4 ounces
Whiting	10 ounces

Mix. This may be used either "dry" or "wet"; is especially recommended for polishing copper, brass and metals. The powder may also be mixed with a little oil and applied with rubbing, the surface of the metal being afterward rubbed dry with whiting.

	(2)
Armenian bole	4 ounces
Rotten stone	4 ounces
Whiting	6 ounces
Oxalic acid	2 ounces

May be performed with oil of mirbane if desired.

If you will substitute whiting or bole for the pumice stone in the formula you have been using you will avoid leaving the "scratches" you complain of upon the surface of the copper. It is almost impossible to remove all of the gritty particles from the ordinary commercial powdered pumice stone. It may be added that for general use in polishing metals prepared chalk or whiting, rotten stone, tripoli and emery are commonly used agents. For the finest work jewelers' rouge (ferrous martis) is employed. This is prepared by calcining precipitated ferric oxide until it assumes a scarlet color.

Manufacture of Linseed Oil.

(Clerk.) The manufacture of linseed oil is quite simple and you will find the process described at length in almost any work on technical chemistry. In outline it is about as follows: The seed is first thoroughly screened in order to remove dust and other impurities, including seeds other than linseed. It is then crushed under large edge rollers, and is after wards put in a steam jacketed kettle where it is heated for a few minutes. It is now ready to be crushed to express the oil. The hot seed is wrapped in a woollen cloth placed in a metal frame and then placed in a hydraulic press. Several frames are pressed together, and on the pressure being applied the crude oil may be seen running down the sides of the press, whence it descends to a small receptacle below. From there it is pumped up first to the storage tanks, and afterwards to the refining apparatus. The seeds after being crushed form cakes that are much esteemed for feeding cattle. When the oil is boiled it is placed in a tank in which is a coil of steam pipes. Here it is boiled for some 12 hours, and is then pumped to the tanks to thoroughly settle and mature. The sediment is termed "roofs," and is used

after proper treatment for making putty, among other things.

Pharmaceutical Synonyms.

(Fresno) We assume you desire a book of pharmaceutical synonyms, something on the order of "Hedges' Polyglot Index," which covers fairly well the principal articles in the materia medica in Latin, English, French, German, Swedish and Norwegian-Danish. "Rudolph's Chemical and Pharmaceutical Directory" gives drug names in English, Latin and German languages. Unfortunately, both of these works are out of print, although you may be able to pick up copies from some dealer in second-hand books. Moeller's International Medical and Pharmaceutical Dictionary in three languages, French, English and German, may also prove of value. It costs about \$1.50. For vernacular German, French and Spanish names of all the important medicinal plants, see Lyons' "Plant Names and Synonyms" (\$2.50). Hoffman's "Popular German Names of Drugs and Medicines" is also recommended. Good medical dictionaries for the pharmacist's particular use are Gould's "Student's Medical Dictionary" (\$2.50); Dunglison's "Dictionary of Medical Science" (\$7); Lippincott's "Medical Dictionary," (\$7) (Prof. Jos. P. Remington of the Philadelphia College of Pharmacy is one of the editors of this work). There are other medical dictionaries.

Color for Dandruff Cure.

(C. W. B.) There is no special coloring substance employed in the so-called dandruff "cures." It may be that some of them are tinted by the manufacturers, but the color of a majority of those we have examined appears to be due to some of the ingredients employed in manufacture. Thus, a dandruff lotion made of chloral hydrate, 1 dram, glycerin, 4 drams, and bay rum, 8 ounces, would, in the opinion of the average pharmacist, need no coloring other than that produced by the bay rum. Neither would mixtures containing resorcin, beta-naphthol or any of the dark colored tinctures sometimes employed, need additional color. In fact, of the half hundred different formulas we have at hand not one of them contains a substance which is distinctively employed for its tinctorial properties. However, this need not prevent you from using any coloring agent you may see fit, and if you will inform us just what color you desire and the kind of lotion or mixture you wish to tint, we will try and help you out. We do not answer queries by mail.

Species.

(S. P. C.) Gould defines "species" as "a name in German and French pharmacy, and in the National Formulary, for certain mixtures of herbs, used in making decoctions and infusions." Dunglison defines the word as "official mixtures of substances cut or bruised. Sometimes used for compound powders, as it always appears to have been formerly." The corresponding word in French is "especies." Typical formulas for "laxative" and "pectoral" species are given in the National Formulary. Here are some others:

(1) Moistens 25 parts of cut senna with a small quantity of water, and sprinkle over it as uniformly as possible five parts of potassium bitartrate, allow to dry and then mix lightly with four parts each of althaea, licorice root, anise, fennel and couch grass, all bruised and cut to suitable size. To produce a diuretic effect buchu or uva ursa may be added. Hager gives this formula for

Diuretic Species:

(2)	
Rest-harrow root (ononidis).....	50 grams
Scoparius.....	50 grams
Juniper berries.....	25 grams
Parsley fruit.....	10 grams
Anise, of each.....	10 grams

(3)	
Chicory root.....	9 ounces
Couch grass.....	2 ounces
Red clover.....	1 ounce
Dulcamara.....	2 ounces

Iodine and Extract of Belladonna.

(T. E.) wants to know how he shall compound this prescription:

Iodine.....	1 dram
Extract of belladonna.....	2 drams
Lanoline, enough to make.....	3 ounces

First reduce the iodine to a finely divided state, as is done in the U. S. Pharmacopoeia formula for ointment of iodine, by means of about 15 grains of potassium iodide and 30 minims of water, and rub with about 2 ounces of the lanoline, gradually added, avoiding, of course, the use of a metallic spatula. In another mortar make an ointment with the extract of belladonna and the remainder of the lanoline, using a little dilute alcohol to first soften the extract. When a smooth, uniform ointment is obtained, gradually incorporate it with the iodine ointment first made. This ointment will gradually change, owing to the decomposition between the iodine and the organic matter of the extract of belladonna.

Blacking for Shoes.

(A. H.) Some experimenting is necessary to overcome the difficulty you have encountered in preparing the waterproof polish for shoes according to the formula published in the July 9, 1903, Era., page 35. It is quite likely, however, that the quantity of lampblack should be increased as also the amount of Prussian blue. Sometimes powdered gall-nuts, iron sulphate, indigo, Berlin and other blues are incorporated in mixtures of this kind in order to impart a good color. Of course, these are merely hints, and their application must be worked out by you. We suggest another trial of the formula. The incorporation of a little formaldehyde or some other suitable antiseptic would probably prevent the fungus growth you have noticed in the other lot of blacking you have made.

French Zinc.

(F. B.) "French zinc" is a name applied by various paint manufacturers to a certain kind of zinc white (commercial oxide of zinc), used as a pigment in painting. We were not aware that this particular kind of zinc white was employed in the manufacture of toilet preparations although zinc oxide is used extensively in various cosmetics. In the powdered form it is very often added to dusting powders, but it is said to have an astringent and drying action on the skin when applied for a long time. A formula containing zinc oxide is given by Piesse under the title—

Perle Powder.

French chalk.....	1 pound
Bismuth oxide.....	1 ounce
Zinc oxide.....	1 ounce

Filtering Pepsin Solution.

(R. L. S.) A great many schemes and devices have been proposed to facilitate the filtration of thick and viscid solutions. Where convenient a filter pump may be attached to the filtering apparatus to good advantage. This facilitates filtration by the production of a partial vacuum into which the filtered liquid falls. In ordinary operations like that of filtering elixir of pepsin the scheme of the National Formulary, viz., admixture with purified talcum, is recommended. Finely picked asbestos fibre and various inert and insoluble powders have also been suggested.

Brown Aniline Dye.

(H. L. S.) Phenyleno brown, also known as Manchester brown or vesuvium, an aniline dye marketed under various names by different manufacturers, is said to be used, either alone or in combination,

made by Gabriel for coloring purposes. A Khipstain & Co., 204 Pearl St., New York, sell an aniline dye for coloring purposes of various shades the name of "sarsaparilla" being used.

GATHERED FORMULAS.

Liquid Metal Polish.

(1)	
Rotten stone	16 av. ounces
Paraffin	8 av. ounces
Kerosene (coal oil)	16 fl. ounces
Oil of mirbane, enough	to perfume

Melt the paraffin, incorporate the rotten stone, add the kerosene and the oil of mirbane when cold.

(2)	
Oxalic acid	1/2 av. ounce
Rotten stone	10 av. ounces
Kerosene (coal oil)	50 fl. ounces
Paraffin	2 av. ounces

Pulverize the oxalic acid and mix it with the rotten stone, melt the paraffin, add to it the kerosene, and incorporate the powder; when cool, add oil of mirbane or lavender to perfume.

(3)	
Pumice	2 av. ounces
Rotten stone	2 av. ounces
Iron carbonate	2 av. ounces
Paraffin	2 av. ounces
Gasolin	16 fl. ounces

Mix the pumice, rotten stone, and iron; pass through a fine sieve to remove all grit. Melt the paraffin and pour into the gasolin; to this solution now add the powder, with shaking to thoroughly incorporate the same (A. E. Ebert, in Meyer Brothers' Drugist).

French Polish.

A French polish can be made as follows: rather complicated, it is worth the trouble: Take one pint of soft water, and mix with it twice as much vinegar; break in small pieces one quarter pound of glue; stir it into the vinegar and water with half a pound of logwood chips, a quarter ounce of finely-powdered indigo, a quarter ounce of the best soap, and a quarter ounce of isinglass. Put all this mixture on the fire, and let it boil gently for at least a quarter of an hour; strain it carefully, put into bottles and cork tightly. When cold it is ready to be used. A clean, soft sponge should be used to apply it.

Restoring Tarnished Gold.

Sodium bicarbonate	20 ounces
Chlorinated lime	1 ounce
Common salt	1 ounce
Water	16 ounces

Mix well and apply with a soft brush. A very small quantity of the solution is sufficient for effecting the desired purpose, and it may be used either cold or lukewarm. Plain articles may be brightened equal to new by putting a spot or two of the liquid upon them from the stopper of the bottle and lightly brushing over the surface with fine tissue paper until sufficiently dried off to accomplish the object intended.

Stove Dealers' Blacking.

Plumbago	1 pound
Brown	1 ounce
Hammer	1 gallon

Dissolve the resin in the benzine and mix the plumbago with it. It is used to give no offensive smell when the stove is used, and to keep the iron from rusting. Another process for a good liquid stove blacking is to mix with powdered plumbago enough sulphuric acids to form a thick paste and to add to it sufficient spirits of turpentine or benzine to make the mixture to the required degree of thickness.

Coating for Damp Walls.

Thirty parts of lime are dissolved in 40 parts of hydrochloric acid and 20 parts of sal ammoniac are

added. A powder composed of freestone, 50 parts, zinc oxide, 20 parts, powdered glass, 15 parts, powdered marble, 10 parts, and carbide tungsten, 5 parts is prepared and made into a paste with the liquid above mentioned. Coloring matter may be added. The composition may be used as a damp-proof coating for walls, or for repairing stonework, or for moulding statues or ornaments (Journ. Gas and Sanitary Engineering).

Depilatory Powder.

Barium sulphide	10 parts
Zinc oxide	5 parts
Wheat starch	5 parts

Triturate intimately to a fine powder. To be used as a depilatory by making a thick magma, which is allowed to remain for 10 minutes on the surface to which it is applied.

Rheumatic Liniment.

Oil of sassafras	2 ounces
Oil of peppermint	2 ounces
Oil of cloves	1 ounce
Tincture of capsicum	1 ounce
Quinine sulphate	1/2 dram
Spirit of camphor	1 ounce
Alcohol to	2 pints

To Remove Iron-Rust from Wash Goods.

To remove spots of rust from muslin and white goods generally, saturate them with lemon juice and salt and expose them to the sun. If one application does not remove them entirely, make a second. It is rarely that more than this is required.

Celluloid Varnish.

Digest 2 parts of colorless celluloid with 20 parts of acetone in a close vessel during several days and with occasional shaking, until a clear, thick mass results. This is mixed with 78 parts of amyl acetate and allowed to clarify by subsidence during several weeks.

Roach Powder.

Insect powder	1 pound
Powdered borax	5 pounds
Red precipitate	10 grains
Colbear	10 grains
Carbuncle	10 grains

Egg-yellow for Bakers.

Crocein B.	1/2 ounce
Alcohol	2 ounces
Water	18 ounces

Dissolve. Used for imparting an egg-like tint to sponge-cake.

Stencil Ink.

Boil together, shellac 2 ounces, borax 1/2 ounces, and water 10 fl. ounces, until the solution measures half a pint; then incorporate a mixture of powdered lampblack or drop black, and gum acacia, each 1 ounce.

Canary Food.

Poppy seed, bruised	1 ounce
Cuttishish bone, ground	1 ounce
Yolk of egg dried	2 ounces
Sugar, powdered	2 ounces
Rusks, ground	8 ounces

Ink for Glass.

Dissolve 20 parts of resin in 150 parts of alcohol and add to the solution drop by drop, and under continuous stirring a solution of 35 parts of borax in 250 parts of water. Finally dissolve 1 part of rectified lin in the mixture.

NEWS DEPARTMENT.

NEW YORK AND VICINITY.

ANTITOXINS FREE.

Board of Health Designs to Treat All Citizens Alike,
Shutting Out Manufacturers and Depriving
Retailers of Profits.

Of the utmost importance to all branches of the local drug trade is Health Commissioner Lederle's recent recommendation to Mayor Low that in future the biological products of the health department be free to citizens of the greater city.

This means a loss of several thousands of dollars a year to retail druggists, and the ruining of private manufacturers' local antitoxin and vaccine trade. Of course, the jobbers will also be affected, though not as much.

A few weeks ago the department decided not to sell its products to other cities, nor to citizens of other cities, on the ground that it was unfair to manufacturers, whose products were conceded to be as good as those of the municipality. Dr. Lederle's reasons for his latest recommendations were given to the Era on Saturday.

"In the first place," said Dr. Lederle, "the health department was the pioneer in the use of antitoxin here. Owing to this and to the superiority for a long time of city products over those of private manufacturers, the former became very well and favorably known with physicians, so their use here is now probably greater than all of those of private make combined.

"We were charged with commercialism when we sold to other cities, and the charge was right. We discontinued that practice, confining our sales to citizens of the city. Still we are accused of commercialism, and still the accusation is just.

"The unfairness of giving vaccine and antitoxin free to the poor and charging full prices for it to those who are able to pay and whose taxes pay for that given to the poor is manifest. Besides, the poor's privilege is extensively abused by unscrupulous doctors, as witness the recent arrest of several. Again, in the case of a family in moderate circumstances who dislike to represent themselves as needing charity, yet are unable to pay for high-priced antitoxins, the hardship is pronounced. Perhaps they may take sixteen or twenty-four hours in deciding what to do, while the patient is in immediate need.

"To get around these objections it might be suggested that we should sell nothing at all, but continue giving to the poor. But what would the physician do whose patient was wealthy and who had been accustomed to using our products? To deny them to him and force him to buy those of a private concern would work a hardship.

"So the only thing to do is to treat all alike, and, as the poor cannot buy, give to the rich. And our critics will call that communism.

"But it is not communism. It will be asked why we don't give away quinine, camphor and all other drugs. The question isn't fair. If I go into a school and there see a child with an ordinary case of sore eyes, I would be unlikely to give it much attention. But if the child had trachoma, it would be hustled out and under treatment in a hurry. One is an individual case; the other is a menace to the public health. Quinine

is good in an individual case; antitoxins are for the vigorous protection of the community—the province of the health department.

"In my letter to the mayor I note that the case is not now as it was two years ago.

"The decrease in revenue because of the loss of present sales will amount to about \$20,000 a year, which will have to be carried by an appropriation. Of the \$20,000 about \$5,000 is for vaccine.

Druggists who handle health department vaccine make a profit of 35 per cent. The diphtheric and tetanus antitoxin margin is 10 per cent. Many pharmacies that are not official board of health branches handle the city products.

How the department will distribute antitoxins when the druggists no longer receive commissions on them Commissioner Lederle is not prepared to say. He believes, however, that the druggists will be willing to handle it anyway, accepting as recompense the fact that it brings people to their stores.

There are 254 drug store health department stations in the greater city. Of this number 158 are in Manhattan, 50 in Brooklyn, 19 in the Bronx, 7 in Richmond and 20 in Queens. Some of these stations sell only a small amount of biological material.

There is certain to be vigorous opposition to Dr. Lederle's plan. The drug trade section of the Board of Trade and Transportation will likely take the matter up next month at the regular meeting. The board's reasons for the recommendation are laughed at as unreasonable. "As well say we must all get food free because we taxpayers feed the prisoners on Randall's Island," said Col. E. W. Fitch of Parke, Davis & Co. "We will stop the scheme."

"We are not much affected in this plan," said Joseph Plant of Lehn & Fink, who smiled as he heard that Dr. Lederle expects that communism will be charged, "but as it harms other branches of the trade, we will, of course, oppose it." It is certain that the local associations will speedily organize opposition.

WHOLESALE D. T. B. A. READY FOR SEASON.

At the annual meeting of the Wholesale Drug Trade Bowling Association, held at the Drug Trade Club on last Friday night, officers were elected and arrangements made for the ensuing year. Twenty-one representatives were present.

Vice-President C. A. McCormick of Johnson & Johnson, presided, in the absence of President H. O. Barnes. It was soon decided to play under the rules of the New York Bowling Association, beginning on October 17. The alleys have not been selected.

Entries will be closed on October 3. The General Chemical Co. drops out this year. Those firms already entered are Roessler & Husslacher Chemical Co., Johnson & Johnson, Seabury & Johnson, Bruner, Ritzley & Co., Dodge & O'Leary, Sharp & Dolime, Parke, Davis & Co., and the National Lead Co. Lannan & Kemp, Colgate & Co. and the New York Cheese Co. have not entered yet, and there are rumors that Colgate & Co. may stay out.

These are the officers elected: President, William A. Heumann; vice-president, C. A. McCormick; treasurer, W. J. Carr; secretary, C. E. Meek; statistician, C. Braun; directors, William Norris, John Rudinmann, H. C. Lewis.

FOR REVISION.

Constitution of Manhattan Ph. A. Will be Revised to Make it Agree With Charter.

The Manhattan Ph. A. resumed its work where it left off in June on Monday night and plunged at once into heavy work.

President Erb in an address of greeting recommended that during the winter members write articles on these matters to read at the meetings. New York should be in the forefront in securing anti-foreign legislation, he said, and he urged some action against the foreign stamp nuisance. He assured the association that it is the purpose of the Eastern branch of the board of pharmacy, of which he is secretary, to assist honest men.

Treasurer Hitebeck reported a balance of \$174.06. Secretary Swann said that 368 names had been put on the roll since the association was formed. Several of these had dropped out through lack of enthusiasm, several have died, others moved, and now the membership is in good standing is 218.

Thomas Latham, chairman trade interests committee, had found out by a visit to Commissioner Murray that the latter's opinion was that Mayor Low's inclusion of naphtha and gasoline with benzine in the new regulations governing combustibles "was ridiculous." Druggists cannot keep naphtha or gasoline, said Commissioner Murray, the Mayor to the contrary notwithstanding. He said he guessed it didn't make much difference to the druggists "as they sell it all out of one barrel anyhow."

Then came constitutional discussions. It will be remembered that there was a dispute over President Erb's ruling that an amendment to an amendment—the instance being the addition of \$50 more to the original amendment that the secretary's salary be made \$150 instead of \$100—need not be resubmitted in writing for action at the next meeting, as is the case with an ordinary amendment, but may be incorporated with and voted on with the original amendment at once. President Erb, as chairman of the legal committee, said that they had seen counsel, who disapproved of the ruling. So the salary still remains at \$100.

What was stigmatized as an unwarranted attack upon the association was read by Secretary Swann from the last issue of a drug journal. The article, under the heading, "Charter Provisions Violated," contained an alleged interview with a "prominent member" of the association who charged that the association had for a long time ignored certain provisions of its charter which require a board of fifteen managers, three vice-presidents, etc. The legality of the election of board of pharmacy members by an association that changed its constitution to take in registered pharmacists of the Eastern sections when the articles of incorporation evidently limited membership to the Boroughs of Manhattan and Bronx.

"I took exception to this article," said Mr. Swann. "The prominent member could just as well have come here to make his protest, and, if we were wrong, we could have made the matter right. I want to say the present officers are not to blame."

Reuben R. Smith—"I, there any reason to believe that what this 'prominent member' writes is true?" Mr. Smith was president when the constitution was amended.

Mr. Swann said that the charge was true, and the provisions are unconstitutional. He read from the minutes of three years ago. They were written by the secretary of the board referred to, who at that time had secretary. Nothing in the minutes

show that the amendments done away with the board of managers and the third vice-president were referred to counsel, though the routine of their adoption was legal enough. The amendment increasing scope of membership was upon advice of counsel.

"If this 'prominent member' who kept hammering at the association is found out he should be dropped," said Mr. Swann.

"Is there any doubt that the member and the associate editor and the man who wrote the article are the same?" asked ex-President Smith.

Mr. Erb said that the gentleman in question had visited him that afternoon and had practically admitted that he wrote the article. When asked why he had not brought it up in the association instead of publishing an article calculated to do harm he replied that he had often tried but had "always been hammered down."

"This evening is the first time that I ever heard a controversy on this question," said ex-President Smith. "I was president and present every night that this gentleman was and the subject was never brought up." Other members corroborated Mr. Smith. Mr. Smith said the attack was not on the officers but on the association.

Sidney Faber offered an amendment to add \$50 to Mr. Swann's salary. This, with the rest of all matters and controversies were referred to a committee, appointed on A. C. Searle's motion, to draft a new charter that shall conform with the articles of incorporation. This committee is composed of Arthur C. Searles, chairman; Reuben R. Smith, George H. Hitebeck, J. Maxwell Pringle and S. V. B. Swann.

The disturbing amendments were adopted, entirely without discord, or idea of unconstitutionality, because it was found after the association had existed for a year or so that a board of managers was entirely unnecessary and cumbersome. For the same reason the third vice-president was done away with. The latter will be reappointed and the board of managers will be resurrected, though only in name, as it will likely be made up of the officers and several existing committees. The amendment for increase in secretary's salary will probably go through without opposition.

R. Reuter, 449 Tenth Avenue, and Herman H. Bruer, Hamburg avenue, Brooklyn, resigned.

SOME INTERESTING EXCISE FIGURES.

Some figures relating to the sale to druggists of stamp books under the newly-amended liquor tax law which are furnished to the Era by State Excise Commissioner Patrick W. Cullinan, when taken in connection with the report made by Mr. Cullinan for the fiscal year ending April 30, 1901, afford opportunity for some interesting comparison and deductions.

During the three months since the amendment went into effect, on May 1, 1901, to August 31, the number of books sold and revenue received was as follows:

	Books.	
Greater New York,	228	\$1,130
Balance of State,	663	3,315
Total in State,	891	\$4,445

During the fiscal year ending on April 30, 1901, there were issued to the druggists of the State and city 1,226 liquor certificates permitting sales under about

VERY SPECIAL

A limited number of live druggists in the larger cities will hear of an attractive proposition, by communicating with

J. N. FERRER

P. O. Box 71.

NEW YORK CITY

the same conditions as provided in the amendment. The revenue on these certificates was \$6,130.

Thus, it seems, fewer druggists are selling liquor than in 1901, despite the fact that there are many more pharmacies in the State. It also appears that the revenue will amount to considerably more, probably twice as much, at least, now as then.

But the most striking fact brought out is that, apparently, only about one-fourth of the druggists who sell liquors are in Greater New York. This was not true in 1901, however, as, of the total number of certificates issued, 564, or nearly one-half, were to New York, Kings, Richmond, and Queens counties, nearly all of which are within the greater city. Of this number New York county had 356, Kings 171, Queens 22, and Richmond 15.

There are 4,110 registered pharmacies in the State, about one-half being in the city. One druggist in every ten in the city and one in every three in the State outside of the city has a stamp book. The general average for State and city is two in every nine.

There are many sections in this city where liquor is not to be had at any of the pharmacies, a person trying, for instance, to purchase brandy in a drugstore in Sixth avenue between the intersection with Broadway and Fifty-ninth Street, would likely give up the attempt as a futile one.

INSURANCE PLANS READY FOR INDORSEMENT.

Final steps of completion are being taken by Emil Reller, chairman; George Gregorius, George Kleinau, E. C. Goetting, and A. Wortmann, comprising the committee appointed by the German Apothecaries' Society to formulate plans for the new Lloyds' druggists' co-operative fire insurance company, which is designed to take in all druggists and physicians in the country who wish to join.

The committee had a full and enthusiastic meeting on Monday. A conference with their attorney comes on Saturday, and then, on next Thursday night, at the first fall meeting of the society, the plan will be announced and proposed for adoption. A committee of co-operation appointed by the Bushwick Ph. A. will be present.

Thomas F. Main's report on insurance before the N. W. D. A., at Boston was discussed by the committee on Monday. The facts given in this report make one of the strongest arguments for cooperative insurance inimitable. It says:

"A synopsis of the expenses and losses of the twenty leading American companies for a period of ten years shows the average expense to have been 36.1 per cent. Average losses 57.1 per cent; an expense of over 60 per cent. for the collection and distribution of the money paid for losses, which appears to be an enormous and unjustifiable tax upon the mercantile community.

"In the Individual Underwriters and the Reciprocal Underwriters of New York—two factory and mills insurance mutuals of New England—the members, while paying the premiums at which their risks are rated by the old line companies, receive substantial yearly rebates in dividends which materially reduce the cost of their insurance.

"In both the Individual and Reciprocal Underwriters the expenses are not allowed to exceed 15 per cent. of the premium incomes, while the losses, on account of the high grade of risks, and the adequate fire protection, are reduced to a minimum. It is claimed that in the Reciprocal Underwriters at least 50 cents of each dollar of premium is saved to subscribers. One of our members insured in the Reciprocal, and paying premiums at the rate of 80 cents, informed your committee that his dividends during the last five years had been such as to make the average cost of his insurance two cents per thousand. The cost of insurance in these New England Mutuals for the whole term of their existence up to 1901 had been 15 cents upon each \$100 of insurance, and the cost last year is said to have been less than 7½ cents, a remarkable showing this, when it is remembered that the cost of insuring mills in old line

companies prior to the formation of the New England Mutuals was \$2.50 on each \$100 of risk."

State Insurance Commissioner Zeno M. Host of Wisconsin, when the druggists' treatment by old line companies was particularly obnoxious, in his annual report, says that the only way possible in which life insurance business can be rightfully conducted is by combining a large number of individuals, who, by contributing to a common fund, insure themselves. Such a business, he says, is no more than a large partnership, and perfect equity should be maintained among its members or policy holders.

CARBOLIC ACID SALES TO BE REGISTERED.

Pharmacists of New York city should remember that the State penal code requires the registration of carbolic acid sales. There seems to be a widespread belief that pharmacists are protected as by a mantle by the pharmacy law from conflicting parts of the penal code. This is not true, and, while the board of pharmacy cannot prosecute for non-registration of carbolic acid, the pharmacy law exempting it, the courts have held that, in case of conflict between the two laws, it is the penal code that "goes."

To be safe the pharmacist must register carbolic acid sales. At any moment a case may arise from suicide or accident that will reveal his negligence to the police, and the pharmacy law's exemption will not shield him from punishment as a misdemeanant. It is thought by some that the pharmacy law should be amended to include carbolic acid among the poisons to be registered.

The penal code requires that morphine and other opium preparations, except paregoric and preparations containing less than two grains of opium to the ounce must bear a scarlet label with name of the article in white letters and name and address of the dealer. Prescriptions in which the dose of opium is more than ¼ grain, or morphine 1-20 grain, must not be refilled except by order of the physician. In registration the penal code requires sales of poison to be entered in book, with the name and address of a witness known to the dealer. The sanitary code of the city agrees with the penal code.

SANITARY CODE DEFINES SUBSTITUTION.

In the definition of substitution by the new sanitary code prepared by the board of health of this city there can be no ambiguity where the U. S. P. provides no standard, for every other standard in this and every other country is included by the code, as well as the standard claimed for the goods by the sellers. It is substitution when:

(a) If sold under a name recognized in the U. S. P., it differs from the standard of strength, quality or purity laid down therein.

(b) If sold under a name recognized in any other recognized standard or authority of this or any other country, it differs from the standard of strength, quality or purity provided thereby.

(c) If its strength or purity falls below the professed standard under which it is sold.

WILMOT CASTLE CO.,
26 Elm Street, Rochester, N. Y.

L. E. TREAT, Syracuse, N. Y.
Treasurer, New York Pharmaceutical Travelers' Auxiliary, and Representative for Johnson & Johnson.

A SCHEME THAT HAS ITS DRAWBACKS.

At their next meeting the Syracuse D. A. will discuss the formation of a club in that city whereby a person gets medical attendance and medicines for one year by the payment of \$6. This club is being formed by an outsider who has secured three physicians who hold themselves ready to attend any member of the club, including operations, for the sum of \$6, whole families for \$10.

The druggist who is in the scheme agree to put up prescriptions for these doctors at the uniform rate of 25 cents. The promotor has obtained the name of a prominent druggist, and all are ready to do business. The question is whether this druggist is doing anything not allowed by the rules of the association. The private opinion of several is that he is within his rights, but that it would be for the best interest of the trade to keep out of such schemes. It is pointed out that the physician will prescribe the cheapest drugs, so that the club may profit and that it will encourage substitution. It is said that the plan under which the promotor is working has succeeded in other cities through questionable means. Where doctors have knocked the scheme they have put all their agents in his territory and taken so many of his patients that he has been obliged to fall in line. The S. D. A. will probably pass resolutions of approval.

AN UNFORTUNATE ERROR—NOT DR. A. L. GOLDWATER.

Printed works are usually read, but if not re-memorated with the utmost care they often give impressions very different from those intended, and unfortunately sometimes with grave results to innocent persons.

It was a circumstance of this kind that linked the names of Dr. A. L. Goldwater and William Turner, 2380 Third Avenue, with an account of substitution of filling systems, prescriptions, sodium mixed with kcepodiam, Mannitol with containing precipitate chalk and the one published in the Era, of September 10th, under the title, "New Way to Fill Prescriptions."

A report of the cases of the board of pharmacy against Mr. Kaiser and the Goldwater pharmacies—not Dr. A. L. Goldwater, as stated in the Era—appeared in an adjoining paragraph, and gave rise to the false impression that the violation named in the preceding paragraphs were those charged. As a matter of fact the persons named were presuntively innocent of any charges, for the judge threw the cases brought against them out of court, because a postponement was requested on the sole ground of sudden illness of counsel, who was personally present in court—not as stated in the Era, because Dr. Ferguson, the chemist of the board, had not returned from his vacation.

Under our system of law a person is held innocent unless proved to be otherwise, and this apparent trial and conviction in the columns of a journal was entirely unintentional. This explanation is a duty performed voluntarily and most gladly.

NEW YORK NOTES.

—Visitors downtown: Andrew Van Antwerp of G. Van Antwerp & Son, Mobile, Ala.; Dr. J. L. Horsey, Ferdinandina, Fla.; R. L. Hicks, Bainbridge, Ga.; Robert Baird McLain, Wheeling, W. Va.; Joseph F. Delaney of Smith Bros. & Co., McKinney, Tex.; A. D. Thompson, Minneapolis, Minn., head of A. D. Thompson & Co., who wasn't named after a telegraph company; Mr. Young, head of Lee & Osgood Co., Norwich, Conn.; George H. Battier, Memphis, Tenn., and his son, who will attend Columbia University; O. F. Fuller, Fuller & Fuller Co., Chicago.

—Drug Trade Club guests: A. R. Fellows, Chicago; James G. Stanley, Baltimore; J. C. Robinson, Dallas, Tex.; A. Biron, Grasse, Germany; C. P. Michaels, San Francisco; H. A. Hover, Denver, Tracy Hover, Denver; William E. Grant, Bridgeport, Conn.; Hon. Ferdinand W. Peck, Chicago; Clarence I. Peck, Chicago; J. P. Remington, Jr., Philadelphia; Charles Thompson, Minneapolis; A. G. Thompson, Minneapolis; George I. Berridge, Detroit; William E. Lukens, Philadelphia.

—Tom Fraser, of the Fraser Drug Co., 22 Duane street, according to a prominent wholesaler, is extensively victimizing Western manufacturers. If these victims, past and prospective, could see Fraser & Co.'s signs—one a letter head nailed to the wall down stairs and the other a penny-in-the-slot-machine stamped aluminum strip nailed to the door upstairs—they would need no further exposition of his resources.

—Mrs. W. K. West of Toledo, O., owner of two very prosperous drug stores there, naively remarked, while visiting here this week, that she had been married "since September." She is now Mrs. Phillips, and wouldn't acknowledge that she was here on her wedding trip, though Mr. Phillips was with her.

—Lectures began at the Brooklyn College of Pharmacy on next Monday. To-morrow and Saturday will be occupied by registration. Christmas holidays begin on December 24 and studies are resumed on January 4. Every prospect points to a very good attendance.

—The "Co-operative Drug Store of Harlem" has been opened at Madison Avenue and One Hundred and Tenth street by I. Langshel. Patent medicines at cost. Prescriptions at reduced rates. It is said that Samuel Elk and Charles Lavitan are the owners.

—James Hazlett, formerly with McKesson & Robbins and then with the Wise Drug Co., Broadway, is now manager in this city for the Albaline Co., at 51 Hudson street, and will introduce their new specialty here and in New England.

—The New Jersey C. P., Newark, began its season of 1903 on Monday, September 14, and will close on Saturday, April 9, 1904.

NEW ENGLAND.

DRUGGISTS ALONE MAY SELL CIDER.

Cambridge, Mass., September 22.—Cambridge is pretty well wrought up over the sale of cider and it now looks as if the druggists of that city would benefit greatly by the workings of the new law, which the chief of police says he intends to enforce to the letter. Under this law the druggists are permitted to sell, whereas grocers and dealers who have heretofore dispensed the famous country drink are now prohibited from doing so. Chief Cunningham says that, under his interpretation of the statutes, applicants who wish to purchase cider from druggists must fill out a blank in the same way as if buying liquor, even if the "juice" is wanted for cooking, mechanical purposes or medicinal uses.

MERCHANT & WILCOX'S MORTAR AGAIN.

Clinton, Mass., September 22.—Not a little politics has been stirred up owing to the action of the selectmen in removing the mortar sign in front of the store of Merchant & Wilcox. Two years ago the same mortar was removed by the road commissioners. Finally it was set in place again. Now, for the second time, it has been taken down without the consent of the owner, and, it is rumored there will soon be "something doing" in the legal line. Harry A. Wilcox has been advised by counsel to take action against the selectmen individually. Two political factions of the town are divided over the controversy, which is daily becoming of more importance.

THE BAY STATE.

Coming Home from Seashore and Mountain Resorts—
New Chemical Company for New Haven—
—Marriages.

—H. E. Heebner, druggist of Lee, will never again doubt the efficacy of dreams. He was out driving one night with Mrs. Heebner and lost his whip, a new and expensive one. Retiring he soon found himself in the land of dreams, and plainly saw himself driving over the same roads. Then he saw his whip with the butt end standing on the ground and the lash caught in the limb of a tree. In the morning he lost no time in driving to the place, and sure enough there was his whip exactly as he had seen it in the dream.

—Clerk Demison of Robbins's, Woburn, is enjoying a two weeks' vacation in Nova Scotia. Alvin W. Lawrence, prescription clerk of Southworth's, Malden, and Mrs. Lawrence are home from Springfield, Vt., where they spent their vacation. Robert Barnes has left Hall & Lyons's, Waltham, to attend school. John Finn of Duffy's, Lawrence, has returned to his work after a rest at Salisbury Beach.

—George Fox, of Henry A. Burdette's, Worcester, has gone to Jefferson Medical College, Philadelphia, while Clarence Holland of the same store has gone to work in a store at Lowell. Arthur Sumner of W. C. Gregory's, Salem, is enjoying a trip through the White Mountains. L. D. Etnan of R. D. E. Willard & Sons, Pittsfield, is home from New York.

—Andrew Mahony has left Flynn's, Arlington, and is now at Desmond's, same town. Steven Connor has entered the employ of W. E. Sibley & Co., Gardner. Wallace Priggs of North Adams, has taken a desirable position at the Wilson House drug store. Henry Barrett of Heagney's, Lynn, is visiting his native town of Clinton.

—Ernest L. Pinkham, who has been operating a drug store at Worcester, has gone to West Medford, where

he is to manage a large store. His successor, a Mr. Arnold, comes from Roxbury, and Irving Howatt, who has been employed with Mr. Pinkham, will soon leave to join his former employer in his new place.
