—The chairman of the committee which had charge of the arrangements for the big druggists' convention in Boston a few days ago, Charles F. Cutler, is authority for the statement that more than \$10,000 was spent in entertaining the visitors. At the Hotel Somerset alone the bills footed up to nearly \$1,000.

—George L. Burrows, formerly employed by Theo. Metalf, Boston, is serving as pharmacist at Harry H. Hovey's, Whitman. Clarence E. Brown, druggist of Beverly, is home from a pleasant trip through the Provinces. Alfred Roy of Melville's, Lawrence, is home from Canada.

—J. Russel Marble, druggist of Worcester, was about to board a sleeping car for a trip away from home the other night, and, leaving his dress suit-case to make an extra purchase, returned to find someone had quietly walked away with it during his brief absence. Not recovered.

—Edward M. Allen, druggist of Andover, was married to Miss Susibel M. Holt, the daughter of prominent residents of Nashau, N. H. Arthur J. Stove, drug clerk of Worcester, has taken out a marriage license to wed Miss Abbie E. Gates, a milliner of the same city.

—Considerable interest has been aroused in Brockton by the arrest and conviction of William H. Watson, proprietor of the Brunswick pharmacy, on a charge of liquor selling. He was fined \$75, appealed, and was held in bonds of \$300 for the Superior Court.

—Frank Craig is back at Clarke's, Lawrence, after two weeks' vacation. Fred F. Francis, popular clerk at Marshall's, Beverly Farms, is enjoying a trip to Brunswick. William Gowen, well-known clerk at Creasey's, is on his vacation.

—Edward G. Rodick's alleged unlicensed drug store, No. 40 Causeway Street, Boston, was raided a few nights ago and Rodick was arrested on the charge of making an illegal sale of liquor. The case has not been tried.

—Frank Gillis, clerk at Charles H. Collins's, and Ezra Pearson, clerk at Walter A. De Wire's, Milford, are spending their vacations in Cleveland, O. George F. Burkhill is again at F. W. Boulton's, after a needed rest.

—Captain Church Howe, at one time proprietor of the Bay State House and a drug store at Worcester, and who is now connected with the U. S. consular service, has been transferred from Sheffield, Eng., to Auzwep.

—William J. Schooff, a Melrose druggist, was fined \$200 for illegally keeping and exposing liquors for sale. More than forty gallons of ale and thirty gallons of whiskey were seized. Schooff paid the fine.

—Lewis Whitney has resigned from Mason's, Franklin, to accept a similar place in Palmer. Arthur Burke, another employee at the same store, is to have a position with the Boston & Albany R. R.

—W. B. Chandler, druggist of Merrick, has been appointed postmaster in place of Caleb D. Kinner, resigned. The office has for some time been located in Chandler's store.

—K. P. Sargent & Co., Everett, have recently placed a handsome new Puffer fountain in their store at Main

Eff. Lithia Tablets

Our Tablets made by a new process are very satisfactory.

BILLINGS CLAPP COMPANY, Boston, Mass.

and Oakes Street. The banquet is of splendid Mexican style.

A well known young Nashua, N. H., druggist, W. H. Deane, was, a few days ago, married in Miss Clara N. Weston, at the home of the bride in Somerville, Mass.

The announcement is made that the Ava Chemical Co. of New York is soon to open a laboratory for the manufacture of its products at North Adams.

Clinton C. Cook, druggist of Orange, is greatly in demand as a judge for horse races and has already officiated at several this season.

Homer McNeil, druggist of East Gloucester, has bought a fine yacht, *Amastasia*, and will enjoy the sea this fall and next season.

Many curious spectators have gathered around the Seth A. Emery's window, Worcester, to see a five-pound mouse.

A W. Bowker's pharmacy in the new Bowker building, Brookline, has been remodelled and handsomely fitted up.

Henry Cobb, clerk at C. C. Hearn's, Quincy, is enjoying an outing of two weeks in New Hampshire.

FROM MAINE.

S. S. Lightbody, a Waterville druggist, has just been sentenced to jail for liquor selling. Two odd cases, one for common sale and one for keeping a drinking house and tipping shop, were in order for sentence this term and the respondent's counsel requested that they be suspended until January owing to illness in the respondent's family. The county attorney told the court that he wanted to show that no distinction was made between the "high toned" and the "low toned" rum-seller. The Court then sentenced Lightbody to pay a fine of \$100 for common sale, and, in default of payment, to serve sixty days in jail; for drinking house and tipping place a similar sentence was imposed.

J. Earle Freeman, clerk in Chapman & Wymans, Portland, is on a two weeks' vacation at Sherbrooke, P. Q. William H. McKone, the affable clerk at Winship's, Central Square, same city, is spending a fortnight at Fairfield in the meantime his place is being filled by Charles Mountford of North Deering. Earl Wakefield, clerk for Jackson Brothers, Augusta, has returned from his vacation at Capitol Island.

The case against James L. Burns of Washington, who was sued for \$25,000 damage by Mrs. Warren Jackson of Liberty, whose husband, it was alleged, was killed as the result of taking what was sold for tincture of rhubarb and is alleged to have been deadly poison, has been settled out of court for a large sum. The case was to have been tried this month.

Liquor deputies are again on the war path in Portland. A few days ago they went into the drug store of Mr. Cross and seized various liquors. The proprietor was ordered to appear in court later. Another seizure was made at the store of Charles Landers, where they took a gallon of whiskey. Mr. Landers was fined \$100 and costs. He appealed.

Joseph F. Young, druggist at 245 Water Street, Augusta, has made an assignment to Williamson & Brewster. Liabilities are figured at about \$1,000 and assets at about the same amount. It is understood that Mr. Young will continue his business and that his present embarrassment will be settled.

Arthur E. Benson, secretary of the Ava Chemical Co. of New York, will in Bangor recently where the society expects to establish a large plant. Mr. Benson did not go, as soon as arrangements can be made another factory will be established at some other point in Maine.

Frank P. Burns, manager of the Woodmont drug store, Woodland, was married a few days ago to Mrs.

Josephine G. Pratt of Auburn. Mr. and Mrs. Burns are enjoying a wedding trip through Canada.

The Chamberlain County Pl. A. spent a pleasant day at Spurwink, a short distance from Portland, lately. A large number of druggists seized the opportunity of enjoying a day among their brethren.

Charles F. Fowler, whose Main Street store in Bangor is always artistically arranged, now has in his window a display of growing tobacco plants in full bloom.

CONNECTICUT.

Judge Wilbur F. Davis has been appointed temporary receiver for the bankrupt estate of George L. Ellsbree, Meridan. On Mr. Ellsbree's books are thousands of prescriptions representing the accumulations of thirty years. Nothing will be done about settling up affairs until the referee has called a meeting of the creditors. In the meantime, the business will be carried on by Judge Davis, with Joseph Ryan, who has been head clerk in the store for some time, directly in charge. Eventually, it is thought, the business will be offered for sale.

The season closed at Woodmont-by-the-Sea last week and the two New Haven druggists who had stores there packed up their goods and returned to town. The summer has not been very profitable on account of the weather. A. B. Norcross, whose first season it was at the shore, has taken up again the management of the Union pharmacy. Col. John W. Lowe, just closing his tenth season at the shore, may not open another year, but may now retire permanently from the drug business.

H. R. Sperry, manager of the C. S. Leete wholesale house, New Haven, is in Washington, D. C., for his vacation. J. M. Jacobs of the same firm, has just returned from a trip to the Catskills, and H. C. Chamberlain returned last week from his summer home at Morris Cove.

P. P. Lane, who expects to get his M. D. from the Yale Medical School next June, has just returned to New Haven for the opening of the fall term. He has been clerking in a drug store in Stratford during his vacation.

The store of R. L. Emberfield, Jr., Hartford, was sold to John R. Childs, for the last nine years night man at L. H. Goodwin's, and before that with J. R. Shannon & Co. Mr. Childs is a pharmacist of high repute.

Mr. and Mrs. John C. Nichols of New London, have just returned from a long vacation in the West. While away they visited Denver and climbed Pike's Peak. They return delighted with their experiences.

C. T. McKesson of New York has been making a tour of Connecticut recently, looking for a suitable place to open a drug store. He has not decided whether he will locate in Hartford or New Haven.

The third son in the family to get a druggist's license is John W. Parker, Jr., of New Haven, who has just passed the examination. His father is a well-known druggist in that city.

"Doc" Hull, New Haven, whose interest and connection with Yale athletics is hardly secondary to his drug business, has just returned from a vacation at Astory Park, N. J.

The Wallingford druggist J. E. Shortelle, has removed into new and more commodious quarters in the large and handsome block in that town which has just reached completion.

The announcement has just been made of the mar-

riage in Hartford of druggist L. H. Harris to Miss Sarah Tulin, daughter of S. D. Tulin.

—F. B. Brill has opened a new store in West Haven. He has a new building to go into, and this is his sixth venture in the drug trade.

RHODE ISLAND.

—Rhode Island druggists seem to have an aptitude for politics. Now, when the fall campaign is opening, the names of men well known in the trade frequently appear. Gilbert R. Parker, president of the R. I. Ph. A., is an alderman in Providence. John E. Reynolds is another member of the same board. P. J. Gaskin of Valley Falls, is president of the Cumberland town council, and has represented the same town in the State Senate. Charles E. Channon is a member of the Warwick town council, and has served several terms in the Lower House of the General Assembly as representative from the same town. S. W. Himes of Phenix, was the leading member of the town council of his town for several years, and Nicholas F. Reiner, who is now a member of the board of pharmacy, was for several terms State Senator from North Providence.

—William Patterson of Valley Falls, is said by some of his fellow-druggists to have the largest collection of undeveloped photograph plates in the State. The Valley Falls pharmacist and his camera are always in evidence at clamakes and outings, but his subjects aver they have yet to see a proof of his pictures, or an evidence that his snapshots have ever hit the mark aimed at.

—Peter McNally, a Providence druggist, who has a place on Atwells avenue, lost both the sum of \$90 and a young man who had been working for him one day last week. The clerk, pleading an urgent message from his father, was permitted to leave the store. An hour later Mr. McNally found the money had been taken. The clerk could not be found.

—M. W. Collins of Providence, general manager of the Rhode Island Drug Co., is making arrangements for the opening of a fourth branch store in this State. The company already has stores in Providence, Bristol and Westerly, and is doing a large business.

—Alexander McGunnagle has moved his pharmacy into the new block at the corner of Dexter and Garfield streets, Central Falls.

PENNSYLVANIA.

INSIST UPON OBSERVANCE OF THE LAWS.

Philadelphia, September 22.—A cheerful shake-up is pronounced in the lower part of the city. Things have been running in a particularly loose way there, many stores being operated under borrowed certificates, the manager turning up once a month or so to draw a five-dollar bill for the use of the parchment. The new Philadelphia end of the board of pharmacy has taken quite a lively interest in these alleged abuses, and has held several conferences with certain representative apothecaries in the section named. A firm and corrective hand will be speedily laid upon these violators, much to the delight of the men who take pains and pleasure in running their stores in a strictly legal way.

C. F. SHOEMAKER, Philadelphia, Pa.
President N. W. D. A.

On the return of Mr. Clayton F. Shoemaker, the newly elected president of the N. W. D. A., his first visit was naturally to his office and desk at Shoemaker & Busch's. When he reached his unassuming corner, a bunch of 100 American beauties peered at him from the top of the malogony, and turning quickly around he found the whole office force lined up behind him. "Busch, what the mischief does this mean anyhow?" exclaimed the astonished Mr. Shoemaker, and a chorus of "speech, speech," went up. Mr. Shoemaker is a modest man, and, as Mr. Busch described the performance, tried to get in the desk and pull the top down. Failing in this, he thanked the "boys and girls," gave them all a handshake, and, five minutes later, the head of the firm was transacting business as usual.

WILKINSBURG DRUGGISTS CAPITULATE.

Pittsburg, September 22.—After a fight, which has lasted all summer, with the "Committee of Twelve" who represent that element desiring the enforcement of the old Blue Laws, the Wilkinsburg druggists have finally raised the white flag and surrendered. Very little information is being given out from either side, but it is understood that one of the conditions in the peace agreement was the dropping of all suits now pending. More than 150 informations have been filed and the cost has footed up to over \$5,000. Suits and counter suits have been filed by both parties, and so fierce did the battle rage that the entire town was arrayed on one side or another. It was not long until many of the druggists found that a number of their regular customers, who were in sympathy with the Sunday closing element had discontinued their patronage. This had the effect of bringing about a decision of all but two stores to close on Sunday. The two to remain open were the Smith Drug Co. and S. W. Covell, who continued the fight until last week, when they also surrendered. Wilkinsburg has a population of nearly 20,000 people and it is not possible to purchase either soda water, cigars, or confectionary in the entire town on Sunday.

DRUG CLERK IN SAD FLIGHT.

PITTSBURG, September 22.—After an absence of five years from home, his parents believing he had sacrificed his life in the late war, Earl McGregor, a drug clerk, has been located in the Ohio penitentiary at Columbus where he has served three years of a ten years' sentence for burglary he is now thought never to have committed. The young man had formerly worked in the drug store of Dr. C. H. Brodenbach of Dayton, O., and made his home with his parents, who, about the time of the trekking out of the Spanish war moved to Pittsburg. Young McGregor continued on in his position for awhile, but subsequently resigned it and travelled through West Virginia. Here, while travelling on a freight train, he fell in with strangers, with whom he was arrested on a charge of robbery. Most of his companions were identified and along with them he was sentenced to ten years in the penitentiary which he entered under an assumed name to save his family from disgrace. An active interest is being taken by friends in his case and efforts looking to his release are being made.

OTHER HAPPENINGS.

—The Record of the class of 1903 of the Philadelphia C. P. has made its appearance. It is bound in soft, rough leather, is printed on excellent, highly finished stock and contains a number of very fine engravings. The volume is dedicated to the president of the college, Howard B. French, of whom an excellent likeness is presented. The members of the class having charge of the publication are: D. James Harbaugh, editor-in-chief; Lewis N. Moyer, editor; Harold B. Morgan, associate editor; Robert O. Hoover, treasurer; Henry A. Smith, business manager; Charles E. Shulito, assistant business manager; and George L. Holstein, second assistant business manager.

—The Philadelphia A. R. D. in a circular says: "Your committee expects the party representing the P. A. R. D. to be the largest delegation attending the N. A. R. D. convention. Every member must put forth his best effort to arrange his affairs so that his presence will be an assured fact. The retail drug trade is now passing through a very critical period, and it behooves every member to do his share to bring about a betterment of existing conditions. You are a member—do your share—attend the national convention.

—Harry Irwin, of W. J. Gilmore & Co.'s travelling force, Pittsburg, and Miss Fossie Malan of Wellsburg, W. Va., were married last week at the home of the bride's parents. They are now on their wedding trip which will consume several weeks, after which they will make their home in Pittsburg.

—A. H. McFarren, Pittsburg representative for Johnson & Johnson, has just returned from a three weeks' pleasure trip through Western states, where he went as a guest of some prominent railroad men.

—R. S. Grosvenor of Johnson, was in Pittsburg last week purchasing a stock order for a new store which he will open in the former city.

—A fire started in the office of E. J. Kretz's new store in Herren Avenue, Pittsburg did several hundred dollars damage.

—A new store to be known as the Food Pharmacy Co. has been opened at Sheridanville.

ALEXANDER R. THOMPSON, a well-known chemist and for more than thirty-five years manager of the department of the chemical works of Powers & Wadsworth at the Falls of Seneca, died of cancer and leukemia, aged 87 years.

THE SOUTH.

ALL ABOUT OUR ARMY BOYS.

Washington, D. C., September 22.—Frank O. Nicodemus, sergeant first class, Fort Sheridan, gets a three month's vacation from September 15. Henry C. Krause, sergeant first class, Fort Brown, is transferred to the general hospital, Fort Bayard, N. M., to relieve Francis L. Oltmans, sergeant, first class, who goes to Fort Brown. Martin Rose, sergeant, first class, is relieved from further duty at Fort Yates, upon the withdrawal therefrom of Company I, Twenty-first infantry, which he accompanies on its march to its new station, Fort Lincoln, where he will report for duty.

Sergeant Ralph E. Gregg, Fort Ethan Allen, Vt., is promoted to be sergeant first class.

During the serious illness of his mother, Sergeant McKeehan, Fort DuChesne, Utah, was on furlough at Kansas City.

The following are assignments and changes.

W. H. Lyons, Ft. Ethan Allen, Vt., to Porto Rico; P. O'Reilly, Havana, Cuba, to Calanias; H. J. Walls and W. H. Vinal, Cuba, to U. S. to accompany troops; J. Walton, U. S., to Cuba; T. Robinson, to Philippine Islands; G. J. Westerdahl, P. I., to Ft. Lincoln, S. D.; C. S. Benche, P. I., to Ft. Leavenworth, Kans.; W. S. Baker, P. I., to Ft. Reno, O. T.; F. Lahm, Ft. Reno, O. T., to Ft. McDowell, Cal.; Leo E. Kensly to Monterey, Cal.; Patrick O'Brien to Philippines; John R. Sands to Ft. Baker, Cal.; A. Korn to Hot Springs, Ark.; W. J. Donahy to Presidio, Cal.; O. F. Free, furlough; G. S. Carty, retired; F. O. Rose, discharged; R. M. Walker to Ft. Missoula, Mont.; A. A. Benjten, sick at Presidio, Cal.; J. Buhel, discharged; R. A. Dickson, discharged, now a Sgt. H. C.; B. L. Jacobson, to U. S. A. T. "Logan", Wm. McFarland to Ft. McDowell, Cal.; F. L. Oltmans to Ft. Bayard, N. M.; A. E. Silvertorne to Philippine Islands; A. J. Stromberg to Ft. McDowell, Cal.; A. E. Searson, discharged; P. Schumacker to Ft. Sill, O. T.; R. Vane to A. Med. Museum, Washington, D. C.

BALTIMORE DRUG BOWLERS GETTING READY.

Baltimore, September 22.—The Baltimore Drug Trade Bowling Club had a meeting to get ready for the season's work. The attendance was gratifying and the spirit manifested contrasted strongly with the uncertainty that prevailed some time ago, when the outlook for a resumption of the games was by no means good. A new element and one that ought to strengthen the organization, is the representation of the retail druggists through the medium of the Calvert Drug Co., which will have a team in the field. John G. Beck, general manager of the Calvert company, presided at the meeting. The election of officers resulted as follows: President, Charles Holzerman, vice-president, John G. Beck; treasurer, Wilham Beaumont; secretary, Harry Cann; schedule committee, Henry Korumann, William Smuck and James Coyne.

Contests are to be held three times a week, as last season. Sharp & Dolme will again be in the club, the other concerns represented being McCormick & Co., last season's champions; James Bady & Son, the Stanley & Brown Drug Co., the Calvert Drug Co., and the Root & Herbs, the National Drug Co., and the Armstrong Cork Co., dropping out. A fund will be set aside to pay at least in part the expenses of those who represent the club in the national contests. Bowling will begin October 5.

N. A. R. D. ACTIVITIES IN BALTIMORE.

Baltimore, September 22.—The Baltimore R. D. A. is displaying much activity in enforcing the tripartite agreement. Alleged violations have been brought to the attention of the national executive committee, and recently the wholesale house of the Loewe Drug Co. was proceeded against. Retailers, also, who fail to observe the arrangement in force, are made to experience the influence of the association. At present not less than eight druggists are on the cut-off list, and it is intimated that other names will be added before long.

A meeting of the association has been called for next Friday at Sonnenberg's hall, to elect delegates to the national convention. It is the purpose of the Baltimore members to arrange an excursion to the capitol on one day during the convention, and it is thought that a large body of pharmacists will participate in the event.

JUDICIAL WISDOM.**Tennessee Judge Asks as Many Indictments as Their Are Violations of Cocaine Law.**

Chattanooga, Tenn., September 22.—A temperate and at the same time vigorous exposition of the evils of cocaine trafficking was made here by Judge McReynolds in his charge to the Grand Jury. He said:

"The use of cocaine is said to be a growing and very demoralizing evil, and the violations of this law should be carefully inquired into by you. From the reports that we have, from the drunken and half-crazed condition in which we see some people on our street, this law is evidently being violated. I am informed that the residents of a certain portion of this city use this drug to such an extent that the place is called 'Cocaine Alley.'"

"The effect of this drug is deadly, and the prevention of its sale is a good law, and should and must be enforced.

"While the statute prescribes that it can be sold one time on the prescription of a doctor, this does not mean that the doctor can leave prescriptions with druggists for its sale, and if the sale is made this will be a protection; it is not. The object and purpose of the law is that the drug be prescribed by a physician in good faith as a medicine, and not that the physician's prescription can be used as a protection for violations of the law. I respectfully request you gentlemen of the jury to make a thorough investigation of this matter, bring witnesses before your body and find out how and where they get this drug, and if they say they get it on physicians' prescription, ascertain who the physician was, how many prescriptions he has given, does he make a practice of it, and from such facts and circumstances determine whether the sale was made in good faith or not. Where you find violations of this law, indict or return presentments against the party or parties, in just as many cases as they have violated the law."

MARYLAND.

—Henry B. Fowler and W. Thomas Kemp, receivers of the Maryland Drug Co., have notified all those interested that they will be prepared until a certain date to receive offers for the stock remaining in their hands. The highest bid for the goods as an entirety will be submitted to the court, and, if satisfactory, accepted. The receivers found matters more involved than they anticipated, and will be unable to determine the exact state until all claims are certified.

—The Pharmaceutical Journal Club went on excursion to Love Point recently on the steamer Queen Anne. The weather was delightful and the party

Delaware—a small state—has some big men in pharmacy. Such are Francis E. Gallagher of Wilmington, president of the State Ph. A., whose picture is on the right, and Levi Scott of Dover, vice-president for Kent county.

had an excellent time. At Love Point dinner was taken, preceded by a salt dip.

—The scarcity of good clerks still continues in Baltimore. A number of proprietors of drug stores have advertised for competent help, but without success. In one instance, \$18 a week was offered, but failed to bring the desired result.

—Miss Emma R. Davis, Maryland C. P., pharmacist at the Union Protestant Infirmary of Baltimore, has gone on a vacation trip to Scranton, Pa., her former home.

—Druggist Frederick W. Schanze, Baltimore, has become a postmaster, postal sub-station No. 49 having been transferred to his pharmacy.

—John S. Stillman is back in his old position in the pharmacy of Dr. Oscar E. Ross, Baltimore, from a season taken to rest and recuperate.

—Among visiting druggists in Baltimore: Dr. E. A. Warebaue, Hagerstown; M. L. Byers, Hagerstown; Dr. E. E. Wolfe, Cambridge.

—J. H. Surratt, formerly with W. C. Fields, Woodberry, has accepted a position with L. G. Fernser, Baltimore.

—E. N. Bacon, manager for Dr. Truitt at the Roland Park pharmacy, is very ill with typhoid fever.

VIRGINIA.

—T. A. Miller, who already has three prospering stores in Richmond, has secured a lease, in the heart of the fashionable residential section, West Franklin Street, of a room under the first floor of a new apartment hotel, and will fit up an attractive store. Mr. Miller says he expects to get possession October 1.

—E. W. Weisiger of Manchester, a druggist ripe in years and popularity, is very ill. He is not expected to recover. The passion of Mr. Weisiger's life outside of his chosen work is Shakespeare, and his speech is frequently rich in appropriate and striking quotations from the great dramatist.

—Robert L. Harrison, a Fulton druggist, is having a new store erected near his present stand on Williams-

ing system. It will be a far larger building than he at present occupies and will be completed early next month.

A young man from another section of the State are coming to Madison to take private quizzes in preparation for the examination by the board of pharmacy, to be held next month.

—One of the poorest marriages in Smithfield took place when Peter Hartsell, prominent druggist of Chase City, led to the altar Miss Frances Compton, daughter of Rev. R. A. Compton.

—The Governor will not appoint the new member of the board of pharmacy until January. It is likely that he will, as heretofore, respect the nominations of the State P. A.

AROUND THE GREAT LAKES.

FAIR WARNING.

Druggists of Illinois are Circularized with Important Parts of Pharmacy Law and Warned About Preparations Containing Cocaine.

Chicago, September 22.—In a new circular issued by the board of pharmacy of this State there is a reprint of the cocaine law, which the board is enforcing to the best detail. The board also advises druggists to exercise great care in the selection of the catarrhal powders which they offer for sale. Many of these powders, the circular states, may contain cocaine, and the fact that the druggist does not know this, is not a valid defence in the eyes of the law.

Attention is called also to the law that "every druggist or other person who shall sell and deliver any arsenic, strychnine, corrosive sublimate, prussic acid, or other substance or liquid usually denominated as poisonous, without having the word 'Poison' written or printed upon the label attached to the phial or parcel in which such drug is contained, or shall sell and deliver any drug or medicine other than upon the prescription of a physician, without having the name of such drug or medicine printed or written upon the label attached to the phial or parcel containing the same, shall be fined not exceeding \$25."

The penalty for not registering fully all sales of arsenic, strychnine, corrosive sublimate and prussic acid is \$50 for each neglect. The person who buys under a false name gets the same fine.

A fine of \$5 is imposed on every sale, excepting patent or proprietary medicines in original packages, or dispensing of physicians prescriptions, of "any drug, medicine or poison without affixing to the box, bottle, vessel or package the name of the article distinctly shown, with the name and place of business of the registered pharmacist from whom the article was obtained."

IN SPECIAL COACHES FROM CHICAGO.

Chicago, September 22.—Retailers in the territory immediately tributary to Chicago who are going to Washington to attend the N. A. R. D., will have special day coaches and sleepers over the Big Four and Chesapeake & Ohio railroads. The trip is sure to be a delightful one and probably a larger number of Chicago and near-by druggists will avail themselves of the vacation convention going excursion privileges afforded than on any previous similar occasion. The train leaves Chicago at 1 P. M. Sunday, October 1, and will arrive in Washington at 1:30 P. M. Monday. The Pacific and St. Louis will be here to meet at noon Sunday, arriving in Washington at 6 P. M., where they will join the Coaches party.

ILLINOIS.

—A coroner's jury in rendering its verdict on the death of a man who committed suicide by the carbolic acid bath in Forest Park, Chicago, had this to say:

"The jury recommends that no retail druggist shall sell to any one any poison, in any form, except with an order or letter from some licensed and practicing physician, and explaining why and for what purpose the poison is desired. We also find that the sale of various poisons is carried on in a reckless manner, and we recommend that the proper authorities look over this practice and take radical measures to stop it."

—Because it has proved somewhat difficult to get positive evidence to convict druggists of violating the new anti-cocaine law William H. Sage, representing the board of pharmacy, has concocted a new plan. He wants the police to try and spot the dope fiends as they enter the drug stores, try to witness the purchase, arrest and search the fiend, and thus get direct evidence against the recalcitrant pharmacist. This plan was outlined to Chief of Police O'Neil, but the latter is said to have doubts about its practicability.

—The Chicago Paint, Oil and Varnish Club held the first meeting of their current year on last Wednesday evening. Officers were elected as follows: President, Alex. H. Levy; vice-president, R. W. Evans, secretary, D. Van Ness Person; treasurer, R. S. Pitkin; directors, O. J. Buck, A. H. Rogg, W. H. Wells.

—The C. W. Shotwell store in the Revere House on North Clark street, Chicago, which recently went into bankruptcy, has been bought by Gus Frank and Henry Shapiro, who will conduct it in addition to the pharmacy they own on the west side.

—James H. Wells, proprietor of the Medinah Temple drug store, Chicago, and also of a pharmacy in Evanston is a temporary cripple because of a fall on a dancing floor. His knee cap was broken and there is danger of his losing the use of his leg.

—Albert Dalberg, employed in the store of Adolph Brendere, on the West Side, Chicago, and who has been arrested twice on the charge of selling cocaine, will have to answer this week to the same charge before Justice Dowley.

—An explosion of wood alcohol in the basement of Budlong's store, Aurora, burned Ed. Warren, a negro porter, so severely that he died. He was drawing the fluid from a barrel and lighted a match to see how much remained therein.

—Grave Coethran, who recently came to Chicago from Indiana and opened a drug store at 1784 North Halstead street, has been charged with not having a registered pharmacist in his store. He was fined \$10 and costs.

—Capt. W. G. Morris, the veteran druggist of 833 West Lake street, Chicago, had the misfortune to fall from a step ladder and sprain his ankle, besides sustaining injuries to his back.

—Clarkson & Mitchell of Springfield, have made an extension of twenty-three feet in the rear of their store and now have one of the very finest pharmacies in central Illinois.

—Armstrong & Armstrong have opened a handsomely fitted up, double-decked drug store on the former site of the First National Bank, Chicago.

—Dr. A. H. Guernsey of Amherst, Wis., was in Chicago a few days ago on his way home from the G. A. R. encampment at Washington, D. C.

—F. W. Baxter and wife of Mount Sterling, will leave in a few days on a three weeks' trip to the Pacific Coast.

—J. H. Bearcroft has sold his pharmacy at Fifty-seventh street and Calumet avenue, Chicago, to Otto Herzog.

—It is reported that Phil Wade has sold his drug store at Chatsworth, to Frank Cole of Bloomington.

—J. Frisch & Co. of Springfield, have opened a new branch store on the southeast side of that town.

—Clarence A. Davidson has returned to Chicago from his fishing trip among the Wisconsin lakes.

—W. A. Clark of East Alton, will move to Upper Alton, where he will open a drug store.

—Charles S. Trowbridge, druggist, of Seneca, has filed a voluntary petition in bankruptcy.

—M. B.monds has sold at Leaf River, and is again clerking in his father's store at Plano.

—It is reported that Edward N. Fernholt of Chicago will open a drug store at Harvard.

—Krause & Tiplke have bought the drug stock of Dr. Van Doren at Hirschler.

MICHIGAN NOTES.

—It is seldom that a community sees one of its own number scale the ladder of success with such rapidity as has Silas Hebee, a former St. Johns boy, who has been spending some time with relatives in that city. Twelve years ago he was making capsules and concerning himself with medicines in the drug store of A. O. Hunt. Now he is about to assume duties as director of the laboratory of physiological chemistry in an institution just founded in New York for medical research, endowed by Mrs. Collis P. Huntington.

—Arthur Loranger of Loranger & Culver, Saginaw, has returned from a summer outing at Quebec. He has a fine 40-foot yacht, under command of an able navigator, with accommodations for four, in addition to the crew, and fishing and sailing on the St. Lawrence river are reported to be prime. Mr. Loranger is also interested in a lumber company at Hammond, La., and he will go south next month.

—Roy Sparks, an errand boy in the employ of D. E. Prall, Saginaw, will be careful how he handles sulphuric acid in the future. He was trotting along the street barefooted the other day, with a jug of the acid dangling from a string, when the cord broke, spilling the fluid over his feet. Quick medical attention probably saved the lad from being crippled for life.

—The display window of Nichols' drug store at Hancock is attracting attention. Candies occupy the lower portion of the window, while in the center is the statue of a dusky maiden under a bamboo tree, incandescence lamps with shells for shades making a very pretty effect. Harry Kessler, dispenser of iced drinks, trimmed the window.

—Trust the Michigan druggists for up-to-date methods in advertising. M. E. Butts of Elk Rapids, supplied the pupils of the central and ward schools on the opening day this year with blotters, the absorbent containing half-tone views of the different school buildings.

—Charles Jewell, the well-known prescription clerk at the Central drug store, Detroit, has joined the ranks of the benedicts. The bride was Miss Kittie Bell, youngest daughter of Mr. and Mrs. A. H. Shepherd of Pontiac. An eastern trip followed.

—E. L. Dodge, for many years chief clerk for L. G. Ripley & Co., Montague, has resigned and accepted an outdoor position with a firm in Salt Lake City, Utah. He will leave with his family for his new home on November 1.

—Foote & Jenks, perfume and extract manufacturers of Jackson, are the first business men in that city to use an automobile in delivering goods. They have purchased a four-horse power machine for the Jackson trade.

—D. D. Brown, who has been in business in Kalamazoo for the last quarter of a century, has entirely remodeled his store at great expense and now has one of the prettiest establishments in the celery city.

—W. D. Hawley, for the last year with E. M. Kennedy at Kalamazoo, has purchased the Waitt & Wicker store at Coldwater. Coldwater was Mr. Hawley's former home. He will refurbish the store.

—Hixson & Bromley of Grand Ledge, have opened another drug store in Flint. Fred Bromley will have charge of the Flint store, Mr. Hixson remaining in charge of the Grand Ledge establishment.

—Chas. W. Parrish, for the last 18 months with Thompson & Grice of Allegan, was married on August 26 to Miss Pearl Elvira Braman of Flushing. They started housekeeping at once.

—Lane & Burnett have opened a drug and grocery store in the post office building at Harbor Springs. Claude Lane was formerly head clerk for M. J. Irwin at the Springs.

—A new bidder for trade in Battle Creek is the store just opened in that city by F. H. Scott. He has been connected with the drug business in the adventist city for five years.

—E. A. Bivins has just moved back into his newly furnished store at Alma, and he now has one of the handsomest drug establishments in central Michigan.

—Chas. N. Ghent, formerly of Bay City, has opened a new store in Alpena, with soda fountain and all the up-to-the-second concomitants of the drug business.

—Arthur Streeter, clerk at J. W. Armstrong's, Middleville, has gone to Trufant to fill a similar position in the store of Ray Van Avery.

—Albert Globensky has bought a half interest in the business of the American Drug Co. at Traverse City and will be resident manager.

—Chas. Powell has resigned his position as manager of the Karmesen Drug Co. of Bangor, and will resume his studies in Chicago.

—W. D. Lyman has sold the Union pharmacy at Muskegon to E. J. Loveland of Tustin, and L. O. Loveland of Lansing.

—Luther Perrigo, the manufacturing chemist of Allegan, is reported very ill, with no hope of recovery.

—Mrs. J. L. Congdon has taken possession of the drug business of Tuxbury & Thorp at Pentwater.

—Ed Campbell, a well-known northern Michigan druggist, will open a store in Baldwin.

—Owing to ill-health, L. E. McIntosh has disposed of his drug business at Harbor Beach.

—J. Harry Sparks of Jackson, is the new prescription clerk at Humphrey's, Battle Creek.

—W. A. Reid of Grand Rapids, has bought the Dr. Zimmerman store at Wayne.

—Gail Combs is the new clerk in the Clifford pharmacy at South Haven.

GEORGE WEEKS, for the last thirty-seven years a druggist at Augusta, Mich., is dead from paralysis, aged 68 years. He was longer in business there than any present firm. He leaves a widow, one daughter and one son, the latter a student at the Detroit medical college.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

[NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories.
Twelve Teachers. Thorough Course.

NEXT TERM BEGINS JANUARY 4, 1904.

Address Inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

MINNESOTA.

—T. C. Sankle of Hayfield, has sold to Gleason & Gray & Co. Lavey started at Shakopee. Eugene N. Yes, a Minneapolis druggist, finds not only his feet "stepped" down as well as up in married life, but that some of the downs are "way downs." His wife, who lives in St. Paul, has sued him for divorce. She charges him with an awfully cruel treatment, in consequence of which, she sets forth, she is a physical wreck. They were married in St. Paul in 1899. The woman is 22 years old and her husband is ten years her senior.

—A few days ago an unknown man was found dead at Grand Forks, N. D., his head having been cut off by a railroad train on the Northern Pacific. The next day the body was identified as that of Duncan A. McAlpine, a pharmacist, formerly of Thessalon, Ont., Can. He was well connected in the East and had been separated from his family through dissipation.

—Registration at the college of pharmacy of the State University closed on Monday of last week, and regular class work began the following day. The new class is much larger than that of 1902. In the opening address Dean Wullung spoke on "The Necessity of High Ideals," and gave the classes about the best talk they ever listened to.

—Sam G. Ellingsen, well known to the drug fraternity in the Twin Cities and in North Dakota, has gone to Two Harbors as manager of the Two Harbors Drug Co., succeeding John Goldner, who returns to Minneapolis.

—H. E. Lucas has succeeded T. N. Berg at Sebeka. M. Hanson is preparing to start at Cyrus. W. D. Belden of Chelonia, has expanded into the Belden-Fullerton-Rhines Medicine Co.

—There is a strong demand for pharmacists of the Finnish nativity in the towns on the iron ranges of this state, so large a proportion of the population being Finns.

—M. Hanson will set up pestle and mortar at Cyrus shortly. George Streukons, it is reported, will succeed Anton J. Maerz at Chaska.

—M. Hanson has bought out A. I. Baekman at Cyrus. V. C. Mead of Luverne, has admitted S. A. Christiansen to partnership.

—T. N. Berg of Sebeka, has sold to H. E. Lucas. George A. Bell of Holding, has filed a voluntary petition in bankruptcy.

—A. T. Wiczek of Battle Lake, will remove to Winona. Perry R. Day of Bagley, is selling.

MRS. LITTLE NOT SCARED BY BANDITS.

Seattle, Wash., September 22. Joshua H. Little, a prominent druggist of Seattle and his wife figured in an adventure that makes many of Nick Carter's look cheap.

Mr. Little was about to count his cash at the close of the night's business. He piled out gold and silver in stacks on the counter and was smiling, when a well dressed man entered. Mr. Little had forgotten to bolt the door.

The stranger said he had a bad cold. Mr. Little offered to use a hand and face about to find himself at the "gun" end of a revolver. He lost all his speed records in getting the hands up. Then stranger No. 2 came and walked leisurely toward the man. He was about to

gather it in when Mrs. Little entered. Stranger No. 2 thrust his revolver in her face and told her to be silent. She obeyed. The men scooped up the cash, then bade their host and hostess a polite farewell, apologized for the intrusion, and slowly retreated to the street.

Mr. Little says he wasn't a bit frightened, but his wife says his expression at the time was the strangest for a man who wasn't that she ever saw. A few days later a man was arrested and positively identified by Mrs. Little. He confessed and added: "The lady was the grittiest I ever see."

CALIFORNIA.

—For the purpose of supplying their factories at Stockton and Tesla in this State with chemicals, James and John Treadwell, the millionaire mine owners of Oakland, have erected a plant at Third and Camelia Streets in Berkeley for the manufacture of chemicals. Chemicals, such as salts of zinc, magnesia, sulphide, and sulphate of sodium will be brought from the mines owned by the Treadwell brothers, and purified at the plant.

—A. Sbarbaro, chairman of the California promotion committee, has offered a prize of \$25,000 to the individual who can produce a successful method of manufacturing cream of tartar from the California grape. At present this country manufactures but little tartaric acid, but Mr. Sbarbaro feels convinced that the grape grown in this state can be used for the purpose.

—William E. Cates, who has been manager of the Golden Rule drug store, Fresno, resigned and has gone with his family to Boston. Henry B. Stanton of San Francisco, succeeds him and has moved his family to Fresno.

—The wholesale druggists, who early in the year decided to close their houses at one o'clock on Saturday during the summer, have formed a new agreement by which they will close at one o'clock on Saturday the year round.

—Ada Seawell was granted a divorce during the week from her husband, Frank Seawell, a well-known San Francisco druggist on the ground of extreme cruelty.

DR. GEORGE WILLIAMS aged 25, of Hazleton, Pa., died in Hahnemann Hospital, Philadelphia, of poisoning, whether suicidal or not is unknown. Dr. Williams fell to the floor while drinking soda water at Rodot's pharmacy, 805 Vine street Philadelphia, where he was employed. Williams' father was a former congressman. He worked, after spending his patrimony of \$8,000 in various Philadelphia tangleboon drug stores. He invented and sold what he asserted was a sure cure for the morphine habit. He leaves a mother and two sisters.

Bioplasm Products.

The Bioplasm Company of New York report excellent results from their products, Bioplasm (Bower), Bioplasm (Adrena) and Bioplasm (Per-Ox-Alk). Bioplasm (Bower) is said to contain mucelin, lecithin, diastase, trypsin, all animal enzymes, and an alkaloid, but the manufacturers claim that its chief therapeutic virtue lies in a new product created in its process. They further claim that it is the acme of biologic therapy, being harmless, non-toxic, pleasant to administer, and indicated in all nervous diseases. Bioplasm (Adrena) is a combination of the suprarenal glands of sheep with Bioplasm and is said to be specific for hay fever, stomatitis, rhinitis and all inflammations of the buccal and nasal membranes. Bioplasm (Per-Ox-Alk) is claimed to substitute pure oxide of magnesium for the saccharine diluent for cases complicated with amyloceous dyspepsia and where an alkaline form is needed. These preparations are being extensively advertised to the medical profession, and the demand for them is bound to come if it has not come already. It is not, of course, good judgment to buy a large stock of any new preparation, but it is excellent judgment to anticipate the demand and be ready to supply it.

Effervescent Lithia Tablets.

To make a tablet that contains the correct amount of medication, and have it uniform, perfect in appearance and perfectly soluble, requires a thorough knowledge of every detail. In the effervescent lithia tablets made by Billings Clapp Co., Boston, Mass. is exemplified this necessary knowledge, the secret of popularity being in the process by which the tablets are made; the fact that the tablets are put up in aluminum cap bottles assists in making them popular with the consumer and thoroughly protects them from the air, and the consumer does not lose any by deterioration. The Billings Clapp Co. furnish these goods with the druggist's name on them and allow him to reap the benefit which comes from marketing a meritorious product. Samples and special net prices may be secured upon application.

MRS. HALLIE CREIGHTON, wife of Frank C. Creighton, a druggist well known in Alexandria, Va., died there suddenly. Her husband and one child survive.

SHARP DECLINE IN MENTHOL.

NEW YORK, September 22.—Bontine trading continues to show steadily increasing volume and seasonal commodities are moving more freely into the various channels of consumption, with prices, as a rule, favoring sellers, the only important exception being menthol, which declined sharply on account of competition among dealers.

OPPIUM.—Owing to the influences noted last week the market estimates somewhat unsettled, but jobbing quotations remain unchanged at \$3.40 to 3.65 for 9 per cent. and \$3.50 to 3.75 for 11 per cent. Powdered continues to find a moderate consuming outlet at \$1.30 to 1.50 for 13 per cent., and \$1.80 to 2.00 for 16 per cent.

MORPHINE.—There is no abatement of activity and values are maintained at \$2.60 to 2.70 for eighths in ounce boxes, \$2.55 to 2.65 in 2 $\frac{1}{2}$ -oz. boxes, \$2.35 to 2.45 in ounce vials and \$2.30 to 2.40 in 5-oz. cans.

QUININE.—Dealers report a fair consuming inquiry, with the tone of the market firm, but supplies are yet obtainable at the old range of 25 to 25 $\frac{1}{2}$ ¢, for bulk in 100-oz. tins, 25 $\frac{1}{2}$ to 26 $\frac{1}{2}$ ¢, in 50-oz. tins, 26 to 26 $\frac{1}{2}$ ¢, in 25-oz. tins, 27 to 27 $\frac{1}{2}$ ¢, in 15 or 10-oz. tins, and 32 to 32 $\frac{1}{2}$ ¢, in ounce vials, according to brand and quantity.

ERGOPT.—Values are higher in sympathy with decidedly stronger foreign markets, and jobbers have advanced quotations to 45 to 50¢, for whole and 50 to 55¢, for powdered.

MENTHOL.—Owing to unexpected arrivals, together with keen competition among dealers, jobbing quotations have declined sharply and the revised figures are \$7.00 to 7.50 per lb. and 52 to 58¢, per oz.

GOLDEN SEAL ROOT.—Values continue to larder under the influence of steadily diminishing stocks, and jobbers have further advanced quotations to 95 to 101.10 for whole and \$1.05 to 1.20 for powdered.

Oil, PEPPERMINT.—Jobbers have modified their views regarding values, and are willing to sell at \$2.65 to 2.85 for Western, \$2.50 to 3.10 for Wayne Co., and \$3.00 to 3.25 for either H. G. H. or redistilled.

Oil, CAMPHOR.—Scarcity and higher foreign markets have caused an advance in jobbing quotations to 90 to 81.10.

Oil, CLOVES.—Manufacturers' prices are decidedly higher on account of a sharp advance in values of the spice, and jobbers have marked up quotations to 80 to 80¢.

MANNA.—Values are easier, owing to expected early arrivals of new crop, and the revised jobbing quotations are 60 to 70¢, for large flake, 45 to 55¢, for small, and 40 to 50¢, for sorts.

CALAMUS.—Blended is very scarce and jobbers have advanced quotations to 45 to 50¢.

NITRATE OF STRAER.—Quotations in a jobbing way have been further advanced to 45 to 50¢, for crystals and 45 to 52¢, for fused.

SPICES.—Early strong markets are noted for all descriptions and among the articles showing higher prices are Jamaica ginger, which is now held at 17 to 20¢, for whole, and 22 to 25¢, for powdered, black pepper, which has been marked up to 20 to 25¢, white to 28 to 32¢, and red to 18 to 22¢. Allspice shows an advance to 12 to 15¢.

COBOLINEAL.—Extreme scarcity has caused a further advance in jobbing prices of Honduras salsor to 35 to 40¢, for whole and 40 to 45¢, for powdered.

SENNA, A ROOT.—The market is firmer and jobbers have advanced quotations to \$1.00 to 1.20 for whole and \$1.10 to 1.30 for powdered.

COLMARIN.—Supplies are offered more freely and jobbing prices have declined to \$1.00 to 1.25 per lb., and 35 to 40¢, per oz.

SALTIRON.—American is firmer and jobbers have advanced quotations to 45 to 50¢, for whole and 55 to 60¢, for powdered.

BUSINESS NOTICES.

Our experience in catering to the wants of druggists has taught us that they are especially interested in formulas for toilet preparations.

In the Era Formulary there is one department which alone contains something over 1,000 such formulas.

Toilet specialties are as important as any class of goods the druggist may sell—they appeal to the tastes of the refined and the rich—to the beautiful and those who wish to be—and they afford a good profit.

Why not awaken to your opportunities for a policy of trade extension by purchasing a copy of the Era Formulary? This book will enable you to become the manufacturing chemist of your neighborhood. Price \$5 per copy, delivered. Write to the publishers for information.

President Hadley of Yale, says that, "the two aims of education are training for knowledge and training for power."

Another eminent educator has the same thought in mind when he distinguishes between "teaching to know and teaching to think and do."

In pharmaceutical education this distinction probably does not obtain, for the training is purely a guide to correct action.

Still it is well for the student to select carefully so that his limited time and means produce the best results.

The Era Course in Pharmacy gives the maximum of practical training for the minimum expenditure of time and fees.

EDITORIAL COMMENT

THE N. A. R. D. IN WASHINGTON.

It may safely be predicted that the convention which is to meet next week in Washington will be one of the most important in the history of the National Association of Retail Druggists. Members of the trade in all parts of the country are looking forward with more or less eagerness to the result of the coming deliberations. The cynical indifference which marked the attitude of many druggists at about the time of last year's gathering has largely disappeared, and instead there is an awakened interest, in some cases still tinged with hopelessness, but, nevertheless, a lively interest. During the summer of 1902 the trade had become convinced that the tripartite plan, then the chief dependence of the association workers, lacked the qualities necessary to make it effective and the prospects for needed modifications were not very bright. The officers representing the three branches of the trade in the triangular agreement seemed to be satisfied with results, and individual retail druggists knowing how freely pledges had been broken, despaired of ever obtaining any substantial benefits. Discouragement and disgust blinded the rank and file in many places to the real benefits actually obtained by means of the old plan. Since then conditions have changed materially. The executive committee of the N. A. R. D. has taken the initiative in devising and applying means for stopping the most obvious leaks in the tripartite fences, and doubting individuals have by dint of tremendous exertions and repeated assurances been convinced that something can and will be done. The object lesson in the form of the direct contract and serial numbering plan has had a marked effect, and the druggist who still believes that cutting cannot be stopped is a rare exception. All eyes are upon the body that restored the Miles goods to the full price list.

SOME IMPORTANT QUESTIONS.

Among the questions likely to demand the attention of the assembly in Washington next week the most important is undoubtedly that of placing the financial affairs of the association upon a more satisfactory basis. At the meeting in Cleveland, last year, it was believed that the increase of annual dues from one half dollar to two dollars would ensure a suffi-

cient income to enable the organization to continue its work with vigor. Why this supply has failed is now not entirely clear; but, at any rate, it has not been so abundant as was anticipated. The association is again in need of funds, and has been obliged to abandon some very promising fields. In all probability an appeal to the assembly will receive a response quite as enthusiastic as that of last year, for, if we are not mistaken, enthusiasm will be more ardent than ever before. But enthusiasm and a hat full of five-dollar bills unsupported by carefully considered financial measures will not place the organization beyond the reach of want. What is needed is some means for bringing the appropriation voted at the annual meeting into the treasury, so that the energy necessary for more important work need not be frittered away in an annual scramble for funds. There is reason to believe that the tardiness of the rank and file is not due to indifference or wilful neglect, but to failure of the machinery for collecting the dues. Perhaps if this defect were remedied no further increase would be necessary, although in the present state of universal confidence another substantial addition would meet little or no opposition. The proper financing of the association's affairs, is, all in all, a vital question. It is extremely bad economy to compel an efficient force carefully organized to extend the association's influence and serve the interests of the trade, to undertake periodically the duties of a collector and painfully gather dues by a store to store canvass. The next week is not likely to witness any material change in tactics. The present policy of the organization is so satisfactory to a majority of the druggists in all sections of the country except New York, that it is almost certain to receive a vigorous endorsement.

TOO MANY DRUG STORES.

In his address as chairman of a section of the A. Ph. A., Mr. Wooten named as the greatest obstacle to success in the retail drug business, the excessive number of stores. He dwelt upon the various causes which had contributed to this congestion, and had something to say about means for preventing matters from becoming still worse, but he offered no plan for immediate relief. Things were shown to be in a pretty bad state and we were given to understand that they might become worse, but the impression conveyed was not hopeful of better things to come. We have no wish to criticize the masterly analysis of the causes of discontent in the retail drug trade upon which we have already commented at length, but have merely returned to it for a fresh thread of thought. There are, according to Mr. Wooten's figures and those obtained from other sources, about four times as many drug stores per unit of population in this country as in continental Europe. Unless we consume very much more medicine per capita than Europeans, the actual sales per drug store cannot, therefore, be more than one-third or, at most, half of those of pharmacy abroad. In some of the foreign countries where population centers are so much fewer, there are also laws which forbid dispensing by physicians. Moreover, the pharmacists, protected in many ways from competition which the American druggist would always receive. And still the apothecary of the Con-

tinents complains of overcrowding quite as loudly as the druggists of this country.

SIDE LINES, THE AMERICAN DRUGGIST'S ADVANTAGE.

In France, Belgium and Holland there have recently been discussions of an alarming increase of pharmacists, and it has been proposed to limit the number of recruits in the field by restraining the classes in the colleges and extending apprenticeship privileges only to members of practicing pharmacists' families. In this country druggists are much less favored by law, they are much more numerous, and find it difficult to get enough assistants. We cannot believe that among ourselves the expense of living is less than abroad, for our high standard is a matter which occasions no little concern, and in our various communities the druggist and his family are always classed with the more prosperous citizens, the "lean and hungry look" is conspicuous by its absence, and they are invariably neatly dressed and comfortably housed. How then, it may be asked, does the American druggist manage to live in a field so limited that it would yield the European apothecary only slow starvation? There can be but one answer to this question. It is because the pharmacist in this country is not limited closely by professional lines. His business sense induces him to seek additional compensation in other fields. Instead of bewailing his lot and reproaching the good health of the community, he lays in a stock of cameras, stationery, and the like and proceeds to make use of his spare time and shelf space. A cigar case causes very little trouble, and adds to the whole, and a soda fountain is an advertisement. If his receipts from the sale of drugs are too small, he makes up by selling books and various articles conveniently kept in the store. In other words the addition of side-lines enables retail pharmacy to support from two to four times as many persons in comparative comfort as would be possible if it were purely a profession.

NONE SO FALLIBLE AS THOSE WHO WILL ACKNOWLEDGE NO ERROR.

The Midland Druggist amuses itself at our expense because we are unable to see that a certain statement of ours is equivalent to one of its own. In trying to prove recently that it is to the druggist's best interest to uphold pharmacy laws in every way possible we said: "Laws that restrict the performance of an important duty to a class of specially qualified individuals, tend to add dignity to the persons thus favored and raise them in popular esteem." Our critic finds no difference between the meaning of this sentence and that of his own cynical statement, "It is the legal regulation which has given to (pharmacy) such impetus toward the status of a profession as it has so far attained." We still see a great difference in the sentiments expressed, but if the word experts should decide that there is none, that in this case a part equals the whole, we shall claim the privilege accorded all humanity and say that we were both mistaken. Pharmacy was an honored calling long before modern restrictive laws were even thought of. If our statement when carried to extremes leads to the logical conclusion that the calling of Marsh, Procter and

Squibb was unworthy of respect because there were then no laws condemning less honest practices, we give it up gladly, although it has done valuable service in a good cause.

THE LENGTHENING OF HUMAN LIFE.

The average length of human life is increasing in a truly remarkable manner, and we wonder whether pharmacy has some slight share in the credit for this achievement or whether it is all due to the work of the doctors. At the International Congress of Actuaries, which recently met in this city, Mr. C. C. Landre of Amsterdam, stated that during the last fifty years, the maximum expectation of life had risen, in his country, from 46.1 to 56.1 years for men and 48.6 to 57.8 years for women. A delegate from England reported that a similar improvement had taken place in his country, and drew some interesting conclusions from collected statistics. Mortality among men of all ages, twenty-three per thousand in 1838, had fallen to nineteen per thousand in 1900, while among women it had fallen in the same period from twenty-two to seventeen per thousand. An increase of ten years in the length of human life in a half century is an achievement upon which civilization, or rather science, can justly pride itself, but those of us who have turned the middle point of life need not expect to profit greatly by the improvement. Gray heads may be more plentiful than fifty years ago, but individually their age is not materially greater. The improvement was shown to have taken place almost exclusively in early life, mortality during childhood being greatly reduced, while that of persons in the "afternoon of life" has remained about the same.

TO ELIMINATE OFFICE-SEEKING.

We print in another column a letter from a correspondent who finds fault with the way in which officers of the A. Ph. A. are chosen. There may be much in what he says, but we fear his language is somewhat more vigorous than the case warrants. If the present method is so highly objectionable, how is it that the officers past and present have managed to stand so high in the esteem of their associates? If our friend means to accuse these gentlemen, who have labored so earnestly and faithfully for such meagre rewards, of odious self-seeking, we certainly shall not write the editorial he calls for. If the office is to be had for the asking, the committee on nominations must be sadly lacking in discrimination. If the members are unequal to this job, why were they chosen? In our opinion, a matter of this kind could be brought forward on the floor of the assembly directly interested much more gracefully than in the editorial columns of a journal. Perhaps the present method is not satisfactory, and perhaps it would be better to adopt a rule similar to that in force in the American Medical Association, a rule disqualifying any person from holding office who has had the bad taste to electioneer in his own behalf. We don't know. That seems to be a good way, but we fear that if some of the officers were to start out with a lantern to find the proper men, they might be obliged to travel needlessly far. Purely honorary offices are not always an unmixed blessing. Many modest and busy men avoid them studiously. In the general economy of things, a

graceful acknowledgement of a willingness to accept an office if the mantle should so fall, would, therefore, seem to possess some advantages.

WANTED: AN EDITORIAL.

To the Editor: Many editorials have been written on varying phases of the Mackinac meeting of the A. Ph. A.—some of them very good. In vain, however, have I looked for one on a subject of more importance, perhaps, than all the rest combined: Office-Seeking at the A. Ph. A.

There is plenty of material for it. Practically all the drug journal men in attendance realized this. They talked about it over their cigars on the broad veranda of the Grand. Strolling through the woods, seeking relaxation after tiresome sessions, they discussed it freely. When they returned to their work, they had many subjects noted in their books to write upon, but strange to say not a word has appeared about office-seeking.

And such an editorial ought to be written—yes a hundred or a thousand such—whatever number may be required to arouse the members of the association to the point of stamping out the contemptible practice. The association is reaching the point where any man may have a high office who advertises himself persistently and blatantly enough, who lobbies and plans well enough, who appears with a clique of over-enthusiastic supporters not noted for previous attendance upon the meetings. Such a candidate may be lacking in most of the requisites for the office to which he aspires. He may not represent either the scientific or the commercial aspects of pharmacy; he may be a man of decidedly mediocre attainments, albeit with an overwhelming idea of his own importance; he may display singularly bad taste in haranguing the members upon trivial subjects; in brief he may be such a man as to cut a highly ridiculous figure before those who are in position to compare him with illustrious predecessors. This, however, will not serve either to deter him from aspiring to the office or, what is far worse, to keep him from being elected. And in admiring the cheap tinsel of his newfound glory he forgets—if he ever knew—that an office which is bestowed as an honor becomes a badge of shame if obtained by self-seeking, political methods.

Who will write such an editorial? American drug journalism has a score of men with the ability and the knowledge to present the facts so that every word will sting like a whiplash. I hope that some of them will undertake it. It needs to be done. The mere suspicion of seeking a high office is in some secret orders sufficient to defeat the candidate's aspirations, no matter how well qualified he may be. A. Ph. A. members should at least see to it that the smirking self-advertiser with an awe-inspiring array of other disqualifications be kept in the background and given no opportunity to bring ridicule upon the most influential body of pharmacists in the world.

CONSERVATIVE.

Real Knowledge.

Every man has two educations—that which is given to him, and the other that which he gives to himself. Of the two kinds, the latter is by far the most valuable. Indeed, all that is most worthy in a man, he must work out and conquer for himself. It is this that constitutes our real and best nourishment. What we are merely taught, seldom nourishes the mind like that which we teach ourselves.—Stray Thought.

SHOP TALK

ON CROWDING AND ITS REMEDIES.

"The drug business is too crowded," remarked the druggist with a sigh.

"You have discovered it, too, have you?" said the C. P. "It must be quite unendurable. Even Mr. Wooten admits that that is far more serious than price-cutting and at the Boston meeting they passed resolutions about it."

"It's no joking matter, I can tell you. About one per cent. real pharmacy, and ninety-nine per cent. push, squeeze and gouge! The result is plain enough."

"Trading stamps?"

"And cutting, substitution—everything disreputable!"

"All professions are crowded now. Even the preachers are beginning to feel the pinch."

"But in the retail drug business it is different. You know yourself that it is not as prosperous as it ought to be in comparison with other lines of trade."

"Contraction of field, or too many sheep?"

"Both, I think. They keep changing the fences all the time, so that it is hard to tell."

"I see what you mean—doctors dispense, manufacturers encroach, and now, I believe, almost every grocer is also a manufacturer."

"I don't believe people use as much medicine as they used to either. The doctors are to blame for that, too. They go in for diet now, and massage; formerly they ordered a big black bottle full of stuff for everything, from chilblains to bow-legs. I heard of a case at a summer resort the other day; woman afflicted with a pain—the doctor said: 'Rub with lard; twenty-five dollars, please.' What is going to become of us?"

"Cut off the supply or weed out," said the sage.

"You don't want to cut off the supply, you know. That would be bad for the colleges; besides, we haven't enough clerks now."

"Then the only thing left is to weed out. How many druggists—no, I mean drug stores—do you think this country could safely spare?"

"Do you mean limiting the thing to legitimate pharmacy?"

"Yes, the legit."

"Oh, I should say about twenty or thirty thousand."

"But—that wouldn't do, you know. Folks would have to travel too far for medicine."

"Some people in this city might have to walk as much as three or four blocks."

"But are you sure that such a perfectly wholesale massage would be necessary? I was in hopes of saving at least a few of my friends."

"According to Mr. Wooten, there are in this country 1,000 inhabitants to one drug store, while in the European states, where the number is limited by law, there are from six to ten thousand. Taking an average of eight thousand, this country of eighty million would need only ten thousand drug stores, and now there are something more than four times as many as that. Besides, if we are going to be really comfortable a still greater reduction will be necessary. The European apothecary is complaining about it, you know, as we are."

"You will have to give that up. It can't be done."

"Oh, come not! But you see that's the situation."

"There is something wrong in your figuring somewhat, and I see that thoroughly. You say they are complaining about there, too, and here where we have the most serious trouble with the business, there is lots of prosperity. Do you read about that Michigan drug-

gist who owns a yacht complete with crew and all? In some of the New England towns, the only man rich enough to own an automobile is the druggist. Please explain that!"

"They don't make it on pure drugs."

"Ah, they jump over the fence—Side-lines?"

"I suppose so. Pharmacy is too limited a field for them."

"Then why don't the rest of you get over the fence, too? That seems to be a much better way out of it, than choking off so many fine fellows."

"We all do that more or less, but we are not all equally successful at it. A reduction would be much more satisfactory—and comfortable."

"Provided that you were not wiped off the planet in the shuffle."

"There are a lot of druggists who 'never would be missed.'"

"By the people or by their brethren in the trade? Do you mean the worthies who live in the bottom of deep rutts?"

"Oh, no! They are harmless. Nobody objects to them. It's the fellow who makes all the trouble, who keeps pushing and shoving on general principles, the cutter. We would all like to forget about him."

"And he is precisely the one who refuses to get settled in a rut where you could comfortably ignore him. He takes the rutts cross-wise, breaks down the walls and makes the rest of you get out of your favorite grooves as well. He browses in other fields, doesn't he?"

"He sells side-lines, so that he can cut on drugs."

"Or cuts on drugs, so that he can sell side-lines? Which is it?"

"I give it up," said the druggist. "It's mighty uncomfortable, anyway."

The sage shook his head. "It's a hard problem. I'm afraid we'll have to give the whole thing up. About the only thing to do is to make pharmacy less attractive, so that fewer will want to come in. If you could only make it so unattractive that the cutters would get out—"

"Unattractive! About the only one who finds it attractive is the cutter. What is there inviting about it now?"

"Then, why do they keep crowding in? If the grazing is better in other fields why don't they go there?"

MR. SEXTON OF NEW JERSEY PUZZLES HIS PATRONS.

People in Perth Amboy, N. J., are not quite, but almost, standing around awaiting their turn to get into the drug store of Clarence A. Sexton of that city. It is a new line of advertising that Mr. Sexton has hit upon, and he is working it for all there is in it.

His medium is a newspaper. Every day, on the first page, he has a third of a column, "Sexton's Puzzle," the heading reads. Below there is an outline comic picture—changing every day as wide as the column and three inches long. These pictures run in series. For instance, there is the girl series:

"This picture represents the name of a girl. Can you guess it? The solution to yesterday's puzzle was 'Bridget,'" the text informs us. "The winner of yesterday's prize was H. O. Bishop, 87 Reector street, Perth Amboy," we are further informed. "Grand prize offer. The prize for the day will be a tooth brush and a bottle of tooth powder. Don't forget to bring in your solution at once, as the first correct one received at our store gets the prize. Conditions: Each answer must be enclosed in a sealed envelope addressed to Puzzle Department, Sexton's Drug

Store. Name and address of person handing in solution must be written plainly on slip of paper and enclosed in envelope. Do not write your name or address on outside of envelope. The time received will be marked on outside of envelope by clerk in charge of our puzzle department, and the person handing in the first solution received will be awarded the prize. Name of the winner will be announced in the 'News' on day following publication of puzzle."

The puzzles are not so easy to solve at that. It will be seen that Mr. Sexton asks that the answers be handed in, not mailed. He varies monotony by offering a different prize every day.

ROCHESTER DRUGGIST SELLS THINGS THAT "GO."

"See that man with whom I talked so long?" asked an East Side druggist the other day. "He is a drummer, and represents a New York toy house. He gets here about a month ahead of the other toy salesmen and gets the first whack at the Christmas trade. I gave him an order of over \$1,500. The goods will be delivered by December 1, and from that date on my drug business will, in effect, be but a side issue. This will be a greater year than ever for automatic toys, and some of them will possess much genius. I have ordered 1,000 automobiles alone. These will sell for from 25 cents to \$1 each, and are wound up. I did not invest in the ones containing little electric batteries. Picture books and dolls will be as staple as ever, also cheaper than I ever before bought them. For Christmas, boys want something that will 'go.' In other words, they want something that represents action. There is hardly a drug store in this section of the city that doesn't sell Christmas presents, and the trade of the big department stores does not seem to injure our business in the least, as long as we stay within the limits of price. I am generally sold out by Christmas eve."

AN EARLY NEW ENGLAND INSTITUTION.

In the window of the Waterbury, Conn., drug store conducted by N. A. Upham, there is an ancient spinning wheel that is attracting considerable attention from passers-by. It is over one hundred years old and its particular novelty lies in the fact that it has but one wheel, while most of them have two. Instead of being run by foot power, as is the usual case, this one is being run by electricity, thus representing a combination of the ancient and modern in a curious manner. Attached to the wheel is a quantity of flax, quite as old as the wheel itself. The wheel was the property of Mr. Upham's great-grandmother, who lived to the age of ninety-three years, and who died about ten years ago.

HE REFUNDS THEM A DAY'S RECEIPTS.

A startling innovation in an advertising way has been put into effect in an up-town Philadelphia store. Checks are given out with every purchase, the ordinary cash register slips with date being used, and an announcement being made that at the beginning of the ensuing month a day's receipts will be returned to the parties holding slips for that day. The selected day being announced, on presentation of the vouchers, the proprietor hands back the cash value of each, to the holder. The first few months there were but few presented for redemption. Lately, however, it seems as if every check on that particular day has turned up.

WHERE WE BUY TO GIVE AWAY.

A "gift" department is the latest thing in the drug line. That is the name of the crockery and china addition that Hull's drug store, New Haven, Conn., has recently opened. According to the manager, the annex differs from a china or crockery store in that it only carries odd pieces of china and crockery intended for whist prizes or other small gifts. No sets of anything are in the stock, only the odd gift pieces from which the place derives its name.

D. J. REESE, Philadelphia, Pa.,
Secretary Philadelphia R. D. A.

(Concluded from page 317, September 24.)

MINT.

Its Early History and Modern Commercial Development.

By A. M. TODD.

COMMERCIAL HISTORY.

The commercial industry began at Mitcham, in Surrey, England, about the year 17550, where at that time only a few acres of ground were devoted to medicinal plants. Fifty years later the area under cultivation was about one hundred acres; but the growers having as yet erected no distilleries, the plants were still carried to London for distillation. The industry in England reached its maximum just a century after its inception, the area under cultivation being about five hundred acres, after which it began rapidly to decline owing to American competition, being reduced during the next fifteen years to about two hundred and fifty acres. When visiting the English peppermint fields, I found the plants less robust and thrifty than in America, which is in part due to our more fertile soil and improved appliances for cultivation and distillation.

The industry in America may be said to have been started in 1816 by Mr. Burnet who, collected a quantity of plants on the shore of a stream in Wayne county, State of New York, and distilled therefrom about forty pounds of oil. From this small beginning the industry developed, until Wayne county, New York, soon became the chief peppermint producing section of the world, and was for many years famous for the quality of its product. In the year 1835 the first peppermint was planted in Michigan in St. Joseph county on White Pigeon prairie, the first distillery being erected the following year. The distilleries first built in Michigan resembled those of Wayne county, which in turn resembled those of England; the essential features being a copper still into which the plants were placed immersed in water, under which a fire was directly built, the escaping steam being condensed in a crudely constructed worm or condenser. Many years ago the production of peppermint oil in Wayne

P. W. VAUGHAN, Durham, N. C.
Secretary North Carolina Pharmaceutical Association.

county, New York, was in some years as great as 50,000 pounds, but owing to the more favorable soil found in Michigan and improvements in distilleries and methods the production has been reduced to about 5,000 pounds. Peppermint was also cultivated for some years in Ohio and some Southern states, but in all these states it has been for some years abandoned.

In the year 1846 a radical improvement in the form of distillery was effected in Michigan by substituting for the "copper kettle still" large wooden vats with steam-tight covers operating upon hinges, allowing them to be opened and closed at pleasure. A short distance above the solid bottom of the vat was placed a perforated removable bottom upon which the dried plants were closely packed, after which the cover was closed down, distillation being effected by the ingress of steam under the perforated bottom, by means of a pipe with valves connected with a steam generating boiler placed some distance away. Two of these vats were placed in each distillery. With this improvement it was possible to keep continuous fires in the furnace, also to allow distillation to progress constantly and uniformly since the ingress of steam is regulated by valves and pressure gauges. Under the new system the yield of a single distillery increased from fifteen pounds to about fifty or seventy pounds of oil per day, also producing a higher quality, since the danger of forming empyretic products by direct contact with the fire was overcome. The size of the vats has gradually increased and in the four nearest distilleries each distillery has four vats with a capacity of about four thousand pounds per vat for each large. Properly sized steam generating boilers are necessary and required and cranes have been introduced for handling the plants. The distilled charges are spread on the ground to dry, afterwards being removed to barns to be fed to horses and cattle. Improved rubber mangles, covered with non-corrosive metal are used. When the weather is favorable and the plants are well covered with leaves and blossoms, over one thousand pounds of oil per day are occasionally obtained by a single distillery.

Soil

Peppermint is now generally grown on land which originally has formed the bed of an old lake. The soil is rich in carbon and is usually

whose gradual decay during many centuries formed a rich black soil of decomposed vegetation. After the subsidence of the waters, trees of various kinds sprung up so that the lake bed often became a forest. Additional soil was formed year by year by the falling leaves and decaying trees until a thickness sometimes of over twenty feet of soil was accumulated.

This soil is usually jet black and extremely rich and fertile. Lying relatively low, it is necessary to thoroughly drain it which involves much expense. Owing to the soft and yielding nature of this soil it is usually impossible for horses to work upon it during the spring months or after excessive rains, unless they are provided with "mud shoes," which consist of pieces of wood about one inch in thickness, nine inches wide and eleven inches long, fastened by clamps under the ordinary metal shoes. In the spring the water is scarcely one foot below the surface of the soil, and in the driest months it seldom recedes more than four feet below the surface. In America this soil is frequently known as "muck." It is rich in carbon and can be converted into compressed fuel briquettes. This new use is now attracting wide interest in America.

Planting and Cultivation.

The ground, having been made ready by plowing the preceding year, is harrowed early in the spring to reduce it to a mellow state, being then marked with furrows about three feet apart. Workmen carry in sacks slung over their shoulders a quantity of the root stalks, which have been produced from the planting of the preceding year. These are about one-fourth inch in diameter and from one to three feet in length when in healthy state. They are placed lengthwise in the furrow by the workmen, who cover them with earth by a movement of their feet as they walk astride the row. An experienced workman can plant from one-half to one acre per day, according to condition of soil, roots, etc. With unfavorable conditions a smaller quantity is planted. With good weather the plants commence to appear above the ground within two weeks, but new plants continue to form for several weeks later.

Cultivating with horses begins within a few weeks after planting, for which purpose cultivators are used having many fine teeth. These are immediately followed by men with hoes, who remove the weeds and grass which the cultivators have left. This process is continued until the plants have become so large as to render cultivation unnecessary, which usually occurs in July, at which time fresh root stalks have commenced to be thrown out, which during August and September will entirely cover the ground. The crop thus grown for the first time is known as "new mint." In the meantime the fields, which were planted the preceding year, have thrown up a "second" crop, or "old" mint without replanting and being earlier in the ground mature sooner than does the "new." Harvesting begins when the plants have approached maturity, which is indicated by the appearance of long purple blossoms at the extremities of the stems, the leaves being well charged with oil and those nearest the base of the parent stalk beginning to turn yellow and drop to the ground. It is at this season that the plants produce the highest quality of oil.

Harvesting and Distillation.

To prepare for distillation the plants are mowed and allowed to dry in the sun a little less than day is usually dried, it being desirable that as much curing shall be done as may be effected without the loss of the leaves and blossoms in handling. Distillation is conducted with much greater rapidity and a better quality of oil results when the plants are well dried, but if too dry a serious loss of oil occurs by abrasion. It was long supposed that a loss occurred by distillation in the atmosphere through drying, on which account many growers dry the plants to the distillery in the green state, in which condition it requires fully twice the time for the extraction of the oil besides

much additional expense in handling the extra weight. The longer steaming also injures the quality, by depositing resin in the oil, extracted from the stems. It is found that the drying of the plants produces a physical condition of the leaves which causes the oil cells to be easily ruptured by the steam, and distillation more quickly accomplished. It is of extreme importance that the entire crop should be distilled as quickly as possible after maturity.

To determine this question, I made a careful experiment many years ago as follows: Equal areas of ground and equal quantities in weight of plants growing side by side were cut down at the same hour near mid-day, when the plants contained no abnormal moisture. Half the plants were immediately distilled. The other half were dried in the shade for six months, losing 49.4 per cent. in weight. It was found that no loss whatever of oil occurred by excessive drying, as the oil is held in microscopic cells which nature has thoroughly sealed.

The plants having been properly dried are drawn to the stillery and are placed at once in the distilling vats already mentioned. If well dried—and a sufficient supply of steam is passed through them, distillation may be effected in from thirty to forty minutes, but in the case of undried plants or those upon which cold rains have fallen, two hours is frequently required. Steam is admitted at the bottom of the vats, the constant pressure forcing it upward through the plants. The heat expands and ruptures the oil cells and the oil being thus carried away with the steam, passes through the condensers, flowing thence into a receiver where separation occurs by gravity. Harvesting and distillation are effected in America during August and September.

In the very comprehensive and valuable work on Volatile Oils, by Drs. E. Gildemeister and Fr. Hoffman, may be found a number of illustrations representing scenes in peppermint harvesting, etc., as well as much interesting data regarding the industry.

The yield of essential oils varies greatly. With plants well supplied with leaves and blossoms and under favorable conditions of weather I have obtained nine to ten pounds of oil from one thousand pounds of plants; but with unfavorable conditions, less than one pound. The year 1902 having been exceedingly unfavorable, the yield of oil was the smallest for many years.

A fair estimate of the average annual production and consumption of American peppermint oil may be placed at two hundred thousand pounds per annum, although it is estimated by some at a higher figure. It is certain that the amount sold as oil peppermint is much greater than the quantity named, being increased by adulteration. Owing to the reduced crop of the past year, adulteration has prevailed recently to an alarming degree. Mr. E. J. Parry, B. Sc., F.I.C., in a report published in the *Chemist and Druggist*, London, December 6, 1902, gives the tests of ten samples, all represented as pure, but none of which were pure; and the extreme adulteration in most of the samples is readily seen by the specific gravities and optical rotation data given. Some are sold under spurious labels with fictitious names of persons claimed as distillers to hide the identity of the adulterators. Measures have been inaugurated for disseminating information regarding quality, tests, etc., which it is hoped will result in materially checking adulteration hereafter.

Peppermint in the pure state is highly agreeable and beneficial, and its consumption during the past twenty years has doubled, owing to new uses which have been found, and an increased use for those purposes to which it had already been applied. It is estimated that about forty million pounds of peppermint plants are produced annually in Michigan, within a radius of seventy five miles from Kalamazoo, yielding on the average about two hundred thousand pounds essential oil. About one-half of this is consumed in America, the remainder being exported chiefly to Europe.

ADVERTISING THE RETAIL DRUGGIST.*

By R. W. VICKERS, Murfreesboro, Tenn.

B EING a firm believer in advertising it is my opinion that all carefully and well-placed advertising does pay. But as to what are the best methods that can be adopted it is difficult for one man to say, as methods that are beneficial and best for some men would not be so suited to one differently situated.

But there are methods that apply with equal force to all, regardless of who or how situated. And the ideas that I shall try to advance have been gained from a rather diversified experience, and most of which can well be adopted by either the city or town druggist.

I consider the obtaining and retaining of the confidence of the public as being the most far reaching and enduring advertisement. For with this confidence comes the high professional regard and favorable comment from the people, without which no druggist can best succeed. Hence I would place paramount the reputation of my store for reliability and fair dealing. I would never forget pleasantness and politeness to all customers, and I would have this practiced by proprietors as well as by clerks. I know a house that has this motto:—"Our effort is to have the goods when they are called for, and our desire is to give absolute satisfaction to every customer." I consider this a very good motto, and one that if well lived up to will prove a wonderfully good advertisement.

Watch carefully your stock and want book, and teach your customers to know that when they want anything in your line you can furnish it. Remember that the reputation of always having the goods is worth more than the cost of getting said reputation.

Keep your stock and show cases clean and well arranged, and spend considerable time and some money on general appearances. This makes an impression on every customer that causes them to like to come back, as well as to speak pleasantly of your store.

Remember that the condition of your show windows is a very good index to your methods of business, and a well kept show window is a cheap and profitable method of advertising. Adopt a business policy, and adhere to it as strictly as practicable, and try to conduct everything in the store in a manner that will elicit favorable comment from all customers.

Always give your customers what they call for, unless they ask your suggestion. In this case always give that which is most to your interest, and none the more to their detriment, and always with the assurance that you propose to make them satisfied with their purchase. But these remarks apply to that part of advertising that must be done within the store, and we should not forget that outside of the store lies the field from which we are to reap our success or failure, and remember that advertising is to the merchant what plowing is to the farmer. I would as soon believe that a farmer could plant his crop of corn and harvest an abundant yield without plowing it, as to believe that a merchant could conduct as successful a business without advertising as with it.

I would run an advertisement regularly in one or more newspapers, and not repeat the same reading matter more than four times in succession. In these advertisements I would make a plain statement of facts, naming a large number of articles carried in stock, assuring the public that you will make good anything sold from your store that proves otherwise, and that their patronage will be appreciated. I would never try to convey the idea that we are the cheapest but only reliable house in town, that all who trade at any other store do so at the risk of being defrauded, and possibly of losing their lives. And I would never begin an advertisement in flaming head lines with such startling announcement as "Fire,"

*First Prize Paper Read before the Tennessee State Druggists' Association, 1902.

Monday, "Mother," "Mother dead," etc., etc. I would have printed a number of neat cards say "Mother's name" in size. These I would put behind pictures of mother and hang them in all the houses. Cards for "Mother's Tablets" and other medicine plates, and they make a very neat appearance. I have met with no objection from toll-gate keepers and residents about the pikes to putting them in conspicuous place, where they will be cared for and I use them several miles out of town. I also believe that we get value received for board signs put in proper places. And the mailing list carefully and frequently worked I consider one of the cheapest and best methods of advertising.

I would also suggest the keeping on hand of a supply of booklets, blotters, picture cards, circulars, free samples, etc., either that you have printed yourself or that will be furnished by the numerous advertisers, and when a package goes out of the house enclose one of these. And when sending packages out of town by the porter give him a number of them and have them left at residences, to be never sort to the ringing of door bells. And once or twice a week I would place some in every buggy and wagon around town.

With strict attention to business, a careful study of the best methods of advertising, and a persistent application of these methods, I consider success very well assured.

Sermonette on Cheerfulness.

Look, stimulatives, medicines! There is nothing in all the pharmacopoeia half so inspiring as a cheerful temper. Do not fancy yourself a victim. Do not go through the world with a face half a yard long. Do not persuade yourself that everything happens wrong. You are the only person that is wrong, when you say that this is a world of trial and trouble. It is a great deal better to be without an arm, or a leg, than to lack cheerfulness. What if the globe does not roll round in the precise direction you want it to? Make the best of it. Put a pleasant face on the matter, and do not go about throwing cold water on the firesides of all the rest of mankind. If you are in want of an example, look at the birds, or the very sunshine on the grass. Show us one grumbler in all nature's wide domains. The man who is habitually cheerful has found the true philosopher's stone. He may be poor and destitute, but he walks clad in armor that all the mines of Golconda cannot purchase. Snow and rain cannot penetrate it, scorn and contumely fall harmless from its surface. The storm that sinks a less courageous craft can only compel him to trim his sails and try again. Who would be a mere thermometer, to rise and fall in direct with every change of life's atmosphere?

Whenever we see a man sighing and despondent about anything and everything, we know that it is his mental health that is out of gear. Cheerfulness is all that he wants. No matter how thick and fast vexations may come, there is nothing like a bright little ray of the soul's sunshine to disperse them. Counted in dollars and cents, your wealth may be a paltry sum, but if you have a cheerful temper you are rich.

Yellow Fever Epidemics.

Fear for the future have been allayed. It may now be predicted that never again in the history of the United States will an epidemic of yellow fever occur. And all of this has been brought about by the discovery that once more a mosquito must be blamed for one of the greatest of human ills—L. O. Howard, in *October Century*.

Modesty is the extreme of pride; it is built on the same base of vanity.

THEORY AND PRACTICE

PURIFICATION OF DRINKING WATER ON THE MARCH.

M. Vauard (Med. modern) presents a method proposed by a French sanitary commission for purifying drinking water for troops on the march. Rapid boiling being out of the question, it is proposed to sterilize the liquid by chemical means. Chlorine in line, employed in Austria and Germany, and bromine, require too much time and too many delicate operations, and the most satisfactory chemical for the purpose is found to be free iodine, which destroys filamentous bacteria in ten minutes. The iodine is applied in the nascent form, being liberated in the water itself, by dissolving a set of compressed tablets prepared for the purpose and forming a part of the equipment of one man in each division. Three packages of tablets are provided, the first colored with methylene blue and containing 1150 grams of a dry mixture of 10 grams of potassium iodide and 1150 grams of sodium iodate; the second red tablets containing each 0.1 gram of tartaric acid; and a third, white tablets containing each 116 grams of sodium hyposulphite. In use a red and a blue tablet are dissolved in the water, and the iodine liberated permitted to act for some minutes; a white tablet is then added, which reduces the excess of iodine and removes all disagreeable taste.

FLUID EXTRACTS FOR MAKING SYRUPS.

The Swiss Pharmacopoeia Commission are considering the advisability of officially sanctioning the use of fluid extracts in preparing syrups, especially those seldom used and subject to rapid deterioration. A referee (Schweiz. Woch.) has prepared twelve of these extract syrups and submitted them to the commission with the following observations upon the conditions required to be fulfilled: All the therapeutically active constituents of the official syrup must be present in the fluid extract in undiminished proportion. The extracts must be completely soluble in water. This condition renders the fluid extracts of the Swiss Pharmacopoeia unavailable for the purpose. The extract must keep well, at least for several months; alcohol and glycerin are the only permissible preservatives. Special fluid extracts which fulfill the conditions may be prepared by concentrating aqueous infusions and adding glycerin, as a preservative, or by percolating with a menstruum containing at most 15 per cent. alcohol, reserving the first percolate and adding glycerin to the weak percolates during concentration.

TO FIND THE MELTING POINT OF FATS, ETC.

Kraemer and Sarthou (Nouv. Rem.) employ a simple method for determining the melting point of fats, waxes, resins, etc. Twenty grams of the substance are melted in a small dish of a size and shape so chosen that the liquid will have a depth of 10 millimetres. An open glass tube 7 or 8 millimetres in diameter is then dipped into the melted liquid, the upper end closed with the finger, and the enclosed liquid withdrawn and allowed to solidify. Five grams of mercury are poured into the open end of the tube upon the solidified cylinder of fat or wax. This is then suspended in a beaker of cold water containing a thermometer so placed that the bulb is beside the cylinder of solidified material. The beaker is placed in a larger one also containing water and serving as a water bath and the whole cautiously heated. The temperature taken at the moment when the column of mercury forces its way through the softening cylinder is the melting point required.

RADIUM EMANATIONS.

Prof. E. Rutherford (Nature) considers the emanations the active principle of radium, about two-thirds of the activity being due to the substances thrown off. He states that a large proportion of the radiations are the direct result of the changes occurring in the minute quantities of matter constituting the emanations. If one C.c. of these emanations could be collected in one spot some remarkable properties would appear. The intense radiations would heat to redness a glass tube containing it, and this very rapid emission of energy would continue for several days without much change and would be appreciable after a month's interval. The rays from it would brilliantly light up an X-ray screen through a foot of solid iron.

NEW ANTITUBERCULOSIS SERUM.

Viguier de Maillane (Nouv. Rem.) has prepared a new serum for the treatment of tuberculosis. Guided by the fact that common fowls are very indifferent to inoculations of human tuberculosis, he prepared a serum having considerable antitoxic power upon tuberculous guinea pigs. The remedy has been tried in six cases of tuberculosis in human beings, giving favorable results in five. The injections are followed by a sensation of heat and pain in the thorax, varying with the nature and extent of the lesions, a diminution of the cough and expectoration and improvement in nutrition.

POLYCHLORAL, A SOLID POLYMER OF CHLORAL.

Dr. Erdmann (Nouv. Rem.) has introduced a solid polymer of chloral possessing intense narcotic properties. In preparing this substance known as polychloral, 100 parts of chloral are treated in the cold with 7 parts of anhydrous aluminum chloride. The product is warmed gently to a temperature not above 40 degrees. After cooling the mass is treated with acidulated water which dissolves all ingredients not polymerized. The resulting white residue is polychloral. It is a stable body volatilizing without fusion, and is insoluble in water, alcohol and acids, and dissolves in sodium carbonate returning to the form of chloral hydrate. It is without taste.

TO DISTINGUISH BETWEEN HEROINE AND MORPHINE.

Goldmann (Report. de Pharm.) proposes a new reaction for distinguishing heroine from morphine. It consists in treating with nitric acid which gives with heroine a yellow color, becoming a bluish green after some hours standing, and immediately upon heating, and finally again yellow. Heroine, which is the di-acetic ether of morphine, does not form a blue color with ferric chloride, due to the etherification of the phenol portion of morphine. Heroine may also be detected by heating with sulphuric acid, which gives rise to the odor of acetic ether.

A MOUNTAIN OF ALUM ROCK.

A writer in the Liverpool Post describes a mountain which is a source of wealth to the natives of the neighborhood, who extract from it annually many tons of alum. The mountain is about 12 miles from the village of Lion Chek, in China, and is about 2,000 feet high and no less than 10 miles in circumference at its base. The alum is obtained by quarrying the rock in large blocks and after roasting, extracting with hot water. The alum crystallizes out and forms a layer in the bottom of the huge vats in which the extraction is carried out, and is later broken up into blocks weighing about 10 pounds each.

Minding one's own business is all very well, but the clerk of to-day, who loses no opportunity of learning something about the other fellow's work, may be the manager of to-morrow.—Spatters.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Sticky Fly-Paper.

(E. A. J.) "Pharmaceutical Formulas" says if any retailer is rash enough to wish to manufacture sticky fly-paper instead of buying it, here is the formula to start from:

- Boiled linseed oil..... 6 ounces
- Gum thus..... 2 ounces
- Castor oil..... 2 ounces

The quantities of the ingredients must vary according to the condition of the linseed oil. It is necessary to have a non-drying oil, such as castor oil, in the composition. Vaseline oil is also good, and a trace of beef-suet is not an objection, because animal matter of any kind helps to draw the flies, especially if it be putrid. A good quality of parchment paper must be used, and the composition spread upon it while hot, with a stiff brush; the paper then folded and the edges turned over, or the composition prevented from exuding by some other means. Several methods for doing this are protected by patent.

In addition to the above formula, we append the following formulas for "sticky preparations," collected and published in one of our German exchanges last year:

- (1)
 - Rosin..... 150 parts
 - Linseed oil..... 50 parts
 - Honey..... 18 parts
 Melt the rosin and oil together, and stir in the honey.
- (2)
 - Rapeseed oil..... 70 parts
 - Rosin..... 50 parts
 Mix and melt together.
- (3)
 - Rosin..... 60 parts
 - Linseed oil..... 38 parts
 - Yellow wax..... 2 parts
 Mix and melt together.
- (4)
 - Rosin..... 10 parts
 - Turpentine..... 5 parts
 - Rapeseed oil..... 5 parts
 - Honey..... 1 part
 As before.
- (5)
 - Oil of sesame..... 5 parts
 - Rosin, dark brown..... 11 parts
 As before.
- (6)
 - Rosin..... 50 parts
 - Castor oil..... 25 parts
 - Honey..... 15 parts
 - Glycerine..... 5 parts
 Mix, as above.
- (7)
 - Turpentine, clear..... 400 parts
 - Rosin..... 135 parts
 - Linseed oil..... 200 parts
 - Castor oil..... 200 parts
 Mix and melt together.

(8) Linseed oil is boiled in an iron vessel until it catches fire. Let it burn until the drops proceeding from it string out into threads. If it is too thick, thin

it with a little turpentine oil. A little yellow wax added to the oil makes it more sticky.

Safety Matches.

(T. R. P.) We cannot give the formula for the particular composition to which you refer. However, we give two formulas taken from a foreign technical journal, but we question the ability of the inexperienced operator to successfully compete, either in price or quality of product, with regular manufacturers making these matches on the large scale.

(1) Dip the splints into a paste composed of potassium chlorate, 6 parts; sulphide of antimony, 2 to 3 parts; glue, weighed dry, 1 part. The paste for the rubbing surface is amorphous phosphorus, 10 parts; oxide of manganese or sulphide of antimony, 8 parts; glue, weighed dry, 3 to 6 parts. The ingredients must be thoroughly mixed and care must be taken not to mix the potassium chlorate in the dry state with the other materials; it should be first mixed with glue dissolved in warm water. The paste for the rubbing surface may be spread with a brush or spatula on the side of the box.

(2) Glue, 1 part; chrome yellow, 2 parts; oxide of iron, 2 parts; peroxide of manganese, 24 parts; hyposulphite of lead, 8 parts; chlorate of potassium, 36 parts. Composition for the box: Hyposulphite of lead, 20 parts; chlorate of potassium, 14 parts; oxide of iron, 7 parts; powdered glass, 8 parts; finest glue, 4 parts; amorphous phosphorus, 24 parts. Glue is dissolved in water and the other substances in powdered form are afterwards mixed with it to the consistency of paint and applied with a brush to the surface of the box.

Many processes for the manufacture of matches have been patented in this and foreign countries. As indicating the direction of the so-called "improvements" in the manufacture of safety matches, we quote from the specifications upon which two patents have been granted in England:

(1) The process claimed is "for substituting entirely the use of amorphous phosphorus in the friction surface used with these matches by means of the compounds of sulphocyanogen of its polymers and isomer."

The paste for the rubbing surface may consist of cyanogen persulphide, 2 parts; persulphocyanic acid, 1 part; potassium xanthate, 0.5 parts; antimony sulphide, 4 parts; gelatin, 1 part.

The heads of the matches are prepared with the following substances: Sulphur, 3 parts; nitronaphthalene, 2 parts; potassium bichromate, 5 parts; potassium chlorate, 50 parts; pulverized glass, 30 parts; gelatin, 10 parts.

In each case the gelatin is dissolved in water and the other ingredients stirred in.

(2) "Improvement in headless matches free from phosphorus, and which are intended to ignite by striking a suitably prepared surface."

The splints in bundles are first dipped in a solution of sodium chlorate, 87.5 parts; gum arabic, 12.5 parts; sulphate of iron, 7.5 parts; and water, 125 parts. After drying they are then dipped in a water proofing solution composed of resin, 25 parts; turpentine, 67.5 parts; oleic acid, 127 parts; and linseed oil, 37.5 parts.

The friction composition for the striking surface on the box consists of amorphous phosphorus, 25 parts; 127 parts; glass powder, 175 parts; water, 25 parts; and gum arabic, 6.25 parts.

Butter Analysis.

(J. N. M.) According to *Chem. Chemist* Wiley of the Bureau of Chemistry, Department of Agriculture, Washington, the common adulterate butter in this country is oleo-margarine and the most common but adulterant neutral lard. In other countries butter sometimes adulterated with cocoa or sesame oil. The methods of analysis by means of which the lard can be identified are described in such works as Wiley's "Principles and Practice of Agricultural Analysis," Vol. III, "Lard and Butter," Food Analysis, Snyder's "Chemistry of Dairying," Loff-

mann's "Analysis of Milk and Milk Products," and other reference manuals. By the use of certain digestive ferments and other bodies, butter may be made to hold an excessive quantity of casein, sugar and water in the form of a somewhat permanent emulsion. This form of adulteration is revealed at once on melting the sample. The detection of adulteration of butter fat by other fats is generally carried out by the determination of the volatile acid, but some other confirmatory processes are occasionally employed.

The composition of commercial butter usually varies within the following limits: Fat, 78 to 94 per cent.; curd, 1 to 3 per cent.; water, 5 to 14 per cent.; salt, 0 to 7 per cent.

The method of sampling butter for analysis adopted by the Association of Official Agricultural Chemists, follows: If large quantities of butter are to be sampled, a butter trier or sampler may be used. The portions drawn, about 500 grams, are to be carefully melted in a closed vessel, at as low a heat as possible, and when melted, the whole is to be shaken violently for some minutes till homogeneous. The mass must be sufficiently solidified to prevent the separation of the water and fat. A portion is then placed in the vessel from which it is to be weighed for analysis, and should nearly or quite fill it. It should be kept in a cold place until analyzed.

Hindoo Ointment.

(T. R. E.) Wyeth's "Handbook of Medical and Surgical References" (1873) gives the following formula under the above title:

Copper sulphate.....	4 drams
Catechu.....	4 ounces
Alum.....	9 drams
White resin.....	1 ounce
Powder and mix with	

Olive oil, q. s., to make ointment.

The author states that this ointment is highly recommended as an application to indolent ulcers.

We are unable to satisfactorily trace the derivation of the title. It is well-known, however, that the species of *Acacia* from which our official catechu is obtained, is a native of the East Indies, growing abundantly in various provinces of Hindostan, and in the Burmese Empire. It may, therefore, be supposed that the Hindoos from the earliest times knew something of the medical properties and uses of catechu, as, indeed, it is said to be used at the present time in India, in ointment form, for the treatment of indolent ulcers. An old formula in our possession gives a formula similar to that quoted above under the title of "unguentum catechu," as follows:

Catechu, finely powdered.....	4 ounces
Yellow resin.....	4 ounces
Alum.....	9 ounces
Olive Oil.....	10 ounces
Water, q. s.	

Mix. Said to be "an excellent application to ulcers in hot climates, when the ordinary fat ointments are found to be objectionable."

Hair Dye That Will Not Stain the Skin.

(J. F. S.) According to Pesse a hair dye which does not blacken the skin may be made as follows: Dissolve in one ounce of solution of potassa as much freshly precipitated oxide of lead as it will take up, and dilute the resulting clear solution with three ounces of distilled water. Care must be taken not to wet the skin unnecessarily with it. This dye is slow in its action. We do not compound the formula, although it is said that plumbism from the use of lead hair dyes is exceedingly rare.

Christina Hair Dye

Pyrogallic acid.....	1 dram
Nitric acid.....	10 minims
Water.....	10 ounces

Mix and dissolve. This preparation is a type of those claimed to be "absolutely harmless and do not tan the skin." Silver nitrate stains on the skin may be removed by potassium cyanide (dangerous) saturated solution of potassium iodide or potassium ferriocyanide.

PRETTY UNANIMOUS.

A Symposium of Opinions on What Practical Experience Should be Required of a Young Man Before He is Granted a License, and What "Practical Experience" is, Proves Pretty One-Sided.

These words were spoken by a prominent New York board of pharmacy man the other day:

"This requiring four years' experience is all bosh! But it is the law—here and nearly everywhere else. And it is criticized, more or less, here and everywhere else, as foolish.

"Why? Because it groups together all minds and all intellects, categorizing them in one class. This, despite the fact that one man is as good in six months, and better, than another could possibly be in six years. But they are equal before the law.

"Again, all proprietors are catalogued in one class by the law. But what a difference! One druggist keeps his junior at work at any old thing, scrubbing floors and washing windows comprising his four years' experience. Another, like a friend of mine in Brooklyn, puts in three hours every day with his junior, behind the counter and prescription case. His relief man, a college student, is obliged to help both himself and the boy by applying his theoretical knowledge. So he teaches the boy how to convert weights and the intricacies of specific gravities. 'They are made more valuable to me,' my friend explains, 'and it is good, very good, for them.'

"There you are: a brainless chap under the preceptorship of an inconsiderate master or stuck in behind the patent medicine counter of a department drug store is given equal privileges with the hustling, brainy, acquisitive youth, tutored by a natural born teacher.

What the Whole Thing Resolves Itself Into.

"The whole thing resolves itself to this: A four years' college course, no two terms beginning in one year, and no 'practical experience' required. Who would oppose such a condition? The public wouldn't. But some of the pharmacists would kick."

He was asked what he calls "practical experience." He replied, promptly:

"I don't know. The law says four years where drugs are dispensed at retail. The man is supposed to be employed at nothing else during the four years. But, we have to let hospital dispensary men take the examination. I do not know that we could prevent a clerk in a wholesale drug house writing, for at all of them some medicines are sold in quantities small enough to be designated as 'at retail.'

"Then, what can we define as four years? Suppose a retailer gives his clerk two or four months' vacation, during which the clerk is not otherwise employed; can the board decide he is not entitled to examination. Suppose even that he is employed in a shoe store days and in a drug store evenings, which is against the law's definition of experience; can we hold him out even then?

"I remember a case of a man who was granted a license by the board, afterward it was found that he had worked in a jewelry store at the same time he acquired his practical drug store experience. It was almost decided to revoke his license, but a lawyer said:

"If you do, I wish you would give me that young man's address; it would make a beautiful case for him and me. Why, I could cite precedents by the week, in law, and medicine, and pedagogy, and science, where the student worked outside as he studied."

A Symposium of Opinions Was Decided Upon.

The Era has heard much talk on lines similar to this. It desired to get the general, universal, pulse on the subject. So it sent out the following letter to a few experienced men whose opinions are only given after clear thought:

As there is much criticism in this and other States of the nearly uniform practice of requiring four years' practical drug experience before granting a license, the main objections being that such a course classes all minds and opportunities alike, we respectfully ask you to write us a few lines, telling us:

What you believe should be required of a young man in the way of or in lieu of practical experience before he is granted a license by a board of pharmacy, and what you call practical experience.

These are some of the replies:

Mr. Patton—"One Supplements the Other."

"The young man who prefers to make pharmacy his life work misses his chance when he fails to get four years' experience as an apprentice in a drug store, just as he loses his opportunity when he neglects a college of pharmacy course. One supplements the other. The quick method of making pharmacists without drug store experience is surely not the best. There ought to be no need of colleges of pharmacy devoting any of their time to commercial instruction; four years' apprenticeship in a drug store usually supplies the need."

JOHN F. PATTON, York, Pa.

Mr. Gayle—"No General Rule Fits."

"I do not see how general rules can be made which do not 'class all minds and opportunities alike.' I do not think the requirement can be dispensed with entirely as to any class of candidates, although it might be wise to admit graduates of pharmacy with less experience than required of those who have had no graduation.

"By 'practical experience' I understand such service as is discharged in a general way in a drug store where prescriptions are regularly compounded."

J. W. GAYLE, Frankfort, Ky.

Mr. Fraser—"Nothing Can Be Substituted."

"My opinion always has been that at least four years' apprenticeship, supplemented by a course in a good college of pharmacy, is the only system of training which will fit a young man for the practice of pharmacy, and that this, properly attested, should be the basis on which to grant him a license.

"His apprenticeship should be passed with a regularly licensed pharmacist, and, if it is impossible for him to attend a college the diploma of which is acceptable to his State board of pharmacy, he should be required to pass a standard examination; after which he should be allowed to practice in any State in the Union.

"I do not think there is anything in the world that can be substituted for a thorough apprenticeship, which, if nothing else, teaches a man how to work—the hardest and most useful thing he has to learn."

HORATIO N. FRASER, New York City.

Mr. Cliffe—"Requirement Should Stand."

"Pennsylvania requires by statute four years' practical experience before a certificate as registered pharmacist can be issued, and there has been no adverse criticism of this requirement, that I am aware of, in this State.

"At the last session of the legislature a measure was supported by the Pennsylvania Pharmaceutical Association that imposed an additional requirement—that each applicant should be a graduate of pharmacy, and on final passage it lacked but twelve votes of the number necessary for enactment. In my opinion it will eventually come.

"Personally, I believe that the requirement as to practical experience should stand as it is, and by that I mean that the time during the four years, not actually spent in attending lectures and laboratory instruction, should be passed in acquiring familiarity with the manual work of the store by being actually employed in one. Nothing can take the place of the store work in giving the man the facility and self-confidence that comes with actual practice, nothing is as well adapted as the college training to give him a clear understanding of the chemical, physical and pharmaceutical principles that control nearly all the work he will be called upon to perform outside of buying and selling."

W. L. CLIFTE, Philadelphia.

Mr. Bodemann—Practical Drug Store Experience Needed.

"Your inquiry is a little bit cloudy, there is no such thing as 'in lieu' of practical experience. A candidate for registration might make 100 in all theoretical branches, yet if he had no practical experience he should not be let loose as a practicing pharmacist. I have not heard of any criticism against the four-year requirement. Most people who start in to learn pharmacy do so when young—and certainly should be allowed to practice until of age. By that time they have had four years' experience. In most European countries it has been the practice for centuries to require a four-year apprenticeship, and custom is, after all, the forerunner and basis of our laws. Without discounting theoretical education in the least, I do believe that a man may be a good reliable druggist without theoretical education, while, on the other hand, I would not allow any one to work behind my counter who had no practical experience, no matter how he may have stood in his theoretical examination.

"What do I call practical experience? Work behind the prescription and sales counter, putting up physicians' prescriptions, household remedies, and selling drugs and chemicals. Of course it goes without saying that selling chewing-gum and jerking soda does not go for practical experience. Washing bottles and cleaning mortars may be ridiculed, but the man who has done that sort of work in his time can tell an apprentice how it should be done, and you cannot learn it in any text book. My answer may be way off the mark, but I answered it as I understood you, though I hardly grasped the full intent of your inquiry."

W. BODEMANN, Chicago.

Mr. Dawson—Wants Four Years' Experience.

"I beg to plead guilty to the charge of being stubborn on the point of a requirement of four years' practical experience before granting a license to practice as a pharmacist. While I was a member of the board of pharmacy, I adhered tenaciously to the notion that a candidate for examination for the grade of licensed pharmacist, should have a practical experience in the practice of pharmacy, of at least four years, and I have always maintained that it was a mistake for a college or school of pharmacy to grant a diploma to any graduate who had not had that amount of practical experience. I will say, briefly, that I believe,

"First.—That a young man should have not less than four years' practical experience in the practice of pharmacy, before he is admitted to an examination by a board of pharmacy.

"Second.—That practical experience should mean the manufacturing of the preparations of the U. S. P., and other pharmaceutical preparations, and the compounding and dispensing of physicians' prescriptions.

"Third.—That a young man should not be granted a diploma as a Ph. G., by a college or school of pharmacy, until he has had such practical experience."

E. S. DAWSON, JR., Syracuse, N. Y.

Mr. Frailey—Class Legislation Unconstitutional.

"The question of qualification for license to practice pharmacy is one of greater importance to-day than ever. The time requirement of four years is, in my opinion, none too great. The security of good, reliable, qualified licentiates might help bias one's opinion on this question, especially when one was badly in need of help which was unobtainable in court.

"In deciding the question, one should not lose sight of the fact that the license to practice pharmacy includes the right to dispense poisons and compound prescriptions.

"The proper exercise of these privileges requires not only a rudimentary but almost an expert knowledge of chemistry, botany, materia medica, toxicology, etc., and, what is of equal importance, a confidence in one's ability to compound and manipulate. This confidence comes

only with years of practical work behind the counter or in a large laboratory.

"A safe pharmacist should have a confidence that is stability itself, and then only be qualified for receiving a license. With stability he is more safe from confusion and liability to err. In common parlance, he is not so likely to become 'rattled'.

"While ready to admit the modern advantages of acquiring more knowledge in less time than was possible years ago, the modern requirements of pharmacy are correspondingly greater, the preparations, both galenic and chemical, are multiplied, and the immitage of words to describe new discoveries is so nearly exhausted that words describing one preparation vary so closely on words describing other preparations differing greatly in character, that it takes an expert to distinguish between the two.

"It is impossible for any but a phenomenal intellect to grasp all this in a less time than four years, and, as class legislation is unconstitutional, the law should be made to govern a fair average.

"Expert knowledge based on theory only is not stable in practical dispensing and is not to be depended on where human life is at stake. Therefore, the four years' practical experience should be actual practice in a retail pharmacy under the guidance and direction of an expert and qualified graduate of a college of pharmacy."

WM. O. FRAILEY, Lancaster, Pa.

Mr. Lignell—Depends on What You Want.

"Depends on what you want, a drug clerk, or a prescription pharmacist.

"If you want a prescription clerk, the practical experience does not count so very much, if the man in lieu of that has a good education, say high school, and term in college of pharmacy.

"If you want an all around drug clerk, he must have practical experience, otherwise he would be rather an expensive ornament around a drug store.

"Twenty-five or fifty years hence, when the drug business has evolved itself into two classes, prescription pharmacists and drug stores, then the practiceless college pharmacist will be possible; not now, except in a very few cases.

"But as long as we continue the present mode of running a combination pharmacy and department store, he is impossible, the only exception being the very large city stores that can afford exclusive prescription men."

"The drug business of today is too intensely practical, and is conducted on too small a scale to allow scientific training to be counted as the only requirement. The old countries have met this question long ago, and they all require practical experience and longer than ours. To my mind, this attempt sounds like retrogression of pharmacy—attempting to shorten requirements when all other professions are lengthening theirs.

"Imagine yourself a young man just out from college, with a State license and a fond papa who is willing to put up the cash, opening a drug store in Jonesville, where you would get, maybe, a prescription or two a day—what would you know of trade requirements, about buying goods, displaying them, advertising, store arrangements, to say nothing of salesmanship?

"In lieu of practical experience then you would have to add to the college curriculum: a course of salesmanship, course of window dressing, course of bookkeeping, course of advertising, course of store decoration, and, to properly equip the men we expect to start in small towns where they could not afford clerks, a course of window washing, floor mopping and bottle cleaning.

The professors of these courses would have queer sounding titles, I am afraid.

"Thus we would read in the future college announcement, after the usual pharmaceutical professorships: 'The Hon. Mary Malony, P. M. S. & C.' (G. E., past master scrubbing and cleaning); 'The Hon. George Washington, W. & S. C.' (master window and showcase cleaning).

"All these courses would, of course, extend the college term to say four or five years, but then the future professional pharmacist would not have to descend to the level of an errand boy, to learn the professional talk of the business, but could emerge chrysalis-like, from the professional cocoon, a learned student of pharmacy and kindred subjects, equally fit to practise surgery as a physician would be to practise surgery who had never seen a "stiff", a dentist who had never seen the inside of a person's mouth, or an agricultural student, who had never seen a farm.

P. A. LIGNELL, Superior, Wis.

There can be only one inference drawn from these replies—that four years' drug store work constitutes the popular idea of what practical experience should consist of.

NEWS DEPARTMENT.

N. A. R. D. NOTES.

President Roosevelt Will Receive N. A. R. D. Delegates.

National Headquarters has been advised through E. E. Pritchard, the hustling secretary of the Western Pennsylvania Association, that President Roosevelt has designated Tuesday, October 6, at 12 o'clock, as the time he will be pleased to receive at the White House a delegation from the N. A. R. D. convention.

The President has been interested in the N. A. R. D.'s fight for a revision of the patent laws and has consented to have the matter presented to him by an authorized committee from the retail trade. A formal statement setting forth the reasons why druggists believe the laws should be changed will be read by the chairman of the delegation and the President given such other information as he may require to reach an intelligent conclusion.

The arrangements to receive the committee were made through the President's secretary, Mr. Loeb, by Mr. Pritchard.

Proprietors and Newspaper Advertising.

The announcement in last week's Notes relative to the stand taken by the leading proprietors with the San Francisco newspapers, resulting in excluding from the columns of these publications all cut-rate advertising, furnishes a striking object lesson in what proprietors can do along this line in other cities.

Without any expense except a few postage stamps, the proprietors have silenced the guns of the cut-raters in Frisco, and without the newspaper publicity they thrive on the public will soon forget that the cutters exist, and they will in fact cease to be factors in the retail drug situation. This means that the ability of the expert substituter to displace standard proprietaries by eloquently championed substitutes in the Golden Gate city has been greatly minimized, and that for the outlay in cash and nervous energy required of the proprietors the proposition under consideration will prove the best investment he ever made.

This being the case, why should not proprietors see to it that the Cincinnati, Philadelphia, Kansas City and other newspapers choose between their patronage and that of the cutter—making it plain to the publishers that they cannot have both? What is good and beneficial for proprietors in San Francisco will be equally promotive of their best interests in other cities. They have the power to control this matter—let them use it.

In this connection Notes desires to urge upon retailers the duty of writing each manufacturer whose advertising appears in newspapers that carry advertisements in which their preparations are offered at cut rates. Scan carefully the newspapers you read and when you come across this combination—a manufacturer's ad, or reading notices booming his preparations, together with the ad, of a cut-rate store offering the same preparations at a ruinously low price—it is meet and proper that you should put him "next" to the situation and ask him to do what he can to protect his own interests and that of his real friends—you and other legitimate dealers.

The proprietors have made a noble start in the direction of restricting their advertising to newspapers that will not lend themselves to a furtherance of the cut-rate and substitution evil. Some of the more advanced and wide-awake proprietors have gone so far

as to incorporate in their contracts the proviso that binds the publisher not to allow the advertiser's goods to be advertised in the publication at cut prices. The situation will not be ideal until all proprietors put the anti-cut price proviso in their contracts and insist upon its acceptance by all publishers with whom they have business relations.

Personal Work and the N. A. R. D. Price Schedule.

A Minnesota retailer writes National Headquarters that a store in his town was recently taken over by the bondsman of the man who established it. The bondsman at once commenced cutting on most all articles except proprietaries.

Before taking steps to meet the cut the case was submitted to National Headquarters, and the competing retailers were advised not to meet the cut until other and less aggressive means had been tried and proven unsuccessful. The following is from the National Secretary's letter:

"It seems to me you would be doing yourself a great injustice to meet the prices of the bondsman of your druggist competitor, who has presumably failed. The best possible thing to do would be to call on this bondsman and have a friendly talk with him on the subject of prices.

"There is no reason why he should jeopardize his own interests and those of his fellow creditors, and I am confident if you can meet him through some mutual friend he will see it is to his advantage to confine his prices to those customary in your town. In a matter of this kind nothing will take the place of personal work, and I desire to urge upon you that you make the most of your opportunities to bring about favorable action without friction.

"As you doubtless know, the N. A. R. D. publishes a price schedule, sample copies of which can be obtained for 10 cents. It is believed that with a copy of this schedule you can agree with your competitor upon prices mutually satisfactory, thereby making him more money as well as yourself."

The price schedule was sent for, and as nothing further has been heard regarding cut prices on bulk goods in that town, it is to be presumed that the plan suggested from National Headquarters has worked out satisfactory results.

Schaefer on the Miles Contract.

Schaefer, Omaha's cut-rate druggist, advertises Peruna at 67 cents, Pierce's \$1 goods at 68 cents, Laxative Bromo Quinine at 15 cents, Doan's Kidney Pills at 39 cents, Cuticura Salve at 39 cents, and other preparations at corresponding prices, and in the same ad, "rises to explain"—metaphorically, of course—why he can't pare prices on the Miles goods. The explanation follows:

"There seems to be some little misunderstanding as to the reason for the advance in the price of the several patent medicines made by the Dr. Miles Medicine Co. Some druggists have seen fit to explain this by claiming that 'all Miles' Medicine which were offered at cut prices were either old or spurious'; others have said there had been a trust formed, this being the nucleus of a clever scheme to abolish the cut price feature of the drug business. Here are the facts: The Dr. Miles Medical Co. have seen fit to number, consecutively, every package of goods which they send out, and they insist on the full price being asked for same by anyone offer-

ROBERT E. SERVICE.

President New York Pharmaceutical Travelers' Auxiliary Association and Representative for Lazell, Bailey & Co.

ing them for sale. And they refuse (as do jobbers who handle their products) to sell their goods to anyone who cuts the price. The number on the package is used to trace the sale. We bought a quantity of their goods before this scheme took effect and sold those goods at our price, but since we have had to buy numbered goods we have had to sell them at their price. That's their business."

Schaefer is right. It's their business, and all the N. A. R. D. asks of proprietors is to attend to this feature of their business as they ought. It is at this point the proprietor's and retailer's interests meet and are identical.

COMMERCIAL TRAVELERS

Mr. Haints is Married—Mr. Peck Tells of an Odd Coincidence—Mr. Hambrook's Sad Death.

Recent visitors to Boston were Dr. G. W. Lucea, treasurer of the New York State Commercial Travelers' Auxiliary Association, representing Bristol, Myers & Co., and Wayne A. Raymond, representing Deutsch Bros., New York.

Alonzo Lilly, Jr., son of Alonzo Lilly, a partner in the former retail pharmacy of Lilly, Rogers & Co., is in Baltimore on a visit from Denver, where he represents a drug company. Mr. Lilly was formerly connected with the Nelson Remedy Co. of Baltimore, but was obliged to sever his connection and go West on account of his health, which had become very precarious. Since his sojourn in the Rocky Mountain State, he seems to have recovered all of his old-time vigor. It is his intention to stay in the West.

W. E. Fuller is up from Massachusetts and Rhode Island, where he ably represents Lehn & Fink, on a short trip for rest. The firm named will now have the variable services in Kentucky, Indiana and Michigan of Warren M. Waters, formerly Kentucky man for the Upjohn Co. Clarence M. Rogers, well known in New England, is another acquisition, and will try his hand at trade booming in New Hampshire, Maine and Eastern Massachusetts.

H. L. Haints of Rochester, N. Y., Western representative of J. Hungerford Smith, was married in Kansas City, to Miss Elhn Stollenberger. The Kansas City crowd didn't do a thing to "Haints'" ears.

W. L. Handley, druggist of Lowell, Ind., has gone on the road for Peter Van Schaack & Sons, Chicago, in Northern Indiana, succeeding E. N. Wexberg, who has been transferred to an inside position.

A. W. Peck, one of the salesmen who make Northern Michigan for the Hazeltine & Perkins Drug Co., tells of a striking coincidence. While walking up town from the depot at Petoskey, on September 17, with three other traveling men, he casually remarked, "Well, boys, this is my birthday." From this the fact was developed that the birthdays of the quartet were September 15, 16, 17 and 18, or in the "four in a row" order, and it was everybody's treat. Mr. Peck!

Dr. J. H. Hirz of Philadelphia, the widely known representative of the Kenney & Mattison Co., will in the future make his headquarters in Milwaukee, to which city he has been transferred.

Fraught with sadness was the death at Portland, Ore., of W. B. Hambrook. It marked the inglorious end of a career which promised much. Hambrook had been a highly respected traveling salesman, first in California, and later in Oregon and Washington. When he moved to Oregon, he was given a position of trust with a drug firm, but soon fell out with his employer, who accused him of burglary. He fled North, but was captured and brought back. On the afternoon of September 21, as he was being brought to Portland, he endeavored to escape from the sheriff, jumped from the window of the train as it was pulling into the station, struck upon his head, and was instantly killed.

THE LATIN GRAMMAR OF PHARMACY and Medicine. By D. H. Robinson, Ph. D., late dean of the school of Arts, and professor of Latin language and literature, University of Kansas. With an introduction by L. E. Sayre, Ph. M., professor of pharmacy in, and dean of, department of pharmacy, University of Kansas. Fourth edition, with elaborate vocabularies, thoroughly revised by Hannah Oliver, A. M., assistant professor of Latin, school of pharmacy, University of Kansas. 12 Mo., 277 pages, cloth, \$1.50 net. Philadelphia, P. Blakiston's Son & Co.

Readers of the Era are already familiar with the character of this valuable text book. It is sufficient to state that the present edition retains the essential features of the earlier editions with the addition of much new matter. The vocabulary has been extended, the English method of the pronunciation of Latin is explained, and many additional prescriptions have been distributed through the book features which are sure to increase its value and effectiveness. Chapters on prescription writing and chemical terms, and a list of pharmaceutical and medical terms with their definitions, contributed by Prof. L. E. Sayre, are worthy of mention.

NEW YORK CITY

NEW YORK AND VICINITY.

MOSTLY HISTORY.

The Story of the Manhattan Pharmaceutical Association, Being the First of a Series of Histories of Retail Organizations.

When, in 1899, an organization of drug clerks headed by the walking delegate of a local labor union, impetioned the State Legislature for a shorter hours law they builded better than they knew. But the result was hardly what they expected.

From a self-appointed committee as a nucleus there rushed into being in a little more than forty-eight hours a compact, live organization, full of men of energy and brains. The Manhattan Pharmaceutical Association was born. Its history since then is one of growth, consistent with its birth.

The Druggists' League for Shorter Hours, whose secretary was Edward Thimme, the walking delegate referred to, comprised a considerable number of the drug clerks of Manhattan and Bronx Boroughs. With considerable energy and a fair prospect for success they had introduced and were pushing a bill to make unlawful more than 120 hours of work every two weeks. This meant six ten-hour days each week.

It is not written that druggists of this city were unreasonable in their demands upon their clerks. This freak bill seemed like an unreasonable demand upon themselves. In the two boroughs the German Apothecaries' Society was alone in doing its best to thwart the movement.

On February 2, 1899, a postal call, exhorting to "attend without fail," was issued for a meeting on February 4, at the College of Pharmacy. The call was signed by William H. Ebbitt, Reuben R. Smith, William M. Massey, John C. Denner, Clarence O. Bigelow and Thomas J. Keenan.

William H. Ebbitt called the meeting to order and William M. Massey was elected temporary chairman. Mr. Massey spoke of the lack of organization which enabled agitators not connected with pharmacy to harass the trade. Arthur C. Searles' motion that the meeting organize into an association was unanimously passed. Fifty members immediately signed, paying \$5 each. A constitution had been prepared and was at once adopted. It related as the association's object: "To protect and promote the commercial and legislative interests of the pharmacists of Manhattan and the Bronx, to foster commercial integrity, to discourage unfair and unmercantile competition, to abolish existing evils, and, by concert of action to prevent the growth of customs that are contrary to good policy and sound business principles."

Thus a lusty infant was given life. William Muir, Felix Hirseman, Sidney Faber and Arthur C. Searles made felicitous speeches. Reuben R. Smith was elected president, William H. Ebbitt, J. R. Caswell and Felix Hirseman, vice-presidents, John C. Denner, treasurer, and Thomas J. Keenan secretary. The association was incorporated by twenty of the members.

Immediate attention was given to the bill for shorter hours. Executive, regular and special meetings came thick and fast. In March two canvassers were appointed to work for members. The Legislature was petitioned to reduce telephone charges. That the horizon was not limited to the city was shown when, sixteen days after the first meeting, a letter was sent to the Chicago R. D. A. congratulating them upon "their success in fighting to maintain their rights as legitimate distributors of medicines."

Every obnoxious bill showing its head was thumped.

In two months the ubiquitous feline-like poison-bottle bill had been deprived of one of its lives. In every battle for pharmaceutical rights the M. Ph. A. was in the van. It fought what President Smith catalogued as "attacks by irresponsible agitators, scurrilous, sensational newspapers and certain proprietary medicine manufacturers who advertise the sale of their wares in gin mills, barber shops, groceries and newsstands." Success came in abundant measure.

In April, first year, John H. Allen of St. Louis, member executive committee, N. A. R. D., gave an address, and a committee of five was appointed to consider the advisability of affiliation with the national organization. The result was affiliation and a long, unsuccessful attempt to work a schedule, the indifference of some of the district committees and the holding back of local outside retailers contributing to a partial failure that became complete when the German Apothecaries' Society, unable to secure recognition of its buying club, broke away. In January, 1902, Mr. Alpers' motion that the association withdraw from the N. A. R. D. was "seconded by acclamation." In the April meeting, also, the M. Ph. A. again "looked over the fence," when they urged Massachusetts pharmacists to work for the passage in their legislature of a trade mark protection bill.

In May a delegation from the Pharmaceutical Clerks' Association, newly-formed from the better class of clerks to fight the shorter hours bill, were visitors. To dismiss the subject, the bill finally passed—with a very considerable change from 120 to 136 hours. It was resolved that members of the association give preference in filling vacancies to members of the Pharmaceutical Clerks' Association.

In September plans were introduced for the Manhattan's first entertainment, jointly with other local societies, pharmacists of the Olympia and other hospital stewards of Admiral Sampson's squadron present during the Dewey celebration, being the guests of honor.

In October the association showed its ability to hang together in a political way when Robert Mazet and Dr. Nelson W. Henry were endorsed for the Assembly. How Mr. Mazet came out is not recorded, but all druggists in the Nineteenth Assembly District save two voted for Dr. Henry.

When the law demanding that a college diploma be required before the applicant is registered by the board of pharmacy passes, the Manhattan may point to the fact that this was recommended in November, 1899, on a motion by Sidney Faber. In the next January all possible help was promised the Association of Military and Naval Apothecaries in their attempt to secure an amendment to the military code of the State, providing for the title of "pharmacist" for hospital stewards in the National Guard and for an increase in pay.

The beneficiary features of the association were greatly added to in March, 1900, when amendments were passed providing "defense for any member in good standing against whom any legal act may be brought and arising from the lawful discharge of his business or professional duties," and to assist families of deceased members.

WILMOT CASTLE COMPANY,
26 Elm Street, Rochester, N. Y.

WILLIAM H. GOVE, Lynn, Mass.,
President and General Manager of Lydia E. Pinkham
Medicine Co. and First Vice-President Proprietary
Association of America.

Mr. Smith was re-elected president in April and J. M. Pringle and George E. Schweinefurth were elected vice-presidents, S. V. B. Swann, secretary, and George H. Hitchcock was re-elected treasurer, his election occurring a few months before, when Mr. Denner resigned.

An early closing movement was started that spring, but fell through. The association was enlarged to take in any registered pharmacist in the Eastern section, and, under the new all-State pharmacy law, C. O. Bigelow and George C. Dieckman were elected to the board of pharmacy.

The long fight for better telephone rates culminated in November, 1900, with the securing of the privileges of subscribers with pay station rights and a sliding contract as to number of calls used during the year.

J. Maxwell Pringle was chosen president in 1901, with George E. Schweinefurth and Charles H. White, vice-presidents. Messrs. Swann and Hitchcock were re-elected.

The delegation from the Manhattan to the State Ph. A., in 1901, was turned down on its fight for matriculation into college and college education for registration applicants. Dauntlessly rising from the defeat, Chairman Hitchcock recommended when he came back, that "our cause be placed in the hands of the State regents." Adopted.

What seems to have been one of the most signal victories was when advantage was taken of one of the new amendments and a special meeting was called in April, 1902, to plan vindication and protection of members implicated in the wholesale charge of violation of the State excise law. The association's counsel assembled the defendants and none of them have paid the \$500 forfeit. Then came another "wake" over another poison bill, a "corker" this time.

The next autumn, with aid of other societies, the life insurance rates were pounded down 25 per cent. But that and later work is too recent to have been forgotten. Charles S. Erb was elected president in 1902, the other officers being re-elected, and the whole force was re-elected in the extra part of this year.

The association now has 216 members in good stand-

ing. Its power for good is only limited by its disposition in that direction—and that is unlimited. Its officers are made of the right stuff. President Erb is at all times enthusiastic and hard working, an eminently capable leader. Secretary Swann's popularity is not his only qualification, as is evidenced by the fact that he alone has brought in 130 members to the association, 100 of whom are still in good standing. Mr. Hitchcock is not confined by the limitations of the treasurer's office; his names are frequently found in the minutes as the father or supporter of important movements. George E. Schweinefurth and F. O. Collins, the latter filling the vacancy caused by the lamented resignation of Charles H. White, are of the straightest timber. In the membership are names well known even far beyond the boundaries of the State.

BOARD OF PHARMACY MATTERS.

The board of pharmacy is about ready to change prosecution tactics and will proceed against violators criminally in the future when it is found to be the second offense, instead of taking civil action or merely notifying those caught to pay up.

Secretary Erb went into a store on Saturday where there were four clerks. When he announced himself they began to flutter. They were unable to find poison book, poison labels, or store license. The proprietor was out to lunch. "The proprietor always is out to lunch in those cases," Mr. Erb said, "no matter what time of day or night it is." When he came in he found the license in the safe. The poison labels were illegal and the poison register had been unused for five years.

One druggist, when asked why he had not put the most important ingredient in a prescription replied that it was a scarce article and he didn't have it in stock.

A prominent uptown pharmacist got a new clerk. He came in one day and saw the new clerk wrapping up a prescription. He heard him charge 35 cents and went back to look at the prescription.

"See here, you sold a prescription that costs 60 cents to put up, for 35 cents. How does that come?"

"Oh, that's all right," replied the clerk, with sincere assurance, "I only put in half the quantity."

The clerk lost his job. The man had not even asked the price nor that it be cheap.

TROJANS DEFEAT ALBANIANS.

For the third time the Troy Pharmaceutical Association defeated the Albany Drug Club, at base ball, the last game being the final in a series of three played between the two teams for a silver cup donated by John L. Thompson Saus & Co. of Troy.

Among the political notables present at the last game were Mayor Druggist Gaus of Albany, and President of Common Council Druggist Henry Schneider of Troy. The line-up for Troy was: Kennedy, p.; McKenna, 2b., cf.; Sullivan, lf.; Healy, 1b.; Cavanaugh, cf., 2b.; Millington, 3b.; Schneider, ss.; Killilea, rf.; Blow, p.; and for Albany Haywood, 3b.; Smith, ss.; Bowsher, lf.; Shufeldt, 2b., p.; Peth, 2b., p.; Beale, 1b.; Fish, c.; Finkle, cf.; Husted, rf.; Papires, Gristle and Brauer. Score: Troy 7, Albany 1. Blow's pitching was exceptionally good. He did not allow a base hit until the ninth inning.

NEW CIGAR LAW.

Under the new Federal law, which goes into effect on November 1, cigars must be sold from the original boxes, which must be destroyed as soon as emptied, and cannot be given away, sold or used for any purpose.

The purchaser may now insist upon the dealer handing out the entire box of cigars, instead of taking out a handful and putting them on the show case for the customer to choose from. The purpose of the law is

to prevent substitution, and it is intended solely for the protection of the purchaser. No displays of cigars, cigarettes nor tobacco may be made unless in the original packages.

JERSEY BASE BALL HONORS TO BAYONNE.

Bayonne won the third and last game, making them their second winning in three games with Elizabeth. Now they are ready for any other team in the State, or out of it.

The score was 16 to 9. Dr. Woodruff did the twirling for Bayonne, and Dunne caught. The rest of the team was made up of N. Cadmus, second base; C. Connors, first base; Whitehead, left field; M. Strauss, centre field; J. Cadmus and Weidenheimer, third base; Landell, shortstop, and Peterson, right field. Epstein and W. Richart were the battery for Elizabeth, and the other players were Winner, centre field; D. Strauss, shortstop; Stulzen, first base; Eggers, second base; Parsons, third base; Horning, right field. Congressman Allan Benny officiated as umpire. Woodruff was an enigma. Landell was prominent with the bat and knocked out three singles and a double, and performed some remarkable sliding, which would make a hit if reproduced in moving pictures.

WHERE MR. SMITHER WAS FOOLED.

A few days ago it was discovered that the young clerk who had charge of the soda fountain at the store of R. K. Smither, 588 Niagara street, Buffalo, was in reality a young woman in disguise! Women seem bound to enter all professions, but in this instance the police objected to the young woman adopting the Mary Walker style of apparel, even though the same was very becoming to her style of beauty. She was tall, with a profusion of black curly hair, properly parted on the left side. Mr. Smither now mourns the loss of the neatest and most proficient soda clerk he has ever had in his employ.

NOT LIABLE WHEN CLERK DISOBEYS.

A Supreme Court decision, just handed down by Justice Davy, holds that a druggist is not responsible for the acts of his clerks in selling liquor in violation of the State excise laws, when the employer has given specific direction that such sales shall not be made. The case was that of State Excise Commissioner P. J. Cullinan against John F. Burkhard, druggist at 680 South avenue, Rochester, and \$500 damages were asked. It was alleged that his clerk, Frank Snyder, had sold brandy in half pint lots to Henry C. Adee, a special excise agent, without a physician's prescription being presented. The court directed a verdict for the defendant. A motion for a new trial was denied.

NEW YORK NOTES.

—Seen down town:—James A. O'Reilly, manager Owl Drug Co., Kansas City; Mr. Roth of Roth & Hug, Canton, O.; Winthrop G. Noyes, Noyes Bros. & Cutler, St. Paul; John E. Jackson, prominent Azewell, Va., retailer; A. E. G. Klor, Newport News; Dr. S. D. Trott, Bermuda; Gilbert Smith, manager Roberts Anglo-American Pharmacies, Rome and Florence, Italy; Mr Heaton, formerly of Potsdam, this State, now of Heaton Bros., retailers and wholesalers, Victoria, Tex., who was here with his wife; L. Jones, manager of the Lowry pharmacy, Northport, L. I.; A. J. Davenport, buyer for Judge & Dolph Drug Co., St. Louis.

—Professor Garret V. V. Dillenback will deliver the introductory lecture at the opening of the Albany C. P. on next Monday evening. The regular sessions will begin on Tuesday. There are several changes in the faculty. Gustavus Michaels, becomes emeritus professor

of pharmacy, while Garret Vander Veer Dillenback is advanced from lecturer to associate professor of pharmacy. Edwin G. Hartman has been appointed director of pharmaceutical laboratory to succeed Frank Richardson, who has left the city.

—Motion for counsel fees and alimony as made in the Brooklyn Supreme Court in the suit for separation brought by Mrs. May D. Bancroft against her husband, Oliver F. Bancroft, a wealthy druggist, of Park Place and Nostrand avenue, Brooklyn. Mrs. Bancroft declares her husband treated her cruelly and finally ejected her from "his handsome home," forcing her to go out into the street "scantly clad." She received \$150 for counsel fees and \$10 a week alimony.

—The adjustor in the fire insurance of Dr. Leo R. Nathan of 1797 Third avenue, who recently was visited by a blaze, was F. G. Leslie, manager of Hegenau & Co.'s drug department, who allowed \$275 on a claim for \$391.

—By the incorporation of the Heffley Drug Co. last week there was revealed a purpose to establish a chain of pharmacies in Long Island. The first store acquired is the long-established one of Heffley Bros., at Babylon.

—Victor Feitsen, who has been in the employ of Kruskal, has succeeded to the proprietorship of the pharmacy of W. Weltwitz, First avenue and Seventh street, who recently committed suicide.

—The State Civil Service Commission has called examinations for October 17. Applications must be made to the chief examiner at Albany before September 12. Apothecaries' positions are included.

—Drug Trade Club guests—George I. Berridge, Detroit; Dr. Oesterlin, Mannheim, Germany; R. G. Wright, St. Louis; E. R. Tasman, London; A. A. Booth, Liverpool; S. C. Warner, Palatka, Fla.

—New York C. P. begins its seventy-fourth annual course on October 5, and it will end on April 15. Christmas vacation begins on December 19 and ends on January 4.

—Paterson, N. J., aldermen are considering the advisability of passing an ordinance prohibiting druggists and grocers from selling liquor, and probably will pass it.

—The Schneider & Irving Drug Co., of Troy, filed with the secretary of State a certificate of a change of name to the Schneider & Macy Drug Co.

—Retail Druggists' Bowling Club resumes its winter contests on Friday evening, September 2, at Starr's alleys.

—Apothecaries' Bicycle Club goes to Greenwood Lake, N. J., today, taking the train to Pompton.

—V. Loewenburg has bought the store at Eighty-fourth street and First avenue, from M. Soroch.

—Samuel Strahl has bought out E. S. Falkenburg at 1197 Bushwick avenue, Brooklyn.

—R. H. Lisburger has opened a new store at 169 South Fourth street, Brooklyn.

—C. H. Gaus, Albany's druggist and mayor, has been renominated for the mayoralty.

—I. D. Wolf has sold his store at 35 Pike street to Max A. Lipkind.

—P. Muehle, 402 Henry street, Brooklyn, has sold to William Davies.

E. I. Santal Perles

Bottles of 50, with yellow wrapper

Write for Samples and Prices

BILLINGS CLAPP CO. - - Boston

VERNON DRISKELL, Ghent, Ky.,
Treasurer Kentucky Ph. A.

AROUND SYRACUSE.

—S. Rosenbloom & Sons last week opened a new department store in South Salina Street. They carry a full line of toilet articles, but will put in no patent medicines. They have signified their desire to maintain the S. D. A.'s schedule of prices in the toilet article department.

—C. G. McElwaine has returned from a trip to the Pacific coast full of admiration at the way the affairs of the S. D. A. are conducted. He says he does not care for a drug store in any city where they do not have an association, as competition is so fierce as to destroy all profits.

—One of the most attractive exhibits at the State Fair was that of Randall grape juice put up by the Chautauqua Fruit Co. of Ripley. F. M. Randall was in charge of the booth, and E. J. Oakes, State representative, assisted in the demonstration.

—The annual meeting of the Tri-county Ph. Soc. was held at Little York. The society embraces the pharmacists of Cortland, Cayuga and Tompkins' counties. A chicken dinner was served, after which business affairs were taken up.

—Willis Kilmer of Binghamton, has been in this city several days, having driven his automobile to attend the motor race meet at the New York State Fair. Mr. Kilmer is the son of Dr. Kilmer of Binghamton.

—George E. Thorpe will leave for Washington on October 1 to represent the local association at the meeting of the N. A. R. P.

—Frank J. Dear of Dear's pharmacy, is slowly recovering from a six weeks' illness of typhoid fever.

—Herbert W. Walker is recovering from a ten days' illness.

—The S. D. A. has given up the idea of having a claim bill.

—Robert Bodden has returned from Atlantic City.

—Arthur Niles is back at Dr. Beach's pharmacy.

AT ROCHESTER.

—The middle branch of the board of pharmacy at Rochester ruled favorably on only fifteen of more

than forty papers. The successful ones were: Pharmacists—James E. Jones, Syracuse; David Stolz, Syracuse; John J. Hobertus, Canastota; John J. Monahan, Auburn; Frank S. Thyme, Schenectady; William E. Cooper, Walden; August W. Snyder, Utica; Ellsworth Pindar, Newburg; John Gates, Madison; Benjamin Wanser, Troy. Druggists—H. R. Thompson, Oneonta; H. N. King, Matewan; Frank E. Grace, Rome; R. R. Aikens, Albany, and John A. Albert, Palmyra.

—Reports from Wayne county show that the peppermint crop this year will be smaller than usual. The farmers have been somewhat discouraged by the great competition given them by peppermint producers in Michigan. However, the Wayne county oil continues to hold the highest rank for quality. Some of the largest producers here have given up the business altogether.

—The Pulver Chemical Co. has been sued for \$375 by Fee Bros., space in whose building they formerly occupied for unpaid rent. A counter claim was presented by the defendants for \$1,000 on the ground that after a recent fire the premises were useless for their business and that no power was furnished. Decision reserved.

—C. M. Page, formerly with Hyde & Page on Main Street, and for some time part owner of the East Side Pharmacy, Main and Seio Streets, has withdrawn. W. C. Lauter will continue the business without change of name.

—Carl H. Pencock, local salesman for the Paine Drug Co., is home from two weeks' vacation up the lake to Montreal, returning by way of New Foundland.

—The Rochester Glass Works was recently damaged by fire to the extent of several thousand dollars. F. E. Reed is the proprietor.

'ROUND ABOUT BUFFALO.

—The Western branch of the board of pharmacy met at Batavia. Certificates were granted to the following: Pharmacists—James H. Saunders, Belfast; E. H. Van Atta, Waverly; M. M. Harris, Buffalo; Max Becker, Jersey City, N. J. Druggists—F. W. Shaw, E. P. Reinman and Oscar E. Hoegaard, Buffalo; E. B. Kerschner, Olean. An all-State pharmacists' license was issued to Jerome J. Patterson of Batavia, in exchange for his middle-State license. The members of the board, accompanied by their wives, were entertained at lunch by Mr. and Mrs. Jewell, and in the afternoon attended the Industrial Fair.

—R. W. Baxter, who has been in Buffalo for many years at 101 Massachusetts avenue, has closed his pharmacy. He will sell the stock and fixtures and retire.

—Frank T. Dewey's pharmacy was the scene of a small fire thought to have started from spontaneous combustion among some of the stock in the cellar.

HERBERT H. BARRETT, a druggist, 32 years old, of College avenue, Westerleigh Heights, Staten Island, N. Y., died from the effects of poison taken with suicidal intent. He left his home to go to New York about noon. When near the ferry, he took a package containing morphine from his pocket and swallowed half its contents. Then he started to walk, but had only taken a few steps when he fell to the street unconscious. Barrett's relatives said they knew of no cause for him to take his life.

N. LAZELL SHATTUCK, a well-known druggist of Barre, Mass., passed away in that town a few days ago. Mr. Shattuck was born in Barre, in 1832. Before the Civil War he went to Worcester and opened a drug store. He went back to Barre and once again gave up business there to return to Worcester.

PENNSYLVANIA.

FOUR DEATHS.

Philadelphia Trade Sadly Bereaved in the Deaths of Men Long Prominent There.

Philadelphia, September 29.—Dr. John H. B. Amick, former Common Councilman from the 37th ward, which he represented for twelve years, and once a druggist at Thirteenth and Diamond streets and Eleventh street and Susquehanna avenue, this city, died at the German Hospital from a complication of diseases. Dr. Amick had been ailing for nearly two years, his malady being brought about by overwork. Dr. Amick was born at St. Clairsville, Pa., in 1851. Shortly after graduation from the medical department of the University of Pennsylvania, he married Miss Sue L. Wile of Philadelphia, and commenced the practice of medicine in Schuylkill Haven. His wife's failing health then induced him to return to Philadelphia, where she died. He was a 33d Degree Mason and a member of Pennsylvania Council No. 342, Royal Arcanum, the Eagles, and the Ancient Order of United Workmen. During President Harrison's administration, Dr. Amick was inspector of drugs. He served as surgeon, with the rank of Major, in the 19th Pennsylvania Volunteers. He is survived by two sons—Harry G. and Ira Bruce Amick.

Jesse W. Pechin, a well-known druggist of 1301 Columbia avenue and 2900 Germantown avenue, died after a lingering illness and an operation, in St. Joseph's Hospital. Mr. Pechin was 43 years old. The funeral was held from the home of his brother, T. E. Pechin.

Dr. Michael C. Kreitzer, a well-known medical practitioner, druggist and metallurgist, died of a stroke of apoplexy, in his 77th year. He was born at Myerstown, Pa., in 1826, and was educated at Myerstown Academy and Yale University. In 1850 he graduated from Jefferson Medical College in this city, and the same year established himself in business as a druggist and physician at 1536 North Fourth street, and continued in active practice at that place to his death. He was an expert in the separating of metals, and for many years had been engaged in extracting nickel and gold from ore mines on his farm in Lebanon county. He was a member of the Philadelphia A. R. D., Philadelphia Commandery No. 2, Knights Templar; Harmony Royal Arch Chapter No. 51, and a life member of Gizard Mark Lodge. He is survived by one son, Harry C. Kreitzer.

Stretched out at the foot of a flight of stairs leading from the drug store at Twelfth and Poplar streets to the cellar, Gustav Kuhn, who resided in the dwelling part of the house, was found dead by his wife, Mary. While inclined to explain his death as due to accident, the police are puzzled because there were no marks of violence on the body such as would have been inflicted had Kuhn fallen down the steps. Until a year ago Kuhn was employed as a clerk in the drug store, but had lost his position. He was a graduate of the Philadelphia C. P. He was thirty-eight years of age.

IT'S GETTING SO A DRUGGIST CAN'T SHOOT.

Philadelphia, September 29.—Robert Hance, the manufacturing pharmacist of Philadelphia, and Dallas Smith of Salem, N. J., who would have been content to clear of reed birds the marshes round about Fort Delaware, are now stalking bigger game.

They are gunning for Uncle Sam.

Mr. Hance and Mr. Smith boarded a naphtha launch and made for the reeds the other day.

The sport was barely under way, however, when a

boatload of soldiers from the fort overhauled the launch, and, without reading libel or riot act, proceeded to tow the little craft to port. The gunners were seized, and none too gently haled before Captain Archibald Campbell, after being locked up in Fort Dearborn for nearly three hours. The captain gravely informed the gunners that they had been trespassing on government property, and that they must not do it again. Then he discharged them.

The news of the seizure spread across the marshes and traveled the banks like wildfire. The troubles of the huntsmen were made common cause by the natives, who have been nipping off reedbird feathers under the very guns of the fort since time immemorial. Messrs. Hance and Smith, it is said, have retained counsel to lay a complaint before the secretary of war.

OTHER HAPPENINGS.

—A battle royal between a black suspect and a couple of officers at Seventeenth and Walnut streets, Philadelphia, on Thursday evening, resulted in the death of one officer and the planting of four bullets in the alleged thief, who is now in the hospital. All signs point to this desperado as the burglar who broke into and robbed the drug stores of Nelson Fry and H. C. Leonard.

—The announcement is made that the Union Drug Co. has removed its headquarters to 142 North Tenth street, Philadelphia, from Tenth and Callowhill streets. H. F. Voshage has severed his connection therewith. N. D. Streeter has also withdrawn and is now sole owner of the store at Tenth and Callowhill streets and Ridge avenue.

NEW ENGLAND.

THE BAY STATE.

—A man who gave the name of J. T. Clark in Western Massachusetts sold perfumery from house to house and among stores. At the Hampshire House, Northampton, he gave a check for \$10, payable to his own order, and drawn by John L. Draper. It was found to be of no value. "Mr. Clark" has disappeared.

—Dr. John Chase, pharmacist in Goodale's, Lowell, took an enjoyable method of spending his vacation. Accompanied by his wife he went all the way, except for the short link of a few miles yet unfinished, from Lowell to New York by trolley cars. Little baggage was carried, and the trip proved delightful.

—Frank Honihan, clerk at Travis & Cunningham's, Framingham, has left there to enter upon his studies at Phillips Exeter Academy, Exeter, N. H. George T. Fox, employed at Henry A. Burditt's, Clinton, leaves there to enter the Jefferson Medical College, Philadelphia.

—Burglars who recently entered Charles H. Clark's pharmacy in West Brookfield secured only a small sum of money, although they completely ransacked the store, breaking and damaging the cash register. They helped themselves to ice cream also.

—H. E. Newcomb, who for a great many years was head pharmacist for Dr. Jesse W. Sargent, a Malden

 ETTA CHEMICAL CO., New York, U. S. A.

CARL S. BENCHE, Ft. Leavenworth, Kan.,
Sergeant First Class, Hospital Corps, U. S. A.

Born in 1877, at Briesa, Germany, Mr. Benche attended the normal schools and college at Kemptitz. In 1891 he took the position of shipping clerk with the Hamburg American Steamship Line, of which brought him traveling experience. In 1896 he landed at New York and enlisted under the Stars and Stripes in 1898. He was sent to the Philippines as a corps man, gaining promotions from private to acting steward and later passing his examination as Sergeant First Class. He is now stationed at Fort Leavenworth, Kan.

druggist, has lately returned from an extended trip to California, Colorado, Arizona, New Mexico, Oregon, Washington and Idaho.

The Currier Drug Co. has opened a store in Lawrence. The company was incorporated by Charles W. Currier, Arthur E. Colby and James E. Simpson, with a capital stock of \$10,000. Mr. Currier is president and Mr. Colby treasurer.

W. H. Perry, for some time employed by the Theo. Metcalf Co., Boston, is among those lately married. Mr. Perry and his wife, after a short trip, went to Ipswich, where he has taken a clerkship in the store of Eben R. Smith.

The Norwood Drug Co., Norwood, is branching out with another store in Franklin. A new drug store in Revere is owned by Fred W. Carr. In Acton a new store has been opened by Frank Willard of Boxborough.

Donat A. Carpenter of Edmund Reeves's, Fall River, leaves there to assume the management of a pharmacy in Warren, R. I., and is succeeded by Edmund P. Talbot, formerly at A. S. Letourneau's.

Who will pay for a large plate glass window, valued at \$50, which was broken in J. W. Colcord's pharmacy, Lynn? A man was pushed through the glass, and no one seems to know who ought to pay for it.

After due deliberation, the board of selectmen in Maynard has decided to do nothing with the townspeople's petition that drug stores be licensed to sell liquor under the usual legal restrictions.

In the annual contest for prizes offered by the Easton Kebab Co. for clever advertisements, J. William O'Connor, employed at South's drug store, Ware, was awarded the fourth prize.

Thomas Farley, a North Adams druggist, is making a good time vacation as a roller of high strings in

Canada first, and his feats on the alleys are watched with deep interest by crowds.

Ernest Roberts, clerk for Cole's, Bridgewater, goes to Boston to study higher branches and to fit himself as a registered druggist. He is succeeded by Frank Parsons of Somerville.

John V. Jewett has left Moore's drug store in Danvers to enter upon a four years' course of study in Dartmouth College, to be followed by a full course in pharmacy.

W. T. Hughes succeeds John J. Hammers at the Braintree pharmacy, Braintree. Mr. Hughes is a fellow of the Pharmaceutical Society of Great Britain and Ireland.

John H. C. Pratt, the North Adams druggist, whose business recently was disposed of, plans to open the old store again, stocking with new goods.

W. C. Thompson, druggist in Shelburne Falls, is the owner of an automobile, and is making some road runs in and near his town.

W. A. B. Cote's store, Fall River, was completely gutted by a recent midnight fire. Mr. Cote carried insurance of \$1,000.

THE SOUTH.

MAPPING OUT WAR AGAINST CUTTERS.

Baltimore, September 29.—At a meeting of the Baltimore R. D. A. on Friday morning, about ninety persons were present and much interest was taken in the proceedings. The primary purpose of the gathering was to take steps in furtherance of an active campaign against the cutters. Concerning this part of the proceedings no information was given out beyond the fact that Messrs. John G. Beck, J. B. Thomas and David R. Millard were appointed a permanent committee on grievances and investigation. A careful inquiry will be set afoot and carried on with a view to discovering whenever the tripartite agreement or other conditions are violated, and by whom. Funds for the uses of the committee will be provided in such amounts as are absolutely necessary.

Power was conferred upon Chairman Cuning to appoint delegates to the annual meeting of the N. A. R. D., and the constitution and by-laws were extensively revised.

HENDERSON MEDICINE COMPANY FAILS.

Baltimore, September 29.—The Henderson Medicine Co. of this city, which appeared to be doing a prosperous business in the manufacture and sale of Henderson's Pink Pills and other proprietary remedies, has gone into the hands of a receiver, Judge Dohler, of the Circuit Court, having appointed W. Thomas Kemp, Mr. Kemp is bonded in the sum of \$10,000, which indicates assets valued at half that amount. The appointment of a receiver was asked for by Albert H. Henderson, president of the company, who alleged that the corporation owes him \$7,104.79 for money loaned, and that it is insolvent. The answer, signed by President Henderson, W. C. Henderson, the treasurer, and H. P. Skinner, acting secretary, admitted the allegations in the bill of complaint and consented to the receivership.

MARYLAND.

The annual session of the Sovereign Grand Lodge of Odd Fellows was the occasion of a visit to Baltimore of a number of druggists from a distance. Some of them were members of the order, while others took advantage of the low rates offered by the railroads to take a trip. Among the callers were: George A. Myers, Dallastown, Pa.; Dr. P. Calhoun, Frederick; T. A. Bradford, Washington, D. C.; J. J. Ross, Westminster; Grant Gra-

ham, Bellington, W. Va.; E. H. Reinhart, Shepherds-town, W. Va.; M. A. Snodgrass, Martinsburg, W. Va.; S. S. Van Trump, Trump; Dr. I. M. Love, Grafton, W. Va.; T. H. Nicholson, Murfreesboro', N. C.; T. Barnes, Roanoke, Va.; Dr. J. Walter Hodges, Washington, D. C.; A. T. G. Hudnett, York, Pa.; Joseph B. Boyle, Westminster; W. F. Ingram, Norfolk, Va.; C. O. Santos, Norfolk, Va., and John W. Wilson, New York.

—George G. Muth, of Muth Bros. & Co., Baltimore, wears a proud smile these days, a smile that won't come off, the cause being the arrival at his home last Sunday, one week ago, of a young Democrat. As twelve years have passed without a similar event, the happy father has been obliged to begin training in pedestrianism and other accomplishments all over again.

—George W. Thomas, Jr., whose home is in Charleston, W. Va., but who is now employed as a drug clerk in Washington, came over to Baltimore last week with Miss Nellie M. Warren of Washington, and was married at the Carrollton Hotel by Rev. Joel T. Rossiter of the First Reformed Church. Mr. Thomas was formerly a clerk in Baltimore.

—H. B. Gilpin, president of Gilpin, Langdon & Co., Baltimore, returned this week from a trip to Europe, on which he was accompanied by his wife and their two sons. The party came on the Minneapolis, landing in New York. All had a fine time and came back in excellent health and spirits.

—Druggist F. Fortman of Waynesboro', Pa., who has been on a trip South with his wife, and who spent two weeks at Asheville, N. C., was in Baltimore last week for a few days, and called on old acquaintances. He is a member of the drug firm of Fortman & Miller.

—The New York Commodity Co., 216 Fulton street, New York, have received a communication from a Baltimore man who forgot to sign his name. If this catches his eye he should write again.

OHIO RIVER VALLEY.

RUBBER MEN ARRESTED.

Six Akron Men Charged with Violating Postal Laws, and \$30,000 Worth of Property Destroyed.

Cleveland, O., September 29.—Those druggists who deal in rubber goods are considerably interested in the result of the trial of a half-dozen prominent residents of the city of Akron, on the charge of violating the United States statutes in sending their products through the United States mails and through the express companies.

Government officials made the arrest, among them: being Anthony Comstock, president of the American Society for the Prevention of Vice and a postoffice inspector at a salary of \$1 a year. Special postoffice inspectors aided Mr. Comstock in the work, and United States marshals from this city aided in the completion of the work.

Besides the arrest of the six Akron men, \$30,000 worth of property was destroyed on the ground that it was being manufactured in violation of the provisions of the United States statutes. Two companies have been put out of business, perhaps only temporarily; perhaps permanently.

The companies are the Lyon Rubber Co. and the Rubber Specialty Co. They were doing a big business in Akron, employing many persons in the manufacture of water bottles and other articles which druggists are called upon to supply.

THE BUSIEST CORNER IN INDIANA.

The busiest corner in Indiana, a corner by which more people pass on foot during a year than any given point in the State is that of the Grand Lodge Hall, 1. O. F., occupied by Harry J. Huder, druggist. Indianapolis is called "The Convention City," and is noted for the great throngs of visitors that come to it nearly every week in the year. And nearly every visitor has to pass the Huder corner at some time during his stay, so that it is a landmark of the city. All the interurban cars and nearly every street car line, and they are many, pass and repass this corner, and the sidewalks fronting the store are waiting places for their passengers.

The store is considered the handsomest as it is the largest in the State, and is the most modern in its equipment. It has a great patronage. Mr. Huder is a thorough business man. Years ago he recognized the fact that the day of the old-fashioned drug store was passing, and he made the change promptly to meet new methods of business. He was born in 1863 at Madison, Ind., came to Indianapolis in 1873, and, in 1876, became a clerk for the late Joseph R. Perry, who was in the retail drug trade here for more than 35 years. In 1888 Mr. Huder began business for himself, in 1894 he removed to his present location.

Recently he has fitted up the store at 22 West Washington street, having bought it of the estate of George W. Sloan, who had been in the drug trade here for 54 years. This is called Huder's drug store No. 2.

The arrests of the Akron people followed closely upon the heels of a raid upon several places of business in Chicago, at which time hundreds of dollars of manufactured stuff was confiscated and correspondence obtained which indicated that the articles may have been obtained from the Akron firms.

The defendants in the suits are determined to put up a hard fight. Whether or not the Government officials have overstepped their bounds upon the meager evidence which they have is, of course, a question and one which will be watched with the keenest of interest by the druggists of this country.

All of those under arrest have furnished bonds to appear before the next session of the Federal court in this city, at which time, it is said, they will be ready to spring a surprise upon the Government to the effect that they are not violating the statutes.

AROUND THE GREAT LAKES.

TACKLED THE WRONG MAN.

Druggists Try to Stop Proceedings Against Them for Violation of Cocaine Law—Seek Injunction Against Board—President Bodemann Amused at Charge of Bribery.

Chicago, September 23.—Charges of malicious prosecution and of securing "bush money" were made on September 21 against Wilhelm Bodemann, president of the State Board of Pharmacy. In a bill for injunction Adolph C. Brendecke and Alfred Dahlberg, proprietors of the Central pharmacy, 242 West Randolph street, accused Mr. Bodemann of offering, for a money consideration, to discontinue the cases charging them with selling cocaine unlawfully.

The druggists declared that Bodemann's prosecutions have been part of a program of persecution to drive them out of business. Furthermore, they accuse the gentleman named of securing "fake" evidence, the drug sold, they say, being not cocaine, but "flake," a low quality of opium.

The bill is directed against Wilhelm Bodemann, William Henry Sage and the State Board of Pharmacy, and asks that the court restrain the defendants from any further prosecutions of the Central pharmacy in the justice courts.

The firm seeking an injunction has been receiving attention from the board for some time. On July 31 four suits were begun against the Central pharmacy in Justice Charlton's court. Three of the suits were dismissed, but in the fourth case Brendecke was fined \$50. Later a second batch of cases was filed in various justice courts, and finally Dahlberg, on complaint of Inspector Sage, was, according to reports, arrested and locked up at the Desplaines street police station. The chief witness for the prosecution before Justice Charlton said he bought cocaine at the Central pharmacy without a prescription.

Wilhelm Bodemann, president of the board of pharmacy answers the charge in characteristic manner, as follows:

"The following 'am de faes'—not by way of defense—just for 'de sake of de faes':

"This man Brendecke, in common with thirty other druggists in the levee districts against whom we had complaints, received a registered letter from the board giving him due notice that we had complaints against him, and requested him to stop selling cocaine. He came out to see me and wanted to know how he could hang on to his valuable trade without running up against the law. He said he was a doctor, and made out a prescription for each five cents worth of dope sold to friends. I told him that if he prostituted his diploma to that extent, I would go before the State authorities and have his license cancelled.

"Did he offer me hush money? Had he done so, he would have landed on the sidewalk at good speed. Did I ask him for hush money? I hope no living being in the world that knows me, or of me takes me for a dead fool. So, I will not answer. I understand that is what the man swears to in his petition for an injunction, and he is liable for anything he says in that way; I will hold him.

"We have presented him and shall continue to do so, even if we drive him out of business—if any business deserves being driven out, it is a 'dope joint'—and the police of his district came to me because the trash hanging around his joint are a nuisance to the police, and we took up the case against him jointly with the police.

"I question whether anybody not on the board has an idea what we have to put up with in the name of and for decent pharmacy."

September 28.—Brendecke's petition for an injunction was refused by Judge Chytrous. Although the local daily papers all noticed the charge of bribery against members of the board, only one could spare a little space to report their vindication, an injustice which has called forth vigorous protests from the trade.

Officers of the Juvenile Court have appealed to the board to enforce the cocaine law. A number of boys sent to the asylum have been found to be confirmed victims of the drug.

THROUGH A DRUG MAN'S EYES.

Mr. R. R. Martin Gives His Impressions of Far Eastern Trade and Industrial Conditions.

Detroit, September 29.—After ten years in the Orient, Robert Rowlett Martin of this city, is home on a visit for the purpose of conferring with his firm, Frederick Stearns & Co., for whom he manages the entire business in the Far East. Mr. Martin enjoys the distinction of being the pioneer drug representative in some of the most remote parts of the semi and even uncivilized dominions of the East. Seated in the home of a friend, he related a few of his experiences and gave his estimate on the outlook for American interests in the Orient:

"Well, as Emerson says, 'there is no foreign country; it is but the traveler who is foreign.' I have now become so accustomed to the changes that I am not as able to point out the differences of the life over there as I would after but a short stay. I will, however, give you an idea of what it means to be representing an enterprising American firm out there.

"I was the first drug representative to arrive in the Philippines after the fall of Manila. I found the conditions unsettled and had a hard time doing business there. I then visited Java, Siam and Borneo, leaving consignments of Detroit-made goods in my wake."

Asked what the prospects were for American interests in the Far East, Mr. Martin said:

"That is a rather complex question. The press in the East, especially the Kobe Chronicle (Japanese), the North China Daily News, and the China Mail, are organs which are constantly pushing Western civilization. They form a great help to the progress of trade with this country. With their editorial voices they daily touch upon the currency question of the East, and the United States comes in for a good share of severe criticism for her action in issuing the silver dollar at a parity with gold. Commercial interests have suffered severely in China and the Philippines for several reasons. The low exchange rates, the unsettled political and financial conditions, and hundreds of relative reasons have had a great deal to do with the general depression. There will certainly be great developments in the Philippines once things are settled and conditions become normal. Russia and China seem to have practically arranged the Manchurian difference, and that alone has made a marked change for the better in business. In India, American interests are making comparatively good headway, and all American houses out there are patiently waiting for a settlement of the present conditions. But with plague, famine and other scourges the country is kept constantly in a disturbed state, and of course, that is very discouraging.

"In South Africa, on the other hand, things are rapidly picking up, that being a country which rapidly recovers itself.

"What is my opinion of the present labor situation

in South Africa? Well, that is a question which at the present moment is greatly troubling the imperial officers and the financiers of Great Britain. I am confident the Chinese are the coming laboring class of South Africa. The war has changed completely the complexion of the labor question. The blacks who worked for from ten shillings a week to perhaps in some few cases one pound sterling, and who gave good value, found that during the war they could make ten times as much pay. They saved up a great deal, and can now remain idle long enough to make things unpleasant and cause enormous difficulty in working the mines. It is held by those in a position to know that Chinese labor will set things right, as the Chink is a strenuous worker and faithful to a degree."

DETROIT BOWLERS PROMISE SURPRISES.

Detroit, September 29.—Now that the chilling blasts of autumn make aquatic and other outdoor sports rather strenuous, the thoughts of both old and young turn to bowling, and a rush is being made for the alleys. The Detroit Drug Bowling League, which set a high mark for its rivals last year, proposes to do even better during the coming winter, and is already preparing for the struggle for the championship. "Try out" games are being played nearly every night, and when the teams for the season are finally announced, those who were pretty well down the list last year promise some big surprises.

The league was formally organized last week. The season will open on Monday night, October 19, and will continue for a series of sixty games, ending in March. Following are the officers elected for the ensuing year: President, H. E. Perry, Michigan Drug Co.; vice-president, Howard J. Lawrence, Parke, Davis & Co.; treasurer, Charles G. Willits, Frederick Stearns & Co.; secretary, A. H. Ludwig, Nelson, Baker & Co.

Two weeks of hard work has placed the Parke, Davis & Co. interdepartment bowling league upon its feet for the season's work. With small changes in the organization of last year has been preserved, holding the same objects in view, namely, good times, good fellowship, and a few records. The teams, eight in number, have five men each. Play will begin on Saturday, October 3. The schedule provides for three rounds of matches. The officers chosen for the season are: President, E. G. Swift; vice-president and treasurer, Ernest Kimmich; secretary, G. W. Mutter.

PRESCRIPTION FOR CARBOLIC ACID.

Chicago, September 29.—Carbolic acid or any preparation of it may not be sold at retail in Chicago, except upon the prescription of a physician, if an ordinance introduced into the council last Monday night shall become a law. Alderman James C. Patterson is the father of the proposed ordinance. The frequent suicides by carbolic acid of late have called his attention to this corrosive liquid, with the result outlined above. He feels that such an ordinance might be the means of preventing many suicides. In 1901 eighty-six persons in Chicago killed themselves with carbolic acid; in 1902 the number increased to 127, while there has been a further increase in the current year.

FROM ILLINOIS.

—The alleged Western Supply Company, a concern which has been operating until a few weeks ago in the Pontiac building, and was frightened off by the interest which the postoffice inspectors took in their business methods, caught several toilet soap concerns. Some of the principals in the swindle have been arrested. It is said they disposed of the goods they secured by means of a "fence" in New York.

—The holiday trade is delayed this year because man-

Chicago Veteran Druggists at Three-mile Crib, one of the intakes of the Windy City's Water System, Lake Michigan.

ufacturers of novelties have been late in getting out their goods. Not until recently have the salesmen received their lines of samples. Country orders are therefore just beginning to come in and city orders have not come in yet.

—H. W. Wardhurst has opened a store under the name of the Southern pharmacy, at 1258 Michigan avenue, Chicago.

—J. A. Roth has bought the store of L. Ginsberg, at Fourteenth street and Blue Island avenue, Chicago.

—Joachim Schachter has succeeded L. K. Kryzer, at 215 West North avenue, Chicago.

DRUGGIST SHOOTS HIS WIFE TWICE.

Shoshone, Ida., September 29.—Dr. J. W. S. Emerson of Shoshone, one of the leading practitioners of the southern part of the State, took a notion to do some shooting the other day. He is now at Milner, running a drug store temporarily. Dr. Emerson, it is stated, had been gambling and went home at 2 A. M., "broke." He is alleged to have demanded more money of his wife, but she refused him, whereupon he shot her in the left shoulder and also in the left breast, only a few inches above the heart. The woman is expected to recover. Her husband is in jail. Mrs. Emerson is the daughter of Frank R. Gooding, chairman of the Republican State Central Committee.

PACIFIC COAST.

A WEIRD MISTAKE.

With Florida Water a Prince of Wales Island Druggist Satisfied Indians craving for Fire Water.

San Francisco, September 29.—From way off in the tropical waters of the Pacific comes as tragic a story as ever appeared the drug world on the western side of the hemisphere. Its a strange tale and concerns the methods of the aborigine as a dispenser of pills and medicines.

Prince of Wales island is off the Alaskan coast and there, in the city of Ketchikan, Zundloch and his wife have a monopoly of the drug trade. They run a millinery establishment with medicines on the side. They have an extensive trade among the Indians who seek the medicine "that burn on the inside." To satisfy this craving Zundloch imported a quantity of Florida water. Its popularity was instantaneous, and its effect as rapid, but more lasting. Three of his customers died and hundreds suffered great agonies, but managed to recover.

The story reached the authorities and the grand jury took a hand. Zundloch admitted that he sold Florida water, but said he thought it was harmless. Samples were sent to the University of Washington for analysis and were found to contain 96 per cent of wood alcohol. Zundloch was tried on the charge of selling liquor to Indians, but the Alaskan laws failed to convict him. The natives have had a lesson, but not in temperance, and report says there is a good opening for a live man who'd carry "something on the side."

Hood Calendars for 1904.

We think it will be an advantage for all retail druggists to accept Hood's Calendar Offer for 1904 as early as possible.

The Calendars are very handsome and there is sure to be a great demand for them.

It's good cheap advertising for the retailer as he gets his name printed on each and every Calendar sent him.

Every Calendar given away is a constant and steady advertisement for you with your customer for a whole year, and costs you nothing extra whatever.

How to get Hood's Calendar is explained fully in regular advertisement in another part of this Journal.

A DIRECT ROUTE TO BUSINESS SUCCESS.

There are leading we could more call the attention of business to the fact that the greater part of business success comes from advertising in some form. Our advertising buy space to familiarize the general with our products, so that when he has a call for them he will know what they are and where they may be obtained. Get posted. The following goods were advertised in the September 24th, Era.

TONIC PILLS. Made by Sharp & Dolner, Baltimore, Md., and said to be composed of beef, wheat and other, and to be especially adapted for fever patients.

PLASTER FORMULARY. Claimed to be the best ever used in any other self-operative work on plaster and other subjects. Has been in preparation for over half a century, and is the 12th edition of Fenner's Complete Formulary. Published by B. Fenner, West 14th, N. Y. From whom further particulars may be obtained.

SEVEN PER CENT PREFERRED STOCK FOR SALE.—The Welch Grape Juice Co., for enlargement

of plant and for advertising purposes, offers to its friends \$200,000.00 of preferred stock at par value, \$100 per share, non-assessable, guaranteed dividend of 7 per cent, payable semi-annually, January and July. Shares issued in any number from one up. More information on page 3.

POCKET ATOMIZER.—Made by Whitall Tatum Co., 410-416 Rice street, Philadelphia; so arranged that when the Atomizer is not in use it can be pushed into the bulb, forming a very compact package which may be carried in the pocket. See cut on page 4.

CONCENTRATED FRUIT SYRUPS.—The kind mother makes, prepared from selected ripe fruit, by the Duroy & Haines Co., Sandusky, O.

BRUSHES.—Hair, Tooth, Nail, Cloth, Complexion, Military and Bath Brushes made by G. B. Kent & Sons, Ltd., London, England, and sold in this country by McKesson & Robbins of New York. Every Brush is warranted perfect.

BUTLER BROTHERS' CATALOGUE.—A wholesale department store on paper, of special interest to retail druggists; takes the market to their stores; issued by Butler Brothers, New York, Chicago and St. Louis. Free for the asking.

SHELF-WORN STOCK.—Gives the public a bad impression of your store, and furnishes the other fellow with an argument that turns patronage in his direction. Why not get rid of it? The Barks Medicine Co., 135-137 Lake street, Chicago, Ill., would be glad to exchange salable goods for it.

PISO'S CONSUMPTION CURE.—A staple article that sells the year around. Be prepared to supply the coming demand.

WINE OF CARDUI.—Made by the Chattanooga Medicine Co., Chattanooga, Tenn., and claimed by them to be advertised in 50,000 newspapers, 18,000,000 almanacs, 5,000,000 booklets and posters, mailing lists, etc. Note their advertisement on inside of front cover.

BORAX.—The 20-Mule Team Brand; cleanses glasses or ice cream dishes better and quicker than any other preparation. Order of your jobber.

MEDICINAL CHEMICALS.—Made by the Mallinckrodt Chemical Works, St. Louis, Mo., and used by thousands of critical pharmacists and physicians. The "M. C. W." label stands for highest purity in medicinal chemicals.

MIXED PAINT.—Made by the Buckeye Paint & Varnish Co., Toledo, O., in 10 desirable shades; durable and economical; put up in gallons, half gallons and quarts.

TOOTHACHE GUM.—82.50 per gross. Made by the Steratol Chemical Co., Oceanus, N. Y. Retail for 10c per package. Send 35c in stamps for sample dozen on attractive show card, and get particulars of their special winter offer.

PATENTS.

Issued September 22, 1903.

- 739,375.—Charles E. Baker and Arthur W. Burwell, Cleveland, Ohio. Process of producing sodium peroxide.
- 739,471.—William D. Allison, Indianapolis, Ind. Tray-support and closet for physicians' tables.
- 739,536.—John T. Flaherty, Washington, D. C. Liquid-measure.
- 739,604.—Frank Jones, Chicago, Ill. Bottle-package.
- 739,616.—Alfred P. Oxley, Detroit, Michigan. Bottle.
- 739,628.—Frank R. Wilkins, London, England. Stopper for bottles, jars, or similar receptacles.
- 739,723.—Augustus Rosenberg, London, England. Portable oxygen-generating apparatus.

TRADEMARKS.

Registered September 22, 1903.

- 41,145.—Flavoring Extracts. The Auburn Extract Co., Auburn, N. Y. The word "Grandma's."
- 41,150.—Certain Named Medicinal Food. Internationale Hell-u Nahmittel Compagnie, G. M. B. H., Leipzig, Germany. The hyphenated word "Haematin-Eiweiss," etc.
- 41,155.—Lotions. Blackmarr & Mandeville, Chicago, Ill. The words or combination of letters "Loto Retardo."
- 41,156.—Tonic. George W. Caldwell, Middletown, N. Y. A bust portrait of the registrant with his autograph signature thereon.
- 41,157.—Hypnotic. Farbenfabrikon of Elberfeld Co., New York, N. Y. The word "Isopral."
- 41,158.—Pellets for Cure of Kidney Diseases. The Bole Drug Co., Ltd., Winnipeg, Canada. The letters "B. D. C."
- 41,159.—Proprietary Remedy for Certain Named Diseases. Salyria Chemical Co., St. Louis, Mo. The word "Salyria."
- 41,160.—Remedy for Hog-Cholera and Other Swine Diseases. Joseph B. McCallum, Whiteville, N. C. The word "crux."

Peter Van Schaack & Sons, Inc., wholesale druggists of Chicago, have recently supplied their patrons in the trade with copies of their annual Price List for 1903. This edition marks volume xxxiii of the series and an examination prompts us to say that it is fully up to the standard of excellence attained by its predecessors. It has been revised from cover to cover, contains 1280 pages, and is a complete catalogue of the multitudinous number of articles that must be carried in stock to meet the daily wants of the retail pharmacist.

SALOON MEN MAKE SAME OLD CHARGE.

Kansas City, Mo., September 29.—There is prospect of open war in this city between "North End" druggists and saloon men. At a recent meeting of the board of police commissioners, several applications for saloon licenses were refused by the board on the ground that there were no saloons in the neighborhood and that the citizens of the locality were opposed to the permits. The saloon men came back with evidence to the effect that liquor was being illegally sold in drug stores in the neighborhood in question and demanded that the law be applied to druggists as well as themselves. The board has the matter under consideration.

KANSAS LIQUOR TROUBLE SUBSIDING.

Parsons, Kas., September 29.—It is reported that several Parsons druggists under bonds to appear to answer charges of violating the prohibitory law, have agreed to a "compromise" with the authorities. The terms reported are that the druggists shall permit no more drinking on their premises and that they shall insist upon a physician's prescription before selling liquor, thus evading prosecution.

After being tried four times on the charge of violating the prohibitory law, Mr. Youngberg, of Ottawa, has at last been acquitted. It is thought that his troubles are over.

HEARD IN IOWA.

—George W. Payne of Burt, has given a bill of sale. The Phelps-King Drug Co. succeeds C. W. Phelps at Keokuk. C. L. Kettlewell has succeeded Graff & Kettlewell at Carson. B. F. Kucheman of Meservey is now B. F. Kucheman & Co.

—F. E. Brown & Son of Anamosa, have admitted H. E. Beam and the style is now H. E. Beam Drug Co. R. E. Anderson succeeds J. B. Atkins at Council Bluffs. —O. W. Phelps of Kanawha, has sold to Henry Irwin and the place is to be called the Irwin Pharmacy. P. W. Fleming succeeds Fleming & Griepenburg at Manson.

—James Harper of Boone, has given a bill of sale. So have J. A. Ross & Co. of Pocahontas. E. D. Morrison & Co. of Valley Junction, have sold.

—The affairs of John W. Cline of Knoxville, are in the hands of a receiver. Baker & Woolsey of Greene, are succeeded by Tobin Bros.

PRICE CHANGES GENERALLY FAVORABLE TO SELLERS.

New York, September 29. (General) business continues to show increasing volume, and the market has a steady undertone with a majority of the price changes favorable to sellers. The principal exceptions are a further decline in menthol and a reduction in manufacturers prices of citric acid.

OPILUM.—There is no material change in the condition of the market, and jobbers continue to quote \$3.06 3/45 for 9 per cent, and \$3.50 3/45 for 11 per cent. Powdered is unchanged at \$4.30 1/45 for 13 per cent, and \$4.80 1/45 for 16 per cent.

MORPHINE.—Jobbers report a steady movement into channels of consumption with values maintained at \$2.00 1/25 for eightths in ounce boxes, \$2.55 1/25 in 2 1/2-oz. boxes, \$2.85 1/25 in ounce vials, and \$2.30 1/25 in 5-oz. cans.

QUININE.—A continued fair consuming demand is reported and the outlook is considered favorable to improved prices in the near future, but jobbers are yet willing to sell at 25 1/2-oz. tins, 26 1/2-oz. tins, 27 1/2-oz. tins, 28 1/2-oz. tins, 29 1/2-oz. tins, 30 1/2-oz. tins, 27 1/2-oz. in 15 or 16-oz. tins, and 32 1/2-oz. in ounce vials, according to brand and quantity.

ELIGOT.—Foreign markets continue to harden under the influence of reduced stocks and increased activity, and local jobbers have further advanced quotations to 47 1/2-oz. for whole Russian, 72 1/2-oz. for powdered, 62 1/2-oz. for whole Spanish and 72 1/2-oz. for powdered.

Oil, CLOVES.—Under the influences noted last week jobbers have further advanced their quotations to \$5. 1/8 1/100, and the tendency is still upward.

Oil, PEPPERMINT.—Primary markets are firmer and local dealers are indifferent sellers at \$3.00 1/3 1/10 for bulk and \$3.25 1/3 1/10 for either H. G. H. or redistilled.

Oil, SPEARMINT.—A firmer feeling has developed among holders and bidding quotations have been advanced to 81. 5/16 1/100.

BALSAM PERT.—Primary markets are reported stronger and spot bidding quotations show an advance to 81. 4/16 1/100.

TTRIC ACID.—Manufacturers have reduced prices to 10 per lb., and 10 1/2 per lb. sold quotations are 23 1/2-oz. in lbs., 23 1/2-oz. in kgs and 10 1/2-oz. in broken lots.

NITRATE OF SILVER.—Manufacturers' prices have further advanced, owing to increased cost of the metal, and jobbers have marked up quotations to 47 1/2-oz. for crystals and 46 1/2-oz. for fused.

SABSAPIPARILLA.—Mexican is very scarce, owing to difficulty in reaching shipment from primary sources, an account of the plague and jobbers have advanced quotations to 25 1/2-oz. for whole, 27 1/2-oz. for cut or crushed and 29 1/2-oz. for powdered.

SAMPLOK MONOGRAMMATED.—An easier feeling has developed and bidding quotations have been reduced to \$1.00 1/2 per lb. and 1 1/4 1/100 per oz.

MENTHOL.—Under the influences noted last week jobbers have further reduced their prices to 86. 5/16 1/25 per lb. and 50 1/2-oz. per oz.

SPICES.—Since the report on spices noted a week ago there has been a further advance in quotations for pepper to 1 1/2-oz. for whole and 1 1/4 1/25 for new brand. Saigon cassia has been marked up to 65 1/2-oz. for whole and 70 1/2-oz. for powdered.

CANARY SEED.—Savina is without quotation but from whole bidding quotations for Sachy have advanced to 1 1/4 1/100 by the bag, and 30 1/2-oz. for

THAP SEED.—Russian is firmer and jobbers have advanced quotations to 31. 5/16 1/100 by the bag, and 1 1/2-oz. in smaller quantities.

SHELLS.—Foreign markets are decidedly stronger and jobbers have advanced their prices to 60 1/2-oz. for S. S. O. and 70 1/2-oz. for Native.

TESTS AND REAGENTS, Chemical and Microscopical, known by their authors' names, together with an index of subjects, compiled for the use of chemists, microscopists, pharmacists, students, etc. By Alfred H. Cohn, Ph. G., Author of "Indicators and Test Papers," etc. First edition, 8vo., 114 pages; price, cloth \$2. New York, John Wiley & Sons; London, Chapman & Hall, Limited.

The earlier works of Alschel, Schneider and Wilder have been heavily drawn upon to supply the text for "Tests and Reagents," but the author is entitled to great credit for the logical arrangement of his material and for the many new tests he has incorporated in his book. The tests are arranged in the alphabetical order of their originators' names, a comprehensive index of subjects making it possible for the busy chemist or pharmacist to find the data he may want without loss of time. As a work of reference it deserves a place in every chemist's library.

BUSINESS NOTICES.

Our experience in catering to the wants of druggists has taught us that they are especially interested in formulas for toilet preparations.

In the Era Formulary there is one department which alone contains something over 1,000 such formulas.

Toilet specialties are as important as any class of goods the druggist may sell—"they appeal to the tastes of the refined and the rich—to the beautiful and those who wish to be"—and they afford a good profit.

Why not awaken to your opportunities for a policy of trade extension by purchasing a copy of the Era Formulary? This book will enable you to become the manufacturing chemist of your neighborhood. Price \$5 per copy, delivered. Write to the publishers for information.

President Hadley of Yale, says that, "the two aims of education are training for knowledge and training for power."

Another eminent educator has the same thought in mind when he distinguishes between "teaching to know and teaching to think and do."

In pharmaceutical education this distinction probably does not obtain, for the training is purely a guide to correct action.

Still it is well for the student to select carefully so that his limited time and means produce the best results.

The Era Course in Pharmacy gives the maximum of practical training for the minimum expenditure of time and fees.

Write to The Pharmaceutical Era, No. 8 Spruce Street, New York, N. Y.

A WAR OF BRAINS.

Sir Norman Lockyer, president of the British Association for the Advancement of Science, stirred up no little commotion among educated Englishmen recently by declaring that the country was woefully behind the times in the matter of technical education, and urging an immediate expenditure of twenty-four million pounds for new universities. He said England was falling behind in the race for national supremacy, that the struggle for existence had undergone a change, the war now being carried on not between individuals, but between organized nations, not with sword and sinew but with science and brains. The means provided for university education and research in Germany and the United States were held up as an example and a warning to his countrymen. There are probably many in the British Islands who agree with the enthusiastic man of science, for that nation has been much given to self-criticism of late, but others do not believe that more scientific instruction and more universities would cure England's ills, and even deny that there is anything serious the matter, at all. A writer in the Chemist and Druggist points out that the inference in the president's remarks, that national brain-power bears any close relation to the number and the endowment of universities is debatable ground, and that the creators of great industries have not been university-bred men. He considers the requirements of the day more a matter of push and enterprise among capitalists than one of college buildings and high-salaried professors. Perhaps a happy adjustment of one to the other is best of all, a sufficient number of trained men who can do things with scientific accuracy and economy, and an abundance of enterprising capitalists willing to employ them. The demand for technical men seems nowhere to be equal to the supply, in spite of what the newspapers say. In Germany they already have a large and troublesome class of unemployed, known as the "educated proletariat," and this country is by no means free from the danger of a similar infliction. Perhaps, after all, the needs of the world are like those of pharmacy—not so much quantity as quality.

THE VALUE OF RESEARCH.

The retiring president of the British association has no patience with those who insist that in order to be

worth while every study must be practical and useful, and that pure science like a polite acquaintance with ancient literature and comic sections, is wholly ornamental and wasteful of time which is money. To be sure, he speaks as the representative of an association having for its avowed purpose the advancement of science, and his opinion is therefore, perhaps, not quite unbiased yet what he has to say on the subject is well worth thinking about. In his opinion it is not enough to be satisfied with improvements; there must be something entirely new. "It is imagined by many who have given no thought to the matter that this research should be closely allied with some application of science being utilized at the time. Nothing could be further from the truth; nothing could be more unwise than such a limitation. Surely all the laws of Nature will be ultimately of service and therefore there is much more future help to be got from a study of the unknown and the unused than we can hope to obtain by continuing the study of that which is pretty well known and utilized already. It was a king of France, Louis XIV., who first commended the study of the 'tenemic inutile.' The history of modern science shows us more and more as the years roll on, the necessity and advantages of such studies, and, therefore, the importance of properly endowing them; for the production of new knowledge is a costly and unremunerative pursuit." Still, for all that, it is not wise to treat a branch of science with contempt simply because it has an immediately useful purpose, an egotism not at all uncommon among Sir Norman Lockyer's associates and a form of snobbery from which we in this country have also suffered at times.

ARE THE DOCTORS TOO GOOD?

Boston always has been noted for the strange and startling ideas which it manages to bring into the world. One of the latest reported from this exuberant thought center is attributed to a health officer of Providence who recently read a paper in Boston on the question whether the doctors were not in danger, of overdoing the business of saving life. He argued that the application of medical skill in sparing the weaklings of the human race was contrary to nature, while by means of the beneficent process of natural selection is constantly killing off the unfit. Medical men, by saving the lives of poor little chaps of less than average vigor were, therefore, counteracting the efforts of nature to "improve the breed" so to speak. All this, of course, based upon the assumption that the strong are the most fit to survive, and is, in fact, lower than Aesculapian thought. To a stock man this argument always appears eminently logical, but it is not yet time to begin stamping the doctors for their work of mercy. The Journal of the American Medical Association will devote attention to a very serious flaw in the chain of reasoning. The strongest children are put not necessarily the most fit to survive. A child, freed from a purely physical standpoint, may be a degenerate already—physically he is not to be compared with any one of the large number of animal species—but what he lacks in bodily strength he makes up in brain development. An ordinary bear can out run, out force and out fight any man, and his intelligence is hardly less so, but a noble animal intelligence goes and he is not fit for a human one. Man's supremacy

rests on brain development only, and relatively puny bodies may sustain and nourish brains of great vigor and usefulness. Besides it is impossible to foretell what sort of man will develop from any child. Some great men have had, according to early appearances, a very poor beginning. Weaklings that grow up to be Darwins, Daniel Websters and Roosevelts are worth saving. Doctors and health officers are doing good work, and they need not worry much about results.

A NEW INDUSTRY.

Although radium is as yet only a scientific curiosity and its uses are only experimental, the wide interest in the metal among men of science has resulted in an actual demand which has already created an entirely new industry. In France and Germany enterprise has been in the field for some time trying to supply the extraordinary demand, and there is a project on foot in this country to extract the wonderful element from ore mined in Colorado. A rich vein of radium is at present far more interesting from a financial point of view than a gold mine, for while the market for the yellow metal is steady at about \$20 an ounce, that of the new scientific puzzle is booming at \$20,000 for the same small quantity. The minerals from which radium may be obtained are pitch blende, thorite, organite, fergusonite, cleveite, chalcocite, autumite and monazite. Unfortunately, like other things much sought after in this world, the interesting new element is somewhat elusive. A given mineral may or may not contain traces, the proportion being an extremely uncertain quantity. At present the industry is limited to a pursuit of traces. This uncertainty now merely adds zest to the search, of course, and the new industry should appeal strongly to the extremely lively imaginations of our mining population.

A FEW TOOTS FROM OUR HORN.

It is one thing to write and print a journal, and another to get people to read it. In these days of million-dollar paper-mills and huge printing presses, a publication escapes all notice unless it possesses the one essential quality, interest. Many periodicals, excellent in printing and subject matter, are never removed from the wrappers because they lack the quality that piques the curiosity and impels one to read. Nowadays quality of paper and worthy intentions do not alone make a journal influential, if an interesting manner of presenting things is lacking, it will receive no more attention than last year's manna. It is this quality of human interest, that the Era has endeavored to put in its pages, the quality which will win it readers, be they subscribers or only borrowers. It is therefore with no little pleasure that we note from time to time evidences that our efforts are having the desired results. During the past week the German Apothecaries' Society of this city successfully launched a co-operative insurance company, an enterprise which had been on the stocks for some time. When the Era investigated the merits of the scheme and printed accounts of results obtained elsewhere, the originators of the movement began to receive letters of inquiry from all parts of the country, and neighboring associations passed resolutions about it and even appointed delegates to inquire into its pur-

poses. A few weeks ago we printed opinions of various members of the trade about Dr. Lederle's proposal to furnish free antitoxin and vaccine to every one in the city, and the week following an enterprising and influential pharmaceutical association passed resolutions condemning the principle and appointed a committee to co-operate with other societies in taking steps in an opposite direction. Now, the Era does not wish to take credit to itself for the success of these enterprises. Success is due wholly to the energetic gentlemen who formulate the plans and carry them to the final issue. But we merely wish to call attention to the fact that we are fulfilling our mission, serving as a means of bringing the thoughts and plans of one druggist to the attention of another, to whom they are equally interesting and without whose co-operation no plan can accomplish results. The highest compliment that can be paid any journal is the assurance that it is read.

Old School Philosophy.

The end of the work is to enjoy leisure, but to enjoy leisure, you must have gone through work. Play-time must come after school-time, otherwise it loses its savor. Play, after all is a relative thing; it is not a thing which has an absolute existence. There is no such thing as play, except to the worker. Put white upon white, and you can hardly see it; put white upon black, and how bright it is! Light your lamp in the sunshine, and it is nothing; you must have darkness around to make its presence felt.

The superior man is exacting of himself; the common man is exacting of others.

The superior man may not be conversant with petty details, and yet may have important matters put into his hands. The inferior man may not be charged with important matters, yet may be charged with the petty details.

The superior man is inflexibly upright, and takes things upon trust.

In speaking, perspicuity is all that is needed. The plebeian kind of respect for piety is the very pest of virtue.

Listening on the road, and repeating in the lane—this is abandonment of virtue.

Artful speech is the confusion of virtue. Impatience over little things introduces confusion into great schemes.

The wise escape doubt; the good-hearted, trouble; the bold, apprehension.

The great man is not a mere receptacle.—Translations from the Analects of Confucius.

ERA COURSE IN PHARMACY.

GRADUATES FOR SEPTEMBER 1903.

Matriculation No.	Grade	Per Cent.
3596	R. Allison Miller, Fullerton, Neb.	90
3571	Otis Eugene Wood, St. Petersburg, Fla	80
3594	Frank A. Morris, Lisbon, Ohio	93
3301	David Reilly, Little Falls, N. J.	93
3651	Howard H. Gillard, Millord, Ohio	80
3605	Hallie E. Smith, Tremont, Oregon	80
3539	F. D. Williston, Fayetteville, N. C.	90
3616	Carl Wilt, Eastland, Texas	98

The above graduates will receive diplomas within a short time. A large and very handsome engraved diploma printed on artificial parchment, with the graduate's name engrossed, especially suited for framing will be furnished to all who request it for the sum of \$2. Those who desire the latter should forward the necessary fee at once to the Pharmaceutical Era.

F. W. SCHUMACHER, Columbus, Ohio.
Vice-President, The Peruna Drug Mfg. Co., and Second Vice-President Proprietary Association of America.

WHEN THE PACKAGE IS HANDED OUT.

A Collection of Notes Upon the External Appearances of Purchases.

C. G. BUCHANAN, Wellsburg, W. Va.

THE external appearance of a purchase has much to do with the feeling of satisfaction which every druggist should endeavor to inspire in his customers. If the packages carried out of the store have been clumsily prepared and possess cheap, trashy and inferior containers or wrappings, much of the gratification of the customer will be destroyed even though the purchase may otherwise have been pleasurable.

The druggist should use only first class containers in dispensing, for it is false economy to attempt to save the small difference in cost between the first and second grades. The bottles should be of good workmanship and of a clear, flint glass, and not the kind with a greenish tinge as that material cheapens the entire effect. The pharmacist should not buy from a firm that sends out bottles full of bubbles and abnormal shapes and sizes, nor should he dispense a bottle with a broken lip. It is an excellent plan for the druggist to adopt one particular style of bottle and to adhere strictly to that style at all times.

In the selection of the style to be adopted pains should be taken to obtain as pretty and neat a shape as possible—the old Philadelphia oval has been one of the most servicable of styles ever used by the druggist, but it has some disadvantages and besides, it is becoming too common. Instead of it one had best adopt one of the newer ovals now upon the market, or a full line of the French square or Blake's.

Bottles may be obtained in plain forms or arrangements may be made with the manufacturers to have the user's name and address blown in each. This is called "private mould work," but it does not require the making of an entire new mould in each case, it being necessary to have only a suitable die plate which can be slipped into a suitable receptacle in the mould. For this reason bottles made in this manner are not much more expensive than the plain forms.

In dispensing prescriptions for external use, it is a good plan to use a round bottle of either blue or amber glass, this style not to be used for any other purpose. The distinct shape and color serves as a warning more effective than any number of labels.

Only the best of corks should be used and all prescriptions should be capped with paper caps.

Ointment jars of opal glass are to be preferred to those from either green or amber, because they not only have a better appearance but are less expensive. Only the best of boxes should be used for dispensing powder, tablets, etc., and the sizes should be kept well assorted.

In the selection of labels, there is a growing to avoid the use of flowery and "gingerbread" styles and to use instead plain lettering neatly lithographed on paper of good quality.

The druggist will find it best to use white wrapping paper entirely. A kind is now being manufactured almost exclusively for the pharmacist's use, of flax fibre, thin enough to make neat packages and yet very strong. The paper comes in rolls and three sizes should be kept, 6-inch, 9-inch and 18-inch, being the dimensions most convenient. These three sizes will accommodate almost every sale in the drug store, but owing to the fact that large packages are sometimes made, a small amount of a somewhat heavier bodied paper should be kept. This may either be purchased in rolls, in which case it should be 24 inches to 30 inches wide, or in sheets of that size square. No advertisement should be printed on the wrapping paper. That field of advertising can be profitably left to others.

Pasteboard cartons should be used for dispensing bulk drugs whenever possible. They are comparatively inexpensive and not only serve to make an attractive package but are also very serviceable to the customer as containers. Only the one, two, four, eight and sixteen ounce sizes should be used and all sizes should bear an advertisement, for many of them will be kept for containers and the store will thus receive more or less advertising at no expense. When cartons are not used, special care must be taken that all packages of bulk drugs are neatly prepared. The ability to do this comes only as a result of constant practice and the clerk who has not that skill should practice daily until he acquires it. In case cartons are not used, small paper bags should be kept for packages of finely powdered substances and for substances like flaxseed, likely to be troublesome, not only to the clerk but also to the customer. An outside wrapper is of course placed around both carton and bag.

The long narrow envelopes designed to hold tooth brushes, combs and similar shaped articles will be found very convenient and well worth the cost, for it is very difficult to make a neat package of such articles.

Attention to all details affecting the external appearance of the customer's purchase will amply repay all the time and expense involved for care in these trifles will not only advertise one's business, but will also produce an agreeable impression. In the case of prescriptions it pleases the physician who will only pay notes that his preparations are dispensed with care and good taste.

ARTIFICIAL RUBBER

A process for the manufacture of "synthetic caoutchouc" has been patented by a French patent. One hundred parts of sand is heated with 25 parts of lime, phosphorus or hydrochloric acid to the boiling point, the paper is heated and allowed to burn until the flame assumes a green color. The mixture is then removed to a furnace with a current of oxygen. The mixture is then opened in the water bath for a brown, highly elastic base. Having the same empirical formula as caoutchouc and containing it and is claimed to be suitable for employment as a substitute for either.

GATHERED FORMULAS.

Harness Wax.

Oil of turpentine.....	3000 parts
Yellow wax.....	100 parts
Prussian blue.....	10 parts
Indigo.....	5 parts
Bone black.....	50 parts

Dissolve the wax in the oil, by aid of low heat, in a water-bath. Mix the remaining ingredients, which must be well powdered, and work up with a portion of the solution of wax. Finally, add the mixture to the solution, and mix thoroughly in the bath. When a homogeneous liquid is obtained, pour into earthen boxes.

Solution of Pepsin and Eucynimus.

Soluble pepsin.....	4 drams
Dilute hydrochloric acid.....	3 drams
Glycerin.....	3 ounces
Tincture of euonymus.....	2½ ounces
Chloroform water.....	4 ounces
Distilled water to.....	20 ounces

Dissolve the pepsin in the mixture of acid and water, then add the tincture of euonymus and let the mixture stand over night. Next filter through a filter paper rubbed over with kaolin, and add the glycerin.

Mounting Paste.

Gelatin.....	150 grains
Arrowroot.....	308 grains
Water.....	8 fl. ounces
Methylated spirit.....	2½ fl. drams
Solution of formaldehyde (10 per cent.).....	20 minims

Soak the gelatin for a few hours in 2 ounces of the water, then make a paste with the arrowroot and remaining 6 ounces of boiling water; mix, heat gently till dissolved, and as the mixture cools add the methylated spirit and solution of formaldehyde.

Skin Bleach.

Lanolin.....	30 parts
Oil of bitter almond.....	10 parts
Borax.....	1 part
Glycerin.....	15 parts
Hydrogen peroxide.....	15 parts

Mix the lanolin and oil of almond; dissolve the borax in the glycerin and peroxide of hydrogen and mix with the fat by agitation. This preparation is said to do its work by aid of the bleaching property of hydrogen peroxide.

For a muddy complexion, or a skin with a blotched or dirty appearance, the following is commended:

White mercurial ointment.....	5 parts
Zinc oxide ointment.....	5 parts
Lanolin.....	30 parts
Oil of bitter almond.....	10 parts

Mix thoroughly, then make the following solution:

Borax.....	2 parts
Glycerin.....	30 parts
Rose water.....	10 parts

For every 3 ounces of this solution add 5 drops of concentrated nitric acid and then quickly stir the solution into the first mixture. Of course, the mixture may be perfumed as desired.

Celery Salt.

(1)	Powdered celery seed, fresh.....	2 av. ounces
	Fine table salt.....	11 av. ounces
(2)	Celery seed, fresh.....	3 av. ounces
	Alum, powdered.....	3 av. ounce
	Phenetic, powdered.....	2 av. ounce
	Fine table salt.....	21 av. ounces

Nothing is so good for an ignorant man as silence, and he knew this he would no longer be ignorant.

That is rank which discloses itself by its smell, and not what the perfumers impose upon us. If a man be an expert in any art he needs not tell it, for his own skill will show it—Persian proverb.

SHOP TALK

ON PROFESSIONALISM AND DOCTORS WHO DON'T ADVERTISE.

"I've found it at last," remarked the C. P.
 "What—that fortune you didn't find in the drug business?" inquired the druggist facetiously.
 "The distinction between business and a profession."

"I thought that was mostly in your eye—depends upon the way you look at it."

"Not at all! I've got something I can put my finger on now. There is a doctor in Milwaukee who has been publishing a ferocious exposé of a brother medicus who committed the crime of furnishing patients at so much per. Doctor No. 1 is an eye specialist and No. 2 finds cases in his country practice which might be conveniently turned over to the expert."

"And he thought there ought to be something in it?"

"That is what stirs up the strictly ethical specialist's wrath. Oh, he waxes quite eloquent, I assure you. But this is what settles a matter that I have been worrying about for ever so long: The giving or acceptance of commissions by physicians from other people, 'is dishonest because the patient is deceived—it is a cowardly proceeding if either of the doctors is afraid to let the patient know for what he is paying. The medical profession is not a trade, and the division of fees without the knowledge of the patient would be degrading the whole profession to the trade level."

"There you have it! The division of profits unbeknown to the customer makes a thing a trade. Remember that please."

"It seems that if you employ agents you are not a professional man. The doctor is not in business. I am not practicing medicine as a business, but as a profession, and while I am entitled to a fair fee for the knowledge, times and labor expended on the case, I can not stoop to the tradesman's means of living drummers to get me patients. Your proposition would degrade you to a "hired man" or "barker" for the quack who might accept."

"That settles it!" said the druggist. "Pharmacy can't be a profession. Why, if we were as toplofty as all that, we couldn't even ask a doctor for his trade. I am going to be a business man. I'd a heap rather make a living as a despised trader, than starve as a professional man."

"What strikes me in this high and mighty doctor's attitude," said the C. P., "is his fine scorn for the trader, the drummer and their ways. I used to think that traveling for orders was almost a profession in itself. But how mistaken I have been!"

"Honestly, now! Do you take any stock in that sort of thing?"

"Of course, not! Do you think there is no competition in the doctoring business? The man with the tablet case has got to hustle for a living like the rest of us. He has a curious code based on a properly beautiful theory, and he thinks he is away above the man who openly makes a bid for something to do, but he has to hustle. There is only one way to get business, and that is to advertise."

"Legitimate doctor's don't advertise," said the druggist, aghast at the sage's revolutionary language.

"They don't eh? Then how do they live? They think they don't, but the more thoughtful know better. Of course they advertise—and I don't see that it is any more honorable because it is done on the sly."

"What do you mean?"

"Mean? Why, just what I say. Old Dr. Gentian told me the other day that he would have to get a move on, the young fellows were up to many new

tricks. Now, you would think his reputation alone would carry him along—that is all a physician is supposed to be working for. But, no, reputation, which is after all, only another form of publicity, is not enough. He has bought a more expensive microscope and has placed it where his patients can't help seeing it, and now he has one of those big electric machines and keeps the X-ray bulb and all the other riggum-a-jigs standing around in conspicuous places. When a patient comes in he sees the doctor's bald head shining among all that fearful and wonderful apparatus, and he almost falls down in awe before such a tremendous man of science."

"But they use those things now."

"Oh, yes, to a limited extent! But there are others beside Dr. Gentian who realize that it is a fine ad. The old doctor admitted to me that it was mainly in making an impression that he used them. He thinks of getting a yellow automobile now—not that he needs it particularly in his work—his practice is mainly ordinary stomach and liver business in his office—but, as he says, 'it looks well!'"

"Everybody has got to get before the public now-a-days."

"Of course, and that is precisely the art of advertising. The lawyer, the actor, the politician, the society leader—they all do it in one way or another. And there is nothing disgraceful about it, as far as I can see. Even the Bible speaks of the inadvisability of hiding one's light under a bushel."

"There are different ways of doing it, you know. It isn't considered good taste for a doctor to blow his horn openly."

"Ah, good taste! But most of them think that keeping up a pretense of modesty is the only thing in morals. Shucks! morals in trade are away above those in medicine. A lying advertisement or a dishonest invoice is impossible from a business stand point, but the practice of medicine is built upon insincerity."

"You are going too far again."

"Am I? When you buy a pair of shoes you inquire about the quality and what you are paying for. If the dealer knows his business he tells you the truth. Go to a physician and you are not supposed even to inquire what you are getting, whether it is really good for anything and how much it is going to cost."

"Oh, well! That's only custom."

ANOTHER DRUG STORE SYSTEM.

Charles E. Ward of Denver at a recent meeting of the Colorado Ph. A. had this to say about keeping drug store accounts:

"I believe that the average retail druggist is not a very exact man when it comes to bookkeeping. His calling demands great accuracy in the pharmaceutical and dispensing branches of his business, but in his bookkeeping he is probably a little shiftless. In my store, for example, I use this system: I take my cash register, which divides my sales into three separate departments—soda, cigars, drugs and merchandise. As you all know, on a cash register there is a key for "Paid Out," "On Account," "Direct Sale," and "Change." I have the date in the first column; cigars, I believe, come next, soda water so much; received on account, so much; drugs, etc., so much, and total, so much. On the opposite side of the page, I take from a daily expense account, which you can buy indexed for every day in the year, my total expense for the day, whatever I have paid out. If I buy a bill of goods from any one, I have another book.

"The first of the year I start this book with a merchandise account, showing that I have so much merchandise fixtures, etc., with which you are all familiar. Every night I itemize the amount of goods from the different stores during the day, invoices received, so that at any time, in case of a fire loss, I can simply go to the safe (I suppose it is fireproof; if it is not, it would not do me much good) and take my cash book showing the amount of goods sold during six months of the year, and I can take this merchandise book, and show the amount of goods bought during the year, and by a set of figures, if you are sharp enough to work them out with the insurance adjuster, you can come to some satisfactory understanding as to about what your loss is, and what they should pay.

"When it comes to an elaborate set of books, kept in prime order, I think the average retail druggist does not keep them; therefore, I think the more simple, the better, at the same time, making them accurate, so as to show your exact standing and in order to keep track of your own business. It is absolutely necessary, in case of fire loss, to make a satisfactory showing. You should know what you have bought since the first of the year, also what your sales have been, then by simply adding the first three items together and subtracting them from the amount of sales, with a proportionate profit, you can come to some sort of an understanding with the insurance adjuster, whereby your loss can be amicably adjusted."

THE MAN WHO KEPT HIS HAT ON.

Jim Spriggs was a schemer. There was no doubt that Jim was a Yankee. And added to Jim's ability to scheme he had all the other New England attributes, one of them being a huge appetite for work and another a disposition to accumulate in his jeans' pocket all that came to them.

Now, it comes within the pale of comprehension when we do affirm that Jim was ready in his twenty-eighth year to rise from his humble place in Squire Jones' general store in Nopunk, where Jim was doing a right good clerk, to the dignity and affluence of boss himself.

Over in Queen's Toddy township, matter of six and thirty miles toward the rising sun at the time of the equinox, Wilyum Jiggers had a drug store. Jim had been particularly strong behind the drug counter in Squire Jones's and he negotiated. It isn't pertinent to this story that Jim got Wilyum's drug store for about half the original price asked. The information is put in for local color, however. Jim moved to Queen's Toddy township.

Hereafter our hero shall be known as Mister James Spryges. We said before that he was a schemer. If Smith could be Smythe, why not Spryges, Spryges?

James talked his venture over with his chum. "I don't just know how I'll do it," he said, "but I'm going to make them talk about me. I'm going to be on every one's tongue. Now how shall I—"

But James' chum, somewhat craven, was impatient. He had been to New York and had heard a new expression. It just fitted here and he expressed his feeling splendidly.

"Aw, keep your hat on!" he said, and went away. "Keep your hat on," muttered James. "Keep your By Gosh, I will!"

James kept his hat on. He never took it off. He never took it off the street when he met young ladies who, in honor of ginocchio in New York and Boston, named them to criticize his apparent lack of good breeding. In the store he always wore it.

It got to be talked about. People wondered. They tried to see what was under that hat. The fringe of hair around it had seemed all right, but— They started out to see heretofore which he always did justice in ample measure, but kept his hat on. He was content under in the Sunday school and filled the position with great profit, keeping his hat on.

Conversations about who was started in his previous had his secret rooms locked in his breast and

under his hat. They spoke of Indian massacres and scalping, with the same result. They impertuned the barber, who is supposed to know secrets of a certain kind, but the barber had never been visited by James, though his face was always clean shaven and the fringe of hair ever properly trimmed. They sneaked up to his bedroom window, without avail. On windy days they haunted the streets he passed through, but the hat never blew off. The jack-knife philosophers and spittoon marksman raced with the sewing circle for a solution. But the hat remained to baffle them. An ordinary black felt hat, yet it called people from miles away and filled James' store, and his money coffers grew.

Then James fell in love. Nancy Quimby she was, and perhaps her curiosity piqued her into as many of the concessions that maidens make to ardent lovers as Cupid did. And her curiosity did not abate. James had a way about him that forbade her asking the question that lay uppermost in her mind. But he asked the one most important to him, and she—let us hope Cupid did it all—consented.

They were married, and James kept his hat on. When they returned from their wedding trip people flocked to the store. They gasped with ecstacy, long breaths. Over James' glossy black hair there was no covering. They looked and made way for others. Then all gradually forgot.

But James' competitor had, long since, discouraged, closed up and moved away disgustedly asserting that it was "no use trying to compete with a freak."

WOKE UP THE NEIGHBORHOOD.

"Talk about store openings," said a druggist in Rochester, "we had one a few years ago that woke up the whole neighborhood, causing a personal investigation upon the part of many individuals—just what we wanted. We decided to have a store that would be open early in the morning. Most of them were opening at that time about 8 o'clock and we decided to catch the early trade and open at 6 a. m. At that hour on the morning appointed the city was awakened by ten sharp and powerful explosions. All but a few early risers were sleeping peacefully, but in less than five minutes half-dressed men, some with Winchester rifles in their hands, were on the street, and heads were poking from all windows, it seemed. The police even woke up and the patrol wagon was summoned by someone. The police station was kept busy answering telephone inquiries for a half hour. A report was soon in rapid growth that a magazine had blown up in the fireworks factory near my store. The truth of the matter was soon learned and the people laughed when they found out that a new druggist had exploded ten bombs at once. It was an inexpensive and effective advertisement. Yes, we caught the early morning trade and our competitors found it necessary to follow our example."

HOW MANY HAVE JOSS STICKS IN STOCK?

A man tried to find some joss sticks in the Providence R. I. drug stores. Some folks prefer these macaroni-like bits of Chinese incense to oil of lavender as an odoriferous defense against the attacks of the mosquito. He visited a half dozen drug stores, two of the city's leading department stores, and nearly every department in these only to learn everywhere that this ware "just isn't" or "joss-sticks." The city has its Chinatown, as what city has not, but he made no attempt to buy what he sought in first hands and was forced to invest in oil of lavender after all. The average man or woman has an idea that a drug store would be the proper place to seek that sort of stuff, and there may be pharmacists who have joss sticks on their shelves, but men have had experiences in other and larger cities similar to that of this Providence man. Should the sticks form part of a druggist's stock in trade?

OIL OF TURPENTINE BY THE DISTILLATION OF WOOD.*

By W. W. HORNE, Fayetteville, N. C.

PLANTS for the destructive distillation of pine wood have been in operation for a number of years, but appear to have met with only limited success. Recent experiments, however, have brought about improvements in the processes and apparatus employed. New plants are under construction, some of those already established are being enlarged, and wood distillation products are rapidly assuming an important place in trade.

Pine stumps, lightwood, slabs, etc., form the raw material for these plants. Both live and dead wood are used. The principal products obtained are the oil of turpentine—variously termed in naval stores journals, "spirits turpentine," "wood naphtha," "wood spirits," "spiritine," etc.—and rosin oil, tar, creosote and charcoal.

The apparatus in use by the different operators varies slightly. All follow in a general way what is known as the Bilfinger process. Iron retorts, each sufficiently large to hold a cord or more of wood, are set up in a brick oven having a furnace in its base. These ovens are sometimes provided with air flues so arranged that the heat acting on the retort can be increased or reduced. The wood is filled into the retort through the charging aperture in the top, the lid secured in position, and the fire started in the furnace. As the heat rises the tar accumulates in the concave bottoms of the retorts and is discharged through an outlet pipe into the tar receptacle. The volatile products pass out through a conduit connected with the top part of the retort. The heavier of these products are precipitated as liquids before they reach the worm and are thus separated from the lighter oils containing the turpentine. The gas and lighter oils pass into the condensing apparatus. The turpentine is afterward purified by distillation with alkali. Only the charcoal remains in the retort. It is claimed that by this process the output from a cord of fat pine wood is about twenty gallons of turpentine, forty gallons of oil and twenty-five gallons of tar.

A sample of this turpentine was obtained from the Fayetteville plant of a firm engaged in this industry. It is a clear, water white product, and is said to be identical with pure spirits turpentine in so far as specific gravity, boiling point, optical activity, and the ordinary chemical tests are concerned. The odor is less aromatic than that of the oil distilled from "virgin gum." The operators state that the difference in odor has been the drawback in the efforts to market the product.

Another method by which oil of turpentine is obtained from wood has been perfected by another firm, at their plant near Fayetteville. This process is very different from that of the plants described above and the spirits turpentine obtained cannot be called a product of destructive distillation, for the wood is not destroyed. There is no oven or furnace, extraction being accomplished by the use of a rosin bath. This, the inventor claims, secures a control not possible with the ordinary methods of distillation.

When wood in retorts is subjected to a high degree of heat decompositions take place which detrimentally affect the turpentine and other products. If tar is decomposed there is a commingling of its volatile ingredients with the other vapors passing out at the top of the retort. Also charcoal, if superheated, discharges quantities of carbonic acid. It is claimed that the turpentine, by absorbing such gaseous products of decomposition, is so impaired in quality that no refining process can restore its original purity. To avoid these effects of excessive heat, some of the processes make use of a system of flues, provided with

dampers, so arranged that the application of the heat to the retorts can be directed and regulated according to the progress of the distillation. To what extent it is possible by such means to prevent these decompositions, is open to question.

In the Weed process the wood sawed into billets is placed in an iron, box-shaped still about 20 feet square and 5 feet deep. The lids closing the apertures are secured in position and melted rosin at a temperature of 160 C. is pumped in and kept in circulation. Steam enters the still through perforations near the top. After the oil containing the turpentine comes over, the rosin is drawn off and the wood allowed to dry for several hours. It is then removed from the still and is without sign of char. In another part of the plant this wood is worked to destructive distillation to obtain the creosote oils, charcoal, etc. The oil of turpentine is separated from the heavier oils by distillation. Four of these oils and a pitch are obtained, making six products derived from the distillate. It is claimed that from 50 gallons of this distillate, 35 gallons spirits turpentine is obtained, ten gallons of the four oils, and five gallons of pitch.

A sample of this spirits, clear and colorless, was found to have a specific gravity of .868, was neutral in reaction, and left no appreciable residue on evaporation under a water bath. The odor is mild and tar like, and when compared with spirits obtained from "virgin gum," probably differs less than does that of the ordinary article of commerce. The chemists of the Agricultural Department at Washington have reported the oil as identical with pure spirits turpentine in boiling point, optical activity, etc.

The Pharmacopoeia defines oil of turpentine as a "volatile oil distilled from turpentine," and describes it as a "thin colorless liquid having a characteristic odor and taste, both of which become stronger and less pleasant by age and exposure to the air, specific gravity .855 to .876, and boiling point 155 C. to 170 C."

Aside from the question of odor, there seems no test prescribed which will distinguish between the rectified product obtained from wood and a sample of turpentine from the oleoresin.

In a recent article in "Drugs, Oils and Paints," by Mr. W. G. Scott, the following are proposed:

In a test tube place 10 c. c. of the turpentine to be tested, then add about 10 c. c. of C. P. sulphurous acid and shake four or five times until the two liquids are mixed. Set aside for twenty or thirty minutes to allow to separate, then observe the appearance and color of the two strata.

American Turpentine—Separation takes place very slowly. Upper stratum-opaque, light buff color. Lower stratum-translucent, yellow amber color. Odor, distinct tar smell.

Pine Distillate (Live Wood)—Medium quick separation. Upper stratum-Translucent lemon yellow color. Lower stratum-clear and colorless. Odor-mild tar smell.

A note adds that pine distillate from dead wood, if highly rectified, gives a reaction approaching that of the live wood distillate. The more the distillate is rectified the less turbidity and the more lemon yellow in color the reaction is.

Experiments with this test have not been altogether satisfactory. It may be that, owing to improved methods, some of the distillates now obtainable are of higher purity than those heretofore on the market. The spirit turpentine of commerce is not a refined, constant product, and for uses demanding highest purity there is reason to consider to what extent the rectified oil from wood will ultimately gain preference.

Should the Pharmacopoeial description be revised to furnish means for distinguishing between these products? Or, should its definition be enlarged so as to include the product obtained from wood?

* Read before the North Carolina Pharmaceutical Association, 1903.

Mighty may prove things insignificant:—A tale of moonshine turned an elephant.—Sanskrit proverb.

A bisected bundle of Mexican Sarsaparilla showing a kind of adulteration—not at all uncommon in Mexican sarsaparilla—intended to increase weight. The objects in the center are stones.

SARSAPARILLA.

The Story of Its Production.—Values, Characteristics and Packing of the Different Varieties.

There is probably no better known botanical drug than sarsaparilla. Yet its growth, gathering and marketing not one of the several importers in this city could describe. Indeed, not one could or would attempt to name the different varieties.

This ignorance is because sarsaparilla is so plentiful, cheap, and inexhaustible in supply that there can be no cornering of the market, no extensive speculation. The responsibility for growth is left unconditionally with the climate and soil and gathering is at the sweet will of the natives. The local dealer receives it at the dock, forwards the pay—and that is all he cares to know.

Just as little seems to be known definitely of sarsaparilla's medicinal value, about which there is no agreement among medical men. There is no article of *materia medica* surrounded with so much uncertainty.

The sarsaparillas are all climbing plants with prickly stems. In one or several species they appear in nearly every tropical or temperate country in the world. In probably every state in the Union they may be found. But the drug yielding species grow chiefly in one belt—extending from Northern Mexico's marshes to Northern Brazil. Central America alone has 31 species.

The botanical source of the sarsaparillas of commerce is not always exactly known. Especially is this true with Honduras sarsaparilla, which is the most popular kind in this country, as is the so-called Jamaica sarsaparilla in Europe. But there are four species—*smilax officinalis*, *smilax medica*, *smilax papayacea* and *smilax sylvatica*—which yield the drug in its various commercial forms.

Commercially the sarsaparillas are distinguished as "mealy" and "non-mealy", the latter preferred for medicinal purposes. Of the "meales" are Honduras, Guatemala, Brazilian and Caracas sarsaparillas, and of the "non-meales," Jamaica, Mexican and Guayaquil. These seven varieties constitute all of any importance that are shipped to this country—or to any other—and are named from the countries producing them or the port from which they are shipped, with the exception of Jamaica, which derives its name from its once having been shipped via Jamaica, though Jamaica does produce a little sarsaparilla.

Sarsaparilla, that is the medicinal variety first visited Europe in 1486, in the possession of Spaniards who gathered it in Peru, San Domingo and Brazil. Its use dates from then. Its arrival in this country is

always picturesque, because of the way it is wrapped.

Honduras sarsaparilla, of which there are about twenty brands, is imported from Belize and other parts of the Bay of Honduras, C. A. It is packed more attractively than any other variety. First, the long roots are folded into bundles from two to four feet long and weighing a little more than two pounds. The bundle looks like a clothesline as it comes from the store. Eighty bundles are packed together in a "seron", being covered top and bottom with cow or buffalo hide, untanned, and bound with thongs of the same material. The distinctive variety is branded in the hide. The weight of the seron is 180 pounds. The roots have a few rootlets attached, are bearded, of a grayish or reddish-brown color, approaching orange, and have a very mealy, or as it is called by some importers, starchy cortex. Small pieces are frequently found to have been cut out of the bundles at different places. This was done in testing the roots. The baling adds usually five cents a pound to the price. Honduras sarsaparilla all comes to the United States and some is shipped to Europe from here. The volume in that variety is from 75,000 to 100,000 pounds a year.

Guatemala sarsaparilla closely resembles the Honduras drug, being packed in a similar manner. Its orange color is, however, more decided, and its bark has a tendency to split and crack off, exposing the central ligneous column. It appeared in commerce about 1852. It is packed in rough bundles or hanks of from three to four pounds.

Brazilian sarsaparilla, which includes Para, Lisbon or Rio Negro sarsaparillas, is a variety now less esteemed than formerly. It is packed in a very distinctive manner, the roots being tightly compressed into a cylindrical bundle, three feet or more in length, and about six inches in diameter, firmly held together by the pliable stem of some plant. Then the sarsaparilla root ends are neatly shaved off. The place of export is Para.

Caracas sarsaparilla resembles the Guatemalan Jamaica sarsaparilla is done up in roots, six feet or more in length, bent repeatedly so as to form bundles eighteen inches long and four inches in diameter, which are secured by being twined around—but less trimly and closely than the Honduras sort—with a long root of the same drug. The seron weighs 180 pounds. The rhizome is entirely absent, but the fibre or beard is preserved and is reckoned a valuable portion. The roots are deeply furrowed, shrunken, and generally more slender than in the Honduras kind; the bark when shaved off with a penknife, is seen to be brown, hard and non-mealy throughout. Yet it is by no means uncommon to find roots having a smooth bark rich in starch. In color, Jamaica sarsa-

parilla varies from a pale, earthy-brown to a deeper, more reddish hue, the latter tint being the most esteemed. This drug is the official one of the British Pharmacopoeia and grows in the Isthmus of Panama, upon the Cordillera mountains of Chiriqui, bordering on Costa Rica. It is all shipped via New York.

Mexican sarsaparilla is the lowest priced variety of all. It has thin and shrivelled roots, very fragile, and of a pale, dull brown color. They possess little starch but considerable acidity. The plant grows in Papantla, Tuxpan, Nantla, etc., and is usually shipped at Vera Cruz and Tampico, being put up in large bales weighing from 200 to 250 pounds. The roots are not tied around the bounde transversely as in most of the other varieties, and the inside often contains earth and stone to increase weight, as shown in the accompanying picture.

Guayaquil sarsaparilla comes from Ecuador via Guayaquil, is crudely packed in large bales, and is not generally made into separate hanks. The rhizome and a portion of the stem are often present, the latter being round and not prickly. The root is dark, large and coarse looking, with a good deal of fibre. The bark is furrowed, rather thick, and not mealy in the slender portions of the root, which is near the root stock, but as the root becomes stout, its bark becomes smoother, thicker and exhibits, when cut a fawn colored or pale yellow exterior.

Much of the Mexican sarsaparilla is shipped to London, where one or two drug millers have a fondness for removing the chumps and slicking it up, sending it to Marseilles, to the French, who resell it to Algiers and other countries.

The supply is in no danger of becoming less. The natives gather the roots and trade them at the stores for merchandise, as the farmer does eggs. From the merchant the lots are gathered by exporters. The Jamaica sarsaparilla is the only one cultivated to any extent. It grows something like the common yam of Mexico and requires much the same treatment. The cultivation will give a return in from two to three years, and the roots may be harvested every year after the first crop is gathered. They are carefully dug up and cut off near the stalk, which is then mounded up with surface soil. Fresh roots will soon spring out and grow rapidly. The roots are freed from earth, dried in the sun, bundled and baled. The first crop may yield twenty pounds of dried roots to a plant. The Indians usually plant it about twenty feet apart, with other crops. The vines are trained to stakes and trellises.

CATALYTIC CONVERSION OF ALDEHYDE INTO ALCOHOL.

P. Sabatier and J. B. Senderens (Comptes rendu.) state that by the direct action of hydrogen gas in the presence of reduced nickel the aliphatic aldehydes and ketones are very readily converted into the corresponding alcohols. The temperature is best kept above the boiling point of the alcohol formed. In yield and purity of product this method is superior to the usual reduction with sodium amalgam. The catalytic action of reduced metals can thus be used in two opposite directions. Reduced copper brings about the decomposition of alcohols into aldehydes and hydrogen, while nickel at a lower temperature causes the combination of this element with aldehydes.

PRODUCTS OF CIGARETTE SMOKING.

Pontag (Zeit. Nahr. n. Genuss.) shows that even moderate cigarette smoking must be injurious, for in smoking twenty cigarettes the smoker draws into his mouth .09 gram nicotine, .011 gram of pyridine bases, .032 gram of ammonia, .0006 gram of hydrocyanic acid, and 360 C. c. carbonic acid. These results were obtained in the examination of Russian tobacco and cigarettes. The proportion of nicotine varied from .44 to 3.99 per cent., the average being about 2 per cent. About one-half of the nicotine finds its way into the cigarette smoke; the longer the mouth piece the less nicotine in the smoke.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescriptive work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Transferring Newspaper Pictures.

(Subscriber) We are not familiar with the process you name, but any substance that will dissolve the ink used in printing may be used to transfer pictures to linen, paper, etc. Spirits of turpentine, benzol, benzene, carbon disulphide, etc., have been employed for the purpose. We take the following formulas from our files:

(1)

Prepare a liquid by dissolving 7½ drams common yellow soap in 1 pint hot water, adding, when nearly cold, 3¼ fl. ounces spirits turpentine, and shaking thoroughly together. This fluid is applied liberally to the surface of the printed matter with a soft brush or sponge (being careful not to smear the ink, which soon becomes softened) and allowed to soak for a few minutes; then well damp the plain paper on which the transfer is to be made, place it upon the engraving and subject the whole to moderate pressure for about one minute. On separating them a reversed transfer will be found on the paper.

(2)

Cover the pictures entirely (taking care not to go beyond the outlines) with a slight coat of fixing varnish, then put the picture on the object to be ornamented, being careful to place it properly at once, to avoid spoiling it by moving. The varnish newly applied being too liquid, the picture should be allowed to dry for about ten minutes and placed on the object to be ornamented, when just damp enough to be adherent; this done, cover the back of the picture with a piece of cloth steeped in water; then by means of a knife or penholder, rub it all over so as to fix every part of it; then remove the piece of cloth and rinse the piece of paper with a paint brush steeped in water; at the end of a few minutes the paper will come off, leaving the painting transferred. Care must be taken that the piece of cloth, without being too wet, is sufficiently so for the paper to be entirely saturated. The picture must now be washed with a wet brush, and dried very lightly with some blotting paper. Keep the ornamented article in a warm dry place until dry. The polishing varnish should not be applied until the next day, keeping the picture meanwhile out of the dust. The latter varnish should be applied as lightly as possible. If dark colored objects are to be ornamented, the picture should first be covered with a mixture of white lead and turpentine, following the outlines of the design, and covering it entirely. When this coat is perfectly dry, proceed as above.

Oil of Pennyroyal Reaction.

(Hydrargyrum) writes: "Under separate cover I mail to you a half-ounce bottle of oil of pennyroyal, at least oil of pennyroyal is what I put in the bottle. I do not know what it contains now. I poured the oil di-

rectly into the bottle and it immediately changed to the dark color it now possesses, becoming almost as hot as fire. The bottle came out of stock and as it was to contain oil I did not wait to wash it out. What caused the reaction which produced the heat and color change?

With the evidence presented it would be difficult to state exactly what caused the reaction. The phenomena described indicate the presence of some mineral acid, probably sulphuric acid, in the bottle at the time when the oil was poured in. In fact the reaction corresponds exactly to that which takes place when oil of pennyroyal is added to sulphuric acid, the oil being decomposed with the generation of much heat, a dirty colored, resinous looking mixture resulting.

The necessity of using well cleaned bottles (and of knowing that they are clean) for every liquid sent out of the pharmacy is emphasized by "Hydrargyrum's" experience. His admission that the bottle was not washed because it was to contain an oil indicates a failure on his part to observe one of the most important rules of good dispensing.

Antiseptic Solution.

(Subscriber.) The following formula is from the report of the Committee on National Formulary and published in last year's volume of Proceedings:

Thymol	1 gram
Menthol	1 gram
Eucalyptol	1 Ce.
Oil of wintergreen	1 Ce.
Fluid extract of wild indigo	8 Ce.
Natural benzoic acid	8 grams
Powdered orris root	10 grams
Boric acid	24 grams
Alcohol	375 Ce.
Water625 Ce.

Dissolve the thymol, menthol, eucalyptol, oil, benzoic acid, and fluid extract in the alcohol and add the powdered orris. Macerate seven days with frequent shaking. Dissolve the boric acid in the water and add to the alcoholic solution. Shake frequently during fourteen days, then filter.

Prof. W. L. Scoville is the author of this formula for

Alkaline Antiseptic Solution.

Potassium bicarbonate	40 grams
Borax	10 grams
Salicylic acid	6 grams
Benzoic acid	6 grams
Eucalyptol01 Ce.
Thymol01 gram
Menthol02 grams
Oil of wintergreen04 Ce.
Solution of carboline	1 Ce.
Tincture of eucubar	15 Ce.
Glycerine250 Ce.
Water, a sufficient quantity to make	1000 Ce.

Dissolve the potassium bicarbonate and borax in 600 Ce. of water. Dissolve the acids, menthol, thymol, eucalyptol and oil of wintergreen in the alcohol and mix with the glycerine. Then mix the two solutions, add the carboline solution and tincture and finally enough water to make 1000 Ce. Allow to stand a few days and filter.

Coloring Globes for Incandescent Lamps.

(C. & T. & Fr.) The process generally recommended for coloring incandescent lamp globes is to coat them with a solution or colloid, in which has been dissolved aniline of the desired shade. To "frost" the globe the dye "freezing" may also be accomplished by means of a solution of alum in water or of white shellac dissolved in wood alcohol.

In using the above process make a saturated solution of alum in water and dip the globe into this, holding it in a horizontal position while the crystals are forming and the excess of liquid is draining. The drying and coloring process should be very slow in order to impart a perfect crystallization to the glass. Re-

peated dippings and dryings will make a heavier coating of crystals. To make red glass globes color the alum solution with cochineal or logwood. Yellow globes are made by coloring the solution with turmeric; blue by using indigo, and other colors by using Diamond dyes. Another method of frosting globes is by dipping them in a hot solution of Epsom salt, or a hot solution of sal ammoniac. In frosting globes they should be previously polished carefully with a sheet of clean tissue paper to free them from all dust and grease.

Pyroigneous Acid for Smoking Meat.

(N. Y. Z.) The use of crude pyroigneous acid for imparting a smoky odor and taste to meat has been frequently discussed in these columns, and several subscribers have furnished the information that the best method of applying it is to take the meat out of pickle and dry; with a sponge or brush, wash all over with crude acid; hang up in a cool place, and repeat the application at intervals of a few days until three coats have been applied. We have seen it stated somewhere that a little glycerin is sometimes added to the solution of pyroigneous acid before applying it to the meat but just how much such an addition would improve the taste and keeping qualities of the meat we have not learned. Prof. Silliman, who investigated this subject a number of years ago advocated the use of the crude pyroigneous acid alone, and he states that one quart added to the common pickle for a barrel of hams at the time they are laid down, will impart to them the smoked flavor as perfectly as if they had been smoked in the ordinary way.

Cocaine Hydrochlorate in a Prescription.

(J. S.) "Will you kindly comment on the following prescription and state whether it may be compounded?"

Cocaine hydrochlorate	10 grains
Boric acid	10 grains
Rose water	1 ounce

"We know of no reason why this prescription should not be compounded. It is closely similar to one quoted by Hare ("Practical Therapeutics") for a solution to be used as an anaesthetic in the eye. Cocaine is precipitated from aqueous solutions by borax, not by boric acid.

Extract of Trailing Arbutus.

(R. D. P.) The following formula has been published:

Rose essence	1 ounce
Jasmine essence	1 ounce
Cassie essence	1 ounce
Orange flower essence	1 ounce
Tincture of vanilla (6 drams to 1 pint)	2 ounces
Spirit of bitter almond (5 minims to 1 ounce)	2 drams

We cannot supply a copy of the issue of the Era you name.

Paralytic Oil.

(J. W. M.) Fuller ("Pharmacopoeia Extemporanea," 1740) gives this formula: "Take ointment called martiatum 2 ounces; oil of spike, petroleum, of each 2 drams; powdered euphorbium, 1 scruple; oil of amber, 1 1/2 drams; oil of rosemary, 1/2 dram."

"Unguentum martiatum" soldier's ointment, was composed of bay berries, rue, marjoram, mint, sage, wormwood, basil, olive oil, yellow wax, and malaga wine. It was said to have been invented by Martiat, and was employed by soldiers as a preservative against injuries from cold.

Information Wanted?

(C. A. R.) "What is 'hydririne' and who is the manufacturer?"

NEWS DEPARTMENT.

FIFTH ANNUAL CONVENTION.

Meeting Now in Session Promises to Make History.—

Sentiment All For Serial Numbering Plan.—Many

Felicitous Speeches.—Proprietary Men Beg

For Moderation.—Little Recreation.

Washington, October 5.—The fifth annual convention of the National Association of Retail Druggists was opened by President R. K. Smither shortly after eight o'clock this morning at the Raleigh Hotel. The great assembly hall on the top floor of the building was fairly well-filled and before the session closed a fringe of standing visitors lined the wall in the rear of the room.

The meeting promises to be the most enthusiastic and eventful in the association's short history.

Between 350 and 400 delegates and visitors are expected to attend the various sessions. More than 250 names were enrolled during the first day and at least 100 more are expected to arrive before another day has closed.

The greatest enthusiasm prevails. No great tests of strength and parliamentary skill such as have marked some meetings in the past are expected, unless the question of buying clubs develops into an issue of supreme importance. All are in favor of the direct contract and serial numbering plan, the subjects for warm discussions being usually only differences of opinions about the relative importance of the various questions involved. Some delegates strongly urge the extension of the cut-off principle to goods other than those now in the tripartite list, while others as earnestly contend that the tripartite plan is an utter failure, and that the contract plan should be forced with drastic measures.

Mr. Smither in his opening address complimented the committee of arrangements upon the excellent programme provided and the pleasant quarters secured. He said that the delegates need not feel in Washington that they were in a strange city, for this was the capital of the whole nation and every one of his hearers must consider it "our capital."

H. B. MacFarland, president of the board of commissioners of the District of Columbia, welcomed the visitors to the city with many pleasant and witty remarks about the stock sights of the place and the propensity of druggists to develop into national bank presidents. Most of the speakers who followed took occasion to refute this gentle charge as being untrue in his particular case at least.

Felix Hirsman of New York responded, stating the objects of the meeting and expressing the hope that they might be accomplished. He felt sure that every leisure moment available would be thoroughly enjoyed.

Samuel L. Hilton, president of the Washington, D. C., Association of Retail Druggists, welcomed the delegates on behalf of the local association, and said that his associates would not only do everything possible to make the present visit pleasant, but would help constantly to make the N. A. R. D. a success.

The roll call by States was the occasion of much jollity, and repartee. The programme contained a rule that each representative should speak two minutes and no more. The person exceeding this stint was to

be fined \$1 for each minute in excess of the time allotted, the money to be expended as the other speakers saw fit. In spite of the universal misgivings and the common reluctance to make a dollar-a-minute speech, twenty-six States responded. Most of the remarks were extremely hopeful and confident of results which the N. A. R. D. would accomplish in the future.

Prof. W. C. Anderson spoke in behalf of the A. Ph. A., the parent association, and hoped that the N. A. R. D. would surmount the obstacles in its path and thrive in spite of trials as successfully as the older association had done.

F. W. Schumacher of the Peruna Drug Mfg. Co., Columbus, Ohio, extended greetings from the Proprietary Association of America, and begged the delegates not to ask the manufacturers to undertake experiments which lacked conservatism, legality and justice to all parties concerned. He said that he could affirm authoritatively that a group of strong proprietary men were prepared to endorse a conservative, practical and just plan.

Walter H. Gale of Chicago responded for the association, saying that conservatism should mark every deliberation. He said sententiously that "Enthusiasm is likely to carry one beyond the practical."

A number of other prominent members of the trade spoke, and a motion was carried inviting the representatives of the N. W. D. A. and P. A. of A. to take part in the discussions of price protection which were to follow and to be present at meetings of committees dealing with the subject.

The program arranged leaves little leisure for recreation. Wednesday morning will be spent in listening to the address of the president and the reading of various reports. In the afternoon the regular business will be steadily followed, while the ladies of the party enjoy a trolley ride about the city. In the evening the delegates and guests will visit the Congressional Library.

Wednesday morning and evening will be devoted to more business of a routine nature, while the afternoon will be spent in the only day-light relaxation of the meeting, a steamboat excursion to Mt. Vernon, Washington's historic home.

The nomination and election of officers will occupy a portion of the last session on Thursday morning when the regular sessions will be brought to a close.

The Wonderful Doran Light.

The question of store lighting has received the attention of many druggists, some of whom believe they should secure better results for less money than they do at present. Those who are desirous of having a well lighted store at a small cost, will be interested in the advertisement of the Acorn Brass Mfg. Co., of Chicago, Ill., which appears on page 11 of this issue. In this advertisement the Acorn Co. claim to have a light—the Doran Light—that will light a store better and at less cost than any other kind of light, and they have so much confidence that it will, when used, substantiate their claim, that they will send their outfit free on 30 days' trial. If it fails, they receive it back at their own expense. The Acorn Brass Mfg. Co. issue a handsome catalogue and price list which they would be glad to furnish upon application.

COMMERCIAL TRAVELERS

Mr. Figgis, Precentor, and Mr. Harwood, Cyclor, Both
Get Along Without Pumping.

W. Weld Figgis, Whitall, Tatum's big-hearted, big-bodied New York City man, about whom a Birmingham reporter was once inspired to rhapsodize of "sweeping mustache" and other outward and inward marks of interest and geniality, is the precentor in one of the big city churches. The congregation still talks of a recent Sunday when the organ-pump wheezily gave out, and of Mr. Figgis' nerve and ability shown in leading straight ahead for a verse and a half until things were right again.

W. F. SOHNI, Albany, N. Y.
Representative for N. Y.
Paper Box Co.
in season and out of season, was in Kansas City last week.

H. T. Haintz of Faxon, Horton and Gallagher, Kansas City, is back at his desk trying to make connections with earth and things earthly after his honeymoon.

J. L. Warwood, a traveling salesman for the wholesale drug firm of Kennedy-Suffel Co., Green Bay, Wis., is up to date and a little beyond. He has abandoned the railroad trains and now makes his trips on a motor cycle. He first tried it as an experiment, but it proved so successful that he decided to abandon railroad travel altogether. He says that he makes fully as good time on the cycle in the end as on the train.

The Rev. C. D. Whalen, who has been selling patent medicines in Los Angeles, Cal., of late, was arrested there. He was accused of running away with the wife of another man and confessed. He had occupied a pulpit at Prattsburg, New York, and became enamored of a member of his congregation and fled with her. Her death a month ago disclosed Whalen's whereabouts and the arrest followed.

W. P. M. DeCamp of Whitall, Tatum Co., now become a stay at home because of his firm's giving him the Boston city trade to look out for, still meets his old friends, for they come to him. Mr. and Mrs. DeCamp, recently entertained two young recently married couples—Mr. and Mrs. Charles Crum, of Albany, N. Y., and Mr. and Mrs. W. H. Quincey of Balston, N. Y.

G. W. WEAVER, a leading druggist of Lockport, N. Y., expired suddenly. With several friends, he was on a fishing trip at Tonawanda. The party had returned to the Hotel Sheldon, after enjoying a big catch, when Mr. Weaver called for a glass of lithia water. After drinking it, he suddenly collapsed, and died before medical aid could be summoned. He was 65 years of age and had heart trouble. The funeral was attended by all of his fellow-druggists in Lockport.

OBITUARY.

PHILO E. KELLOGG, a pioneer in the retail drug trade of Chicago, died on September 21, of heart disease, almost directly in front of his residence at 7157 Yale avenue. Mr. Kellogg, who was employed by the firm of G. M. Foster & Co., became suddenly ill at the store, 120 Clark street, and started for his home, but expired on the way. He was born in Connecticut in 1844 and had been engaged in the drug business in Chicago for forty years. He is survived by a widow and one son, who at the time of his father's death was at Oconomowoc, Wis., on his wedding trip. Mr. Kellogg was an associate member of the Veteran Druggists' Association, and, in accordance with a custom of that body, a floral tribute was presented bearing the motto, "Cheers for the living; Tears for the dead."

JOHN LAUGHLIN shot and killed himself at Wheeling, W. Va., while grieving because he would have to undergo an operation on a disabled leg. Mr. Laughlin was well and favorably known in the wholesale drug business several years ago, but of late years had been devoting his time to newspaper work.

HENRY DIEHL, who was one of the firm of Diehl Bros., druggists for many years in Buffalo, is dead. Their store at Main and Genesee streets was a landmark to Buffaloonians. The business was sold two years ago, the prescription files going to Denny & Field's store and the members of the old firm retiring.

HENRY BEHNKE, a druggist of New Ulm, Minn., was found dead in bed at the home of his brother-in-law, Robert Hartman. Behnke was visiting his sister and had apparently been in good health. He was forty-six years old and unmarried. Death was due to heart disease.

DUNCAN A. McALPINE, who formerly owned a drug store at Thessalon, Ont., Can., was killed by accident in the Northern Pacific Railway yards, Grand Forks, N. D. He had been farming in the West for some years. His widow resides in Toronto.

W. C. LANMAN of Norwich, Conn., died recently. Although for many years Mr. Lanman has been engaged in other lines of work he made his beginning in business as a member of the firm of Lanman & Sevin, now conducted by N. D. Sevin.

ANTONIO DASKE, clerk in the Ansonia drug store, Ansonia, Conn., went to the theatre one evening recently and got so excited that on the way home he was seized with heart disease and expired almost immediately.

CHARLES FRANCIS WOOD died at his home in Boston. He was for thirty-three years connected with the former wholesale drug house of Weeks & Potter Co., and was prominent and widely known.

MRS. NOELLE, wife of Druggist Charles F. Noelle, South Ann street, Baltimore, was found dead in bed last Thursday morning. Her demise was due to heart trouble.

MRS. EMMA E. LONGLEY SCOTT, wife of George T. Scott, a Worcester, Mass., druggist, is dead at the age of forty-six years. Her husband and three sons survive her.

MRS. CLIFFORD, wife of the retired physician and druggist, Dr. T. T. Clifford of Sedalia, Mo., died last week. Her husband and three children survive.

NEW YORK AND VICINITY.

INSURANCE PLANS ENDORSED.

German Apothecaries' Society Unanimously Tells the Committee to Go Ahead.—One Thousand \$25-

Shares Ready for Subscription.—Resolutions Against Free Antitoxins.

With the endorsement—enthusiastic and unanimous—of the plans worked out by their committee for the formation of a retail druggists' co-operative fire insurance company, the German Apothecaries' Society last Thursday night celebrated their return to business after the summer vacation. Probably no action fraught with greater moment to pharmacists in this country was ever taken by the society than this. The result is a high compliment to the committee and its energetic chairman, Emil Roller.

The story of the proposed company has already been told, exclusively, by the Era, with the result that the committee has been mightily aided by suggestions and approval from persons in sympathy with the plan and experienced in co-operative fire insurance benefits, and encouraged by promises of support from prominent retail druggists all over the United States. Already inquiries are coming in from druggists in this and other States who wish to drop their old-line policies and take advantage of the rational rates co-operation makes possible.

With the carte blanche to "go ahead," given by the society, the committee has opened its subscription lists to those desiring to underwrite the new company. A reserve fund of \$25,000 is being obtained by offering 1,000 treasury certificates of \$25 each. The list will be kept open for thirty days, according to present plans, during which time only members of the society will be allowed to subscribe, the maximum amount of shares any one person may take being kept low enough to make it impossible for any person or clique to corner the stock.

After thirty days—unless it is decided to take such action at once—members of sister societies may subscribe for stock. By that time it is certain that other societies, including the Kings County and the Manhattan, will follow the lead of the Bushwick Ph. A. and endorse the plan. One hundred and nine members of the German Apothecaries' Society, including most of the best names in the active membership, prior to the society's endorsement of the plan had given signatory evidence of their intention to become underwriters. It is believed that the number of shares these 109 members will take will average about four to each person.

Certificates Non-Assessable and Non-Transferable.

The treasury certificates—all these details were endorsed in a set of proposals submitted to the association by the committee—will be non-assessable and non-transferable, and shall not be placed on the market for sale. At the close of subscriptions and after the purchase of the charter a constitution will be submitted to the subscribers, now underwriters, and organization by election of officers, etc., will immediately follow.

When the plan came up for discussion by the society Mr. Roller was armed with an array of testimonials and facts in its support. He told about the Druggists' Mutual Fire Insurance Co. of South Dakota, of which Secretary I. A. Keith said: "We have saved to our policyholders \$32,634.52, giving them an

average rate of 50½ cents," and quoted the favorable statistics given by Secretary John Weyer of the Retail Druggists' Mutual Fire Insurance Co. of Ohio, and by E. B. Heimstreet, secretary of the old Wisconsin Druggists' Mutual Fire Insurance Co. Thomas F. Main's address before the recent convention of the N. W. D. A. at Boston, showing that two New England factory mutual companies are giving their members protection for only 15 cents on each \$100, was also quoted from.

"Your committee recommends the creation of our own co-operative company, which can be accomplished under the present laws by the purchase of an English Lloyd's charter," Mr. Roller said. As announced some time ago in the Era, the committee has a charter in prospect belonging to a society which recently merged with another society, also having a charter. This charter was offered to the committee for \$15,000, the price finally being beaten down to \$7,000.

The other members of the committee, most of whom spoke in support of the plan, are George Gregorius, George Kleinau, E. C. Goetting and A. Wortmann. Eight members of the Bushwick Ph. A., headed by President Kunkel, and sixteen members of the Kings County Ph. Soc., headed by President Kleine, were present as guests, the chief purpose in coming being to hear the committee's exposition of the plans.

Against Health Departments' Freak Philanthropy.

The Bushwick Ph. A. had, taking its cue from the Era's announcement on September 24 that President Lederle had recommended the free distribution hereafter of the health department's laboratory products, comprising vaccine and the antitoxins, protested in strong resolutions against such action. President Kunkel brought the resolutions with him and the G. A. S. endorsed them.

Plans for the outing today at Bachmah's Pavillion, S. I., were announced by President Imhof. S. V. B. Swann, chairman; Robert S. Lehmann, George Leinecker and August Diehl are the committee of arrangements, and Secretary Swann announces that \$100 worth of prizes will be given and that, as Bachman's is enclosed, rain will not interfere with a good time.

Chairman Schleussner of the legal aid committee, reported that it was yet undecided whether to defend August Hitzel in his \$10,000 damage suit for an alleged mistake. Carl Schur reported that \$136 had been sent from the mortuary fund to the widow of William Weltewitz. Alexander Tsheppe, Manhattan; J. A. Roeder, Brooklyn, and Herman Hblo, Bronx, were proposed as new members, and Herman J. Lohmann, Jersey City, as an associate member. Henry Schmelz and John H. Weil resigned.

An affidavit on a postal card was read from Carl E. Kessler, who, in a Munchen, Bavaria, rathskeller, swore that he had just drunk a certain—we refrain here—number of beers to the G. A. S. Secretary of the Board of Pharmacy Charles S. Erb was asked if the selling of Newfoundland cod liver oil under a Norwegian label is unlawful. He said it is. It was recommended that 50 cents be asked hereafter for a small bottle of the oil.

President Kleine extended an invitation to Kings County next Tuesday to a stereopticon lecture on the manufacture of antitoxins. The same lecture will be given at the New York C. P. on Wednesday evening. After a salamander, proposed by Paul Arndt to the guests, the meeting adjourned.

THE OLD BOTTLES.

In Magnificent Quantities and Innumerable Varieties They are Gathered as Junk, Cleaned and Resold.

If anyone asks you where all the old bottles go to, just take him down to South street and walk him along the river toward the east from Roosevelt street. On one side are the structures of the docks. On the left-hand side are saloons, sailors' rests and many old junk shops. One of the latter class you will soon see that carries a sign over its wavering doorway of "Bottles."

When you have reached here your friend will know where the old bottles go to. In fact, he'll be surprised that there are so many old bottles to go anywhere. Mr. Abatemarco, evidently of Italian extraction, is the proprietor and he is a licensed junk man.

Bottles! It's *soak* is a log that no part may be called nondescript, yet it all looks second-hand. Bottles to the left of you, bottles to the right of you, bottles above you, as you enter, and, if you don't stop carefully in the gloom, you'll find bottles in the obscurity beneath you.

Three shelves, forty feet long, made of hemlock slats, are six feet deep and divided into three high compartments, four feet square, and run along the sides. They are full of bottles, crowded, piled, packed, fallen all along on the floor, barrels, boxes and heaps of bottles. From the ceiling dangle in solid formation multitudes of the wicker and straw-covered flasks that when alive gurgled with the wines of Rouen and Palermo. This is the front room. There is a back room and more shelves, and barrels, and boxes, and careless heaps, and a big double vat for washing bottles. Then there is another floor, above, stored full of more bottles.

Two-gallon, pint, ounce, brown, green, blint, lead, round, square, corked, capped—not a style blown in years that is not there. Tons of pop bottles, wagon-loads of beer bottles, thousands of patent medicine and prescription bottles.

"Three years," said Mr. Abatemarco when asked how long he had been there. "Oh, everybody," he replied when asked to whom he sold. "Sure, little ones," was the response when it was asked if druggists ever bought from him. "Little ones" probably meant little bottles, not little druggists. Mr. Abatemarco was in bare arms, shirt collar turned in. With two assistants he industriously picked pint prescription bottles from a big crate and washed them in the tank. The assistants sang softly, in minor-keyed falsetto. Occasionally a bottle smashed. Those cleaned came out of the preparation quickly, respectable looking again after their garbage can surroundings and putrid contents. Mr. Abatemarco was genial, but not conversational, hence the short quotations above.

The crate they worked on was filled from both Brooklyn and Manhattan pickings. John V. Wischert's name was there, so were Leo Dreyfuss, Emil Roller, F. Ahlborn, W. B. Baker, Bolton Drug Co., Julius Kallish, Thomas D. McElhenie and a hundred others the writer knew. Popular patent medicines were well represented, too. Patent labels were on several. But they all went into the one vat and one water.

The beer bottles go back to brewers, the pop bottles to pop manufacturers, some of the patent medicine bottles to the manufacturers and a great many of various sizes go to grocers and druggists. All in all, for each cork you go up to the third floor and join the stock of a cork merchant, it goes, and are sold to be ground up for sandpaper and packing paper manufacturing, if badly damaged.

Produce? Well, taking a root bottle as a basis, the average price of which would be about \$8.50 a gross when new, they cost Mr. Abatemarco about a dollar and

he sells them for \$2.50 if printed and \$2.75 if not.

Druggists should remember that there is a law in this State against rebelling registered bottles. All beer and pop bottles, nearly all patent medicine bottles and the bottles used by many druggists, especially those who deal extensively in their own preparations, are registered. Chapter 432, laws of 1896, reads:

Any person who shall fill with any beverage, medicine, medicinal preparation or compound any bottle or siphon having produced thereon the registered mark of any person, without the written consent or purchase from the owner of such mark, is guilty of misdemeanor, and shall be punished by a fine of not more than five dollars for each bottle so filled or by imprisonment for not more than one year.

In addition to this law—many other states have like laws—there is always the danger in using second-hand bottles that imperfect cleaning may leave some poison.

The above article was hardly written when information came to the Era that William Papke of 43 Hamburg avenue, Hermann Zulech of 131 Central avenue, Louis Schenck of 967 Flushing avenue and Hermann C. Arford of Knickerbocker and Jefferson avenues, all Brooklyn druggists, were charged before Magistrate Naumer in the Myrtle avenue court, with violation of the bottle act. Inspector M. O. Smith of the Long Island Bottlers' Union was the complainant. Inspector Smith said he found in the defendants' places nine bottles that had been used for other than their original purposes. Carbolic acid, muriatic acid, javanella water and other poisons had been found in them.

Magistrate Naumer fined the defendants 50 cents for each bottle found to be irregularly in the possession of the accused. He did this because it was the defendants' first offense. The Long Island Bottlers' Union was largely instrumental in securing the passage of the law above quoted, and the action against the druggists is in line with a determination evidenced when the law was passed, and since often reiterated, to see that it is enforced.

DRUGGIST GETS A BRIDE AND A BOOM.

A boom for the nomination of Dr. Wilbur Lieb, a druggist of Hammononton, N. J., as the Republican candidate for coroner, got a unique send-off last week. The doctor went to Baltimore the Monday before, and when he returned Saturday night he brought a bride with him. When the residents of the town got about the next morning they discovered that the druggist's friends and admirers had been very busy during the night.

The whole front of the store and adjoining residence was decorated without regard for style or symmetry, but with lavish expenditure of time and patience. There were strings of old shoes, decrepit umbrellas, lighted Chinese lanterns, ice cream and soda signs in profusion, fans with suitable inscriptions and sundry other tokens of esteem from an admiring populace. As people were on their way to church they stopped to congratulate the doctor and to proffer assistance in removing the "decorations," but the doctor said he thought he could do it alone. Before the day was out the political friends of Dr. Lieb had his boom for coroner well launched.

A limited number of live druggists in the larger cities will hear of an attractive proposition, by communicating with

J. N. FERRER

P. O. Box 71.

NEW YORK CITY

UNDER POLITICAL SUPERVISION?

Surgeon General McGill of New Jersey Attacks Reputable Jersey City Druggists who Conduct Free Dispensaries.

Dr. John D. McGill of Jersey City, surgeon general of New Jersey, has publicly made wholesale charges of corruption against the five druggists of that city who conduct the free dispensaries. These five men are prominent both as citizens and in pharmaceutical circles and his charges, which he says are inspired by one of the free dispensary druggists, have created a storm of indignation and protest. The men involved are Mr. Cadmus, Coles street and Newark avenue; Joaquin J. Bru, Grand street and Fairmount avenue; John C. Gallagher, Grove and Fourteenth streets; William R. Laird, Washington and Montgomery streets, and Charles Zoeller, Central avenue and Congress streets. Dr. McGill said:

"One of the worst features of the administration is this free dispensary business run as a political machine. I have been informed by a druggist at whose store a Fagan dispensary is maintained that at some of the other drug stores where Fagan dispensaries are conducted rank frauds are perpetrated against the city. Prescriptions are written by the yard and are not filled at all but are entered in a book and charged to the city. This fraud could be carried on without limit. These political dispensaries should be abolished. There is no supervision over the Fagan free dispensaries except political. The mayor bosses the job himself. The low death rate this year has nothing to do with the free dispensaries."

These startling charges stirred up a hurricane. It is asserted that the worthy doctor will be summoned before the Grand Jury to make good these and other charges. The dispensary physicians as well as the druggists of the city generally talk of instituting damage suits, and rief the doctor fore and aft. Dr. Ferdinand N. Sauer, chief deputy health inspector, who supervises all five of the free dispensaries, said:

"He stooped low to make the accusation. I don't think there is another physician in the State who would do such a thing. If honest doctors and druggists cannot be found to dispense the paltry sum of \$2,500 a year to the poor, in the name of humanity, the doctors, the druggists and the city should go out of business and a sign should be hung up on the outer walls saying there is no honest man within except Dr. McGill." Mr. Gallagher said:

"I think the attack is cowardly in that it assails by innuendo responsible business men by putting them under the suspicion of being thieves. If Dr. McGill has proof of any wrongdoing he should be at least manly enough to come out boldly and divulge the name of the wrong doers. These are political times, but charges made by the surgeon general of the State and president of a national bank are liable to lead the public to place some reliance on them. Speaking for myself and the other druggists who are in charge of the free dispensaries I will say that had we cared to swell our bills against the city for prescriptions we could have treated people not resident in Jersey City. As soon as we discovered that applicants were non-residents we refused to accommodate them. Knowing personally the high character of the men who are conducting the dispensaries, I positively decline to believe that any one of them could stoop so low as to commit the petty larcenies charged. I would not be surprised if Dr. McGill found himself defender of a libel suit as the outcome of his very rash statements and I am ready to do my share in furthering such a suit."

Mr. Zoeller said that his books were open for inspection by any one who wishes to see them. Mr. Bru

agreed with him. Mr. Laird said that as far as he knows there is no justification for the attack.

The total number of patients treated at the dispensaries during the last two and one-half months is 6,822. The total cost was \$2,340, of which \$1,705.10 went for medicines and \$625 for physicians' salaries. The dispensaries close to-day.

NOT A MEETING OF THE FRESH AIR CLUB.

The gentleman in the picture, Alfred Lehman, of A. and R. S. Lehman, 375 Third avenue, proprietors of one of the oldest pharmacies in the city, will always

remember his birthday of 1903. It occurred on September 30, and was made memorable by the presence of congenial friends who were his guests at the Broadway Theater to see James T. Powers in "A Princess of Kensington," and afterward at a jolly midnight supper at Allaire's, Third avenue, headquarters of the German Apothecaries' Society, of which both brothers are members. Among those present were: Miss Edith Ambrose, Mr. and Mrs. A. Blanchard, Edward Dezurko, Mr. and Mrs. Hugo Kantrowitz, Mr. and Mrs. O. D. Lehman, Miss Hattie Lehman, Miss Lillian Messinger, Mr. and Mrs. Thomas B. Swift, Mr. and Mrs. J. Tucker, Thomas H. Tucker, Miss Mabel Tucker, William Wagner, Miss Amalie Wagner, Mrs. Harry Weaver, and Robert S. Lehman.

P. A. OF A. MEN MEET AT BUFFALO.

Last week a convention of manufacturers and proprietors of patent medicines assembled at the Iroquois Hotel, Buffalo, to discuss various important matters and compile a report to be submitted to the convention next year. Among those present were D. S. Chamberlain of Des Moines, Ia., president of the P. A. of A.; F. W. Schumacher of Columbus, O., vice-president; Mr. Talbot, manager of the Piso Co.; Dr. V. Mott Pierce, Mr. Gove of the Lydia Pinkham Medicine Co., and Thomas Voegelé of the N. A. R. D.

The prime object was to devise ways and means to prevent cut-rates and stop substitution.

GEORGE FELIX LaLASSEUR, an eminent French chemist, who came to this country a few months ago as the representative of a big French syndicate to investigate the peppermint industry, died in Borgess hospital, Kalamazoo, Mich., of pneumonia. He had been in that city for several weeks. His body will be shipped back to France.

FRANK J. KEARNAN, a Millbury, Mass., druggist's death has brought about the closing of his former pharmacy.

CUPID IN THE CLASS OF '02.

Cupid was not losing ground in the class of '02. New York C. P., but, despite strenuous studying, found

MRS. W. H. C. BARTLETT.
two hearts not unperceptive to his darts. So it is our pleasure to announce that Miss Edith Mary Morris and William Holmes Chambers Bartlett, members of that year's class, were married in Seattle, Wash., where Mr. Bartlett is now located, on September 23. Fellow grads expected some such news as this. Both young people are extremely popular. Miss Morris' home is in Cincinnati. She is a graduate of the Cincinnati Hospital and a post graduate of St. Luke's Hospital, this city. Her studies were chiefly for pleasure, as she is heiress to a tidy fortune.

DRUG CLERKS' CIRCLE TO HAVE OPEN MEETING.

A meeting of the Drug Clerks' Circle was held on last Tuesday night. The attendance was one of the largest in the history of the circle. Joseph A. Brandie was made a member. The open meeting committee reported having hired Pacific Hall, 209 East Broadway, for the purpose of holding the next open meeting, which will take place on Thursday evening, October 15, at 8 p. m. Dr. William C. Anderson, Dr. Albert A. Brandage and Dr. George C. Dickman were invited to deliver addresses, and a number of musical and literary artists will entertain.

The practice of many proprietors in leaving unlicensed clerks in charge of their stores, was taken up and the following resolutions adopted:

Whereas, It is prevalent among many drug store proprietors to leave their stores in charge of their unlicensed clerks, which is in direct violation of the public trust and safety as well as of Sec. 194 and 200 of the New York State pharmacy law, therefore,

Be it resolved that the Drug Clerks' Circle having at heart the public welfare as well as the welfare of the individual drug clerk and of the profession generally, hereby enters its protest and urges the proper authorities to take such steps as will put an immediate halt to the pernicious practice.

And, be it further resolved that copies of these resolutions be sent to the State board of pharmacy and to the pharmaceutical press for publication.

NEW YORK NOTES.

Buffalo changes: E. C. Holt, formerly with the Saeger Drug Co., Auburn, is now with H. P. Hayes, Buffalo. W. D. Balliett, formerly with H. P. Hayes, is now with C. J. Dwyer, Howard M. Church, lately with F. C. F. Siefert of Frelonia, has gone to New York city with Faxon, Williams & Faxon at their Eighth avenue store. The drug store of John Murphy, which has been for a number of years near the Union depot, Olmst, has been moved further uptown.

James Twohey of Hayden & Twohey, Buffalo, very much surprised his friends four weeks ago by quietly becoming married to a certain pretty school teacher. Knowledge of the joyful event did not become generally known until the happy couple were discovered by mutual friends passing their honeymoon in the quietude of the Muskoka Lakes resorts. Mrs. Twohey was formerly Miss Stoll, a daughter of the oldest and most prominent family of Hamburg, N. Y.

Edwin P. Lant, druggist at 2491 Broadway, has tiled a petition in bankruptcy, with liabilities of \$19,910 and assets of \$81,732, consisting of stock, \$1,100; fixtures, \$920; accounts, \$290; cash, \$6, and one share of stock of the Empire State Drug Company of Buffalo, \$10. Among the creditors are Frank P. Lant, \$2,753, and the New York Telephone Company, \$354. He has been in business since July, 1901. Judge Holt appointed John C. Coleman receiver.

The first regular meeting of the season of 1903-4 of the New York section of the American Chemical Society will be held tomorrow night. W. J. Waring will read a paper on "The Volumetric Determination of Zinc", C. W. Volney, on "Nitro-Sulphuric Acid and Its Action on Organic Compounds," and E. H. Miller, E. J. Hall and M. J. Falk, on "The Reduction of Lead from Litharge in Preliminary Assays and the Advantages of an Oxide Slag."

Dr. Harvey Wiley, chief of the bureau of chemistry of the Department of Agriculture, was in this city to confer with the leading importers of food products regarding the operation and enforcement of the pure food law passed at the last session of Congress, and which became operative on June 30 of this year.

J. Stanwood Menken is now superintendent—a new position—of Hezeman & Co.'s store at 200 Broadway. Mr. Menken lives in Brooklyn and was formerly president of a big dry goods house of Memphis, Tenn. George Ramsey, president of Hezeman & Co., had a week's vacation in Toronto and other Canadian cities.

Hyman Lewis, the druggist of Myrtle avenue, Brooklyn, is defendant in a divorce suit brought on the ground of ill-treatment. Mrs. Lewis said her husband's income is \$50 a week and she wants half of it as alimony and \$250 as counsel fee. Lewis counter-charges ill treatment and denies the size of the income.

Mr. and Mrs. William Philip Ungerer announce the marriage of their daughter, Rosa Dora, to Arthur C. Stallman. The ceremony occurred on September 29. Mr. Stallman is connected with the Stallman & Fulton Co. With his bride he is making an extended trip through the West.

Visitors downtown: William M. Borden, Columbia, Pa.; Charles A. Goodwin, Eastern Drug Co., Boston; H. J. Fisk, assistant manager Parke, Davis & Co.'s London branch; Mr. Colvin of Colvin's pharmacy, Elmira.

Ground has been broken for Dodge & Olcott's new factory in Bergen Point, New Jersey. The Hendrick Sanatorium will be used for offices and a pier and bulk-heads will be built on Newark Bay.

The Abbott Alkaloïd Co. of this city, has secured a judgment for \$1,113 against Augustus P. Hafner. Solomon of Hartford and Hanna gained judgment for \$67 against Julius Altman.

Goldblatt Bros., 32 Avenue C and 413 Honston street, have separated. Max Goldblatt taking the first-named store and Jacob Goldblatt the other.

Louis Schmier is now a proprietor at 2-4 Bank street. He was formerly in the employ of Tsheppe & Schur, Third avenue.

J. Kopoloritz has gone from F. L. Cherey & Co., 461 Grand street, to become manager for C. S. Abram, Rye, N. Y.

J. D. Marklewicz has sold his store at New Rochelle to Samuel S. Dechter, a recent graduate of the Brooklyn C. P.

Frank Schurfer has bought the store at 313 Bedford avenue, Brooklyn, of Adolph Levy.

Earl H. Beckwith is reopening an old store at Bedford Station.

NEW ENGLAND.

FIVE YEARS' SUSPENSION.

Massachusetts Board of Pharmacy Deals Severely With Druggists Collette—Many Other Liquor Cases.

Boston, October 6.—Francis M. McHugh and Louis P. Collette, Worcester druggists, were examined by the State board of pharmacy on charges of violation of the liquor laws, as provided for by the statutes in cases where druggists have once been convicted in court. The first-named was raided last March and the latter in April, both being arrested and fined \$50.

Each claimed to have pleaded guilty in court under advice of their counsel and without knowing just what they were doing, since they both were innocent. Simon B. Harris, State agent for the board, urged that the board suspend their certificates, asserting that they kept liquors in larger quantities than necessary for legitimate business. This was not Collette's first offence. The board suspended Collette's certificate for five years and McHugh's for one year. Collette's term has been exceeded only once—in the case of Druggist Tate of Clinton, whose certificate, about two years ago, was suspended for ten years.

UNITED DRUG CO. GATHERS FOR BANQUET.

Boston, October 6.—A banquet was given by the United Drug Co. at the Hotel Brunswick, Boston, to its representatives in various cities. A company of about two hundred from all sections of the country where this co-operative organization has its retail representative druggists were in attendance. Good-fellowship marked the occasion. E. D. Cahoon served as toastmaster and among those heard in after-dinner addresses were James T. Wetherald, C. P. Jaynes and Louis K. Liggitt, Boston; George C. Lyon, Providence, R. I.; William Bolton, Brooklyn, N. Y.; Thomas Taylor, Louisville, Ky.; Stephen Hexter, Chicago, Ill.; James Demoville, Nashville, Tenn., and several others. The affair proved wholly enjoyable for all the participants.

Secretary Louis K. Liggitt had invited the stockholders to come and see the new laboratory. On the first day luncheon was served in the "lab" to the visitors and their wives. Then came a trolley ride through the park system and an afternoon tea at Mrs. Liggitt's for the ladies, the men having a business meeting. In the evening the ladies went to the Colonial theater and the men to the Newton Club, as Mr. Liggitt's guests.

The second day was given to a joint meeting of the closely-allied Drug Merchants of America and the United Drug Co. During the session \$75,000 worth of one of the company's new remedies was sold. It was voted to construct an addition to the present laboratory building, to be 22½ feet long, 91 feet wide and six stories high. Plans are now under way.

There were some changes in the personnel of the officers. E. D. Cahoon, treasurer of the W. B. Riker & Sons Co., New York, continues as president, and George C. Lyons of the Hall & Lyons Co., was elected treasurer to succeed J. T. Wetherald, who resigned and retires from the active part in the management which he has taken, while still remaining a director and also a stockholder in the company—the second largest one in fact. His numerous other duties in connection with Vinol and Pinkham remedies make such demands upon his time that he thought best to relinquish some of his duties. E. L. Scholtz of Denver remains as vice-president, and Louis K. Liggitt continues to be the company's secretary and business manager. The board of directors remains as heretofore, except that J. C. Brady of Fall River, succeeds Stephen Hexter of Chicago.

TO EQUALIZE TELEPHONE COMMISSIONS.

New Haven, Conn., October 6.—The meeting of the New Haven R. D. A. was not as profitable in business transacted as the members had hoped. At the last meeting the members voted to contribute \$2 each to the N. A. R. D. When the vote was taken this month some of the members labored under the impression that the \$2 included their dues and when the treasurer called for an assessment of \$1 there was some tall kicking. Finally, however, most of the druggists came up with the price, though a few took time to consider it.

Another matter of interest was the telephone service. Unless the present arrangement with the local telephone company some of the druggists who have pay stations are getting a rake off of 10 per cent, while, it is said, others are getting as high as 20 per cent., and still others nothing. It is planned to equalize the commission in some way. The company expects each instrument to net about \$84 a year. When a druggist has the convenience of a pay station in his store and the telephone only earns \$70, the company should not pay a commission, said one of its officers. When, however, the telephone earns over \$100, it is argued that it is only just that the company should pay ten per cent. The druggists agree with this but say that under the present arrangement the commissions are not arranged on the earnings of the respective instruments.

WATERBURY CLERKS TO HAVE BANQUET.

Waterbury, Conn., October 6.—The committee in charge of the arrangements for the first annual banquet of the Waterbury Drug Clerks' Association, to be held on Tuesday evening, November 3, is busy completing arrangements. A large delegation of drug clerks from Hartford and New Haven and other nearby places have accepted invitations to attend, and many of the store owners will be there also. The proprietors feel much kinder towards the association since it withdrew from the Central Labor Union and the clerks will now have the support of all the local men. The committee in charge of the banquet includes Joseph Kilbride, chairman; Edward J. Dwyer, secretary; Ralph H. Foster, George A. McNamar, Edward J. Doran and James N. Banziger.

CUSTOMER HOLDS THE TRUMP CARD.

Fall River, Mass., October 6.—A Fall River druggist finds himself in a rather queer predicament. His wife recently was attacked in playful fashion by a large St. Bernard pup, which tore a big hole in her gown, practically spoiling it. The druggist, indignant, sought redress to the amount of \$35 as damages. The owner of the dog promptly paid. He then sent two friends to the pharmacy, where they bought, it is alleged, a bottle of liquor without having to go through the usual legal formalities. Now the dogs' master has notified the druggist that he holds the trump card and threatens full exposure of the illegal sale unless the \$35 is forthwith returned. Thus far the end of the chapter has not been reached.

PRETTY EXTENSIVE LIQUOR STOCK.

Boston, October 6.—Pleading guilty to the charge of illegal keeping of liquor, Charles Harrington of Lowell,

Eff. Lithia Tablets

Send for sample and special net prices on our carton package Aluminum Cap Bottles with your name on them.

Our Tablets made by a new process are very satisfactory.

BILLINGS CLAPP COMPANY, Boston, Mass.

paid a fine of \$75. The druggist, it is alleged, was caught "red handed" by a liquor inspector, just as he was handing over a bottle of liquor to a customer. Search brought to light a 25-gallon whiskey cask about half filled, a 10-gallon gin cask also about half full, six and a half pints of whiskey and thirty-three pints of gin, in bottles more whiskey and two four-gallon jugs; more gin, a five-gallon cask half filled with port wine, and numerous empty jugs and bottles.

THE BAY STATE.

—Application by P. L. Willard for a sixth-class or druggist's license for his store in West Somerville resulted in a public hearing by the license committee of the board of aldermen, before which church people of prominence, Sunday school workers, the president of the West Somerville Board of Trade and others appeared in remonstrance. A lawyer who conducted the hearing in the druggist's behalf objected to the introduction of mere rumors regarding Mr. Willard's conduct of his business and claimed that tangible evidence of unworthiness alone should determine the committee in its decision.

—In the Superior Court, Boston, a bill in equity has been filed by George L. Wilson, of the botanic drug firm of R. O. & G. P. Wilson, Boston, against Dr. John P. Naughton of Worcester, alleging breach of contract. Mr. Wilson brings the action as counsel for the Osmo-Chemic System of Medicine, and Judge Richardson has issued an injunction restraining the defendant from transferring 4,500 shares of the stock of the corporation system and certain other stocks, pending the conclusion of this bill.

—A. F. Woodbury, a Brockton druggist, announces his marriage to Miss M. A. Lincoln of the same city, the ceremony taking place in Brookline. It was a quiet affair, without guests. Singularly, an earlier marriage of Mr. Woodbury took place in the same church, about twenty-five years ago, and was performed by the same clergyman. Mr. and Mrs. Woodbury are to live in Plymouth, N. H., where he has purchased a farm.

—During September, the board of pharmacy examined twenty-two candidates, of which the following eight were successful: Mary A. F. Whitmarsh and James S. Groff, Boston; David A. O'Brien, Lowell; Albert F. Doyle, Avon; Stephen R. Arnold, New Bedford; Fred L. Bradford, North Adams; Carleton R. Wheeler, Danvers, and Louis Simonson of Middletown, Conn.

—E. C. Tozier, a Haverhill druggist, came into prominence as a candidate for nomination as senator, in the recent Republican caucuses. He lost, however, being defeated by the present incumbent, Senator Carlton F. How. Mr. Tozier has served in the Common Council of Haverhill with marked credit.

—A woman entered Buffington's pharmacy in Worcester and tried to buy some rolls and other articles, mistaking the place for a bakery. Just why she did so is uncertain, for the place resembles most up-to-date drug stores. When informed of her error the woman only slowly realized it.

—The Lowell Drug Exchange recently enjoyed a fine outing at Willw Dale, a suburb, where they were the guests of one of their members, P. N. Brumelle, at his summer cottage. A substantial dinner was served and a baseball game, among other diversions, came later.

—In the Superior Criminal Court, final disposition of the case of Frank Frost, a Chelsea druggist, accused long ago of violating the liquor laws, was made in a verdict of not guilty, which was recommended by the district attorney.

—Seven young boys from South Boston were implicated in the burglary of Andrew F. Kendrick's Battles Street pharmacy, Brockton. The police have arrested six of the youthful gang and they have been held for several days.

—Joseph E. Harrity, of Clinton, was the defendant in two suits brought to recover rent for occupancy of land by him upon which he stored a quantity of brick. He lost both suits, one for \$63 and the other for \$13. Appealed.

—At Guertin's, Fall River, a stuffed raccoon of large size, shot by Charles Guertin, a clerk, has been on exhibition. Mr. Guertin was a public benefactor, it is related, inasmuch as the raccoon was a chicken thief.

—While at work on some shafting in the Cochrane Chemical Works, Everett, Fred G. Berry, aged about forty five, fell and was so badly injured that he lived only a short time. A widow and two children survive.

—Mrs. J. W. Colcord, who conducts under the name of J. W. Colcord a drug store in Union street, Lynn, has made an assignment to John M. Barry, an attorney, for the benefit of creditors.

—Adjustment of the loss caused by the recent fire at William A. Cote's store, Fall River, has been brought about through the payment of almost \$2,800 in insurance.

—Warren W. Delf, who formerly was manager of the Maplewood pharmacy, Gloucester, is now agent in Gloucester for the Prudential Insurance Co.

—An old employe of the American Soda Fountain Co., at the Boston plant, recently fell four stories down the elevator shaft, dying from his injuries.

—C. A. Pierce, manager of the Jaynes manufacturing Co., Boston, has just returned from his summer vacation spent at North Woburn, Mass.

—Edward H. Weston, druggist of Jefferson, has given up his home in that town and has taken up his residence and business in Worcester.

—H. H. Stacy, manager of the candy department of the United Drug Co., has returned from a trip to New York.

CONNECTICUT.

—The last report from Hartford from the pharmacy commissioners is that of twelve candidates for druggist's licenses, eight passed successfully. They are John W. Parker, New Haven; Frank D. Dolan, Stamford; Benjamin S. Starr, New London; R. B. Martin, Brooklyn, N. Y.; V. McDermott, New Haven; Charles M. Brunson, Naugatuck; S. A. Bube, New Haven; John M. Claxton, Torrington.

—An innovation in the retail drug trade in this city was the establishment last week of a young woman, soda water clerk in the Medicine Shop, New Haven. J. R. Salowsky has the fountain in charge and the managers say the experiment is a very successful one. As far as known she is the only woman in the business in the State.

—Under an attachment placed upon the drug store of J. L. Bartlett to better settle some pressing claims of creditors, the store has been closed. Attempts to affect a settlement or sale of the stock and good will fell through, hence the attachment.

—Ernest L. Parker has purchased the stock and good-will of George L. Risley, his co-partner, in E. L. Parker & Co., Hartford. Ernest L. Parker will continue the business under the same name.

—W. G. Hunter, who has been on the road for several years, has decided to go back into the retail drug trade. He has accepted a position with Hutchinson in Branford.

—F. G. Ball, who several years ago quit the pharmacy business to go into the piano trade, has gone back to his original work and is now with Schurman in New Haven.

—Eugene E. Mayer, who managed the Union pharmacy, New Haven, last summer, has gone to the Medicine Shop.

RHODE ISLAND.

—The Rhode Island C. of P. began its second year with an entering class of forty-seven. As nearly all the students who were enrolled last year as freshmen are to continue and finish the two years' course, the enrollment is expected to go much higher. A number of special students have been admitted to take the new course in textile chemistry which has been added to the curriculum. A special course in bacteriology also has been added and post-graduate courses requiring an additional two years, established.

—William H. Boardman of Lonsdale has been nominated by the Central Falls Republicans for mayor of that city. The Democrats carried the city a year ago, but it is said that the drug man's candidacy will prove as potent in healing some political wounds from which his party has been suffering as the medicinal goods in which he deals have been in curing the physical ailments of many of his prospective constituents.

—Four new instructors have been added to the faculty of the Rhode Island C. P.—L. V. Calder, general chemistry; James A. Wright, toxicology, physiology and theory and practice of pharmacy; E. J. Gallagher, assistant in botany, materia medica and pharmacognosy, and G. W. Fairbanks, assistant in operative pharmacy.

—The Bloodgood pharmacy, Pawtucket, has been bought by George T. Bradley, a Lawrence man, who for two or three years was employed as manager of the store.

FROM MAINE.

—They are doing things differently now in Maine. At Augusta, S. S. Lightbody, a leading druggist of Waterville, received a sentence to pay \$100 and costs on a finding of being a common seller of liquor, and in default of payment had the alternative of sixty days in jail. On another charge of maintaining a tipping shop, the druggist was ordered to pay \$100 and costs, in addition to a sentence of sixty days, and in default of payment to serve an additional sixty days. Mr. Lightbody is one of the richest citizens of Waterville. The case has attracted widespread attention inasmuch as fines alone usually have sufficed. Another case was that at Portland where Druggist Ernest E. Cross was sentenced to jail for selling liquor. His wife interceded in his behalf and his sentence was suspended on his promise never to sell liquor again.

—Biddeford had a wholesale raid of druggists, no less than nine being visited in one day by the sheriff, and many seizures were made of contraband goods. In Portland, a visit by officers to John Quinn's pharmacy resulted in finding a supply of liquors. James T. State and Edward W. Cady, also Portland druggists, were each fined \$100 on liquor charges. State paid and Cady appealed.

—W. H. McKane, employed at F. L. Winship's, Deering Center, is on a vacation in Waterville. Nicholas O'Connor of Spaulding's pharmacy, Hallowell, is spending a vacation in Boston. James A. Broe of Smith & Broe, Portland, is back after spending the summer at Peak's Island.

—The annual outing of the Cumberland County Ph. A. made up largely of Portland druggists and those in places near the "Forest City," was a great success. The party went from Portland to Spurwink in buckboards and had dinner and a game of baseball and other sports.

—A doll contest at Smith's drug store, Lewiston, is now over and the dolls, which made an interesting exhibit in the windows of the pharmacy, have been

awarded to three little girls, whose friends as patrons of the pharmacy, secured for them many necessary purchase coupons.

—William A. Rowe has been added to the force at Alden's, Yarmouth. L. C. Akers, chief clerk at W. W. Foss's, Portland, goes to Boston for a like position. Walter Smith, Devine's, Augusta, has resigned to take another position with a Boston house.

—Frank P. Burns of Westbrook, manager of Woodman's store, recently was married, the bride being Miss Josephine G. Pratt of Auburn. The wedding tour was to places of interest in Canada.

PENNSYLVANIA.

THE P. A. R. D.

C. F. Shoemaker Addresses Them on Treatment of the Cut-Rate Evil.—Organization and the Tripartite Plan the Solution, He Says.

Philadelphia, October 6.—At the last meeting of the P. A. R. D. the committee to get up a large delegation to go to Washington, reported that there would probably be seventy-five in all from Philadelphia.

C. F. Shoemaker, president of the N. W. D. A., addressed the meeting. After saying that he was graduated from the Philadelphia C. P. and paying a tribute to Professors Maisch, Bridges and Parrish, he compared the practice of pharmacy in Europe and this country. England, he said, is more demoralized by cut prices than this country, as they do not have the side lines that are carried here. In France it is similar to England, while in continental Europe the number of stores and prices of wares are regulated by law.

"The man, to be a success," said Mr. Shoemaker, "must have the commercial instinct. There are few 'captains of industry'—the majority must necessarily be private. Having what the people want, and letting them know you have it is of far more value in increasing your business than advertising at cut prices."

The treatment of the cut rate evil is entirely artificial, Mr. Shoemaker asserted. It is a difficult task to control four hundred wholesalers; how much more so the forty thousand retail druggists. That the retailer greatly overestimates the amount and value of the proprietary business, is one impediment to successful coping against cut-rate practices. The solution of the problem is in organization, thoroughly and loyal, and the strict enforcement of the tripartite plan. The direct contract and serial numbering plan has as yet too many drawbacks to insure the results hoped for.

A vote of thanks was extended to Mr. Shoemaker.

Mr. Poley introduced the following resolution which was adopted.

"That the P. A. R. D. urges the N. A. R. D. to adopt a resolution that on and after a certain date no new preparation will be accepted by its members unless marketed with direct contract and serial numbering."

Mr. Rehfs introduced the following resolution, which was also adopted:

Powdered.....Per ounce \$1.00
Pink Top Capsules.....Per ounce 1.00
Tablets, 2½ grain only.....Per ounce 1.00
ETNA CHEMICAL CO., New York, U. S. A.

Resolved that the delegates of the P. A. R. D. in attendance at the N. A. R. D. convention in Washington are hereby instructed to use all honorable means and vote for the continuance of the tripartite arrangement of marketing proprietaries, with direct contract and serial numbering." Adjournment was taken for a luncheon.

A PLEASANT "GOD SPEED YOU."

Philadelphia, Oct. 6.—Jacob H. Redsecker of Lebanon, Pa., has been ill for some time, and, on the advice of his physician, he prepared for a trip to Europe. His looking was for the Nordland. Upon reaching this city he was met by Messrs. Miers Busch and Mahlon N. Kline, who, to his surprise and delight informed him that quarters had been prepared in advance at the Union League Club, and he was taken there to his room. Messrs. Busch and Kline had, in addition to this courtesy, arranged an informal dinner for the evening, where a select few—Messrs. Redsecker, Jacob Redsecker Boetem, Professor Remington, B. M. Faires, Miers Busch and Mahlon N. Kline—the last two the last—were the guests.

The next morning, Mr. and Mrs. William McIntyre, Mr and Mrs. Cliffe, Mr. and Mrs. Hoch, Mr. and Mrs. Reussner, Professor Remington and Messrs. Busch, Kline, Crawford and Boetem formed a party that escorted Mr. Redsecker to the steamship to wish him bon voyage. A large basket of alleged fruit was sent on board from the assembled party, just before the gang-plank was withdrawn, and while there was fruit in it, one dozen bottles of Pommery and a couple of hundred cigars helped out the bulk and tantalized the beholders by their prominence. Mr. Redsecker may remain abroad anywhere from six to eight months.

PHILA. DRUG ATHLETIC ASSOCIATION FUN.

The outdoor sports of the Philadelphia Drug Athletic Association came to a close on September 25 at the Orchard, Essington. A spirited game of base ball took place. Special features were the pitching of B. Frank Davis, the fielding of Harry Baudoin and Otto Kraus, Jr., and the batting by Dr. Boltz and Ralph Haus. After supper and a few pleasant remarks from J. H. Mashholder, the club left for the city, reaching Twenty-fourth and Chestnut Sts. at 8 o'clock. Every member was weighed at the station. Dr. A. T. Pollard's card registered 363 pounds (this speaks well for the supper). The party spent the evening at the Casino bowling alleys. Highest scores were made by Charles Willis, W. A. Johnson, Dr. L. W. Rehlein, W. Fred Steinmetz, Dr. Boltz, J. H. Mashholder, Dr. A. T. Pollard and John Duffy. The highest individual score, 190, was rolled by Charles Willis.

The club have engaged the Girard bowling alleys for every Tuesday afternoon from 2 to 6 during the fall and winter months. A standing invitation is extended to their drug friends to call.

MR WEIGHTMAN NINETY YEARS OLD.

Philadelphia, October 6.—Commemorating the ninetieth anniversary of the birth of William Weightman, of Powers & Weightman, a reception was given him last week by employees of the laboratory at Ninth and Parrish streets. Mr. Weightman's private office was elaborately decorated with flowers and greens, and a handsomely-framed portrait of the old gentleman hung in a conspicuous position.

Mr. Weightman received the congratulations of his employees and in the afternoon, at his home, in School Lane, was presented by the hands of the Falls of Schuylkill laboratory with a beautiful album, containing a

congratulatory address. In accepting the gift he made a brief address, returning thanks for the kind wishes extended and the expressions of good will coming from his workmen.

PHILADELPHIA C. P. ELECTS THREE TRUSTEES.

Philadelphia, October 6.—A meeting of the Philadelphia C. P. was held on September 23. The occasion was the election of three trustees. Miers Busch was elected in place of Henry M. Rittenhouse, Messrs. Krewson and Kline being re-elected. The college is billing rapidly, lectures having been resumed on October 1, and the classes show a personnel that is most promising. The three societies will soon be organized, as soon as the men settle down, and then the full routine of the old institution will be in running order.

OTHER HAPPENINGS.

—This week saw the opening of our colleges of pharmacy. The opening of the college term will mean much to the druggists of Pittsburg and Allegheny; as it will bring in numbers of young men who will find it expedient to work during their junior term. This will in a measure solve the problem of help, at least for the winter. What is the city druggist's gain, however, is his country brother's loss. Nearly every town of any amount in the western end of the State has sent one or more young men out. One town alone sent seven to the different schools, and that means seven druggists in the market for junior clerks.

—The Thermal Foot Bath Co., which was recently organized in Bradford, will make application to the governor on October 16 for a charter. The stockholders are W. O. Neely, George D. Russell, J. L. Kerstetter, and F. A. Gallagher. The apparatus will be manufactured in Bradford.

—Frank J. Becker, formerly of Sixth and Dickinson streets, Philadelphia, goes to Brooklyn for the H. K. Mulford Co. Thomas I. Morris will enter business in Pittsburg. E. J. Melvin returns to Philadelphia for the fall and winter.

—Apropos of the smallpox epidemic, Shoemaker & Busch, Philadelphia, compelled their force of 150 hands to be vaccinated or show a scar not less than three years old. The majority asked for and took the vaccination.

—A. G. Richardson of the J. Hungerford Smith Co., was in Pittsburg last week, en route to St. Louis, where his firm expect to make a large exhibit of their products at the coming exposition.

—Jacob Brothers of Tenth and Chestnut streets, Philadelphia, and Dr. Taggart of Eleventh and Arch streets, Philadelphia, announce the early opening of their new stores.

—George L. Sandt, a well-known druggist of Brookville, was stricken with appendicitis while on a visit to Detroit, and now lies in a critical condition in that city.

—Wharton & Co. report the sale of Ott & Nicoud's Sixteenth and Pine street, Philadelphia, store to Harry Lee Barber of Third and Catharine streets.

—Magistrate Burnett of Nanticoke, announces that he will give trading stamps to all persons married by him to the full amount of the fee paid.

—C. W. O'Sullivan, formerly clerk for Louis Emanuel, Pittsburg, has opened a new store in Second avenue, Glenwood.

—T. R. Wirsing, who has several stores about Pittsburg, will open a new one at Grant and Third avenues.

THE SOUTH.

BALTIMORE AT WASHINGTON.—N. A. R. D. MATTERS PROGRESSING.

Baltimore, October 4.—Next Wednesday will be known as Maryland day at the convention of the N. A. R. D., Washington. It is expected that two hundred or more druggists from Baltimore and places outside of this city will visit the National Capital and attend the sessions. Various diversions have been arranged, and the occasion will be made one for enjoyment and recreation as well as for the discussion of business. The official delegates from Baltimore number 12 and they will go over tomorrow.

Locally N. A. R. D. matters appear to be progressing. The organization seems to be gaining strength and is able to give emphasis to its regulations. Its ability to control the retail drug trade is evidently on the increase, and its promoters express the greatest confidence in the future. Within the past few days the order has gone forth that all drug salesmen must provide themselves with cards if they want to get orders from retailers.

The dearth of competent drug clerks continues, and the pay offered at the present time for capable men is higher than perhaps ever before.

MARYLAND C. P. RECEIVES MATRICULANTS.

Baltimore, October 2.—The Maryland C. P. began its sessions yesterday with a body of students which in point of number and educational equipment compared favorably with any previous classes. The roll of the junior class contained more than thirty names, and this total will be considerably increased in the course of the present month. Among the matriculants are a young woman from and a native of Porto Rico. Lectures were delivered yesterday by Prof. Charles Caspari, Jr., dean; Prof. Daniel Base, and Dr. D. M. R. Culbreth, all members of the faculty.

BALTIMORE NOTES.

—The printed proceedings of the annual meeting of the Maryland Ph. A., at Ocean City are out, Secretary Louis Schulze having made such excellent progress with his work that he is several months ahead of his predecessors in completing the document, a pamphlet of about 150 pages. The early publication of the report was especially desirable this year owing to the fact that the General Assembly of Maryland meets at Annapolis next January, and that an effort will be made to secure supplemental legislation, the new pharmacy law having proved somewhat inadequate in practice, while the law to regulate the sale of poisons turned out to be entirely useless.

—S. W. Douglas, a young pharmacist, has just been detached from the ordnance proving grounds at Indian Head, Md., and ordered to the Navy Yard at Portsmouth. He has been very popular since he first went to the reservation two years ago, and has acted as physician and surgeon with most gratifying success.

—A. P. West, who has been employed during the summer as assistant chemist in the Agricultural Department at Washington, has returned to Baltimore and will continue his studies in chemistry at the Johns Hopkins University.

—Druggist J. George Jung, Fair avenue and Cannon street, Baltimore, is remodeling his store. He is having installed new show cases and other fixtures, and handsome display windows are also being erected.

—The contests of the Baltimore Drug Trade Bowling Club began last Monday at the Diamond with gratifying prospects for the future.

AROUND THE GREAT LAKES.

ENCOURAGING SITUATION IN CHICAGO.

Chicago, October 6.—The officers of the auxiliary districts of the C. R. D. A., held a meeting at the Northwestern C. P. last week. The question of a price schedule for Chicago was to the fore. Several different views were expressed, but the majority of those present felt more favorably inclined to the adoption of some kind of a schedule—even though the down town situation had to be disregarded—than they were to having conditions remain as at present.

Reports were received from all the districts which were represented. Those reporting from districts in which Organizer Cusick had labored spoke in the highest terms of his excellent work. The effect of thorough district organization was made plain by the temper of the remarks of the different district officials. It was not claimed that perfect harmony and cordiality had been established in each district, but it was evident that many misunderstandings had been cleared up and that in some districts where dissensions had made co-operation difficult there is now a willingness to get together, make mutual concessions and join in a hearty effort in the interests of the common cause. There is no question but that the outlook is now very promising where but a short time ago it was dubious indeed.

BATTLE CREEK MAYOR'S PRONUNCIAMENTO.

Battle Creek, Mich., October 6.—No more ten-cent "stiffened" coca colas or spiked root beers, is the gist of the pronouncement of Mayor Webb of Battle Creek, for the benefit of the druggists. "Coca high balls" have come under the ban of the health food city's reform mayor, and on Saturday night he sent out fifteen notices, reading in part as follows:

"I would respectfully call your attention to the fact that certain retail druggists in this city are drawing intoxicating liquors from soda fountains, mixing the liquor thus drawn with coca cola and other beverages and selling the same over their counters." He concludes by threatening prosecution if the practice is continued.

The order has caused quite a stir at the Creek and many exaggerated stories have been sent out to the press. The chief of police is co-operating with the Mayor.

PARKE, DAVIS & CO. BOWLERS.

Detroit, October 6.—The Parke, Davis & Co. bowling league was the first to open the season in Detroit, and some very creditable scores were made on the Cadillac and Woodward alleys, Saturday night. Warren of the Chemical team bowled 206, while the high team score, 779, was made by the general business team. The league will cut quite a figure in local bowling circles this year, as their teams have been increased from three to five men, and matches innumerable are already being made for odd nights.

FROM ILLINOIS.

—At the annual meeting of Robert Stevenson & Co., it became necessary to elect new officers on account of the vacancy in the presidency caused by the death of the

erty, Robert Stevenson. The election resulted as follows: President, Arthur Dawson, vice-president, James B. D. Stevens; secretary, L. Giles Lewis; treasurer, Charles Stevenson.

—G. A. Wecker, proprietor of the Alhambra pharmacy, N. Second and State street, Chicago, has sold to Henry Moffett, who managed the store for Mr. Wecker. The latter will in the future confine his attention to his store at the corner of Thirty-first street and Cottage Grove avenue.

—The Ricman pharmacy has just been opened at the corner of Twenty-ninth street and Indiana avenue, Chicago. Mr. Ricman was formerly clerk for C. E. Cross at Fifty-third street and Jefferson avenue.

—E. E. Bohlke has sold his store at the 441 State street, Chicago, to Frank Granow, his former manager. Mr. Bohlke will leave shortly on an extended European trip.

—O. F. Fuller of the Fuller & Fuller Co., Chicago, is vacationing at Peekskill, N. Y. He will return about the fifteenth of next month.

—James A. Meikle has opened a new store at Lincoln and George streets, Chicago. He formerly clerked for H. A. Halvorsen.

—James W. Morrisson of Morrisson, Plummer & Co., will return from Nova Scotia about the middle of the present month.

—F. P. Boyden has moved his drug store from 2011 West Harrison street, Chicago, to 1723 Lincoln avenue.

—J. H. Newman has bought the drug store of A. Schlegler at 334 Jackson boulevard, Chicago.

—A. O. Hupfield has bought the store of Justice Leboy at 545 Milwaukee avenue, Chicago.

MICHIGAN NOTES.

—E. A. Bivins is a living testimonial to the fact that there is money in the drug business when it is properly managed. He went to Alma in 1895 on Elk Rapids to manage the drug stock at that time owned by C. E. Mahan in the opera house block. In two years he was part owner of the business. On July 15, this year, he purchased the B. S. Webb drug stock and building. He then purchased the balance of the block formerly owned by him in connection with his partner, and now his one of the finest establishments in the State. All by hustling.

—The sentences handed out to South Haven druggists recently in the circuit court at Paw Paw for violations of the local option law, were as follows: William Romus, John Wentworth and Frank Brien, twenty days in jail and \$50 fine; Susan H. Novins and W. J. Romus, twenty days in jail; B. E. Southinson, traveling salesman, forty days in jail and \$50 fine.

—Mayor Palmer of Grand Rapids, has received several anonymous communications to the effect that certain druggists of that city were running on the wide-open plan, so far as the dispensing of liquors is concerned. But His Honor says that, like all reputable newspapers, he wants to know who is who, before he tells them what is what.

—Fire and water recently caused \$1,000 damage to the store and stock of P. L. Heath at Hastings. The fire started in or near a box containing baby food and a local paper states that it was probably due to "spontaneous combustion." The food must have been "hot stuff." Loss covered by insurance.

—A large block of stock of the Grand Rapids Sucky Fly Paper Co. has changed hands, Manager J. H. Brewster retiring, and it is stated that the business has been absorbed by the O. & W. Thum Co. of Grand Rapids, the largest manufacturers of fly paper in the world.

—Boat fishing in the inland lakes near Petoskey is great sport. C. A. E. Pick and John Pence of the

Fabius drug store, were out for a few days and they brought home long strings of fish and some capital stories.

—E. E. Miller of Traverse City, has a mushroom in his window that is nearly two feet in length and weighs 25 pounds. How many beefsteaks would that thick-cutted fellow be equivalent to?

—W. C. Kirchgessner, analytical chemist with Peck Bros., Grand Rapids, rides good wheels, but has trouble about keeping them. He reports the theft of his second bicycle this season.

—G. T. Chamberlin's store at Hartford is gaining a great reputation in that neck of woods for unique and artistic window displays. The trimming is done by Charles P. Aspin.

—H. H. Rodenbaugh, who has disposed of his interests in the drug store of Rodenbaugh Bros. at Muskegon, has bought the store of J. A. Hoedemaker, Grand Rapids.

—Dr. S. E. Campbell has bought the drug business of W. B. Minthorn at Hancock and will put in a complete stock. Charles Miller of Saginaw, will assist him.

—Stanton will have a new drug store, E. L. Stevenson, formerly pharmacist for the E. D. Hawley Co., having decided to engage in business for himself.

—A. W. Olds and family of Grand Rapids, have removed to Hartford where Mr. Olds will engage in the drug business, opening his store on October 10.

—Three Rivers' three drug stores will now close at 8 o'clock every evening. Bosses say their clerks have some rights which they are bound to respect.

—DeFields Bros. have bought the store in the opera house at Benton Harbor, Fred Dewey having sold his interest to go South for his health.

—The Saginaw Drug Co., jobber of drugs and groceries at Saginaw, have removed into a new building prepared especially for them.

—The six South Haven druggists arrested for violation of the local option law, were given light jail sentences.

—W. B. Lyman has sold his store at Muskegon to Loveland & Loveland, who will take possession this week.

—The board of pharmacy will hold its final meeting of the year at Lansing on November 3 and 4.

—Fred Neumeister, the Muskegon druggist, lost about \$100 through the operations of burglars.

Free, A Wholesale Department Store on Paper.

Some two weeks ago the attention of readers was called to that wholesale department store on paper, the Butler Bros., unbridged catalogue No. T 473, a work which should be in the hands of every druggist as it is the last fully illustrated edition of "Our Drummer"—as the catalogue is known—that Butler Bros. will issue this year. Readers of the Era who have not secured one of these valuable books will find it to their interest to do so at once for it contains a mine of merchandise suggestions. The catalogue takes the market to your store and quotes net wholesale prices on the widest range of goods ever gathered between the covers of any wholesale catalogue. At this season of the year "Our Drummer" should be especially valuable to the retail druggist for from it he would be able to select his complete stock of holiday goods. The October number of "Our Drummer" brings catalogue T 473 up to date. This catalogue is now ready and the prices quoted in it went into effect September 25, and are guaranteed during October, or until the November catalogue is issued. These catalogues are absolutely free, and any person ordering them should remember that the number of the fully illustrated fall catalogue is T 473 and the October number is T 470.

WEST OF THE MISSISSIPPI.

THEY WILL STAND UNITED.

Des Moines, Ia., October 6.—The Retail Druggists' Association of Des Moines has succeeded in enrolling every druggist in the county and the organization will be much more flourishing with this united effort. A scrap is on in Des Moines which promises to assume no mean proportions before the winter shall have rolled around. The clerks have organized with about 60 members, but as yet only two druggists of the city have recognized the union.

Frequent meetings of the clerks have been held and proposals made to the retailers without avail. For two months the druggists did not know that a union had been formed. The first knowledge of the actual organization of the union came through a prominent retailer reading the Era. While the differences between the clerks and the retailers is of small importance as to wages, there is considerable discussion over hours. The clerks want a strict enforcement of the twelve-hour rule, and say that even at that they are giving the retailers the best of it. The twelve-hour rule as interpreted here means really 10 hours' work with two hours out for meals. Many of the clerks here have been working from fourteen to sixteen hours a day, with no rest on Sunday. The rules of the union are that the clerks shall have one Sunday off in every four.

MUST PAY TO DISPENSE "CLARET SODA."

St. Paul, Minn., October 6.—Local owners of soda water and soft drink dispensing apparatus have a new item of expense this year in the shape of an investment of \$25 in Uncle Sam's permits to sell liquor. In a way the dispensing of claret sodas, which one expert says might be more truly called claret highballs, is responsible for the license, though in the main it is because of the presence of a heavy percentage of alcohol in the syrups.

Local soda counter proprietors who failed to obey the warning of the revenue collectors and secure the permit when the order was promulgated the early part of the year paid dearly for their inattention, and now some of them have quit the dispensing of alcoholic beverages altogether. Good fruit syrups are comparatively free from alcohol, but in the cheaper syrups, it is said, there is a heavy percentage of the intoxicant.

BOUND TO GET THE COCAINE.

Minneapolis, October 6.—A cocaine fiend is making life a more or less howling waste for South Minneapolis druggists. Unable to get his favorite drug in any other manner, he resorts to subterfuge.

A few days ago he went into a drug store and told the clerk that he had been sent by the proprietor of another store to get thirty-five grains of cocaine. The unsuspecting clerk dealt out the drug and the man left. Shortly afterwards the clerk telephoned the druggist and learned that the man had lied. Attempts of like nature have been made at other stores. The druggists are now suspicious of all requests for cocaine.

BEWARE OF DRESS SUITS HERE!

A jovial invitation to the meeting of the Wyoming Ph. A., at Rock Springs on October 15, reads:

"You are cordially invited and urged to come and bring your wife or your best girl with you. It is for the best interests of the association for you all to be there.

"Any member appearing in a dress suit will find

poison in his coffee. If you are not an association member, come anyhow. Our president promises all a good time, and we want you to join us."

R. L. NEWMAN, President.

GUFF H. MAGHEE, Secretary.

W. SCHUPBACH.

Nebraska pharmacists, as a rule, take pride in their various pharmaceutical organizations. This year the Nebraska Ph. A. met in Grand Island and the aforesaid pharmacists say the meeting was the best attended and most successful ever held in the State. The N. A. R. D. was re-endorsed, the direct contract and serial numbering plan was commended, and the proposition to revise the patent laws was favored. Participating in the work of the association was W. Schupbach, a wide-awake retail pharmacist of Columbus, whose portrait appears herewith. Mr. Schupbach is a vice-president of the Nebraska Ph. A.

CALIFORNIA.

—Wedding bells are soon to ring in Kansas City. Frank Metcalf, the prominent druggist of Los Angeles, has been caught in Cupid's net. He will wed Miss Claire Holmes of Kansas City.

—By the first of next year Ed. Birden will have one of the swellest drug stores in the State. He is building at Santa Paula.

—Raney & Phoenix is the name of a new drug firm at San Bernardino. The partners are recent graduates of the C. P.

—The drug business of L. M. Endicott at Rio Vista has been purchased by L. M. McCurdy, a Minnesota physician.

—R. L. Dewar of 361 O'Farrell street, San Francisco, has closed out. He is looking for a new location.

—Dr. Nish of the School of Pharmacy, has returned to San Francisco from a jaunt to Los Angeles.

GEORGE W. WEAVER, of Lockport, N. Y., a leading druggist and highly esteemed resident of that city, died suddenly. He was sixty-five years old and had been in the drug business for thirty years. A widow and two daughters survive.

JOHN A. GOURLIE, druggist of Summerside, P. E. I., Canada, is dead.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories.
Twelve Teachers. Thorough Course.

NEXT TERM BEGINS JANUARY 4, 1904.

Address Inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

THROUGH BRITISH SPECTACLES.

Thomas Mahen, F. C. S., one of the best known men in British pharmacy, visited this country last year and found opportunity to study trade conditions and inspect some typical American retail pharmacies and manufacturing establishments. On his return to England he presented a paper embodying some of his views to the London Chemists' Assistants' Association. He also stated that any description of American pharmacists and pharmacies would be singularly incomplete without reference to Parke, Davis & Co.

Mr. Mahen said the growth of this firm had been extremely rapid and at the present time its buildings occupy a ground space of fifteen acres. Besides these laboratories the firm has laboratories at Walkerville, Ont., and at Hounslow (near London), and branch offices in all the principal cities in America, India, Australia, South America, and at this moment there is an enormous development of the trade on the continent of Europe, particularly in Spain, Russia, Italy, Germany and France.

Regarding the question of standardization we quote from Mr. Mahen's paper as published in a recent number of the American Druggist:

Many conservative Britishers are accustomed to regard with incredulity the "tall" ideas of Americans, and a considerable discount is sometimes made from the descriptions, which are also regarded as being "tall." Possibly some of these who hear this paper may take this popular view and console themselves with the reflection that after all more size does not count for very much. In the case, however, of Parke, Davis & Co., it is not on their size that their reputation rests, for it will be conceded by every one who knows anything about recent pharmaceutical history that it is to that firm, more than to any other agency, that we owe at the present moment the position now held by standardization in the estimation of medical men and pharmacists all over the world. This is a strong claim, but it is historically true, and its verification is as demonstrable as any proposition of the kind can be. The young firm started 35 years ago, with the determination that everything produced in the laboratory would be as perfect as it is possible for human skill and ingenuity to make it. From the first they not only tested all their drugs but they proceeded to standardize a large proportion of them, and before many years had elapsed their standards were recognized throughout America. Just at first, of course, the methods for standardization were not so perfect as they are today, but they were the best that were available at the time. For example, tincture of nux vomica was standardized for some time on its extractive. With regard to that drug we have got considerably ahead of that position, thanks to Parke, Davis & Co., who were also the first to standardize nux vomica on its alkaloids. One of the very first things to bring Parke, Davis & Co. into notoriety was an action raised against one of their customers at the instance of the authorities in America with reference to tincture of nux vomica. Whether they had been successful or unsuccessful, so far as the legal position was concerned, was a matter of no moment, the great thing was that they were absolutely successful in directing, for the first time, public attention in an unmistakable way to the absolute necessity for having standards of some kind for preparations of potent drugs, such as nux vomica. It is nearly a generation since that action was fought, and though we, in this country, may think that the standardization of nux vomica on its extractive matter was not worth fighting about, all of you must recognize its contribution to a score of other alkaloidal drugs, every one in its way just as important as nux vomica, which Parke, Davis & Co. standardized on their alkaloids, but which are other not standardized at all, officially or unofficially, by other makers or whose unofficial standards have been recommended, are standardized on their extractive. We who sell standardize alkaloidal drugs by the latter method cannot afford to sneer at extractive method adopted 25 years ago. The superiority being so that nux-er should today propose to adopt any other than an alkaloidal standard for alkaloidal drugs.

Of recent years the firm have brought forward a new method of standardization, viz., by the physiological test. It has now been freely admitted by pharmacologists that for such drugs as castor, digitalis and strychnine there is no other possible means for arriving at satis-

factory standards. For these drugs, and quite a number of others, methods have been advised and are regularly in use which insure that all the preparations of the drug will be of a definite and uniform standard. In order to carry out all the various operations of the firm, such as the manufacture of serums and vaccine, for which the firm are famous, a regular menagerie requires to be maintained at Detroit, including something like 200 horses, very many heifers, thousands of guinea pigs and frogs, pigeons, fowls, dogs, rabbits—in fact, every animal that is of use for physiological purposes. These are all open to inspection.

The introduction of cascara, crinoidia, coca, and many other valuable drugs, a number of which now occupy positions in the leading pharmacopoeias of the world, by Parke, Davis & Co. is conceded by Mr. Mahen, who concludes his paper on American pharmacy by a description of Detroit, the "home city" of Parke, Davis & Co.

OUR CANADIAN LETTER.

—The annual election of class officers for the Ontario C. P. Toronto, resulted as follows: Honorary president, F. C. Herber (Dean); honorary vice-presidents, Miss I. Ball, Miss Alice Gibson; president, W. T. Penner; first vice-president, J. W. Smith; second vice-president, E. L. Taylor; secretary, Alex. C. McGregor; treasurer, E. Costerman; committee—R. M. Black, P. A. Kennedy, G. A. Young, F. A. Taylor, F. H. Smith.

—Among the representatives of the American drug trade who visited Toronto recently were A. C. Stallman of Stallman & Fulton, New York; Fred W. Benn, representing George Borfeldt & Co., New York, accompanied by W. Newbury, manager of the factory established by the firm in Japan; J. L. Ponda, representing R. L. Gibson, New York, and Mr. Moore, Dodge & Olcott, New York.

—The Toronto Drug Clerks' Association held a highly successful entertainment in Pythian Hall. About 200 guests were present. Progressive euchre was one of the features of the occasion, prizes being won by J. B. Waugh and W. E. Walms. W. J. A. Caruallan, J. Kelly and T. Rogers contributed musical selections.

—The business of the Higginbotham Drug Co. at Leithbridge, N. W. T., especially in the jobbing department, has so increased that J. D. Higginbotham, the senior partner, who is also postmaster, has given over the management to E. M. Carpenter. The firm will shortly move into a large new building.

—The Eze Manufacturing Co., Toronto, have brought action against the Good-Day Manufacturing Co. of the same city, on the ground that the defendants are imitating their goods, especially the package containing a preparation of household ammonia. They ask for damages and injunction.

—The creditors of F. D. Hope, druggist of Moyle,

SPECIAL OFFER ON CALCURA SOLVENT

Dr. David Kennedy's Latest Kidney
and Liver Medicine.

For thirty days, ending on November 7th, we will give to all retail druggists one free bottle of Calcura Solvent with each dozen they order of their wholesale dealer, providing, each druggist thus ordering, will make a window display of the said goods and this date from their store free sample of Calcura Solvent and advertising matter. On two dozen orders they will receive a free set of the same.

Simply send us your order, together with the name of your wholesale dealer through whom you wish the free set shipped.

The free goods, samples and advertising matter will be sent direct from our office, all charges prepaid, even the cartage to your store. On a ATTRACTIVE WINDOW DISPLAY, LARGE SIZE SAMPLES AND MOST EFFECTIVE ADVERTISING ALWAYS GREAT A SURE AND STEADY DEMAND FOR CALCURA SOLVENT.

Address THE CALCURA COMPANY,

(Manufacturers of Dr. Kennedy's latest preparations.)

B. C., have taken possession of his business. Charles N. Anderson has sold his store at Comber, Ont., to Charles Kuister, C. A. Wallace, druggist of Calgary, N. W. T., has disposed of his branch store at Okokots, N. W. T.

—Miss Benson, B. A., Ph. D., daughter of Judge Benson, Port Hope, Ont., has been appointed to the position of professor of chemistry in the Lillian Massey School of Domestic Science, Toronto, rendered vacant by the recent death of Miss Edith Curzon.

—Wm. Lawson, B. A. Sc. of Toronto, chief chemist and technical advisor of the Utah and Idaho sugar companies, was appointed one of the two official chemists of the Eleventh National Irrigation Congress, in session at Ogden, Utah.

—W. R. Trench, druggist of Sintaluta, Assiniboia, N. W. T., married Miss Lizzie Smith of the same place. The happy couple went to Winnipeg and other Manitoba points on their honeymoon.

—A factory will shortly be erected by the Ava Chemical Co. of New York at Winnipeg, the company having arranged with a number of the local druggists for the sale of their products.

—Scott & Jury, druggists of Bowmanville, Ont., are opening an optical parlor, and have secured Prof. Rogers, the eye specialist of Chicago, to assist.

—Bernard Craeroff Axton, chief chemist of the New Zealand government also is making a tour of the American continent, was in Toronto last week.

—G. F. Proctor has sold out his business at Midland, Ont., and is now dispensing for Dr. A. J. Johnson, Toronto.

PROFESSOR FRANKLIN T. HARRISON, government analyst for the district between London and Windsor, Ont., Can., died at London, after a protracted illness. He was recognized as a scientist of great ability, was 43 years of age, and leaves a widow and three children.

W. P. TURNER, the Anaheim, Cal., druggist, died while on a pleasure trip to Los Angeles.

PATENTS.

Issued September 29, 1903.

- 739,932.—Max Seiffert, Leipzig, Germany. Sealing cap for bottles.
- 740,976.—Edward F. Baker, Passaic, N. J. Sticky fly-paper.
- 740,193.—Edward D. Sloan, Denver, Col. Barrel-filter.
- 740,217.—William W. Bays, Salisbury, N. C. Automatic cut-off and filter.
- 740,283.—George Klenk, Hamburg, Germany. Process of making tannin extracts.

FLUCTUATIONS IN VALUES MORE NUMEROUS.

New York, October 6.—As the active consuming season advances increased animation is developing throughout the general jobbing market and fluctuations in values are more numerous. The principal changes are a decided advance in oil peppermint and a decline of 3c per lb. in hard mercurials.

OPTI M.—A continued quiet market is noted with jobbing quotations unchanged at \$3.40-3.55 for 9 cent, and \$3.50-3.75 for 11 cent, powdered is selling moderately at \$1.50-1.50 for 13 cent, and \$1.80-1.90 for 16 cent.

MORPHINE.—Jobbing parcels are moving freely on consuming orders at the old range of \$2.00-2.70 for eighties in ounce boxes, \$2.50-2.75 in 2 1/2-oz. boxes, \$2.55-2.45 in ounce vials, and \$2.00-2.40 in 5-oz. cans.

QUININE SULPHATE.—The consuming demand continues satisfactory and the tone of the market is firm with jobbers quoting 25c-25 1/2c, for bulk in 100-oz. tins, 25 1/2c-26c, in 50-oz. tins, 26c-26 1/2c in 25-oz. tins, 27c-27 1/2c in 15- or 10-oz. tins, and 32c-32 1/2c in ounce vials, according to brand and quality.

MENTHOL.—Reports of crop damage and consequent higher primary markets have caused a sharp reaction from the recent depressed conditions and jobbers have advanced quotations to \$7.50-8.00 per lb. and 60c-65c per oz.

SAFERON.—American is very scarce and difficult to obtain in primary markets and local dealers have advanced jobbing quotations to 50c-65c.

BALSAM.—Oregon is in very tight supply and jobbers have advanced prices to \$1.50-2.00.

ESSENTIAL OILS.—A number of important changes in this department have occurred during the past week, chief among which is an advance in peppermint to \$3.50-3.60 for Western, \$3.00-3.75 for Wayne County and \$3.75-4.00 for either H. G. H. or red-stemmed. Spearmint has been further advanced to \$1.50-1.75. Other specialties showing higher prices are cassia which is held at \$1.05-1.20, cloves, 55c-61.81-10 and caput \$1.00-1.10.

COTTONSEED OIL.—The market is slightly easier and jobbers have reduced quotations to 50c-55c, by the 100 and 60c-75c for less.

HARD MERCURIALS.—Manufacturers' prices are 3c per lb. lower and the revised jobbing quotations are 95c-81.00 for calomel, \$7.0-9c, for coprosive sublimate, \$1.00-1.10 for red precipitate, \$1.10-1.20 for white and 72c-75c for sublimed.

HERB MOSS.—Primary markets are still higher and spot jobbing quotations for blended have been pushed up to 11c-15c.

COTTON ROOT BARK.—Owing to extreme scarcity of selling prices have been advanced to 25c-30c.

BLOOD ROOT.—Under a similar influence jobbers have advanced quotations to 15c-20c for whole, 15c-25c for 1/2 and 21-25c for 1/4 and 1/8.

THYMO.—A decline in prices under a slow demand and the revised jobbing quotations are \$2.00-2.05 per lb. and 20c-25c per oz.

GINGER.—Jobbing quotations for powdered 4c have been advanced to 20c-25c for quantity.

CLERIC ACID.—Drops have fallen on reduced quotations to 32c-35c in 100-lb. casks, 35c-37c in 10-lb. cans, 45c-47c for 5-lb. cans.

LAMIN SCLER.—The market is easier and jobbing quotations have fallen to 1c-2c for whole and 18c-22c for powdered.

TRAMPKIN SCLER.—Good quality is very scarce and quotations for advanced quotations to 20c-25c.

COLICIN.—Jobbing prices have been reduced to 8c-75c for 100-lb. casks and 55c-10c for 10-lb. cans.

HYDRANGE.—Various and irregular quotations are noted for 100-lb. casks and 10-lb. cans and jobbers are quoting \$1.00-1.75 per lb. for the best quality, 100-lb. casks, 10c-15c for 10-lb. cans.

HOPS.—New York and other local markets are quiet and quotations are 10c-15c for 100-lb. casks.

SHELLAC.—Market is quiet with D. C. 100 at 10c, 25 at 11c, V. S. C. 100 at 10c, 25 at 11c, and black at 5c per lb.

BUSINESS NOTICES.

Our experience in catering to the wants of druggists has taught us that they are especially interested in formulas for toilet preparations.

In the Era Formulary there is one department which alone contains something over 1,000 such formulas.

Toilet specialties are as important as any class of goods the druggist may sell—they appeal to the tastes of the refined and the rich—to the beautiful and those who wish to be"—and they afford a good profit.

Why not awaken to your opportunities for a policy of trade extension by purchasing a copy of the Era Formulary? This book will enable you to become the manufacturing chemist of your neighborhood. Price \$5 per copy, delivered. Write to the publishers for information.

President Hadley of Yale, says that, "the two aims of education are training for knowledge and training for power."

Another eminent educator has the same thought in mind when he distinguishes between "teaching to know and teaching to think and do."

In pharmaceutical education this distinction probably does not obtain, for the training is purely a guide to correct action.

Still it is well for the student to select carefully so that his limited time and means produce the best results.

The Era Course in Pharmacy gives the maximum of practical training for the minimum expenditure of time and fees.

EDITORIAL COMMENT

THE N. A. R. D. CONVENTION.

The convention to which we devote considerable space this week was a remarkable one in several respects. The attendance was very large, a spirit of unusual harmony prevailed among the delegates and the results accomplished give definite promise of benefits to follow. The most noteworthy feature of the meeting was the presence of a number of influential representatives of powerful proprietary firms, who took active part in the deliberations, and gave abundant proof of sincere and honest intentions to aid the retailer in every way possible to eliminate price cutting and its attendant evils from the drug trade. The free exchange of thought upon the floor of the assembly by the two branches of the trade which during the past year or two approached open hostility cannot fail to have beneficial results. Both sides have had an opportunity of looking at things from the opposite point of view, all of which will tend to moderate demands and blunt the sting of accusation. If the retail druggists did not obtain all they asked, they received something which may prove of far greater value, a very definite promise to accomplish the same ends by means and in a manner provided and devised by the persons who alone possess the legal right to fix prices, the proprietors themselves. The responsibility now rests with the other party to the agreement, and evasions will be impossible. The proprietors have agreed to hold themselves strictly accountable for the outcome, and they speak with a confidence which means success. For this changed attitude of the manufacturers toward their retail distributors, the N. A. R. D. deserves all the credit. If the retail trade had not organized and demanded relief, the proprietary manufacturers would never have undertaken a task which has heretofore always resisted the most carefully planned attacks.

THE NEW CAMPAIGN AGAINST THE CUTTER.

The campaign against price demoralization about to be inaugurated by a number of the largest proprietary manufacturers in America will be watched with the keenest interest. The details of the plan have not been made public, but we have reason to believe that it is the intention to make the tripartite plan effective by local agents of the various firms, acting upon the advice of the N. A. R. D. There will be no active co

organization, but I do not propose to divide the different parties to the contract. I repeat, however, the enforcement of the buying club agreement will be taken out of the hands of the general druggist association thus removing the most vital element of the plan. The tripartite agreement has failed because its enforcement was left to the officers of the N. A. R. D. who possessed neither the means nor the legal power to make it effective. This task has been voluntarily assumed by the manufacturers who confidently predict unqualified success. It has been established again and again that the manufacturer has the right to fix the price at which his goods shall be sold, but in the case of proprietary medicines it has been a question whether he wished to do so. Low prices and especially cut prices do undoubtedly stimulate the sales of goods. People will buy at a reduced price articles of which they feel no need when a full price is asked. The convention at Washington has taught us that this is the proprietors' chief objection to the direct contract plan, and the willingness of the manufacturers to attack the problem at all, shows either great magnanimity on their part or a conviction that there can be too much of a good thing.

THE DIRECT CONTRACT PLAN.

The delegates at the convention were practically unanimous in demanding the adoption of the direct contract and serial numbering plan. A simple and sure method of obtaining full prices naturally recommends itself very forcibly to the retailer whose profits depend directly upon the amount paid by the consumer. But the cost to the manufacturer was and still is a matter concerning which the retailer can have only a faint conception. Mr. Beardsley of the Miles Medical Co. stated that the 34,000 signatures secured over his name trouble cost his firm fully a dollar apiece. While the Miles experiment was in progress, other manufacturers were trying practically the same plan in Canada trying it on a small scale, before taking the much larger risk in this country. The result was extremely discouraging, and should have a quieting influence upon those radical retailers who insist that they will have a direct contract or nothing. The sales fell off about fifty per cent., although the retailers aided in every way possible to make the venture profitable. That the Miles Medical Co. experienced an increase of business of thirty per cent. did not seem to the manufacturers sufficient proof that others would find it equally profitable. And no one gifted with ordinary reason can blame them for hesitating long before undertaking a doubtful and extremely expensive experiment for the sums involved are enormous. No shrewd business man can be expected to jeopardize large interests entrusted to him in an uncertain venture, especially when the benefits to be derived are only indirect at best.

N. A. R. D. FINANCES.

While the association had, during the past year, achieved a truly remarkable success in its fight with the evil of price cutting and in increasing the profits of the retail druggist, the results are in other ways distinctly discouraging. At the Cleveland meeting in 1902 the annual dues were increased from fifty cents to one dollar, and this addition was expected to furnish adequate funds for carrying on the work of the

organization. These expectations have not been realized, the sum collected in annual dues during the past year being but little more than that obtained from the same source during the year previous. The total of dues collected during the year 1903 will not exceed \$14,000, which represents a paid membership of only 7,000. This in spite of the fact that fully \$8,000 has been spent in organization work besides a large sum collected from newly formed associations. This lack of support from the druggists of the country is difficult to explain, and is decidedly ominous. It can not be due to oversight or lack of interest, for the benefits of association work are sufficiently obvious. The manufacturers insist that thorough organization is absolutely necessary to ensure the success of any plan of price control. If the druggists of the country show no more interest in their own affairs no one can blame their proprietary friends or the officers of their association for abandoning them in disgust. The failure of the convention to make some definite attempt to place the affairs of the association upon a more solid basis is the one unsatisfactory feature of a meeting otherwise entirely successful. The donation of several thousand dollars by generous or interested friends can be of no permanent benefit to the organization, and may develop into positive harm. If non-members contribute more to the support of the organization than its own regular members, whom does the association represent? Every one is familiar with the demoralizing influence of charity upon the individual, and there is no good reason to believe that its effects upon a commercial organization will be a whit less baleful.

THE QUESTION OF BUYING CLUBS.

The association took no action favorable to buying clubs, which is entirely logical, for the tripartite principle is quite incompatible with that of societies formed for the express purpose of eliminating the jobber. Nor is this likely to affect the association unfavorably for the history of the past year shows that where the tripartite agreement is effective, the buying club is superfluous. Druggists are also beginning to realize that the profits of the wholesale business are not so enormous as to make it advisable for everyone to enter it on his own account. Mr. E. L. Baldwin, formerly secretary of a buying club in San Francisco, informs us that since the wholesale druggists of his town have joined in the chase of the cutter, the club's capital has been deposited in the bank, that having been found to be the most profitable disposal for it. He says that the scheme is of doubtful value, anyway, for it does not pay unless the scope is made as broad as that of a regular wholesale firm in which case the expenses also rise accordingly. Perhaps to this enterprise we may also apply the old adage concerning the inadvisability of having "too many irons in the fire."

THE POINT OF VIEW.

The importance of looking at all sides of things is one of the lessons taught by the Washington convention. It is now clear that fully half of what has been said and written about the direct contract and serial numbering plan amounts to exactly nothing at all, because all the facts were not taken into consideration. A few simple words from one of those who knew, swept away line upon line of painfully constructed argument like so much chaff.

SHOP TALK

WHEN THE CITY CLERK FAILS IN THE COUNTRY.

"I am often appealed to," said a prominent San Francisco pharmacist, "to recommend drug clerks to country retail friends. I am always pleased to get these requests, but to supply the need satisfactorily is a much more difficult task than any one who never tried it, would think. In the first place, there is at the present time a scarcity of good drug clerks on the Pacific Coast. As proof of this I can name you half a dozen firms of this city that have had to send East within the last few months to get men.

"In the second place, the country trade has its own peculiarities and the young man, who will answer for city purposes will not always do for the smaller towns. A man for the country drug store, besides possessing all the natural elements of skill and integrity, must be genial and gentle in all things, and lay aside any brusqueness which the whirl of trade in a large establishment may have imbred in him.

"I remember one competent young fellow I sent down to Salinas. A week after he bade me good-bye he again stood in my office. I asked him what caused his speedy return. He replied that he was tired of being insulted." He liked his employers, but said the customers treated him as though he were an ignorant outcast. People refused to leave prescriptions unless they were assured the proprietor himself would fill them. As far as I could gather, it all grew out of a lack of confidence which country people have in the young clerk.

"The good clerk for the country store must not only know his customers by sight, but must establish a genuine acquaintance. Moreover, he must not be over sensitive, as was my young friend."

THEY BOTH WERE BLESSED BY PROVIDENCE.

A Syracuse druggist recently had an experience with a crazy man and was extricated from an embarrassing position by the use of his wits. The "bug house" individual went to his store and asked for some medicine saying that he had a revelation from the Lord who told him to go to this store and get some medicine that would heal him. "I thought I would find out," said the druggist in relating the incident, "if he had the price. I asked him and he said he was soon to be president of the United States. I asked him where I would get my pay and he said the Lord would bless me. Knowing that blessings would not pay my rent I decided that I must get rid of the maniac as soon as possible. A thought struck me I looked him over and told him that I had a revelation from the Lord that the only thing that would save him would be to cut off his left ear and if he would step into the back room I would begin operations at once. The man grew pale. 'I think I will have to pray over it,' he said, and down he knelt. After a short time he arose with a look of relief on his face. 'The Lord says the operation is not necessary,' he said and made tracks for the door. It struck me that the Lord was good to both of us."

DRUGGIST WHO HAD THE DISCHARGE HABIT.

"The meanest man I ever worked for," said an old clerk the other day, "used to keep a store in Syracuse. Some days he would be an angel, and other days as cross as—Beelzebub. Why, there were days at a time he wouldn't speak to me. He had a habit of telling me every little while that I was discharged. I thought first that he meant it, but I saw that he expected me to come to work the same as usual, and I grew to know that he was only talking to hear himself talk. However, I resolved to take the first good job that was offered me. It ran along a few weeks and, sure enough, I was offered a good place at a better salary

than I was getting. I was to start work the following Monday. I didn't say anything to the boss as I expected he would fire me. Along about Wednesday some little thing came up and I was discharged again. I said nothing and he had not mistrusted that I was going to take him at his word. By Saturday he was all right again and I saw that he expected me to come to work on Monday as usual. I had Sunday off. Monday, however, I didn't show up but went to work at my new place. On my way home to dinner I met my old boss. 'Why weren't you at work this morning,' he said. 'You fired me last week.' I replied, 'and now I am working at another place. Next time you get a clerk you had better not discharge him every day and may be you can keep him.' His jaw dropped, and he turned away without a word. But the lesson didn't last. I was talking with his new clerk not long after, and he said he had been discharged three times already."

HE HAD TO WORK THAT NIGHT.

A comedy that had all the aspects of tragedy was one in which a pharmacist of the "East Side" in Kansas City figured the other night. It was about 6 o'clock in the evening and the streets were thronged with passers, when a little, sad-looking blonde pushed through the throng to the door of a corner pharmacy. She went to the phone, and, after talking earnestly into the receiver for a few minutes went to the door and kept watch on the crowd until she was joined by a man whom the clerk behind the counter recognized as manager of a neighboring store.

The two held an animated conversation which evidently very much interested a group of loungers. The girl seemed to be pleading, while the man protested. Finally a tear-drop or two appeared on the girl's cheeks. The man looked sad, but closed his lips firmly and started on. The girl's hand crept into his, and held him back. Several times he started, and each time she held him.

"It's no use, little girl, I must go. Don't feel bad about it," he said at last, and, gently disengaging her hand, walked quickly down the street.

"Pathetic, wasn't it?" said the clerk, as the girl disappeared, after a tearful look in the direction of her vanishing lover.

"Awfully pathetic," replied a loungeur with a grin. "She wanted to go to the minstrel show and he had to work tonight."

TOUCHIN' ON AND APPERTAININ' TO.

Some fragments caught from two traveling men's conversation:

"Never get into an argument with a man you wish to sell goods to," said the glassware man. "He may concede the argument to you; he may even tell you you know a great deal about the matter at issue; but he doesn't like it. When I see an argument coming, no matter how slight it is, I go off at a tangent on something else, in such a way that he does not notice it."

"I know," said the pharmaceutical man, "and don't do too much hurrahing either. We have a man over in Jersey who shouts: 'If you don't buy of us you are missing it. We are the people; there is no other firm like our's in the field. What does it avail him? Nothing. He is a fine fellow, but his predecessor sold twice as much as he does. He did no hurrahing and would talk quietly about any article he wanted to sell, telling how it was produced, its uses, history, etc. Thus he got the druggist interested."

"Yes, and it is when you get down to quiet talk you're winning. It's the personal business does it," replied the glassware man. "You're right it is," said the pharmaceutical man.

JAMES W. MORRISSON, Chicago,
Head of Morrisson, Plummer & Co., and Fourth Vice-
President N. W. P. A.

MUST HAVE A PULL WITH RAILROAD.

That the average druggist has the faculty of reaching out for and grabbing the nimbler dollar in a great variety of ways is well illustrated in the case of a well known pharmacist of Flint, Mich. In this connection it is necessary to say that the rivalry between the Pere Marquette railroad and the suburban electric lines is "fierce." One day last week two women went from Detroit to Flint to spend the day. They made the trip out on the electric, but when night came found themselves in a hurry to reach home and they resolved to try the steam road. They went to the Pere Marquette ticket office, but the agent started to assess them \$1.00 each for fare.

"I don't feel like paying 97 cents extra," said one of the women, "let us go back to the electric line."

They had already started away when the agent called them back.

"If you will walk a block down street to a drug store," said he, "they will sell you a ticket over the steam road for \$1."

"But are they good?" asked one of the women, who are unused to the ways of railroads.

"Oh yes," said the agent, with a chuckle, "Everybody that my friend ——— sells a first class."

"So will we ride home on the railroad for \$1, if only who know no better paid \$1.00," said the woman who told the story.

PATTERSON'S CREAM SODA COW WAS LOST

A large crowd in the market square game has been caused by Druggist J. A. Patterson of Stockton, Cal. Patterson makes a specialty of cream soda and the brand he sold over the counter, he usually a profitable. Moreover, he believes in advertising that he can do. He's not strong for full page displays, but gets around with a two line notice. The other day he was in the market. He was the one that supplied the cream for the crowd. Patterson closed over the market in an instant in but for a few hours when he first struck. He had one of his newspaper office and boys with him in the crowd. Patterson's Cream Soda Cow was a good looking one. The next day she was found in a pasture. The crowd of boys called the cow "Patterson's Cream Soda Cow." Mr. Patterson is known than any other man in the city and he had a good deal of money in the city and he had a good deal of money in the city and he had a good deal of money in the city.

GRANULAR EFFERVESCENT SALTS.*

By I. FULLERTON COOK, P. D.

THE increase in the use of granular effervescent salts has been so marked within recent years, and the process of manufacture so greatly simplified, that every retail pharmacist should be independent of the manufacturer for this class of preparations. The fact that a nauseous dose of medicine may be taken with comparative ease when mixed with an effervescent drink or one highly charged with carbon dioxide has long been known, and the introduction of effervescent salts has made it possible to take advantage of this principle without the inconvenience of obtaining a previously carbonated water. This fact was soon recognized but for years the price was almost prohibitory because of the expensive method of manufacture, and since it required elaborate apparatus for recovering the alcohol, its preparation was entirely outside the province of the retail pharmacist.

In the former method the powders, consisting of tartaric acid and sodium bicarbonate in the proper proportion, together with medicating substance, are thoroughly dried and powdered, and when uniformly mixed, moistened with alcohol and forced through a suitable sieve, to divide the paste mass into granules; they are then thoroughly dried.

As the powders are only moistened with alcohol, in which they are practically insoluble, the finished preparation retained its property of effervescence when dissolved in water; but the use of alcohol, most of which was lost in the process, increased the cost and prevented the preparations from gaining great popularity.

Within a comparatively short time, however, this method has been entirely superseded by a much less expensive and more simple process, which takes advantage of the one molecule of water of crystallization in citric acid for supplying the desired moisture. Enough of the tartaric acid is replaced by citric acid to make a pasty mass of the powders when they are subjected to a temperature which will liberate the water of crystallization. In the large laboratory, when a suitable formula has been selected, the mixed powders are placed in a steam-jacketed, porcelain lined kettle, kept at the proper temperature, and the whole mass manipulated until it becomes uniformly moistened; it is then passed through a suitable sieve and finally dried in hot-air closets.

When the retail pharmacist, however, attempts to make a granular effervescent salt by the same method, but with the apparatus usually at hand, he meets with the difficulty of securing a properly regulated heat, and the salt does not become uniformly moist; the surfaces which are exposed to the air become dry before the remaining portion is moistened, and the resulting granular salt is often not satisfactory.

While the expert may obtain a nicely granulated preparation by the use of a dish and open fire, yet the experience with classes in the college laboratory has shown that it is rather the exception than the uniformly good results can be obtained by this method, and the modified manipulation, suggested in this paper yields good results, even in the hands of a novice, and is adapted to the use of a retail pharmacist.

Numerous experiments have shown that a mixture of sodium bicarbonate, tartaric acid and citric acid in a proportion which will produce a substance neutral to sodium tartrate and sodium citrate, and so adjusted that just sufficient moisture will be present to produce a pasty mass, without marked effervescence when the whole is heated, may be taken in the hands of many unskilled granular effervescent salts, and good results obtained, even when the proportion

*Read at the annual meeting of the Pennsylvania Pharmaceutical Association, June 1902, and reported therein in the American Journal of Pharmacy.

of medicating substance varies considerably, the precaution always being observed, however, to thoroughly dry every addition. The following mixture fulfills these conditions:

Basis for Effervescent Salts.

Sodium bicarbonate, dried and powdered,	530 grams
Tartaric acid, dried and powdered,	280 grams
Citric acid, uneffloresced crystals,	180 grams

Powder the citric acid and add the tartaric acid and sodium bicarbonate.

This basis may be mixed with many of the medicaments commonly used in the form of granular effervescent salts, in the proportion which will properly represent their doses and such substances as sodium phosphate, magnesium sulphate, citrated caffeine, potassium bromide, lithium citrate, potassium citrate, and others, will produce satisfactory products; a typical formula would be as follows:

Effervescent Sodium Phosphate.

Sodium phosphate, uneffloresced crystals	500 grams
Sodium bicarbonate, dried and powdered,	477 grams
Tartaric acid, dried and powdered,	252 grams
Citric acid, uneffloresced crystals,	162 grams

Dry the sodium phosphate on a water bath until it ceases to lose weight; after powdering the dried salt, mix it intimately with the citric acid and tartaric acid, then thoroughly incorporate the sodium bicarbonate.

The mixed powders are now ready for granulation. The change in manipulation which is suggested to replace that usually followed, requires either a gas stove or a blue-flame coal-oil stove, and one of the small tin or sheet-iron ovens which are so largely used with these stoves. The stove itself will be found in almost every drug store, and the oven costs from \$1 to \$2.

The oven is heated to about 200 degrees F. (the use of a thermometer is desirable at first, but one will learn quickly how to regulate the flame to produce the desired temperature), and the previously mixed powders are placed on, preferably, a glass plate, which has been heated with the oven, about $\frac{1}{2}$ pound being taken at a time, dependent upon the size of the oven. The door of the oven is now closed for about one minute, and, when opened, the whole mass will be found to be uniformly moist and ready to pass through a suitable sieve, the best kind and size being a tinned iron No. 6. This moist, granular powder may then be placed upon the top of the oven, where the heat is quite sufficient to thoroughly dry the granules, and the operator may proceed immediately with the next lot of mixed powder, easily granulating to or more pounds within an hour.

Sugar has often been proposed as an addition to these salts, but experience has shown that the slight improvement in taste, which is sometimes questioned, does not offset the likelihood of darkening which is apt to occur when the salt is being heated, or the change in color after it has been made several months.

It should be remembered, too, that in making a granular effervescent salt by the method which depends upon the liberation of water of crystallization, a loss in weight, amounting to about 10 per cent. of water which is driven off, and also to a trifling loss of carbon dioxide when the powder is moistened.

A Modern Thought.

There was a time when the retail dealer was consulted as to his opinion on everything which he offered for sale. Now, however, people read advertising and form their own opinions as to the merits of various articles to be purchased.—Progressive Advertiser.

THEORY AND PRACTICE

URANIUM NITRATE IN ALKALOIDAL TESTS.

J. Aloy (Bull. Soc. Chim.) recommends uranium nitrate as a reagent for alkaloids. This salt gives precipitates with most alkaloids, the precipitate yielding upon ignition a residue of U₂O₃. Dilute aqueous solutions of uranium nitrate gave precipitates with all alkaloids examined except caffeine, theobromine and asparagine. With morphine the reaction is especially sharp. .005 gram of the base yielding a distinct reddish color and smaller quantities an orange yellow tint. A 5 per cent. solution of uranium nitrate is employed, that intended for the morphine test being neutralized with ammonia. The precipitates all have a more or less intense yellow color, and break up with regeneration of the alkaloid when treated with alkaline bicarbonate. The reagent precipitates one-tenth milligram of the following alkaloids: Pyridine, narcotine, papyverine, codeine, thebaine, narcaine, quinine, cinchonine, cinchonidine, strychnine, hruicine, cocaine, pelletierine, aconitine, atropine and cicutine.

QUININE.

E. Choay (Jour. Pharm. Chim.) finds that the quinine of the market—an inexpensive febrifuge proposed by Delondre and Labarraque and consisting of an alcoholic extract of cinchona—does not represent the alkaloidal strength of the bark. The total alkaloids in ten specimens varied from 89.51 to 14.25 per cent., five samples exceeding 70 per cent. This high alkaloidal content did not indicate that the product was rich in quinine and cinchonidine since it was due to the admixture of amorphous alkaloid obtained as a residue in the manufacture of quinine.

COMPOUNDS OF TANNIN AND BISMUTH.

Thibault (Bull. Soc. Chem.) in an investigation of the conditions under which bismuth tannin compounds are formed, found that tannic acid acts only upon the hydrated oxides of the metal and not upon the anhydrous oxide. The combination does not interfere with the acid functions of the acid, the bismuth entering as a substitute in the hydroxyl group. If the theoretical quantities are not employed in preparing the compound, variable products are formed.

HYOSCYAMUS MUTICUS.

F. Ransom and H. J. Henderson (Pharm. Jour.) state that *Hyoscyamus muticus* as a source of hyoscyamine could be readily obtained in the market. The forms now on the market are: Stalks from which most of the leaves have been removed, containing .498 per cent. alkaloids; compressed cakes, mostly leaves, leaf stalks and seed capsules, containing .900 per cent.; and seed capsules yielding .585 per cent. alkaloid.

TEST FOR SACCHARIN.

W. Wanters (Bull. Soc. Pharm. Brux.) describes a delicate test for saccharin when this compound is in a fairly pure state. A trace of pure saccharin when warmed with phloroglucin and sulphuric acid gives a violet black solution which upon dilution with water becomes deep violet. The test does not succeed unless the material is fairly free from impurities.

CORROSIVE PROPERTIES OF TUNG OIL.

I. Hertkorn (Chem. Zeit.) states that several patents have been taken out for the use of tung oil or Chinese wood oil in cosmetic preparations, and shows that this oil is totally unfit for such purposes. The oil produces severe ulcerations when brought in contact with the skin; in several instances careless handling resulted in the formation of ulcers.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tested formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Cider Preservatives.

(H. W. K.) In many of the states laws are in force which practically prohibit the addition of chemicals or other foreign substances to cider as preservatives. However, among the substances recommended for the purpose are salicylic acid, bisulphite of lime, formalin, etc. Of the first named about 1½ ounces are required for 50 gallons of cider. A so-called calcium sulphite is on the market in packages, just the size for one barrel of cider (32 gallons).

To preserve with salicylic acid: Place the acid in some suitable container and pour upon it a sufficient quantity of cider and thoroughly mix before adding it to the contents of the barrel. If the acid be added directly to the cider in the barrel, it is very likely to float upon the top and not be dissolved. It should be dissolved in a little alcohol and added to the barrel. The time when this addition should be made depends on individual taste and circumstances, generally when the first fermentation is completed. As the cider runs from the press, pass it through a hair sieve into a large open vessel. In a day or less, the pomace will rise to the top, and in a short time become very thick. When little white bubbles break through it, draw off the cider through a spigot placed about three inches from the bottom. At this stage the acid may be added.

Another method, and one largely followed, is at this point to transfer the cider to clean sweet casks, and when the bubbles again escape at the bung hole, rack it again, repeat this a couple of times. Then fill up the cask with cider in every respect just like that originally contained in it, add a tumbler of warm sweet oil and bung up tight. For very fine cider it is customary to add at this stage about one-half pound of glucose or a smaller portion of white sugar. The cask should then be allowed to remain in a cool place till the cider has acquired the desired flavor. In the meantime clean barrels for its reception should be prepared as follows: Some clean strips of rags are spread on melted sulphur, lighted and burned in the furnace, the sulphur vapor to be retained in the barrel. Then to 15 pound of mustard seed in a coarse cloth bag, and put it in the barrel fill the barrel with soft soap and add about 4 pound of isinglass or fine gelatin dissolved in hot water. This is an old-fashioned but satisfactory method.

Other old-fashioned, though frequently used processes are the following:

(1) Place in each barrel immediately on making 4 ounces bicarbonate salt, 1 ounce chalk, 1 ounce

(2) Mustard seed, 1 ounce, all pepper, 1 ounce, slip of 4 ounces and alcohol, 8 ounces.

(3) To keep cider sweet. When it has reached the degree required add one to two tumblers of grate large radish to each barrel of cider.

The addition of bromine sublimate has been recom-

mended to retard the formation of free acid (souring) in cider. For some interesting details of experiments along this line, see this journal, February 3, 1898, page 173.

Remedies for Corns.

(C. B. H.) Salicylic acid is the most usual remedy for corns and quickly reduces the hardened cuticle. A satisfactory preparation containing it is the compound salicylated or corn colloidon of the National Formulary. A somewhat similar formula, said by the author of Pharmaceutical Formulas to be a "good working one," is the following.

Pyroxalin	2 drams
Salicylic acid	14½ ounces
Extract of <i>canalis indica</i>	2 drams
Glycine balsam	12 ounces
Castor oil	2 drams
Methylic ether	9 ounces
Rectified spirit	4 ounces

Put the pyroxalin in a bottle and pour half the spirit upon it. Shake, add the ether, and shake until dissolved. Add the rest of the ingredients in the above order, dissolving the acid in the remainder of the spirit.

Corn Salve.

Salicylic acid	2 ounces
Ammonium chloride	2 ounces
Acetic acid	12 ounce
Lanolin	2 ounces
White wax	2 ounces
Lard, enough to make	1 pound

The ordinary felt circular plasters with a hole in the center are valuable in the treatment of corns and bunions, and absorbent cotton inserted between the toes is effectual for soft corns. A compress of wet lint covered with oiled silk, says the author of "Diseases and Remedies," is often a very effectual application, while tincture of iodine is useful to relieve the stinging pain caused by swollen and tender corns, and it answers well for bunions too. It deadens and hardens the skin.

Witch Hazel Salve.

(E. A. G.) Probably the best known formula for this ointment or salve is that given in the British Pharmacopoeia. It follows:

Liquid extract of witch hazel ..	50 minims
Simple ointment	150 grains

Mix thoroughly.

Simple ointment is made by melting 2 ounces of white wax and 3 ounces of benzoated lard in 3 fluid ounces of almond oil on a water-bath, removing the mixture and stirring constantly until cool.

Another formula:

Lanolin	2 ounces
Glycerin	2 ounces
Fluid extract of witch hazel bark ..	2 ounces
Boric acid	2 drams
Yellow petrolatum	10 ounces

Dissolve the boric acid in the glycerin by heat, add the extract and lanolin and, lastly, the petrolatum. Stir well.

Hebra's Itch Ointment.

(W. A. S.) "Hebra's itch ointment," also known as "Wilkinson's ointment," is the compound sulphur ointment of the National Formulary. The formula follows:

Precipitated calcium carbonate ..	10 grains
Sublimed sulphur	15 grains
Oil of cade	15 grains
Soft Soap, U. S. Pharmacopoeia ..	30 grains
Lard	30 grains

Mix the lard with the soft soap and oil of cade. Then gradually incorporate the sublimed sulphur and precipitated calcium carbonate.

Ringworm Ointment.

Cresote	1 fl. dram
Emulsions of	1 fl. dram
Ammoniated mercury ointment ..	6 ounces

NATIONAL ASSOCIATION OF RETAIL DRUGGISTS.

FIFTH ANNUAL CONVENTION HELD IN WASHINGTON, OCTOBER 5-8, 1903.

Earnestness and Determination Characterize the Sessions—Fully 450 in Attendance—Confidence in Direct Contract and Serial Numbering Plan Reaffirmed—Trial of Another Plan by Group of Powerful Proprietors Welcomed—Reduction of Tax in Alcohol Favored, Not Tax Free Alcohol—Revision of Patent Law Demanded and Brought to Attention of President Roosevelt—Wholesale Distribution to be Defined and Reclassified—Sales to Wholesale Grocers Restricted—New Proprietaries to be Marketed under Price Protective Plan—Legislation Against Trading Stamps Favored—Merits of Contract Plan Brought to Attention of Pharmaceutical Manufacturers—Sales to Physicians Discouraged—Legal Advice Authorized—Notes to be Continued and Extended—Advertising of Cut Rates Condemned—Sale of Imitations Discouraged—Dues to Remain as in Past Year—Over \$13,000 in Funds Raised in Whirlwind Session—Work of Past Year Successful, but Support by Retailers Inadequate—Much Plain Speaking and Warm Discussion.

The fifth annual convention of the National Association of Retail Druggists, held at Washington, D. C., October 5 to 8 inclusive, was in one way most successful and hopeful of benefits to come, and in another way extremely disappointing. The work of the past year was shown to have borne abundant fruit, but the organization failed to obtain the support of the retail trade which the benefits conferred seemed to merit. That the association is recognized by the proprietary manufacturers as a power which must be dealt with was demonstrated by the presence of a powerful delegation of proprietors willing and anxious to discuss and confer upon plans, but efforts to secure a general adoption of the plan upon which many hopes have been centered for some time past failed. A proposal presented by the proprietors with many assurances of good will and sincerity to try a plan of their own, was received with some misgivings and reluctance. Funds to cover an expected deficit were raised amid scenes of excitement and enthusiasm similar to those of the Cleveland convention.

OPENING SESSION. MONDAY EVENING.

Welcome by Commissioner MacFarland and Samuel L. Hilton—Responses by Various Members of the Association—Roll-Call and Two-Minute Responses by States—Committee on Credentials Appointed.

President R. K. Smither called the meeting to order shortly after 8 o'clock, and in his opening remarks complimented the local committee on the arrangements made for the entertainment of the visitors. He said that things looked favorable and he expected substantial results would be accomplished. He had served on the board of aldermen of his city, Buffalo, and formerly thought aldermen were important and necessary officers, but since coming to Washington he had learned that a city might be governed very well without aldermen. He thus introduced the Hon. H. B. F. MacFarland, president of the Board of Commissioners, the governing body of the District of Columbia.

Commissioner MacFarland said he hoped the convention would meet in Washington again next year, and referred to the numerous druggists who had become presidents of national banks. He welcomed the visitors and especially the ladies, to his city. The high character of druggists as a body was referred to, and proved by calling attention to the excellent men willing to serve on boards of pharmacy. He felt sure there was no need of conferring the freedom of the city upon the delegates.

Felix Hirschman of New York, responded, stating the objects of the meeting and hoping that results might be accomplished. He was certain that every available leisure moment would be thoroughly enjoyed, and hoped that every one present would live to be a bank president.

Samuel L. Hilton, president of the Washington, D. C., R. D. A., extended a hearty welcome to the visitors, and said his association would not only do everything possible to make this visit pleasant but also aid in every way the great cause of the N. A. R. D. His local body had enjoyed the benefits of the organization for two years, it included every druggist in the district but one and had secured an advance of 15 per cent. on many proprietary medicines.

Roll-Call and Responses of States.

In response to the roll-call with an invitation to each representative to speak two minutes, every minute in excess of this time incurring a fine of one dollar, the following delegates replied:

Alabama.—J. D. Sutton of Mobile, said Alabama was present at the first convention at St. Louis, and was present with a full delegation at this.

California.—Edward L. Baldwin of San Francisco, declared that with the N. A. R. D. his association had accomplished more in one year than had been possible in any ten years previous.

Connecticut.—John A. Lavery of Bridgeport, extended greetings of his local body.

Delaware.—T. B. Cartmel stated that this year he had four delegates with him. Other years he had been obliged to do all the work himself.

Florida.—H. C. Gross of Ocala, reported that Florida had just seen the light, and was prepared to furnish turpentine, phosphates and other necessary articles.

Georgia.—Geo. D. Case of Milledgeville, said his state was "all right" and moreover was the home of Uncle Remus and Tom Morgan.

Illinois.—Walter H. Gale of Chicago, could not talk at a dollar a minute. He regretted to be obliged to announce that the beloved chairman of the R. D. committee had not been able to come with him.

Iowa.—E. B. Tainter, Carroll, said a word in praise of N. A. R. D. work in his state.

Indiana.—I. N. Helms of Indianapolis, reported that Indiana had always been ready and was still ready to help in the good work.

Kentucky.—Simon N. Jones declared that his state was in the N. A. R. D. and intended to stay there.

Louisiana.—James E. Bays of New Orleans, reported that his city and Louisiana were "all right."

B. E. PRITCHARD, McKeesport, Pa.,
President N. A. R. D.

Massachusetts.—W. J. Bullock of New Bedford, said the Central Old Bay State was only too glad to be counted in the ranks of the N. A. R. D.

Michigan.—Clas F. Mann remarked that he had not in mind and had therefore not heard the welcome. But he took for granted that it was all right, and responded in kind.

Maryland.—J. G. Book of Baltimore, declared that he was glad his city sent one delegate, now there was no Baltimore had been backward for two or three years but proposed to do better.

Massachusetts.—A. J. Eckstein of New Elm, said the association had arrived at a crisis. It was in a desperate straits. It had established the spirit of cooperation instead of rivalry, but could not live in the past. The members were urged to do their duty when the sky threatened as when clouds looked threatening.

Missouri.—S. Wright of Webb City, said his state had won the heart of the N. A. R. D. and wished that it could do more.

North Carolina.—P. W. Vaughan of Durham, offered the aid of his association.

New Jersey.—Geo. C. Fitzgerald of Camden, said New Jersey would give all the help it could.

New York.—Dr. William Muir reported that New York had always been loyal and is still loyal to the N. A. R. D.

Ohio.—Lynn C. Hoop of Cleveland, stated that "right has been with you when the N. A. R. D. was first started, and we are yours stand pat in the direct contract plan."

Pennsylvania.—T. H. Potts of Philadelphia, reported against spirit and awakened interest in his city.

Tennessee.—D. A. Kuhn of Nashville, reported much favor and confidence. A druggist formerly the worst enemy to a large city had been chosen president of the local association.

West Virginia.—W. C. Gordon, of Wheeling, hoped one encouraging word would be carried through to a successful close.

Wisconsin.—A. E. Miesner, of Milwaukee, stated that favor had been garnered throughout the state and particularly in the city.

Prof. W. C. Anderson of Brooklyn, presented the greetings of the A. Ph. A., and said the old association was a true illustration of the fact that a worthy purpose upheld earnestly and with a worthy spirit must endure. He said that the difficulties of the N. A. R. D. had been largely overcome and there should be unity. In the past there had been strife, but now the success of the direct contract plan was apparent to all.

M. T. Brisson of New Orleans, responded and expressed the hope that the N. A. R. D. would produce benefits commensurate with those of the A. Ph. A.

F. W. Schumacher of the Peruna Drug Mfg. Co., Columbus, O., extended the good wishes of the P. A. of A. He hoped that the affiliated associations would continue to work for the benefits of all branches of the trade. The manufacturer regretted as deeply as the retailer that cutting had crept in as a disturbing factor. Plans should be made carefully. He did not believe that one plan could be made to cover conditions in all places. Local self-government seemed to be the solution according to the principles of our own government. There was danger of a financial depression and the clouds were darkest over the districts where cutting flourished. Public sentiment should be taken into consideration. If under these circumstances prices were raised, public sentiment would be loud in disapproval. The proprietors were ready to help. The speaker could state authoritatively that a group representing powerful interests were ready to put into operation a legal conservative plan whenever this might be demanded by the local associations. Conservatism was the key word.

Walter H. Gale of Chicago, said in response that the appearance of this gentleman upon the floor marked an epoch in the association's history. It showed that the proprietors were willing. There were always some who were ready to say that the proprietors should be made to do this or that. But every one must see that the plan must be practical, legal and conservative. Enthusiasm might easily carry one beyond the practical. All things must be done legally, conservatively and justly to all branches of the tripartite agreement. It was impossible to force any one to do anything unjust or illegal. Each was entitled to his own ideas, but all must work together. All were really ready to help.

C. C. Leadbetter of Alexandria, Va., said for the N. W. D. A. that the jobbers were ready to co-operate in any practical plan just to all branches of the trade.

In response, W. O. Frailey of Lancaster, Pa., said organization was the great question of the day. If the retailers of the country would stand as solidly as the N. W. D. A. the entire trouble would be ended.

The following gentlemen were appointed a committee to examine the credentials of delegates: Peter B. Moriarty of Massachusetts, Charles Conley of Indiana, George E. Thorne of New York, W. E. Resiman of Missouri, Oscar C. Smith of Maryland, E. H. Cross of Alabama, Stewart Grindle of Minnesota.

TUESDAY MORNING.

The first day of the convention was devoted almost exclusively to routine business. The morning session was spent in listening to the address of President Smither and the report of the executive committee, while the afternoon was devoted to the reports of the secretary, the treasurer, the district organizer and the department of publicity.

At noon a special committee called upon President Roosevelt and in the afternoon the ladies of the assembly enjoyed a treatery table about the city.

President's Address.

President R. K. Sautter read his annual address, outlining the work of the association of the past year

ROBERT K. SMITHER, Buffalo, N. Y.
Retiring President, N. A. R. D.

and closing with a number of recommendations to the body assembled.

He said the year had been a prosperous one for the association. The department of organization had added 750 local associations to the forces of the national body, and hundreds of thousands of dollars had been added to the profits of the druggists of the country. Druggists in the larger cities were still pessimistic but a better spirit was becoming manifest. The age of competition was out of date and one of cooperation had taken its place. The tripartite agreement had been proved inadequate to the task in hand. During the year the best had been done with this imperfect measure. Few resorts to coercion had been found advisable, efforts having been mainly limited to the use of moral suasion. Great trouble had been experienced in securing evidence. The trouble of tracing the goods had made this difficult if not impossible. Two things were evidently necessary; a contract and a measure for tracing.

The history of the Miles' trial was briefly outlined. The chief difficulties had been the jobbers' protest and the slowness of retailers to sign the contracts. One practical defect had been found, the sale of six bottles for \$5 having given the cutter a loop-hole. In spite of all these difficulties the plan had been an unqualified success. The contracts had been signed by 34,000 retail druggists. He was gratified to be able to announce that the firm which had undertaken the expensive experiment had been rewarded by an increase of sales of over 70 per cent.

The experiences of the N. A. R. D. representatives at the Boston convention were recounted. The N. W. D. A. had given a hearty endorsement to the contract plan, but the P. A. of A. had deliberately "dropped the issue." There seemed to be no evidence of insincerity, but conservatism held many to object to the rigid demand for full prices.

Mr. Smither had this to say about the most hurtful kind of "substitution": "The proprietor alone can absolutely control the retail price of his preparations and

reserve to the retailer a fair compensation for handling the goods. If he refuses to do this, what claim has he on the retailers? If he allows 65 cents to be substituted for \$1.00 in the receipts of a retailer, has he not merited reciprocity in kind?"

President Smither recommended: 1. That the convention reaffirm its position in favor of the \$2.00, \$4.00 and \$8.00 scale of prices on proprietary goods and that the executive committee be instructed to urge upon all proprietors the advisability of acceding the retailer his just due.

2. That the executive committee and attorney, together operate with local associations in the several States to secure the passage of an anti-trading stamp law similar to the Massachusetts law.

3. That the buying club proposition be carefully considered and the attitude of the association toward such clubs be unmistakably defined.

4. That strong resolutions be adopted favoring a reduction in the tax on grain alcohol to 70 cents per gallon and opposing tax on free alcohol used in the arts except for export.

5. That the present policy of the department of publicity be continued, the executive committee to have authority to raise the status of N. A. R. D. Notes to that of an all-round journal of our trade if at any time it should be found expedient to do so.

6. That the valuable services of our general attorney be retained if the finances of the association will make such action feasible.

Report of Executive Committee.

Simon N. Jones of Louisville, read the report of the executive committee, a voluminous and forceful document. He said nearly all parts of the country had been visited by employees of the organization department during the year, and that this work had been found necessary to the success of the national body. The difficulty of securing the general adoption of the direct contract plan was considered at some length. The main objections of the proprietors seemed to be a reluctance to take the initiative. In view of the fact that 95 per cent. of the retailers favored the plan this seemed surprising. The committee believed that the plan not only insures a fair profit to the retailers but also inures to the benefit of the proprietors. They were so firmly convinced of the merits of the plan that it was recommended that some form of contract be put into effect by every proprietor.

After four years trial it had been found that the tripartite plan was inadequate unless strengthened in some way. The attraction of the 'almighty dollar' was too strong for the integrity of some members of the trade, and upon this integrity success depended.

The report presented a strong appeal to the members of the association to keep the treasury supplied. If the affairs of the organization could not be financed on a solid basis the abandonment of the entire movement should be seriously considered.

The report concluded with a number of recommendations:

That the question of raising funds for the prosecution of the association's work first of all be taken up and settled, as this is the burning question of the hour.

That the number of organizers be increased so that each affiliated association may be visited as often as possible, at least once a year.

That a determined effort be made to have the proprietors of the leading remedies adopt some form of price protection upon their goods, preferably the direct contract and serial numbering plan.

That the convention reaffirm its pledge to promote the interests of every proprietor who shall adopt adequate price-protective methods in the distribution of their goods.

N. A. R. D. Notes and various pamphlets, besides lending frequent aid to the secretary's office force. An expansion of the Notes, both as to size and character and circulation was recommended. The legal branch of the force had also been of great assistance to the secretary.

Dr. Noel's report was mostly presented in the form of diagrams and charts which had been prepared so as to be exhibited and explained to the assembly. Maps showing the districts covered in organization work, the distance traveled by organizers and other interesting summaries and details were exhibited.

Treasurer's Report.

Rudolph S. Vitt, treasurer of the N. A. R. D., read his report. It dealt purely with receipts and expenditures. This report and that of Secretary Wooten showed that the total receipts had been \$37,523.80, while the disbursements were \$35,841.11, leaving a balance of \$1,682.69 in the treasury.

WEDNESDAY MORNING.

John C. Gallagher read the report of the Committee on National Legislation, covering the work done during the year in looking after the interests of the retail druggist in congress. The movement for the reduction of the tax on alcohol had been vigorously prosecuted, but as yet without definite result. A growing sentiment in favor of a reduction could however be noticed and the prospects for action during the next session of congress were bright.

The committee for various reasons did not favor the entire removal of the tax from alcohol and recommended continued agitation for reduction merely.

The committee failed to oppose a bill for a change in the patent laws during the last session of congress, because no means had been provided for keeping members posted as to the nature and purpose of the various measures. The report recommended the setting aside of funds for the promotion of patent law revision.

An article written by Wilhelm Bodemann and reprinted by the association was referred to, and the reasons why the Hepburn Pure Food and Drug Bill failed were given. The committee did not favor national regulation of question of purity in food and drugs. It believes that this should be left to local and state officials, and recommended that the attitude of the N. A. R. D. toward pure food and drug laws should be defined for the guidance of future committees.

Report of Committee on Trade Marks and Patents.

E. B. Tainter, chairman of the committee on trade marks and patents, read the report of his committee. The report presented a copy of a bill which is to be introduced during the next session of congress. Its object is the amendment of the patent laws so as to grant patents only on the process of manufacture and not on chemical substances used in medicine.

Committee on Commercial Relations.

T. B. Cartmell read the report of the committee on commercial relations. The report commended the work of Secretary Wooten during the year and especially his efforts to secure the adoption of the direct contract plan in Boston, and urged that the executive committee be given authority to increase his office force. The work of the chief organizer and the head of the department of publicity was approved, and it was recommended that the annual dues be increased to \$2.50, this amount to include a subscription to the N. A. R. D. Notes.

The committee further recommended that the term "wholesale firm" be defined, that the list of jobbers be revised and that wholesale druggists be separated into two classes: class A comprising firms carrying

WYMOND H. BRADBURY, Washington, D. C.,
Secretary District of Columbia R. D. A.

on a strictly wholesale business and class B comprising those who also sell at retail.

The direct contract and serial numbering plan was referred to as "the missing link necessary to make the tripartite plan effective."

Down with the Press.

President Smither read a letter from W. Bodemann, chairman of the R. H. committee. It expressed the writer's regrets at not being able to attend. In referring to the cocaine prosecutions in Chicago the immediate cause of absence, the writer used language which owing to the presence of ladies Mr. Smither was obliged to read in Latin. The expressions even when clothed in a dead language were so vigorous that a representative of the press was seized with convulsions and toppled over, chair and all, into the ample lap of Dr. Muir, whereupon Prof. Anderson exclaimed: "The first time on record that the press has been knocked out by an expression!"

A suitable reply was prepared and dispatched to Chicago.

Mr. Beardsley Tells How It Was Done.

A. H. Beardsley of the Miles Medical Co. was called upon for a few remarks. As he advanced to the platform, Prof. Anderson proposed "three cheers and a tiger for the man who had introduced the contract plan." The response was hearty enough to startle the peaceful citizens of Washington.

Mr. Beardsley thanked the N. A. R. D. for the help given his firm in making the contract plan a success. He said he had taken up the task because he believed that the retail druggist was entitled to a fair profit. He believed that the prices printed on the Miles packages were correct—the goods were worth the money. His firm had gone into the scheme with eyes open. It had proved a tremendous task and cost a lot of money. It was not a mere "bluff proposition" as some had suggested, to get advertising. The task had involved a lot of expense, but he believed that the victory was now practically won. There was still a little cutting here and there but it was gradually dying out. In most places the goods sell at full prices and at all places the cutters find the Miles goods the most difficult to obtain.

THOMAS V. WOOTEN, Chicago, Ill.,
Secretary N. A. R. D.

The speaker told a story of an incident which occurred in Illinois. A general dealer had obtained a supply of goods through a small druggist who had signed the contract. The goods were displayed and marked at cut prices. The chief offender had not signed the contract but the firm brought suit for corrupting its agents and the contention seemed to be sustained.

The experience of his firm had demonstrated that a proprietor could protect the price of his goods if he believed they were worth the money.

Still it was a tremendous undertaking. There were lists to be printed, contracts to be sent, not once but again and again. The number of signatures up to date had reached 31,000 and they were coming in at the rate of about 1,339 a month. In many places the entire schedule had been raised because the Miles' goods were sold at full prices.

Committee on Pharmacy Laws.

Louis Ehrman of Pittsburg presented the report of the committee on pharmacy laws. He reviewed the legislation affecting the pharmacist that had been passed or proposed during the year and announced that an ordinance had been adopted in Chicago surrounding the sale of carbolic acid with certain precautions. The committee did not favor restrictive laws which contained no provision for remedy there, as the experience had been that such laws were not effective.

The committee considered it inadvisable for drug goods associations to take part in any restrictive legislation. The call for, according to the report, not due to the drugist, but to the doctor.

The recommendations embodied in the report were somewhat revolutionary. It proposed that examinations as boards of pharmacy be abolished and that local licenses be issued instead, the licenses for pharmacists to be granted at the discretion of the authorities and the requirement to be a diploma from a recognized college of pharmacy and six years' experience. It was further recommended that the association endavor

to secure the enactment of a law prohibiting the use of the title of druggist or pharmacist by any person not a graduate of a recognized college of pharmacy. The educational standard of the colleges and the amount and kind of experience to be required were defined in detail.

The Association Thanks Mr. Beardsley.

Upon the invitation of President Squires, Prof. Anderson expressed the association's appreciation of Mr. Beardsley's efforts in behalf of the retail drugist. He referred to the early history of the N. A. R. D., its purposes and the conditions under which it was formed. The organization had begun with a secret for a plan. The tripartite agreement seemed to offer the solution of the difficulty, had been given a thorough trial and been found wanting. The association was then compelled to renew its search for an adequate plan. The contract principle was found to be the only one capable of dealing with the cut-rate evil. An excellent plan had been prepared but how to put it into effect was another problem. Conventions might meet and express confidence year after year but it would be absolutely useless unless some proprietor with the necessary courage, enterprise and good will could be found to put it into effect. He thanked God that one man had been found who was willing to undertake the task. The end had justified the means. The success of the plan meant much to the Miles Co., but incalculably more to the retailers. He hoped the delegates would carry home the highest praise for the one firm willing to stand by them. In return for the benefits received the retail trade should give the most hearty support to the proprietors who had shown themselves to be friends. He believed that the association would pledge every retailer in the country to sell protected products without comment, and that the Miles Co. had paved the way for a further adoption of the plan. Its experience was a practical demonstration that a proposition could be sold at the price marked on the package with benefit to all concerned.

The secretary read an invitation from prominent citizens of St. Louis to the N. A. R. D. to meet in the world's fair city next year. Theodore Hagenow and Rudolph S. Vitt endorsed the statements of their fellow citizens and also invited the association to meet at St. Louis.

Mr. Jenkins of Schieffelin & Co., extended the greetings of the Travelers' Protective Association to the druggists assembled. He said that the success of the travelers depended upon the prosperity of the retail druggist, and that his associates were ready to give them hearty support to that end.

J. Doble of Williamsport, Pa., replied for the assembly. He said that in all other branches it was more certain if the support of other branches of the trade could be depended upon. The good will and cooperation of traveling men were extremely valuable in any undertaking of the retail trade.

A preliminary report of the committee in favor of organization was read. It recommended a number of changes in the association's constitution and by-laws. The effect of the alterations was to bring an element other than the purely commercial into the organization. The purpose of the changes were at first misunderstood and the report met with considerable opposition until Mr. Erritt, the association's attorney, explained that the modifications were mainly intended to enlist the sympathy and respect of the public. Pharmacy presented two sides to the world, material and functional. The change in the constitution preserved the duties of the druggist to the community, and in view of these duties the pharmacist would have a right to demand a living profit. Upon learning that the purpose of the change was merely a legal one all opposition ceased.

RUDOLPH S. VITT, St. Louis, Mo.,
Retiring Treasurer N. A. R. D.

EXCURSION TO MT. VERNON.

In the afternoon the delegates and their friends enjoyed the only outing of the week, a trip to Mt. Vernon. The expedition began in the rain, but before the steamer had proceeded far down the Potomac the sky cleared, and the weather for the remainder of the day "ceased from troubling."

Luncheon, furnished by the Washington Retail Druggists' Association, was served on the way, and the usual scramble about the lunch counter enlivened the trip.

The visitors streamed up the hill to the historic home of Washington, and a pleasant hour was spent in examining relics and prying into curious corners. Nothing of interest peculiar to the pharmacist as distinguished from the ordinary patriotic American citizen was discovered, except an old mortar in the kitchen fireplace which may have been employed in preparing the coffee and spices consumed on the historic dining table.

WEDNESDAY EVENING.

The session, presided over by Vice-President Thos. Voegeli on Wednesday evening, was devoted to an open discussion of the association's work. The resolutions prepared and presented to the body during previous sessions were read and discussed seriatim. Views were aired with great freedom, and discussions frequently waxed uncomfortably warm, but the evening closed with a clearer atmosphere and an increased mutual respect on all sides. Speeches were limited to five minutes, but when later in the evening remarks became hot and pointed this rule was frequently forgotten.

B. E. Pritchard remarked about the resolution to supply goods to grocers and jobbers with full name of the purchaser upon the package, that the scheme is in use in Western Pennsylvania and promises well.

A resolution for the division of wholesale firms into two classes, called forth a number of remarks. Its object, as explained by members of the committee, was to prevent the demoralization of the retail trade by firms doing both a wholesale and retail business.

Charles Rehfuss was unable to see any advantage in the proposed resolution. The matter is in the hands of the local associations now. In any case the retailers never see the lists, and there is no provision to make any distinction.

Simon N. Jones said the list is not a matter of interest to retailers only. It concerns all three branches.

Charles Fleischer explained that the question of buying clubs does not enter into consideration in the measure.

Mr. Cartmell said the division into two classes had been proposed for several reasons. There were many jobbers apparently straight who were known to local druggists to be doing the meanest kind of business, buying at wholesale rates and selling below the cost of the goods to legitimate retailers. It was thought best to bring the matter before the association. There were three parties to the agreement, but loyal wholesalers should be grateful for this action.

Mr. Pritchard wished to know where the wholesale grocer "got off at." If this dealer had not been taken into consideration, it amounted to a loophole large enough to admit an elephant.

A resolution to continue organization work as far as the financial condition permitted was thought unnecessary by Mr. Fleischer. He said if there were no money, no work could be done as a matter of course.

A resolution to withhold the support of the association from national pure food and drug laws, but to leave the matter to the various States, brought M. N. Kline to his feet. He thought the resolution entirely wrong and that the retail druggists should be interested in this movement. Some of the state laws are good and some bad, and there should be more uniformity. There have been efforts to secure a national law for some years past, and the law recently before Congress was prepared with great care. He thought the retailers should go on record as favoring the national law.

Otto Kraus of Philadelphia, considered a national pure food and drug law quite as important and necessary as the N. A. R. D.

J. C. Gallagher defended the resolution, declaring that every bill proposed is so changed and emasculated by interested parties that it is of no benefit to the druggist. In fact, a national law promises to be a great hardship. The conditions surrounding the sale of drugs are so variable that a rigid literal application is often extremely unjust. Whenever matters are left to government officials there is certain to be injustice. Local authorities and boards of pharmacy were able to discriminate. He related an experience with an inspector who claimed that all the laboratory required in the examination of drugs could be carried in a small hand-bag. "The trouble with this country," said Mr. Gallagher, "is that it has too many laws."

Mr. Kline wished to correct a statement of the last speaker. He said that the final form of the Hepburn bill was almost identical with that of the original measure. That had not been emasculated. Mr. Gallagher asked if the first five pages and the definition of drugs and chemicals had not been entirely eliminated.

The resolution concerning the direct contract plan had not yet been acted upon by the committee on resolutions, but a number of members wished to discuss the question at the time.

M. T. Breslin thought the matter could be discussed much more profitably if all parties interested were present and after the proposals which the proprietors were ready to make were definitely known.

Mr. Heims said there could not be too much light on the subject. He thought it impossible to discuss the question intelligently without knowing the results of the conference. He further considered it disrespectful to the committee having the matter in charge.

Prof. Anderson suggested that it might be well to get the opinion of some of the proprietors, which need not interfere in the least with the final action to be taken later.

G. E. THORPE, Syracuse, N. Y.,
Delegate, Syracuse R. D. A.

Lewis C. Hopp wished the proprietary visitors would speak more from the platform and less in committee.

Dr. Muir thought it possible that the retailers might be able to give the jobbers and proprietors some light on a number of subjects.

Vice-President Voegeli, from the chair: "Let there be light."

Harry L. Kramer moved slowly toward the platform in response to loud calls and cheers for "Col. Kramer," "Uncle Harry," etc. Being tall enough to look over the beaming faces before him, he refused to mount the platform, preferring to remain on the floor "with the boys." He said that so far as his business was concerned, the direct contract and serial numbering plan was a physical, mechanical and practical impossibility. This statement was not made because he had a pet plan of his own or because he wished to lessen the honor of the gentleman who had made the contract plan successful. It could not be done because his products were put up in metal boxes, and he knew no way in which a package of this kind could be numbered so effectively as to serve as evidence to condemn anybody.

He deeply appreciated the benefits obtained from the retail branch of the trade, and craved the privilege of carrying out his own plans in regard to his business in his own way. He had faith in the square dealings of all retailers and especially of those present in the assembly. He hoped that any proprietor who had good reasons for not adopting the proposed plan would receive proper consideration.

Mr. Frailey was sorry that Mr. Kramer had been called upon. He had shown his sincerity and should not be criticised by the retailers. He stood before the world as the originator of an idea, an idea that had led up to the Miles plan. Two plans were already in operation, fifty more would be welcome and would result in benefits if applied with sincerity. The speaker wished to hear from other proprietors who have not adopted any plan. It had frequently been said, "Show us a successful plan." A plan had been found and he invited some one to show why it was not applicable. It was costing the retailers of the country millions of dollars because there were not enough plans in operation. Educated men were compelled to lead a miserable existence and they thought they were entitled to an explanation.

Mr. Schumacher arose after loud and persistent calls and hearty applause. He said he felt the earnestness of the moment. He had been thinking of the matter for several weeks and had, in fact, been neglecting his business to study this new plan. It was impossible to overestimate the importance of public opinion. He had been engaged in all three branches of the trade, and could sympathize with his former collaborators. A few years ago every one seemed to want the tripartite plan, and his firm had sincerely done its duty by that plan, living up to it in every way. Every pound of Peruna had gone through the proper channels. He exclaimed with the greatest earnestness: "We are innocent. Examine our books if you will."

The speaker regretted that everyone had not adhered to the agreement, and that the plan had not been a success. He said, "others have betrayed us." In a military organization, when any member showed the white feather, there were means for instituting a court-martial. The tripartite plan was a good plan in the hands of good people. He believed it could be modified so as to eliminate the disturbing element. But when new plans were proposed it was necessary to take many things into consideration.

He wished to state a few facts. A plan had been proposed which was known to be a good one. When he had asked the committee in conference whether it could be applied without friction, he had been answered "no." He had investigated the matter and had found that the dealers in the larger cities did not want a plan that was mandatory. Allowance must be made for local public sentiment. Any plan must merit the approval of the people as well as that of the retailer. Popular sentiment could be changed, but not by radical measures.

There were some 60,000 small stores in rural districts far from drug stores that handled certain goods. These people handled only little individually, but much in the aggregate, and the goods were sold at full prices. They would not understand the contract if it were sent to them. It would be necessary to make allowances for a very large body of people.

Mr. Schumacher begged his hearers not to be too hasty. He believed that a proposal would be presented to the meeting that would meet the approval of all. He had asked several reliable people if Peruna could be sold in large cities at full prices at once, and had been answered, "No, it would do incalculable harm." He hoped that harmony would continue. This was the first time a large body of proprietary manufacturers had been present at a retail convention. He urged calm, temperate discussion, and gave earnest assurances of sincerity of purpose. He said he had spent several weeks in chasing rainbows, and had a little experiment on foot that was not at all bad. When in the retail business he had made it a practice never to do anything until he was "dead sure," and he said he would continue to do the same. This resolve he commended to his hearers as the secret of success. The thing necessary to do in this case was the application of something to reduce dishonesty to a minimum. This remarkable extemporaneous address closed with the assurance that the measure which would be presented would give results.

Charles C. Charles of Malden, Mass., related an in-

VERY SPECIAL

A limited number of live druggists in the target cities will hear of an attractive proposition, by communicating with

J. N. FERRIER

P. O. Box 71. NEW YORK CITY

cident concerning a truck load of Peruna in the streets of Boston, and requested an explanation.

A member inquired of the gentleman representing Peruna whether the public wished to pay a dollar for the genuine article or preferred to pay less for an imitation.

Mr. Schumacher thought he should not be asked to reply to such questions. He did most earnestly hope that this spirit would not hinder the work in hand. If any results were to be obtained, assurances given in all sincerity should be accepted as such.

Prof. Anderson hoped that no one would question the gentlemen present about matters which were entirely beyond their control. Every retailer in the room should be thankful at this crisis that there were proprietary manufacturers willing to come and talk the matter over as business men.

He wished to know why small dealers would be unwilling to sign contracts, and referred to Mr. Schumacher's conference with leading druggists about the contract plan and wondered whether they were not leading cutters. In Greater New York the cutters made statements that they were willing to maintain prices, but they were not willing that their statements were backed by a plan that did not admit of easy evasion.

The proprietors might recommend the assembly to "go slow," but he wished to say that during five long years the retailers had been doing that very thing. The crisis had become serious. The paid membership had fallen ominously, and the present policy was not holding the association together. The organization failed to receive the support of three years ago. What was needed was something more forceful. The present plan did not give the protection desired. The dues might be raised to five dollars, but it would do no good as long as the present policy prevailed. But if five leading proprietaries could be put on the direct contract plan it would be easy to collect five, ten or even fifteen dollars in dues.

Mr. Smither took issue with Prof. Anderson's statement that the influence of the N. A. R. D. is waning. He denied emphatically the truth of the statement, and advised the delegates to "Hold fast that which is good." He did not wish to abandon the tripartite plan entirely. The N. A. R. D. members were not men of a single idea. If the proprietors found it impossible to adopt the new plan it was best to accept the best alternative. The proprietors proposed to strengthen the old plan, which was not entirely useless. It had done much good in the past and the association did not wish to see it go down in its own ashes.

J. N. Heims of Indianapolis, urged that others be given due consideration. The retailers wished one plan, but the proprietors found it impossible to adopt it. When parties disagree a compromise is necessary, and this necessitates yielding from both sides. He advised the delegates to accept the best terms offered. It was comparatively easy to lead a horse to the watering trough, but an entirely different matter to make him drink. He urged his associates to have patience and not to fly off at a tangent.

L. G. Heinritz thought insufficient stress had been laid upon the valuable services of Secretary Wooten and President Smither in Boston. He quoted a remark to the effect that Mr. Wooten's plea was the most eloquent and able ever presented upon the floor of a convention.

B. E. Pritchard called attention to the changed attitude of the proprietary manufacturers, which indicated something of the association's strength. Five years ago the organization had received only sneers, four years ago it elicited a laugh, three years ago a smile, two years ago they had said, "What the devil are those fellows doing?" last year several proprietors had contributed

\$1,000 a piece, and this year there had been respectful inquiries of what the retailers want.

Frank H. Freericks wished to set Mr. Pritchard right on one point. When the retailers wanted to talk business in Boston, the proprietors had been "not at home."

Dr. V. Mott Pierce responded after his name had been called loudly and persistently. He had hoped that the matter would be left until the next day, but being as it was he was willing to make a few remarks. It seemed to be an experience meeting and he could also say something about plans. His firm also had a contract and serial numbering plan in operation. It had been in force in Canada longer than the Miles plan in this country. Every retailer wanted the plan and was willing to assist the goods in every way possible. If the experiment had been successful, the firm would adopt the Miles plan "in a minute." But the results were not encouraging. The sales during the last month had been 50 per cent. less than during the corresponding month of the year previous. He could not explain this loss, but the fact remained. He related the history of a few plans which had been tried years before. These had all been heralded as the solution of the difficulty, but all had failed. One difficulty had been in getting the contracts signed. After the utmost efforts not more than one-half the contracts had been signed. Correspondence from the West, where there had never been any cutting, was very nearly insulting. In regard to cutting, he said that the cutter did not spoil the sale of goods, in spite of what some of the gentlemen had said. The new plan was still an experiment. The proprietors were not yet sure that it was the measure sought. But they were all watching it and if it should prove what was claimed for it, they would be glad enough to adopt it. No one could ask any firm to undertake an experiment that might reduce sales 50 per cent. "That would wipe us out of the United States," concluded Dr. Pierce.

Mr. Gove of Lynn, Mass., said he had had no experience with plans, as others had, but he did not believe that the plan had been as successful as had been represented in N. A. R. D. publications. The experience of other firms with similar plans had not been such as to justify his firm in adopting it. No one should expect them to proceed on the evidence presented. It was out of the question for the Pinkham Co. to try any such experiment, but anything reasonable that could be done to lessen the common evils of trade would be done gladly.

Mr. Mitchell of the Chamberlain Medicine Co., said his firm had also been experimenting in Canada. But, as Dr. Pierce had said, it had not been an unqualified success. It had been found extremely difficult to obtain signatures to contracts. To be successful a plan should be acceptable to everyone. His firm was, however, anxious to lend aid in any way that might be found feasible.

E. W. Grove of the Paris Medicine Co., said he had not tried the plan, but had been inquiring into it. He knew that when the retailer suffers the proprietor also suffers. The plan was watched carefully and if it should be found successful, his firm would adopt it.

Mr. Beardisley regretted that he had been called into the discussion. He said that the business of his firm

DOCTORS WILL HELP YOU

Where there is a baby, there should be an

WILMOT CASTLE COMPANY, 26 Elm St., ROCHESTER, N. Y.

was less extensive than that of some others, and that while the plan had in his case been successful, it might not succeed with others. Obtaining the signatures to contracts was certainly a serious matter. He stated that the average cost to the Miles Medical Co. of the signing contracts had been about one dollar. But so far the experiment had paid. The firm had undertaken the erection of a new laboratory and it would be the proof, so that it would not burn down. He felt sure that the delegates would listen respectfully to what the gentleman had to say and urged them to accord them the same courteous treatment which had been given the Miles Co. If this were done all would be well and "in the sweat by-and-by we shall have the millennium."

Various speakers told of the increased sales of the Miles remedies, and it was twelve o'clock before the meeting adjourned.

THURSDAY MORNING.

The delegates assembled somewhat late on Thursday morning, and President Smuther pushed the routine business with all possible speed. The various resolutions presented by the committees were adopted seriatim without much discussion. The nominations for officers were announced, and the nominees elected unanimously. Prof. Anderson casting the ballot for the association.

The resolution condemning the sale of goods to physicians by manufacturers of pharmaceuticals provoked a lively discussion. Prof. Anderson advised the association not to go too far.

A resolution discouraging the sale of imitations of Van Stan's Stratum Cream, after some discussion, was adopted so as to include all preparations, no names being given.

It was announced that the President had arranged to receive the association at the White House and a recess for this purpose was ordered. Before leaving the hall, Vice-President Voegelé read the communication signed by a number of proprietary manufacturers and which had been so long expected.

The proprietary manufacturers of which there were several including representatives of the leading proprietaries on the market, stated that it was impossible to adopt at that time the direct contract and serial numbering plan, but that any reasonable proposals would receive careful consideration. The most important portion of the communication was a request to be allowed to try a plan of adjusting the cut rate difficulty at their own expense. The plan contemplates the adjustment of local schedules by representatives of the manufacturing firms.

After the President's reception, which was attended by large numbers who made their way to the White House as best they could in the pouring rain the delegates reassembled to consider the proprietor's proposal.

Mr. Fredericks of Cincinnati, was the first to gain the floor. He said that for three days he had been trying by every conceivable means to secure the adoption of the contract plan. Now after all this discussion they had come with a proposal to continue under the old plan. It was the same thing as in the five years past. The true purpose was to send the delegates home with the old story that the proprietors will continue to do the same thing they have done before. "Can we say," said Mr. Fredericks, "that we had to accept this? Are we absolutely dependent upon the manufacturers? Have we not lost millions while they may have lost thousands." He asked if no demonstration would be satisfactory except that obtained by each particular kind of good, why there was such reluctance to try it. He advised the rejection of the proposal, because it was not what the retail druggists wanted and because another

year's trial of the old policies would destroy the association.

After a short discussion about the proper disposal of the matter, routine business was resumed. A number of resolutions were adopted without noteworthy comment.

The resolution to continue the work of the organization department elicited some opinions concerning the value of such work.

Charles F. Mann did not wish to criticize the department in question, but thought some of his remarks made in private demanded a little explanation. Personally he believed that organization work should be done more largely by the localities themselves. The association could not afford to carry a large force of organizers. He suggested that there should be one organizer and other men should pay their own way. Much organization work had been done in the West which was a pure waste of money. Small associations were easily formed where there was no cutting and no need for them, these would lapse from non-payment of dues as soon as the constitution would permit. Michigan, in which there was no cutting to speak of, had been completely organized, but there was neither interest nor enthusiasm after the organizer had gone.

Dr. Noel thought the last speaker had been excited a little more than necessary by the financial statement. He said it was impossible to abandon certain sections, and explained that much work done by his department had nothing to do with the formation of associations. Much time was spent in adjusting local difficulties and the expense for this duty could not properly be charged to organization work. As a matter of fact, the department had very largely paid its own way and if the other services were considered the total expense would be insignificant.

Dr. Muir thought the fault lay not with the organization department but with the plan. He said it was impossible to hold members under the present defective plan. A few remarks of the cutters disorganized faster than the department could bring them together.

Mr. Wooten said he had tried to show why the work had not been permanently successful. It seemed impossible to keep druggists interested without personal contact. He inquired why State associations represented such a small proportion of the druggists. He said that with the present attitude of the drug trade no plan could possibly hold the members together. The best method of breaking down this attitude had been sought and the only way seemed to be a personal canvass by an organizer.

Mr. Beardsley wished to emphasize the necessity of organization. If the druggists wished to cooperate with the proprietors thorough organization would be essential. The defeat of the plans mentioned by various speakers was due to lack of this quality, while the success of the Miles plan was due to organization.

Mr. Fleischner challenged anyone to get 75 per cent of the druggists in any locality without organizers, and said without at least this proportion they would have no right to demand what had been demanded.

Mr. Meissner said the trouble was not one of plans or apathy, but merely that the druggists would not trust each other. He asked why druggists should not maintain a walking delegate.

Mr. Mann feared that his remarks had been misunderstood. He believed in organization work but not that it should all be done at the expense of the treasury. The expense should be borne by the locality.

Mr. Kramer paid Mr. Beardsley many eloquent compliments and Mr. Hyman protested that "When doctors disagree, the devil takes the patient."

When the resolution about the contract plan reappeared, there was another sharp encounter, but matters were brought to a close by Mr. Baldwin of California. He said the druggists could not dispense with the tripartite plan. It was still necessary. In San Francisco the jobbers refused to sell so much as an ounce of Epsom salt to aggressive cutters and in Los Angeles the same condition prevailed. He urged the delegates not to make a fatal error, for in California druggists were watching the convention for guidance.

M. N. Kline feared that a large proportion of the members had forgotten the history of previous efforts to control prices. He related experiences with a number of plans that had all failed utterly. Each plan was hailed as the certain solution. He cautioned the delegates against the great weakness of youth, "cocksureness." He said he had been "cocksure" many times, but in his old age he had become more cautious. The delegates were advised to trust the proprietors who had come to them in good faith, and to inject a little enthusiasm into the apathetic. It was a mistake to refuse to take anything because the thing asked had been withheld.

Many other interesting speeches were made during the discussion of the remaining resolutions. During the consideration of the report of the finance committee Mr. Voegeli successfully stimulated enthusiasm to a high pitch. Before the temperature resumed its accustomed level nearly \$14,000 had been added to the association's assets. The amounts subscribed and the names of those who contributed will be printed in a later issue.

WHAT THE CONVENTION DID.

Officers for 1904.

At the last session, the following officers were elected:

President, B. E. Pritchard, McKeesport, Pa.; first vice-president, Edward Wolff, St. Louis, Mo.; second vice-president, Samuel L. Hilton, Washington, D. C.; third vice-president, E. B. Tainter, Carroll, Iowa; secretary, Thomas V. Wooten, Chicago, Ill.; treasurer, C. F. Mann, Detroit, Mich.; executive committee, Thomas Voegeli, Minneapolis, Minn.; C. Rehness, Philadelphia, Pa.; L. G. Heinritz, Holyoke, Mass.; R. K. Smithers, Buffalo, N. Y.; Simon N. Jones, Louisville, Ky.; M. T. Breslin, New Orleans, La.

RESOLUTIONS FINALLY ADOPTED.

Alcohol Tax Reduction.

Resolved, That the National Association of Retail Druggists in convention assembled at Washington, D. C., October, 1903, urgently favors a reduction in the tax on alcohol to 70 cents per proof gallon as a measure that will greatly benefit small users of alcohol, and the public generally.

Resolved, That we do not favor tax-free grain alcohol for use in the arts and for medicinal purposes, believing that in order to safeguard the revenues of the Government it would be necessary, under such a provision, to enforce regulations that small users of alcohol could not possibly comply with, and that the measure would prove a specimen of class legislation by benefiting a few at the expense of the many.

Resolved, That copies of this resolution be forwarded to the chairman of the Finance Committee of the United States Senate, to the chairman of the Ways and Means Committee of the House of Representatives, and to the Secretary of the Treasury.

Resolved, That the executive officers of this association, together with the committee on National Legislation, be instructed to use every effort to secure the aforesaid reduction of the tax on alcohol, and that the individual members of the N. A. R. D. be strongly urged to further this result by personal interviews with their representatives and senators.

Resolved, That we reaffirm our demand that the

patent and trademark laws of the United States be revised in the interest of equity and justice and that our committee on National Legislation is instructed to prepare and present at the next session of Congress a bill amending our patent laws; the aim of this bill should be (a) that no patent be granted on any drug, medicine or medicinal chemical; (b) that no patent on the product be granted, only on the process.

Resolved, That the form of a bill amending the patent and trademark laws submitted by the committee on trademarks and patents is recommended to the committee on National Legislation as the basis for such law.

Wholesale Distributors.

Resolved, That we reaffirm it as the sense of this association that all regularly incorporated, properly capitalized organizations of retail druggists who are conducting a legitimate wholesale drug business shall be recognized as wholesale distributors, and the executive committee is directed to use its best efforts to that end.

Wholesale Distributors Classified.

Whereas, it is admitted that the list of wholesale drug distributors, as originally promulgated, lacked the proper classification, therefore be it

Resolved, That we recommend that the executive committee be directed to use their efforts to revise said list in the following manner: All recognized jobbers doing a strictly who's-the-jobbing-or-distributing business shall be designated as class A. All recognized jobbers conducting a wholesale and retail business shall be designated as class B.

Wholesale Grocers.

Resolved, That it is the sense of this body that wholesalers loyal to the interests of the non-cutting trade shall not supply proprietary goods to brokers or wholesale grocers, except application be made on a blank which shall disclose the name of the retailer to whom goods are shipped.

Resolved, further, That manufacturers should discourage in all practical ways the distribution of their products through jobbing and retail channels outside of the drug trade, thereby cementing and strengthening the bond of friendship which unites manufacturers with wholesale and retail druggists.

New Proprietaries.

Whereas, The cutting of the prices of proprietary medicines is prevalent, and

Whereas, It is to the interest of retail druggists to promote conditions which will not permit such cutting therefore be it

Resolved, That the retail drug trade expresses itself as opposed to any new proprietary preparation the retail price of which has not been protected by a satisfactory price protective plan.

Trading Stamps.

Whereas, We believe the use of trading stamps is detrimental to our best interests, be it

Resolved, That we favor the enactment of anti-trading stamp laws in the various states, and our executive officers are instructed to co-operate with local associations in the passage of such laws.

Pharmaceutical Manufacturers.

Resolved, That we commend those manufacturers of chemicals, pharmaceuticals and like products handled by the retail drug trade who have expressed their desire to withhold their goods from persons selling them at ruinous prices; and we instruct the executive officers of this association to promote as far as may be practicable any proposition by any manufacturer of such products intended to prevent the sale of the products of such manufacturer at such ruinous cut prices.

Resolved, That we commend to the consideration of such manufacturers the merit of a direct contract with retail distributors.

E. I. Santal Perles

Bottles of 50, with yellow wrapper

Write for Samples and Prices

BILLINGS CLAPP CO., Boston

Resolution C.

Resolved, That it is the sense of this convention that those pharmaceutical manufacturers who rely upon the druggist for the distribution of their products, co-operating with him in building up the mutual interests of the manufacturer and retailer, are worthy of the aggressive friendship and loyal support of the retail drug trade.

Resolved, That the association heretofore takes official cognizance of the existence of a number of manufacturing pharmaceutical houses who enter especially and directly to the physicians, whose business is wholly or principally made up of direct sales to doctors, and whose policy is therefore clearly incompatible with, and hostile to, the welfare of the retail druggist.

Resolved, That the retailer who deals with such pharmaceutical houses is doing his own interests.

Resolved, That all manufacturing pharmacists, with special reference to those loyally supporting the N. A. R. D. under Resolution C, adopted at Cleveland, be asked and urged to abstain as far as possible from direct selling to dispensing physicians beyond what is required by the pressing emergencies of medical practice.

Resolution J.

Resolved, That the executive committee is authorized to continue the work of organization of the retail drug trade as aggressively and extensively as the finances of the association, in their judgment, shall justify.

Resolved, That the executive committee is authorized to employ a legal adviser for the association, if the financial condition of the organization permits it to do so.

Resolved, That the work of the Department of Publicity is heretofore endorsed and commended, and that the N. A. R. D. Notes, the official publication of our association, issued under the direction of the Department, shall be so enlarged and improved as to more fully meet the publicity requirements of our work, as our executive committee may deem advisable.

Advertising.

Resolved, That we commend those manufacturers of proprietary medicines who have employed the means in their power to prevent the advertising of their medicines at cut prices, and recommend a similar policy on the part of other manufacturers.

Resolved, That particular consideration be given to the goods of such proprietors as have inserted in their newspaper contracts a clause cancelling the contract if said paper accept cut rate advertisements from aggressive cutters on their manufactured goods.

Counterfeits.

Whereas, This association has always taken a stand in opposition to the introduction of proprietary articles, the promoters of which seek to gain trade by the use or simulation of well-known trade names which have been made valuable through the expenditure of much money and energy by the owners of the same, be it

Resolved, That we recommend to our members that they discourage all efforts to make sale of any article that is infringement of a well-known proprietary.

Special Resolution on Direct Contract Plan.

Whereas, The N. A. R. D., at its last annual convention, declared itself in favor of the direct contract and serial numbering plan for marketing proprietaries, and

Whereas, We are convinced that this plan has been proven to be one by which the objects to be accomplished can be successfully carried out, therefore be it

Resolved, That this convention reaffirms the position of the N. A. R. D. in favor of the direct contract and serial numbering plan.

Resolved, That we commend the example of our proprietors as have already put this plan into effect, that we earnestly urge all proprietors who are sincerely interested in the cause of the retailer to adopt the same, and that the executive committee again call upon the individual proprietors to adopt the direct contract and serial numbering plan.

Resolved, That we declare our unshaken faith as the result of demonstration in the power of this plan to alone give us that relief which we are seeking, and we believe that it should be made the basis of the tripartite plan.

Resolved, Further, that in deference to what we believe to be a sincere request on the part of a large number of proprietors (as evidenced by their communication submitted to the conference committee) that they be allowed to try certain other plans of their own, we do hereby give expression to our earnest desire that said proprietors may have full opportunity to try their plan—

AMONG THE BOWLERS.

Early-Season Surprises and the Disbanding of the Chicago League and the Withdrawal from

New York of J. & J.

Baltimore, October 13.—The regular season of the Baltimore Drug Trade Bowling Club was inaugurated on Monday night of last week at Schneider's German Cafe by the teams of Sharp & Dohme and the Stanley & Brown Drug Co. In the work on that evening and that of the Root & Herbs on Tuesday evening, when the Calvert Drug Co. team failed to put in an appearance and the Root & Herb men bowled three games as a matter of form, the interval of the summer with its lack of practice was plainly apparent. In only one of the contests was a score of over 800 made. Last Friday night, when James Bailey & Son lined up against McCormick & Co., the result was different. Both teams showed right from the start that they are out for blood and only one total fell below the 800 mark. These are the team and highest individual scores for each game:

Sharp & D.	707 759 742	Stanley & B.	728 751 719
Dohme	160	Winkelnann	158
Root and H.	790 860 796	Calvert Drug Co. (forfeited)	
Melbourne	178		
J. Bailey & Son 812 819 801	McCormick Co. 817 815 780		
Fairley	188	Brauer	174

These are the standings:

James Bailey & Son.	3	0	Stanley & Brown.	1	2
Root & Herbs.	3	0	McCormick & Co.	0	3
Sharp & Dohme.	2	1	Calvert Drug Co.	0	3

PHILADELPHIA MAKES MANY CHANGES.

Philadelphia, October 13.—The preliminaries of organization were perfected last week by the Wholesale Drug Trade Bowling League. R. Shoemaker & Co. and the Armstrong Cork Co., two of the strongest teams, have dropped out. A retail druggist's team, from the P. A. R. D., will enter, as will also Philadelphia C. P. team. Johnson & Johnson's coming in was hailed with joy. With Chicago out and New York weakened, Philadelphia should carry off honors next year.

JOHNSON & JOHNSON WITHDRAW FROM

W. D. T. B. A.

The entire complexion of the national wholesale drug bowling tournament next spring is liable to a big change, owing to the Johnson & Johnson team withdrawing from the New York Wholesale Drug Trade Bowling Association and joining the Philadelphia association.

Johnson & Johnson were the local pennant winners last season and the season before, their record at the wind-up last spring being twenty-eight games won and five lost. Two of the team rolled in the national tournament, Mr. Stevens, who substituted for Mr. McCormick getting the highest individual score.

Louman & Kemp have entered again for this year and the New York Glucose Co. has withdrawn. Colgate & Co., it is believed, will be in line before the season opens. As it stands now the association has nine teams.

CHICAGO D. T. BOWLING CLUB DISSOLVED.

Chicago, October 13.—The Chicago Wholesale Drug Trade Bowling Club has been dissolved. The first game of the season was to have been played on last Friday, but it did not take place, and at a called meeting of the club many of the members were found to be so apathetic concerning the matter that it was finally decided to dissolve the club and formal action was taken to that end.

NEWS DEPARTMENT.

NEW YORK AND VICINITY.

WHAT IF IT DID RAIN?

Torrenial attentions from the heavens prevented a record-breaking G. A. S. outing at Bachman's Pavilion, S. L., last Thursday, but, notwithstanding, there were seventy-five present and expenses of a splendid time were more than paid. Before dinner games were played. Winners in the "scissors" game were Mesdames W. L. Schultz, S. V. B. Swann, Rudolph Zahn, G. C. P. Stolzenburg, A. Braun, Paul Gebicke, C. Schoenfeld, William Brandt and Henry F. Albert, and the Misses Lillian Schultz, E. Volkenberg and Clara Staebler. In the children's race, Lillian Schoenfeld and Alber Zahn were victorious. The egg race prizes were carried away by the Misses E. Volkenberg, M. Silva and Lillian Schultz, and Mrs. George C. P. Stolzenburg.

The ladies' bowling winners were, in the order named: Mrs. R. Zahn, Miss L. Schultz, Mrs. H. F. Albert, Miss E. Volkenberg, Miss M. Silva and Mrs. Gustav E. Dohrenwend. The men's bowling winners came in this order: Otto Lenz, George Huether, Fred Trau, William Deninger, Henry F. Albert and Dr. Volkenberg. S. V. B. Swann won a beautiful glass and silver stein as a special prize, and Adolph Amend made the lucky draw for the vapor bath cabinet offered by Hugo Kantowitz.

A splendid supper mellowed President Imhof, Mrs. Imhof and Mr. Swann, among others, into speaking. Mr. Imhof complimented Mr. Swann, and the latter promised that at the society's ball, on January 21, at Terrace Garden, there will be 1,000 couples, in the grand march.

WILL SHARE THE JOBBERS EXPENSE.

At the annual meeting of the Erie County, Ph. A., there was a large attendance. The following were elected to membership: G. J. Dittly, H. L. Wilson and F. M. Griesheimer. Officers elected for the ensuing year are: President, A. J. Keller; first vice-president, F. A. Darrin; second vice-president, Oscar Rydstrom; treasurer, J. L. Perkins; secretary, P. M. Lockie. The following motion was carried unanimously:

Understanding that the jobbers to the drug trade demand an additional 5 per cent. profit on proprietary medicines to pay for increased expenses and labor necessary to distribute goods under serial numbering plan and contract plan, it is therefore resolved, that the members of the association are willing to stand an additional 2 per cent. towards making up the 5 per cent., in the event of patent manufacturers adopting this plan.

STATISTICS OF THE DISPENSARIES.

Under the State Dispensary law, passed in 1890, to regulate the establishment and operation of dispensaries by placing them in control of the State Board of Charities, there were, at the end of the last fiscal year, 45 dispensaries in greater New York and 28 elsewhere in the State. The number of persons treated for the year was in Greater New York, 889,157. The number of persons treated outside of New York city was 27,881, making a grand total for the entire State of 917,038.

Statistics show that the movement of population at dispensaries exhibits a marked tendency toward Manhattan borough. The explanation of this preference for Manhattan on the part of those who seek medical aid at dispensaries is that the majority of the large hospitals and medical school dispensaries are in that borough, and because the large medical schools create a demand for material for clinical instruction.

SYRACUSE PAPER ROASTS COCAINE.

One of the Syracuse papers is conducting a campaign against the sale of cocaine to irresponsible persons. The following editorial recently appeared:

The news columns of this paper yesterday carried the story of the arrest of a man who was said to be crazy from the effects of cocaine which he had been taking, the sale of which it seems is unrestricted in this city. In other words, the police say that there are cocaine joints in Syracuse where the drug is freely taken and that they are not able to stop its sale to this class of irresponsible persons. The cocaine habit is as degrading as the morphine or opium habits, and if there are druggists in this city who are not particular to whom they sell the drug, it is time that their names were given to the public that they might be held up to public censure. One would scarcely think that there would be any person in the drug business in this city who would simply for dollars and cents, willingly deal out hell and damnation to men and women whose moral condition is already several degrees below par.

NEW YORK NOTES.

—The family of Claude G. Johnson of 300 Clinton street, Brooklyn, druggist and superintendent of a sub-station of the post office, were much worried for several days recently by Mr. Johnson's disappearance from home. It was all remedied, however, by Mrs. Johnson's receiving a telegram from her husband, dated Chicago, which said that he had been suddenly called to that city on business, that the business was urgent and that the sender had been unable to explain it before starting. He said he was on his way home. When he left home Johnson is reported to have had \$100 of post office funds with him, which he was on his way to the general post office to pay over for stamps, money orders and receipts of his branch.

—Drug Trade Club guests from out of town: Alden Sleeper, Boston; Gilbert Smith, Rome, Italy; H. J. Fisk, London, Eng.; Andrew Marshall, England; C. A. Johnson, Norwich, Ct.; William Bird, Savannah, Ga.; Jewett V. Reed, Baltimore; F. W. Passmore, London; W. L. Bucher, Columbia, Pa.; V. P. Powell, London, Eng.; John C. Dorland, Bay Shore, L. I.; C. V. H. Whitbeck, Hackensack, N. J.; Charles L. Ross, Ticonderoga, N. Y.; P. D. Kinney, Poultney, Vt.

ETNA CHEMICAL CO., New York, U. S. A.

Ed Wells taking "Turkey" to the Substituter.

—On the ground that no standard for emporatorated oil is specified by the Pharmacopœia, William Mindlin defended the suit brought by the board of pharmacy for obliteration. The court last week ruled that the board's contention that emporatorated oil is another name for "emporatorated liniment," which is a pharmacopœical compound, was right, and that emporatorated oil must be up to that standard.

—Five Chinamen and a photographer were arrested in this city for smuggling opium. They had more than \$5,000 worth in their possession. The opium was shipped from Albany, in the name of R. H. Taylor, consigned to John M. Schneider, the photographer arrested, at 802 East One Hundred and Sixty-eighth street. All were held for the United States Court.

—Miss Winifred Claxton Leeming, sister of Thomas and Joseph Leeming of the Montreal firm of Leeming, Miles & Co., and agents in this country for Nestle's Food, was married last week to Dr. Karl Max Vogel, of the Church of the Holy Trinity, Brooklyn. A sister of Mrs. Vogel is the wife of Dr. Smith Ely Jelliffe, professor of pharmacognosy, N. Y. C. P.

—The Buffalo C. P. opened on last Friday. Owing to the non-arrival of many of the out-of-town students, lectures were postponed until this week. Those who were present were excused by the professors, and afterward attended the football game in a body. This year's class will be large and sessions will begin in earnest on Monday.

—The New York C. P. will have a meeting on Tuesday evening, October 20, when the bronze has relief bust of Dr. Charles Rice will be received and placed in the corridor. The New Jersey Ph. A. will send a delegation of its members to present another memorial to Dr. Rice. A resolution will be served after the meeting.

—Seen downtown. N. W. Polson of N. W. Polson & Co., Kingston, Ont.; Robert M. Dodd, John A. Dodd & Son, Milwaukee; Dr. A. I. Curtis, Atlanta; C. H.

Ellis, Portchester, N. Y.; R. Thomas, Jr., Thomasville, Ga.; H. A. Dupee, Bridgeport, Conn.; W. L. Mix and W. A. Spaulding, New Haven, Conn.

—S. V. B. Swann, the indefatigable entertainment man of the German Apothecaries' Society, has coaxed the members' wives into organizing a cœchre club, of which Mrs. Henry Imhof was elected president and Mrs. S. V. B. Swann, vice-president.

—A pleasant surprise was given to their friends by the announcement last week, of the marriage of William H. Sanborn manager for Kinnmouth, Asbury Park, N. J., and Miss Grace Mildred Love of Avon, N. Y.

—Reiger, the California perfume man, is establishing a complete New York branch at 78 Hudson street. J. J. Brinkerhoff, who has covered the New York city trade with notable success, will be the manager.

—Runyon Pyatt of Rogers & Pyatt, the drug and chemical importers, will soon be able to return from Saratoga, where he has been receiving treatment for a severe case of ptomaine poisoning.

—L. G. Hofmeyer is now the sole owner of the store of Lowe Bros., Inc., 141 Greene avenue, Brooklyn, of which company he was a member.

—The Drug Trade section of the Board of Trade and Transportation will have its first meeting after the summer vacation on October 22.

—Regular enrollment is four behind and post-graduate enrollment twelve ahead of last year's figures at the N. Y. C. P.

—The Ed. Sawyer pharmacy at 500 Lenox avenue was sold at public auction last week. Mortgage sale.

—M. W. Lauer of Magnus & Lauer, the essential oils firm, is seriously ill with typhoid fever.

—George P. Hermes, N. Y. C. P., has bought out Henry Carey of 543 Second avenue.

—I. D. Wolf of 35 Pike street, has sold to Max A. Lapid, New York C. P.

—Adolph Levy, 313 Bedford avenue, Brooklyn, has sold to Frank Schaeffer.

—Isaac Hoffman has sold 30 Montgomery street to Herman & Baylison.

—Max Brandt has purchased George Goetting's store at 720 Third avenue.

—Herman Lipstein is opening a store at 193 and 194 Second avenue.

—S. H. Hurwitz, 173 Avenue C, has been succeeded by A. Lerner.

AROUND SYRACUSE.

—John H. Ryan of 74 Madison street, Cortland, has returned from his third trip this season into the northern part of Pennsylvania. Mr. Ryan takes these trips for pleasure and recreation, but he generally brings back two or three hundred dollars worth of ginseng. This time he brought back twelve hundred roots, worth \$200. Mr. Ryan in no sense makes a business of digging ginseng, but finds it in the woods near where he visits. He estimates that this time he spent over two whole days looking for ginseng. Barring the rattlesnakes he says that hunting ginseng is a finer pastime than fishing or hunting. The finest patches that he has found have been under piles of boughs and limbs of trees that have been cut down.

—C. W. Snow & Co., wholesale druggists, have consolidated their business with C. A. Reeve & Co., and both houses will hereafter be conducted under the name of C. W. Snow & Co. C. A. Reeve & Co. have been large dealers in paints, varnishes and kindred lines at 251 to 253 West Fayette street. The identity of the regular and special lines of the two concerns will be preserved. The Reeve company have moved their stock into the Snow Block and will give up their pres-

ent store. All of the salesmen of both companies will probably be retained.

—The City drug store, Oncida, has been closed, the firm having made a general assignment for the benefit of creditors without preference. It is stated that the assets are ample to cover the liabilities and that this step was mutually agreed upon in order to dissolve the partnership of William D. Parkell and William F. Snow, who have been associated together in business for eight years.

—The Benevolent Medical Association which caused the Syracuse D. A. a little anxiety, as recently told in the Era, has gone up in smoke and the manager, L. H. Kramer, has disappeared. This Association guaranteed to furnish medical and surgical treatment, including medicine, for the period of one year to any person subscribing \$6. A contract was made with a Syracuse druggist to fill all prescriptions at twenty-five cents each.

—The first meeting of the creditors of Frederick W. Stewart, the Oswego druggist who was recently adjudged a bankrupt, was held at Pulaski. The liabilities amount to \$6,734.40. The assets consist of book accounts to the amount of \$200. Of the liabilities \$1,671.40 is secured by mortgages as follows: C. W. Snow & Co., Syracuse, \$1,871.40; Oswego City Savings Bank, \$1,200; Charlotte Diment, \$1,000; Byron Stewart, \$600.

—George E. Thorpe, president of the S. D. A., returned from the convention of the Odd Fellows at Baltimore suffering from an acute attack of fever, but is now recovered.

—Bert H. Gifford has left Syracuse to take a course in the Buffalo C. P.

AT ROCHESTER.

—The bowling club of Rochester pharmacists has been duly organized with twenty members and is open to challenges from any team in the city. A practice game was held last Thursday afternoon at Weble's alleys, with Captain E. H. Moore at the head of one team and Dr. Schultz as opposing captain. Out of five hotly contested games, Captain Moore's team won three. Practice games will be played every Thursday afternoon.

—W. W. Quackenbush, who is well-known in the wholesale trade of Rochester, has completed costly improvements in his new store at Penn Yan. He had occupied one store for 33 years. Mr. Quackenbush has all of the fire and energy of 33 years ago, when he commenced business. George Simmons, who has charge of his laboratory and prescription work, will remain with Mr. Quackenbush.

—J. W. Jones of Corning, has entirely refitted his store, by putting in a new floor, a new steel ceiling, electric lights, etc. The new white and green crepe walls give a fine finish. He also has built a modern basement, light and bright.

—A. J. Nichols, formerly of Pultney, has removed a part of his stock into the store formerly occupied by the Bryan Drug Co. in Corning. He is remodeling both stores, which will be run under his personal management.

—The drug salesmen, to the number of two dozen, have organized for their annual bowling tournament. D. H. Moore will look after the club matters and meets will be held Thursdays at Weble's alleys.

—A butterfly window attracted much attention at the Powers Hotel Drug Co. store. The butterfly wings all bore advertisements.

—William R. Van Zandt of the Paine Drug Co., accompanied by Mrs. Van Zandt, has gone on a pleasure trip to Detroit.

NEW ENGLAND.

LARGE-MINDED CITIZENS.

Citizens' League of Bristol, Conn., Run Up Against a Snag When They Try to Set the Morals of Druggists.

Bristol, Conn., October 13.—Moral-be reformers have attempted to interfere with the rights of the druggists of this place, and as a result, last Sunday no drugs could be obtained in the town, even in the face of most urgent calls.

Some of the old settlers decided recently that they would like to revert to the times of 1680, and began to hunt for the old blue laws that are still on the statute books. Last Thursday the druggists received notification to close all stores on Sunday, under penalty of prosecution. As an afterthought at the bottom of the notice that stores might open for an hour at noon and a couple of hours at night.

The druggists met and decided to go the town one better, and Sunday every store was closed tight. All the proprietors took a trip out of town, so no one could be reached to open on a hurry call. By night some of the members were sick of their bargain. In speaking of the matter one of the leading druggists said:

"The Citizens' League will receive all the notoriety they want at the hands of the druggists before this thing is over. If the situation is not changed very soon, we will bring the thing to a crisis by issuing a counter-petition asking that the trolley cars be enjoined from running on the Sabbath. This, I think, will bring the people in general to a correct realization that twenty reformers can't run the town. The druggists have voted to fight this thing to the bitter end."

Last Sunday the newsdealers refused to handle Sunday papers because of the persecution they had suffered at the hands of the League, and most of the citizens of the town went without.

CONNECTICUT.

—Druggists of Ansonia have been worked recently by a clever impostor who presented forged notes from prominent people asking for drugs and then decamped with the goods. The police arrested Louis Studley. He had worked the Bristol Drug Co. for half a pound of Epsom salts and a quart of Holland gin, explaining that he wanted the large quantity for a sick horse. He had an order which purported to be from his employer. Studley pleaded guilty, and said he had worked the People's drug store of Seymour, several times and other drug stores in this vicinity.

—Raymond W. Burke, one of the best known clerks of Meridian, who has been the manager of Victor W. Schmeizer's drug store on East Main street for some time, was appointed as night mailing clerk in the local postoffice.

THE BAY STATE.

—Druggists in Massachusetts are getting mighty tired of the trading-stamp schemes. In Worcester, at the last meeting of the R. D. A., the question was carefully considered, and it was found that common

with the old fever returning the stamps. In one of the most prominent retail drug stores in Boston, where the stamps are sold, a large sign informs the patrons that the postage stamps are given there, saying that it is to be understood that the payment for them indirectly by the consumer is an additional cost of the article purchased.

—L. C. Deanehouse, of Taunton, long a practical, active member of the General, conducted the People's drug store in Taunton in a cooperative position which the United States Government offered him a year or more ago, and has sailed for San Juan, Porto Rico. His new position brings into play his knowledge of the island's pharmacy.

—August P. Conroy, who owns the Woburnton Drug Co. store in Woburnton, an enthusiast in baseball matters, has been heard to take the management of the Woburnton baseball team next year. The club stands well toward playing, and already there are indications of a successful season ahead.

—The defendant of the Massachusetts State inspector of Food and Drugs, Harry A. Tobey, clerk in a drug store in Natick, has been on trial in the district court here, charged with selling an adulterated Elixir. He was fined in the sum of \$300 for a future hearing.

—The falling and explosion of a large lamp suspended in a show window of E. H. Weston's, Worcester, sent fire to the woodwork near and to the stock in the window display. A hand extinguisher put out the fire.

—At the coming annual meeting of the Western Massachusetts Fox Hunt Club, the name of Frank S. Deasey, Jr., of the drug firm of Deasey & Parsons, Westfield, is to be presented for the office of president.

—The Colonial Chemical Co., long conducted at West Medford, has decided to move to Boston and its plant in West Medford is to be demolished. An old mill nearby will be taken as a branch of the Boston plant.

—Louis K. Luggitt, secretary and general manager of the United Drug Co.'s interests, at its Boston plant, is enjoying a trip to Gettysburg battlefield and other points of interest in that part of Pennsylvania.

—William S. Curtis, druggist in Hanover Four Corners, was up in the Second District Court, Abington, on a liquor case. He was declared to have committed no wrong and was discharged.

—Amos K. Eilden, the veteran Boston druggist, at the twenty-seventh annual dinner of the Young Men's Congress, Boston, spoke on the subject of "Why the Democratic Party Left Me."

—J. H. Grogans, once the owner of the Mason drug store, Franklin, was renominated from the Fourth Massachusetts district as a representative to the General Court of Massachusetts.

—Frank Nason, employed by the Arthur J. Connor Drug Co. manufacturing medicines, in Boston, has been appointed to take charge of the company's New York office.

—A. H. Bechard of Springfield, has accepted a position with the Pacific Drug Co. as one of its managers, and has taken up his residence in San Francisco.

—The Smith Drug Co. of Cheapee, has moved to 257½ Exchange street. Frank Smith, as manager, is to be assisted by his sister, Miss Alice Smith.

—Some mean person threw a big stone through the window of J. W. Coleard's drug store in Lynn, and then got away before anyone could capture him.

—William J. Lewis, for some time clerk at Theodore F. Rice & Co.'s, South Frammingham, has bought a lot of interest in Blainfield's Whitinsville.

—The Retail Druggists' Association, in Pittsfield, a

branch of the N. A. R. D., now has regular business meetings and dinners.

—James T. Begley has purchased the store formerly owned by Isidore Verrier, in Spencer.

VERMONT.

—H. L. Johnson of Burlington is clerking in Barnes's, Winooski. Charles Devoe of the same store has returned from a trip to New York and Montreal. Allen Thompson joins the force at J. J. Vearens's store. L. P. Cook, Eastman's, St. Johnsbury, has resigned to take a position in Gould's, Portland, Me.

—The license commissioners in Brattleboro, dissatisfied with the way things have been conducted in several places there, have declared the licenses forfeited, leaving only two places where liquors can be bought—C. E. Graffam & Co.'s drug store and the drug store of C. F. Thomas.

—The fact that there has been a display of extra large potatoes in the window of the village pharmacy in Essex Junction has attracted many people. One potato weighs more than four pounds and another more than three pounds. "Pharmaceutical" exhibit.

PENNSYLVANIA.

COLLECTING HISTORICAL DATA.

Philadelphia, Oct. 13.—George M. Beringer, chairman of the historical committee of the Philadelphia C. P., is making an effort to obtain all of the available data relating to old time apothecaries, trade conditions and customs of their days, their stores, life work, habits, associates, scientific, politic and social attainments, etc., and especially data relating to the growth and development of modern pharmacies, wholesale drug establishments, manufacture of pharmaceuticals, chemicals and allied industries, etc., for preservation in the archives of the college.

The college already possesses a number of historic relics and souvenirs and it is now proposed to establish a section in its museum for the exhibition and preservation of such materials as obsolete drugs, preparations, utensils, apparatus, shop furniture, books, etc., associated with pharmaceutical history. Generous responses to the request for donations are looked for. A complete catalogue of the graduates of the college will probably be compiled and published by Mr. Beringer's committee.

WHOLESALE COMPANY ROBBED BY EMPLOYEES.

Philadelphia, October 13. Charles Hoff was arrested by Pinkerton detectives on the charge of receiving and selling goods stolen from the Smith, Kline & French Co., the wholesale druggists.

Five other men had already been taken into custody by the detectives. They were Joseph G. Haines, Robert J. Hartford and Edward Kramer, employees of the firm, and Samuel Davis and John Ryan. For several months past various articles have been missed by the firm. Investigation directed suspicion toward Haines, who had been with the Smith, Kline & French Co. for twelve years, and soon led to the arrest of the other five men. Ryan, Davis and Hoff did not actually steal the goods themselves, but it is charged, received them from the trio employed in the drug business and disposed of them at private sale in saloons and other places.

SOMETHING THEY HADN'T LOOKED FOR

Philadelphia, October 13.—Is the end of the Blue Law prosecutions and persecutions in sight? An arrest for selling prohibited articles and the hauling of the offender before a magistrate had a strange ending. The offender promptly paid his fine and his lawyer immediately issued a warrant for the arrest of the informer, claiming that he too, as purchaser, was equally guilty, and asking for the imposition of a fine upon him. He quoted in substantiation of his position another old and obsolete section of the same general code, and it was so much to the magistrate's satisfaction that the purchaser and informer was fined as an equal violator of the 1794 act. This apparently threw a bombshell into the camp of the prosecuting society and the balance of the day's cases were dropped and for the time being the paid spies whose business it is to tempt druggists and others into violation of the law, are without their usual employment.

OTHER HAPPENINGS.

—The first of the series of pharmaceutical meetings for 1903-1904 will be held on Tuesday afternoon, October 20, at 3 o'clock, at the Philadelphia C. P. The following program has been arranged: "History of Pharmaceutical Meetings of the Philadelphia College of Pharmacy," M. L. Willert; "A New Method for the Determination of the Alkalinity of the Blood with Exhibition of Apparatus," Dr. Arthur Dare; "An Account of a Recent Trip to Bermuda, Illustrated with Specimens," D. E. Branson; "The Drug Store Sink," Prof. Clement B. Lowe.

—The two stores of the late Jesse W. Pechin at 2900 Germantown avenue, Philadelphia, and Thirtieth street and Columbia avenue, have been placed on the market by order of the executors, for instant sale. William J. Pechin of Twentieth street and Columbia avenue, a cousin, has charge of the disposal.

—E. E. Wilson, president of the Union Drug Co., Philadelphia, pending the winding up of the affairs of that corporation, announces the formation of the E. E. Wilson Co., chartered in the District of Columbia, with a capital of \$1,000,000. They expect to pay not less than six per cent. on the capital stock.

—Asa Fabian takes charge of Richard H. Lachey's branch at 2800 Germantown avenue, Philadelphia. George R. Townsend leaves the Ellwood Lee Co. to go with Armour & Co. Dr. Bell of Denver, Colo., takes his place.

—John A. Bornemann of Sixth and Dickinson streets, Philadelphia, has returned from his wedding trip. His bride was Miss Agnes Thompson.

—Henry T. Kalubach of Marvine and Norris streets, Philadelphia, has been disabled with a corneal ulcer. He is now recuperating at Atlantic City.

—Three men in Philadelphia made a punch from wood alcohol, lemon and sugar. Three days drinking was followed by three deaths.

INDIANA.

—A new store has been started in Lafayette by M. Hollis, well-known as a drug clerk in that city for a number of years. He will conduct it under the name of "The Owl Drug Co."

—At Mt. Vernon, Dawson & Boyce have dissolved partnership. Charles Dawson will continue the business alone.

—At Ft. Wayne, Pellens & Polster have dissolved partnership. The new firm will be Pellous & Lewis.

—Snyder & Buzby of South Bend, have been succeeded by Snyder & Heil.

AROUND THE GREAT LAKES.**THE SMALLER DAYS OF FORTY-FOUR.**

Chicago, October 13.—In a reprint of the first Chicago directory, that of 1844, are found the advertisements of three druggists—L. M. Boyce and S. Sawyer as wholesale and retail druggists, and Clarke & Co., as dealers in drugs and medicines, manufacturers of lard, oil and candles.

Eleven physicians also advertise—professors of later-day ethical disapproval of paid-for notoriety. The memory of Dr. Blaney is warned up when we read that he is "professor of chemistry and materia medica in Rush Medical college. May be consulted professionally in his office on Clark street, near South Water street. Dr. Blaney will also attend to chemical analysis in all its branches." Later Dr. Blaney gave up practice and divided his time between being leading chemist at Rush and making stomach analysis in murder cases.

ILLINOIS.

—Apparently bona fide evidence of good faith does not always furnish a safe basis for granting credit. This was recently demonstrated in the case of a Chicago wholesale notion and cigar house. They failed with good large liabilities as compared with the assets. The way they got credit was to first buy sizable bills of a few houses, take advantage of the discounts and then use these firms as references. The same firms whose bills were at first discounted now loom up as creditors for large amounts incurred on subsequent purchases.

—The rumors of a new wholesale drug house for Chicago are gaining force and strength. It is now pretty well assured that such a movement is on foot and a company forming, but whether sufficient stock will be subscribed to enable the project to materialize is, of course, a matter for the future to decide. The projectors are said to be both outside and local men, all having had long and thorough experience in the drug trade. Another week or two is likely to develop the facts in the case.

—Local druggists are complaining a little just now. Trade is distinctly of between seasons proportions. There is a little demand for cough mixtures and the like, but we are simply having orthodox fall weather, too cool for ice cream soda, too warm for hot.

—P. A. Schroeter sold his store at 438 South Thirty-eighth avenue, Chicago, to Frank I. Ellis, formerly in business at Holman and Madison streets.

—At Charleston, R. C. Stewart has succeeded Dr. E. P. Hilligston, in one of the oldest established drug stores in that city.

—I. H. Fry, 2839 Cottage Grove avenue, Chicago, has sold to the Hurrasho Drug Co., formerly of Kaukaee.

**NORTHWESTERN UNIVERSITY
SCHOOL OF PHARMACY . . .**

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories,
Twelve Teachers. Thorough Course.

NEXT TERM BEGINS JANUARY 4, 1904.

Address Inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

A trio of prominent Minnesota Pharmacists and all Vice-Presidents of the State Ph. A. They are (from left to right) Richard H. G. Netz, Owatonna; Mrs. Rachel E. Henny, Waconia, and Theo. F. Leib, Winona.

—C. M. Griswold, formerly manager of the Winnetka Drug Co., has opened a new store at Winnetka, Ill.

RAISED A NEW POINT AT LIQUOR LAW.

Paw Paw, Mich., October 13.—Zealous enforcement of the local option law in Van Buren county has brought forward a peculiar case here. E. R. Longwell, the druggist, was placed under arrest, charged with having sold for medicinal purposes a sufficient quantity of intoxicating liquor to a single person to constitute him a wholesale dealer under the general law. The allegations were admitted, the defense being that it was not a violation of the law to make such sale. The court held otherwise, and instructed the jury to return a verdict of guilty. In view of the fact that the question was new, however, sentence was suspended, pending a review of the case in the Supreme court, and the respondent was released on bail.

MARYLAND.

—William G. Speed was appointed receiver for the retail drug business of Albert J. G. Raiber, Baltimore. In the petition Mr. Raiber stated that his liabilities are \$7,181.74 and the assets \$8,115, including stock in trade valued at \$3,000 and \$345 due on open accounts. Mr. Speed was named as receiver on the application of C. C. Burgess & Bro., printers, and other creditors, whose claims aggregate \$1,000, and was authorized by the court to continue the business for thirty days.

—Among the visiting druggists in Baltimore last week were: Randolph Weller, New Oxford, Pa.; Anthony M. Harter, Philadelphia, W. E. Snelling, Norfolk, Va.; J. H. Bean, Mountsville, W. Va.; J. P. Bean, of Charley & Co., Cameron, W. Va.; and Mark A. Burkhardt, Dayton, O.

—Druggist S. N. Appleby, Huntington avenue and Twenty-eighth street, recently underwent a successful operation and is now on the mend.

—Druggist W. L. Pierce, Gilmore and Lorman streets, is going on a trip to recuperate, he having been very ill for some time past.

REPORT IN FAVOR OF CONTRACT PLAN.

Toronto, October 13.—The Druggists section of the Toronto branch of the Retail Merchants Association of Canada held their opening meeting for the season in the Medical Building, Toronto. The committee on price restriction reported that they considered it advisable to change the name of the price restrictive plan to that of "contract plan" and that they had interviewed a number of manufacturers who they expected would shortly take up the plan. As some manufacturers of cough preparations composed of turpentine and linseed had decided to raise the price, a committee was appointed to consider the advisability of manufacturing an improved syrup of linseed and turpentine preparation on the co-operative plan, to be sold to members.

R. H. STRATTON of Gordonsville, Va., one of the best known druggists of that State, died after an illness of two months. In the latter part of July Mr. Stratton, who had been in failing health for some time, went to the Buffalo Ridge Springs, but after a week became quite ill and came home. A few days later he was stricken with paralysis. Mr. Stratton was a prominent Mason. When he died the entire city mourned for him. He was born in Lexington, Va., in 1841. He was a Confederate soldier.

SPECIAL OFFER ON CALCURA SOLVENT

Dr. David Kennedy's Latest Kidney and Liver Medicine.

For thirty days, ending on November 7th, we will give to all retail druggists one free bottle of Calcura Solvent with each dozen they order of their wholesale dealer, providing, each druggist thus ordering, will make a window display of the said goods and direct to them their free samples of Calcura Solvent and advise (long letter, on two dollar orders they will receive 2 for 1) the date.

Simply send in your order, together with the name of your wholesale dealer through whom you would like the goods shipped. The free goods, samples and advertising matter will be sent direct from our office, all charges prepaid, even the postage by your store. OUR ATTRACTIVE WINDOW DISPLAYS, LARGE SIZE SAMPLES AND MOST EFFECTIVE ADVERTISING ALWAYS OBTAIN A STEADY AND STEADY DEMAND FOR CALCURA SOLVENT.

Address THE CALCURA COMPANY,

(Manufacturers of Dr. Kennedy's latest preparations)

- 41,251.—Antiseptics. Charles Zoller & Co., New York, N. Y. The word "Antifungine."
- 41,252.—Disinfectant Antiseptic and Deodorant. Auro Chemical Co., Morristown, N. J. The word "Aurozone."

TRADE MARKS.

Registered October 6, 1903.

- 41,235.—Hair Tonics and Dandruff Cures. The Cherokee Indian Medicine Co., Enid, Okla. The representation of the head of an Indian of the Cherokee tribe.

PRICE CHANGES WITHOUT SPECIAL SIGNIFICANCE.

New York, October 13.—A continued steady general market is noted with the movement in a jobbing way satisfactory to dealers, as the aggregate volume of business shows fairly liberal proportions. Fluctuations in prices are less numerous and without special significance.

OPPIUM.—Only limited quantities have received at auction and jobbing quotations remain unchanged at \$3.00/3.57 for 9 per cent, and \$3.50/3.75 for 11 per cent. Powdered continues to sell moderately at \$4.30/4.50 for 13 per cent, and \$4.80/5.00 for 16 per cent.

MORPHINE.—Jobbing prices continue to move freely on consuming orders at prices within the old range of \$2.60/2.70 for eighth in ounce boxes, \$2.55/2.65 in 2½-oz. boxes, \$2.35/2.45 in ounce vials and \$2.30/2.40 in 5-oz. cans.

QUININE SULPHATE.—Business in a jobbing way is of average volume and volumes are firm in sympathy with stronger markets for raw material, prices of bark having advanced about 10 per cent, at the monthly auction sale in Amsterdam last Thursday. An early improvement in quotations for quinine is looked for and dealers meanwhile offer sparingly at the old range of 25¢/27¢, for bulk in 100-oz. tins, 25¼¢/26¢, in 50-oz. tins, 26¼¢/27¢, in 25-oz. tins, 27¢/27½¢, in 15 or 10-oz. tins and 52¢/52½¢, in ounce vials.

ACETANILID.—Manufacturers have advanced prices 1c per lb. and the jobbing market is correspondingly higher, the revised quotations being 30¢/35c, as to quantity.

MANNA.—Small flake is scarce and higher, both here and abroad, and local jobbers have advanced quotations to 50¢/60c, as to quality and quantity.

ERIGOT.—Stocks are light and closely concentrated and the market is stronger with jobbing quotations advanced to 55¢/65c.

CLOVES.—Unfavorable crop news has caused prices to advance sharply in producing markets and spot jobbing quotations have been marked up to 15¢/18c, for whole and 20¢/25c for powdered.

OLL, CLOVES.—Values are higher, owing to the increased sale of the spice, and jobbers now quote \$1.00/1.15, as to quantity.

OLL, WORMWOOD.—Lower producing markets are reflected in a weaker feeling among local dealers and jobbing prices show a decline to \$1.00/1.50 for prime and \$3.50/1.25 for ordinary.

BENZOIC ACID.—Owing to extreme scarcity the market is stronger and jobbers have advanced quotations to 55¢/60c, according to size of order.

SODIUM BENZOATE.—A firmer feeling has developed and jobbing quotations have been marked up to 55¢/65c, as to quantity.

LITHIUM SALTS.—Manufacturers' prices are higher and jobbers now quote benzoate and citrate \$1.60/1.90, bromide \$2.25/2.50, carbonate \$2.25/2.50, chloride \$2.75/3.00 and salicylate \$1.55/1.75.

BLOOD ROOT.—Values continue to harden on account of scarcity and jobbing quotations show a further advance to 20¢/25c, for whole, 22¢/27c, for crushed, and 25¢/34c, for powdered.

HYDRA.—Foreign markets are stronger and spot jobbing quotations have been advanced to \$1.75/2.25 for Rio and \$1.45/1.95 for Carthagena. Powdered 10c higher.

MANDRAKE ROOT.—Stocks are diminishing and the local market is firmer with jobbing prices advanced to 15¢/19c for whole and 19¢/21c, for powdered.

STROPLANTHUS SEED.—Koube is easier and jobbers have reduced quotations to \$1.75/1.25 for whole and \$1.25/1.40 for powdered.

CHARLES P. CRAIG, a druggist at Cambridge, Md., died there suddenly on Tuesday of last week of heart disease. He was 62 years old, born in Talbott county, Md., and had resided in Cambridge since 1869. He leaves a widow and two children—William Grason and Louise Craig.

SILAS MARLOTT, a St. Cloud, Minn., druggist, died last week.

The Safford Stamp Works of Chicago have opened a branch office at 31 Barclay street, New York, which will be their headquarters in the East for up-to-date ideas for saving time, labor and money. They have for years made a specialty of druggists' business, and have ideas in rubber stamps, seals, numbering machines, etc., etc., adapted to the drug business.

BUSINESS NOTICES.

THE ERA DRUGGISTS' DIRECTORY—A NEW EDITION.

We shall publish this week the 10th revision of the Era Druggists' Directory, and we can announce confidently that it is the best edition we have yet offered.

In addition to the many features which have made the Directory the standard work of its kind in this country, the new revision will include a complete list of the druggists in Costa Rica and a list of the principal drug stores in Chile, Peru, Bolivia, Ecuador and Colombia.

The list of retail druggists in the United States shows a slight falling off, and does not quite reach the 10,000 figure which the last edition showed, but this is made up by increased numbers in Part III. (Manufacturers, Jobbers, etc.).

This Directory will be found invaluable to any merchant or manufacturer who does business with the trade. It is not only a work of reference which should be in constant use, but for sending out circulars to the trade there is, so far as we know, nothing like it published. It is sold only by subscription, and the price for the present is \$5.00 per copy, net, postpaid.

The edition is limited, and we are obliged to reserve to ourselves the right to raise this price at any time.

The Pharmaceutical Era for next week, Oct. 29, will be the regular fall Price List Edition. It will contain corrected price lists of the drugs and chemicals, and the proprietary articles which make up the retail druggist's stock in trade. These price list editions are issued in the spring and fall of each year and are designed to aid the buyer in an intelligent purchase of stock. The lists are so arranged that they can be consulted with the greatest ease, and the volumes are bound and perforated to be hung up in a convenient place for handy reference. This edition is furnished subscribers without additional charge, and a limited number of extra copies may be obtained at the regular price of \$1.00 each.

EMPLOYER AND CLERK.

The liability of an employer for the acts of his clerk still lacks a satisfactory legal definition. Some time ago we recorded a decision that a druggist could not be held responsible if his clerk violated the law in direct disobedience of specific orders. This has now been reversed by Justice Greenbaum of the Supreme Court in this city. The case is interesting in more ways than one. The excise commissioner brought suit against a druggist for selling without receiving a physician's prescription a bottle of a well-known brand of malt whisky. The defense claimed that the whisky sold was a medicine rather than a liquor and that the druggist could not be held liable for the sale because it had been made by a clerk contrary to orders. Both of these arguments were rejected although they have been sustained in other courts. During the past year the courts of Ohio decided that certain medicinal brands of whisky were not subject to ordinary liquor laws, and Judge Davy of this State declared that an employer could not be held responsible for the unlawful acts of his clerks. We are, therefore, again entirely at sea in regard to the legal status of these two important points. Why should not judges and doctors be expected to agree in their findings as well as analytical chemists?

DOWIE IN NEW YORK.

The appearance of Dowie, the modern Elijah and arch-enemy of drugs and doctors, in this city with a mighty army, has not as yet created any alarming commotion. Although the invading host is more powerful in numbers than the druggists of the town, the trade continues to carry on business as usual and to make plans for the future. Nobody but his followers seems to take the great advertising prophet very seriously. Perhaps the world has become accustomed to the old semi-religious doctrine of healing without the means provided for this purpose by nature. For centuries the same curious belief in the power of the immaterial to create or destroy the material has waged war upon a rational healing art. Since medicine has been put upon an experimental basis and has become almost an exact science, it would seem to be a simple matter to combat these strange notions, but it is doubtful whether this sort of nonsense has ever before been so wide-spread as

in those days of laboratories and microscope. Downer and Cutler Science so-called, number their degrees by the thousands of spite of law, science and common sense. Why so many apparently sensible people adhere to doctrine that openly insult all that is rational and true, until we remember that rational common sense itself have nothing to do with the case. It is only the unreasoning followers who risk their lives and spend their money in what they are pleased to call "the cause." The leaders find the doctrine extremely profitable. Faith does not prevent people from taking ill, and wonder cures are somehow always expensive. Mark Twain has shown us how amazingly profitable is the Eddy cult as a money-making business, and the rival institution near Chicago is ever more ambitious. The Boston trust is satisfied to receive fat fees and enormous profits from the sale of books, but the Elijah who is about to subdue Wall Street demands complete personal submission to his will.

THE LAW ON FAITH HEALING.

While Eddyism continues to flourish and modern Eldais proceed on missionary travels in luxurious special trains the law promises to make it interesting for some of the anti-medicine cult. The Court of Appeals at Albany last week handed down a decision which should have a wholesome effect upon the harpies who prey upon people with more faith than sense. It affirms a verdict in a suit brought by the State against one Pierson, in which the accused was found guilty of neglecting his adopted child and condemned to pay a fine of \$500 or spend a day in jail for every dollar of the fine not paid. Pierson, who is one of Down's flock, failed to provide a physician or medicine for the little girl who died of pneumonia. The defense argued that the law did not require the use of medicine, that medicine was not an exact science; that a great body of people had lost faith in doctors, that doctors disagreed among themselves as to methods of treatment, and that the State must prove that medical attendance would in this particular case have been beneficial. Judge Haight held that the State by granting licenses recognized a definite class of medical practitioners and it required parents to feed, clothe and protect helpless children. Full and free enjoyment of religious profession and worship is guaranteed, but acts which are not worship are not. A plea of religious scruples is no excuse for failures to obey the law in matters having nothing to do with worship. The Pierson case is regarded as in a measure a test case. Shortly after this case came up, charges against a family of Christian Scientists were heard in the same court. Several members of the family were allowed to die without medical attendance, and a "reader" connected with a temple of Eddyism in this city was indicted. The cases will now in all probability be pushed, and "healers" who receive enormous fees for discouraging the use of remedies supplied by nature and science will please take notice.

THE AMERICAN DRUGGIST—WHAT SORT OF MAN IS HE?

Why have the druggists of the country failed to give the N. A. R. D. adequate support? That is now a question of far greater importance than the

advantages or disadvantages of the different plans for price control. The association has enjoyed remarkable success in all its undertakings, and no one has questioned the integrity or ability of its officers. Yet the rank and file neglect to give it the meagre support required to make it still more successful. Friends of both the association and the druggists whom it represents have been trying to find the reason for this lack of response. Suspicion and lack of confidence are by some believed to be the underlying cause, but this can scarcely be accepted as the true reason, for the results obtained have been universally commended and the Washington convention was practically unanimous in expressing confidence in officers and policies. Several members stated on the floor that the cause of the trouble could be found in a spirit of apathy among members of the trade, a lack of interest in everything not immediately connected with the narrow surroundings of each store. One delegate of wide experience maintained that it was not apathy at all, but a general distrust of everybody and everything. But none of these explanations seems to be quite satisfactory. Lack of confidence in the few large cities where N. A. R. D. work has not as yet procured striking results, may be easily accounted for, but that does not explain the lack of enthusiasm in other parts of the country where the benefits have been marked. The organizers find little difficulty in bringing together the pharmacists in smaller towns and it is precisely these druggists who lose interest as soon as the association's representatives have departed. The delegates at the convention had abundant enthusiasm; why are the druggists who sent them there so lacking in this quality? Is it merely a sleepy indifference to everything outside their narrow horizon, or a small, sordid willingness to profit by the labor of others? How many years of hard work is required to wake up the average druggist to his own interests? In the meantime those who are too short-sighted to keep in touch with current events by reading the journals, and too apathetic to help fight their own battles may find it difficult to survive.

THE COCAINE CRUSADE IN CHICAGO.

The cocaine venders of Chicago are making desperate efforts to retain their very profitable trade, but their struggles are useless against President Bodemann's determination that the degrading business must stop. A few weeks ago this officer of the Illinois board of pharmacy was assailed with charges of bribery and persecution, and various tricks were employed in the newspapers to injure his reputation. So far the only effect has been an increased respect for Mr. Bodemann in the community and a more hearty approval from his fellow druggists. The latest move of the cocaine renegades has all the appearances of a last desperate resort of hopeless combatants. They petitioned the Governor of Illinois to remove the officer who has shown such troublesome faithfulness to his trust. The Governor promptly referred the charges to the board of pharmacy the members of which filed answers defending their president and requesting the Governor's support. Both documents have now been turned over to the press with an endorsement of the Governor commending the board's

devotion to its duty. Perhaps the enemies of pharmacy and humanity have other resources which they will bring to bear—they are engaged in a fight to the death—but we are confident that the outcome will be a more exalted standard of ethics in pharmacy and honor to the devoted few who have borne the brunt of battle.

THE ERA DRUGGISTS' DIRECTORY, NEW EDITION.

A new edition of the Era Druggists' Directory makes its appearance this week. Those skilled in statistics and possessing the ability to abstract history and prophecy from figures, will find the volume interesting reading. There has been no increase in the total number of retail drug stores in the country during the past year, the actual number being 30,800 or 150 less than a year ago, a decrease of a little more than one-third of one per cent. In Canada the number of retailers has increased from 1,673 to 1,700, while in the other countries embraced in this continent the number remains practically unchanged. The most striking change in the character of the business carried on by American druggists is the addition of various side lines to the drug stock. The lines most commonly added are books and stationery, and paints and oils. New soda fountains have been unusually numerous. There has also been a perceptible increase in the number of druggists who carry surgical instruments. On the other hand many druggists, particularly in the larger cities, have dropped the sales of wines and liquors. Whether this change is due to a growing stringency of liquor laws, or a conviction that this class of business does not properly belong in a pharmacy, can, of course, not be learned from figures alone. The additions to this year's edition of the directory include a list of the principal druggists of Costa Rica, Chile, Peru, Bolivia and Colombia. A notable feature concerns the development of pharmacy in Oklahoma and Indian Territory. In these two territories the numbers of retail druggists have increased 102 and 105 respectively. The preponderance of foreign names among the druggists of New York City and Chicago is more marked than ever. Native Americans bearing Anglo-Saxon names may almost be said to have deserted the calling in these large centres of population.

THERE ARE OTHERS.

The American Druggist is in the habit of flapping its wings and crowing lustily whenever it makes its appearance on time with the account of a convention obligingly closed three days before the regular date of issue. No doubt our neighbor deserves due credit for doing its duty by its readers, although with the aid of modern presses and typewritten reports prepared beforehand, it is possible to do a lot of printing in three days. Perhaps it is also necessary for a journal to blow its own horn—that is one of the disagreeable features of the business—but it is never wise to blow so hard that people begin to examine and make comparisons. The vociferous periodical was not the only one looking out for the interests of its subscribers at the Washington meeting. The Era gave its readers a golly slice of the proceedings

M. T. BRESLIN, New Orleans, La.
Member Executive Committee, N. A. R. D.

while the convention was still in session; besides, was our neighbor's account so very "complete" after all? We have searched its columns in vain for a definite account of the most striking features of the meeting, the proprietors' proposal, the conference with the President and the open session of Wednesday night. This intensely interesting session, during which every one had a chance to learn so many things, and more vital questions were asked and answered than any self-respecting journal could hope to digest in a year, seems to have been overlooked entirely.

Drug Clerks and Success.

One of the worst habits of some unsuccessful drug-clerks is that of fearing that they may do more for their employers than they are paid for. Nothing short of a habit of unselfish devotion to the interests of the business will ever bring pleasure enough to the heart of an employer to make him think his clerk is indispensable. Clerks who have no such habits as lead to the highest success should begin at once trying to establish them. The longer they delay the greater will be the difficulty in replacing bad habits with good ones. The sifting of natural selection is inexorable, but as rapidly as a man fits himself in all essentials for a higher place the quicker is he ready to fill such a place when it comes along, and the more certain is he to keep it.—Merck's Report.

Opportunities in Pharmacy.

It is not necessary that the pharmacist shall always remain upon the plane of average success. If he has the natural or acquired capacity for the conduct of large affairs, opportunities for advancement are as abundant in pharmacy as in other occupations. No other calling can show a larger per cent. of men who have become reasonably wealthy. Nearly all the proprietary specialties which have made fortunes for their owners, nearly all the wholesale firms, and pharmaceutical and chemical manufacturing houses have been started by retail druggists. In short, in pharmacy as in all other vocations, the best men achieve the largest success, and the widest opportunities are open to those who take the widest views, and who have the business acumen necessary to avail themselves of these opportunities.—Prof. J. H. Beal

MEETING OF N. A. B. D., OCTOBER, 1903, AT THE HOME OF WASHINGTON, MT. VERNON, VA.

SHOP TALK

ON COURTESY, RAREST OF VIRTUES.

"If I were Brown, I would throw him into the river," said the C. P.

"Yes, indeed," replied the druggist.

"Eh? It's that new clerk of his. He will kill Brown's trade, as sure as you're born."

"Will it be soon?" inquired the man of drugs, rubbing his hands.

"I went in there just now," continued the sage, taking no notice of his friend's feigned eagerness. "I don't buy a great deal, but I hate to be treated like a piece of furniture. That cub took not the slightest notice of me; he stood jabbering and cackling over the counter with a girl who seemed anxious to get away. He never so much as looked at me for fully twenty minutes. Didn't seem to know I was there, although the girl had the good taste to glance at me inquiringly every minute or so. I might have been a wooden Indian for all he seemed to care. And Brown pays him a salary to sell goods!"

"Did he apologize?"

"Apologize nothing! He acted as though I were an intruder when the girl finally escaped, as if it were the proper thing to keep an old man standing around waiting his high and mighty pleasure."

"I suppose you gave him a lecture?"

"No, I did not! I felt more like taking him out into the street and making a few dents in the pavement with him."

"Don't be so hard on the poor fellow! Perhaps he doesn't know any better."

"No, perhaps not," rejoined the C. P., his temperature beginning to fall at once. "Perhaps I ought rather to feel sorry for one who is so hopelessly unfit for this crowded world. He will see trouble enough. He will find pretty hard sledding in the drug business. The world has little use for that kind."

"Why?"

"Because he doesn't fit into the general scheme. There are so many people that no one can live entirely by himself. Everybody must be adjusted to others so that society can move along without friction."

"And so they got up a book on etiquette. Is that it?"

"A person—a grown person, children are all savages—who considers himself only doesn't belong in a civilized community. He interferes with the rights of others, and prevents free and easy movement."

"And the business man must be careful not to disturb the machinery."

"He must make the path through his establishment smooth and agreeable so that people will feel that they are doing exactly what they want to do."

"That's why he is a philanthropist and gives away goods below cost—occasionally."

"Philanthropy has nothing whatever to do with it. I am speaking of courtesy which has to do only with the surface of things—the rubbing surface. When you oil machinery, you don't care to have it penetrate into the metal. It's on the surface where there is contact that it does its work."

"How can a man have a smooth surface and still be looking out for himself all of the time inside?"

"He can though," said the C. P. soberly. "Some of the worst villains ever are the politest people on earth. Of course, we have all got to look out for ourselves, but civilization demands that we pretend to do the other thing. It's not good manners to try to get something away from the other fellow, but we all do it on the sly."

"It's a difficult world."

"Of course it is! Some people never get properly adjusted at all; a great many fail to get the hang of the thing until they are about ready to pass on to the next."

"Courtesy pays."

"Yes, we must see that our presence is not too painful to others. Superficial suavity is a great thing in business. I have seen men who can swindle you with such consummate grace of manner that it is a positive pleasure, and there are others who can't offer you a cigar or a drink without making you want to trash them."

"It's a great gift."

"I don't know about that. I'm inclined to think it is mainly artificial. There are some people in whom kindness and respect for others seem to be perfectly natural, but that may be only one of the acquired characteristics Darwin tells about. The natural man like the natural animal is purely selfish in everything he does. He does not consider the rights and feelings of others, but follows his own inclinations entirely. But I believe that a constant attention to the wishes of others will do the trick if it is done with tact."

"Ah, tact!"

"It is very easy to overdo the thing. People dest spread it on too thick as much as boorishness."

"Because that shows that you don't mean it."

"I suppose so. Although nobody really expects sincerity in manners still it must not have too many holes."

"Oh, well! I prefer a plain, bluff, out-spoken man every time."

"Because you think he is more apt to mean it. The plain, bluff business is only another attempt to cover up the holes. A lot of men make a show of being plain and out-spoken merely to dodge common decency. There is no such thing as a plain man. If there were, you would avoid him like sin. He would be more repulsive than a gorilla in the park, and would, in fact, have to be kept in a cage."

"At the same time, you can be too polite."

"That is where I differ with you. The courtesy that makes you feel it, is not courtesy at all. True politeness does not show. You merely feel that the man is a very agreeable fellow, but you don't know why."

"Bah! Do you mean to say that it is all on the surface?"

"Perhaps not quite so superficial as the rules laid down in the books on etiquette—there is even a courteous manner of thought—but it never penetrates to the inmost heart of a man. It is always only an adjustment to prevent friction."

"Well, it is valuable in the drug business, anyway."

"Quite as necessary as the ten commandments, or any other part of the training that fits a man to live and enjoy himself among his fellows."

HIS QUESTION MACHINE IN ORDER.

For many years we have joked about the barber and the linguistic torture to the latter framed ear. But no barber was ever in it with Slasher, who isn't a barber. Slasher divides his patronage among many stores, visiting all within a radius of half a mile of his city home. The first time the proprietor sees him is enough. A druggist who settled in his neighborhood the other day, had never heard of him. But he soon did.

Slasher came in the second day after the opening.

"Got aly nux vomica? Ie inquired

"O, yes, this is a well-equipped"

"You keep opodeldoo?"

"Certainly, it is—"

"How about calomel?"

"O, of course, we have all—"

"And hydrochloric acid. I suppose you have some that is stock also?"

"Certainly, you should under—"

"And I would like to know beyond a question that you have essence of peppermint"

"Say, if your time is valuable—"

"And tincture of myrrh? Then carbolic acid you must have, and glycerine and oxalic acid and chloral

and guaiacum and ipecacuanha and phenol—"

"C'nfound it, man, don't you understand—"

"Certainly, certainly; I see you have all those things. I have the greatest faith in you, but, you see, we cannot always trust our fellow mortals,

though we have to depend on them. But the question greatest with me is, have you any stamps and postal cards in stock? Could you accommodate me with a two-center and a card, please?"

HE ALWAYS HAD SOMETHING ACHING.

"A little deception now in the right place," said Syracuse druggist the other day, "works wonders. For instance, I had to discharge a clerk once because his constant blues chilled every one with whom he came in contact. He meant all right, but the impression he made was all wrong. If a customer came in and asked him how he did, he never had a cheerful response. He had a headache, backache, rheumatism and everything else in the category. I told him he'd better say that he never felt better, was finer than silk, or that he felt like a 'fighting cock,' even if he was bad enough to be in bed. I tried to impress upon his mind that the customers did not really care how he felt and only asked out of courtesy or because they did not know what else to say, and that they would feel better if they received a cheerful answer. He couldn't learn, however, and he had to go. Another thing I try to teach my clerks is to wait gladly on a stranger, whether he wants anything in which there is any profit or not. The man who wants a postage stamp or to look in the directory should have his needs attended to just as quickly and cheerfully as the man who buys a good big bill of goods. He may be back some other day and want to buy something that will put a few cents into my pocket. A clerk is paid his weekly stipend to serve whoever comes into the store, and he gets his pay no matter whether he deals out postage stamps, directories, telephone service, or drugs and toilet articles."

TO THE DRUGGIST FOR YOUR LUNCHEON.

A novel move has been made by the pharmacists in Salt Lake City, who conduct soda water fountains. They have planned to run lunch counters on the side during the winter. Not only will hot drinks be served, but dainty dishes of fried delicacies and all kinds of soups will be found on the bill of fare. The day of the syrup and water and sweetened atmosphere soda fountain has passed away. Small electric stoves will be installed behind the counters. On these will be prepared individual pan roasts and fries of oysters, clams and similar delicacies of the season. There will be all kinds of soups to suit the taste. Even noodle bouillon with plenty of noodles will be on the list. Another new soup will be asparagus bouillon. Celery will be served as an appetizer. Some novelties in hot drinks will also be introduced. There will be Russian tea and Ceylon chocolate, a highly spiced beverage. Of course, the regular run of egg drinks and hot punches will be on tap. Sherbet and ices, despite the winter weather, will continue to hold their places on the menu. The outcome of the experiment is being anxiously watched. A protest has already come from the restaurants and

candy kitchens, but those druggists who have decided to enter this new field, maintain they are acting entirely within their rights.

WANTED HIM TO SELL GOODS AFTER ALL.

He was a traveling salesman for a druggists' firm. After four years he asked for a raise in salary, pointing out his success in selling goods.

"But, you evidently misapprehend our idea of salesmanship," the manager of the traveling service replied. "We do not care for men who sell goods; we only want them to take orders."

The salesman retired as gracefully as possible, not pressing the case.

Time went on. The salesman had changed his method of attack. Now he simply walked in to his prospective customer with, "Anything for you to-day? No? Well, good bye." At the end of the year the manager of the traveling service called him into his office.

"Mr. ——" he said, "your sales have fallen off \$9,000 in the last year."

"I know it," the salesman replied.

"You know it?"

"Oh yes, I have all my sales in this little book. See?"

"Well, you're mighty cool about it."

"Not so very. But Mr. ——" (naming the proprietor) once told me: 'An employe should unquestionably obey an order or advice of his superior.' Now you remember our conversation last year when you said you preferred us to take orders rather than to sell goods?"

"Ah—h—h, but, I—I—meant not to crowd goods on to customers."

"Oh, I see. But I didn't understand it that way then. But I can get my sales up again."

So the salesman went back to selling goods. The next year he not only made up the \$9,000 but \$2,000 beside. And the raise came, doubled and unsolicited.

HE HAD TO CATCH "THAT 'ERE MOKE."

A coster stopped outside a chemist's shop with a rather recalcitrant moke.

"Mister," said the pearly one, "can you give that 'ere animal sunfink to make 'im gee-whizz? 'E won't move for nuts."

The man of poisons smiled, went inside, and brought out a large bottle of liquid ammonia. He withdrew the stopper and placed the neck of the vessel underneath the tired one's nasal organ.

One long, deep sniff, and one gasp of twenty assempower, then off galloped Neddy as though his Satanic majesty was after him with a thick stick.

The coster, in stupefaction, gazed at the rapidly retreating form of his asinine friend, then anxiously inquired of the chemist:

"Say, cockie, is that 'ere stuff expensive?"

"No," responded the gentleman designated by that facetious title.

"Then git a move on yer, an' give us two sniffs. I've got to catch that 'ere moke."—Birmingham Post.

PIONEER GINSENG MAN OF ONONDAGA COUNTY.

Many Syracuse residents are devoting their back yards and vacant lots to the cultivation of ginseng. There are also several farms in Onondaga county where the root is grown. This industry is not so new there as many people think. Indeed, dealing in ginseng was practiced by Ephraim Webster, the first white person who made a permanent settlement in Onondaga county, in 1788. According to old histories of the country, Webster carried on quite a business in selling ginseng to the Chinese market. He used to collect the root from the Indians, sending it to Dr. Isaac Halen of Philadelphia, who was a great friend, and who shipped it to China for him. It is said that he collected ginseng in the western portion of the State, then for the most part a wilderness.

SOME CAUSES OF DRUGGISTS' MISTAKES.*

By W. F. JACKMAN, Professor of Pharmacy,
University of Maine.

THERE are few places where habitual exactness of thought and of expression need more emphasis than in the drug store. To the beginner in pharmacy, all is new, both in matter and nomenclature. Here abound pitfalls in a multitude of names for the same thing, and conversely in several different things with the same or a similar name—names scientific and vulgar, technical and commercial, medical and lay, medieval and recent, alchemical and chemical; in tongues ancient and modern, including the vernacular and dialectical. Throughout this maze which seems diabolically designed to beget blunders, yet where a blunder is morally a crime, here where the equipped and diligent find full exercise for every trained faculty, there is surely no place for the untrained and heedless.

Intricacies of Nomenclature.

Among his early lessons in the store the beginner must distinguish between the mild and corrosive mercury chloride, with their half-dozen common and dozen less common synonyms. Soon after he learns that salts of lemon bear no relation to lemons, copperas none to copper, nor limes to lime. Also that ammonia has a very important relation to sal ammoniac, but none whatever to gum ammoniac. Later he ascertains that benzene has no kinship with benzoin, but is identical with benzol, and also bears certain important relationships to gum benzoin (which is not gum), and to carbolic acid (which is not an acid). After these preliminary exercises he will be better able to understand (to spell as pronounced) that oil of koko (theobroma) is really koko butter and not kokonut oil, although it comes from a koko nut, a valuable food or beverage source; but that the true kokonut oil comes from the kokonut, also a valuable food-stuff source; whereas, as a matter of fact, the koko (erythroxylon) does not produce nuts at all, and is moreover a decided poison, not proper to use in food products at all.

By this time the young pharmacist suspects that further search will reveal other pharmaceutical terms to be misleading also. His search is rewarded by finding, e. g., in above considered case, that oil of the cacao nut (or cacao butter) is not only not cocoanut oil, but is not even an oil at all (at ordinary temperature); and not much more truly a butter than is butter of antimony. He also finds that such other side dishes as "milk of lime," "sugar" of lead, "oil of vitriol," "syrupy" phosphoric acid, "milk" of sulphur, "thorn-apple" and manna are not the most palatable articles of the pharmacists' bill of fare. (Incidentally, the hope may be here expressed that some noble soul may soon give us, a much needed work, a complete descriptive list of pharmaceutical terms similar in sound or meaning.)

Heterophemy.

Of the ever impending danger of error from confusion of terms in above classes all pharmacists are from the first aware, and consequently on guard. But another source of error, the more dangerous because not so commonly known to exist, remains to be noted. The average druggist would perhaps resent the suggestion that he probably mentally associates together habitually certain things not necessarily at all related; and that from this wrong association, from whatever cause arising, he is in grave danger of substituting for the thing intended its mental associate, when compounding or dispensing. Heterophemy, a mental defect simplest stated as thinking of one thing and saying or doing another, is commonly enough recognized in every-day affairs, where it is

usually only a source of banter or amusement. But in the drug store nothing can ever be tolerated as amusing or excusable that is a source of mistakes.

To illustrate: the writer once had a clerk who wrongly associated borax and alum, so that the mention of one always brought to mind the other. In sales this several times led to an unconscious substitution of one for the other, until his liability to this mistake was forcibly impressed on his mind by the joint efforts of customers and proprietor. This error was probably originally due to wrong association because of similarity of appearance of these drugs, less marked in the lump than in powdered form, although the mistake was made with both forms. The writer also knew a physician who acquired an enviable reputation for skill in a particular case in which he intended and supposed he had prescribed yerba reuma, but which he really wrote yerba santa. The cause of error here was obviously similarity of names. But students have been known not infrequently to confuse yerba santa and grindelia, an error probably due to physical similarity of the crude drugs.

Other instances might be cited, but one will suffice. The writer formerly confusedly associated taraxacum and podophyllum, so that the thought of either called up the other, the result being a confused composite mental picture that required great caution to prevent a dispensing error; this confusion applied alike to the crude drugs and their preparations. It is not thought that the same confusion existed, in degree at least, between their common names as between the official names, which suggests that the error may have arisen from contemporaneous study of the drugs when their official names were learned. Wrong association was doubtless forming and growing stronger by repetition for some time before first recognized at the prescription counter. From the moment of its distinct recognition the chief danger ceased. But it is precisely because not recognized that gravest dangers is to be feared from this source.

From long observation it is held that danger of errors in compounding and dispensing due to this cause is neither fanciful nor rare, but real and widespread. The wisdom of the adage of the ancients, "Man, know thyself," will find justification here, and a conscientious heart-searching will doubtless reveal to many of us hitherto unsuspected joints in our pharmaceutical armor. At least, nothing is to be here more feared than complaisant self-confidence based on assurance rather than on inspection. Apropos of this principle some philologists say that students should not, e. g., study both first and second declensions the same day, for danger of confused association; but the danger here seems overrated. It is a fair question, however, whether certain well-intentioned warnings may not at times do more harm than good; e. g., against confusing quinine and morphine, which are not commonly liable to confusion, not kept near together, nor in similar containers, are very different in "feel" and usually markedly different in form.

A Short Table of Sins.

As an aid to examination of pharmaceutical conscience, a short table of sins, as below, may be made and filled in with any observed lapses of above kind. The beginner will make errors which do not trouble the expert. He will, e. g., confuse magnesium sulphate with manganese sulphate. Hypophosphite he will call hypophosphate of course, and confuse with the other acids of phosphorus. Some months will be required to define the mysterious borderland between cinchonine and cinchonidine, and to feel sure whether it is hyosicine hydrobromide or hyoscyamine bromate. But errors which wider knowledge will remove may be ignored, since the needs of the dispenser chiefly concern us. We note then that this error arises from wrong association because of:

*New England Druggist.

Similarity in	Use	Sweet Oil, Cottonseed Oil, Olive Oil, etc.
	Thing	Zinc Sulph.; Magnes. Sulph.; Alum. Borax; "Oil" of Vitriol.
Names	Shape	Pot. Bichrom.; Red Prus. Pot. dumpy; Pot. Bichrom. Camphor.
	Color	Orange (typ.); Quinine, Morphine, Quinine, Salicine, Zinc White, Pearl White.
Sound	Taste	"Sugar" of Lead
	Smell	Peppermint, Sparanoid
Meaning	Use	Bas. citrat., Impassibil., Chloride of Lime, Calcium Chloride
	Sound	Myristol, Myrcin, Myrcin Escobane, Dogbane, etc.; Trocheol, Thieriac, Drop Black, Black Drop, Black Wax, Black Draught, Prep. Chalk, Drop of Chalk, Coca, Cocin, Cocin, etc.

These instances are here given, as few persons have the same difficulties, e. g., the writer knew a dispenser of lime in order to fill a prescription calling for calcium chloride—a mistake we look for only in beginners.

Mental Preconceptions.

Another source of error since familiar need be but mentioned. It is that a mental preconception or prejudice will obscure or prevent the recognition of a truth opposed to such preconception or prejudice, and that in proportion to strength of such prejudice. The universality and power of this principle is the chief reliance of the party boss, who finds it cheaper, more potent and far-reaching than money. Another instance is the familiar fact that if one makes a mistake in adding a column of figures there is strong probability of making the same mistake the second time, unless the column is added in the opposite direction. This is because the mind is predisposed to accept as true its former judgment at the point where the mistake was before made, and so the error passes undetected. The special care necessary to avoid error from above principle is particularly well known to proofreaders. A pharmaceutical instance: A preconception that a physician would prescribe tinct. catechu as one ingredient in a certain mixture (possibly because he commonly did so in similar cases) led a clerk to dispense tinct. catechu, although tinct. kino was plainly written; the same mistake being afterwards repeated. Another clerk who prided himself on being able to find any article in the store in the dark, relying on shelf position to the exclusion of label reading (contrary to rules), dispensed laudanum for paregoric, the marked difference in appearance and smell of the two not once attracting his notice. As this occurred in the writer's own store, he is unfortunately able to couch for its authenticity.

One instance as a warning to the too confident will suffice. A druggist to whom the foregoing had been pointed out and who while freely conceding the probability of the monitor was yet altogether sure of his own impeccability, was recently discussing with the writer a coming excursion, the date of which he supposed to be June 15, an error, but due to misinformation. His confidence in a friend's mistaken information then constituted a mental prejudice such that when later he read a newspaper descriptive article of the proposed tour, which plainly stated the date to be July 15, he nevertheless read it June 15. This article he read to several friends, each time repeating his mistake. Not until he wrote to the excursion manager to engage passage (who called attention to his mistake in dialect) did he suspect his error and would not then have acknowledged it had not the newspaper clipping been procured. His friends have not yet dared suggest that he might just conceivably have made it his own but more from a similar cause a similar mistake.

Among the many things of which we are profoundly conscious is not remarkable that we know so little

of ourselves. We are blind and deaf to most that passes on about us at best, and as to ourselves the testimony of the senses is both insufficient and suborned. It is insufficient because the subjective is less noted than the objective, suborned because (through prejudice, as above noted) the senses are taught to give only good and not evil report of the master ego. Hence that some druggists may refuse to listen to the suggestion that they may as other men be liable to error is indicative of nothing except danger to their customers.

Another source of error arises from the fact that since thought runs ahead of its execution through the lips or fingers, there is danger, especially if hurried or hurried, of omission (or occasionally of inversion), an error generally unsuspected by the perpetrator. Familiar illustrations will occur. It is necessary only to indicate it to emphasize the importance of checking off each ingredient when compounding.

Absent-Mindedness, the Bane of Undisciplined Minds.

Another source fruitful of errors commonly enough recognized but more hopeless of correction, the bane of undisciplined minds, is absent-mindedness. Although a vicious habit wholly unfitting one for the drug business, it may sometimes trouble the victim only in certain lines. The immature or objective type may, e. g., do mechanical work or listen to directions concerning same, but would hardly read half a page or listen to a ten-minute lecture without going to sleep—or wool-gathering. This type, though painfully common, is largely the attribute of youth and lack of mental training. The mind is largely yet blank. A more serious type is that in which the mind is not blank, but occupied with thoughts and ideals remote from the business in hand. If habitual, this of course renders the victim unfit for dispenser. If the symptoms are only acute and due to passing cause, he may be for the time only unfitted for anything but mechanical work. If the cause is deeper and the preoccupation become chronic, sense and safety demand his immediate exit. No account need be taken of the obsession and idiosyncrasies of the drinking man, the gambler, morphine user, etc., for no sane employer will have such around.

There is a time, covering a varying number of years after puberty, when for the average young man the only safe things to let him do around a drug store are to scrub, wash bottles, and grow. For at this period he simply cannot think of the pharmacopoeia, only of the immorata, and the next dance. Emerging from this chrysalis stage, if of good sense and morals, his temporary alienation will have left no serious trace. He will then be ready for the real study of pharmacy.

Logically supplementary to a consideration of causes of dispensing errors would be certain modes of safeguarding against them. Under this head, a theme of deepest consequence, might well be considered the usually much lauded plan of "double checking." At a later time it is hoped to examine somewhat fully into this and kindred plans for safe dispensing.

In the foregoing merely some, not all, causes of error are considered. No attempt at scientific completeness is made. Perhaps the most common serious source of error (aside from downright incompetence and heedlessness, which it is idle to consider) is planlessness. But the proper corrective of this is the special theme of the supplementary article referred to in the preceding paragraph.

State Your Business?

The underlying principle of all advertising for all businesses is the same. What applies to one business will, with very minor alterations, apply to another. There's not enough difference between any two businesses to make much difference in advertising. Advertising is simply letting folks know what you have, who you are and what you can do for them. If you don't tell them they can't know. If they don't know they probably won't buy. That's all there is to it, and no amount of reasoning will make it otherwise—American Grocer.

THE PHARMACOPOEIA AND THE PHARMACIST.*

By A. R. L. DOHME, Ph. D.

EVERY ten years the time comes around for a new pharmacopoeia to make its appearance, and while we should normally look for this to be the first year of the decade for which it is to be official, the fact is that it practically never puts in an appearance until from one-third to one-half of the decade has passed. It does seem strange to date a pharmacopoeia 1905 and have it come from the press in 1904, but we see here again an instance of not adapting an old custom to modern conditions. When the first pharmacopoeias were revised, there was little to be done, for there was little progress in pharmacy from one decade to another, and a convention called in 1830 could complete its labors and get out a book in the same year or not later than early the next year. Now progress is much more rapid, and ten years produce enough new investigations and facts to practically make a new book of its revised edition.

It seems to me that it is time to modernize the revision of this important book, becoming more important every day, and instead of being four years behind the times, to be up-to-date. Let the revision committee be appointed in the middle of the decade, say 1905, i. e., in the "five" years, instead of the "naught" years, and then have the revision completed and the book ready for issuance in the month of December preceding the 1st of January it is to go into effect and become official. The Pharmacopoeia used to be and is largely yet a moral rather than a legal authority, i. e., it effected its purpose of pure drugs and standard preparations by moral persuasion or the fear of being found wanting, rather than by the legal power or fine and imprisonment. We are now entering upon the era wherein it will be a legal document, because pure food and drug laws will now become general, and the U. S. P. will be their standard as it already is the standard in all states that have such laws. As a legal document, it should be kept closely in touch with the most modern thought and knowledge, and its revision should not be postponed four years after the date on its cover. It will be necessary, it seems to me, after these laws become general, to supplement this decennial revision by an annual or bi-annual revision supplement, thus compelling the revision committee to continue at its labors and not quit after publishing its decennial revision. The questions of moment that are confronting the revision committee are not few and it is just as well to present them to this body and bring its opinion to bear upon the question at issue.

1. Shall the strength of all tinctures in the U. S. P. be made uniform, or shall they continue as at present, of all possible variable strengths, i. e., shall the word "tincture" mean something in pharmacy, just as fluid extracts mean 1:1? If so, shall this strength be 10 or 20 per cent? At the Brussels international Conference of Pharmacists this year the delegates decided to adopt 10 per cent. for all potent tinctures. If we change many to this 10 per cent. strength, why should we not change all?

2. A minimum impurity requirement for all inorganic chemicals has been proposed. We now really require 100 per cent. pure inorganic chemicals throughout the U. S. P., and we are or ought to be fully cognizant of the fact that such a thing does not exist, that potassium iodide or ammonium bromide do not exist commercially in such a state of purity, and we deceive ourselves when we assume as much or believe as such. Hence, it has been deemed advisable to state limiting amounts of impurities permissible, e. g., potassium

iodide must be at least 98.5 per cent. pure, and so on for every inorganic chemical in the pharmacopoeia.

3. The use of petrolatum as an ointment base is under discussion, and opinion is divided upon the preference thereof to fatty bases, such as lanoline or lard.

4. The use of solutions of unstable syrup formulas instead of the syrups themselves with the instruction to use so much solution to so much syrup for making the same whenever needed by the apothecary.

5. The introduction or non-introduction of Antitoxin into the U. S. P., for while no one questions the desirability of doing so, it practically is open to serious question, on account of the difficulty of establishing a method of determining its strength and of controlling the same. The German pharmacopoeia requires all its antitoxin to be tested by the National Institute at Frankfurt, and only such as has its lead seal upon it is official. This is not practicable in this country.

6. The abolition of solid extracts and the use only of powdered extracts, because of the indefiniteness of the term "pilular consistency."

7. The wide application of pharmaceutical assaying to drugs to the end that about twenty will be standardized by assay instead of four, as at present, and that all their preparations will be standardized as well. While we know that but few pharmacists will ever assay their preparations or their drugs, yet we believe that it is in the interest of medicine and of modern ideas to establish the standard and make manufacturers and pharmacists live up to them.

8. To introduce standardized drug powders, i. e., powders of definite fineness and of assayed strength. This question is not by any means decided, but it is believed that it is in the interest of the pharmacist, physician and patient to have all ground or powdered drugs that are sold to the pharmacist of a standard strength, wherever such a standard can be established by assay.

9. The admission of synthetic chemicals that are largely used, whether patented or not, provided the patent expires before the year 1910.

10. The adoption of doses for all the drugs and preparations of the pharmacopoeia.

The pharmacist will have much more occasion to use the pharmacopoeia about to be issued than he has that that will soon pass into history, because of the adoption of state and national laws for the strength and purity of drugs. When he buys his drugs hereafter from the jobber and manufacturer, he will either have to be sure that such jobber or manufacturer is absolutely reliable, and examines or assays his drugs, or he must test and assay them for himself, in case he prefers to take his chance with the cheap dealers or manufacturer, for no matter where he buys them, the law will hold him responsible for whatever short comings may be found among the drugs in his store. For this reason, the pharmacist and the pharmacopoeia will have to become better friends in the future than they have been in the past, and the importance of examining their drugs by the standard of the pharmacopoeia is at once apparent.

No pharmacist who understands his profession and keeps abreast of its advances and present conditions need fear to face the future, because if he knows how to apply the tests and assay processes of the pharmacopoeia as he should, he will not be molested by the law. If the result of the pure food and drug law is to wipe out all such as are incapable of properly carrying on their calling, this will be a gain for the public and capable pharmacist. When I buy chemicals or drugs, it matters not from whom, and if it is from the best and most reliable house in the country, I test them and assay them, so that I know what I am using and can rest content. If you can convince yourself that those you buy from have done the same, and can do it as well and thoroughly as you can do it, you might take your chance and depend on them for the purity of your goods, but you will always be safest and sure not to be found wanting when the law puts you to the test, if you have made a close friend of your pharmacopoeia, by having tested your goods yourself.

*Read before the Maryland Pharmaceutical Association.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulae and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Syrup Gum Syrup.

(E. B. Co.) The following formula has been published as producing a satisfactory preparation:

Tincture of red spruce gum.....	2 fl. ounces
Sugar	26 ounces
Water	1 pint
Caramel	1 dram
Fuller's earth	2 drams

Mix two ounces of sugar with the tincture of spruce and Fuller's earth, rub well and add the water in divided portions; then filter, returning the filtrate until it comes through clear; add the caramel and sugar, which dissolves with a gentle heat, and strain while warm. A syrup of a different and richer appearance may be made by mixing equal parts of the syrup prepared as above and syrup of wild cherry of the U. S. pharmacopoeia.

The tincture of red spruce gum directed for use in the above is best prepared from this formula:

Alcohol, q. s.	1 pint
Red spruce gum (in fine powder).....	2 ounces

Macerate until dissolved and filter.

Lassar's Paste.

(A. B.) Hager gives the following, which is the original formula:

Salicylic acid	2 grams
Yellow vaseline	50 grams
Zinc oxide	24 grams
Starch	24 grams

Triturate the powders together, and make into a paste with vaseline. This preparation is also known under the title of "Paste Salicylica, Lassar."

Lassar's Naphthol Paste.

Beta-naphthol	1 ounce
Precipitated sulphur	5 ounces
Yellow vaseline	2 ounces
Soft soap	2 ounces

Mix the powders, add the vaseline and soap, and mix thoroughly.

Elixir of Iron, Arsenic and Strychnine.

(F. W. B.) The following formula has been published:

Iron pyrophosphate	128 grains
Solution of arsenious acid.....	400 minims
Strychnine	2 grains
Distilled water, hot,	1 fl. dram
Simple elixir, enough to make.....	16 fl. ounces

Dissolve the iron pyrophosphate in the water and add to 12 fluid ounces of the elixir in which the strychnine has been dissolved; mix thoroughly, add the solution of arsenious acid and enough simple elixir to make 16 fluid ounces. Each fluid dram contains 1 gram of iron pyrophosphate, 1/32 gram of arsenious acid and 1/64 gram strychnine.

Soothing Ointment.

(A. B.) We cannot give the formula for the proprietary article. The following has been recommended for a "soothing ointment":

Resorcin	100 grams
Zinc oxide	60 grams
Bismuth subnitrate	60 grams
Oil of cade	120 grams
Petrolatum	350 grams
Hydrous woolfat	350 grams

Powder the resorcin and mix with the other ingredients. This ointment will darken on exposure to air and light, and it should be kept in well closed containers.

GATHERED FORMULAS.

To Fasten Cloth or Leather upon Tables, Desks, Etc.

Prepare a mixture of wheat flour 1 kilo, four tablespoonfuls of powdered rosin, and two tablespoonfuls of powdered alum; rub the mixture in a flat capsule or other suitable vessel, with water to a uniform smooth paste, which transfer to a small kettle over a fire, and stir until the paste is perfectly homogeneous, without lumps. As soon as the mass has become so stiff that the stirrer remains upright in it, transfer it to another vessel, and cover it up, so that no skin may form on its surface. This paste is applied in a very thin layer to the surface of the table, the cloth, etc., then laid and pressed upon it and smoothed with a roller. The ends are cut off after drying. If leather is to be fastened on, this must first be wetted. The mass is then applied, and the leather rubbed smooth with a cloth.

Putty for Railway Carriages.

The putty used for railway carriages must be of special composition to prevent it working out under the vibration to which they are subjected. The following mixture makes a good putty for the purpose: Dry white lead, 15 lbs.; rubbing varnish, 1 1/2 pint; gold size, 1 gill; boiled oil, 1 gill; silex, 1 lb. Another recipe is: One part white lead; one of gold size japan, 1 part of hard drying varnish. Some railroad painters prefer to use half each of lead in oil and dry lead, mixed with equal parts rubbing varnish and gold size japan. The putty should not be applied until forty-eight hours after the priming has been done.

Filling for the Teeth.

Zinc oxide (recently made by burn- ing).....	200 parts
Powdered silex	8 parts
Powdered horn	4 parts
Powdered glass	5 parts

Mix and pass through a very fine sieve.

To be kept in a well-stoppered bottle. When required for use, a little of the powder is mixed quickly with a concentrated solution of chloride of zinc, so as to make a thick paste, which is pressed into the cavity of the tooth and will harden in less than ten minutes. The mixture is claimed to form a hard white cement which will last for years, being next to gold leaf in permanency.

Cough Elixir.

Dilute hydrobromic acid.....	1 1/2 fl. ounces
Tincture of esquin	2 fl. ounces
Tincture of lobelia	1 fl. ounce
Tincture of senega	2 fl. ounces
Wine of ipecac	2 fl. ounces
Solid extract of hebrice	1 ounce
Spirit of chloroform	2 fl. ounces
Oil of pepperum	20 minims
Vinegar of squill	5 fl. ounces
Refined sugar	24 ounces
Distilled water, a sufficient quantity to produce	60 fl. ounces

Dose—10 to 60 minims.

NEWS DEPARTMENT.

N. A. R. D. NOTES.

MONEY RAISED AT THE CONVENTION.

Chicago, October 17.—The following is the result of the appeal made for funds by Executive Committeeman Thomas Voegeli at the Washington convention. The funds were afterwards turned over to the new treasurer.

Delegates.

Connecticut—Bridgeport, John A. Levery, \$5.
Illinois—Chicago, W. T. Kleuze, \$5; L. P. Larsen, \$5.
Indiana—La Porte, F. W. Meissner, \$5.
Kentucky—Louisville, Simon N. Jones, \$5.
Louisiana—New Orleans, M. T. Breslin, \$5; F. C. Godbold, \$5.
Massachusetts—Boston, George W. Cobb, \$5; George W. Cobb (first payment of \$5 per year for five years), \$5. Holyoke, L. G. Heinritz, \$5.
Minnesota—Minneapolis, Stuart Gamble, \$5; Charles W. Hubn, \$5; Thomas Voegeli, \$5.
Missouri—St. Louis, Theo. Hagenow, \$5.
New York—Brooklyn, William C. Anderson, \$5. Syracuse, George E. Therpe, \$5.
Pennsylvania—Pennsylvania State Association delegates, \$10. Bloomsburg, George P. Ringler, \$5. Kittinging, W. J. Sturgeon, \$5. Philadelphia, John D. Groves, \$5; A. T. Pollard, \$5; T. H. Potts, \$5; D. J. Reese, \$5; Charles Rehffuss, \$5; S. W. Strunk, \$5. Pittsburg, H. J. Seigfried, \$10.
Wisconsin—Madison, Edward Williams, \$5.
Miscellaneous—Henry Robb (address unknown), \$5; "Committee on R. H.," \$7.

Manufacturers.

District of Columbia—Washington, Inter-State Medicine Co., \$25.
Massachusetts—Worcester, J. Leyden White (Pheno-Caffein Co.), \$10.
New York—Brooklyn, F. E. Kirby (Morgan Drug Co.), \$5.
Total, \$40.
Total cash, \$197.
Pledges—Associations (City, County and State).
Alabama—\$25.
California—San Francisco, \$50.
Connecticut—Bridgeport, \$25.
Delaware—Wilmington, \$25.
Illinois—Chicago, \$300.
Indiana—Fort Wayne, \$50; Indianapolis, \$50; La Porte, \$10.
Kentucky—Louisville, \$50.
Louisiana—New Orleans, \$25.
Maryland—Baltimore, \$50.
Minnesota—Minneapolis, \$250; St. Paul, \$25.
Missouri—St. Louis, \$250.
New Jersey—Jersey City, \$25.
New York—Bigghamton, \$25; Erie County, \$25.
North Carolina—\$25.
Ohio—Columbus, \$25.
Pennsylvania—Bucks County, \$25; Lancaster County, \$25; Lawrence County, \$20; Philadelphia, \$250; Reading, \$25; Western Pennsylvania (Pittsburg), \$250.
Tennessee—\$25.
West Virginia—Wheeling, \$25.
Wisconsin—Milwaukee, \$25.
Total, \$1,980.

Individuals.

Alabama—Mobile, J. D. Sutton (\$5 a year for five years), \$5. New Jersey—Jersey City, J. C. Gallagher, \$5. Total, \$10.

Manufacturers.

Dr. Miles Medical Co., Elkhart, Ind., \$1,000; Nard Mfg. Co., Pittsburg, Pa., \$50; Peruna Drug Mfg. Co., Columbus, O., \$1,000; Piso Company, Warren, Pa., \$1,000; Paris Medicine Co., St. Louis, Mo., \$1,000; Lydia E. Pinkham Medicine Co., Lynn, Mass., \$1,000; William R. Warner & Co., Philadelphia, Pa., \$15; World's Dispensary Medical Assn., Buffalo, N. Y., \$1,000; Sterling Remedy Co., \$5,000. Total for manufacturers, \$11,065.

This gives: Total pledges, \$13,055; total cash and pledges, \$13,252.

In explanation of the last item in the donations by manufacturers it should be stated that Maj. H. L. Kramer of the Sterling Remedy Co., proposes to turn over to the N. A. R. D. a certain percentage of the proceeds of the amount of orders for his company's products received within a certain specified time and on a special order blank. He is to advance the \$5,000 to the N. A. R. D. treasury at the rate of \$500 per month, thus making the donation nearly equivalent to cash.

J. P. J.'s New Postal.—Cigars Due from Francis.— Changes Made by Many of the Boys and Some are New to the Grip.

E. C. Fowell, Middle States man for Schieffelin & Co., is back in his territory after a two week's visit to the metropolis.

Will A. Stecker has resigned his position as traveling salesman for the A. H. Lyman Drug Co. of Manistee, Mich., and will give his time to the management of the Cadillac pharmacy at Cadillac, of which he is part owner. He was with the Lyman Co. for four years.

Herbert Welsh is a new man with the McPikes, Atchison, Kan. Jim Leads, with the same firm, has gone to his home in Hiawatha to recuperate after a period of illness.

W. H. Francis, the popular travelling salesman employed by Langley & Michaels, the wholesale jobbers of San Francisco, was married in Ventura to Mrs. Myrtle Lloyd. Francis recently built a handsome bungalow for his wife near Ventura.

John Paul Jones, Sharp & Dohme's New York State man is always original. This is his postal card to his friends: "Life is Short—Let Us Do the Other Fellow Some Good—As We Journey Along.

I Am The Other Fellow. Thaw Out—And Send Me a Mail Order to Hotel Gerard, Rochester, N. Y. Oct. 17 & 18. (Sd.) John Paul Jones 'He Pays the Freight' This is by special permission of former Lieut. Governor Jones, (Jones of Bigghamton)."

Albert T. Womson, long employed at Wetherell's

WARD R. FORD, M. D., Minneapolis, Minn.,
Representative for Eli Lilly & Co.

drug store, West Springfield, Mass., George Schirch has resigned his position to become associated with Eli Lilly & Co. He will be identified with the company's New York branch and will travel in the East.

Albert T. Wouison, long employed at Wetherell's pharmacy, Gloucester, Mass., has resigned to become a travelling salesman for a Boston firm of cigar manufacturers. His work will carry him among druggists.

F. N. Oaley, general western agent for Seabury & Johnson, has returned to Chicago from a trip to the Pacific coast. He reports present business and future prospects out there as distinctly all right.

George St. Clair has severed his connection as Chicago manager for Johnson & Johnson, it is reported. He will go into the brokerage business in Chicago and is now in the East making arrangements, it is said, for accounts. It is understood that his successor has not yet been appointed.

Chicagons interested in the new Pacific Drug Co., wholesale, which recently opened at Portland, Ore., are Paul S. Norton, formerly representing Seabury & Johnson in Chicago, who is president, and L. Brinckerhoff, formerly with Morrison, Plummer & Co., who is vice-president.

OBITUARY.

DR. H. M. ALEXANDER, the owner of the Lancaster county vaccine farms, near Marietta, Pa., died at Onewago, Pa., aged 52 years. He established his vaccine farms in 1889, one of the largest vaccine establishments in the world, producing 100,000 points annually. He had recently begun producing antitoxin for diphtheria.

H. H. WAUGH, a druggist of San Francisco, expired in a dentist's chair while under the influence of chloroform, preparatory to having some teeth extracted. Before taking the drug he called in his own physician. Waugh was well known throughout this city and held a high position among the pharmacists of the State.

GEORGE T. TALBOT, a prominent chemist and manufacturing pharmacist of Lawrence, Mass., is dead at the age of fifty-eight years. He was born in Newburyport, Mass. He is survived by a wife and one son.

AMRON DAVIS, one of the oldest residents of Boston, Mass., is dead. He was the last living employee of the old Roxbury Chemical Works. He retired from business (i. e. about twenty-five years ago.

AMONG THE BOWLERS.

Baltimore Now in Full Swing, With J. Bailly & Son in the Lead—Buffalo and Rochester Strikes.

Baltimore, October 20.—All six of the Baltimore Drug Trade Bowling Club teams were in the field last week, and the season may therefore be considered as fairly on. Monday night the Stanley & Brown Drug Co. met the Root & Herbs, and took two out of the three games, a let-down in the first preventing three straight. The scores and the highest individual averages for each team were:

Stanley & B.	701	815	880	Root & H.	763	730	742
Whitehurst	...	166	...	Davis	163
McClyk & Co	804	862	756	Calvert Drug	753	510	690
W. Smuck	...	177	...	Ellicott	128
Sharp & D.	825	823	800	J. R. & Son	862	800	825
Löffler	...	182	...	Fairley	192

Those games place the several teams in the following positions:

	W. L.	W. L.
J. Bailly & Son	5	1
Stanley & Brown	3	3
Root and Herbs	4	2
McCormick & Co	3	3
Sharp & Dolme	3	3
Calvert Drug Co	0	6

The Calvert Drug Co., it will be seen, is the weakest team in the aggregation. It is composed of new material, however, and subsequent developments may show rapid improvement.

Detroit, October 20.—The Detroit Drug Bowling League will open its season this week, and some very exciting contests are looked for. The teams have been having several try outs, and some very creditable showings was the result.

The officers of the League are: H. E. Perry, president; H. J. Lawrence, vice-president; C. G. Willis, treasurer; A. H. Ludwig, secretary. The members are Nelson, Baker & Co., Michigan Drug Co., Parke, Davis & Co., F. Stearns & Co., Farrand, Williams & Clark and F. P. Ingram & Co. The personnel of the league is as follows, and the first named is the captain of their respective teams:

Nelson, Baker & Co.—A. H. Ludwig, F. Walsh, J. Feeney, A. Hillman, J. Holland, Wm. Schroeder and O. Mauer.

Michigan Drug Co.—C. R. Carlisle, H. E. Perry, Wm. Hodges, R. Pulver, C. G. Almeindinger, L. H. Cole, O. Grald.

Parke, Davis & Co.—H. J. Lawrence, G. Squires, P. Berry, G. Elsey, J. E. Smith.

F. Stearns & Co.—S. O'Donnell, C. G. Willis, G. Haggerty, N. O'Donnell, C. Keppler, Dr. Ballah, C. Lorgoin, H. Rheinhold.

Farrand, Williams & Clark—M. Tengan, W. Mofatt, F. Gendernalik, R. Clements, P. Keller.

F. P. Ingram & Co.—J. Laughlin, C. Wieber, S. Mannassa, C. H. Harrington, A. Smith, P. J. Cosgrove, N. Baxter.

Interest is being maintained in the Parke, Davis & Co. inter-departmental league by the fine scores being rolled up. The high team score last week was made by the General Business team, 89, which establishes a new record for the league. Stewart and Paige each made 208, the high single scores for the week.

The Druggists' Bowling Club of Buffalo, at their annual meeting, elected the following officers: President, Henry A. Schuck; vice-president, John H. Rifer; secretary and treasurer, J. L. Perkins; captain, P. M. Lockie. The club will bowl every Friday afternoon during the winter months.

The bowling team of Rochester druggists had another practice game last Thursday and the team headed by Druggist Elmer E. Chilson won from the team headed by D. H. Moore. The game showed that the bowlers have not "forgotten how," and they feel confident that they can now go against any other team in the city.

IN SOUTH AFRICA.

Where a Drug Clerk Got Richer in Experience Than in Money—Was Besieged by Boers, Sold Poison for Hyenas, and Was Vanquished by a Strange Board of Pharmacy.

Two years ago the ninth of October a young man went from Brooklyn to South Africa. His latent enthusiasm, fired by tales of gold almost lying loose in the highways, inspired him to give up a comfortable position with Druggist A. G. Koehler of Broadway and Decatur streets, Brooklyn, and leave his wife behind while he went and gathered some of that gold. His name was Otto I. Wessel.

But Mr. Wessel is back—to stay. And, differently than he had planned—poorer by \$2,000.

When Mr. Wessel struck Cape Town, Cape Colony, he found a city of 10,000 inhabitants, nominally, holding 250,000. It was war time. Mr. Wessel began paying board at the rate of \$3.50 a day. After a short time he got a position with Heynes, Mathew & Co.—at six pounds a month. He postponed picking up the gold.

But Mr. Wessel soon proved his worth. Heynes, Mathew & Co. are one of the largest drug firms in South Africa. Their main retail and wholesale store at Cape Town is a beautiful structure, six stories high. They have branches at Sea Point, Green Point, Ronderbosch, Claremont, Stellenbosch, Bloemfontein, Kimberly and Mossel Bay. Mr. Wessel became invaluable to them, with the result that his six pounds a month was considerably more when the first pay day arrived. In a short time he was getting five times as much and had found a somewhat cheaper boarding house. Then he was sent to take charge of the branch at Mossel Bay.

Peace in War Under American Flag.

Life was full of interest. The Boers took it into their head to capture Mossel Bay. So they began to besiege it. "What the Dickens shall I do?" thought Mr. Wessel, who knew that the first thing a Boer army always does after capturing a town is to annex its drug store to their commissary. He decided to fly an American flag, and did so, for three days, when British ships came into the bay, cut off the Boers and saved the beleaguered city.

It was in Mossel Bay that Mrs. Wessel, who had followed her husband a year later, nursed Jack Buell, Parke, Davis & Co.'s famous representative in South Africa, into health from a malignant attack of fever. Buell and Wessel were a sort of South African Damon and Pythias. In our picture Mr. Buell is playing Pythias to another Damon, but that is only temporarily, for picture purposes.

"Ah, those Boers are great customers," Mr. Wessel told an Era representative. "In our little store at Mossel Bay a day would occasionally come when neither myself nor my clerk would sell a thing. Perhaps the very next day we would sell 75 pounds' worth at a profit of 150 per cent. They buy medicine by the gallon. Ten boxes of Williams' Pink Pills at one time!"

"You should have seen my poison book. Entries like this: 'One ounce strychnine, to kill hyenas.' Nearly every sale was for killing wild beasts. Then we sold an immense amount of strychnine solution for snake bite injections, and the price would set a Broadway man wild. It was a great place for the fellow who owned his own business. But to conduct your own store you must register. And that's the reason I came away—because they wouldn't let me register."

England Jealous of Professional Privileges.

England and Englishmen are in absolute power.

J. L. BUELL,
P., D. & C.'s Representative in South Africa.

The professional man from the outside is kept out just as far as possible. In Cape Colony the making of the pharmacy laws is vested by Parliament in the Cape Peninsular Pharmaceutical Society. A. Mathew of Heynes, Mathew & Co., is the president of the pharmacy board. There are two other members, one of whom is a physician, and a secretary, who is not necessarily either physician, or druggist, but an employee. To show the unfairness to foreigners it is only necessary to relate Mr. Wessel's sad experiences in his attempt to register.

He went to Mr. Mathew. "Go to the secretary," said that gentleman. "I cannot help you; you will have to take the examination."

"That is just what I want," said Mr. Wessel, and bled himself to the secretary's home, after procuring the address from President Mathew. The secretary was not at home. The law required the applicant to register by October 1, and the examination was set for the middle of that month.

October 1 passed, without Mr. Wessel's seeing the secretary. On the sixth, that gentleman came into the main store, where Mr. Wessel was then working, and the seeker and sought were introduced. "It's too late now, anyway," sighed Mr. Wessel, "for the first is passed."

"But, my gracious," exclaimed the secretary, "I was succeeded by another man nine months ago!"

And the president had not known it!

Examinations occur quarterly and before the next one Mr. Wessel had been transferred to Mossel Bay. He and his wife packed their trunks and travelled two days back to Cape Town for the next examination. When he presented himself and letters showing his having worked in the United States he was asked:

Difficulties Which the Foreigner Encounters.

"How do we know you are the man named in these papers?" His passport was not accepted as evidence, but he was sent out to swear to the papers, which cost

him \$2.50. When he returned he was told that he would also have to show certificates of his education. That meant months of waiting while they came from the United States. As a law goes into effect on January 1, next, providing that no one shall be registered who does not have a diploma showing four years' study in the Cape Peninsular High School, Mr. Wessel, seeing that he could not get his papers from this country in time for the last examination under the old conditions, gave up. His attempts to take the examination cost him \$500.

That this strictness only applies to foreigners is shown by the fact that a bottle washer in Heynes and Mathew's passed the board number one after four weeks of unassisted study!

The examination lasts two days. There are eight questions to be answered orally and eight in writing. In botany the examination is far higher than here. In everything else it is farcical. In identification, for instance, the examiner takes a bottle from the shelf, covers the label, and, without lifting the stopper, lets you look through the glass.

Mr. Wessel told his experience to Mr. Sauer of Parliament, who, the next day, in a scathing address, in Parliament, said, "the most ridiculous law we have is our pharmacy law." He scored them for keeping out foreigners and said that any foreigner with the pluck and money to fight would win. He told Mr. Wessel that the injustice of the present conditions would be remedied by the next Parliament.

In the Transvaal conditions are about the same, though Lord Milner, the governor, recently said in a speech that Americans, Germans, Austrians and Frenchmen have got to make the country and their professional men should be admitted. It is likely Lord Milner will carry the day.

Work in the pharmacies in Cape Colony is for ten hours a day, with absolutely no holiday or Sunday work. There is an immense amount of patent medicine sold. It is a splendid place, Mr. Wessel says, for a man to start a pharmacy if he has money enough, especially if he becomes a citizen. But under the present laws he would have to hire a native to manage his store.

Where Hand-Made Pills are a Curiosity.

And there, says Mr. Wessel, comes the rub. The clerks are all English, many of them graduates in pharmacy in England. But, he asserts, they are a set of incompetents. They say they never saw a tincture made, and some pills that he made, such as every clerk here can make, were shown around as curiosities, and he was beset by "graduate pharmacists" who wished to learn his "secret." In one store, after a consultation among five clerks, including the manager, this prescription

R
Ext. Bellae liq. in 60
pro dosis.

was filled with Ext. Belladonnae liq., which is rarely given in more than two-minim doses.

And this prescription, also after a consultation, for a snuff:

R
Cocain. mur. 0.5
Saccharum lactis 5.

was filled by giving 5 grams cocaine instead of the five-tenths gram called for.

These prescriptions and the way they were filled were shown to Frank Heynes of Heynes, Mathew & Co., who frankly admitted that he had never before realized what incompetence they were forced to put up with.

Mr. Wessel was presented with a magnificent silver urn by his employers before he came away.

CHARGED WITH BEING A SWINDLER.

Pierson, alias Percy, alias Sherwood, Cleveland, O.

William M. Pierson, alias William M. Percy, alias Howard J. Sherwood, arrested in Cleveland on the charge of obtaining goods under the name of a reputable druggist, and turned over to the United States authorities to be prosecuted by them for using the mails fraudulently, was indicted by the United States Grand Jury in Cleveland and released in \$1,000 bail.

Pierson had a desk at 315 Superior street, Cleveland. He had not the slightest difficulty in receiving time shipments from dozens of big drug firms who believed him to be Henry J. Sherwood who has a large pharmacy at 979 Woodland avenue. The Antikamnia Company of St. Louis were the only firm whose shipment Pierson actually got into his hands, as his arrest, through a mix-up in his and the real Sherwood's mails, occurred before he could remove the other consignments from the freight-house.

Pierson in his testimony said "I ordered only goods that I had orders for." But he was unable to produce his order book. He said he employed a travelling salesman, named "Smith," whose whereabouts he was unable to reveal. He asserted that he came from Boston, where he was in business, though he had strangely forgotten who the business transactions were with.

The authorities believe Pierson came from New Hampshire and that his people live there. They believe he is of the Crosher-Granville-Fraser-Gerrish class, to whose order letters his are strangely similar. Swindler Crosher, when asked by an Era man if he knew Pierson, said that he was sorry, but he did not.

Chief of Police Kohler, by whose permission Pierson's picture is given here, believes the prosecutions' case is complete, as does Postoffice Inspector W. T. Fletcher. Charles Hamilton of the Potter Drug & Chemical Co., Boston; a representative of the Meinen Chemical Co., Newark, N. J., and Oscar M. Reed, McKesson & Robbins' credit man, were in attendance at the grand jury hearing. All three firms recovered their goods from the Cleveland freight-house.

McKesson & Robbins announce that they are willing to prosecute to the fullest any swindler, large or small, with whom they come in contact. In line with that course they voluntarily sent Mr. Reed to Cleveland to aid the authorities.

Any reader of the Era who recognizes Pierson's picture, will confer a favor by communicating with the Era.

VERY SPECIAL

A limited number of live druggists in the larger cities will hear of an attractive proposition, by communicating with

J. N. FERRER

NEW YORK CITY

NEW YORK AND VICINITY.

ENDORSES N. A. R. D.

Kings County Ph. Soc. Votes \$25 and Encouragement to the National Organization—Other Transactions.

A hearty endorsement of the N. A. R. D., was given by the Kings County Ph. Soc. at its last meeting and what may be looked upon as the first step in its re-affiliation with the national organization was thus taken.

This action occurred after report of the N. A. R. D. proceedings at Washington by Dr. William Muir, and was upon his motion. He said the success of the Miles plan was emphatic in the West and that he believed Kings county and other associations should give inspiration and show proprietors that the smaller societies meant business. Therefore he moved that \$25 be voted to the N. A. R. D., with an expression of hope that several proprietors will have adopted the Miles plan before the year is done. The motion was carried with one dissenting vote.

Dr. William C. Anderson also spoke of N. A. R. D. matters. He said that the success of the Miles plan would stir other proprietors to put it or some other direct contract plan into effect. "It looks as if there is a great future for the retail trade in the work of the N. A. R. D.," he said. "Proprietors are beginning to realize that the best way to push goods is to put them under a direct contract plan."

Considerable discussion was provoked by Dr. Lederle's recommendation that the health department's bacteriological products be given away to all New Yorkers, but no action was taken. Dr. Muir said the druggists would present an unhappy spectacle should they go before a committee and plead, on the ground that they were losing perhaps \$10 a year, against a movement that meant \$25 a year saving to many. Dr. J. H. Droge said that not more than ten per cent. of the druggists keep antitoxins anyway, and that there are so many kinds that must be kept that profits are buried in the necessary stocking up with the different ones. Mr. Doudeu thought the department's purpose foolish and unfair, as the same principle might be applied to all other medicines.

It was reported that the college has 101 juniors, 80 seniors and 5 post graduate students enrolled.

Emil Roller of the German Apothecaries' Society, aroused great interest in the plans for a new druggists' co-operative fire insurance company, making an address in presenting them. Adrian Paradis, Dr. William C. Anderson and W. H. Bussenschutt were appointed as a committee to meet the fire insurance committee and report back at the next meeting. There is no doubt that the plans will be endorsed. Mr. Roller received a hearty vote of thanks.

New members proposed were: Otto Marx, William P. Gregorius, Albert Fischer and James J. Williams. New members elected were E. Wesbeck, Benjamin F. Williams, Thomas E. Burchels and Edward William Steinicke.

REGISTERED SERUM MANUFACTURERS.

In the recently published list of serum manufacturers registered by the government under the new law providing registration and inspection of the plants of all companies manufacturing serums for commercial purposes, should be added Frederick Stearns & Co., Detroit. The list also includes: Parke, Davis & Co., Detroit, Mich., vaccine virus and serums; H. K. Mulford Co., Philadelphia, Pa., vaccine virus and serums;

Dr. H. M. Alexander & Co., Marietta, Pa., vaccine virus and diphtheria antitoxin; Pocono Laboratories, Swiftwater, Pa., vaccine virus; The Fluid Vaccine Co., Milwaukee, Wis., vaccine virus; The Pennsylvania Vaccine Co., Conewago, Pa., vaccine virus.

JUDGES DISAGREE ON EXCISE CASES.

Justice Davy's recent decision in an excise case in Rochester that an employer is not liable for the act of a clerk who sells liquor in violation of the State excise laws, when the employer has given specific directions that such sales are not to be made, was not concurred in by Justice Greenbaum in Part X of the Supreme Court, Manhattan, last week.

The case before Justice Greenbaum was brought by State Commissioner of Excise Cullinan against E. D. Paxson & Co. of 1449 Broadway. Mr. Paxson was charged with selling a bottle of a well-known brand of malt whisky to a special agent of the commissioner without receiving a physician's prescription.

The question at issue was: Was this brand of whisky taxable? Paxson is the holder of a subdivision 3 liquor tax certificate, and the action, the first of its kind in this State, was brought to recover on the bond against Paxson as principal and the United States Guarantee Co. as surety. Cantwell & Moore were the attorneys for the defendant. They admitted the sale of the whisky, but contended that it is a medicated beverage, a medicine rather than a liquor and as such no more amenable to tax than pepsin, calisaya, etc. The prosecution put on the stand Dr. Crampton of Washington and Dr. Gay of the State agricultural department. The latter testified that this whisky contained 46 per cent. of alcohol. The commissioner based his claim on Section 11, Subdivision 2 of the liquor tax law.

Incidentally, the defendant's attorneys argued that Paxson was not responsible for the act of his clerk in selling the whisky, citing in support of the claim the decision made recently by Judge Davy in the Burkhardt case of Rochester. Judge Greenbaum did not agree with the ruling of Judge Davy and ordered a verdict for the plaintiff. The forfeiture is \$500.

SUCCESSFUL FIRST OPEN MEETING OF D. C. C.

Flattering success attended the first open meeting of the Drug Clerks' Circle, on last Thursday night. These meetings will be a regular institution hereafter, the purpose being to attract new members, and the next one will be at Cooper Union on the evening of November 25.

Dr. Albert H. Brundage spoke and Dr. William C. Anderson talked interestingly, though briefly of the occasion. President Phillip Lewy presided gracefully, and Dr. Joseph Kahn, a member and a professor in the Brooklyn C. P.; Vice-President Louis B. Epstein, Financial Secretary J. Streiffer, and Joseph Beck all responded to the president's calls with interesting, pointed addresses, part of Dr. Kahn's contribution be-

BABY
STERILIZER
PROFIT.

WILMOT CASTLE CO.,
26 Elm Street, Rochester, N. Y.

ing an original poem. An excellently rendered recitation by Miss Beck, and artistic work on the piano and violin by Mrs. Rosa Schapiro and Miss Dora Thomas, respectively, won well-merited applause.

For the ball at Terrace Garden on Christmas eve a profit of \$500 is already assured. This money will be used in hiring an organizer to procure new members. It is the laudable ambition of the circle, which now has about 200 members, to enroll several times as many more within the next six months. Larger facilities will be secured up-town and an effort will likely be made next summer to secure representation on the board of pharmacy. There is no other pharmaceutical society in Greater New York that shows the enthusiasm that this young organization does.

POLITICAL RECRIMINATIONS.

Dr. John D. McGill of Jersey City Talks Learnedly of Graft by Druggists, but Fails to do More than Talk.

The good Dr. John D. McGill, surgeon-general of New Jersey, whose wholesale charges—politically implied—against the honesty of the five druggists of Jersey City who conducted the free dispensaries over there this last summer has not been backed up by proof, as yet, though the worthy doctor has been challenged to show some specific instance.

But there is a development in the fight—no less than the formation of a doctor-druggist organization, to be called the Jersey City Red Cross Association. Dr. McGill says that twenty doctors and nine druggists have joined. But he refuses to divulge the druggists' names. He says the doctors will give their services free. Some of the druggists will also—the unsophisticated Dr. McGill says—and none of them will charge more than ten cents for filling a prescription.

Dr. McGill said: "The doctors of this city well know that the Fagan free dispensaries are a sham. In a certain Fagan dispensary on August 29 and 30, 1902, the number of 204 prescriptions were entered in the books and charged to the city. That was at the rate of seven prescriptions in ten minutes. Two drug clerks were employed in the store. Does any sane man believe that two clerks could have put up that number of prescriptions in so short a time, while at the same time attending to the regular store trade during busy hours?"

Dr. McGill's plan is ridiculed and roughly scored by the following druggists in interviews: Maxwell Abernethy, L. E. Carpenter, William L. O'Brien, manager for James Foulke; H. Koch, Oscar Wagner, Dr. W. C. Phillips, George H. White, Dr. A. J. Kirstein, Frank O. Cole, Walter Huber, William Kumpel, Frank Lisehke, Dr. Thomas D. Williams, Frank Pernor, Dr. S. B. Matthews, John S. Broas, C. J. McCluskey, Herman Wouters, Benjamin Bache, and many others. Their views may be expressed by those of Dr. Saur, health officer supervising the dispensaries, who said:

"I would not trust a druggist who would fill a prescription for ten cents."

Said John C. Gallagher, who conducts one of the dispensaries, of Dr. McGill's remarks concerning rapid making of prescriptions "I can inform him that a large New York dispensary having two clerks put up regularly between six and seven hundred prescriptions a day between two and six in the afternoon."

MR. HELFMAN ON "THE INFINITELY LITTLE."

Joseph Helfman of the Bulletin of Pharmacy, Detroit, lectured at the Brooklyn C. P. on last Tuesday evening and again at the New York C. P. on last

Wednesday evening, in both instances before mixed students and pharmaceutical audiences. His subject—excellently handled—was "The Infinitely Little," and had to do with the germs of contagious diseases and led up to a description of the making and testing of the biological products with which they are fought. The lecture was illustrated with unusually efficient stereopticon views, and was highly appreciated at both colleges, not only for its concise, clear exposition of the subject, but for its very distinct delivery. The Brooklyn lecture was under the auspices of the Kings County Ph. Soc. and the Alumni Association had charge of the other lecture.

MORE PROFESSIONAL FLAVOR IN M. PH. A.

A new feature which may considerably change the character of the Manhattan Ph. A. meetings was developed, undesignedly, at the regular meeting on Monday night. It occurred when F. O. Collins asked for the formula for "liquor burrow," for which he received a prescription, but which he was unable to fill. In a few moments the formula had been given by a member, but a discussion arose between Sidney Faber, Charles S. Erb and Joseph Weinstein as to whether the preparation should be made up clear or cloudy. This was settled by agreeing that physicians disagreed on the matter.

But the injection of professional talk grew apace. George H. Hitchcock brought up some peculiar prescriptions that had come his way and Mr. Faber told how, after he had once filled a prescription reading:

R.
Aet. plumbi 1 oz.
One teaspoonful to quart of water as directed;

by dispensing "liquor plumbi subacetatis," the physician protested, saying that sugar of lead was what he wanted.

This meeting probably marked a permanent departure from rigid adherence to commercial business and discussions as has been the practice in the past. And the members believe it will enhance an attendance that has been somewhat disappointing lately.

Emil Roller evoked great interest by explaining the proposed new druggists' co-operative fire insurance company, which his committee of the German Apothecaries Society is organizing. The matter of endorsement was referred to the grievance committee consisting of William C. Alpers, Oscar Goldman and Walter E. Faber.

SYRACUSE DRUGGISTS PROPOSE COCAINE LAW.

President George E. Thorne of the Syracuse D. A., has appointed a committee consisting of W. H. Bissell, chairman, E. S. Dawson, Jr., and William Muench, to draw a bill for introduction into the New York State legislature to place restrictions about the sale of cocaine. The Syracuse druggists, with one or two notable exceptions, are determined to stamp out this evil and to take steps to place the druggists above the criticisms which have been prevalent.

It is expected that in framing a new law many mistakes will be made and that hardship will be entailed upon the retail druggists. All this is necessary in order to reach a few. It is not yet decided how the law will be introduced into the Legislature or through what channel, but it is probable that the State association's legislative committee will take the matter up at the coming session. It is thought that there will be no trouble in passing such a bill, as no druggist would have the nerve to oppose it.

NEW YORK NOTES.

—Flaming headlines in the Syracuse dailies announce that Miss Genevieve Powell Sheehan was married on January 2, to Dr. W. N. Pendergast of that city, but had kept the matter a secret. Miss Sheehan was cashier at Dwight & Co.'s drug store for a number of years and had attained an immense popularity among the patrons. Dwight's drug store is a hanging-out place for the better class of young people and a meeting place for the theater-goers. Miss Sheehan was the right person in the right place. Two weeks ago Miss Sheehan resigned. Then she broke the news to her parents. The reason for keeping the marriage a secret was that they were not ready for housekeeping.

—A charge of grand larceny which if proved could scarcely have shown great culpability on the part of the defendant was brought against James R. Crawford, druggist at 168 Ralph avenue, Brooklyn, by Mrs. Elizabeth Crawford, his daughter-in-law, on the ground that he had, after his son's death, collected \$27.80 from the Junior Order of American Mechanics. The charge was dismissed, as Magistrate Furlong held that the evidence of Mrs. Crawford negated any presumption of intention to commit grand larceny and that she had mistaken her remedy. He referred her to the Surrogate's Court.

—William Blaikie, the aged druggist of Utica, returned to his home after a three months' visit in Scotland. He spent most of that time in Edinburgh, from where in 1842 he started for America. All his old acquaintances there had passed away. The scenes were quite familiar, even to an old furniture store where he worked in his boyhood. While abroad Mr. Blaikie and his daughter visited Andrew Carnegie at his home, Skibo Castle. They also went to Inverness, where they remained two weeks. The trip proved a betterment to Mr. Blaikie's health.

—Drug Trade Club guests from out of town: Charles L. Ross, Ticonderoga, N. Y.; P. D. Kinney, Poultney, Vt.; Charles F. Mann, Detroit; Minor E. Keyes, Detroit; Robert Rowlett Martin, Bombay, India; R. E. Pinegan, Lincoln, Eng.; V. P. Powell, London, Eng.; John Baker, Jr., San Francisco; Joseph Helfman, Detroit; Thomas Voegeli, Minneapolis; L. Townsend, Rutland, Vt.; William H. Dodds, Detroit; John C. Dodds, Detroit; A. H. Eber, Detroit.

—These passed last Eastern branch examination: Guisepe Bisconti, D. Marshall Durrett, Izil Genn, Karl E. Iahn, William Karlinsky, Joseph Pullman, Mitchell Robinson, Adolph J. Rubinowitz, Rebecca Gitler Siegmeister, Judson T. Smith, Jacob Trustrit, Louis Wolpov, David E. Yaffa, Jacob Felder, Maria Marx, Felix L. Thon, Benjamin C. Wanser.

—Pleasant callers at the Era office were Mr. and Mrs. Hermann O. Luckritz. Mr. Luckritz is a pharmacist at 2843 Wentworth avenue, Chicago, and came here, via Niagara and Syracuse, on his wedding trip. This announcement will be the first intimation his many Chicago friends will have of his desertion from bachelordom.

—The first meeting of the season of the Society of Chemical Industry, N. Y. section, will be at the Chemist's Club tomorrow evening. Dr. E. J. Lederle, president of the health department, will lecture on "Some phases of the work of the department of health."

—Thursday night, November 5, is "Konners" with the German Apothecaries' Society, and musical and other entertainment talent will be provided. A substantial supper comes as a matter of course, and original songs written by members will be features.

—The Apothecaries' Bicycle Club, including Mr. and Mrs. George C. P. Stolzenburg, George Leinecker, Frank Manning, Leon Weinert and Hugo Kantrowitz

wheeled to Lake Mohunk on last Thursday, taking dinner at New Paltz.

—Alexander Lipschitz, formerly a druggist at 531 Henry street, Brooklyn, has filed a petition in bankruptcy, with liabilities of \$7,426, of which \$6,236 is for the unexpired lease of the Brooklyn store, and no assets.

—Seen down town L. G. Maid, Tupper Lake, N. Y.; Allen Brown, Minersville, N. Y.; A. E. Pickard, Rosslyn, L. I.; D. Wiley Baker, Trenton, N. J.

—Edward Sawyer has sold his pharmacy at 2365 Seventh avenue, which he bought only recently, to H. Fahrens, post graduate N. Y. C. P. '98.

—Herman Heinemann is opening a new store at 2289 Broadway. He formerly was at 242 Seventh avenue.

—W. H. Bennett & Co., have a new store at 1111 La Fayette avenue, Brooklyn.

—Arthur E. Raltano has opened a branch store at 98 Skillman street, Brooklyn.

—Julius Applebaum bought Davidoff's pharmacy at 140 Forsyth street.

AT ROCHESTER.

—George Garrie King, prescription clerk at the Paine Drug Co.'s retail store, had the misfortune to fall from a pear tree one day last week. He sustained painful injuries, and Dr. Wilson attended him. His fall was broken by dropping into a bushel basket which he was using to hold the pears. His accident insurance policy had lapsed.

—The C. F. Maid drug store at 379 Lyell avenue, was purchased by James Murray, for some time manager of the pharmacy of W. H. Faist, 216 Brown street. C. J. Jones has been promoted to succeed Mr. Murray as manager of the Faist store.

—A new drug store will shortly be started at 951 Genesee street. E. F. Hamburg will be the proprietor.

'ROUND ABOUT BUFFALO.

—The Empire State Drug Co. held its annual meeting on October 14. The old directors were re-elected for the following year. The directors held a meeting and elected the following officers: President, Thomas Stoddart, Buffalo; first vice-president, H. J. Dimond, Buffalo; second vice-president, Felix Hirsemann, New York; secretary, John Peterson; treasurer, George Reiman; executive committee—Thomas Stoddart, Neil McEbrean, George Reiman. The annual report showed a material increase in the business.

—Sigmond Z. Kiglawka has opened a pharmacy at 205 Peckham street, in the heart of the Polish section.

FROM JERSEY TOWNS.

—Harry Camp, an employe of Whitall, Tatum Co. at Millville, was demonstrating how to use huge glass bottles as Indian clubs the other day when the vessels clashed together and broke, cutting terrible zashes in his head and severing one of the arteries. He almost died from the loss of blood.

—Richard E. Schmidt has bought the store at 419 Grove street, Jersey City, formerly owned by the late John E. Waterton. C. H. Andrews is managing it.

—Dr. A. C. Kirsten, the Jersey City druggist, had his pocket picked of \$40 while riding on a street car the other day.

Miller is third vice-president of the N. C. Ph. A.

NEW ENGLAND.

DRUGGISTS' QUEER FIGHT AGAINST OCTOPUS.

Providence, R. I., October 20.—The Handy Drug Co. is engaged in an interesting conflict with one of the city's big department stores.

The department store, in seeking to extend its place of business from one thoroughfare to another, found its plans blocked by the drug store. An agreement was made giving the department store the right to trespass to a certain extent. Later it was alleged that the octopus had exceeded privileges. The Supreme Court refused an injunction.

When the octopus's contractor attempted to set iron columns in a corner of the drug store, an attorney with a crowbar prevented. The department store then sent employes to buy root and herb beer, which, when analyzed, was found to contain a higher percentage of alcohol than permitted in beverages sold without a license. The druggists were haled into court. Decision withheld.

INDIGNANT MINISTERS SCORE POOR DRUGGISTS.

Bristol, Conn., October 20.—This town is in a fume of excitement over the clash between the chief of police and the druggists over the Sunday closing order. Last Sunday not a store was open all day, and in several cases there were urgent demands for drugs. All the ministers preached on the topic. Said one of them: "The druggists are expecting to excite sympathy. The attempt, by the refusal to fill prescriptions in hours when they are permitted to keep open, was not manly, but a petty action to coerce the authorities by causing public inconvenience."

RHODE ISLAND.

—In one of the towns near Providence, where the R. I. Ph. A. complained last spring that three drug stores were being run without registered pharmacists, the town authorities took no action and the places were permitted to run. The proprietor of one of the three has made an assignment, another is temporarily out of business with a broken leg, and the third, who is a physician, has gone to take a post graduate course in one of the medical schools.

—Block Island, which is known politically as the "Town of New Shoreham," is said to be governed, or

have its seat of government in the Island's solitary drug store, run by Uriah Dodge.

—The freedom with which the drug stores, or some of them, have been permitted to sell liquor during the last year is being made an issue in the municipal campaign in Central Falls.

THE BAY STATE.

Year's Work of the Boston Dispensary Shows Nearly 100,000 Prescriptions Issued.—Doings in the Trade.

—Early fall has brought about general changes, renovating and improvements in a number of stores, among them that of J. H. M. Edwards, Salem, where the interior is being handsomely decorated; L. J. Sinoite, Haverhill, who goes into a new store at Locust and Essex streets; Dr. H. P. Grise, Gardner, where a large addition is under way, and F. B. Horne, Frammingham, which is being enlarged substantially and otherwise improved.

—A deputy sheriff who attempted to collect an account against Frederick A. Guertin, a Fall River druggist, found that the entire stock of the store had been sold to the druggist's brother. Thereupon the sheriff promptly attached the store and stock, doing this under the provisions of the new statute providing that sales shall be determined fraudulent and void, if it be found that creditors of the seller are thereby endangered.

—The Boston Dispensary, which has just held its annual business meeting, during its last fiscal year has given out from its pharmacy 92,102 free prescriptions. The dispensary is considerably more than a hundred years old, having been established in 1796. In all its history it has given aid and treatment to a total of 1,625,676 patients.

—Few drug clerks get an opportunity to enjoy such a long vacation as that upon which Charles Warren, clerk at P. H. De Lee's, Maynard, has just begun. He will take a two months' trip, including visits to New York, Philadelphia, Baltimore, Washington, Richmond and Spray, N. C., where he has a sister.

—Samuel P. Avery, New England agent for the Midland Linseed Oil Co., at its Boston office, has disappeared. An auditor reports finding a shortage. Avery's wife and children have gone to Chicago, their former home. Mr. Avery was well known among sporting men of Boston.

—Frank W. Bacon of Waltham, formerly of the Bacon & Sawyer pharmacy, from which he went, not long ago, to accept a government position in Boston, has been ill with appendicitis, necessitating an operation.

—Members of the drug firm of Lynch & Co., East Cambridge, have decided to dissolve partnership. Albert E. Lynch will continue and James B. McMinin and Herman Hawthorne withdraw. Mr. Lynch now conducts three stores in Cambridge.

—Many druggists in Massachusetts, and practically all in Boston, make a general practice of leaving their cash registers open at night. The open drawer can then be examined and its empty condition learned by visiting burglars.

—After a long summer season the Cottage City drug store in Cottage City is closed and the manager has gone to take charge of a New Bedford pharmacy owned by G. W. H. Smith of the Cottage City store.

—James Hayland, a prominent Fall River druggist, is seriously ill at his home in Taunton. His illness has been of some duration, but not until recently was he obliged to give up business.

—Phillip A. Lowe, a Pittsfield druggist, lost \$75 from the cash register through burglars. An effort also was made to force open the door of the safe, but unsuccessfully.

—In Chicopee, the people have been having an Arts and Crafts Exhibition. Among the most creditable displays was that of the Warren-Smith Drug Co. of Chicopee.

—The Norwood Drug Co. has opened its new store in Franklin. Free soda served to all who called during the first few days was a feature which attracted many.

—A new pharmacy at North Adams is to be opened by Charles H. Perron, who has been a clerk for Pinnouault & Co., that city, during ten years or more.

—Officers of Boston raided the drug store of Joseph Wilson, Washington street, and confiscated five gallons of whiskey which they claimed was kept illegally.

—G. B. Moulton, a Danvers druggist, moves into a new store—taking a well-situated place which has been remodelled especially for his needs.

—Louis E. Larose has a new store in Easthampton. Mr. Larose formerly was in business in Nashua, N. H.

CONNECTICUT.

—An unknown youth created quite an excitement at Marwick's drug store, Hartford. The store is entered by two doors, but one of them was closed. The young man approached hastily, rushed up the two steps leading to the door, and, apparently thinking there was another step, put his knee and head through the glass door. Without lifting his head which he had been carrying down in a thoughtful attitude, he backed, entered the other door, walked up to the fountain and coolly inquiring for a glass of vichy. He didn't look at the smashed door or the crowd, but paid for the drink and started out. Then Mr. Warwick appeared. The young man merely turned to the astonished proprietor, said something in a low tone, and walked away, unhurt.

—John F. Griffin of New London, had a hard fight with two drunken sailors in his drug store on Front street. Seeing the men heading for the store he locked the door. The sailors kicked the door. Fearing they would break it in, Mr. Griffin opened it, whereupon one of the men proceeded to kick a new show case into a thousand pieces. The kicker was so hurt by his performance that he was sent to the hospital. His companion was sent to the lockup after Mr. Griffin had a hard tussle with the two men.

—L. M. Royce of Madison, proprietor of the Madison drug store, was fined \$75 and costs of \$13 for selling intoxicating liquors without license or prescription. This is the second time for Mr. Royce. He pleaded guilty and asked for time to get the money. He was put under bonds for ten days.

—Edward H. Allen, son of Architect Allen, formerly of New Haven, was made a defendant today in a suit brought by the City Hall pharmacy of New Haven which claims \$100 damages. Allen, it is alleged, purchased a box of candy and refused to pay for it.

—The pharmacy at Minden, of George L. Ellsbree, who recently failed, was sold to Victor E. Schmelger for \$3,025 after being inventoried, very moderately, at \$5,000.

—Luin B. Switzer, the Southport druggist, has been spending two weeks vacation with his brother in Western New York.

PENNSYLVANIA.

TEMPLE COLLEGE ADDS PHARMACY.

Philadelphia, October 20.—Temple college announces the establishment of a full pharmaceutical course admitting both sexes. The curriculum embraces a full two years graded course, with sessions of nine months each. The entire work is done in the evening. The student attends four nights a week, from 7 to 10 o'clock. The nights are Tuesday, Wednesday, Thursday and Friday.

The faculty is as follows: I. Newton Snively, A. M., M. D., dean, materia medica; Lewton M. Holloway, A. M., Ph. G., theory and practice of pharmacy, and director pharmaceutical laboratory; William C. Carnell, B. S., physics, chemistry, and director chemical laboratory; H. F. Slifer, M. D., physiology; Boardman Reed, M. D., hygiene and climatology; Albert Robie, M. D., bacteriology; F. Simon, A. B., botany and pharmacognosy, and director botanical laboratory. Lecturers and instructors—Mervyn Ross Taylor, M. D., materia medica; H. F. Pfeleger, A. M., M. D., histology; Frederick C. Lehman, Ph. G., materia medica; Linwood S. Carson, Ph. G., physics, chemistry and director microscopical laboratory; T. H. Davies, M. D., botany and pharmacognosy; Walton C. Swinzells, M. D., hygiene; D. Randall Macarrol, materia medica and physiology.

PROSECUTED FOR USING BROWN SUGAR.

Philadelphia, October 20.—The pure food crusade is making much disturbance, discomfort and general uneasiness through the State and just now in the city. Grocers and liquor sellers, brewers and others are being arrested and held for trial under the technical charge of adulteration. The climax was capped this week, however, in the arrest of Robert A. Hance, one of our oldest and most respected manufacturing druggists. The prosecution in this case was straight persecution, his fluid extract of vanilla being the article that exception was taken to. Mr. Hance explained naively to the representative of the commissioner what the adulterant was—brown sugar, added for body. While they admitted that he was right, they claimed that the law was mightier than they, and under this will try and assess him \$50 for "adulteration." The incident has stirred up much indignation.

QUARTET IN A BADLY MIXED FIGHT.

Philadelphia, October 20.—Christopher L. and L. Stanley Dobson, druggists at 6201 Vine street, have a suit for \$4,000 for alleged trespasses, assault and battery and defamation against two defendants, a certain Mr. Miller and his daughter, who in turn have a \$4,000 suit against the Dobsons for alleged assault and battery and pistol threats.

It all was over some goods the Millers had stored on the Dobsons' premises. The Dobsons seem to occupy the best strategical position with reference to the suit just now, as actual witnesses, including a policeman, say that the Millers' charges are unfounded.

OTHER HAPPENINGS.

Three hundred applicants attended the board of pharmacy examination at Philadelphia on last Saturday, at the old Central High School, Broad and Green streets. Severe efforts will be made to make a portion of the next examination absolutely practical and while no plan has been evolved that is satisfactory, yet a method will undoubtedly be devised.

Dean H. H. Meitzer of the department of pharmacy of the Medical College reports a class of over fifty matriculants. The class was organized on Monday night by the election of Tanton Earl as president.

THE SOUTH.

COCAINE CRAZED DRUG CLERK SHOT FRIEND.

Wilmington, Del., October 20.—While riding along a country road Dr. James R. Mahaffy, a veterinarian of Wilmington, was shot twice and seriously injured by Charles Jack, a drug clerk, who was accompanying him on a call. It is supposed that Jack asked the doctor to go into the country when residents heard shots in rapid succession, and saw Jack running away from Dr. Mahaffy who feebly raised his own revolver and fired after him. Jack came to Wilmington where he was arrested. To Chief of Police Black he admitted that he did the shooting, and said that he had been taking cocaine. He added that he was suddenly seized with the idea that he could get a lot of money by shooting Dr. Mahaffy and robbing him, and immediately put the plan into execution. Jack is 24 years old and unmarried.

MARYLAND.

—The business of the Calvert Drug Co., a combination of retailers banded together to buy goods on the cooperative plan, has grown so rapidly that larger quarters have become absolutely necessary. The spacious warehouse at 205 and 207 South Charles street, known as the Parker building, has just been leased for a term of years. The structure has four stories, all of which will be occupied by the Calvert company. The latter will move as soon as some essential alterations have been made. A report that the company would soon abandon its present status for that of a wholesale corporation is denied by Mr. Beck.

—Dr. Joseph Helfman of the Bulletin of Pharmacy, lectured before a large audience at Maryland C. P. The subject was "Biological Products," the remarks being illustrated with stereopticon views. After the lecture, a complimentary dinner was given him at the Carrollton Hotel. Those present included Charles E. Bohne, H. A. Elliott, J. Edwin Hensel, J. Fuller Frames, Prof. H. P. Hynson, Prof. Charles Caspari, Jr., Prof. Charles Schmidt and Prof. Daniel Base, Dr. A. J. Corning, J. Emory Bond and O. W. Smith.

—Those passed the examination held by the State board of pharmacy on October 1: Pharmacists—George H. Krug, Frederick E. Knowles, Alexander E. Muse, William E. Rowens, Ferdinand Uman. Assistant pharmacists—Leonard V. Johnson, William Horace Rames, John Henry Von Duello.

—Among the visiting druggists in Baltimore last week were Dr. T. Dale Stewart, Delta, Pa.; Dr. W. Adams, Wyo Mills; A. C. Jordan, Abbeville, S. C.; S. M. Purcell, Leesburg, Va.; A. C. Richards, Norfolk, Va.; M. F. Ward, Cranfield, and N. C. Cameron, Perryville.

—Prof. H. P. Hynson, of Hynson, Westcott & Co., Baltimore, had as visitors last week M. A. Ruckhardt,

of Akron, O., and Thomas Voegelé, of Minneapolis, Minn., who attended the annual meeting of the N. A. R. D. and afterward ran over to Baltimore for a brief stay.

—Druggist Joseph Bailor, Baltimore, whose affairs were placed in the hands of receivers less than two weeks ago, is reported to be very ill. Grave fears for his recovery are entertained. It is said that bad health contributed to his financial embarrassment.

—Postal substations have been established at the drug stores of John B. Hurtt, Regis B. Laroque, and Joseph W. Chalk, all of Baltimore.

—Druggist J. P. Sullivan, Baltimore, contemplates making extensive improvements.

VIRGINIA.

—Those passed by the Virginia board are announced by Secretary T. A. Miller as follows: Registered—F. S. Anderson, Richmond; W. H. Procy, Harrisonburg; S. M. Roodenp, Richmond; A. Wolberg, Alexandria; W. C. Bryce, Swansboro; W. B. Gillespie, Lexington, and W. G. Cousins, Assistants—A. K. Fletcher, Harrisonburg; S. W. McCune, Richmond; Elmer L. Spittle, Alexandria, and V. A. Brooks.

—W. H. Smith, a well-to-do colored man, has made the latest addition to the drug stores of Richmond, having just opened a well-stocked one in North Second street. Smith is said to be worth not less than \$50,000. This makes three drug stores owned by colored men in Richmond. Dr. Jackson, another colored man, will open a store on Church Hill, January 1.

—Some nights ago thieves entered the drug store of Dr. Ricketts at Orange, and rifled the cash drawer, and helped themselves to whatever else caught their fancy.

—The friends of Luther Ott, a prominent druggist of Harrisonburg, are sympathizing with him in the recent death of his wife. She is survived by four children.

—One of the recent prominent visitors to Richmond was C. B. Fleet, druggist of Lynchburg, who was for a number of years secretary of the Virginia P. A.

—Druggists W. L. Pierce, Gilmore and Lorman streets, Baltimore, is very ill, but appears to be on the mend.

STATISTICS OF THE HOP CROP.

The hop crop is better in the United States this year than last, according to the Crop Reporter of the department of agriculture. In Bavaria, where more than half the German crop is produced, the yield will be slightly larger than last season, while Bohemia, Austria's chief hop provider, has only half its last year's output. Great Britain's production is considerably less than last year. United States the estimate is 280,000,000 pounds for the United States the estimate is 280,000 pounds for the Pacific coast and 100,000,000 pounds for New York, making a total of 380,000,000 pounds against 320,000,000 last year. Great Britain's estimate is 410,000,000 pounds, France's 68,000,000, Belgium's 100,000,000, Germany's 280,000,000 and Austria Hungary's 141,000,000.

NEW PHARMACY COLLEGE IN OHIO.

Cincinnati, October 20. A department of pharmacy has been added by the National Normal University of Lebanon, this State. The dean of the faculty will be Dr. F. H. Frost, State inspector of drugs. The university's well-equipped laboratories will be an advantage to students. The aim is to fit a student for the board of pharmacy examinations in a 18 week course.

AROUND THE GREAT LAKES.

PERSISTENTLY RUMORED.

Prominent Chicagoans Named as Identified With New Wholesale House, "Not Guilty."—Said That Half of Stock is Raised.

Chicago, October 20.—Rumors of a proposed new wholesale drug house continue, but the persons reported to be connected with the matter are for the most part strenuous in denial. Those most insistently mentioned are Mr. Lange of Yahr, Lange & Co. of Milwaukee, and Thomas Andrew Cobb, formerly buyer for Morrison & Co., but now Chicago distributor for several prominent patent medicine concerns, who has his office at 56 Fifth avenue. The manager of the druggists' sundry department of a big house and the Chicago manager of a pharmaceutical concern are also named in one of the rumors, but they deny any permanent knowledge of the matter.

Mr. Cobb said that it was not true that he was at the present time trying to organize a wholesale company, but he believes there is an opening for such an enterprise, and if someone with money will back it he may be glad to identify himself with it. After the Lord, Owen & Co. failure, he said, he was interested in a movement to try and get control of the business and continue it, but the matter came to naught. Notwithstanding all this, several well informed people declare that there is a movement of this kind on foot and that ten days ago half the desired capital stock had been raised.

TO FIGHT CARBOLIC ACID PRESCRIPTIONS.

Chicago, October 20.—The quarterly meeting of the C. R. D. A. will be held today. The adoption of a price schedule will be acted upon. A present perplexity of Chicago druggists is indicated by the following paragraphs from the call for the meeting.

"Carbolic acid to be sold only on prescription? How does that strike you? The city council, at its last meeting, considered this proposition and referred it to its committee on judiciary, which is likely to report it favorably, unless something is done to put the subject before the members of this committee in the proper light. Singly we can do nothing; unitedly we can do everything that needs to be done. Come to the meeting and let us talk it over."

In support of his carbolic acid resolution, Alderman Patterson exhibited figures from the coroner's office showing that four times as many persons killed themselves last year with carbolic acid as with all other poisons combined. The list of suicides was: Carbolic acid, 127; morphine, 9; Paris green, 4; narcotics, 9; arsenic, 1; chloroform, 3; laudanum, 2; strychnine, 2.

R. H. COMMITTEE—BODEMANN—POMPEIIAN VASE.

Chicago, October 20.—A tribute to that Chicago fighter, William Bodemann, president of the board of pharmacy and terror to evil-doers, which helps us to realize the esteem in which he is held by those who have no need to fear, was given him last week. It is—he has named it—a Pompeian vase, with names of admiring friends covering it outside and in. It is a pleasant memento of the "R. H." committee, an unofficial, unquenchable-by-organization of the N. A. R. D. What does R. H. mean? Well, what was it, in common, forceful parlance, General Smith was commanded to do in the wilderness of Samar, P. I.?

PRETTY COMPLIMENT TO MR. BODEMANN.

Chicago, October 20.—Under the head of "Bodemann and Cocaine Law Enforcement," the N. A. R. D. Notes reprinted the article recently published in the Era reviewing the absurd charges recently made against the president of the State board of pharmacy. It also refers to the Bodemann resolutions adopted at the N. A. R. D. This resolution was as follows:

Whereas, our esteemed colleague, William Bodemann of Chicago, in the fearless discharge of his official duties as a member of the Illinois board of pharmacy, has found it necessary to prosecute certain druggists of that city for the illegal sale of cocaine, and

Whereas, he has been abused and villified by enemies thus created, much to the mental distress of himself and his family, and

Whereas, we who know William Bodemann realize how impossible it is for him to be guilty of any dishonest act or be influenced by any motives other than those dictated by rugged integrity; therefore be it

Resolved, that we hereby declare our utmost confidence in him, that we resent any imputation on his honor, and that we pledge to him our support in his fight against the illegal sale of cocaine by unprincipled druggists.

ILLINOIS.

—It is reported that the Interstate Medical Association, successors to C. S. Baker & Co., pharmaceutical manufacturers at Grand Crossing, who recently assigned, and also interested in several large sanitarium projects, has secured an extension from creditors and furnished competent security pending the consummation of a large railroad deal, which is expected to furnish more than sufficient funds to pay all indebtedness.

—Detectives seized a musical clock in the drug store of George R. Mayer, Chicago. A nickel put in the slot causes the thing to play a tune and hand out a check for a soda or a cigar. A lucky person might get a 25-cent check. There was practically no chance about the machine and one was always sure of receiving full value.

—Health Commissioner Reynolds of Chicago, has accepted the resignation of Superintendent W. K. Jaques of the city laboratory. It is expected that Dr. Reynolds will ask that a laboratory superintendent be certified to him. In that event, an examination for that post will be required.

—J. E. Haney, who recently sold his interest in the firm of Hood & Haney at Peru, Ind., and who is to open a new drug store there, is in Chicago buying his opening stock.

—Secretary Frederick H. Kellett of the C. R. D. A., recently married Miss Harriet Schofield. They will reside for the present at 1175 Congress street. Congratulations.

—Hoyt Bros., formerly of Freeport, have moved to Chicago, and have opened at Leeland and Evanston avenues.

—E. S. Wenklin of Phoenix, Ariz., was in Chicago buying goods. So was L. W. Moody of Portland, Ore.

—President O. F. Fuller of the Fuller & Fuller Co., has returned from a vacation in the East.

A Winning Base Ball Team, Supported by Kansas City Drug Firm.

Brightwell & Landes, who have a store at Twenty-third and Olive streets, Kansas City, find it good business to support a baseball team. The nine seen in the accompanying cut plays under the firm name. It is one of the best amateur teams in Kansas City. Arthur Birmingham is captain and John Riley is manager. The team has a record of forty-three out of fifty-three games that it has played with other amateur teams during the last two seasons.

MICHIGAN.

—Ionia county will vote on local option at the coming election and newspaper editors have already sharpened pencils. The Review of Portland says: "The better element in the saloon business has become reconciled to the possibility of the county going dry and these men have already made their plans for the future. Ionia county will have an excess of drug stores. In Portland there will be at least two elaborate new drug stores, conducted by men who are now in the saloon business."

—R. E. Dettindaver, clerk at the store of F. E. Heath, Middleville, selected \$51 in crisp bills from the money drawer while the proprietor was at supper and left for Grand Rapids. Clever use of the Morse code put him in jail at Hastings where he awaits trial. It is probable that he will be dealt with leniently. Mr. Denth regarded him as the best pharmacist ever in his employ and may decide to reengage him. Dettindaver was drunk when he took the money.

—The McDonald Drug Co. has been organized at Kalamazoo, capital \$6,000, and has bought the store building at the corner of Main and Burdick streets. Cornelius Crawford, vice president of the Hazeltine & Perkins Drug Co., Grand Rapids, is president of the Kalamazoo company.

—The last meeting of the old Michigan board of pharmacy will be held at Lansing on November 3 and 4 and Secretary Muir says that there will probably be 75 candidates for examination.

—The drug store of George W. Priest at Pellston was burned recently and little was saved. Net loss will be about \$1,000. The fire was caused by the explosion of a lamp.

—Clinton Joseph, druggist at Quincy, who was burned out in the recent conflagration in that village, has sold his remaining stock to A. T. Mallory and M. D. Greening.

—C. G. Dykema of Grand Rapids, has bought a

drug store at Woodward avenue and Sibley street, Detroit, and will move his family to that city.

—J. D. Woodbeck of Osago, will conquer the cold blasts of a Michigan winter by means of a hot water heating apparatus, just installed at his store.

—H. J. Wilson, clerk at Fairman's, Big Rapids, has bought a stock of goods at Edmore and will open a store in that village.

—The new drug and grocery establishment of Hixson & Brouley has opened for business in the Inglis block at Flint.

—The Van Buren county jail has been dubbed by some cruel, cruel wit as the "Druggists' Home."

WISCONSIN.

—At the monthly meeting of the Milwaukee P. A. on last Thursday it was decided to hold the annual stag party some time in November. It is expected that many druggists from Minneapolis and Chicago will be in attendance. No other business was transacted.

—A. B. Richardson, Milwaukee, has sold his branch store at National avenue and Reed street and also the one near the Soldier's Home. He still retains the main store at Grove street.

—Mr. Showalter, formerly manager for John A. Dadd & Son of Milwaukee, has resigned and has bought the Weissbaum pharmacy, Twelfth and Walnut streets that city.

—Louis C. Meyer, for twenty-two years connected with the drug trade at Sheboygan, has purchased Mablendorf's drug store.

—A. H. Natwick has purchased the interest in the Gold & Natwick store at Soldier's Grove, from Morris Gold.

—Charles Jones has rented one of the stores in the new Beloit hotel at Beloit, and will open a drug store.

—The new village of DeForrest, is advertising for a druggist to locate there.

EDWARD L. BALDWIN.

To the druggists of the Pacific Coast the personality of Edward L. Baldwin is sufficiently familiar, for he has been one of the most active exponents of the policy of co-operation and associations in the drug trade of that part of our country for the last ten years. He was a delegate of the San Francisco and Bay County Drug Association to this year's N. A. R. D. convention, and as he remarked characteristically, he came to Washington "to work, not to talk." He is one of those fortunate men who possess the faculty of knowing just when and where his influence is most needed. At more than one critical point in the deliberations of the assembly and the committees he succeeded in turning threatened discord into complete harmony. He has great confidence in the benefits to be obtained from the new agreement between the proprietary manufacturers and the N. A. R. D. He believes the association is at the beginning of a new era. In one of his speeches he remarked, "The N. A. R. D. had reached a critical point, but the tide has now turned and the future promises only prosperity."

Mr. Baldwin was born in Geneva, Ohio, and began the struggle with the world on his own account at the age of seventeen. He worked his way through the Spencerian Business College of Ohio and taught penmanship for two years. His first acquaintance with drugs was made in the employ of Frank Hibbard, Ludington, Mich., and after five years he was ready to begin business for himself, the first field of operations being in Free Soil, in the same State. Failing health drove him upon the road, and several years were spent in traveling in the West for various drug houses in Detroit. In 1894 he purchased the Ferry Drug Co. in San Francisco, and has since built up a very satisfactory retail trade, besides manufacturing a profitable line of remedies.

Ten years ago Mr. Baldwin was elected secretary of the Retail Druggists' Association of San Francisco, an organization which contained a commercial section to devise ways and means for meeting the cut-rate evil. This movement developed into a co-operative manufacturing business, and later led to the formation of the San Francisco Drug Exchange, a buying club which achieved considerable success, but which has, since a

more satisfactory understanding with the wholesale dealers of the city has been reached, been suspended. Both of the enterprises were entrusted to Mr. Baldwin's care. In the formation of the San Francisco and Bay County Association, affiliated with the N. A. R. D., and its successful fight with the cut-rate evil, he bore an active part. He is now vice-president of the association.

CALIFORNIA.

—Mr. Kelly of Kelly's drug store, Nome, has achieved distinction for his gallantry in protecting a woman from an enraged mining millionaire who so far forgot himself as to strike her in the face. Charles D. Lane, well-known for his money and his mines, involved in trouble with Miss Lena Walton over rival claims, disputed one afternoon in Mr. Kelly's store. After a few heated words, Lane struck the woman. Kelly immediately interfered and prevented further trouble. Lane repented, was arrested, pleaded guilty, paid a fine and went his way.

—The California press has begun to agitate the question of growing licorice in this State for commercial purposes. The demand for the product is shown by the fact that last year the United States imported over \$1,500,000 worth. The root grows well in California, and at one time there was a flourishing patch of it on cotton land at Florin in Sacramento county. The plant above ground resembles alfalfa. It is pointed out that the demand for licorice in the United States is on the increase. In 1901 the imports amounted to but \$800,000. —In the state board of pharmacy there are still two vacancies which Governor Pardee has not yet filled. The name of Mr. Sutherland of the Grant Drug Co. is mentioned in connection with one of the vacancies.

—The San Francisco R. D. A. has not given up its endeavors to effect a State organization. At present this is one of the main subjects before the association.

HEARD IN IOWA.

—Schneider & Green have bought out Fred W. White at West Union. S. G. Cogswell, proprietor of the Dr. Baker Drug Co. of Des Moines, has sold his stock. L. M. White of Quasqueton, has sold to W. Biddinger. G. Vanderburg has succeeded J. H. Holihan at Hull. —Otis Hamm and Charles G. Willis of the Early Drug Co., Early, have dissolved partnership, Mr. Hamm retiring. C. C. Reid, who has been connected with the store during last spring, will remain as manager.

—N. P. Kauntberger of Bondurant, has sold. Irwin Tuttle & Co. succeed W. J. Spaulding & Son at Des Moines. A. M. Westveer of Lake City, has sold to the Wilson Drug Co.

—George Woodcock and Murl Hibbard have bought the store of Dr. E. D. Morrison & Co., at Valley Junction.

—F. S. Shadle of Luverne, has sold to W. H. Worts & Co. Frank Mains of Menlo, has given a bill of sale.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories.
Twelve Teachers. Thorough Course.

NEXT TERM BEGINS JANUARY 4, 1904.

Address Inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

J. G. KILBURN, NEWTON, MASS.

1871 he was registered in New York City. After owning and selling several stores, he settled in Newton.

Massachusetts may be said to be as completely organized as any state in the Union. The State association, of which Mr. Kilburn is a vice-president and a live worker, is also a staunch friend of the N. A. R. D. Mr. Kilburn was born in Boston in 1846. He clerked first with S. E. Stone at Walpole, then with Gilman Bros., Boston; Weeks & Potter, Boston. In

A BUSINESS THAT PAYS.

Wonderful Growth of the Late Dr. David Kennedy's New Business—Fair Dealing Pays.

Forty years ago, and for years thereafter, the name of Dr. David Kennedy of Rondout, N. Y., was known among druggists and newspaper proprietors as the synonym for fair dealing and prompt payment. To-day the same enviable reputation attaches to the Cal-Cura Company of Kennedy Row, Rondout, N. Y., the successor of Dr. David Kennedy in the manufacture and sale of his latest proprietary medicines. Dr. Kennedy was one of the pioneer great advertisers of proprietary medicines. His "Favorite Remedy" was long a leading seller and was favored by druggists on account of the fair treatment they always received. After building up an enormous business, Dr. Kennedy sold a controlling interest in the enterprise to other stockholders in the Dr. David Kennedy Corporation, retaining only a one-third interest himself. After serving several years as the president of this corporation, Dr. Kennedy was deposed from the presidency and all active connection with the concern. Of the legal complications that followed it is not within the province of this article to treat, further than to state that although a determined effort was made to prevent Dr. Kennedy from again embarking in business, it was unsuccessful.

Although Dr. Kennedy was a man of large means, one of the heaviest owners of real estate in the city in which he resided, prominent in social and political affairs, he could not enjoy life without work. He had been a presidential elector, twice mayor of the city of Kingston, of which Rondout is a part, and was a director in two of the leading banks of the city. But this was not enough to keep his vigorous brain busy, so in 1858 he placed upon the market his new line of medicines, consisting of Cal-Cura Solvent, Herculine Tonic, Cal-Cura Pills, Evening Ointment, Ocelline Balm, Epidermal Soap, Rose-cura Oil, Cal-Cura Plasters and Coughline Syrup.

From its inception, the new business was amply capitalized and Dr. Kennedy set out to make it a model of its kind. The services of Mr. John McCann of Amsterdam, N. Y., were secured to place the goods personally with the druggists and so satisfactory was his work that he still heads the corps of travelling men employed. Careful attention was given to newspaper advertising, and while no extravagant use of space was made, every line was made to tell. The interests of the trade were safeguarded. All druggists were treated

alike. Every advertisement urged purchasers to patronize their local druggist. Window displays, pamphlets and free samples were furnished in liberal quantity. Advertisements in local papers bore the name of local druggists. The medicines themselves were safe, harmless and beneficial. Any pharmacist or physician acquainted with the formulas would endorse them. All bills were paid the day they were received.

The result was that everybody was anxious to deal with Dr. Kennedy. The business grew apace and the territory was gradually extended. When Dr. Kennedy died, on August 5, 1901, the business was such a good thing that his heirs did not feel justified in abandoning it. The Cal-Cura Company, composed of Dr. Kennedy's immediate family, was organized. One of his sons is the president of the company. Another is the vice-president. They regard the business somewhat in the light of a memorial to their father, and take pride in carrying it on along the lines established by him. The volume of business has doubled annually since the Cal-Cura Company has been in charge and the Cal-Cura Company stock is a good thing to have—so good that there is none on the market. The company occupies Dr. Kennedy's office and laboratory in the Kennedy Row, a long row of connected buildings that is the property of the Kennedy Estate. There the medicines are manufactured, packed and shipped, and there the business offices of the Cal-Cura Co. and the other interests controlled by the Kennedy Estate are located. The success of the business is a standing proof that fair dealing pays and that druggists, as well as the general public, stand by those who treat them fairly.

Mixed Spices.

Cureuma	1/2 ounce
Cassia	1 ounce
Cloves	1 ounce
Mace	2 ounces
Cinnamon	2 ounces
Pepper	2 ounces
Coriander	8 ounces

Mix and reduce to a moderately fine powder.

Tetter Ointment.

Calomel	2 drams
Dried alum, powdered	2 drams
Lead carbonate	2 drams
Oil of turpentine	2 ounces
Simple cerate	1 1/2 ounces

Transparent Capping Fluid for Bottles.

Colophony (resin)	20 parts
Ether	40 parts
Collodion	60 parts

Dip the heads of the bottles, suitably corked (if desired a tag or label may be pasted over the cork) into the varnish, which dries rapidly and leaves a beautiful transparent coating.

SPECIAL OFFER ON
CALCURA SOLVENTDr. David Kennedy's Latest Kidney
and Liver Medicine.

For thirty days, ending on November 7th, we will give to all retail druggists one free bottle of Calcurea Solvent with each dozen they order of their wholesale dealer, providing, each druggist thus ordering will make a window display of the said goods and distribute from their store free samples of Calcurea Solvent and advertising matter. On two dozen orders they will receive a per cent discount.

Simply send us your order, together with the name of your wholesale dealer through whom you would like the goods shipped.

The free goods, samples and advertising matter will be sent direct from our office, all charges prepaid, even the postage to your store.

OUR ATTRACTIVE WINDOW DISPLAYS, LARGE SIZE SAMPLES AND MOST EFFECTIVE ADVERTISING ALWAYS CREATE A STRONG AND STEADY DEMAND FOR CALCURA SOLVENT.

NOT A PLEASANT THING TO CONTEMPLATE.

Startling facts have been brought to light concerning the taste of Utah women for alcoholic liquors as a result of a canvass of the soda clerks in drug stores by the Salt Lake Herald. It was learned that at fountains where it is generally understood that no liquors are served, no less than fifteen per cent. of the women who call for drinks there, ask that a little liquor be mixed in. At other fountains where spirituous drinks are openly sold, nearly fifty per cent. of the women patrons indulge in fancy drinks that contain liquor. This indulgence, according to the statistician of the Herald, is more prevalent with the highest class of people.

OUR CANADIAN LETTER.

- H. A. Wise & Co., druggists, Winnipeg, have moved into their handsome new establishment in the McIntyre Block. The interior fixtures are all of golden oak.
- The F. Woodhull Co. of Hartney, Man., have increased the size of their drug store, doubling its capacity.
- The drug commission house of Pierrepoint & Carter, Winnipeg, has gone out of business.
- B. M. Canniff, Portage la Prairie, Man., is advertising his business for sale.

MARKET STEADY AND FLUCTUATIONS WITHIN NARROW LIMITS.

New York, October 20.—With very few exceptions the fluctuations in values during the past week have been within narrow limits, but in a general way the movement into consuming channels has continued satisfactory to dealers and the tone of the market is steady.

OPIMUM.—Lack of important demand and cable reports of weaker primary sources have caused an easier feeling in the local market but jobbing prices are maintained at the old range of \$3.40@3.65 for 5 per cent, and \$3.50@3.75 for 11 per cent. Powdered is moving moderately in small lots at \$3.40@4.50 for 13 per cent, and \$4.80@5.00 for 16 per cent.

MORPHINE SULPHATE.—A continued steady jobbing movement into consuming channels is reported with quotations unchanged at \$2.60@2.70 for eighths in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.30@2.40 in 5-oz. cans.

QUININE SULPHATE.—Contrary to general expectation there has been no change in manufacturers prices but the tone of the market has continued strong under the influences noted last week, and dealers are still looking for an early advance. Meanwhile there is a good steady jobbing demand which is being met at the old range of 25@25½c. for bulk in 100-oz. tins, 25½@26c. in 50-oz. tins, 26@26½c. in 25-oz. tins, 27@27½c. in 15 or 10-oz. tins, and 32@32½c. in ounce vials.

MENTHOL.—An advance in the import cost has caused a firmer feeling among local dealers, and quotations for jobbing quantities have been marked up to \$7.75@8.25 per lb. and 62@67c. per oz. according to quantity and seller.

PEPPERC.—Rio is decidedly stronger in sympathy with cable reports of an upward movement in the London market, and local jobbers have advanced quotations to \$1.85@2.10 for whole and \$1.95@2.20 for powdered according to quality and quantity.

SARSAPILLA.—Mexican is firmer owing to scarcity and quotations for jobbing quantities have been marked up to 25@30c. for whole, 27@32c. for cut or crushed and 30@35c. for powdered.

BALM OF GILEAD BUDS.—Spot supplies are steadily diminishing and holders have advanced quotations to 45@55c.

FINCHORN ROOT.—Values are firmer owing to scarcity and the revised jobbing quotations are 45@50c. for whole and 55@60c. for powdered.

MANDRAKE ROOT.—A decidedly firmer feeling is manifested on the part of dealers owing to light available supplies and stronger markets at producing points, and jobbing prices show an advance to 15@19c. for whole and 19@21c. for powdered.

JAPAN WAX.—Primary markets are ended higher and jobbers have advanced spot quotations to 21@25c. as to quantity.

ALCOHOL.—4-gram is higher in sympathy with the stronger market for corn and jobbing quotations show an advance to \$2.47@2.48 by the bbl. and \$2.50@2.70 for less. 40-grass is held at \$2.40@2.50 by the bbl. and \$2.60@2.75 for less.

CANARY SEEDS.—Jobbing quotations for coker have been reduced to 36@37c. for 12-lb boxes and 40@45c. for smaller quantities.

CLOVES.—A continued strong market is reported with whole held at 16@18c. and powdered 20@25c.

BUSINESS NOTICES.

THE ERA DRUGGISTS' DIRECTORY—A NEW EDITION.

The 10th revision of the Era Druggists' Directory is now ready, and we can announce confidently that it is the best edition we have yet offered.

In addition to the many features which have made the Directory the standard work of its kind in this country, the new revision includes a complete list of the druggists in Costa Rica and a list of the principal drug stores in Chile, Peru, Bolivia, Ecuador and Colombia.

The list of retail druggists in the United States shows a slight falling off, and does not quite reach the 40,000 figure which the last edition showed, but this is made up by increased numbers in Part III. (Manufacturers, Jobbers, etc.).

This Directory will be found invaluable to any merchant or manufacturer who does business with the trade. It is not only a work of reference which should be in constant use, but for sending out circulars to the trade there is, so far as we know, nothing like it published. It is sold only by subscription, and until further notice the price will be \$5.00 per copy, net, postpaid.

The edition is limited, and we are obliged to reserve to ourselves the right to raise this price at any time.

A HELP IN PRESCRIPTION WORK.

There are a great many things that the average dispenser can't remember, and there are as many more that he shouldn't try to remember—it isn't safe. These things come up in prescription filling when time is an important factor and accuracy is strictly essential. There are questions about dosages, dose equivalents, percentage solutions, specific gravity, incompatibilities, metric and thermonetric equivalents, meanings of Latin, French or German terms. These things are all tabulated, or figured out, handy for instant reference, in the Era Dose Book (Third Edition, Revised and Enlarged). Price 50 cents, postpaid.

EDITORIAL COMMENT

THIS WEEK'S PRICE LISTS.

The price lists which swell the bulk of the present issue, offer little opportunity for the historian or paragrapher. They are not subjects for conversation or speculation, but, like the artisan's tools, are valuable for the work they aid in performing rather than for qualities inherent in themselves. They are essentially useful and as such deserve all the space they occupy. There have been no remarkable changes since our last price list edition, but such alterations in detail as are noted are precisely those which the druggist requires to know. The drug and chemical list has been augmented by perhaps more than the usual number of additions. The production of new medicinal chemicals goes on apace, and there are as yet no signs that this popular industry has reached its highest development. It is one of the many trials that tend to cover the poor druggist's head with premature streaks of gray. The prices are, as a rule, slightly higher than those of six months ago which is quite in accordance with the tendency of the times. Pretty much everything we need has gone up except stock in the big trust, and most of us get along fairly well without that. The prices in the proprietary list have not advanced and there have been no additions of a startling nature. The new preparations are mostly of a kind already fairly plentiful, tonics, laxatives and antiseptics. There are nearly as many proprietary medicines on the market as there are drug stores in the United States. Some of them perhaps fail to yield expenses, but there are others which are as remunerative as the mines of King Solomon ever could have been. The ability of each of this vast number of substances to find some satisfactory application to the comparatively small body of one animal, and that the human animal which is so very similar under all conditions and circumstances, is one of the marvels of the age.

ATTENDANCE AT ASSOCIATION MEETINGS.

It is a comparatively simple matter to effect the organization of local pharmaceutical societies, but to keep the flame of enthusiasm from gradually flickering out requires constant nursing and frequent additions of fresh fuel. Almost every pharmacist believes in associations in the abstract and is willing to give "the good work" the benefit of his name, but when

the movement makes any considerable demands upon his time and energy, he is apt to find it too much trouble. The chief difficulty seems to lie in the very small amount of leisure at the druggist's command. The store usually draws so heavily upon his resources of body and mind that attendance at society meetings becomes an added burden instead of the recreation which it should be. Unless the session offers something to arouse his interest in spite of tired nerves and muscles, he is likely to seek his rest elsewhere. How to inject into the weekly or monthly meetings features which will make them attractive is a problem which troubles all association leaders to a greater or less extent. The difficulty is not a new one, and no sovereign remedy has ever been found. When scientific societies were in vogue, the rank and file complained that professionalism had no attractions for the average druggist whose waking hours were devoted to a struggle with matter-of-fact affairs. The cry for more "practical" papers and informal discussions of business problems was the result. Numerous organizations were formed on new plans which eliminated the precocious student and exalted the successful salesman instead. But even substantial financial interests have failed to keep some of the most important of these associations in flourishing condition. The Kings County Society and the Manhattan Association of this city have very respectable assets and number their members by the hundreds, yet it is difficult to secure a regular attendance of more than a dozen or two, and this condition probably prevails elsewhere. It is now proposed to add other features, entertainments in the form of music, amateur literary and dramatic art, etc. Whether they will have the desired effect will depend upon many things. If the entertainments are good and the members are fond of social pleasures it may swell the attendance to a respectable figure. The German Apothecaries Society has by similar means created a solidarity among its members which is the envy of neighboring organizations. It should, however, be borne in mind that all people are not as happily constituted as the Germans who are peculiarly fond of semi-public social gatherings. Moreover the only natural and reliable bond of interest between pharmacists is and should be pharmacy. No doubt each association has its own symptoms and requires its own peculiar treatment. Some will need more papers on scientific subjects and others music and fun-making. The main thing is to make a determined search for the difficulty and an intelligent effort to correct it.

BIOLOGICAL REMEDIES IN DRUG STORES.

In view of the great importance of biological products in the more recent developments of medical science, the indifference to the trade in these preparations shown at a recent meeting of the King's County Pharmaceutical Society is somewhat surprising. It is the duty and privilege of the pharmacist to furnish the remedies required by the physician in the treatment of disease. Is he content to step aside and allow someone to perform this duty in his place? The principle of counteracting poisons formed in disease by antidotes produced by the animal body itself is apparently applicable to every important malady, and medical research is now devoted very

largely to a search for these naturally formed specifics. A large portion of the pharmacists' revenue is derived from the sale of remedies for a few important diseases, and an extension of serum therapy to all of these diseases is possible if not probable. In the treatment of diphtheria with antitoxin little or no medicine is required beside the one or two doses of serum administered. A common disease which formerly required frequent and repeated calls upon the pharmacist now makes very slight demands upon his services. If serum therapy is to have a like effect upon other diseases, we may then expect to see the vegetable and mineral drugs of the Pharmacopoeia in some measure replaced by these animal products. In that case, what becomes of the dispenser who is not prepared to supply the few but indispensable remedies employed by the physician? Medical progress, in which pharmacy has borne an active part will have passed him by. If the pharmacist is to maintain his important position, he must be prepared not only to furnish all remedies needed by the physician, but also to guarantee their quality and strength.

ANOTHER "SECRET OF SUCCESS."

All great men have of late been affected with a spirit of generosity and have very kindly been giving young men private tips on the best methods of getting on in the world. Carnegie, Hanna and a score of others have divulged their pet "secrets of success" and have told the boys how it should be done. The latest to be added to this list of eminent men is Dr. Brundage. The Brooklyn doctor's formula for getting the things that everybody else is also trying to get, is a bit complicated but it may be summed up about as follows: To succeed one must have ability to accomplish results, energy to make use of the ability and economy so that the energy and ability will not be wasted. This secret lacks the brevity of some others, but it has the quality of comprehensiveness, and seems to be very satisfactory as secrets go. Still, if it could have been boiled down into a little smaller compass, such as that occupied by the word "work," for example, it might have been a little more convenient for daily use. As it is, we fear that it will never make many millionaires, for although many more factors are taken into consideration than in some rival secrets, still there is one rather important factor missing. If these kind gentlemen who are so generous with advice would only add the one essential factor always omitted, opportunity, a whole generation would arise and call them blessed. For what is the use of ability and energy and economy, when we lack the opportunity of turning them into cash? We have been told by these same gentlemen that great men make their own opportunities, but we still believe with Thackeray, who also knew something of life, that "The race is not always to the swift nor the battle to the strong."

OPPOSITION TO PURE FOOD LAWS.

We have on several occasions predicted that the regulation of the impure food and drug question in this country would present extraordinary difficulties. Among people who are accustomed to having their affairs regulated by arbitrary and peremptory authority the obstacles to be overcome are sufficiently serious

ious, but Americans resent interference of any kind not directly supported by popular sentiment, and the rigid application of scientific tests to articles of which everyone considers himself an excellent judge is bound to create no end of friction. A national law governing the importation of adulterated and falsely labelled foods and drugs has now been in force only a few months and the excitement has already begun. The importers object to the manner in which the provisions are enforced, and are trying to have the inspection of foods placed under the jurisdiction of the Department of Commerce. They claim that there is a ring in the Department of Agriculture bent on getting control of the machinery of enforcement, with the purpose of building up a large bureau with an army of clerks and officials, and that members of Congress are urged to support the scheme in order to have a share in the patronage. They further claim that they were not given sufficient opportunity to oppose the measure which is now a law, and will make an effort to modify the proposed Hepburn Bill so as to enable them to escape the annoying inquiries of Dr. Wiley and his staff. All of which might have been expected. The importers feel abused and will have no difficulty in making other people including members of Congress agree with them. A powerful lobby will be in readiness when Congress reassembles and every effort will be made to defeat the purpose of any pure food and drug bill presented. When it is found useless to attempt to block the entire movement the fight about the question of standards will begin. The movement to transfer the bureau of inspection from the Department of Agriculture to the Department of Commerce is not likely to rid the importers of much annoyance, for it is quite probable that if a change of this kind could be effected, Dr. Wiley would also be transferred because of his great experience in dealing with the problem.

THE MILES PLAN. A CONVINCING ARGUMENT.

An incident which occurred in this city during the past week, explains in a curious way the attitude of certain portions of the trade toward the N. A. R. D. and plans for correcting evils of trade. A prominent druggist sent an order for Miles' goods through the usual channels, expecting a prompt delivery as a matter of course. A day passed and the order remained unfilled. What could be the matter? The firm's credit had never been questioned, and no favors had been asked. Why did not "the money bring the goods"? He had, of course, heard of the contract scheme before, but had never taken much stock in it. After several days he discovered to his surprise that it was actually impossible to get the goods without signing the contract. Now this gentleman, who is not one of the apathetic kind, but a fair type of the astute wide-awake New York business man, is convinced that the direct contract and serial numbering plan is a wonderful institution. The object lesson accomplished at once what hours of haranguing and car loads of literature failed to do. To be sure, the journals had contained accounts of the plan and its success, but journals, like association orators, are always "talking through their hats"; but this practical demonstration was an entirely dif-

WALTER H. GALE, Chicago, Ill.

ferent matter. He had actually been refused the goods, and there must, therefore, be something in all that talk after all. If a plan could have a real practical effect it could be not merely another one of those association resolutions which sound so well and promise so much but commonly have no influence whatever on real commercial transactions. What a commentary on the character of association work and trade journal literature! We are actually expected to keep on saying things that mean nothing at all. Can we wonder that object lessons are necessary, when even our friends take for granted that we are merely talking for effect?

CLASS A. AND CLASS B.

We wonder how many of our readers have noticed that in classifying wholesale druggists into divisions A and B, the gentlemen of the N. A. R. D. have been following a plan which has been in use in the Éra Druggists Directory for the past two years. The Directory also distinguishes wholesale dealers who act purely as intermediate distributors from those who in addition conduct a retail business, but it goes a step farther in again separating the latter class into mixed dealers designated B and a class C composed of druggists who are practically retailers but have a "small jobbing outlet." Whether this similarity in classification is merely a coincidence or not makes very little difference. If, for commercial reasons, it is found expedient to divide wholesale druggists in this way, it is obvious that in adjusting their relations with retailers, a similar division must also possess advantages.

Honesty in Advertising.

Honesty—uncompromising honesty in the smallest things as well as in the largest, is the only foundation on which permanent success can be built and the honesty of the store must be reflected in its advertising.—Show Window.

SHOP TALK

ON BEING "DEAD SURE."

"I agree with Mr. Schumacher," said the druggist. "If you wait until you are 'dead sure,' you'll save the cost of many a mistake. His secret of success is a good thing to paste inside your hat."

"It's a mighty good thing to be sure you're right before you go ahead—if you can," replied the C. P.

"How many sleepless nights I might have spared myself, if I had only adhered to that policy," continued the man of drugs with a sigh. "And those figures in the bank might have been quite different."

"Yes, you have made lots of blunders," said the sage. "Anybody can see that, now."

"What do you mean? Yes—ah—of course—everybody does, you know! You are right; I have made a lot of them. Look at that row of proprietaries on that shelf—dead loss! And if I had only gone slow on a hundred other things; That fountain over there—this store building, the fixtures, the location, that partnership twenty years ago, my studying pharmacy at all when I might have studied medicine. It sometimes makes me sick to think of it all."

"You have company in your misery. I have also made a few, but I no longer worry about them. That's the advantage of being a philosopher or having a good digestion—I can't make out the difference. I dare say old man Pillem wish that he had made a little more 'dead sure' before marrying that young

"Oh, well! That has nothing to do with the case. I am speaking of it as a business policy."

"To be sure—to be sure!" mused the sage solemnly bobbing his head. "You can't apply it every where; but in business the dead sure thing is all right—that is, for old men."

"Why old men? A young fellow needs that sort of thing more than one of longer experience. He is a heap more likely to make mistakes."

"He has the time."

"I believe the sooner he gets at it the better."

"That's it, precisely."

"Do you believe in making mistakes?"

"I think with President Roosevelt that it is better to make a few mistakes, or even a great many of them, than to do nothing at all."

"Ah, but that's another matter entirely."

"It all amounts to the same thing. The 'dead sure' policy is all right provided that you have something to be 'dead sure' about. The trouble is that most of us would have to wait too long. If the average man were to stand around until he could start on a deal certainty, the day would be pretty well spent before he could get at it. In most lives there would be very little sense in beginning at all. Most of us accomplish little enough as it is."

"More would be done if so many didn't go off half-cocked."

"Better to go off half-cocked than to hang fire until the game is out of sight."

"(Still) it is well to be pretty sure of your aim. Besides, success in life is no four-footed animal nor bird."

"It is more elusive than either. It is not everybody that has the faculty of seeing the game. And then there are so many slips when the aim is fairly good. Even the best shots miss occasionally, and I believe they could feel fairly certain they must have fired wide a number of times. The main thing is to keep at it—find your game and blaze away. The young fellow who is too saving of ammunition in the beginning is not apt to have much to be 'dead sure' about. It's time enough to begin economizing on powder when you have a pretty good bag."

"Still, it is the cool calculating fellow who figures on all sides of a proposition that usually succeeds in life."

"That is another thing entirely. Be as sure as you can, is a different proposition. The trouble with your 'dead sure' theory is that it removes all elements of chance, and that can not be done. You've got to take chances."

"All business is not speculation. You talk as though it were all a matter of chance."

"Oh, no! Quite the contrary. It is mostly a question of hard work. I am inclined to think that that has more to do with it than cool calculation. The greatest successes came mighty near being failures at one time or another. The margin is uncomfortably narrow some times."

"There are lots of safe investments."

"There are no dead sure things in this world. The element of chance—or uncertainty, if you prefer—is everywhere. And the most uncertain of all is the human animal himself."

"Nonsense! Given a fair start in the matter of parents, and a boy will just about fit the conditions in which he is placed."

"But you can never be certain of conditions. Nobody can tell what a boy is going to amount to, and he himself least of all. He has got to take all sorts of chances, and mistakes are the only 'dead sure' thing."

"He can be sure of one thing—work."

"It will take him years to find out his own capacity for work. As a rule he will allow circumstances to choose his life-work for him. If he studies pharmacy, he will have to take chances on whether he is cut out for that sort of thing, and whether he will find it worth while after he enters it. When he goes into business it is the same way. He must risk his all with the rest of them."

"Well, as a rule he has nothing to lose at the start."

"That makes it a little easier, doesn't it? He has little or no capital, and time to try again if he fails."

"But after the time begins to get short, or when his pile is respectable he can't afford to take the risk."

"Ah, there you have it! The cautious policy, the 'dead sure' policy, is the policy for the man who has more to lose than to gain. When he gets old so that he is compelled to make every minute count, and his agility is not what it used to be, he had best go a bit slow. But the most cautious individual of all, is he who has accumulated a bigger pile than the other fellow. He has much to lose, and can afford to stand pat."

SYRACUSE DRUGGIST WORKS DOG OWNERS.

"Few druggists pay enough attention to remedies for dogs and other pets," said a thoughtful Syracuse druggist recently. "A friend of mine who is a great lover of dogs recently put me wise, and I have taken more pains ever since. He told me that he went into a certain store and asked for a well-known cure for mange, saying that his dog was troubled with the disease. The proprietor smiled as if it was a joke and began to hunt for the remedy which he found after a lot of trouble, on a top shelf covered with dust. It was the last bottle he had left. Now a dog lover labors under the belief that his dog is one of the family, and he doesn't want him insulted in this way. It would please the owner better to see a section of shelves devoted to dog remedies and a placard stating that fact. A person who does not own a dog—and there are many—has not the least idea of the affection a dog lover has for the beast. Incidentally, I might

remark that dogs show almost a human affection for their owners.

"One of our Syracuse druggists is certainly up to snuff, as he went to the city clerk, got all the names of dog owners who took out a license in the city and sent each owner a pamphlet on dog diseases, telling them where they could find the remedies. Now that policy draws trade, for the dog owner will not only patronize the druggist for dog medicines, but his respect for him increases several fold, and he will be likely to go there when he wants anything else in the line of drugs."

THEY PUT UP A JOKE ON BANDERWELT.

"Ikey" Banderwelt—that isn't his name—is a traveling salesman for a drug house. One day he heard that the manufacturer of a certain well-known toilet powder was about to get out a new box. A Sunday or two afterward he was at home with his baby and his camera. And while the baby was posed in various cunning positions the camera shutter worked industriously.

One of those pictures was, to use Banderwelt's expression, a "Jim dandy." Why not send it in to _____ for his powder boxes?" Banderwelt thought. He did so, and it was accepted.

When the boxes appeared, Banderwelt, thinking something was due him, asked for a couple of hundred dollars. He was put off. After a while his resourcefulness showed itself. Wishing to move, he rented one of the powder manufacturer's houses. Then, in a couple of months he wrote to the manufacturers, suggesting that the two months' rent—which he hadn't paid yet—would conveniently fix up the pay for the picture. A letter from a lawyer warned him that if he didn't pay he would have to get out. He proposed a compromise, writing back that, as the house needed calcimining, if that were done, he would be content. The manufacturer was willing.

But the boys at Banderwelt's office knew about the affair. They got together one day, and, a particularly waggish New York state man at the pen, wrote the following to Banderwelt, on one of the manufacturer's letter heads:

"Dear Sir:—I have decided to calcimine the house with a preparation made chiefly from my talcum powder. Therefore, when you want to powder baby after his bath, you can rub him against the wall."

A CIGAR TALK.

"A successful druggist has pretty nearly got to make himself capable of running a department store," said a member of the Syracuse D. A. recently. "Now take the cigar and tobacco end of it. A lot of money can be made or lost at a cigar stand, and if a druggist has one in his place he must know how to run it. The day is past when a man comes in and asks for a cigar, lays down his money, takes what is offered him and gets out. He asks for a name of a particular brand, and if you don't keep it you lose his trade.

"The taste in cigars varies, and the druggist has got to keep in line. Just now there is a great call for clear Havana goods. There is many a druggist who don't know a Key West from a domestic cabbage leaf and he had better wake up. If he don't understand his business the hundred and one drummers on the road will wreck him. He must judge whether his trade lies among working men; if so, too many trust goods must not be displayed. If his trade is among a different class they probably want clear Havana and high-grade domestic cigars, and do not care whether they are trust or anti-trust."

COMPETITORS OF THIS DRUGGIST WILL NEED AN AIRSHIP.

Druggist C. A. Sexton of Perth Amboy, N. J., who is responsible for the puzzle advertising scheme recently described in this column, does not believe in traveling the beaten path. His latest advertising medium is the atmosphere above and about his town. "Every night at about 7:30," says Mr. Sexton, "I

GEORGE D. CASE, Milledgeville, Ga.

send up a balloon bearing a tag with the information that whoever returns it to the store will receive a prize. A different prize is given each night. About seven o'clock children and grown people begin to flock to this neighborhood to see the balloon go up. People all over the city look for it every night and tags have been returned from distant points. I consider it one of the best ads I have ever tried."

THE DESIRED EFFECT.

L. C.—Q. Is strychnine good for the complexion. I was told that sixteen grains would make a person very white.

A. Yes; sixteen grains will make a person very white, unless there is a doctor convenient with a stomach pump.

NOTHING TO REPLACE PRACTICAL EXPERIENCE.

Watertown, S. D., October 3.

To the Editor:—I do not think there is anything that will take the place of, or can be substituted for practical drug-store experience. However, I believe the State should exercise control over apprentices—first, by requiring them to register, only after they have given satisfactory evidence as to their qualifications, and preliminary education; second, by exercising supervision over the kind of experience they obtain.

The time required by most States is only a safeguard thrown out to protect the public against incompetent persons, mostly as to preliminary education. Raise your requirements as to preliminary education and the necessity of a long term of actual drug-store experience is diminished. Yours truly,

D. F. JONES.

English Pharmacy in Lucknow owned by W. C. Kidd.

A WORD FROM INDIA.

Anyone May Sell Drugs, and Need Not Care Whom He Kills—Customs of Druggists and Conditions of Trade as Related by R. R. Martin of Bombay.

Pharmacy in India—the word is misapplied, but there is none better—as well as trade conditions and features there were interestingly described recently to an Era man by Robert Rowlette Martin of Bombay, India, representative in the Far East for Frederick Stearns & Co., Detroit.

Mr. Martin is well-known to many New Yorkers, as this has been his home, and during his brief stay here his room at the St. Denis was a gathering place for many friends. It took him months to get here, ship after ship becoming disabled, until Mr. Martin might, by a superstitious sailor, be called a Jonah, and he had the novel and not altogether pleasant experience of being shipwrecked for three weeks on an out-of-the-way island of the Maldivie group in the English Archipelago, Indian Ocean southwest of Ceylon.

But he is on the way back to India now, via London, Paris, Marseilles, and, of course, Suez.

"The East," said Mr. Martin, "starts at Suez. Once the traveler reaches Suez he immediately enters a different life. Conditions of transportation change, and henceforth, he be bound for Yokohama, Australia or any port in India he is allowed to take along one or more native servants without extra transportation charges.

"Life in the East? Well, you know, that is a very wide subject, but I will try to give you a little insight.

"First of all, business is done in the early morning hours. Generally my broker, my servant and myself leave the hotel at Bombay at six; of course you know it is daylight there at four. We drive down, reaching the bazaars in about thirty minutes.

"These bazaars are all side by side, and vary in buying capacity only. But there are no secrets between them. You small dealer gets the same business as the big one. Price cutting? I should say so! But these things naturally adjust themselves, without harm.

"By eleven in the morning we have visited the leading buyers and received assurances that something is going and that if I can come down tomorrow they will tell me when I may come down again. From one to the other as they stand side by side, you have gone, and found them all wholesale and retail, each with a story to tell. Each has a talk about how the hot cure of wine or cold beer or only contained ten bottles, how the anti-typhoid headache cure, how the 'kempic' gas breaks, and so it goes. You chat

along with your native friend; he inquires about everything under the sun and nothing about business, and then, with a twinkle in his eye, he politely dismisses you with:

"Sahib, if you will come in tomorrow I will tell you when you can come again! Oh it is slow!

"It will, no doubt, be a matter of great surprise to readers of the Era that there is no pharmacy law in India. Neither is there medical or legal law. Any man may be a pharmacist, or doctor or lawyer, and it is oftentimes a thorn in the flesh for a graduate when he is making a tour of the world to go into a bazaar with his touring associates and there see a large square sign over what is, in every sense of the word a pig sty, bearing the legends 'L. R. C. P.' and 'M. R. C. S.' and other titles which the medical man has rightly earned in England and is honestly entitled to use in India, but which he treats with an utter lack of ethics, inasmuch as ethics there are not productive of revenue. To rectify this condition, a certain element of the profession not long ago appealed to Lord Curzon, who, after careful consideration, decided it was impossible to frame a medical law that would be just to all.

"What would you say in America to a medical examination, consultation and medicine, the entire cost of which amount to 8 annas, or 16 cents? India is honeycombed with a form of medical attendant called the 'bone setter.' This photograph (reproduced here), is of one of the most learned men in India in his branch of the profession. As he appears, he is ready to commence operating, while on his left you see several vases of Stearns' fine pharmaceutical preparations. These men receive for their services a fee varying from 4 annas, or 8 cents, up to 5 rupees, or 1.00 cents.

"There is a rule or custom as old as the Koran that if a native admires any article you possess you must at once present him with it. In the course of my visits in the East I have given away at least two dozen Waterman pens, simply through large dealers admiring my own pen.

"There are many little courtesies in business sadly lacking on this side of Asia and which make life in the Orient very pleasant. When you are leaving a city like Bombay, the native dealers all come in the evening together, and give you a small silver holder of attar of roses and place a garland of flowers around your neck. I can imagine the chemists of New York waiting upon our friend John Paul Jones and putting a garland of Jack roses on his neck, when he comes to New York, and praying that God will bless him.

Celebrated Indian "Bone Setter" ready to commence operating.

Mr. Martin in camp on Mahlive Island after the Shipwreck.

"Naturally, you ask how, with no pharmacy law, they regulate the sale of poisons. Well, the Lord seems to be good. India is a prolific country. If the population were not kept down there is no telling what would be the result. Cases of poisoning worry the authorities very little. Plagues and other pests that beset India have in a measure been welcomed by those in authority, inasmuch as by those means the population is kept down.

"In many shops every precaution is taken. But with the lesser rank and file I have often seen the same spatula going out of the opium jar into the phenacetin bottle, and such a thing as wiping the spatula! Of course there are many poisoned in this way. But who ever hears of it? In this great world of turmoil, the native coolie's life, worth four cents a day, passes into insignificance.

"Now, as to what they sell. First, you find most of the proprietary medicines of America and England exploited there, and you find largely the pharmaceutical preparations of the British pharmacopoeia. Any American house that attempts to appeal for business in India must be ready to put in a complete line of British pharmacopoeial products. This means a very large investment. But the great trouble with the native dealer is his absolute disregard of agreements and the due dates of bills, though in the end he provides for all. But when you consider the credit extended by German, French and English houses—I often see sight drafts at twelve months from firms glad to get business at that extended credit—you will agree with me that the inducement is not great for American houses. This applies in general to all India, but in the Strait settlements, affairs are totally different. There you have a fluctuating currency, and the consequence is the encouragement of the gambling spirit, which is so deep rooted in the Chinese, inducing dealers to buy great quantities of goods far in excess of requirements when exchange is high, in the hope of unloading when exchange is low."

The clerks, Mr. Martin said, are mostly English; that is in the larger establishments. The native "compounders" get 30, 40 and 50 rupees—from \$0.60 to \$16 a month. English drug clerks usually go to India

on a three-years' agreement, at 15, 18 and 20 pounds a month for the respective years.

Mr. Martin's shipwreck experience may have been novel, he says, but he wants no more. In the unfortunate party were twelve white men, two white women and six hundred native coolies, almost naked and armed with knives. For three weeks lookouts were kept in the trees. When rescue finally came, the whites, especially the men, whose responsibility toward the women in the savage surroundings had nearly unnerved them, were more than ready to accept it.

Mr. Martin also covers South Africa in partnership with Mr. Elger, under the name of Elger & Martin, with headquarters at Cape Town, Cape Colony. Messrs. Elger and Martin are intimate friends of their fellow-pioneer, "Jack" Ruell, of Parke, Davis & Co., whose picture was published last week.

TRANSLATIONS FROM THE ANALECTS OF CONFUCIUS.

Give prominence to loyalty and sincerity.

The great man is catholic-minded, and not one-sided. The common man is the reverse.

Learning without thought, is a snare; thought without learning, is a danger.

It is moral cowardice to leave undone what one perceives to be right to do.

What is disliked by the masses needs inquiring into; so also does that which they have a preference for.

Nine things there are of which the superior man should be mindful:—to be clear in vision, quick in hearing, genial in expression, respectful in demeanor, true in word, serious in duty, inquiring in doubt, firmly self-controlled in anger, just and fair when the way to success opens out before him.

Men of loftier mind manifest themselves in their equitable dealings; small-minded men in their going after gain.

Where plain naturalness is more in evidence than polish, we have—the man from the country. Where polish is more in evidence than naturalness, we have—the town scribe. It is when naturalness and polish are equally evident that we have the ideal man.

The Thinker is Born, Not Made.

By what processes shall we develop mental strength? Not by devouring books. Seneca said, "Read much, but read few books." Not by appropriating other men's fine thoughts. The memory is a noble faculty, but it is only one of a commonwealth, in which the rights of each member must be respected to insure the safety of the whole. Having dead men's mental coin rattling from the pen-point or tongue tip may make a clever quotationist, but never a rich, ripe thinker.

Mr. Martin and the unfortunate party landed on the beach after the shipwreck.

PROFITS—SYSTEM.

By MYRON PUFF, Merton, N. Y.

A LITTLE study of the matter and some good solid thinking will convince pharmacists, particularly the employing ones, who depend upon the profits accruing from the business for the successful progressive maintaining of their business, that the small carelessnesses both of themselves and their employes, are productive of serious results, not only to the particular store in which careless management and methods exist but through the changing of positions and by the advancement of employees to proprietors, these same, small, careless methods pass on and on until the effect which they surely have, may mean a lack of prosperity, a shrinkage of income to a large part of the drug trade of the country. This result may take place in such a quiet, unnoticed way that those to whom it means the most do not recognize in it the monster it really is, slowly but surely eating toward the heart of their business.

The Necessity of System.

System is the watchword of successful concerns in the business world of today. You may say, "system is all right for large firms and corporations, which do a large amount of business and must trust many employes with important matters; but as far as my little business is concerned, I am perfectly satisfied that my way of doing things is better suited to its size than any amount of system could be." And yet I have heard pharmacists who do twelve or fifteen thousand dollars' business a year, say that at the year's end they had just made a good living and that was about all.

The business man who is not making as much money as he should, frequently blames someone else for it. It is either, that times are not as good as they are said to be, or competitors have cut prices so that there is no longer the profits there used to be. New stores have entered into competition, or wholesale prices have advanced, while it is impossible to raise retail prices. While these causes have their effect in some special cases, I believe that in 90 per cent of the drug stores, conditions might be improved by a study and correction of some evils, generally considered small, and by the installation of a definite system of supervision.

Careless Checking.

During many years of experience, the fact has repeatedly been brought to my attention, that in many stores new goods coming in, are checked off by boys or by the cheaper help, often with the following result: Goods left in the packing, goods left out of order, and yet billed. The boy checks carelessly, and goods are paid for and not received. More goods are charged for than received, the difference is not noticed.

The amount involved in individual cases like these is not always large, yet it is one of the small leaks, and the total loss during a business career may run into a great sum. This may be avoided by systematizing so that new goods are unpacked by the boy, laid on a back counter and afterward carefully checked from the bill by an employe who is experienced enough to have formed habits of care.

Guessing.

Another small evil, which may almost be called a great one, is the practice by both employers and employes of guessing at quantities of liquids sold over the counter rather than taking a little more time and trouble and measuring. The guessing way invariably gives more than should be given for the money, for the reason that the person doing the guessing is afraid his customer may return and claim a shortage. To make sure he gave what he considers will be full measure, which really is a little more. Then there

are dispensers who, after putting a quantity of goods on the scales, find that the balance is down good and hard and are too tired to remove the surplus.

Who can say how much these things may mean in dollars if practiced every day by three or four people in a store, three hundred and sixty five days in the year, during a business career covering many years.

This sort of thing may be corrected by a system, consisting of careful, watchful instruction from the proprietor, and a plentiful supply of graduates in a convenient place so that accurate measurement may be made without loss of time.

Even in the prescription department some dispensers will fill bottles of which they think they know the capacity, in cases where the prescription calls for only one liquid, or is written q. s. ad. They do not consider that most prescription vials are made to hold two or three drachms above their stated size, which means the loss of many times two or three drachms of expensive preparations in a few years.

The Employe Who Spills and Breaks.

There is also the employe who is forever spilling or breaking something or who invariably tries to use a funnel two sizes larger than he should or else is too tired to get any and as a result, distributes what he is pouring, over the outside as well as the inside of the vessel.

These losses must be corrected by getting rid of help who cannot use brains to advantage. For the active paying practice of pharmacy brings into play and needs the steady, strenuous use of brain and every faculty of which we are possessed.

The kindest advice the employer could give to a person who after spending two or three years in a drug store, continually breaks, spills and upsets, is that he is not fitted for a pharmacist and would do well to seek employment in some other line.

Which Line Pays the Profit?

Every pharmacist would do well to know just what part of his business is paying the greatest, and on the other hand what department is paying the least. He would then be anxious to and probably would be in a position to know how to make more profit. The proper method would be, to develop to the utmost, the particular branches of his business which show the greatest proportion of gain to the amount of business transacted.

A frequent source of loss to the pharmacist is that arising from failure on the part of jobbers to credit for returned goods. From time to time goods are returned which have been received as the result of wrong or indefinite ordering, or of error on the part of those taking or filling the order. Jobbers have a habit of delaying credits, many times the credit is never given and though the retailer may remember that he returned some goods, he cannot tell exactly what they were.

The only right method to enable him to keep straight and avoid loss is to do enough bookkeeping to have a complete record of every transaction, by charging the wholesaler with everything returned and all money paid, crediting every bill of goods purchased.

Systematic, definite methods of business when once adopted will be found easier, more satisfying and better paying, than the thoughtless, self-satisfied, profit-depleting, slipshod way.

"Whispering Tongues Can Poison Truth."

In order that all men may be taught to speak the truth, it is necessary that all likewise should learn to hear it; for no species of falsehood is more frequent than flattery, to which the coward is betrayed by fear, and the dependent, by interest. Those who are neither servile nor timorous are yet desirous to bestow pleasure, and while yet must demands for praise continue to be made there will always be some whom hope, fear, or kindness will dispose to pay them

COMMENTS ON EXTRACTS OF ERGOT.*

By JOS. P. REMINGTON.

OF recent years there have been so many unofficial ergot preparations put upon the market, and extensively advertised to the medical profession on the plea that they were convenient to dispense and agreeable to take, that the attention of all but the most conservative has been drawn away from the more reliable official preparations, namely, the extract and fluid extract of ergot.

This tendency has had the unfortunate result of decreasing the faith of the physician in the physiological effects of ergot, yet in most cases it was not the drug, but the preparation that was at fault.

When early in the last century the late Dr. John Stearns, of New York State, called attention to the legitimate use of ergot in medicine, it was regarded as a drug which exercises its properties only upon one organ of the body, but subsequent research and experimentation has proved it capable of exerting a contractile effect upon all the unstriated muscular tissues.

As this fact became generally recognized, it was found that the variability of the results in the administration of ergot was chiefly due to the difference in the strength and efficiency of the preparation, and it was evident that a better process of extracting and preserving this unstable fungoid growth would have to be devised if uniformity of result was to be counted on. In 1857, Professor William Procter discovered that by the addition of acetic acid to the alcoholic menstruum in extracting ergot a practically permanent solution resulted, due to the fact that acetic acid fixed the alkaloids, and rendered them stable, and therefore for the making of the extract and fluid extract of ergot, this process was adopted by the pharmacopoeia of 1860, and thus given us a uniform and reliable method for the administration of this important drug.

There has been much discussion as to whether the physiological effects of ergot are due to active principles, which can be isolated or not, and many attempts have been made to prepare solutions containing the so-called active principles. All the evidence, however, goes to show that there are no active principles which can be separated from the drug that will accurately represent the medicinal action of the drug itself, and moreover whatever evidence may be brought forward to prove the value of solutions "containing nothing but the active principles" it is certain that a carefully prepared extract or fluid extract must contain those active principles, as all of the soluble constituents are extracted, and thus the employment of the official preparations is unaccompanied by the serious risk of experimentation, and leaves nothing to be desired except, perhaps, convenience of administration, which is a small consideration when the life of one or often two, persons is at stake.

The fluid extract is the best to use when the liability of producing nausea is not great, and when a moderately rapid effect is desired.

The solid extract in capsule form, though slower in its action, does not have the same tendency to produce nausea.

For hypodermic use the best method of administration is to prepare an aqueous sterilized solution by dissolving the solid extract in water and filtering the solution. In regard to the preparation of solutions for hypodermic use it may be said that unfortunately the attempts heretofore made to find some effective and non-irritating preservative have not met with success so that aqueous solutions containing certain antiseptics, though they may keep the solution clear and free from fermentation, cannot be relied upon to prevent the changes which take place naturally and which eventually render the solution inert, unless such preservatives are added in sufficient quantity to

J. A. Kirkbride, Drug Broker, and native guide in Bombay.

be detrimental to the medicinal action of the drug. Chloroform water of official strength, .2 per cent, has so far proved to be the most unobjectionable and efficient preservative for aqueous solutions.

Much of the value of both the fluid extract, and solid extract depends upon many conditions occurring preliminary to the actual making of them, namely, the selection of the best ergot obtainable irrespective of cost, its thorough cleansing and preservation, the care exercised in percolation, and, in the case of the solid extract its evaporation at a low temperature.

Spanish rye ergot is very superior in activity to any other kind, and should be used exclusively. Ergot from barley, wheat or oats, though showing some activity, is much inferior to that from rye, and the peculiar atmospheric conditions of the Spanish peninsula, tend to the more mature and better growth of this fungus.

The cleansing of ergot is of considerable importance, since the bags or cases in which the drug is imported, contain particles of dirt, nails, tacks, and hair pins dropped apparently by the women who pick the ergot, and the presence of a small worm makes itself evident by the small quantities of excrementitious matter which it deposits after eating out the interior of the ergot, leaving nothing but the hollow shell. In the preliminary process of purifying before grinding, the foreign matter must be removed, and in large laboratories this is done, by passing the ergot through a chute in which magnets are placed so as to remove the nails, etc., and then a strong draft of air from a blower is applied which removes the dirt, the few pieces of worm-eaten ergot and all foreign matter. The ergot is then preserved in chloroform vapor in tight bins until it is transferred to the mill for grinding, after which it is taken to the percolators, and the active principles extracted usually with the official menstruum of alcohol and acetic acid, by the percolation process, whereby a fluid extract is obtained which accurately represents the drug cubic centimetre for gramme.

Solid extract is prepared by the official process of evaporating the fluid extract at a temperature below 50 degrees C. (122 degrees F.) to a pilular consistency. It has been suggested for the trial of physicians and pharmacists who are accustomed to make up a solution of the extract for hypodermic use, to enclose the solid extract in tinfoil capsules (60 grains in each) so as to avoid the inconvenience of weighing it. One of these capsules dissolved in 6 fluid-drachms of sterilized water with three drops of chloro-

*Read before the Pennsylvania Pharmaceutical Association, June, 1903.

reform added to preserve it makes an aqueous solution of the same strength as the fluid extract, which is the strength generally employed for hypodermic use. The aqueous solution thus prepared may be relied upon to keep without deterioration for a period of about three months.

THEORY AND PRACTICE

LIQUID EXTRACT OF NUX VOMICA.

S. Judd Lewis (*Pharm. Journ.*) presents a method for the preparation of a liquid extract of nux vomica from which all fat has been removed. Nux vomica in No. 20 powder, is exhausted in 20-pound lots and 70 per cent. alcohol, and the extract distilled in a vacuum still until only five pints remain. One gallon of boiling distilled water is added, and the whole rendered slightly acid with acetic acid. The fat is allowed to separate from this aqueous solution by allowing it to stand for 48 hours and washing the separated substances with a little acidulated water to remove the alkaloid. The aqueous liquids are combined and evaporated in vacuo to two pints. Six pints of 90 per cent. alcohol are added to the warm residue, and often cooling the whole made up to one gallon with distilled water. After determining the strychnine content of the solution it is diluted to standard strength with 70 per cent. alcohol. The presence of fat was found to be only one of the causes of turbidity in nux vomica preparations, other constituents of the drug being the primary cause. A method of powdering this troublesome drug is added. It consists in placing the seeds firmly in a small vice and reducing it by means of a large file.

INCENSE.

A. H. Morgan (*Chem. and Drug.*) writes a letter from Rome which contains some interesting information about the incense used in churches. He states that the only incense used in Italy consists of olibanum alone, and he wonders how the compound formulas given in English works of reference have arisen, for on the continent he had never found one. In Italy, the words "olibano" and "incenso" are synonymous, and by drug houses in that country olibanum is generally listed as "Gomma incenso". Dr. Guastacchi gives under the heading "olibano" in his *Commentario*, the synonym, "Olibanum, incense, thus," and remarks that the Greek "libanos," the Latin "olibanum," and the Arabian "laban" and analogous words in other languages, are all derived from the Hebrew "labanah" signifying milk, from the fact that this substance first makes its appearance as a milky fluid flowing from the trunks of various species of Boswellia. The word "thus" seems to be derived from the Greek "thunon," meaning a sacrifice. A French writer gives the word "incens" as a synonym of "oliban" and states that the custom of burning it at religious ceremonies originated among the Hebrews, who employed this means to mask the odor arising from the sacrifice of animals by fire.

CHARACTER OF ETHER.

W. Wölfe (*Apoth. Zeit.*) after an exhaustive study of other states that ether used for inhaling to produce anaesthesia should exhibit the following characters: Specific gravity, 718 to 720, at 15 degrees C.; boiling point, not below 34 or above 35 degrees C.; it should have no effect upon Nessler's reagent, it should produce no change when shaken with 5 Cc. of an alkaline solution of silver nitrate, 20 Cc. shaken with a fresh solution of potassium ferricyanide and

ferric chloride and placed in the dark, should not produce a green or blue color, the same quantity shaken with a solution of potassium iodide and phenolphthalein should not produce a red tint; allowed to evaporate spontaneously it should leave no residue or odor; evaporated spontaneously with five drops of water it should leave a residue which neither reddens nor bleaches litmus paper. The vapor of pure ether is alkaline to litmus paper.

THE SOURCE OF RADIANT ENERGY.

In the discussion of radio-activity at the recent meeting of the British Association for the Advancement of Science, Prof. Rutherford, of Montreal, attributed the energy required for the observed effect to the instability and the consequent disintegration of the atom, a positively charged particle being projected from the atom with high velocity, and leaving the remainder in a state of instability which causes further changes. Sir Oliver Lodge was inclined to support this theory as a working hypothesis, although it did not harmonize with the views held by some chemists, and the amount of energy involved in radio-active processes far transcended the range of chemical action. Lord Kelvin thought it utterly impossible that the continued emission of energy from radium for a year could come from a store of energy lost out of the body. It seemed to him certain that if the results published by Curie and Dewar were correct, energy must, somehow, be supplied from without.

CANNABINOL.

A. Fraenkel (*Chem. Zeit.*) claims to have separated the active principle of hashish, and has given the substance isolated the name cannabiol. The drug is extracted with a light petroleum spirit and the extract evaporated to dryness and subjected to fractional distillation. The fraction passing over between 210 and 240 degrees C. contains the active constituent. The product thus obtained is treated with alcohol which separates a paraffin and the remainder again subjected to fractional distillation. Cannabiol is the fraction which distills at a constant temperature of 215 degrees and one-half millimetre pressure. It is a pale yellow syrupy liquid which becomes discolored when exposed to the atmosphere. In dogs it produces symptoms of poisoning when administered in the form of smoke or by the mouth, but it has no effect in the form of subcutaneous injection. Cannabis sativa grown in Germany yields none of this active principle.

CHRONIC HEROINEISM.

The value of heroine as a substitute for morphine is a matter concerning which there is still much difference of opinion (*Munch. Med. Wochschr.*). The assertion that heroine could be employed subcutaneously without danger of inducing a habitual demand for the drug has not been borne out by experience. Manguat advises the injection of heroine only in cases in which it seems to be absolutely necessary. Blendel also declares that the substitution of this compound for morphine is only the exchange of our danger for another. He states that the number of heroine habitues is already large. Bureaux considers this body a very valuable remedy, morphine having a much less favorable effect upon the dyspnoea of asthmatics.

STERILIZATION OF GELATINE SOLUTIONS.

M. A. Chauffard (*L'Union pharm.*) reports the findings of a committee charged with formulating plans for preventing infection with tetanus in the use of intravenous injections of salt and gelatin. The proposed formula for the solution indicates 1 to 2 per cent. of gelatin dissolved in a salt solution containing 7 parts sodium chloride per 1,000. The liquid is to be carefully sterilized in portions not exceeding 150 Cc. each, by heating in a steam apparatus at 115 degrees, during thirty minutes. The formula and proposed method of sterilization will probably be included in the next issue of the French *Colex.*

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from co-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Bleaching Sponges.

(A. G. F.) Ordinarily sponges are cleaned and bleached by the use of permanganate of potassium, followed by a solution of sulphurous or hydrochloric acid. This is substantially the process adopted by the National Formulary, a method which satisfactorily whitens the sponges, but often partially destroys their tissue. Sometimes the sponges are first soaked in dilute hydrochloric acid and then treated with the permanganate. In bleaching the first thing to do is to clean, wash and squeeze the sponges. They should be well beaten to get rid of sand and loose earthy matter, soaked in water for some hours, then squeezed dry, and placed in a tub containing dilute hydrochloric acid. After remaining in this solution until all effervescence is over and no hard particles are seen or felt—stirring them about with a stick is useful to hasten the process—they should be well squeezed and transferred to a pan of water under a running tap. Next, the sponges are placed in a 2 per cent. solution of potassium permanganate. After soaking them for a few minutes—the exact time can best be judged by the color, which ought to be dark brown—they are to be removed, again washed, and put into another tub of solution of half a pound sodium hyposulphite and one ounce oxalic acid to one gallon of water. Here the sponges soak for about fifteen minutes. Finally, take them out and wash them thoroughly. By this treatment the sponges are rendered perfectly white and remain so. Many sponges contain a more or less dark-colored core, and if treated only with permanganate and acid the core is either not bleached at all, or if bleached somewhat, the tint is apt to grow darker again. By the combination of the three solutions every portion is thoroughly and permanently whitened.

Roeser claims that bromine water is preferable for bleaching sponges, especially after being used in surgical operations. The sponge is thoroughly disinfected and may be put through the process eight or nine times without destroying its texture. His method is this:

Wash the sponges in warm distilled water (not above 150° F.) which contains in each liter 20 drops of 10 per cent. solution of caustic soda. After thoroughly treated in this manner, they are drained and placed in vessels containing the bromine water, which is made by adding 30 grams of saturated aqueous solution of bromine to one liter of distilled water. Leave the sponge in this solution until it is decolorized, and repeat with fresh bromine solution until it is thoroughly bleached, which is hastened by warmth and exposure to sunlight. After removal from the bromine bath, squeeze the sponges well and immerse them in a dilute solution of soda (20 drops of a 10 per cent. solution to the liter), and lastly wash out all traces of bromine odor with distilled water.

Yvon's Solution of Ergotin.

(D. M. C.) King's American Dispensary under the title "Liquor Ergotinae" gives the following formula for "M. Yvon's Solution of Ergotin:"

Coarsely powder ergot and deprive it of its fixed oil by washing it with rectified disulphide of carbon, then dry it in the open air and protected from the light until the odor of the solvent has entirely disappeared. Introduce this powder into cylindrical percolator, and exhaust it in the cold by distilled water, to every 1,000 Cc of which two grams of tartaric acid have been added. Heat the liquid obtained, so as to coagulate any albuminous matters that may be present in it, then filter, and by means of a water bath evaporate it to about one-third of its volume. When cool, filter, digest the filtered liquid with a slight excess of recently precipitated carbonate of calcium so as to saturate the excess of tartaric acid. Filter, evaporate to the consistency of thick syrup and precipitate with alcohol of sp. gr. 0.822, added in such quantity as to furnish with the aqueous liquid an alcohol of sp. gr. 0.871. Again filter, and then evaporate to drive off the alcohol. Exhaust the residuum by the addition of distilled water in quantity slightly less than that of the weight of the ergot employed, a little animal charcoal being used. Again filter, and to the filtered liquid add for each 100 grams of ergot employed, 150gm. of salicylic acid. Complete the process by adding distilled water, in such quantity as to obtain a weight of liquid equal to that of the ergot employed in the preparation of the solution. Allow this to rest for several days in a cool place, and then pour it into small vials, having well-fitted ground stoppers.

This solution of ergotin is said to be especially available for use in hypodermatic injections.

Etching on Glass.

(D. C. M.) See this journal August 6, 1903, page 140. The application of liquid hydrofluoric acid to glass always results in a smooth design not readily seen unless deeply cut. To produce a rough surface the glass must be exposed to the fumes of the acid. This is readily done (after preparing the glass in the usual way by coating with paraffin, beeswax or other covering, into which the design is traced with a sharp-pointed instrument) by placing the article as a cover over a leaden dish containing commercial hydrofluoric acid, or a mixture of a fluoride and strong sulphuric acid. The commercial acid contains 40 to 50 per cent. of true hydrofluoric acid. The fumes are very injurious to the eyes and respiratory organs, and the liquid acid makes a very painful sore if allowed to come in contact with the skin, which is developed slowly, but lasts for some time. If a drop of the acid, by any means, gets upon the skin, it should be washed off immediately with water and ammonia. Where etchings are to be made only occasionally, it is more convenient to use fluorspar or potassium fluoride and sufficient strong sulphuric acid to make a thin paste. These are stirred together in a leaden vessel (improved by bending a piece of sheet lead into a saucer form) with a leaden stick, then the prepared glass object is placed over it and allowed to remain for one to six hours, according to the character of the glass and the depth of etching desired. Hard glass is not as quickly affected as soft. The paste may also be used as an ink with a steel pen, but the design is not as clear and sharp when obtained in this way.

Registration of Licentiatees from Other States in Ohio.

(Subscriber) Section 4409 of the pharmacy law of Ohio states that the Board of Pharmacy "may register as pharmacists without examination, and issue certificates of such registration, to persons who are legally registered as pharmacists and hold certificates of such registration under the laws of another state, upon the following conditions: Each applicant for such registration shall have attained the age of 21 years, and be registered after examination in one

Booths in the Drug Bazaar, Lahore, India.

state from which he holds his certificate. The standard of qualification and requirement as to competency in any state shall be at least as thorough as that established by the board of pharmacy of this state. The board shall only recognize certificates of registration granted by states wherein like recognition is given to persons resident of this state and holding certificates from the board of pharmacy thereof."

Whether all of the boards you name grant licenses under similar provisions or recognize licentiates of the Ohio board we are not informed. Why do you not write to the Secretary of the Ohio board, W. R. Ogier, 185 Hamilton Street, Columbus, for definite information?

Medicina! Tea.

(D. P.) Several formulas for "specics" or "medicinal teas" were printed in the Era of September 24, 1903, page 321. Here are some others:

(1)

Senna, cut.....	17	parts
Trifolium, cut.....	17	parts
Fennel seed, bruised.....	3	parts
Elder flowers.....	3	parts

(2)

Cathartic Tea.		
Senna leaves.....	50	parts
Guaiac wood.....	5	parts
Juniper wood.....	5	parts
Rosetharrow root.....	5	parts
Couchgrass root.....	5	parts
Dandelion root.....	5	parts
Chicory root.....	5	parts
Star anise.....	5	parts
Astringent Tea.		
Tilia flowers, with bracts.....	5	parts
Senna leaves.....	5	parts
Melissa leaves (balm).....	5	parts
Frangula bark.....	10	parts
Sassafras wood.....	2½	parts

Essence of Spruce.

(E. B. C.) Essence of spruce is prepared by boiling the young branches of the *Abies nigra* (*Pinus nigra*), or black spruce of this country, and evaporating the decoction. It is a thick molasses like liquid possessing a bitter, acridulous and astringent taste, and is principally used for making spruce beer. In England a so-called "essence of spruce" is made by dissolving 1 dram of English oil of juniper in 3 ounces of rectified spirit and adding gradually with shaking 2 ounce of caramel.

Spruce Extract.

Oil of haddock, pure Oil of spruce.....	5	fl. ounces
Oil of lemon.....	1	fl. dram
Oil of wintergreen.....	1½	fl. dram
Oil of sassafras.....	½	fl. dram
Magnesium carbonate or purified talcum.....	1	ounce
Alcohol, deodorized.....	20	fl. ounces
Water.....	12	fl. ounces

Dissolve the oils in the alcohol, triturate the magnesium or talcum with the water, add the alcoholic solution, let stand for several days, agitate occasionally and filter.

GATHERED FORMULAS.

Black Currant Cough Syrup.

Benzene acid.....	.45	grains
Crystal violet dye.....	.1	gram
Elixir of gluside.....	1	fl. ounce
Glycerin.....	22	fl. ounces
Wine of ipecac.....	5½	fl. ounces
Oxymel of squill.....	11	fl. ounces
Spirit of chloroform.....	3¾	fl. ounces
Syrup of black currant.....	45	fl. ounces
Tincture of cochineal.....	1	fl. ounce
Distilled water, a sufficient quantity to produce.....	7	pounds
Dose.....	1½	to 2 fluidrams.

Soluble Cayenne Pepper.

Cayenne pepper.....	16	ounces
Alcohol, 95-per-cent.....	16	fluid ounces
Salt.....	16	ounces
Anatto, q. s., to color.		

Digest the cayenne pepper in the alcohol at a gentle heat for two days; then put into a percolating apparatus and displace the tincture; add to the tincture one pound of table salt, rub them together in a mortar, and add sufficient annatto to give the mixture the proper color. Evaporate, and finally dry in a stove at about 120 degrees Fahrenheit. When dried, rub through a coarse sieve.

Non-Sticky Face Cream.

Quince seed.....	1	ounce
Boiling water.....	4	pints
Borax.....	½	ounce
Boric acid.....	½	ounce
Glycerine.....	12	ounces
Perfume.....	2½	ounces
Alcohol.....	13½	ounces

Steep the quince seed in the boiling water for two hours, stirring frequently, then strain carefully. Dissolve the borax and boric acid in enough hot water to make four pints, add the glycerin and perfume dissolved in the alcohol, and finally the quince seed mucilage little by little, shaking thoroughly after each addition. It is important that the mixture be well shaken in order to secure a homogeneous mixture.

Orange Flower Skin Food.

White wax.....	1½	ounces
Spermaceti.....	1½	ounces
Cocconut oil.....	1	ounce
Lanoline.....	1	ounce
Oil of sweet almonds.....	2	ounces

Melt in a porcelain vessel; remove heat and add Orange flower water..... 1 fl. ounce
Tincture of benzoin..... 3 drops
Beat briskly until creamy.

Flesh-Colored Massage Cream.

White potash soap, shaved.....	2	parts
Glycerin.....	3	parts
Water.....	3	parts
Alcohol.....	1	part
Carmine, sufficient to color.		

Dissolve the soap by heating with the glycerin and water, add the alcohol and for every pound of the mixture add 20 to 30 minims of oleobalsamic mixture (Dieterich).

Indestructible Ink.

Graphite, impalpable powder.....	100	parts
Gum copal.....	20	parts
Iron sulphate.....	25	parts
Tincture of galls.....	25	parts
Indigo sulphate.....	140	parts

Mix the materials and boil them in sufficient water to make a fluid of the desired consistence. After boiling for a few minutes let stand awhile for the grosser particles to settle. Then decant and bottle.

"SAVE-THE-HORSE"

REGISTERED TRADE MARK

∴ SPAVIN CURE ∴

SEPT. 7th.—At the Fasig-Tipton Sales at Sheephead Bay a yearling by Escher-Excellenza was being sold by Mr. William Easton, and when the animal was led into the ring he said: "This horse has been suffering from a bog spavin, of which practically no trace remains. He was treated with that remedy called "Save-the-Horse," which all of you know, and it did save the horse, that is, it CURED him. Now you know lots of great horses, Morelo and others, were successfully raced and there is no reason to expect that this colt will ever take a lame step." The bidding then opened at \$250, and the colt was sold to Mr. J. D. Smith for \$800.

ORDER OF
J. M. DAY
LEADS CROSSBOW
DAYTON, OHIO
Dayton, Wash., Sept. 15, 1903.

Troy Chemical Co.

Troy, N. Y.

Gentlemen—Herewith please find enclosed N. Y.

Exchange for which please send me at once 1

Bot. "Save-the-Horse"

"Save-the-Horse" is certainly accomplishing wonderful results in this case. The bog is all gone and the Thoroughpin is fast disappearing.

Very truly yours
J. M. Day

THE PALACE PHARMACY,

O. H. MCKINSTRY, PROPRIETOR
J. M. HURST, REG. PHARMACIST.

Seaton, Ill., Sept. 22, 1903.

Troy Chemical Co.,

Troy, N. Y.

Gentlemen—Enclosed find acknowledgment from Mr. A. C. Greer. The Mr. Diets, to whom I sold a bottle, is well pleased. The one bottle he bought took curb off two horses.

O. H. McKinstry

Bear in mind, Mr. Druggist that every man who takes a Horse or Agricultural Paper and Dailies in large cities are reading every week testimonials direct from men of standing who use it, as strong and reliable as the above statement. Don't let a sale at \$5.00 per bottle go by. If you don't get it, in the end the customer must have it and will purchase direct. We protect every purchaser where used in all cases where indicated as given on back of guarantee. Booklet, Guarantee and Price on application.

TROY CHEMICAL CO., - - - TROY, N. Y.

Also manufacturers of PIXINE and VETERINARY PIXINE.

New Counter Card

12 Trial Size "NEW-SKIN," retailing at 10c.,	- - - - -	\$1.20
3 Family Size "NEW-SKIN," retailing at 25c.,	- - - - -	.75
Total, retail,	- - - - -	\$1.95
Card complete, wholesale,	- - - - -	1.25
Profit,	- - - - -	\$0.70

YOU have been selling a good deal of "NEW-SKIN" from the court plaster drawer as the result of our advertising to the consumer, but think how much more you will sell if you show above attractive package. The sale is guaranteed, as "NEW-SKIN" is always returnable at our expense, so you take no risk in buying.

ORDER OF YOUR JOBBER—If he cannot supply you we will ship your first order by express, prepaid, on receipt of the price in money or stamps.

SUCCESSFUL ADVERTISING.

How a Syndicate of Shrewd Retailers has Built up Trade.

OUT FOR BUSINESS!

How best to advertise and increase the business of a retail drug store has always been a hard question. The druggist is at a disadvantage. He can't employ solicitors to drum trade, brass buttons at the doorway won't do, and advertising on any scale in the daily papers or magazines is such a scattering shot that it may miss his neighborhood entirely. So he either gives up the attempt and hopes, or rests satisfied with a thousand cheap circulars of the conventional type with practically nothing in them to attract or hold the attention of any one. Has this not been the experience over and over again of many a good pharmacist, who has a first class store and who knows he is fairly entitled to at least a part of the trade which he sees going to others not half so well equipped?

Three years ago six retailers, located in different sections of New York City, got together and tried an idea which looked good. They engaged the services of an advertising expert well up in the drug line, and proceeded to publish a local paper of their own—each with his own name as its author and editor, of course—and distribute it new and fresh every month throughout their respective neighborhoods. By thus clubbing together, using in common the same up-to-date literary matter and illustrations, and by printing as one issue with names and addresses only changed, they each got for \$10.00 what amounted, value received, to at least a twenty five dollar advertisement. And best of all, as the event proved, it came out on time regularly every month and at once assumed the dignity and force of a regular periodical with each individual store as the centre of publication. This lifted it entirely out of the category of ordinary circulars and insured its being sought for and read by the people.

The result might have been foreseen. Anyway, it proved the very thing these shrewd dealers had needed, and for three years the membership has increased steadily until to-day over 125 stores are using it practically to the exclusion of all other advertising.

These stores are scattered all over the eastern half of the United States and Canada. It's one of those big successes that happen once in a while when you are hardly looking for it. All kinds of stores use it—tony neighborhoods, poor neighborhoods—the great secret of it probably being that it is read! It's a subtle form of advertising—the reader gets it sugar-coated without knowing it, and puts down the little four page magazine sheet somehow with the idea all through him that the editor and publisher keeps the best drug store within reach—then he goes there—especially for his prescriptions—and the druggist has got him.

There is one kind of a store, and only one, where this new form of literary advertising will fail, and that is where the proprietor don't know enough to hold on to an enthusiastic crowd of new customers when they come to him. Needless to say in such a store no advertising could be made to pay.

HISTORY—NOT THEORY.

All this is fact—not speculation. At the syndicate headquarters, 82 Duane Street, New York, there is a barrel of overwhelming endorsements from stores that have materially built up their trade with this little paper, known as "The Drug News"—stores whose proprietors are shrewd men who cannot have fooled themselves as to the source of their results. As the whole matter is a confidential arrangement, but little noise has been made about it—yet the consensus of opinion among those who are up on the advertising question is that this scheme stands head and shoulders above any other retail drug advertising ever thought of. It's so simple, easy, cheap. Advance proofs are submitted about the 25th for the ensuing month's issue, any desired changes on 4th page (to bring out your specialties by name or price) are indicated, and your journals are express-paid to your door. For a new store, or an old store under new management that seeks the confidence of its neighbors, nothing will turn the trick so quickly. A number of districts in several cities and towns are still untaken and there is room for about thirty more subscribers. Contracts are exclusive for one store in each competing district and are not taken for less than six months. Where one thousand papers monthly are sufficient, a special trial offer at six dollars per month (check invariably in advance) is made, and you have the privilege of using part of the last page for your own specialties, prices, etc., if desired.

For any further information address promptly, E. S. Mayo, 82 Duane Street, New York.

Full names and addresses of members who volunteer the following testimonials sent on request, with dozens of others:

"In the past year my business has increased over 30 per cent. and it is my honest belief mostly through the medium of your splendidly edited little paper."

C. A. II., Amsterdam Ave., New York.

"Of all the systems of advertising I find yours the best I have ever tried. Within the last year my business has increased over fifty per cent., which I think is largely due to the distribution of your Drug News."

O. S., Newark, N. J.

"Brings immediate returns and I think it the best investment I ever made in advertising"

S. H. S., Third Ave., New York.

"Your Drug News has done more to establish my trade and prestige than any other one method of advertising. I certainly would not want to be without it."

A. A. L., Lancaster, Pa.

"I am getting results, which are what an advertiser spends his money for."

J. C. V., Laurium, Mich.

NEWS DEPARTMENT.

ADVERSE OPINION.

Commissioner of Patents Allen Says No Change in Law is Required and That Rights of Foreign Inventors Are Protected by Treaty—"If Prices of Product Patents Are Too High Do

Not Buy"—Trademark Decision Also Adverse.

Chicago, October 27.—President B. E. Fritchard of the N. A. R. D., has supplied national headquarters with a copy of a communication from Hon. F. J. Allen, commissioner of patents, to President Roosevelt, the address of the committee from the N. A. R. D. convention presented to Mr. Roosevelt having been referred to Commissioner Allen for an opinion. The opinion is adverse to the N. A. R. D.'s position and indicates that it will be necessary for friends of patent law revision to override the influence of the commissioner if they are to succeed in procuring the remedial legislation they seek during his term as commissioner of patents.

In the communication to the President, Mr. Allen says:

"In the argument presented by the N. A. R. D., their representatives urge the necessity for amendment of the patent and trademark laws in several directions, and state their objections to the so-called unjust features of the present laws.

"The answer to this contention is that Congress has been given power by the Constitution to promote the progress of science and useful arts by securing for limited times to inventors the exclusive right to their discoveries. The statutes passed by Congress pursuant to this constitutional power have been made as broad as the right conceded by the Constitution to inventors in their discoveries. These statutes, in stating what subject-matters of invention may be secured by letters patent, defines patentable inventions in terms not less broad than the complete field of invention. This phenacetin patent is for a composition of matter within the classification of the statutes.

If Not Worth the Price, Do Not Buy.

"Now, referring to this particular case, we find the N. A. R. D. not a charitable institution, but composed of those who buy and sell and get gain in retailing drugs, objecting to the protection given by this system to the inventor of phenacetin, because of the price which the owner of the exclusive privilege to make phenacetin in this country forces upon them. There is but a single answer to this contention: If the article is not worth the price, do not buy it; if it is worth buying at the high price of which they complain, it is probable that the inventor will receive the reward for his invention which the author of this law contemplated and to which he is richly entitled as the inventor of so great and useful an invention. It must always be remembered, in the consideration of any question of this sort, that no one is forced to use a patented invention. If the new invention is undesirable, it may be let alone.

"This particular patent, to which the objection of this association is directed, I have identified as a patent issued to Oskar Hinsberg of Barmen, assignor to the Farbenfabriken, vormals Fr. Bayer & Co., of Elberfeld, Germany, March 26, 1889, No. 400,086. This patent will expire in about two years and a half, or seventeen years from its date, and after that time this valuable

product will become public property. If his invention was of little consequence, he would undoubtedly receive little; and if his invention is so valuable that this product can be marketed at the rate of one dollar an ounce, it is to be hoped that he will profit richly in having conferred upon the public so great a benefit as this useful product.

Patent Rights of Foreigners Covered by Treaty.

"The second objection of the retail druggists' association is that our system of law makes too liberal concessions to foreigners, and by that is meant that while a German can obtain, as in this case, a patent for a product in this country, he can only obtain in Germany a patent for the process by which his product is made. This matter is controlled at the present time by the provisions of Article II of the Convention for the Protection of Industrial Property, concluded at Paris, March 30, 1883, ratified by the President of the United States on March 29, 1887, where it was provided that the citizens of each of the contracting states should enjoy in all the other states of the Union, in these matters of invention, the advantages that the respective laws thereof accord to their own subjects or citizens. But it is to be noted that since 1836 our statutes have not limited the right to protection of inventions to American citizens, but have permitted foreigners to avail themselves of the benefits of our legal system for the protection of their inventions, as well as our own citizens. If this statute in earlier days was too liberal in its terms, in that a foreigner could obtain a broader patent in America than in his own country would give him, nevertheless, since the International Convention of 1883, no narrower statute would fill the measure of our international obligations, and it is not to-day too broad.

"The representatives of the national association suggest that certain countries do not grant patents on medicinal preparations, and that some of them have laws requiring working of inventions within their limits, which penalty for their non-working of annulment of the patent. No such system of working has been considered proper to be introduced into our system of laws, since it assumed its modern form in the statute of July 4, 1836. The objections to requirements of working are manifold, and it is thought unnecessary to enter into a particular discussion of them for this present purpose. As to the exclusion of any particular subject-matter of invention from the field of protection of the law, I believe it would be harmful to the art in question and that it would deprive the inventor of a privilege intended to be conferred upon him by the Constitution of the United States and at present secured by the existing laws.

But He Does Agree With One Recommendation.

"The last objection made by the representatives of this association is to the alleged laxity of our patent laws. It is difficult to understand just what is intended by this loose phrase, but the writers speak of the failure of proper investigation in regard to these claims, owing to insufficient time given to the consideration of applications. If this may be construed as an argument that if the Patent Office had more examiners it would be able to search more carefully in the arts, and on that account the number should be very materially increased, it would precisely meet my own views.

"The representatives of the association say that the

remedy they desire is "first, That adequate time be given to investigate the merits claimed by the inventor, so as to demonstrate that it is novel and thereby confers additional good to the country at large. Second: Patents should be granted on the process only—not on the product. Third: Articles made according to the process patented must be manufactured in this country. Fourth: No foreigners be granted greater privileges in this country than are given to him by his own. As an alternative for second, we desire that the revised patent laws forbid the granting of letters patent on medicines, as that term is understood in the art of healing."

"As to the first remedy, I am of the opinion that no change in the law is required, excepting such as will increase the working force of the Patent Office. As to the second, I should think that the constitutional privilege should not be abridged by statute. As to the third, I should think it exceedingly undesirable, for reasons which have thus far kept such requirements out of our statutes. As to the fourth, I should think this could never find expression in law, because of our international obligations. As to the alternative for the second proposition, I think it is as bad as the latter, and also that it covers a vague field.

Commissioner Allen Takes Up Trademarks.

"The representatives of the N. A. R. D. next pass from their consideration of the patent law to that of the trademark law. I quote their language: 'The predominant iniquity of our present trademark laws is that they seem to the owner a too exclusive right to the name of the article. This name might be a word coined by him, or one of a combination of two or more words in ordinary usage; they allow possessors of patents to continue the life of the monopoly granted by the letters patent by claiming a perpetual protection by reason of their registered trademark or trade-marks.'

"As to this objection, I can only say that it is founded upon an absolute misapprehension of the law of this subject. When a patented article becomes public, by the expiration of the patent, the right to use the title descriptive of the article manufactured becomes public also and can no longer be defended as a trademark.

"In conclusion, I will call attention to the fact that this attack upon the law, made by the representatives of the association, who state that they represent thirty-eight thousand retail druggists of the United States, is one of a class of attacks which will often be met, and that a similar question was presented in behalf of the representatives of a dental organization claiming to represent many thousands of dentists, whose complaint was argued before the committee of Congress last winter. In each of these cases the commercial plans of the interested individuals appear to have been interfered with, and although in each case suffering humanity was pointed out as standing closely crowded behind their claims, and in whose interest alone the arguments were supposed to be made, the conclusion reached was that it was a commercial proposition and did not require any change of law. The perfect remedy for an exorbitant price will be found in a moment, by letting the article alone. But if its great value makes its use seem desirable, the price should be paid and the view carried cheerfully forward to the time, two years and a half in this instance, when this product will by operation of law become the property of all the people of the United States."

When made familiar with the contents of the commissioner's opinion Albert E. Ebert, the veteran Chicago druggist, said: "I am simply amazed that the commissioner of patents should assume such a position." Attorney Joseph W. Errant said: "Commissioner Allen exhibits a narrow, one-sided point of view."

AMONG THE BOWLERS.

The Baily Team Leads Baltimore—Detroit Scheduled to Do Big Things—Philadelphia and New York News.

Baltimore, October 27. Last week's bowling of the Baltimore W. D. T. C. was close, with the exception of the totals scored by the Calvert team, and furnished plenty of entertainment. Sharp & Dolme rolled up what was within some three points of the highest score recorded this season on any alley in the city. The results so far show that the teams are evenly matched, with the single exception of the Calvert company, and that it would be hazardous to forecast results. The totals and the highest individual averages in each of the games were as follows:

J. B'y & Son 856 789 765 Stanley & B. 723 771 813
Jones 188 Perry 170
Calvert Dr'g. 651 691 690 Root & H'brs. 812 873 788
Schumann 153 Davis 201
McC'k & Co. 729 778 817 Sharp & D. 876 774 767
W. Snuck 190 Goldsborough. 169

These games leave the several teams in the following positions:

	W. L.		W. L.
J. Baily & Son....	8 1	Sharp & Dolme ...	1 5
McCormick & Co. 6	3	Stanley & Brown..	3 6
Root & Herbs....	3 6	Calvert Drug Co....	0 9

Detroit, October 27.—The opening of the Detroit League last week was eminently successful, and judging by the results shown the league has developed some very clever bowlers. J. E. Smith and P. Detty of Parke, Davis & Co., did some remarkable bowling. Parke, Davis & Co. rolled 928 for the first scheduled game of the season. At the present indications, the record will not stand long. The scores and highest individual averages for each team were:

P. D. & Co. 928 846 857	Ingram Co.	753 703 756
J. Smith	223 Cosgrove	177
P. W. & Co. 541 702 659	A. Smith	177
Moffatt	158 Mich. Drug.	734 762 832
N. B. & Co. 777 727 657	Carlisle	212
Hillman	170 Stearns Co.	731 703 756
	S. O'Donnell..	184

These games place the several teams in the following positions:

	W. L.		W. L.
Parke, Davis....	3 0	Ingram Co.	1 2
Michigan Drug....	3 0	Stearns Co.	0 3
N. B. & Co.	2 1	P. W. & Co.	0 3

Interest in the Parke, Davis & Co. Interdepartmental League is centered on the fine work of the Chemical team, which has won eleven games and lost one, being beaten once last week by the Scientifics. The league is developing some good bowlers, who are likely to be heard from in the bigger league before the season is over.

Philadelphia, October 27. In the Wholesale Drug League, as it is constituted for the winter season, the following houses have entered: Smith, Kline & French Co., Captain Phil. Donnell; J. Ellwood Lee Co., Captain Wright; Whittall Tatum Co., Captain Harper; Phila. Drug Athletic Assn.; Hance Brothers & White, Wanderers; H. K. Wampole & Co.; the schedule, not yet fully arranged, will be played off at the Central alleys in the Pitearn Building, Eleventh and Arch streets.

The first regular bowling by the Phila. Drug Athletic Association was held on last Tuesday afternoon.

RUBINAT WATER

IF YOU BUT SELL 50 BOTTLES A YEAR

WRITE FOR MY QUOTATIONS

J. N. FERRER

P. O. Box 71 - NEW YORK CITY

The association has leased the Academy alleys, 913 Girard avenue, and for purposes of better sport, have divided the men into two teams, the "Red" and "Blue." The highest score made was by Landts, who rolled 245 in the second game. This good score looks remarkable in the face of the scores of 129 and 109, made by him in the first and third games.

The employes of the corporation of Hegeman & Co., 200 Broadway, New York, have organized a bowling club and are open for challenges from other teams, drug teams preferred. The officers of the club are H. War-

ner, president; John Krappe, vice-president; Richard Green, treasurer; Louis Halk, secretary.

The Wholesale Bowling Association will begin its winter tournament on Saturday, next week. The schedule is for only eight teams this year, instead of twelve. This enables them to begin bowling a month later and finish about a month earlier than with the twelve-team arrangement. Colgate & Co. have finally decided to stay out, so the make-up now is: Dodge & Olcott, National Lead Co., Parke, Davis & Co., Bruen, Ritchey & Co., Lauman & Kemp, Seabury & Johnson, Roessler & Hasslacher Chemical Co. and Sharp & Dolme.

NEW YORK AND VICINITY.

DR. CHAS. RICE MEMORIAL.

Bronze Tablet Unveiled in Hall of N. Y. C. P.—Eulogies and Reminiscences by Friends and Fellow-Workers—Character, Life and Work of the "Father of the U. S. Pharmacopoeia."

"Scarcely none has left a more stainless and none a more splendid name," was stated of the great Lord Chatham by one of England's most eminent historians. In almost identical language and by more than one speaker was summed up the character and life work of the late Dr. Chas. Rice at a stated meeting of the New York College of Pharmacy, Tuesday evening, October 20.

The occasion was the formal presentation and unveiling of the bronze tablet in memory of Dr. Rice, erected in the main hall of the college. A committee from the New Jersey Ph. A. at the same time presented, at the request of their organization, a set of handsomely engrossed resolutions in memory of the same distinguished man.

All routine business was laid over till next meeting and President Chandler, at the request of H. J. Lohmann, introduced George S. Campbell, president of the New Jersey Ph. A., who told of the action of his association in preparing the resolutions. He then called upon Mr. Lohmann to make the presentation and who referred to the great loss the New York C. P. had sustained in the death of Dr. Rice. He said it was an honor and a work of love for his committee to pay a tribute to the bright and illustrious author and educator whose works have immortalized his name. In delivering the memorial, Mr. Lohmann said he "hoped it would serve as an incentive for all of us and the coming pharmacists to step into the pale of this bright light."

President Chandler replied to Mr. Lohmann in a few well chosen words, saying that the college highly appreciated the act of the New Jersey Ph. A., and that the compliment was earnest and substantial.

Secretary Main reported that he had received letters of regret from the following members of the committee of Revision of the U. S. P., who were unable to be present: Dr. Geo. F. Payne, Dr. W. G. Gregory, Dr. Walter H. Haines, Prof. Samuel B. Sadtler, Prof. J. U. Lloyd, Dr. Chas. E. Dohme, Dr. H. C. Wood, Dr. E. H. Squibb, Dr. Oscar Oldberg, Prof. Chas. Caspari, Jr., Dr. N. S. Davis, Jr., Dr. H. A. Hare, and S. A. D. Sheppard. The members of the committee present were Prof. Jos. P. Remington, Dr. Reynold W. Wilcox, Prof. W. L. Scoville, Dr. John H. Marshall, Dr. A. L. R. Dohme, Prof. Henry Kraemer, Prof. Virgil Coblentz and Dr. H. H. Rusby.

The report of the special committee on the memorial to Dr. Chas. Rice was read by the chairman, Dr.

Arthur H. Elliott. He told how in 1868 there was elected to membership in the college a young man, 27 years old, who had recently been serving the U. S. Government on one of its warships. Two years later this young man had proved himself so useful that he was elected a member of the Board of Trustees of the college. He soon became chairman of the examination committee, an office he held under four succeeding presidents. He was also for a number of years chairman of the library committee, and in many other ways helped the college, "a third of a century of his life being spent in these noble works, until at last he was called to his rest."

Dr. Elliott said "this man of self-sacrifice, energy and abundant learning, Dr. Charles Rice, was dearly loved by those who knew him best, and well might it be said of him—

'Green be the turf above thee,

Friend of our better days.

None knew thee but to love thee,

None named thee but to praise.'"

As he closed his address with the presentation of the tablet, Dr. Elliott said he hoped the memory of Dr. Rice's earnest life might be a stimulus to the alumni of the college and as enduring as the metal in which his features were cast.

In accepting the tablet for the college, Dr. William Jay Schieffelin said it was a worthy memorial of a distinguished man. Dr. Rice, he said, hated shams. One of the most modest of men, he had a contempt for false pretense whether in men or drugs, and with unexcelled energy and a masterly knowledge of the science of pharmacy he was able to perform great service to American medicine and pharmacy by his work on the Pharmacopoeia. Dr. Schieffelin also referred to Dr. Rice's public spirit and charity, and said the donors of the tablet had done themselves and the college alike an honor by giving the "beautiful and permanent memorial of a true man."

Prof. Jos. P. Remington of Philadelphia, the successor of Dr. Rice on the Committee of Revision, followed Dr. Schieffelin by stating that he "believed he would go anywhere to bear tribute to the memory of one of the noblest men the sun ever shone upon." He said he was amazed at the amount of work Dr. Rice

WILMOT CASTLE COMPANY,
26 Elm Street, Rochester, N. Y.

Rice Memorial Tablet, unveiled last week in the New York College of Pharmacy.

did. He was true and faithful in every position in which he was placed. Fidelity characterized everything that he did. It made no difference whether it was working out some obscure question in chemistry or some difficult or knotty problem in an assay process, or something connected with the Pharmacopœia that required great research, he would spare no pains to get it exactly right. He was honest, he hated sham, he loved truth and 'loved truth for truth's sake.' He laid down his life and was a sacrifice to the altar of truth and honest conviction.

Prof. Remington said his committee would soon issue to the immediate friends of Dr. Rice and subscribers to the monument fund a handsomely bound memorial volume and also a popular edition of the same work, a copy of which was to be placed in every college of medicine and pharmacy in the United States. He thought every student of pharmacy should be put in possession of a copy of the life of this noble man. Students could go to him at any time and get information. He knew nothing that he was not willing to tell to any one, if it was upon pharmacy. Prof. Remington believed "the memory and record of Dr. Rice's life would be with the members of the New York C. P. as long as memory lasts."

Dr. Reynold W. Wilcox said a long acquaintance was not necessary for one to understand what Dr. Rice was. The impression he gave one of his thorough knowledge, broad learning and scientific enthusiasm needed not years for development. It was apparent to the student for the first time. As one read the history of Dr. Rice's life, it would seem as if he were almost possessed of the spirit of prophecy. Continuing, Dr. Wilcox said:

"In the early seventies, Dr. Rice was already making his reports on impurities and adulterations in chemicals and pointing out ways and means to remedy this defect. As we go along a little further, we see, during the early eighties, an enormous development of specialties, and it seemed as if the day of the practicing

physician was drawing to a close. Surgery was coming into unexplored and hitherto deemed inaccessible regions. The narrow specialists were developing very rapidly and the physician seemed to be a thing of the past. What has been the result to the student of therapeutics? In the first place, it has given the man—this physician specialist, a greater and larger opportunity to know of remedial agents, and in the second place, we are largely indebted to therapeutics in every single specialty, including surgery itself, for take away from surgery anaesthesia, a subject for study in therapeutics, take away antisepsis when asepsis is not possible, and modern surgery to-day is impossible. Pharmacy has played no unimportant part in the development of medicine to-day, it is its inseparable handmaid.

"Dr. Rice was not one of those who could tell us how things had to be done. He did them. He so mapped out the scope of the Pharmacopœia that in 1880 he became chairman of the revision committee. Again in 1890 he was chairman of the revision committee, and it has been said, and I believe with truth and justice, that the Pharmacopœia of 1890 stood far in advance of any Pharmacopœia ever brought forth even under the most auspicious Governmental influences in any country, and to the chairman of those two committees all praise should be due. The physician, the general practitioner, is the jury before whom all special procedures and all surgical processes must pass. Charles Rice pointed out the defects and the means by which those defects in chemicals and drugs could be removed.

"Medicine stands to-day the better, the more useful, the more scientific because of the life and labors of Charles Rice, and when pharmacy and medicine, which go hand in hand, as they are beginning to do, and shall be more and more necessary each to the other, the result which Dr. Rice did so much to bring about will be always associated with the man whose memory we honor, whose professional attainment and personal friendship is so dear to each and every one of us."

Felix Hirsman spoke on behalf of the German Apothecaries Society, referring especially to the impression the deeds of Dr. Rice had made upon the pharmaceutical world, and that he was one of the most devoted workers in pharmacy that this country had produced. Caswell A. Mayo spoke of Dr. Rice's journalistic work, and Eben McIntyre told in a reminiscent vein of Dr. Rice's taking up the study of the Russian language at a late period in his life. Mr. McIntyre said he never saw a man with so many sides to him as Dr. Rice had. Chas. S. Erb, president of the Alumni association, and Rev. St. George Young, Dr. Rice's pastor, also made short addresses.

The tablet, a picture of which is here given, is in bronze, the portrait being executed by A. G. Newman, sculptor, and cast by the Henry-Bonnard Bronze Co. of this city. It occupies a place in the wall at the left and just inside the entrance hall.

MR. DAWSON AT WORK ON ALCOHOL TAX.

E. S. Dawson, Jr., of Syracuse, secretary of the State Ph. A., has sent a circular letter to all the other State associations, setting forth the action taken at Utica looking toward the reduction of the alcohol tax. He has received several replies from states that have already taken action.

Mr. Dawson's letter gives the resolutions adopted by the New York association, and concludes as follows:

Will you co-operate, in the name of your association, with this association in an effort to bring the attention of Congress to this important matter? I shall submit to the several congressmen and senators from this State a letter on lines similar to this. Firm in the belief that united action on the part of State associations will have weight with our national lawmakers, I remain,

Yours very truly,

E. S. DAWSON, JR.

DRUGGISTS NOT LIABLE IN EMERGENCY CASES.

A very important decision concerning the legal liability of druggists for injuries received by patients treated by them was rendered by the Appellate Division of the Supreme Court on last Thursday, in the case of Frederick Roth against Arneemann & Behrens, druggists, formerly in business at 570 Eighth avenue, this city.

The action was brought to recover \$10,000 damages. The plaintiff alleged that he had received a slight cut on his left thumb in a ball game and went into the defendants' store for treatment. A clerk bandaged the wound and handed him a small bottle containing carbolic acid and so labeled, with instructions to keep the bandage wet with it. He put five or six drops of the acid on the bandage with the result that the wound became inflamed, blood-poisoning set in, and the thumb had to be amputated.

Steiner & Petersen of 300 Broadway, attorneys for Arneemann & Behrens, claimed that pharmacists were not permitted, under the laws of this State, to practice surgery or medicine, and that the plaintiff was guilty of contributory negligence and violation of duty when he went to a drug store for treatment, instead of to a qualified physician and surgeon. They also claimed that the clerk, in undertaking to treat Roth, did so on his own individual responsibility, and that if any cause of action existed in Roth's favor, it could not be maintained against Arneemann & Behrens, but should have been prosecuted against the clerk, as having undertaken the case not as a druggist nor as an employee of the druggist's.

Justice McLean, on trial, had sustained the contention and dismissed the action. Roth appealed to the Appellate Division, where the decision of Judge McLean was unanimously sustained, and this important principle of law effectually settled.

This decision is of the utmost importance to all druggists, as it affords protection from annoyances in cases where the druggist has been compelled to act in an emergency as a surgeon, and also relieves him from liability from similar work performed by his clerks.

PREFERS DR. LEDERLE TO TAMMANY HEALTH OFFICER.

311 West 11th St., New York.

To the Editor: The Druggists Circular is sending out a circular containing an advance proof of an editorial which is to appear in that journal. It is entitled "Free Milk vs. Free Antitoxin," and has all the appearances of a Tammany campaign document paid for and distributed by Tammany.

This attempt to discredit the present efficient city administration is too thin for us not to see through it. With all our grievances against the present Board of Health, we all know how much superior is a man like Dr. Lederle to a Murphy or a Sexton. He at least knows something of Dr. Koch, which Sexton never did.

The circular will probably find favor with a very small minority of druggists who object to Dr. Lederle's campaign against blue ointment made with charcoal and tincture of iodine made with wood alcohol, but the majority of the druggists, however they may differ on questions of politics, are too intelligent not to know the difference between Dr. Lederle and some of the former bar-keeper presidents of the Board of Health.

ISIDOR B. MEYER.

CHANGES IN ARMY PHARMACISTS.

These are recent changes among the army pharmacists: M. Simmel, Ft. Snelling to Ft. Leavenworth; H. W. Riess, Ft. Leavenworth to Ft. Snelling; L. David, detached service to Washington, D. C., and return to station; J. Keralla, Ft. Casey, Wash.; H. J. Robinson, Ft. Brady, Mich.; R. W. Soper, Manila, P. I.; William Peake, Manila, P. I.; E. Jones, Ft. Brady, Mich., to retirement.

NEW YORK NOTES.

—Seen down town: J. J. Gerig, Ocala, Fla., who was in on a buying trip; Charles F. Mann, Detroit; Miner E. Keyes, Detroit; F. W. Meissner, La Porte, Ind.; Charles Hubbard of Charles Hubbard, Son & Co., the Syracuse jobbers, who was on his way to Atlantic City; Professor Henry Kraemer, of the Philadelphia C. P.; Dr. D. T. Taylor, Washington, D. C.; J. J. Smith, Brewster, N. Y.; I. M. Swezey, Port Jefferson, L. I.; H. W. Hummel, Charleston, S. C.; F. L. Gilbert, Knoxville, Pa.; P. G. Ott, Bangor, Pa.; W. B. Durvey of Durvey & Johnson, Freehold, N. J.; J. P. Kelly, Elmira, N. Y.; James B. McMahon, vice-president N. K. Fairbanks & Co., Chicago.

—An explosion of chemicals caused great excitement at M. J. Kahan's pharmacy at Houston street and Avenue A. The front and rear windows were blown out and every bottle in the place was smashed. Mr. Kahan, his sister, Sarah, and a telegraph operator for the Western Union Telegraph Company, got out before the explosion occurred. Sheets of flame shot through the broken windows, but the fire was quickly extinguished. The store was wrecked. Mr. Kahan said he could not tell the cause of the explosion. He estimated his loss at about \$2,000.

—It was decided at a conference between Assistant Secretary of the Treasury Armstrong and Prof. Wiley, chief of the division of chemistry of the agricultural department, to detail two employees of the latter department to this city, to co-operate with the customs officials in taking samples of foods and wines. One of the men detailed is a chemist, and he will make the examinations in New York. This will save the time consumed in sending samples to Washington.

—Professor William C. Anderson, president of the State Ph. A. and former president of the N. A. R. D., is at St. John's Hospital, Brooklyn, recuperating from an operation for appendicitis. His illness dates only from last Wednesday and the promptness with which surgical attendance was secured had much to do with his recovery. He has hosts of friends who will be as gratified to learn of his probable recovery as they will be sorry to hear of his illness.

—A barrel of gasoline became ignited in the store-room in the rear of the C. A. Ellas' drug store at Bath. Mr. Ellas, in his endeavors to extinguish the blaze, was severely burned about the face and hands. The fire spread rapidly, but the fire department confined it to the drug store. The loss is covered by insurance. The cause of the gasoline becoming ignited is not known.

—Board of pharmacy received many letters asking why they didn't leave the poor druggists free of red tape and as for dry goods stores, some of which are advertising non-secrets at ridiculously low figures. Secretary Erb bids us say their chemist has 200 various new samples ready for analysis, most of them from dry goods stores. Results announced later.

—The Sherman Square pharmacy, 2055 Broadway, has been purchased by W. J. Butts, a former retail druggist of Brunswick, Ga. Mrs. L. B. Havens, wife of Supreme Court Justice Havens; H. W. Beebe and A. G. Havens were the former officers and directors of

ALFRED D'ANNUNZIO.

Alfred D'Annunzio came from an old family of Italian chemists. That his title to work in the same profession is clear is evidenced by a dozen or so of medals, of bronze, silver and gold, that he won while still in Italy, at various exhibitions, including the last World's Fair. Despite this, he is still a young man. He has a new store at 634 Ninth avenue, in which he is carrying splendid, live business and professional principles to success.

the Sherman Square, Mrs. Havens being the president.

—Secretary Erb of board of pharmacy received a postal card signed "Christinn Drug Clerks' Association," per "A. W. S.," naming some alleged junior clerk violations and praying for prosecution. Mr. Erb wonders if they will send out any "Peace Be Unto Thee" Tracts.

—Herbert J. Geenan has closed the Schuyler Square pharmacy at One Hundred and Sixth street and Broadway and moved to Twenty-first street near Sixth avenue. It is said Mr. Geenan's change was induced by his landlord raising the rent from \$1,500 to \$3,000.

—There was no quorum at last Thursday's meeting of the New York section of the Board of Trade and Transportation, despite the facts that it was the first meeting after the summer vacation and there were important matters hanging.

—Robert J. Vogel, manager of the Import department of Fitzsimmons, Gleason & Co., and Miss Marietta Gaffney were married on last Wednesday. They are now on a wedding trip to Old Point Comfort and other Southern points.

—George B. Adderly, pioneer sponge dealer of Nassau, Bahama Islands, was seen at Dyer's, 87 Front street. He says that New York and Europe took \$500,000 worth of his sponges last year and that the demand is very good.

—Dr. E. G. Rave of Hicksville, L. I., has been appointed a local inspector by the Eastern branch of the board of pharmacy. He serves without pay, and is the only inspector employed by the board under such an arrangement.

—A movement to close at one o'clock on Saturdays all the year around is on foot among the drug and chemical importing and milling firms, and several have already signed an agreement to that end.

—After November 1, it is reported, the store in the Park Avenue Hotel, Park avenue and Thirty-third street, will be owned by a Mr. Adams, from the South. Present proprietor is C. J. Leigh.

—Recent Drug Trade Club guests from out of town: James F. Ballard, St. Louis; Harry E. Amber, Philadelphia; A. J. Nolde, Bombay; Charles Ratjen, New Zealand.

—Karl August Fritzsche of Leipzig, oldest son of Hermann Traugott Fritzsche, senior member of Fritzsche Bros., has become a partner in the firm.

—Gregory & Nickerson—Robert N. Gregory had a store in 1896 at 393 Fourth avenue—are opening a new store at 1620 Broadway.

—Hersch Puck has closed his store at Melrose avenue

and One Hundred and Eightieth street and moved to Brooklyn.

—Abraham Weinstein has bought the pharmacy of I. D. Kruskal, First avenue and Fifty-seventh street.

—Theodore Tapken, 153 Franklin street, Brooklyn, has sold to his former clerk, H. J. Feber.

—The Lowe Drug Company secured a judgment against John G. Underhill of this city.

—Emil Troester has sold the store at 1429 Amsterdam avenue to Julius A. Sacks.

—Roth & Holmes are opening a new store at 64 Court street, Brooklyn.

—James A. Linhart will open a store at 1413 Second avenue.

'ROUND ABOUT BUFFALO.

—Neil McEachern of Vermont street, is the republican candidate for re-election as alderman of his ward. His political friends are confident of retaining "Mac" in municipal office for another term.

—Heyden & Little have re-opened the old Baxter pharmacy at 410 Massachusetts avenue. The stock and fixtures have been thoroughly renewed.

—C. N. Read has bought the store of Watson & Son, Perry, and has placed it in charge of George L. Page.

—A. M. French of Cherry Creek, has opened a store in Holland, and engaged Charles T. Quirk as manager.

—H. M. Anthony has bought out the store of George A. Lawrence at 1657 Main street.

NEW ENGLAND.

TRYING TO RE-ORGANIZE WATERBURY CLERKS.

Waterbury, Conn., October 27.—A committee from the Central Labor Union is making the rounds of all the drug stores asking the proprietors to request their clerks to join the Drug Clerks' Union, which is affiliated with the Central body. Nearly all the clerks were once members of this organization, but when the trolley strike was inaugurated many did not sympathize with the strikers, and all except nine withdrew from the union and formed the Drug Clerks' Association, which is not affiliated with the Central Labor Union.

The committee are determined that the drug clerks shall again become affiliated with their organization. An attempt is being made to coerce the employers into taking a stand in favor of the union. The clerks' union will have the support of all the labor unions. In several stores the committee have been told plainly that the proprietors did not intend to make their clerks join the union. The committee replied by threatening boycott. Drug clerks all over Connecticut have their eyes on Waterbury. The outcome will make considerable difference about forming unions in several of the large cities. The proprietors are no less interested. It is thought that many of the clerks withdrew from the Waterbury union because their employers told them in no uncertain terms that they would make no concessions to them in the way of shorter hours or more pay while they were connected with the union.

DRUGGIST'S ROOF SIGN RAISES COMMOTION.

Hartford, Conn., October 27.—Hartford newspapers and all the ultras of artistic, and other aesthetic circles are in throes of impotent wrath and despair over the despoiling of the beauty of City Hall square by the flaming over druggist Goodwin's roof of a Wilson Whiskey sign.

Mr. Goodwin gets \$700 a year for that sign. And "Constant Reader" and "Pro Homo Publico" get the honors. Artist Charles Noel Flagg doesn't like the technique of the toper who thumps his appetite for the re-

ductive highball. The "Times" suggests the horrible possibility of Dr. Munyon on City Hall itself. The "Port" thinks the atmosphere of refinement has been clouded and the "Courant" heaps abuse. Meanwhile reprisals are suggested in possible action by City Council and others talk of boycotting Mr. Goodwin.

NEW ENGLAND P. & O. C. HAS ANNUAL MEETING.

Boston, October 27.—The Paint and Oil Club of New England at its annual meeting, Young's Hotel, October 22, elected officers as follows: President, William S. Whiting, Brookline; vice-president, Charles H. Coburn, Lowell; secretary, C. W. Willis, Boston; treasurer, William S. Cutler, Boston; executive committee—William Agge, Frederick H. Newton, George W. Wheeler and Charles E. Chapman, all of Boston; Howard Hutchinson, Lynn; C. S. Forbes, Portland, Me.; Albert E. Balcom of Providence, R. I. George L. Gould served as chairman. Secretary Willis showed a membership of 126. A report from the National Paint and Oil Club was presented by I. H. Wiley. Several new members were admitted. A banquet was an enjoyable feature.

THE BAY STATE.

—Henry K. Mansfield, the Salem druggist, was one of the members of the Ancient and Honorable Artillery Company to go on the tour made by that organization with the Honourable Artillery Company of London. Mr. Mansfield says that the guests from the other side were not at all well acquainted among themselves, social distinctions which hold so tenaciously in England being rigidly adhered to over here. Even though the members had been together throughout the trip from England and while traveling in this country, they made no progress toward friendships which had not been formed on the other side, the conditions of travel doing practically little to augment or make friendships.

—Charles W. Jaynes and Miss Ruth C. Wilkins, daughter of Mr. and Mrs. Charles W. Wilkins of Audubon road, Boston, were married in the Episcopal Church of Our Saviour, Brookline. The bridegroom is the son of Charles P. Jaynes, president of Jaynes Drug Co., and also the Jaynes & Chapin Drug Co., operating several retail pharmacies in Boston, and is associated with his father's business. Mr. and Mrs. Jaynes went away on a wedding journey, on returning from which they are to reside in Brookline.

—Pierre N. Brunelle, a well-known Lowell druggist, went into the basement of his pharmacy to attend to a soda fountain attachment. For light he used a portable incandescent electric light and it is supposed its wire became crossed in some way with a heavily-charged electric wire connected with the ice-cream motor. Mr. Brunelle received a heavy shock. He was found by a policeman, unconscious. It is feared that amputation of several fingers may be necessary.

—William H. Davis, a Fall River druggist, and his wife recently were the recipients of a genuine old-fashioned surprise party, given by their neighbors and friends. Mrs. Davis has been ill for more than a year, and the occasion was therefore for her the more enjoyable. The guests carried her a beautiful vase.

—A mean man from a suburb went to Boston town and bought a pound of carbon disulphide. With that and his drunk he began to have sport. Along the streets he sprinkled passing horses with the disulphide. It made the horses lively. In the name of the S. P. C. A. the mean man was fined \$50.

—Police inspectors have arrested in Medford William

A. Ritchie of Medford, employed by Albert G. Smalley & Co., Boston, dealers in druggists' sundries and bottle glassware. Ritchie is charged with the larceny of nearly \$700 sometime between the last part of July and the middle of this month.

—In a Chelsea pharmacy window there is the legend: "Goods Sold at Cost and More, Too." This looks like a mistake in English on the druggist's part, but it is not, for the townspeople became involved in discussion as to just what the sign meant, and that was just what the druggist aimed at.

—Howard Nowell, a Haverhill druggist, has been enjoying camp life in the wilds of the Maine woods. To celebrate his return, the druggist invited a party of about twenty-five friends to a days' outing and a feast of venison and smaller game which Mr. Nowell had secured.

—A scarcity of competent drug clerks was given as its reason for closing by the Smith Drug Co., Market square, Chicopee. The patrons are directed to Warren Smith's pharmacy, the two stores having practically the same interests back of them.

—Henry Maxwell, a Lynn druggist, and member of the board of aldermen, recently became possessed of a fine automobile of the "red devil" order, and as he runs about, is somewhat envied by brother druggists who do not own such a vehicle.

—William H. Watson, a Brockton druggist, was haled to court at Plymouth on a charge of exposing and keeping liquor. There was no reasonable evidence that Mr. Watson was not complying with the law.

—In settlement of a mortgage held by M. J. Finigan of Worcester, the stock and fixtures of the drug store of Frank J. Kearnan, Millbury, are to be disposed of at public auction.

—The drug business long owned by Frederick E. Whitmore at 263 Highland avenue, Somerville, has been purchased by Samuel B. Herzberg.

—J. F. Bartlett has succeeded to the business of the late J. S. McGilvary, Chelsea, and has had the store thoroughly made over.

—The goods in C. H. Webster's store in Newburyport were sold at auction to Harry B. Trask of that city.

—The Music Hall pharmacy, Quincy, was sold by Deleavere King to Edward J. Murphy.

CONNECTICUT.

—H. W. Smith of Ansonia, certainly may call himself a qualified pharmacist, if documents to that effect may be taken seriously. Mr. Smith has hanging in his store certificates of his registration at various times in Arkansas, California, Colorado, Connecticut, Florida, Nevada and New Mexico. He was formerly a pharmacy commissioner in Connecticut. Spare time he devotes to his hobbies, one of which is selling steam and naphtha launches. He also has a farm near town and has the poultry culture craze.

—H. A. Dupee, Bridgeport, has contracted for a soda fountain which, it is said, will be finest in the State.

PENNSYLVANIA.

PHILADELPHIA C. P. MEETING.

Philadelphia, October 27.—The first in a series of pharmaceutical meetings was held at the Philadelphia C. P. last week. The papers discussed were: "History of Scientific Meetings of the Philadelphia College of Pharmacy," by M. I. Willert; "A New Method for the Determination of the Alkalinity of the Blood," with exhibition of apparatus, by Dr. Arthur Dare of Jefferson Medical College; an account of a recent trip to Bermuda, illustrated by D. E. Bransome; "The Drug Store Sink," by Prof. Clement B. Lowe. Professor Kramer exhibited a muranta plant which he had grown from rhizomes sent to him by Mr. Outerbridge of Bermuda, and also the fruiting branches of *Eonymus* and other medicinal plants.

J. ELWOOD LEE CO. WISHES TO BUILD.

Coushohocken, October 27.—Unless the councils of Coushohocken agree to close two streets of the borough the J. Elwood Lee surgical plant, which employs about 400 persons, may remove its plant to another place. The company has asked the privilege of erecting a building on Spring Mill avenue, with a 600 feet front and a depth of 500 feet. It is to be one story high and, in form, a hollow square. Should their request be granted the company promises to build a number of houses for their employees.

OTHER HAPPENINGS.

—The board of pharmacy, now that the early fall examinations are over, has turned attention to the loose way in which some of the Philadelphia stores are being run. In four instances stores have been detected doing business without a manager's certificate in sight. Two of these places, within a stones' throw of each other, were being run, one by a man who had kept books in an Italian pharmacy in the old country, the other by a graduate of a foreign medical school. A severe hand will be laid on these violators, and the board will have the unanimous backing of every reputable apothecary in the city.

—Harvey G. Fenner of Broad street and Columbia avenue, Philadelphia has been forced to close. The store will be sold at sheriff's sale. There will be lively bidding, as the corner is one of the busiest and most prominent in the up-town district. Although but a comparatively small room, a \$10,000 fountain was installed there.

—Charles Refuss of Cunnans and Harris streets and Twelfth and Pine streets, Philadelphia, was the highest bidder for the remaining store of the late Jesse Peechin, at Thirteenth street and Columbia avenue.

—New stores are reported for Seventeenth and Dauphin streets and Seventeenth street and Susquehanna avenue, Philadelphia.

OBITUARY.

WILLIAM NAY, manager of Bauer & Black of Chicago, died at his home in Chicago of pleurisy. Mr. Nay was 56 years old. He was born in England and came to the United States in 1875. For fourteen years he had lived in Chicago. He was a graduate of Oxford. A widow and four grown children survive him.

JOSEPH DEBOIS, for more than 25 years a druggist of Kingston, N. Y., died of heart disease. He was largely interested in western mining property.

THE SOUTH.

ONE MARYLAND COUNTY NOT UNDER THE LAW.

Baltimore, October 27.—When the present State pharmacy law was enacted nearly two years ago, Talbot county claimed and secured exemption from the operations of the statute, the representatives of that county taking the ground that the bill, as finally reported and accepted by the druggists, was entirely too lenient and would fail in large part of its purpose. This was generally realized, but the supporters of the measure found that it was either a mild law or none at all, and they accepted the best that could be obtained. Talbot county, however, rejected all compromises, and insisted on being left out, which was reluctantly done. Since then it has been the aim of leading pharmacists to get the county into line, and with this end in view a committee from the Maryland Ph. A., consisting of Dr. J. F. Hancock and David R. L. Millard, the latter secretary of the board of pharmacy, visited the most prominent druggists there last week to secure their support. They found sentiment largely favorable. The legislature meets again next January, when the druggists will endeavor to have the exemption of Talbot county rescinded and the provisions of the law made more effective.

KENTUCKY BOARD ELECTS NEW OFFICERS.

Winchester, Ky., October 27.—At the annual meeting of the State board of pharmacy, George Wilson qualified as a member, having been appointed by the governor to succeed Addison Dinmitt, whose term expired with that meeting. The board was then organized for the ensuing year, with the following officers: President, John E. Stormes, Lancaster; secretary, J. W. Gayle (not a member), Frankfort; treasurer, George T. Wilson, Bowling Green; chairman executive committee, C. S. Porter, Somerset.

A class of thirteen was examined. The following passed: R. E. DeJarnett, Williamstown; G. J. Kaufman, Newport; Eugene Taylor, Lexington; Terence Cooney, Paducah; R. C. Summers, Columbus; W. H. Eisenmenger, Louisville; W. A. Ligon, Sonora; J. E. Curry, Lexington; G. J. Covington, Louisville. The next examination will be held in Covington, January 12.

ORLEANS ASSOCIATION BEARS DELEGATES.

New Orleans, October 27.—A very enthusiastic meeting of the Orleans Ph. A. was held on the night of October 16. The delegates who attended the N. A. R. D. made their reports, a very elaborate one being made by M. T. Broslin, chairman of the delegation. Messrs. F. C. Godbold, G. W. McDuff and James E. Bays, the other delegates, also spoke interestingly. The meeting was one of the best held in New Orleans, and the hours rolled to half-past one in the morning before adjournment was taken.

SIGNING EARLY CLOSING AGREEMENT.

New Orleans, October 27.—An earlier closing hour movement has just been put on foot here, and many druggists have already signed a binding agreement to close their stores at 9 o'clock every night, except Saturdays, or pay a fine of \$25. The agreement goes into effect on November 1, and continues until April 30, 1904. All those who have signed are earnest in the movement and pleased to anticipate the coming of shorter days.

A VERY PALATABLE LUNCHEON.

New Orleans, October 27.—The Louisiana Ph. A. has just issued its proceedings. Credit is due Secretary G. W. McDuff for the elaborate and interesting way in which the book is gotten up. Aside from the regular order of business—very interesting in itself—the book gives a resume of the amusements, entertainments and various sports which were features of the session.

This is a copy of the menu of the lunch tendered to the members by the local branch of Parke, Davis & Co.:

MENU.

- Antidiphtheritic Serum Punch
- Skull-Capped Vaccine Points
- Horse Radishes
- Opium Wine
- Cosmoume
- Nutritive Liquid Peptone, Crossed
- Elixir Alimem
- Pancreatin Roast "Chekan" Pepsin Filling
- Turkey Corn on the Cob
- Indian Turrips
- Calabar bean a la Physiologist Standardize
- Cascara Punch
- Condurango Wine
- Thyroid Patties
- Adrenalin Sauce
- Couch Grass, Palatol Dressing
- Kola Wine
- Euthymol Cream
- Witch Hazel Jelly
- Horse Chestnuts
- Strawberry Leaves
- Hot Germicidal Soap Cakes, Syrup Ipecac
- Cold Things
- Iceland Moss
- Frostwort
- Ash Wafers
- Thermofuge Cheese
- Paraguay Tea

MARYLAND.

—The scarcity of efficient drug clerks, which has been noticeable for some time past, continues, and not a few pharmacists are decidedly embarrassed as a consequence. One well-known retailer recently offered a young man \$75 a month and board, but his other employer promised to do as well or better, and he decided to remain where he was. This is said to be by no means an isolated case, the general range of salaries being high.

—Among the visiting druggists last week were J. Newton Gilbert, Annapolis; C. S. Henry, Cambridge; William Mentzer, Waynesboro', Pa.; J. B. Steele, Stephens City, Va.; J. Hartley Johnson, Ellicott City; A. H. Melhorn, Hanover, Pa.; William R. Rudy, Mt. Airy.

—Druggist W. L. Pierce, Baltimore, who has been very ill for weeks past, has returned home from a recuperation trip, and is once more waiting on his customers.

—Muth Bros. & Co. learned last week that a negro driver, had been disposing of goods which he was sent to deliver. He was arrested and committed to jail for trial.

—The retail pharmacy of W. A. Pryor, Baltimore, has been purchased by Park McCubbin, formerly a clerk for George A. Fox.

LOUISIANA.

—The New Orleans C. P. opened its doors for its fourth session on Monday, October 21, with a junior class of about forty students. This is an encouraging showing for the college, which is yet in its infancy.

—Albert J. Ferry, formerly with John Belon, Canal street, New Orleans, and then with Dr. J. F. Chretien, has returned to Mr. Belon.

—A. B. Willson, formerly with I. L. Lyons & Co., has opened a new store near the Rocheblane market, New Orleans.

How to Write Handsome Show Cards and Signs.

Consult the advertisement in the Miller College of Advertising Art, which appears on page 6 of this issue.

An Open Letter To the Retail Trade From the Wholesalers.

GENTLEMEN :

We, the undersigned wholesale druggists, whose trade connections cover the United States, beg to notify you that we have accepted the distributing agency for the **R. FAXTON CO.** goods, of Boston, viz: Paxtine Antiseptic Painsalva Cream and the Ruth Paxton Improved Fountain Syringe.

These articles are steadily and continually advertised, and you take no chances in stocking a sufficient quantity to cover the demand created in your vicinity. Do not let any sales pass you because you do not have the goods; if you do not make the sale your competitor will. Hold your customer by saying you will get the goods for her, and send one of us your order, which will be promptly filled.

These goods are unlike anything you have in stock and will support your personal recommendation. Paxtine, especially, is one of the most meritorious articles of its kind we have ever handled, and sells repeatedly to the same customer. Yours very truly,

OUR "SANTA CLAUS" CATALOGUE IS OUT

The catalogue whose appearance each year is the signal that "the holiday season is off" is now ready.

Tens of thousands of retailers have learned to await this catalogue before buying—and then to buy QUICK.

They know they have waited long enough, but not too long. Every item is in and the line is still unbroken. They can get what they want and all they want.

The new catalogue contains the most comprehensive line of holiday merchandise ever gathered into the showing of any single house and names prices that set the pattern for America.

A copy of this catalogue means more to the buyer of toys, china, dolls and fancy goods than fifty sample trunks that might be brought to his store. Retail druggists in especial will find it of value to them.

FREE to merchants; we send it to no one else. Ask for catalogue T-479.

AROUND THE GREAT LAKES.

MR. BODEMANN TWICE ENDORSED.

Both Chicago R. D. A. and Drug Clerks' Association Rally Around Him—Price Matters Improving Finely.

Chicago, October 27.—At the fourth quarterly meeting of the Chicago R. D. A., on Tuesday of last week, resolutions of confidence in Mr. Bodemann were adopted and a committee was appointed to take up the matter of the carbolic acid ordinance with the city council. Reports showing the work accomplished during the quarter, was all most encouraging.

In reference to the attacks on the State board of pharmacy, the following resolutions were adopted by a rising vote:

Whereas, the druggists of the State are practically unanimous in their desire that the cocaine evil should be stamped out; and,

Whereas, it was largely through their efforts that the present cocaine law was enacted; and,

Whereas, We feel it our duty to aid in every way the enforcement of said law and the upholding of those upon whom devolves the work of such enforcement; and,

Whereas, In the fearless discharge of his duties as president of the State board of pharmacy, Wilhelm Bodemann has incurred the hostility of certain members of our profession who sought to evade the law, and as a consequence has been wrongfully accused of soliciting bribes and otherwise maligned; therefore, be it

Resolved, That the said Wilhelm Bodemann has the unanimous indorsement and support of the members of the Chicago R. D. A., that he is entitled to and has our utmost confidence, and that we resent any imputation against his honesty and integrity.

Resolved, That the thanks of this association are due Mr. Bodemann for his self-sacrificing devotion to duty in this fight for the stamping out of the campaign evil, a fight in which he represents the entire respectable element of the profession; and, be it further

Resolved, That the Chicago R. D. A., representing practically all the druggists in Cook County, wishes to express its deep appreciation to the Hon. Governor Richard Yates for standing by the board in the enforcement of the law without fear or favor.

After discussion of the proposed city ordinance requiring that no carbolic acid be sold except on a physician's prescription, a committee was appointed, to confer with the special committee of the city council to whom the bill has been referred, consisting of D. R. Dyche, George R. Baker and C. J. Brady.

The subject of a minimum price list for the whole city was considered, and the consensus of opinion was that no differential should be given to any district or class of dealers, and that the scale should be based on the popularity of the goods, instead of a flat price for all goods of a certain standard price, thus catering to public sentiment by a flexible system of price making. The executive committee was empowered to frame and promulgate this schedule.

The dues for the ensuing year were fixed at \$10, the same as in the past. Walter H. Gale and W. T. Kleuze told of the convention at Washington, and reflected the enthusiasm that there prevailed. Thomas Voegeli of Minneapolis, gave a stiff little talk on organization.

Reports from the twenty-four districts in Chicago were encouraging in the main. The city as a whole is in much better condition than it was three months ago, there being very much less price cutting, less aggressive advertising, less friction among the dealers and as a result much money is being saved. Organizer Cusack gave an interesting description of his work. Everybody present appeared highly gratified with the showing made, and the gathering was full of enthusiasm.

Drug Clerks Also Endorse Mr. Bodemann.

The Drug Clerks' Association also gave Mr. Bodemann a vote of confidence. At a meeting last week the clerks in strong resolutions denounced the charges of attempted blackmail against Mr. Bodemann, declared their entire confidence in him and in the board, that the members of the association know that the laws are being enforced better now than ever before, and that they believe the charges against the board and Mr. Bodemann individually were prompted solely by the strictness of the prosecution which is being waged against the cocaine sellers and other pharmacy law breakers. In conclusion, Mr. Bodemann was endorsed for reappointment on the board.

NORTHWESTERN ALUMNI MEET TO REORGANIZE.

Chicago, October 27.—On last Friday evening the Alumni Association of the School of Pharmacy of the Northwestern University gave a banquet at the Sherman House. The menu was excellent, and the meeting which followed was one which will result in much good to the organization and to the school. Dr. Harry H. Kahn was toastmaster. Among those who spoke were Dr. Kahn, professor of materia medica; Dr. R. Pond, professor of botany; Dr. H. M. Gordin, professor of organic chemistry; Dr. T. Whittelsey, professor of inorganic chemistry; D. C. Eccles, head of the dispensing laboratory; Thomas V. Wooten, and Dr. Oscar Oldberg, dean.

After dinner, Dr. Kahn called the diners to order. He said that one purpose of the meeting was to reorganize the association and to put it on a growing basis, where the members would manifest an interest in the work of the body and recognize it as a connecting link between themselves and alma mater. Other members responded with suggestions. A motion by Dr. Oldberg to the effect that all those graduates of the school, who were present, be declared members of the association, was carried. The proposed new constitution and by-laws were taken up, and after some discussion, it was agreed to leave the matter to a committee for further discussion and revision. The chair appointed as the committee T. V. Wooten, Dr. Oscar Oldberg, Miss Nina Piper, J. W. Hoover, K. J. Pritzger, J. H. Montgomery and H. E. Erickson.

The following officers were elected for the ensuing year: President, Thomas V. Wooten; first vice president, Judson W. Hoover; second vice-president, J. E. Elliott; third vice-president, W. L. Barnum; secretary, Miss B. C. Piper, 6441 Sangamon street, Chicago; treasurer, M. A. Miner; trustees, J. H. Montgomery, A. J. Gill and Dr. Harry H. Kahn.

NEW RECRUITS TO N. A. R. D.

Chicago, October 27.—New recruits "lined up" with the N. A. R. D. are the following from the ranks of the army of erstwhile aggressive cutters: Broach & Huil, Kirksey, Ky.; Loewy Drug Co., Baltimore, Md.; John Tilma, Buffalo, N. Y.; the Wilson Company, Philadelphia.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories.
Twelve Teachers. Thorough Course.

NEXT TERM BEGINS JANUARY 4, 1904.

Address Inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

The Central Cut Rate Drug Store, Washington, D. C., was a projected store, whose projectors were convinced that such an enterprise was not feasible under present conditions and abandoned it. The N. A. R. D. has for a long time past been doing effective work in converting cutters, but it has not paid as much attention to influencing prospective cutters not to start as it might have done. The Washington case establishes a precedent that will be religiously adhered to in the future.

ILLINOIS EXAMINATION RESULTS.

Springfield, Ill., October 27.—At the October examination at Springfield, the following passed: Registered pharmacists—L. E. Gronhardt, Beardstown; W. O. Foster, Colchester; W. B. Hattenheuer, Streator; C. L. Hollister, Jerseyville; J. Hoyer, Chicago; F. J. Karlovsky, Chicago; C. R. McElougall, Chicago; L. H. McMillan, East St. Louis; A. J. Richards, Springfield; A. N. Rigg, Macomb; T. B. Shaffer, Oneida; F. A. White, Farmington. Ass'tants—A. W. Armstrong, Dwight; F. A. Blum, Rockford; G. M. Foster, East St. Louis; J. E. Rogers, Silman; P. R. Snider, East St. Louis; A. L. Wangler, Chicago; C. J. Welker, Chicago; S. J. Williams, Macomb.

The next examination will be at 146-S East Thirtieth street, Chicago, November 17.

THE TOWN WENT QUAIL HUNTING.

Grand Rapids, Mich., Oct. 27.—Van Buren county has been put to large expense in the drug store cases brought up by the Anti-Saloon League, through failure of the league to produce sufficient evidence to convict in many cases, or of failure to appear against the defendant when the case was called. As a result, a grand jury has been called, resulting in subpoenas being issued for 117 of South Haven's prominent citizens, including the mayor. On the day the officer was in town for the purpose of serving the papers, there was a wholesale exodus for the country. People who had never fired off a gun were out in the fields, ostensibly quail hunting.

INSTRUMENT MEN AGAINST CUT PRICES.

Chicago, October 27.—Members of the American Surgical Instrument Trade Association closed their annual business meeting at Chicago on October 21, after deciding to hold the next session in June at St. Louis. It was decided to ask manufacturers to refuse to sell to mail-order houses that cut prices. The following officers were elected: President, L. P. Aloe, St. Louis; first vice-president, William H. Armstrong, Indianapolis; second vice-president, A. B. Brand, St. Paul; secretary, J. Frederick Hartz, Detroit; treasurer, Charles Lentz, Jr., Philadelphia.

ILLINOIS.

—One of the best entertainments ever given by the Chicago Drug Trade Club was that which took place on last Thursday evening. The club rooms in the Bismarck hotel were filled with members and guests. Many ladies were present. Master Abie Shynman, the "boy pianist" gave new evidence of his musical genius. Miss Elizabeth Blamere, soprano, and Mr. Winno, tenor soloist, gave several selections. William Tabor Houston, the entertainer, presented some of his specialties, and not the least of the entertainment were the droll sayings of J. M. Hawly, the humorist and the selections of Will Collins, the monologist.

—Porter B. Fitzgerald has resigned his position with Morrison, Plummer & Co. of Chicago, to take the management of the Southwestern Drug Co. of Wichita, Kans., recently organized to engage in the wholesale

drug business. Mr. Fitzgerald will remain in Chicago for ten days after the first of November to arrange for such new stock as will be necessary to be purchased there, before going on to New York.

—Gustave H. Smith, a clerk for T. F. Cannon, North Clark and Huron street, Chicago, was arrested on a warrant sworn out by his former employer, charging him with having stolen goods from the store. The police declare that they found the goods in Smith's room.

—T. C. Ballard, manager of the druggists' sundry department of Morrison, Plummer & Co., returned from a two weeks' visit to St. Louis. E. J. Carpenter of the city sales force of the company, has recovered from an illness which kept him at home for six weeks.

—Radium and radio-activity was the subject of a highly interesting and instructive address by Dr. H. W. McCoy of the University of Chicago at the monthly meeting of the Chicago Section of the American Chemical Society, at the Sherman house.

—John J. Bechm, a well-known West Side, Chicago, druggist, who was a candidate for city clerk at the recent elections, is contesting the election of Fred C. Bender to that office. The recount of the ballots is now progressing.

—W. A. Bancroft, Washington avenue and Sixtieth street, Chicago, has sold his store to a syndicate of which William Campbell of the Economical Drug Co., is said to be the head.

—E. G. Haney, formerly of the White Ford Chemical Co., has bought the Shippey pharmacy at 175 South Western avenue, Chicago.

—The Owl pharmacy, Sager & Lyon proprietors, at Sixty-third and Kimbark avenue, Chicago, was sold to Gabriel & Gilchrist.

—J. M. Lustina, druggist in Sixty-seventh street, Chicago, was recently operated on for appendicitis and is still in the hospital.

—Whaley Brothers have purchased the drug store of J. M. Cody at Thirty-first street and South Park avenue, Chicago.

—R. Moreau, formerly in the drug business on the North Side, Chicago, has opened a store in South Maywood, a suburb.

—E. C. Arno, at one time in the drug business in Chicago, is about to open in Dubuque, Ia.

DRUG STORE BLOWN UP BY DYNAMITE.

Wootser, O., October 27.—Aylosworth's drug store at Fredericksburg, this county, was blown to pieces with dynamite. It was at first thought that the deed was committed by burglars, but later information is that the act is the result of bad feeling over the approaching local option election.

SPECIAL OFFER ON CALCURA SOLVENT

Dr. David Kennedy's Latest Kidney and Liver Medicine

For thirty days, ending on November 24, we will give to all retail druggists one free bottle of Calcura Solvent with each dozen they order of their wholesale dealer, providing each druggist thus ordering will make a window display of the said goods and distribute from their store free samples of Calcura Solvent and advertising matter. On two dozen orders they will receive 5 per cent discount.

Simply send us your order together with the name of your wholesale dealer through whom you would like the goods shipped.

The free goods, samples and advertising matter will be sent direct from our office, all charges prepaid, even the postage to your store. IN AN ATTRACTIVE WINDOW DISPLAY, LARGE SIZE SAMPLES AND MOST EFFECTIVE ADVERTISING ALWAYS CREATE A STRONG AND STEADY DEMAND FOR CALCURA SOLVENT.

INDIANA.

- At Lafayette, J. D. Bartlett, Robert Rice and George Hollis have formed a partnership (not incorporated) under the name of The Owl Drug Co.
- F. H. Kissling has removed his business from College avenue and Twenty-second street, Indianapolis, to West Lafayette.
- At Hamilton, Fred. Rudd, formerly with Geddes & Harding of Butler, succeeds P. S. Will.
- At Muncie, C. E. Thornburg & Co. have been succeeded by J. H. Thoraburg.
- Hood & Haney at Peru, have dissolved partnership, G. J. Hood succeeding.
- At Plymouth, J. W. Rimard has succeeded J. E. Garwood.
- G. G. Graham has opened a new store at Veedersburg.
- At Ashley, W. F. Bauchman succeeds H. M. Phillips.

OUR CANADIAN LETTER.

- The Provincial government of Ontario has appointed J. G. Ardagh and F. G. Marriott fellows in chemistry on the teaching staff of the School of practical Science, Toronto, the latter to take the place of James Horton, resigned.
- Inquiries are being made by leading business men of London, Ont., as to the feasibility of starting a factory in that city for the manufacture of coal tar products. There is no factory of the kind in Canada, and the field is regarded as a favorable one, as the trade in aniline oil and aniline dyes is increasing.
- J. D. McCrostie, druggist of Ripley, Ont., has removed to Paisley, Ont.
- G. T. Burnett, druggist of New Westminster, B. C., has disposed of his business to H. Ryall.

BILLINGS CLAPP CO., - - Boston

PRICES OF DOMESTIC CRUDE DRUGS TENDING UPWARD.

New York, October 27.—A continued steady feeling prevails throughout the general market, but there have been no important developments, and there are very few price changes calling for more than ordinary mention. It is worthy of note, however, that most of the domestic roots and barks are ruling firm, with values tending upward, owing to scarcity.

OPUM.—There is more or less keen competition among importers, which has a depressing effect on the market, but conditions at primary sources of supply do not warrant any decline and jobbers continue to quote the old range of \$2.40@3.65 for 9 per cent, and \$3.50@4.75 for 11 per cent. Powdered continues to move moderately in small lots at \$4.40@4.50 for 13 per cent, and \$4.80@5.00 for 16 per cent.

MORRHINE SULPHATE.—Business in a jobbing way is of full average volume, and the tone of the market is steady with dealers quoting \$2.60@2.70 for eightths in ounce boxes, \$2.55@2.65 in 2½ oz. boxes, \$2.35@2.45 in ounce vials and \$2.30@2.40 in 5-oz. cans.

QUININE SULPHATE.—Manufacturers have not yet announced the expected advance in prices, but the market has a strong undertone and there is no pressure to sell round lots at current figures. The jobbing movement continues satisfactory to dealers and the ruling quotations are 25¢@25½¢ for bulk in 100-oz. tins, 25½¢@26¢ in 50-oz. tins, 26¢@26½¢ in 25-oz. tins, 27¢@27½¢ in 15 or 10-oz. tins, and 32¢@32½¢ in ounce vials.

SILVER NITRATE.—Manufacturers prices have been advanced owing to the increased cost of silver, and the revised jobbing quotations are 47¢@52¢ for crystals and 40¢@51¢ for fused.

PEPAC ROOT.—Cables from London reporting a decidedly stronger market for Carthagenia have caused a sharp advance in local quotations for that variety and jobbers quote \$1.55@1.75 for whole and \$1.65@1.90 for powdered. Rio also is firmer and quotations have been marked up to \$1.80@2.05 for whole, and \$1.90@2.15 for powdered.

BARKS.—Firm markets are reported for all descriptions, owing to reduced stocks and lack of offers from producing markets. Bayberry and cotton root are very scarce with values higher, and both are quoted at the advanced range of 25¢@30¢ for whole and 30¢@35¢ for powdered. Cramp is without quotable change, but supplies are very light and prices show an upward tendency. Limited quantities are yet available at 25¢@30¢ for whole and 28¢@32¢ for powdered.

SAFFRON.—Valencia is firmer, both here and abroad, owing to a small yield of new crop, and spot jobbing quotations have been advanced to \$9.00@9.50.

OLL CAPTIV.—With the market better supplied the tone is somewhat easier, and quotations for jobbing quantities show a decline to 35¢@\$1.05.

OLL CUTBERR.—Lack of important demand and consequent slow trading have had a weakening influence, and jobbers have reduced quotations to \$1.20 @1.45.

FINCHORN ROOT.—Under the influence noted last week jobbing prices have been further advanced to 50¢@55¢ for whole and 60¢@65¢ for powdered.

MANDBAKE ROOT.—The market has a decidedly strong tone, with the outlook favorable to still higher prices, but jobbers are yet willing to sell in a limited way at 15¢@16¢ for whole and 19¢@21¢ for powdered.

BLOOD ROOT.—Stocks continue to diminish under a fair consuming demand, and jobbers have further advanced prices to 20¢@25¢ for whole, 22¢@27¢ for crushed and 25¢@30¢ for powdered.

LOBELIA SEED.—Values are higher, owing to scarcity, and the revised jobbing quotations are 70¢@80¢ for whole and 80¢@90¢ for powdered.

Hood's Calendars for 1904.

We think it will be an advantage for all retail druggists to accept Hood's Calendar Offer for 1904 as early as possible.

The Calendars are very handsome and there is sure to be a great demand for them.

It is good cheap advertising for the retailer, as he gets his name printed on each and every Calendar sent him.

Every Calendar given away is a constant and steady advertisement for you with your customer for a whole year, and costs you nothing extra whatever.

How to get Hood's Calendar is explained fully in regular advertisement in another part of this journal.

Note the special offer of the Chelera Co. of Kingston, N. Y., which appears on page 462 of this issue.

BUSINESS NOTICES.

THE ERA DRUGGISTS' DIRECTORY.

The 10th revision of the Era Druggists Directory, now ready, is the best edition we have yet offered. It is the standard work of its kind in this country and includes a complete list of the druggists in Costa Rica and the principal drug stores in Chile, Peru, Bolivia, Ecuador and Colombia.

The list of retail druggists in the United States does not quite reach the 40,000 figure which the last edition showed, but this loss is made up by increased numbers in Part III. (Manufacturers, Jobbers, etc.) This Directory will be found invaluable to any merchant or manufacturer who does business with the trade. It is sold only by subscription, and until further notice the price will be \$5.00 per copy, net, postpaid.

The edition is limited, and we are obliged to reserve to ourselves the right to raise this price at any time.

"We are all learning more or less every day, and wide reading in one's chosen field is imperative."

But there is a great difference both in the quantity learned and the manner of reading.

The newspaper habit, the careless reading of many headlines in many dailies, does not lead to great learning.

On the other hand careful systematic reading is the medium of all education.

Why does the college student read to better advantage than the newspaper habitue?

Because his reading is selected and systematized. System and selection in reading is, however, also possible outside college walls. The main thing is to get the right person to arrange it for you.

The Era Course in Pharmacy has been selected and systematized for the use of home students by educators of wide experience.

Write to the Pharmaceutical Era, 8 Spruce Street, New York City.

THE OPINION OF THE COMMISSIONER OF PATENTS.

The opinion of U. S. Commissioner of Patents Allen, which we reported last week seems to dispose of the movement for revision pretty effectually, for the time being at least. The commissioner is evidently not at all in doubt about the merits of the case; he not only answers each argument with great emphasis, but in referring to the motives behind the desire for revision, he approaches very near to ridicule. If this official opinion carries much weight at Washington, it would seem to be of little use to attempt any further consideration of the question, at least until popular sentiment and with it the attitude of the powers that be, can be brought to a more favorable point of view. From the commissioner's present standpoint, his answers to the arguments presented to President Roosevelt are no doubt sound. But his point of view is radically wrong, and for this the druggists are in a measure to blame. The plea to the sympathies in the interests of suffering humanity was unfortunate. It appeared to lack complete sincerity, and created a prejudice which under the circumstances is not entirely unnatural. The question is, as the commissioner pointed out, not one of injustice to suffering humanity. If this adverse opinion is to be answered effectively, it must be approached on different ground. The present patent laws must be shown to be foolish and antiquated, which in fact they are. If the matter had been presented in this way, it is quite probable that the committee's request would have been treated with greater respect.

THE QUESTION A COMMERCIAL ONE.

The point insisted upon in the commissioner's report, that the question of the exorbitant price of phenacetin is purely a commercial one, is well taken. From the standpoint of ordinary business ethics, there is no injustice in asking the sick to pay one dollar an ounce for this remedy. Patent laws are meant to secure to the inventor, such benefits as he can obtain from his discovery. The object is to prevent a distribution of these advantages among his fellow-men. Before the inventor placed the preparation upon the market everyone was obliged to get along without it, and if the principle of patents is at all tenable, the public have no right to share in the benefits created. As a matter of fact the public has a

very considerable share of the benefits; for the demand shows that some people think very highly of the preparation. The circumstance that the firm furnishing the product has taken advantage of the weakness of our laws to enrich itself inordinately, and has by a system of persecution rendered itself obnoxious to a very large class of our citizens, has nothing to do with this phase of the case. No one thinks it an injustice to demand ten dollars for a very few doses of antitoxin, even though the cost of production represents only a small fraction of this sum, and eminent surgical specialists charge as much as a thousand dollars for a single operation with the complete approval of the public. The remedy for an exorbitant price is simple, as the commissioner points out, with an almost audible grin: get the consumer to stop buying it.

PROTECTION FOR THE FOREIGNER.

The assertion that there is no injustice in permitting an inventor, native or foreign, to get all the profits out of a discovery that he possibly can, does not, however, hide the essential absurdity of the present policy of our government in regard to the granting of patents. If the government exists by and for the people, is it not inconsistent literally to tax the citizens for the benefit of a foreign enterprise? It is not necessary to review numerous statutes and treaties to discover the absurdity of our present policy; it is sufficient to look at the results. The fact that a manufacturer in Germany can and does compel the people of this country to pay four times as much for a product than those of any other country is proof enough that something is radically wrong. What can be said in defense of a policy that aids the foreigner at the expense of its own citizens, especially when pursued by a government wedded to the commercial protection of its own industries? This feature of the question has been left severely alone by Commissioner Allen. Apparently his view has been considerably obscured by the plea for the "dear public." A mother who takes from her children's sustenance to feed their infant brother may be defended with volumes of arguments, but it must be a courageous statesman who dares to justify the action of a parent who passes this same milk on to a lusty stranger. A policy so excessively generous is much too altruistic for this competitive world. It is all very fine to establish laws on broad principles and to administer them with generosity, but a suggestion that the policy might be a little too broad, presented by a large body of citizens would seem to deserve a respectful hearing at the very least, especially when practically every other nation has abandoned this same policy because it was found to be contrary to the best interests of the people.

A POLICY THAT INVITES LAW-BREAKING.

The policy of discrimination in favor of the foreign manufacturers, now pursued by our government, is offensive in another way. It makes it difficult for peaceable citizens to escape collision with the law. The difference between the price of phenacetin in this country and that demanded in Canada offers extraordinary inducements to the smuggler and the adulterator. Hence the numerous phenacetin crusades by boards of health, and the wholesale charges against

respectable druggists. Some of these charges are, no doubt, true, but in the majority of cases the retail distributor of the impure drug is innocent of any crime greater than failure to test the material when received. Unfortunately the druggist is by law held responsible for the quality of all preparations dispensed, on the supposition that he personally examines all materials kept on his shelves. That the pharmacist now occupies this false position before the law is to be deplored, but it does not prevent frequent legal entanglements and very harsh decisions. We have no doubt that many members of the trade have in this way been unjustly branded as frauds and criminals and compelled to pay fines, and that in many cases this amounts to little more than legal persecution. Adding injury upon injury, the government besides furnishing the incentive for the crime the results of which fall upon the poor druggist's head, also provides the foreigner with a weapon with which to flay him. This appears to be the real cause of the sentiment in the trade against this drug, and remotely, for the present movement to secure a revision of the laws. It is not a question of profit—the druggists are not so insincere as the commissioner insinuates—for the margin on an expensive drug is as a rule more respectable than that of a cheaper article. And now when the representations of the druggists go to the President of the United States with a request that their grievances receive some attention, they are turned away with a smile.

THE REAL GRIEVANCE.

The druggists of the United States have a real grievance against the government, and it will be difficult to convince them that all the trouble is due to their own short-comings. Many respectable members of the trade have been haled into court and made to suffer at the hands of the foreigner, when entirely unconscious of wrong-doing. Although they have assumed certain legal responsibilities which it now seems impossible to fulfil, they feel the injustice of being called to account for errors practically beyond their control. The fact that the laws of their own land invariably seem to be against them, makes the quarrel with phenacetin the more exasperating. On the other hand the importers are entirely within their legal rights. The U. S. patent law gives them the right to demand whatever price they may be able to obtain, and there are other laws that prohibit smuggling and sale of adulterated goods. We may have our opinions about the manner in which they exact their pound of flesh, but the law of our country delivers to them their pound of flesh. It is, unfortunately, difficult to discover the exact fraction of injustice in the matter. It is the druggist who suffers the injustice, but how? The exorbitant price does not affect him; other preparations of similar character and no greater merit, sell for the same price. The patent laws are inconsistent with the principles of our Government, but not unjust if the principle of protection is tenable. Then where is the injustice which nearly every druggist feels? We are of the opinion that in the last analysis it will be found to lie in the abnormal conditions created by the patent laws which compel the druggist to undertake duties which he finds impossible to perform, namely, testing and assuming personal responsibility for the quality of all drugs dispensed.

PERJURY IN DRUG STORE LIQUOR CASES.

A decision of the Michigan supreme court holding dealers liable for perjury in making false reports of the quantity of liquor sold, even after conviction for illegal sales, is of considerable interest to the druggists of that state. In certain counties where local option is in force, druggists are required to make sworn statements weekly of all liquor sales. In a recent suit the defendant charged with illegally selling intoxicating beverages pleaded guilty and paid the fine. The prosecuting officer, not satisfied with the penalty, immediately filed information for perjury in making false reports under oath. In defense the attorney stated that the conviction for the illegal sales in question should serve as a bar to perjury proceedings covering practically the same offense. But the supreme court ruled that there were in effect two separate violations, the false statement and the sale constituting separate offenses. In cases of this kind in Michigan it will, therefore, no longer be a simple matter of pleading guilty and paying a minimum fine. Action for perjury may be brought for each separate weekly statement made incorrectly under oath. This decision need not disturb any druggist who manfully strives to live up to the spirit as well as the letter of his community's laws—which every citizen should do—but it will serve as a warning to those who do not hesitate to stretch a point occasionally in the pursuit of profits, and also to those who through neglect fall into devious ways not strictly according to the regulations.

HUMAN SUBJECTS FOR GERM EXPERIMENTS.

Enthusiastic students of medical science have frequently in the past horrified the public with proposals to employ human material for experimental purposes. There has always been strong objection to the vivisection of animals and tampering with the physiological machinery of cats and dogs while the organism is still in active operation. The antivivisectionists have always contended—and not without reason—that these experiments are of doubtful value because the organism of the lower animals differs so widely from that of the human species that reaction to manipulation must also vary. This objection is of especial weight in experiments with disease germs which have curious preferences in the matter of the animal species which they inhabit. A scientific body in Paris has recently gone to great trouble and expense to discover an organism other than man acceptable to the syphilis germ which seems to be an aristocrat in its way. Latest reports state that the germ has been successfully inoculated upon the body of an innocent chimpanzee. Now, this our nearest relative in the animal kingdom, is in great demand for experimental purposes, and although the price is high—two thousand dollars or more for a single specimen—the search for a remedy to combat this loathsome disease will be pushed with vigor. Progress in the investigation of tuberculosis has also been hampered by want of a medium in which the wicked little germ will go through the same dreadful performances as in the human body. At the meeting of the American Public Health Association, held last week in Washington, a doctor from Philadelphia brought up the old proposal to employ condemned criminals for medical

**WILBER J. TEETERS, M. S., PH. C.**

Professor Teeters has been connected with the teaching force of the University of Iowa, Iowa City, since 1895, when he became demonstrator of chemistry in the medical department of that institution. In 1900-1901 he served as instructor in the College of Pharmacy, S. C. L., and a year later was made assistant professor of pharmacy and director of the pharmaceutical laboratory. Last year he held the chair of pharmacognosy, and on September 24 of the present year became, by action of the board of regents, acting dean of the College of Pharmacy and professor of pharmacy, succeeding Professor E. L. Boerner in both of these positions. Professor Teeters is an alumnus of Mt. Union College, Ohio, and a graduate of the School of Pharmacy, University of Michigan. He is a well-known member of the A. Ph. A. and brings to his new field of labor an excellent record of work successfully accomplished.

experimentation and supported it with a rather novel argument. He considered the question from the standpoint of the person most concerned, the criminal. He thinks that almost any man would rather die from tuberculosis in the interest of science than by the usual and more abrupt methods in the interest of justice. However this may be, we fear that the popular mind would require a great deal of education before it would consent to the taking of any such liberties with the living human body.

SOCIETY OF WOMAN PHARMACISTS AND CHEMISTS.

Pennsylvania has a new ornament, a society of woman pharmacists and chemists. The association starts out bravely, and the Era wishes it every possible success. We do not understand precisely why any society of pharmacists should be composed exclusively of women, nor whether this is to be an association of women or one of pharmacists and chemists. Perhaps it does not matter; there is plenty of room for more societies. Needless to say, the aims and ideals of the new sorority are high, and we hope it will succeed in all its undertakings, and enjoy a long—no, we prefer not to say long life. Societies of woman pharmacists have usually been short-lived, and the cause of dissolution has almost always been an epidemic of marriage among the members.

SHOP TALK

ON "PRACTICE MAKES PERFECT," AN OVERPATED MAXIM

"Mr. Emanuel's six years' experience may be a bit long, but, just the same, practice makes perfect," remarked the druggist with a that-settles-it air.

"That depends," returned the C. P., who as a matter of principle, always refuses to take things for granted.

"Depends upon what?" said his friend slightly nettled.

"Upon what sort of practice you mean. There is a whole lot of difference in the kind of practice a person gets in this world, and especially in the sort of experience a boy gets in a drug store."

"Oh yes, I dare say! There are different kinds of drug stores and several varieties of druggists. But you know what I mean. The little odds and ends of information picked up by boys do not differ so much."

"You forget that there is a great difference in boys. Some catch on at once, while others are sensitive to impressions from a club only. Some heads are like a sponge, while others are more like a block of wood. I took two small boys to a circus once. On the way home I used a sort of mental pump on them to find out what impressions had resulted. One of them had seen simply everything and could describe every detail to the color of the clown's whip. The other seemed to have received only one vague impression, and that concerned the biggest thing there—an elephant. There must be some sort of relation between the practice and the person who does the practicing. A neighbor of mine has practiced upon the violin faithfully every day for years, yet he makes no improvement whatever. He doesn't know how. It is the same way in everything—unless you practice in the right way, it doesn't amount to anything."

"Oh, well, of course! But you've got to make some rule about the thing, you know."

"I fail to see any sense in a rule that doesn't mean anything," said the sage. "What is wanted is fitness, isn't it? Then why not adopt a standard of fitness and let it go at that?"

"Because there are difficulties. The board of pharmacy examination is supposed to do that; but you see, you can't find out everything in that way. Experience has shown that nothing but several years of experience gives the familiarity with drugs necessary to ensure fitness."

"Experience has shown," said the C. P. with peculiar emphasis, "that a boy who has had the advantage of a high school training and a laboratory course in some good college of pharmacy will get more real knowledge of dispensing in three days of drug store practice than a chuckle-headed youngster who leaves school because he can't learn the multiplication tables can get in three years."

"Those are extreme cases."

"Extreme cases seem to be pretty stiff arguments, just the same. It seems to me you druggists are mighty unreasonable people. You keep talking about the poor material you get for apprentices—no, it isn't apprentices that you want; you are after bottle-washers and undersized porters. You take your fellow-druggists to task for not selecting better boys. Somebody—I forget who it was—recently said that only high school graduates should be employed in the pharmacy, boys who are in a condition to profit by the experience they get and who may be expected to grow up to be ornaments to the profession."

The druggist nodded. "I agree with that. It's a good scheme."

"Do you know what that means?"

"That we can't get them, I suppose."

"A boy graduates from the high school at about

the age of eighteen. So far he has been too busy to get more than a few months drug store experience. At about that stage of his development he is ambitious and is making plans for the future. If he continues his studies at all, he will be most likely to keep on then. If stopped then he will never seriously think of a professional course in college. Still you ask him to spend the next two or four years, the most precious of his life, washing bottles and wedding a mop to get experience of drugs. If he continues his studies from the high school on in pharmacy, as he would in any other profession, he will graduate at the age of twenty. What do you propose to offer this university graduate?"

"He has no experience!"

"No, and in order to get that experience you expect him to spend from two to six years acting as all-round drudge in a drug store, at a mighty few dollars per. You will not allow him to begin his chosen work until he is twenty-two or twenty-five, and then he will be obliged to compete with eighteen year old boys who have no education to speak of because they have grown up with the drug business. A great inducement, isn't it?"

"But it doesn't work that way."

"No, it doesn't. That sort of boy does not go into the drug business, and I don't blame him. Now what sort of boy can you get with that several-years-experience fence?"

The druggist gazed out of the window.

"I will tell you. He is commonly the boy who thinks he is done with school at the age of twelve or fourteen. It may be poverty, in which case the final result is not so bad, but it often is a strong dislike of books and study that drives him to take any job he can get when he ought to be in school. In many cases he plugs along several years before he finds out that there is such a thing as the science of pharmacy. When he goes into the thing, he thinks he is going into business. When he finds out that in order to get the best salary he must be registered, he is too far along to go back to the seventh grade. He has the experience—at least so it is counted—all he lacks is his license—science be hanged—and he goes about the quickest way to get it."

"Short cramming courses?"

"That's it, and who can blame him? He scrambles past the board, and at twenty-one stands away ahead of the poor chump who has spent his time in hard study. Besides, all these years he has been earning his board. Under such conditions, what inducement has pharmacy to offer the conscientious student?"

"You are harping on extreme cases again. As a matter of fact, the boy who has grown up with the bottle-washing business is a heap more competent than a man with a university degree. I prefer him every time."

"Then why do you talk to me about poor material, high school requirements, scientific study of pharmacy and that sort of thing?"

"We want the training added to the experience."

"But you see you can't get that without immense sacrifice on the part of the boy, and he has a right to object. He can not spend the best years of his life in the back room of a drug store and in school at the same time. It is an impossibility."

"Why can't he divide his time?"

"Because you will not let him. You want a bottle washer to be around when you need him; that leaves no time for school."

"Now you are saying what you ought to know is not true. All the pharmacy schools in the large cities expect their students to spend part of their time in

the store. The courses are arranged with that in view."

"Yes, and in that way they are able to get a few hours' experience a day. That will amount to less, actually, than a year for the course. And still the tendency is to require several years' experience before graduation. How is a boy to get it if he wants to graduate at twenty and he is expected to have a high school certificate? It is a mighty swift boy that can take a stiff course in a good high school and work in a drug store at the same time."

"You must have missed something, somewhere," said the druggist. "Pharmacy needs men of education if it is to rank as a profession, and a clerk has got to have a lot of practical experience. The thing can be done, somehow, in spite of what you say."

"But don't be unreasonable and ask the impossible."

IN EVERY TOWN THERE IS ONE "BEST."

George E. Thorpe of Syracuse, has printed a little paper which he is distributing among his trade. He calls it "The Modern Pharmacist." The object of this paper is given in the following editorial:

"The main province of this little paper is to tell the truth. In every neighborhood where there are several drug stores there is generally one that is, on the whole, the best. They may all be good, but there must be a difference, and there can be only one best. We do not propose to say anything about the others, but we desire to give you some insight into our ideas—the aims, ambitions, methods which direct the conduct of our business—the truth is always good enough for us—and if you conclude—as we believe you will—that our store is worthiest of your confidence, then we shall be pleased to have you transfer your patronage from the second best, or third best, to us."

WILL PRINT LISTS SUGGESTING HOLIDAY GIFTS.

"I have ordered all of my stuff for the holiday trade," said a pharmacist in Rochester the other day. "The fellows who don't begin now to think about Christmas will be apt to get left. I have ideas all worked out even to two or three window displays during Christmas week. Christmas this year comes on Friday, so we will have an excellent week for trade. I am going hot after the trade of the children and their pennies count up fast. For the women I will have the best of perfumes and soaps—do you know that soaps as presents are highly appreciated by women? For the men there will be the best brands of cigars in boxes from ten up to 100. I will guarantee the cigars, and by doing so women will not be afraid to buy. You know how wives sav their husbands growl about the cigars presented to them by their well-meaning companions in life. Children will buy small boxes for their papas, and the fathers will have no trouble in getting for the children and wives appropriate presents. I intend to have lists printed suggesting the presents appropriate for men, women, misses, youths, youngsters and even the babies."

Quantity, a Factor in Selling.

Large quantities of goods attract attention, impress the customer, and most customers buy more freely and quickly from a large stock than they would from a small stock. I at one time lived near two grocery stores, and in watermelon season one of them would buy half a dozen melons at a time and the other would buy one or two hundred at a time. The one who bought one or two hundred would be sold out first.—The Zenith, Marshall Wells Co., Duluth, Minn.

We Bow to the Era.

We are indebted to the Pharmaceutical Era for the excellent likeness of F. W. Schumacher which appears in this issue. The Era account of the N. A. R. D. Convention is full and accurate, while its array of cuts of leading men is superb and well worth preserving.—W. P. Retail Druggist.

The Exhibit at the Berks County, Pa., Fair of Edmund J. Gable of Reading.

Mr. Gable informs the Era that the various pharmaceutical houses contributed the bulk of the free samples, although he put out 15,000 souveniers, cards, etc., of his own. "It was a grand success as an advertisement," he says, "and the results are already coming in. We were awarded first prize as the first druggist to exhibit at the fair. We have only been open three months, but are advertising heavily." Mr. Gable is successor to S. S. Stevens at 724 Penn street, Reading.

PACKAGE SLIPS.

By PEHR LIGNELL, Superior, Wis.

THE man in the drug business of to-day, who wants to stay there, must advertise. The way and the manner how lie with the man and his locality.

There are many ways to advertise. Some may use the daily paper although the majority of us can not use it to advantage, because doing mostly a neighborhood business we find it too costly. It may have a circulation of, say 10,000, and of that number of readers, we can only expect three or four thousand, at the most, to go out of their way to find our store, therefore we have paid a little more than twice what we should for the ad.

The Package Slip.

The monthly store paper, booklet or any other kind of advertising which may be used, does not interfere with the slip, nor does the slip interfere with any other kind of advertising; it supplements them.

The package slip is a very small affair, but very effective, if properly written, on the principle that the bullet makes more execution, if it hits, than a barrelful of buckshot fired at random. It is made to be enclosed in every package leaving the store. Only a small leaflet 4x5 in size is required; it soon becomes a habit to slip these little leaflets into every package, and the customer will invariably read them when he opens the package at home.

Writing the Slips.

does not require an advertising expert. If you can write a letter, you can write them yourself. The whole point is to make them short, for people will not read a long ad, unless they are looking for something they are interested in and want to be informed more particularly about.

Do not try to say everything in one single ad. You must remember that you will have to write dozens of them in the future and would soon run short of subjects if you tried to crowd several things into one. The idea is to have one subject at a time. That you want to talk about. Then when you have de-

The most conspicuous building in this picture is that of Hoynes, Mathew & Co., Cape Town, Cape Colony, South Africa. This firm does an immense wholesale and retail drug business at this and branch stores in other towns.

cided what you want to say, write it down in simple, and above all strong language. Don't try to write an ad. or a treatise in your best English. Write it exactly as you would talk. Take for instance the following package slip:

You are not in the Dark.

when you trade at "The Guarantee," you only get, "what you ask for." We don't wrap up "something just as good," because we don't believe in that kind of business, it wouldn't pay. We are building up the biggest drug business in Superior, by honest ways of doing business and low prices. If you ask our opinion about any medicine, we will tell you what we know about it, and if we have a better one, we will let you know.

Our prices are so low, because we sell for cash only, it makes no difference to us, if you are rich or poor, we give credit to none; so nobody can get offended, when they are asking for credit, if they are refused, because they know that nobody else can get credit at "The Guarantee."

We had been bothered for a long time with the usual questions from customers—if the article were pure or if it were genuine, etc., etc. So there was the question that required an answer.

Mr. Bodemann of Chicago has been quite insistent recently with his admonition to "Boil it down." That's the best advertising advice a man can have. Boil it down and when you have done that—boil it down again. Cut away everything but the essence of what you want to say. Don't go on the supposition that the public does not know anything. Say only so much and let the rest be told by inference. Let them reason the thing out themselves. It's more interesting for them and it will make a more lasting impression on their minds.

Another thing, give them reasons; don't make a big blow by using big adjectives or high flown language. Give a reason for everything you assert. Take for example the following:

"Here is a Pair

you rarely find together—absolutely pure drugs and reasonable prices. We know our drugs are pure, because we buy them direct from the manufacturers themselves, in original packages. The prices are reasonable for three reasons:

First—We buy direct (and pay cash) that gives us a discount from regular prices.

Second—We sell for cash only, and lose nothing on bad bills, nor ask you to pay us big prices (as others do, who give credit) to help us to pay them.

Third—We are satisfied with one profit, don't expect to make half a dozen at once on one sale.

You see, we might ask and get six profits once, but we could not do it again with the same customer. We would sooner ask and get one profit and have the customer become a steady customer—isn't that right?"

We say that our prices are reasonable, and then proceed to give the reasons for this reasonableness: We say that our drugs are pure, and then continue and explain why they are pure. We could elaborate it further, by explaining that they do not have to go through many hands, wholesalers, brokers, etc., but the average intelligent man can reason out for himself that we buy direct, and in original packages. Then we explain our cash way of doing business, telling about the discount we get by paying cash ourselves. That's one reason why we can sell cheaper than our competitors.

In this way, we prepare the man who has been thinking about asking us for credit; he reads the reasons we give for our ability to sell at low prices and our way of selling for cash only, and he refrains from asking credit. Another suggestion slip follows:

"Medicine Making

isn't like anything else. There's no chance to improve the job afterwards—it Must be right the First time.

Nobody knows that better than we do; and we know that because we know our business.

People like a particular druggist above everything else, that's why we are so particular—it pays.

People don't like big prices, that's why our prices are lower than everybody else's—it pays.

It's to your advantage to get the best drugs, fresh and effective.

It's your saving to buy them cheaper than you ever bought them before.

Our advantage lies in having people know that our stock of drugs are absolutely fresh and pure, and lower in price than others of same, or inferior grade."

Just think what a long argument there is here about carefulness, all in twenty-one words, followed by our usual reasons.

Printing the Slips.

They should not exceed in size four by five inches printed on good quality paper—preferably white. If you have suitable cuts, so much the better; they attract attention, and can easily be obtained from different sources. Another point to remember is not to print more than about five hundred at a time of each kind, so that the customers do not get tired of reading the same thing over and over again.

This kind of advertising can be done by everybody, and at any locality, and will not interfere with the other advertising done. The druggist has many opportunities to tell about things in the drug store that to him appear trivial, but he should remember that the drug store has always been a place of mystery to the public, and the tendency is always to be interested in anything mysterious. Then why not tell them?

I have in package slips and booklets—of which I have written about seventy five or eighty—treated a new subject every time, have told about the making of a cough cure, about the filling of a prescription, how we buy goods, how we sell goods, etc., etc. And then there are all the side lines, that we handle. How much we can tell about sponges, where or how they grow, how they are prepared for the market, etc., in advertising baby bottles, and nipples; there's so much to tell about the care of the baby, including small household receipts, etc. What mother do you think would fail to read such kind of advertising?

TO INCREASE THE PRESCRIPTION FILE.*

By MOODY R. TIDWELL, Miami, I. T.

THE first thing for a druggist to do is to gain the confidence of the physician, in his ability to properly compound the various prescriptions he might send. By talking with him about the various chemical and pharmaceutical preparations, their many modes of manufacture, their appearance, medical properties, and doses, we can convince him of our scientific knowledge of pharmacy. We can also invite him to our laboratory or prescription counter, and there show him preparations in course of manufacture and explain to him the various methods used to extract the medicinal properties of the crude vegetable drug, and impress upon him the thoroughness with which a certain constituent is absolutely exhausted by reprecipitation, explain the difference between maceration, percolation, and reprecipitation and impress upon him the care exercised in buying crude stock for use in the laboratory, so as to get nothing but absolutely reliable drugs, or those containing the correct amount of active principle.

The supply houses will tell him and also tell us that we cannot buy crude drugs on the market with any reliability, but we should buy their finished product, which is guaranteed to contain the correct amount of active ingredients wanted. Right here is where they overstep the bounds. We can buy crude drugs from a reliable drug miller, at a small advance in cash, which are guaranteed to contain a certain per cent of active principle, and their guarantee is as good as any other.

I hope all druggists manufacture all that is required for their respective localities. Should you not manufacture your pharmaceutical preparations, be sure to buy from a reliable manufacturer, then you need not be ashamed to show them to your physician.

Take a good sized sample, not less than 4 ounces, of your preparation, call on your physician, tell him all about how it was prepared, what it contains, and its superiority over other preparations of unknown value. Leave the sample with the physician, ask him to try it and note the results. Sample every physician in town and never take more than one product at a time, because one is enough to talk about at one call.

Repeat the sampling about once a month, using different preparations of your own manufacture, and you will be surprised how soon the physician will begin to specify on his prescriptions your products, or at least tell you to use them in his prescriptions.

Do not substitute but always put up exactly what the prescription calls for, unless there should be a gross mistake, in which case do not say anything, but quietly as possible communicate with the physician and he will appreciate your ability and your fitness as a prescriptionist is more firmly established in his estimation.

The physician soon finds out that you will not substitute and he likes you as a professional man, the better. If he prescribes a certain make of an elixir, be sure to give him that make or nothing. Always be ready to make any ordinary urinary analysis and help the physician in every way possible.

Keep in stock an assortment of syringes, rubber and cotton bandages, trusses, serums, antitoxins, etc.; call the physician's attention to the fact that you are so supplied, and he will soon come to regard you as headquarters for those goods. When in need of anything of that sort he will invariably instruct people to go to you, because he knows you have the goods and has confidence in your knowledge of the class of goods to furnish.

Always be a subscriber to as many leading pharmaceutical journals as you can "assimilate," not only

A corner of the interior of Heynes, Mathew & Co.'s big drug store at Cape Town, South Africa. On top of the upright case will be seen a sponge man and several other sponges, articles which bring immense prices in that country.

a subscriber, but a reader and contributor. Keep posted on all the new chemicals and pharmaceutical products which appear in the market, so that you will be able to give your physician an intelligent answer as to any new product he may ask you about. This is sure to impress him with your enterprise in keeping up-to-date.

Have on hand several works pertaining to pharmacy, and especially the U. S. Pharmacopoeia and a dispensatory of the latest edition. In your prescription department have plenty of tools to work with, keep all scrupulously clean, be accurate and quick in your compounding, and the physician will not forget it.

UTILIZING THE SHOW-CASE.

By C. G. Buchanan, Wellsburg, W. Va.

MANY druggists, in fact the majority of them, have either failed to notice or have carelessly refused to take advantage of the advertising possibilities afforded them by individual show-case displays.

In order to clearly illustrate what is meant it is only necessary to close one's eyes and picture the average drug store show-case. It usually contains a vast accumulation of articles ranging from proprietary salves to tweezers and camel-hair brushes, while its neighbor across the aisle begins its seal at chamois skins and runs through a long list to tooth-powders and toilet creams. These ill-chosen combinations might be forgiven were there some attempt to arrange them attractively and in such a manner that they would draw trade, but these possibilities are apparently not even a consideration and the only aim seems to be to find storage room for the stock.

How different to this method is that of the ever watchful, hustling, enterprising department store which expends as much thought and time upon its show case displays as upon those for the windows, and from them the department stores receive a relatively large amount of benefit.

To be sure a druggist's stock contains such a multiplicity of small articles which are being constantly called for during the regular course of business that it becomes absolutely necessary to have some convenient place easy of access in which to store them, and as no method of doing this has been proposed which so nearly fills the requirements

*Read before the Pharmaceutical Convention of Indian Territory, 1903.

as the use of a show case it is not to be presumed that the druggist who relinquish his time honored custom. But even so, he can continue this use to the cases in the rear of the store and use those which occupy a prominent position for their rightful purpose of attractively displaying goods, catching customers' attention and creating trade.

The interior of the case should be draped with cheese-cloth, crepe-paper or other suitable material and the articles tastefully arranged in its setting always remembering not to exhibit more than one general class of goods nor to put too much in the display.

An individual show-case display is not necessarily made up of one article alone, for sometimes the best results are obtained by using a combination—the use of one naturally suggesting another. For example, a display of hair brushes and combs can have as a background an assortment of tonics and shampoos used in the care and preparation of the hair, and a combination of washes and powders in combination with tooth brushes will form a more effective and a stronger display than the brushes alone.

The druggist should have no difficulty in selecting materials for these displays. His sundry stock and his own preparations gives him an abundant assortment from which to choose and even should these fields fail him, his regular drug stock presents many possibilities—for example: a display of spices at the season of canning and preserving, or a tasteful display of the products of some drug, notable cinchona will always prove interesting.

Show cards and price cards should be features of every display and the display itself should be changed at least once a week, otherwise it will lose its attraction for the regular customer.

THEORY AND PRACTICE

CURIOUS FORMS OF DRUG HABIT.

The Chemist and Druggist notes a number of odd examples of drug addiction, which according to a physician quoted is not due to the neurotic state to which modern civilization has attained. Herodotus tells of the Scythian warrior who made a practice of building a fire in his tent, throwing upon it some seeds of Indian hemp and lying down upon his couch of skins to enjoy the fascination of the subtle intoxicant. The case is cited of a lady artist, a martyr to headaches who habitually ate anti-pyrin out of the palm of her hand as she worked at her easel. Caffeine has many admirers, tabloids of this alkaloid forming in one case an invariable traveling companion. Probably the most remarkable of the cases mentioned is the case of "ginger habit." One patient consumed two and three pounds of ginger-root in twenty-four hours. Essence of ginger was a regular tippie in a number of cases, one old lady patient, a teetotaler consuming daily four to six ounces containing more alcohol than an ordinary bottle of whiskey. Another lady bought her eau de cologne by the case and drank several dozen a week, while still another ordered her compound tincture of cardamoms wholesale and drank it by the quart.

TURPENTINE: TESTS FOR PURITY.

M. Vazes (Bull. Soc. Chim.) describes a method for the examination of turpentine. Two hundred and fifty c.c. of the sample are subjected to practical distillation, a fraction of 50 c.c. each being collected and 20 c.c. being left in the flask. It is assumed that none of the adulterants have the same boiling point as the pure oil, so that only the lighter and heavier

portions are examined for added materials. The refractive indices of fractions 1, 3 and 5 are then taken and compared. Oil of turpentine may normally contain limited quantities of rosin and rosin oil. These are determined by means of the index of refraction and titration with alcoholic potash. The proportion of rosin should not exceed 2.5 per cent. The number of boules which can be used economically for the adulteration of turpentine is very small. Petroleum oil, white spirit or shale oil, light petroleum spirit, benzene and carbon disulphide all effect the index of refraction and distil over with the first fraction. The nature of the adulterant can usually be guessed by an examination of the first few drops of distillate. A sample of genuine oil should not begin to distil below the temperature of 150 degrees C.

TEST FOR BEEF EXTRACT.

A. Searl (Pharm. Jour.) has devised a method for the detection of yeast extract which, owing to its similarity in taste and appearance to extracts of beef, is now widely employed as an adulterant of the animal product. A Fehling's solution is prepared by dissolving 200 grains of copper sulphate and 250 grains of neutral sodium tartrate in 4 ounces of water; this is mixed with 250 grains of caustic soda dissolved in 4 ounces of water. Ten grains of the sample to be examined are dissolved in 1½ ounces of water and boiled for a minute or two with one-half its volume of the proposed solution. Genuine meat extract gives no precipitate, but the preparation of yeast yields a bulky curdled precipitate of a bluish-white color which is almost insoluble in water. Samples of pure yeast extract gave about 1 grain of precipitate from 10 grains of the material. Only one sample failed to respond to the test and easily reduced the copper of the solution.

A NEW GLUCOSIDE IN RHUBARB.

E. Gilson (Apot. Zeit.) has separated a new glucoside from two varieties of rhubarb. The glucoside has been named ponticin, and the plants from which it is derived are *Rheum rhaponticum* and Austrian rhubarb. The author considers both varieties as being obtained from the same plant, a hybrid of *R. rhaponticum* and *R. undulatum*, the name Austrian rhubarb being applied to the larger roots, while the smaller roots are sold as *R. rhaponticum*. Ponticin is extracted from the drug by means of acetone, and does not occur in English or in Shensi rhubarb. When pure it forms white crystals and is insoluble in all the ordinary solvents, but it dissolves readily in caustic alkalis. Boiling in dilute sulphuric acid separates the glucoside into dextrose, and a body which has been named pontigenin and which is soluble in alcohol and ether.

LACTIC ACID IN WINES.

A. Pastheil and W. Hübner (Arch. d. Pharm.) have devised a method for the determination of lactic acid a normal constituent of wine in the presence of acetic and other volatile acids. The method is based upon the fact that lactic acid is decomposed by concentrated sulphuric acid with the evolution of carbon monoxide. The mixture containing lactic acid is heated for one-half hour on the water bath with an excess of baryta water, then evaporated to a small bulk and transferred to a distilling flask. The mixture is evaporated to complete dryness under vacuum and a moderate temperature. After cooling a stoppered funnel is connected with the flask and the distillation tube connected with a gas burette containing caustic potash solution. A few C.c. of concentrated sulphuric acid are introduced by means of the funnel, and the whole heated carefully until the evolution of gas ceases. The gas is measured after washing with the caustic potash.

ACTION OF RETAINE.

Waller and Plummer (Brit. Med. Journ.) show that betaine extracted from raw beet-sugar possesses a well marked, although not very powerful, poison-

ous action upon the animal organism. Syrup made with the sugar gave a cadaveric odor suggesting the presence of choline and betaine. About 44 grams of the hydrochloride salt were extracted from 1,000 grams of the material. Tested upon animals in doses of .1 to .15 gram per kilogram of body weight and given intravenously fatal doses were found to paralyze the heart while smaller doses caused a rapid fall of blood pressure. The experiments showed the necessity of carefully purifying raw beet-sugar before use.

RAPID PREPARATION OF SOLUTIONS.

A process for the rapid preparation of dilute solutions of substances such as tar, naphthol, ichthylol, menthol, ethereal oils, etc., which dissolve in water with difficulty, has been patented in France. The substances are dissolved in a suitable solvent and some neutral salt added to increase the density of the solution. This solution is then poured into the required amount of water, in which it sinks and distributes the dissolved material by diffusion without any stirring. If the solvent used is an acid, such as acetic, some sodium carbonate is dissolved in the water, and the solution which is poured in liberates carbon dioxide, which effectually stirs the mixture.

OIL IN COLOCYNTH PULP.

E. Dowzard (Pharm. Jour.) points out an error in the British Pharmacopoeia, which to ensure the absence of seeds in colocynth pulp requires that the drug contain only a trace of fixed oil. The author states that the pulp normally contains about 3 per cent. of ether extract, consisting mainly of colocynthin the active principle. The best solvent is petroleum ether in which colocynthin is insoluble but which readily dissolves fixed oils. In seven samples of the drug the petroleum ether extract varied from .52 to 1.33 per cent. The author suggests that 2 per cent. might be the maximum quantity of oil allowed in colocynth pulp.

PURITY OF LINSEED OIL.

B. Sjollem (Zeit. f. Nahr. u. Genuss.) states that the index of refraction gives a valuable indication as to the purity of linseed oil. As determined by the Zeiss refractometer the number of pure oil varies from 87. to 91.5. Large proportion of free, fat acids lower the reading, and if the number is low the free acid must be determined. Oxidation causes a rise in the reading and mineral oils and resin oils also have a higher refraction index, but nearly all vegetable and animal oils give a lower number. The author finds that next to the index of refraction, the most reliable test for purity is the iodine number.

DETERMINATION OF FORMALDEHYDE.

C. Lemine (Chem. Zeit.) determines formaldehyde in solution by a process based upon the reaction between this compound and sodium sulphite. When formaldehyde acts upon this salt a neutral soda and the bisulphite compound of formaldehyde are formed. A measured quantity of sodium sulphite solution is neutralized with a few drops of the bisulphite of sodium, phenolphthalein being used as indicator. Five C. c. of the solution of formaldehyde are then added which produces a red coloration. The caustic soda formed is titrated with deci-normal sulphuric acid until the solution becomes colorless.

CATIVO BALSAM.

G. Weigl (Pharm. Centralh.) has determined a number of constants characteristic of cativo balsam. It contains 13 per cent. of unsaponifiable resene, 2 per cent. of essential oil and 75 to 80 per cent. of resin acids. The acid number varies from 25.27 to 28.13, and the ester number from 126.92 to 131.97. In 90 per cent. alcohol only 66 per cent is soluble, and it is entirely soluble in ether and mixtures of equal volumes of ether and acetic ether.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Soda Water Extracts.

(J. M. McC.) Formulas for soluble extract of ginger ale and extract of birch beer were published in the Era of March 10 and April 30, 1903, pages 299 and 452, respectively. The other formulas you ask for follow:

Wild Cherry Extract.

(I)

Acetic ether	5 fl. drams
Benzoic ether	5 fl. drams
Oenanthe ether	1 fl. dram
Oil of bitter almonds (deprived of HCy)	2 fl. drams
Saturated alcoholic solution of benzoic acid	1 fl. dram
Glycerin	4 fl. drams
Deodorized alcohol, enough to make	16 fl. ounces

(II)

Benzoic ether	1 fl. ounce
Oenanthe ether	2 fl. drams
Amyl acetate	2 fl. drams
O of bitter almonds (deprived of HCy)	1 fl. dram
Fluid extract of wild cherry	3 fl. ounces
Glycerin	2 fl. ounces
Deodorized alcohol, enough to make	16 fl. ounces

Soluble Root Beer Extract.

Fluid extract sarsaparilla	1 fl. ounce
Fluid extract wild cherry	1 fl. ounce
Fluid extract yellow dock	1 fl. ounce
Fluid extract wintergreen	1 fl. ounce
Oil of coriander	1/2 fl. ounce
Oil of lemon	1/4 fl. ounce
Oil of sassafras	1/4 fl. ounce
Magnesium carbonate	2 1/2 fl. ounces
Sugar coloring	1/2 fl. ounce
Deodorized alcohol	16 fl. ounces
Distilled water	16 fl. ounces

Dissolve the oils in the alcohol, rub the magnesium carbonate with the water, add the fluid extracts and caramel, then add the mixture to the solution, and, after standing a few days, with occasional agitation, filter.

Soluble Extract of Sarsaparilla.

(I)

Oil of wintergreen	5 fl. drams
Oil of sassafras	5 fl. drams
Oil of anise	5 fl. drams
Magnesium carbonate	2 1/2 fl. ounces
Alcohol	16 fl. ounces
Water, enough to make	32 fl. ounces

(II)

Oil of wintergreen	6 fl. drams
Oil of sassafras	2 fl. drams
Oil of cassia	1 1/2 fl. drams
Oil of cloves	1 1/2 fl. drams
Oil of anise	1 1/2 fl. drams
Deodorized alcohol, enough to make	16 fl. ounces

It should be noted that these formulas contain no sarsaparilla whatever, but under the above title they

A SUCCESSFUL BUSINESS WOMAN.

Of the 214 drug stores in the city of Indianapolis only one is conducted by a woman, and this store at Senate avenue and Twelfth street, is in every respect up-to-date, a model of neatness, and furnishing an example to be followed in the attractiveness with which its stock is displayed. The owner of this store who gives her every day attention to the business is a widow, Mrs. A. M. Eyster, who has carried on the trade since the death of her husband eleven years ago. She is highly educated and attractive, a good business woman and a registered druggist. Mrs. Eyster, who is yet young, taught for a year or more in the public schools of Indianapolis and had not been long married when called upon to assume charge of the business left by her husband.

are employed for producing the so-called "sarsaparilla flavor."

Chocolate Extract.

Chocolate or cocoa, powder.....	4 av. ounces
Sugar.....	20 av. ounces
Glycerin.....	1 fl. ounce
Rose water.....	½ fl. ounce
Vanilla syrup.....	q. s.

Make an intimate mixture of sugar and chocolate or cocoa, add the glycerin and rose water, and then enough vanilla syrup to make a thick paste, carefully reducing all lumps which may form.

To make chocolate syrup from this "extract" mix it with syrup in about the proportion of 4 fluid ounces of the former to 12 fluid ounces of the latter. The advantage claimed of this extract is that the syrup can be prepared just as wanted.

Tincture of Curcuma.

Moisten 2 ounces of powdered curcuma root with an ounce of alcohol, pack in a glass percolator, close the orifice at the bottom of the percolator and macerate for several hours. Then remove the cork and percolate with 2 pints of dilute alcohol.

Emery for Sharpening Tools.

(J. D. B.) The emery cakes used to dress the edges of buff and glaze wheels are formed by melting a little beeswax with emery flour and after thorough admixture, forming it into solid lumps of suitable sizes. Cooley's Cyclopaedia of Receipts states that "emery stones" are formed of emery, of the requisite coarseness, mixed with about half its weight of good Stourbridge loam, and water q. s. to make a stiff

paste, which is forced into metallic moulds by a powerful press. The pieces, when thoroughly dry are exposed in a muffle for a short time to a temperature just under a full white heat.

The so-called artificial "grindstones" may be made by melting 1 part of shellac and sifting into it 3 parts of powdered emery, the mixture being formed into the proper shape while warm. The same composition may be formed upon pieces of wood for use in sharpening knives, tools, etc. Wood may also be coated with emery by first applying a thin coating of glue with a brush. When dry a second coat of glue is applied and as quickly as possible powdered emery is sifted upon the wet surface and allowed to dry. Another coat of glue and emery is then applied in the same way. No. "O" emery is said to be the best for this purpose.

An emery paste for sharpening fine tools is made as follows: Emery in finest powder, 2 parts; jewelers' rouge, 2 parts; spermaceti ointment, 2 parts. Mix.

Cough Mixture Containing Heroine and Ammonium Chloride.

(E. W. B.) Try the following modification of the N. F. formula for compound syrup of white pine:

White pine bark.....	30 drams
Wild cherry bark.....	34 drams
Spikeard root.....	2½ drams
Balm of Gilead buds.....	2½ drams
Blood root.....	2 drams
Sassafras bark.....	105 grains
Ammonium chloride.....	128 grains
Heroine hydrochloride.....	8 grains
Chloroform.....	15 grains
Sugar.....	25 ounces
Alcohol.....
Water.....
Syrup (U. S. P.), of each a sufficient quantity.

Reduce the vegetable drugs to a moderately coarse (No. 40) powder, moisten the powder with a menstruum composed of 1 volume of alcohol and 3 volumes of water, and macerate for 12 hours. Then percolate with the same menstruum until 16 ounces of tincture have been obtained, in which dissolve the sugar, ammonium chloride and heroine; lastly add the chloroform and sufficient syrup to make 32 ounces and strain. Each fluid dram contains ½ grain of ammonium chloride and 1.32 grain of heroine hydrochloride.

Elixir Heroine Compound.

Heroine hydrochloride.....	0.5 parts
Ammonium hypophosphite.....	20 parts
Tincture of henbane.....	50 parts
Syrup of tolu.....	200 parts
Glycerin.....	200 parts
Aromatic elixir, enough to make.....	1000 parts

(German Hospital, Philadelphia)

Practical Tests for Alcohol.

(S. J. K.) We know of no more simple or practical tests for alcohol suitable for use by the country druggists than those given in the Pharmacopoeia. It certainly is not a difficult matter to take the specific gravity of a sample of alcohol with an accurate hydrometer, the preferred instrument being that prescribed by the U. S. Government for the use of internal revenue and custom house officials. The specific gravity of alcohol should be about 0.820 at 15 degrees C (59 degrees F) or 0.812 at 25 degrees C (77 degrees F) and this is all that is required to test its strength, if at the same time, the sample be free from abnormal odor. The freedom of alcohol from aldehyde, one of the commonest impurities, methyl alcohol and oak tannin, is readily proven by the potassium hydrate test, and silver nitrate T. S. should exclude more than traces of fusel oil and other organic impurities. Of course, the spontaneous evaporation of alcohol from clean, odorless blotting paper saturated with it, a test also provided by the Pharmacopoeia, should give no odor of fusel oil, nor other foreign impurities.

NEWS DEPARTMENT.

N. A. R. D. NOTES.

PRESIDENT PRITCHARD REPLIES TO ANTI-REVISION OPINION.

Chicago, Ill., October 30.—At a conference held in this city it was decided to secure unity of action between the Committees on National Legislation of the N. A. R. D., the A. Ph. A., the N. W. D. A. and the P. A. of A., these four organizations representing all branches of the drug trade being on record in favor of reforms in the patent laws, and when Congress convenes a strong and united front will thus be presented to the Congressional Committees whose duty it is to deal with this question.

President B. E. Pritchard, replying to Commissioner Allen's opinion respecting the advisability of revising the patent laws, published in "Notes" last week, contributes the following paper:

Opinion Too Narrow; Phenacetin A Type Only.

I have gone carefully over the report submitted by the Commissioner of Patents to the President of the United States, with reference to our association's request for a modification of the patent and trade mark laws. In my opinion the commissioner has taken too narrow a view of the subject, confining his report largely to the phenacetin patent, whereas we merely used that product as a type, because it is better known among the laity than others less prominent.

Our objection, as I understand it, is not to the mere fact that patents are granted, but to the more important and far-reaching results that follow the granting of patents upon medicinal products, viz.: the building up of numerous hurtful monopolies upon articles used solely in the healing art. Trusts in mechanical and commercial commodities have been bitterly assailed by the Roosevelt administration, as hurtful to the best interests of the country, and yet they merely affect the bank account of a limited number of citizens, whereas trusts in medicines are freely permitted, and, as in the report under consideration, encouraged and applauded, and their promoters heralded as benefactors of mankind by those whose duty it should be to protect us from their rapacity and avarice, while their dire effects are upon many millions of those least able to bear them. If our government officials would enter upon a campaign against such trusts they would undoubtedly meet with more sympathy and applause than in the work they are doing.

Adventurers take Advantage of our Laws.

We do not know that the patentee of phenacetin was the original inventor, or whether he was not merely a shrewd adventurer, who, finding that the article had not been patented in this, the only country open to such questionable procedure, "jumped the claim" and reaped the benefit; for we are told in this same paper that he assigned it immediately to a promoting company, no doubt, for a comfortable consideration. This is not an unthinkable proposition, for we are credibly informed that acetanilid was being used to some extent in the United States for several years before it was seized upon by a speculator, who succeeded in patenting it under the name, "antifebrin," and demanding 25 cents per ounce for it, while the original product had been sold for less than that figure per pound. We also now have foisted upon the country mixtures of acetanilid and ammonia; acetanilid, soda and caffeine; and various

other low-priced chemicals under patented and trade marked titles, loudly extolled in the advertising columns of the medical press and sold at exorbitant prices. Thus it will be readily seen that the claim that "the result of the system has been to aid in the development of the industrial arts," is wide of the mark, while the result of the system does tend to encourage charlatanism and cast dismay upon the true scientist.

Uncalled for Thrusts.

We are both surprised and disappointed to find in the commissioner's report upon this subject such undignified language as the following:

"It must always be remembered, in the consideration of any question of this sort, that no one is forced to use a patented invention. If the new invention is undesirable it may be let alone. If anybody wishes to thresh grain with a flail to-day, he may do so; or, if he prefers to use the sickle rather than the harvesting machine, that privilege cannot be denied to him."

Such uncalled for thrusts might be in place in the consideration of patented boot jacks, or addressed to ignorant, non-progressive people, but to apply such an argument to the educated, enterprising, progressive men of science, such as are the pharmacists and chemists of the United States, ought to be beneath the dignity of the incumbent of so high and honorable an official position as the Commissioner of Patents. The buying and dispensing of these patented synthetics is not of our own volition, we well know the nature of them and the thinly-veiled falsity of the so-called inventor's claims. The Commissioner probably is not aware of the fact that the manufacturers maintain extensive literary bureaus, manned by well-trained press agents, who are constantly engaged in pressing their exaggerated claims upon the attention of the physicians throughout the country, whilst other remedies equally potent, but non-patented, obtainable at one-tenth the price, are at hand, but with no one sufficiently financially interested to exploit them.

Not Usefulness of Invention that Makes the High Price.

For several years the writer had been selling his own headache powders, using phenacetin and salol; mentioning this fact to a physician who had been practicing for nearly forty years, he instantly demanded the reason for phenacetin. "Why not the safer and surer acetanilid?" And this, too, without any knowledge concerning the vast difference in cost of the two items. Surely this was an honest expression of opinion from one well qualified to give it. It is not, as the commissioner seems to infer, the usefulness of the alleged invention that makes it bring the price, but the insolent, purse-proud, aggressiveness of the owner.

The provision of the "Convention for the Protection of Industrial Property," in force between this and other contracting nations, is based upon reciprocity, and can be of no effect when, as plainly stated in the commissioner's report, "That while a German can obtain, as in this case, a patent for a product in this country, he can only obtain in Germany a patent for the process by which his product is made." The conclusion drawn from this is that Germany paternally and patriotically cares for its own, while the United States supinely makes of its citizens "easy marks" for every shrewd foreigner who can manipulate the law to his own advantage by hoodwinking our officials. This portion of the patent laws ought by all means to be revised.

L. H. NORWOOD, Minneapolis, Minn.
Representative for Sharp & Dohme.

No Relief with Expiration of Phenacetin Patent.

The expiration of the patent on phenacetin brings no relief. There will still remain in force hundreds of other patented synthetics, all equally harsh in their bearing upon our people, and the whole battery of the **paid crookedness will be turned** upon the physicians to exploit them, and this modern system of highway robbery and legalized looting will continue unabated until we can bring our government officials to a realizing sense of their duty and sufficient pressure upon Congress to amend the laws. Our international obligations surely do not mean that our citizens shall forever continue to be "held up" by foreigners.

As suggested by the commissioner, "The insufficient force of examiners to satisfactorily report upon applications for patents on medicines," is possibly the great difficulty, and an increase in the number of trained medical experts, giving sufficient time to fully examine into the merits claimed by would-be patentees, might possibly furnish the key that will unlock the aggravating situation.

More Donations.

Donations to the N. A. R. D. are coming along fairly well. Contributions to the fund during the past week were as follows:

Wells & Richardson Co.	\$1,000
Hartick's Food Co.	1,200
Chattanooga Medicine Co.	1,000
Centaur Co.	250
Dr. Kilmer & Co.	1,000

MERTON W. COLLINS, a Providence, R. I., drug store, died of typhoid fever at St. Joseph's Hospital, in that city. He was only thirty-two years of age.

COMMERCIAL TRAVELERS

Christian Becomes a South African Copper King.—Lang and Estelle, New York State Men, Resign.

L. H. Norwood, whose picture adorns this page, is Sharp & Dohme's representative in Minneapolis and is first vice-president of the Minnesota commercial travelers' auxiliary. He says: "We have an active and progressive lot of boys in the auxiliary in Minnesota."

J. Edward Leary for a long time with L. Richmond & Co., druggists in Brockton, Mass., has given up his position to take one as traveling salesman for U. P. Seaverns & Co., Boston, for whom he will cover the Cape Cod district. Besides selling drugs and medicines, Mr. Leary will carry lines of paints, oils, chemicals, etc.

J. B. S. McIntosh, for many years a representative of Sharp & Dohme, and who now is a retail druggist in Waynesville, N. C., under the style of McIntosh & Co., was in this city. If he is as popular with his customers as he always was with the retail drug trade his measure of success should be gratifying.

J. P. Christian, general representative for Sharp & Dohme in the Middle West, has resigned to go to South Africa, where he will promote extensive copper interests.

A. J. Lang, whose popularity in the Albany section of the State is well known, has been obliged because of ill health to resign his position as representative of Eli Lilly & Co. and go to his home at Gouverneur.

L. A. Middaugh, formerly clerk at Faxon, Buffalo, is now doing detail work for Frederick Stearns & Co., Detroit.

F. H. Estelle, popular traveler for John Wyeth & Bro. in this State, has severed his connection with that firm.

J. H. Nutt, formerly traveler for Fox, Fultz & Co., is now on Lehn & Fink's staff in New England.

J. D. Sipp, sales agent for the Duroy & Haines Co., the Sandusky, Ohio, wine people, has the postal card idea down fine. A new one shows him on one end of the card, night-shirted and candle in hand. On the other end of the card, fully clothed, a small dog is drawing him. He will arrive in the city about March 1, he says.

ABOUT PERFUME EXHIBIT AT WORLD'S FAIR.

The advisability of making a joint exhibit at the St. Louis World's Fair was considered on Thursday at the office of Henry Dalley of Lazell, Dalley & Co., by the executive committee of the Manufacturing Perfumers' Association of the United States. Action had been deferred until this time owing to a lack of knowledge as to the space allotted. Mr. Dalley is now in conference with exposition representatives, and definite action will be taken soon. The negotiations for space will be in charge of Mr. Dalley, Theodore Rieksecker and Richard A. Indant. Adolph Spiebler of Rochester was among those present at the meeting.

CHARLES H. KEMP, a native of Trappe, Md., who for many years conducted a drug store there, died suddenly at Wilmington, N. C., on October 20. He was 37 years old and engaged in the milling business at the time of his death.

NEW PURE DRUG REGULATIONS.

Several Changes in Execution of New Pure Food and Drug Law Ordered.—Immediate Possession of Sampled Goods Under Bond.—Professor Bigelow Coming to New York.

The United States treasury department is about to set entirely new regulations into effect with regard to the execution of the pure food and drug law which took effect on July 1.

An innovation, probably the principal one, is that the owner, or importer may, upon his request, receive the goods immediately upon their arrival at port, with the exception of the samples selected for appraisement, upon filing bonds with approved security in double the estimated value of the merchandise. A condition is that the owner or importer must return the goods, if the collector orders, within ten days after the samples have been appraised and found either undervalued or not up to the standards required by the pure food and drug law. This will relieve congestion at the port, and remove delay in receipt of goods by the importer, who may, if he wishes to take the chance on purity of his goods, distribute them to his customers. Should they be recalled, however, and the importer not be able to return them, he will forfeit his bond.

Another innovation provides that importers shall receive a formal notice if their goods are found to be under standard, and be given an opportunity to present evidence as to their purity and wholesomeness. Heretofore any statement by the importer had to be made when the sample was taken and before he knew the inspector's finding. Hereafter he will receive a formal notice when the sample is drawn and another after the department of agriculture has reported thereon.

Another improvement is that all goods entered for immediate transportation to an interior port will be sampled at the port of final destination, thus saving time. Facilities for the analysis of samples will soon be provided at all the leading ports.

Professor Bigelow, who has been Dr. Wiley's chief assistant, has been ordered to proceed to New York, where he will establish a laboratory at which analyses of samples of suspected drugs and foods will be made. This new arrangement, it is expected, will reduce by about six hours the average detention of goods.

AMONG THE BOWLERS.

Baltimore, November 3.—The bowlers were exceptionally active last week, and some excellent scores were made. The second game last Friday of the Baily quintet was something to talk about, the total for the team being 926, and excitement ran high. The most exciting series of the week, however, were the games between the Root and Herbs and McCormick & Co. The work of McCormick & Co. was rather uneven, good bowlers breaking, which lost them two of the three contests. The totals for the several teams, together with the high individual averages were as follows:

Root & H.	859 830 920	McC'k & Co.	890 739 804
Kabernagel	295	E. Smuck	172
Sharp & D.	793 826 858	Calvert Drug.	688 654 660
Dorsey	385	Elliott	151
J. B. & Son.	720 926 831	Stanley & B.	878 784 713
Fairley	493	Winkelmann	168

These place the several teams in the following positions:

	W. L.		W. L.
Jas. Baily & Son.	10	Root & Herbs.	5
McCormick & Co.	7	Stanley & Brown.	4
Sharp & Dolme.	7	Calvert Drug Co.	0

Detroit, November 3.—With the exception of two or three of the members, the Detroit Drug League was

not "on edge" in their games played last week, and the many big scores of the previous week are missing. Parke, Davis & Co. and F. Stearns & Co. won three games each from their opponents, and the Michigan Drug team won two out of three. G. Squires of P. D. & Co. rolled an average of 198 for the evening. The team and highest individual scores for each game were:

P. D. & Co.	781 847 739	N. B. & Co.	718 785 780
Squires	222	Hillman	188
F. S. & Co.	804 740 752	F. W. & Co.	705 704 684
S. O'Donnell.	295	Riddell	173
M. D. Co.	772 746 823	F. P. I. & Co.	726 763
Hedges	188	Smith	192

Summary of games:

	W. L.		W. L.
P. D. & Co.	6	N. B. & Co.	2
F. Stearns & Co.	3	F. E. Ingram	0
M. D. Co.	5	F. W. & Co.	0

The games of the Parke, Davis & Co. Interdepartmental League were characterized by some remarkable bowling during the week. Helm of the Mechanical team bowled over 226 pins in one of the games. The Chemical team still maintains the lead, having won 14 games and lost one. The Stock team is second with 8 won and 7 lost.

OBITUARY.

P. J. TORMEY, one of the most prominent citizens of the Pacific Coast and a leading pharmacist of California and Washington, died in Portland, Ore., on October 16, after a stroke of paralysis. Mr. Tormey was born in Plattsburg, N. Y., in 1817. In 1886 he went to California, and became one of the leading wholesale merchants in druggists' supplies and sundries in San Francisco. He was one of the proprietors of the Owl Drug Co., San Francisco and Los Angeles, and the Quaker Drug Co., Seattle, Wash. For the last twenty years he was a whist enthusiast, and there was no whist congress of the American Whist League that he did not attend since its organization. In 1901 he was elected president of the League. He leaves a widow, three daughters and a son.

DR. R. R. MACFARLANE of Seattle, Wash., died suddenly on the North Coast Limited train while traveling through Montana. He was well known throughout the West where in various cities he had been identified with the drug trade. He was at the time of his death interested in the Parlor pharmacy, Seattle. In addition he owned a drug store at Dawson City. Dr. MacFarlane was in perfect health when he left Seattle and his death came as a great shock to his family, a widow and young daughter.

HORACE J. SLOAN, a Lowell, Mass., drug clerk, died after a long illness which had its beginning in Porto Rico, during the recent Spanish-American War, where he was a member of the hospital ambulance corps. Only a day or so before Mr. Sloan's death, many of his friends gave a complimentary entertainment for his benefit. He leaves a wife.

DR. CHARLES P. TRAPP, for twelve years engaged in the retail drug business at Ann and Aliceanna streets, Baltimore, died on October 19 of a complication of diseases. He had been confined to bed for about two months. Dr. Trapp was born 48 years ago in Germany, and came to this country with his parents when quite young. He leaves a widow.

CHAMPE WALKER, well known in Washington and Alexandria, Va., died suddenly of heart disease on the night of October 21 at the Elks' Hall, Alexandria. He was at one time a member of the retail drug firm of Daniel & Walker, but afterward engaged in business as a restaurateur.

NEW YORK AND VICINITY.

RETAIL AGENTS SUED BY CHEMICAL COMPANY.

Several retail druggists of this city will be defendants, this month, in suits brought by the Dr. George Leiminger Chemical Co. of Chicago, for alleged non-payment for goods. Two similar actions against E. A. Neer and Benjamin Kent, Paterson, N. J., druggists, resulted in the defendants' favor.

Several of the defendants are represented by Charles A. Kalish, attorney for the New York Consolidated Drug Co., who said in the defendants' answer:

"We are informed that representatives of the plaintiff called upon various retail druggists, and offered for sale a preparation called solidified formaldehyde, put up by the plaintiff. The druggists, it is alleged, were shown what purported to be orders for the article from physicians, said orders to be turned over to the druggists who purchased the goods. It was also represented to the intending buyers, we are told, that the article would be extensively advertised, and that business would be worked up by means of a large corps of canvassers, who, in many cases, were said to be qualified physicians. Druggists purchasing the goods were to be given exclusive agencies for sections within a radius of fifteen blocks of their stores.

"The defendants claim, among other things, that, in many years, the physicians' orders turned over to them by the salesmen were fraudulent; that the plaintiff failed to work up business as promised, and that goods were sold to other druggists within the limits of the so-called special agencies; in short, that the goods were sold under false representations. It is claimed also that the clauses in the contracts were not specially called to the attention of the purchasers, and that, in some cases, a copy of the contract was not filed with the buyer, as provided in a printed form."

KILLS HIMSELF AFTER FAILING TO BURN STORE.

After being arrested on the charge of attempting to burn his drug store in Lestershire, near Binghamton, Truman H. Wheeler took poison in the Court House and died about an hour later in the county jail.

Benjamin T. Ash, a merchant, who owns the block in which Wheeler had his store, had a peculiar presentiment that he ought to go and see his building. When he reached the store he found it locked, but thought he could see a little smoke inside. A man was put in over the transom and opened the store. In the back-room was found a dish of sealing wax boiling over an oil stove, with excelsior, two large cans of gasoline, and a dish of high explosive, composed of glycerine and an acid, surrounding the stove. The wax was just ready to boil over, and as soon as that happened it would have ignited and communicated with the surrounding inflammable material, causing an explosion and the destruction of the building, and probably the loss of several lives in the Young Men's Christian Association rooms, directly over the store.

Wheeler had locked the store, and came to Binghamton. He was arrested at noon, and an arraignment was held for the Grand Jury on the charge of arson. Judge Parson fixed bail at \$1,500. Wheeler asked permission to go out to find a bondsman. He was permitted to go in charge of a policeman. Before going out he asked the officer to permit him to go into a closet in the basement. The two then went to a store on Chenango street, where Wheeler became ill. A physician was called and Wheeler was taken to jail, where he

died in a few minutes. A bottle was found in the Court House closet from which he had taken a dose of diluted prussic acid. He was about fifty years old and unmarried.

UNKNOWN DISTRIBUTER OF DOPE IN SYRACUSE.

Syracuse druggists have been trying to catch the unknown man who sells morphine, cocaine and similar drugs to "dope" fiends about the city. Several times it was thought that he had been discovered, but there was not enough evidence to warrant an arrest. The druggists believe that the salesman is himself an habitual user of some drug. He buys cocaine or morphine at several different stores, not buying enough at any one place to excite suspicion. In this way he secures enough to supply his customers for a day. The next day he visits other stores and so on. A drug clerk, in explaining the reason for the existence of such a peddler, said that many users of the drug will not purchase it for themselves, being unwilling to acknowledge that they were addicted to the habit. They do not fear that the man who brings the drug to them will tell because he is liable to the law.

SYMPATHY SENT BY CLERKS TO DR. ANDERSON.

A well-attended meeting was held by the Drug Clerks' Circle on last Thursday evening. Two new members were elected—D. Katz and J. Sher. Joseph Beck, of the arrangement committee for the ball, reported having received \$170 for advertisements and tickets, since the last meeting. A gavel was presented to the organization by A. Rotnow, a member, who received a vote of thanks. The news of the illness of Dr. William C. Anderson deeply affected the members and a committee consisting of Ph. Lewy, Dr. J. Kahn and Joseph R. Beck was appointed to call on the professor and extend to him the best wishes of the society.

NEW YORK NOTES.

—The Rochester Ph. A. is looking forward to the winter meetings with much interest. One or two influential druggists withhold their membership and the consequence is that the druggists sometimes become discouraged in their efforts. An attempt a short time ago to secure uniform prices on dentrifices and talcum powders fell through because one large company on Main street east refused to sign an agreement raising prices. It is asserted that all of the Rochester druggists are obliged now to sell these preparations at cost.

—Names presented for membership to the Drug Trade Club are: E. B. Bronson, 100 William street; George Lloyd, 130 Fulton street; C. A. Loring, New Dorchester, Mass.; George S. Northrop, 100 William street; Alfred A. Booth, Liverpool, Eng.; Charles F. Mueller, 100 William street; Walter S. Gibbs, 54 Cliff street; Dr. Peter M. Wise, New Rochelle, N. Y.; Valentine Pryor Powell, 88 Gold street.

—The manufacturers of carbonic acid gas held a meeting in this city and formed an association. Pur-

J. N. FERRER

P. O. Box 71

NEW YORK CITY

"WE ADMIRE THE HONEST MERCHANT AND LOVE THE MAN."

This sentence, printed on the menu card, admirably expressed the sentiments that ruled at a pretty little dinner on last Friday evening, given by Brent Good of the Carter Medicine Co., to Alfred B. Scott and eight of the latter's other all-time friends.

It was a meeting of kindred spirits, welded together in a friendship of years, which has endured since its units were not the prosperous men of today and will outlast, they promise, all other earthly things. It was one of those times when sentiment, reminiscence, hearty, unhidden friendship is predominant, when formality never intrudes.

The dinner was in one of the private rooms of the New York Athletic Club. Speeches, it was ordered, should be barred. But, before it was over everyone had made his speech and had made or was ready to make some more. These were the diners besides Messrs. Scott and Good: E. G. Wells of the M. J. Breitenbach Co., John M. Peters of W. J. Matthieson & Co., Ltd.; Lyman Brown, Arthur A. Stillwell, Herbert B. Harding of the Humphreys' Medicine Co., Max J. Breitenbach, Joseph Kerr, the well-known journalist, and Dr. R. H. Greene, Mr. Scott's physician.

Alfred B. Scott and Samuel W. Bowne, originally Poughkeepsie boys, organized the firm of Scott and Bowne about thirty years ago. About ten years ago the interests were divided amicably, Mr. Bowne retaining the Americas as his territory and Mr. Scott taking the rest of the world. He has his headquarters in London, but, as he says, is a firm believer in "neutralization or products," and manufactures Scott's Emulsion in Switzerland, Belgium, Germany, China, Spain, France and six other countries as well as in England. He lives in Geneva Switzerland.

Mr. Scott came here with his family a month ago, for the purpose of establishing his son in college, proving himself the same good American he was before he moved away. In the future many visits will be made here, one of which is promised for the coming holidays, as it is the family's wish to spend that season with the young collegian. They returned to London on Tuesday.

pose is to regulate prices and devise method of insuring return of cylinders. Ten days' time was taken to notify customers of the change in price schedule, the agreement becoming effective on Monday. The makers west of Chicago have a like association, which is successful.

—The Edison Polyform & Mfg. Co., New Jersey, composed of Willbur L. Beaty and George J. Meier of Chicago, and J. Tracy Horton of New Jersey, are defendants in a suit brought by Thomas A. Edison, the inventor, to restrain them from using his name on a liniment put up by them. Mr. Edison asserts that he has no connection with the firm.

—Seen down town: James F. Demoville, Nashville, Tenn., who was on his way home from farther East; Charles E. Goodwin of the Eastern Drug Co., Boston; William C. Baur, Norwalk, Conn.; Milton Tidd and Charles Stuckert, two prominent Trenton, N. J. pharmacists; G. W. Jacques, South Amboy, N. J.; H. W. Hummell, Charleston, S. C.

—"She spelled it farmercuticle," said Dr. H. M. Seem, manager of the local office of Sharp & Dohme.

ALFRED B. SCOTT.

God's Emulsion.

Take the Milk of Human Kindness;
In it pour some Faith and Hope;
Put in Cheerfulness and Courage,
Strands of Love from Friendship's Rope,
Put in Honor, Squareness, Goodness,
Common Sense and Words of Gold;
Add Rare Merit, Candor, Greatness,
Charity that ne'er grows cold;
Drop in Fairness, Fun and Fancies;
Tenderness—some Sadness, too;
Something Holy—Wee bits Wicked,
But of Sorrows very few;
Put in Debts and Loans and Favors,
Laughter, Tears, Success, Delight;
Dangers, Heartaches, Fears and Follies,
Firmness in a Fight, when right;
These ingredients all compounded
In that Chemistry of Thought
Form what Friends call God's Emulsion
And 'tis labelled—"A. B. Scott."

JOE KERR.

New York, October 27, 1903.

"She came here recommended as proficient in several languages and all the businesses and was to be my stenographer. Is 'farmercuticle' the way it is spelled in the Hoboken Journal of Orthography, I wonder?"

—The State civil service commission announces general examinations to be held on November 28, for residents of Erie county only. Positions to be filled are those of apothecary in the State hospitals and institutions and assistant chemist in the cancer laboratory of the State department of Health, Buffalo.

—Employees at the Drug Trade Club wonder how it happened that the day before the municipal election was

chosen to hang signs and touch up the menu cards in urging the enforcement of an old rule against tipping. An employee who accepts a tip is supposed to lose his place at once.

—Justin L. Brewer, editor and publisher of the *Journal of Pharmacology* and editor of *Sputnik*, left the Prospect Park Laboratory, Brooklyn, on Monday, for a better position in the New Jersey State Laboratory of Hygiene at Trenton. Mr. Brewer is a New York C. P. boy.

—Miss Lillian Major, daughter of A. Major, the well-known manufacturer of Major's cement, and a student at Smith's College, Northampton, Mass., pleasantly surprised her parents by visiting them last week. Mr. and Mrs. Major will return the visit Thanksgiving week.

—Alzheimer's pharmacy, Coney Island, was the point fixed by the fireman beyond which they resolved that the disastrous conflagration of Sunday must not go. So Alzheimer's got more water in five minutes than it ever did before in its existence. It did not burn.

—The J. Elwood Lee Co., surgical instruments, Conshohocken, Pa., obtained a judgment for \$454 against the Memorial Hospital for Women, this city. The Dr. J. Parker Fray Co., toilet articles, this city secured a judgment for \$154 against Isaac Streop.

—575,332 pounds of boric acid were imported into this country in the first eight months of this year. Some other figures were: Bismuth, 36,101 pounds; sulphur, 1,533,218 pounds; sarsaparilla, 303,473 pounds; divi divi, 491,803 pounds.

—New York section of the American Chemical Society meets at the Chemists' Club tomorrow night. Speakers will be C. W. Volney, D. T. Evans, P. A. Levene, W. E. Chamberlain, E. H. Miller and J. P. Thompson.

—The winter meeting of the American Chemical Society will be held at St. Louis, December 28 and 29, in connection with the meeting of the American Association for the Advancement of Science.

—Drug Trade Club guests: Louis C. Ruzen, Bound Brook, N. J.; Seward Davis, Montclair, N. J.; W. Lloyd Wood, Toronto; Percy N. Furler, London; R. de la Bana, City of Mexico.

—Charles Wylie, who has a store at Fifty-third street and Sixth avenue, has bought the store of Mrs. Henry Carter, Eighty-fifth street and Broadway.

—The Paint, Oil and Varnish Club of New York, will hold its eighty-eighth dinner and meeting at the Drug Trade Club on November 12.

—Dr. E. T. Heck's drug store, Riverdale and Kingsbridge avenues, Bronx, was wiped out in last week's big conflagration on in the Bronx.

—Dr. William C. Anderson is reported as "getting along nicely," from the recent operation for appendicitis.

—S. M. Robinson, who was burned out in last December, has opened a store at 12 Brown place, Bronx.

—Michelle Lovine has a new store, just opened at 549 East One Hundred and Forty-Ninth street.

—Henry Olmstead has sold his pharmacy at 1141 Lexington avenue to Pincus Jaffe.

—Joseph Wolfson has bought out Samuel Falk at 1433 Madison avenue.

—A. E. Rattano has a new store at 98 Skillman street, Brooklyn.

—E. Regnaud has sold at 232 Eighth avenue to E. Ludemann.

—Joseph J. Huebler has opened a store at Richmond Hill, L. I.

NEW ENGLAND.

ANOTHER CRUSADE.

Massachusetts Board of Health Searching for Impure Drugs—Two Druggists Charged with Selling Adulterated Phenacetin.

Boston, November 3.—On complaint of John F. McCaffery, an inspector for the State board of health, Henry K. Mansfield and Fred M. Gardner, two Boston druggists, were charged in the Municipal Court with selling adulterated phenacetin. Their cases were continued, each being placed under bonds of \$200. This is the beginning of a crusade in this city against the sale of adulterated drugs, and phenacetin is felt by the board to be more commonly impure than many other drugs. Its chief substitute, they say, is acetanilid. A regular visit to drug stores all about Boston is a part of the plan of crusade and many retail stores have already been visited. The chairman of the board says that no one drug will be marked for inspection, but that various ones will be tested. The board finds great difficulty in getting convictions, even though adulterations of drugs is a criminal offense.

The evidence required is great and has to be obtained most carefully. Many druggists known to the board as perfectly trustworthy, are themselves imposed on, so clever are the adulterations, requiring expert analysis which few druggists can stop to make, or afford to hire made. The board has excellent reason for believing that the substitution of an inexpensive adulterant for pure phenacetin, especially, is very general on the part of those from whom druggists are induced to buy.

TRAVELING SALESMEN JOIN CLERKS.

Waterbury, Conn., November 3.—The members of the Drug Clerks' Association are feeling very much elated over their meeting on Saturday night, at which many new members were added. The clerks had been trying for some time to have the travelling salesmen affiliate as honorary members. A half dozen or more did join the association at the meeting and three new drug clerks became members. This strengthens the organization considerably and is all the more gratifying because of the war that has been declared against the organization by the central Labor Union through the Drug Clerks' Union. At the meeting George McNamar of Cone's drug store was elected financial secretary to succeed Joseph J. Kilbride, resigned. Mr. Kilbride had occupied the position since the association was started.

MR. SCHMELZER GETS THE ELLSBREE STORE.

Meriden, Conn., November 3.—The largest drug transaction in the State for several months was the purchase by Victor W. Schmelzer of East Main street, of the bankrupt business of George L. Ellsbree. Mr. Schmelzer will conduct the place besides running his other store. There was considerable competition between Theodore Grueher, the Pratt street druggist, and Mr. Schmelzer, and sealed bids were finally demanded from both men. There was only a few dollars difference in the offers. Mr. Schmelzer served his apprenticeship with Mr. Ellsbree, who purchased the business in 1874 and ran it successfully until recently. Mr. Ellsbree, who is a member of the State board of examiners, will not enter the business again. Mr. Schmelzer will have as his employees Joseph Ryan and Louis Freier, with whom Mr. Schmelzer was employed before he went into business for himself.

FEW CANDIDATES FOR REGISTRATION IN MASSACHUSETTS.

Boston, November 3.—Four examinations were held in October by the State Board of registration. The number of those examined—thirty-three—was much smaller than ordinarily in a month. Of these, thirteen were successful, as follows: Jacob Harris, Bernard H. Schutzkwer, Joseph M. Sisonsky, Boston; John E. Heffernan, Salem; Robert S. Barrett, Andover; John Shea and Arthur W. Wells, both of Lowell; William F. Stover, Winthrop; Peter J. Crane, Haverhill; Andrew H. Mareh, Shelburne Falls; John R. Moore, Westboro; James J. Nolan, New Bedford and George E. Torrey, Newburyport. The usual examinations are slated for November.

THE BAY STATE.

—John Cowan, pharmacist in the United States Navy and who has been in charge of the pharmacy at the Charlestown Mass., navy yard for many years, is retired from active service on account of physical disability. He is a sufferer from a chronic stomach trouble. As a pharmacist, Mr. Cowan saw a term of service lasting through more than thirty-five years. He has been all over the world and has been stationed in many foreign countries, going as pharmacist on many important landing expeditions. His illness had its origin in the Philippines. He requested retirement. He is a New York man.

—Through the Suffolk County Superior Court in Boston, suit was brought by A. P. Watson, a North Attleboro druggist, who is trying to recover some show cases which a sheriff seized under a writ of attachment two years ago. The trouble was the outcome of Mr. Watson's purpose to erect a building in his town, and for this he engaged a Boston firm of architects to draw up plans. A dispute regarding the amount of their bill arose, resulting in their attaching the drug store, and seizing the cases.

—At a business meeting of the Milford, Ph. A., the following officers were elected: President, L. A. Lamson of Hopdale; Vice-president, A. H. Sweet, Milford; secretary, G. Adams of West Medway; treasurer, J. A. Rice, Milford; executive committee—Messrs. Rice and Collins of Milford and Mr. Mason of Franklin. This was the adjourned annual meeting. Excellent reports were presented and prices were discussed.

—In the police court in Lowell they are trying to solve the ownership of about two hundred bottles of whiskey sent from Boston by express to the Phelan pharmacy, that city. By error, the street number was incorrectly given on the consignment, and the Phelan pharmacy refused to receive the goods, claiming they had not ordered them.

—Joseph Letonneau, drug clerk employed by P. J. E. Laeroix, Newton, in answer to charges against him of violating the liquor laws, pleaded guilty. It is claimed that he not only sold without requiring the buyer to register his name, but that the customer was intoxicated at the time. Court fined him \$75. He appealed and is under \$300 bonds.

—Miss Annie H. Gilman, daughter of Hon. and Mrs. Gorham D. Gilman of Newton, has become the bride of George Angier of that city. The wedding and reception at the home of the bride's parents was a pretty social event. The bride's father is head of the firm of Gilman Brothers, the old-time wholesale Boston drug house.

—William C. Gregory, a Marblehead druggist, participated in the recent festivities arranged in honor of the London Honourable Artillery Company, and collected many souvenirs, which have been put on exhibition in his pharmacy window.

H. E. RICE, NASHUA, N. H.

The man who passes on the bills of the New Hampshire Ph. A., is Auditor H. E. Rice, a prominent pharmacist of Nashua, whose name has been connected with many movements for the betterment of pharmacists and things pharmaceutical. It has been said that the New Hampshire association is one of the most thoroughly jolly aggregations in the collection of state organizations. Their annual meetings, always at "The Weirs," are full of snap and enjoyment.

—A notable addition to the business centre of South Deerfield is the new drug store of Dr. E. M. Roche, now nearing completion. Some hindrance to the workmen in getting lumber and supplies has delayed the opening.

—William Ritchey was held for the grand jury, on the charge of larceny of nearly \$700 from A. G. Smalley & Co., Boston, wholesale dealers in druggists' glassware and sundries. Ritchey said he needed the money.

—Kearnan's pharmacy in Milbury, recently put up at auction sale to satisfy a claim in the form of a mortgage, brought \$150. It was bought in the interest of the mortgagee, whose claims amounted to \$1,050.

—In recognition of the forty-first birthday of J. C. Emery Panneton, a Fall River druggist, a number of his friends called at his store and presented him with an expensive meerscham pipe.

—J. W. Kilgour purchased the Norris drug store in Fairmont avenue, Hysie Park, in which town he has been for many years employed at the pharmacy of A. G. Childs.

—The pharmacy of C. P. Thompson & Co., Springfield, was robbed of \$30, is believed by the same gang that has broken into several other drug stores recently.

—Arthur D. Marey, druggist at 35 Concord square, Boston, has voluntarily filed a petition in bankruptcy, having liabilities of nearly \$975, and no assets.

—Webster's drug store, Newburyport, has been sold to Edward W. Eaton, who formerly was clerk at Castlethun's pharmacy in the same city.

—Robert Hart & Bro. are the new owners of the store formerly conducted by Frederick E. Whitmore, Highland avenue, Somerville.

CONNECTICUT.

—Onesime Forest, a drug clerk in Bridgeport, married Miss Elma Dezeroy of Chicopee Falls, Mass. It was a church wedding followed by a reception at the home of the bride's parents.

—Frank M. Finch, druggist in South Norwalk, is a voluntary petitioner in bankruptcy, owing \$3,700, against which there are assets of \$3,200.

Send for sample and special net prices on our cation package Aluminum Cap Bottles with your name on them.

Our Tablets made by a new process are very satisfactory.

BILLINGS CLAPP COMPANY, Boston, Mass.

PENNSYLVANIA.

WOMEN PHARMACISTS.

Several of Them Form a New Association in Pennsylvania—Their Honorary President, Dr. Hayhurst, is the First Woman Pharmacist in the United States.

Philadelphia, November 3.—Many of the most prominent women pharmacists and chemists of Pennsylvania, and especially of Philadelphia, have organized the Society of Women Pharmacists and Chemists of Pennsylvania, designing ultimately to enroll in their membership every woman pharmacist in the State.

The president of the new association is Susannah G. Haydock, Philadelphia C. P., '93, who conducts a successful pharmacy at Twenty-second and Locust streets. Mabelle Haydock, P. D., B. P., Philadelphia, '01, is secretary. She has a large pathological and chemical laboratory in her own name at 2516 North Thirtieth-street employing two assistants.

Although just organized, the association has an honorary president, Susan Hayhurst, M. D., Ph. G. She was the first woman pharmacist in the United States, is a graduate of the Philadelphia C. P. and is director of the Women's Hospital pharmacy.

The vice-president is Bertha L. De Graff-Peneock, Ph. G., Philadelphia, '96, who is in business with her husband, Professor J. C. Peneock, at 2012 South Thenth street. Among the members are:

Miss Anna R. Lescore, P. D., Philadelphia, '02, director of the pharmacy at the Pennsylvania Hospital for the Insane; Bessie Pierce, Ph. C., University of Michigan, '93, post graduate work, '99, chemist and member of the firm of Takanap Soap Co., Darby, Pa.; Sarah Naly, Ph. G., Philadelphia, '95, who until lately conducted a pharmacy at Denver, Colo., and is now with Miss S. G. Haydock; Clara Sprissler, Ph. G., Philadelphia, '93, in business with her brother at Ninth and Lombard streets; Mrs. Leonard, Ph. G., Philadelphia, '92, in business at Sixteenth and Christian streets; Mrs. Francis Margolin, P. D., Philadelphia, '02, in business at Third and Lombard streets; Edythe Goodman, P. D., Philadelphia, '02, pharmacist at the Samaritan Hospital, where she was the first woman pharmacist. Ida V. De Haven, Ph. G., Philadelphia, '98, Director of Hartford Hospital pharmacy; Rose Slobodkin, P. C., Philadelphia, '99, pharmacist at Mt. Sinai Hospital; Laura M. Snuley, Ph. G., '98, pharmacist for George B. Evans; Florence Yapple, Ph. G., '93, business manager American Journal of pharmacy.

ALPHA, BETA AND ZETA PHIS ELECT.

Philadelphia, November 3.—The Philadelphia C. P. classes have now settled down to the regular routine. Laboratories are open, quizzes organized, and, as a final work, the three societies have been formed.

The first year society, the Alpha Phi, has the following staff: President, H. J. Sunday; vice-president, A. M. Shiffer; secretary, Miss Bertha Whaland, treasurer, W. D. Burgoon; reporters—A. L. Collins, E. D. Cook; executive committee—E. Irwin, J. H. Allen, E. E. Slayton, A. L. Baskin, G. B. Haley.

The second year, or Beta Phi, elected as follows: President, F. W. Cast, N. Y.; vice-president, R. D. Gilliland, secretary, F. W. MacNess, Ohio; treasurer, J. Percy Benington; reporters—G. B. Davies, W. J. Phillips; executive committee—D. B. Crawford, E. C. Hatlaway, W. D. Hyram, E. E. Woodland, J. Percy Benington.

The senior society, or Zeta Phi: President, S. M. Hay; vice-president, W. E. Dittmeyer, W. Va.; secretary, Miss Millicent Renshaw; treasurer, Y. A. Kopp; reporters—William Kennedy, C. A. Walter; executive committee—J. A. Garvey, Harry Coombs, P. E. Hastings, J. S. Chisholm, J. H. Converse.

OTHER HAPPENINGS.

—W. M. Rickert of Fifteenth and Westmoreland streets, Philadelphia, has been appointed acting receiver in charge of the store of Harvey G. Fenner at Broad street and Columbia avenue. He will run the store in the interests of the creditors. An amicable settlement is looked forward to, the plant being too valuable in both location and equipment to be disturbed.

—An echo of the winding up of the affairs of the Union Drug Co., Philadelphia, comes to light in the possession of the Twelfth street and Fairmount avenue store, one of the chain. N. D. Streeter of Tenth and Callawhill streets, has taken title thereto and will run it in conjunction with his other place.

—Jelliffe's pharmacy is the title of the new Seventeenth street and Susquehanna avenue, Philadelphia, store. Dr. H. L. Randall opens at Seventeenth and Dauphin streets.

—Leonard H. Newhold goes to Sixteenth and Pine streets, Philadelphia, from Delaware county. P. P. Masters and J. F. James have gone to Pittsburg.

—The announcement of the marriage of Burton F. Ashmead and Miss Mary E. Auld, both of Philadelphia, have been sent out.

THE SOUTH.

MARYLAND.

—Mrs. Isaac E. Emerson, wife of the widely known president of the Emerson Drug Co., and her daughter, Mrs. Horner, had an unpleasant experience in Druid Hill Park. They were going along in their automobile, when several policemen pounced on them and took all three occupants of the vehicle to the police station. There a charge was laid only against the chauffeur, of speeding the machine in excess of the prescribed six miles an hour. The ladies say they were subjected to many indignities and not a little abuse by the policemen, and they afterward brought formal charges before the board, but decided to withdraw them when they found that a formal hearing might involve further humiliation.

—A meeting of creditors of the Maryland Drug Co., Baltimore, was held on last Friday, among those in attendance being Henry Rosengarten, of Rosengarten & Sons, Philadelphia. The situation was gone over, and it is understood that an effort was made to induce some of the creditors who had sued out attachments to withdraw them. No definite conclusion was reached.

—J. F. Kaiser, organizer for the N. A. R. D., who succeeded Mr. Singer in this territory, returned last week from a tour to Williamsport, Scranton and Pottsville, Pa. He reports that he met with much success in impressing druggists in these towns with the advantages of organization. During the next two or three weeks he will work in Baltimore.

—The Pharmaceutical Journal Club, Baltimore, held its first meeting after the summer recess on last Friday. Horace Burroughs, Jr., read a paper on glycerophosphates, another paper being by Claude C. D. Hickman, on Fowler's solution. W. J. Lowry, Jr., president and E. F. Kelly was elected a member of the executive committee.

—A determined effort will be made by Maryland

pharmacists to have the poison law enacted two years ago amended so as to restrict the sale of habit-forming drugs. This matter has been extensively discussed and sentiment is being systematically aroused on the subject.

—For the second time in four months fire broke out in the establishment of C. C. Bartgis & Bros., druggists' sundries, East Lombard and Water streets, Baltimore. The damage amounted to about \$2,500, covered by insurance. The cause of the blaze is not known.

—The Wedgewood Club had its monthly dinner on last Thursday evening at the Eutaw House, the event bringing out nearly all the club members. Some twenty-five were present, and W. W. Cherry was the presiding officer. The evening was most agreeably spent.

—Among the visiting druggists last week were: William C. Spencer, Murfreesboro, N. C.; J. J. Rose, Westminster; J. A. Hooff, Charleston, W. Va.; Dr. L. H. Dielman, New Windsor; H. N. Wells, Hyattsville, and Dr. P. D. Fahrney, Frederick.

—Dr. Gurley D. Moose of North Carolina, who took first prize at the Maryland C. P. last year, has accepted a position in the laboratories of Hynson, Westcott & Co., Baltimore.

AROUND THE GREAT LAKES.

JOBBER MEET.

Will Establish a Minimum Discount Considerably Better Than the Present Eight and Two, and Prophecy Trouble for Manufacturers Who Do Not Conform.

Chicago, November 3.—Manufacturers of proprietary medicines who are not disposed to give the jobbers what the latter consider a square deal, were the subject of discussions by the members of the Mississippi Valley Drug Club and the Ohio, Kentucky and Indiana Drug Exchange, wholesale associations, which held a meeting in Chicago on last Wednesday. There were present all the Iowa people, and wholesalers from Milwaukee, Peoria, Indianapolis, Columbus, Cincinnati and other points in the territory covered by the two associations.

The reason the jobbers were called together was because they have become discontented with the treatment accorded them by some of the manufacturers. Several manufacturers of goods which are in very large demand, allow the jobber only eight per cent. discount with perhaps an extra two for cash. In one instance ten per cent. is allowed but the discount is withheld as a sort of a rebate for six months after the goods are shipped. Of course, these are comparatively isolated instances, but they and others which might be mentioned make goods which constitute quite a material portion of the proprietary business done by the jobbers. It was therefore decided to establish a minimum discount, and those manufacturers who do not agree to it, according to the sentiments expressed by many of the jobbers present at the meeting, are very likely to find that they will have to hunt for a means of distributing their goods. The consensus of opinion was that a discount of ten per cent. with an extra five off for cash, or fifteen per cent. and one off for cash would be about right.

The jobbers say that this is absolutely necessary if they are to make any money in patents. It costs them ten to twelve per cent. to do business, and the manufacturers who are now insisting on terms which the jobbers say, leaves them absolutely no profit will have to come to time, the jobbers insist, if they expect to continue business relations with them.

NEW SOUTHWEST DRUG CO., WICHITA, KAS.

Chicago, November 3.—Porter B. Fitzgerald left on Saturday to accept his new position as general manager of the Southwest Drug Co., which has just been organized at Wichita, Kas., and will be ready for business about January 1. The new company is a strong one with ample capital and good men in the directory. The officers are: G. Gehring, president; F. Henriott, vice-president; J. W. Cookson, secretary, and Willis Davis, treasurer. Mr. Fitzgerald will commence buying stock for the new wholesale concern at once, going to New York this month for that purpose, but will probably appoint a buyer later on. No one in the Chicago trade needs to be told that the Wichita house made a wise choice in securing Mr. Fitzgerald. He has been with Morrison, Plummer & Co., for about sixteen years as the head of their correspondence and country departments.

BRENDECKE ADMITS HE WAS A THIEF.

Chicago, November 3.—In a recent trial of a case against Brendecke, the druggist who attempted to retaliate upon William Bodenmann for prosecuting him for cocaine selling by charging Mr. Bodenmann with offering to "hush up his cases for a money consideration," has admitted what sort of a fellow he, Brendecke, is. In a recent trial of a case against him Brendecke admitted that his lawyer pleaded guilty for him to the charge of receiving stolen goods, and that he paid a fine of \$100. The stolen goods were cocaine and were taken from Lord, Owen & Co. Brendecke's inspiring admission was brought out by fierce cross-examination.

PERJURY CHARGES FOLLOW LIQUOR PENALTY.

Lansing, Mich., November 3.—In granting a writ of mandamus asked for by the prosecuting attorney of Van Buren county, to compel the circuit judge to set aside his order quashing an information for perjury against Charles Rogers, the supreme court has made an interesting ruling.

Mr. Rogers, a Van Buren county druggist, where local option is in effect, was first charged with the illegal sale of liquor. He pleaded guilty and paid the penalty. Putting on the screws a little tighter, Prosecutor Anderson thereupon filed information for perjury in making alleged false weekly report relative to the sale of liquor, the statute requiring such report to be made under oath. Rogers' attorneys filed a plea in bar, alleging the former conviction as a bar to the perjury proceedings. The Supreme Court holds it to be a separate offense, which Rogers will have to answer.

ILLINOIS.

—The druggists of the fifth district, Chicago, had a rousing meeting, and the outlook in the district, which is exceptionally large, was announced to be promising in spite of many serious problems. Addresses were made by President Avery of the Chicago association, and Mr. Spilver who came over from the West Side by request. Officers for the coming year were appointed as follows: President, John T. Lueders; vice-president, William Krizan; secretary, W. T. Adams; treasurer, B. S. Cooban.

WE WANT DRUGGISTS

To send us a list of physicians who patronize them, and we will write each physician that he can obtain Phenalgin from the druggist mentioned; we will also send the physician a sample, with literature.

ETNA CHEMICAL CO.

313 West Street

NEW YORK

DR. C. A. LEATHERS.

Dr. Leathers is one of those whom every other man considers himself fortunate to meet. This is because Dr. Leathers is not only a Kentuckian, but one of the best sort that that State yields. He is a young man, as may readily be seen from the picture; is a member of the Lawrenceburg Drug Co., Lawrenceburg, Ky., and is second vice-president of the Kentucky Pharmaceutical Association.

—The special C. R. D. A., committee appointed to confer with the council committee having in charge the proposed carbolic acid ordinance did not confer last Tuesday as was expected. A sub-committee has been named by the council committee, and in a few days will be prepared to meet the druggists.

—Peter Van Schaack, Chicago, wife and sister, Mrs. Hilbard, will leave shortly for a six months' tour of New Mexico, Colorado and Southern California.

—John Richmond, druggist of Kodzie avenue and Ohio street, Chicago, has sold to Mr. Grunski, formerly clerk at the Reliable pharmacy.

MICHIGAN.

—The interests of Dr. John Avery and his son Bryant in the drug firm of Passage & Avery, Greenville, have been purchased by Olin Shamma, a pharmacist employed for the last two years at Slawson's store. John H. Passage remains at the head of the firm.

—The drug store at 103 Ottawa street, Muskegon, has been purchased by Edward Marcoux, for a number of years in the employ of Fred Neumeister. The place will be remodeled and an up-to-date stock carried.

—P. B. Kirkwood has bought the interest of his partner, J. E. O'Donohue, after an association of 11 years at Negaunee. The retiring partner has purchased the drug business of Werner Nikander.

—A Saginaw druggist found a piece of bark in some sausage he had purchased and remonstrated with his butcher. "Well," said the man behind the apron, "what did you expect, the whole pup?"

—Timothy Burke is now sole owner of the Cadillac pharmacy at Cadillac, having bought W. A. Stecker's interest. Mr. Stecker has taken a position as traveling salesman for a Chicago drug house.

—Because of ill-health, George J. Noteware has disposed of his drug business at Bellaire to Hugh Vaughn. Mr. Vaughn was formerly a druggist at Pellston and Central Lake.

—Edgerton Wing, the Port Huron druggist, will remove his place of business further into the center of trade where he believes there is room for a first class establishment.

—Congratulations and cigars are passing between Von Furniss of Nashville and his many friends. He was recently married to Miss Edna Johnson of Lake Odessa.

—The Mashek Chemical & Iron Co.'s plant at Wells will be started about January 1, and, when in full operation, will turn out 500 gallons of wood alcohol daily.

—Senator Bangham of Homer, has purchased a drug store at Albion and will remove to that city. He wants to give his children the advantages of a college education.

—Clinton Joseph, whose store at Quincy was burned, will locate at Bronson, having bought the drug stock of Calkins & Morrison in that village.

—L. E. Warren, manufacturing chemist at Battle Creek, has accepted a similar position with the William S. Merrell Chemical Co. of Cincinnati.

—Charles and Frank Hull, the Vermontville druggists who were accused of violating the local option law, stood trial and were acquitted.

—J. M. Bittman has sold his drug stock and fixtures at Saginaw to John Gould of Freeland, and they will be removed to the latter town.

—A. A. Jackola will open a drug store at Calumet on November 1. He bought the stock in Chicago.

—M. Remington of Bangor, has bought the drug business of C. E. Hessey at South Haven.

—Sam Robinson has sold his stock at Charlotte to Dr. Thornton of Eaton Rapids.

—E. L. Stevenson & Co. have opened a new and attractive drug store at Stanton.

—A. W. Olds will open a nicely furnished store at Hartford, on November 7.

—S. Zeller's store at Sault Ste. Marie was burned.

INDIANA BOARD PROSECUTING SUCCESSFULLY.

Evansville, Ind., November 3.—A. G. Ruggles of Warsaw, was prosecuted by the State board of pharmacy for conducting a retail drug store without complying with the law. Two members of the board, C. B. Woodworth and H. E. Glick, secured the evidence. Indiana so far has had numerous prosecutions and has been successful in every one. The board is becoming stricter.

At the October meeting of the board in Evansville, the following passed: Registered pharmacists—A. F. Schmidt, Washington; A. M. Sum, Washington; F. L. Donnell, Greensburg; A. W. Flick, Evansville; J. Zimmerman, Lynnville; David Hecht, Evansville; C. G. Aughe, Frankfort; W. D. Minnes, Ossian; J. H. H. McDonald, New Albany; H. C. Beiling, Evansville. Registered assistants—O. A. Matthew, Mitchell; J. R. Kelley, Muncie; B. V. Winslow, New Albany; C. A. Robertson, English; C. A. Thomsan, Flora; W. W. Bock, Logansport; Geo. Pfender, Evansville; Chester Boothe, Sullivan; S. S. Harris, Rockville. The next meeting will be at Indianapolis, January 13, 14 and 15.

MICHAEL J. BUCKLEY, a Haverhill, Mass., drug clerk, is dead at the age of 27, as the result of taking a quantity of oil of mirbane by mistake instead of medicine. He realized by the peculiar taste that he had made a mistake and at once took a powerful emetic, but without avail. He had intended using the oil of mirbane to make a patent tip polish for finishing shoes, a preparation which he had discovered and made very successful commercially. He leaves a wife, two sons and a daughter.

OTTO ZWIETZSCH, president of the Otto Zwietsch Co., soda appliance manufacturers, Milwaukee, Wis., died on October 27.

PACIFIC COAST.

GOVERNMENT AWARD SCANDAL.

Charged That Some Druggists Were Favored in Awarding Government Contracts, While Others Were Not Allowed to Bid at All.

San Francisco, November 3.—A scandal has broken out in the Medical Department of the United States Army in California and an investigation is now being held. Many of the leading druggists of San Francisco are involved and have been called to give testimony. It is charged that W. H. Miller, chief clerk of the department, has shown favoritism to certain firms in the awarding of contracts. Testimony has shown that the department was in the habit of receiving requisitions from all the posts west of the Rock Mountains, and in Honolulu, and the Philippines. From these a list of supplies needed is made out and distributed among the wholesale druggists of San Francisco. These firms are allowed ten days in which to submit their bids. The bids are opened in the presence of the bidders and the contract is awarded to the one having the lowest figure. The bidders, however, are required to submit samples with their bids, and if the samples of one excels those of another the authorities reserve the right to reject the lowest bid.

It was stated by one witness that Miller had suggested that this plan be changed, that the supplies be divided into groups, and that the members of firms invited to bid be limited to three or four. Originally there were thirty or forty bidders and the competition was keen as the contract amounted to thousands of dollars and was considered the biggest plum a San Francisco drug firm could capture.

Miller, it is further charged, specifically, refused to allow the Merrill Drug Co. to bid, putting them off time and again and giving them a list finally at ten o'clock of the day the bids were due at noon. It was also asserted that the firms favored were H. S. Crocker & Co., instruments; Redington & Co., and Mack & Co. One clerk testified that Miller complained that Redington & Co. were not receiving their share of the trade. The same clerk also says that Kirk, Geary & Co. were discriminated against. The investigation is still in progress.

CALIFORNIA.

—H. R. Bristol recently of the firm of Bristol & Rowley, pharmacists at Santa Ana, has gone to San Diego, where he has set out a grove of gum trees. He will endeavor to supply his district with fuel in a few years.

—A. A. Cavagnaro, who served the city of San Francisco in the last Legislature, has returned to the C. P. to continue his studies.

—J. D. Mahoney, who owned a drug store and much other property at San Miguel, was burned out recently.

—E. Weingartner & Co. have opened a new drug store at Polo Alto.

GEORGE F. TALBOT, prominent as a manufacturing pharmacist and chemist, died at Andover, Mass., in his fifty-ninth year. He was born in Newburyport. He is survived by a widow and one son.

S. W. STOREY, a long-established druggist at Vernon, Ind., is dead. His store is now operated by his widow. It will probably be sold.

NICHOLAS J. GAUER, Sr., president of the Angostura Bitters Co., died in Chicago.

NEW HAMPSHIRE.

—When the Earl of Denbigh, commander of the London Honourable Artillery Company, and his men recently passed through Lancaster, away up in the White Mountain region, on their Canadian trip, their brief stop in Lancaster was due to the enterprise of Parker J. Noyes, the town druggist. He pulled the wires with official committees to bring about this treat to his townspeople. The school children were given a holiday on Mr. Noyes's suggestion.

—John J. Carney of Carney & Giguere, Manchester, has been making a trip through the New England States.

—A part of Foy's drug store, Pleasant street, Concord, has been converted to a saloon.

FROM MAINE.

—At the last meeting for examinations by the State board of pharmacy, in Augusta, the following were successful: William G. Trainor, Biddeford; Arthur Dussault, Rochester, N. H.; James L. Race, Green Lake; Walter L. Collins, Caribou; Ralph C. Hamilton, S. J. Foster, James T. Gallagher and Thomas Johnson, all of Portland.

—So tangled up did the evidence become in the court at Biddeford, where druggist Thomas F. Cosgrove was up on a charge of violation of the liquor law, that the judge threw the case out of court, the attorneys on both sides not having their cases sufficiently well prepared to please him.

—W. C. Hawker & Co.'s pharmacy in Augusta is now greatly improved by alterations, including the putting in of a large new soda fountain of elaborate design, and also nearly seventy-five feet of glass show cases.

—The Lafayette pharmacy in Portland rejoices in the addition of a handsome new soda fountain of a style unlike any in any other drug store in Maine, so the makers assured the owner.

—The Portland Drug Company's new store, in the new building of the Northeastern Telephone Co., Portland, is a fine example of up-to-the-minute stores, so complete are the fittings.

—Ernest E. Cross, a Portland druggist, plans to open soon a pharmacy in Bethel, where he has under preparation a fine location.

FROM JERSEY TOWNS.

—A grocer woman of Union Hill sued Eberhard Seitz of Homestead, a soda water manufacturer, for \$5,000. A bottle of fizz had exploded and knocked out her eye. She didn't get the desired satisfaction, however, as the judge ruled that the manufacturer was not liable. The latter testified that the bottles had been given a seventy-five-pound test and had been filled with only a fifty-five-pound pressure.

—Samuel B. Matthews, druggist at 557 Grove street, Jersey City, was arrested with five other men on charges preferred by four little girls. Bail was fixed at \$750 apiece, and Matthews was one of those who was sent to jail pending further disposition of the cases.

—William Rust & Sons, New Brunswick, will open a new branch store on George street, that city.

ECHOES FROM EAR PRICE LIST EDITION.

Echoes are but repetitions of things said. Many sayings will not bear repeating; not so, however, the good stories told in the advertising columns of last week's Price List edition. These will bear repeating many times, and every repetition will result to the advantage of some live druggist who knows a good thing when he sees it. Therefore, we repeat:

PISO'S CONSUMPTION CURE.—Any drug store in the country ought to be able to dispose of $\frac{1}{2}$ gross of this salable staple. The Piso Co., Warren, Pa., say they are making an especially attractive offer to purchasers of the above-named quantity. Write to them for particulars.

QUININE PILLS.—The United States Medicine Co. brand is quoted at \$2.00 per dozen in their advertisement on page 2. This firm also quote prices—in the same space—on nine other preparations which they make.

SOLULES.—A product from the laboratory of the popular pharmaceutical chemists, Hance Brothers & White, and claimed by them to be a brand of elastic filled capsules that are as perfect as cure and skill can make them. For further information on "Solules" see the advertisement of the above-named firm on page 5.

CHEESEMAN'S PILLS.—The genuine kind that many druggists are not familiar with. Made by the H. Robinson Co., 2328 Second Ave., New York City.

VAN STAN'S STRATENA.—"Ten times stronger than glue," is the claim made for this cement by the manufacturers, the Van Stan's Stratena Co. of Philadelphia, Pa.

FORMALDEHYDE.—It will soon be in greater demand. Are you ready to meet the demand? If not, the Roessler & Hasslacher Chemical Co. can assist you. They not only make Formaldehyde but also many other chemicals used in pharmacy and the arts. A letter addressed to them at 100 William St., New York City, will receive prompt attention.

PIL. ANTI-ANASARCA.—Are you familiar with them? They are made by the Reynolds Pharmaceutical Co. and their office is in the Liberty Bldg., Liberty and Greenwich Sts., New York City. This firm also make Ureine Conoids (Reynolds) and Colchicine-Lithii-Comp. (Reynolds). Note the price list of these goods on page 9.

FAILING'S PREPARATIONS.—They have all been reduced in price but not in quality. The new price list—on these goods—which went into effect Oct. 1st, 1903, appears on page 9. These goods are still made by J. P. Failing, at Albany, N. Y., which is recommendation for their quality, and a guarantee that the manufacturer has the druggist's welfare at heart.

FENNER'S 20TH CENTURY FORMULARY.—Will post you right up to date. This is the 12th edition of Fenner's Complete Formulary, so well known to the drug trade, and claimed by the publisher, B. Fenner, Westfield, N. Y., to be ten years later than any other authoritative American work on pharmacy and allied subjects. The price is \$10.00 per copy, express prepaid by the publisher, or it may be obtained from the jobber.

BRAKE'S PALMETTO WINE.—Costs \$6.00 per dozen and retails for 75c a bottle. Order of any jobber.

AMOPCA.—One of the many specialties which R. W. Robinson & Son handle at 180 Greenwich St. and at 228 Fulton St., New York City. See the complete line that this firm list on page 10.

SODA MINT GUM.—Made by the Soda Mint Gum Co. at Pitsburg, Pa., and claimed by them to aid digestion and to be beneficial in sick headache. See

the cut of the handsome display jar—on page 10—that is furnished free with an order for 100 five-cent packages.

NUTROLACTIS.—The Galnetagogue, for nursing or said to be approved by the Academy of Medicine, Paris. Made by The Nutrolactis Co., 395-398 W. 11th St., New York City.

DYER'S MITCHELLA COMPOUND.—A product of the Dr. J. H. Dye Medical Institute, Buffalo, N. Y., claimed to cure diseases of women. The price is \$8.00 per dozen. The manufacturers create the demand.

KIE ZIE TABLETS.—Said to be a brain and nerve tonic. Made by Frank K. Kitzmiller at Harrisburg, Pa., who says the Tablets have real merit and that it will pay any druggist to push them: 10c and 50c boxes. Write to him for special prices.

HARVIE'S "KILL BUG."—The manufacturers, The Harvie Drug Co., 153 Maiden Lane, New York City, say this preparation is used by the New York Fire Department and that is recommendation enough. Kills bed bugs, roaches, fleas, ants, moths, etc.; said to be non-explosive, non-poisonous and non-staining.

MANICURE SUPPLIES.—All kinds and descriptions. Note the advertisement of the Forquignon Mfg. Co. on page 203.

FLORENTINE COLOGNE.—"Sold for 28 years." Put up in all sizes from 5 cents to \$1.50 per bottle. For samples and prices write to C. H. Selick, 56 Leonard St., New York City.

GARDNER'S PHARMACEUTICAL PRODUCTS.—Always sold by the druggist with perfect confidence that the customer will be pleased. See the price list on these goods—page 14.

NEW SKIN.—A water proof liquid court plaster, made by the Douglas Mfg. Co., 96-102 Church St., New York City, who guarantee the sale. See the cuts of their new and attractive packages and counter card on page 17.

PROTOS.—Physicians say it is a highly nutritious, non-fermentable food which is particularly adapted to infants and adults who are deficient in muscular development. Made by The Protos Co., 1052 Madison St., Chicago, Ill.

"CRYSTAL" CAPSULES.—Soft, elastic gelatine capsules, made by the Crystal Capsule Co., 1000 Spring Garden St., Philadelphia, Pa., who say, "Every kind, every size, at prices that will surprise you; no order too small, none too large. Send for prices."

RECAMIER CREAM.—Well known, well advertised. Send for samples, lithographs, booklets and circulars for free distribution. Address Recamier Mfg. Co., 131 W. 31st St., New York City.

WOSTENHOLM RAZORS—FREE.—Two of them with a \$4.00 order for Bishop's Antiseptic Shaving Lotion. The 25-cent size is \$2.00 per dozen and the 50 cent size is \$4.00 per dozen. Made by the Peirce Henderson Chemical Co., 1218 Broadway, New York City.

ROBINSON'S ALFALEA NUTRIENT.—Claimed by the manufacturers to be Nature's own remedy for making rich blood, a specific for Anemia, Stomach and Kidney troubles, etc. For free samples and literature apply to the Alfafa-Nutrient Co., Masonic Temple, Chicago, Ill.

RHEUMATOLO.—An Antirheumatic and Gout Remedy manufactured by The Rheumatol Co. of New York, and the formula is given in their advertisement on page 202.

WOODWOOL PREPARATIONS, HARTMAN'S. Made by the Hygienic Wood Wool Co., 38 Pearl St., New York City. Note their prices on page 202.

Advertising Tape, a New and Effective Method of Advertising for Druggists.

The accompanying cut will give one an excellent idea of the novel and effective method of advertising recently introduced by Messrs. G. Reis & Bro., 621

Broadway, New York City. It is well known that good results cannot be secured from advertising unless the advertising is placed where the public must see and read it, or, in other words, the advertising must be placed where it will do the most good. In this advertising tape, made by the Messrs. Reis, is found a system of advertising that goes to the most prominent position possible, directly into the hands of the consumer. The tape is designed to take the place of cord, ribbon and tinsel for tying up packages, it is made in various widths and combinations of colors, and when tied on boxes as shown in the illustration, it is made to resemble ribbon. The manufacturers claim that the cost of the tape is very little more than that of ordinary cord, and much less than that of tinsel or silk ribbon. With the druggist's name, address, etc., printed upon it, it would seem that this tape should not only make an effective advertisement but that it would also lend prestige to his store by giving his packages that little tone which so impresses the general public and causes them to designate his store as being a little better than that of the other fellows. Messrs. Reis & Bro. will send samples and quote prices to any interested person.

The Holiday Number of "Our Drummer" is Out.

The Santa Claus number of Butler Bros.' catalogue, "Our Drummer," is out, and doubtless many in the trade have secured a copy ere this. In the line of holiday goods listed this catalogue is most complete, and in it Butler Bros. have shown a thorough conception of the dealer's wants for the festive midwinter season. In this Santa Claus catalogue Butler Bros. say: "We do not ask your holiday order, we simply ask that you study our line and prices as shown, and then give us your business if our better values entitle us to it." They further say, "History is made by men who dare." There is food for thought in the foregoing statements. It is the man who dares to get out of the old, time-worn business rut of leaving well enough alone and grasps opportunities when they appear, that gets the thick-velvet profit which lies on Christmas goods. It is also true that catalogues are less expensive than traveling salesmen, and common sense will tell any man that the firms who sell from catalogues have a distinct right to claim lower prices than those firms who employ traveling salesmen. Druggists who have not received a copy of "Our Drummer" should write at once to Butler Bros., New York, Chicago or St. Louis, for this free edition of their Santa Claus catalogue T-479.

A Progressive Wholesale Drug House.

The well known and progressive wholesale drug house of Morrisson, Plummer & Co., 200-206 Randolph St., Chicago, Ill., are making a bid for more trade by filling their advertising spaces with short, crisp sentences and paragraphs which tell of the superior service they can and do render to retail druggists who deal with them. Among others, they make the follow-

J. W. WEBB.

Mr. Webb is a member of the firm of Marcus D. L. Webb & Son, Stuttgart, Ark., and is second vice-president of the Arkansas Association of Pharmacists. A Missourian by birth, he is only twenty-four years of age. He hardened his muscles at farming before attending college at Stuttgart and Valparaiso, Ind. He is one of those progressive, aggressive young men whose acquisition by any association or business is a fortunate one. The store which he and his father conduct is called the "Grand Prairie."

ing statement which should have considerable weight with level-headed retailers: "We do not promise not to make mistakes. The man who does promise this either does not know this business or is too hopeful, but we do promise to make a few less than the next man. And we do promise to adjust promptly and courteously the few we do make." Morrisson, Plummer & Co. have always had the reputation of carrying a complete down-to-date stock, of employing good men and rendering prompt and efficient service. The fact that their business shows a continuous and healthy growth proves that they have lived up to the reputation established by them and that the trade in general appreciates good service. As the proof of the pudding is in the eating, so there is but one way to test the truth of Morrisson, Plummer & Co.'s statements, and that is, by sending them a sample order.

20th Century Cash Registers at Low Prices.

Elsewhere in this issue appears a cut of the Century Cash Register, which is made by the Century Cash Register Co., 656-674 Humboldt Ave., Detroit, Mich. This register undoubtedly represents the acme of perfection in cash registers, and yet it is said to sell for about one-sixth of the price of other registers. Every machine is sent on seven days trial and guaranteed for five years. A good cash register should be a fixture in every drug store for they save the proprietor many dollars in the course of the year. The Century Co. have a plan for advertising and introducing their machine to responsible merchants for a short time, and they claim that the plan will enable the druggist to obtain possession of a high grade, up-to-date, 20th Century Cash Register for very little money and on very easy terms. Druggist who are interested in a good cash register for little money should write the Century Co. at once for full particulars.

SCARCITY OF COD LIVER OIL.

An Unprecedented Situation in the Drug Field.

It is doubtful if the condition created by the present great scarcity of cod liver oil can find a parallel in the history of medicine. That an article of such wide popularity and general use as cod liver oil should become so scarce and high in price is an incident that gives rise to serious thought. Never before, perhaps, has it been so clearly shown how great the constant demand is for this product. From all parts of the country come urgent inquiries regarding the outlook in the near future and in some sections it is almost impossible to get the pure oil at any price.

This famine in cod liver oil, if continued for any length of time, might easily result very seriously. There are thousands of people, young and old, who use this oil continually and whose health depends upon it. To deprive them of cod liver oil for even a short period would be to deprive them of a very valuable life food, and as there is nothing to take the place of cod liver oil the seriousness of a prolonged famine can be better imagined than described.

A rumor has been current that the market in cod liver oil had been cornered and that a speculator was holding the available supply at exorbitant prices. This report has no foundation whatever in fact. The scarcity of oil is due entirely to natural causes and there has never been any danger of a corner in this product.

It is a source of satisfaction to know that Scott's Emulsion will bridge the temporary scarcity of pure cod and will keep this valuable article within the reach of every one who needs it. By reason of their long experience Scott & Bowne were able to foresee the present situation in the cod liver oil market and provided for it by securing enough oil to carry them over, although at an enormous increase in the cost of the oil. Notwithstanding this, Scott's Emulsion will be sold to the retail trade at the same price as formerly.

It is not alone dangerous but unnecessary to experiment with the numerous cheap substitutes for cod liver oil. While Scott's Emulsion is known to be the standard emulsion of cod liver oil, containing only the purest and best ingredients, there can be no excuse for using the cheap, worthless substitutes. At this time, particularly, the drug trade should safeguard itself and protect its customers by handling Scott's Emulsion as against any other preparation of cod liver oil made. It is the only one that is guaranteed to be absolutely pure and staple in character. Scott & Bowne's reputation of thirty years is back of every bottle of Scott's Emulsion.

Stretched Gelatine Around the Oil.

Some time ago Messrs. H. Planten & Son, the well known Capsule Manufacturers of New York, had a call from one of their customers, who was very anxious to know how they made those little round and oval shaped capsules which contain no air, and look as if two semi-circles or ovals of gelatine had been made, filled with oil, and fastened together in some mysterious manner.

Mr. H. Roff Planten, the firm's manager, explained to this searcher after knowledge, that their new airless process by which this class of goods was made is a very simple one and only requires skill, knowledge and costly machinery. Sheets of gelatine are prepared and stretched round a certain amount of oil, to secure a proper dosage, the sheets containing the oil then brought together under immense pressure, heat is applied and presto, the capsules or pearls are the result. After this process the capsules and pearls are put through a curing and finishing process, and are then ready for the consumers. The explanation seemed very clear

to the inquirer and he departed with a happy, though rather incredulous, smile.

The firm has constant requests to enclose private formulas which require this peculiar stretching-around-the-oil process and we suggest that if you have any formulas you desire to place on the market in the best possible style, you write to them for information and prices. Messrs. H. Planten & Son have been in the Capsule business since 1836 and are in fact "The Pioneers of the Capsule Industry in the United States. Their goods are thoroughly reliable and have gained the enviable reputation of being 'The Best by Every Test.'"

Art of Show Card and Sign Writing—How to Learn It.

Where in the country can be found a druggist or a drug clerk who would not be benefited in some form if he or she was a good show card and sign writer? To be sure, there are many who are, but taken in the aggregate, it is a very small percentage of druggists and clerks who can do this class of work. Furthermore, there are very few lines of business that would pay a better profit for the time and knowledge expended at this work than the drug business. Druggists are rapidly waking up to the fact that their show windows are excellent paying advertisements, and are giving them considerable time and attention. One retail drug store in the down town district of New York City has a large show window which attracts much attention, always having from six to a dozen persons noting its contents, many of whom pass inside, the numerous clerks employed therein being always rushed during the business hours. The secret of this store's successful window displays does not—to all appearances—lie in the variety of goods displayed nor yet in the changes which are frequently made, but it is principally in the fact that a neat show card—upon which is printed a description and the price—is attached to each and every article. The time and money expended upon this window is undoubtedly a profitable investment and simply demonstrates to the progressive druggist that in order to keep up with the procession he or one of his clerks must be a good show card writer. The Miller College of Advertising Art, 482½ Columbus Ave., Boston, Mass., guarantee to make a good show card writer of any person of ordinary intelligence in from one to three months. They also claim to teach every student individually with hand painted—fresh from the brush—illustrations and original letters of instruction. An Era representative who called at the Miller College—and was shown some students' work—says, "The students' work that I saw was certainly fine, and would attract attention anywhere." The Miller College will, for a limited time only, give a discount from the regular price to all who mention this journal when writing. Interested persons should not neglect this opportunity.

SPECIAL OFFER ON CAL-CURA SOLVENT

Dr. David Kennedy's Latest Kidney and Liver Medicine.

For thirty days, ending on November 7th, we will give to all retail druggists one free bottle of Cal-cura Solvent with each dozen they order of their wholesale dealer, providing each druggist, upon ordering will make a window display of the said goods and distribute from their store free samples of Cal-cura Solvent and advertising matter. On two dozen orders they will receive 5 per cent discount. Simply send us your order together with the name of your wholesale dealer through whom you would like the goods shipped. The free goods, samples and advertising matter will be sent direct from our office, all charges prepaid, even the cartage to your store. OUR ATTRACTIVE WINDOW DISPLAYS, LARGE SIZE SAMPLES AND MOST EFFECTIVE ADVERTISING ALWAYS CREATE A STRONG AND STEADY DEMAND FOR CAL-CURA SOLVENT.

One Dozen Dr. Davis' Anti-Headache Free.

Druggists who are having calls for Dr. Davis' Anti-Headache, and those who want to stock a headache cure which is said to be worthy of the name, should cut out, fill out and send to their respective jobbers the coupon which appears in the advertisement on the inside back cover of the October 29th Price List edition of the Era and which entitles the dealer—who signs it—to one dozen of the 25c size of Dr. Davis' Anti-Headache free. Druggists who take advantage of this offer can make a net profit of \$6.75 on an investment of \$5.25. This offer should have the careful attention of the trade for it is very few headache remedies that yield such good profits.

AMERICAN STOPPER CO.
12 Verona St., BROOKLYN, N. Y.
TIN BOXES and CANS
LARGEST MAKERS OUTSIDE THE TRUST

DECLINE IN CAFFEINE AND MERCURIALS.

New York, November 2.—Business in a jobbing way has continued satisfactory to dealers and the market retains a steady undertone with fluctuations in values during the past week more or less important, notably those for mercurial preparations, caffeine, cloves and clove oil.

OPTICUM.—Market conditions are practically as noted for several weeks past and quotations for jobbing quantities remain unchanged at \$3.40@3.65 for 3 per cent. and \$3.50@3.75 for 11 per cent. Powdered is selling fairly in small lots at \$4.00@4.50 for 13 per cent. and \$4.80@5.00 for 16 per cent.

MORPHINE SULPHATE.—Business in a jobbing way continues of full average volume and the tone of the market is steady with dealers quoting \$2.60@2.70 for eighths in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.30@2.40 in 5-oz. cans.

QUININE SULPHATE.—A moderately active and firm jobbing market is reported with quotations maintained at 25¢@25½¢ for bulk in 100-oz. tins, 25½¢@26¢ in 50-oz. tins, 26¢@26½¢ in 25-oz. tins, 27¢@27½¢ in 15 or 10-oz. tins and 27¢@28½¢ in ounce vials.

CAFFEINE.—Keen competition among manufacturers has caused a decline of 35¢ per lb. and the revised jobbing quotations are \$3.25@3.50 per lb. and 35¢@40¢ per oz. Citrated is quoted \$2.20@2.50 per lb. and 27¢@30¢ per oz.

BENZOIC ACID.—Extreme scarcity has resulted in marking up jobbing prices to 50¢@55¢.

SODIUM BENZOATE.—Under the same influence jobbers have advanced quotations to 50¢@55¢ for granular and 51¢@56¢ for powdered.

BALM OF GILEAD BUDS.—Stocks are exceedingly small and jobbing quotations show an advance to 60¢@65¢.

MERCURIAL PREPARATIONS.—Manufacturers' prices are lower on account of keen competition and the revised jobbing quotations are 93¢@98¢ for calomel, \$16¢@18¢ for corrosive sublimate crystals, and 91¢@96¢ for powdered, \$1.10@1.15 for red precipitate, \$1.20@1.25 for white and 68¢@73¢ for bisulphate.

LITHIUM PREPARATIONS.—The market is easier in tone and jobbers now quote carbonate \$2.00@2.25 per lb. and 20¢@25¢ per oz., benzoate and citrate, \$1.45@1.85 per lb. and 17¢@22¢ per oz., bromide \$2.10@2.30 per lb. and 21¢@25¢ per oz., chloride, \$2.50@2.75 per lb. and 22¢@25¢ per oz., and salicylate \$1.50@1.75 per lb. and 16¢@20¢ per oz.

TRICKLY ASH BERRIES.—Owing to scarcity jobbers have advanced their prices to 35¢@40¢.

BARKS.—Cotton root continues to harden and jobbing quotations show a further advance to 30¢@35¢ for whole and 35¢@40¢ for powdered. Tricky ash is scarce and firm at 30¢@35¢ for whole and 35¢@40¢ for powdered.

YERBA SANTA.—Primary markets are higher with stocks light and spot jobbing quotations have been advanced to 20¢@25¢.

ERGOPT.—Stronger foreign markets have caused local jobbers to mark up quotations to 60¢@65¢ for whole Spanish and 70¢@75¢ for powdered.

SAFFRON.—Spanish is higher here and abroad jobbers have advanced quotations to \$8.75@9.00 for Valencia and \$7.25@8.00 for Alicante.

SARSAPARILLA.—Mexican on account of scarcity has been advanced to 22¢@27¢ for whole, 21¢@30¢ for cut or crushed and 26¢@32¢ for powdered.

SLEEPIS.—Canary is firmer in sympathy with stronger primary markets and Sanyra is held at 43¢@45¢ by the bag and 66¢@70¢ for less. Sully is quoted 56¢@58¢ by the bag and 66¢@70¢ for less. Fenel has been advanced to 15¢@20¢ for whole and 17¢@22¢ for powdered.

CLOVES.—The market is decidedly stronger owing to short crops and jobbers have advanced prices to 22¢@25¢ for whole and 20¢@30¢ for powdered.

OIL CLOVES.—Owing to higher prices for the whole, jobbing quotations have been advanced to 81¢@85¢

THE ERA DRUGGISTS' DIRECTORY.

The 10th revision of the Era Druggists Directory, now ready, is the best edition we have yet offered. It is the standard work of its kind in this country, and includes a complete list of the druggists in Costa Rica and the principal drug stores in Chile, Peru, Bolivia, Ecuador and Colombia.

The list of retail druggists in the United States does not quite reach the 40,000 figure which the last edition showed, but this loss is made up by increased numbers in Part III. (Manufacturers, Jobbers, etc.)

This Directory will be found invaluable to any merchant or manufacturer who does business with the trade. It is sold only by subscription, and until further notice the price will be \$5.00 per copy, net, postpaid.

The edition is limited, and we are obliged to reserve to ourselves the right to raise this price at any time.

"We are all learning more or less every day, and wide reading in one's chosen field is imperative."

But there is a great difference both in the quantity learned and the manner of reading.

The newspaper habit, the careless reading of many headlines in many dailies, does not lead to great learning.

On the other hand careful systematic reading is the medium of all education.

Why does the college student read to better advantage than the newspaper habitue?

Because his reading is selected and systematized.

System and selection in reading is, however, also possible outside college walls. The main thing is to get the right person to arrange it for you.

The Era Course in Pharmacy has been selected and systematized for the use of home students by educators of wide experience.

Write to the Pharmaceutical Era, 8 Spruce Street, New York City.

PROPRIETARY MEN ACT.

The most important event in the history of the anti-cut-rate movement since the organization of the N. A. R. D. in St. Louis, not excepting even the adoption of the contract plan by the Miles Medical Co., occurred in this city last Monday. At a special meeting of the P. A. of A., arrangements were made to give the N. A. R. D. the active support of the manufacturers in restricting prices to a fair basis. We can now look forward with confidence to an era of better prices and prosperity in the drug trade. For several years past there has been a theoretical cooperation among the three branches of the trade to prevent the sale of proprietary medicines at ruinously low prices, but in many cases it has been a cooperation in theory only. The tripartite plan lacked the solid support necessary to make it successful. The retailers have commonly been inclined to blame the jobbers for the failure of the plan, but now we have a better explanation from the proprietors themselves. They admit that the plan has been a failure, not because it was wrong in theory, but because of insufficient support of the manufacturers. After long consideration and numerous executive sessions, more recently in Boston, Buffalo and Washington, they have become convinced of the value of the plan and the necessity of doing their part in securing to the retailers a living profit on their goods. To make plans and formulate a method of cooperation with the N. A. R. D. was, in brief, the purpose of the meeting in this city during the past week. The solidarity of the proprietors, the means at their disposal and the important work already done by the N. A. R. D. should eliminate all chance of failure. It is now time for the retailer to lay aside all cynicism and doubt, throw his hat into the air, figuratively speaking, and give his lustiest cheers for the N. A. R. D. and its officers and for the proprietary firms like the Miles Medical Co., the Sterling Remedy Co., and not least for the Peruna Co., which have acted as the leaders in securing this most important action from an exceedingly conservative body of men. Victory is in sight!

THE PLAN OF OPERATION.

That the direct contract plan has been shelved for the time being should not disturb the most radical retailer. The proprietors here assembled declared that

it was absolutely impossible to employ in distributing goods in the larger cities. At the energy of preparing and putting into operation this plan has, however, not been in vain. The Miles Remedy Co. has and is making it a success, and we can scarcely overestimate the importance of the role played by this plan in securing the present favorable action of the other proprietors. It has demonstrated to the world that it pays the manufacturer to deal fairly with his distributors and to take a little trouble to gain their active support. While the contract plan could not be adopted, it is believed that the tripartite plan will now be effective because it is acceptable to practically all the retailers. In New York the proprietors wish to make arrangements with the larger retailers, like those in the Broadway section and the department stores, and to permit them to fix a minimum schedule. This will be no injustice to the smaller dealers, for the minimum agreed upon will be high enough to insure a comfortable profit to all. That this is possible has been proved in the case of Peruna which has been sold at a fair profit in this city for the past three years, thanks to the efforts of Mr. Lee M. Evans and the officers of his firm. The policing and the operation of the plan will be left to the N. A. R. D. which will have the strength which a complete cooperation of all the proprietors can give. How the tracing of goods will be effected without a system of numbering has not been explained, but this does not seem to worry anyone. Success has been promised, and by those whose promise means much.

MONUMENTS TO LIVING MEN.

So accustomed are we to associating such exercises with death and bereavement that when we first read of the meeting to be held in St. Louis this week to do honor to Prof. O. A. Wall, we experienced a momentary feeling of depression, although we knew very well that the most conspicuous figure in the celebration was at that moment alive and happy in his home. Men who by reason of endearing qualities and worthy accomplishment gain the love and esteem of a large circle of associates are commonly remembered in a substantial and articulate way only after their work is done and they no longer need encouragement. The folly and wastefulness of withholding payment of a debt which we are all anxious to pay until it can no longer be of any benefit to our creditor has often been pointed out. If we feel a debt of gratitude, let us pay it when it will do the most good. The man who works purely in his own interest has a sufficient reward in his own appreciation of the benefits gained, but there are a few of the best among men whose hardest work is done for others with no hope of adequate reward. While the world's benefactors do not ask or expect a full recompense for their labors, they still often feel the lack of the stimulus which is the result of visible accomplishment. Is the work which costs them so much effort worth while? Does it appear trivial to others and are all their efforts merely so much energy wasted? These doubts are more frequently than we are apt to think the cause of very real suffering, which could be easily removed by a few words of appreciation spoken in time. The encouragement is a debt which we owe for benefits unselfishly given. No doubt it is a fine thing to erect tab-

lets to honor Dr. Rice who is beyond the need for encouragement but it is, after all, a sad and useless performance in comparison with the testimonial to Dr. Wall who is still among his friends, able to enjoy the keen pleasure of the appreciation which is his due.

AN ANCIENT FORMULA CREATES A SENSATION.

How like a bubble is a newspaper sensation! Both are manifestations of an exceedingly attenuate film of real substance distended by a relatively immense volume of gas. Investigation invariably results in total collapse and evaporation. The New York papers have during the past week been spreading bucketfuls of ink over an innocent formula the like of which is familiar to every druggist's boy in the land. The commonplace list of materials was heralded as a great scientific discovery destined to revolutionize civilization, a great boon to suffering humanity, etc., etc. One journal facetiously suggested that this was the true cause of the fusion forces' defeat in the late election, for it threatened to put all the barbers out of business and the discovery had been made in a municipal laboratory under fusion administration. Altogether more fearful and wonderful knowledge about things not true has been scattered than the druggists can explain away in a month. And what was it all about? An ordinary depilatory mixture containing the usual sulphide of barium, etc., and printed in a formulary issued by the department of charities and the trustees of public hospitals with some hundreds of other receipts equally well-known and commonplace.

PHARMACEUTICAL TROUBLES IN GERMANY.

The government of Germany does not hesitate to regulate the most minute affairs of its children. It has long since taken the country's pharmacy under its wing, and is gradually arranging all the details of the apotheker's life, so that in course of time that strictly scientific individual will have nothing in the world to do but obey a code of rules and enjoy life. For some time the authorities have limited the number of pharmacies and have so arranged that concessions cannot be transferred. The result of this and innumerable other regulations has been an extraordinary demand for pharmacies and inordinately high prices for those which can be sold. Now, it is safe to say that the average human official who lays no claim to omnipotence would suffer no qualms of conscience because of this enhanced value; natural laws of supply and demand would be depended upon to regulate that. Not so the upper servants of His Imperial Majesty, Wilhelm II. Some enthusiastic apotheker might rashly buy one of the expensive luxuries and be unable to afford it. But how to mend matters became a serious question. To permit the building of more stores and thus reverse a former action would never do. Things were so nicely regulated already that only one course remained open, a course the nature of which no American citizen could even guess. The State cannot prevent an extravagant apotheker from purchasing a business which he cannot afford, but it is prepared to do the "next best thing." If he cannot raise the money to pay the interest on the price, the State will loan him money at a lower rate.

TOO MUCH REGULATION.

Although in Germany the authorities have done their best to straighten out every conceivable difficulty that ever troubled the pharmacist, still the people are not as contented as common gratitude seems to demand. A year or two ago a decree went forth that no physician should prescribe patented medicines for charity patients and that no pharmacist should dispense them at government expense. The doctors were ordered to prescribe instead the pharmacopoeial equivalents which could be prepared in every pharmacy. All of which should have been very acceptable to the apotheker, if the feelings expressed in some of our own society meetings are any index of the universal pharmaceutical sentiment in regard to the proprietary. But the law is no longer in force. It seems that the pharmacists themselves objected vehemently and secured the reinstatement of the patented remedies.

A REPLY THAT ANSWERS.

The N. A. R. D. has reason to feel proud of its new president. No druggist can read Mr. Pritchard's answer to the taunting communication of U. S. Patent Commissioner Allen without experiencing a very pleasant feeling of satisfaction. It is a temperate, sane and lucid presentation of precisely that side of the question which the commissioner was pleased to ignore or overlook. We have sent a copy of last week's Era containing the reply to that official in Washington, and hope it will do him good—it certainly will if he takes the trouble to read it. It is always a great deal easier to dispose of a question by simply assuming that people do not know what they are talking about than carefully to consider the other side of the case—usually the least conspicuous side—and giving a really satisfactory answer. If Commissioner Allen will read carefully Mr. Pritchard's reply, he will be convinced that the druggists of the country know what they are talking about when they complain of burdensome patent laws. That is always an important preliminary step in obtaining an impartial view. After he has relieved his mind of prejudice, he will be prepared to formulate a real opinion of the case.

THEY HAVE TAKEN LIBERTIES.

A paragraph in our news columns of last week has set in motion the wheels of a memory which is an ornament of this office, and the result of the grinding is curious. We have been "called out of our name" so often that even the P. O. officials have got used to it. When some one wrote to the "Circular Era," the other day, the man in gray brought the letter to this office without the least hesitation. Perhaps the most picturesque of our many nicknames is "The Pharmacackical Epoch," the handiwork of our ancient and oft-lamented friend, Lillard. Many seem to have labored under the impression that we bore some resemblance or relation to an agriculturist's skin, for communications addressed to "The Farmer's Cuticle Era," "The Pharmar Cuticle," and the like, have been frequent. We have a very poor opinion of the sneaking individual who addressed envelopes to "The Pharmaceutical Error" and "Druggist's Error," and have a gun loaded especially for him—exchanges please copy—but the gentleman who wrote to "The Druggist's Ear" evidently knew what he

was about. "The Pharmacalera" must have been written by a Spaniard, and is not entirely a misnomer; "calera" carries a pleasing suggestion of high temperature. There are a host of other names of which even Sherlock Holmes could give no satisfactory explanation. Thus, why should anyone write "The Pharmaceutical Erie" and "The Druggists' Erie"? "The National Era," another of our many names, is much nearer the truth.

TRADE AGREEMENTS AND LARGE CITIES.

Why is the most stubborn opposition to arrangements for the regulation of trade between jobbers, manufacturers and retailers always developed in the great centers of population? This is a question which has been answered in a number of ways varying with the point of view of the interpreter. Members of the trade in the inland districts have been inclined to account for it all by accusing the city business men of greater selfishness and perversity, while the latter have regarded the movement as mere bothersome interference by visionary enthusiasts. A prominent wholesaler recently dropped a remark which seems to fit the facts admirably, and is perhaps the best explanation thus far offered. He said: "No wonder the inland jobbers favor the rebate plan! It has been a Godsend to them; it has built up their business at the expense of ours." With the change of a few words, the same statement might serve to explain the attitude of the large aggressive retailers toward N. A. R. D. plans. All these arrangements and agreements are destructive of free competition, and it is precisely in the field of open competition that the large metropolitan dealer has the advantage. Competition is war, and in war one combatant loses as the other gains; both cannot win at the same time. The more redoubtable champions in the field do not welcome a cessation of hostilities, for it robs them of the advantage of superior equipment and prowess. The most successful warrior is always the most reluctant to beat his sword into a ploughshare, and the last to admit the advantages of peace. War seldom results in the greatest good to the many, but always in added strength to the powerful few; in this respect competition or commercial war is no exception. It remains for the N. W. D. A. and the N. A. R. D. to convince the Hector and Achilles of modern commercial warfare that it is possible to rise as high by occasionally withholding a blow as by treading upon the writhing bodies of fallen rivals.

Earnestness.

There are many human forces that make for accomplishment.

And the greatest of these is earnestness.

It is corner-stone and keystone, bed-rock foundation and towering walls—the whole masonry of success.

It sweeps before it all doubts and difficulties; prevails against brute strength; surpasses genius.

Enthusiasm is the fickle flash; earnestness, the steady glow.

It is that quality which shines through and glorifies the simplest deeds and plainest words.

Earnestness impresses where all else is powerless.

Earnestness proves itself and cannot be counterfeited.—Judicious Advertising.

LUMAN T. HOY, Woodstock, Ill.

Luman T. Hoy, secretary of the Illinois board of pharmacy, and a prominent druggist and politician, was born in Illinois in 1859. He lived on his father's farm until fifteen years old. In 1880, he entered a drug store in Woodstock, becoming one of the partners, the firm name being Murphy & Hoy. At the end of twelve years Mr. H. purchased Mr. Murphy's interest. Mr. Hoy has held various town and city offices, and, on March 22, 1894, he assumed the duties of secretary of the board of pharmacy. In 1876 he was married to Miss Anna A. Vandenberg of Palmyra, N. Y. Mr. and Mrs. Hoy have two sons, one of whom is employed in the treasury department at Washington, D. C., and is studying medicine, the other, who is a graduate of the Northwestern University Law Department, is practicing law in Chicago.

THE OTHER SIDE OF THE PATENT LAW QUESTION

New York, November 9, 1903.

To the Editor—In a reply to Commissioner Allen's adverse opinion respecting the proposed revision of the laws regulating the issue of patent for chemicals President Pritchard of the N. A. R. D. repeats the suggestion (*Pharmaceutical Era*, Nov 5th) that the U. S. laws be made to conform with those in Germany, i. e. that patents be issued only for the process of manufacturing a product, and not for the product itself. Now, without wishing to discuss the phenacetin matter (which for reasons which I will state below is entirely irrelevant to the question) permit me to point out what the effects of adopting Mr. Pritchard's plan would be. If A has a patent for process of manufacture and has reason to suspect that B who is making the same product, is violating the patent, he must—under the common law that a man is innocent until proven guilty—procure proof of such infringement. No easy matter, since B will

certainly do all in his power to frustrate getting proof. But supposing that after months and even years of espionage he should be so fortunate as to secure evidence which the court would recognize as conclusive, he would have the same Herculean task confronting him with C, D, E, F, G and other infringers who might be more numerous than the letters of the alphabet. Hence to adopt Mr. Pritchard's plan would be to practically deprive the luckless inventor of the fruits of his labors and would hence utterly discourage scientific chemical research.

If, however, the laws were to provide—as is the case in Germany—that the manufacturer of a product for which someone else holds a process patent must prove that his method is entirely different and does not infringe, the matter would stand entirely different. Then the process patent would afford powerful protection—much more protection than the product patent gives today, since the burden of proof would be shifted upon the alleged infringer, who would have to prove that he is not infringing.

What is the grievance complained of? That phenacetin, which is not patented in Germany, is patented here and is much higher in price. Why is phenacetin, not patented in Germany? Because the laws there provide that if a description of a chemical has appeared in public prints, the inventor of it can no longer obtain a patent therefor. In the U. S., however, a person furnishing proof that he is the inventor can within a certain time limit obtain a patent, even though an article thereon has appeared in some periodical. Hence the inventor of phenacetin, who was dilatory in his patent application in Germany, could not obtain a patent there, but could and did obtain one in this country. But, says Mr. Pritchard, if only a process patent existed for phenacetin, other methods of manufacture would be found and competition would lower its price. Granting that this is so with phenacetin, it is a very great question whether non-infringing methods of manufacture could be found for the vast majority of patented chemicals, for inventors are very careful indeed to cover all possible contingencies. Be that as it may, the clear intention of Mr. Pritchard is, or seems to be, to deprive inventors of the results of their long years of work, of that which in the principle and spirit of all patent laws is theirs—protection for a term of years.

To epitomize the above: first, to adopt the German patent laws without shifting the burden of proof to the alleged infringer would render all U. S. process patents for chemicals utterly valueless; second, to adopt also the plan that the defendant in an infringement suit must prove that his process of manufacture does not violate the patent of the plaintiff, would give the inventor much more powerful protection than he now enjoys and hence would not cure the supposed evil. What is the evil complained of? That an inventor has a monopoly on an invention for a term of years and charges what price he wills. If this is a real evil in the case of patented drugs, it is an equally just cause of complaint against the issue of patents for mechanical inventions, etc., and in this case the whole principle of patent law is wrong and ought to be abolished. Yours respectfully,
C. F. STEFEL.

Taking Discounts.

Loss of discount by letting the payment of a bill go till it is due is rank waste.

For example, our terms are one per cent twenty days net forty days. The man who takes forty days pays one per cent for use of the money twenty days, or at the rate of 18 per cent per year.

Most jobbers give a larger discount for cash than we do—some as much as 6 per cent sixty days. It is almost a crime to lose a luscious discount like that, yet it is often done by merchants of good standing.

Discount your bills even if you must borrow money from your bank—"Our Drummer."

SHOP TALK

ON SHAMS AND SHAM HUNTERS.

"I hate shams," remarked the druggist, swelling out the front of his waistcoat. "Ever since I was a small boy I have been peculiarly sensitive to anything in the shape of make-believes and fraud."

"Yes, we all are, you know," replied the C. P. tapping the showcase softly with the ends of his fingers. "There is my grandson—he is only seven years old, and has already turned sham-hunter. He has a little bantam hen. The other day he came in with flaming cheeks and a fine air of righteous indignation, because someone had slipped an artificial egg in Biddy's nest—said it was too mean for anything to fool the poor thing so."

The druggist smiled. "Oh, well!" said he, "that sort of thing—of course—"

The sage waited solemnly a moment for his friend to complete his sentence, and then continued:

"That boy is in the stage through which we all pass at one point or another in our lives. He has discovered that there is deceit and sham in the world and he feels the injustice of it. At the present moment he hates sham eggs, and takes great pride and satisfaction in doing so."

"You certainly are not going to defend fraud and deceit!" said the druggist aghast.

"Oh, no!" returned the sage drily. "I am something of a sham-hunter myself. But let me tell you that it is one of the most dangerous and least satisfactory sports on earth."

"Why dangerous?"

"Dangerous to one's self-esteem."

"But a person always feels sincere when he is out for the other thing, and that is a pleasant sensation," objected the druggist.

"My dear boy," said the C. P. with a sigh. "Sincerity is only a relative term. We have no right to go gunning for shams in others until we have thoroughly cleaned out our own little piece of woods. For every deceit we find in the other man's field, there is pretty sure to be one to offset it in our own."

"Do you mean to say that we are all equally full of shams? How about the reformers? Have not they been held in honor in all ages? What would the world do without its reformers?"

"Do you mean those who point out the weak spots or those who mend them?"

"They are the same to me," said the druggist. "The man who can see and dares to show up his neighbor's sins is the most admirable character in all history."

"Softly, softly!" said the sage. "Reformers have had a rather rough time of it until recently."

"Until recently?"

The C. P. nodded. "The world is getting old and wise, wiser than any one of us. It doesn't hate the long-haired and the strenuous who point out its foibles any longer. How long is it since they stopped burning people for telling a little piece of the truth? After that, for a while, talking reformers were in demand; they received salaries for telling men how wicked they were. Now-a-days when a wild-eyed creature mounts a box, and proceeds to lay bare the popular follies, sins and crimes, the world smiles, nods its head, ah much as to say, 'We know all about that,' and passes on. The reformer who expects to be stoned and martyred for telling the truth, is doomed to disappointment."

"Perhaps too many have gone into the business for profit," said the druggist. "Still when anyone really tries to do something there is as much opposition as ever."

"Ah!" said the sage. "That is another matter. Talking and doing are two widely different things.

Talking doesn't hurt, mighty few of those who do the talking are capable of doing anything at all. The world knows that, and, therefore, when someone comes along who tries to turn things topsy-turvy by saying things and making outrageous statements, nobody pays any attention unless there is something amusing about it. Dowie got his name in the papers because he was amusing."

"He was the biggest sham of them all."

"Perhaps," said the C. P., "but like most sham hunters, he didn't know it. That is one of the peculiarities. When people begin to hunt for shams in others, they are stone blind to their own. The public immediately turns the search light on the hunter which shows up all his defects and usually he presents a comical figure. He is commonly so far from perfect that the public refuses even to throw a brick at him."

"I was thinking of our friend Rubinstein when I spoke of shams," said the druggist. "Don't you think he will get hurt?"

"What is he doing?"

"Showing up what he considers shams and fakes in the drug business."

"How does he show them up?"

"By talking about them."

"Oh!" said the C. P. "No, he will not get hurt." "His attacks on patent medicines and the powers that be are pretty fierce."

"Very amusing," said the sage. "It is very easy to find flaws, but unless they are new or interesting flaws and who point them out are worthy of attention, nobody will take any serious notice. Besides, why should a druggist condemn utterly any one remedy when the efficacy of half the pharmacopoeia preparations are still in doubt?"

"Is it possible that you believe in patent medicines?"

"As long as the doctors fail to agree about the value of all but three or four drugs, I shall not presume to condemn."

"But the fake methods employed in exploiting some of them!" protested the druggist.

"Fake—fake!" said the C. P., rubbing his chin.

"That is another relative term, like sincerity. Those two qualities get pretty badly mixed up in competitive business. But before we begin to throw stones, let us put our own house in order. We will begin with that sign over there: 'Hair tonic—Cures—'"

"Stop!" said the druggist. "I don't care for any more of that."

"Business necessity," resumed the sage—but the druggist was already half way down the aisle.

"Just the same," said he, "Rubinstein will have trouble."

"Oh, I don't know," replied the sage. "Dowie didn't."

WEIGHING INCESSANTLY MAKES A MAN NARROW.

"Why is it that druggists in some towns are so much smaller than others in mental characteristics?" was asked of a prominent druggist the other day.

"I have asked myself that question many times," was the reply, "and I have thought out what I believe to be the solution. You know the tendency of the business is to make a man exact. In weighing out sixtieths of grains a man has to be careful or he will become the sixtieth part of a man. Now it is every man's duty to broaden out and to counteract this influence. In the cities where strong associations keep up prices, the druggists are enabled to get their noses from the grindstone and enter into broadening recrea-

love. They were free to meet and talk with other men. There is nothing broadening in weighing in minute and portions of powders and liquids and it is the duty of a druggist to rise or to turn his back on his business or profession as you choose to call it and to become a man among men."

DRUG STORE ODORS AND THE OLFATORY SENSE.

"Is living over drug stores injurious to health?" "I think not," said the proprietor of the "Deutscher Apotheke," who not only spoke good English but had spent twenty-five years of the best part of his life in residence quarters over his store.

"I have raised a family and, so far as I can see, the health of my wife and children is up to the average. I hope you don't take me for an invalid." He went on to explain.

"I don't think living over a drug store is any more injurious to one's health than living in rooms over stores in which any other kind of business is conducted. Of course, there are some cases where unusual chemical preparations are manufactured in the store and these might produce conditions causative of disease. But the smell or odor of the ordinary drugs and chemicals used for dispensing and retailing has never been found detrimental to the health of those who handle them, and my neighbors have never complained that this store was a 'nuisance.' The odor of a drug store may be unpleasant to some persons, but I have found that a large majority of those I have questioned like the smell of drugs."

"But did you ever stop to think that of all senses of man, smell is the one which is least intellectual and most purely emotional? You can't account for the impression which the composite odor of a drug store makes upon different individuals. Somebody has said that the olfactory sensibility of man is a mere relic which has outlived its principal uses, and I believe he was quite right. Comparatively few of my best customers up the avenue are able to distinguish perfumery odors to any great degree."

"But I have wandered away from the drug store 'smell.' It is hard to tell what is the most distinctive odor of the composite member of smells emanating from the average pharmacy. I can always distinguish the odor of valerianic acid above the 'din of hattle, smells kind o' like old cheese, you know, while my clerk says he can always detect an odor he describes as a 'mixture of chlorinated lime, tar camphor and rotten eggs.' I notice that whenever we have opened the bottle containing iodoform we have a persistent odor and one which makes some customers turn up their noses. Asafoetida is particularly disagreeable to some people. So is sumpul root. I made up some tincture in the back room a few days ago and one of my best customers who came in during the operation asked me if my store was properly ventilated. Said the 'odor was enough to make a well woman sick.' Distinctions between odors are only relative at best, for an odor agreeable to one person is disagreeable to another. Different circumstances may also cause the intensity of odors to vary, such as dampness, light, heat, etc. It's a big subject when you get into it."

"I talked with old Dr. — about this very question only the other day and he said that the sense of smell is a kind of anticipatory taste which guides us towards those objects which are useful for food, and strongly repels us from those which will prove injurious. In other words, agreeable scents are analogous to sweet tastes, and vice versa. After explaining the physiological mechanism of the nose the Doctor went on to say that smell is one of the senses which is most increased by strychnine and is decreased by cerebral depressants and those agents which produce changes in the nasal mucous membrane, as potassium iodide. He then naturally drifted off onto the subject of sternerutories like bloodroot, capsicum, euphorbium, pecan soap tree bark, and others that I can not now recall. He said that the 'stimulus produced

by these agents is transmitted by the nasal branches of the fifth nerve to the respiratory center, exciting the sulcus and forcing expiratory effort called sneezing,' and I agreed with him."

"No, the smell of a drug store is not disagreeable and no establishment has ever been condemned by anybody as a nuisance on this account. I do not approve of having my clerks sleep in the store and have never asked them to do so. With good ventilation a drug store is just as healthy a place as any other store and as for living over the store there's many a more unhealthy domicile. I expect to live to be an octogenarian and die, right here at home."

THE QUEST OF THE NON-REFILLABLE BOTTLE.

The old druggist was in a thoughtful mood. Always proud to claim kinship with men who had conferred dignity upon the calling of which he was a member he nevertheless did not hesitate to take a fall out of those individuals whom he believed to be "chasing vague chimeras." The statement that nearly 150 non-refillable bottles had been patented in Washington during the past two years brought him to his feet.

"I know it," he said, "and I have tried to reason it out. But you can't. These inventors are a lot of dreamers. In a small degree modern conditions and legislation may have emphasized the quest of the non-refillable bottle. But when you have the article what does it amount to? To hear some of these fellows talk one would think they had devised a process by which humanity would achieve its proudest progress and everlasting happiness. The recital of their accomplishments reminds me of the paths trod by the old alchemists in their search of the unchanging."

"Yes, I am aware that the authorities of the Patent office announce month by month and year by year new additions to the list which seems already numerous enough to supply all of the industries in which a non-refillable bottle could be used. There is something seductive in this quest, an undefinable, non-resisting power which beckons the would-be inventor on until he has invented a bottle, and then, what does his invention amount to when he has secured his letters patent? Answer me that?"

"I know an inventor who has talked so much about the mission of the non-refillable bottle that it has finally taken possession of him and he is really insane on the subject. As I think of him I sometimes wonder whence comes this aspiration to invent such a bottle. The good Book says 'if one hungers there is meat,' and if his 'soul hungers for righteousness, is there not righteousness?' I am sure there must be an answering fact to this desire on the part of the inventor. But what is it? Is there or will there ever be an ideal non-refillable bottle? Is not the visionary inventor, pardon the metaphor, 'like an infant crying in the night' for a bottle whose usefulness he must or should know will ever be at best restricted? Of course, the future with its unspeakable potencies is before him and none, perhaps, dare say that his dream will not be realized. So, I say, let him pursue his quest."

"I would suggest, however, that the inventors of non-refillable bottles organize a grand brotherhood to shape and give coherence to their individual efforts, and also to take steps to preserve the historic forms and primitive patterns of their earlier work before it is too late. By so doing they will confer a great favor upon humanity in general, and the inventor yet to come in particular. Pachelbal has said that half of the ills of humanity result from our inability to sit still in a room. Is the mind of the inventor non-refillable or is it diseased? He certainly has not acquired the habit of masterful inactivity."

A five-dollar-a-week clerk can wipe out with one fifty-dollar-a-week advertisement may have created.—Jed Scarborough, Printers' Ink

James Ready gathering seed in the Ginseng Garden at Onondaga Valley, New York.

GINSENG GARDENING.

THE first attempt to grow ginseng on a large scale has been made by the New York State Ginseng Company on a farm three miles south of Syracuse. Fully a quarter of an acre of ginseng has been planted this season and the company now has under cultivation a whole acre. A good share of the ginseng that is grown in the United States is produced from Onondaga County, there being small patches at Amber, Tully, Rose Hill and Onondaga Valley. The company is capitalized at \$100,000, the stockholders being prominent capitalists. The practical man is James Ready who has had long experience in growing ginseng. In stocking the farm wild roots obtained from the Onondaga Indians and plants obtained from small growers throughout the State, many of whose gardens were purchased entire, were used.

The method of ginseng culture is interesting in the extreme as may be seen from the accompanying illustration. It is grown underneath a lattice work which while admitting plenty of light and air keeps out the fierce rays of the sun which are fatal to the plant.

Of the original 13,000 plants set out about 8,000 bore berries this fall. These berries are nearly as large as a small pea, grow in clusters and are a bright red in color, and do not grow on plants less than three years old. When the berries are gathered they are placed in sand and are allowed to remain until the pulp decays, when the sand is sifted and the seeds extracted. The fresh seeds do not sprout for eight months. Some growers put the seed in the ground as soon as they are harvested; but the most approved way is to pack between layers of sand which is kept moist and stored in a cool place. In the following spring the seeds sprout, producing in the fall a small root two inches long which has a commercial value of from six to ten cents. The germinated seeds are worth twenty dollars a 1000. Wild roots and seeds which are yearly becoming more scarce do not demand quite as high a price. The yearlings sell for four to six cents while the seed retails at from ten dollars to fifteen dollars a thousand.

The high price paid for ginseng roots has stimulated the search for it to such an extent that the wild variety is becoming very scarce. The wild ginseng

is dark and dull in color while the cultivated variety is white and grows much larger and faster. On being transplanted to cultivated gardens the wild variety gradually bleaches out.

It has been shown that cultivated ginseng roots can be grown for one dollar a pound. At present prices this leaves a margin of profit of from five to eleven dollars per pound according to quality. Even at these prices it is claimed that it will be years before the demand in China can be supplied. The prices can decline to a considerable extent and still leave a good margin of profit. If the price declines the demand will increase, for the root will then be within the reach of the common people in China.

The popular impression that wood dirt is necessary for the growth of ginseng has been found erroneous. The soil which the New York State Ginseng Company uses is a sandy loam. In planting, the yearlings are set about three inches apart, the medium sized roots about six inches apart, while large varieties are set six inches apart in rows separated by a foot of space.

ERA COURSE IN PHARMACY.

GRADUATES FOR OCTOBER, 1903.

Matriculation No.	Name	Grade	Per Cent.
3636	John F. Briggs, Slickshinney, Pa.	80
3621	Lester V. Ashton, Cor. Turner and Summer Sts., Auburn, Maine	80
3568	Charles West, Opelousas St., Algiers, La.	95
2944	Frank B. Davis, Pueblo, Colo.	97
3747	Edroe Verrel Harrison, 218 W. Franklin St., Baltimore, Md.	90
3681	Mahlon V. Boyatt, Brownstown, Ind.	68
3677	Otto C. Moderow, 2458 Westworth Ave., Chicago, Ill.	97
3367	Frederick Dahl, Jr., 202 Central Ave., Brooklyn, N. Y.	68

The above graduates will receive diplomas within a short time. A large and very handsome engraved diploma printed on artificial parchment, with the graduate's name engrossed, especially suited for framing will be furnished to all who request it for the sum of \$2. Those who desire the latter should forward the necessary fee at once to the Pharmaceutical Era.

A DREAM, TOO GOOD TO BE TRUE.

By JAMES SEYMOUR GLEGHORN,
Allegheny, Pa.

A GREAT evolution in pharmacy has at last taken place. Those that have been in the ranks through the past ages have been expecting it. They have felt as though a change would take place some time, but hardly looked for it so soon, and, now that the new era of things has dawned upon them, they can hardly believe their eyes. Even though this is the twentieth century, the greatest age the world has ever known and a time when we might expect almost anything, and nothing should surprise us, yet notwithstanding all this, it all seems too good to be true. Still it appears to be a fact that pharmacy has at last reached its proper sphere and now ranks, as it should, on an equal footing with other professions, as a purely scientific, technical pursuit. Commercial pharmacy at last has flown and scientific pharmacy is here alone.

"How strange," we say. But why strange? All things change. The law of readjustment is alone responsible for this. As for every positive there is a negative, so for every current a counter current. An absolute fixed state is nowhere to be found in nature. Everything from sun to atom is in a state of unrest. Even the air which we breathe undergoes a constant process of readjustment. Then why should we not expect a change to take place in pharmacy when we know that death alone makes life possible? In this case it has been our colleges of pharmacy which by their aid, constant toil, effort and perseverance, have made this evolution possible. It is the colleges to which we must give thanks for this, as it is they alone, we might say, which have brought about this high standard.

They have a right at least to behold the fruits of their labor in the Doctors of Pharmacy whom they have sent out to practice before the whole world. The art and science of pharmacy, scientific pharmacy, as it exists today, consists of compounding prescriptions, the selling of such appliances as are ordered by the physicians for use in the sick room, the performing of all kinds of analytical work, both quantitative and qualitative, bacteriological research, microscopical tests with accompanying photographs, X-ray examinations and complete and exhaustive chemical analysis of urine, as well as complete analysis of metals, etc. Naturally, it requires men of high technical skill and education to perform this work, but the colleges of pharmacy have taken time by the forelock, and have prepared their graduates for this very work. They felt and knew that a change was coming and now that it has arrived their alumni are prepared for it.

Pharmacists never think of working more than eight hours a day now, and they never work on Sundays, as they all attend church. Owing to the scarcity of clerks, salaries have gone skyward. Drug clerks now receive as much as the president of the steel trust or the president of the United States. A salary of five thousand a year for a drug clerk is considered very small, and it is next to impossible to secure them at that figure. If pharmacists of the past only had a way of knowing what enormous salaries are now being paid, they would come back to life and apply for positions. To them, such salaries would have seemed preposterous. Soda water, cigars and candy are now supplied through their proper channels, the department and cigar stores. All shelf bottles have been removed from public view to laboratories in the rear; patent medicines are no longer kept in stock, as this is an age of physical culture, the demand for patent nostrums having ceased.

The places usually occupied by these articles are taken up by display or wall cases where such goods as surgical appliances, bandages, sterilized cotton, lint, gauze, etc., are arranged on shelving, preferably glass, as are likewise hypodermic syringes, fever thermometers, instruments, etc., also thermometers

of all kinds, lactometers, hydrometers, alcoholometers and specific gravity beads, all in full view of the public.

People no longer think of going to a pharmacy for a hair, clothes or tooth brush, or the like or for perfumes or toilet articles. All these, with many other articles that had been sold for years by pharmacists have been turned over to the department stores. Can you help marveling at this wondrous change? The pharmacist is now the chemist to the medical profession as well as public analyst.

Pharmacy is now truly the handmaid of medicine. Every physician fully realizes that scientific medicine cannot exist without scientific pharmacy. Physicians also realize that they have not the time, in this hurrying age, to be their own pharmacists, nor do they care to be as they are fully aware that medicine and pharmacy are two distinct professions, and that they have neither the time nor the inclination to prepare and dispense medicines nor to make such chemical and microscopical examinations as their practice requires. The dispensing doctor is a thing of the past. Each and every pharmacy conducts what is known as a bureau for trained nurses. If a customer is in need of the services of a trained nurse, all he has to do is to call up the nearest pharmacy and one is supplied immediately. All prescriptions are called for and delivered, as are likewise all supplies wanted in the pharmaceutical line. All this involves no extra expense to the customer. It is done simply to accommodate the customer and at the same time advertise the pharmacy.

Women in pharmacy are a thing of the past. They have either married or quit the ranks. Colleges of pharmacy are now open to men only. Boards of pharmacy now require all applicants to be men of degrees, such as B. A. or B. S. and in addition to this, they must also wear the pharmaceutical degree of Doctor of Pharmacy, must have had at least five years' experience in a scientific pharmacy and have served not less than two years in the U. S. regular army. No minor requirements are now overlooked. The examinations are practical as well as theoretical, and those who are fortunate enough to pass are indeed capable pharmacists.

Prescriptions are never refilled unless so ordered by the physician. Counter prescribing is unknown. Physicians no longer prescribe proprietary preparations, they adhere strictly to the U. S. Pharmacopoeia. Pharmacists as a rule, have welcomed this change, as it gives them a much larger revenue. Heart-weakening and depressing coal tar products are no longer found in scientific pharmacies, as physicians have long since refused to prescribe them. People no longer resort to patent cure-alls for each and every ailment to which the human flesh is heir, but, instead, consult their doctor, who, as a rule is the very acme of integrity, and who conscientiously tells them whether they are really in need of medicine, or fresh air and physical culture. The advance in both medical and pharmaceutical science has been wonderful, in fact, a veritable revolution has taken place, and it is a godsend to the people to know that the day of self medication is past, and that the American people are bound to become a nation of giants.

What a grand realization all this would be, were it only a fact, instead of a pharmaceutical dream!

← THERAPEUTIC USE OF FRENCH CONVULVULI.

Dr. L'hospitaller (L'Union Pharmaceutique) has studied the pharmacology of the common species of Convolvulaceae indigenous in France and finds that their physiological action is very similar to that of exotic species, but less energetic. The therapeutic action in both cases is due to the presence of purgative resins present in the indigenous plants in smaller quantity than in the imported drug. Experiments upon animals showed that the native convolvuli also acted as a drastic, irritant purgative. Therapeutic use in doses of 50 to 1 gram gave very satisfactory results.

THEORY AND PRACTICE

QUESTION BOX

OIL OF ACACIA FLOWERS.

H. Walbaum (Jour. Prakt. Chem.) has studied the essential oils derived from the flowers of trees of the various species of acacia. The flowers of certain species yield a perfume known as "Cassie," and appearing in the market in the form of pomades prepared by macerating with fats, and also as solid extracts obtained by means of volatile solvents. Cassie Romaine is obtained from the flowers of *Acacia Cavenia*, while the true cassie is extracted from those of *Acacia Farnesiana*. The essential oil may be separated from the commercial products by distillation with steam and extracting the distillate with ether after saturating with salt. Dilute alkalis separates the crude oil into phenols, non-phenols and salicylic acid. The acid is probably produced by the saponification of methyl salicylate which is widely distributed in this class of plants.

VISCOSITY OF SOAP SOLUTION.

H. C. Sherman and H. Abraham (Jour. Am. Chem. Soc.) propose the viscosity of the respective soap solutions as a means of identifying various fats and fixed oils. They have determined the relative viscosity of solutions of a number of potassium soaps. The "viscosity figure" is higher in the better grades of olive oil than in the poorer qualities. The addition of other oils lowers the viscosity. The figures of olive oil and almond oil are characteristically high, but much of this viscosity may be lost on long exposure to the air at ordinary temperatures. The high figures shown by these oils are supposed to be due to the proportions of the fatty acids present and not to the presence of any peculiar constituent.

SOLUBILITY OF PICRIC ACID.

J. Bougault (Jour. Pharm. Chim.) states that picric acid is not more soluble in ether than in water. The solubility in water is about 1.2 per 100, while an equal volume of ether dissolves only 1.08 parts. The presence of water in the ether increases the amount of picric acid dissolved, ether of specific gravity, .725 dissolving 3.68 parts per 100 volumes and that of a specific gravity of .726 four parts. Solutions of picric acid in ether are entirely colorless, while those containing small quantities of water are distinctly yellow. Picric acid, therefore, serves as a convenient test for the presence of water in ether.

PURIFICATION OF IODINE.

A. Goss (Jour. Am. Chem. Soc.) finds that of the methods of purifying iodine that of Star gives the purest product. The process consists in dissolving the iodine in potassium iodide, precipitating with water and subliming the dried product. For determining the iodine the conversion of the element into zinc iodide and titrating with silver nitrate, potassium chromate being used as an indicator is recommended.

COLOR TEST FOR POTASSIUM.

L. A. Hill (Jour. Am. Chem. Soc.) has devised a colorimetric method for the determination of small quantities of potassium in water and soils. The potassium is precipitated from the solution in the usual way with chloroplatinic acid, and the precipitate reduced with stannous chloride in the presence of hydrochloric acid. One part of potassium oxide per million in the original solution gives a distinct color.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries to this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Solution of Cresols.

(L. U. L.) Pharmaceutical Formulas states that one of the best starting-parts for the preparation of solutions of cresols is the 'cresote' obtained from blast furnaces, which is rich in cresols and contains comparatively little phenols. The proportions used are: cresote, 30 parts; soft soap, 10 parts, and solution of soda (10 per cent.) 30 parts. For cresote, coal-tar oil boiling between 170 degrees C. and 230 degrees C. may be used. The ingredients are to be boiled together for an hour, then set aside to settle, when the dark fluid is drained from an oily portion floating upon the top. It is preferable to form the soap in the mixing thus: Boil together 1 gallon of crude carbolic acid (or "oils" if cheapness is required), 1 pound palm oil, 3 pounds soda ash, and 2 gallons of water for two hours, replacing water so as to maintain a volume of at least 2½ gallons. Set aside for several days and decant the clear brown syrupy fluid. Such solutions become milky when mixed with water, but when alcohol instead of water is used to dissolve the alkali water-soluble solutions are the result. These are only available for surgical purposes owing to their cost. Eucalyptus oil and similar essential oils may be added to these disinfectants with benefit so far as odor is concerned. Resin oil may be used instead of palm oil with advantage, as the resin soap is a much better emulsifier.

The following formulas have been suggested by Professor Wilbur F. Scoville:

Disinfectant Solution.

Cresylic acid	500 grams
Colophony	300 grams
Potassa	45 grams
Water, enough to make.....	1000 grams

Heat the cresylic acid and colophony together in a suitable dish until the resin is dissolved. Dissolve the potassa in 90 grams of water, add to the resin solutions and boil until the latter is completely saponified and the liquid becomes clear. Cool and add enough water to make 1000 grams.

Saponated Cresylic Acid.

Purified cresylic acid.....	500 grams
Linseed oil	350 grams
Potassa	80 grams
Water, enough to make.....	1000 grams

Dissolve the potassa in 50 grams of water, and add the linseed oil. Shake well together, then add the purified cresylic acid and shake or stir until the liquid becomes clear. Then add enough water to make 1000 grams, and strain if necessary. Prof. Scoville says the cresylic acid used for this preparation should be white or nearly colorless, and must be free from tarry matters. It may be easily prepared from the crude acid by distillation, using only that portion which comes over at temperatures between 188 and 198 degrees C. This comprises the greater portion of the volatile part of the crude acid. It

E. B. TALNTER, Carroll, Ia.

Third Vice-president, National Association of Retail Druggists.

is not necessary to use a thermometer in distilling, the colorless distillate being the portion desired. Three isomerides of the cresol exist (ortho-, meta-, para), and they are homologues of phenol and derivatives of toluene. The three isomerides are exceedingly difficult to separate; of these the meta-cresol is said to be the most powerful antiseptic.

Depilatory Powder.

(P. W. W. II) The main or active ingredient of nearly all of the preparations employed for removing hair from the body is usually a sulphide or sulphhydrate of one of the alkalies or alkaline earths, although the older depilatories were made with caustic alkalies. In using these depilatories they should be made into a thin paste with water, applied in a thin layer to the skin, allowed to remain a few minutes and then scraped off with a blunt instrument, when the hair will have softened sufficiently to remove without pain. A formula for a preparation used by surgeons for the removal of hair from the axilla and other parts of the body previous to operating follows:

Barium sulphide	2 parts
Zinc oxide	1 part
Starch, in powder	1 part

Mix and keep dry. When desired for use make a paste of it with a little water and apply to the part from which the hair is to be removed. Leave on for ten minutes, and then scrape off. This usually acts at once, but if necessary apply a second time. The hair will grow again but this is the case with all safe depilatories. Care should be taken to use only freshly made barium sulphide in the preparation.

Depilatory Paste.

Solution of soda (1 to 10)	10 parts
Sodium sulphide	8 parts
Tinctorie of citronella	1 part
Savon	1 part
Glycerin	4 parts
Lard	8 parts
Unguent butter	8 parts
Water	17 parts

Mix and make into a thin paste.

Unna's Depilatory Crayons.

Unna's depilatory crayons consist of rods of resin, mixed (by mixing together) with 10 per cent of yellow wax. They are said to act rapidly and almost painlessly in removing hair from limited areas, and we should think they might answer your purpose. The rod or crayon is covered with lard, and when used the exposed end is touched for a moment to the flame of a candle or lamp, and is applied gently to the spot from which it is desired to remove the hair. On its removal it brings the hair away with it. These are destroyed on bringing the stick again to the flame.

Hair Dye.

(J. P. S.) We do not know of any formula for an "absolutely stainless" hair dye. It is manifestly impossible to suggest a dye that will not stain however much any preparation may be claimed to be of this character. There are, however, some dyes which produce tints that do not develop quickly and the stains made by them when applied to skin, may be easily removed before the color "strikes in." Formulas for dyes of this character were given in the October 1, 1903, Era, page 541.

The most satisfactory black dye for the hair, according to many authorities, is made with silver nitrate, using pyrogallie acid or some sulphide as a mordant. Here is formula from Paschke's book on "Cosmetics."

Pyrogallie acid	10 grains
Distilled water	2 ounces
(II)	
Silver nitrate	1/2 dram
Distilled water	1/2 ounce
Stronger water of ammonia	q. s.

Dissolve the silver nitrate in the water and add the ammonia water until the precipitate first formed has been dissolved.

(III)	
Potassium iodide	1/2 ounce
Distilled water	1 ounce

Solution for removing stains.

To use: Cleanse the hair from all grease by washing it with warm water in which a little sodium carbonate has been dissolved, and dry with a towel. Apply solution No. 1 and follow in a short time with solution No. 2, avoiding as much as possible touching the skin. The dye is best applied at night. Remove any stains which may be made on the skin with No. 3. In order to avoid stains it is well to put a rubber or oilcloth covering about the shoulders, to wear gloves, and to oil the face with glycerin or fat.

A non-metallic black hair dye is the following from a foreign exchange:

Pyrogallie acid	35 parts
Citric acid	3 parts
Boro-glycerin	110 parts
Water	1000 parts

Mix and dissolve. If the black produced by this solution is not deep enough, add more pyrogallie acid; if too deep use a little less. The hair should be washed with some alkaline solution in the morning before applying the dye.

Liquor Ammonii Anisatus.

(Druggist) "Liquor ammonii anisatus," or anisated spirit of ammonia, is official in the German Pharmacopoeia and made by dissolving one part of oil of anise in twenty four parts of alcohol and then adding five parts of water of ammonia. It forms a clear and yellowish liquid and the G. P. directs that it should be preserved in well-closed vessels.

Black Ink for Brass Stamps.

Ordinary printers' ink thinned with olive oil or—	
Aniline black, B. S.	3 drams
Distilled water	10 drams
Wood alcohol	10 drams
Rectified spirit	10 drams
Glycerine	4 ounces

Mix and dissolve.

NEWS DEPARTMENT.

SPECIAL MEETING OF THE PROPRIETARY ASSOCIATION.

MAKES PLANS FOR KEEPING THE WASHINGTON PROMISE.—TRIPARTITE PLAN WILL BE ENFORCED.

Largest and Most Important Meeting the Association Ever Held.—At Hotel Manhattan, New York, on Sunday, Monday and Tuesday.—N. A. R. D. Representatives Admitted for First Time in Years.—Twelve Big Firms Join to Enforce Schedules on Their Goods.—They Contribute \$14,400 a Year to Organize.—Will be Joined by Other Firms.—Work Begins at Once.—New York Wholesale Jobbers' Presence at Joint Meeting Insisted Upon.—They Came and Each Promised Co-operation in Enforcing Tripartite Plan.—Manufacturers Notify Pacific Coast Cutters that Goods will be Withheld Until They Sign Schedule.—Retail Representatives Elated.—Dr. V. Mott Pierce Elected Chairman of "Washington Promise" Committee.

To keep the promise their representatives to the N. A. R. D. last month in Washington, the Proprietary Association of America met in special session at the Hotel Manhattan, Madison avenue and Forty-second street, this city, on Sunday, Monday and Tuesday of this week. The meeting was the largest held by the association in years. It was also the most important, according to the opinions of those in attendance, not only to the proprietary association but to the wholesale and retail trades as well.

The "promise" alluded to in the opening sentence, as revealed to the general delegation in attendance at the N. A. R. D. meeting at Washington, was to "do something," that is, to put into operation at once a plan or plans for remedying the cut-rate evil. Only a dozen or so of the retailers present at the Washington meeting know that that "something" meant the organization of the retailers, by a combination of at least five big manufacturers, on a price schedule for their own goods.

This week's meeting was full of meaning. It was freely admitted that under present demoralized price conditions all three branches of trade are losing tremendously; that the tripartite plan is a plan that must be followed; that its failure in the past was due to the proprietors themselves. The New York wholesale jobbers were called into conference and plainly told that their co-operation was expected; that if it was not given the manufacturers will act without them. The serial numbering plan was mentioned, but said to be impracticable. No representative of the Miles company was present.

Calling of Meeting By President Chamberlain.

When the Proprietary association of America adjourned its annual meeting in Boston in September it was subject to a call from the chair. Shortly before the N. A. R. D. meeting at Washington in October a committee of the P. A. of A. met in Buffalo. Dr. V. Mott Pierce, Harry L. Kramer, F. W. Schumacher of the Peruna Drug Mfg. Co., E. W. Grove of the Paris Medicine Co., George A. Newman of the California Fig Syrup Co., and Mahlon N. Kline of Smith, Kline & French Co., and Mr. Mitchell of the Chamberlain Medicine Co., attended the N. A. R. D. meeting. It was there in committee meeting, the promise was given.

The calling of this week's meeting was by President D. S. Chamberlain of the Chamberlain Medicine Co., Des Moines, Ia. It was kept as quiet as possible, the

Era being the only paper that learned of it in time to have a representative on the ground.

Manufacturers began arriving on Saturday. Sunday morning the lobby of the Hotel Manhattan was filled with knots of men from all over the United States discussing the one question the meeting was called to settle—price-cutting. In the afternoon a short, informal meeting was held in President Chamberlain's room. Mr. Schumacher had gone carriage riding and his voice was missed so greatly in the deliberations that they were early cut short.

By Monday morning at 10 o'clock so many had arrived that the attendance was said to represent more than that of any meeting in a long while. At that hour the first formal meeting was called, in executive session. Substitution divided attention with the real purpose of the meeting and it was not until afternoon that matters began to take shape.

The Poor Outsiders Down Stairs in the Lobby.

In the meantime curiosity was intense down stairs in the lobby. The proprietary men always meet in executive session, and "executive" with them means secret in every sense of the word, even when their deliberations are of the most perfunctory nature. But yesterday they were coming nearer and more earnestly to live issues than for many moons. So the air downstairs was oppressive with expectancy. For there were John C. Gallagher of Jersey City, and Charles Rehffuss of Philadelphia, both members of the N. A. R. D. executive committee; Colonel John R. Lowe, the prominent New Haven association man; F. E. Holliday, vice-chairman of the proprietary committee of the N. W. D. A.

Every man who chanced down from the sacred chamber was buttonholed. But information as to what was happening was scarce. "Substitution" talk seemed to comprise it all. It did develop, however, that the association had voted \$25 per capita for the N. A. R. D.

information bureau. At half past one the meeting adjourned to meet again at two-thirty.

When the proprietary men visited the N. A. R. D. at Washington they were taken into committee meetings and given every privilege. No invitation had been extended to the N. A. R. D. to send delegates to the proprietary meeting. But Messrs. Gallagher and Kehl-fuss were present.

They came, not with any plans to offer, nor suggestions to make, as they explained. They were there, they plainly told the officers of the proprietary association, to see that the promise made at Washington was carried out.

But no suggestion was made to them that they come into the meeting. So, at noon, they made it plain that they desired admittance. "We are here, not begging admission, but expecting it," said Mr. Gallagher. Mr. Kehl-fuss told Mr. Schumacher that, in view of the facts they had treated the proprietary committee with every consideration at Washington, and that they now were officially representing the retail druggists' association, if they were not admitted to the proprietors' meeting the retail druggists of the country would demand to know why not. They were admitted, and Mr. Holliday went up with them.

This recognition of the demands made by Messrs. Gallagher and Kehl-fuss was a signal victory for the N. A. R. D. Similar requests—less emphatically put, however—had been made at several previous meetings of the P. A. of A. and had been refused.

Retailers Speak at the Afternoon Session.

When the session reconvened for the afternoon, both Mr. Gallagher and Mr. Kehl-fuss made short addresses. They announced pleasure that such a meeting as the present one had been called, expressed gratification at their invitation to attend, though, as they said, it was a somewhat tardy one, and assured the manufacturers that the N. A. R. D. was ready to heartily co-operate with them on any intelligent plan for the amelioration of the present conditions, providing the manufacturers showed themselves to be really in earnest. Mr. Gallagher emphasized the fact that they came with neither plans nor suggestions, but only as representatives of the N. A. R. D., to see that the promises made the N. A. R. D. by the proprietary committee at Washington were carried out.

Mahlon N. Kline and F. W. Schumacher responded, saying they were pleased to have the N. A. R. D. representatives present and assuring them that it was their firm purpose to do something at once, and that whatever they did it would be on a large scale. Mr. Holliday said the jobber was ready to co-operate. Shortly afterward a recess was taken and a few moments afterward, at four o'clock, the gavel rapped again for a meeting with the jobbers of this city, who were present by invitation, the N. A. R. D. representatives not going in this time.

By this time the deliberations had shaped themselves into something definite. Substitution is not the real, but a dependent issue, it was admitted, and lives, when it does live, largely upon cut-price conditions. The prices first was now the order.

The proprietary association—a fact little realized outside its own membership—can take no action that is binding upon its members, except legislative movements. The association's constitution prohibits interference with or regulations for any member's private business. So, any resolution that might be passed that had to do with regulations of prices would amount to nothing because the constitution rules it not to be binding upon the members. The co-operation of the proprietors must be as individuals, not as an association. This condition is made by the Trust laws, also. But the feeling that something must be done had become so general with

the members, that it was eminently proper to use all of the machinery of the association in calling them together, though any action they might take after coming must be as individuals or combinations of individuals furnishing their own funds and not accountable to nor dependent upon the association in any way. This condition contributed somewhat to the chaotic work of the early session. Individuals gradually came together and plans grew into more intelligible and intelligent form.

Nine Firms Planning to Begin Organizing.

For some weeks nine large firms, constituting a committee, the Pyruna company at their head, had been tentatively planning to organize a price schedule. It was this committee that had met in Buffalo and had gone to Washington to the N. A. R. D. meeting, and it was on this committee's deliberations and final plans for a price schedule campaign, to be waged by the companies as individuals, each in its own way—though each was to pledge a certain amount, probably \$100, monthly, to the work—that this week's meeting rested. The only thing definite that the plan reached on Monday was that the campaign would be on each of the contributing firms responsibility as individuals, but they were to co-operate, employing representatives in different sections, to allow the big retailers to fix the minimum, and to swing into line by the force of the tripartite plan any retailer who hung out. Further perfecting of the plans in fact, their adoption or rejection, was left to the Tuesday morning session.

A plan which was suggested on Monday by one of the committee was for each of the nine manufacturers to contribute \$100 monthly, for hiring representatives to organize sections. When any aggressive enterer was found who was not to be brought into line he was, if he chanced to be a department store man, to be given the representative's salary as an inducement, and, if he was a retail druggist, the tripartite screws were to be at once applied. Mr. Kline feared that the wholesalers would oppose such a plan as discriminating against the retailer and hurting the jobbers' sundry sales. The plan was not seriously entertained, however, though the \$100 contribution idea was held in the platform of the plan carried over to Tuesday.

Enter the New York Wholesale Jobbers.

It was somewhat after four o'clock when the jobbers began to appear. Alfred H. Kennedy of C. N. Crittenton & Co., had been present all day as a member of the proprietary association. Mr. Littel of R. W. Robinson & Son, was followed in by W. S. Mersereau of Schieffelin & Co., A. Bakst of Bakst Bros., Mr. Snower of Eimer & Amend, a representative of Britt, Loeffler & Co., Mr. James of Towns & James, and William P. Kitchey of Bruen, Kitchey & Co. Many of the proprietors deserted the crowded convention room then, practically the only ones remaining with the wholesalers being the officers and those not officers who were on the committee.

Several addresses were made by the proprietors. Dr. Pierce assured the wholesalers of the proprietors' love and of their pleasure at seeing them, a pleasure that was often felt, he said at seeing their checks. Mr. Schumacher gave one of his characteristic, forceful addresses, in which he minced no words. He said the retailers were now demanding that something be done, it was due them that something decisive be done at once, but not only was action due the retailers but the manufacturer was in sore need. His own firm could figure that they had lost \$175,000 in one year through price-cutting. He brought fist into palm as he asserted that if the jobber didn't co-operate they would find a way to do without his help. Mr. Kramer emphasized the need of speedy action in his pleasant, always interesting manner.

President Chamberlain, William H. Gove, E. W. Grove, Mahlon N. Kline and one or two others also spoke along lines similar to those taken by Messrs. Schumacher and Kramer.

For the wholesalers Messrs. Kennedy and Mersereau said that they were pleased at any time to co-operate in any way for the benefit of the retailer, whom they considered as their best friend, and this co-operation would be given though it should mean a loss to their firms. William P. Ritchey endorsed these views, the others not speaking.

The meeting with the wholesalers was not entirely satisfactory because of the latter's small attendance, though every firm had been invited. Some of the proprietors had urged in their addresses that a wholesale drug club be formed, and when the wholesalers present assured them that there already was such a club they asked who the president was, "Albert Plaut of Lehn & Pink," was the reply. Mr. Plaut was not present. "Who is your secretary?" was then asked. "H. D. Robbins of McKesson & Robbins." "Where is he?" The wholesalers were obliged to admit that he also was absent, and the proprietors held up their hands in mock despair. The meeting was adjourned to meet at 10 o'clock on Tuesday morning, when, it was announced, wholesalers absent at the first meeting were expected to attend, and the new plan of campaign would be taken up again. The plan was not outlined to the wholesalers at the Monday night meeting.

Addresses, Favorable to Retailers.

These addresses, highly favorable and friendly to the retailers, may be looked upon by him with intense satisfaction because they were made in secret session from which it was not expected that anything would creep into the hands of the press.

A suggestion that the local wholesalers might make this meeting the occasion for endorsing the recent action of the jobbers of the Middle States, who demanded discounts of 10 and 5 instead of the present one of eight was replied to as extremely unlikely. "This meeting is to consider price cutting," it was urged, "not discounts." Another denial of such a possibility was by Mr. Holliday who said that "the jobbers of New York don't want what they are getting now, but are giving it away."

The "Washington Promise" Becomes a Reality.

When the Tuesday morning session closed the association had accomplished work that, members enthusiastically said, was more important than any it had ever done before since its organization. The now famous "Washington Promise" was kept, and twelve big firms went into a business meeting to perfect plans for organization.

The morning meeting was called to order about ten o'clock. Messrs. Gallagher and Rehffuss of the N. A. R. D., were present. Discussions were frank and open. A suggestion that the N. A. R. D. carry out the proposed organization work themselves with the moral and financial support of the proprietors, was quickly vetoed by Mr. Gallagher, who wished it understood that it was up to the manufacturers and the N. A. R. D. expected them to "make good." He assured them that their work would be heartily supported by the retailers, however. The manufacturers' lukewarmness had defeated the tripartite plan before and had seriously hampered the heroic efforts made by the N. A. R. D. Now the latter body had trusted to the promise given at Washington that something would be done and were waiting to see the work begin.

Mr. Schumacher made a speech chock full of vigor. "We have got to keep our promise," he said. "We promised to go back to the N. A. R. D. next Summer with something done. We must go back with

something done. We are going to. Nine of us will keep our promise."

Pacific Coast Cutters Must Reform or Get No Goods.

One of the most significant events in connection with the meeting was the sending on Tuesday morning by George A. Newman, of the California Fig Syrup Co., of a telegram to his partner in San Francisco, R. E. Queen, who is general manager of the company, advising him to tell the price demoralizers on the coast that the manufacturers had decided to sell them no more goods until they signed the schedule.

President Chamberlain, when asked for a statement or expression of his ideas as to the results accomplished during the meeting, said that, as he had sedulously refrained all along from giving out anything, and had advised the same course in others, it was only proper that he should maintain that attitude. He did say, however, that there never was a time when the feeling between the manufacturers and retailers was so friendly as now and that this meeting, the most important ever held by the association, emphasized that fact.

The advantage and the sentiment were plainly with the retailer. Both Mr. Gallagher and Mr. Rehffuss are elated at the result of the meeting. So were, indeed the great majority of the wholesalers themselves. The N. A. R. D. has assurance through its representatives that the manufacturers are their friends. And this assurance has now been practically and definitely demonstrated to be true, and will be reported to the retail druggists of the United States as true.

Immediately following the adjournment of the early morning session, shortly after twelve, the "Washington Promise" committee, now increased from nine to twelve, went into session. It is believed that the number of participants in the "Washington Promise" plan will reach twenty, possibly more, in a short time. Work will be begun at once. Mr. Schumacher said that he is going away for a European trip next May, but that he is going to return in time for the next N. A. R. D. convention, which he is going to attend and where he will have results to present.

The "Trust" Bugaboo is Avoided.

The one retarding factor in the beginning by the manufacturers of the campaign now mapped out, a campaign which has been under consideration by them for months, is the "trust," or combination-in-restraint-of-trade" bugaboo. Their attorney—some of the proprietors are lawyers also—has urged them to go slow. The plan now formulated, is, therefore, one that has been born in deep thought and with every consideration to avoid possible legal embarrassment. As it stands, it apparently cannot be thus endangered.

Every move will be as individuals. There will be no written agreements. Each firm will contribute a certain amount each month toward carrying on its own work, which will be along lines to be determined by the firm itself. In cutting centers organization will be by personal representatives. In remoter sections it will be by mail, or otherwise, as may be later decided as most expedient.

Larger Retailers will Fix the Minimum Schedules.

The larger retailers will be asked to fix the minimum prices for their respective sections. This is believed to be only just, as the large retailers handle the bulk of trade. It is also a question of expediency, as the manufacturers say that the big men are the ones who realize a good business proposition such as this one is, and they can be better depended upon to keep promises. Moreover, they are harder to force into line, something that is feared would have to be done if the mistake was made as the N. A. R. D. made it when they attempted to organize New York

City three years ago, and approached the small retailers first, the big ones later. The big ones refused to join the movement, it will be remembered. But General Organizer Noel of the N. A. R. D. did not make that mistake when he came here last Spring to organize. He went first to the larger retailers, who, since the failure of three years ago, had organized the Drug Merchants' Association and were placidly keeping, without exception, a 74-cent minimum price on Peruna, and they immediately went into the plan, with their own minimum.

Dr. Noel's Schedule will be Used in this City.

The Peruna schedule was gotten up by Lee M. Evans, the local Peruna representative, who personally supervised its working. No department store eccentricity was able to disturb it but, significantly, a small retailer recently did smash it. Had the Peruna company then had the cooperation of the other manufacturers and the force of the tripartite behind it, the retailer alluded to would never have dared cut prices, the manufacturers affirm.

The schedule that was made up when Dr. Noel was here is the one that will be used in the work in New York under the "Washington Promise" plan. Peruna is there listed at 74 cents, Pinkham's at 77 cents. The range is between 73 and 77 cents on dollar articles, and from 40 cents up on 50-cent articles. Any retailer is free, in fact, is encouraged, to sell above these prices. In some sections of this city it is being done now.

"Washington Promise" Committee Left In Possession.

It was about two o'clock when the Washington Promise committee adjourned, after electing Dr. V. Mott Pierce to succeed Mr. Schumacher as chairman. Mr. Schumacher, who refused to listen to the pleading of his conferees that he accept the place again, in congratulating Dr. Pierce, told that gentleman that he would not be in his position for ——— thousand dollars a year, naming a figure that, for want of space we shall not print.

In the meantime the lobby lost, one by one, its substitution and other lobby devotees, until "the \$150,000,000 worth of medicine representation," as one member called it, had diminished toward respective homes. Messrs. Gallagher and Relfuss had gone earlier, and only a small part of the original crowd was left, including the promise committee, who were scheduled for a four o'clock meeting with the jobbers.

No Absentees Among the Jobbers This Time.

For the wholesalers' conference with the manufacturers Albert Plant of Lehn & Pink, was the first to arrive. He was soon joined by Stanley Judwin of Orlando H. Judwin, Mr. Benkenmeyer of Henry Klein & Co., E. A. Snowber of Eimer & Amend, George C. McKesson of McKesson & Robbins, W. S. Mersereau of Schiefel-foin & Co., A. H. Kennedy of C. N. Crittenton & Co., and one or two others.

Mr. Schumacher, outlined the committee's purpose to the wholesale men. Mr. Newman and most of the others also spoke. For the jobbing delegation, after some questions as to the details of the plan from Mr. Plant, every wholesaler present promised cooperation with the manufacturers in enforcing the tripartite agreement and carrying out the plan as outlined. Mr. Holliday, vice-chairman of the proprietary committee of the N. W. D. A., told some plain truths about the conditions at present existing and told the New York wholesalers that, with the manufacturers and retailers working in harmony it was for their best interests to get in line. The meeting did not close until nearly seven o'clock, and with it closed a remarkable convention. The manufacturers were so much in earnest that meals were forgotten. The session, always protracted until

away past regular meal time, did not end with adjournment, but were carried into corridors and lobbies, where, in subdued tones, the members stood in groups, punctuating their earnest conversations with excited gestures. No amusement were indulged in. Even the ordinary amenities were largely dispensed with, and it was a remarkable sight to see some who had been involved deepest in the discussions, asking, after the strain had relaxed, about the identity of other men with whom they had been in touch for three days.

Benefits Manufacturers, Wholesalers, Retailers, Public.

"The result is a benefit to all three classes of trade," said a manufacturer. "The manufacturers and jobbers will have larger sales and the retailers larger profits on each sale, while the public will be benefited by lessened substitution.

"That we can carry out the work is beyond doubt. We now have \$1,200 a month subscribed, or \$14,400 a year, and that will be increased as new manufacturers join us. If necessary we will increase the amount subscribed by each participant in the plan."

Mr. Holliday also takes this rosy view of the situation. He is highly pleased that the load he has been struggling under will no longer rest on him alone.

The firms, with two exceptions, which the Era has not learned, who form the Washington Promise committee are the Peruna, Horlick's Malted Milk, Chamberlain Medicine, Piso, California Fig Syrup, J. C. Ayer, Paris Medicine, Dr. Shoop and Alcock companies, and the World's Dispensary Medical Association.

Some Who were "Among Those Present."

Among the representatives of the various companies present were J. G. Patton, Anheuser-Busch Brewing Association, St. Louis; Charles H. Stowell, J. C. Ayer & Co., Lowell; George A. Newman, California Fig Syrup Co., San Francisco; D. S. Chamberlain, Chamberlain Medicine Co., Des Moines; J. A. Patton, Chattanooga Medicine Co., Chattanooga; Alfred H. Kennedy, Charles N. Crittenton Co., New York; Elden C. De Witt, E. C. DeWitt & Co., Chicago; William S. Douglas, Douglas Mfg. Co., New York; O. E. Fester, Foster-Milburn Co., Buffalo; J. A. Hamlin, Hamlin's Wizard Oil Co., Chicago; Mr. Horlick, Horlick's Food Co., Racine, Wis.; Herbert B. Harding, Humphreys Medicine Co., New York; Horace M. Sharp, Dr. D. Jayne & Son, Philadelphia; Clarence G. Stone, Lambert Pharmaceutical Co., New York; Joseph Leeming, Thomas Leeming & Co., and Henri Nestle, New York; W. A. Talbott, Mienjah & Co., and the P'so Co., both of Warren, Pa.; James M. Munyon and Dr. Bower, Munyon's Homeopathic Home Remedy Co., Philadelphia; E. W. Grove, Paris Medicine Co., St. Louis; F. W. Schumacher and Lee M. Evans, Peruna Drug Mfg. Co.; William H. Gove, Lydia E. Pinkham Medicine Co., Lynn, Mass.; William S. Mersereau, Schiefelfoin & Co., New York; Mr. Griffith, Scott & Bowne, New York; Henry C. Lovis, Seabury & Johnson, New York; M. N. Kline, Smith, Kline & French Co., Philadelphia; Harry L. Kramer, Stealing Remedy Co., Kramer, Ind.; Dr. V. Mott Pierce and E. C. Poass, World's Dispensary Medical Association, Buffalo. There were several others present, including representatives of the Dr. Shoop Family Medicine Co., Racine, Wis.; and the Alcock Manufacturing Co., New York.

J. N. FERRER

P. O. Box 71

NEW YORK CITY

NEW YORK AND VICINITY.

MR. KAMINSKY AGAIN.

The Shrewd Saul H., Vice-President and Salesman for the Dr. George Leininger Co., was a Member of Dr. A. P. Sawyer & Co., which His Peculiar Methods Nearly Put Out of Business.

Last Spring many druggists here and elsewhere were induced to give nice large orders for "solidified formaldehyde" to the Dr. George Leininger Chemical Co. of Chicago. In 1897 just as many, under somewhat similar circumstances, took nice, large orders from the Dr. A. P. Sawyer Co. of Chicago. They doubtless will be surprised when we inform them that Saul H. Kaminsky, the slick salesman and vice-president of the Leininger company, who they claim victimized them last spring, was a member of the Sawyer company, which he nearly ruined before he was ousted.

This information has been imparted by the Era to Charles A. Kalish, the attorney for the New York Consolidated Drug Co., the retail buying club of this city, who is also attorney for several of the formaldehyde victims, and will prove useful in defeating the suits the company has brought against the druggists for payment. First, we will relate the incidents of the later, or Leininger cases to date:

Many tales of broken promises are told by the score or so of New York druggists who were induced to buy. As told in the Era last week, several are defendants in suits brought to recover the price of the goods. Several others have already settled under threats of prosecution.

That this condition of affairs is not confined to New York is evidenced by the fact that the Adams Express Co. writes from its Chicago office that they have more than a hundred packages which were refused by druggists all over the country.

In the evidence brought out in the company's unsuccessful suits against Benjamin Kent and E. A. Neer, the Paterson druggists, it was shown that the contracts contained none of the agent's promises, and the retailer never thought of having them written in. On the bottom of each contract was a notice, in small type, that the company was not responsible for representations made by its agents, unless they were written on the original, duplicate and triplicate contract in ink and signed in ink. This notice was in no instance called to the retailers' attention by the agent.

At the trial of the Kent and Neer cases, the defendants amazed the physicians whose cards the agents presented, who disclaimed any knowledge of the affair. The judge held that the proviso absolving the company from liability for agents' promises unless they were written into the contract and signed, did not absolve the company, and that the transactions smacked so much of fraud that the whole contract was vitiated. That the company does not intend to carry the suits higher is shown in a letter from their attorneys to Mr. Neer, asking him to set the formaldehyde in his possession aside so they might check it off and "close the incident."

H. O. Ryerson of Newton, N. J., is also scheduled for a suit. The New York druggists were put in touch with Paterson affairs by a letter to Oscar G. Kalish, druggist at Twenty-third street and Fourth avenue, and brother of the attorney, from Mr. Kent. This best describes the methods of the agents: "Several druggists here have been victimized," he wrote, "by agents of

the Leininger Chemical Co. The agent called on druggists and presented various physicians' cards and said they would use the article; also that they had a score of canvassers nearby, skilled physicians, who called on doctors at regular short intervals. We now find this card scheme was a take. We do not see one of the canvassers who were to follow one another like beads on a necklace, and no mailing matter has reached the doctors. We are now threatened with a suit for our bills and we propose to show the company up."

Mr. Kalish had felt very badly at being taken in, as he prides himself on being too astute for that sort of thing. This letter from Mr. Kent, however, and the revelation by J. Jungman that he, also, was a victim, made Mr. Kalish feel better. Just as soon as it became known by others "in hiding" that they were not alone in their shame, sad heads began to pop out. The Bolton Drug Co. of Brooklyn, William B. Riker & Sons Co., F. K. James, Fred Trau & Co., George Gregorius, C. E. Vetter, Mrs. Josephine Dorn, the Sultan pharmacy, William Wilson and Klein & Feldman are a few who appeared. The "flyers" in formaldehyde amounted to sums ranging from \$100 to \$1,000. H. M. O'Neil is also said to have taken an agency.

Mr. Bolton, under threat of suit, settled his bill of about \$1,000 for about \$300. Mr. Jungman said: "The scheme is one like we are approached with every week and is fair enough when the representations made are carried out. But in this case the whole affair was very evidently a swindle. They unloaded their goods as rapidly as possible, making no attempt to keep promises. I have engaged a lawyer, and, though it would be cheaper to pay the \$200 and settle, I will fight."

In Mr. Jungman's case, as in several others, the plausible salesman, who in most cases was Saul H. Kaminsky, vice-president of the company, turned in several orders from physicians as an extra inducement in selling the territory that he tried right afterward to re-prepare to every one of Mr. Jungman's competitors. The physicians refused to pay for the "orders."

Mr. James, after repeated calls for that "score of canvassers," got one, and, in this manner managed to dispose of about a third of his load. Mr. Wilson settled, it is reported. Mrs. Dorn paid full value, \$100, and is now going to bring suit to recover her money. The others who have not already paid, will not, unless the suits go against them. But several of the druggists have been approached by the company, who, it is said, are now ready to take back all goods. Just how many undertakers were induced to take orders is not known, though in Mr. James' "territory," a couple were sold direct.

Dr. George Leininger is president and treasurer of the company, which is headquartered at 707 North Wood street, Chicago. Besides Vice-President Kaminsky, the other officers are P. J. Ellert, secretary, and Louis Kaminsky, general manager.

New, something about the Dr. A. P. Sawyer Medicine Co. When Mr. Kalish, the druggist, was told on

DOCTORS WILL HELP YOU

Where there is a baby, there should be an
**ARNOLD MILK STERILIZER
AND PASTEURIZER**

You can sell many of them if you let us supply you with free literature with your name. Address,
WILMOT CASTLE CO-PAN-Y, 26 Elm St., ROCHESTER, N. Y.

Saturday by an Era representative of Kaminsky's having been connected with the Sawyer company, he was astonished. "Why I've got a lot of their stuff on my shelves now," he said. "Never could get rid of it. They were to send through the jobbers, but the jobbers refused to handle it, and I got it direct. This certainly means the defeat of the present Leininger suits. Its another score for the Era."

The attention of the Era was called to Kaminsky's methods and the Sawyer company in November, 1897, by the following letter:

As you take great interest in exposing frauds I think I can put you on to a good one. I enclose an advertisement of Dr. Sawyer. Their full name and address is as follows: The Dr. A. P. Sawyer Medicine Co., 121 South Clinton street, Chicago, Ill. They sent a man around to sell goods, offering great inducements and many promises, and the affidavits which they presented I find are bogus. McKesson & Robbins have had dealings with them, and I think you could get a good many points from them. They stuck me for \$126 worth of goods, which I have had for the last 60 days without selling a dollar's worth, simply because they did not carry out their agreement. I have written to them and they seem to pay no attention to the fact that I have not sold any of their goods and threaten to sue for the amount. I am at a loss to know what to do. Could you advise me? Trusting I may hear from you at an early date, I remain, Very respectfully,

W. S. ROCKEY.

Mr. Rockey was only one of many. Victims now who were victims then are William Wilson and Mrs. Dorn. Then, as now, they approached the largest retailers, promised gilt-edged advertising, reserved for him a "territory," and insisted on large orders only. The contract then as now was in triplicate, with this note at the bottom:

There is no agreement aside from this order. All special promises are specified either on the face or back of this order. I have a correct copy of this order, and all special promises or agreements are made upon the face or back of this order written in ink by your salesman. Sign here:.....

The Leininger company's contract clause is different only in form. In design, evidently, it is identical with that of the Sawyer company.

The Era's expose of Kaminsky's methods brought the Sawyer company disaster. He enjoyed and threatened this journal, but unavailingly. Later, in 1899, Kaminsky asked that a receiver be appointed, stating that he was a stockholder, owning 520 shares. He alleged numerous irregularities in the conduct of the business. He sued for \$1,000 for wages due. A receiver was appointed, but Kaminsky was outdone and fled out.

The retail druggist should keep a file of the Era as a directory of these doubtful little affairs.

MANY QUAFF DEEP SALAMANDERS.

Lifelong regret is the portion of those who did not attend the "Kommerz" of the German Apothecaries' Society on last Thursday night, unanimously pronounced the most successful of many good ones. Salamander followed salamander, along with the Wurzburger flowed speech and song, a fine collation was mixed in and Friday had been long born before the assemblage broke up.

There were eighty five at Allaire's, in the lodge hall. Drs. Kudlich, Julius Hoffman, Brunner and von Ramdohr, guests of honor were welcomed heartily by President Henry Imhof, Salamander. Very successful, "Sol Wiedler Gut," sung by Emil Roller, melody of Schunkel Waltz, sung by assemblage. Applause. Mr. Imhof dwells on connection between druggists, doctors and patients. Salamander, patients feeling better. Mr. Imhof's baritone solo, an air from "The Magic Flute" was followed, after encore by the "Rahne Song" Med-

icine, music and pharmacy were toasted together after Oscar Krause's explanations why they should be considered as arts. Salamander. This time by Dr. Hoffmann, to be drunk by the doctors to the society. "The Seat of Intelligence" was scientifically located by August Sippel of Newark. Mr. Lyons gave a humorous recitation. Michelli, a Signor favorite with pharmacists sang twice. "Tears be With You," was a humorous English recitation by Paul Arndt. Collation and salamander to landlord Allaire. To the tune of "Coppersmith," Mr. Imhof's song, "Shadow Pictures of Pharmacy," was sung. Then Mr. Imhof was forced to confess himself the author, and was cheered. "In a Deep Cellar" was sung by Helm. "Orpheus," a recitation by Arthur Schulz, was followed by Oscar Krause's speech in praise of women. Salamander. Three "hoops" for women. Paul Arndt played the Bandolonia while all voices sang "Moritath." Then came Mr. Arndt's encore, "The Last Rose of Summer." Michelli sang alone and with Sullivan. Every sang. Salamander. This time to Otto Alexander, now in Champlain, this State. Dr. von Ramdohr sang "The Three Little Pies" and Charles Klauen gave a humorous recitation in the Tyrolean dialect. Emil Roller presented an enlarged photograph, framed, of the society. At no Kommerz had there ever been such entertainment, such feasting and such fun. To S. V. B. Swann, who now plans the Society's good times, many words of praise were given for his first "Kommerz."

At the business meeting earlier in the evening Felix Hirsman called attention to the importance of the recent Roth vs. Amernum and Behrens decision, which was given in the Era on October 29. Messrs. Krause and Sidney Fauser said that neither pharmacist nor physician can be compelled to act in accident cases. Mr. Hirsman reported as delegate to the N. A. B. D. Mr. Swann turned over the surplus left from the outing to the treasurer with all formality. It amounted to seven-cent pennies. Emil Roller said that a general conference of committees from the local societies would take place this week, at which the proposed new druggists' co-operative fire insurance company will be discussed. Alexander Tsheppe, J. A. Roeder and A. J. Lehmann, the latter as associate, were elected new members. William J. Koch and H. H. Blohmeier were proposed.

NEW YORK COLLEGE AT WORLD'S FAIR.

The New York College of Pharmacy will probably have an exhibit at the St. Louis World's Fair next summer. The invitation by the fair authorities is looked upon favorably by the faculty, and, it is believed, by most of the trustees, who decide the question at their regular meeting this week. Probably four departments will send work, the various displays being fashioned by the students along toward the end of the winter term. The college has never before made such an exhibit. Members of the faculty believe the effect upon the public will be valuable, at least in bringing it to realize that there does exist such a thing as colleges of pharmacy and depicting to it some of the alchemic mysteries in which they delve.

SYRACUSE DRUGGISTS DRAFT COCAINE BILL.

The Syracuse D. A. on Friday night endorsed a newly-drafted bill, prohibiting the sale of cocaine or any of the many other remedies which contain that drug except upon the prescription of the physician. This action is radical and the outcome will be noted with great interest. The bill will be sent to the State association for endorsement. It was drafted by a committee appointed a month ago by the S. D. A., consisting of

W. B. Bissell, E. S. Dawson, Jr., and William Muench. Sunday closing of drug stores was discussed but no action was taken. Arrangements were made for a banquet and reception at the Empire to-day.

MADE MISTAKE IN CHARGING EXTORTION.

A curious series of surprises were exchanged recently by James Sullivan, a young lawyer, and H. Greenbaum, Jr., son of L. Greenbaum, druggist at 2227 Third avenue. Mr. Sullivan, who is connected with Steiner & Peterson, counsel for the eastern branch of the board of pharmacy, was sent to serve summons on the elder Greenbaum of civil action for two violations of the pharmacy law.

"I represent my father," said young Mr. Greenbaum, who was alone, "Can't I fix it?" "Certainly," said Mr. Sullivan, who upon Mr. Greenbaum's request, also accepted \$50, the amount of the actions. Then he was told to wait for a moment. Mr. Greenbaum went to the back room and called a policeman. When the latter arrived Mr. Greenbaum insisted upon Mr. Sullivan's arrest, charging extortion. As this was a felony Mr. Sullivan was arrested.

"Are you not a lawyer?" asked Magistrate Crane?

"Yes sir, and I demand to know what I am here for."

Mr. Greenbaum made his charge of extortion in writing, whereupon the Magistrate discharged the lawyer, saying his arrest was an outrage. Mr. Sullivan, very angry, is now going after Mr. Greenbaum for false arrest.

In civil actions, the person serving the summons may legally collect the penalty, giving a receipt for it.

TWENTY-SEVEN PASS IN NEW JERSEY.

At the October examination by the New Jersey board of pharmacy these were successful: Registered pharmacists—Samuel D. Bickel, Atlantic City; John Joseph Buckley, Perth Amboy; Joseph R. Brown, Gloucester; Samuel Burstein, Newark; Parker George Clark, Atlantic City; John Dilks, Pitman; David Dunlop, Newark; Jacob Hagin, Elizabeth; William Hornblower, Jersey City; William Kimpel, Jersey City; Charles Dawson Kerr, Newark; William Joseph Lee, Jersey City; Edward Lockman, Jersey City; William O. Luttmann, New York; Paul N. Litchfield, Camden; James Campbell Mackey, Paterson; Henry Francis Nielsen, New York; Edgar H. Patterson, Madison; Phillip Pearlstein, Hoboken; James Franklin Paisley, Hoboken; John C. Prosch, Newark; William E. B. Watson, Trenton. Registered assistants—Charles R. Garrabrant, Paterson; Samuel Jacobs, Paterson; Jacob Lesser, Newark; Ernest E. Onsted, Newton; Margaret Marie Quinn, Newark.

NEW YORK NOTES.

—John P. Evers, druggist at One Hundred and Twenty-fourth street and Lexington avenue, was defendant jointly with the U. S. Guaranty Co. in an excise suit brought by State Excise Commissioner Cullinan. The ruling of Justice Greenbaum was the same as that made by him in the case of E. D. Paxson & Co., as given in the Era recently, that is that the bond of \$500 was forfeited. The charge was selling brandy without a physician's prescription. There are many similar cases to come up, not only in Greater New York but throughout the State.

—There is a strong sentiment in the Manhattan Ph. A. toward changing headquarters from the college of pharmacy to Allaire's, Third avenue below Eighteenth street, where the German Apothecaries' Society meets. If so, the meetings will likely take on a more Bohemian

ISAAC C. CHAPMAN, Newburgh, N. Y.

Recently Mr. Chapman received the congratulations of his many friends upon the fact that he had reached the age of three score and ten. But he does not "look the part." For fifty-five years out of the seventy Mr. Chapman has dealt in drugs. His is a wholesale jobbing business. A noteworthy incident in connection with Mr. Chapman's lifelong residence in Newburgh is this: The Rev. Dr. F. B. Savage was pastor of Union Church for twenty-five years, and Mr. Chapman never missed hearing one of Dr. Savage's sermons. Of course Mr. Chapman has begun with the same steadiness and regularity to listen to the discourses of Dr. Savage's successor.

less routine look, and likelihood is that attendance will pick up. Allaire's is famous as a gathering place for good-fellowship organizations, and rent is free.

—In giving his verdict the judge in a recent board of pharmacy prosecution case began by elaborating on the fact that he was a regular customer of the druggist defendant, in whose honesty and capability he had the utmost confidence. The plaintiff and attorney reconciled themselves to defeat when they were thunderstruck by hearing a fine of \$25 and costs imposed.

—Dr. Hans Goldschmidt of Essen, Germany, will lecture tomorrow evening in Havemeyer Hall, Columbia University, under the auspices of the Columbia University chemical society. His lecture will be illustrated with experiments upon aluminum-thermics, or the production of high temperatures by burning aluminum, of which method he is the inventor.

—Eastern branch board of pharmacy reconsidered appointment of Dr. E. G. Rave as inspector at Hicksville. Action prompted largely by feeling that, as unpaid representative, Dr. Rave would not be properly amenable to authority and that they could not with propriety direct his work as in the case of an employee.

Bottles of 50, with yellow wrapper

Write for Samples and Prices

BILLINGS CLAPP CO. - - Boston

—Dr. George Ferguson, chemist Eastern branch, board of pharmacy has begun examination of about 300 samples recently gathered. So far fifty per cent. of the lot have been found below standard and about twenty prescriptions have turned up.

—F. M. Smith, president of the Pacific Coast Borax Co., has entered his steam yacht *Hauoli* in the contest for the Lystrastra Cup. Mr. Smith is a member of the New York Yacht Club.

—Hefley Drug Co., successors S. I. Vanderbeek at Islip, L. I., and Mr. Vanderbeek, it is reported, has purchased one of Benjamin Kent's lag drug stores at Patterson, N. J.

—Aubrey H. Weightman, of the laboratory staff of Powers & Weightman, Philadelphia, and Miss Fanny Cummins Cox, were married recently in Plainfield, N. J.

—Max Goldbaum has sold to Alfred Timon at 59 East Third Street and will open a store at One Hundred and Twelfth street and Lexington avenue.

—Edgar J. Lauer, brother of the late Monroe W. Lauer, has assumed the duties of secretary and treasurer of Magnus & Lauer, Inc.

—A. Katzman, who recently failed in Second avenue is now practicing medicine at 237 East Eleventh street.

—Louis Manulkin will open a new store at 165 McKibben street, Brooklyn.

—Herman Olney has bought out F. W. Hesse of Freeport, L. I.

'ROUND ABOUT BUFFALO.

—E. A. Kingston, a prominent Cold Springs druggist, is about to change his location to larger quarters. About December 10 Mr. Kingston will move into the splendid new building just across the street from his present location. The new store is 75 feet deep and 32 feet wide. It has a handsome steel ceiling and solid mahogany fixtures, with gold plated trimmings, and French and German plate glass mirrors. The interior is to be illuminated by 50 incandescent lamps and 6 arc lights.

—At the annual meeting of the senior class of pharmacy at the U. of B. the following officers were elected for the ensuing year: President, C. E. Freeman; vice-president, F. M. MacMurray; secretary, Miss M. Kelly; treasurer, Otto McKee; poet, J. L. Sherlock; prophet, G. J. Coston; marshal, W. R. Horton; Iris representatives, R. B. Jones and G. D. Hull; historian, C. E. Turner.

—George A. Lawrence, who for the last 13 years has conducted a pharmacy at 1657 Main street, has sold to Herbert M. Anthony. M. Anthony is a nephew of the late A. C. Anthony, the Seneca street druggist. Mr. Lawrence was compelled to leave the retail business owing to failing health. He will be seen hereafter as a knight of the grip.

—Charles Stoddart of Stoddart Bros., is suffering from an affection of the throat and has gone to the mountains of North Carolina to effect a cure and to rest from arduous work.

MAY 1st, 1902, ERA WANTED.

We will pay fifteen cents for a copy of the May 1st, 1902, *Pharmaceutical Era* delivered at this office. The *Pharmaceutical Era*, No. 8 Spruce St., New York.

NEW ENGLAND.

ARRESTED FOR PRESCRIBING.

Drug Clerk Higgins's Attorney Claims He Cannot be Pronounced Guilty, Even After He has Confessed, Unless Man Prescribed for is Produced.

New Haven, Conn., November 10.—There is great excitement among the druggists here over the arrest of Eugene J. Higgins, a prominent drug clerk, on the charge of violation of the medical laws.

The arrest was caused several days ago by the death of William Winnell, who, it is alleged, was doctored by Higgins. Higgins was a boarder with Mr. and Mrs. Winnell. Recently Winnell and his wife separated and Winnell went to live in another part of the city. Higgins still continued to board with Mrs. Winnell.

On the night that Winnell was first taken ill, according to the charges, he called in Higgins. According to the testimony in the police court, Higgins gave him a dose of medicine prepared by himself in a local drug store. He also watched with the man that night and the next morning advised the calling of a physician. The next evening a doctor was called in who ordered the man sent to the hospital, but he died before reaching there. The body was embalmed. The medical examiner gave the cause of death as pneumonia.

In court the State introduced in evidence several prescriptions from the Union pharmacy alleged to have been made out by Higgins. One man, a brakeman, whom it was said Higgins prescribed for, left the State when the clerk was arrested. Evidence was introduced to show that Higgins has confessed to writing prescriptions.

Attorney Goodhart claimed that the confessions Higgins is said to have made and the prescriptions themselves prove nothing if the man prescribed for can not be produced. The judge reserved his decision.

ALL'S WELL THAT ENDS WELL.

Boston, November 10.—William H. Gove, president of the Lydia Pinkham Company in Lynn, just elected a representative to the General Court of Massachusetts, representing Essex County, ran up against one unlooked for obstacle in his campaign. It appears that the Times, Los Angeles, Cal., is on the "unfair" list of the Typographical Union. As the Lydia Pinkham Company was running an advertisement in that paper, the Los Angeles Union communicated with the unions in Lynn and Salem and warned the men not to vote for Mr. Gove. He received several letters rather threatening in character, although he paid little attention to them. It was shown, however, that all Pinkham advertising is placed through a regular advertising company whose contract with the Los Angeles Times long ago expired, though the paper seems to have carried along the advertisement on its own responsibility. This pleased Mr. Gove in a better light, from the union's view point, and the "embargo" against him as a candidate was removed. He received a very flattering vote.

THE BAY STATE.

Green's Worcester drug store received good advertising through the police. In one of the windows there was arranged an exhibition by the Son Sen company. A pretty young woman dressed in Japanese style, resembling the Son Sen trademark pictures, was the chief part of the exhibition. Only the upper part of the young woman's body was to be seen, and this apparently

rested on a stand the supports of which were plainly visible, making her look like a half woman. The display attracted immense crowds and the police ordered the exhibit stopped and the curtains drawn. Naturally, the druggist was loth to do this, but the police claimed the right to enforce the city ordinance against obstruction of the sidewalk.

—A former Eastern drug clerk, Ralph S. Shumway, who was employed in various stores in Webster, Worcester and Providence, R. I., followed Horace Greeley's advice to young men. Recent letters show that he has prospered. He first lived in Los Angeles, where he was married. He next was given the position of manager of a big drug business in Nogales, Ariz., and there he received the appointment as army surgeon for that State, a position which he still holds in connection with his drug duties. He and two or three friends invested some money in a property near Nogales and experts have recently discovered that it contains gold.

—Trouble appears to have broken out again in Lawrence, regarding the way the municipal pharmacy is conducted. The experiment has been watched carefully, ever since the city established its own place taking the business from the drug stores. It is said that the pharmacy costs \$4,000, whereas for four years previous to that, the cost where regular drug stores filled the prescriptions was about \$3,000 a year.

—Seth C. Clark, dealer in patent medicines in Melrose, has filed in Boston a voluntary petition in bankruptcy. He has debts amounting to \$14,285 and no assets. Most of the claim against him are unsecured. The largest individual ones are those of the H. B. Humphrey Company, the advertising agents, Boston, \$6,106, and Lewis N. Cushman, Boston, printers and publishers, \$3,400.

—Henry Adams, a Springfield druggist, is just back from a three weeks camping and hunting trip in the woods of Maine. His son accompanied Mr. Adams. They covered the country in and around Moosehead and Caribou lakes. They paddled in canoes considerably more than a hundred miles, besides tramping many miles.

—Charles F. Stahl, the Boston Egyptian gum drops manufacturer, has had his business incorporated as a stock company, the C. F. Stahl Confectionery Co., with its capital stock of \$50,000. Mr. Stahl is president and his cousin, Ernest A. Geisser, is manager and treasurer.

—The Lenox pharmacy, Springfield, has gone into the hands of a keeper, placed there pending a settlement of its affairs, the condition of which appears to be somewhat uncertain. Two young druggists from Holyoke recently have been conducting the store.

—Among Boston's representatives to the General Court, elected last week, were Frank E. Gaylord, Republican, apothecary at 1521 Washington street, and Arthur L. Gavin, whose drug store is in East Cottage street. Both received flattering votes.

—A. J. Brunell, a Fall River druggist, is the owner of a trotting horse which is winning fame at the Riverside Trotting Park races. He owns two fast horses, in fact, which are expected to make notable records for themselves.

—E. S. Anthony Company, the wholesale drug-house in Fall River, has become incorporated with M. M. Hathaway as president and L. R. Darling as treasurer, manager and clerk. The capital stock, \$30,000, as all been paid in.

—Daniel M. O'Brien, druggist in Rockland, charged with violating the liquor laws, at first pleaded not guilty, and afterward retracted and pleaded guilty, paying a fine of \$65.

—Liquor inspectors raided the Centre street drug store in Brockton. Charles H. Iris, in charge, received a summons to appear in court to respond to a charge of selling liquor.

—Clarence Hatlaway of Smith & Hathaway, Middleboro, is just able to be out and about again and to attend to business, after a very severe attack of appendicitis.

—Gorham N. Winlow, druggist of Hollbrook, has voluntarily filed a petition in bankruptcy. He has liabilities of almost \$2,500 and no visible assets.

—A new store is being made in the block of Caskin & O'Connell, Danvers, to accommodate George B. Moulton's drug store.

—At Fall River, Arthur Talbot, clerk at Normand's drug store was fined \$50 for illegal liquor selling. Talbot appealed.

RHODE ISLAND.

—There is a time and a place for everything. A former speaker of the Rhode Island house of representatives sought to impress this truth on a Providence druggist by slapping the latter's face at East Greenwich on election day. The druggist, W. R. Greene, is said to have approached the lawyer, who was a candidate for election to the General Assembly, at the polling place at East Greenwich for the purpose of collecting a bill. The lawyer slapped the druggist's face and is said to have told him that election day, a legal holiday in Rhode Island, was no day on which to collect bills. A lawsuit is said to be coming.

—The controversy between the Handy Drug Co. and another department store in Providence has been adjusted. The octopus wins, of course, in so far as it is to secure peaceable possession of the premises occupied by the smaller concern. Report has it, however, that the drug company got its price and, although relinquishing the field, is practically the victor.

—One of the big department stores in Providence which has an extensive drug department is making the regular dealers hustle because of its price-cutting on certain lines. The retailers are up in arms but seem to be helpless.

—Gilbert R. Parker, President of the R. I. Ph A. was elected a member of the Providence board of aldermen at the city election last week.

DON'T USE DUMMY DISPLAY CIGAR BOXES.

The internal revenue department advises that dummy cigar boxes, intended for display use are, while not prohibited by law, very "objectionable because they are made in the similitude of the genuine boxes" and internal-revenue officers in order to satisfy themselves that the law prohibiting packing of cigars in boxes without proper labeling and stamping is not being violated, "will be justified in opening and examining every such box whenever found. This will cause the dealers great annoyance in having their displays disturbed and the boxes opened, and for this reason their use should be discouraged."

WE WANT DRUGGISTS

To send us a list of physicians who patronize them, and we will write each physician that he can obtain Phenalgin from the druggist mentioned; we will also send the physician a sample, with literature.

GOOD TRIPARTITE POLICING.

Baltimore Association Hired Detectives to Watch Suspects, Thus Getting Desired Evidence—
Trading Stamps.

Baltimore, November 10.—The Baltimore R. D. A., closely affiliated with the N. A. R. D., exhibits energy, in having during the last few months proceeded against several of the local houses for violations of the tripartite agreement and compelled them to make terms; it is after other game. It was recently brought to the attention of the association that several cutters were getting goods. Detectives were employed to make an investigation. Steamboat piers and railroad stations were closely watched, with the result that evidence of a positive kind has been secured against three concerns, while several others are under surveillance. The manufacturers are apparently innocent of all duplicity. They had shipped the goods to dealers on the fair list, by whom they were sent to places in this city, usually by boat. The packages were timed to arrive on the wharf just before the vessel left, and were at once taken away on the steamer's arrival here. The detectives, however, were on hand bright and early.

In one instance a detective was stationed in front of a suspect's place of business. During the three weeks the vigil lasted not half a dozen parcels left the store, showing clearly that the owner knew he was being watched. All sorts of obstacles were put in the detective's way. The policeman on the boat was induced to try intimidation, but John G. Beck, on behalf of the association, soon stopped this by bringing charges of dereliction of duty against the officer.

One other matter the association has taken hold of is trading stamps. A Lexington street druggist still gives stamps, and others have declared that if he is per-

mitted to do so, they will follow suit. The matter will come up for consideration at a meeting of the executive committee next Tuesday.

AROUND THE GREAT LAKES.

AT N. A. R. D. HEADQUARTERS.

Chicago, November 10.—A "Collection Department" is a new addition to the forces at N. A. R. D. headquarters announced this week in the "Notes." The departments' duty will be to supervise through the active aid of officers of local association the collection of the 1883 dues which still remain unpaid and to promptly begin the collection of the 1894 dues as soon as they mature. The first general instruction to local officers are as follows: "Hereafter the names of all druggists who pay their dues should accompany your remittance to National Headquarters."

Additional donations to the N. A. R. D. funds since the Washington convention and not previously mentioned in the Era are: The Vapo-Cresolene Co., \$250; The Chamberlain Medicine Co., \$500; Allcock Mfg. Co., \$1,000; Phenyo-Caffein Co., \$50; Freeman Perfume Co., \$25.00; St. Joseph County (Ind.) R. D. A., \$10.00; Holden Drug Co., Stockton Drug Co., J. E. Oliver, H. McComas, J. B. Freitas, J. A. Patterson, all of Stockton, Cal., each \$5.00; Central Drug Co., Lion Drug Co., J. D. Gray, also of Stockton, Cal., each \$2.50; making \$37.00 from the San Joaquin County Association. Before the convention N. B. Eccleston, Oxford, N. Y., contributed \$5.00. In the cash donations previously reported "Henry Robb, address unknown," was credited with \$5.00. This donation has been identified as from Henry Ranch, Minneapolis, Minn., a delegate from the Minnesota Ph. A.

In the resolution adopted by the Washington Convention thanking the proprietors present for their attendance and the spirit of co-operation and good-will manifested by them in the cause of better trade conditions, the name of George A. Newman, representing the California Fire Syrup Co., was omitted. This was a clerical error, as Mr. Newman was present and joined heartily in the splendid assurances of loyalty and support that were given by the proprietary men to plans which have for their aim the advancement of the mutual interests.

CHICAGO RETAILERS WIN EXPRESS ARGUMENT.

Chicago, November 10.—Some time ago the express companies refused longer to pay their agents fifteen per cent. commission on orders taken for moving baggage, reducing the commission to six cents an order. The C. R. D. A. decided that they would not stand this, and appointed a committee consisting of Secretary Kellett, and Messrs. Light and Quailes to take the matter up. So successful were they that the old rate of fifteen per cent. has been reinstated and the companies also agree to pay ten per cent. commission on any business. Not only this, but the express companies have been induced to dispense with all other agents such as cigar stands, barber shops, etc.

INDIANS THOUGHT DRUGGIST FORDHAM "THE DEVIL."

Grand Rapids, Mich., November 10.—W. W. Fordham, a druggist of Elmira, and well known in northern Michigan, has just completed a journey of 2,400 miles from this State to Spokane, Wash., in an 8-horse-power automobile. He used 287 gallons of gasoline, at an expense of \$70.81, the first supply being purchased at

14 cents a gallon, and later in Montana he paid 50 cents.

Mr. Fordham had an interesting time. He crossed the Powder river on a railroad bridge and went jolting over the ties just in time to miss being scooped by a fast train. In crossing the Crow and Flathead reservations the beaded and painted redskins thought him the devil himself returned to make it hot for them for some of their depredations against the whites. At sight of him, gliding along in the benzine buggy, the "Injuns" took to the tall timber.

ILLINOIS.

—The post office officials are anxious to ascertain the whereabouts of Gus Oncay, a pharmacist formerly employed by T. F. Cannon, 190 North Clark street, Chicago. Oncay, it is said, worked at the drug store only a few days, but long enough to become acquainted with the method of issuing money orders. It is claimed that he filled out blank money orders in amounts ranging from \$50 to \$150 and cashed in the aggregate nearly \$500 from friends and acquaintances about town. All efforts to locate him by the government detectives have failed. He is known to have a wife and two children in the city.

—The twelfth district druggists met at Shoenhofen's hall on Milwaukee and Ashland avenues, Chicago, on November 3. Regular monthly meetings will be held in the future. A committee of six was appointed to look after the druggists in the district who have ratcheting proclivities. The following officers were elected: President, B. A. C. Hoelzer; first vice-president, Ernest J. Heis; second vice-president, Frank E. Falkenburg; secretary W. L. Haussman; treasurer, Thorvald Mygdal.

—On Monday of last week Judge Kohlsaat confirmed the 40 per cent. composition offer of Lord, Owen & Co., 20 per cent. of which had already been paid. At that time objections to the compositions had been filed by certain creditors but were not brought to the notice of the court, and on Wednesday Judge Kohlsaat revoked the confirmation and referred the matter to Referee Eastman.

—Officers of the C. R. D. A. think the prospects good for the adoption of a flat schedule on proprietaries the city over in the not distant future. They say that all but one of the big State street stores maintain a Barkis-like attitude regarding the matter, and all that is needed to make the movement a success is the conversion of the single exception.

—That nickel-in-the-slot, music-producing, full-value-for-the-money giving machine, which caused George H. Mayr so much trouble at the hands of the police, turned out to be all right. It was "pulled," but the court decided that the thing was innocuous, and the minions of the law had to cart it back and set it up in good order again.

—Continued fine weather for this season of the year makes the local trade very quiet. Collections are fair except from the manufacturing trades using chemicals. This is attributed in many instances to losses sustained through strikes.

—Allen G. Griggs has sold his interest in the Griggs Drug Company at Ottawa, to his father, E. Y. Griggs, who celebrated his eighty-fifth birthday by resuming the management of the business.

—V. L. Blahnik has opened a new drug store at Forty-seventh and Paulina streets, Chicago. He has put in handsome oak fixtures and a large fountain.

—C. T. Boswell, druggist, of Rockford, has bought the building in which he has conducted his business for many years.

—Isaac Robbins sold his pharmacy at 543 South Jefferson street, Chicago, to Joseph Reissman.

—R. G. Hebeda & Son succeeded J. H. Steathman in the drug business at Metamora.

—C. M. Griswold has opened a new drug store at Winnetka.

WEST OF THE MISSISSIPPI. DRUGGISTS BLACKLISTED.

In Iowa Beware of "Horse-Necks" or Mrs. Wise of the W. C. T. U. Will Get After You—No Joke for Druggists on List, However.

Des Moines, Ia., November 10.—Mrs. Ida B. Wise, an Iowa woman, residing at Missouri Valley, has declared war on druggists in general and soda fountains in particular. She is secretary of the Iowa branch of the Woman's Christian Temperance Union and says that in Iowa soda fountains and druggists are largely responsible for the habit of drinking among women.

Mrs. Wise is not content with making speeches and writing essays. She has had published what is called a "soda fountain blacklist," enumerating all of the druggists in her district who are known to deal spirituous liquors over what Mrs. Wise pleases to call the "soda fountain bar."

"The soda fountain habit is making drunkards of women and boys," says Mrs. Wise in her circular. "Why, I stopped in at a fountain and a young woman came in and asked for a 'horse-neck.' They tell me that a horse-neck is nothing but a straight whiskey. Now I wouldn't know whiskey if it were given me. I never tasted or smelled the vile stuff."

There are thirty unions in the forty-four towns of the sixth district. The secretary of each union has a list of the druggists who are said to sell liquor at their soda fountains. In a few cases these lists have been distributed to every house in town. In other instances the plan of campaign is to pass the list about to the officers of the various women's societies and secure resolutions at each society meeting against black-listed druggists.

Mrs. Wise proposes to extend this system to all parts of Iowa. Druggists say that great injustice is done by the blacklist and that druggists, than whom there are no more honorable or lawful in Iowa are found on the list.

So far does Mrs. Wise permit her prejudices to influence her that she imagines any dark colored drink is whiskey. A traveling man at Sioux City during the last W. C. T. U. convention, was accosted by Mrs. Wise while drinking coca-cola. "You old whiskey sot," said the woman, "why don't you go to a saloon?"

No effort was made to explain the temperate character of the drink and Mrs. Wise, the druggists say, doubtless has placed the store where the incident occurred on the "black-list."

IOWA TRYING TO STIFFEN REQUIREMENTS.

Des Moines, Ia., November 10.—Bills will be introduced in the Iowa legislature this winter asking for changes in the pharmacy laws as follows:

1. An amendment providing that request blanks for the sale of intoxicating liquors be issued by the county auditor numbered consecutively and returned intact.

2. An amendment providing that applications for sale of liquor on the part of druggists be accompanied by affidavits that neither the applicant nor any of his assistants have been refused a permit in two years.

3. An amendment providing that when a druggist quits business his permit shall be void.

4. An amendment providing that all pharmacists before receiving certificates be required to pass the State examination or give satisfactory evidence to the board of having passed an equally rigid examination before some other State board.

The purpose of the last amendment is to raise the standard of pharmacists. It is persistently claimed that young men desiring to enter the drug business will go outside of the State, secure a license at less cost and efforts than if they attended recognized Iowa schools, and return to Iowa not fully prepared to perform the duties of their profession, yet qualified under the law to do so.

TESTIMONIALS AND BANQUET TO DR. WALL.

St. Louis, November 10.—The Professor O. A. Wall testimonial exercises will be held at the St. Louis C. P. at 7:30 p. m., on November 11. Two life-sized bronze medallions have been prepared, one for the college and the other for Professor Wall's family. The program has not been fully arranged at this time but will consist of introductory remarks by Dr. H. M. Whelpley, presentation of the medallion to the college by Charles Gietner, response by President Theodore F. Hagenow, remarks by Dr. O. A. Wall, Sr., followed by Dr. Enno Sander, who was Professor Wall's preceptor; presentation of the second medallion to the Wall family by Professor Francis Henn, response by Dr. O. A. Wall, Jr., remarks by four or five graduates representing the classes graduated during the thirty years of Dr. Wall's services as professor of materia medica and botany. Among these speakers will be: William C. Bolm, '75; Dr. O. A. Claus, '82; Dr. Joseph L. Boehm, '98, and E. P. Cuckorel, '91.

The exercises will be public. The medallion will be placed in the college hall. It is also the intention to have prepared a copper tablet bearing the names of the graduates contributing to the fund. The Alumni association will then take charge of Professor Wall and tender him a banquet at Priestler's, 302 Washington avenue, which is being arranged for by E. H. Voepel, president of the Alumni, and W. H. Lamont, chairman of the entertainment committee.

THOMAS W. WALLWORK, employed for some time at Grover's drug store, Winchester, Mass., died at North Andover, Mass., of diabetes. Mr. Wallwork, who leaves a wife and child, was thirty-one years old.

CHARLES WHITE, for some time employed as clerk in the pharmacy of Charles A. Curtis, South Boston, Mass., died in Sharon, Mass., at the age of twenty-eight, from pulmonary trouble.

Easy Money for the Druggist in Perfume Essences.

The advantage to be derived from manufacturing one's own perfumes, especially the bulk goods, is apparent. Lohm & Fink of New York City make a specialty of perfume essences from which they say can be produced all the "swell" odors of triple and quadruple extracts by simple dilution with cologne spirit. Messrs. Lohm & Fink claim that their Absolute Essences represent highly concentrated combinations of perfume bases and that each odor is complete in itself. Price lists and descriptive literature pertaining to these goods may be obtained by addressing the above-named firm at 120 William St., New York.

PACIFIC COAST.

DRUGGISTS STOP OBNOXIOUS ORDINANCE.

San Francisco, November 10.—A delegation of local druggists headed by S. A. McDonnell and W. A. Searby waited on Mayor Schmitz this week and strongly protested against the ordinance passed by the board of supervisors, which requires the placing of labels on packages containing substances intended for human consumption. The ordinance is designed to aid in the enforcement of the provisions of the new sanitary code, recently adopted by the board of health, and is now in the hands of the Mayor.

The druggists are up in arms against the enacting clause of the ordinance which makes it a misdemeanor "for any person, firm or corporation to sell or offer for sale or give away any package, box or bottle containing any drug or substance or fluid intended for human consumption, unless such package, box or bottle have thereon a label showing in plain Roman letters the name and true quality and ingredients of the contents thereof."

The penalty provided for each violation of the ordinance is a fine of \$500 or imprisonment in the county jail for six months, or by both such fine and imprisonment.

Impressed with the arguments, the Mayor promised to give the matter earnest consideration.

The committee also waited on Dr. A. A. D. Ancona, chairman of the health and hospital committee of the board of supervisors. Later the doctor sent a communication to Mayor Schmitz, requesting him to withhold his signature from the ordinance. He said that a mistake had been made and the plea of the druggists should be complied with. The ordinance will be redrafted, and its provisions will not apply to medicines.

CALIFORNIA.

—The will of the late Peter J. Torney of the Owl Drug Co., who died at Portland, Ore., on October 9, was filed for probate last week. He leaves his entire estate, which consists of stock in the Owl Drug Co. of San Francisco and the Quaker Drug Co. of Seattle, to his widow and four children. Each of his children is to receive five shares of stock in the local company and fifty shares in the Seattle company. The residue goes to the widow. Rev. S. Casey and J. D. Johnson are named as executors.

—Daring thieves effected an entrance to the home of Frank H. Gay, the well-known San Francisco pharmacist, on the night of November 1. They ransacked the sleeping apartments. Just how they succeeded in prosecuting their pilage without disturbing his slumber is the problem that perplexes Gay. Between \$60 and \$75 in coin, a gold watch, a diamond scarf pin, sundry articles of jewelry, and a varied assortment of wearing apparel constituted the principal items of loot.

—Dr. Charles M. Troppmann, owner of the Fifth and Bryant street pharmacy, San Francisco, was remembered last week by A. W. Harvey, an elderly man, just before the latter took his own life. Harvey was a friend of Troppmann and the doctor had been treating him for cancer. Harvey grew despondent and shot himself in the Park. On his person was a letter to the doctor in which he enclosed the sum of \$75 due for medical attendance.

—The Drug Clerks' Union held a very successful smoker a week ago last Friday night in hand of organizer Joseph Hufschbeck, who is at present in California in the interests of the Union. An organization of clerks has been formed at San Jose, Cal., and one will be formed next week at Stockton.

AN ESKAY'S FOOD WINDOW.

First Prize in Contest for Best Display Awarded by Judges to Stoddart Bros., Buffalo.

The decorative art as applied to legitimate advertising is worthy of much study and descriptions of successful window displays are always interesting to Era readers. We therefore take pleasure in printing herewith an illustration of the display recently made by Stoddart Bros., of Buffalo, N. Y. The display was arranged to represent the Brooklyn Bridge, the material used for its erection being Eskay's Food, manufactured by Smith, Kline & French Co. of Philadelphia, and by them awarded first prize in a contest which began early in June.

At that time Smith, Kline & French Co. offered twelve prizes for the best display of Eskay's Food, the competition to be open during the months of June, July, August and September, the winners to receive as prizes: first \$25; second \$15; the next five \$10 and the next five \$5 each. Great interest was shown in the offer and a number of druggists competed.

The contestants submitted photographs of their displays which were then simply numbered and sent to a committee of judges consisting of William A. Dawson, Hempstead, N. Y., H. F. Ruhl, Manheim, Pa., and Ulysses G. Manning, South Bend, Ind. By this arrangement the judges in considering the photographs could not know whose exhibits they were passing upon. The result of their decision follows:

First prize: Stoddart Bros., 84 Seneca street, Buffalo, N. Y.

Second prize: John P. Powers, Somerset and Craig place, Plainfield, N. J.

Third prize: W. L. Bucher, Sixth and Locust streets, Columbia, Pa.

Fourth prize: Kulick's Pharmacy, Mattison avenue, Asbury Park, N. J.

Fifth prize: Ferris & Ferris Co., Frankville, N. Y.

Sixth prize: Davison Pharmacy, 570 Cookman avenue, Asbury Park, N. J.

Seventh prize: C. L. Sherwood, 1206 Main street, Sabetha, Kansas.

Eighth prize: Dr. D. C. Mebane, City Pharmacy, Wilkes Barre, Pa.

Ninth prize: C. C. Strong, 338 Broad street, Waverly, N. Y.

Tenth prize: Rowe & Martin, 321 Washington street, Portland, Oregon.

Eleventh prize: W. Rockey, Eighth avenue cor. 34th street, N. Y.

Twelfth prize: J. G. Block, 142 Monticello avenue, Jersey City, N. J.

Smith, Kline & French Co. desire to thank the druggists who took part in this competition for their interest and the excellent taste shown by them in arranging

the material sent to them for the displays. The attractive bonus and window display offer made by the manufacturers of Eskay's Food should enlist the interest of every druggist who should write to them for full particulars of their special offer under which they send the window display referred to in this competition.

OBITUARY.

WILLIAM NEIDLINGER, the head of the firm of Neidlinger Brothers, druggists' glassware and sundries, New York, died at his residence, Brooklyn, as the result of a trolley accident. Several weeks ago he was thrown or pushed from a car in a Brooklyn bridge crush and struck his head. He was for nearly fifty years in the glassware and sundries business, beginning as a boy. He was sixty-four years old. He was a member of the Hansom Place Baptist Church of Brooklyn, being president of the board of trustees at the time of his death. He was a director of the Baptist Home, a director of the City Mission Society, and an active worker in the Baptist Church Extension Society. Mr. Neidlinger leaves a widow and three children—W. H. Neidlinger, the composer, of New York City; George H. Neidlinger, who was associated with his father in business, and Mrs. H. B. Noyes, Jr., of Mystic, Conn.

DAVID S. DEVOR one of the best known druggists in Northeastern Indiana, a member of the State Ph. A., committed suicide at his store in Ridgeville on November 2. He had prepared a solution of cyanide of potassium in a small graduated glass, and stepping to the front door of his store he hailed a friend who was passing by with "Well, here goes, George," and swallowed the solution.

SAMUEL TRUITT, one of the Purdue University team of football players killed in the terrible railroad wreck on October 31, was a son of A. S. Truitt, druggist at Nobleville, Ind. Young Truitt clerked in his father's store during vacations and was a young man of high promise.

GEORGE HUNN, for many years president of the German American bank of Minneapolis, Minn., and who before entering the banking business was a successful druggist in that city, died last week. He was born at Oggersheim, Germany, in 1835 and was once a member of the Minnesota legislature.

GEORGE O. JONES, a Chelsea, Mass., druggist died of pneumonia at the home of his brother in Somerville. His age was thirty years and he was ill only a short time.

HARRY STREITHORST, a retail druggist of Cincinnati, where he was well and popularly known, died at his home in that city on November 3.

MRS. HARRY BURKE, wife of Michael J. Burke, druggist at Lawrence, Mass., died after a brief illness.

NEXT TERM BEGINS JANUARY 4, 1904.

Address Inquiries to

PROF. OSCAR OLDENBERG, 87 Lake St., Chicago.

TAKING A MAN'S MEASURE.

What do your customers think of you? Do you ever ask yourself this question? The American people are prone to lend a hand to the skies and then turn and condemn him in proportion as they have praised him. It is, therefore, an excellent policy to keep yourself in a position that cannot be condemned. Druggists, to do this, are required to be strictly up-to-date, or to be called back numbers by the public. The advertising columns in last week's Era contained some new things that you perhaps may have overlooked; we therefore again note them here for your consideration.

GRAPES JUICE.—The product of the Welch Grape Juice Co., Westfield, N. Y., is one which gives satisfaction to both retailer and customer, sells all the year around, and affords a handsome profit.

PISO'S CONSUMPTION CURE.—Address the Pisco Co., Warren, Pa., for particulars regarding their specially attractive offer on this staple article for the season 1903-4.

LIQUID GLUE.—The Army and Navy Brand, claimed by the manufacturers, the Waechter Mfg. Co., Baltimore, Md., to be the best and strongest glue that money, experience or brains has produced. Write them for quotations.

HANFORD'S BALM OF MYRRH.—Do you know where to obtain it? If not, note the list of leading wholesale druggists on page 2 who handle this popular remedy.

DRUG STORE ADVERTISING.—One month's service free can be obtained by cutting out the coupon on page 2 and sending to the M. P. Gould Co. Drug Store and Medical Advertisers, Bennett Bldg., New York City.

CASH REGISTERS.—The kind that are guaranteed for five years and sent on seven days' trial. Made by the Century Cash Register Co., 456-474 Humboldt Ave., Detroit, Mich. This firm have a plan for advertising and introducing their machine to new trade which they are extending to responsible merchants for a short time. They will be glad to furnish full particulars to all interested persons.

STORE FIXTURES.—Made of metal, and are handsome, cleanly and durable. Manufactured by the Yesbora Mfg. Co., Toledo, O. If you are in need of anything in the line of metal combination tables, display stands, or automatic store stools, write to Dept. C, and obtain one of this firm's new catalogues.

PROTOS.—Said to be a highly nutritious, non-fermentable food; can be made into soup and added to broth, and is very palatable. Note the Protos Co.'s advertisement on page 5.

THIOCOL ROCHE.—Used in tuberculosis, pneumonia, chronic bronchitis, etc.; put up in four forms, powder, tablets, and two kinds of syrup. Note the adv. "You can do what he did," on page 6.

SHOW CARD WRITING.—Taught by mail from hand painted, fresh from the brush illustrations, and with original letters of instruction. Special discount from regular prices for a limited time if this paper is mentioned when writing. Address the Miller College of Advertising Art, 482½ Columbus avenue, Boston, Mass.

BIOLOGIC PRODUCTS.—From the biological laboratories of Fred'k Stearns & Co., Detroit, Mich. This firm have a reputation for marketing only products whose quality will carry them rapidly to the front. Special inducements are offered to all who can handle quantity lots of their biologic products.

RIBINAT WATER.—J. N. Ferrer, P. O. Box 71,

New York City, who furnish quotations upon large or small quantities of this mineral water.

PHENALGIN.—The product of the Rima Chemical Co., 315 West street, New York City, who want all druggists to send them a list of physicians who purchase their stores. Note their advertisement on page 487.

TIN BOXES AND CANS.—Made by the American Soap Co., 12 Verona street, Brooklyn, N. Y., who say they are the largest makers outside of the trust, and will be pleased to fill orders for large or small quantities.

THE "DORAN" LIGHT.—Claimed by the manufacturers, the Acorn Brass Mfg. Co., Chicago, Ill., to be better and cheaper and to cost less than any other kind of light. To prove their claim, they will send their outfit free on thirty days' trial. Write to them for catalogue and prices.

DOG REMEDIES.—The Sergeant line, guaranteed in every respect by the Polk Miller Drug Co., Richmond, Va. Note the fact that this firm are offering exclusive agencies and are beginning an extensive campaign of newspaper and magazine advertising. Further information in their advertisement on page 19.

SAULTRIM.—The pocket manicure that is handy, and retails for 25 cents, which is half the price it was made to retail for. It is made of German silver, has a removable knife and three files instead of one, put up on handsome celluloid display stands for \$2.00 per dozen. See the cut in the Rochester Metal Mfg. Co.'s advertisement on the inside back cover.

Solules, They are Factors in Elegant Pharmacy.

It isn't so long ago that no inconsiderable part of the affliction of illness consisted in the vileness of taste or smell or both of the medicines one had to take in order to get well. "Elegant Pharmacy" has happily changed all that to a very comforting extent and in no way more pleasantly than by means of Soluble Elastic Capsules.

We can now take our Castor Oil or whatever other oily, bitter, nauseating, or otherwise "horrid" dose the doctor decrees, so artistically wrapped in gelatine that we can't tell whether it has taste or smell.

Druggists who sell Soluble Elastic Capsules and what druggist nowadays doesn't sell at least some, should be sure to see samples of the Capsules made by Hance Bros. & White of Philadelphia.

"Solules" is H. B. & W.'s expressive trade name for their line of these goods, which is a large one.

The goods are very fine in every way having the qualities both physical and therapeutical that make them good goods to keep in stock. H. B. & W. have a special catalogue of Solules which they send to anybody who asks for it.

PATENTS.

Issued November 3, 1903.

- 742,845.—Oscar Dressel, Elberfeld, Germany, assignor to Farbenfabriken of Elberfeld Co., New York, N. Y., a corporation of New York. 1-Acetyl-anilido-2-4 Diamidobenzene.
- 742,894.—William H. McKenna, Pittsburg, Pa., assignor to McKenna Brothers Brass Company, Limited, Pittsburg, Pa., a partnership. Siphon-filler.
- 742,910.—Robert E. Schmidt, Elberfeld, Germany, assignor to Farbenfabriken of Elberfeld Co., New York, N. Y., a corporation of New York. Process of making Anthraquinone Alpha Disulfonic Acids.
- 742,985.—Robert Hearn, St. Paul, Minn. Non-refillable bottle.
- 742,990.—Alfred H. Humphrey, Kalamazoo, Mich. Bunsen burner.
- 743,018.—John N. McKim, Montreal, Canada. Inhaler.
- 743,083.—Ferdinand E. Jagenberg, Dusseldorf, Germany. Machine for labeling round paste-board or paper boxes or casings.
- 743,155.—Otto Eick, Baltimore, Md. Bottle-washing apparatus.
- 743,202.—Charles W. Speirs, London, England, assignor to the Morgan Crucible Company, Limited, London, England. Apparatus for mixing mineral or other dry substances.
- 743,200.—Herbert H. Wing, New Brighton, N. Y. Process of obtaining sodium sulfite.
- 743,204.—Vernon Knowles, Reading, England. Anesthetic apparatus.
- 743,205.—George Merling, Frankfurt-on-the-Main, and Robert Welde, Hocht-on-the-Main, Germany, assignors to Farbwerke, vorm. Meister, Lucius & Bruning, Hocht-on-the-Main, Germany, a corporation of Germany. Trimethyl-cyclohexenocarboxylic-Acid Ester and process of making same.
- 743,206.—George M. D. Merwin, St. Louis, Mo. Therapeutic appliance.
- 743,310.—Stillman A. Moulton, Campbell, Cal. Neck and chest protector.
- 743,312.—William H. Murphy, Rochester, N. Y. Oxyhydrogen blowpipe.
- 743,340.—Percy Simundt, Charlottenburg, near Berlin, Germany. Disinfecting apparatus.
- 743,351.—Edward N. Trump, Syracuse, N. Y. Vacuum-pa.

- 743,352.—Edward N. Trump, Syracuse, N. Y. Process of evaporating liquor.
- 743,383.—Gordon D. Harris, New York, N. Y., assignor to J. H. Pennington, New York, N. Y. Evaporating apparatus.
- 743,409.—George H. Hurd, Cleveland, O., assignor to Frank M. Richardson and John F. Field, Chicago, Ill. Apparatus for administering anesthetics.

TRADEMARKS.

Registered November 3, 1903.

- 41,408.—Breath-perfuming candles. Lawrence Hesselbroth, Chicago, Ill. The word "Ozonets."
- 41,409.—Surgical dressings. William S. Douglas, New York, N. Y. The word "Cuticlose."
- 41,410.—Pomades. Frank Toscano, New York, N. Y. The word "Cangrina."
- 41,411.—Hair tonic or renewer. Fountain of Youth Company, Trenton, N. J. The picture or representation of the head of the biblical character Ruth with flowing hair.
- 41,412.—Cream preparation for the skin. Brown & Allen, Atlanta, Ga. The word "Frostine," appearing in plain, clear and distinct type.
- 41,413.—Liquid chemical or medical preparation for certain named purposes. Lambert Pharmacal Co., St. Louis, Mo. The word "Listerine."
- 41,414.—Remedy for coughs, colds, and bronchial troubles. George W. Burch, Quincy, Ill. A photograph of the registrant.
- 41,415.—Whooping-cough medicine. Julius Kalish, New York, N. Y. The word "Tussiform."
- 41,416.—Proprietary medicine for certain named diseases. Frank Hohart, Topeka, Kans. The hyphenated word "Vin-Sung."

AMERICAN STOPPER CO.

TIN BOXES and CANS
 LARGEST MAKERS OUTSIDE THE TRUST

MARKED DECLINE IN OIL OF PEPPERMINT.

New York, November 10. Dealers report a continued satisfactory routine movement into the various consuming channels and the tone of the general market is steady, although in one or two instances important declines in quotations have been recorded, notably in peppermint and Union salad oils.

OPUM.—Lack of important demand and easier markets abroad have had a depressing influence on the local situation but jobbing prices remain nominally unchanged at \$3.10@3.45 for 9 per cent. and \$3.50@3.75 for 11 per cent. Powdered continues to sell fairly in small lots at \$1.40@1.50 for 13 per cent. and \$1.80@1.90 for 16 per cent.

MORPHINE SULPHATE.—Jobbers continue to report an average movement on consuming orders with quotations maintained at \$2.60@2.70 for eighths in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.70@2.40 in 3-oz. cans.

QUININE SULPHATE.—Business in a jobbing way continues of a satisfactory character and quotations are firm with an upward tendency but limited quantities are yet obtainable at the old range of 25¢@25½¢ for bulk in 100-oz. tins, 25½¢@26¢ in 50-oz. tins, 26¢@26½¢ in 25-oz. tins, 27¢@27½¢ in 15 or 10-oz. tins, and 32¢@32½¢ in ounce vials.

MENTHOL.—Trading is light, and with the market better supplied the tone of the market is easier with jobbing parcels obtainable at \$7.25@7.75 per lb. and 60¢@65¢ per oz.

UNION SALAD OIL.—Manufacturers have reduced their prices 5¢ per gallon and the revised jobbing quotations are 50¢@51¢ by the barrel and 60¢@70¢ in smaller quantities.

MANORAKE ROOT.—Owing to extreme scarcity the market is decidedly stronger and jobbers have advanced quotations to 19¢@23¢ for whole and 21¢@25¢ for powdered.

BALSAM PERU.—A firmer feeling is manifested on the part of holders and jobbing quotations have been marked up to \$1.45@1.65.

CAMPBELL MONSIEUR.—Manufacturers' prices are 10¢ per lb. higher and jobbers have advanced their quotations to \$1.25@1.35 per lb. and 12¢@15¢ per oz.

VANILLIN.—Values are higher in sympathy with the increased cost of raw material and jobbers now quote 55¢@81.00.

ESSENTIAL OILS.—Peppermint is easier both here and in producing markets and spot jobbing quotations have been reduced to \$3.20@3.45 for Western, \$3.25@3.60 for Wayne County and \$3.60@3.85 for re-distilled. In some quarters the weakness is attributed to manipulation. Spearmint and tansy are both firmer under tight available supplies and jobbers quote \$5.00@5.25 for the former and \$1.25@1.50 for the latter. Fennel Watergreen also is firmer and jobbing quotations show an advance to \$2.25@2.50.

POLIOHYLLIN.—The market is stronger under the influence of higher cost of crude material and prices of jobbing quantities have been marked up to \$3.50@4.00 per lb. and 35¢@40¢ per oz. according to size of order.

GUM GAMBIDGE.—Supplies are more abundant and the market is easier with jobbing quotations reduced to \$1.00@1.10 for colony and \$1.10@1.20 for select pipe. The latter range is also quoted for powdered.

COCHINEAL.—Honduras is very scarce and jobbers have advanced quotations to 50¢@55¢ for whole and 55¢@60¢ for powdered.

CARMINE.—Under the above influence quotations for No. 10 have been advanced to \$3.75@4.00 per lb. and 25¢@40¢ per oz.

BAYBERRY WAX.—Values are slightly easier under increased supplies and jobbers have reduced quotations to 25¢@26¢.

LINSEED OIL.—Jobbing quotations have declined to 28¢@30¢ for raw in bbls and 15¢@16¢ for less. Boiled is quoted 30¢@40¢ in bbls and 40¢@50¢ for less.

A Barn Paint That is Guaranteed for Five Years.

There are many makes of barn paint upon the market, but Pitkin's Red Oxide Barn Paint is the only one that we know of that is guaranteed for five years. This paint has been a leader for thirty years, and the manufacturers, the George W. Pitkin Co. of Chicago, Ill., have seen many competitors appear and disappear during those years, but no one of them appears to have been able to compete with the old reliable Pitkin Barn Paint. The makers say that this paint has a rich red color, that it penetrates the wood and stays, that it has easy working qualities, and that the druggist can make more profit from handling it than can be made from any other barn paint. Druggists who are looking for a barn paint that will net 100 per cent. profit and please the consumer, should write to the George W. Pitkin Co. for their special price proposition.

BUSINESS NOTICES.

THE ERA DRUGGISTS' DIRECTORY.

The 10th revision of the Era Druggists Directory, now ready, is the best edition we have yet offered. It is the standard work of its kind in this country and includes a complete list of the druggists in Costa Rica and the principal drug stores in Chile, Peru, Bolivia, Ecuador and Colombia.

The list of retail druggists in the United States does not quite reach the 40,000 figure which the last edition showed, but this loss is made up by increased numbers in Part III. (Manufacturers, Jobbers, etc.)

This Directory will be found invaluable to any merchant or manufacturer who does business with the trade. It is sold only by subscription, and until further notice the price will be \$5.00 per copy, net, postpaid.

The edition is limited, and we are obliged to reserve to ourselves the right to raise this price at any time.

"We are all learning more or less every day, and wide reading in one's chosen field is imperative."

But there is a great difference both in the quantity learned and the manner of reading.

The newspaper habit, the careless reading of many headlines in many dailies, does not lead to great learning.

On the other hand careful systematic reading is the medium of all education.

Why does the college student read to better advantage than the newspaper habitué?

Because his reading is selected and systematized. System and selection in reading is, however, also possible outside college walls. The main thing is to get the right person to arrange it for you.

The Era Course in Pharmacy has been selected and systematized for the use of home students by educators of wide experience.

Write to The Pharmaceutical Era, 8 Spruce Street, New York City.

HAVE THEY SOLD THEIR BIRTHRIGHT!

A journal devoted to scientific pharmacy prints conspicuously upon its first editorial page the following startling statement: "In order to make a penny, honest though it be, the retail druggists of this country, as represented in the N. A. R. D., have been willing to sell their birthright." The writer of course refers to the agreement with proprietary manufacturers by means of which prices are to be protected. Our esteemed contemporary seems to think that the pharmacists should co-operate in manufacturing all necessary remedies and throw the secret remedies overboard completely. This has always been the attitude of the scientific pharmacist toward the proprietary preparation. He urges his fellows to leave it alone and to make their own preparations, the time-honored occupation of the trained pharmacist. The secret remedy is regarded as an interloper, a substitute for the medicines developed and perfected by pharmaceutical and medical science. We have no desire to defend the secret remedy nor the retail pharmacist who has permitted it to usurp his place. Perhaps no defense is necessary; the condition, however deplorable it may be from a professional standpoint, is the natural result of natural causes. But that the N. A. R. D. has sold the druggists' birthright, we cannot admit. It is not a theory that confronts the druggist of today; he has no choice between pure professionalism and the business of retailing another's goods. He must adapt himself to actual conditions or starve. The retail drug business is already overcrowded, and estimates show that from fifty to sixty per cent. of the business done in drug stores consists in the sale of proprietary remedies. Does our friend expect the druggist to throw away one-half of his business? That is what it would mean to abandon all efforts to secure some profit on these goods. At the present time the average druggist cannot exist without the proprietary medicine trade. Our professional friend says cheerfully, "reduce the number of stores," but how? We cannot sit down placidly in our studies and construct a new profession of pharmacy. Things are in a very bad way as everyone will admit, but we are compelled to do the best we can.

DROWN HALF OF THEM.

The same journal of pharmaceutical science takes some of us to task for defending the druggist found

guity of selling adulterated goods. We do not know precisely which of us is the culprit, for we do not remember ever having seen a defense of the adulterator, the most cowardly and contemptible of public enemies. There have been a number of attempts to remove a portion of the odium attached to the innocent sale of articles adulterated by others. This offense is one which, although committed without the least intention to defraud, admits of no defense, for the druggist practically gives his word of honor that he will supply only standard drugs when he accepts his license from the State. He is legally responsible for all materials dispensed over his counter whether he knows what they contain or not. Just here is the undoing of so many druggists, and this is what we and others have tried to explain, not excuse or defend. The pharmacist is supposed to test all materials, but everyone admits that this is a practical impossibility. That is the explanation of a number of cases in which druggists, honored and respected in their communities, have been fined for selling a few cents' worth of goods containing a small fraction of impurity. It is not a defense nor an excuse, merely an explanation. Does anyone believe that eighty per cent of the druggists in this city would add less than five per cent of acetanilid to the phenacetine dispensed in dribblets over their counters? Prof. Rusby in a letter to the Druggists' Circular states the case very tersely as follows: "The cause of the recent phenacetine trouble is the responsibility borne by the pharmacist for the quality of the goods sold by him, in the absence of any accompanying provision by which he can ascertain their quality when he purchases them." In the absence of the bureau proposed by Dr. Rusby, what are we to do? Our scientific friend suggests that, "Nothing more beneficial could happen to American pharmacy, to say nothing of the public, than the elimination of about one-half of the drug stores now in existence." Which is very probably true, but here again we are confronted with a practical question. Which half of the 40,000 druggists in the United States shall we drown? The phenacetine test condemns more than half, and we prefer to consider that test of honesty inaccurate. Down with the adulterator, so say we all! But it is well to proceed with due caution. Too much haste might lead us to drown the wrong man. We should also greatly enjoy tracing the current of present events in a pharmaceutical review of the future.

THE OILY-TONGUED SALESMAN HAS HIS INNINGS.

Mr. Schumacher declared the other day that the Peruna Co. had lost during the past year \$175,000 through substitution. The speaker did not, of course, refer to the sort of substitution which it was formerly the custom to denounce roundly at pharmaceutical gatherings, but the practice which some of our scientific friends consider legitimate and even praiseworthy, the sale of the druggist's own preparation instead of the secret remedy called for with the consent of the purchaser. We do not know the basis for Mr. Schumacher's estimate, but no doubt he knows whereof he speaks. The other day a little lithographed folder lying upon the pavement attracted our attention. It bore a huge question mark and upon the first page the words "I didn't want something just as good." It set forth the merits of a certain

"genuine" make of suspenders. There was nothing remarkable about the little slip of paper except this disagreeable and familiar phrase; it was merely another reminder that the hateful subject has wandered far from the drug trade. Cautions to prospective customers to beware of the wily salesman who uses every trick of persuasion to beguile the purchaser into changing his mind, stare at us from every fence, hoarding and advertising page. Everyone seems to have caught the spirit. The housewife must insist and insist upon receiving the exact brand of coffee ordered or make the best of the grocer's own selection. When we go into a shop to buy a pair of shoes, we are invariably shown several kinds which we have distinctly said we do not want and which we have never thought of buying. The same condition confronts us at every turn. "Just as good" seems to be the foundation of a modern business. The effort is no longer to place upon the market something new (or better or less expensive, but to replace something already in demand by a product of our own, and for this purpose every artifice known to the advertiser and expert salesman is brought into action. The trained craftsman who employs his skill to produce inexpensive comforts or necessities for the many no longer occupies the centre of the industrial stage; the place of honor and greatest reward is reserved for the indispensable "hustler who can sell the goods." Students of economics tell us that all this is merely a passing phase of commercial evolution which we will outgrow in time. However that may be, it is well to recognize this condition for in it may be found the seeds of most of the present evils in the drug trade.

THE RETAILER NOT THE ONLY FACTOR.

The manufacturers of proprietary remedies seem to have experienced a considerable loss of profit during the past two or three years, and the search for a cause and remedy is only natural. The expense of advertising necessary to sell the goods seems to have risen so as to threaten the relatively narrow margin of profit. There is a feeling that the advertising hitherto always effective no longer has the drawing power that it should have, and for this condition the retail druggist is generally supposed to be responsible. No doubt there is a great deal of drug store substitution—we might as well get used to eliminating the idea of deception and fraud formerly associated with this term—but we are inclined to think that the manufacturers have attached too much importance to this one cause. The remedies now in vogue are only substitutes for older ones, and there are always a host of new arrivals crowding with the energy of desperation to replace them. No popular remedy has ever endured through many generations, and the present favorites must expect to be supplanted sooner or later by others better suited to the tastes and beliefs of the hour. There are also other reasons which may help to account for the changed relations between advertising expenses and sales. The attitude of people toward medicine-taking is changing. Even physicians prescribe less drugs and more of fresh air, and hygiene than formerly. The numerous publications devoting space to the "science of health" are very commonly discouraging the use of medicines and especially the widely advertised secret mixtures. A few of the stronger publications even re-

fuse all advertisements of medicines and editorially advise the people to get along with less draught-drinking. All of these causes must offset the sales of proprietary preparations and for them the retail druggist is in no way to blame; in fact he is a fellow-sufferer from the same causes. It is, however, an excellent stroke of business for the proprietary men to cultivate the friendship of their retail distributors in aiding them to secure living profits. A quid pro quo in the form of reduced drug store substitution in return for protected prices should be very well worth while. In how far all these plans will succeed and have the desired effect remains to be seen.

MR. BODEMANN THINKS DIFFERENTLY.

In a letter which we print upon another page our friend Mr. Bodemann takes us to task for uttering certain rather radical opinions about the agitation for patent law revision. He very charitably excuses what he considers a serious mental aberration on our part by ascribing it all to a disordered liver, and prescribes sundry remedies not found in the pharmacopoeia. We thank the gentleman for his kind intentions, but fear that the treatment suggested would not be advisable in our case. If our remarks have created the impression that we discover any "redeeming features" in Commissioner Allen's report, we have failed utterly in our purpose. We tried to show that that official had viewed the matter from a false view point, but our partisanship did not hide from us the fact that the druggists had themselves obscured the point really at issue. The plea for "suffering humanity's sake" was unfortunate, and it accounts in a measure for Mr. Allen's opinion such as it is, or was—we hope to hear further from that gentleman. We found no redeeming features in his defense of the present patent laws, but did the best we could to point out that they are foolish and antiquated and that they violate every precept of common sense. The Era will continue to examine both sides of every question even at the risk of a reputation for crankiness and hepatic torpidity. As for the C. P., we shall let him fight his own battles. He thrives upon differences of opinion, and is much the better off for an occasional drubbing. We respectfully invite others to "pound him" whenever they feel so inclined.

A REMEDY WHICH ADMITS OF NO TWO OPINIONS.

It has long been a reproach of medicine that the efficacy of the various remedies has too frequently been a matter of opinion. The element of faith in the treatment of disease has prevented the art of therapeutics from taking a place among the exact sciences. Tests upon the living human body are very difficult of control and the results are correspondingly doubtful. It is seldom that a test can be made upon a large scale and carried out to an unqualified conclusion. The medical profession is, therefore, not a little interested in a test of antitoxin under peculiarly favorable circumstances, made last week at the Elmira reformatory in this State. An epidemic of diphtheria broke out in the institution, and in a very short time fifty cases developed resulting in three deaths. A supply of antitoxin was received from the State Laboratory and every inmate of the reformatory inoculated. The effect was instantaneous; the severe epidemic was completely and suddenly checked. Within twenty-four hours after receiving the remedy only two new cases developed, and there have been no more deaths. Here is one remedy about which there seems to be not the shadow of a doubt.

WILLIAM M. WARREN.

"Work, continuous, hard and rapid!" said a former business associate when asked to name the principal factor in William M. Warren's signal success. He possessed in a remarkable degree the other personal qualities which distinguish the successful man of business, judgment, broad view, grasp of detail and diplomacy, but in his case the most conspicuous quality was an extraordinary capacity for work.

Like most men who achieve remarkable success, Mr. Warren began at the bottom of the ladder and forced his way to the top. His rise from the position of office boy in the branch office of Parke, Davis & Co. in this city to that of general manager of the vast business which he occupied at the time of his death, before the age of thirty-nine, is one of those stories which stimulate American boys to industry and enterprise. The beginning of his career in the New York office, his advancement to the position of purchasing agent, the transfer to an important position in the great laboratory in Detroit, his rise step by step as vacancies occurred to the highest position, and his work in developing the business to its present mammoth proportions are recorded in the news columns of the present issue.

It is needless to state that Mr. Warren was a man of great versatility and large grasp. The business which he conducted touches nearly all branches of human endeavor, commerce in all its intricate details, scientific research, progress in professional knowledge and thought, and the important enterprise of making known to the world the discoveries and products of the laboratory. He not only earned the commanding position which he held, but he rose to fill all its innumerable requirements without the loss of any of the sympathetic qualities which rendered him an agreeable companion and endeared him to his employes as well as his employers.

With all of his energy and capacity for hard work, Mr. Warren was a born diplomat. He made use of the ambition existing in the different departments of the great manufacturing plant, and it was when inter-departmental rivalry became too keen that he was at his best. "He had a way of allaying the little frictions," said one of his associates, "and of keeping the whole institution going at the maximum efficiency and with the maximum satisfaction to all concerned, employes and employers, that stamped him a genius."

MR. BODEMANN DISAPPROVES.

Chicago, Nov. 14, 1903.

To the Editor—Your C. P. man and your editorial man seem to have a bilious spell. Let me suggest phosphate of sodium. Or, perhaps, the both of them have gone on a foot, or, if the two are identical—then the one must have gone on a big bendler. Something seems to be "loose"! I take it that you don't care if I am frank; if you do I can't help it, I am that way, anyway.

You seem to kick against the experience clause of most pharmacy laws, because everybody or almost everybody in the trade seems to be in favor of it. What would you put in place of it? Under best circumstances and conditions, nobody should be allowed to act as R. P. until he has had four years' experience. Of course, a high school graduate does pick up more in one year than a soda jerker in five years; a smart boy more in a day than a boy who knows just barely enough to peddle peanuts or wrap up herrings, in a month. That goes without saying! But, even a good high school graduate should have at least four years practical experience. Why not kick at the five years required before immigrants can be naturalized? I claim that I was a better American citizen after I had lived here one year than Herr Most or some other anarchist will be after he has been here twenty years, in or out of the pen.

Don't you know that even all high school graduates are not alike? We in Illinois threw the high school diploma overboard as worthless, because we had some such graduates come before us who could not divide $\frac{1}{4}$ of a grain by 30. So I claim the line must be drawn somewhere. Take a little phosphate, or quit drinking, or go on a tear—do something to stir up the liver.

Now about the patent law. You seem to discover some redeeming features in Mr. Allen's report because nobody else does. Can't you swing yourself up to the height of lofty, sublime ideas of progress and encouragement of research work? Under our monstrous law research is forbidden—under a ban.

Talk about protection! Where does the science of chemistry flourish? Here or in Germany? Germany does not allow patents on articles used for food or medicine—except on processes—and yet all the so-called coal tar preparations are made there—not here! Facts talk! Figures don't lie, but figures do; and that's what I say about the fellows that holley about the so-called protective part of our patent law.

See how it works in Germany without this monstrous protection. All that the coal tar used to be good for was to run it into the gutter. Now, under the patent laws, so widely different from ours, Germany exported in one year \$7,500,000 worth of aniline color to Japan alone, all made out of coal tar. If we really meant what Mr. Allen asserts, encouragement of science, our laws would say, "Go ahead boys, find new methods to make these valuable remedies. We will protect you in each new process, but—we can not allow you an ironclad monopoly over the product itself. We must stimulate research work, and not retard it."

But what does Mr. Allen say: "If you don't feel like paying the price, leave the stuff alone." That sounds so ungentlemanly, so undignified that I will not believe that Mr. Allen himself ever wrote it. His reputation as a broad gauge man makes that unlikely. He must have lent that to some petrified bureaucratic fossil and by mistake signed it in the

rush, just as perfunctory as most men sign petitions or political calls.

You seem to hold that now after Mr. Allen has spoken the jig is up. Why this thushness? Congress can change our monstrous laws, even if this change should not meet with Mr. Allen's approval. Wait till the N. A. R. D. committee calls the committees from the Proprietors, Wholesalers and American Associations together and asks some wideawake congressman to take up the amendment of the law, and see how every last congressman in these United States will be petitioned by his pharmaceutical constituents! Wait till I, your humble servant, appear before that congressional committee and pound sense into their heads, and see if that will not have some effect on Mister Commissioner Allen. Even if he did write that report, as I do not believe, he is not it, the whole thing. There are others.

We can say to Brother Allen, "If you don't like it, you need not, we do it anyway and we are the people who make laws and you execute them."

Yours, W. BODEMANN.

EMPTY CIGAR BOXES—STAMPS MUST BE DESTROYED.

Humboldt, Kansas, November 9, 1903.

To the Editor:—We noticed in the Era of October 1, page 352, an article on a new Federal law to go into effect November 1. We wrote to the Commissioner of Internal Revenue to send us the law and also quoted your article word for word and got a reply showing that you have misconstrued the law in its meaning. The letter from him is as follows:

Your letter of the 23d inst. has been received in which you quote from the Pharmaceutical Era an article to the effect that "Under the Federal law which goes into effect November 1, 1903, cigars must be sold from original boxes which must be destroyed as soon as emptied, and cannot be given away, sold or used for any purpose. The purchaser may now insist upon the dealer handing out the entire box of cigars instead of taking out a handful and putting them on the showcase for the consumer to choose from. The purpose of the law is to prevent substitution, and is intended solely for the protection of the purchaser. No display of cigars, cigarettes or tobacco may be made unless in the original packages."

In reply you are informed that the above quoted article does not correctly represent the views of this office in some particulars. The law does not require that cigar boxes, when emptied, shall be destroyed and not used for any purpose. It only requires that the internal revenue stamp thereon shall be utterly destroyed and that the boxes shall not again be used for repacking cigars. The statement that the "purpose of the law is to prevent substitution" is correct, but that it is intended solely "for the protection of the consumer or purchaser" is misleading. The object of the law is to protect the revenue of the government and prevent the illegal sale of cigars and tobacco separated from the original stamped packages, and upon which no internal revenue tax has been paid.

This office would not regard it as a violation of the law and the regulation if a dealer handed out from an original stamped package a few cigars for a customer to select from provided he returned the cigars not purchased immediately to the same original stamped box from which they were withdrawn.

Respectfully,

J. C. WHEELER,

Deputy Commissioner.

We think it would be well to correct the Era's statement of October 1.

Yours,

HESS DRUG CO.

SHOP TALK

CHOLLY WAS LONG ON CASH, SHORT ON PATIENCE.

Cholly did not have to work in a drug store. His father was the richest man in town. But the boy had got tired of school, and fancied that he wanted to go into business. He hated his father's bank, but thought it would be lots of fun to be a druggist.

Hence Cholly's appearance in our midst. His clothes were much too fine, and he had no definite job. He was merely to "help around," which was also the important position of Jimmy who was small for his age, and wore no clothes worth mentioning.

Jimmy hated Cholly at sight, which was not unnatural, and made several unsuccessful attempts to spit on the newcomer's beautifully blacked shoes during the first five minutes of their business association. But Cholly was a royal good fellow and game, as events proved, and soon won the "kid's" respect.

When the boss arrived at the store, there was a search for work that Cholly might begin on. Jimmy had already washed all the bottles and graduates, but the head clerk, who was a particular friend of Jimmy's, suggested the show-bottles.

Now, perhaps none of you remember those old-fashioned show-bottles, with several cells one above the other. We used to fill them with some organic coloring substance, that deposited a sticky, gummy resinous layer upon the interior of the glass—the very mischief to clean.

Jimmy had dodged that job for weeks. He knew what it meant. Therefore, when he saw Cholly remove his coat and cuffs and carry those same bottles to the sink, his freckled face took on a broad unholy grin.

About the middle of the forenoon Jimmy tip-toed to the back room and inspected the field of operation. The bottles still had the best of it. They still wore a dirty grayish film and Cholly was woefully dishevelled, and from time to time relieving his feelings by swearing softly to himself. But he was game; he was not by any means conquered.

Jimmy's savage little heart softened. He briefly explained the use of shot in scouring the insides of bottles. But Cholly was not expert, and the bottles were heavy.

An unusually violent shake sent one of the globes to the floor. It did not break and Cholly's face bore a strange look of disappointment. He looked hard at his enemy innocently lying on the floor and scratched his head. Suddenly a thought struck him. Jimmy's interest increased.

Cholly pulled down his shirt-sleeves, brushed the hair out of his eyes and marched up to the desk of the boss. Jimmy was near the bursting point with curiosity.

"Mr. B——, how much are those bottles worth?" "Which bottles? Those old show-bottles? Oh, I should say about five dollars. Why?"

In reply Cholly calmly spread out a five dollar bill, and marched less calmly back to his bottles. Then he carefully closed the door and admonished the startled Jimmy to "stand from under."

Then arose an awful din in that back room. Crashes and thumps and shouts of glee seemed to burst from every crack and key-hole. Presently Jimmy's face appeared at the door, with eyes like saucers and hand beckoning, beseeching us to hasten.

There was Cholly, a perfect personification of fury wearing out his beautiful shoes on those detested show-bottles. From one side of the room to the other, under the sink, against the stove and all other hard objects the battle raged, the whole punctuated with yells and grunts of satisfaction. Jimmy was too much dazed to enjoy the sight as he should have done

under normal circumstances. Not until the wreck was fairly complete, did he regain sufficient composure to help trample a few of the larger pieces of glass into bits. After the debris had been cleared away he regained his usual business sense.

"Say!" said he to Cholly. "I would 'a'cleaned 'em for you for a quarter."

The banker's son did not tarry long in the drug business. He is now a banker himself, and a member of the legislature.

HE DOES NOT READ THE ERA.

There were not many drug stores in the town, which explains a lot of things. Our competitors deserve more credit for what we are than we are usually willing to admit.

A man carrying a whip and the atmosphere of horses opened the dingy door of the dingier store.

"Hello, Bill!" said he, "how's biz?"

"Dinged slow!" replied the only occupant of the place, seated upon a rickety chair behind the rusty stove and smoking an ancient cob pipe.

"What'll you have, Jake!" inquired this shirt-sleeved individual, evidently the druggist himself, without removing his feet from the stove.

"Got any of that there Bunkum's Boots Buster?" inquired the customer.

The enterprising druggist unlimbered a long left arm and pointed with the stem of his pipe to one of the upper back shelves.

"Second shelf from the top—about two feet from that partition," said he. "See that can there? Look back of that!"

Bill followed directions and presently walked up to the stove with a faded yellow package covered with dust.

"How much?"

"Four bits," sucking anxiously at the pipe which had come perilously near going out during this absorbing business transaction.

Accepting the bill presented, the druggist straightened out his right leg so as to admit a hand into a trousers pocket, and abstracted the necessary change. No bother there with cash register or books!

"So long, Bill!"

"So long! Say, what's your hurry?" and Druggist Bill had made a sale.

Bill does not read the Era. Why should he?

IF YOU DON'T LIKE IT, GO SOMEWHERE ELSE.

"What is the price of this?" inquired the customer. "One dollar," replied the druggist with an air of conscious rectitude.

"A dollar! Whew!" mildly protested the purchaser turning the package over and over in his hand. "Aren't you just-a-a-little high?"

"No, sir!" replied the druggist, his chin rising.

"But—but, I can get it at Brown's in the city for eighty-five cents."

"You can, eh?" snarled the drug man. "Then let me tell you, that's the place to get it."

The customer hesitated a moment, placed the package on the counter and walked out.

"That's where you lost an opportunity," said I.

"Why?" retorted the druggist disgustedly tearing the paper from the package preparatory to replacing it on the shelf. "D—n 'em! If they think I'm going to hang around here waiting on people for nothing, they're mistaken. This is not the city."

"Very well!" said I. "Still I think you might have saved that customer."

"How? How would you go about it?"

EMIL WALTER.

Emil Walter, now senior non-commissioned officer in charge of the First Reserve Hospital, Manila, P. I., received his appointment December 21, 1893, and ranks No. 52 in seniority on the list of sergeants first class, Hospital Corps, U. S. A. He is a graduate in medicine and pharmacy, is 38 years of age and his army record embraces important service in various Indian campaigns and the Philippines. He has also served at Fort Riley, Kansas and Fort Meyer, Va.

"I would have stated the case to him, simply, clearly, courteously. I would have said something like this, 'I beg your pardon, but you see, this is not the city. In order to be able to keep this place, which must often be a great convenience to you, we are obliged to charge a little more than city druggists. Is it not worth just a little to you that you can get what you want right here at your door, without going to the bother of a trip to the city? Time, convenience, and transportation are worth something, are they not?'"

"I see myself getting down on my knees to anybody," snarled the disappointed salesman. "I'm not here for my health, and if they don't like my prices, they can go hang."

POOR DR. FRY AND HIS "FARMACIA ITALIANA."

Send your sympathy, fellow druggists, to Dr. Walter W. Fry, the Philadelphia druggist, who is thinking of removing the inscription, "Farmacia Italiana," from the Eighth and Catharine street store.

Three months ago gallant Mark Goldberg cooled his ardent passion in Fry's with lemon soda. In his pocket was a thirty-two-calibre pistol. His manner was agitated. Presently Fannie Cohen sauntered along with a reticule on her arm. Mark rushed to the door and beckoned frantically. She entered and ordered a chocolate. Between sips he breathed his love. The girl laughed at his suit, busy with her refreshments. He shot her in the back. This fracas was followed by so many other troubles for the druggist that he was thinking for a time of keeping his heavy iron shutters continually up in protection of windows and bottles. Italians made his corner a rendezvous, stabbed one another and took refuge in the "Farmacia Italiana" with bloody wounds. Dr. Fry has known times when he and his clerks had to huddle behind the counter to escape the hail of missiles directed at some criminal inside. The crowd tried to mob Goldberg, for example, and the young man was dragged from the clutches of vengeful men trying to lynch him in the middle of the store.

Last week it happened again. The doctor was

treating an old woman for rheumatism and nine or ten customers waiting. Bang! came the familiar sound of a revolver, and one of the bulk windows crashed inward on the floor. The old woman felt the breath of the lead on her cheek and the bullet flattened itself on the soda fountain. The old woman was so scared that she jumped from her chair and ran across the store and almost leaped over the counter. Witnesses say she was as lively as a school girl, like a two-year-old goaded by a gally, while she could hardly limp into the place five minutes before.

And the long-suffering doctor cursed his "Farmacia Italiana."

KEEP DOWN FOOLISH PRIDE OR GET A FALL.

"I see your soda water fountain is closed for the season," remarked the Era man to a clerk in a medium-sized drug store.

"Yes, and I'm mighty glad of it," was the reply.

"Glad? Why, didn't it pay?"

"O yes, but don't you see, the boss don't keep any clerk especially for the fountain, and I don't like to be dishing out that stuff just like a four or five-dollar-a-week kid! It isn't very dignified."

The young man's boss heard part of what had been said, and, when the clerk had stepped to the back of the store, he freed his mind to the Era man.

"You see, that young fellow is a graduate of a pharmacy college, and he was insulted when I told him he would have to attend the fountain part of the time. He thought he was hired to put up prescriptions, and feared the result if some of his numerous young lady friends should see him drawing soda. He is a good boy, but his pride will keep him down unless he can get over it. If you are in business for looks you'd better get out before you fall out or get kicked out. The soda department is an important part of the trade and when you can't afford a man for that alone every body has got to turn in and help."

"INSECK POWDER" IS NEGRO'S NAME FOR COCAINE.

A long-legged, hungry-looking negro with sunken eyes and stooped shoulders, among other unmistakable marks of the drug victim, walked into a New Orleans drug store. Without speaking, he looked from show case to show case, and then to the bottles on the shelves.

The druggist watched him for a few moments trying to decide whether he was crazy. Finally he walked up to the negro and said:

"Will you tell me what you want?"

The negro "sized up" the druggist, then said:

"Is you got any insecck powder?"

"What kind? Fleas, chinchies or roaches?"

"Dat aint de kinds I wants. Don't yer know what I means w'en I says insecck powder?"

"I have powders to kill every thing—roaches, fleas, rats, chickens, horses or men. If they won't do, you had better get a gun."

"Boss, yer don't seem ter onderstan' me. What I wants is cocaine. I don't wantter kill no inseccks. What I wants is coke. Gimme two-bits wuth uv it, kase insecck powder ain't gwinter to do me no good."

SENTIMENTS OF HIM WHO DOES IT ALL.

"Is your association to have a clam-bake this fall?" was asked of the president of one of the drug associations up the State.

"No I guess not. No one has started the ball moving and I am tired of getting up everything and doing all the work. I want some one else to do something in association work. I am between the devil and the deep sea. If I am too active, people accuse me of wanting to be "It" all the time. If I do not take the initiative then I get kicked for not doing more. No, if we have a clam-bake some one else will have to get it up. I believe thoroughly in these social recreations, as they teach druggists that others engaged in the same business are not all rascals, as we used to think. If everything is left to the president of the association, there is apt to be a falling off in interest."

FAR AWAY NEW ZEALAND.

A Possible Vague Idea of Primeval Forests and Primate Existence Set Right in a Description of the High Position Pharmacy Occupies There.

To the casual thinker a reference to New Zealand is likely to conjure up vague visions of horrible reptiles, mastodons and aboriginal human beings skulking about through primeval jungles, avoiding and hunting one another. And then the mind will dismiss this picture of paint and feathers and probably never hear nor think of New Zealand again for years and years. Indeed, it is this remoteness from our affairs and through no fault of its progressive self that this combination of these islands of Australasia has become identified in the average mind with cannibalism and Feejee and hippopotami. And pharmacy in New Zealand? Well, there is something to tell about it. Its very advanced condition and the enviable position it holds among the professions should be an index to the general progressiveness of the country—though there is one very big country not far from here where pharmacy cannot be said to be rated as very high professionally.

But before the writer gets too deep in pharmacy he wishes to assure the reader that there are no big reptiles in New Zealand. No snakes, nor toads at all, only a few frogs. This fact is vouched for by Mr. Charles Ratjen, who until he sold his pharmacy a few weeks ago, was the leading chemist of Auckland, N. Z., and who is now in this country on a combined business and pleasure trip.

Mr. Ratjen is at the Broadway Central Hotel. He is a tall, blonde, young Englishman, though a native New Zealander, energetic, prosperous and in speech in no way belaying his nationality. As the Era has lately been talking to its readers of South Africa and India and has several more countries written up ready for their education, its representative asked Mr. Ratjen to help us out with New Zealand, and he consented.

Druggists—"chemists" they are called—are much more prosperous than here. What their education is may be best told in reciting the requirements for registration: A four-years' apprenticeship is required during or before which the prospective pharmacist must pass a heavy preliminary examination in Latin, mathematics, botany and chemistry before he is entitled to appear before the pharmacy board. The pharmacy examination is also severe, comprising chemistry, botany with use of microscope, pharmacognosy, materia medica, etc. The theoretical knowledge is obtained under the auspices of the New Zealand Ph. Soc. in courses at the different universities. A university diploma is not necessary, however, if the candidate can pass the board without it.

New Zealand is naturally divided into three islands—North island or New Ulster, South island or New Munster and Stewart island or New Leinster, and politically it is divided into eight provinces, Auckland, Taranaki, Wellington and Hawke Bay on North island; Nelson, Marlborough, Canterbury, Otago and Westland on South island, and Stewart island is comprised in the provinces of Otago. The board of pharmacy is comprised of members elected every three years from the different provinces, by the pharmacists. New Zealand and New York stand nearly together in this last respect.

It is directly of Auckland, the chief city, that Ratjen talked, though conditions there are pretty much the same as all over the islands.

"Auckland," Mr. Ratjen said, "has a population of about 70,000. Nearly all the business is done on one street, Queen street, which runs through the center of the city. Of the forty druggists of Auckland nearly all are on Queen street. There are no German, French or American chemists among them, but they are nearly all English, with an occasional Scotchman or Irishman. The native Maori population, though

in some cases very rich, have furnished no pharmacists. In Auckland as in America the 'Bobbies' are Irish."

Price cutting is prevalent with patents. For instance Ayer's Sarsaparilla, one of the few American proprietary medicines sold there, costs the chemist about 75 cents and sells for about 80. But the price-cutting is mainly due there, as here, to dry goods and other outside stores, who are allowed to handle patents. In prescription work there is no cutting. The usual prescription is an 8-ounce mixture, with a tablespoonful to a dose or a 6-ounce mixture with a dessertspoonful dose. The price is generally uniformly between 50 and 60 cents, though, of course, if costly ingredients are prescribed the charge to the customer is higher, probably enough to make a profit of 50 per cent., though the chemist dislikes to make his charge more than sixty cents. "But, the physicians write very easy prescriptions," Mr. Ratjen said.

Relations between physicians and chemists are most cordial. The physicians come into Queen street every day and, instead of having their own city offices, meet together in "consultation rooms," in the rear of the pharmacies, and which are provided free by the chemists. Of course, their prescriptions go to the chemist whose consultation room they frequent. Consequently, as Mr. Ratjen puts it: "The one who has the most doctors is the man."

Association work is advanced in most of the provinces, though in Auckland a chronic but undefinable indisposition to get together between the "old fellows" and the "boys," whose views do not jibe on all commercial questions, has just about put the Auckland association at a standstill. Mr. Ratjen looks for a resumption of peace, however.

The usual drug sundries are to be found in the New Zealand pharmacy, but no cigars or soda water. In fact, there is only one fountain in Auckland. For that one its importer paid \$400, but after a few months sold it for \$150 and was "glad to get rid of it." It is now being run by a fruiterer, with small results. The people know nothing about soda water, and, as it is dispensed there by people who know nothing of the art, probably do not care to learn. Mr. Ratjen believes a fountain run as it is here and by an American dispenser would be a success.

That historical gentleman who is chronicled as being a seeker after "one honest man," should have tried New Zealand. Mr. Ratjen very much astonished the Era man by asserting that he never heard of substitution there. The Era man got back at him with a series of surprised shocks when he told him something about board of pharmacy investigations here. It was incredible to him. But the fact that their cutting on patents still leaves a profit and that their prescription work pays handsomely all militate heavily against dishonesty.

There is a sort of supervision exercised over pharmacists by the police department, but official visits of inspection are a rarity. Mr. Ratjen never heard of any law against substitution, he said. Poison laws are strict. Opium sales to the Chinese are absolutely prohibited. Chemists are not allowed to import more than four ounces at a time and have to keep an open register of all opium and morphine sales. Arsenic and strychnine sales have to be reported to the police. Here is where the druggists did catch the law. "The law had been in effect only about a year," said Mr. Ratjen, "and had not been enforced at all. Then one day the bobbies raided the whole blooming city." It cost them about \$2.50 apiece and no further lesson is needed.

Because of an exorbitant import duty of \$6 a gallon on alcohol and a government ban against manufacturing it within the country, pharmacists are unable to make their own tinctures. So they either buy them from England or from manufacturers who manufacture them under bond, and whose rebate makes his tax of one shilling a pound.

Good drug clerks are scarce. A registered man gets from \$12 to \$20 a week and an unregistered clerk from \$8 to \$10. The hours are peculiar. For the

registered man they are from 8.30 in the morning to 9 in the evening, though many nights he is permitted to leave at 6. He has a ternate Sundays off. His Sundays for work are easy, however, as the hours are only in the evening from 6 to 9, except in a few stores which open from 11 to 12, midday, also. These hours would be eminently satisfactory to an American clerk, but there is another advantage—the weekly half-holiday. This is ordered by law. Every dealer is required to close on either Wednesday or Saturday afternoon at one o'clock. The dealer is allowed to choose at the beginning of the year which day he shall observe as half-holiday. If he chooses Wednesday he may change to Saturday. But if he chooses Saturday, Saturday it must remain until the year is up. This is to give as nearly a half-holiday as possible.

On this half-holiday the drug stores may remain open for selling medicines only from one to seven and open all around from seven to nine. During the time between one o'clock and seven the owner is allowed to have only one assistant in the store with him.

According to the registrar's census taken on the night of March 31, 1901, there were 811 chemists and druggists and assistants in New Zealand, against 656 at the previous census in 1896; of this number 56 were females. Among the above figures are included 393 male chemists and druggists, and 11 female; 218 male assistants, and 24 female; 10 male clerks and one female; 14 male messengers, 1 salesman, and 11 saleswomen. Persons holding diplomas from colleges of pharmacy or registration papers from boards of pharmacy of other countries must pass the New Zealand pharmacy examination before they are allowed to practice.

In 1902, the value of imports in pounds sterling of New Zealand was as follows: Drugs, medicines, chemicals and druggists' ware, 370,922; opium, 98; castor oil, 17,628; photographic goods, 29,135.

Mr. Katjen, in the brief space of seven years since he established his pharmacy, raised his business until it was the largest in the pharmacy line in Auckland. His selling was largely prompted by a desire for shorter hours, though a purpose to go into a big industrial venture with a few of his friends had something to do with his decision. His trip here is largely for the purpose of obtaining machinery for the proposed industry.

Use Good Paper.

If a merchant fully realizes how frequently his business standing is judged by appearances he will never make the mistake of sending out poor printed matter. Bad printing and poor paper may completely destroy the good effect that a well-written circular or booklet would otherwise have. This is not surprising, for the person who receives printed matter from a stranger is sure to have his opinion of it influenced by its appearance. He may be unconscious of this influence, but he will be affected by it all the same. The same principle holds good with regard to business stationery. A tastefully well-printed letterhead on good paper is in itself a letter of introduction, and one that conveys a good impression.—The Retailer and Advertiser.

Every merchant should realize that his advertisement is practically an invitation to the public to visit his store. Some advertisements are even more than that, for they not only invite the public to come, but they promise them a specific reward for coming. The trouble with some merchants is that they forget that the people who come in response to their invitations are the guests of the store while in it, and should be treated accordingly. It is true that they may be influenced, in part or entirely, by motives of personal interest, but they are none the less guests of the store and have every right to expect courteous treatment. And it is also true that if they fail to receive the courtesy and attention to which they are justly entitled their first visit may also be their last.—The Retailer and Advertiser.

THEORY AND PRACTICE

RAPID TEST FOR CURCUMA IN POWDERED RHUBARB.

Giachino Triggs (Boll Chim Farm) recommends a new method for the detection of curcuma in powdered rhubarb. He states that it is much more simple, certain and satisfactory than that given in the Swiss pharmacopoeia which is the only test of this kind official in any country. One gram of the powder is rubbed in a mortar with 1 gram powdered boric acid. The mixture is placed in a porcelain evaporating dish, moistened with 0.6 gram dilute sulphuric acid, and carefully heated with constant stirring of the semi-liquid mass. Under this treatment, pure rhubarb acquires a light brown color which gradually becomes more pronounced and finally, upon long continued heating, passing into gray. When curcuma is present, the mass assumes a dark purple red color probably due to the conversion of curcumin into rosocyanin. The addition of a little ammonia to the cooled mixture yields, in the case of pure rhubarb, the color usually produced when this drug is treated with alkalis, while in curcuma mixtures the color formed is a blue gradually changing into a dirty gray.

A COD LIVER OIL STORY.

A correspondent sends to the Chemist and Druggist an account of a cod liver oil transaction which he obtained first hand from one of the interested parties, the truth of which he guarantees. It appears that one of the largest refiners in Norway consigned a number of barrels of cod liver oil to a large wholesale house in London. A rival firm in the same town, knowing of the transaction, and being short of oil to fill certain contracts, sent a representative to Hull, who traveled in the same steamer as the oil. This representative saw the casks loaded for London, after which he took an early train, and saw them loaded into the railway van in London. He then followed them to their destination, bought them from the purchaser at a large profit to the seller, and consigned them back to Hull, afterwards taking train himself and traveling in the same steamer back to Norway, of course delivering the oil to his own firm. This incident shows the extreme nature of the Norwegian cod liver oil famine, and the desperate measures adopted by some of the refiners to fulfil contracts.

ACTION OF IODINE AND IODOFORM UPON ALBUMEN.

C. H. L. Schmidt (Dtsch. med. Wchschr.) states that, contrary to the findings of Kobert and Altenburg, albumen solution possesses the power of decomposing iodoform although it is difficult to detect free iodine in such mixtures by means of starch. To determine the separated iodine it is necessary to employ means for breaking up the combinations with albumen. The decomposition of iodoform is probably caused by the basicity of the albumen. When albumen or its more closely related decomposition products are treated with an excess of iodine a reaction for one of the iodine acids may always be obtained. Iodine in the nascent state abstracts hydrogen from albumen, hydriodic acid being formed and the albumen hydrolyzed at the expense of the water present. Blood, pus, hydrocele fluids, and albuminous and normal urine, all separate iodine from iodoform at blood heat. This process is assisted in the blood by biologic influences.

INFLUENCE OF LIGHT UPON CHEMICAL CHANGES.

Cannecian and Silber (Berichte) report the results of a study of the effect of light upon chemical changes in a number of chemical compounds. The light was permitted to act upon the substance during

an entire Summer. Benzaldehyd was mostly converted into a resinous polymer, a little benzoic acid also being formed. Benzaldehyde and benzyl alcohol formed, besides some resin, hydrobenzoin and isobenzoin of melting point 121 degrees. Benzophenon and benzyl alcohol yielded benzopinakone of melting point 186 degrees, hydrobenzoin, isohydrobenzoin and resin. Benzophenone and formic acid remained unchanged with the exception of a small portion converted into resin. In mixtures of opianic acid and ethyl alcohol the light favored esterification, and the pseudoester of opianic acid of melting point 92 degrees being formed. Acetone in imperfectly closed flasks was oxidized to formic and acetic acids. In bulbs closed by fusion water under the influence of light separates the ketone into acetic acid and methane.

CONSTITUENTS OF IPEACAC.

Carl Lovin (La Presse Med.) has studied the action of the two alkaloids of ipeacac upon the blood, the heart and other organs of the body. He concludes that emetine and cephaeline are poisons having a paralyzing action on the heart. Emetine has the more marked action upon the heart while cephaeline has the stronger poisonous effect upon the kidneys. Upon the lungs emetine seems to have no undesirable effect while cephaeline in some cases produces some irritation. The emetic action of ipeacac is due to these two alkaloids, cephaeline being the most active although emetine has usurped the name. The different varieties of the drug vary greatly in emetic power. Rio ipeacac contains .45 per cent. emetine and .52 per cent cephaeline, while the variety known as Carthagea contains .89 per cent. and 1.25 per cent. of these alkaloids respectively. The latter is as an expectorant about twice as active as Rio ipeacac.

INDIAN HEMP PREPARATIONS.

L. W. Famulener and A. B. Lyons (Proc. A. Ph. A.) find that the only reliable preparations of cannabis-indica are the extract and fluid extract. These preparations were both found to be stable and could be depended upon if made from fresh Indian hemp of good quality. The tincture also appeared to be stable, but it seemed to contain a needless amount of alcohol and to possess no advantage not offered by the fluid extract. Most of the preparations claimed to contain the active principles of cannabis-indica in a concentrated form were practically inert, and not one of these products could be recommended. A few possess a fair amount of activity, but these are relatively far more costly than the official preparations. Most of the powdered preparations of the drug were also found to be inert, the material in this condition being too easily oxidised to be of value. The physiological method of assay was found to be the only practical one, but it yielded results sufficiently exact for all practical purposes.

TESTS FOR NITRIC ACID.

W. Wobbe (Apot. Zeit.) gives several reasons why the ferrous sulphate test for nitric acid in sulphuric acid should not be replaced by the diphenylamin test. While the latter test is admitted to be far more satisfactory than the former in many respects, the author declares that the reaction can not be accepted as absolute proof that nitric acid is present. Diphenylamin gives a similar reaction with a number of bodies which readily yield oxygen, a fact which does not seem to be generally known. Thus a sharp color reaction is obtained with nitrous acid and chloric, iodic, bromic and selenic acids as well as with nitric acid. Ferric salts also give the reaction with this reagent and it is for these reasons that the ferrous sulphate reaction has been retained in the German pharmacopoeia.

DISODIUM PHOSPHATE TO DISTINGUISH ALKALOIDS OF CINCHONA.

J. Messner (Pharm. Zeit.) employs a solution of disodium phosphate to distinguish between the four

principal alkaloids of cinchona. He finds that the neutral chlorides and sulphates of the alkaloids differ distinctly in their behavior toward a 5 per cent. solution of the salt. Ten Cc. of one per cent. solution of the alkaloidal salt are treated with three or four drops of the reagent. An immediate and permanent precipitate is given by cinchonine; no change is shown by cinchonidine; and a temporary turbidity indicates quinine or quinidine. If the last two alkaloids are present, another 10 Cc. of the solution are treated with a few drops of 25 per cent. hydrochloric acid. This acid mixture gives with an equal volume of the reagent a crystalline precipitate in the presence of quinine, but remains clear with quinidine.

TO AVOID THE EMETIC EFFECT OF IPEACAC.

Dr. W. Roberts (La Sem. Med.) overcomes the emetic effect of ipeacac, a serious objection to the use of this drug in large doses in dysentery, by administering in the form of pills coated with salol. The author employs pills containing 5 gram of ipeacac, and which after thorough drying are given a coating of salol, by plunging for a few seconds into a bath of this body rendered liquid by means of heat or dissolved in ether. Pills treated in this way pass through the stomach unaffected by the gastric juice, but dissolve readily in the fluids of the intestinal canal where the ipeacac is in position to exert its anti-dysenteric power without producing emesis.

A STABLE COCAINE SOLUTION FOR LOCAL ANESTHESIA.

A. P. Krymow (Vratch) prepares a cocaine solution for use as a local anaesthetic by pasteurizing for three hours at 60 degrees. The cocaine is best dissolved in sterilized water and the solution then placed in flasks and sterilized. The growth of fungi and bacteria in the solution may also be prevented by boiling but this treatment impairs the activity of the alkaloid. Boiled cocaine solutions lose strength in time, their anaesthetic power being less than that of pasteurized solutions and the effects being of shorter duration.

PHOSPHORATED OIL.

Kremel (Zeit. d. A. O. A. Ver.) states that for retarding the oxidation of phosphorus in phosphorated oil the addition of absolute alcohol is most effective. He also prefers olive to almond oil as a solvent. The phosphorus is dissolved by agitating in the warm oil and 5 per cent. of absolute alcohol is then added to the cooled solution.

SURINAM COPAIBA.

For two years past there has been imported into Holland in small quantities from Paramaribo, a copaiba which is as fluid as that of the Para balsam, although on filtration it becomes a little thicker. It is now expected that it will soon be placed on the European markets in considerable quantity, forest concessions having been granted in Surinam for its exploitation.—Ind. Mercur, Pharm. Journ.

FOMITIN.

Rosenbaum (Der. prakt. Arzt.) describes a preparation known as fomitin, said to be a fluid extract of the fungi Fomes cinnamomeus and Fomes ignarius which occur on species of Prunus. The extract is said to be entirely without general effect, its action being limited strictly to the spherules of Beck, yet its influence upon the gastric processes is marked.

ISAROL.

A product derived from ichthyol and known as isarol (Bull. des Sci. pharm.) is a red brown liquid containing from 8.5 to 9.5 per cent. of sulphur and 43.7 per cent. of matter soluble in benzine. It has the same medicinal properties as ichthyol and is slightly lower in price. It is soluble in water and partially soluble in alcohol.

HOWARD ANTHONY PEARCE, Providence, R. I.
Secretary Rhode Island Board of Pharmacy.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulae and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Saturated Solutions.

(S. B.) A solution is said to be saturated when it has dissolved all of the substance that it is capable of taking up at a given temperature. Of course, the amount of moisture in a salt varies somewhat and the resulting solution may not always be quite the same, but for ordinary work in dispensing the variation may be overlooked. A saturated solution of potassium iodide is made by dissolving the salt in water until that point is reached when the water will dissolve no more. The ratio of this solubility is stated by the Pharmacopœia to be 1:0.75, that is, 1 part of potassium iodide will dissolve in 0.75 part of water. The respective quantities of salt and water necessary to produce a saturated solution measuring exactly 1 fluid ounce can be arrived at only approximately. The correct method is to take proportional quantities of the salt and water and make a solution which will produce a volume a little greater than that you really need. Then measure out one fluid ounce. From actual experiment Caspari has determined that a saturated solution prepared at a temperature of 15 degree C. by dissolving 46 grams of potassium iodide in 100 Cc. of water, measured at 12 C.

these data and the explanations given in any text book on pharmacy you should have no trouble in preparing any saturated solution.

Calcium Biphosphate.

(D. R.) Under this title acid phosphate of calcium is official in the French Codex. The formula follows:

Calcined bone	500 grams
Sulphuric acid (Codex).....	500 grams
Distilled water	q. s.

Reduce the bone to a fine powder; mix the powder with twice its weight of water so as to form a homogeneous mass, pour upon this mixture little by little the sulphuric acid, stirring constantly with a wooden spatula. Heat the mass until much carbon dioxide has been evolved and it becomes nearly solid. Reduce the mixture to the consistency of a liquid paste by adding fresh portions of water, and set aside for 24 hours. At the end of this time mix carefully with boiling water and place the whole upon a cloth; wash the residue until the liquid which passes through is no longer sensibly acid. Evaporate the clear liquid to the consistency of a rather thin syrup; allow to cool completely, separate by decantation the liquid from the sulphate of lime and wash the residue with a little cold water, which add to the decanted liquid. Evaporate to a syrupy consistency; the acid phosphate of lime will crystallize upon cooling in pearly plates.

This salt is very deliquescent; it yields a yellow precipitate with nitrate of silver.

Excise Requirements for Druggists in New York.

(Pharmacist) We think the following explanation of the excise requirements sent out some time ago by the Kings County Pharmaceutical Society to its members answers your inquiry: "United States internal revenue tax, \$25; State excise, \$7.50, bond, about \$5; book containing 100 stamps, \$10. Compliance with all of these provisions will enable the pharmacist to sell liquors, in quantities not exceeding one pint, not to be drunk on the premises, only one sale to each person during 24 hours. Each sale to be registered on stub in the stamp book which must be kept open for inspection by any State or peace officer. The sale of any fractional part of a pint requires the same stamp and same registration, as above indicated. Stamp must be affixed over the cork and neck of the bottle, so that removal of the cork destroys the stamp." See also this journal for April 23, of the present year, page 430.

Chocolate-Coating Tablets.

(Subscriber) "Please state in your next issue a practical method by which tablets of tablet triturates may be chocolate coated on a small scale."

Tablets may be coated by rolling them in finely grated chocolate and applying a little heat. The process is not entirely satisfactory, however. A better method, it is said, is to moisten the tablets with a little mulling of cacao and roll them in powdered cacao until evenly coated. When dry, the tablets are to be rotated in a paste-board box with a little grated cacao butter, while slightly heated by the whole over a small flame. The tablets thus acquire a polish.

Unguentum Aegyptiacum.

(F. F. M.) This ointment was official in the London Pharmacopœia of 1721, and has subsequently received the following synonyms: Mel Aegyptiacum, Lond. 1746; Osmel Verucinis Lond. 1788; Dub. 1807; Osmel Cupri Acetatis, Dub. 1826; Limentum Verucinis, Lond. 1836; after which time it was dropped. The last formula was: Veridrigs, powdered, 1 ounce; vinegar, 7 1/2 ounces; honey (despumated), 14 ounces, dissolve the verdigris in the vinegar, and strain through a linen cloth; afterward the honey being poured in, boil down to a proper consistence.

NEWS DEPARTMENT.

NO DELAY IN ORGANIZING.

Washington Promise Committee is at Work.—Organization Will Be by Sections of the United States, with a Vice Chairman in Charge of Each Section.—Work in This City.

Without a day's delay the carrying out of the program for fulfilling their promise made at Washington to the N. A. R. D. has been entered upon by the twelve big proprietary firms. Organizers are already in the field.

The story of the special three day's meeting in this city last week of the Proprietary Association of America, was printed exclusively in this paper, and created great interest among the trade, the retail branch, of which while awaiting results, are highly gratified over the stand taken at the meeting by Messrs. John C. Gallagher and Charles Rehffuss of the N. A. R. D. executive committee, and their straightforward insistence that the proprietors carry out their promise without in any way involving the N. A. R. D. in responsibility for its success or failure.

Last Week's Era fully described this meeting, the largest ever held by the proprietors, which the New York jobbers were called in and promised co-operation along the lines of the plans of the twelve manufacturers and the tripartite plan.

At the second meeting with the manufacturers last week, the New York wholesalers, two of whom had been unavoidably absent from the meeting of the day previous, were unanimous in expressing hearty co-operation with the plans of the proprietors. They offered many suggestions of value in promoting the work of organizing, and Albert Plaut of Lehn & Fink, pointed out to the manufacturers the adverse conditions with which New York jobbers had to contend, conditions of which the manufacturers had previously known nothing. The meeting closed with a cordial feeling between the jobbers and manufacturers that is highly favorable to the plan.

Dr. Pierce Describes the Information Bureau.

Many of the proprietors stayed in the city after the close of the meeting. F. W. Schumacher of the Peruna Drug Mfg. Co. ex-chairman of the Washington Promise committee, and Dr. V. Mott Pierce, chairman; Harry L. Kramer and President D. S. Chamberlain, were to be found at the Waldorf nearly all of the week. Said Dr. Pierce to an Era representative:

"The first result of the meeting was the disposition, which seemed unanimous, to have a central information bureau, for giving out news of conditions of trade in various cities, like Bradstreet or Dun, with more particulars concerning demeriters of trade and substitution. This will make information more thorough in detail, and benefit not only the manufacturer but the jobber. It is hoped that the jobber will join the manufacturer in subscribing to the information bureau."

For this bureau, the manufacturer, at the special meeting, voted \$25 a member. Mr. Wooten will have charge of the bureau, giving the information obtained through the old channels.

"Next in importance, I think," continued Dr. Pierce, "was the enthusiastic disposition in respect to co-operation and friendly intercourse. The fact is that the membership was weighed down by indifference as to co-operation, and jealousies. But now it looks as if a

change had taken place. The members have grown out of this feeling of apathy. This is due to the more progressive spirit of modern business and thought.

Success Depends Upon the Retailer.

"Now, as to the Washington Promise Plan—I think that is a pretty good name for it, don't you?" (The Era named the plan). "We will succeed just so much as we have the co-operation of the retailer. He is the important factor in our plan."

Dr. Pierce then explained the general program for organization. The United States will be divided up into several large divisions. A prominent proprietor or proprietors, in each division will send out his own men to investigate the conditions in the various cities in his section, and, as vice-chairman of the Washington Promise committee, will endeavor to improve these conditions by price organizing. Of course with the tripartite behind him. As explained last week, the larger retailers will be asked to fix the minimum schedule, which will include the goods manufactured by the twelve proprietors now pushing the plan, and by such other proprietors as may join this original dozen. Geographical situation will largely decide the apportionment of the districts to the vice-chairmen. For instance, Dr. Charles H. Stowell of Ayer's, might see to New England with Mr. Gove of Pinkham's. George A. Newman of the California Fig Syrup Co., might have Kentucky, and R. E. Queen, general manager of the company might have California, his headquarters being in San Francisco, while Mr. Newman's are in Louisville. Dr. V. Mott Pierce of the World's Dispensary Medical Association, may look after New York State and Pennsylvania. Horlick's Food Co. to look out for Wisconsin, Mr. Schumacher of Peruna, for Ohio, etc.

The manufacturers now belonging to the Washington Promise committee are the Peruna Drug Manufacturing, Horlick's Food, Chamberlain Medicine, Piso, California Fig Syrup, J. C. Ayer, Paris Medicine, Dr. Shoop Family Medicine, Alcock Manufacturing, Lydia E. Pinkham Medicine and Himrod Manufacturing companies, the World's Dispensary Medical Association and the Chattanooga Med. Co. of Chattanooga, Tenn. Dr. D. Jayne & Son are already in conditionally, virtually increasing the membership to fourteen, and Mahlen N. Kline of the Smith, Kline & French Co., Philadelphia, telegraphed his firm's intention to give \$25 a month toward organization.

Mr. Schumacher and Mr. Kramer Talk.

Mr. Schumacher told the Era representative that he could not take the chairmanship again because he is going abroad in May to see his aged invalid mother, who has his promise that he will visit her, a promise that he feels he must keep at all events. But, he says, he will be back to the N. A. R. D. meeting next year, and will then show results of ten month's work.

Colonel Harry L. Kramer said:

"The retail druggist is the distributor of the manu-

BEL-CAP-SIC CALENDAR OFFER NOW READY

SEND FOR SAMPLE CALENDAR AND PARTICULARS

J. M. GROSVENOR & CO.

148 Pearl Street, - - - BOSTON, MASS.

facturer's goods. Therefore, as matters of both business policy and principle, the only square thing for the manufacturers to do is to protect the retailer's interests. How this is best done is a great question. Certainly no great result can be accomplished involving the interests of 10,000 retail druggists, 500 jobbers and 300 manufacturers, whose business alone amounts to \$150,000,000 a year, without organization. The net result of the meeting at Washington is great, but it is not the result of the meeting, but of the education and growth and development of organization of the last five years.

"The proprietors who are undertaking to improve conditions are enthusiastic and honest. That's a long step in the right direction. And they're up against a hard proposition. But they have started work, putting their money and brains into it, which means a great deal with anything like fair co-operation on the part of the retailer. Results will be slow. Demoralization has got under a great headway and must be stopped before there is an upward movement. Every retail druggist should come right up to the full meaning of his own duty by going over every article in his stock, marking up prices when they have been cut to the fullest possible limit.

"People Don't Take Medicine Because It's Cheap."

"Cut prices do not create legitimate demand. People don't take medicine because it is cheap. What is the use, after the business is created and the money to pay a fair and legitimate profit is in the hands of the customer, of throwing that profit away? Competition among retail druggists should never be in quantity. Every time a druggist sells in quantity he is destroying his own business. Cut out quantity. It is not the basis of competition. People don't demand it. Give them just as little as you can for as big a price as you can get, and make up the difference in a nice, clean, prosperous-looking store, a good smile and excellent quality of drugs. Cut down the quantity one-half and you largely increase business and profit.

"I hope that every retailer will co-operate with the proprietors who are interested in this work by advancing the prices and handing out the medicine of a proprietor who is trying to help him when it is asked for. The wholesalers are with the movement. They originated the tripartite plan which it is now aimed to strengthen."

Mr. Gallagher of the N. A. R. D., said this was the first proprietary meeting at which he had seen any real work accomplished. He asks the retailers' co-operation and says he believes if this plan fails the proprietors will never bother with another.

GATHERING CORRESPONDENCE OF EMINENT PHARMACISTS.

The Historical Committee of the A. Ph. A. has undertaken the collection of the correspondence of such men as Procter, Squibb, Maiesch, Rice, and others. Persons who are in possession of letters from these men or of other representative men of American pharmacy and who are willing to have them deposited in the archives of the A. Ph. A., are requested to send them to the committee in order that they may be properly mounted, classified, and bound.

The committee has secured paper and covers of standard size, so that the volumes of correspondence when completed will constitute a uniform library. Persons who are willing to aid in this work by collecting the correspondence of any one man, who has rendered conspicuous service to American pharmacy in his day, should apply to the chairman for standard paper and covers. The committee hopes to make a creditable showing at the Kansas City meeting next summer.

Letters may be sent to one of the following persons,

or to the chairman, at Madison, Wis.: Procter letters to A. E. Elbert, Chicago; Maiesch letters to M. I. Wilbert, Philadelphia; Rice letters to Miss Adelaide Rudolph, Case Library, Cuyton Building, Cleveland, O.

NEW PURE FOOD LAW.

Senator McCumber Hopes to Have It in Force by January 1.—Dr. Wiley Endorses It—What It Provides.

A new pure food and drugs bill has been introduced in the Senate by Senator McCumber and was formally referred back to his committee, the Senate committee on manufactures. It is a wide departure from and much less cumbersome than the Hepburn-McCumber bill of the last Congress, which was killed by a substitute bill, which in turn died on the Senate calendar.

In the new bill, Senator McCumber has heeded the suggestions of several prominent drug houses, in changing the old definition of adulteration, in which all drugs differing from the standard laid down in the Pharmacopoeia came under the penalty, a definition that was faulty because it discredited concentrated products above the standard in strength, and articles specifically labelled as one-half strength.

Senator McCumber intends reporting the bill out of committee as soon as possible, desiring it to become effective on January 1, which, he believes, will give those concerned ample time to prepare for it. Dr. Wiley will use his influence with Representative Hepburn to induce him to adopt the text of the McCumber bill for introduction into the house, so that the measure may be advanced simultaneously, and its ultimate passage thus expedited.

Offenses of Which the Law Shall Take Cognizance.

The introduction into any State or Territory or the District of Columbia from any other State or Territory or the District of Columbia, or from any foreign country, or shipment to any foreign country of any article of food or drugs which is adulterated or misbranded within the meaning of this act is hereby prohibited, and any person who shall ship or deliver for shipment from any State or Territory or the District of Columbia, to any other State or Territory or the District of Columbia, or to a foreign country, or who shall receive in any State or Territory or the District of Columbia from any other State or Territory or the District of Columbia or foreign country, or who, having received, shall deliver in original unbroken packages for pay or otherwise, or offer to deliver to any other person any such article so adulterated or misbranded within the meaning of this act, or any person who shall sell or offer for sale in the District of Columbia or the Territories of the United States such adulterated or misbranded foods or drugs, or who shall export or offer to export the same to any foreign country, shall be guilty of a misdemeanor, and for such offense be fined not exceeding two hundred dollars for the first offense, and for each subsequent offense not exceeding three hundred dollars, or be imprisoned not exceeding one year, or both.

This is the Method of Conducting Examinations:

The chief of the bureau of chemistry in the department of agriculture, shall make or cause to be made examinations of specimens of foods and drugs offered for sale in original packages in the District of Columbia, in any Territory, or in any State other than that in which they shall have been respectively manufactured or produced, or from any foreign country, or intended for shipment to any foreign country, which may be collected from time to time in various parts of the country.

It shall be the duty of every district attorney to whom the secretary of agriculture shall report any violation to cause proceedings to be prosecuted without delay.

What the Term "Drug" Includes.

The term "drug" shall include all medicines and preparations recognized in the U. S. Pharmacopoeia for internal and external use; also any substance intended to be used for the cure, mitigation or prevention of disease.

What the Term "Adulteration" Means.

First:—When a drug sold under or by a name recognized in the U. S. Pharmacopoeia, differs from the standard laid down in the Pharmacopoeia; Provided, no drug shall be deemed to be adulterated under this provision if the standard of strength, quality or purity shall be plainly stated upon the bottle, box or other container thereof, although such standard may differ from that determined by the test laid down in the Pharmacopoeia.

Second:—If its strength or purity fall below the professed standard under which it is sold.

What is Meant by Misbranding.

First:—If it be an imitation of or offered for sale under the name of another article.

Second:—If the package containing it or its label shall bear any statement regarding the ingredients or the substances contained therein, which statement shall be false or misleading in any particular, or if the same is falsely branded as to the State or Territory in which it is manufactured or produced.

The Administrative Sections of the Bill.

Section 6 provides that persons who manufacture or offer for sale drugs designed to be transported from one State to another shall be required to furnish samples upon demand. Section 7 makes a refusal to do so a misdemeanor punishable by fine not exceeding \$100, or imprisonment not exceeding 100 days, or both. Section 8 gives the U. S. District Courts jurisdiction over such offenses and provides that adulterated or misbranded goods may be seized and confiscated; but "This act shall not be construed to interfere with commerce wholly internal in any State nor with the exercise of their police powers by the several States."

AMONG THE BOWLERS.

New York Bowling in Fair Shape.—Philadelphia Just Starting Out.—Warm Work in Detroit.—Baltimore Contest Very Uneven.

For want of space last week bowling news was crowded out. So there is a double allowance this week. New York's tournament is nicely on and Philadelphia begins on Tuesday of this week. In New York it seems to be a case of one, two, three in nearly all the series. This is New York's record for their first night of the season, giving team and highest individual scores:

Bruen, R. & Co.	794 791 759	Lauman & K.	680 767 632
Norris	177	Thomas	200
Sharp & D.	801 761 739	Natl' Lead.	715 731 794
Doerr	183	Keuble	203

Last Saturday's games turned out:

Seabury & J.	850 854 871	Roessler & H.	836 816 727
Lov's	194	Walsh	186
P. D. & Co.	805 797 838	Dodge & O.	716 776 709
Brunn	193	Robertson	188

Standings:	W. L.	W. L.	
Bruen, R. & Co.	3 0	National Lead.	1 2
Seabury & J.	3 0	Lauman & K.	0 3
Parke, D. & Co.	3 0	Roessler & H.	0 3
Sharp & D.	2 1	Dodge & O.	0 3

Philadelphia, November 17.—Officers of the Philadelphia W. D. T. B. L. are: President, J. Elwood Lee; vice-president, E. S. Thorpe; secretary, C. S. Welles; treasurer, C. P. Donnell. The teams comprising the league are J. Elwood Lee Co., Conshohocken; Johnson & Johnson, New Brunswick, N. J., and the following Philadelphia teams: Smith, Kline & French Co., Wanderers; Philadelphia College of Pharmacy, Philadelphia Retail Drug Athletic A. "Blue" team and "Red" team; Hance Bros. & White.

The games are scheduled to be played on Tuesday evenings except the special schedule arranged for the Johnson & Johnson, New Brunswick, team, which will have to be played on Saturday afternoons. The schedule concludes on May 10.

Baltimore, November 9.—Baltimore's teams, except the Calvert Drug Co., moved closer together. The Stanley & Brown Drug Co. five, which needed a few games, fell afoul of the Calvert Drug Co.'s quintet, and, like other teams, succeeded in fattening its percentage by taking all three games. The Root & Herbs, who have taken on a great spurt, rolled up 915 in one contest. The scores made last week and the highest individual averages are as follows:

McC. & Co.	826 806 812	Sharp & D.	700 700 782
W. Smuck	178	Dickson	162
Stanley & B.	753 755 757	Calvert Drug.	648 638 700
Verdenberge	172	Elliott	155
Root & H.	875 773 915	J. B. & Son.	791 838 845
Kabernagle	189	Byers	177

Baltimore, November 17.—Perhaps the most notable feature of the contest last week was the victory of the Stanley & Brown team over that of the Calvert Drug Co., although the former had only four members on hand to do battle. One of the most effective members of S. & B., Mr. Lockwood, who had dropped out last season, is again in the ranks and must be regarded as a tower of strength. The team scores, highest individual average and standing of the teams are as follows:

McC. & Co.	852 762 830	Sharp & D.	794 784 819
W. Smuck	177	Dohme	179
Stanley & B.	643 620 581	Calvert Co.	631 592 598
Lockwood	172	Miller	137
Jas. B. & Son.	751 906 862	Root & H.	811 768 843
Fairley	195	Cann	168
	W. L.		W. L.
James B. & Son.	13 5	Root & Herbs.	8 10
McCormick & Co.	12 6	Sharp & Dohme.	8 10
Stanley & Brown.	9 9	Calvert Drug Co.	17 1

Detroit, November 10.—The Parke, Davis & Co. team, by remarkable bowling, have won all their games so far scheduled this season. The team and highest individual scores for each game were:

P., D. & Co.	759 808 848	Stearns	672 683 744
Smith	209	O'Donnell	169
F., W. & Co.	682 684 678	Ingram Co.	675 752 768
Moffatt	171	Mannance	187
M. D. Co.	793 821 893	N. B. & Co.	882 782 740
Hedges	221	Hillman	211

Unusual interest was shown in the games of the Parke, Davis & Co. Interdepartmental League last week, owing to the fact that the first series is about played, and as all expect a marked change in the standing of the teams. Birnbaum of the General Business team, led with the high score of 255. The standing of the teams is:

Chemical	16 2	General Business	8 10
Pharmaceutical	10 8	Publication	8 10
Stock	10 8	Mechanical	6 12
Scientific	9 9	Canadian Laboratory	5 13

Detroit, November 17.—Seasonal playing last week! Parke, Davis & Co.'s unbroken record was scattered by the Michigan Drug team, who took one game from them. The scores by games and the highest score in each series were:

Parke, D. Co.	813 886 877	Mich. D. Co.	826 790 750
Lawrence	210	Pulver	189
Squires	210		
F., W. & Co.	668 643 636	N. B. & Co.	727 844 731
Gendallitis	152	Walsh	210
F., F. Ingram.	823 747 778	F. Stearns.	785 750 853
Smith	200	Reinhold	203

The standing of the clubs:	W. L.	W. L.	
Parke, Davis & Co.	11 1	F. F. Ingram & Co.	5 7
Mich. Drug Co.	8 4	F. Stearns & Co.	5 7
Nelson, Baker & Co.	6 6	Par., Wms. & Clark.	1 11

WILLIAM M. WARREN DEAD.

He was General Manager of Parke, Davis & Co., a Position which He Reached, Step by Step, from the Humble One of Office Boy.

William M. Warren, general manager for Parke, Davis & Co., died on Wednesday of last week at his home, 151 Lafayette avenue, Detroit, as the result of spinal trouble, complicated with an affection of the stomach.

Three months ago, in August, Mr. Warren developed symptoms of ptomaine poisoning, contracting a persistent, low fever. To regain his strength he went to Hot Springs, Va., from which place he was called back to Detroit to the funeral of his father, afterward going to Atlantic City. Two weeks ago he returned to Detroit, but on his way, at Utica, this State, he had an attack of acute indigestion, falling to the floor. This fall aggravated an old spinal trouble, the outgrowth of breaking a muscle in the back five years ago. Spinal meningitis ensued and his death came after great suffering.

William M. Warren's personality and life both commanded respect, admiration and affection. The story of his career is inspiring. He was born in 1861, at Smith Station, Ma. Later his parents moved to Elizabeth, N. J., and, at the age of 16, the young man left his school books for the employ of Parke, Davis & Co., at their New York office.

He stayed with the firm and grew into it. He wore overalls and swept out the office. But he did that humble work so well that men above him believed it to the firm's advantage to increase his responsibilities. In six years he was general purchasing agent for the New York branch. His abilities made him desirable in the main office. There he worked in the laboratories and on the road. In 1888 he was made manager of the traveling service. In four years more he was, in addition, manager of the general business department, with the title of assistant manager. In 1897 the directors completed the work of the man who had taken the broom out of the hands of the office boy. Mr. Warren became general manager of the entire immense business.

His training was as thorough as his rise was rapid. Neither pharmacist nor chemist himself, he hired scientists and kept in touch with their work. He was also a diplomat. When rivalry between departments—each ambitious to make the greatest showing—occurred, Mr. Warren knew how to allay the little frictions and keep the whole institution going at the maximum point of efficiency.

Mr. Warren married Miss Mary C. Buhl, daughter of Theodore H. Buhl, president of the company, who recently died. Mrs. Warren died three years ago.

Mr. Warren was a member of several prominent clubs. He was an enthusiastic yachtsman and won many trophies. But social duties never interfered with those of business, and he was always punctual at his office.

The funeral services were on Friday afternoon at the home, and were very simple, under the conductorship of the Rev. E. H. Pomeroy, of the Fort Street Presbyterian Church, of which Mr. Warren was a deacon. Floral tributes filled the parlor. The active pallbearers, all personal friends of the deceased, were: David C. Warren, Thomas H. Newberry, Charles C. Pethold, Andrew H. Green, W. C. Kaufmann, W. Howe Muir, Dr. W. E. Rice and Dr. Ben. F. Prosser. The honorary pallbearers were heads of departments, as follows: Colonel E. W. Litch, John H. Smolser, P. E. Hall, James Wilson, O. W. Smith, James E. Bartlett, J. T. Barwood, Dr. Charles Stewart, W. H. Holden, L. C. Cook, P. G. Reed, S. H. Carrigan, J. C. Spratt,

Henry A. Wetzel, Fred M. Odema, Joseph Helfman, C. W. Woodruff, Harry Skillman, Henry Barden, W. H. Kern, E. G. Swift and Herbert Turrell.

Mr. Warren leaves a nine-year-old daughter, Elizabeth Buhl Warren. His mother and a sister also are living.

OBITUARY.

BYRON F. McINTYRE died at the home of his son-in-law, Dr. R. S. Gage, East Orange, N. J., on November 7, aged 57 years, of heart disease. Mr. McIntyre, during the last year had spent most of his time in experimenting with milk food products and the establishing the Cold Process Co., this city, of which he was director and chief chemist. His first drug experience was with the old firm of Lazell, Marsh & Gardner. Then he entered the firm of McIntyre & Embrose, chemical and pharmaceutical manufacturers. Not succeeding financially, he entered the employ of Reed & Carnrick, later leaving them to become head of McKesson & Robbins' laboratories.

LEVI CARTER, president of the Carter White Lead Co., died at his home in Omaha on November 7, of pneumonia. He was about 70 years of age, and leaves a widow. He was born at New Hampton, N. J. With General Isane Coe he did a heavy freighting business across the plains from Omaha before the Union Pacific was built. In 1875 he began the manufacture of white lead in Omaha, and, in 1886, the Carter company was incorporated. He was held in high esteem.

JOHN C. PARKER, employed by J. Boyle & Sons as advertising man, while temporarily insane took his own life at his home in East Boston, Mass., by inhaling gas. He formerly lived for some years in Lowell, Mass., and was there connected with advertising work to promote patent medicines. He leaves a wife. Mr. Parker was about fifty years of age.

A. PARRAN BETTS, who was in charge of Dr. Kirk's drug store at Rising Sun, Cecil county, Md., and who was well known in Baltimore, died suddenly on November 12 of acute uremia. He was in his forty-sixth year and leaves a family. For some years he conducted a pharmacy at Preston and Casor streets, Baltimore.

FRANKLIN S. STEPHENS died at his home in Rochester, N. Y., last Friday, aged 71 years. He for many years was engaged in the drug business in New York. For the last few years he had lived in Rochester, the home of his childhood. His funeral was held under the auspices of the Masons.

RICHARD H. HALSTEAD, druggist and banker of Concord, Mich., died of apoplexy. He was 65 years of age and prominent in G. A. R. circles. Mr. Halstead had been in business at Concord since 1871.

GEORGE S. NORTON, a drug clerk at William R. Webster's, Worcester, Mass., died of consumption, aged thirty-two. His death was hastened by an unsuccessful surgical operation which he underwent in September.

J. N. FERRER

P. O. Box 71 NEW YORK CITY

NEW YORK AND VICINITY.

KAMINSKY TALKS OF FORMALDEHYDE CASES.

Despite statements by the express companies that their Chicago offices hold hundreds of solidified formaldehyde packages returned by druggists in all parts of the country, Saul H. Kaminsky, vice-president of the Dr. George Leininger Chemical Co., Chicago, which is claimed to have victimized many druggists, and who also was a former undesirable member of the Dr. A. P. Sawyer Co. of Chicago, says that his firm never had any trouble outside of New York and New Jersey.

Mr. Kaminsky says he knows what was done in this city (New York druggists who are involved in suits with the company will be glad to hear of this admission) as he "inaugurated the work" in New York himself. He says the defendants' statements are peculiar, and that he made no agreements with anyone to give them exclusive territory. He says he has an agreement, signed by the retailers, in which they promise not to cut prices. Riker's and Kalish's signatures, as well as Vedder's and Trau's are on the agreement, he says, and as the firms in each couple are only a couple of blocks apart, they must know their talk about 15-block territories was hush, he insists. He also says that he will use these agreements in combatting "territory claims." He further says:

"Kalish and Jungmann claim that fraudulent orders were turned over to them by our salesman. Now, the first orders given them by us from physicians and others and those on the strength of which the arrangement with the druggists for the sale of our goods was made, were bona fide. But afterward one of our men went wrong and did forge a couple or so orders from physicians. We are after that gentleman right now. We turned plenty of good orders over to these same druggists afterward, which they filled, and I certainly do not see what kick they have coming. As to the New Jersey cases, which were decided in favor of the defendants, I do not think that fact in itself will count for much against us in the minds of those who are acquainted with the intricacies of New Jersey justice. The defendants claimed that the letters shown them by our agents were not genuine. These letters were from local physicians, and stated that they expected to prescribe our generators in their practice. A large number of physicians had furnished us with these letters, but we were not expecting any such thing as this and had not preserved them. You may be sure that this house is not attempting to do business other than on legitimate business lines."

Kaminsky also says the druggists of Chicago find no fault with his company.

Still, George Gregorius, Mrs. Josephine Dorn, E. A. Neer, Benjamin Kent, Frederick Trau & Co., Oscar G. Kalish, J. Jungmann, E. Vedder & Co., F. K. James, and several others in this region say, emphatically, that the whole transaction with them was an outrageous swindle and that Mr. Kaminsky worked it. They do not say that the company itself is not all right, but they are satisfied that the part they have met is not. Charles A. Kalish, attorney for the druggists, says that Kaminsky has no such agreement as he claims he possesses.

HANDSOME TRIBUTE TO DR. TUTHILL.

A handsome, appropriately engraved gold watch and fob were presented to former Secretary Frederic C. Tuthill at the last meeting of the Kings Co. Ph. Soc. Adrian Paradis made a graceful presentation speech, and Mr. Tuthill, somewhat uncertain in vocalization from a big lump in his throat, said a few words in

acceptance. It was a handsome tribute to one whose work has contributed more than that of any other man to the growth of the society. He resigned the secretaryship a few months ago to accept a chair in the Brooklyn C. P. faculty. The charm was Masonic on one side and bore the Royal Arcanum emblem on the reverse.

DRUGGISTS HEAR NEW PLAN OF INSURING.

Representatives from New York City pharmaceutical associations met in Assemblyman Joseph Green's law office on Friday afternoon, last week, to consider plans for the formation of the proposed new druggists' co-operative fire insurance company. Among those present were Emil Koller, chairman of the German Apothecaries' committee that has the plan in charge, and his conferees on the committee, George Gregorius and George Kleinau; William C. Alpers, Oscar Goldman and Walter E. Faber of the Manhattan Ph. A.; Otto Edler, Bushwick Ph. A., and Adrian Paradis, Kings County Ph. Soc.

There was some difficulty in purchasing the Lloyd's English charter, under which the druggists proposed to organize, because of the inability of the lawyer of the society owning the charter to gain the signature of one of the underwriters, all the rest having signed their willingness to sell. This one member is traveling. Though the Lloyd's charter, after the missing member shows up, may be obtained, during the period of waiting Assemblyman Green, who is an expert on matters of insurance law and legislation, informed Mr. Koller that he could place them in shape to write policies for not more than half of the \$7,000 asked for the Lloyd's charter.

Under our peculiar State laws, no body of men may unite to form an insurance company unless they deposit \$200,000 in premiums with the State insurance commissioner. At least that is the usual interpretation of the State insurance laws. But Assemblyman Green says that men may organize themselves for protection against fire loss, mutually insuring themselves, providing the organization is made only for protection and not for gain, without paying of interest or dividends. A disadvantage of this scheme would be the losing of the fire insurance patrol service, which it is said, however, would be a loss in name only, as the patrol would be obliged to go to any fire, leaving the owners' status with the insurance companies until later.

It was to hear the mutual protection plan, as outlined, that the committees met. Another meeting will be held soon, when it may be definitely decided what course to take in organizing.

CHARGES AGAINST DRUGGISTS FIZZLE OUT.

For two dollars' worth of mistakes Dr. Ferdinand N. Sauer of the Jersey City health department, and physician in charge of the free dispensary system, and Manager John Dolan of the Cadmus drug store, Newark avenue and Coles street, Jersey City, were indicted by the Grand Jury on the charge of fraud connected

WILMOT CASTLE CO.,
26 Elm Street, Rochester, N. Y.

"Forgotten but not dead," is the legend suggested for this illustration by the genial John Pfeiffer of Hoboken, N. J., who appears in the right of the picture, his classmate G. G. Geiger, of West Orange, N. J., being shown at the left. Both are of the class of '81, N. Y. C. P., and Mr. P. asks the "boys": "Do you see any chemical changes since we graduated?"

with the city free dispensary system, a branch of which was situated at the Cadmus store.

Thus fizzled out the wholesale charges of dishonesty made by Dr. McGill against the five free dispensing druggists and the physicians connected with them, charges made during a political campaign to discredit the regime under which the dispensaries were established. It was in line with the whole outrageous proceeding that the "indictment" was returned on the day before election. When it reaches judicial hands it will be disposed of as quickly as its flimsy excuse calls for.

The dispensary charges were a boomerang. Druggists, whether Republican or Democratic, condemned the charges and their promulgator. John C. Gallagher, the prominent N. A. R. D. man, who conducts a free dispensary, defied McGill to prove his charges and, with his large political influence, worked against the mayoralty nominee of his own party and for the administration which was successful at the polls. The mistakes on which the indictments are based, came through not recording prescriptions as received, but waiting until the end of each day. In this way a few that had been paid for got into the city books.

SYRACUSE DRUGGISTS ENTERTAIN AT BANQUET

The Syracuse D. A. held a banquet and reception at the Empire on last Thursday night. The event was attended by 125 people. One of the most enjoyable features was the reception from eight to nine o'clock in which the druggists and their wives mingled and became better acquainted. The reception committee consisted of Mrs. Marjette Harmon, Mrs. Charles Hubbard, Mrs. G. E. Thorpe and Mrs. William Menech. The social side cannot be too strongly dwelt upon, and it is owing to such affairs as this that the good business feeling prevailing among Syracuse druggists is so pronounced.

A pleasant incident was the introduction of A. H. Boardman of Eckhart, Ind., by Vice-president W. H. Blundell. It was done by means of rhyme in which the names of many well-known patent medicines were introduced. Mr. Boardman, who is general manager of the Mass. Mutual Co., and that his business had never recovered as it in fact has since the adoption of the serial numbering plan. Other speakers were A. J. Horrick, of Rome, Wis., J. D. Eyrigh of Syracuse and Rex Frank Hamilton of Syracuse. The latter is a "reformed" druggist, having once been a mem-

ber of the drug firm of Fitch & Hamilton. He is now a prominent Methodist minister.

WANT CIGAR STORE SLOT MACHINES REMOVED.

As soon as Mayor-elect Alan C. Folos reaches the executive chair he will be appealed to by representatives of the Syracuse D. A., who will ask him to remove all the slot machines from the cigar stores. The druggists claim that the cigar dealers are unfair in their competition with them by the use of card and other machines which place the business on a gambling basis. All of the druggists keep cigars, but they claim that they cannot put in card machines without lowering the dignity of their stores. They ask that the cigar dealers be put on the same basis with them, especially as all gambling machines of this kind are strictly illegal. The druggists appealed to the present mayor upon one occasion to take out the slot machines, and while he gave them considerable encouragement the down-town druggists exerted a powerful influence upon the executive and the machines remained in.

COCAINE BILL DRAFTED AT SYRACUSE.

At its last regular meeting the Syracuse D. A. adopted the following resolutions regarding the sale of cocaine:

Whereas, The use of cocaine and its salts and preparations containing same has become so general that it has resolved itself into an abuse of a valuable drug, and, the number of habitual users of this drug has increased to an alarming extent, and it having come to the notice of the Syracuse D. A. that some retail druggists throughout the State of New York are in the habit of making the sales of cocaine and admixtures thereof in small quantities to habitual users of the drug, a feature of their business, and, as this custom is making many new victims of the pernicious cocaine habit, and as lowering the tone of the profession of pharmacy, be it

Resolved, That the Syracuse D. A. declares itself in favor of the passage of some legislative measure, at the next session of the Legislature, that will restrict the sale and dispensing of cocaine and its salts, or of admixtures thereof, and hereby urges the New York Ph. A. and the State board of pharmacy to devote their energies to that end, and be it further Resolved, that the secretary of this association communicate with the chairman of the legislative committee of the State Ph. A. and the secretary of the State board of pharmacy, advising each of the action taken by the Syracuse D. A.

The following bill has been framed for introduction into the State Legislature and will be submitted to the other pharmaceutical associations with a view to joint action.

Section 1. Section 198 of Chapter 667, of the laws of 1900, is hereby amended so as to read as follows:

Section 198. Poisons—retailing of.—It shall be unlawful for any person to sell at retail or furnish any of the poisons named in the schedules hereinafter set forth, without affixing or causing to be affixed to the bottle, box, vessel or package, a label containing the name of the article and the word "poison" distinctly shown, with the name and place of business of the seller, all printed in red ink, together with the name of such poisons printed or written thereupon in plain legible characters, which schedules are as follows, to wit:

Schedule A.

The alkaloid cocaine, or any of its salts, or any admixture thereof, or any proprietary preparation or article containing the same, to be sold or to be furnished only upon the prescription of a duly registered practicing physician or dentist, which prescription shall be retained by the seller and shall be filled but once, and no copy of which shall be given to the purchaser.

Schedule A of the present law is made Schedule B, and the word "cocaine" is stricken out. Schedule B is made Schedule C.

MAY 1st, 1902, ERA WANTED.

We will pay fifteen cents for a copy of the May 1st, 1902, Pharmaceutical Era delivered at this office. The Pharmaceutical Era, No. 8 Spruce St., New York.

MANHATTAN PHARMACEUTICAL ASSOCIATION.

Attendance at the Manhattan Ph. A. meeting on Monday night looked up considerably. The reading of an interesting paper on "Modern Therapeutics," the result of several years' labor on the part of Doctor Alfred A. Herzfeld, and several other well-known chemists and pharmacists, was read by Dr. Herzfeld and created great interest. This paper will be printed in full next week. Dr. Herzfeld, now a practitioner, was a New York C. P. gold medal man in 1887.

The proposed new amendments to the constitution, drafted to bring that document into accordance with the charter were tentatively proposed by Arthur C. Searles and will be acted upon at the next meeting.

A most complete report was read by William C. Alpers, chairman of the grievance committee, which had been appointed to study the fire insurance plans being considered by the committee of the German Apothecaries' Society.

The committee, Mr. Alpers said, were thoroughly impressed with the enthusiasm and earnestness with which Chairman Roller and his associates are working. He told about the meeting with Assemblyman Green. Of the mutual protective plan, without capital, Mr. Alpers said that such an association could not be incorporated, nor could members who refuse to pay their pro rata share, in case of a fire, be compelled to do so.

"As to the organization of a co-operative society without incorporation," said Mr. Alpers, "a number of questions were put to Mr. Green, all of which he willingly answered. They all tended more or less to bring out the fact that such an organization, if it should try to do business without regard to existing State laws, would probably be involved in a series of law suits, as the existing fire insurance companies would probably not allow the organization to do business, for the reason that other tradesmen might organize similar companies, and the whole insurance business thereby undergo a radical revolution. Mr. Green thought that probably the best way to settle the question would be to commence a so-called friendly suit, one member refusing to pay, and thereby test the legality of the organization."

A very eatable—and drinkable—collation followed the business meeting.

NEW YORK NOTES.

—F. M. Grieshelmer and William Murchison, who composed the Pharmaceutical Drug Co., Buffalo, have agreed to separate and have divided the stock between them. Mr. Grieshelmer, who is related by marriage to Mr. Brickner of the Blaw & Brickner Drug Co. of Rochester, becomes vice-president of that company and takes the patent medicine and sundries to Rochester with him. Mr. Murchison will continue the manufacturing business in Buffalo, and retain the old name, doing a small jobbing business in essential oils, chemicals and pharmaceuticals. He has already located at 348 Washington street, across the street from his old quarters, which are offered for rent.

—Among some visitors from out of town: W. H. Jones of P. R. Jones' Sons, Danville, Va., who had his bride with him and stayed at the Holland House during this part of his wedding trip; W. A. Hubbard, Newton, Mass.; C. H. Case, Jefferson, O.; W. B. Van Vleet, Johnstown, N. Y.; B. B. Graham, Omaha; W. J. Henderson, Burlington, Vt.; D. T. Taylor of D. T. Taylor & Co., Washington, N. C., who was accompanied by his wife and her woman friend; F. A. Morse West Rutland, Vt.; C. C. Wells, Saratoga, N. Y.; J. H. Des Marceis, Bristol, Conn.; F. C. Bark, Flemington, N. J.

—That Health Commissioner Lederle is a physician is perhaps a natural inference of the persons who hear him addressed as "Doctor." It leads, however, to

amusing mistakes. A veterinary surgeon, unexpectedly roped in to shoot a lame horse, and writing to the commissioner about the disposal of the carcass, signed himself "Yours fraternally." The "vet" would doubtless have felt he had been unduly condescending," commented the doctor, "had he discovered later that I was only an humble Ph. D."

—His acquaintances are having fun about Herman Lipstein, who a few years ago thought it too cold in this city and sold and went to Central America. Then he got too warm, and, this summer sold and came back, taking out a license for a new store in Second avenue. A week later he changed his mind and bought a store uptown in Second avenue. Then he decided it was too cold, and, forfeiting his payment, has gone to California.

—Towns that went "dry" shall not become "wet." rules Excise Commissioner Cullinan, who refuses to sell pharmacists' liquor stamps for use in any town of the State in which hotel or saloon or storekeepers' traffic cannot lawfully be carried on. This knocks in the head the pet delusion of some who love the cup that inebriates, who chance to live in towns that recently voted no license.

—President Philip Lewy presided over the enthusiastic meeting of the Drug Clerks' Circle last week. B. Colle reported that a program was arranged for the next open meeting. His recommendation that it be held before the ball on Christmas eve, was voted down. The committee appointed to call on Dr. William C. Anderson with sympathy in his illness found him improving.

—The next meeting of the New York section of the Society of Chemical Industry will be held at the Chemists' Club tomorrow evening. The following papers will be read: The chairman, "The More Recent Medicinal Synthetics (with Exhibits)," C. Baskerville and T. B. Foust, "Rare Earth Mordants," Oskar Nagel, "On Vegetable Protein."

—J. H. Relfuss the popular Brooklyn druggist, and third vice-president of the Kings county Ph. Soc., left on Tuesday of last week for Stockton, Cal., where he is to be married. Miss Siever is the young woman's name and Cupid's opportunity came when she was visiting Brooklyn friends not long ago. Congratulations to "Jack" Relfuss.

—F. W. Schumacher, the Peruna man, said last week that his firm is beginning to exploit its goods in Australia and South America, and that they have recently opened branches in Canada and Mexico. Brazil, Argentine and Chili, of the South American countries, and Cuba, together with several European countries are to be invaded at once.

—F. K. James, the Eighth avenue druggist, and M. P. Gould, the drug store advertising man, have returned from a three-weeks hunting trip in the game warden laden woods of Maine.

—The S. Marulescu Drug Co. of 285 Delancy street, has leased a store at Broome and Eldridge streets, a site which half of the druggists on the East Side had been after.

—Samuel Lifshutz has a new drug store at Attorney and Division streets, Jacob Massel, who recently sold at 215 Mource street, is clerking for Mr. Lifshutz.

Eff. Lithia Tablets

Sold for sample and special net prices on our carton package Aluminum Cap Bottles with your name on them.

Our Tablets made by a new process are very satisfactory.

BILLINGS CLAPP COMPANY, Boston, Mass.

—These were the successful applicants at the last examination by the Eastern branch: Henry Jansen, Otto J. Koch, Charles Langer, Isaac Slonimsky.

—Bauer & Black secured a judgment against Frank J. Tynan, druggist at 508 Court street, Brooklyn, for \$81.

—Schieffelin & Co. secured a judgement for \$81 against the Dr. Gray Wonder Workers Co.

—S. Harkway is opening a new store at Rutgers and Cherry streets.

FROM ROCHESTER.

—At the monthly meeting of the Rochester Ph. A. H. B. Guilford, delegate to the national convention, made his report. The committee on prices, of which Elmer E. Carlson is chairman, reported that an agreement had been reached between the pharmacists on prices on toilet articles, dentifrices, talcum powders, etc. One large dealer had heretofore held out against an advance of prices but he had been won over, and the rate war now is apparently at an end. It was reported that one of the local druggists was giving away trading stamps and the secretary was instructed to notify the offender that unless he stopped the use of the same he would be suspended by the N. A. R. D. The bowling team reported that it was in fine form and ready to meet all comers. The team will join with the other members of the Rochester Ph. A. in a banquet and smoker to be held at the alleys next Thursday after noon.

NEW ENGLAND.

LOWELL'S AWFUL THIRST.

Five Gallons of Liquor in Six Months for Each Inhabitant, Babies Included—Only Druggists Allowed to Sell.

Boston, November 17.—A somewhat singular condition of affairs prevails in Lowell, according to the police records. It appears that since six months ago when Lowell became a no-license city, there have been forwarded to Lowell 574,000 gallons of liquors, both spiritous and malt. Lowell has about 100,000 population, so the average six months' allotment of liquors is considerably more than five gallons for each person, infants included. And druggists are the only ones licensed to sell.

Lowell has about seventy-five drug stores. Years ago when the board of pharmacy was first given jurisdiction over drug store liquor licenses, a crusade was made against many of the so-called "drug stores" of Lowell. In not so very long a time the board closed up about thirty fake drug stores. It is said by those experienced in such matters that wherever there is a large French population, as in Lowell, one will find a city of great general thirst.

WATERBURY BOYS HAVE PLEASANT ANNIVERSARY.

Waterbury, Conn., November 17.—The Waterbury Drug Clerks' association celebrated recently the first anniversary of its organization by giving a most elaborate banquet. Among the guests were: Arthur L. Dickinson, former president of the Connecticut Ph. A.; John B. Ebbes, treasurer of the Connecticut Ph. A.; Herbert W. Lake, president of the Waterbury Ph. A.; Thomas T. Casey, secretary of the Waterbury Ph. A.; Thomas L. Axtelle, M. D.; John M. Boudier, M. D.; W. R. Swann, representing Schieffelin & Co. of New York; E. N. Richardson, representing Sharp & Dolme of

Baltimore; J. H. Donley, representing the Merrell Chemical Co. of Cincinnati; W. H. Wheeler and George L. Moses, representing the Apothecaries' Hall Co. of this city.

After those present had done full justice to the delicious entable and drinkables, the speech-making began. President Carpenter made an able toastmaster. The following responded to toasts: Arthur L. Dickinson, John B. Ebbes, J. H. Donley, Thomas Casey and Dr. Axtelle. It was an early hour when the festivities ended. The committee which arranged for the banquet was: Joseph L. Killbridge, George A. McNamar, Edward J. Dwyer, James N. Banziger, Ralph H. Foster and Edward J. Duran.

FINED FOR SELLING IMPURE PHENACTINE.

Boston, November 17.—E. M. Gardner and Henry K. Mansfield, the two druggists charged with selling adulterated phenactine, retracted their first plea of not guilty, and asked that the charges be considered as constituting one case, as they were in partnership. They entered a plea of *nolo contendere* and the court imposed a single fine of \$100, on Gardner, which was paid, while Mansfield's case was placed on file. The defendants stated that they purchased the phenactine in good faith. The defendants gave their joint address as Canal street, but have since announced that they are to go out of business there, where they conducted a wholesale trade. Comparatively few in the drug trade even knew that they were established for business in Canal street. Mr. Gardner's name appears in the Boston directory as the owner of three retail drug stores, but Mr. Mansfield's name is not in the directory. He is known as having had several pharmacies in Salem.

MERCHANT STEALS HIS NEIGHBOR'S DRUGS.

Boston, November 17.—Arrest of one of a prominent dry good merchants of Cambridge shows a peculiar case of double life. Early in the morning the police captured James S. Reardon in Bird's drug store in Massachusetts avenue, which adjoins his, Reardon's, own dry goods store. Reardon had in his possession nearly six hundred cigars, three bottles of brandy, several boxes of candy and five or six dollars in change which had been stolen from the drug store. When arraigned he pleaded guilty. Reardon was prosperous in his own business. This drug store had been robbed three times within the last few months and the police are inclined to connect Reardon with all of the cases.

THE BAY STATE.

—E. F. Leonard & Co., Springfield druggists, recently won a verdict for \$91 damages. The firm, made up of Edward E. Leonard and Homer F. Dickinson, sued for \$175. The defendant was a Boston contractor who agreed to furnish the drug firm with new counters. The old counters were sold for delivery at the same time the new ones were due to arrive. A delay of two weeks beyond the contract time in the delivery of the new counters caused the buyer of the old ones to change his mind. E. F. Leonard & Co. had to sell some one else at a much lower price and therefore sued for the difference.

—As the outcome of the charge brought in the court in Newton against Joseph A. Letourneau, a drug clerk in the employ of P. J. E. Lavroux, and his conviction of illegal liquor selling, an investigation by the board of adherents has been requested. It is said that Letourneau himself was not guilty of law breaking and that, in fact, his license permitted sales to be made by himself or clerks.

—John T. Loftus, proprietor of the Summer street

pharmacy, Worcester, has sailed from Boston on a Cunard Line steamer for a trip of several months in Europe. Dr. Loftus intends to spend most of his time in England and Germany, where in the leading hospitals he will study diseases affecting the nose, ears and throat. He was accompanied by his sister, Miss Maria Loftus.

—The drug store of Theodore St. Onge, Millbury, has been sold to Timothy J. Cotter. Four years ago the new owner quit the drug business to become manager of the Tourtellotte House. Mr. St. Onge has been a druggist in many large towns and cities in Massachusetts and has found Millbury the best-paying place of all. His selling was due to a most tempting offer.

—Dr. John Homer, a prominent Newburyport druggist, was defendant in a case in which he was charged with selling tincture of iodine not up to standard. Fine of \$100, from which Dr. Homer appealed. Dr. Homer has been in the drug business nearly forty years, fully twenty of that time as a pharmacist in Newburyport. The plaintiff was the State board of health.

—The Whithall Tatam Company announce the removal of their Boston office and salesroom to their new location at 91 Washington street, north, where increased facilities enable them to exhibit the complete lines of samples to better advantage and permit of prompt attention to orders.

—Dennis F. Donovan, a druggist at Lawrence, is a voluntary petitioner in bankruptcy. He owes a little more than \$2,300 and has no assets. George H. Barnard of Fall River, who conducts a drug store in Central Falls is also a voluntary petitioner in the same court.

—Peter Crane, although in the drug business for many years, has only recently taken the examinations before the board of registration in pharmacy. He received a percentage far ahead of the ordinary. He is employed as clerk at M. F. Flynn's, Haverhill.

—At Barker's, Gloucester, there has been an exhibition of prescriptions filled since Mr. Barker opened up business eighteen years ago. There are 179,000 of these prescriptions, not including the refills. Mr. Barker is more than proud of this high record.

—A young Roxbury druggist, James H. Dorsey, has recently been on a hunting trip through the woods of Maine where he had a fine time, greatly benefitted his health and had more or less success shooting.

—Fred Guertin, who for several years has conducted a drug store in Mechanicville, has given up his home there and removed to New Bedford. His brother, Charles Guertin, has taken the pharmacy.

—M. Duquette, druggist at Indian Orchard, where he has much of the patronage of the French residents, lately has been on a business trip through Northern New York and Canada.

—Frank Lavoie is the new owner of the Kearnan drug store in Millbury and begins business with practically as much that is new as if the store were entirely so.

—Jesse Clark, a Fall River druggist, recently entertained the members of the Providence Basket Ball Team. Mr. Clark is much interested in basket ball.

—Fred Whitmore, who recently sold his drug store in Somerville, has gone to his old home in Bath, Me., where he is visiting friends.

—Fall River has a new pharmacy at 1512 Main street, opened by William J. Briggs and Harrison Brightman.

—A. H. Standish, long a druggist in High street, Taunton, has removed to a better location in Old Colony avenue.

DR. SUSAN HAYHURST, Philadelphia, Pa.,
Honorary President Society of Women Pharmacists and
Chemists of Pennsylvania.

PENNSYLVANIA.

USUAL GOOD SENSE.

P. A. R. D. Cheers N. A. R. D. Report, Will Investigate
House that Sells Cutters, Denounces Trading
Stamps and Does Several Other
Wise Things.

Philadelphia, November 17.—The regular meeting of the P. A. R. D. with President Ledson in the chair, was held at the College. Delegation Chairman Charles Refuss had prepared a most interesting resume of the work done by the Philadelphia "hustlers" at the N. A. R. D., and a round of spontaneous applause greeted its reading. A rising vote of thanks was tendered the delegates and the entire report ordered spread on the minutes and published in the next copy of the P. A. R. D. Bulletin.

Among letters was the correspondence between Chairman Eppstein of the executive committee and a manufacturing pharmaceutical house of Philadelphia. A physician, who is also a druggist, had opened a store in the northern part of the city. He was listed by the N. A. R. D. as an aggressive cutter, and this house had been selling him. The manufacturers replied that they had instructed their salesmen not to "solicit" any orders from cutters. A later note followed the first, in which they asked if they stopped selling the person in question, what would the P. A. R. D. do for them? The matter was referred to the executive committee, the temper of the members being aroused by the pe-

WE WANT DRUGGISTS

To send us a list of physicians who patronize them, and we will write each physician that he can obtain Phenalin from the druggist mentioned; we will also send the physician a sample, with literature.

ETNA CHEMICAL CO.

313 West Street

NEW YORK

It will occupy all of the four floors and will have greatly improved facilities for doing business. The building is as well adapted to the wants of the company as if it had been built for the purpose, and will afford ample room. It contains 12,000 feet of floor space and additional storage room can be secured if needed. The floors are high and both front and back are easy of access.

WILL STOP CUTTERS' PHARMACEUTICALS SUPPLY.

Baltimore, November 17.—The cutter and the trading stamp occupied the attention of the executive board of the Baltimore R. D. A. at their meeting last Tuesday. It was the sense of those present not only to prevent the cutter from getting a supply of proprietaries and goods included in the tripartite plan, but to shut off his means of getting pharmaceuticals. It is thought that every house will fall in line if proper representations are made. As long as the cutter can get pharmaceuticals it is difficult to control the trade. David R. Millard was appointed chairman of a committee to get data on the Pittsburg method of procedure, with John B. Thomas as the other member. With regard to the trading stamp, the executive board was of the opinion that it would be best to co-operate with the Merchants and Manufacturers' Association, which has taken up the matter and is expected to petition the legislature for the enactment of suitable legislation.

MARYLAND.

—Dr. John F. Hancock, one of the oldest pharmacists in Baltimore, connected with all the druggists' organizations there and a manufacturer of medicated lozenges and other articles, is engaged in writing a history of the past fifty years in pharmacy in the Monumental City. The volume will be issued shortly after the first of the year. At the same time Dr. Hancock will celebrate his golden jubilee as a druggist. The event will probably be recognized in some suitable way by his colleagues, among whom he is held in high esteem.

—The mystery of the three fires in the establishment of C. C. Bartgis & Bros., dealers in druggists' supplies and lithographers, Baltimore, has been explained. Mark Zeller, 16 years old and employed there for about two years, confessed to the police yesterday that he set the place on fire each time in order to cover up thefts, and that he wanted the place to burn down so the old funnels would be consumed and he would no longer be required to clean them. The losses were about \$25,000.

—Milton Fox, son of druggist Fox, Baltimore, and employed as clerk in his father's store, has gone on a pleasure trip to Jamaica.

—Mrs. Lillie Sullivan, Baltimore, died as the result of drinking Jamaica ginger prepared with wood alcohol.

LOCKED UP AS INSANE, NOW SUES FOR \$50,000.

New Orleans, November 17.—Thomas J. Logan, a druggist well known in New Orleans, yesterday filed suit for \$50,000 damages in the Civil District Court against Dr. M. V. Richards, the coroner. The suit grows out of the arrest and incarceration of Logan on an affidavit charging him with insanity. He remained in jail, as the petition alleges, from October 17 to October 21, besides having been arrested in New Iberia and being caused other annoyance in New Orleans by being guarded. The petitioner charges that his arrest and incarceration were high-handed, unjustifiable, illegal and wanton acts, and were oppression and malfeasance, in gross violation of his personal rights.

EUGENE J. BASS, Portsmouth, Va.,
Second Vice-President, Virginia Association of Colored Pharmacists.

AROUND THE GREAT LAKES.

SAGE ARRESTED.

Agent of Illinois Board of Pharmacy Charged by Cocaine Sellers with Selling Chichester's Pills.—Other Druggists Regard Sales as Legitimate.

Chicago, November 17.—Druggist Brendecke and his cocaine-selling confreres now are trying another mode of attack on the board of pharmacy, since their appeal to the Governor was so neatly turned down. They caused William H. Sage, agent for the board, to be held to the Criminal court.

D. H. Brillow, attorney for Brendecke, declares he has evidence to make something of a case against Wilhelm Bodenmann, president of the State board. He appeared in Justice Martin's court in the afternoon and alleged that certain druggists, acting as their own detectives, had bought cocaine and other barred drugs in Mr. Sage's store.

The attorney said the men had combined to secure the conviction of the members of the State board, and were watching all the members or agents of that board who are in business in Chicago. He declares the case of Mr. Bodenmann will be brought into court next week.

Mr. Bodenmann says Brillow has fabricated his charges out of whole cloth, and that his case will be taken before the Bar Association. As for the status of Brendecke, the curious need only be reminded that he recently admitted in court that he had received goods

Always insist upon having

ABBOTT'S THE ORIGINAL
Angostura Bitters.

C. W. ABBOTT & CO.,
Baltimore, Md.

stolen from Lord, Owen & Co. These goods comprised 30 ounces of cocaine and 120 packages of Birney's Catarrh Snuff.

The remedy which it is alleged Mr. Sage sold is Clchester's Pills. When the case came up before Justice Johnson last week, a number of druggists testified in behalf of the defendant, stating that they had been selling the remedy for years and regarded its sale as legitimate and proper. The justice reserved his verdict but later in the week bound Mr. Sage over to the grand jury. The outcome will be watched with interest by the trade as they are, of course, vitally interested in knowing whether the sale of this remedy is against the law.

SURPRISE FOR VETERAN DRUGGISTS TOMORROW.

Chicago, November 17.—The Chicago Veteran Druggists' Association will be "surprised" tomorrow when they gather for their quarterly meeting by being taken on a tour of inspection of the tunnel system of the Illinois Telephone Co., at the invitation of the company given through F. Blocki, commissioner of public works and son of John Blocki, the veteran's corresponding secretary.

This is an invitation to the members and is self-explanatory:

Dear Fellow Veterans:

I defy anybody to write his history after his death any better than before. Therefore do it today, or as soon as you possibly can.

What I would earnestly ask you to do, is to write your reminiscences of your apprentice and clerk days, your start in business, whom you knew and met among druggists, and then send it to me.

Our historian has your statistics; what I am after is a pen picture of your earlier days. Every last man should send this history in at once, not as we proposed, three for each meeting. We want the whole lunch right now and then draw lots at each reunion whose and how many records we shall read.

Get yourself together and do this now for your beloved association. I have never touched you before but I make this touching appeal now and by responding to it promptly you will gladden the heart of your recording secretary.

W. BODEMANN.

DRUG STORE LIQUOR WITNESSES BOYCOTT TOWN.

Grand Rapids, Mich., November 17.—Citizens of South Haven, who have been summoned to appear before the grand jury at Paw Paw, called to investigate alleged violation of the local option law by drug stores, have made arrangements to boycott Paw Paw while in that city. They have raised \$350 to charter a special train, including a Pullman and buffet cars, and meals will be served on the train. Even a barber, a boot-black, a minister and a four-piece orchestra will be provided. Any member of the party found to spend a dollar in the county seat will be fined \$10. It is expected that the jury will be in session eight or ten weeks and the special train will be run daily between the two towns.

TOBACCONIST THREATENS "HEART CUTTING."

Grand Rapids, Mich., November 17.—Cut rates on cigars have been the rule in this city for many moons and the situation, instead of clearing up, seems to grow more strained. This week the druggists are selling five-cent cigars at the rate of 15 for 25 cents, and all goods, whether made by a trust or union or not, are being slaughtered. The E. J. Reynolds Co. is operating six cigar stores on prominent corners in the downtown district and the druggists have been "going" this concern one better ever since Reynolds started the merry jig. Mr. Reynolds is quoted as saying, "If necessary we will rent a store and open a pharmacy, and then show the druggists what we can do in cutting the heart out

of the drug business." The druggists are standing pat, and are waiting to see the new pharmacy.

CHICAGO ORGANIZER CUSACK RESIGNS.

Chicago, November 17.—The monthly meeting of the executive board of the Chicago R. D. A. was held on November 10 with President Avery in the chair. The board accepted the resignation of Organizer E. J. Cusack, who retires to go into other business. His work has been eminently satisfactory. The appointment of his successor was left to Dr. Noel, the general organizer. The committee having in charge the carbolic acid ordinance reported that the council committee had appointed a sub-committee to meet the association's representatives, but nothing has been heard from them. The matter is probably dead.

ILLINOIS.

—The news of the death of Wm. M. Warren, general manager of Parke, Davis & Co., was received with the deepest regret in the trade here, where his remarkable ability and genial personality were most highly appreciated. J. E. Bartlett and F. P. O'Brien of the Chicago office attended the funeral. The latter was Mr. Warren's private stenographer for years. Among the many floral pieces was a magnificent pillow of English violets from the employes of the Chicago branch.

—Dr. Edward Kremers of the pharmacy school of the University of Wisconsin put in a busy day in Chicago yesterday. In the afternoon he delivered a lecture before the students and alumni of the Northwestern C. P. on "Plant Perfumes," while in the evening the members of the Chicago section of the American Chemical Society listened to an address on the chemistry of volatile oils.

—The Chicago Drug Trade Club has made several important changes in its constitution and by-laws. A new membership class known as "Class C" has been created to be composed of out of town firms connected with the wholesale drug trade. All other classes are composed of individuals. Retiring directors will hereafter be ineligible for reelection.

—Louis F. Stuebe, a prominent retail druggist of Danville, and who represents the Danville district in the N. A. R. D., was a Chicago visitor last week.

—Jesse I. Cozine has bought the store of Shepard & Andrews at Thirty-third and State streets.

—At Watseka, W. H. Ausin has been succeeded by E. J. Austin.

MICHIGAN.

—Sidney Erwin of Battle Creek is the new member of the Michigan board of pharmacy, succeeding W. P. Doty, of Detroit, at the beginning of the year. It is the aim of the board to induct the practical element into the examinations as much as possible in the future, and, to this end, President Henry Heim of Saginaw will visit the States of Illinois and Wisconsin, to get a clear idea of the advanced method of those boards of pharmacy. The adoption of this plan will lengthen out the examinations to three days. The new board will be composed of Henry Heim, Saginaw; John D. Muir, Grand Rapids; Arthur H. Webber, Cadillac; C. B. Stoddard, Monroe, and Sidney Erwin, Battle Creek.

—Fred J. Arner, at one time pharmacist with Harwood & Kephart of Potosky, writes Mr. Harwood from Buenos Ayres that he has been made general manager of Dr. Williams' Medicine Co. in South America, and will shortly remove his headquarters to Rio de Janeiro, with large salary and increased responsibilities. Fred carries both burdens with oldtime cheerfulness.

—The Lawrence Drug Co.'s store at Lawrence has been bought by O. D. Allen and one of the exchanges

in that local option county "hopes it will not be necessary for him to take a rest at the expense of the county, as some former druggists of Lawrence have been compelled to do." This looks to a man up a tree like a premature and uncalled for job.

—A stock company with \$50,000 capital, is being formed at Cheboygan for the purpose of converting a big heap of sawdust left by the mills in that town, and known as "sawdust mountain," into ethyl and wood alcohol and charcoal. Ethyl alcohol will be made by the Classed process.

—The American Drug Co. has put up a new electric sign, "Drugs", over its store at Traverse City and a total of 110 incandescent bulbs make the short word blaze forth like a noonday sun. Sixty lights have also been placed in the show window, making it one of the handsomest in town.

—The Central drug store at Algonac has changed hands, the new proprietor being Joseph Taggart, formerly at Marlette. The former proprietor, C. Hibberd, has decided to go into another line of business and will move back to Detroit.

—West's drug store, Grand Rapids, enlarged, remodeled and beautiful, was opened to the public on November 7. An orchestra furnished music and 1,500 bottles of perfume were given away to lady visitors.

—C. A. Fisher, the former proprietor of the North side drug store at Albion, will remain in the city, having been employed by Dr. A. D. Bangham.

—Conway & Hall of Sault Ste Marie, are expanding. They will open an uptown drug store, putting in a fresh stock and the latest fixtures.

—H. J. Wilson, for the last year with George Fairman of P'g Rapids, has bought the F. D. Salsburg stock at Edmore.

—Charles Dell, formerly with C. W. Vining at Lakeview, is now with W. W. Slawson at Greenville.

—George W. Priest will replace his burned store at Pellston with a two story cement block.

—H. G. Watz of Court street, Saginaw, has sold his drug stock and the store is closed.

—E. L. Sargent of Boyne Falls, has bought the M. M. Palmer store at Levering.

—P. T. Stocking has removed his drug business from Harvard to Grattan Center.

—E. L. Sargent has resigned his position as manager of Moon's, Boyne Falls.

WISCONSIN.

—J. W. S. Tomkiewicz, a very well-known Polish pharmacist of 452 Mitchell street, Milwaukee, was found guilty of having employed Joseph Kusawa, an unregistered pharmacist, and fined \$50 and costs. His attorney took an appeal. Tomkiewicz claimed that during his absence from the city last summer he had left the store in charge of his brother, Anton Tomkiewicz. Kusawa is said to have filled some of the prescriptions, however. The prosecution was brought by the State board of pharmacy.

—The Wisconsin Pharmaceutical Co. will hold its annual meeting this month and some three hundred druggists of the State who own stock will receive dividends. It is said that the old officers will be re-elected and that Edward Rauber will remain in charge as manager.

—Ernest Kaiser, manager of the South branch of the Kradwell-Thiesen Drug Co., at Racine, was united in marriage to Maude Schmerler of that city.

—F. E. Stemple, the Johnsons Creek druggist, who was badly injured in a railroad wreck, is recovering rapidly.

—Dr. S. E. Campbell, a Milwaukee druggist, has succeeded W. B. Minthorn at Hancock, Mich.

—H. G. Lemppke of Marinette, has bought the Eagle pharmacy at Merrill.

PACIFIC COAST.

CALIFORNIA.

Denver Druggist in California to Fight for Big Legacy—

Board of Pharmacy Meet—Marine Pharmacist Elkus Suspended.

—George E. Saner, a well-known druggist of Denver, is in San Francisco to institute suit to recover real estate in that city valued at nearly \$500,000, and which has been in the name of the late Dr. L. C. Lane and comprises part of the large estate left by that well-known physician and pharmacist. Saner claims that he and four other heirs of the late Dr. E. S. Cooper of Galesburg, Ill., are entitled to this property under the will of the late Dr. Elias Cooper, San Francisco, founder of the Cooper Medical College. According to Saner Dr. Elias Cooper left to his brother, Dr. E. S. Cooper of Galesburg, certain parcels of land in San Francisco, which the latter never conveyed to any one. Saner is a grandson of the eastern Dr. Cooper, and s one of five heirs. After Dr. Elias Cooper's death, says Saner, Dr. Lane bought out the interests of all the other heirs except that of his grandfather. If Saner wins his case he will be one of the wealthiest druggists in the West.

—The State board of pharmacy has just passed the following as licentiates at Los Angeles: Charles Fredericks, Jr., Earl W. Salsburg, John M. Becker, William Raymond Johnston, W. S. McKay, A. W. Stevenson, H. W. Hardy, G. E. Porter, F. B. Braddock, F. G. Keyes, R. D. Owen, and John F. Howard. Assistants: C. A. Bacon, A. W. Drew, Peter Lowson, Charles Scavazzo, W. F. Davidson, J. P. Ladd, Jr., R. C. Silvernail, and G. W. Curtiss. At San Francisco—George S. Hollister, Thomas H. O'Connor, David C. Moore, B. R. Niellois, G. W. Peterson, A. Neve, Jr., Joseph R. Lewis, E. G. Shier, J. E. Robertson, P. E. Squire, E. L. Scott, E. R. McDonald, John Van der Luster. Assistants—D. J. Smith, Frank Glando, R. A. Slinamon, W. E. Simpson, Charles O. Dee, Hans A. Mager, G. M. Edington, A. B. Brogden.

—C. W. Elkus, pharmacist at the United States Marine Hospital of San Francisco, has been suspended from duty by Dr. Stimson, the commanding officer at the hospital, after an official investigation of charges brought against him by his superiors touching upon the character of his service. The position is a very important one. It is under civil service, and therefore it is not within the jurisdiction of the commanding officer to discharge the incumbent.

—Chief Clerk W. H. Miller of the United States Army medical supply depot who was accused of favoring large drug firms in San Francisco in purchasing goods for the Government has been suspended pending final action on the charges. The depot purchases thousands of dollars' worth of supplies annually for the army in the Philippines, Hawaii, the Pacific Coast States, Alaska and the country as far east as Denver, Texas and Montana.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories.
Twelve Teachers. Thorough Course.

NEXT TERM BEGINS JANUARY 4, 1904.

Address Inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

—The American Lithin & Chemical Co. of New York is having trouble in California. It seems that a Mrs. R. O. Butterfield and others own some rich lepidolite and amlygonite mines at Palo. An agreement is alleged to have been made with the New York concern for the development of the property, but Mrs. Butterfield asserts the Lithin company has violated its contract, and therefore sue has brought suit.

—At the moment that it is being urged throughout the State that fornice culture be attempted in California reports come from Cayeno, a sea coast town, that experiments are being conducted with very fair success. As the imports of this country exceed a million dollars annually, druggists see great opportunities for this State if fornice can be successfully grown.

—F. E. Baskette has purchased the business of the Colpe Drug Co. at San Mateo, which will in the future be conducted as the "Baskette Drug Co. Mr. Baskette has long been the San Mateo manager for the Colpe company and under his direction the business has assumed great proportions for a town the size of San Mateo.

—By mutual agreement the drug firm of Poggi & Thatcher at Onand, will be dissolved on December 1. Mr. Thatcher will remain where he is and Mr. Poggi will open an establishment near by. The two men part the best of friends.

BUSINESS SUCCESS SPROUTS FROM THE SEED OF GOOD ADVERTISING.

Druggists should commence at once to sow the seeds of a successful holiday business. Don't neglect the regular stock, brush it up, re-arrange it, make it look like new, and advertise it. Push all lines. Don't forget that you have a future business to take care of, and take time to read this column each week. You will find many things here that will interest you. The following appear in the November 12 issue:

GRAPE JUICE.—The Gold Medal Brand, made by the Chattanooga Fruit Co., at Ripley, N. Y., who furnish free samples to all dealers who desire them.

BIOPLASM.—A product of the Bioplasm Co., 100 William St., New York, now being extensively advertised to the medical profession. You will have calls. Any jobber can supply it.

VERNAL PALMETTONA.—This product, formerly known as Vernal Saw Palmetto Wine, is made by the Vernal Remedy Co., 101-107 Seneca St., Buffalo, N. Y. The change in name was made simply because the new name is more easily remembered than the old one. The Vernal Co. have reduced the price of all their \$1.00 preparations from \$8.50 to \$8.00 per dozen. Note their advertisement on inside of front cover.

WINE OF CARDUI.—Made by the Chattanooga Medicine Co., Chattanooga, Tenn., and claimed by them to be a product which no druggist can afford to be without; extensively advertised throughout the country, and daily growing in popularity.

CREO-TERPIN COMPOUND.—Sold to relieve cough and pain and remove the cause without disturbing digestion. Prepared by Henry K. Wampole & Co., Philadelphia.

COLORIED SPECTACLES.—Smoke, blue and green, in light, medium and dark shades, in nickel-plated frames. Made by T. A. Willson & Co., manufacturing opticians, Reading, Pa., who claim their low-priced steel spectacles lead the world. Druggists will undoubtedly find them a profitable side line.

SODA FOUNTAINS.—Made by the Puffer Mfg. Co., 1148 Portland St., Boston, Mass., who have been independent manufacturers for SIXTY years. Send for their catalogue of new goods and their price list of second-hand goods.

ARTIFICIAL FLOWERS.—They make a store doubly attractive. Now is the time to have a few yards of holly vines and a few dozen holly sprays for interior decoration. They may be secured from Frank Netschert, 31 Barclay St., New York City, who makes all varieties of artificial plants, flowers, etc., and who will send a 68-page illustrated catalogue on request.

SHOW CASES.—If they are neat and up-to-date they improve the appearance of the store more than any other article of furniture. Hugh Lyons & Co., Lansing, Mich., make a complete line of up-to-date show cases. Note the cut of their latest cigar case on page 3, and then send for one of their catalogues.

STOCK LICORICE.—The old reliable Young & Snylth's brand, made by the National Licorice Co., 106 John St., Brooklyn, N. Y.

ANUSOL SUPPOSITORIES.—A profit bringing remedy made by Schering & Glatz, 58 Maiden Lane, New York, and claimed by them to cure hemorrhoids and to relieve constipation. All wholesalers carry them in stock.

HUMPHREY'S SPECIFICS.—Made by the Humphreys' Medicine Co., 111 William St., New York City, who create the demand by advertising them to the consumer. This firm also furnish a lot of good advertising with each of their cabinets. Don't let your competitor get all the benefits to be derived from this excellent line of goods, but write at once to the above named firm for particulars regarding their cabinet offer.

HOOD'S CALENDARS.—Next month the C. I. Hood Co., Lowell, Mass., will begin to supply the retail trade with these popular calendars. If you haven't ordered your supply, better do so at once.

ABBOTT'S SALINE LAXATIVE.—Thousands of druggists are said to be handling it at a big profit. Are you one of them? Made by the Abbott Alkaloidal Co., Ravenswood Station, Chicago, Ill. Note the net prices of this product on page 5.

PROTOS.—Made by the Protos Co., 1052 Madison St., Chicago, Ill., and claimed by them to be the best food known on the market today for all stomach troubles.

NON-COLLAPSIBLE NIPPLES.—The Miller Rubber Mfg. Co., Akron, O., make them, and they also make a special offer of three dozen of these nipples, one dozen tissue finger cots rolled, and a supply of new and catchy advertising novelties, all for \$1.00.

"M. C. W." Sugar of Milk.

Druggists' and physicians' attention is directed to the new package of Sugar of Milk marketed by the Mallinckrodt Chemical Works. It is put up in handsome square packages, which are tightly sealed to prevent the article from becoming contaminated. The reputation of the Mallinckrodt Chemical Works is sufficient guarantee for the purity and reliability of their sugar of milk, and the "M. C. W." brand is bound to increase in popularity.

TIN BOXES and CANS
 LARGEST MAKERS OUTSIDE THE TRUST

DECLINE IN QUOTATIONS FOR OPIUM.

New York, November 17.—Routine trading continues of a satisfactory character with the tone of the general market steady, but continued weakness in oil peppermint and a decline in quotations for opium are conspicuous features.

OPIUM.—Under the influences noted last week quotations for jobbing quantities have been reduced to \$3.25@3.50 for 9 per cent, and \$3.35@3.60 for 11 per cent. Powdered is correspondingly lower and the revised quotations are \$4.25@4.50 for 13 per cent, and \$4.75@5.00 for 16 per cent.

MORPHINE SULPHATE.—A moderately active jobbing movement is in progress and values remain unchanged at \$2.60@2.70 for eighths in ounce boxes, \$2.55 @2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials, and \$2.30@2.40 in 5-oz. cans.

QUININE SULPHATE.—Manufacturers' prices have not yet been changed but the tone of the market continues firm and outside holders are not anxious to sell at current values, jobbers are filling orders at the old range of 25@25½¢ for bulk in 10-oz. tins, 25½¢@26 in 5-oz. tins, 26@26½¢ in 2½-oz. tins, 27@27½¢ in 15 or 10-oz. tins and 32@32½¢ in ounce vials.

MENTHOL.—Trading continues light and unimportant and the easier feeling noted last week has resulted in a further decline in jobbing quotations to \$7.00@7.50 per lb. Onnces are unchanged at 60@65¢.

VALERIAN ROOT.—Spot stocks are becoming depleted and the market is firmer in tone, but jobbers are yet willing to sell to a limited extent at 25@30¢ for whole and 30@35¢ for powdered.

PEPSWAX.—Primary markets are firmer and spot quotations for jobbing quantities have been advanced to 35@40¢ for country and 44@46¢ for city.

SAFFRAN.—Valencia is decidedly stronger owing to unfavorable crop reports from producing districts in Spain and local jobbers have advanced quotations to \$9.25@9.50, according to size of order.

ESSENTIAL OILS.—Continued weakness is a conspicuous feature of the peppermint situation and jobbing quotations show a further decline to \$2.80@3.15 for Western and \$3.00@3.25 for Wayne County. Spearmint has reacted from the firmer position noted last week and there are no sellers at \$1.75@1.90. Fenny continues firm with quotations further advanced to \$5.00 @5.25. Clove is held with decided firmness and jobbers have marked up quotations to \$1.30@1.35. Among the Messina essences, bergamot and lemon are easier owing to cables from Sicily reporting favorable crop conditions. Bergamot is obtainable at \$2.25@2.30 and lemon \$0.60@.81½, according to quality and quantity.

COBALTINER SEED.—Owing to light available stocks both here and at primary sources of supply the local market is stronger and spot jobbing quotations have been advanced to \$6½¢ for whole 1½@13¢ for ground and 15@16¢ for powdered.

DANDELION ROOT.—Supplies are light and the market is firmer with jobbing quotations advanced to 18@23¢ for whole, 20@25¢ for crushed or cut and 24@25¢ for powdered.

CAMPBOR MONOBROM.—Jobbers have further advanced their prices to \$1.00@1.50 per lb. and 15@20¢ per oz.

CACAO BUTTER.—Manufacturers quotations for cakes are higher and jobbers now quote 38@38½¢ for the box, and 12@15¢ for smaller quantities.

TAMARINDS.—Supplies are more abundant and jobbers have reduced quotations to \$2.50@2.60 per keg, and 10@12¢ per lb. for less than a keg.

SHELLAC.—Continued strong markets are noted at all distributing points and spot jobbing quotations have been further advanced to 75@80¢ for D C 70@75¢ for Orange and 60@65¢ for N. Yve. Bleached and powdered are both held at 45@70¢.

Doctors Visit Apollinaris Spring.

About two hundred physicians recently made a visit to the Apollinaris Spring at Neuenahr, Rhinisch Prussia, where the famous table water of that name is bottled. An interesting account of the visit appeared in the Cologne "Volkzeitung" of Sept. 17th.

Apollinaris is bottled only at the spring and only with its own natural gas, and the physicians were thus enabled to witness personally the interesting processes involved in the cleaning, filling and dispatching of the millions upon millions of bottles in the course of the year. With the greatest readiness the directors of the spring furnished information concerning the various features, and the unanimous opinion of the visiting physicians was that the Apollinaris Spring is an establishment of the first rank in magnitude and administration.

BUSINESS NOTICES.

THE ERA DRUGGISTS' DIRECTORY.

The 10th revision of the Era Druggists Directory, now ready, is the best edition we have yet offered. It is the standard work of its kind in this country and includes a complete list of the druggists in Costa Rica and the principal drug stores in Chile, Peru, Bolivia, Ecuador and Colombia.

The list of retail druggists in the United States does not quite reach the 40,000 figure which the last edition showed, but this loss is made up by increased numbers in Part III. (Manufacturers, Jobbers, etc.)

This Directory will be found invaluable to any merchant or manufacturer who does business with the trade. It is sold only by subscription, and until further notice the price will be \$5.00 per copy, net, postpaid.

The edition is limited, and we are obliged to reserve to ourselves the right to raise this price at any time.

"We are all learning more or less every day, and wide reading in one's chosen field is imperative."

But there is a great difference both in the quantity learned and the manner of reading.

The newspaper habit, the careless reading of many headlines in many dailies, does not lead to great learning.

On the other hand careful systematic reading is the medium of all education.

Why does the college student read to better advantage than the newspaper habitué?

Because his reading is selected and systematized.

System and selection in reading is, however, also possible outside college walls. The main thing is to get the right person to arrange it for you.

The Era Course in Pharmacy has been selected and systematized for the use of home students by educators of wide experience.

Write to the Pharmaceutical Era, 8 Spruce Street, New York City.

THE DAY OF TURKEY AND THANKFULNESS.

To-day we expect to remain peacefully upon the various drug store counters which we visit each week, for we do not expect any one to bother about drug journals on Thanksgiving day. That day is given up to more material if not more practical things. There was a time when people spent the day in counting up the profits or blessings of the year, and endeavoring to feel properly thankful for the result, but we fancy that few of our readers will examine either their financial or spiritual ledgers this year, for time has changed many things. Every one who is in a condition to enjoy the substantial blessings provided by nature in her summer's laboratory, will do so to the best of his ability, and thus give thanks physically, which is perhaps as satisfactory to all concerned as any other way. Appreciation is, after all, the source and substance of all thanksgiving. We hope every one of our friends will forget for this one day about the condition of the ledger, bills due and low prices, and eat the very best dinner of the year without fear of hurry calls and disturbance. After the turkey, cranberries and pies have been stowed away, we hope every druggist will sally forth with two or more boys and girls—we are profoundly sorry for the unfortunates who have none of their own and are unable to borrow one or two—and take a brisk walk in the antitoxic November air. The individual who can not taste of life's wine and feel that it is good to be above the brown earth under these circumstances we shall leave to take his own pills on the morrow. We refuse to enumerate the reasons why every one pharmaceutical should feel thankful to-day. We have been doing that very thing during all these past twelve months.

THE SPREAD OF N. A. R. D. INFLUENCE.

The conquest of the drug trade of this country by the N. A. R. D. is now almost complete. We may in a very short time expect to see every point of any importance occupied by the national forces. For several years there has been an influence working in opposition to the organization in the East, and radiating in all directions from New York as a focus this force has done much to keep alive cynical distrust, the chief cause of the inertia that has sapped the association's resources. The national body has, however, been moving slowly but surely toward the

center of resistance and we are at present witnessing what seems to be the last struggle of dying opposition. The effect of the attitude exhibited by the Washington Promise Committee of proprietors has been remarkable. Cynicism has almost disappeared and sneers have been replaced by expressions of confidence or willingness to await developments in neutrality. Members of the trade who have resented and resisted the intrusion of the N. A. R. D. into business affairs in the East, have either been converted or have changed their attitude from motives of self-interest, which in reality amounts to the same thing. The tripartite plan will now have a trial such as it never had before. If it accomplished very respectable results when practically its only support was derived from the retail branch of the trade, what may it not accomplish now when the other two branches thoroughly organized are determined to make it effective? We are assured on all sides that the contract plan does very well for one or two proprietary firms, but that its general adoption is absolutely impossible. However this may be, the Miles firm, the first to venture a trial, have found it remarkably profitable. Advice from sources entirely independent of either retailer or manufacturer states this week that the sales of this firm's goods have actually doubled, which indicates a considerable increase since the Washington meeting. It is, of course, possible that the Miles firm, being the pioneers, have obtained the cream of the benefits and that a second trial would prove less advantageous; still, the difficulties would also be less, and we find it strange that no other manufacturer has hastened to place himself upon the same basis, which should be the more desirable because it is limited.

THE CONTRACT PLAN IN CANADA.

The delegates at the N. A. R. D. meeting in Washington were considerably startled by an announcement by Dr. V. Mott Pierce that the contract plan had failed in Canada and resulted in a reduction of fifty per cent in the sales of the goods to which it had been applied. The Canadian Pharmaceutical Journal questions the accuracy of this statement, and says that whatever may have been its success in other respects, it certainly did maintain prices. Accepting the statement about the loss of trade as correct, our contemporary asks why there should be such a noticeable falling off. "It," it says, "is due to the adoption of the contract plan, then our previous contention, 'that the good will of the retail distributor is a valuable asset for any manufacturer to possess,' is erroneous, the basic principle of price protection is unsound and the principle should be abandoned by proprietors without delay." The journal quoted is unwilling to accept the assumption that the adoption of the contract plan was even a minor factor in producing the unsatisfactory result, and points out a number of causes to which the shrinkage of sales might be due. One of the causes was an increase in price shortly before the plan was adopted; another was a premature announcement of the company's intention which gave the cutters a chance to "stock up"; two other contributing causes were the lack of anything like a vigorous advertising campaign and the advent of the "dull season in patents" before the

plan was fairly under way. The quoted remark seems to us especially pertinent. If the friendship of the retail druggist is so utterly valueless, why the present plan and campaign?

REMEMBER MR. GALLAGHER.

In the stirring events of the last few weeks and the rejoicing about the unprecedented action of the proprietary manufacturers in undertaking to make the tripartite plan effective, a task which the retailers had well nigh abandoned, the valuable services of the N. A. R. D. representatives at the meeting in Hotel Manhattan have been in danger of being overlooked. The general plan of action had been pretty thoroughly worked out beforehand, but some of the details still remained to be filled in. As our readers will remember, the proprietors suggested that certain parts of the work could be done by the N. A. R. D., a proposal which seemed innocent enough at first sight. But Mr. Gallagher of Jersey City, one of the representatives at the national association present, realized the gravity of the consequences connected with an assumption of this kind at once. Before the words had fairly filtered into the minds of the hearers, he was upon his feet, and in forceful, unmistakable terms he notified the proprietors that the undertaking was of their own choosing and devising, and that the N. A. R. D., which had not sought such action and had merely suspended judgment until the plan had proved its success or failure, could accept no part of the responsibility for results. We do not believe that the proprietary gentlemen wished to shirk any of the obligations assumed at Washington, but it is so easy and natural to leave some of the worry and work to others that if Mr. Gallagher and Mr. Rehiuss had been merely acquiescent, it is quite possible that the unability for promised results might have been divided, with grave danger to the N. A. R. D. The retail association has already stretched a point in accepting the fortified tripartite scheme instead of the contract plan demanded, and it was well to remind the proprietors that the trade now looks to them to do things and not to the N. A. R. D. We should not forget that the remarkable results accomplished by the national association during the past year have been won by individual men and not by a unanimous support of the rank and file. The greater honor to the willing and able few!

SOUTH HAVENITES AND PAW PAWERS.

Paw Paw is the pleasing name of a Michigan town, the seat of government of a county which is at present the scene of a curious comic opera situation. South Haven, another town in the same county and, it seems, a peculiarly enterprising rival, has been frequently mentioned in our news columns as a storm center disturbed by numerous difficulties between druggists and the county authorities about the sale of alcoholic beverages. Only a few weeks ago a druggist was incarcerated for violating a local option law, and last week we announced a wholesale summoning of South Haven citizens to appear in Paw Paw to answer troublesome questions about the doings of their town. At first sight the righteousness all seems to be on the side of Paw Paw, which appears to be striving nobly to reform a wicked and

perverse South Haven, but there is an other side to the dispute, as there always is to every question. It seems that there has been a rivalry which almost amounts to a feud between the two towns for years, and that South Haven is not nearly as black as she has been painted by the Paw Paw papers. That there are drug stores in abundance in the suspected town and that some of them occasionally furnish drinks without the formality of a preliminary wink, is perhaps true, but the citizens stoutly disapprove of the liquor trade, and the ministers hold up the place as an example for the edification of shameless communities where saloons are permitted to flourish openly. The South Havenites resent the action of the Paw Pawers, and claim that the county seat, which is far less prosperous, is merely trying to bring disgrace upon its more fortunate rival. They are determined that the shame of their own town shall not add to the prosperity of its persecutor. The number of witnesses called is very large, the hearings will be long, and the supply of sustenance to the enforced visitors would therefore be very profitable to the hotels and boarding house keepers of Paw Paw, a village of less than three thousand souls. To avoid giving comfort to the enemy, the South Havenites will take their hotel with them in the form of a special train supplied with all the necessaries, not to say luxuries of life, and they propose to run this train daily between the place of judgment and the place judged. Let us hope that these two towns that are doing so much to keep the rest of the country amused and interested will both come out of the present fracas with flying colors.

MORE DRUG STORE LIQUOR TROUBLES.

Our Boston correspondent this week reports another collection of suits against Massachusetts druggists who are entangled in the liquor laws. These reports come in with monotonous regularity and we can not help wondering why a state which has an international reputation for strenuous intellectuality does not devise regulations that can be depended upon to enforce the public will with less friction. The present liquor laws of the State are complicated enough in all conscience, to take account of every condition that might arise, and there seems to be no lack of determination to enforce them; yet abuses and scandals are so common that one wearies of reading about them. The multitude of suits against druggists must eventually affect the standing of the calling in the community. We do not believe that the average pharmacist of Massachusetts is a whit more fond of the liquor trade than his brother in other States, New York for example; yet his reputation as a law-abiding citizen is constantly in question. The difference is not one of personnel, but is merely the result of circumstances for which the laws are responsible. Laws that encourage or induce the degradation of the drug store or the opening of rum-selling "joints" under the guise of pharmacy are vicious, and every friend of the calling should insist upon their early reform or repeal. New York has a law which many have considered unduly lax, and yet the results have been eminently satisfactory. Statistics which are easily collected under the new arrangements, show that there has been no desire to take advantage

C. I. SHOOP, M. D., Racine, Wis.
President and Treasurer, Dr. Shoop Family Med. Co.

of the liberty granted. Under a fair law, the druggist does not seek the saloon trade; he avoids it whenever possible.

WANTED, STUMP PULLERS.

Concerning the collection of N. A. R. D. dues, a local secretary writing to the "Notes" suggests that the officers of local branches should not be held accountable for all the trouble. He states that there has been no price-cutting in his community and his associates are slow to recognize their indebtedness to the national body in a substantial manner. He reports that the process of separating the dues from those who owe them is "like pulling stumps." Perhaps that explains another item in the same number of the N. A. R. D. publication, a call for men of large stature to travel as representatives of the national retail organization. Possibly "pulling stumps" is the duty which these imposing representatives are expected to perform. Muscular persuasion is not generally considered very good form in modern civilized communities, but there are time and places when it seems almost justified. For months "headquarters" aided and abetted by every drug journal in the country, have pleaded, argued, cajoled and wheedled in a vain endeavor to bring the retail druggist of the country to a realizing sense of his duty to his association and his representatives. And all this effort seems to have done not a particle of good. Those who "paid up" would in all probability have done so without urging. What have the others done about it? Registered a vigorous protest and given some manly reason for their neglect of duty? Not at all. They have merely "hung on," growled a little, accepted the benefits, and acquiesced in everything but their own obligations in the matter. There are some animals and men with whom argument in words is a sinful waste of breath; these require muscular persuasion. We hope the stump pullers will be more effective than the beautifully worded and pathetic pleas which have been scattered throughout the country.

Our Letter BOX

A FEW PERTINENT THOUGHTS FROM PRESIDENT PRITCHARD.

We have recently been favored with a brace of letters from President Pritchard which are of so much general interest that we venture to print the portions not purely personal. We hope the gentleman most concerned will have no objections; but if he should feel that we have taken undue liberties, let him please remember that if people will persist in writing interesting letters to editors they must expect to see them in print.

ON COMMITTEE APPOINTMENTS.

In reply to our inquiries concerning N. A. R. D. committees, the president of that organization says they are still in process of formation, and adds the following observations which are both good sense and excellent politics:

The writer became president of this highly commendable association without premeditation—was entirely "non particeps criminis," if that is good Latin which you may doubt—therefore, there was no previous thought given to the personnel of committees. Such then, being the situation, it naturally takes time to sit out and make proper inquiry concerning their make-up. Personally I am not in favor of recognizing men purely on account of geographical considerations. Neither am I favorable to appointments for any purely political purposes, yet I at the same time realize the vast importance of representation from as many states as possible, but I want the men selected to be, as nearly as I can ascertain, working members. Honor where honor is due! With all these considerations in mind, it follows that time will be required to formulate the various working contingents.

I have completed the lists, but before publishing the names and assignments, I have submitted them to the members of the Executive Committee for approval. During my term of office I want unanimity and avoidance of any possible cause for friction, and to be assured of that very desirable condition, I purpose to lay all important matters before my cabinet before finality of action. The make-up of the committees will be made public in a very few days.

Thanking the Pharmaceutical Era for its able championship of our cause and its many evidences of kindly sympathy, I remain sincerely yours,

B. E. PRITCHARD.

HOW THE FAMOUS REPLY TO COMMISSIONER ALLEN CAME TO BE WRITTEN.

In another letter Mr Pritchard gives an insight into the interesting mental processes which resulted in the incisive reply to the Commissioner of Patent's report. He writes:

I thank you for your complimentary allusion to my reply to the patent commissioner's report. I will tell you in this connection, the secret of getting up such a paper, and this is it: I was writing from the heart, and was so filled with indignation at the supercilious manner in which the Commissioner handled what I considered a sacred matter, and was so overcome with ire that he should feel called upon to make such disdainful reference to the members of our craft and endeavor to call in question the sincerity of our motives, that the words flowed from my pen of their own volition, and I could not even trust myself to

look the paper over in revision, but dispatched it immediately just as originally written. Possibly a more studied effort would have fallen wide of the mark, and been a dismal labored failure.

I hold in my hand a letter from Commissioner Allen in which he states that my "argument" will be given due consideration."

MR. BODEMANN HAS HIS OPINION OF CERTAIN JOURNALISTS.

Chicago, November 20, 1903.

To the Editor:—The latest is a sensational article in to-day's Record Herald pointing out Secretary Hoy as a grafter; the nut of the charge is that he charged the State, or rather the Board, twenty-five cents for laundry. This the Herald picked out of the printed report which the editor called for. I wrote him that if he wanted any additional information, I would gladly furnish it.

This item of twenty-five cents was duly audited and, in as much as we don't want to draw a voucher, warrant and check for each box of matches, or for washing our towels. Hoy had these trifles on his bill as legitimately as his salary bill; and if the editor had wanted to know the truth he could have easily found it out.

But the Herald is against the present Governor, and ready to believe and publish and invent any lie against any of the present administration's boards.

Is that true journalism? Not by a d— sight. The result is that the efficiency of public boards is belittled by such atrocious harangues.

In this particular I am glad to go on record as stating that there is no squarer man in a public place than L. T. Hoy.

W. BODEMANN.

PHARMACISTS OF THE U. S. NAVY.

Atlanta, Ga., November 4, 1903.

To the Editor:—I take pleasure in calling your attention to the recent report of the Surgeon-General of the U. S. Navy, Dr. P. M. Rixey, in which he asks for an increase of twenty-five pharmacists in the U. S. Navy and the application to that grade of all laws enacted for the benefit of other warrant grades. If this recommendation of the Surgeon-General becomes a law, it will give commissions to pharmacists in the U. S. Navy. These recommendations of the Surgeon-General are the same that were asked for at the last meeting of the American Pharmaceutical Association by an unanimous vote, the request being transmitted to Dr. Rixey.

Very respectfully,

GEORGE F. PAYNE.

Chairman, Committee A. Ph. A., on the Status of Pharmacists in the Service of the U. S. Government.

DEPENDS UPON THE ERA FOR NEWS.

Brooklyn, November 16, 1903.

To the Editor:—Please send us another copy of The Pharmaceutical Era. We wish to use it for a special purpose and can say that we depend upon the Era for all special news in the trade and we do not have to wait from two weeks to a month for it either, therefore, we like your publication.

CHAS. A. JOHANNOT.

Pres. Morgan Drug Co.

DOLL VOTING CONTEST TO DRAW HOLIDAY TRADE!

A contest opened on the 1st of November at the drug store of Harry J. Ramsey, East Pepperell, Mass., to last until Christmas eve, which already has given considerable impetus to trade. Mr Ramsey secured a fine French doll, nearly three feet tall and with jointed body, natural hair and movable eyes. "Her ladyship" is charmingly dressed in French fashion. With each ten cent purchase there goes a privilege to vote for any favorite little girl. The one receiving the most votes will receive the doll on Christmas. A similar doll contest recently given in Maine resulted in greatly increased business for the druggist.

SHOP TALK

TOMMY ENTERS THE DRUG BUSINESS.

When the junior clerk came down to open the door he found Tommy waiting on the threshold.

"Hello, Bub!" said he. "What do you want so early in the day? Don't want some shaving soap do you?"

Tommy realized that here was an enemy that must be reckoned with, in the many years of usefulness which he hoped to spend in the drug store. For a boy of fourteen can not be called "Bub" without serious consequences, and the allusion to his pair of unusually cherubic cheeks was distinctly unfriendly.

"I am going to work here," said the boy.

"Oh!" said Frank, for that was the junior clerk's name. "You are the new kid, are you? All right! Get to work!"

"What is there to do?"

"What is there to do! Listen to that! What isn't there to do?"

Tommy thought best to ask no more questions for the present. He had hoped that Mr. Brown would be there to show him how to begin, or, at least, Mr. Thompson, the head clerk, whom he knew slightly and for whom he had tremendous respect.

"Come on!" said his enemy from the interior of the store. "Get your coat off! Hold on a minute! What's your name?"

"Thomas Dunn," replied the new boy meekly.

"Dunn—Dunn! Is Mrs. Dunn, who lives in that little house back of the school your mother?"

Tommy nodded.

"Father dead, eh!" continued the clerk brutally.

"What are you coming here to work for? Why don't you go to school?"

"Cause I want to take care of my mother," replied the new recruit standing up very straight.

"Well, you aren't very big, but you look strong. That's a good thing. Can you lift a cake of ice? You can do that for me. But you are making an awful mistake in going into the drug business." The clerk wagged his head with remarkable gravity considering his eighteen short years. "I know—I know," he added, shaking a finger at Tommy.

"Don't you believe a word he says," said a friendly voice. The boy looked around and recognized his friend, Mr. Thompson. "Listen to me!" continued the head clerk. "The drug business is all right. You are going to like it, and you are going to make a tip-top druggist. I can see that now."

Tommy's spirits revived. "What shall I begin on, Mr. Thompson?"

"You'll find a broom behind the door in the back room. Take the old one—the best one. Let's see if you can sweep the walk."

The broom was old, but Tommy was new, and the walk was well swept that morning. The new addition to the personnel of the establishment felt the great importance of his position. Was not Brown's the finest store in town, and had not Mr. Brown himself been mayor and was he not known to everyone as an authority on all subjects and as the most influential member of the school board? No soldier on guard before his general's tent ever felt more keenly the dignity of his duty, than did Mr. Brown's new boy on that first morning.

Presently the proprietor himself came along and approved of the manner of sweeping; Tommy felt certain that he had found his life-work. He would be diligent and learn to know almost as much as Mr. Thompson; but at that moment his ideal was Mr. Brown, the good and kind and prosperous.

There was work enough; Tommy found that out before the morning had grown very old. There was the store to be swept and dusted. The dusting was

an operation requiring considerable delicacy of touch, and the boy realized as never before the wisdom of his mother's constant admonitions to "mind and not knock over things" in moving about the house. During the dusting he had an opportunity to observe closely the great variety of wonderful things in the show-cases. Of some of these he already knew the use—there were flat bottles with funny little hose attachments; these he knew, for he had seen the hose in operation. There were also beautiful perfume bottles which he knew to be mainly ornamental, and he mentally resolved to buy the finest of the lot with his own earnings for his mother's next Christmas present.

Tommy's share of the dusting was nearly completed when an incident occurred that made his heart stop beating for a moment. Perhaps it was a little too much haste, or it may have been that there were more objects about than he could bear in mind at the same time; at any rate a picture of a beautiful lady which stood on a little easel on the counter capsized and was stepped upon by a hurrying customer before it could be rescued.

"Oh!" said Tommy drawing a hard breath.

"There you go!" taunted the junior clerk from the other side of the store.

Happily Mr. Thompson was near, and his smile restored things to a normal basis at once.

"Not so very bad!" said he, and walking to the other end of the counter he drew out the exact duplicate of the soiled lady, and the injury was completely healed.

"When you break or upset anything," said the head clerk to the grateful boy, "always tell me about it at once. Don't try to hide it! If you are as careful as you can and will tell me about all your mistakes, we shall get along beautifully."

After the bases of the counters had been washed with sponge and water, there was a great accumulation of graduates and mortars waiting to be cleaned. Tommy was awkward, at first, and slow, partly due no doubt to his impulse to apply his nose or tongue to all things. He was soon cured of this propensity. A graduate contained a few drops of what looked temptingly like molasses and Tommy tried it and nearly dropped the graduate into the sink-full of glass-ware. But Mr. Thompson assured him that he would not die, that time, and incidentally showed him the danger of tasting things. Thereafter the boy was careful not to touch even with his finger, any syrup however seductive it might look.

After dinner, Tommy was initiated into the mysteries of the cellar, where there was a marvellous collection of barrels, boxes and huge bottles. Here the boy found much use for his sturdy young muscles, but he was not afraid of work, and when, at about six, Mr. Brown came down to inspect the result, the place was, as he said, "in shipshape."

In the evening, Tommy with clothes carefully brushed, watched the absorbing operation of waiting on customers. It was all new and strange; things look so different from behind the counter than from the point of view of a customer. Mr. Thompson seemed to know everybody and everything, and the boy wondered if he would ever reach such wonderful proficiency. But there were compensations even in the present. When one of Tommy's friends, known on the street as "Swipesey," came in to get some fly paper, what an immense satisfaction it was to stand calmly behind the counter, like an old tried hand, and pretend not to notice his admiring glances.

At eight o'clock our new recruit went home, and related all his experiences to his proud mother; and the magnificence of the store, Mr. Brown's supernatural

grasp of affairs, the kindness of Mr. Thompson, all required a great deal of discussion, but the junior clerk scarcely received a word of mention.

Instead of the ordinary studies which had been planned for the short evenings, Tommy proposed that he devote all his time to arithmetic and denominate numbers.

"A druggist has got to know an awful lot," said he with a sigh. "Mr. Thompson says to begin with, I must know all about fractions and apothecaries' weights, and he says he will let me take some of his books as fast as I need them."

When the boy had gone to bed, tired but full of courage and hope for the future, the mother sat for some minutes looking into the fire. Then she drew her lamp nearer her work and resumed her sewing. The first few stitches were dimmed by moist eyelashes.

"People are so good to us," she said.

THE CRIMINAL WHO WILL NOT SELL "JUST WHAT IS ASKED FOR."

The customer was long, lank and loose-jointed, and wore boots with trousers comfortably tucked in the tops.

"Say, Mister! Got any strick-strychnine? I want about an ounce, if it don't cost too tarnation much."

"An ounce!" said the druggist. "Great Scott! What are you going to do?"

"Hey? I want it to feed to Tildy. She's been slow and lazy like fur quite a spell—ain't got enough spirit to cook her own 'aters skassly. Lem Baker—you know Lem—he's ben down to them there bottons, and he says as how when they gits that way down there, they eats strychnine. He says fur me to git an ounce of the stuff and give Tildy as much as'll lay on a ten-cent piece twice a day. Melbe an ounce is too much. You'll know how many times she'll have to take it."

"Not very often!" said the druggist with a peculiar smile. "Are you sure your friend said 'strychnine'? Wasn't it quinine?"

"Any difference? Lem says it's a whitey sort of stuff. Melbe it was tother name—I dunno!"

The druggist explained to the young farmer that the proposed treatment would be extremely bad for the beloved Mathilda's health, and that an ounce of strychnine was capable of killing an army, to say nothing of a rather slight overworked woman. Lem Baker's confiding friend was easily persuaded to take quinine is capsules instead.

"Gosh!" said he, carefully stowing away the precious parcel in the bottom of a cavernous pocket under a red bandanna handkerchief and a pair of huge woolen mittens. "I come dang near killin' Tildy, didn't I? Ef you hadn't a ben here—if it had a ben that young feller—"

"Your all right in this store," said the druggist hastily.

So "Tildy" still feeds the calves and pigs. That druggist is so incredibly lost to all sense of shame, that he actually takes pride in his share in the little transaction. As everyone who reads the papers must know, he really committed the most heinous crime known to advertisers, persuaded a customer to take something "just as good." Will druggists never learn to hand out "just what is asked for?"

SOMETHING EXTRA IN STINGINESS.

"Talk about closeness and calculating stinginess," said a Broadway drug clerk, "I used to know a downtown druggist who was just about as 'near' a person, as the Yankees say, as I ever met. I give you my word that this old codger, used to go into a free saloon where an elaborate free lunch was set out every day at just noon. He would walk up to the bar, buy a five-cent cigar, which he invariably put carefully away in his pocket, then he would tackle the lunch. And my! how he would make the soup, the cold meat the salad, the cheese and the pickles disappear. For

fully fifteen minutes he would minister to the needs of the inner man, then would wash his hands and return to the shop as well satisfied as most men would feel after a dinner at Delmonico's. But what do you think he used to do with that five-cent cigar, for he never smoked? Sold it to the first customer who came in for ten cents."

NO SUCH MAN AS "MOL" IN THE TRADE.

"When a druggist friend of mine recently called my attention to a prescription he had received that day," said a New York physician, who formerly was a pharmacist, "calling for collargol, he asked me if I didn't think the doctor who wrote it was a lunatic.

"I don't see anything in that prescription to show that he is," I replied. At that the druggist began to look as if he doubted whether he had found such a funny thing after all. "How did you fill it?" I asked.

"Why, I made a two-ounce solution of nitrate of silver," he replied.

"Then I told him what I thought of his pretensions to be a high-class chemist and up-to-date man, a reputation he had gained and is making a great deal of money on. I told him that collargol had been on the market for four years, as he might have known had he ever looked at a drug journal.

"But he was not as bad as another druggist, also generally given credit for being an exceptionally clever man in his calling. In this case I wrote a prescription for a consumptive client, calling for several capsules of creosote. These capsules I desired to be very soft so I wrote: 'Three grain creosote, mol. capsules, —'s or some other.' 'Mol. is the abbreviation for Latin molis, meaning soft. And I wrote it and specified —'s, so as to be sure and get an extra soft capsule.

"Well, that druggist told my client he would have to wait 24 hours. At the end of that time the druggist said he couldn't fill the prescription. So I told the patient to have it filled at —'s, which he did.

"A few days later I got a letter from the druggist. He took me to task severely. 'You sent that creosote prescription to —'s,' he said, 'though you know their reputation for substituting. Now I have certain proof that they substituted, for I looked everywhere in the trade for Mol's capsules and no one by the name of Mol is to be found in the trade.'

"Perhaps I didn't reply to that letter!

"There is too much of a tendency with some druggists after they come out of school to sit down and sit still. Figuratively speaking, identifying themselves as of the same order as the butcher, the grocer and other mere tradesmen."

SHOES AND GOLOSSES AS PHARMACISTS' SIDE LINES.

"I want to get a pair of shoes," said a woman the other day to a Syracuse drug clerk. "Shoes? We don't keep shoes here, this is a drug store," replied the clerk with a smile.

"Wasn't it here that I bought a pair of shoes about six months ago? I am sure it was in some drug store. They fitted me and I want to get another pair. I must have got into the wrong store."

The clerk had a good laugh after she went out. A companion behind the counter took him up.

"What'll you bet there isn't a Syracuse druggist who sells shoes?" he asked.

"I guess I will go you a small box of cigars."

"All right. You call up Alvin W. Beach's drug store in East Washington street and see if they don't keep shoes there."

The pharmacy mentioned was called up on the 'phone and the clerk was informed that Mr. Beach had dealt in ladies' shoes for a long time. A discussion of side lines immediately took place among several who happened in the store and the information was elicited that Henry L. Passage sells rubbers, F. C. Joslyn & Co. umbrellas, and Edwin I. Van Buskirk manufactures ice cream upon an extensive scale.

IN LITTLE CURACAO.

This Little Island Has Five Enterprising Druggists.—
Of One Firm, Messrs. Senior & Co., and of
General Conditions Mr. Y. Reynardus
Writes to The Era.

To Mr. Y. Reynardus, a good friend of the Era, we are indebted for a very well-written and interesting description of pharmacy on the little island of Curacao, one of the Dutch West Indies. Curacao is only 46 miles north of the coast of Venezuela, in the Caribbean Sea. Mr. Reynardus writes:

As I very often see illustrations of American drug stores, in your paper, I take the liberty to send you a photograph of the pharmacy where I am employed.

The island of Curacao has belonged to Holland since the year 1815. The population is 30,000, more or less; about 4,000 are whites, the rest negroes and mixed. The natives speak a kind of patois, composed principally of Portuguese and Dutch words and dialects. The island has a beautiful harbor and is a very healthful place. There are five drug stores established here, besides one belonging to the Military Hospital. Allow me now to say something about the Botica "Excelsior"—Botica means pharmacy or drug store—belonging to Messrs. Senior & Co., the photo of which I enclose.

This drug store is established since 1896 and its representation is increasing daily. The owners are Edgar Senior and H. M. Chumaceiro, both Curacao graduates and very competent in their branch, and well educated. Their business is on a large scale and they are well known in Europe and the United States, as "A one." In the photo Mr. Senior does not figure, as he was absent on a pleasure trip to Europe. The man with black mustache, standing toward the rear of the dispensing department is Mr. Chumaceiro. The three standing outside are clerks of the Botica "Excelsior." The one in the middle, with coat on, is myself, chief assistant, and subscriber to "The Pharmaceutical Era."

The number of prescriptions filled daily in this store, amounts to about forty, exclusive of refills, which sometimes number as many as sixty. At present we are in charge of the prescriptions for the poor of the eastern side of the island, which are paid for by the Government, according to a new contract. The other drug stores here belong also to respectable firms.

About ten doctors are practicing in this island, only one of whom is an American graduate—Thomas Gaerste. The others are Dutch and German graduates.

According to law, drug stores should be open from 6 o'clock in the morning until 9 o'clock p. m., but, as a rule, there is night service.

Our people are highly satisfied with our services and very very seldom is a mistake reported. The drugs are mostly ordered from Germany and only patent medicines are imported from their respective sources. But lately we have begun to observe that pharmaceuticals and chemicals from American factories do fill our requirements very satisfactorily, and in some ways much better than the German ones. All the members of the aromatic group or series, prepared in the States, are so good that they keep their white color for a long time; they do not turn red so soon as the German stuffs. The herbs we prefer to get from your country. Among the factories known in this place, Parke, Davis & Co.'s laboratories and McKesson & Robbins and Lanman & Kemp's are all considered to be very good. Upjohn's pills are also imported here and enjoy a splendid reputation. Scott & Bowne's cod liver oil emulsion is also an article of ready sale. All fluid extracts we prefer to receive from the States, as they keep for a long time and completely answer their therapeutic purposes.

Corner in the "Botica Excelsior," Messrs. Senior & Co., proprietors, Curacao, West Indies.

Soda water is also a branch of business for the drug stores. Cold refreshments are served at any time. With but one exception, all the apparatus brought to Curacao are Matthews', and the juices are also obtained from that firm.

Besides our drug store business we manufacture on a large scale, "Curacao liqueur"—already well known. This liqueur is prepared from selected fresh orange peels from our own groves. J. B. Martin, 1136 Broadway, N. Y., is the sole agent for the States.

Mr. Chumaceiro of our firm was in New York last April, and visited the New York College of Pharmacy, of which he carried away with him a very good impression as well as of the kind reception by the professors.

Among the different American consulting books, we keep are the American Dispensatory, Colblentz on Pharmacy, Heebner's Treatise on Pharmacy, Potter's Books, Practical Examination of Urine, by Tyson, etc.

CITRIN.

Kudolf Berendes (Ber. d. d. Pharm. Ges.) describes a process for the preparation of citarin. The product of the action of chloromethyl alcohol upon citric acid is the dibasic anhydromethylene citric acid. This acid forms white odorless crystals having a slightly acid taste, and dissolving easily in about 20 parts of cold water, still more easily in hot water, with difficulty in alcohol and slightly in ether. Citarin is the disodic salt of this acid and dissolves readily in water to form a neutral solution having very little taste. Upon the application of heat the salt carbonizes with the evolution of a formaldehydic odor without fusion. Solutions when heated yield formaldehyde, the salt must, therefore, be dissolved in the cold. Mineral acids separate from concentrated solution free methylene citric acid. Alkalis with heat separate formaldehyde which is easily detected by the odor and chemical tests. A ten C. c. solution containing .1 gram citarin to which a few drops of sodium carbonate has been added treated with dilute silver nitrate and heated gently yields a white precipitate changing to black metallic silver. Citarin absorbs moisture from the air and cakes into masses, unless protected in well-stoppered bottles.

PYOLUENE.

Pyoluene is an antiseptic said to rival mercuric chloride in bacteriocidal power. It is described as oxymethylallylsulphocarimide, and is claimed to be neither caustic nor acid nor toxic. Its taste is agreeable and it is soluble in all proportions in water, the alcohols, the ethers and glycerine.

IRA B. CLARK, Nashville, Tenn.
First Vice-president Tennessee State D. A.

METHOD FOR ASSAY OF ALKALOIDAL DRUGS*

By A. B. LYONS, Detroit.

KELLER'S general assay method has been widely accepted as the most practical yet proposed. A convenient quantity of the drug, in fine powder, is introduced into a flask with ten times its weight of an appropriate ethereal solvent, in most cases a mixture of one part of chloroform with about eight of ether. The solvent is given time (ten minutes) to penetrate thoroughly the cellular structure of the drug. Solution of ammonia is then added and the flask is frequently shaken during a specified time, generally four hours. Water is then added just sufficient in quantity to cause the drug to cake together, leaving the ethereal fluid quite clear, and of this there is then decanted a certain aliquot portion from which the alkaloid is extracted by shaking out with dilute acid.

Experience has shown that, in most cases the alkaloids are almost wholly dissolved out of the drug by this procedure even when the drug is in a powder no finer than No. 30. Duplicate assays generally agree well, and the yield of alkaloid is in most cases quite as large as in assays by other methods.

There are, however, some theoretical objections to the method. The most serious of these depends upon the solubility of ether in water and conversely that of water in ether. We all know that when a given volume of ether is shaken with a given volume of water, each fluid dissolves a portion of the other so that the volume of the ethereal stratum is changed. Since commercial ether contains a variable quantity of alcohol the change in volume will not be always the same.

Another source of error in the aliquot part is found in the volatile nature of the solvents used. In warm water it is impossible to avoid some loss by evaporation, so that the aliquot part taken is too large.

In this country the Keller method is generally modified by substituting parts of volume (of fluids) for parts by weight. The exactness of the aliquot part is still further compromised by this practice.

W. A. Puckner has described a modification of the Keller method which avoids the use of the aliquot part. He uses only one half of the ethereal solvent for the maceration and after the usual maceration transfers the drug to a small percolator in which after the ethereal solution has been well drained off, the marc is percolated with the same menstruum to complete extraction. The quantity of ethereal solvent reported is

*From the *Pharmaceutical Review*.

not materially greater than in the Keller method, while the quantity of alkaloid obtained for weighing or titrating is larger because it represents the whole of the sample taken for the assay. In the case of drugs containing a very small proportion of alkaloid this is an important advantage.

The objection I find to this plan is that the transfer of the mass from the flask in which the maceration has been conducted to a suitable percolator, which should not be more than 3 cm. in diameter, requires very dextrous manipulation, or it will be attended with loss of alkaloid.

I have been practicing with a good deal of satisfaction a different modification of the Keller method, which seems to me less open to objection than any heretofore proposed. The plan is the very obvious one of packing the drug in the percolator, having previously moistened it with an appropriate menstruum of which an alkali forms a part. In some cases it may be best to moisten the powdered drug first with an aqueous solution of potassium bicarbonate, dry at a gentle heat or by spontaneous evaporation, introduce into the percolator with or without moistening according to circumstances and percolate slowly with the appropriate ethereal menstruum.

The method, however, which seems to be the most generally useful, is as follows: Provide a cylindrical percolator about 20 cm. in length and 2 to 2.5 cm. in internal diameter, ending in a tube 5 cm. long and about 3 mm. in internal diameter. A glass stop-cock in the tube would be a very desirable improvement. In absence of this, the rate of flow of the percolate must be controlled by packing the tube more or less firmly with absorbent cotton. Since the solvent is to be a very mobile fluid, the packing should generally be quite firm.

Having prepared the percolator, moisten the drug (5, 10, 15, 20 grams, or more, according to richness in alkaloid—the finer the powder the better) with the mixture of ammonia, alcohol and ether-chloroform, the proportions of which will be somewhat varied to suit different drugs. If 10 grams of such a drug as belladonna leaf are to be used for the assay, the mixture may consist of: Stronger water of ammonia, 1 c. c.; alcohol, 4 c. c.; ether-chloroform (6:1 vol.), 5 c. c. Moisten in a small evaporating dish, transfer quickly to the percolator, pressing the powder down firmly with a glass rod. The small amount of powder that remains adhering to the dish, spatula and glass rod can be easily transferred to the percolator by aid of a little absorbent cotton, which is finally pressed down upon the powder. The percolator is then to be covered and allowed to stand 5 to 10 minutes so that the ammonia may thoroughly permeate the drug. A mixture of ether and chloroform, or whatever solvent is best suited to the extraction of the alkaloid present, is next added and the powder percolated with it to exhaustion. It is easy generally to secure a rate of flow of one drop per second, which will ensure thorough exhaustion by the time that 50 to 75 c. c. of percolate has passed. When it is believed that the exhaustion is complete, test this by collecting 15 or 20 drops, stirring this with a drop of normal sulphuric acid, evaporating off the ethereal solvent and testing the acid solution with Meyer's or Wagner's reagent.

From this point the assay is to be carried on in the usual manner.

The method may be modified in some cases by placing the powder in the percolator dry, introducing over it a little absorbent cotton moistened with water of ammonia, closing the percolator for 10 to 30 minutes and then proceeding to percolate with ether-chloroform. Other modifications will suggest themselves as worthy of trial in case difficulty is experienced in following the routine described. It might be advantageous in some cases to moisten the drug at first with a solution of lead subacetate, dry it and then treat as above. Possibly a dilute solution of ferric chloride might be preferable sometimes to the lead solution. But, as a rule, the method as described is quite satisfactory, exhausting the drug very completely and requiring very little time to carry through.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the ERA. Copies of these may be obtained at two cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Salvage of Proprietary Abortifacients.

(Chicago) We have repeatedly stated in these columns that we believe a druggist has no moral right to furnish any preparation of an abortifacient character, proprietary or otherwise, other than upon the written order of a physician. Many of the preparations advertised as abortifacients are at best of no value, and were they valuable for the purposes claimed their use would be dangerous to human life. No honorable-minded druggist cares to assume responsibility for this kind of traffic. Attempts have been made by the United States postal authorities to interdict the transmission of these remedies through the mails, but it has always been difficult to prove legal fraud, proprietors "proving" that their goods were sold only for the purposes advertised, and their products were not intended for producing abortion.

In discussing this subject from a legal standpoint Fall ("Law of the Apothecary") says there is no uniformity in the language of the statutes of the various States describing the various acts which constitute the offense. In some cases, the particular articles which are prohibited to be used are limited in words to "any medicine or drugs." In other instances it includes "any substance or thing whatever." In some statutes the words "or other noxious thing" are used. * * * * It is, under most of the statutes which have been here examined, an offense of some kind to merely sell or give away the drug, and in some instances even where no intent to procure the criminal result exists, but where the drug is of a kind which causes the result, and it makes no difference whether or not the drug was employed in procuring abortion. The law is directed against supplying a substance with the intention that it shall be employed to produce the result; and if the seller did supply it, intending it to be used for the unlawful purpose, though it is not so taken or used, the offense is complete. The consent of the woman who desires the noxious drug is not material, and neither the existence nor absence of it makes any difference in the commission of the offense.

Another distinction made by the several statutes is that some of them require the drug to be administered to a "pregnant woman," others to "any woman," and still a third class add the words "or supposed by the person to be pregnant." In the first class of cases, actual pregnancy must exist. In the second class of cases it is quite sufficient to constitute the offense that the drug was administered with the intent to procure the result, though the woman was really not pregnant. In the third class the intent must be coupled with the fact that the woman was supposed to be pregnant, though whether she was or not is immaterial.

Salary and Choice of a Location.

(W. B. A.) "I want you to tell me to the best of your ability and without any partiality whatever, in what part of the United States I can get the best

salary and eventually start in business. I have had over five years' experience in the drug business, am twenty-three years of age and a graduate of the Philadelphia College of Pharmacy."

No direct answer can be given to your question for there are too many conditions involved. We can tell you that there is a demand for experienced drug clerks right here in New York City at fairly good salaries as clerks salaries go, and one has but to read the news columns of the Era from week to week to learn that there is also a general scarcity of capable licensed clerks in many parts of the country. Only recently we have had letters stating that good men were wanted both in Pittsburg and Chicago. With this apparent dearth of qualified men the average man of your training, experience and age should have no difficulty in securing a remunerative position. Our insight into the future, however, is not keen enough to discern with any degree of certainty where you can most profitably locate to eventually go into business. We know too little of your individuality and capability, and less of the future needs of a particular locality for a drug store. We believe that if you are of the wide-awake, hustling type, you can go into any of the cities named, secure at once a remunerative position and a few years later, if you have the capital, become the proprietor of a paying business. It is always best as a rule for one to follow his old business while prospecting for the new. The matter of change should be a subject of thoughtful consideration. In other words, do not act until you are "sure you are right, then go ahead," for it is you who must make the decision and abide by the consequences. The attainment of success in any calling and in any location is invariably secured by individual effort and opportunity. And as a general proposition, there is no achievement disproportionate to the effort spent upon it.

Glove Cleaning Paste.

(O. D. Co.)

	(1)	
Ord soap	1	ounce
Water	4	ounces
Oil of lemon	1/2	drum
French chalk	q. s.	

Shred the soap and dissolve in the water by heat, add the oil of lemon, and make into a stiff paste with French chalk. The lemon and chalk may be omitted, and replaced with powdered orris.

(2)

White soap	25	ounces
Warm water	15	ounces
Labarraque's solution	10	ounces
Water of ammonia	1	ounce

Shred the soap and melt it in the water by heat, stirring well all the time. When luke warm add the other liquids and mix thoroughly.

To use either of the above: Put the glove upon the hand and apply the paste with a piece of flannel, rubbing the kid from wrist to tip of finger.

Probably as satisfactory a method of cleaning gloves as any is to wash them with deodorized benzine, but care must be taken to avoid the neighborhood of a fire during the washing process. A formula for a liquid "cleaner" recommended by the British and Colonial Druggist some years ago follows:

Methylated ether	100	grams
Benzol	200	grams

Put the gloves on the hands and rub thoroughly with a clean piece of flannel wetted with the solution. Let the greater part of the fluid evaporate before taking the gloves off; then hang them up in a current of dry air until the smell of the fluid has evaporated. Do not put the gloves near a naked flame while moist with the liquid.

Registered Nurses in New York.

(L. G. T.) The attorney-general of the state of New York has just recently interpreted the so-called "registered nurses' law," passed by the last Legislature. He holds that the act in question does not limit the right to practice nursing to registered nurses only. In his opinion the act does not require a re-

J. R. WEBB, DeWitt, Ia.
Treasurer Iowa Pharmaceutical Association.

gent's certificate or even a course of study in a training school for nurses as a condition precedent to the right to practice nursing. It prescribes the conditions upon which one may obtain the right to the title of "registered nurse," but does not require unregistered nurses to discontinue their occupation. The act prohibits persons who are not registered nurses from assuming the title or using any abbreviation, word, letter or figure to indicate that they are so registered.

Show Globe Colors for Winter.

(J. L.) All colors have a tendency to fade in strong sunlight and so far as we know, there is no show globe solution that will stand protracted exposure without losing some of its brightness. Various substances are added to lower the congealing point of show globe solutions, but the addition of about 20 per cent. of alcohol is probably the most serviceable. Transparent colors should be chosen and the globes should be clean outside and in. Do not use deep colors for large globes, or very pale liquids for small containers, as they do not show to advantage. The following formulas have been recommended for winter use.

Wine Color.

Alcohol	1 part
Water	7 parts
Caramel	4 s.

Dissolve the caramel in the water and add the alcohol. The shade of color can be regulated by the amount of color used.

Crimson.

Oil of turpentine	32 fl. ounces
Powdered alkane	3 troy ounces

Extract the color by percolation or maceration.

Yellow.

Color commercial alcohol with tincture of curcuma to the desired shade.

Red.

Dissolve carmine in water of ammonia, and reduce to the desired shade with a mixture of water 4 parts and glycerin, 1 part.

Green.

Copper acetate	40 grains
Acetic acid	260 minims
Water	15 fl. ounces
Alcohol	5 fl. ounces

Dissolve the copper acetate in the water by the aid of the acid and then add the alcohol.

Blue.

Copper sulphate	2 tr. ounces
Water	12 fl. ounces
Glycerin	4 fl. ounces

Dissolve the salt in the water and then add the glycerin.

In all cases it is desirable to allow the solution to stand over one or two nights at near the freezing temperature, and then filter while cold. Many other formulas can be devised, if desired, by employing coloring substances soluble in alcoholic or glycerin solutions.

Bronzing Hot Water Radiators.

(Radiator) Bronzing hot water radiators is a little out of our line but a practical machinist and steampipe fitter supplies this information, which he says is all right: First clean the work from oil, dirt, etc., with benzine or turpentine. If with the former highly combustible substance, see that the room in which the work is done has ample ventilation, and that there is no fire near. With these precautions proceed to clean the work thoroughly. Then apply a coat of dead flat color of a yellow, or yellow-ochre shade. When dry, if sufficiently heavy to have afforded a good ground, put on a coating of good oil size. While the size is still "tacky," or not quite dry, apply dry bronze powder with a wad of cotton. This is the usual and quickest method. A coat of elastic oil varnish will keep the bronze from turning dark longer than it would otherwise, though it is not sure to keep from cracking. Of course much will depend upon the quality of the varnish used. Some varnishes will not crack under such conditions. Again the better grades of bronze will retain their color longer than the cheaper.

Who Makes these Motors?

(J. L.) "Where can I procure a small model engine, vertical or horizontal, with sufficient power to work a very light piece of toy mechanism? The engine must be driven by a spring motor or clock-work, not by electricity or steam. The engine is for the purpose of window display. If such an engine is not in the market, then where can I procure a spring motor with pulley attachment that would answer the purpose of driving the toy mechanism?"

Possibly some one of our readers can supply the desired information.

Cement for Mother of Pearl.

Isinglass in thin sheets	1 dram
Mastic	2 drams
Ammonium chloride, powdered	1 dram
Alcohol	3½ ounces
Water	4 ounces

Steep the isinglass in the water for one day, and then dissolve by aid to a gentle heat, add 16 drams of alcohol, pass through a cloth strainer, and to the hot solution add, with constant stirring the mastic, previously dissolved in 12 drams of alcohol.

Paste for Cleaning Show Windows.

A German technical paper gives the following formula for a paste for cleaning show windows:

Castile soap	2 parts
Water	3 parts
Dissolve the soap in the water and add:	
Prepared chalk	4 parts
Vienna chalk	3 parts
Tripoli, fine	2 parts

Stir into a homogeneous mass and pour into moulds to set.

Show-Card Ink.

Pure asphaltum	2 ounces
Venice turpentine	1 ounce
Lampblack	½ ounce
Spirits of turpentine	½ pint

NEWS DEPARTMENT.

AMONG THE BOWLERS.

Some Reversals in New York Standings—Rochester Bowlers' Banquet—Detroit's Bowling Much Better Than Last Year—Calvert Drug Got Its Back Up.

The National Lead Co. and Lanman & Kemp rather surprised the men who dope things out, for both teams won their three straight, though the team scores were worthy of the veriest novices, not one of the six rising to 775. Those are team and highest individual scores: Lanman & K. 750 771 753 Sharp & D. 721 762 720 Thomas 197 Solon 175 McGillen 197 Nat'l Lead 764 759 741 B. R. & Co. 750 693 738 Agneau 194 170 Norris 211

Standings:		W. L.	W. L.
Seabury & J.	3	0	Lanman & Kemp... 3 3
Parke, Davis & Co.	3	0	Sharp & Dolme... 2 4
National Lead...	4	2	Ruessler & H... 0 3
Bruen, R. & Co.	3	3	Dodge & Olcott... 0 3

Twenty-four of the leading druggists of Rochester attended the bowling match and banquet on last Thursday afternoon. President Frederick W. Pickett of the Rochester Ph. A., presided. Addresses were made by Messrs. McBay, Chilson, Guilford and Moore. Mr. McBay spoke especially of the good that has resulted from the organization. Mr. Chilson gave his associates some inside facts as to the difficulties that have been met by the committee on prices and rates, of which he is chairman. The committee has the deep sympathy of the other members. Two games were played. D. H. Moore's team won from that of Mr. Gram, and Mr. Guilford's from that of Mr. Lutt.

Detroit, November 24.—The games of last week marked the completion of the first quarter of the schedule of the league, and the records so far show an increase of 20 per cent over last year. Last year Nelson, Baker & Co. led the first quarter by a narrow margin, while Parke, Davis & Co. this year head the league by a large lead, having lost only one game out of the 15 played. The highest team score of the season is 966, made last week. Last year the same team held the highest team record, 904, and they beat it in the first game played this year with 911. The team and highest individual scores:

P. D. & Co.	812	966	819	F. I. & Co.	713	738	714
Olsey	232	232	232	A. Smith	200	200	200
N. B. & Co.	747	811	848	F. S. & Co.	780	743	762
Ludwig	178	178	178	Haggerty	201	201	201
P. W. & Co.	820	719	682	M. D. Co.	742	674	789
Koppersmith	187	187	187	Carlisle	208	208	208

The following shows the quarter's averages:

	Pins.	Ave.	Pins.	Ave.	
Parke, Davis	12,546	836	F. Stearns	11,190	746
Hich. Drug.	11,726	781	P. F. Ingram	11,176	745
Nelson, Baker	11,582	762	Farrand	10,201	680

The standings:		W. L.	W. L.		
Parke, Davis & Co.	13	1	F. Stearns & Co.	6	9
Hichigan Drug	9	6	P. F. Ingram & Co.	5	10
Nelson, Baker	8	7	Farrand, W. & C.	3	12

One week's play in the Parke, Davis & Co. inter-departmental league was lost owing to the death of manager Warren. Play was resumed last Saturday night on the second quarter, and the feature of the evening was the bowling of the stock team, which made a total of 899 pins, this being the high team score

for the season. Those who bowled over 200 were Farwell 224, Lawrence 207, J. Smith 202. The standing of the clubs:

Chemical	18	3	Scientific	10	11
Stock	13	8	General Business	9	12
Pharmaceutical	12	9	Canad. Laboratory	6	15
Publication	10	11	Mechanical	6	15

Milwaukee, November 24.—Employees of the several wholesale drug firms of the city have organized their bowling teams for the winter season. In the games played thus far the Jerman, Pflueger & Kuehnstedt five have won three straight games from the Drake Bros. company, while the Yahr & Lange Co. team has defeated the J. P. & K. team two out of three games.

Baltimore, November 24.—The bowlers were treated to a surprise last week, when the Calvert Drug Co. quintet developed a streak that put the crack team of James Baily & Son on its mettle and came near resulting in a clean sweep. The Baily contingent took two of the three games, but by very small margins, neither contest being decided until the last frame had been rolled. Last week's results and high individual averages:

J. B. & Sons	845	805	793	Calvert Drug	843	799	809
Fairley	184	184	184	Ellicott	180	180	180
McCk & Co.	732	864	826	Stanley & B.	775	712	695
Armour	171	171	171	Lockwood	180	180	180

Standings:		W. L.	W. L.
James B. & Co.	15	6	Sharp & Dolme... 8 10
McCormick & Co.	14	7	Root & Herbs... 8 10
Stanley & Brown	10	11	Calvert Drug... 2 19

NO EXCLUSIVE RIGHT TO COMMON WORDS.

The right of all persons to the use of ordinary words as trademarks was emphasized recently by the decision of the Court of Appeals in the case of the Barrett Chemical Co. vs. Stern. The plaintiffs use the word "Roachsalt" for their preparation and the defendant uses the words "Roach Salt" for a preparation for the same purpose. The decision reads:

"The sole question is whether the plaintiff has a technical trade mark that has been invaded by the act of the defendant. Both parties are engaged in the same business, and both have made use of a common word to describe the character, quality, and use of an article for destroying insect life. The fact that the plaintiff made use of the word before the defendant did not give him the exclusive right to it, since it was merely descriptive of the article. There is no allegation or finding that any fraud was intended or committed, or that the defendant, by the use of the word, palmed off his goods to the public as the goods of the plaintiff. The case, in its legal aspect, is practically the same as if each party had labeled his goods 'Roach Poison' instead of 'Roach Salt.' They are all common descriptive words, indicating to the purchaser of the article that it was a powder or preparation for destroying roaches or other insects; and when the two labels are compared with respect to size, color, character, and advertising caption, descriptive of the thing to which it is attached,

they are so dissimilar that it is scarcely possible that any observer possessing reasonable intelligence who wanted to procure the plaintiff's goods would be likely to be deceived, or mistake the defendant's article for that of the plaintiff."

THEY HONOR WARREN'S NAME.

Directors, Executives and Employes of Parke, Davis & Co., Hold Meeting and Adopt Memorial Tribute to Their Late General Manager.

In loving memory of a beautiful and beneficent life, we the assembled directors, executives and employes of Parke, Davis & Company, would fain express the sorrow and heartache caused by the untimely death of our General Manager, William M. Warren. For the relief of our own grief, as a just tribute to a life rich in effective performance, and in deference to the sentiments of a wide circle of surviving friends, we record this testimony to the able character, the massive and solid testimony to the large, warm generous heart, the brilliant integrity, the large, warm generous heart, the brilliant and gifted mind, the abounding energy of our beloved friend. As long as life and memory may linger in our mortal frames, we shall cherish the recollection of his noble spirit and his winning manners simple, sweet, and lofty spirit and his winning manners simple, sweet, and lofty spirit. The benevolence of his heart shone out in the engaging smile, in the keen and penetrating yet kindly eye, which gained for him a friend in every acquaintance. No man ever lived whose granite-like proclivity inspired quicker or more lasting trust. To know William M. Warren was to like him; to know him well was to love him and trust him to the gates of death. And what living creature ever trusted him in vain? His simple word was a tower of strength. When did he ever fail in the whole span of his short but shining life to fulfill his pledged faith with a chastity of honor that knew no stain—may whom did he fail to beggar his promise by the measure of his performance? Gifted he was, but his equanimity of his mind in moral weight as in mental strength, by his remarkable success was only the demonstration of his remarkable character.

Mr. Warren won many of the great prizes of life—high position, wealth, influence, popularity, business suc-

cess, but he never paid any of their tragic penalties. His temper remained sweet, his faith in men unimpaired. His honor remained his love of mankind unclouded.

It would hardly be fitting at this time to give more than a passing glance at Mr. Warren's beautiful death and to his wife and orphaned child, to parents and to the full height of all domestic duties, to him, indeed, they were not duties but joys, for he cherished tenderly every family tie and he could not draw a cheerful breath until these dearest to him shared in the rich happiness of his young and radiant life.

Mr. Warren had barely crossed the threshold of his fortieth year. Entering the service of Parke, Davis & Company when a lad of seventeen, he rose steadily through its various grades until at forty-two he filled the highest place in the gift of the house, that of General Manager. At its death its administrative success seven years of almost to a day. Its wonderful increase has been manifested in a rapid and unceasing increase of the business, in the multiplication of new buildings and branch houses, in the successful extension of foreign trade and acre after acre; in the successful enterprise; in heightened prestige, in the formation of a remarkable corps of veteran executives animated by the principles of their leader and trained to perpetuate his policies. No ambitious merchant could wish a sadder monument than the contributions made by William M. Warren to the tower and growth of the great enterprise in his lungs! The secret of his brilliant career was threefold. He knew law, and loved, to discover and put the key of dozens of obscure and untried men into the hands of opportunity. Wholly free from national antipathy, prejudice or social narrowness, he measured his talents by the single standard of ability to produce results. As an organizer, as a coordinator and manager of men, his rare gifts would have brought him fame in public life. He had an eagle's eye for opportunity and a keen unperceived by the dull vision of the mediocre. In the arts of mercantile construction he was a gifted architect, and to build, to build was the darling occupation of his mind and aspired to the welfare of this House day condition that could effect the study, but his also was the object of his assiduous study, but his also was the rarer power to connect the present with the distant future by new lines of policy. He had the statemans instinct for tendencies as well as realities; and when the tendency of to-day became the fact of to-morrow, he found himself prepared. With the magnanimity of a lion armed and prepared. With the magnanimity of a true leader, he feared no rivals; he feared not to survive his own successors that his lifework might survive its author, and the House to which his labor was dedicated might thrive and prosper during its supreme, its heroic term. Fidelity to a trust strives to make himself dis-

expression when the trustee strives to make himself dispensable.

Oh, beloved friend of happy days, partner of our triumphs, architect of our success, may thy serene spirit remain an invisible presence in our lives and comfort our aching hearts. May the sweetness, the strength, the wisdom, the genial cheer of the young life be distilled upon our souls and sustain us in the task which thou hast forever resigned. May thy great, large-minded thoughts be breathed into our to-day a salubrum work which touches lives and our labors and human suffering. In our the very nerve of pain and human suffering. In our feebleness we could not abridge this gift, to preserve long thy days; may it be given us to cherish, to preserve and to augment the handwork!

THINKS UNION HURTS DRUG CLERKS.

Enterprising labor men have been trying to induce Syracuse drug clerks of the city to join the retail clerks union, and it has claimed that a large number of clerks had decided to join. Inquiries, however, revealed that the licensed clerks are against the union and will have nothing to do with it. Junior clerks look more favorably upon the proposition, but will probably stay out.

George E. Thorpe, president of the S. D. A., said: "The druggists have taken no action in the matter as yet. I can not see that it would be detrimental to the clerks them, but I think it would be detrimental to the clerks themselves. A registered pharmacist has to take an course of from three to six years and it costs him anywhere from \$500 to \$1,500. He should not be classed with the clerks in other kinds of stores."

NEW YORK AND VICINITY.

HARVEST TIME AGAIN.

**Already Analyzing the Latest Crop of Drug Samples—
About 50 Per Cent. Sophisticated—Department
Stores Present Better Results Than the
Smaller Ones.**

There were 492 samples in the last batch gathered by the inspector of the Eastern branch of the board of pharmacy. The drugs investigated chiefly comprised iodine, camphorated oil, spirit of camphor, laudanum, seidlitz powders, soap liniment, cream of tartar, tincture of arnica, etc.

The most interesting development of the analysis of 120 of these samples—the rest are being analyzed—was that only two adulterations were found in a great number taken from four of the leading department stores of this city. These two samples were spirit of camphor and one was below half strength, and all the other lines were found to be splendidly up to standard, in some cases even a trifle high.

The department stores were visited by the inspectors after the recent terrific slaughter in drug prices by one of them had prompted nearly fifty retail druggists to write to Secretary Charles S. Erb, enclosing the cutters' advertisement, and calling upon Mr. Erb to "get after these fellows and let the poor druggists alone." The letter writers did not believe that any firm would advertise four ounces of camphorated oil in bottles for 11 cents and sell the straight article. But twelve samples were collected from the store in question and all were found to be good.

But the result is not everywhere so pleasant, for, after subtracting the samples taken from the department stores from the 120 analyzed of the rest, taken from retail drug stores, 48 or more than 50 per cent. were adulterated or weak. Nearly every one of the total of 50 violators have already been settled for at \$25 cash, the offenders paying promptly upon notification. None of the defendants will allow his case to go to court.

The present investigation shows that wood alcohol is not being used as much as formerly. In two spirit of camphor samples, Dr. George A. Ferguson, the chemist, was unable to find any camphor at all, and the same thing happened with two camphorated oil samples. In one or two cases the inspectors' coming was known soon enough to permit the druggist to add more iodine to his tincture. One man was unfortunate in that he forgot, while dumping in mere crystals, to remove the wood alcohol. These samples, crystals still undissolved, are away above strength, for which the penalty is just as great.

One druggist visited the board's attorneys, and told them that the inspector had asked him for "commercial" creosote and had received it. He believed he had a right to sell "commercial" creosote as such. As the sample was straight carbolic acid, the board members now wonder whether "commercial" creosote should contain creosote. Seidlitz powder and cream of tartar samples were found to be pretty straight.

One druggist told the inspector, when he took a sample that he need not bother the chemist to have it analyzed, as it was adulterated, all right.

Another druggist is storing up trouble for Secretary Erb. He is boasting that if Mr. Erb even seeks to penalize him that he'll catch it, as he has one of Mr. Erb's poison labels which he will produce in court to show "that even the secretary sells poisons." Probably he will then learn for the first time that Mr. Erb, or any other druggist, has a right to sell poisons if he registers

them. It seems almost inconceivable that there should be a druggist who does not know he has a legal right to sell poisons. But he exists, and he has a brother in the man on the East side who did not know until an Era man told him that he could sell poisons without a prescription, and another brother on Columbus avenue who told the Era man on last Saturday night that "it is against the law to sell laudanum without a prescription," when the Era man sought to buy a dime's worth.

NEW YORK COLLEGE'S PLANS FOR BIG FAIR.

It was decided by the trustees of the New York College of Pharmacy to give the faculty a free rein in preparing an exhibit for the World's Fair at St. Louis next summer.

The college will occupy all the space they may be allotted. Transportation and like expenses will be borne by the State, as the exhibition will be a part of that of the University of the State of New York, the only cost to the college being for the material used, unless it is decided to send some one with the exhibit. It is probable that an attractive circular, one that will be preserved by the visitors, will be gotten up. After the fair is over the exhibit will be preserved for similar occasions in the future. The specimens will be of pharmaceutical preparations, chemistry, botany, histology and pharmacognosy.

QUIGLEY SHOULD NAME HIS DOG TRILBY.

Thomas F. Quigley, the well-known Syracuse druggist, is wondering whether spirits had anything to do with the return of his fox hound after an absence of one year and six months. Prof. Silas Chesebrough, a local spiritualist and soothsayer, has presented him with a bill for \$25 for influencing the "diakkas" to allow the dog to return. Mr. Quigley was disturbed in his slumbers early one morning last week by a deep-throated howl. It was 3.30 a. m. and Mr. Quigley was not inclined to pay any attention. But the dog let out a few more yelps, whereupon Mr. Quigley recognized his voice. In rushed Dan. The animal is a valuable one and it had been Mr. Quigley's companion on many a hunting trip. Prof. Chesebrough threatens to send or take away the dog again if his bill is not settled.

NEW YORK ALUMNI WILL HAVE GOOD TIME.

There'll be fun in the N. Y. C. P. library on Wednesday night, December 9, for that is the date of the annual banquet of the Alumni. "Sumptuous," they say the menu will be, "lavish," the entertainment. President Charles S. Erb will be the toastmaster. This will be the first time the dinner is held in the college. Noted speakers will be present. Philip Fitz is chairman of the arrangements committee and is assisted by Fred Borggreve, E. P. Wondler, J. P. Binder, Jr., and F. X. Lynch.

NEW YORK NOTES.

—Sharp & Dohme have recently arranged to be represented in Great Britain by the old, conservative house of Thomas Christy & Co., 4-10-12 Old Swan Lane, Upper Thames street, London, E. C. Messrs. Christy & Co. will not at first attempt to introduce Sharp & Dohme's full line, but will centralize efforts upon the introduction of their Lithiated Serrum Comp., Mel-Maroba, Erezole and Lapacetic pills, and are assisted by Sharp & Dohme in the issuance of a very artistic little piece of literature, prepared to be sent to English physicians.

RANDALL, MATHEWSON, Middletown, Conn.,
Secretary Middletown D. A.

—Seen down town: Charles R. Paul of A. D. Paul & Co., Cannadagna, N. Y., and Mrs. Paul; Mr. Sullard, junior member of A. E. Sullard & Son, Franklin, N. Y.; Mr. Sullivan, manager for Dr. George F. Lewis, Collinsville, Conn.; W. G. Albertson, Amityville, L. I.; Trygve Jewell, proprietor and manager of the cod liver oil firm of Otto S. Jewell, Aalesund, Norway; H. C. Sanderson, Scranton, Pa., who was on his way South for his health, and the manager of his pharmacy, Joseph Baumeister.

—The Era's recent report of a rumor that Benjamin Kent, the big Paterson, N. J., druggist, had sold one of his stores, is confirmed. S. I. Vanderbeck, Jr., former proprietor of the Islip pharmacy, Islip, L. I., which he recently sold is managing the Kent pharmacy, which was purchased by the Vanderbeck Drug Co. The store is now being rebuilt by Mr. Kent after the Paterson fire of two years ago, and is one of the biggest in the State. Something over \$200,000 is said to have been paid for it.

—Walter J. Garvor of this city, who managed the Cobman House pharmacy at Ashbury Park last summer, is enthusiastic over a recent hunting trip in the Adirondacks, during which he shot his first buck—and one to spare. This was Mr. Garvor's first hunt of any kind despite the fact that he is the champion pistol shot of the world. "As a tonic the excitement of hunting deer is simply beyond description," Mr. Garvor writes in a letter to the Era.

—S. & N. Stella's store at 730 Broome street was completely burned out last week. Their store occupied part of the ground floor of a tenement which, it is believed, was burned by an incendiary. Several mysterious fires had occurred in the building before, and because of them the druggists had been unable to get insurance on their stock; their loss, about \$5,000, being complete.

—Watson Reed Kirkland married Miss Edith Fairchild, manager of Samuel W. Fairchild of Fairchild Bros. & Foster Brooklyn, last week. Mr. Kirkland is a partner of John McKesson of McKesson & Robb, this city, of which firm he was formerly an employee. He is now lawyer for Fairchild Bros. & Foster.

—Fire in chemical works of Dr. Parkes's Sons & Co., Pittsburg, Pennsylvania, caused a loss of \$8,000, \$5,000 in

surplus. The flames were also communicated to the drug store of C. A. Gould, the druggist, whose loss was \$5,000, partly insured. Mr. Gould had just received a large stock of Christmas goods.

—The Welch Grape Juice Co. have appointed F. H. Higby as their New York City representative, with headquarters at 76 Park Place. Mr. Higby has long represented them in Boston. As they carry a large stock in the city local orders can be filled promptly.

—Drug Trade Club guests: Fred T. Bradley, New Haven; A. Schrober, Buffalo; James H. Causey, Denver; Porter B. Fitzgerald and G. Gehring, Wichita, Kas.; Dr. Ernst Miller, Marburg, Germany; George C. Buell, Pittsburg; A. Boonsonge, Holland.

—McKesson & Robbins received a remittance of one dollar in a form last week that they declared to be the most unique they had seen. It was an interest coupon, worth one dollar, clipped from a 4 per cent Government bond.

—Morris Brodtkin, formerly druggist at Forty-eight street and Second avenue, and now manager there for Naitove, his successor, has filed a petition in bankruptcy with liabilities of \$3,466, and no assets.

—F. E. Roen & Co. have added to their drug store possessions by purchasing I. S. Zeaman's store at 1670 Broadway.

—Charles D. Messinger succeeds P. Matthau, Second avenue, between Forty-fourth and Forty-fifth streets.

—John F. Manning is successor to the Meade pharmacy at 471 Main street, New Rochelle.

—George B. Dressner has bought Budenborn Bros.' store at 1478 Bedford avenue, Brooklyn.

—H. W. Johnson has bought out James G. Sanford at 411 Lewis avenue, Brooklyn.

—Harry M. Smith is opening a new store at 2911 Fulton street, Brooklyn.

NEW ENGLAND.

WHERE WILL IT END?

Cambridge to Seek Legislative Help to Rid That City of "Fake" Drug Stores and to Regulate Sales of Liquors Under Licenses.

Boston, November 24.—Always in throes of liquor troubles, this poor State will now be called upon to assist one of her saloon-druggist-laden municipalities. In Cambridge there has been started a movement for legislation to regulate druggists' liquor licenses better than the present laws do. The first in a campaign of no-license meetings has taken place. Not only was it urged that there be more restrictive laws, but that there be some provision for proper inspection of such liquors as druggists legally may sell, in order to insure purity of the drink itself.

For years Cambridge has been no-license. Consequently there are many drug stores which are so only in name. Sales of liquor almost wholly support some of these places. But the privilege of license is greatly abused, it is affirmed. The movement to change things has the general support of the better element. Among the supporters are a large number of legitimate drug stores.

RUBINAT WATER

IF YOU BUT SELL 50 BOTTLES A YEAR

WRITE FOR MY QUOTATIONS

J. N. FERRER

P. O. Box 71

NEW YORK CITY

which sell liquors only for medicinal, mechanical or chemical purposes, and not as a chief part of their trade. By next year there may be far fewer "drug" stores in the University City than at the present time.

THE BAY STATE.

—Dr. Jorge Vargas, who has a pharmacy in Back Bay, Boston, is the consul at this port for Colombia. He has received no official information regarding the revolutionary troubles in his native country, nor has he even had newspapers from that place. Although his patrons inquire of Dr. Vargas for latest news, he replies that he really knows nothing beyond what daily newspapers here tell of the trouble in Colombia and Panama. There is one thing found in Dr. Vargas's pharmacy not ordinarily to be had in such stores, and that is coffee, from his native country, which he imports himself and calls "Vargas Coffee."

—The Lenox pharmacy in Westfield has gone under the hammer, the goods being sold in large and small lots to whomever bid the highest. The business gradually ran down, so it is stated, whereas it might from its location and surrounding conditions have been built up into a successful trade. The two young men who conducted the place apparently were rather indifferent to their own success. To the surprise of the auctioneer and others, when the sale came off it was learned that much of the wood furnishings, of oak, were simply leased and could not be sold, their real owners claiming the property.

—Joseph Wilson, a Boston druggist, was charged with illegal liquor selling, and found guilty. It appeared that this was not his first offence. Wilson received a sentence of two months in the House of Correction and was fined \$100. It was stated that the sentence will force him out of business, and that he has a family dependent upon him. The judge held, however, that he should have considered these conditions before breaking the law.

—In Fall River, Ernest Picard, manager of the Cabana drug store, and Charles M. Graunag, a clerk were arrested on the charge of illegal liquor selling. They pleaded not guilty and their cases were continued.

—A prosperous year was experienced by the American Soda Fountain Co., Boston, according to President James N. North. The surplus at the end of the fiscal year is \$276,458 making total assets of \$5,050,387.

—An early morning blaze in Westfield, had its origin in the cellar of Prout & Judson's drug store, where the clerk had built the first of the season fire in the furnace. Loss fully covered.

—There is some chance that the Pratt Medicine Co., may soon establish a plant in Sandwich. If so, Ambrose E. Pratt will assume the management there.

—William Lewis, druggist in Whitinsville, intends to resume the study of medicine about the first of the coming year.

—A new drugstore in South Fitchburg, will be that of Dr. J. B. W. Yvoo, for whom a new block is to be erected.

—Plans have been almost finished for a new naval dispensary at the Charleston Navy Yard to cost \$12,000.

—Fire did \$1,000 damage to the stock at E. E. Jenkinson's store in Waltham. An overloaded register.

—Burglars entered the drug store of John Tirrell, Sharon, capturing several hundred cigars.

RHODE ISLAND.

—The general assembly will undoubtedly be asked at the coming session in January, to raise the fees for second class liquor licenses. This class applies only to the retail liquor dealers, but it is hinted that the fee for druggist's liquor licenses is in a fair way to be increased in about the same proportion.

—William R. Greene the Providence druggist whose face was slapped by former Speaker S. W. K. Allen at East Greenwich on election day, has retained a lawyer and brought suit against the ex-speaker for damages. The ad damnum is placed at \$1,000.

CONNECTICUT.

—Eugene Higgins New Haven, the drug clerk arrested for prescribing, was fined \$100. Higgins appealed. According to Higgins he found a friend quite ill, and, believing that he could relieve him, made up a prescription for him. The friend died, and pneumonia was given as the cause of the death. The accused is determined to make the state define illegal practice.

—The glass doors of Marwick's drug store, Hartford, long the envy of other druggists in town, for the third time lately was completely shattered by some mistaking it for a door and walking through it. The doors are wide and the glass runs almost to the floor so that it appeared at first glance that the doors were open.

PENNSYLVANIA.

LATE REGISTRAR STEM'S PORTRAIT PRESENTED.

Philadelphia, November 24.—At the regular pharmaceutical meeting of the Philadelphia C. of P., the regular program was preceded by the presentation to the college of a crayon portrait of the late registrar, W. Nelson Stem. The portrait was presented on behalf of the memorial committee by Prof. Joseph P. Remington and was accepted for the college by Prof. Clement B. Lowe.

M. I. Wilbert, read a paper on the "Centenary of the Society of Pharmacy of Paris." Mr. Wilbert gave also a resume of the later work on radio-active substances, illustrated by lantern slides. Dr. Rodney H. True of the U. S. department of agriculture, gave an address on the "Cultivation of Medical Plants," illustrating with drug specimens of his own production. Dr. True said that the shortage in supply of a number of our native drugs, such as hydrastis, senega and cascara sagrada, furnished the main motive for making experiments along this line. The Government is now carrying on experiments in the flats along the Potomac at Washington, at Burlington, Vt., and in Texas, thus securing varying conditions of soil and climate.

Prof. Henry Kraemer exhibited a living digitalis plant and drug specimens of both inula and belladonna, all of his own raising, and said that he had seeds of both belladonna and inula, which he would be glad to give to any one desiring them. George B. Weidmann demonstrated a method of making tablets and triturates, using a hand machine.

PENNSYLVANIA NOTES.

—Wirsing & Bailey have just opened a fine drug store at 300 Grant street, Pittsburg. It is on a busy corner, and the store will be kept open all night. The fixtures are of quartered oak. Mr. Wirsing has another store at 11 Smithfield street.

—Sullivan & Richardson, Second and Dickinson streets, Philadelphia, lost \$225 by fire, as the result of

WHEN YOU HEAR OF A BABY

Think of the dollar you can make selling an

AND PASTEURIZER**

We will supply you with free literature with your name to distribute, on application.

WILMOT CASTLE COMPANY,
26 Elm Street, Rochester N. Y.

overturning an old report. They were doing experimental work.

—A man, a mule, a bundle of excelsior. An exploded barrel of alcohol, wrecked cellar, \$500 loss. Location, Ninth and Vine streets, Philadelphia, in a drug store.

—The Moffitt-West Drug Co. has just completed moving into its splendid new building at Broadway and Clark avenue, St. Louis. Six stories and two basements, in height the building is one of the largest and most complete wholesale drug houses in the country. Its appointments are unexcelled.

THE SOUTH.

MARYLAND.

—Messrs. Wortmann, George Gregorius and Sutherland, of the German Apothecaries' Society of New York, Mr. Wortmann being also manager of the Consolidated Drug Co., of that city, paid a visit to the Calvert Drug Co., a kindred concern, in Baltimore, last week. The three visitors arrived in the morning, were entertained at luncheon and inspected the Calvert company's new headquarters in the Parker Building, and left again for home about 4 P. M. The call was in pursuance of a promise made some time ago.

—The District of Columbia B. P. examined twelve applicants for registration at its recent meeting, two of whom were successful—A. W. Evans and R. D. Howard. Secretary Johnston, 1221 New Jersey Ave., N. W., Washington, announces that the board has made a rule that hereafter applicants must file their applications with him at least a week before the examinations. Examinations are held on the second Mondays of January, April, July and October.

—Rigdal W. Baldwin was appointed receiver for the drug store of Walter N. Smith, 521 North Howard street, Baltimore, on a bill of complaint filed by the Stanley & Brown Drug Co., with the consent of Mr. Smith. The receiver bonded for \$2,000. Mr. Smith owes Stanley & Brown \$500 on a promissory note, secured by chattel mortgages, and \$300.00 on open account.

—Dr. Georg F. Seeborn, who is prominently connected with Parke, Davis & Co., at Detroit, lectured last Tuesday evening at the Maryland college, on Wednesday evening at the University of Maryland, and on Friday evening at the Baltimore Medical College. His discourses were devoted to an exposition of certain phases of the manufacturing of anti-toxin and vaccine virus.

—J. F. Kaiser, representative of the N. A. R. D., who has been promoting the interests of the organization in Baltimore, has just returned from a trip to the Eastern Shore of Maryland, during which he called on a number of druggists and explained to them the advantages of close cooperation with the national body.

Among visiting druggists in Baltimore: W. Allen Jennings, Meriden, Ct.; M. Green, Steglensleben, J. P. Patrick, Leesburg, Va.; H. J. Metzger, Wynesboro', Pa.; E. C. F. on, Gettysburg, C. J. W. Simpson, Alexandria, Va., and William Lawson, Washington, D. C.

—George H. Knapp was named a receiver by Judge Dobbler for the Henderson Medicine Co., for which W. Thomas Kemp has been appointed receiver by consent on September 25 last. The Henderson company manufacture Henderson's pink pills and other proprietary.

—A. J. Shrago & Co. have purchased the pharmacy

of Ringgold, Reinhart & Co., Cumberland. Ringgold, Reinhart & Co., are now established on North Eutaw street, Baltimore.

—A meeting of the Maryland C. of P. Alumni Association will shortly be called to make arrangements for an entertainment to take place before the holidays.

AROUND THE GREAT LAKES.

VETERANS UNDERGROUND.

Even Eighty-Three Years Marches Valiantly Through the Tunnel—Dinner—Some Speeches That Must Have Been Good Ones.

Chicago, November 24.—The Chicago Veteran D. A. held their regular quarterly meeting on Friday afternoon. First came the usual dinner and then President Blocki announced the "surprise" prepared by Corresponding Secretary John Blocki through the instrumentality of his son, F. Blocki, commissioner of public works. It was as the Era announced last week, a tour of inspection of the tunnel system of the new Illinois Telephone & Telegraph Co. Veterans and guests were taken in carriages to the entrance of the main tunnel. When they had finished their interesting experience underground and had inspected the company's "central," the party returned to the Union and the meeting was resumed.

The Association had for its guests, President Avery and Secretary Kellett, Mr. Graves and George R. Baker as representatives of the Chicago R. D. A., Secretary T. V. Wooten of the N. A. R. D., and the members of the board of pharmacy, Messrs. Heermann, Sprieve, Metzger and Hoy.

An opportunity was given those present to respond to Mr. Bodenmann's request for biographies. Those of Thomas M. Jamieson, M. Louis Waltersfort and Moritz Krens were handed in. The latter was unable to attend in person and his associates were grieved to learn that he was in very feeble health.

Of the tunnel trip Mr. Bodenmann writes the Era that "Veteran Hottinger, 84 years of age, marched through the entire system with the energy of an 18-year-old youngster"; and of the meeting that "G. B. Englehard gave a powerful description of the defeat of Mayor Rauch for reelection through the druggists on account of his action in the telephone matter, and told the new telephone company that unless they arranged machinery by which the public would have to pay for the use of the phones in drug stores, the company need not count on the druggists' support. Mr. Wooten spoke on the latest Washington Promise. Mr. Keller wanted to see the day when the C. R. D. A. was 1,000 strong and the dues were \$100 a year. Mr. Elbert spoke on pharmacy law as a force, and Mr. Englehard on pharmacy law as a benefit.

TWO TICKETS BEFORE DRUG TRADE CLUB.

Chicago, November 24.—The annual election of officers of the Chicago Drug Trade Club will take place at noon on December 3. On the evening of the same day the annual dinner and meeting will be held. There are two tickets before the club. The "Regular" is as follows: For president, Cornelius P. Van Schoonck, first vice-president, E. A. Vestburg, second vice-president, E. D. Kenneid, secretary, Harold S. Gray, treasurer, B. T. Van Allen. The "Member" ticket is as follows: A. R. Fellows, president, M. L. Barrett, first vice-president, James W. Morrison, second vice-president, J. V. Pierce, secretary, R. A. Heavner, treasurer.

TWO TOWNS ARRAYED.

**Paw Paw the Wily Good, South Haven the Sodom—
Where the Beer Flowed Free and the Music
Played Until the Jails Swallowed Some
Druggists.**

South Haven, Mich., Nov. 24.—There is a rich field here for a writer of farce comedies. If Charley Hoyt were alive he could certainly improve on "A Temperance Town." He would undoubtedly name a farce written by him about this town and the town of Paw Paw, "A Drug Store." He might call it simply "Paw Paw."

In the first place, the drug stores of South Haven were until just recently a wonderful institution. They flourished like the proverbial green bay tree. Many of them have fancy names. There is one called "Red Cross," another is called "The Big Medicine Man." In nearly all are bars where liquor and beer were dispensed. It wasn't even necessary to wink.

In recent months the proprietors of some of the stores became so emboldened in selling beer and stronger drink, that they put round tables in the rear of their stores and had regular waiters to take and serve orders for the liquid refreshments. In two or three cases music was furnished.

Headache powders had a great run. In some cases it was necessary in procuring liquor in the drug stores to say that "the doctor ordered it." The doctors ordered it for all sorts of diseases. Nearly every man in town was taken ill from three to twenty times a day.

With this condition facing pure, holy Paw Paw, there was little wonder that the seat of government would call for a grand jury to wipe out the great evil that threatened the destruction of the flower and youth of the Sodom of Van Buren county.

And the grand jury was called. Many witnesses were summoned from South Haven. The special train chartered to take them from South Haven to Paw Paw, 35 miles, and return, is a flyer, provided with a chef, dining car and a large and varied supply of fine beers, liquors and cigars.

South Haven and Paw Paw resemble some of the South American republics. All that is needed to precipitate a war is a leader. South Haven would swoop down on Paw Paw and wipe it off the map. The original enmity comes from the fact that South Haven long desired to have the county seat moved from Paw Paw to South Haven. She failed through a clean trick by Paw Paw.

Some of the drug stores visited here today were entirely out of liquor and business was dead. In one place there was a pretension made to sell drugs. The clerk was asked the price of a 5-cent bottle of vaseline. He said it was 25 cents. He knew nothing at all of the price of that commodity or anything else he had in the drug stock.

There was a picture of a tiger couchant on the wall. The clerk told with great gusto how the former proprietor of the drug store had fixed a bandage across the eyes of the tiger for the purpose of advertising the place as a "blind tiger."

The clerk escorted the correspondent to the rear of the drug store and showed him where the former proprietor had the nerve to erect a bar, with an ice box at the end, with a cash register in the center and whisky bottles conspicuously displayed on the back bar.

Charley Rogers is the name of the former proprietor. Charley was arrested and was sent up for 90 days for violating the local option law, and when his time was up he was charged with perjury and is now awaiting trial for that offense.

In South Haven the ministers of the gospel preach

against the hell holes of iniquity that fill other cities, and yet Charley Rogers ran a wide-open saloon in the guise of a drug store and the Remus's, father and son, and Nevins and Bruen and others did likewise.

When the drug store business became so notorious that the decent people said that they could not go into one without a feeling of shame, a man named Jones was induced to come here from Lansing and start up a drug store without a liquor attachment, and it is said that the very people who induced him to come here passed his place and entered the "blind tigers." So Mr. Jones did not last a great while.

Now we will see whether Paw Paw wins, and whether South Haven is discouraged in continuing its drug store orgies.

Grand Rapids, November 24.—The grand jury has so far returned indictments for the following druggists of South Haven, alleging violation of the local option law: J. L. Congdon, Chas. Converse, Wm. McAllister, M. L. Gordon, Chas. E. Hessey, O. P. Goodrode, Chas. Reeves, Jas. McBride and J. Clark Martin, and is still in session.

NEW ROOMS OF ILLINOIS BOARD.

Chicago, November 24.—The Illinois board of pharmacy met on Monday of last week and continued their sessions on Tuesday and Wednesday. On the latter day Messrs. Muir, Webber and Heim of the Michigan board were the guests of the Illinois board. They came by invitation to inspect the newly-fitted-up quarters of their Illinois brethren at Thirty-ninth and Langley avenues, and to see how Mr. Bodemann and his associates conducted an examination. They were pleased with what they saw. The new quarters are unquestionably the best adapted for the purpose in the country. There are new identification tables and dispensing counters and there is a seating capacity of 180. This enables the handling of a large class in about half the usual time. The class at this meeting numbered 102, and it is Mr. Bodemann's last, unless he is reappointed, as his term expires on December 31. In his opening talk to the aspirants for registration, he urged them to prove themselves the banner class in the banner board rooms. The board discussed the work being done in Chicago and it was decided to go ahead vigorously with the prosecution of local violators.

These candidates passed: Registered—A. W. Armstrong, Chas. B. Black, R. F. Bogue, O. O. Brownmark, Jay G. Butler, Simon Contarsy, L. E. Conway, H. J. Eckert, M. H. Fleishman, Thos. Gessner, W. H. Gladville, Jr., Morris Gold, H. B. Honeus, L. A. Johnson, Aaron Kigon, F. V. Koepke, Wm. Lyon, F. A. Milne, Wm. MacAllister, A. F. E. Otto, R. R. Rains, Jas. Reisman, Jas. A. Scott, Wm. A. Sprinkel, Chas. J. Strate, C. A. Ullman, C. W. Wagner, Chas. P. Walker.

Assistants—H. W. Anderson, R. D. Atkinson, A. A. Berger, Wm. E. Cody, P. F. Coffey, Chas. Dykstra, Fred. H. Eberley, S. McL. Farrar, Max M. Gordon, Otto Groer, A. E. Gulick, A. E. Gerhardt, J. D. Halper, J. T. Holvay, L. G. Jacobs, A. C. Kassel, C. F. Koehler, Wm. Kuehn, E. A. Lukasek, P. L. Larsen, H. C. Metzger, Geo. H. Mitchell, Edward Michael, Wm. S. Mollett, Sampson Morris, Fred W. Patton, J. E. Pyne, Geo. Sandstrom, C. A. Sankiewicz, W. C. Schulze.

DYCHE BUSINESS MANAGER OF NORTHWEST-ERN.

Chicago, November 21.—William R. Dyche has been appointed business manager of the Northwestern University, as was predicted some time ago. He succeeds Dr. R. D. Shepard, who has held the position for twelve years. He is a member of the State board of pharmacy, of the Veteran Druggists Association and is a graduate from the Chicago College of Pharmacy, class of 1882.

ILLINOIS.

—Ernest H. Stoltz, Chicago, has filed a voluntary petition in bankruptcy. He schedules liabilities of \$78,381, and no assets. He was formerly a member of the retail drug firm of Stoltz & Grady, North Clark street, but sold his interest some months ago to Mr. Grady for \$1,000. Prior to and since he severed his connection with the firm Mr. Stoltz was in the patent medicine business on his own account, both as the Plunge Oil Co. and the Dr. Grassam Medicine Co. Both concerns are out of business now.

—A Chicago paper makes quite a sensation of the fact that during the two years Lamm T. Hoy has held the position of secretary of the State board of pharmacy, he was given printing to the Woodstock Printing Co., of which Mr. Hoy is president and one of the principal stockholders. This is said to be in violation of the law that no State employe shall enter into a contract with himself, but no allegation is made that the State did not receive the full value for its money.

—The special committee of the Chicago R. D. A., formed to charge the carbolic acid ordinance matter, had a meeting with the council subcommittee last week.

It was decided that the druggists' committee have the associations' attorney draw up an ordinance to be submitted to the councils covering the objects desired in restricting the sale of carbolic acid, and at the same time avoiding features that would impose a needless burden on the druggists.

—The Twelfth district association, Chicago, is "whooping things up" in great style. The meetings are enthusiastic and well attended and an energetic entertainment committee is at work on a series of bowling games. A committee on organization has been appointed to visit every druggist in the district and get him in line.

—The wholesale perfumery house of John Blocki & Son, 56 Fifth avenue, Chicago, have leased the building at 185 Michigan avenue and will occupy it about April 1. Their lease runs for five years.

—Frank E. Kirby, vice-president of the Morgan Drug Co. of Brooklyn, N. Y., has been visiting Chicago in the interests of their specialty for three weeks past and left for St. Louis.

—F. C. Hartshorn, of Twenty-sixth street and Calumet avenue, Chicago, sold his store, and it will hereafter be conducted under the name of the Calumet pharmacy.

—Sager & Lyon, Chicago, are out of the retail drug business, having sold their various stores, and will devote their attention in the future to the Lemaire Perfume Co.

—The Hudson Chemical Co., manufacturers of "Dentol" at 163 State street, Chicago, is in the hands of a receiver.

MICHIGAN.

—The Honey Comb Chocolate Chip Co. of Battle Creek, are attempting by law to prevent Roy Shepard from entering the employ of the Caverly Co. of Dayton, O. Shepard was for some time in the employ of the Battle Creek company as a spinner of the Honey Comb chips, and it is claimed he received a full knowledge of the secret processes by which this company manufactures its goods. The Battle Creek company holds that Shepard knows nothing about making other kinds of confection. The case will be watched with interest by employers of special labor all over the country.

—Ionia county will in all likelihood go "dry" at the coming local option election, and the people are already preparing for the new elaborate "drug stores" which a number of their citizens have announced will be opened. At least two of the new drug stores in Portland will be conducted by men who are now in the saloon business. The local optionists are mad and are saying that the county jail will soon be known as the "Druggists Home," by which title the Van Buren county jail is now known.

—Druggist Henry Zerzan of Prescott, is "some shecks" with a rifle. He went one last week with a party of friends to hunt deer. They had not been in the woods many hours before Zerzan sighted a fine buck at a distance of nearly 1,000 yards. Taking careful aim he fired, and, although the deer was more than half a mile away, the bullet pierced its heart. The buck was a beauty and weighed 298 pounds. Zerzan also shot a bear last week, weighing 360 pounds.

—Wilcox & Godding have an up-to-date store at Eatin Rapids, even though the proprietors are not always around to see to things. George Wilcox is on the road for the Morgan-Drug Co., of Detroit, while Fred Godding is on the road this winter with the Godding Comedy Co., a troupe of artists in fun making. They are in northern Michigan at the present time and Fred is the star actor.

—A lady customer of Leranger & Culver of Saginaw,

on making a recent purchase, carelessly left her bank book containing a \$5 bill on the counter. When she returned the money had disappeared but a clerk remembered that a package of medicine had been made up for Tower, Mich., and, when the packet was undone at its destination, sure enough, there was the Saginaw lady's pin money.

—Parke, Davis & Co., Detroit, have leased a 50-acre farm at Mt. Clemens, on which they will put 5,000 guinea pigs, using the animals, so it is stated in the press dispatches, for experiments in serum inoculation. Hog cholera has been decimating droves of swine in portions of the State this season and Parke, Davis & Co. have prepared a vaccine for this scourge.

—Ben Eaton, son of N. N. Eaton, who was for many years druggist and postmaster at Boyne Falls, was recently sentenced to the "pen" for life in the state of Washington, for killing a man in a saloon brawl. Ben was a bright and capable young man, and a first-class pharmacist, but went in fast society and was reckless when drinking.

—C. H. Houghtaling has bought the R. D. M. Turner stock and business at Quincy, reentering the drug business after an interval of about seven years. His son George will return from St. Paul, Minn., to assist him.

—P. Corey Taylor has opened a model pharmacy at Mt. Pleasant. The store counters and fixtures are of mahogany. Mr. Taylor has been in the drug business at Mt. Pleasant for 15 years.

—W. G. Sprague of Flushing, will remove his stock to new quarters in the Niles block. He is putting in new fixtures and will have one of the finest stores in Genesee county.

—Charlevoix has one less drug store, Dr. G. W. Crouter having disposed of the Cook stock to the other three druggists of the town.

—Dr. G. W. Logan of Paris, has bought a lot at Boyne City on which he will put up a building, fitting out a complete drug store.

—W. H. Vaughn, traveling salesman for a Chicago drug house, will open a new store at Muskegon.

WISCONSIN.

—The annual meeting of the Wisconsin Pharmaceutical Co., of Milwaukee, a corporation in which some 450 druggists in Wisconsin and northern Michigan hold stock, was held in Milwaukee on last Tuesday. So great has been the increase in the company's business during the year that in spite of the many improvements that have been made to its laboratories, a dividend of ten per cent. was declared. All of the officers were reelected. E. G. Rauber, general manager of the company, was complimented on the manner in which he had conducted the business.

—There have been several store changes in Wisconsin during the week just closed. The Gaenther Drug Co. succeeds A. W. Von Kaas at Oshkosh; L. C. Meyer succeeds A. Mahlendorf at Sheboygan; Esser Bros. succeeds the Richardson Drug Co. of Milwaukee; R. J. Strass of Milwaukee, succeeds Henry Kamps of Marshfield, and J. E. O'Donoghue succeeds Werner & Nerlander at Neganee.

—Druggists complain that there is a great scarcity of drug clerks in Milwaukee as well as in the State. Not a day passes that the wholesale firms do not receive letters asking for licensed clerks. The city papers are filled with advertisements calling for clerks, and the Drug Clerks Association has been appealed to. Clerks wages are said to be increasing as a result of the scarcity.

—Taylor Bros., Stevens Point, who conducted one of the largest drug stores in the Wisconsin River Valley, have dissolved partnership. W. W. Taylor will continue the business while David A. Taylor will locate

in Milwaukee. They have been engaged in business at Stevens Point for thirteen years.

—The Milwaukee Drug Clerks' Association will hold its annual ball and entertainment at Ivanhoe Temple on Thanksgiving night. Invitations have been extended to clerks throughout the State and the attendance promises to be very large.

—The twenty-second annual report of the State board of pharmacy has been compiled, is now in the hands of the printers, and will be ready for distribution by December 1.

—The date for the annual smoker and "tramp comers" of the Milwaukee Ph. A. has not as yet been decided upon. It will probably be in January.

—William Klinghelz of Manitowoc, has purchased a drug business at Marinette and will take possession on December 1.

—E. Van Wagenen of Darlington, has sold his drug and book business to George Oates, his former manager.

—The new brick store building of John C. Neher, the Eau Claire druggist will be opened this week.

—Dr. H. P. Chambers of Florence, has offered his drug store for sale.

UNLAWFUL DISTRIBUTING OF FREE SAMPLES.

St. Paul, November 24.—Official disfavor is being courted by people who distribute free samples of patent medicine without the required city permit. The other day Assemblyman Schurmeier reported to the health department an infraction of the law by which the life of a child was placed in jeopardy. The medicine in question was a small sample of patent cathartic pills, and the child, finding it on the doorstep, proceeded to swallow all of the stuff. Prompt work by a doctor was all that saved the youngster.

There is a city ordinance which imposes a heavy penalty on any person distributing free samples of medicine or food stuffs without first submitting them to the health department for analysis. The claim is made that the ordinance is being daily violated. The city health officer, detailed two inspectors to round up anyone found distributing medicine samples.

INDIANA.

—An eager buyer and an equally eager seller in a drug store transaction, in a town through which runs the line separating the states of Indiana and Ohio, recently found that the deal could not be made in as great haste as they had supposed. The would-be buyer lived on the Ohio side of the line. The would-be seller on the Indiana side, where the drug store is located. The sale was about to be closed when it was discovered that a law passed by the last Indiana legislature requires the seller in a transaction to make out a list of all his creditors and notify each five days before making a sale, by proper advertisement. Should the seller fail to do this any creditor may come in, set aside the sale and make his claim out of any goods to be found on hand at the time of the sale.

—Following the death of George Handy, Morristown, his store has been closed awaiting the appointing of an administrator of his estate.

—N. G. Mackintosh, formerly at Newbern, has moved his store to Midland.

—M. E. Renner, Urbana, has sold to George Karnes.

WE WANT DRUGGISTS

To send us a list of physicians who patronize them, and we will write each physician that he can obtain Phenalgin from the druggist mentioned; we will also send the physician a sample, with literature.

ETNA CHEMICAL CO.

313 West Street - - NEW YORK

HERMAN E. FRANER, Indianapolis, Ind.

MANY GERMAN DRUGGISTS IN INDIANAPOLIS.

Within the last twelve or fifteen years German names have come to predominate in the signs of the retail drug stores of Indianapolis, and today of the 211 stores more than half are owned by men of German birth or of German ancestry. The two men in this city longest established in the retail trade bear German names. They are Sigmar Muehl and Herman E. Franer. Mr. Franer's picture is given here, Mr. Muehl's being reserved for next week. Mr. Franer is owner of the oldest retail drug store in Indianapolis at 456 East Washington street. It was started by his father, I. C. Franer, in 1859. Herman was born in Germany in 1841, came to Indianapolis in 1854. When the civil war broke out he followed the flag serving in the 79th Indiana regiment. In 1865 he returned to engage in the drug trade and carry on the business established by his father.

OHIO HAPPENINGS.

—C. B. Harper & Co., who already own one successful retail drug store in Akron, have bought the stock of E. Stuebelcher & Co., 638 East Market street, Canton. They are remodeling the interior, and, as soon as they can install their new fixtures and fountain will open for business as a retail drug store, and physicians' and dental supply house. Stuebelcher was listed in the Era Druggists' Directory as a wholesaler, but Harper & Co. do not intend to do a jobbing business.

—J. P. Mykrantz, retail druggist 71 Columbus, is moving into a fine new store at 218 So. H. 2d street.

Bleaching Bones and Ivory

To make bones a good white when the process for bleaching ivory should be adopted. First treat the bones with a strong solution of washing soda to remove grease, and open the pores. Then immerse in a solution of potassium bichromate to which an equivalent part of strong solution of ammonia has been added and maintain at a moderate temperature for as long as may be found necessary (24 to 36 hours or more). On removal from the liquid be careful to dry slowly to prevent cracking.

PACIFIC COAST.

CALIFORNIA.

—The San Francisco Drug Clerks' Association at its last meeting reelected many of its former officers. The new officers are: President, E. J. Molony; first vice-president, Paul A. Dubois; second vice-president, H. L. Perrone; corresponding and recording secretary, G. Eastland; financial secretary, J. M. F. Eitel; treasurer, George M. Sutherland; guide, P. H. Weiss; guardian, A. E. O'Neal; advocate agent, G. L. Gerrard; trustees, J. H. Hubachek, A. L. Hong and C. L. Braumen; delegates to Labor Council, J. H. Hubachek, Fred Driscoll, William Hatch, W. W. Say, G. W. Sutherland; business agent and manager of the employment bureau, J. H. Hubachek.

—San Francisco will very shortly have a botanical garden devoted exclusively to medicinal plants. Grounds have already been set aside in Golden Gate Park for the purpose, and the work of preparing the soil has begun. Because of the climate here it is believed that ninety per cent. of the medicinal plants can be grown in the open. The planting and the care of the shrubs will be undertaken by the California C. P. A course in medicinal botany will be given special attention in the college as soon as the garden has produced results which will warrant laboratory experimental work.

—Jobbers in San Francisco report a holiday trade even greater than last year which surpassed all seasons before it. The chief demand for goods comes from the country districts where the activity in the pharmaceutical business is very great. New establishments are more frequent than at any time during the year and no failures have been reported. Oregon and Washington also report an unusually brisk season.

—For a week small sums of money have been disappearing from the drug store of G. W. Burnett, San Francisco. One morning last week the thief was caught. He was Harry Harnish, a young man who had been employed at the store up to last May and who had a duplicate key. Harnish was an industrious lad until he fell in with bad company. He confessed.

—H. P. Elder of Woodland scored a unique hit the other day at the county fair. A prize had been offered for the most artistic display by any merchant in the city. Mr. Elder presented one of Woodland's prettiest girls to represent his store and he decorated her with suitable emblems from his establishment. He was awarded the prize.

—Dr. Klingler, head physician at several of the mines in and about Nome, has come down from the eyrie. He says the drug business through out Alaska is becoming more and more systematized, and, where a few years ago every man was his own drug store, few pharmaceutical establishments are within reach of all the more populous camps.

—A pretty painted sign bearing the words "E. C. Drug Company" appeared in Buda a few other day. P. W. Ralston, formerly clerk in San Francisco, is manager. Mr. Ralston left San Francisco while many leading firms were endeavoring to secure his services.

—H. J. Finger of the State board of pharmacy has been visiting Los Angeles. He asserts that many druggists who are said to be practicing without licenses will be prosecuted unless they promptly conform to requirements.

—The contract for supplying drugs to Nevada county has been awarded to H. C. Bousermann. The county hospital at Eureka, Humboldt county will be supplied with drugs by the Red Cross pharmacy of Eureka.

—Messrs. Curtis and Henkle, two of San Francisco's most prominent clerks, have opened a drug store at

San Jose, Mr. Curtis was formerly with the Grant Drug Co., and Mr. Hemple with G. W. Burnett.

—The Morrow Drug Co., a new establishment, opened its doors this week in Bakersfield. W. S. Kimball, for many years with J. A. Huges, is manager. Stock valued at \$8,000.

—At Concord the Morgan's Klein Drug Co. began business last week. Mr. Klein, for several years clerk for Dr. January at Concord, is in charge.

—Dr. Sands of Ocean Park, has been succeeded by Harry A. Dutton, who was formerly with the Tanner Drug Co. of Los Angeles.

—The most recent addition to the drug trade in Santa Rosa, was C. S. Badenfeld who opened a store last week.

—The drug store at San Jacinto, formerly run by the Chambers brothers is now owned solely by B. L. Chambers.

—Frank L. Wingard, a Long Beach druggist, is erecting a new building, having outgrown his old quarters.

—Hereafter the Crane drug store at Santa Barbara, will be conducted by Crane & Fairbanks.

—The Union Drug Co. will be opened in December at Watsonville by O. and C. Mandersheid.

OUR CANADIAN LETTER.

—At the regular monthly meeting of the Druggists Section of the Retail Merchants Association, Toronto, the principal business was the discussion of the proposed business tax as a substitute for the present method of assessment on the value of stocks. The following resolution was adopted: "That in our opinion the business tax, as proposed will apply very unfairly to all retail druggists and we desire to place ourselves on record as opposed to its application."

—The college yell of the students of the Manitoba C. P. is as follows:

Ointments, Ointments, M.-C.-P.
Phenol, Phenol, Pharmacy.
Liquors, Lotions, Liniments pure,
Any old drug dope, any old cure,
Spirits Fragrant, Sis! Boom! Bah!
Pharmacy! Pharmacy! Rah! Rah! Rah!
P-h-a-r-m-a-c-y! Pharmacy! Pharmacy!

—E. Muir of the Quebec Ph. A., has brought charges in the Quebec city police court against a number of physicians who are accused of giving prescriptions to be filled by unlicensed druggists or unregistered drug clerks; and also against several druggists for selling poisons contrary to the provisions of the pharmacy act, and for permitting unqualified clerks to fill prescriptions.

—A new drug store has been opened at Dundas and Wellington street, London, Ont., by Vernon W. Meek and Willbur R. Vinisz, both honor graduates of the Ontario C. P. and for some years in the employ of Cairncross & Lawrence of London. The firm name is Meek & Vinisz. Their new place is one of the most handsomely fitted up stores in the province.

—Dr. D. Pelletier recently from Central America and holder of a diploma from Johns Hopkins university is opening a large drug store at 90 Church street, Toronto.

—A. E. Clendinning of Edmonton, N. W. T., has sold to the Edmonton Drug Co.

—Rupert P. Weeks has purchased the business of Thomas C. Beman, Toronto.

—J. S. White has bought the drug business of Davies Bros., Victoria, B. C.

—The stock of Adolphe Venilleux, Quebec, has been seized by creditors.

J. F. ROBERTS, Parkhill, Ont.
Hon. Pres. and District Representative, Divisional Association, Ontario C. P.

—A. C. Lechead, druggist of Lucknow, Ont., has sold to Dr. Spence.

—E. J. Dismore of Hedley City, B. C., has gone out of business.

OBITUARY.

HENRY CARRINGTON BOLTON, the celebrated chemist, author and lecturer, died last week at his home in Washington, D. C. The scientist's father, Dr. Jackson Bolton, was for twenty years an eminent physician of New York City, where Henry was born on January 28, 1843. At the age of nineteen he was graduated from Columbia College. He exhibited such a fondness for chemistry that his father equipped a small laboratory for him. He studied abroad, traveling extensively and obtaining information that later was used in stories of travel. From 1872 to 1877 he was assistant in analytical chemistry and head of the laboratory of quantitative analysis in the Columbia University School of Mines, and in 1877 he was chosen professor of chemistry and natural sciences at Trinity College, Hartford. The trustees of Columbian University, Washington, made him non-resident professor of the history of chemistry in 1892, and in the next year he was married to Miss Henrietta Irving of New Brighton, S. I. It was said of Dr. Bolton that he belonged to more learned societies than any living American. He was president of the Washington Chemical Society in 1900, and a member of the German Chemical Society of Berlin, and the Chemical Society of Paris. His private

Always insist upon having

Angostura Bitters.

C. W. ABBOTT & CO.,
Baltimore, Md.

library was considered unexcelled for its collection of books on the history of chemistry. Dr. Bolton's writings dealt not only with science, including chemistry and mineralogy, but also with various literary matters, bibliography and travel. He wrote more than 200 monographs on the history of chemistry alone. The interment will be in Tarrytown, N. Y.

FRANK SMITH, long a druggist in East Bridgewater, Mass., died at his home after an illness of only a few hours. He was born in Duxbury in 1810. When a boy he worked "before the mast" until he became first mate of a merchant sailer. He then, thirty years ago, gave up the sea to become a druggist. He leaves a widow and one son.

MR. AND MRS. VALENTINE REIMANN, of Franklinville, N. V., the parents of Edward J. Reimann of the drug firm of Ferris & Ferris Co., that town, died within two days of each other. He was aged 78. George Reimann of Buffalo, was a favorite nephew.

CHARLES R. SMITH, an old-time druggist of Newburyport, Mass., died from injuries received by being knocked down by a street car. He was sixty-five years of age. He retired a few years ago.

J. C. MONNETTE, a druggist of Kings City, Cal., died at Turlock, Cal. Mr. Monnette had been ill for many months and long ago his case was pronounced hopeless.

DR. EDWARD ALVA DUCKETT, prominent in Washington, D. C., pharmaceutical circles, died in that city, aged 29.

MISS JENNIE HAMILTON, the well-known wholesale and retail druggist of Bridgeport, Conn., is dead.

JOHN WILLIAM COOK, senior member of J. W. Cook & Bro., Hagerstown, Md., died at the age of 42.

JAMES HANNA, long a druggist in Thorntown, Ind., died on November 12, aged 72.

RUDOLPH STANGORH, a well known German druggist of Chicago, died last week.

JOHN R. GARRETT, senior member of Garrett & Taggart, Oakland, Cal., is dead.

JOHN ARMSTRONG, died in Philadelphia, aged 84.

DR. R. R. MAC FARLANE, physician and druggist of Seattle, Wash., died last week.

Handle all the Lines You Might?

The good will of your customers is your best asset. Do you make it yield the largest possible returns by selling all the lines you have money and space to handle?

The store that sells a single line suffers a grievous waste. People who are in the habit of going to that store to buy dry goods or groceries would certainly be disposed to give it the preference in other lines.

Rent and clerk hire and running expenses are more or less a fixed quantity. You cannot reduce them below a certain point even when you have but a single line. Each added line will increase the dollars-expense a little but the ratio diminishes all the time. For comparatively little increase in investment or expense you can add other goods that will materially swell your sales and profits.

So long as a merchant has or can make spare capital and spare room we do not think he is getting out of his business all there is in it unless he adds new lines just as fast as he gets a chance. "Our Drummer!"

LOOKING AHEAD—THROUGH SMOKE.

The American Association of Retail Druggists' Great Meeting in 1950, when the Organization Is Very Nearly Wrecked.

Palm Beach, Fla., January 22, 1950.—The silver anniversary meeting of the American Association of Retail Druggists opened here today. Delegates from each of the ninety-eight States were present, as well as those from the nine territories and from Mexico and South America. In all there are more than seven thousand pharmacists and their wives already in Palm Beach, and they are still coming. The North Ontario delegation was several hours late, not arriving until this morning because of a wreck on the Transcontinental Electric. The Indianola contingent, in three air ships, also came in late. Hawaii will be here tomorrow.

All the hotels are full and if many were not domiciled in their trains and air ships some would certainly have to sleep out under the spreading palms. Nearly all of the South American delegates except a few who came in on the Flying Bee Line are housed aboard their electric ship, City of Rio.

The first session convened at eleven o'clock this morning with President I. B. Horton in the chair. Beside him sat Patrick Finnegan, president of the United States; President Portuondo of Brazil, and President Ramon of Mexico; Secretary of the United States Health Department L. R. Bryson, and several other cabinet officers. Governor Anderson of Florida, who is also a pharmacist, and governors from eleven other States, including Governor Albach of North Ontario, who came as a guest of the delegation from that State, and many other notables were present on the stage of the auditorium.

More than ten thousand were in the building. Cheering followed every response, which was made by the delegation arising in a body at the call of Secretary Branson. But the ovation accorded Porto Rico, whose representatives are all women, was one that made their leader, Miss Amice Perreto, that brilliant young pharmacist whose laboratory discoveries have made her fame world wide, blush with ripest pleasure.

After roll call Delegations Reporter H. C. Atkinson read briefly the statistical figures shown by the present attendance. The 60,000 druggists in Greater United States had elected one delegate to every thirty pharmacists. New York was entitled to 117 delegates and of this number 115 were present, the other two being kept away by illness. This, considering the number, is a remarkable showing, although the total delegations from some of the smaller States and territories are present. Altogether there are 1012 delegates in attendance and more to come. The reporter drew attention to the fact that Alberta is the only territory and Nova Scotia the only State whose associations do not "pay the freight," that is, the expenses of their delegations.

Governor Anderson then delivered the address of welcome. He gave Florida's bananas and oranges, her climate and loving hospitality, and everything else she has to the visiting pharmacists, who seemed to appreciate the gift. He felt sure Florida would like to keep them there forever were it not for the suffering of poor humanity in other States the deprivation of so much brain and science and so forth would cause. He said he had always loved pharmacy and knew he loved pharmacists and he turned in the direction of his wife who, before she was married to him, owned an opposition store, for verification. His hearers almost encored him.

President Horner on behalf of the visitors accepted all that the genial governor had offered, promising, however, to take none of it home except the pleasant memories of such a meeting, such loving treatment and such surroundings give.

President Finnegan was then introduced. He said

he was going to go Governor Anderson several better. In short, he was prepared to give the pharmacists the whole United States. He expressed his pleasure that the good hearted governor had not looked upon himself as the whole thing and deprived him (President Finnegan) of the privilege of making the gift. He had feared the United States would be already given away before it became his turn to talk.

After the secretary's and treasurer's reports, the latter showing a balance on hand of \$287,000, and that every auxiliary association had paid its per capita assessment (amounting to \$5 per capita for State and \$3 per capita for territorial associations) President Horton read his annual address.

He deplored the recent misunderstanding between the American Association of Retail Druggists and the American Drug Clerks' Association as one of the most unfortunate events in the life of either association and one that must be remedied, even if by the sacrifice of the position held by the A. A. R. D. He said it was a reflection on the stamina of the male members of the A. A. R. D. that after the 40-hour-40-dollar-a-week senior and 50-hour 25-dollar-a-week junior schedules had been amicably fixed between the two great bodies that the mere question of admission of clerks' wives to lesser official positions in the Wives' Auxiliary of the A. A. R. D. should bring open rupture. He said he hoped no member of the A. A. R. D. would prove to be under petticoat rule at this meeting and recommended that the A. A. R. D. notify the wives that unless they extended the privilege sought by the clerks' wives the A. A. R. D. would hereafter refuse to bring them to the annual meetings, thus breaking up the auxiliary. This, President Horton said, might be radical action, but it would restore peace between the two male bodies, and peace must be obtained at any cost.

Later, when the recommendation was discussed, it brought out the fact that the two factions—for recognition and against—were very evenly divided. Two or three, held under the hypnotic eyes of their wives, made fiery speeches against the recommendation.

It looked like a smashing of the A. A. R. D. right there and then, and, safe to say, when the vote came, the minority, whichever side that had been, would have bolted. But quiet came unexpectedly through the announcement by N. Z. Epstein, head of delegation from the A. D. C. A., who had been leaning back in his chair in amused contemplation of the forensic battle, that the solution of the difficulty, he was pleased to say, was at hand. The clerks' wives were planning an auxiliary of their own, to affiliate with their husbands' association and didn't want any of the old offices of the A. A. R. D. wives' auxiliary anyway. Tumultuous cheering followed the announcement.

Chief of Bureau of Pharmacy of the United States Health Department Daggett reported that there were now 60,000 pharmacies in Greater United States, or one to every 5,999 persons. The average value of pharmacy was \$19,643. Only sixteen cases of substitution had been found in the last year. Of these eight of the licenses were revoked. All State chiefs are using the greatest vigilance, and never has the standard of honesty been so high. The rest of his report will be given tomorrow.

Patent Leather Varnish.

A varnish that will not peel off or crack from the leather may be made from the following formula:

Rosin, black.....	7½ ounces
Venice turpentine.....	7 ½ ounces
Oil of turpentine.....	7½ ounces
Sandarac.....	15 ounces
Shellac.....	20 ounces
Alcohol.....	11½ pints
Lampblack.....	4 ounces

Digest the rosin, turpentine, sandarac, shellac, and alcohol together, afterwards add the lampblack, and well mix. Apply with a soft brush.

STEARNS & CO.'S NEW VACCINE BUILDING.

The adaptation of modern scientific method to the propagation of vaccine is reflected in every part of the building just erected by Frederick Stearns & Co., manufacturing pharmacists, Detroit, Mich. One may go still further and truthfully say that the building in completeness and arrangement for the economy of labor and elaboration of product, is unique. It is entirely of brick, has but one outside entrance and no windows whatever, being lighted by skylights of the most modern and approved form, fitted with prismatic glass which diffuses a very strong light without allowing direct rays of sunshine to enter. Ventilation is obtained by means of powerful patent ventilators and electric fans, the dust from outside sources being absolutely excluded, an important item in the production of pure vaccine. The building is heated by steam, lighted by electricity and provided with hot and cold water throughout.

The large incubating room is equipped with iron stalls provided with small racks which the calves stand on. This raises the animals from the floor so that they do not stand in their own excretions even for a moment. The walls of this room are of pressed brick, enameled white, and the ceiling is arched or "coved," doing away with corners. The floor is of concrete, drained by a number of sewers. There is no wood in this room at all, even the racks on which the animals stand being iron, and these racks are scrubbed, sunned and sterilized daily, there being two complete sets. The room is cleaned daily by flushing with a hose.

The cleaning and sterilizing room adjoins the operating room. Both of these are practically porcelain lined, the walls being of glazed white tile with all joints enameled, making a continuous snow-white waterproof surface as smooth as glass. The ceilings are coved here also, doing away with corners. The light is from skylights and the ventilation through flues. Neither of these rooms has an outside door or window. The sterilizing room is provided with electric clippers, by means of which the calves from the quarantine barn are very closely clipped; then the calves are scrubbed in a hot antiseptic bath in the vats with which this room is provided. After being thus thoroughly cleansed they are shaved over the area to which the vaccine is applied. Then being transferred to the next room, they are vaccinated and placed in the incubating room first described and fed on sterilized milk during the progress of the vaccinia which has been induced. It should, perhaps, be stated here that when the calves are first received from the farm they are placed in a quarantine station devoted entirely to their use, and are kept here for some time, under the inspection of our head veterinarian, to demonstrate their entire healthiness, before being vaccinated.

In this building also, but entirely separate from the vaccine department and not communicating with it in any way either by door or window, are the large injecting and bleeding rooms of the antitoxin laboratory.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories. Twelve Teachers. Thorough Course.

NEXT TERM BEGINS JANUARY 4, 1904.

Address Inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago

The following are ready to lease in the vaccine opera-
tor's office, with complete outfit, in fact everything you
could wish for, being built as clean cool aseptic as
a modern hospital.

THE ROAD TO WEALTH.

This road is short and straight, and it depends com-
pletely upon the man who travels it, as to whether he
reaches the end or not. No matter what your business,
if you can do enough of it at a fair profit your fortune
is made. This column will help you along the road to
wealth, better watch it closely. The following are
brief descriptions of some of the goods advertised in the
November 19 issue:

SEN SEN.—The popular Throat Ease and Breath-
Perfume, made by T. B. Dunn & Co., Rochester, N. Y.,
who are supplying the trade with attractive advertising
matter.

POMPHIAN MASSAGE CREAM.—Made by the
Pomphian Mfg. Co., Cleveland, O., and claimed by them
to be a harmless skin food which will positively re-
move blackheads, pimples, tan, sunburn, and moth
patches. Retail for 50c, and \$1.00 per bottle.

ABSORBENT COTTON.—A reliable brand at low
prices. Made in three qualities, all of which are pre-
pared under strict pharmaceutical rules by the Maple
wood Mills, at Fall River, Mass.

POWDERED DRUGS.—If it is the best kind you
want, send to Gulpha, Langdon & Co., Baltimore, Md.,
and secure a price list of the finest quality powdered and
ground drugs for preparation.

PURE RYE WHISKEY.—The kind that should be
handled in every store that sells whiskey for medicinal
use. Made by Clarke Bros. & Co., Peoria, Ill.

DRY GOODS.—All druggists visiting New York
should call at the immense dry goods emporium of James
A. Hearn & Son, West Fourteenth St., New York.
This store handles no drugs, groceries or liquors, but a
very complete line of dry goods.

ARENOL SOLUTION.—The product of Frederick
Stearns & Co's laboratory, Detroit, Mich. Supplied in
one ounce glass-stoppered bottles at 50c, net, per ounce.
The manufacturers say that for permanence and physi-
ologic activity they believe it to be unequalled. Write
for literature.

SHOW CARD WRITING.—The Miller College of
Advertising Art, 152½ Columbus Ave., Boston, Mass.,
guarantee to make a good show card writer out of you
in 50 lessons or refund your money. You can, for a
limited time, secure a discount from regular price if
you will mention the Era.

DI ROY WINES.—Made by the Duroy & Haines
Co., Sandusky, O., who will furnish samples of their
most popular and best selling wines upon request. If
you want a line of this class of goods which will win
trade, write at once to the above named firm.

HAZARD, HAZARD & CO'S PREPARATIONS.

This line of colognes, toilet waters and pharmaceutical
preparations are again upon the market and can be ob-
tained at 3 E. 14th St., New York City.

COLLAPSHIBLE TUBES.—The New York Com-
modity Co., 216 Fulton St., New York City, are manu-
facturers of Dr. Butler's Cream Dentifrice, and also
make a specialty of filling and labeling collapsible tubes
with your own preparation, such as dentifrices, oint-
ments, pastes, etc.

NEEDHAM'S RED CLOVER.—Manufactured by
D. Needham's Sons, Inter Ocean Bldg., Chicago, Ill., and
claimed by them to be the standard blood purifier for
25 years. Put up in three forms, Blossoms, which cost
\$1 a dozen, Fluid Extract at \$8.00 a dozen, and Solid
Extract, \$20.00 a dozen. Literature furnished upon re-
quest.

DOG MEDICINE.—If you are looking for dog
remedies that you can recommend to reach every ac-
count that a dog is her to, consult the advertisement
of the Polk Miller Drug Co. on page 20.

DRUGGISTS' RINGS.—Made of sterling silver ox-
idized with ruby or emerald eyes. Sent prepaid to any
address upon receipt of price. Low price see the J.
Arthur Co's adv. on page 21.

To Clean Hard Paint from Brushes.

Suspend each brush in a solution of one part crys-
tallized sodium carbonate (washing soda) in three
parts of water, and in such a manner that it will
bring some distance from the bottom of the tumbler.
Let it stand twelve to twenty-four hours in a warm
place (140 to 150° Fahr.) when the dried paint will
be so softened that it can be easily washed out with
soap and water. Brushes that have become hard as
stone can be restored by this process.

Treatment of Baldness.

Pilocarpine hydrochlorate,	5 grains
Oil of rose	8 minims
Oil of rosemary	4 drams
Camphoral liniment	4 drams
Glycerin	1 ounce
Oil of almond, expressed	3 ounces
Spirit of sulphur	3 ounces

This formula is said by Dr. Whittle to be one of
the best combinations in the treatment of baldness.
The mixture should be rubbed well into the scalp
night and morning.

Black Leather Varnish.

Resin	50 parts
Turpentine	50 parts
Oil of turpentine	50 parts
Sandarach	40 parts
Shellac	120 parts
Alcohol, 90 per cent	500 parts

Digest, then add
Lampblack

15 parts
previously triturated with a little alcohol.

Patent Leather Preserver.

Carnauba wax,	1 part
Oil of turpentine	95 parts
Aniline black oil soluble	0.06 part

Melt the wax, stir in the oil of turpentine and the
dye and scent with a little oil of mirbane or lavender.
The paste is rubbed out on the patent leather by
means of a soft rag, and when dry should be polished
with a soft brush.

Nerve Tonic.

Potassium bromide	120 grains
Aromatic spirit of ammonia	6 fl. drams
Comp. tincture of chloroform	10 fl. drams
(R. P., 1885)	2 fl. drams
Tincture of nux vomica	1 1/2 fl. drams
Distilled water, q. s. to make	6 fl. ounces

Dr. David Kennedy's NEW MEDICINES

	Per Dozen.
CALCURA SOLVENT	\$5.00
CALCURA PLASTERS	2.00
CALCURA PILLS	2.00
EPIDERM SOAP	2.00
EXEMALINE OINTMENT	4.00
DR. KENNEDY'S TONIC (Mercurine)	8.00
COUGHLINE SYRUP	4.00
REDECURA OIL	4.00
OCULINE BALM	8.00

Samples, counter, advertising and window displays provided.
Address the manufacturers.

THE CAL-CURA CO.

Dr. Kennedy Row,

RONDOUT, N. Y.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued, November 17, 1903.

- 744,085.—Meckley Masterson, Cripple Creek, Colo. Liquid-dispensing apparatus.
- 744,128.—Emerson H. Strickler, Baltimore, Md. Process of manufacturing trisodium phosphate.
- 744,385.—Charles E. McClellan, Zanesville, O. Bottle.
- 744,512.—Edwin K. Drake, De Land, Fla. Suspensory bandage.
- 744,556.—Michael M. Kearney, Scranton, Pa. Non-refillable bottle.
- 744,560.—Henrique C. Kennedy, Philadelphia, Pa. Bottle-washing machine.
- 744,603.—John D. Pierce, Philadelphia, Pa. Atomizer.
- 744,617.—Eduard Ritsert, Frankfort-on-the-Main, Germany. Closing bottles or vessels.
- 744,656.—Ottile Wider, Washington, D. C. Fountain-syringe.
- 744,674.—William S. Barnett, Jacksonville, Fla., assignor to Non-Refillable Bottle and Cork Company, Jacksonville, Fla., a Corporation of Florida. Non-refillable bottle.

- 10,516.—Title: "It Reaches the Right Sp't." (For medicine). Alexander Crichton, Castleton, Canada.

Tell Them Something New.

As often as it is possible for it to do so, an advertisement should tell readers something regarding the article advertised that they did not know before.

When people secure an important piece of information they are apt to act according to it, and consequently if they learn from an ad. that a certain article possesses some new qualification that makes it desirable for their uses they may be safely counted upon to buy the article.

Every different characteristic of an article will appeal to a certain class of people. Therefore, when this class finally discovers that the article possesses the characteristic that appeals to them they are its friends and patrons ever after.—Profitable Advertising.

TIN BOXES and CANS

LARGEST MAKERS OUTSIDE THE TRUST

PRICE CHANGES FAVOR BUYERS.

New York, November 24.—Dealers report a good jobbing movement into the various channels of consumption but the majority of price changes during the period under review favors buyers, reductions in manufacturers' quotations for cocaine and codeine being the leading features.

OPIMUM.—There is no material improvement in the condition of the market and the undertone is easy with quotations barely steady at the recent decline to \$3.25 @ 3.50 for 9 per cent. and \$3.35 @ 3.60 for 11 per cent. Powdered also is easy but prices are nominally unchanged at \$1.25 @ 1.50 for 13 per cent. and \$4.75 @ 5.00 for 16 per cent.

MORPHINE SULPHATE.—Business in a jobbing way is moderately active with quotations maintained at the old range of \$2.60 @ 2.70 for eighths in ounce boxes, \$2.55 @ 2.75 in 2½-oz. boxes, \$2.35 @ 2.45 in ounce vials, and \$2.30 @ 2.40 in 5-oz. cans.

QUININE SULPHATE.—An average consuming business is in progress and the market retains a firm undertone but the expected advance in values has not yet materialized and jobbers continue to quote 25 @ 25½¢ for bulk in 100-oz. tins, 25½ @ 26¢ in 50-oz. tins, 26 @ 26½¢ in 25-oz. tins, 27 @ 27½¢ in 15 or 10-oz. tins, and 32 @ 32½¢ in ounce vials.

COCAINE.—Keen competition among manufacturers has had a depressing effect on the market, notwithstanding the continued strong position of crude material at producing points, and quotations have been reduced 25¢ per oz. The revised jobbing range is \$4.00 @ 4.25 for bulk, according to quantity.

CODEINE.—Foreign markets are easier and spot jobbing quotations have declined to \$3.55 @ 3.65 for alkaloid in ounces and 3.80 @ 4.00 in eighths. Sulphate \$3.50 @ 3.50 in ounces and \$3.55 @ 3.75 in eighths. Phosphate \$3.60 @ 3.25 in ounces and \$3.30 @ 3.50 in eighths.

MENTHOL.—A continued easy feeling is manifested on the part of the larger holders and jobbing quotations show a further decline to \$6.75 @ 7.25 per lb. and 58 @ 63¢ per oz.

ICHTHYOL.—The tone of the market is easier and jobbers have reduced quotations to \$4.25 @ 4.50 in pounds, \$4.25 @ 4.60 in halves, \$4.00 @ 4.75 in quarters and 32 @ 35¢ in ounces.

POLYPHENOLAN.—Owing to the increased cost of raw material the market is decidedly stronger and jobbing quotations show an advance to \$3.75 @ 4.25 per lb. and 37 @ 42¢ per oz.

UNION SALAD OIL.—Manufacturers' prices are lower and the revised jobbing figures are 18 @ 19¢ by the lb. and 58 @ 68¢ for less.

ESSENTIAL OILS.—Peppermint continues easy with quotations in a jobbing way further reduced to \$2.85 @ 3.10 for Western and \$2.35 @ 3.20 for Wayne County. Natural saffras is scarce and higher with jobbers quoting 65 @ 70¢. Anise is firmer both here and abroad and spot quotations have been advanced to \$1.55 @ 1.80. Onssia is weaker with sellers at 96¢ @ \$1.00. Synthetic wintergreen is lower and jobbing parcels are obtainable at 65 @ 75¢.

BLOOD ROOT.—Stocks are steadily diminishing and jobbing prices have been further advanced to 24 @ 29¢ for whole, 27 @ 32¢ for crushed and 29 @ 34¢ for powdered.

ERIGOT.—Crop conditions are to be more favorable and with foreign markets reported weaker, spot jobbing quotations have been reduced to 53 @ 58¢ for whole and 63 @ 68¢ for powdered.

KAVA KAVA.—Stocks are very light and the market is firmer with jobbing quotations showing an advance to 30 @ 35¢.

COTTON ROOT BARK. Supplies are coming in more freely and an easier feeling has developed with jobbing prices showing a decline to 24 @ 34¢.

CALCICUM SPECIF. Values are easier under a slow demand and fewer offerings and prices in a jobbing way have been advanced to 55 @ 65¢ for whole, 60 @ 70¢ for ground and 65 @ 75¢ for powdered.

SEPARATION OF HYDROCARBONS BY ALCOHOL.

K. Kavitchkoff (Petrol. Rev.) describes a process for the separation of petroleum hydrocarbons in the cold by means of alcohol. It is suggested that the process may lead to the isolation of petroleum compounds hitherto unknown.

SCHOOL OF PHARMACY FOR WOMEN.

A school of pharmacy for women is about to be established in connection with a lady's pharmacy in St. Petersburg. The pharmacist in question was the first lady to be authorized to practice the profession in Russia—Pharmaceutical Journal.

The Pharmaceutical Era.

EVERY THURSDAY.

VOL. XXX.

BUSINESS NOTICES.

THE ERA DRUGGISTS' DIRECTORY.

The 10th revision of the Era Druggists Directory, now ready, is the best edition we have yet offered. It is the standard work of its kind in this country and includes a complete list of the druggists in Costa Rica and the principal drug stores in Chile, Peru, Bolivia, Ecuador and Colombia.

The list of retail druggists in the United States does not quite reach the 40,000 figure which the last edition showed, but this loss is made up by increased numbers in Part III. (Manufacturers, Jobbers, etc.)

This Directory will be found invaluable to any merchant or manufacturer who does business with the trade. It is sold only by subscription, and until further notice the price will be \$5.00 per copy, net, postpaid.

The edition is limited, and we are obliged to reserve to ourselves the right to raise this price at any time.

"We are all learning more or less every day, and wide reading in one's chosen field is imperative."

But there is a great difference both in the quantity learned and the manner of reading.

The newspaper habit, the careless reading of many headlines in many dailies, does not lead to great learning.

On the other hand careful systematic reading is the medium of all education.

Why does the college student read to better advantage than the newspaper habit?

Because his reading is selected and systematized.

System and selection in reading is, however, also possible outside college walls. The main thing is to get the right person to arrange it for you.

The Era Course in Pharmacy has been selected and systematized for the use of home students by educators of wide experience.

Write to The Pharmaceutical Era, 8 Spruce Street, New York City.

EDITORIAL COMMENT

IF OUR DEEDS ARE HONORABLE, WHY SHUN THE LIGHT?

The N. A. R. D. Notes announces very strangely that, "a good deal of the sensational matter printed about the 'Washington promise,' and the 'agreement' made by the retailers and proprietors at Washington is misleading and tends to place on the shoulders of the N. A. R. D. the responsibility of making the proprietors' present effort a success." It further states that "the retailers' organization has nothing whatever to do with the manufacturers' proposition." We confess that we are unable to understand precisely what the official organ of the N. A. R. D. is "driving at." Certainly the Era does not feel the least bit guilty, for the accuracy of our reports about the new campaign and the events which led up to it have never been questioned. None of our contemporaries has, as far as we know, placed the responsibility where those most concerned did not admit that it rightfully belonged. We suppose that the Notes is merely voicing the views of some of the prime movers in the present campaign, who constantly have a timid ear and a fearful eye on the alert for legal complications. If this is the case, and it is really the Era that is accused of telling too much of the truth, we can only say that we are very sorry but not at all repentant. The facts were hard to get, but it is the business of a journal to print the news, and we should consider it a breach of our readers' confidence to print anything but that which to our best knowledge is the truth. Why anyone should attempt to hide a movement in which 40,000 druggists are expected to be active participants we cannot understand. If there is anything about it that must remain hidden we have small confidence in its success. The benefits, if there are to be benefits, to those most interested must come from a more cordial feeling among the retail trade toward certain preparations—we hope that is sufficiently discreet—and how it is expected to encourage and foster a feeling of this kind without the friendly publicity given by the trade journals, is to us a mystery. The Washington promise is a fact, and if the N. A. R. D. had nothing to do with it, who did? No one has accused it of having any "official" connection. We are sorry if we have spoiled somebody's plans, but we can not promise never to tell all the truth again.

"THE HUSTLING NEWSPAPER OF THE DRUG TRADE."

We can not believe that the N. A. R. D. Notes meant to elabourate this journal when it spoke of "sensational" and "mis-leading" statements about that "promise" campaign for upon the appearance of our report of the famous meeting in Hotel Manhattan. President Pritchard promptly ordered a thousand reprints for distribution among friends of the N. A. R. D. Another reason why we do not believe the "Notes" had "its eye on us" is because its editor, Mr. Charles M. Carr has since then been saying some embarrassing nice things about the Era. In a recent letter he writes among other things, "I regard the Era as the hustling newspaper in the drug trade and I admire its enterprise and activity in the news field as well as the vigor of its editorial expressions;" and "I want to thank you for the splendid support the Era has been giving our cause." We hope we deserve all this, and as no journal can very well afford to be modest we shall not add very much lest it encourage doubts. We can, however, thank our friend, and say that we hope to deserve his good opinion for a long time to come.

THERAPEUTIC NIHILISM.

We print upon another page an address delivered by Dr. Beard of the Minnesota University medical college before the druggists of that State. His subject, "Therapeutic Nihilism," means, as we understand it, a lack of faith in the efficacy of drugs in influencing the course of disease. This form of unbelief seems to be prevalent among thoughtful people and is distinctly unfavorable to the medical profession. The speaker deplors the nihilistic attitude of the public and holds the druggist in a measure responsible for it. He regards the condition as the direct result of the commercialization of everything pertaining to drugs, the universal scramble for the dollar without a sense of responsibility for the effects produced. Among the direct causes enumerated are counter prescribing, supposed to weaken public faith in doctors, and refilling prescriptions, the passing around of the physician's formula from one patient to another, thus familiarizing the people with the ingredients and undermining confidence in the results sought. Another cause named is the lack of quality standards which insure as far as possible like effects under like conditions, but the chief among the agencies for the creation of unbelief is that bug-bear and, when convenience requires, friend of the doctors, the patent medicine. The remedies proposed include the removal of the causes and a stimulation of public respect for those connected with the supply of medicines by means of higher educational requirements. The pharmacopoeial revision committee is censured for failing to eliminate from the official list of drugs those known or generally supposed to be inert. In other words it is proposed to make pharmacy the censor of the materials employed as remedies with the power of rejecting preparations to which men of science do not at present attach any value. No doubt druggists would be glad to reduce the number of articles which they are expected to keep in stock, but it is difficult to see how they could effect this reform. It is not the pharmacist who makes the application of the remedy to the disease; that is the

doctor's business. The druggist must supply the article demanded of standard quality and there his responsibility ends. Let the doctors stop prescribing the remedies which have lost the confidence of sensible people and they will disappear from the drug store shelves quickly enough.

WHO HAS DESTROYED FAITH?

The question of the decay of therapeutic faith is an interesting one, and Dr. Beard in trying to find its causes has earned our gratitude. The condition described is very real, as we most all have observed, and it explains many things. The attitude does not obtain only among people gifted with analytic minds who can correctly interpret the shrug of the doctor's shoulders and the prescription containing chiefly sugar of milk. It has spread to the credulous who find it easier to believe the statements of others than the evidences collected by their own senses. Christian Scientists, Dowdites and other anti-medicine cults merely represent that element of our population that has in some way lost confidence in drugs and, in the absolute necessity of having something upon which to hang its faith, has accepted doctrines ten times more preposterous than the claims of the most shameless quack. No doubt the causes enumerated by Dr. Beard have been important factors in destroying the blind faith that in times past has been a source of immense revenue to an endless procession of quacks and charlatans, but we believe that there are other still more important reasons for the decline of belief. The physicians themselves have in their inability to agree upon fundamental questions and in smiling at the ancient household remedy, done much to encourage doubts, and are far more to blame for the attitude of which they complain than the druggists. But in our opinion all of these causes are inadequate. In questioning the value of drugs people are only following the spirit of the times. This is an age of disappearing superstitions and crumbling faiths. It is the scientific spirit, the tendency to inquiry into all things and preserve only that which survives the test. And as the overhauling of old customs and beliefs and the rejection of useless lumber has done more than any other force to uplift mankind, we can see only the hopeful in the present doubt of drugs. Let science winnow out the chaff, and in time the people will come to rely upon the real therapeutic agents far more implicitly than the benighted sufferers of past ages ever trusted the semi-religious, semi-mysterious decoctions of their times. The trouble with modern medicine and modern pharmacy is not that there is too little faith, but that there is still too much superstition. When medicine shall have lost all its empiricism and all its insincerity, the pharmacist will be a true man of science.

THE GROWTH OF SCIENTIFIC THERAPEUTICS.

The application of drugs in the treatment of disease is gradually being placed upon a scientific basis. An interesting article on the relation of treatment to the pharmacologic action of drugs by Dr. Vexux-Tyrode of Harvard University, recently appeared in the Journal of the American Medical Association. Methods of determining the value of drugs have varied little during the ages that science has

been busy collecting the meagre store of knowledge of the human body now available. The use of drugs until very recently rested entirely upon past experience. The process involved in discovering a remedy in the "old days of Babylon when there were no physicians and the sick were exposed on the public ways so that they might converse with passers-by who perchance might have had the same ailment and who possibly might suggest a remedy," differs surprisingly little from that of recent times when one physician prescribed a remedy because a patient of an other had recovered after absorbing a similar draught. But there is reason to believe that this old inexact method will soon be replaced by a truly scientific method in the case of all drugs as it has already been replaced in some cases. The author of the paper quoted states that "a superficial knowledge of drugs acquired from clinical experience alone is not only not productive of the best results in therapeutics but that it may even be dangerous. Realizing this fact, the best clinicians the world over now try to base their therapeutics on experimental pharmacology." The comparatively new science which concerns itself with testing the action of drugs by means of carefully controlled experiments has already done much to replace the old empiricism with actual knowledge, and has disclosed many errors in the use of remedies supposed to be well understood. Even standard remedies like quinine, calomel and morphine are now prescribed with greater certainty of results than formerly. There is nothing like knowledgē the truth of which can be proved to remove the clouds of doubt and unbelief.

THE PROFESSIONS AND THE BOYCOTT.

The strike of the street-car men in Chicago, has raised an interesting question which concerns doctors and druggists. In the early days of the struggle one of the papers printed an account of a clash in which a non-union worker was injured. The man was carried into a neighboring drug store to await the coming of a physician who had been hastily summoned. When the medical man arrived he asked the man for his union button and upon being informed that he did not belong to the union the physician refused even to examine his wounds. Thus far the newspaper report. Of course the medical profession was horrified at the thought that any member of the most humanitarian of all callings should so far forget his duty as to refuse aid to the wounded, no matter who the injured might be, and an investigation was immediately begun. The druggist and others connected with the case promptly denied that anything of the kind had occurred, and the reporters' story proved to be only another of those yarns, common in some journals which are intended to be read and not to inform. The medical profession, therefore, escapes the disapproval that would inevitably follow such a neglect of duty, but a pertinent question for the strikers remains. The doctor or druggist who would dare to refuse aid to a non-union patient would deserve the execrations of the public, yet the striker, would not hesitate to boycott either physician or pharmacist. How is it possible to justify the boycott in one case without also admitting its right in the other?

V. MOTT PIERCE, M. D., Buffalo, N. Y.
Secretary and General Manager, World's Dispensary
Medical Association.

RADIUM STILL SCARCE.

Radium is still the scientific mystery of the hour, although its mysteriousness has yielded somewhat to the importunities of the investigators and it now seems that our entire system of physical laws may not be upset after all. The doctrine of the conservation of energy, for instance, seems to have suffered no serious injury, and in the light of more recent explanations is to all appearances as good as new. The source of the strange energy is now generally believed to reside in the structure of the molecule or atom, and the heat and light given out appear to be merely a manifestation of force set free in a breaking up or rearrangement of the material particles. Prof. Ramsay of University College, London, announced last week that he had proved definitely that the emanations which have been puzzling the scientific world, are ultimately changed into the element helium. The emanations thrown off by the metal and its salts seem to be some form of matter in an intermediate state, which in the course of a few days disappears to reappear as helium, a well-known element. Proof of transmutation of elements is, therefore, complete, unless both radium and helium should turn out to be only compounds, in which case, we would be allowed to keep our solid little friend, the atom, intact, in the same way as some of the other fundamentals of science have been restored to us. In the meantime the commercial future of the marvel of science has become more doubtful than ever. There have been a number of rumors of companies formed for mining radium on a large scale in this country, but Prof. Ramsay has examined the ores and he declares them worthless. The element will, therefore, not appear in the domestic arts very soon, and it is perhaps better that it should continue to be a mere problem for the scientists for some time to come, for its energy is too little under control and is too great for promiscuous use.

"Bargain Basement" in D. R. Dyche & Co.'s Drug Store, Randolph and State Streets, Chicago.

Why waste the valuable floor space in our basement by storing rubbish upon it? Why not make that basement an income producer? The department stores have bargain basements; why shouldn't we? And the first drug store bargain basement in Chicago was started by D. R. Dyche & Co., Randolph & State streets, after Manager Graham had asked himself and his superiors the above questions. The idea has been a success from the very start.

There are two entrances, one from the store above and another from Randolph street on the south. To the left as one enters is the sponge department, most of the finer articles being shown in a long glass case which extends nearly the full length of the room. Ranged through the center is a series of tables and cases, showing a profusion of perfumes, pomades, soaps, and other

necessaries of the toilet. At the end of the space counter near the stairs leading up into the main store are the rubber goods.

In one corner is the telephone booth and directory, so that all customers desiring to use either are referred to the basement. Along the east wall is ranged a row of shelves of pharmaceuticals.

The place is busy with people drawn there either by curiosity or the hope of a bargain. Window signs are used in the upstairs store and in the windows to call attention to the bargain basement. Mr. Graham is arranging to put in a special line of holiday goods, and he expects that the place will become one of the popular features of State street. It appears that the possibilities of the drug store basement are greater than have been appreciated.

COD LIVER OIL FROM DOG FISH.

Nova Scotia, November, 1903.

To the Editor:—The old saying that what is one man's loss is another's gain is being exemplified along the Nova Scotia coast just now. For years past the fishermen have been harassed beyond endurance by the schools of dog-fish which destroy their nets and trawls, and devour the fish caught on their lines. Utterly useless as a food fish they were formerly thrown overboard as soon as they were killed, a few livers were saved, and the oil tried out of them was sold as "fish oil" for twenty five or thirty cents a gallon. Purchasers were scarce, even at that price. The failure of the Loboten fisheries has raised the dog-fish, from a most execrated pest, to a rather sought after fish.

The livers have been in steady demand for some time and while the average price paid for raw livers, has been fifty cents a bucket, it has gone as high as a dollar and a quarter per bucket, at the last of the season. The oil obtained from the dog fish is not as objectionable as one might suppose. Of a pale straw color with little odor, it is practically indistinguishable from cod liver oil when well made. As a general rule, however, the fishermen who prepare it are not remarkable for the cleanliness of their surroundings, and in addition to this they take little or no pains to remove the stearin from the crude oil

Several of the larger fish firms have put in small plants for the treatment of livers, and refining of oil. These houses have a commercial reputation to sustain, and therefore they refrain from shipping this product under any but its true designation of "fish oil." We can only surmise what becomes of it when it leaves the Atlantic seaboard, and reaches Upper Canada, and the United States.

After the removal of the livers, the dog-fish carcasses are sold to the farmers for compost, or spread on the land owned by the fishermen. When made into a carefully prepared compost heap, with an equal weight of peaty mud from the swamps, they furnish a most valuable fertilizer. Strawn broadcast on the field, they not only pollute the atmosphere with an intolerable stench, and the brooks and watercourses with the result of their decomposition, but the greater part of their efficiency is lost by evaporation, and a large part of the carcasses themselves, is carried away by the crows, ravens, and seagulls.

The export of "fish oil" will probably exceed that of last year by some thousands of barrels, in addition to this a few barrels of genuine cod liver oil of high grade, have been turned out by each of the larger firms of fish dealers. This has found a ready market in the New England states and in Ontario.

SHOP TALK

DARK DEEDS IN CORNERS DARK.

"The wicked stand in slippery place," probably because they have had more practice; in the same situation the inexperienced sinner often gets a fall.

Tommy, the new boy at Brown's, proved to be the "man for the place," but it must not be supposed that he was any nearer to the angels than was good for him. During the first week he fought a pitched battle with a boy who threw mud at the drug store sign, received the earnest reproval of his friend the head clerk for stealing apples from the grocer across the street, broke two bottles valued at forty cents, and suffered a slight congestion of the lung as the result of prying into the mysteries of a carboy of ammonia. Still he was an exemplary boy, as boys go, and made rapid progress in the varied knowledge pertaining to a country drug store. The only person about the place in whose eyes he had not found favor was the junior clerk, and he was jealous of a possible rival for soda water honors.

The druggist was not too exacting; in fact he had been a boy himself, and did not expect perfection. About one point, he was, however, very decided, he would have no cigarette-smoking about the store.

Tommy had never felt a very keen desire to smoke anything more narcotic than corn-silk until he saw Frank, the junior clerk, consuming the little white rolls with great satisfaction in the cellar. Now he wondered if it could really be as much fun as Frank pretended.

The head clerk had set the boy to filling some large bottles from barrels in the cellar, an operation requiring much time, for the spigot was small and the stream of liquid slender. Presently Frank appeared and proceeded to enjoy another stolen smoke.

"Say," said Tommy, "Mr. Brown said you were not to smoke in the store."

"What's that to you?" snarled the clerk. "What does a kid like you know about it. A man wants it pretty bad some times," stroking his downy upper lip.

"But—that's what he said."

"Why don't he make me stop it then?"

"He doesn't know you come down here every once in a while to smoke."

"Why don't you tell him?" sneered the clerk, knowing very well that the curious sense of honor among boys made him safe on that score.

"I'm no sneak," said Tommy meekly.

"Then what are you talking about?"

"Nothing—only Mr. Brown said—"

"Look here! Did you ever smoke?"

"No!" confessed the boy blushing with shame.

"Then don't talk to me!" retorted the clerk with emphasis.

Tommy bent over his bottles. He felt that Frank was still smiling at his innocence.

"Why don't you smoke?" continued his persecuter presently.

"Cause I can't."

"Cause you d'assent, you mean."

"I dare."

"You dare, eh? Then let's see you do it."

"I haven't got any cigarette."

"Oh, you haven't? All right! Here's one. You'r afraid—I knew it—I knew it."

"I'm not afraid."

"Oh, No! The good little boy is too good!"

Tommy straightened up—he had just placed a fresh bottle—and sullenly held out his hand. He sucked gingerly at his first cigarette.

"Oh, Tommy!" called the head clerk from the floor above.

The boy tried to answer, but could not, his throat was full of smoke.

"He's coming!" said Frank dodging behind some boxes.

"Oh!" said Tommy, and dropped the smoking cigarette. Instantly the whole cellar seemed to be ablaze.

"Mr. Thompson—Mr. Thompson!" shrieked the boy trying to quench the flames with his cap, his feet, his hands. But it was only a slight film of gasoline that had caught fire, and when the head clerk appeared, the flame flickered out.

"What's all this?"

But Tommy did not answer. He lay writhing upon the floor nursing a scorched wrist.

Several minutes later when the druggist was trying to dress the slight wound, the boy suddenly said: "The bottles!" and bolted down the cellar-way. A bad scare, five gallons of "pure rye" spread over some yards of cement flooring and one scorched boy, was the inventory of the damage.

"Mr. Thompson," said Tommy later in the day "do you think Mr. Brown is going to discharge me?"

"No, I think not."

"Then why didn't he say anything about—about you know? He only looked sober."

"That's his way," said the head-clerk. "Aren't you glad he didn't scold you?"

"No, I'd rather he'd say awful things than look that way."

That night Tommy did not tell his mother quite all about everything.

DRUG SALESMAN WON BET THAT HE WOULD LIVE.

Horace Benedict of Rochester, a retired drug salesman, and well-known by the older pharmacists in Central and Southern New York, the other day smoked his first cigar in twenty years as he returned from one of the savings banks with his pass book "written up," showing a credit in his favor of over \$3,000. Mr. Benedict tells in the following language how he came by this bank account:

"It was November 1st, 1883, that I attempted to secure an insurance policy on my life. I was single, as I still am, but I thought if I could secure an endowment policy I could collect the full amount with dividends equaling half the face value of the policy in twenty years. The agent to whom I applied said I wouldn't live that long and refused to write my application. I was just fifty years old and I felt as young as ever in my life. I offered to bet him \$500 that I would live that long, he 'took me up,' and the money was deposited in the bank, a clean \$1,000. I was so anxious to live and win the bet that I quit smoking, 'cut out' all drinking of alcoholic beverages, late suppers, etc. I wanted to be on the safe side. The \$1,000 has grown to over \$3,000. I am well, while my friend, the insurance agent, who is much younger than I, is stricken with paralysis. I think I will get married with the money."

DID FORTUNE TELLER AID THE BETTING DRUGGIST?

The friends of H. G. Lavelle, a druggist of Syracuse, N. Y., tell a good story of his success in betting on the recent election. For a long time Syracuse has been overrun with fortune-tellers. Two years ago Mr. Lavelle and a party of friends went out into the country, where they found an old woman who foretold the future. For a consideration they secured a prediction from her as to the result of the election that year. She positively picked Jay B. Kline as the winner, although the betting was against him and his chances did not

I. C. BOTTUME, Philadelphia, Pa.
Pennsylvania Organizer, N. A. R. D.

seem to be very good. Nobody in the crowd had the nerve to risk his money on her word. Afterward, when Kluge was elected, they were sorry. This year for the fun of the thing they visited the old woman again. She immediately picked Man C. Forbes for mayor and Metilade for alderman of Mr. Lavelle's ward. It is claimed that the druggist drew \$500 from the bank and prepared to test the old woman's powers. The crowd of bettors in the lobby of the Yates Hotel was surprised to see him appear with a big wad of bills. He won everything he touched. Mr. Lavelle, when asked to substantiate the report, smiled and said that some of his friends have a good imagination.

QUICK SALES AND BIG RETURNS IN VICHY.

He was one of those eminently good-natured chaps of middle age whose indulgence with inebriants fills them with genial solicitude for everyone else. He walked smilingly and expansively into a drug store not far from Brooklyn Bridge. He was waiting for a car. Soon a newspaper man came in, ordered a soda and started out. The first comer looked at the reporter lovingly. He nodded pleased approval as the soda was gulped down. He raised his hand in a freetiously-affectionate wave of farewell as the reporter walked out.

But that wave upset the heaving craft. He sloughed and pitched gallantly, but collision was inevitable. When it came the soda fountain shared it. Old Bilulious struck the vichy spigot and struck it hard. Then his clothes caught in innumerable other spigots and held him fast. Down surged the vichy between his clothes and spinal column. It divided and escaped from his garments through his trousers legs. The man raised one foot, evidently trying to direct the stream on that side into the gas light. The clerks dashed from the rear of the store and extricated him.

"You've wasted all our vichy," said one.

"How much?" asked the man.

"Well, it's worth a couple of dollars."

"Here's five. Never had so much fun in m'life."

And he walked out and offered the motorman a couple of cigars.

YOU MAY USE MY STORE AS A THOROUGHFARE.

Perpetrant advertising on the part of Daniel A. Jones, druggist, with quarters in the Wells building, Milwaukee's new sixteen-story office building, has resulted in occupants of the offices in the structure using his store as a means of entrance to the build-

ing, notwithstanding the great marble entrance is only a few feet distant. Druggist Jones put up large placards some weeks ago inviting the public to use his store as an entrance way to the elevators, and, as it offered a short cut to persons in a hurry, many availed themselves of the invitation. As a result, hundreds of people pass through the Jones store daily, never thinking of using the main entrance, and his trade has increased greatly, the wayfarers often stopping to buy as they pass through.

SOME MORE PRINTERS INK IN SYRACUSE.

The newspaper idea has struck the Syracuse druggists hard. The latest druggist publisher is W. H. Bissell, who issues a monthly paper to his customers. In his first issue the following editorial states his object thus:

"To have a closer acquaintance with our customers, and form new friends. We shall endeavor to make it entertaining to the readers in the form of useful information pertaining to the drug business, and also to advertise our store. The drug trade needs to be flooded with light, as other sciences have been. The public is interested in our business as it is in every other. We begin to tell them about it and they will listen. To open our dispensary at random, our readers will find the text for an interesting gossip."

The following business maxims printed in the paper are of interest: "We keep the best of every-thing," "Soap's cheaper than dirt. We sell soap." "We treat all our customers with equal courtesy." "There are other drug stores in town, but ours is all right." "Our prescription department is the real business end of our drug store." "Our prices are real-ly bed rock; there is nothing lower for the same goods."

THE WOES OF A DRUGGIST.

By JOSEPH C. WATSON, Philadelphia.

The story of which I'm about to relate
Of the woes of the druggist, necessitate
A description of scenes familiar I say
To druggists in general, they happen each day

While others, for instance, are dreaming of heaven,
He promptly his drug store opens at seven;
An artisan enters, rough-shod, loud his tramp,
Still louder his shriek, "say! give me a stamp."

The telephone rings twenty jingles a day:
"Hello!" says a voice, "take this message away."
"What's eating your breakfast? My message can't wait"
Oh! such is the life of a druggist to date.

Now enters the man with illusory ills,
Who buys Epsom salt, swamproof, liver pills,
"That treatment cured Jones and others," they say,
The statement I read in the paper to day."

He quotes to me Munyon, who says "there is hope;"
And shows me a pamphlet about Castle soap,
Hands out endorsements recommending "paw paw,"
A name that bluffs rhyming and sounds like "mamma."

So hourly it goes till his day's work is done
When he's off for his bed like Time on the run
He's worn and so weary, eyes heavy with sleep,
His night lamp burns dimmer, shadows o'er him creep.

But his rest is broken just before the dawn,
Loudly rings the night bell; he answers with a yawn,
Slips into his trousers, then descends down below
And fills a prescription, a hard life I know.

But in God's world above he'll sit with the best,
Fine garments he will wear, he's crowned with the blest
When they ask his business in the old world below,
To his answer they will say, "from here you'll never go."

NIHILISM IN THERAPEUTICS IN ITS RELATION TO PHARMACY.*

By DR. BEARD,

Secretary of the Faculty, College of Medicine and Surgery, University of Minnesota.

IT seems like a far call from the days when the doctor was his own pharmacist, compounded his own prescriptions and carried his own drug store in his own saddle bag to the day in which colleges graduate pharmaceutical chemists and doctors of pharmacy, when state boards license druggists and when great laboratories of chemistry and bacteriology are required for the manufacture of therapeutic agents of every description. And yet, while we move in the ever widening circles of human progress, the slow meridian's curving which constantly and inevitably leads us back, and thus revolving we come here and there to points at which the shifting radii of our movements coincide. Such a point of coincidence we approach in the progress of pharmacy. The drug doctor of the past was a professional man. The pharmacist of today is confronted with the opportunity to elevate his calling to the rank and dignity of a profession. In fulfilling this destiny he will but be true to the obligations of his birth. His ancestry was in the aristocracy of learning.

A Condition Confronts Both Medicine and Pharmacy.

The early type of the pharmaceutical physician, who presents so picturesque a figure to the imagination today, who has been so faithfully portrayed by Ian McLaren as the hero of "The Bonnie Brier Bush," was the parent of children who have been the subject of a remarkable variation of species. He underwent a process of reproduction which the histologists term that of cellular division. The one segment of him developed in the practitioner of medicine; the other segment into the practitioner of pharmacy. In the process both parts of him have passed through certain difficult transition stages and have presented some very odd perversions of type. His dual offspring exhibit still the features of a common origin; their relationship is still apparent and persistent; occasionally each displays a tendency to reversion to the mutual type; their common environment has widened into large room for each, but there remains a border land of heritage which they still share. It is still true that any condition of growth which materially affects the one, must also seriously affect the other; nay, for the determining cause of conditions which obtain in either the two callings may be and often are jointly responsible. Certain it is that no condition which arises within and largely influences the trend of progress in the one profession can fail to make itself felt, sooner or later, in the other. And such a condition, of mutual creation, of dual consequence and of growing significance, confronts both your calling and mine today.

Nihilism in Practical Therapeutics.

A spirit of nihilism in practical therapeutics is abroad in the medical profession and it is growing great. A disbelief of the value of drugs is entertained by some of the best minds in medicine. Like all forms of radicalism it is in the nature of a violent reaction against an unsound and unscientific faith. Its mischief is not in the sacrifice of that which it destroys but in the accumulation of the debris of destruction which it piles in the path of progress of scientific medicine.

The Worship of False Gods.

A scepticism of prevailing methods in the treatment of disease cannot long obtain in the mind of the medical profession without conveying itself to the mind of the public. Unfortunately, the popular mind, bereft of high authority, turns quickly to the worship of false gods. The molten image was the answer to the vagrant need of the people, growing out of the

long absence of the Moses of their deliverance in the mount. The mass of people follow a leader in whose inspiration they believe, but let the guide falter and they wander away into a wilderness of distrust.

The distrust of empiric medicine which has unquestionably communicated itself from the professional to the public mind has been too suddenly felt. The authority of scientific medicine has not yet been recognized to the point of leadership. The sheep who have no shepherd readily answer to a false call. The hieling in medicine has seized his opportunity. In the soil of distrust of established methods have sprung up the mushroom growths of false theory. New systems of healing have grown up in a day and among them, most marvelous in its exotic type, is that which denies the very nature of the material existence from which it derives its support and lifts its head into the thin ether of the dim and distant nebulae of truth which are gathered into the obscure hypothesis, Christian Science.

Therapeutic nihilism is a condition which confronts us, for the causation of which we have to fix the responsibility and for the care of which we have to provide the means.

The Responsibility of the Medical Profession.

Firstly and frankly, let us acknowledge the responsibility which attaches to the profession of medicine. The empiricism of the medical practice of the past—an empiricism which is still but slowly giving way before the advance of scientific medicine—has been a potent factor in the development of this prevailing agnosticism. The conservatism of medical educators who have clung tenaciously to the traditional teaching of a commonly disused *materia medica* has been another and a baneful influence in conjuring forth this evil spirit of nihilism from the dead sea of worthless and discarded drugs. Until we teach and prescribe the use of therapeutic agents upon the basis of their physiologic action alone, a physiologic action taught and learned by laboratory methods of study, until we officially consign a large part of the pharmacopoeia to an index expurgatorius of *materia medica*, we need not marvel at the active spread of professional and popular disbelief and we may argue in vain against the mischievous contention, the common stock in trade of ephemeral systems of healing, that the practice of medicine is simply and solely the administration of drugs. The recent failure of the commission charged with the revision of the U. S. Pharmacopoeia to use its opportunity of expurgation is a subject both for wonder and regret. But while we freely admit the responsibility which the medical profession has incurred for the agnosticism within and without its own ranks, which must long remain to vex the disciples of the new gospel of scientific medicine, yet we cannot but recognize gravely the injurious part which pharmacy has played in energizing this tendency to disbelief and that to its own hurt.

Indictment Against Pharmacy.

If I shall bring against your calling a stronger indictment than I have brought against the profession of medicine, for its share in the parentage of this mischievous product, let us be reminded that some of your own leaders have already plead guilty, in your behalf, to the charge and have joined with us in an earnest effort to bring forth fruits meet alike for your repentance and for ours.

This indictment may be very briefly stated; it is this: That pharmacy which has always deserved and in many periods of its history has achieved a place among the arts—that pharmacy which had its birth in and must yet fulfill its destiny as a learned profession, has permitted itself—and particularly in America—to degenerate into a mere trade. The contagion of commercialism has crept into your calling, even as it has, although perhaps with less disaster, into our own.

Men, Methods and Materials.

The proof of the indictment is to be found in

*Address delivered before the Minnesota Pharmaceutical Association, 1903 meeting.

the men, in the methods and in the materials you employ.

In the men for you have filled the ranks of your should-be profession with imperfectly educated and poorly trained recruits—with unfit men who are impatient to make money in its employ. We of the medical profession live in houses too largely made of glass to throw any unkindly stones at you in this accusation. We, too, have sinned, in this regard, to our own infinite prejudice in the past. The results are upon statute books. We congratulate ourselves upon these legislative enactments, but they are criticisms of our past.

Our Disposition to Reform.

The laws which regulate the practice of medicine and pharmacy are evidences of our disposition to reform, but they are not complimentary to our general character. It has been necessary for the protection of the public, to put these professions under the police power of the State. These regulative measures are reformatory of existing evils among us, perhaps, but should the time ever come when these professions shall have reached their ideal of fitness, practice acts and State boards of examiners will have survived their day. Indeed, during the several years in which I have been actively concerned in matters of medical and sanitary legislation, and in which I have seen the health of the interests of the State suffer in the hands of venal or ignorant legislators, whose average intelligence is far below the level of the professions whose responsibilities they seek to regulate. I have entertained a gathering doubt of the merit of many of these restrictive measures and have inclined to a belief in the superiority of the Massachusetts plan of leaving the professions to work out their own salvation, upon the principles of natural selection, unaided and unhindered by the law. So long, however, as the legislative control of the health interests of the State is necessary, it should be safeguarded by the co-operation of the legislative representatives of the State societies of medicine, of pharmacy and of dentistry, and of the State Board of Examiners and of Health. And so long as State legislatures are as ignorant and as ruthless of those health interests as they have proven to be, these representative bodies should join in a demand that their consideration be submitted to expert commissioners, appointed by the Governor of the State, which shall report desirable legislative measures.

Two or Three Major Sins.

In the matter of methods by which your professional welfare and ours have been diminished for the sake of a current commercialism, two or three major sins appear. You have too commonly permitted your licensees to prescribe as well as to dispense drugs. You would doubt the scientific quality of the physician who without examination or inquiry into the conditions of his patient should prescribe a remedy, and yet as a matter of mere gain the practice is a current one over the counters of the pharmacy. Needless to say that if the health of the patient does not suffer, his therapeutic faith does. You have frequently encouraged the practice of repetitiously filling prescriptions, often for miscellaneous employment, without orders from the writer. Perhaps nothing has so actively undermined the confidence of the public in the efficacy of drugs as the habit of passing around remedies and prescriptions without reference to the variation in the sufferer's needs. And this habit has been encouraged by the re filling of prescriptions.

Standardization Imperative.

In the matter of materials, the indictment is fully as serious a one: You have not always required a sufficient guarantee of the quality of materials to the use of which your customers have committed their faith. A want of uniformity in the pharmaceutical preparations you dispense has prejudiced the possibility of a systematic study of their effects. Standardization of drugs is a very imperative need.

Laws to Regulate the Sale of Proprietary Medicine.

You commonly keep upon cabinet shelves prepara-

tions of whose composition you know little or nothing, whose virtues only the advertisements allege, of whose adaptation to the needs of patients, you and they are alike ignorant. Members of your calling have been known to influence legislators against the enactment of laws to regulate the sale of these preparations and to convert all patent into proprietary medicines. In certain states of the Union, measures have been enacted which require a formula of percentage composition to be printed upon the label which every preparation bears and the pharmacists of Minnesota cannot do a better service to the public health than by combining to secure such legislation in the face of the powerful lobbies which the patent medicine manufacturers and a commercialized newspaper press will always put into the legislative field.

Methods of Trade, Not the Principles of Profession.

These, gentlemen, are the conditions, perhaps the legitimate conditions of trade upon which this indictment is framed. Their business morality I shall not discuss. These methods have been, in themselves very largely responsible for the therapeutic confusion into which the drug treatment of disease has fallen, for the discouragement which scientific men feel in the determination of any accurate results of the remedies they employ, for that distrust of medicinal agents which has infected the mind, both of the medical profession and of the public in later years. As I have said, they are the methods of trade, but they are not the principles of profession, and I submit it to you that until the basal ethics of a profession are established, and firmly, its educational standards cannot determine its place, as a calling among higher calls.

If these, then, are the conditions which are, in part, responsible for the therapeutic nihilism of today, what may be said of the possibilities of cure in the hands of the pharmacist.

Removal of this Agnostic Tendency.

As a co-operator with the men and women of today who are preaching and practicing the new gospel of scientific medicine, the professional pharmacist may do much toward the removal of this agnostic tendency. As a public teacher he unconsciously fills a position of exceptional vantage. He is the direct purveyor to the people of the means of therapeutic relief and he can do much to direct their intelligence to the choice of scientific measures and the tutelage of scientific men. To the accomplishment of this difficult task, he must bring high ideals of professional responsibility and high quality of professional training. These two essentials are closely relational. Much sympathy may be given to the argument that a higher education will put the rising generation of pharmacists upon a higher plane of social relation, will lift them to that higher conception of public duty—which the leaders of their profession already entertain. A large dignity unquestionably attaches to a calling, admission to which requires a larger preparation and demands a loftier endeavor. The pharmacist must broaden the base upon which he builds. Pyramids may vary in their height, but the height is always commensurate with the base; the smallest of them cannot stand upon its apex. An academic education is none to broad a foundation for the profession, either of pharmacy or of medicine, and I question whether the one will not be bettered by its attainment as much as the other.

Cultural Opportunities.

If, to touch a professional quality, in the calling of the pharmacist shall be added the further and finer touch of art which has already done so much to develop the useful adjuncts of his business and to contribute to the aesthetic enjoyment of his patrons, he will thereby become still more an educational factor in the community, adding beauty to use in his relation to its needs and in the evolution of the means of health preservation—an end of even nobler purpose than the development of the agencies of cure. There are few callings, indeed, which afford the cultural opportunities which the science and the art of pharmacy possess.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few sales which are out of print, for which we charge twenty-five cents each.

Cold Cream.

(S. & C.) The following formulas differ somewhat from the pharmacopoeial preparation (Ointment of Rose Water), the second formula containing paraffin or mineral oil instead of almond oil. Here are the formulas:

(I)

White wax ¼ ounce
Spermaceti 2½ ounces
Oil of sweet almonds 2½ ounces

Melt and add:

Rose water 1½ ounces

Beat until creamy—not until cold. When the cream begins to thicken add a few drops of oil of rose.

(II)

White wax, 150 parts, is dissolved in paraffin oil, 500 parts, with the aid of a gentle heat; borax, 9 parts, dissolved in water, 240 parts; the two fluids are brought to a uniform temperature, not exceeding 60 degrees C., and the aqueous solution is poured into the oily one in a continuous stream, stirring gently for a minute or two; then oil of geranium, 1 part, and oil of rose, q. s. are added, while stirring, and the product is poured into jars before cold. According to William C. Alpers, the author of this formula, the cold cream so obtained is more white, soft and smooth, pleasantly odorous, keeps well in the heat of summer and the cold of winter, and becomes only slightly thinner in summer. Care must be taken to select the best quality of paraffin oil, entirely free from odor or color.

Almond Cream.

Various formulas for almond cream have been published in the Era. In addition to advising you to consult the indexes of previous volumes for formulas we give the following:

(I)

Cold cream 5 parts
Expressed oil of almond 5 parts
Glycerin 5 parts
Boric acid 5 parts
Solution of soda 12 parts
Mucilage of quince seed (I to S), 25 parts
Distilled water 143 parts
Perfume, a sufficient quantity.

Heat the cold cream and almond oil together. Add gradually the solution of soda (5 per cent.), and heat together until an emulsion is formed. Add a small quantity of water, then the mucilage of quince seed and glycerin. Mix thoroughly, and lastly add the boric acid and the perfume.

(II)

Almonds, blanched 1 ounce
Rose water 4 ounces
Beat the almonds to a paste and add the rose water; strain, heat to the boiling point, and add:
White wax 1 ounce
Almond oil 2 ounces
White castile soap 1 ounce
Mix thoroughly and add:

Saturated solution of boric acid 2 drams
Eau de cologne 1 ounce
Oil of bitter almonds 1 minimus
Oil of rose geranium 5 minims
Glycerine 1 ounce

Divi-divi; Chemic Blue; Sapan Wood; Cutch.

(H. L. S.) Divi-divi is the commercial name for the astringent pods of *Caesalpinia coriaria*, a leguminous shrub which grows in low marshy tracts in the West Indies and the north of South America. The plant is between 20 and 30 feet in height, and bears white flowers. The pods are flattened, and curl up in drying; they are about ¾ inch broad, from 2 to 3 inches long, and of a rich brown color. Divi-divi is used in the manufacture of leather, its value for this purpose depending upon the large amount of tannin contained in the yellow resinous matter surrounding the seed husks. It may be employed in dyeing as a substitute for galls or sumach. The principal ports of export are Maracaibo, Rio Hacha and Sabanilla. According to Blount and Bloxam, divi-divi contains, when air dried (13.5 per cent. of moisture), 30 to 50 per cent. of tannin. It is stated that it would be one of the very best heavy-leather tanning agents, were it not liable to fermentation and consequent damage of the goods.

"Chemic Blue" is a synonym for free sulphindigotic acid $C_{16}H_{11}N_3O_2$ (SO_3H), known also as sulphate of indigo or soluble blue indigo and Saxony blue. It is formed by the action of sulphuric acid on indigo and was formerly extensively used in dyeing Saxon blue on wool. It is not adapted for dyeing silk.

Sapan Wood, spelled also "sappan," is one of the several dyewoods of commerce, all belonging to the leguminous genus *Caesalpinia*. It is a native of tropical Asia and the Indian Archipelago, but its cultivation has been promoted in the West Indies and Brazil. The wood is somewhat lighter in color than Brazil wood and its other allies, but it contains the same coloring principle, brazilin, a substance apparently similar to haematoxylin. Brazilin is present in the wood as a glucoside, and for the purpose of hydrolysing this, the wood is submitted to a process of fermentation analogous to that adopted for logwood. The colors produced by means of sapan wood depend on the mordant, e. g., chromium mordants yield a violet or claret; aluminium, rose-red; iron, dull violet or purple; copper, drab or brown; tin, crimson. Dr. Ure ("Dictionary of Arts and Manufactures") gives as synonyms "East Indian dye wood," and "buckum wood" and states that it is called "sapan" by the French, "because it comes to them from Japan, which they corruptly pronounce sapan." The wood was an important object of commerce during the middle ages.

"Cutch" is one of the synonyms for catechu, and "Pegu cutch" is the name commercially applied to the catechu derived from the Burmese dominions, and so called from that section of the country from which it is exported. This variety of catechu is described in the dispensatories. The other article you name we do not find listed in the Price list edition of the Era.

Colorless Hydrastis.

(M. M.) Under the names of "colorless hydrastis," "fluid hydrastis," "liquid hydrastis," etc., preparations of the alkaloids of hydrastis have been largely used. In some cases, according to the United States Dispensatory, these solutions have been made directly from the drug by depriving a fluid extract of coloring matter, in others the alkaloid has been dissolved in a suitable liquid. The same authority states that G. Steinman, in 1887, examined several samples and found hydrastine in each, combined with either sulphuric or hydrochloric acid, besides aluminium, potassium, boric acid, etc., in small proportion; by dissolving 20 grains of hydrastine sulphate or chloride in a pint of a solution of glycerin and water, a liquid is produced from which the asserted good results can be obtained. To take the place of the many differing

formulas offered for these preparations the formula for glycerite of hydrastis was made official in the Pharmacopoeia of 1890, and for the sake of uniformity this is the preparation that should be employed when "fluid hydrastis" without other specification is ordered.

As showing the diverse characters of the formulas that have been published, we reprint the following:

(1)
Hydrastis, white alkaloid 20 grains
Water 8 ounces
Glycerin 8 ounces

Dissolve the alkaloid in the water by the aid of one or two drops of hydrochloric acid, filter, and add the glycerin.

(2)
Hydrastine hydrochlorate 25 grains
Aluminum chloride 23 grains
Calcium chloride 20 grains
Magnesium chloride 18 grains
Potassium chloride 12 grain
Diluted hydrochloric acid 10 minims
Distilled water 5 fl. ounces
Glycerin, enough to make 16 fl. ounces

Dissolve the salts in the water, add the acid, then the glycerin, and filter.

Waterproofing Corks; Bottle Capping Mixtures.

(Dr. J. C.) Corks may be made impervious to water and acids by coating them with melted paraffin. For bottle "capping" mixtures the following formulas have been recommended:

(1)
Put a weighed amount of dry glue or gelatin in water, and let it stand over night. In the morning drain and press off all the surplus water, and then dissolve the swollen mass by heating in a waterbath. Add while still in the bath about one-half as much glycerin as there is liquid gelatin, and for every pound of gelatin employed add 1 ounce of tannic acid, and stir until entirely homogeneous. If it is desired to color the material any of the mineral colors may be used. Test the liquid on a piece of glass, and if when cold, it is too hard or brittle add a little more glycerin, and if too soft more glue and tannin, preserving the proportions indicated.

(II)
Shellac 3 ounces
Venice turpentine 1½ ounces
Boric acid 72 grains
Powdered talcum 3 ounces
Ether 6 fl. drams
Alcohol 12½ fl. drams

Dissolve the shellac, turpentine and boric acid in the mixed alcohol and ether, color with a spirit-soluble dye and add the talcum. During the mixture must be agitated frequently. (Dieterich).

(III)
A collodion varnish has also been suggested. Try the following: Pyroxilin, 1 ounce; ether, 6 ounces; alcohol, 8 ounces. Dissolve and add camphor, 2½ drams. To apply, dip the cork and portion of the neck of the bottle into the varnish which may be suitably tinted by the use of aniline colors.

Dyeing Paraffin Blue.

(C. S. K.) Induline, 6 R, an aniline blue dye, used in coloring ointments, soaps, candles, pomades, fats, etc. is probably the most satisfactory dye for coloring paraffin. According to Hurst ("Dictionary of the Coal Tar Colors"), this dye comes into commerce under a variety of names. Besides induline, 6 B, we find listed: Fast Blue R, Fast Blue B, Induline A, Induline R, Induline A, Fast Blue Green shade, Sodaline R8 and B S.

The commonest aniline bases in general use for coloring fats, etc. are auramine, chrysoidine, safranine fast blue victoria blue, induline, methyl violet brand 6 B, malachite green, brilliant green, bis-marek brown, and nigrosine. All kinds of shades can be obtained by suitable mixtures made from among these. The bases are either sold as such in powder or in highly concentrated solution, or made up into small dice shaped pieces by fusion with the proper

quantity of stearine. They are also sold dissolved in oleine. They are much used, especially in the manufacture of stearine candles. Candles are dyed either in the mass before moulding or in dipped candles the last dip is made into dyed grease.

In dyeing paraffin or stearine great care must be taken not to over heat the mass or the dye may decompose. Blues generally change to a brick red but recover their color on cooling. In dyeing it is always best to dissolve the dye in a little of the fat separately and then to add the strongly d'ed fat to the main mass.

Dose of Zinc Sulphocarbonate.

(H. N. M.) "I enclose a copy of a prescription written by a New York physician. It is:

Zinc sulphocarbonate 5 drams
Tincture of nux vomica 2½ drams
Glycerin 1 ounce
Water, enough to make 4 ounces

Mix. Dose: One teaspoonful three times a day after eating.

Please give me your opinion on this matter. It seems to me that the prescriber meant either to prescribe sodium sulphocarbonate or he forgot the dose of zinc sulphocarbonate. Should the prescription containing such a dose of this salt be dispensed?"

We think the prescription can be safely dispensed. While the most commonly employed doses of zinc sulphocarbonate, as stated in the Era Dose Book, range from 1 to 3 grains, yet, on good authority it is asserted that the dose may range from 1 to 10 grains, in pill, solution, or trituration. The maximum in this range, as readily seen, is greater than the quantity ordered in the above prescription, viz: 9½ grains to each teaspoonful of the mixture. For internal administration zinc sulphocarbonate is employed in the treatment of septic conditions of the intestinal tract, and in fevers arising therefrom.

Caroid.

(J. R. C.) Caroid is a vegetable digestive ferment said to be derived from the unripe fruit of the plant known as carica papaya, Wilde. The juice is concentrated in vacuo, and the ferment is precipitated by the addition of alcohol. Its action, contrary to that of pepsin, on the one hand, which acts only in acid media, and of diastase, pancreatin, etc., on the other, which act only in alkaline media, is claimed to be equally good in both acid and alkaline fluids. The dose is from 2½ to 5 grains. We cannot give the date of the first use of the term "caroid" but very likely the manufacturers of this product, the American Ferment Co., Jersey City, N. J., will supply you with this information upon request. It is claimed on pretty good authority that the ferment obtained from carica papaya was introduced to commerce in the 80s by Troutte, Perot et Cie, of Paris. According to the National Dispensatory the juice of this fruit was examined by Wurtz and Bochut in 1870 and they named the ferment they obtained from it "papain."

Massage Cream.

(W. E. F.) See this journal August 14, 1902, page 170. Here is another formula:

White wax ½ ounce
Spermaceti ½ ounce
Cocconut oil 1 ounce
Lanolin 1 ounce
Oil of sweet almonds 2 ounces

Melt together in a porcelain dish, remove from the fire, add one ounce of orange flower water and three drops of tincture of benzoin, and beat briskly until creamy. We do not answer queries by mail.

Black Ink for Rubber Stamps.

Aniline black 1½ ounce
Pure alcohol 15 ounces
Glycerin 15 ounces

Dissolve the aniline black in the alcohol and add the glycerin.

NEWS DEPARTMENT.

AMONG THE BOWLERS.

S. & J. of New York Aggregation, Forge Ahead—S. & D.'s Hard Luck Both Here and in Baltimore—

P. D. & Co. Still the Detroit Wonders.

Seabury & Johnson and Sharp & Dohme tussled hard for honors on Saturday, the former winning all three games, two of them by very narrow margins, and helping their pennant chances considerably. Parke, Davis & Co. lost their position in the tie for place with S. & J. by losing one game to Roessler & Hasslachner. The teams and highest individual scores were:

S. & J.	777 772	S. & D.	772 703	811
Judge	198	Doerr		208
P. D. & Co.	779 761	740	Roessler & H. 670	636; 772
Carr and Blake, each,	180	Malsch		191

The standings are:

	W.	L.		W.	L.
S. & J.	6	0	L. & K.	3	3
P. D. & Co.	5	1	S. & D.	2	7
Nat. Lead	4	2	R. & H.	1	5
B. R. & Co.	3	3	D. & O.	0	3

Baltimore, Dec. 1.—Last week four teams lined up with determination, and a majority of the contests were exciting. The quintet of James Baily & Son, who are now in the lead, met the men from Sharp & Dohme, and the battle waxed fierce. S. & D. made the greatest number of pins, but by a peculiar division of scores, lost two of the games. Three totals of over 900 were made in the three games. One total, 978, by the Baily team, comes very near the record on any alley for the season. Stanley & Brown took two of three games from the Root & Herbs, holding that team down in its run after McCormick & Co., the leaders, and bringing the five strong teams of the club closer together. Team scores and the individual high scores are as follows:

S. & B.	768 771	752	R. & H.	727 827	771
Whitehurst ...	191	Milbne & Smith, each	186		
S. & D.	951 938	820	J. B. & Son.	880 978	840
Loeffler	235	Fairley		231	

The standings are:

	W.	L.		W.	L.
J. B. & Son.	18	6	S. & B.	11	13
McCoy, & Co.	17	7	S. & D.	10	14
R. & H.	15	9	C. D. Co.	1	23

Detroit, Dec. 1.—The Parke, Davis & Co. team in the league is keeping up its sensational work in making a runaway race for the championship. The games of last week marked the opening of the second quarter, and as usual the P. D. & Co. team took three straight from their opponents. The Nelson, Baker & Co. team, champions of 1902, are just about striking their gait, and it is expected that they will take a few kinks out of the record of the leaders when next they meet. Following are team and highest individual scores:

P. D. & Co.	840 865 906	F. W. & Co.	736 700	771
Elsey		Gendralinitis .		191
N. B. & Co.	804 831	921	Ingram Co.	717 788 779
Hillman		210	Cosgrove	192
F. S. & Co.	774 769	801	Mich. D. Co.	763 765 693
S. O'Donnell. .	195	Diels & Carlisle.		180

Summary of games:

	W.	L.		W.	L.
P. D. & Co.	17	1	F. S. & Co.	9	9
N. B. & Co.	11	7	F. P. I. & Co.	5	13
Mich. Drug Co.	9	9	F. W. & C.	3	15

The Parke, Davis & Co. interdepartmental league games grow more and more interesting, the lower teams showing decided improvement. The teams are gradually drawing together. Stock, by winning nine straight, is pulling up within striking distance of the leaders, the Chemicals. The Mechanicals, one of the so-called weaker teams, showed what stuff they're made of during the last week by taking three straight from the leaders. They are the first team to accomplish this feat. The high score for the week was made by Lawrence, 216. The standing to date:

	W.	L.		W.	L.
Chemical	21	6	Publication	11	16
Stock	19	8	Mechanical	11	16
Pharmaceutical	15	12	Gen'l Business.	10	17
Scientific	15	12	Canada Lab.	6	21

Looking at the above, especially Baltimore, one wonders where New York will come in at the National Tournament.

COMMITTEES OF PROPRIETARY ASSOCIATION.

Through the courtesy of Secretary Joseph Leeming of the Proprietary Association of America, the Era is enabled to publish the announcement of the following committees for the ensuing year:

Executive—The officers, ex-officio; H. B. Harding, chairman, Humphreys' Medicine Co., New York; Dr. V. Mott Pierce, World's Dispensary Medical Association, Buffalo; A. H. Beardsley, Dr. Miles Medical Co., Elkhart, Ind.; George A. Newman, California Fig Syrup Co., Louisville, Ky.; Dr. Charles H. Stowell, J. C. Ayer Co., Lowell, Mass.; W. A. Talbot, The Piso Co., Warren, Pa.

Membership—Joseph R. Kathrens, chairman, Palst Brewing Co., Milwaukee.

Legislation—John W. Kennedy, chairman, E. C. DeWitt & Co., Chicago.

Trade-Marks—George A. Newman, chairman, California Fig Syrup Co., Louisville.

Trade Interests—H. J. S. Hall, chairman, Hall & Itckel, New York.

Transportation—A. H. Beardsley, chairman, Dr. Miles Medical Co., Elkhart, Ind.

Delegates to attend the annual meeting of the National Wholesale Druggists' Association at New Orleans, November, 1904—F. W. Schumacher, chairman, Peruna Mfg. Co., Columbus; R. E. Queen, California Fig Syrup Co., San Francisco; Dr. V. Mott Pierce, World's Dispensary Medical Association, Buffalo.

Delegates to attend the meetings of the various pharmaceutical associations—Dr. V. Mott Pierce, chairman, American Ph. A.; Dr. V. Mott Pierce; N. A. R. D., P. W. Schumacher; California Ph. A.; R. E. Queen, San Francisco; District of Columbia Ph. A.; Alonzo O. Bliss, The Alonzo O. Bliss Co., Washington; Iowa Ph. A.; Norman Lichty, Norman Lichty Mfg. Co., Des Moines; Kentucky Ph. A.; George A. Newman, Louisville; Louisiana Ph. A.; J. C. Lyons, L. L. Lyons & Co., New Orleans; Maine Ph. A.; A. S. Hinds, Portland; Massachusetts Ph. A.; William H. Gove, Lydia E. Pinkham Co., Lynn, Mass.; Minnesota Ph. A.; Daniel R. Noyes, Noyes Bros. & Cutler, St. Paul; New Hampshire Ph. A.; Dr. Charles H. Stowell, J. C. Ayer Co.; New York Ph. A.; W. T. Hinson, W. T. Hanson Co., Schenectady; Ohio Ph. A.; Frank J. Cheney, Cheney Medicine Co., Toledo; Pennsylvania Ph. A.; W. A. Talbot, The

Infringements and Simulations of Trade-Marks—H. H. Good, chairman, Carter Medicine Co., New York.

Fraternel Relations—H. L. Kramer, chairman, Sterling Remedy Co., Kramer, Ind.

Memorials of Deceased Members—Brent Good, chairman, Carter Medicine Co., New York.

Advertising—J. P. Weatherall, chairman, L. E. Pinkham Med. Co., Lynn, Mass.

Publication—C. W. Griffith, chairman, Scott & Bowne, New York.

Delegates to attend the meeting of the Proprietary Articles Trade Association of Canada—Thomas L. Leeming, chairman, Heuri Nestle, New York; Brent Good, New York; H. E. Bucklen, H. E. Bucklen & Co., Chicago.

Arrangements and Entertainment for the Annual Meeting of the Association—Clarence G. Stone, chairman, Lambert Pharmacal Co., New York.

OUTLOOK BRIGHT.

Organizers for the Washington Promise Committee Hope to Have Drug Merchants and Department Stores Working on a Price Schedule by January 1.

It is confidently expected that the new price schedule for the articles manufactured by the proprietors who joined hands on the Washington promise plan at the recent special proprietary association meeting at the Hotel Manhattan, this city, will be launched in this city by the first of next month.

In the same week that the meeting was held, the work of organization here began. In charge of it are Lee M. Evans, representative of the Peruna company, and E. C. Pease, representative of the World's Dispensary Medical Association. The Era has kept closely informed of what they are doing, and now, because of the confidence displayed by Messrs. Evans and Pease in probable early success, reveals for the first time to the trade at large what is being done.

The plan is, simply: Organization of the big retail druggists and the department stores by the manufacturers' representatives, Messrs. Evans and Pease. After that, systematic, fast organization of the rest of the trade by a corps of skilled N. A. R. D. organizers. Thus, for the big retailers and the department stores the proprietors are responsible. For the rest of the trade, believed to be a simpler proposition, the N. A. R. D. will answer.

Part of the work of the representatives for the proprietors was easy, might be said to be already accomplished when they began work last month, for the Drug Merchants' Association, comprising Hegeman & Co., J. N. Hegeman & Co., Riker, James, Millau, Wilson, Kalish, Jungman, Bolton, Reid, Yeoman & Cubit and others, who represent probably 50 per cent. of the retail business, have been working harmoniously for three years on practically the same schedule as the one now proposed, on which they had been organized by Mr. Evans, and which Dr. Noel of the N. A. R. D. adopted when he was here last Spring. So the two representatives were able to begin at once with the department stores.

This they have done, by direct approach in most instances, to the heads of the firms themselves. Their best reception was not always encouraging, though invariably respectful and kind. For instance, one man, the most important one, said at first that he would run his business "as he pleased." Mr. Evans did not dispute his privilege, but replied:

"My dear sir, the druggists here are not fools; they buy the goods for 60 or 65, and it is more profitable than getting them from their vendors."

"Oh, no," the merchant replied. "It does them no good to buy here, for every package is stamped all over."

"Yes, and I exchange the goods for them," retorted Mr. Evans.

"What?" was the startled exclamation at this reply.

It was almost decided at one time to bring N. A. R. D. organizers into the field at once, but, though Mr. Wooten is believed to have been willing to supply them, John C. Gallagher of the N. A. R. D., who is closely observant of all that is going on, advised strongly against such a course, and his wisdom prevailed. "Give the proprietors a chance to carry out their promise," Mr. Gallagher urged, and, if they succeed, let theirs be the credit. If they fail, then they may, if we leave them alone, get the credit for failure, and they will not be able to say: "We would have been all right if the N. A. R. D. hadn't meddled."

President Joseph Weinstein of the New York R. D. A., comprised of druggists of the lower East Side, had also asked for an organizer, but the granting of his request was postponed in line with Mr. Gallagher's argument. Mr. Weinstein believes his section, containing the druggists below Fourteenth street and east of Broadway, can be easily organized, with two possible exceptions, and will stay organized. In fact, that section, peculiarly isolated so far as competition with druggists outside is concerned, is also peculiarly favorable to organization, and would be the easiest of any section in the city to keep in good shape, though comprising more druggists than any other.

The Era's exclusive story of the Manhattan special meeting has been highly complimented. President Pritchard of the N. A. R. D. ordered copies for circulation among the subscribers of his paper, the Western Pennsylvania Retail Druggist. Dr. V. Mott Pierce of the World's Dispensary Medical Association, who is chairman of the Washington Promise committee, and his predecessor on that committee, F. W. Schumacher of the Peruna Mfg. Co., gave witness to its authenticity throughout, and Secretary Joseph Leeming of the Proprietary Association, spoke of it as being a "splendid account."

St. Paul, December 1.—Thomas Voegeli of Minneapolis, chairman of the executive committee of the N. A. R. D., announces his entire faith in the manufacturers.

"I fully believe," he says, "that they will carry out their agreement with the retailers. I have staked my faith upon the validity of their engagements and am not so far sorry that I did so. The N. A. R. D., you may be assured, is and will continue to be more aggressive than ever in the maintenance of what its members feel to be their just rights."

"But it is strange how reluctant many retailers are to take full advantage of this national association. They begrudge the annual dues of \$2 just as they kick against the \$5 dues of the city association. They will spend ten times that amount every month in theatres and diversions of all kinds and say never a word; while here, where they have a chance to defend their own interests through a strong national body and put money into their pockets, they balk. This, of course, does not apply to all retail dealers, but to many."

CHARLES F. COLBY, a druggist of Lancaster, N. H., died of Bright's disease after a long illness. He was a native of Colebrook, N. H., where he was born in 1846. He leaves a wife and one daughter.

FREDERICK P. DILLINGHAM, a druggist of Dorchester, Mass., died at his home. His wife survives him.

NEW YORK AND VICINITY.

SOPHISTICATION IN HIGH PLACES.

Last week's work in analyzing on the bunch of 492 samples stored up for examination by the Eastern branch of the board of pharmacy showed sixteen, or about half the number analyzed, to be below standard. This makes 75 samples bad out of less than 160 tested. Last week found wood alcohol showing up more strongly.

It might create a sensation in the trade if the names of those druggists involved were published. And, members of the board believe, publicity might have a salutary effect. Now, it is pointed out, the druggist promptly pays his \$25 when caught, and the cases never reach either the courts or the newspapers. Thus the druggist has learned to feel secure from publicity.

But, it is also pointed out, this feeling of security is liable at any time to experience a sad shock. The records of these violators are public records, and the board of pharmacy has no right, as a public body, to withhold them from any daily newspaper or any one else who chooses to scan them. Once let the newspapers become aware of the state of affairs, and their appreciation of the sensation a full account of the druggists' misdeeds would create would place the public in possession of the facts the next morning. The result would be, it is aptly said, incalculable financial loss to individuals and a general plunge into disrepute of the whole trade, a part of which deserves no such fate.

Some of the best known druggists in New York and Brooklyn are involved in this last batch of findings. Some of them are prominent in association circles. One of them, a trustee of a college of pharmacy, is on the wrong side in their samples. In his case, however, the trouble is directly traceable to his head clerk, but he has to pay the three fines, aggregating \$75, just the same and would, if the daily papers got on to the facts, very likely be made the figure head of their articles.

MISS LEHMAN IS NOW MRS. DE ZURKO.

Miss Hattie Lehman, sister of Alfred and Robert S. Lehman, druggists of this city, and Edward De Zurko, druggist at 103 Grand street, Brooklyn, were married in the presence of about seventy-five friends, at Allaire's, the headquarters of the German Apothecaries' Society, 192-4 Third avenue, Wednesday night, Nov. 25. After the ceremony by the Rev. Mr. Thorpe of the M. E. Church, a delicious wedding supper in the adjoining parlors was partaken of. Then came dancing until the early morning hours.

Robert S. Lehman presided at supper. Among those who added to the entertainment were Thomas J. Tucker, Charles Sachs, John Bauer, Thomas Swift and Matthew Moss, who spoke; Hugo Kantowitz of the Apotheker Zeitung, who read an original acrostic poem; Miss Amalie Wagner, who recited humorously, and Mrs. Kobertina Moss, the bride's aunt, who recited. During dancing intervals Miss Adele Sachs and Mrs. Emma Moss and others sang. The bride is accomplished, petite, and has many friends.

PERFUMERS' ASSOCIATION WILL NOT EXHIBIT.

The proposition to make a joint exhibit at the World's Fair has been abandoned by the Manufacturing Perfumers' Association of the United States. When the matter was first broached the executive committee, of which Henry Dalley of Lazell, Dalley & Co., this city, is chairman, sent letters to every member of the association to ascertain their wishes. The letter stated that the exhibit would not be made unless a certain number joined the movement, as the ex-

pense would be too great unless shared by several firms. Though a good many replies were favorable, not enough were willing to enlist, and Mr. Dalley on Tuesday wrote the members that the plan was off.

This, of course, will not cause lack of perfumery at the Fair, as several independent displays will undoubtedly be made.

SOME VISITORS TO TOWN.

Mr. Rogers of McMonagle & Rogers, W. D. Olney, and H. C. Ogden of Ogden & Shimer, all Middletown, N. Y., druggists, were welcomed in wholesale circles, and so were several other State men, among them F. B. Palmer of Spring Valley, S. Korn, Arkville, and Mrs. D. K. Gilbert, Plattsburg. Among New Jersey men was G. W. Jaques of South Amboy, and Nicholas McDonald of Lakewood, and Pennsylvania was represented by Mr. Wood of Thompson & Wood, Bradford; Mr. Howd of Hyer & Howd, Wellsboro; C. J. A. Loder of Philadelphia, and Mr. May of the May Drug Co., Pittsburg. Others seen floating around were Frank A. Hubbard, Newton, Mass.; Mr. Brewer of Brewer & Co., Worcester, Mass.; C. H. McConnell, Chicago; Henry Thornton, Boston, manager for Parke, Davis & Co.; Joseph M. Hollander, Braddock, Pa., and John Moon, New London, Conn.

Drug Trade Club guests were: J. F. Williamson, Chicago; Trygve Jervell, Norway. Charles E. Dodd, Albany, N. Y., and Herbert M. Shilstone, New Orleans, manager for the Vermont Chemical Co., who was on his way to the British West Indies to recuperate his health. He is a native of the Barbadoes.

TWO END LIFE WITH POISON.

Mrs. Henry Nitzsche, wife of the druggist at 503 First avenue, committed suicide on Saturday by drinking hydrocyanic acid. She told a policeman who was passing the drug store as she drained the vial containing the death potion, that she was tired of living because her husband neglected his business and left the care of it to her, which she had in addition to her household duties. Mr. Nitzsche's friends say that she was hysterical and that her dying statement was wrong.

Patrick Kennedy, forty-eight years old, a druggist, living at 313 Seventh avenue with his wife and two daughters, committed suicide on Saturday morning in a saloon by taking poison.

NEW YORK NOTES.

—New York section, American Chemical Society, will meet tomorrow evening at the Chemists' Club, and listen to addresses by Leo Balkeband, "Dissociation of Lead Nitrate"; E. H. Miller and J. F. Thompson, "Conversion of Lead Sulphate to Barium Sulphate," and "Method of Determining Sulphur in Lead Slags"; P. A. Levene, "End Products of Self-Digestion of Animal Glands"; F. G. Wiedemann, "A Restant Source of Error in Optical Sugar Analysis"; W. D. Horne, "Dry Defecation in Optical Sugar Analysis"; G. Plath, "Exhibition of Photographs and Spec-

mens of Modern Steneware Apparatus for the Chemical Industry."

—The Court of Appeals recently decided that a person has the right to use his own name in connection with his business, even though he may thereby interfere with or injure the business of another, but a Court of Equity will restrain him from intentionally so using it as to deceive the public—or enable others to do so—into buying his goods as those of another, and will require him, when entering a business in which another is engaged, and using the name, to use every means reasonably possible to distinguish his own business and goods from those of his competitor."

—A deficiency judgment for \$15,247 was docketed last week against Tarrant & Co. corporation in favor of Arthur Johns, growing out of the foreclosure sale of the land at the northwest corner of Greenwich and Warren streets, where the building was destroyed and many others damaged by an explosion about four years ago.

—Dr. George H. White, president of New Jersey board of pharmacy, Jersey City, under the name of George H. White, Inc., is head of a new corporation to manufacture drugs of all kinds. The capital is \$500,000 and the incorporators are Dr. White, Frederick G. White and George G. Tennant.

—W. H. Short long a druggist at 119 Atlantic avenue, Brooklyn, died of pneumonia last week. His store was sold by his widow to Fritsh M. Friedman, druggist at 30 Jordanon street, Brooklyn.

—The Diamond Soda Water Manufacturing Co. secured a judgement for \$87 against J. N. Hegeman & Co., the smallest of the two Hegeman firms of this city, which also operates several stores.

—William C. Alpers' pharmacy is newly incorporated under the name of The Alpers Pharmacy. The capital is \$20,000, and W. C. Alpers, J. A. Miner and L. H. Andrews are the directors.

—The Union Square pharmacy, this city, is a new incorporation, capitalized at \$5,000, and including among directors, George H. Abbott, William H. Lyons and Trevelyan.

—R. W. Robinson & Son Co., the jobbers of this city, have incorporated for \$80,000 as manufacturing chemists. F. M. Robinson, W. R. Robinson and David W. Kent.

—J. Levinson, formerly at 682 Third avenue, Brook-

lyn, has opened a new store at 148 Glenmore avenue, Brooklyn.

—D. Davis & Sons', sponge importers at 148 William street, were considerably damaged by fire on Sunday.

—Grant Rodenaur has bought out William Friedmans at 280 Prospect Park West, Brooklyn.

—N. Krausche has sold the store at 580 Rogers avenue, Brooklyn, to Harrison W. Eames.

—Lanselle & Co. have opened a new store at 2831 Broadway, George Speth is the manager.

—John A. McLachlan succeeds M. A. Majarietta at 351 Herkimer street, Brooklyn.

ROUND ABOUT BUFFALO.

—The jury in the suit of the State excise department against Ernest Butler Walker and George E. Lathbury and the Title Guaranty Co. of Rochester, returned a verdict of \$500 for the department. In 1901 Walker & Lathbury, druggists of Buffalo, according to the complaint, sold brandy without a prescription. The defendants claimed the store was sold to Ernest R. L. Smith in November, while the offense was alleged to have been committed on the following December. This claim was overruled.

—Buffalo druggists as capitalists: J. M. Horton, Utica and Hasten streets, has large interests in a South Dakota copper mine. George Schaefer, 805 Genesee street, has several shares of well-paying stock in a silver mine in Colorado. Horace P. Haynes, proprietor of three successful drug stores in Buffalo, started on Friday night for the Isle of Pines to select the first purchase of lands for the Tropical Development Co., of which he is president.

—A warm controversy pertaining to municipal affairs has arisen between J. N. Adam and Thomas Stoddard relative to the printing bills of a local newspaper. At Wednesday's meeting of the city fathers a hot debate took place in which Councilman Stoddard severely scored Alderman Adam, who will ask for a public debate. Mr. Stoddard and Mr. Adam are fellow-Scotchmen, and, sometimes, in close competition in the drug business.

—The department store of J. N. Adam & Co. ran a cut-price sale on patents during the week of November 16, which somewhat demoralized the legitimate trade. A meeting of the committee on trade interests was held on November 27 and adopted a new schedule of minimum prices, which J. N. Adam & Co. pledged themselves to maintain. It goes into effect on December first. The chief change is from 20, 40 and 80 cents to 21, 43 and 81 cents.

—On November 25 pharmacists licenses were granted to George H. Sprague, E. B. Blight, J. A. Woodsides of Canandigua, and Richard W. Lee of Broadalbin. On the same date druggists' licenses were issued to George P. Babcock of Cattaraugus, and W. L. Carlson, Buffalo.

—The following high scores were made by the Buffalo Druggists' Bowling Club last week. Jacob Diehl, 187; P. M. Loeckie, 183; George Reimann, 202; J. L. Perkins, 165.

—Howard Wade of 193 Niagara street will open another pharmacy at Elmwood and Auburn avenues. It is to be an elegant one, entirely finished in oak.

NEW YORK CITY

Retail Druggists' Bowling Association.

This picture was taken on "poverty night." Though they are druggists, they sometimes dress better than here. Standing, from left to right, are: Arthur Reeder, S. F. Haddad, R. Timmerman, Herman Heinemann, Matthew Moeller (ex-member), Fred. Wichelms. Sitting, from left to right: L. W. DeZeller, Otto Boeddiker, Bruno Darscha, S. V. B. Swann (Mickey), George E. Schweinfurth, George H. Hitchcock (Hitch), J. Maxwell Pringle (John L.), William Weiss (ex-member).

A BRIGHT SIDE.

That New York Druggists are Not Always Bending Over the Pill Counter is Shown in this Account of Their Three Bowling and One Bicycling Clubs.

When it comes to bowling (let it be gently whispered) the Wholesale Drug Trade Bowling League of this city is an undeveloped youngster, where the three retail clubs, or associations (as one likes to call itself), are giants, mature and formidable. If the retailers only had a team amongst that wholesale aggregation! But, never mind, the league's second best last year, Seabury & Johnson, were, figuratively, mopped on the floor by the New York R. D. B. A. And, as S. & J. look like the wholesale winners this year, and the N. Y. R. D. B. A. is scheduled for three games with them, the relative disproportion in bowling prowess will likely be again demonstrated.

The N. Y. R. D. B. A., with the other two bowling clubs, and the Apothecaries' Bicycle Club, also a social organization, are gracious pictorial visitors this week. These four organizations do a wonderful lot toward lightening the lives of their members, and they go a long way toward mellowing up the trade socially. Their members are "good fellows," which doesn't mean, in this case, that they are not good business and professional men, for they are, and prominent ones.

The N. Y. R. D. B. A. was organized six years ago by L. W. (Willie) DeZeller, Seabury & Johnson's extremely popular city representative. Mr. DeZeller is also star member of S. & J.'s wholesale team. The association bowls every Friday night, at Starr's, from 8.30 to 12, keeping official record of the scores. The five highest men on the sheet are the association's rep-

representatives in outside contests. The officers are: President, Fred. Wichelms; vice-president, Otto Boeddiker; secretary, Arthur Reeder; treasurer, S. F. Haddad; captain, George E. Schweinfurth.

You can't swear on the alleys. A simple "damn" costs money. It costs you 25 cents to talk shop. The motto of the members is perfect, though they are business competitors and sometimes disputants in other associations. For instance, when a member was under serious legal charges a few months ago, he brought his resignation and, at the supper, a weekly occasion, told his fellows that he was "in their hands." With one accord they shouted: "We don't want to hear anything about it. We have confidence in you." At another time a prospective member persisted in bowling after the rest had gathered to eat. Now, there is a rule that when Captain Schweinfurth orders bowling dropped, or resumed, the command must be obeyed to the second. This man was admonished by the captain. "But I came here to bowl, not to eat," he replied. "But you can't bowl now," said Captain Schweinfurth, mildly. "Well, I didn't come to eat; I came to bowl. I suppose I can go home if I want to, can't I?" "You may," was the assurance, "and the sooner the better we will be pleased."

for nearly every baby. Let us send you free literature to distribute, with your name.

WILMOT CASTLE COMPANY,
26 Elm Street, Rochester, N. Y.

Apothecaries' Bicycle Club.

This photo was taken in 1902 by Leon Wernert, at the "Hermitage," Williamsbridge. The gentlemen, left to right: George Ducker, C. E. Vetter, George Leinescker, Henry F. Albert, Robert S. Lehman, George T. Riefflin, Sidney Faber, Charles Balling, Henry Hlefeld, George E. Huetter, George C. P. Stolzenburg, Hugo Kantrowitz. Ladies, standing: Mrs. George T. Riefflin, Mrs. Henry Hlefeld, Miss Hlefeld, Miss Ruth Faber. Ladies, sitting: Miss Hattie Lehman (now Mrs. Edward D. Zurko), Mrs. Henry F. Albert, Miss Helen A. Hintze, Mrs. George C. P. Stolzenburg.

The nutmeer went, and no voice bade him stay nor said adieu.

Every year there is a banquet and dance on "ladies' prize bowling" night, when handsome trophies are hung up. Just before Christmas each year is "package" night, when each member contributes a 25-cent prize to the tree, and the highest scorer has first choice. There are about thirteen active members.

The Friday Club, or West Side Bowling Club, meets Friday afternoons at Terrace Garden. Most of the members are also members of the German Apothecaries' Society. They were organized in 1871. Every year, in May, they have an annual banquet and prize bowling meetur. Student songs, original poems and informal jests make the walkin ring. These affairs are always "stags." They are not all young men, these, but they are "boys" just the same, as anyone will agree who witnesses, as the writer often has, five victorious gray beards capering with joined hands after a game. They are a fraternal bunch, and many is the "Bruderschaft" they drink. Henry Hlefeld is president, and George T. Riefflin is secretary. Mr. Riefflin is Sharp & Dohme's handsome city representative.

The Thursday Club, formerly called the East Side Club to distinguish it from the West Siders, are all members of the German Apothecaries' Society. They have been "organized for 35 years and never had an officer," as George C. P. Stolzenburg describes it. They play a challenge game. Like the West Siders, they have a partiality for the German varieties of bowling. In May they have a prize bowling and banquet meetur. This is one of the two biggest of three clubs, and what is true of the social assets of the other two is also true of this.

But there is another organization that gets away from the indoor club idea, and regoires in the outer air. They are old fashioned, for they cling to the bicycle. But they can point out, though they cannot enumerate the benefits of the old-fashionedness has been to them. The main members are mostly German Apothecaries' Society men. The trips they take, weekly, from early Spring to late fall, are not limited to favorite haunts, but are usually governed by a liking to explore country. One sometimes a trip last four days, though oftener

it is concluded in one, Thursday. The White Mountains, the Catskills, the Adirondacks, and the mountains of New Jersey and Pennsylvania, and all the intermediate scenic points have been visited since 1897, when the Apothecaries' Bicycle Club was organized by Sidney Faber. George Leinescker is president, Hugo Kantrowitz is secretary, Leon Wernert, treasurer, and Mrs. George C. P. Stolzenburg is vice-president.

NEW ENGLAND.

AGAINST TELEPHONE ORDERS.

Boston Druggists Say Phoning of Prescriptions is Conducive of Many Mistakes—Other New England News.

Boston, December 1.—Some leading druggists of this city are taking a stand against the practice of taking prescription orders over the telephone, a practice that is growing more prevalent. The druggists say there are so many pharmaceuticals that sound much alike, especially when heard over a telephone, that the danger of mistakes is great. They do not believe the responsibility for errors in such cases should be laid upon them. The druggists say, moreover, that not a few busy physicians do a deal of telephoning to houses of their patients and make their "visits" in this way, sizing up the case from what is told them, and then call up the druggist to put up something and send it to the patient. And the druggists object to all the risk involved.

WHAT DID THIS "INSECTERSIDE" USE?

Boston, December 1.—That corrosive sublimate, contrary to popular belief, is not a good destroyer of bed bugs and "sich licks," was testified to by an "Insecterside," as an important expert witness described his calling, in a suit over a bill for room rent in a fashionable Back Bay hotel. The tenant claimed he was forced to leave by bedbugs. He not only declined to pay the rent due when he left, but sued for \$2,000 damages because of the discomfiture received at the hands of the bugs.

It came out in court that the hotel had for years employed a professional killer of bedbugs who took the suite in hand after the lessee had used ineffectually many bottles of corrosive sublimate. The "Insecterside" refused to say just what he used to kill bugs, but expressed great disdain for corrosive sublimate. Boston druggists are pretty certain that he used formaldehyde. The tenant lost.

Druggists' Thursday Bowling Club.

In the upper row, left to right, are William H. Weyandt, Carl R. Kessler, John K. del, Robert Fleischcr, Hugo Kantrowitz (tueser), Oscar Goldman, Dr. Carl F. Klippert, Carl Schur, Herman Reuske. Lower row, left to right, Carl F. Schlessner, Felix Hirsemann, George C. P. Stolzenburg, Alfred Hantscher, Albrecht Wortmann. Photo by Brother Leon Wernert.

THE BAY STATE.

—A mixed-up case in the Springfield court is that of Ernest A. Sawyer against the American Soda Fountain Co. of Boston. The company made an exchange with William J. Harris, giving him a new fountain for an old one. Harris had bought his business of Sawyer, who held a mortgage on the place, the old fountain coming under the terms of the mortgage. Sawyer says he gave Harris no permission to dispose of or exchange the fountain—Harris says otherwise. Harris became financially involved and his assets did not meet obligations of the mortgage, so Sawyer seeks to hold the fountain company responsible for the amount lacking. The case is not yet settled.

—That advertising, in whatever its form, undoubtedly pays is illustrated in the case of J. S. Reardon, the dry goods merchant in Cambridge, who was caught while escaping from the store of his next door neighbor, J. A. Bird, the druggist. Since the affair became public, Mr. Reardon's trade has increased wonderfully. So has that of the Bird pharmacy. Mr. Reardon denies absolutely that he ever before entered the drug store as a burglar, even though a story had gone forth that it was he who had done so twice previously. That he is a bit unbalanced seems to be a common belief, in which Druggist Bird shares.

—Brookline druggists had an experience with a fake "doctor." He was very professional in appearance, and tried every pharmacy in town, rushing in and leaving two prescriptions, which he said he would return for later. The druggists found that one of the prescriptions called for a powder entirely new to them, and in asking one another for it, they learned that they were all in the same dilemma. In each case the "doctor" gave a different name. His object, the druggists decided, was to force them into buying the powder.

—The police of South Framingham raided three drug stores and captured considerable of the "stuff." At L. F. Hoffman & Co.'s they seized gin, port, whiskey and sherry. At Theodore F. Rice & Co.'s they confiscated whiskey, rum, gin, brandy, claret, port, champagne and ale. At the store of W. F. A. Bean they got rum, gin, whiskey, sherry and port. The police were foolish. Perhaps the druggists were keeping it to drink themselves.

—In Falls & Brinkshaw's drug store, Chelmsford, the chief clerk was charging a gasoline tank used in heating the soda fountain. He dropped some of the gasoline near where the lighting apparatus is placed. Then he lighted up. The spilled portion caught fire and set fire to the tank. It looked mighty serious for the time. A man outside rushed in with a heavy woolen horse blanket, with which he smothered the flames.

—The State board of health continues to keep after druggists whom it suspects may be lax in observing the laws regarding purity of drugs. Sales of adulterated phenacetin have caused special watchfulness recently. Leslie Frye and Stanley Donahue, of the board of officers of the Frye Hygienic Medical Co., Boston, have been invited to appear in court and explain why they have adulterated phenacetin in their possession.

—Candidates successful in passing before the Board of Pharmacy: John H. Dorsey, Hyde Park; Clarence H. Holland, Clinton; Herbert R. Hutchinson, Somerville; Clifford J. Webster, Boston; Frederick B. Barham, Cambridge; Joseph E. Boyd, Boston; Alexander A. Petit, New Bedford; William H. Curtin, Salem; John J. Finnegan, Gloucester, and Flynn R. Person, Leominster.

—The health officials of Newburyport are seeking to compel druggists who are licensed to sell liquors to sell only the purest ones. The State laws require a certain standard of purity of whiskey, etc., but this seldom has been enforced.

PENNSYLVANIA.

DISCOUNTS ON NEW REMEDIES.

Western Pa. R. D. A. Offers to Co-operate with Jobbers in Insisting that the Latter Receive Proper Discounts Before Retailers will Handle Remedies.

Pittsburg, December 1.—The Western Pennsylvania Retail D. A. is now planning to abolish the annoyance caused by the introduction of new remedies into this market. B. E. Pritchard, president of the N. A. R. D., who is secretary of the association, has submitted the following to the jobbers:

"Gentlemen.—Recognizing that we are both interested in the matter of the introduction of new remedies into this market, and that they are to a great extent an annoyance when satisfactory arrangements concerning remuneration and quantities cannot be arrived at, our board of directors recently adopted the accompanying resolutions, which we herewith submit for your approval. If you will indicate to our secretary what you consider a fair minimum discount, he will in all cases insist upon not less than the figure so indicated being granted or withheld his sanction.

"Resolved, That it is the sense of this board that when our jobbers are approached by representatives for the purpose of introducing new proprietary remedies, or such as have never been sold in these markets, that they be requested to refer the same to the secretary of the association before doing business with them. And be it further

"Resolved, That we tender the services of our secretary and the influence of the members of this board of directors in arranging for a satisfactory discount for the jobbers, as well as a fair wholesale and retail price for such articles for the retailer before sanctioning their introduction."

The co-operative insurance project is apparently desired by many druggists. Secretary Pritchard has received the following communication, which is self-explanatory:

"At the last meeting of our association the following resolution was passed: The Cambria County R. D. A. advocated and encouraged the formation of a mutual fire insurance company among druggists. The members of the association believe that the druggists are discriminated against in the matter of insurance rates; that they are out of all proportion to the risk assumed.

The object of our association in passing the above resolution was to get the matter before the druggists of the State.

Very truly yours,
CHARLES L. BERRY, Secretary.

The board of directors of the Western Pennsylvania association unanimously endorsed the resolution.

WORK OF PHILADELPHIA DRUG CLERKS.

Philadelphia, December 1.—The Drug Clerks' Association is attempting to get before the proprietors and increase their membership also. The following admirably written letter was sent out in calling a recent meeting, which, however, was poorly attended and was adjourned to a later date:

Fellow Drug Clerks:—Has it not occurred to you that a drug clerks' association would be a great benefit to the drug clerks in and around Philadelphia? My dear sir, such an association does exist, organized in May, 1903. The objects for which it was organized

Eff. Lithia Tablets

Send for sample and special net prices on our carton package Aluminum Cap Bottles with your name on them.

Our Tablets made by a new process are very satisfactory.

BILLINGS CLAPP COMPANY, Boston, Mass.

were, of course, for the welfare of the drug clerks in and around Philadelphia. Unlike a union we do not expect to gain our end by means of a strike or violence of any kind. Our present aim is to get strong, then our first move will be to discontinue any and all attempts at that greatest enemy of the modern drug business, namely—price cutting. What will be the consequence if our employers get better prices? Will we not share in their increased profits? Most assuredly we will. Having gained this point, what will be done next? We will try to come to some agreement with the P. A. R. D., in relation to shorter hours. We will of course be able to come to such an agreement and remain on friendly terms with the P. A. R. D. This is not imagination, but is an assured fact, as has been proven in Chicago. If you are interested in this work attend the meeting. Meetings third Friday of each month.

JOSEPH A. RIDER, 901 South 16th Street.

The officers of the association are: Samuel C. Samson, president; George H. Kramer, first vice-president; Joseph A. Schrom, second vice-president; Joseph A. Rider, secretary; Charles G. Wolf, treasurer; executive committee—Joseph A. Rider, chairman; John C. Stelly, R. Clark Strode, John Sierer, Charles G. Wolfe.

FOOD FOR THE PHARMACY BOARD.

Philadelphia, December 1.—News was received by Mr. Cliffe, the Philadelphia member of the board, respecting the date of a R. A. certificate, which an applicant for a position had said was lost. On inquiry it was discovered that the person in question had never registered, and was simply masquerading as a qualified clerk. The incident evoked much comment and word was at once sent out to examine the records and to make a list of the qualified and registered men, so that, in the event of any like emergency arising, simple reference to the nearest board member will bring speedy and accurate information. The board is still working through the labyrinth in the lower part of the city and the stirring and shaking they are giving the dry bones are producing effects that are bound to last. None of the results of the examination held last month have been given out and several sensations are promised when the final notices are sent.

OTHER HAPPENINGS.

—W. G. Markell has sold the Keystone pharmacy, 19 Frankstown avenue, Pittsburg, to J. C. McGonigle, formerly with Schilling Bros. Co. It is the intention of Mr. McGonigle to remove the fixtures to Hamm street and Euclid avenue. He expects to open his store on December 15. It will be known as the Euclid pharmacy.

—J. R. Thompson has assumed the general management of P. C. Schilling Co.'s stores, with the headquarters at Christy's establishment, Fourth avenue and Smithfield street, Pittsburg. Before taking control, Mr. Thompson visited New York and Boston, inspecting the stores there.

—W. E. Rodenmeyer of Lutz & Rodenmeyer, 4900 Second avenue, Pittsburg, and Miss Bessie Zenn were married last month. News of the marriage became public only a few days ago, owing to the bridegroom's desire to keep it a secret for a time.

—George Reimer of W. H. Pile & Sons, Philadelphia, is receiving the congratulations of his numerous friends. He received word from Pittsburg a few days ago that he was heir to one-third the estate of a great uncle—over \$500,000.

—Matthew John Cassidy, the popular member of the firm of Cassidy and Kahn, Bradlock avenue, Pittsburg, is the latest resort in the ranks of the Bonshets,

He married, on Thanksgiving Day, Miss Mary Agnes Judy, a belle of Bradlock.

—Friends of Robert A. Hance, the veteran fluid extract manufacturer of Philadelphia, will be pleased to know of his gradual return to health. He has been confined to the house for the past six weeks with a severe influenza.

—Frederick K. Porter, of Porter & Golden, Sheridan and Station streets, Pittsburg, has been in ill health for some time and is spending the winter at Santa Fe, Cal. His numerous friends sincerely hope the climate will benefit him.

—John K. Klemmer, formerly connected with F. Karl Dohm, opened store in Sharpsburg, on December 1, having purchased the stock of Fred R. Sniess. Klemmer contemplates purchasing a fine new set of fixtures.

—James B. Leslie, clerk in the South Side pharmacy, Twelfth-second and Sarah streets, Pittsburg, married Miss Ada Hatton. The young couple enjoyed a bridal tour to Oil City, Niagara Falls and Buffalo.

—Wharton & Co., drug store brokers, announce the change of their offices to 623 Land Title Building, Philadelphia. They have sold the store of Dr. Conard at Seventh and Brown streets, to George Johnson.

—A deal has been consummated whereby J. S. Gleghorn acquires possession of the store at 125 Brushton avenue, Pittsburg, from Edward S. Allen. The latter owned the drug emporium less than two months.

—R. L. Free, proprietor at 500 Kirkpatrick street, Pittsburg, is preparing to put in a new store at 2307 Forbes street. If his plans materialize he expects it to be in operation December 10.

—E. F. Stephens has purchased the drug store of Houseman & Thomas at Glassport, on the Monongahela river. Mr. Houseman will permanently retire.

—Wilbur Smith has disposed of the Birmingham pharmacy, Southern avenue, Pittsburg, to Mr. Altman. Y. R. Gettel is manager of the store.

—Fred R. Sniess will shortly open at Fifty-ninth street and Penn avenue, Pittsburg. He was formerly manager of Carl Hartwig's.

—G. W. O'Sullivan, formerly with Louis Emanuel, has opened a handsome new store at 3330 Second avenue, Pittsburg.

—George Beltz, Ph. G., Philadelphia, has entered the medical class of the Medico-Chirurgical College.

The Century for 1904.

The Century for 1904 promises a wealth of reading and pictures that surpasses even the high standard achieved during 1903. Perhaps most notable of all the strong features of the volume will be Dr. S. Weir Mitchell's "The Youth of Washington," told in the form of an autobiography. It will be a daring and unique piece of historical work, written as if it were done by General Washington himself, sitting down in Mt. Vernon in his old age and recording, solely for his own eye, the story of his youthful life. Then there will be a series of articles on "Italian Villas and Their Gardens," written by Edith Wharton and illustrated, largely in color, by Maxfield Parrish. Ernest Thompson Seton has prepared "Fiddle and Woodmyth," and early numbers will bring John Burroughs' "Current Misconceptions in Natural History." Ray Stannard Baker, whose articles on the Great Northwest and the Great Southwest have been leading and widely acceptable features of recent volumes, will continue his notes on these regions; and there will be valuable contributions by Jacob A. Rus, Dr. James M. Buckley, and scores of other notable writers. The list might be indefinitely lengthened.

THE SOUTH. FOR FREE ALCOHOL.

Representative Hill of Connecticut Introduces Tentative Bill for Free Alcohol Where Manufacturer Consumes It on the Premises.

Washington, D. C., December 1.—Representative Hill of Connecticut has introduced a tentative measure in reference to free alcohol for manufacturing purposes, which will be used by the Ways and Means committee, to which it has been referred, as the basis of a bill to be drafted by the committee. As it stands the bill does not fully meet the wishes of the manufacturers.

The Hill bill provides for the use of pure grain alcohol, free of tax, in the production of articles in the manufacture of which the alcohol is entirely consumed on the premises. This makes free spirits available in manufacturing powders, pills, etc., it will be seen, but not for medicines in liquid form. The free alcohol question will likely come up for discussion in the committee in a few days. Mr. Hill may be depended up to fight strongly for the bill in any favorable form, as he has been for years identified with the movement for free alcohol for manufacturing purposes. The bill provides that:

"From and after the passage of this act either grain alcohol or methylated spirits, or both, at the discretion of the Secretary of the Treasury, may be withdrawn from bond and used without payment of the internal revenue tax thereon in any manufacturing processes wherein said grain alcohol and methylated spirits are consumed or destroyed upon the premises of the manufacturer, so that they become no part of the salable product or cannot be recovered therefrom.

"The Secretary of the Treasury is hereby directed to appoint such officers and agents as may be necessary to supervise and inspect such use of grain alcohol and methylated spirits without payment of internal revenue taxes, and to make such regulations as he may deem necessary to provide for and control the use of grain alcohol and methylated spirits in manufacturing processes as provided in section one, which regulation shall provide for and include the reimbursement by person so using grain alcohol or methylated spirits of all expenses incurred by the government in such supervision and control in manner and form as the secretary may determine."

COCAINE LAW FOR DISTRICT OF COLUMBIA.

Washington, D. C., December 1.—A bill regulating the sales of poisons in the District of Columbia has just been introduced into the House by Representative Robinson of Indiana. After naming the poisons referred to the bill provides:

"It shall first be learned that the person is aware of the poisonous character of the substance and that it is desired for a lawful purpose, and the package shall be plainly labeled with the name of the substance, the word 'Poison,' date of sale, the name and address of the firm dispensing, and before delivery shall be made, except in the case of solution of water of ammonia and sulphate of copper, there shall be recorded the quantity, the purpose, the date, the name and address of the purchaser, and the name of the dispenser, which book shall be preserved for at least three years. Provided, That the foregoing shall not apply to articles dispensed upon prescription: Provided further, That the record of sale and delivery shall not be required of manufacturers and wholesalers who sell at wholesale to licensed pharmacists, but the package when sold at wholesale shall be properly labeled with the name of the substance, the word 'Poison,' and the name and address of the manufacturer or wholesaler.

No firm shall sell, furnish, or give away any cocaine or preparation containing it, morphine, salts of morphine, or preparation containing it, heroin, salts of heroin, or preparation containing it, or any chloral hydrate or preparation containing chloral hydrate, or any preparation containing chloral hydrate, medicinally pure carbonic acid, or preparations containing medicinally pure carbonic acid, except upon signed prescription,

dated and containing the name of the person for whom prescribed. Such order or prescription shall be permanently retained on file, and shall not be recompounded or dispensed a second time except upon the written order of the original prescriber: Provided, That the above provisions shall not apply to preparations containing not more than two grains of opium, one-eighth grain of morphine, or one-eighth grain of heroin, or two grains of chloral hydrate, one-sixteenth grain of cocaine in the fluid ounce, or, if a solid preparation, one avoirdupois ounce, or to solutions of medicinally pure carbonic acid containing not more than two and one-half per cent. of such acid. Provided further, that the above shall not apply to preparations sold in good faith for diarrhea and cholera, each bottle or package of which is accompanied by specific directions for use and a caution against habitual use, nor to liniments or ointments when plainly labeled 'for external use only'; and provided further, that the above shall not apply to sales at wholesale by jobbers, manufacturers, and retail druggists to retail druggists, hospitals, colleges, scientific and public institutions."

Penalties are from \$5 to \$25 for violating provisions of the first paragraph, and of from \$25 to \$50 for the first offense; \$50 to \$100 for the second offense, and \$100 to \$200 and imprisonment not to exceed six months for subsequent offenses.

THOMAS P. LANGDON DEAD.

Baltimore, December 1.—Much regret was occasioned in the drug trade here last week by the death of Thomas P. Langdon, who was widely known in the wholesale trade and who succumbed to a complication of diseases on November 23, after an illness of ten weeks. He had long been far from well. In fact, it was impaired health which compelled him to retire from the firm of Gilpin, Langdon & Co., with which he had been connected since 1866, about two years ago, and since then he had lived very quietly. Mr. Langdon was 59 years old and a native of Charlestown, W. Va., though he had resided in Baltimore nearly all his life. His connection with the firm in which he was long a factor dates from the year 1863, when the concern was known as Canby, Gilpin & Co., and when it was located at Light and Lombard streets. In 1866, on his admission to partnership, the name was changed to Gilpin, Langdon & Co. During his career as a member of the firm it had two destructive fires. After the second one the concern was incorporated with H. B. Gilpin as the principal stockholder. Though poor health made him somewhat reserved, Mr. Langdon was known for kindness of manner and courtesy. His wife, a former Miss Drusilla Carter, survives him.

SHARP & DOHME JOURNAL CLUB MEETS.

Baltimore, December 1.—The Sharp & Dohme Journal Club, whose membership is composed of the heads of the departments in the big establishment, held a meeting recently and recognized by electing the following officers: President, Dr. A. R. L. Dohme; vice-president, Charles L. Baker; secretary, E. F. Kelly; treasurer, Henry Kormann. It was decided to meet on the second and fourth Wednesdays of every month at Pabst's Garden for the discussion of scientific matters and social purposes. Dr. Dohme afterward gave a talk on his trip to Asia, dwelling especially on what he had seen in the Holy Land, and illustrating with photographs.

WE WANT DRUGGISTS

To send us a list of physicians who patronize them, and we will write each physician that he can obtain Phenalgin from the druggist mentioned; we will also send the physician a sample, with literature.

ETNA CHEMICAL CO.

213 West Street - - NEW YORK

SIEGMUND MUEHL, Indianapolis, Ind.

Mr. Muehl has two stores in Illinois street. He was born in Missouri in 1846, and started into the drug business at Washington, that state, in 1859, as an apprentice. In 1868 he bought a drug store in St. Louis, which he conducted for four years. He then took a vacation and went to Heidelberg, where he studied special courses for a year. He has been in the trade in Indianapolis since December, 1875. He is one of the original members of the State Ph. A., organized in 1880. He has been president of the local organization several times since its organization in 1877. His retail interests are among the largest in the city.

DRUGGIST VEAZEY DIES IN PRISON.

Baltimore, December 1.—John H. Veazey, member of a well-known Cecil county family and a druggist by profession, died in jail here yesterday morning of what has been diagnosed as alcoholic coma. He had been employed here as a pharmacist, but disappeared several days ago. His prolonged absence caused a friend to make a search for him. The police were notified and it was then learned that a man answering Veazey's description had been sent to jail. The deceased was 38 years old and well thought of. He had many friends, and his unfortunate end is deeply regretted.

MARYLAND.

—Among visiting druggists in Baltimore: George A. Meyer, Ballastown, Pa.; J. P. Higgins, Leightonsville; Lewis Barbehenn, Broadhook, Pa.; John J. Rose, Westminster, and Mrs. C. H. Michaels, Reisterstown.

—Louis Schulze, secretary of the Maryland Ph. A., writes the Era that the association will hold its next annual meeting at Mt. Holly Inn, June 21 to 24. A. R. L. Dolme, Roland Park, is the local secretary.

—Mr. Offutt, manager of Klingel pharmacy, 103 W. Lexington street, Baltimore, has gone with James O'Donnell, in the latter's Capitol Hill store at Washington.

—Charles Luing will open a pharmacy in Baltimore street, Baltimore.

VIRGINIA.

—T. A. Miller of the State board of pharmacy, has opened his fourth drug store in Richmond. It is in the basement of the apartment house, Chestertield. The assurance that the appointments and fixtures of

the store would be of the highest possible character silenced any objection that might have been raised against the invasion of the exclusive residential section of the city by business. S. M. Roadcap is the manager.

—The Richmond D. A. has again practically dropped out of existence. An organization is continued, but all efforts to get the members to attend meetings or pull together effectively have so far proven fruitless. The fight proposed to be made against the cut rate stores of the city was given up before it was begun, though many claim that it could easily be won if all would enter an agreement and stick by it.

—R. L. Harrison's store, recently completed, was entered by breaking one of the expensive plate glass front windows.

KENTUCKY.

—J. W. Fowler & Co., Louisville, who suffered in the Masonic Temple fire, have moved their damaged stock to their store at Second and Green streets. They lost at the hands of the firemen. Mr. Fowler says his damage by looting will reach nearly \$1,000, meerschau pipes and whiskey having been confiscated.

—L. C. McDaniels, Louisville druggist, made an assignment for the benefit of his creditors on last Friday. His assets are about \$600, and liabilities estimated at \$2,500. Poor trade was the cause.

—C. R. Maneman, who bought out H. H. Rade-maker at Hancock and Chestnut streets, Louisville, married, on Thanksgiving Day, Miss Verena R. Weber. The happy couple left on a short trip.

—J. C. Vogt, druggist, Louisville, who was appointed superintendent of the City Hospital, was installed in office this month. He is making a good officer.

—F. L. Cessna's drug store at Rowlett's was damaged by fire last Wednesday to the extent of \$3,000. Mr. Cessna carried no insurance.

—Mr. J. Wagner, who conducted a drug store at Eighteenth and Broadway, Louisville, has closed.

—W. H. Eisemenger has bought Kromer's drug store at Eighteenth and Rowan streets, Louisville.

LOUISIANA.

—T. P. Porter, charged in two affidavits with violating the law which provides that every druggist shall have a license, and who pleaded not guilty later withdrew his plea on one charge and pleaded guilty. The other affidavit was dismissed and he was sentenced to pay a fine of \$50 or serve thirty days' imprisonment.

—A. C. de Mousabert, one of New Orleans' prominent druggists, has sold because of poor health. He was one of the organizers of the Orleans Ph. A., and was at one time a member of the State board of pharmacy. His successor is Joseph Rosiere, formerly prescription clerk at P. L. Cusacks.

—A. D. Parker, president of the firm of Parker, Blake & Co., has left New Orleans for Boston where he married Miss Philips of that city on November 25. Mr. Parker is the youngest of New Orleans' wholesale druggists.

—A. Ernst, drug clerk in Shreveport, made a flying trip to New Orleans to marry Miss Corinne du Hault de Lassus. Miss de Lassus belongs to one of the oldest families of Louisiana.

—James E. Bays, prominent druggist of Magazine street, New Orleans, has sold to J. J. Duggan who was formerly with E. T. Diez.

—The earlier closing era, like the cold weather, is approaching slowly but steadily upon the druggists of New Orleans.

OHIO RIVER VALLEY.

OHIO VALLEY DRUGGISTS' ASSOCIATION.

Annual Meeting Attended by Mr. Wooten, and a New Schedule Adopted.—Annual Election of Officers.

Cincinnati, December 1.—The annual business meeting and selection of officers of the Ohio Valley Druggists' Association was held on last Tuesday at Odd Fellows' Temple. There was a full attendance and good fellowship.

Thomas V. Wooten, of the N. A. R. D., was present and outlined the work accomplished at the recent annual convention in Washington. His remarks were listened to with considerable interest, especially his statements regarding the attention large patent medicine manufacturers are beginning to take in the association, and the stand that has been inaugurated against those who sell below contract price.

At Mr. Wooten's suggestion, the local association adopted new uniform rates. Hereafter, manufactured medicines rated at 25 cents, 50 cents and \$1, will be set at 25 cents, 45 cents, and 90 cents, respectively. It was unanimously decided that if any member is detected selling below the new prices, his name will be sent to the manufacturer and if the manufacturer continues to supply the offender, he will hear from the association.

A committee consisting of the board of control, and Julius Greger, Edward Voss, Frank Freericks, and Alfred De Lang was appointed to make arrangements for the coming convention of the State Ph. A., which will be held in this city next June.

The election of officers for the ensuing year resulted as follows: President, A. O. Zwiek; first vice-president, Alfred DeLong; second vice-president, Edward Voss; third vice-president, Dr. J. C. Krone of Hamilton; secretary, H. B. Waltermann; treasurer, L. P. Holzhauser; board of control—For three years, Emil Zorn, J. E. Kutchbauch; for two years, J. H. Linnemann, Carl Plath; for one year, Otto Groenland, T. D. Wetterstrom, H. E. Kniemoeller; from Butler county, William Howe; from Kenton county, Ky., C. A. Willenbrink; from Campbell county, Ky., George Wilhelm. This was the fifth successive time that Dr. Zwiek was chosen to the highest office in the organization.

AROUND THE GREAT LAKES.

WHERE ARE THE INDICTED SALOON-DRUGGISTS?

Grand Rapids, Mich., December 1.—Myron Wakeman, Charles Converse and John McBride, druggists of South Haven, have been arrested on indictments found by the grand jury at Paw Paw, for violation of the local option law. The officers have difficulty in getting service in the remaining eight indictments. Clare Edgell, proprietor of the Clifton pharmacy, is said to be in Hot Springs, Ark., and J. L. Condon in Pentwater, the whereabouts of the others being unknown.

The local option law has been in effect in Van Buren county for seventeen years. Not long ago a few unscrupulous druggists began to give trouble. Capt. Napier attempted to start a road house, was refused a license, and then opened a "drug store." Later he sold to Charles Rogers, who ran the store openly for another year, paid a fine of \$500 and served a year in jail.

The signal success of Napier and Rogers led to the

opening of eleven other "drug stores" in South Haven within a single year. Out of the eleven stores operating last summer, only two or three, it is alleged, could be classed as legitimate. Similar conditions were true in other parts of the county, and, though there was numerous convictions, as soon as one man was arrested he secured someone else to go on with the business. Some months ago the Anti-Saloon league caused several arrests and five "druggists" of South Haven have recently been released from serving 30-day jail sentences.

ILLINOIS.

—Matthew White, a prominent Englewood politician, is the new organizer for the N. A. R. D. in Chicago and for the C. R. D. A. He has for some time been in charge of one of the city sub-departments. It is said that Mr. White had a prejudice against keeping names of dead men on the pay roll, and so on. At any rate, he is now with the druggists, and his reputation as a conscientious hustler and efficient executive officer gives grounds for the expectation that he will be able to do good work in Chicago. He began his new duties on Monday last week.

—Charles H. Sagar, for several years of the firm of Sagar & Lyon, Chicago, retail druggists, and president of the Lemaire Perfume Co., has retired. The firm of Sagar & Lyon has dissolved. F. K. Lyon will devote his entire time to the interests of the Perfume company, of which he is now in control. Mr. Lyon is well known to the trade. He was for many years at the head of the sundries department of Lord, Owen & Co.

—Proceedings in involuntary bankruptcy have been instituted against R. C. Frericksen, a well-known druggist at 1201 West North avenue, Chicago. The store is in charge of A. A. Taylor as receiver. Morrison, Plummer & Co. and the Fuller & Fuller Co. are the principal creditors. Mr. Frericksen will be remembered as one of those who put up such a hot fight against the board of pharmacy three or four years ago.

—With the ending of the street car strike, Chicago business has resumed its normal tone. During the trouble there was little trade on the cross streets of the South Side. The cross town cars did not run, and druggists who had been accustomed to a good trade at the transfer corners found this demand suddenly cut off.

—Thomas N. Jamieson, former druggist and leader of the Republican organization in Illinois, recently saved the day at Springfield and turned the party toward the subject of a new charter for Chicago.

—S. B. Lamberston, now with Morrison, Plummer & Co., but formerly with Lord, Owen & Co., had the misfortune last Saturday to fall and fracture a bone in one of his arms.

—Robert Heller is reported to have bought the drug store at 361 Blue Island avenue, Chicago, formerly owned by Leo Ginsberg. Mr. Heller was formerly with Leo Rogers.

—Jesse I. Cozine has succeeded Shepard & Andrews at Thirty-third and State streets, Chicago.

—C. M. Griswold has opened a new drug store at Minnetka.

WISCONSIN.

—Retail druggists of Milwaukee are up on arms against the stand taken by one of the largest department stores in the city which came out with large advertisements in all of the morning papers, quoting cut rates on all well-known patent medicines. The 81 preparations are being sold for 60 cents and lower priced goods in proportion. It is now likely that the Milwaukee P. A. will hold a special meeting and try and have prices kept up. Thus far they have been successful in stopping rate cutting and in several instances where department stores have started drug departments, have succeeded in having these departments discontinued, and, in lieu of this favor, have purchased the stores' stocks.

—N. C. Nelson, who conducts the only drug store at Martell, has a copy of the smallest Bible ever printed. It is 1½ inches by 1 inch and ½ inch thick, comprising both the Old and New Testaments and is illustrated. It can only be read through a magnifying glass. The miniature Bible is to form a part, and a very small part at that, of the exhibit at the St. Louis Fair.

—Milwaukee, in the midst of a campaign against "grafting," in testimony collected for the grand jury, indicating that excessive prices have been paid for drugs for the county hospital. Whether or not any druggists will be implicated in the matter is hard to say at this time, as the findings of the board committee have been kept secret.

—It is said that the retail druggists at Racine, Kenosha and other cities throughout the State have discontinued cutting prices and that a new price list will go in force on January 1.

ONE POOR POLICEMAN'S MANY AILMENTS.

St. Louis, December 1.—St. Louis druggists have been agreeably surprised at the unexpected closing up of a number of drug stores, so-called, as a result of the campaign against fake doctors by the city health department.

Detective Joseph Durney, a magnificently healthy young man, was selected to see the "doctors." After he had been sent home to receive treatment for some sixty terrible diseases from as many physicians, each of whom took the dollar he was privileged to invest as the first payment, he made public the results.

The department then got busy and the police courts had some long sessions. There were a number of "drug stores" conducted by these men. Most of them were closed after one visit from a city license department representative. C. R. Brandt of 2311 Franklin avenue, was fined \$50 and costs for conducting a store without a city license. No mention was made as to his State license.

While Detective Durney was making his rounds, he ended on some druggists to see if he had any serious ailment. Several gave him doses for alleged cramps, but these cases the department will not take up, but there is said to be serious trouble ahead of a West End druggist who prescribed for a "severe attack of appendicitis" and afterward, when he found his patient was going to leave the city, wrote him a prescription.

DR CHARLES SCHAEFER, for many years a prominent wholesale druggist of Philadelphia, died in that city last week, aged 65 years. Dr. Schaefer was well known in the scientific world as a botanist. He had almost completed a book upon the mountain flora of the Cascade Mountains when he died.

FROM SEVERAL BOARDS OF PHARMACY.

—NEBRASKA.—The reorganization of the board resulted in the election of W. M. Tomner of Lynch, president; W. W. Kendall of Superior and H. L. Harper of Beatrice, vice-president; E. L. Wilson of St. Paul, secretary; D. J. Funch of Holdrege, treasurer. The personnel of the board is the same as that of last year with the exception of J. H. Schmidt, whose place is taken by Mr. Harper. Two vice appointments for certificates were successful, as follows: H. R. Best, Omaha; Mrs. Clara Fenwick, Craig; Henry Eigenbaum, Geneva; C. J. Fleming, Columbus; E. R. Fletcher, St. Paul; B. R. Jones, Kennard; A. W. Peterson, Hordley; F. J. Rupert, Hooper; Tom Roberts, North Bend; K. F. Stinson, Gravity, Ia.; Robert Sullivan, Omaha; C. E. Wyckoff, Bancroft.

—ARKANSAS.—At the late examination, held in Little Rock, the following were granted certificates, Miss Crenshaw receiving the highest average, 95.5: Bishop Brookes, Hope; John R. May, Atkins, Charles Bieberman, Hot Springs; J. E. Sears, Hot Springs; L. Wood, Hot Springs; C. H. Yunker, Charleston; W. H. Lusby, Hot Springs; Miss Mattie Crenshaw, Dermott; T. S. Anderson, Magazine; Arthur North, Little Rock; A. H. Meier, Bentonville; Martin Brown, Springdale; Geo. eming, Danville; J. J. Young, Okalona.

—KANSAS.—At Wichita, there were twenty-six applicants, and these were successful: B. C. Beal, Logan; Horace W. Cliftondon, Mediana; J. W. Hollinger, Wichita; Joseph E. Nygreen, Lawrence; Grover E. Smith, Alta Vista; George L. Kuss, Edna; Walter J. Downing, Clay Center; J. Lawrence Ward, Arkansas City; Alma V. Johnson, Lincoln; J. J. Hendricks, Coffeyville; Pauline S. M. Johnson, Topeka; D. R. Moore, Goodland; Samuel L. Wilkinson, Newton; James S. Sheldon, Council Grove; H. A. Kenneke, Wellington; H. G. Graves, Caney; Lafayette M. Foster, Selden; W. G. Hanning, Belleville; Homer H. Neff, Springhill; Assistant pharmacists: Jay V. Thompson, Wichita; Delton Spar, Conway Springs. Following are those registered during the last quarter by virtue of being graduates of recognized schools of pharmacy: Alfred Dietrich, Leavenworth; O. L. Hankins, Lawrence; C. W. Nester, Medicine Lodge; Bruce N. Gleissner, Abilene. Following are those restored to the register since the last meeting of the board: H. T. Webe, Topeka; William McGeorge, Argentine; H. A. Door, Emporia; John A. Tuggle, Iola; A. O. Craig, Hutchinson.

—LOUISIANA.—The board will meet on December 5 to elect a president to succeed the late P. R. Vallon. Of eighteen applicants at the last examination these passed: Registered pharmacists—Louis Henne, Peter Pallossier, Percy W. Porter; David M. Tomb, Jackson, La.; A. L. Duplantis; J. R. Theriot, Gueydan, La. Qualified assistants—Patrick Harvey, Peter F. Murphy, George A. Munson.

—MINNESOTA.—Of fifty-four applicants, licenses were granted to the following: Pharmacists—John R. Loes and William Loesch, Minneapolis; Roland A. Beck, St. Paul; Nella M. Knowlton, Pine Island; Cornelius M. Judd, Rochester; Adolph F. Burne-ster, New Ulm. Assistants—Robert C. Woolson, Herbert W. Cutler, Ames; A. Bulmer, Walter I. Frey, Olans; K. Ojorden, Henry Schwankl, George W. Schover.

—MICHIGAN.—These passed the recent examinations at Lansing: Registered Pharmacists—Ray D. Arnold, Port Huron; R. H. Cawthorpe, Alpena; Charles E. Chambers, Detroit; F. H. Chibensch, Schwaning, H. E. Cobb, Brooklyn; H. L. French, Adrian; G. W. F. Hesse, Saginaw; John G. Hoyt, Remus; Albert G. Kuth, Manistee; M. C. Landon, Caro; Harvey Lich-

tenwalner, Battle Creek; H. H. McClintic, Carson City; Earl C. Macy, Durand; Paul J. Miller, Lapeer; A. R. Russell, Char; Frank J. Norton, Rockford; W. Ross Turner, Clifford; Isaac W. Ware, Alpena; John H. Meisel, Monroe. Registered assistants—H. M. Arndt, Marion; Claude E. Brower, Saranac; Carl I. Campbell, Grand Rapids; Thomas H. Cooper, Port Huron; William D. Crandall, Jackson; O. B. Harper, Detroit; William H. Lanway, Detroit; E. H. Lemaire, Chassel; Byron L. Curtiss, Big Rapids; William H. McOmber, Grand Rapids; E. G. Miller, Port Huron; George R. Moore, Cairo; John A. Morrison, Cass City; Charles Shullis, Brooklyn; D. O. VanWyck, Grand Rapids; A. T. Wilson, Inlay City. The next meeting will be at Detroit, January 5 and 6.

—OHIO.—These applicants successfully passed the examination entitling them to certificates as pharmacists: Herman F. Rauch, Mansfield; Herbert L. French, Adrian, Mich.; Thomas T. Cusick, Crooksville; Roy Loper, Ada; Frank E. Meek, Ada; Tiffin C. Rogers, Greenville; Patrick T. Fitzgerald, Wooster; Josiah Jepson, Jr., Cleveland; M. M. Lefavor, Glouster; Lawrence F. Fischer, Cincinnati; W. E. McLean, Athens; Carni S. Cunningham, Goshe; Charles E. Bixler, Wooster; Herbert C. McKim, Burlington, Ky.; Samuel M. Walter, Bellaire; Frank Brauer, Cincinnati; Fred. S. Kotte, Cincinnati; Anthony Mongold, Cincinnati; P. E. Miner, Steubenville; Fred. C. Richards, Cincinnati; Arthur B. Mapes, Evansport; John Littleton, Bantam; John E. Maley, Lockland; Sister M. Raymond Finn, Cincinnati; S. E. Lawrence, Toledo; John C. Wolfe, Zanesville; A. J. Bucklew, Bryan; Andrew G. Einspanier, Cincinnati; A. C. Walters, Lancaster; Edgar F. Sheeran, New Lexington; Ellis E. Matthews, LaRue; Frederick J. Cernak, Cleveland; Archibald H. Dickerson, Louisville, Ky.; John H. Ratje, Carthage; George W. Deitrich, Orrville; Carl A. Seibel, Cleveland; John S. Rapp, Portsmouth; Benjamin L. Kindel, Celina; Albert B. Beiersdorfer, Celina; Stanley E. Crosson, Columbus; George A. Streich, Cleveland; A. A. Williams, Cincinnati; James Bates, Cleveland. The following may receive certificates as assistant pharmacists on their pharmacists' examination, if they so desire: Jacob Loertscher, Toledo; Allison V. McComb, Montpelier; Edwin G. Hedgeman, Cincinnati; Edward Haines, Elmore; William E. Swift, Jefferson; Gilbert Crawford, Cleveland; W. F. Allen, Mt. Vernon; W. L. Mason, Scio; Ira C. Wade, Tiffin; Howard H. Gillard, Milford; Alfred J. Hodder, Cincinnati; Carlos G. Pope, Clyde; Charles W. Reeg, Portsmouth; Frank Herron, Zanesville; F. H. Simmermon, Felicity; Wade H. Barnes, Greenville; Edgar G. Winger, Hudson; J. M. Hageman, Marion; Thomas H. Dexter, Conneaut. The following were successful in their assistant examination: H. C. Shuttleworth, New Straitsville; Flora E. Schmauser, Chillicothe; Louis W. Sauer, Cincinnati; Thomas H. Williams, Cincinnati; C. M. Liggett, Cardington; Clarence E. Stump, Zanesville; Earl Haverfield, Cleveland; B. E. Hart, Cleveland; Edward O. Ranchfleisch, Cleveland; Sigmond Grossman, Cleveland; Earl D. Coup, Cleveland.

FRANK G. FRIESE, aged 37, died on Saturday at the home of his mother, Louisville, Ky. He had been in bad health for many years, having never recovered from the effects of a spell of typhoid fever contracted over twelve years ago. At that time he was conducting a drug store at Shelby and Oak streets, Louisville. Lately he has been working for C. J. Rosenham & Co. He was unmarried.

A POPULAR DECISION.

Much favorable comment has been occasioned in the trade by the announcement of Scott & Bowne that the price of Scott's Emulsion will not be increased during the prevailing scarcity of cod liver oil. This decision on the part of the manufacturers of Scott's Emulsion is of the greatest importance to the drug trade and the public. If Scott's Emulsion was nothing more than an ordinary emulsion or cheaply compounded preparation of cod liver oil, the matter of its future price would not be of such vital interest, but being the standard preparation of cod liver oil and being used exclusively and continually by thousands of people, it is only natural that a great deal depended upon what this valuable remedy was going to cost during the oil famine.

Another point of importance is the fact that the quality of Scott's Emulsion remains absolutely unchanged. The manufacturers have made no attempt to discount their action in the matter of price by cutting down the quality of the ingredients in Scott's Emulsion and herein rests the druggists' security and the public's protection. Every bottle of Scott's Emulsion has the makers' guarantee of purity and uniformity of quality and this guarantee carries with it the weight of thirty years' favorable reputation. With adulteration so common at this time it is well that so popular a remedy as Scott's Emulsion can be always depended upon and so easily secured.

That Scott's Emulsion has for over a quarter of a century maintained its position as the standard preparation of cod liver oil speaks volumes for its usefulness and the esteem in which it is held. That during all this period its quality should have continued absolutely uniform reflects not only credit upon the principles which guard its manufacture, but still further enhances its value as a reliable, unvarying and carefully prepared emulsion.

Important Trade Mark Decision.

The United States Circuit Court of Appeals has recently handed down a decree which makes it unlawful to use the name of a natural product as a designation for an artificial manufactured product.

This decree was rendered in the case of William T. Thackeray in Chicago, and enjoined him from using the word "Hunyadi" on his artificial Hunyadi Geyza water, which he has been manufacturing from Lake Michigan water doctored with chemicals in imitation of the imported Hungarian natural mineral water, Hunyadi Janos.

This decision should act as a prohibition to the public against imitators.—(New York Tribune, Nov. 7th, 1903.)

E. M. WASSON, a patent medicine salesman well-known in Ohio, died of heart failure in Cleveland. He was going from the Union Station to his hotel and dropped dead on the street. He was buried from his home in Columbus.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories.

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

PUBLIC OPINION.

The public likes a hustler. Give the public an idea that you are a hustler and that you have made up your mind to get a share of its trade, and the public will make you hustler, for it is human nature to follow the crowd. You cannot be a hustler, however, unless you keep posted. The following gleaned from the November 26th issue of the Era should be of service to you:

GRAPE JUICE—RANDALL'S.—Made at Ripley, N. Y., and generally known as the Gold Medal Brand. You should order your winter stock at once as this Juice will freeze in cold weather.

CYSTOGEN.—Made by the Cystogen Chemical Co., St. Louis, Mo., and recommended by them to stop the ammoniacal fermentation of residual urine in cystitis. This product is being widely advertised in medical journals and every druggist should be prepared to supply the demand.

TABLETS.—If you have any private formula or bulk order work in the line of tablets, you should secure a catalogue from the Paine Chemical Co. of Rochester, N. Y., for they make a specialty of this class of work and guarantee strict confidence.

AUTOMOBILES AND CASH REGISTERS FREE.—\$30,000.00 worth of them are to be given away to the druggists of the United States by the World's Dispensary Medical Association, proprietors of Dr. Pierce's Medicines. For further particulars see page 3.

THE ERA DRUGGISTS' DIRECTORY.—The 10th edition was issued in October of this year and is the very best directory of the entire trade ever offered. This book is the standard work of its kind in this country, and contains complete lists of the wholesale druggists of the United States and Canada, and the retail druggists in the United States, Canada, etc.; also a list of manufacturers and jobbers who supply the drug trade, and a classified business directory of the drug, chemical and allied trades. For a more complete description see page 2.

PURE CASTLE SOAP.—Colonna Castle for hospitals and nursery use, and La Primera Castle for toilet use, are made by the Home Soap Co., 68-70 Clark street, New York, and are guaranteed by them to be strictly pure Olive Oil Castle Soaps. It will pay you to handle these brands.

HUMPHREYS' SPECIFICS.—If you are to sell your share of these goods, you should have a Humphreys' Cabinet. If you want one write to the Humphreys' Medicine Co., 111 William street, New York, and secure their cabinet proposition.

SHOW CASES.—Hugh Lyons & Co., Lansing, Mich., say that if you will put your wares in good, handsome show cases, you will have no complaint to make on account of trade being dull. They furnish handsome Show Cases, and will be pleased to send you a catalogue.

PERUNA.—\$5,000 is said to be spent every day in advertising this tonic. You cannot get your share of the results of this advertising unless you have the goods to deliver.

STANDARD PHARMACEUTICALS.—They should command the attention of every pharmacist, as they are made by the well known and reliable firm of Wm. B. Warner & Co. This firm also make a line of well known specialties which every druggist can become acquainted with by securing one of the firm's catalogues.

A PROFITABLE SIDE LINE PROPOSITION.—One that will mean more money to you with very little trouble. For further information note the advertisement of the Forest City Paint & Varnish Co. on page 13.

OILS OF WINTERGREEN AND BIRCH.—The kinds that are produced in the heart of the wintergreen growing country, and claimed by the distiller, John T. Stütz, to be unequalled for purity, strength and color. For quotations, address Mr. Stütz at Broadheadsville, Monroe County, Pa.

DR. TULLAR'S VAGINAL SPRAY.—This is the Syringe they talk about. For prices, ask your jobber, or the Tullar Co., 23 Union Square, New York.

CORKER OINTMENT.—Made by Wm. C. Brinkerhoff, M. D., & Co., 1107 Steinway Hall, Chicago, Ill., and claimed by them to be a "corker" to cure and a "corker" to sell. They will furnish 200 samples for free distribution if you will write them.

BUTLER BROS.' CATALOGUE T182.—This is the December number of "Our Drummer," and it contains a host of unbroken bargain offers that will interest druggists whose holiday stock is incomplete or needs bracing up. If you haven't secured one you better do so at once. Address Butler Bros., at New York, Chicago, or St. Louis.

SANITARY STILLS.—They differ from the other stills on the market in that they not only distill water, but they aerate it at the same time, thus making it as pleasing to the taste as many mineral waters. They can also be used for distilling herbs and flowers, and in the manufacture of pharmaceutical preparations. A cut of this Still may be seen on page 20, and literature, prices, etc., can be secured by applying to the manufacturers, the A. H. Pierce Mfg. Co., 127 N. Green street, Chicago, Ill.

G. S. E.—The great college and society card game, now covered by three copyrights, trade mark and two U. S. patents. Said to be gaining in popularity every day. It should be good stock for any drug store; costs \$2.00 per dozen and retails for 25c; manufactured by the W. W. Gavitt Printing & Publishing Co., Topeka, Kans.

KLIP-KLIP.—The pocket manicure, made of solid German silver, designed for trimming, filing and cleaning finger nails. Retail at 25c and pays the druggist a liberal profit. See cut on page 21.

DR. E. LEWIS, 27 years old, of Robinson street, Pittsburg, Pa., died at his home after a short illness. Death was due to a complication of diseases. Lewis was for a long time manager of Kearsy's drug store, at Fifth avenue and Grant street. At the time of his death he was engaged as assistant tutor at the Pittsburg College of Pharmacy. His death is mourned by a large circle of friends. He was a member of F. & A. M. and I. O. O. F.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued November 24, 1903.

- 744,718.—Isabel Cassidy, New York, N. Y. Massage appliance.
- 744,732.—Max Engelmann, Elberfeld, Germany, assignor to Farbenfabriken of Elberfeld Co., New York, N. Y., a corporation of New York. Process for preparing dialkylbarbituric acid.
- 744,746.—Benjamin W. Glass, Belfast, New Zealand. Non-refillable bottle.
- 744,764.—William Kathol, Vailsburg, N. J. Filtering apparatus.
- 745,028.—Justin K. Toles, Chicago, Ill., assignor to Bauer & Black, Chicago, Ill., a corporation of Illinois. Surgical bandage.
- 745,051.—Samuel B. Goff, Camden, N. J. Bottle-filler.
- 745,139.—Ribecci Belfert, New York, N. Y. Face powder.
- 745,175.—Anton Frederiksen, Copenhagen, Denmark. Bottle-stopper.
- 745,191.—Frederick W. Johnson, Waltham, Mass. Self-closing bottle-stopper.
- 745,195.—James C. Kinsey, Philadelphia, Pa. Closure for milk bottles.
- 745,227.—Clarence A. Myers, Atlantic City, N. J. Label-retainer for salve-boxes, ointment-boxes, etc.
- 745,242.—Thomas W. Ruffner, McKeesport, Pa. Acid-vat.

TRADE-MARKS.

Registered November 24, 1903.

- 41,517.—Antiseptic preparations for mouth and nose washes. Crandall Pharmaceutical Co., New York, N. Y. The hyphenated word "Ben-Sal."
- 41,518.—Hair tonics. Henry Meier & Co., Pittsburg, Pa. A picture of the head of a lady with long flowing hair, having a comb in her right hand, with the word "Godiva" and a facsimile of the signature of Dr. H. F. Knoblauch, deceased.
- 41,519.—Ointments and lotions for certain named purposes. The Lehealol Preparation Co., Melrose, Mass. The word "Lehealol."
- 41,520.—Substance and salve for skin application. Lauderdale Chemical Co., Brooklyn, N. Y. The word "Facine."
- 41,521.—Salvo. The Wilson Company, Richmond Hill, N. Y. The representation of a locomotive drawing four ears, the word "Speedieer" being so printed as to cover the exposed sides of said four cars.
- 41,524.—Furniture and floor polish. Mathilde Lange, Chicago, Ill. The word "Meteor" associated with a kaleidoscopic figure.
- 41,525.—Liquid and paste composition for certain named purposes. The A. H. Andrews Company, Chicago, Ill. The word "Carbo."
- 41,528.—Chloride of lime. Crookman Brothers, Chicago, Ill. The representation of three stars.

LABELS.

Registered November 24, 1903.

- 10,544.—Title: "J-B." (For ammonia.) Jenkins Bros., Brooklyn, N. Y.

The Best Stopper for Perfume Containers.

This is a season of the year when druggists begin to think seriously of putting their own Perfume Extracts, Toilet Waters, etc., upon the market, and if any of our retail friends are at sea as regards the proper kind of a stopper for containers of this class of goods they can soon get on the right track by consulting the advertisement of Swindell Bros., Baltimore, Md., which appeared on page 17 of the November 26th issue. This firm are the manufacturers of the Brawner Patent Self Closing Glass Sprinkler Top, recognized by leading perfumers as being the best sprinkler top for their use upon the market. The manufacturers of the Brawner Top claim that it is perfect in every detail, that it is far superior to metal tops, for it will not corrode, and it gives a more finished appearance to the package at less cost; it is also so made that it closes the opening in the neck of the bottle when not in use, thus preventing evaporation and protecting the contents from any hurtful influence. These stoppers are sold by wholesale druggists and jobbers of glassware, or they may be secured direct from Swindell Bros., Bayard and Russell streets, Baltimore, Md. This firm also makes a specialty of perfume and prescription bottles which are worthy of the druggist's careful consideration.

BUYERS KEEP CLOSE TO ACTUAL REQUIREMENTS.

New York, December 1.—A continued fair jobbing movement into consuming channels is reported by dealers, but as usual toward the end of the year buyers are inclined to keep close to actual requirements when making purchases and there is not much activity outside of the so-called sundries suitable for the holiday trade.

OPUM—Primary markets are ebbled somewhat steeper and the local situation is correspondingly improved, but consumers are yet able to supply their wants at \$3.25@3.50 for 9 per cent. and \$3.35@3.60 for 11 per cent. Powdered is still available at \$4.25@4.50 for 13 per cent. and \$1.75@5.00 for 16 per cent.

MORPHINE SULPHATE—Business in this jobbing way continues moderately active with quotations nominally steady at \$2.60@2.70 for eighths in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.30@2.40 in 5-oz. cans.

QUININE SULPHATE—Dealers report a continued average consuming demand with the tone of the market firm but there is no change in quotations and the ruling figures are 25@25½ for bulk in 100-oz. tins, 25½@26 in 50-oz. tins, 26@26½ in 25-oz. tins, 27@27½ in 15 or 10-oz. tins, and 32@32½ in ounce vials.

HEPACA—Rio is somewhat easier in sympathy with a recent decline in the London market and spot jobbing quotations have been reduced to \$1.70@1.95 for whole and \$1.85@2.05 for powdered, according to grade and quantity.

SILVER NITRATE—Owing to a decline in the metal, manufacturers have reduced their quotations 1c per oz. and the revised jobbing prices are 43@48c for crystals and 45@50c for fused.

CALENDULA FLOWERS—New crop are obtainable in a jobbing way at 35@45c as to size of order.

CYPRION ROOT BARK—The market is better supplied and easier with jobbers quoting 25@30c for whole and 30@35c for powdered.

SARSAPELLA—Mexican is easier under a similar influence and jobbing quotations show a decline to 20@25c for whole, 22@28c for cut or crushed, and 24@30c for powdered.

PLUM LEAVES—Owing to freer offerings from producing markets, spot jobbing prices have been reduced to 25@30c.

VIOLET FLOWERS—New crop have begun to arrive and the tone of the market is firm with jobbing stocks held at 25@30c as to quantity.

BLOOD ROOT—Stocks continue to diminish and jobbing quotations show a further advance to 25@30c for whole, 28@35c for ground and 30@35c for powdered.

ACONITE ROOT—Slow trading and increased supplies have developed a weaker feeling among holders, and quotations for jobbing quantities have been reduced to 19@23c for whole, 22@26c for ground and 24@28c for powdered.

Oil, SWEARMENT—Values are firmer under the influence of stronger primary markets, and local jobbers have advanced quotations to \$2.25@2.50.

Oil, WINTERGREEN—Natural is scarcer and higher with jobbing prices showing an advance to \$2.35@2.60.

Oil, WORMWOOD—The market is weak owing to a liberal yield of new crop and jobbing quotations have declined to \$1.50@1.70 for prime and \$1.75@1.125 for gross.

Oil, WORMSEED—Supplies are light and the market firm with jobbing quotations showing an advance to \$1.85@2.10 for Baltimore and \$1.60@1.85 for West.

Oil, CAMPHOR—Owing to extreme scarcity and the fact that the next arrivals are not expected for two or three months the market is stronger and holders have advanced quotations to 20@25c as to quantity.

\$30,000.00 in Prizes for Retail Druggists.

Progressive druggists seeking to draw the attention of the public to their stores should give careful consideration to the advertisement of The World's Dispensary Medical Association appearing on page 3 of last week's issue. The manufacturers of Dr. Pierce's Medicines have evolved many practical advertising ideas, but their present one appears to eclipse all the others as it will pay the successful druggist two profits. In short, the advertisement says that the above-named Association will give away to the druggists of the United States \$30,000 worth of automobiles and cash registers as prizes for successful window displays. Druggists know full well the value of window displays as advertising mediums, and we shall be greatly disappointed if Era readers do not carry away the greater part of this small fortune. For further particulars, just tell Dr. R. V. Pierce, Buffalo, N. Y., that you saw it in the Era.

The Pharmaceutical Era.

BUSINESS NOTICES.

THE ERA DRUGGISTS' DIRECTORY.

The 10th revision of the Era Druggists Directory, now ready, is the best edition we have yet offered. It is the standard work of its kind in this country and includes a complete list of the druggists in Costa Rica and the principal drug stores in Chile, Peru, Bolivia, Equador and Colombia.

The list of retail druggists in the United States does not quite reach the 40,000 figure which the last edition showed, but this loss is made up by increased numbers in Part III. (Manufacturers, Jobbers, etc.)

This Directory will be found invaluable to any merchant or manufacturer who does business with the trade. It is sold only by subscription, and until further notice the price will be \$5.00 per copy, net, postpaid.

The edition is limited, and we are obliged to reserve to ourselves the right to raise this price at any time.

"We are all learning more or less every day, and wide reading in one's chosen field is imperative."

But there is a great difference both in the quantity learned and the manner of reading.

The newspaper habit, the careless reading of many headlines in many dailies, does not lead to great learning.

On the other hand careful systematic reading is the medium of all education.

Why does the college student read to better advantage than the newspaper habitue?

Because his reading is selected and systematized.

System and selection in reading is, however, also possible outside college walls. The main thing is to get the right person to arrange it for you.

The Era Course in Pharmacy has been selected and systematized for the use of home students by educators of wide experience.

Write to the Pharmaceutical Era, 8 Spruce Street, New York City.

MORE ADULTERATION.

Pharmacy in New York is apparently in a bad way at present; only apparently, however, for we hope to show presently that the situation has a hopeful side. The sale of adulterated and inferior drugs is shamefully prevalent, but we still refuse to believe that conditions are a particle worse than they always have been. In fact, the present campaign of inspection and disclosure is only a step in the elimination of evils the removal of which will mark the inauguration of a new era in pharmacy. The report of board of pharmacy inspections is not at all flattering to the drug trade, but it brings to the surface evils that have long lain hidden; it, moreover, calls attention to the fact that there is a remedy and that that remedy is already at work. The facts disclosed by the report are sufficiently hideous. Out of 492 samples gathered at random, more than 150 have already been found adulterated, and the proportion is expected to reach 40 per cent. This in spite of the fact that the examiners allow a liberal margin in favor of the store inspected. The preparations examined are those usually made on the premises, tinctures of iodine, etc. A large proportion of the samples were far below official strength, and some were adulterated with cheap and inferior materials. In some cases the tincture of iodine proved to be above standard strength, apparently the result of a hurried attempt at correction by the druggist. When the inspector hove in sight, the drug man hastily dumped a handful of iodine crystals into the tincture bottle, apparently unaware of the fact that the presence of a mass of crystals would at once reveal the trick. At the beginning of the present campaign, there were loud demands for a searching inspection of the department stores, which appeared to be selling below cost; the result has been far from flattering to the regular drug trade, for the samples were remarkably near the pharmacopoeial standards. Without the department store samples to improve the average, the report would, in fact, be still more unpleasant. It is not improbable that when the report becomes public property, the daily papers will publish the names of delinquents. Publicity of this kind will not add to the public's confidence in the calling, but in the end it will perhaps have a salutary effect.

NOT AS BAD AS IT SEEMS.

At first sight the announcement that forty per cent. of the samples collected at random from the drug stores of the city do not conform to the official standard, seems to indicate a hopeless state of degeneracy in the trade; but there are other considerations which render the situation distinctly encouraging. The violations were, except in isolated cases, unintentional. In most cases the samples were below standard strength because they had been prepared by incompetent or ignorant persons. The result is the same as far as the effects are concerned—ignorance is no excuse for violation of the law—but it shows that there is a remedy at hand, a strict enforcement of the pharmacy law and the elimination of the incompetent. The ignorant shop keeper who has for years been a reproach to the drug trade must go. The present campaign places a premium upon the thoroughly able and honest pharmacist. Defective samples obtained in stores owned by men of high reputation for ability and integrity were invariably traced to incompetent clerks. This helps to explain the present scarcity of thoroughly reliable clerks. "But," will say our irritable pessimist, "how is it possible that you can extract comfort from a situation so desperate?" To which we may reply that the situation is better than pharmacy has ever before experienced in this city, and that the present agitation is the beginning of better things. It is well to remember that until comparatively recently pharmacy got along as best it could without restrictive laws and inspections. In the old days nobody bothered himself about standards unless he felt so inclined, and who knows what strange concoctions were dispensed for official tinctures and extracts? A drug store could be opened with very little capital and the business offered many attractions to the small trader. The result was a host of druggists who were pharmacists in name only. Members of this class were no more competent to mix drugs than to build Brooklyn Bridges. If they happened to own pharmacopœias they did not know how to use them. Some of this class still survive, and if pharmacy is to take the place it deserves, these incompetents must be weeded out. No one really interested in the calling will be sorry to see them depart. They are beyond the influence of associations and journals, and the jobbers do not seek their accounts. They are out of place in this calling and the sooner they seek other means of livelihood, the better for all concerned, themselves included.

ETHICS OF THE LIQUOR TRADE.

Mr. Ebert—his letter appears upon another page of this issue—thinks the pharmacist should have nothing to do with the sale of liquors, and to that end he proposes to exclude these materials from the U. S. Pharmacopœia. Our correspondent has spent a long and thoughtful life in pharmacy, and his opinion possesses unusual weight and value. His views are probably those of thousands of other druggists who have found in the liquor department of their stores only vexation of spirit. The remedy proposed is no doubt the result of careful thought and calm deliberation, and yet—we hope we may be pardoned if we point out a few difficulties. In the first

place, if liquors were omitted from the pharmacopœia it would be necessary also to omit medicinal wines and other preparations into which these liquids enter as constituents. It might also be necessary to exclude alcohol, and that would be plainly impossible. In the second place, a simple removal from the official list would not banish liquors from the drug store shelves. The pharmacopœia influences only a small part of the pharmacist's stock in trade. None of the 28,000 proprietary preparations on the market are official, yet they make up fully one-half of the druggists' trade. The articles on the shelves are not there because they have received the official sanction, but to supply a demand legitimate or otherwise. If it were possible to ignore everything not included in the pharmacopœia pharmacy would be very different from the curious drug business of today.

THE IDEAL LIQUOR LAW.

Mr. Ebert suggests that we offer some solution of the liquor trade problem. It is a difficult question, and no solution which is entirely satisfactory has ever been offered. We certainly do not feel competent to solve it. Many pharmacists will have nothing to do with liquor, and find this way out of the difficulty very satisfactory to them; but it does not answer all conditions. The legitimate business of the druggist is the supply of materials used as medicines. In this country pharmacists are not limited to the dispensing of prescriptions as are the pharmacians of France. They are allowed and expected to sell a number of medicinal agents in bulk, both to the physician and to the patient directly. Alcoholic liquors are prescribed by many physicians and have a legitimate use in therapeutics; as medicinal agents the druggist should, therefore, be permitted to supply them. But wines and whiskies are also employed as intoxicating beverages, and as such their sales are subject to various legal restrictions. The sale of intoxicating beverages is not a legitimate part of the druggists' business, and here lies the root of the difficulty. An ideal liquor law would leave the pharmacist free to sell these materials as medicinal agents and make it impossible for him to sell them as beverages. If all druggists were conscientious in the matter, there would be no need of laws—the thing is sufficiently simple, a refusal to sell answering all requirements—but some men, unfortunately, will not do their duty unless compelled to do so, hence the numerous laws. There are many fairly good laws in the various States, but most of them seem to be imperfectly enforced. Some invite violation, like the Massachusetts law, and some are impossible of enforcement. In our opinion the most satisfactory measure thus far proposed is the New York law, which permits the sale of a limited quantity of liquor under a government stamp, the stamp tax being sufficiently high to prevent competition with the regular saloon trade, and all sales being recorded. Perhaps the quantity adopted in this State is too large—a pint seems more than necessary for any medicinal purpose—but the measure is simple, easily enforced and just. Of course, this law, like every other law is absolutely valueless unless enforced.

A CURIOUS USE FOR A LIQUOR LAW.

Liquor laws may sometimes be made to serve purposes for which they were never designed. Here is a story which is not a fairy tale nor a history of curious happenings in the strange countries of the moon. A certain town in a certain State somewhere upon this planet has a retail druggists' association and also an excellent liquor law, which, as frequently happens, is not treated with great respect. The R. D. A. occasionally has trouble with certain obstinate members of the craft who are proof against all the insinuating blandishments that the organizer is able to bring to bear. But the R. D. A. is resourceful; it contains brains of extraordinary Italian suppleness, and is capable of wiles beside which those of Macchiavelli are mere bungling child's play. When the obstreperous druggist on the back street becomes mulish, the police of the district receive a quiet tip that the liquor law is being violated at a certain number on a certain street. The heavy hand of the law descends, and the R. D. A. presently hears loud and plaintiff calls for help. In a few days the organizer drops in at the number and street indicated, and the former recalcitrant falls into his arms, pays his dues like a little man and is good for a long time afterward. We are apt to look upon the unused furniture stored away in our attics as so much worthless rubbish, but if we keep our wits about us we can often put some of the old discarded pieces to very profitable use.

THE DRUG CLERK'S HOURS AND PAY.

Some interesting data about the pay and work of drug clerks in Minnesota have recently appeared. Long hours seem to be the universal cause of complaint among the clerks and nearly all the associations which they have organized are designed to secure a reduction in the daily period of toil. According to the figures given, the Minneapolis drug clerk averages thirteen hours of daily duty, although some remain at work from 8 o'clock in the morning until 11.30 at night, and all work thirty days a month and seven days a week. Thirteen hours of daily toil is not unusual in other walks of life, but there is perhaps no other calling which requires even occasionally as many as sixteen hours. The clerks deserve to have this grievance attended to upon grounds of common humanity, but we doubt whether their stock argument that the wear and tear of long hours makes drunkards and "dope fiends" of them, does them much good. Over-indulgence in stimulants is a personal vice, for which circumstances should not be blamed. The young man who resorts to drink and drugs to keep himself fit for his plain duty would probably have become a drunkard or fiend anyway. To employ a lame excuse as a plea for more considerate treatment is undignified, to say the least. In the matter of wages the clerks will also have difficulty in gaining much sympathy from the general public. There are, it is said, only two drug clerks in Minneapolis who get \$100 a month, some receive \$85, but the majority do not obtain more than \$65, while there are some who get only \$40 a month. In consideration of the clerk's long hours and great responsibility, these sums do not seem larger than they should be, but in comparison with wages as

W. A. TALBOT, Warren, Pa.,
Secretary and Treasurer, The Piso Company.

wages run throughout the country, they are not small. We fancy that even in Minnesota the proportion of clergymen who receive more than \$1,200 a year is extremely small, and even \$40 a month for twelve months is far in excess of the average pay of the teachers in American schools. The drug clerks have a perfect right to better their condition in every way possible, and we hope every one of them will get an increase of salary at the end of this month and always have three nights a week off, but they must not expect people to pity them over much. We all have troubles of our own and some of them are quite as serious as those of the Minneapolis clerks.

AFTER THE DEATH OF COMPETITION, WHAT?

We present this week an article which deals with the future of trade associations and the results which may be expected to follow the destruction of the ordinary low-price competition. This interesting paper entitled, "Pillel's" Association Experience," is not offered as an expression of our own belief, but merely as a suggestion of an important phase of a most important subject. The writer skillfully follows the imaginary history of the drug trade in a town of medium size after competition has been superseded by an era of brotherly love. The reduction of all to one common level of price deprives the largest and most enterprising druggist in the community of his only advantage and destroys profits generally until a new form of competition arises which brings forth the old conditions anew. An expert in N. A. R. D. affairs could no doubt easily find numerous fatal defects both in the premises and in the deductions. For instance, it is difficult to understand why it was necessary to adopt a flat schedule by which many prices were reduced and very few raised. If the druggists had agreed to advance prices all along the line, there would have been no loss of profits but a gain instead. Whether this would have been permanently satisfactory to the cutter, is another question. How the merchant whose prosperity and even existence depends upon selling more cheaply than his neighbor, will regard agreements which deprive him of his only weapon of offense and defense, is a question which we should very much like to have somebody answer for us.

INVASION BY THE UNLICENSED PRACTITIONER.

San Francisco, November 27, 1903.

To the Editor:—Pharmacy is the art of preparing medicine to meet the demands of rational drug therapeutics. The practice of pharmacy includes all that is implied by the words manufacturing, compounding, dispensing and selling medicine. Medicines are poisons, and the only justification for preparing and selling them is to be found in their proper application to the treatment of the sick. Special education and training is required to apply them aright. Therefore the practice of pharmacy is dependent upon, and subsidiary to, the practice of drug therapeutics. Special education and training are also requisite for the practice of pharmacy, therefore pharmacy should be regarded as a separate, but closely related, profession, when considering the relation between pharmacy and the medical profession.

The field of pharmacy and that of drug therapeutics necessarily overlap to a certain extent. Physicians are obliged to dispense medicines under certain circumstances, and the public demands that the pharmacists should know the properties of drugs as therapeutic agents, and be prepared to recommend them for the treatment of minor ailments. The two professions should therefore come to some mutual understanding in regard to the boundary line between them, and stop accusing each other of infringement upon each other's preserves. Until they do they will not be in a position to unite in repelling the invasion of the unlicensed practitioner now seriously threatening the practice of pharmacy and drug therapeutics.

It has been said that any person except a physician or pharmacist can practice medicine or pharmacy in the United States without a license. And when one observes how the nostrum business grows and thrives there seems to be some truth in the saying. For the nostrum business, as represented by patented foreign synthetics, and domestic so-called proprietary medicines, has undoubtedly absorbed a large part of the business of manufacturing medicines belonging to the licensed practitioner of pharmacy.

The Supreme Court of the United States, in its decision in the *Fig Syrup Case*, No. 36—October Term, 1902, contains the following sentence: "It may be said . . . that most, if not all, the States of this Union have enactments forbidding and making penal the practice of medicine by persons who have not gone through a course of appropriate study, and obtained a license from a board of examiners, and there is similar legislation in respect to pharmacists. And it would seem to be inconsistent, and to tend to defeat such salutary laws, if medical preparations often and usually containing powerful and poisonous drugs, are permitted to be widely advertised and sold to all who are willing to purchase. Laws might properly be passed limiting and controlling such traffic by restraining retail dealers from selling such medical preparations, except when prepared by regular medical practitioners."

If physicians and pharmacists would heal their differences and unite in demanding such legislation they would doubtless obtain it. To secure such union appropriate measures would have to be adopted in which the pharmacist would receive a license to do a certain amount of prescribing, without leaving his store, and he would have to be sufficiently educated to prescribe in a proper manner.

The Pharmaceutical Era hits the nail on the head in its editorial, appearing in the November 10th issue,

when it says that "the pharmacist is responsible for all materials dispensed over his counter whether he knows what they contain or not, and he accepts that responsibility when he accepts his license to practice pharmacy from the State." That being true, it follows that the practice of pharmacy, including the manufacture and sale of medicines, should be under the control of the pharmaceutical profession, as the Supreme Court suggests; and the profession should be so organized as to control the action of its own members, just as the legal profession is, and those guilty of unprofessional conduct should be disbarred, and their license to practice taken away from them. Then there would be no secret medicines, and the profession of pharmacy would be in a position to guarantee the materials dispensed by means of a bureau or board of control instituted by the profession for the purpose.

F. E. STEWART, M. D., Ph. G.

NO LIQUOR IN THE PHARMACOPOEIA.

Chicago, November, 1903.

To the Editor:—I have always been interested in your editorials on the liquor traffic of the drug store. They have the true and sound ring, but unfortunately do not suggest a remedy for the evil.

The writer for many years has asked that wines and liquors be eliminated from the official list of the United States Pharmacopoeia. This in his opinion would go far to separate the druggist from the so-called saloon druggist who makes use of pharmacy to sell rum at the expense of the legitimate saloon keeper.

On account of the recognition of wines and liquors as remedial agents by the national standard, local permits for this sale is obtained, which would not be the case if they were not so acknowledged.

In the writer's opinion based upon half a century's practical experience and observation they are not more necessary to be dealt in, than gun powder which is sometimes called for in drug stores—again I say drop wines and liquors from the forthcoming pharmacopoeia for it will benefit pharmacy by removing one of the troubles we are constantly cursed with, and at the same time reduce the number of existing drug stores in this country.

ALBERT E. EBFRT

ERA COURSE IN PHARMACY.

Graduates for November, 1903.

Matriculation No.	Examination Grade.	Per cent.
3746	Sister Pauline, St. Joseph's Hospital, Girard Ave. and 16th St., Philadelphia, Pa.	96
2525	Webster E. Little, Tarpon Springs Florida	98
3173	Isaiah Allen Conrad, 2514 Columbia Ave., Philadelphia, Pa.	93
3578	Claude H. Kratzer, Nazareth, Pennsylvania	75
3453	Fred W. Spreen, St. Louis College of Pharmacy, St. Louis, Mo.	96
3588	Wallace M. Pierce, M. D., 743 Harris Ave., Providence, R. I.	92
2021	H. Leshe Buzine, 1002 W. Second St., Wilmington, Delaware	97
3903	George C. Borresen, 425 Main St., La Crosse, Wis.	96
3607	Zachariah G. Jones, 902 E. Eleventh St., Kansas City Mo.	75
3630	Otto E. Schach, 343 S. Fourth St., Coshocton, Ohio	96
3846	Albert M. E. Buenger, Box 675, Colorado Springs, Colorado	96

The above graduates will receive diplomas within a short time. A large and very handsome engraved diploma printed on artificial parchment, with the graduate's name engrossed, especially suited for framing will be furnished to all who request it for the sum of \$2. Those who desire the latter should forward the necessary fee at once to the Pharmaceutical Era.

SHOP TALK

PRACTICAL EXPERIENCE.

Labels on bottles and boxes are school-books and teacher to the boy who undertakes to learn the drug business by process of absorption. Tommy, Brown's new boy, made such use as he could of these pharmaceutical data, and in a short time he had tugged away under his cap a curious collection of verbal lumber. It was no doubt, real knowledge, but as yet it was of extremely doubtful utility.

The head clerk encouraged him to look up some of the names in the dispensary, but progress was slow and uncertain. When fully one-half of the words in a sentence had no meaning for us, our reading somehow does not take hold. To a savant, the synonyms of castor oil and the formula for ricinoleic acid may be very interesting and illuminating, but to a child who has been hastily weaned from school at the age of thirteen, the effect is apt to lack inspiration. The boy soon picked up considerable knowledge of the outsides of bottles but his information commonly failed to penetrate the stoppers.

Absorbing knowledge from labels is, however, comparatively safe. The so-called "practical" method of instruction is probably more effective, but it is not so innocent, at least Tommy found some hazard in it. He learned very thoroughly that a cylinder charged with carbonic acid gas must be treated with due respect, but the process by which his knowledge was acquired will scarcely recommend itself to educational experts.

Frank, the junior clerk, wished to get away early to the ball game.

"Say," said he to Tommy, "have you charged the fountain yet?"

"No," said the boy. "I didn't know I was to do it." "Well you'd better get at it, then. And you'd better be quiet about it, for Mr. Brown won't like it that it hasn't been done before."

"I—I don't know if I can do it alone," said Tommy. "Oh, pshaw! You know how. Why don't you get that kid to help you?"

"Who, Fred?"

Frank nodded and was off. So Tommy stole down the cellar stairs, opened the door into the back yard, and whistled for his crony, a boy of inquisitive and adventurous turn of mind, and some years younger than the regular factotum of the store.

"Want some fun?" inquired Tommy.

"What is it?" said his chum, making a dive into the dark doorway.

"You see that handle?" explained Tommy. "You jiggle it back and forth—like this—when I turn that thing over there. You want to work it good and hard, 'cause if you don't—"

"What'll it do?" asked Fred eagerly.

"Splode!"

"And what then?"

"What then! You don't want to be around when it splodes, that's all."

"Why, what'll it do to you?"

"Blow you all to slivers. There was a man in Biggs-ville—Frank told me about him—he ran a dray—he had one of those things—it was hot, in July—I don't know what that had to do with it—it fell off onto a stone, and it—"

"Busted!" prompted Fred jumping up and down in his appreciation of the exciting situation.

"That's what it did, and what's more, it blew him—the man—all over town. They had to pick him up in a basket—and they haven't found all of him yet."

"Gee!" said Fred, eyeing the cylinder with great interest. "Do you think she'll go off?"

"I don't know, but you want to keep the thing going when I tell you to."

Fred tested the rocking apparatus and stood eager to begin. Tommy gave the cylinder valve a slight twist and stepped back to watch the gauge. He did not know that unless he also opened the valve into the fountain reservoir or something gave way, there would presently be several tons of pressure in the connecting tube.

"Hey, Fritz! What are you doing? Jiggle it—jiggle it, man!"

A loud report and a hiss of escaping gas cut short Fred's frantic exertions.

"Run Fritz—for your life!" shouted Tommy and shot through the basement door, over a pile of boxes, through a jungle of burdocks, over the high fence, into the yard and street beyond. When he ventured to look around he saw the courageous Fred several blocks away streaking down the centre of the street, and in his eagerness to keep a few fragments of his small body together, making as close an imitation of Mark Twain's whizzing jack-rabbit as human limitations permitted.

Tommy looked at the store with expectant horror. He wondered where the head clerk would come down and if Mr. Brown would break into many pieces. But nothing moved or happened, and presently the boy stole around the corner to get a look at the front. The windows did not bulge out the least bit, and the sign swung peacefully on its hinges.

The boy plucked up courage and cautiously peered into the cellar. There was the apparatus exactly as he had left it. The hiss had long since died out, and the cylinder had never looked more innocent.

The soda fountain expert tiptoed to the valve and turned it down firmly. Some fifteen minutes later a very much subdued boy appeared at the prescription desk. When the head clerk had finished and adjusted the label which occupied his attention, he looked up. "Well!"

"Mr. Thompson," said Tommy, "There is something the matter with that soda thing down stairs."

"Who told you to meddle with that?"

"Frank said I was to get it ready."

"Oh, it was Frank, was it?"

As the head clerk surmised, the safety disk had blown out and the cylinder was quite empty.

Tommy's mother did not hear of her boy's exploit until some months later, and then it was too late to be alarmed.

CUTTING MANAGES TO KEEP AHEAD OF THE GAME.

"How much do you charge for Quiller's Qualm Queller?"

"Eighty cents," replied the druggist.

"Eighty cents! And Cutting advertises it for sixty-seven."

"But you know, Mrs. Brown," suggested the man of drugs mildly, "that it is a dollar preparation and—"

"That doesn't make any difference. I'd like to know what right you have to charge us more than anybody else."

"We try to give our customers the best of everything."

"They all say that. My family has traded here for years, and yet every Tom, Dick and Harry can go to Cutting's and get things for less money. If that's the way you treat old customers—and good pay too—I'll go somewhere else. No, sir! My money is worth as much to me as it is to you. I suppose you would charge me two prices for this prescription too." At the thought of this added indignity she flounced out of the store.

The druggist sighed but said nothing. The evening of the same day: enter Mr. Brown, husband of Mrs. Brown.

"How much would you charge for filling this prescription?" he inquired.

"Seventy-five cents," replied the patient pharmacist after studying the formula a moment.

"I thought so."

"Do you want it filled?" asked the man of drugs.

"I see it has been filled before. That is Cuttings' stamp, I believe."

"No thank you," said the old customer. "Mrs. Brown had it made up today. Cutting charged her two dollars for this, and then gave her a bottle of Quilley's Qualm Queller for sixty-seven cents."

"Yes, that's the way he does it," observed the druggist.

IS IT THE MILK OF HUMAN KINDNESS?

Adjusting yourself, immediately, spontaneously, to the peculiarities of your customer, no matter what his class, is something a college of pharmacy does not teach. It can't. It is a pity that every pharmacy student cannot spend at least a half-day in Charles S. Erb's store at Sixty-fifth street and Amsterdam avenue when that gentleman is behind the counters. Secretary of the board, head of a half dozen associations and orders, he is a busy man. With all that he spends many long days in his store, sometimes alone, except for the porter and the dog. And the way he hustles around is as big a caution as his comfortable manner of handling customers is an inspiration. It's more fun watching and listening there sometimes than at Weber & Fields. There are the humorous incidents of twenty minutes there on last Thursday afternoon. Mr. Erb was alone.

Man with young son who had his hand bound up. Undid wrapping.

"Sliver, eh? Yes, I see; it's out all right. Looks good and bad too, don't it. Better use sweet oil instead of vaseline, and bathe it with hot water. Don't mention it."

Turning to one of half a dozen who had congregated meanwhile:

"What is it for you?"

"Please, sir, my ma wants some black paper, a black envelope and a black stamp. Baby's dead."

Mr. Erb was all sympathy, hiding his amusement to spare the child's feelings.

Young woman, about twenty. "Please, I have a bottle of perfumery for twenty cents that I got here. Can I exchange it?"

"You most certainly may. Now what will you be best pleased to have?"

"Well, I believe you'd better do the choosing."

"Oh, have you any violet soap?"

"Yes, ten cents a bar. Two bars?"

"No, one. Let's see, have you got a sleeping powder?"

"Yes, ten cents."

"I'll take that, I guess. No, I don't want this soap. I'll choose a cake for five cents."

By this time Mr. Erb had waited on two other customers. His voice came from behind the prescription case.

"All right; give you sleeping powder, soap, and five cents in change. How will that do to save time?"

"Oh, Mr. Erb, I'm sorry to take so much of your time."

"It's all right, only—"

"Shall I charge this or will you pay for it now?"

He was calling to a young woman just going out.

"Oh," she stammered and came back.

"A quarter. Thank you. I caught you that time, eh?"

Then Mr. Erb picked up his conversation with the sleeping powder girl.

"Only that is the cheapest way I thought."

"I know your time is valuable. I am sorry—"

"Now, don't you care; you stick by me long enough and I'll get even with you."

And she went out, smiling.

Telephone bell rang, and we saw a sterner side.

"Hello! — & —? Yes. Now if you do that I shall be very angry. You have made too many mistakes. I ordered a ten-cent size and you sent a six-shilling —. What? New girl? Well, that's not my fault. You must send what I order or I'll send it back. I won't take anything I don't order. Is that plain enough English?"

He rang off.

"Here, you're trying to go away without paying me, too, are you? What is this, a conspiracy? Guess I'll have to keep the dog at the door."

Another woman came back in confusion. But she went away smiling, too.

A man with his back to the stove started to tell that he had often forgotten to pay, too.

"So have I," said the pharmacist.

Traveling man.

"In a hurry today and can't talk. Send around a box, though. Do I get it through your house direct or through the jobber? Jobber? All right."

Child returning bottle citrate of magnesia. "There's five cents on this," she said.

"I don't see it. Guess you mean five cents for it, don't you?" The little one smiled bashfully.

Fourteen-year-old girl handed Mr. Erb a paper.

"My mother wants you to read that."

"I know what it is without reading it."

"Bet you don't!"

"Bet I do. She wants to know how to use it?"

"That's just it! How'd you know?"

"Oh, I just knew. Tell her same as she did before; just rub a little in her scalp."

Mail man handed him a letter.

"Thank you, Linnie."

And so on. Not a moment was lost while he replied to the many questions. He talked from wherever he might be at the moment. His customers are nearly all of the middle, working class, and they all like him.

He came around to where the Era man stood. "Yes," he replied to a compliment, "and I like it. Lots of fun if you have the right disposition. And they like it."

As the Era man went out Mr. Erb was "jolly" a caller, trying to get him out to the "Chapter" next night. The store does a very big business, and its ever-pleasant, lightning-moving proprietor is largely the cause.

HOW MRS. McGRONE REGULATED THE THERMOMETER.

An uptown druggist took it into his head to combine advertising and philanthropy. His neighborhood contains the working class, largely. An epidemic of colds had been going around.

The druggist gave each of his customers a thermometer, of course bearing his advertisement, and told them how desirable it was to keep the mercury always at a certain point.

One day Mrs. McGrone came into the store. "Good mornin' to yez," she chirrured. "Good mornin', Mrs. McGrone," the druggist replied, "and how's the thermometer today?" "Ah, its a foin' thing, sur, to be shure." "And where do you keep it, Mrs. McGrone," he asked. "A shwingin' from the chandler, sur," she answered. "It's fine, that is," said he. "And what do you keep it at—the number, I mean?" "At sixty, always, sur," she said. "Good again!" he said. "And do you find it always so easy to keep it there?" "Oh, inlaid it's not hard at all," she assured him. "Whenever, an' especially after the gas is lighted, it gets too warm, I take it out in the yard an' cool it off a bit."

The Advice of Friends.

The advice of friends is a good thing to listen to in matters of business, but it is a very sorry prop for one's support. "Each man builds his own house and lives in it." Success comes of self-reliance. No two friends will advise precisely alike as touching any one thing. He succeeds best who with ax in hand cuts his own way.—Printers Ink.

PILLEM'S ASSOCIATION EXPERIENCE.

By PEHR LIGNELL.

MY friend Pillem, is a cutter; not of the mean, contemptible kind, but simply an up-to-date druggist.

When he first came to Drugville, buying out an old fossil druggist, he found to his delight, that all of his competitors were old fossils too; or rather he found out that fact before he bought the store, and that decided him to settle in Drugville.

Drugville, is a city of medium size, and the drug business had been conducted on neighborhood lines for years, i. e., people went to the nearest store, as none was more prominent than any other. Now, that is where my friend Pillem saw his opportunity. He advertised, he improved the looks of the store, took special agencies, and in every way he made "The Palace Pharmacy," a shining light.

Soon the people were seen "steering" for the Palace Pharmacy when they wanted drugs, etc., and my friend Pillem prospered. Of course he "cut," that is, he sold patents at city prices, being in a city. All these things greatly disturbed the old druggists; they talked it over, they—well, they did not include Pillem in their nightly prayers, and never by any chance recognized him on the street. And Pillem did not care one way or another; he was attending strictly to his ever growing business.

As a result of the other druggist's uneasiness, there appeared on the scene a representative of the Universal Association of Drug Peddlers. He was smooth, he was plausible, he was "large of stature" as per requirements. He called on Pillem. Now Pillem has always been a man who believed thoroughly in associations and, in short, in everything that would help to advance the interests of his profession. He was thereupon glad to meet this gentleman; he easily fell in with his ideas; he became enthusiastic.

A big meeting was called; all attended. Pillem was unanimously chosen president; he was flattered and could not for the life of him comprehend all this cordiality, good fellowship and expressions of friendliness from his erstwhile enemies. He went to work on this association matter, worked hard and would not stand in the way of reform and any possible advance of the drug interests. Prices on all dollar goods were fixed at 95 cents; others in proportion. That meant, of course, an advance of eight or ten cents over Pillem's former prices, but there was the good of the association to consider of course and a small matter like that could not be of any moment; so matters were thus arranged.

Things went along smoothly, at first; an era of good feeling set in among the druggists, borrowing was more frequent. Were they not all friends? Pillem felt good and thought his competitors had at last discovered his good points; it felt good to be appreciated, really it did.

Now Pillem had a system for his store that would show him the sales, increase and decrease of every department, etc. I have always had it as my own private opinion, that Pillem's success denuded more on his perfect system, than on anything else, but that is aside. One day when I dropped in at Pillem's as I often did to admire his way of doing business, and if possible absorb some of his ways myself—one day, as I said, I dropped in. There was the usual buzz at the fountain, the cash register went at a continual "cling-clang," clerks were all busy and the whole store wore a prosperous look. Pillem himself sat at his desk, busily figuring. Thinking that he was figuring his profits I did not want to disturb such a pleasant occupation, and was slowly wending my way towards the door when one of the clerks stopped me, saying that Mr. Pillem wished to see me.

Pillem is a very agreeable man, when he wishes to be, and after fishing out some good two-fers and lighting them up., he finally brought the talk around to drug topics. Wanted to know how "bizz" was,

I told him that as far as my store was concerned it was slightly on the increase. "What is on the increase," he said. "What line of goods are selling better than usual," he queried.

When I came to think it over I could not tell him precisely, I merely thought that the receipts were better, that was all. "That is the usual way with you fellows," Pillem said. "Don't know what you are selling or whether you are making money or not." Pillem is a little outspoken at times, and apparently does not care a fig if you get offended or not. He went on to tell me that his patent medicine business had fallen off about half. "Tell you what," he said. "You fellows have worked a confidence game on me all right," and Pillem winked knowingly. "Don't you see," he went on. "I was selling patents at 82 and 85 cents, now I sell them at 95 cents; my expenses are the same as when I sold them at 85, but my sales are halved. I do not take much figuring, to see how much money I am losing. In comparison with my former sales I am getting ten or twelve cents more for each sale, but as my sales are now only half of what they used to be, with the same expense, I am out on this deal. Then you must remember that all of my competitors are selling at the same prices as I do—and that easily accounts for the falling off in sales. They are getting only 95 cents whereas they used to get a dollar, but their trade has increased correspondingly as mine has decreased."

"Another thing," he continued. "Part of the advertising value to me is lost inasmuch as the public can now get patents at the same price everywhere. Formerly they had to come to me, and I consequently sold them other goods that they now buy in the stores where they buy their patents. And to cap the climax, I can not get out of this agreement any more for the U. A. D. P. would stop my supplies."

As I went back to my little suburban store I could easily see Pillem's position from his standpoint. We the small druggists sold more goods at a slightly smaller price on patents only, whereas Pillem lost most of his patent medicine trade and a lot of other trade in the bargain.

Some months after this a representative of the U. A. D. P. arrived in our city again and called a meeting. After recounting the benefits we all were reaping from the association and our agreement and getting another liberal contribution for his association, he proceeded to spring another scheme, this time for the price of counter goods.

Why, asked he, were we satisfied with small prices and continual bickerings among ourselves in regard to prices on common drugs and chemicals, why not get together and establish a schedule on that too. I became enthusiastic and, in fact, so did we all. The idea! Why had we not thought of that before? Everybody was forming trusts and organizations of every kind and here were we, the druggists, who considered ourselves educated men away behind common laborers when it came to a question of profits.

Pillem tried to get a word in edgewise, but he was hardly given a hearing. The question was barely discussed, so impressed were we with the idea and what it promised for us all, that we were afraid that something would come between us and its possible execution. The vote was taken and the resolution was adopted in a minute; a committee was appointed to agree on prices; and the meeting adjourned.

By and by I received my little book with association prices, and after perusing it, I must confess that my former enthusiasm cooled considerably. The prices were considerably lower than those I had been in the habit of charging. But, thought I, here is the reason why So-and-So at the next corner has got so much of my old trade away from me—he was on that committee. I never thought that he would sell at those prices, but he must have done so, for he was no doubt instrumental in getting the other members to agree to this and again I blessed the U. A. D. P. as our saviour.

I might have gone on and continued to ask my old

prices and never have known at what prices my competitors were selling their goods, but now I knew at least, that they were not selling at prices lower than these, and if I had lacked this assurance, I might have continued to ask my old prices, and thus have permitted the trade gradually to get away from me.

As I have mentioned before, Pillem had a way, often disagreeable, of saying things that hurt one's sensibilities. Now, one of his most repeated sneers at the ordinary druggist was that he did not take an inventory every year, nor had any so called system about his sales, to ascertain his profits in different departments. About this time, I began to think that there must be some truth in his savings; my sales were about the same, still my bank account was slowly diminishing. I forgot to mention that what had jarred on me, when Pillem had been funny at the expense of the average druggist, was that I was one of those who did not take stock and had no particular system.

You see, my store was an old one, that I had bought; the trade had always been about the same and my clerk had been with me for years, many many years, so that I did not even have a cash register. And really, I had never seen the use of taking stock or in having any system of sales by departments, etc. Since I became acquainted with Pillem, I had often thought about his way of doing business. He was not content like the rest of us to make a bare living; he wanted profits which he later no doubt intended to expend for steam yachts and automobiles. But as for me, I was going to-day about the same as I did—well never mind now how many years ago it was, that I bought this store—I lived well; that is, considering the living my friends and acquaintances were getting, many of them. I had often thought with pride, much smarter than I ever was. But lately I had often thought that even I might have made a big strike if I had not been so very conservative, and if I had taken advantage of opportunities.

Anyway, the last twelve months, my sales had been about the same, and my bank account slowly getting lower. I therefore bethought myself of Pillem's way of taking inventories, and finding out where I really "was at."

My old clerk and I had the most strenuous life for a couple of weeks after that; we took an inventory, and it was really a voyage of discovery. I had stock the existence of which I had never been aware, and many articles were of no earthly use as far as selling was concerned; they might have been of some use in a museum. On the other hand, I found as I said things that I did not know I possessed; for instance, we found a full barrel of cod liver oil hidden in the basement, and here we had been buying it in half gallon lots at famine prices.

The result was not so very far out of the way. Of course, I did not have so large a stock as I thought I had, and my complacency was knocked out of its grooves a little, but the result was a puzzle; my stock was smaller than I thought and also my usual yearly bank account, while the sales were about the same. Now, where was the trouble?

One night I went down to Pillem's; the Palace Pharmacy was as brilliant as ever; the fountain was buzzing as usual; the cashier was "ting-linging" the cash register, and business was—but really, when you gave it a second look, you were made aware of some changes. What was it? I thought that more clerks than usual were off at night, or perhaps they were in the prescription room. Trade too seemed a little slower—or was it only temporary. Pillem was at his desk as usual and greeted me with his kindly grin. "Well, been on your vacation?" said he, "haven't seen you for long time." I told him that I had "been taking stock, not, it must be confessed, without some pride in the fact that I could mention it to him casually like, for I had always thought that Pillem supposed I did so annually.

Pillem handed me a cigar, waited till I had lighted up and said with a decided wink, "I rather think that is what most of the druggists have been doing lately,

altho' it is a funny time to take stock at this time of the year." I told him that I did not know if others had done so or not, but that I had, and that I had come to him for advice. You see, Pillem, and I were located very far apart; I was on the other side of the river in the factory district while he was away downtown.

He winked again quizzically and I could not see what he was driving at, at all, till he said, "Do you not note some difference in the store here?" On my confessing that it seemed a little slack, he continued "Yes, guess it is a little slack—sure enough—have let three men go the last month and am just clearing expenses." I told him about my experiences. "Yes, I know!" Pillem said. "That is about it, you are doing about the same business as usual and making less money than usual. I am doing less business by fifty per cent. than usual and am making no money. Don't you see where your agreement on counter goods is taking us? The secret of my business was lower prices than the others, and I could make money only on account of the volume of my trade, considering my large expenses. The secret of your success, on the other hand, was higher prices even if your aggregate sales were less. Now by coming down to my prices on counter goods, you make less profit on them and lose five per cent. besides on your patent medicine sales. The expenses being the same as you always have had them. The public don't have to walk any extra blocks now to get better prices, the prices being the same in every store. We are all flat down on a level, something like the English labor unions, suiting our pace to the slowest worker. Advertising does not count, brains, do not count, fixtures do not count nor ability, the people know that the prices are the same all over, and why then should they patronize anybody in preference to anybody else? The only solution would be to close half of the stores but who is willing to close, and how would he dispose of his goods?"

"Do you know what will be the result of this, for the drug business?" he asked. "Yes, the result will be easy to foretell; there is soon going to be another war, and a worse one than the drug business has ever seen, and if that fails, all the men of brains, business ability and push will quit the business for good leaving it to you old mossbacks. If they do, how will the drug stores of the future look? Yes, like the small candy stores of to-day, small holes in the wall."

"Well," said I, "what are you going to do? Are you going to be content with your present business, or what will you do?"

"I will tell you in confidence mind you," said Pillem. "I am not the only one in the business who feels that he is done; there are lots of others, my boy, and we are almost ready now to revive the business. The past six months we have been organizing on our own hook; we have equipped a large factory to make patents, about six or seven hundred different kinds. These will be handled by us only and advertised extensively. Regular patents will be bought through brokers and sold at flat cost, as an advertising feature, and if any association will interfere with our chemicals or drug supplies, we can fix them easily through brokers too, no fear of that. In that way we will be entirely independent of any old association.

You fellows who are out in the cold will try to sell the regular patents at full price. As you cannot compete with us on prices, the public will naturally pass your stores as they did before this association existed. The cut prices on patents will draw them to our stores. Besides, we will sell a lot of the new patents we intend to make and sell with hardly any competition. Then again we can sell counter goods at any price, away below your prices anyway, and let me ask you, where will you be? You are not the only one of the small druggists who are awaking to the fact that bank accounts are getting smaller, while the work is the same."

Now, this did not sound very encouraging and to make a long story short, I understand from Pillem

that he and the other "big druggists" will start their new scheme the first of the year. I am very anxious to know how it will work.

QUALITY VERSUS PRICE.

Druggists are beginning to place more emphasis upon superior quality than upon low prices in their arguments for trade. The cutter still follows the beaten track, and continues to call customers with the old "I sell cheapest" cry. With the disappearance of price-cutting we may expect to see more druggists ignoring the price argument and insisting upon quality. Here are a few examples of what some enterprising druggists have done in the way of publicity without classing themselves among the "cheap":—

From a booklet of the Palace Drug Store, Carson City, Colorado:

"Questions often arise in people's minds concerning the quality of drugs used in prescriptions, and the ability of pharmacists. Oftentimes this question is right and natural. The compounding of a perfect prescription is the result of years of study and practical experience, and the use of only the purest and freshest drugs. At our store you get the benefit of years of experience, and we guarantee no substitution nor impure drugs. We would like to fill your next prescription. It is to your advantage."

Con De Pree, druggist in Holland, Mich., prints upon his letter heads, checks and blanks, the following motto:

"The Best is None too Good. Especially in Medicine."

The same principle is employed in some of the best advertising prepared by the M. P. Gould Co. From a booklet on "Quality":

"The greatest thing in the world is not the saving of a few pennies. There is a saving which does not save. In drugs and medicine quality is of the first importance every time. Nothing else is of any importance. The size of a bottle of medicine has nothing to do with its cost, or its real value."

"Is there any profit or satisfaction or reason in saving possibly several cents on a prescription and getting medicine of an inferior quality? Medicine prepared from drugs of an inferior quality, by careless or hurried or inexperienced clerks is costly at any price."

"How can a druggist charge a lower price for filling a prescription than perhaps only one of the drugs in that prescription costs (if the purest quality is used), and still claim to do prescription work of the highest quality? On the face of it there is something wrong. Look for quality in prescription work—not price."

From a slip distributed by Albert E. Marsland, Brooklyn:—

"We are not angels; nor do we claim many of their attributes; but we do work always and faithfully to carry out to the best of our ability the intentions and wishes of physicians who write prescriptions and direct them or allow them to be brought to us."

"Our Prescription work is of a consistent character and we would welcome, right in the midst of any part or process of our work, on any prescription, the physician who wrote it."

WHAT DID THEY DO WITH IT?

At an auction sale of unclaimed packages, the accumulations of a year by the Adam's Express Co., at its Boston office, one buyer secured for twenty-five cents a box containing a dozen bottles of a remedy good for every ill under the sun—a remedy rarely heard of these days. The stated price put by the manufacturers on each bottle was seventy-five cents. A college chap bought for sixty cents a box which proved to contain half a dozen bottles of a beef blood diet, the wrappers on which gave the price as a dollar a bottle, and the package further contained several bottles of a remedy for indigestion. There was much general fun at the sale.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Castile Soap.

(S. K. J.) White castile soap is the only kind officially recognized by the Pharmacopoeia which requires that it shall be prepared from soda and olive oil. A sample of soap which responds to all of the requirements of the Pharmacopoeia may be said to be perfectly pure. Marbled castile soap is harder, more alkaline, and more constant in its composition than the white variety. It contains less water than white castile soap and while, therefore, stronger and more economical for many purposes, it is less pure, the impurities arising from the veins of marbling and consisting of ferruginous matters introduced in manufacturing. Similar criticisms may be made against the commercial varieties of the so-called "green" castile soap.

The manufacture of genuine marbled castile soap in European countries is described by Gathmann ("American Soaps") as follows: Olive oil (from the second pressure of the fruit) with or without the addition of other oils, is saponified with lye at from 10 to 20 degrees B. Coloring matter is then added, such as copperas (sulphate of iron), which, together with the sulphur compounds either present in the crude soda or otherwise added afterwards, causes a greenish black color by the formation of ferrous sulphide. The marble formed by these materials changes to yellow on exposure to the atmosphere. The soap is grained on strong lye, which contains considerable salt in solution, and the waste lye is then run off. It is then once more boiled on strong "salted" lye and the waste lye drawn off again. Fresh lye of 22 to 25 degrees B. is then added and the soap boiled until saturated with alkali and strongly boiled down. A little water is then carefully added to bring the soap to the right condition for marbling, or successive portions of lye gradually decreasing in strength, are used for the same purpose. The soap is then run into large wooden frames and left to crystallize, in order to form the marble. (The coloring matters collect in non-crystalline portions).

For white castile soap the process is the same, but omitting the coloring and thinning the soap for "setting," first with lye at 6 to 7 degrees and then with still weaker lye, and at last with water.

Of course there are variations from this process, as well as in making all other soaps. The appliances and lye used in the foreign countries are very different from those used in the United States. The lye is still made to some extent from kelp, or more frequently by causticizing soda ash. Differently prepared lyes are used for different operations, and the boiling of a batch of soap over the open fire still used there, and the many changes of lye, generally take from three to four days.

It will be noticed that the mottle is produced from the same cause in true Castile soap as in "German Mottled," only the conditions required for mottling are brought about in different ways, for while

E. F. TROLINGER, Belle Buckle, Tenn.,
Secretary Tennessee State D. A.

in the former the soap is boiled to a grain and then thinned with lye or water, the German Mottled is made by boiling on pickle or soap already containing too much water. In order to make the mottle more intense, coloring matter may be added to the soap.

Soaps that have been boiled down immediately after saponification, without settling, invariably contains some free alkali. For this reason sulphate of iron, which was formerly employed as coloring matter in such soap, was added in such a manner as to combine with the free soda, thereby setting the iron free to form the marble and also neutralizing the free soda present. The oxide of iron and other similar pigments now generally used do not possess this neutralizing action.

We are not familiar with the brand of soap you mention.

Oilcloth Coats.

(St. Pierre, Miquelon). The manufacture of oilcloth coats is, we confess, wholly out of our line and those engaged in the business refrain from giving out any of their trade secrets. The best we can do, therefore, is to give some formulas collected from various technical publications which may prove of assistance by suggesting to you possible lines of experimental work. We cannot answer for the practicability of the formulas.

"Oilcloth coats or seamen's "slickers" are made ("Workshop Receipts") by first dipping the material, preferably fine twilled calico, in bullock's blood. The material is then dried in a current of air and two or three coats of raw linseed oil, containing a little gold size or litharge, applied. After each application the cloth should be allowed to dry thoroughly before the next one is applied, the drying operation being conducted in a current of air, and in a place protecting the cloth from both sun and rain. "Oilskins" made in this way have stood the wear, both here and in the tropics, for years.

(2) Istinglass, alum soap, equal parts; water, sufficient. Dissolve each separately; mix the solutions and apply to the cloth on the wrong side. Dry, and brush the cloth well, first with a dry brush and then lightly with a brush dipped in water.

Oiled Muslin is made by stretching suitable pieces

of colorless muslin upon frames and applying to it a varnish made from 6 parts of boiled linseed oil, $\frac{1}{2}$ part rosin, and $\frac{1}{8}$ part turpentine. Another varnish for the same purpose is said to be made by boiling 6 parts of oil with $1\frac{1}{2}$ parts of litharge and $\frac{1}{2}$ part oxide of lead. The glossiness of the fabric is produced by passing the cloth between heated rollers, a piece of the damp but very smooth fabric being placed on either side of the oiled muslin. It is said, too, that the composition of the mixture with which the muslin is coated requires alteration, according as the finished fabric is to be used in a cold or warm climate, or in winter or summer. The manufacture of these articles is not without some risk, as the rapid drying of fatty oils in contact with combustible material may cause spontaneous ignition.

Flexible Varnish for Cloth.—(1) Linseed oil, 1 gal.; dried zinc sulphate and sugar of lead, of each, 3 ounces; litharge, 8 ounces; both, with constant agitation, until the mixture "strings" well, then cool slowly, and decant the clear portion. If too thick, thin down with quick-drying linseed oil. Apply with a brush. (2) A varnish for preparing "oiled muslin" may be made from 6 parts of boiled linseed oil, $\frac{1}{4}$ part rosin and $\frac{1}{8}$ part turpentine, or by boiling 6 parts of linseed oil with $1\frac{1}{2}$ parts of litharge and $\frac{1}{2}$ part of oxide of lead. The varnish is applied to the muslin stretched on suitable frames. The glossiness of the fabric is produced by passing the fabric between heated rollers, a piece of damp but very smooth fabric being placed on either side of the oiled muslin.

Liquid Depilatory.

(R. J. M.) We know of no satisfactory depilatory in liquid form. Most all of the depilatories recommended at the present day, and the Era has published a great many formulas for this class of preparations within the last eighteen months, depend upon the presence of a freshly prepared sulphide, and are usually applied in the form of a paste. A typical formula is the following, from Martindale: Barium sulphide (in fine powder), 1 to 3 parts; powdered starch, 3 parts. Mix. Make into a paste with water at the time of using, spread over the part required, and remove at the end of ten minutes. In a similar manner, Queirel has found calcium sulphide extremely useful in removing hair, especially from the field of surgical operations. The calcium sulphide is applied in a thin layer, like a paste, and rinsed off with tepid water in five minutes, rubbing lightly with a cloth. The hairs wash off with it, leaving the surface smooth, without irritation or inconvenience of any kind, except the rather unpleasant odor of the sulphide, which can be disguised if so wished. The hair soon starts to grow again, however.

The following, from the Pharm. Post, and which we give for what it is worth, is a formula for a

Liquid Depilatory.

Tincture of iodine 6 parts
Oil of turpentine 6 parts
Castor oil 8 parts
Alcohol 48 parts
Collodion 100 parts

To be used once or twice daily for 3 or 4 days. The film formed is then pulled off rapidly, so as to take the hair with it.

Buckberry Bark.

(H. L. S.) "Buckberry," also known as the "deerberry" or "squaw huckleberry," is one of the synonyms for *Vaccinium Stamineum*, which is described by Britton and Brown ("Illustrated Flora of Northern United States") as a divergently branched shrub, 2 to 5 feet in height, with pubescent or glabrous twigs. It is found growing in dry woods and thickets from Maine to southern Ontario and Minnesota, and south to Florida, Kentucky and Louisiana. The leaves are astringent. We do not find buckberry bark listed in any price list at our command.

The name "seedy buckberry" is one of the synonyms for *Xolisma ligustrina* or privet *Andromeda*, found growing in Canada and the eastern United States.

NEWS DEPARTMENT.

AMONG THE BOWLERS.

Pegging Away.—Detroit Doing the Best Work.—
Phenomenal Average of Siffer of Parke, Davis
& Co., Detroit.

There was some good individual work in the wholesale drug trade tournament. McGillen, of the Lanman & Kemp five, leading with 237, the record mark of the tourney. Kemble's steady anchor work landed two games for the National Lead Co. The scores, teams and highest individual averages, are:

Lanman & K. 816	722	691	Nat. Lead.	786	730	795
McGillen	237		Kemble	199		
Dodge & O.	863	763	825	Roessler & H. 755	805	800
Howe	204		Hamann	184		

Standings:

W. L.	W. L.		
Seabury & J.	6 0	Lanman & K.	4 5
Parke, D. & Co.	5 1	Dodge & O.	2 4
National Lead.	6 3	Sharp & D.	2 7
Bruen, R. & Co.	3 3	Roessler & H.	2 7

Detroit, Dec. 8.—Scores of 200 or over are becoming a regular event at the weekly bowling tournament. Dr. Siffer, a new recruit on the Parke, Davis & Co. team, did some phenomenal bowling at last week's games, having the remarkable average of 207 for the three games. This team is conceded to be the best amateur team in the city. The team scores and the highest individual averages:

Parke, D. & Co. 889	848	876	N. B. & Co. 767	869	768
Siffer	230		Ludwig	205	
Mich. Drug Co 709	770	695	Ingram & Co. 610	786	743
Cole	164		Smith	209	
Stearns & Co. 667	770	695	F. W. & Co. 890	720	639
Haggerty	164		Gendernalik	213	

The standing:

W. L.	W. L.		
Parke, D. & Co.	19 2	F. Stearns & Co.	11 10
Nelson, B. & Co.	12 9	F. F. Ingram & Co.	6 15
Mich. Drug Co.	11 10	F. W. & Co.	4 17

Baltimore, Dec. 8.—The Baltimore Drug Trade Bowling team club again showed last week that it is composed of excellent material, which can be depended upon to make a good showing alongside of any other quintet in the city. Last week's scores:

Jas. B. & Sons. 683	803	783	S. B. & Co. 780	773	781
Holzerman	200		Winkelman	203

McCormick & Co.	18 9	Stanley B. Co.	12 15
Roots & Herbs.	17 10	Calvert Drug Co.	1 26

DR. CHARLES ST. JOHN, who was killed in the Philippines, was buried from the family home at Buffalo, N. Y., last week. A detail of regulars from Fort Porter acted as an escort. Dr. St. John was killed on May 22, 1901, at Parcele, in a brush with the Filipinos. He was 35 years old. He was a graduate of the University of Buffalo, was formerly a pharmacist and worked at J. A. Lockie's, and later had charge of the pharmacy of the Fitch Hospital, afterward becoming house surgeon there. At the beginning of the Spanish-American war he was appointed a contract surgeon in the army.

OBITUARY.

HENRY MARTIN WHITNEY, long actively identified with the Massachusetts board of pharmacy, died at his home in North Andover, on December 2, from a complication of heart and kidney troubles. Mr. Whitney, who reached the age of seventy-five in August last, was born in Winchendon, Mass. He began in the drug trade in the employ of Carleton & Hovey, Lowell. About 1850 he moved to Lawrence and became junior partner in the drug firm of Wilson & Whitney. He afterward purchased his partner's interest, selling out eventually to W. H. Glover & Co. When the State board of pharmacy was created, the choice for president fell upon Mr. Whitney. He was zealous, hard-working and did much to benefit and purify the retail drug trade. He was at one time president of the A. Ph. A. and never failed to attend its annual convention. Mr. Whitney's aggressive prosecution of dishonest druggists made him many enemies, but among the better class he was widely applauded. He is survived by his wife.

JOHN DWIGHT, who, as the pioneer manufacturer of bicarbonate of soda, was well known in the chemical trade of this country, died on November 25 at his home in New York City, from paralysis. He was born in 1819, in South Hadley, Mass., and, in company with his brother-in-law, Dr. Anstin Church, began the manufacture of bicarbonate of soda in 1846, under the firm name of John Dwight & Co., which, in 1896, became Church & Dwight Co., Mr. Dwight being president. He was an elder in the Presbyterian Church, and a philanthropist. He leaves two sons and two daughters. One of the sons, John E., is second vice-president of the Church & Dwight Co.

DR. CYRUS EDSON of New York, a prominent physician and at one time president of the old New York City board of pharmacy, died at Roosevelt Hospital of pneumonia. He was a son of former Mayor Franklin Edson, and was born at Albany in 1857. He was one of the Columbia crew which won the Henley cup in 1878, the only time America ever had that distinction. A wife and four children survive him.

JOHN MALCOLM HURTT, the son of John B. Hurtt, senior member of the wholesale drug firm of J. B. Hurtt & Co., Baltimore, and associated with his father in business, died on last Thursday, of pneumonia. He was only twenty-seven years old and had many friends. He was raised and educated in Baltimore and entered his father's employ thirteen years ago. His wife and two small children survive.

ROBERT E. PRICE, a first year student at the Philadelphia College of Pharmacy, is dead.

NEW YORK AND VICINITY.

END OF THE YEAR.

It Finds the German Apothecaries' Society in a Flourishing Condition.—Nearly All of the Officers Relected.

Henry Imhof concluded his first year as president of the German Apothecaries' Society, on last Thursday night, and was unanimously relected. His administration has been an admirable one. The society is on the up-track, as Treasurer Felix Hirseman's report shows, with a surplus for the year of \$429.90, a bank deposit of \$2,522.97, total cash assets of \$2,952.87, and a membership, including 19 associate, 2 honorary and one corresponding member, of 324. The expenses for the year were \$1,957.49, the income \$2,387.39. One member was expelled, 5 resigned and eight died.

This high death rate, 3 1/2 per cent. was deplored by President Imhof, who asked the secret process by which his esteemed predecessor Mr. Schlessner, had prevented any deaths. One member Gustav Ramsperger, has paid dues for more than 50 years.

Mr. Schlessner, as chairman of the legal aid committee, said that the case against their fellow member, August Hitzel, had been withdrawn by the plaintiff's lawyer, who had seen that his client had no case. (This case—purely blackmail—was a suit for \$10,000 for an alleged mistake in selling carbolic acid instead of a liniment, and was stated in the Era last summer.)

Paul Arndt appeared without a beard and the meeting nearly broke up. It is believed he did it to disprove allegations that he is older than he is. He succeeded.

Felix Hirseman adjured watchfulness that no "nigger" get into the prerequisite bill to be introduced by the State association this winter.

A misunderstanding had arisen between Corresponding Secretary Sidney Faber and Mr. Imhof, the latter said. It was over a former member who had gone back to Germany a long time ago, residing there seven years and taking out citizen papers. He had returned to this country and applied for readmission, which had been refused because of a recently passed by-law that no person not a citizen of the United States was eligible for membership. Mr. Faber has questioned the conformity of this by-law with the charter.

The correspondence in the matter was read, and the association, by rising vote, affirmed its confidence in President Imhof. Mr. Faber was not present, but had written that he did not wish his name to appear for reelection. The alleged charter violation will be discussed at the next meeting.

The officers for next year are: President, Henry Imhof; first vice-president, Oscar Goldmann; second vice-president, Max Schneider, of Brooklyn; treasurer, Felix Hirseman; corresponding secretary, George Hoffmann, 427 Garden street, Hoboken, N. J.; recording secretary, Dr. Carl F. Klippert; archivist, Geo. Leinecker; librarian, George C. P. Stolzenburg; trustees: "The Three Carls."—Schur, Kessler and Schlessner. The legal aid committee is Carl F. Schlessner, Carl Schur and George Kleinau. John M. Fischer was reappointed chairman of the trade committee, and, after Felix Hirseman had refused a reappointment, George Kleinau was made chairman of the legislature committee. S. V. B. Swann was reappointed as entertainment man.

A rousing vote of thanks for his long and valuable services as corresponding secretary was given Mr. Faber. William J. Koch and Herman Blohmeyer were elected new members. Leopold Freyberger who had sold his store, resigned. C. Troestler of Brooklyn, an old member, is dead.

THE SHOOTERS' SHOOT OFF TO SHOOT.

The "Shooters' Shoot" is off again. This club, comprising A. A. Stilwell, Brent Good, M. J. Breitenbach, E. G. Wells, Martin H. Smith, M. Mayer, J. G. Monihan, J. Schlicht, G. Blampey and Charles C. Forster, all well known in patent medicine and medical circles, are noted for thrilling experiences. This trip is to Anne Arundel county, Md. Ducks, fun, frolic—that's their slogan. But here is a "welcome," composed by one of their number to the rest:

"Once more we meet upon this shore where sport and game are found;

Once more we grasp each friendly hand and pass the bowl around;

Once more we slap our brother's back in welcome and in cheer;

Once more we see the little ducks as they come floating near.

Once more we fill the old gun up with powder, wad and lead;

Our spirits rise unto the skies—dull care away has fled.

Once more we fill our good selves up, our load is quite a weight;

Our spirits are not rising now, but going down first-rate.

So pass along the loving cup, we'll drink a welcome toast

To each and every Shooters Shoot and our right genial host.

So fill your glasses to the brim and give a hearty cheer;

We're glad to meet upon this shore and meet each other here.

"The Shooters Shoot" are a right good clan, gay and free from care.

Here's to our luck; may many a duck fall to each one's share.

A welcome then, with right good will, we'll drink to Chesapeake Bay.

And year by year we'll all meet here, tho' we come from far away.

Here's Health and Luck, and many a duck to each and every brother.

We'll pass around the loving cup and welcome one another."

GOOD CLERKS ARE VERY SCARCE.

Never were good clerks so scarce. This was illustrated when a clerk left Hegenan's, 200 Broadway, where he was getting \$15 a week, and went to Jungman's, where he was formerly employed, for \$23. This advantage on the good clerk's side is largely contributed to by the activity of the board of pharmacy, as the proprietor, to feel certain that the board will not find a bad sample, is taking greater care that his clerks are not blunderers, and as the small proprietors no longer dare risk being caught out while an unregistered man is in charge. Therefore, he either foregoes the pleasure of going out to his meals and on similar excursions, or, that he may go out, hires a registered man.

MRS. BERTHA CODDING WILCOX, wife of Howard N. Wilcox the leading druggist of Bristol, Conn., is dead. She had been an invalid for many years. She was 32 years old. Beside her husband she leaves a daughter, Helen.

INTERDENOMINATIONAL DRUG COMMITTEE.

Readers of the Era have of late often noticed long accounts about the "Interdenominational Committee to Suppress Drug Addiction," usually in the church news of newspapers. It now develops that this philanthropic movement is purely a sharp business venture on the part of ex-Preacher Dr. W. N. Richie, secretary of the "committee."

The report of this interdenominational committee was widely circulated in October. Appeals were made for funds to free slaves to vicious drugs. A history of the committee's origin was always included, as follows:

"The late Rev. John Hall, D. D., LL. D., of the Fifth Avenue Presbyterian Church, New York, became so impressed with the far-reaching and terrible effects of the use of opium and with a remedy which was discovered by a German scientist, after fifteen years of experimenting, and which came into the possession of the Rev. Dr. Richie of the Presbyterian Church, that he united with the Rev. F. F. Sample, D. D., LL. D., ex-moderator of the Presbyterian General Assembly; the Rev. Dr. Bliss, editor of The Independent; the Rev. Dr. Stoddard, editor of The New York Observer; L. A. Maynard, editor of The Christian Work; the Rev. D. S. S. Baldwin, recording secretary of the Methodist Episcopal Church; Dr. Henry Cobb, secretary of the board of foreign mission of the Reformed Church; the Rev. Dr. Creagan, secretary of the American board of commissioners for the foreign missions, and other well-known men, in having the matter laid before the secretaries of other foreign mission boards. This led to the appointment of the Interdenominational Committee to Suppress Drug Addiction."

The committee's officers were: The Rev. Dr. R. F. Sample, president; Thomas O. Conant, editor of the Examiner, vice-president; the Rev. Dr. Francis E. Marsten, pastor Bechany Church, second vice-president; W. W. Westervelt, lawyer at 33 Pine street, treasurer, and Dr. Richie, secretary.

During an investigation of a late appeal for funds it was admitted by the secretary, the treasurer and the vice-president that the committee was formed solely to further a purely business enterprise of the Rev. Dr. Richie, who for more than five years has been engaged in the manufacture and sale of a secret remedy for the cure of the drug habit.

Dr. Richie's factory and salesrooms are in two rooms in the Presbyterian building, at 156 Fifth avenue. He admitted that he had bought the formula for his secret remedy as a business enterprise, and, through his connection and acquaintance with many well-known religious leaders, through his former connections with the Presbyterian Church as a minister, had interested a large number of them to lend their names to his scheme. He was convicted in October, last year, of unlawfully practicing medicine, and was fined \$75. He was once a pastor of the United Presbyterian Church in West Fourth-fourth street, this city, and then took a Philadelphia pastorate.

Both Dr. Richie and his assistant, Dr. "Lukworth,"—the name is assumed—admit that they are not successful with their patients.

BOARD OF PHARMACY UNDER CIVIL SERVICE?

The board of pharmacy is awaiting a decision by Attorney General Cuneen as to whether that body is under the direction of the Civil Service Commission.

Secretary Birdseye of the commission notified the board last month that the attorney general's decision that the new board of examiners for barbers comes under the commission's jurisdiction was taken by them to mean that their power was the same with respect to the board of pharmacy, and the commission warned the board not to pay any of its employes except upon the commission's approval.

President Brundage, Vice-President Gregory and Secretary Bradt, after receiving an opinion from the board's counsel adverse to the commission's claims, at-

tended a hearing by the commission at Albany, presenting briefs. Attorney-General Cuneen was made referee by common consent.

CUSTOMER OWNS PRESCRIPTION IN HARLEM.

Who owns the prescription, that puzzling old question, was settled, so far as the Harlem Police Court is concerned, on Saturday, when Magistrate Baker told the druggist that if he didn't give up the prescription he would have to go to the Tombs.

A retired policeman caused the ruling. Several years ago he got what he considered a wonderful prescription for sore throat from his family physician. He had it compounded at the pharmacy of James Wood, 2227 Third avenue. Wood sold the pharmacy to the Harlem Drug Store Co. On Thursday the ex-policeman went to the drug store and asked for his prescription, that he might have it filled at a pharmacy nearer his present home. The manager refused to give up the prescription and Magistrate Baker summoned Charles Robinson, a clerk, to court, ordering him to give up the prescription. But when the ex-policeman went after it the next morning he was again refused. Magistrate Baker had Robinson held to court. Then he said to him: "Either you give up that prescription right now, or I will send you to the Tombs to answer a charge of larceny. These prescriptions belong to persons who buy them from physicians and none other. They are left with druggists simply for convenience of both parties."

The prescription was given up. Magistrates have decided like cases before. In Detroit a magistrate decided as did Magistrate Baker. In Cincinnati it has been decided otherwise.

FOR FIVE-DOLLAR ALCOHOL TAXES.

Both the German Apothecaries' Society and the Manhattan Ph. Soc. have endorsed legislative committee reports recommending that the present government \$25 liquor tax and the state \$7.50 alcohol tax be repealed, and a uniform \$5 national and \$5 state taxes be substituted for them, for the benefit of those who wish to sell only alcohol, and do not care to handle liquors.

The two legislative committees will communicate with the internal revenue department at Washington to see what can be done. The various state associations will be asked to take the matter up. The purpose is not so much to secure a reduction in cost to the druggists as to change the classification, which in the case of the government, is that of a liquor seller.

MEDICO-PHARMACEUTICAL LEAGUE OFFICERS.

At the New-York County Medico-Pharmaceutical League's meeting on Friday night at the Tuxedo, the following officers were elected for 1904: President, Dr. A. Ernest Gallant; vice-president, Dr. Samuel S. Wallian; second vice-president, Dr. James Moran; secretary, Dr. Joseph Gutfreund; treasurer, Dr. Samuel F. Brothers; trustees, Dr. Thomas H. Manley, Dr. W. R. Inge Dalton, Julius Kalish, pharmacist; E. Esentrager, pharmacist; William J. Lederer, dentist, and Dr. Eugenie R. Eliscu, Dr. Louis Rosenthal, Dr. Gustavus

Henkle of New-London, Conn., and Dr. Edmund Peaslee Douglass of Groton, Mass.

COCAINE VENDERS "VINDICATED"—FOR A CONSIDERATION.

The Mercantile & Financial Times of 64 Murray street this city, a sheet that exists by writing up men and ventures, the consideration therefore being the purchase by or on behalf of the person or thing written up of a certain number of copies at 15 cents per, had a screed in its issue of November 21, entitled "Unwarranted Attack On Druggists."

The Illinois board of pharmacy's prosecutions of Brendecke, et al, cocaine venders, is the subject, and this alleged newspaper calls it "persecution," "attributable to business jealousy," in a half column of falsehood and trash.

But the luminous part is that the agent for the paper went to Mr. Bodemann, president of the board, first, offering him a mushy editorial in its columns for \$45—the price of 300 copies. Mr. Bodemann's reception of the agent need not be described to those who know him. So the "other side" were offered an editorial, and bought it.

"I hope that Brendecke, et al., paid enough to enable this blackmailing sheet to send a copy to every druggist in the country," writes Mr. Bodemann to the Era.

But the "blackmailing sheet" alluded to does not mail its copies. It ships them by freight to the object of its carresses and the latter does the distributing.

The term "blackmailing," was mildly objected to by the old man in charge at the "editorial" office of the paper, who was seen by an Era man on Friday. "Oh, no! no! oh, no! no! we do not blackmail! Oh, no! no! we would not do such a thing! Oh dear, no!" But he admitted that his crowd were paid for the article.

PUZZLE: WHEN WILL HE GET THE MONEY?

Some serious things are really very funny, for instance, this letter, received last week by the Era from a Rochester manufacturer:

"Gentlemen: We have just received the following rather mysterious telegram:

"For particulars of your customer H. P. Crosher, New York, apply to Pharmaceutical Era, number eight Spruce street, New York.

Drugs. . . 446 P.

"Can you give any particulars of interest about Mr. Crosher? The man we are interested in does business at 66 Greenwich street, New York City, and owes us some \$431. If you can assist us in interpreting the above, we will be under obligations to you."

There is considerable difference between \$431 and the cost of a subscription to the Era, which warns its readers against men of the Crosher variety.

GERMAN APOTHECARIES' FIFTY-THIRD BALL.

The fifty-third annual ball of the German Apothecaries' Society will be held on January 21, at Terrace Garden. There will be no regular dinner. There will be 2,500 invitations sent out by Entertainment Committee Chairman S. V. B. Swann, who anticipates that there will be 1,000 couples in line for the grand march, which begins at 10.30 o'clock.

BOARD OF PHARMACY MATTERS.

Mr. Erb, secretary of the Eastern Branch of the board of pharmacy, was besieged all of last week by reporters for the daily papers. Some one had written them, "tipping them off" about the latest batch of adulterations. They were refused any specific information. But a report will be made to General Secretary Bradt on the last of the month, and then the facts will be public property. There is a probability that the druggists involved will find themselves in public print then.

There will likely be a license revoked at the next board meeting, as it is asserted by a pharmacist in this city that an affidavit purporting to have been made by him as an employer, on which a candidate was permitted to take the examination, was a forgery.

This work of investigation by the board of pharmacy, members say, is going to make times remarkably better in the local retail trade. A premium is being put on competency and honesty, both with the clerks and the proprietors, and those, who, by dishonest practices, are enabled to keep their heads up financially will be crowded out. "Which will be a good thing," the members affirm.

The ignorant will also have to go. "We find that college graduates show up best in the samples," a member said. "This encourages the belief that the 40 per cent. of adulterations are largely contributed to by ignorance."

As a sample of this ignorance: A druggist in this city told a board member that their proceedings were high-handed and unheard of. "Why do you swoop down on us without warning?" he asked angrily. "It is not fair. The board ought to send out a printed notice to every pharmacist thirty days before a visit is contemplated, notifying him of such visit."

PHENACETIN COUNTERFEITERS ARRESTED.

Joseph Haas, alias Harry J. Claire, reported discoverer of the gold cure, is in the Queens county jail awaiting action on four indictments for burglary. He was captured with three others, and in his possession in a Long Island City house, where the gang made their headquarters, was found several hundred bottles of spurious phenacetin, which Haas was manufacturing and selling. There were also counterfeit labels of the Farbenfabriken company.

Haas comes from Pittsburg. He is said to be a competent chemist and wealthy. His lawyers are now fighting for \$50,000 in royalties on the gold cure, which they assert are due Haas. His first downward step was in counterfeiting labels of a big western wholesale drug house. His family's influence secured his release at that time. Ernest Menet, a Frenchman, also a chemist, was arrested with Haas, as were also Dominic Ricco, William Flanagan and Charles Blackburn.

NEW BOLTON-RIKER STORE IN BUFFALO.

The Lyon Drug Co. of Buffalo was incorporated on December 2. The capital stock is \$44,000. The directors are George G. Lyon of Providence, William C. Bolton of the Bolton Drug Co., Brooklyn, Edward D. Cahoon of New York, Edwin P. Dodge of Providence, Louis K. Liggett of Newton Center, Mass., Alfred H.

RUBINAT WATER

IF YOU BUT SELL 50 BOTTLES A YEAR

WRITE FOR MY QUOTATIONS

J. N. FERRER

P. O. Box 71 NEW YORK CITY

Cosden of New York and Charles P. Jaynes of Boston.

Mr. Liggitt is a member of Chester Kent & Co., Boston, and he and his associates in the new company are all prominent, both by reason of their big retail business and their connection with the United Drug Co.

The plans of the new concern are to open a large retail drug business on Main street, Buffalo, in the busiest section of the city, and to push not only goods of their own manufacture, but a full line of all patents at cut prices.

NEW YORK NOTES.

—On the evening of December 19, the Drug Trade Club's rooms will be open to permit members and their friends to witness the illumination and display of fire works incident to the opening of the new Williamsburg Bridge, of which a very good view may be had from the club's windows. Not more than one hundred cards of admission will be issued. A dinner will be served from 5.30 to 7 o'clock, and an additional opportunity is that of seeing the loan exhibit of paintings to which some very valuable additions have recently been made.

—A circular letter has been addressed by the Merchants' Association of New York to prominent retailers all over the State, asking aid in an attempt to have the trading stamp abolished by the next Legislature. The association denounces the stamp as "an artificial means of stimulating trade which results to the injury of the merchant as well as to the consumer."

—The J. Elwood Lee Co., Conshohocken, Pa., writes to the Era: Noting your news items upon Government coupon remittance to McKesson & Robbins, we beg to add our novel experience. Several days ago our mail disclosed a request for a Syracuse Suspendory from a York Stater enclosing two twenty-five-cent "skin plasters," in excellent condition, for payment.

—Candidates for election to the Drug Trade Club are: Charles H. Ketchum, 100 William street; Smith Weygant, 25 Broad street; Dr. J. J. Taylor, Philadelphia; Rudolph Andreae, 100 William street; Dr. Thomas C. Taylor, Larchmont, N. Y.

—Seabury & Johnson of the National Wholesale Drug Trade Bowling League, did up the Retail Druggists' Bowling Association on Monday night. S. & J. won the greatest number of points in two games by eight.

—Meinicke & Co., this city, obtained a judgment for \$136 against Julius Richter; Schieffelin & Co. secured a judgment for \$186 against Charles F. Jones, 439 Lenox avenue.

—Carl B. Franc of the Grape Capsule Co., this city, has gone to Wyoming to see his brother, Otto, of whom he received word that he had accidentally shot himself.

FROM SYRACUSE.

—A number of druggists held a conference a few days ago to consider the question of forming an independent ice company to supply themselves with ice next summer. This action is made positively necessary by the grasping tactics of the ice companies in Syracuse. Last summer the druggists had to pay twenty-five cents a hundred, though the year before they only paid fifteen cents. It is quite likely that an independent ice company will be formed.

—The Syracuse D. A. met on last Tuesday to consider the question of trading stamp and rebate schemes. The stamp nuisance has grown to quite an extent, and recently there appeared a scheme of cash rebate by which the purchaser gets something like four per cent. off by presenting his checks at the store of the company which promotes it. The S. D. A. adopted a resolution opposed to any such scheme, and no druggist will go into the plan.

—E. S. Dawson, Jr., Secretary of the State Ph. A., will this week officially inform the legislative committee of the State association of the action taken by the S. D. A. in regard to the anti-cocaine measures.

—Barnes & Barnes are having a great run on photographic supplies, and occasionally give demonstrations of the paper and the materials which they sell.

—Davis Stolz, formerly with G. E. Thorpe, has taken a position at the head of the manufacturing department of C. W. Snow & Co.

—Willett L. Brown of Brown & Dawson, has been seriously ill with catarrhal appendicitis.

—C. S. Ives had good success in his recent hunting trip in the North Woods.

—Rufus Smith and Frank C. Joslyn have returned from a trip to New York.

—C. W. Snow and family have returned from a week at Atlantic City.

NEW ENGLAND.

MUCH ADULTERATION.

Massachusetts Board of Health Finds 42 of 101 Samples Adulterated—Six Convictions—Wide Range of Drugs Involved.

Boston, December 8.—In its last report, the State board of health shows that a month's inspection of drugs and food products included examination of 101 different samples of drugs, of which 59 were found to be good quality and 42 adulterated. Nine complaints were entered in the courts during the month for violation of the laws relative to the inspection of drugs and foods. In six of these cases there were convictions and fines. The samples of drugs which were found to be adulterated included phenacetine, alcohol, stronger water of ammonia, ether, capsicum, distilled water, sodium borate, glycerine, iron and quinine, precipitated sulphur, oil of lemon, washed sulphur, powdered opium, syrup, tincture of iodine, etc. Samples were collected from all over the State. The percentage of adulteration was lower than often formerly.

APPEALED FROM PHENACETINE CASE DECISION.

Boston, December 8.—Leslie H. Frye, of the Frye Hygienic Medicine Co. of this city, was convicted on the charge of selling adulterated phenacetin and fined \$200. He appealed, and is held in \$500 bonds. The complaint against Frye was brought by the State Board of Health. Mr. Frye's partner, Stanley Donahoe, has disappeared, but officers are in search of him.

An expert witness stated at the trial that five grains of acetanilid had been known to cause death, and that if mixed with pure phenacetin its power of action upon the heart of some people would not be lessened. A health board chemist who examined phenacetin, said that it had been found to contain twenty-five per cent. of acetanilid.

DRUGGISTS' ASSOCIATION ADOPTS STAMPS.

Worcester, Mass., December 8.—At a meeting of the Worcester county pharmacists' association, on account

DOCTORS WILL HELP YOU

Where there is a baby, there should be an

ARNOLD MILK STERILIZER AND PASTEURIZER

You can sell many of them if you let us supply you with free literature with your name, Address, WILMOT CASTLE COMPANY, 26 Elm St., ROCHESTER, N. Y.

of business competitors using trading stamps, to the detriment of the business of druggists, it was voted to adopt trading stamps. The druggists appreciate, they say, that there is a fad of expecting something gratuitous with purchases from the counters of the retail merchant. This being so, they decided it was for their interest to get in line and be up-to-date.

Delegates to the N. A. R. D., P. B. Moriarity and T. A. Brennan, reported.

The meeting was presided over by P. B. Moriarity, president of the Worcester county association. Walter S. Doane was secretary. A large number were present.

THE BAY STATE.

—The Eastern Middlesex D. A. has just held in Malden its annual election. These were elected: President, A. B. Morgan; vice-president, Jesse W. Sargent; treasurer, T. D. Cronin; secretary, C. A. Charles; executive committee—W. P. Sheldon, H. E. Brier, G. Y. Sawyer, J. J. Keaney, W. B. Southworth, G. J. McArthur, John Larrabee, J. A. Morgan, F. A. Spencer. The association is planning a banquet for the near future.

—The Boston Drug Clerks' Union had a jubilation meeting, which, however, had one feature to cause regret—the retirement from office of President James J. McVey, who has served most acceptably during several terms. He is of the firm of McVey Brothers, East Boston. The union presented him with a gold watch-chain with charm attached. Vice-president Joseph T. Collins made the presentation speech.

—Boston drug stores are not finding quite the usual profit in serving egg drinks at their fountains because of the extraordinarily high prices of the eggs, which are now retailing for fifty-five cents a dozen. Druggists are taking some chances on the freshness of eggs purchased much below this latter price.

—The drug store of the late Frank Smith of East Bridgewater, which was temporarily closed, has been reopened by Horace T. Smith, his son. Edward Farrer of Boston, who has been taking an inventory of the stock of the store, has been engaged to conduct the business until the estate can be settled.

—At South Framingham, druggists Theodore F. Rice, Frank A. Bean and Louis F. Hoffman, whose stores were raided not long ago, appeared to meet charges of violation of the liquor laws. They pleaded not guilty and obtained a continuance of the cases.

—Stone & Webster, Boston, have met with loss through fire which partly destroyed their Fort Hill Chemical Works in Rumford Falls, Me. The fire's origin is not known. The damage is estimated at about \$5,000, fully covered by insurance.

—Arthur E. Gray, employed at Cooper's, in Plymouth, broke his arm by too great strenuousness in a recent football game. The real nature of his injury was not learned until several days after the accident.

—Fire in the building occupied by the Billings Clapp Co., the Boston manufacturing chemists, caused damage to the amount of \$1,500. The fire caught in the drying room. Cause unknown.

—The Bijou drug store which Edward E. Wright has just opened in New Bedford, is in the theatre building and has an entrance directly from the theatre lobby, as well as on the street.

—In the continued case of Ernest Picard and Charles M. Graunang, clerks at the Dr. Cabana drug store, Fall River, both were found guilty and each was fined \$50. Both appealed.

—In Fall River, Alexander J. Bolduc, employed at Leander Bolduc's drug store, was found guilty of illegally selling liquors and fined \$50. He appealed.

—Induction wires in the telephone booth in the

drug store of V. T. Fitz Simon, Montello, caused a blaze to start. Soda water saved the store.

—Fire in Woburn damaged Frederick P. Brooks' drug store to the extent of \$2,000. Mr. Brooks was away at the time on a Thanksgiving visit.

—Albert W. Taylor has become manager of Alexander E. Sumter's pharmacy, Springfield, going from Levitan & Co.'s, in the same city.

—In an early morning fire in Quincy, Dr. Richard Gershel's and L. G. Murray's pharmacies were slightly damaged.

—The Dr. Cabana drug store, Fall River, temporarily closed as the result of liquor trouble, has been reopened.

—A store in Danvers is to be entirely made over for G. B. Moulton, druggist.

CONNECTICUT.

—A large fire in the Waterville drug store, Waterville, did several thousand dollars worth of damage. E. R. Bolan, the proprietor, went to the cellar to draw a can of alcohol. He carried a lighted lamp. It was necessary to tap a new barrel. Mr. Bolan set the lamp down at a considerable distance away. The augur bit burst through and the alcohol squirted out. A spray struck the lamp. Burst into flame. Mr. Bolan's sleeve became saturated and burst into flames. A customer heard him call for help and rushed down stairs with a bucket of water which he threw over Mr. Bolan. Mr. Bolan's burns are very painful. The loss is covered by insurance.

—The annual meeting of the R. D. A. of New Haven will be on next Tuesday evening, and will be followed by a banquet. Large numbers of druggists from surrounding towns have been invited. After the banquet the committee have arranged a vaudeville entertainment. This will be the association's first meeting in two years, because of trouble in getting the members to agree about time and place. The committee in charge consists of President Charles Fleischer, Chairman C. H. Conway, Ernest Hesse, J. P. Crowley, J. R. Alling and Otto Marx.

—Thomas C. Trefry, for more than twenty years one of the leading druggists of New Haven, sold his store last week to Joseph P. Degán. Mr. Degán has for several years been a druggist in that town. He is planning to sell his old place. Mr. Trefry gets out on account of ill health and will go South for the winter.

—The State board of pharmacy announce the following new druggists: Herbert G. Wilson, Hartford, Margaret E. Coughlan, Waterbury; Armon L. Cook, Watertown; Harry B. Olsen, Nangatuck; John E. Boyle, Bridgeport. Two women tried the examination, but only one was successful.

—The people of Glastonbury are considerably stirred up over the arrest of Druggist C. O. Talcott and his assistant, A. F. Hetschell, for selling liquor. Both men were fined \$50 and costs.

—Governor Chamberlain has announced his appointment of Herbert E. Smith of New Haven, as State chemist for two years.

FROM MAINE.

—In a recent raid by officers upon several Portland drug stores, liquor was found in only one place, the pharmacy of William F. Stone. He has been summoned to court.

—Joseph F. Young, the Augusta druggist, has turned his business into a corporation, the Young Drug Co., and has added new stock.

—The drug business of Sanford & Bowers, Lewiston, has been succeeded to by John H. Whitney.

PENNSYLVANIA.

ALL HATS ON.

Weather Cold but Temperature Warm at P. A. R. D. Meeting—Munyon Censured—Nominations of Officers.

Philadelphia, December 8.—Just why the janitor of P. C. P. museum, where the P. A. R. D. holds its regular monthly meeting, neglected to turn on the steam on Friday afternoon, no one knows. All to know, however, that the room was like the cabin of an oyster sloop, and President Leedom, after sizing up the big bunch present, requested that hats and overcoats be the first business of the day. His famous order, "Hats on! its cold!" will long be remembered.

The various ward committees' nominations for action at the January meeting were prominently displayed on a blackboard for criticism and comment.

The vigorous action of the committee in disciplining two city druggists called forth words of praise and appreciation. After watching the two men were placed on the cut-off list. One of them has two stores. He was caught purchasing in large lots and afterwards reselling to a cutter in Baltimore. The other man is trying vainly to open a new store and the difficulty he is experiencing in getting goods together may act as a deterrent to any one similarly inclined.

The schedule committee is again trying its hand at preventing the indiscriminate slashing of new goods—articles that are not in the signed list. They have not agreed upon a plan, but the matter has been left in their hands, chairman Cliffe feeling sure that in a very little while a different method of price arrangement will be put in force and a means found to fix the price of a new proprietary at once.

Cudgels were taken out for daily papers. Nearly every apothecary in the city is a branch advertising agent. The paper in question had informed the various agencies that after a certain date they proposed to print all "help wants" and "situations wanted" free of charge. As it takes just as much time to telephone a free "want" in as it does to prepare and send the paid ones, and as the paper in question seemed to think the druggist should push ahead without remuneration, the whole matter was referred to a committee consisting of Messrs. Potts, Strunk, Poley, Lowe and Reese.

The Drug Clerks' Association reported fully in the Era last week, sent a communication asking inspection, and, if the P. A. R. D. then deemed the clerks' objects laudable, co-operation. A committee of three from the P. A. R. D. will attend their next meeting on Friday December 18, at 11 P. M.

The final axe was sharpened for Professor Munyon and his paw paw and witch hazel soap. At the last meeting a communication was read from the Munyon company in reference to their new remedy and the indiscriminate way it was slashed, being a reply to a letter of inquiry from people interested in holding up prices. The reply was unsatisfactory and some farther correspondence passed between the P. A. R. D. and the company. The last letter from the company was vague and unsatisfactory, and called forth vigorous comments. The manager could have condensed his verbose epistle into the following. "We are very sorry, but what are you going to do about it?" The net result was a resolution offered by one of the mildest and most conservative members of the association that the Munyon company had not the best interests of the druggists at heart. It was passed with a shout.

The meeting adjourned until the second Friday

in January when the following list of nominees will be acted upon:

President, Thomas H. Potts; first vice-president, William Lincoln Cliffe; second vice-president, William E. Lee; third vice-president, D. J. Reese; treasurer, G. W. Febr; financial secretary, C. W. Shull; recording secretary, N. A. Cozens. Executive committee: A. T. Pollard, W. H. Gano, Chas. Leedom, R. H. Lackey, Jacob Eppstein, H. C. Blair, A. J. Frankenburger, S. C. Heury, H. A. Nolte, A. R. Hesseke, L. S. Sarber, H. J. Siegfried, Otto Kraus, H. L. Stiles, N. J. Weisner, Dr. C. B. Lowe, Jacob M. Baer.

WESTERN PENNSYLVANIA DRUGGISTS COMMENDED.

Pittsburg, December 8.—The Western Pennsylvania R. D. A. is being praised for its effort to stamp out price annoyance occasioned by the introducing of new remedies. Secretary B. E. Pritchard has received the following communication from the Indianapolis headquarters of the National Wholesale Druggists' Association:

"The position taken by the members of the Western Pennsylvania R. D. A. in favor of enabling the jobber to obtain a reasonable discount from the manufacturers of new remedies is such a commendable one that I cannot refrain from expressing to you on behalf of the wholesale drug trade our high appreciation of the valuable co-operation tendered by your association. This action on the part of your members is directly in line with the spirit of the Tripartite Plan, and I can assure you that your people will have the warm gratitude of the jobbers. It is this kind of co-operation which helps, and I only hope that many of our retail friends throughout the country will follow the good example set by your association.

With kind regards and best wishes,

Yours very truly,

JOHN N. CAREY, chairman.

GAS DEMORALIZES PHARMACY FORCE.

Pittsburg, December 8.—Leaking sewer gas overcame fifteen persons in May's drug store on Market street last Friday. All were taken to the Homeopathic Hospital. The gas came from the city sewer pipes and made its presence felt about 10 o'clock, when a number of the attendants suddenly reeled and sank swooning to the floor. The first to succumb were in the basement, but in a few minutes a number of girls in the first and upper floors fainted. It was only due to the cool and collected demeanor of Walter May that a panic was prevented. Those who were able to endure the strong odor rushed about frantically for stimulants and water. Business was suspended until late in the afternoon. Temporarily the female clerks were displaced by members of the sterner sex.

HAMMERS OUT FOR THE TRADING STAMP.

Philadelphia, December 8.—An agitation began some months ago among the retailers has been kept up. The various trading stamp companies have been extremely active during the past season, and their plausible tales and gracious promises have hypnotized several men into becoming subscribers. Several of these concerns are doing business in the city, their little abominations being distinguished by their colors. Now an edict has gone out from the executive committee of the P. A. R. D. that while the stamps are not absolutely prohibited,

E. I. Santal Perles

Bottles of 50, with yellow wrapper

Write for Samples and Prices

BILLINGS CLAPP CO., - - Boston

they could be construed as price cutting. Their use is now being gradually discontinued and it is hoped that in another month the grocer and notion dealer will have a monopoly of them.

OTHER HAPPENINGS.

—Many complaints are being heard about the manner in which some of the physicians in Allegheny are neglecting to report smallpox cases. Recently the State Board of Health threatened to unanathematize the city. It develops now that a young Allegheny pharmacist succumbed to the disease because of handling bottles which came from the bedside of a smallpox patient. The case of the first victim had not been reported. A leading druggist sounds the note of warning that the trade should be very careful in refilling old bottles and that some physicians should attend more closely to their duty.

—Marriage announcements: Albert R. Laughlin and Miss Mary S. Chandler, and John B. Tingle and Lydia R. Eastburn. Mr. & Mrs. Laughlin will reside at Lansdowne, a suburb of Philadelphia, while Mr. and Mrs. Tingle are at home at 504 Creighton street, Philadelphia.

—Louis J. Ringer, manager for Dr. L. A. Podoeski of Sixth and Poplar streets, Philadelphia, has purchased the store.

—Maximilian Sontag has sold the store at Rising Sun Lane and Germantown Avenue, Philadelphia, to Benjamin Krehl.

—The store of Wirsing & Bailey, Third Avenue and Grant streets, Pittsburg, was visited by a \$200 fire.

—James W. Madder opens a new store at McKeesport.

THE SOUTH. KENTUCKY FIRE INSURANCE.

Committee Appointed by State Ph. A. Investigates Ohio Druggists' Insurance Co. and Recommends Similar One for Kentucky.

Louisville, Ky., Dec. 8.—At the last annual meeting of the State P. A. a special committee was appointed to consider the feasibility of a plan of organizing a mutual druggists' insurance company in the state.

This committee, composed of Simon N. Jones of Louisville, J. W. Gayle of Frankfort, and Addison Dimmitt of Louisville, are preparing to submit to the druggists a prospectus, whereby they hope to get an expression from them as to the organization of the company.

The prospectus outlines the plans governing the operation of the Retail Druggists' Mutual Fire Insurance Co., of Ohio, which they desire the members of the Kentucky association to read, afterward informing the committee whether they would insure with such a society if formed in Kentucky. The committee recommended the plan and say it will save from 30 to 50 per cent of premiums to Kentucky druggists. Following is something about the Ohio company as outlined in the prospectus:

"The mode of operation of mutual companies under the present law is almost identical with that of stock companies; except that the members assume an obligation in lieu of stock and receive in return the profits of the business. Each member pays a full premium on entrance only, or on any increase of his insurance, and he receives his share of the earnings at the end of his policy year, either in cash or credited on the next year. As the percentage of losses in this company are only one-half (or less than one-half) that of stock companies doing a general business, it can be readily understood why this company is able to return to its members 35 per cent of their premiums in dividends. The drug store is a mercantile risk, usually located in a mer-

cantile center, and is necessarily subject more or less to surrounding hazard, and herein lies the principal hazard; for while our losses are but 30 per cent of premiums, only 10 per cent have their origin within the store itself.

"As the rate of premium for insurance on drug stores, like all other risks must be determined by location, conditions surrounding and the facilities for extinguishing fires, and as tariff rates are made after careful survey by men skilled in that kind of work, therefore it is reasonable to suppose that the regular tariff is relatively more nearly in accordance with the hazard than we could without great expense attempt to establish. It is our aim to have rates as uniform as possible according to the hazard, and maintain them without change as long as the hazard is not changed. It matters not, so far as this company is concerned, whether rates are all high or all low, as that will not affect the amount of fire loss; it will only affect the dividends. Higher rates will give greater dividends, lower rates less.

"Everything that will increase the hazard of your risk adds to your rate; therefore the less you carry of inflammable or combustible materials the lower will be your rate. Insurance surveyors make the rates according to the conditions; if fireworks, coal-oil, benzine, gasoline, etc., are handled; if the cellar is in disorder, rubbish or ashes are found in boxes or any other thing that will add to the hazard it is counted in the rate. It is not the purpose of this company to cut rates, but to return you as much in dividends as possible.

In order that the members may reap all the benefits in an insurance company, it must be a mutual one. To be a mutual company, under the laws of Ohio, there must be an obligation beyond the amount of premium paid for one year. The law requires that the obligation shall not be less than three, nor more than five premiums. This company has adopted three premiums as the limit of obligation. This three premium contingent liability is not a premium note, as in the old mutual companies, but is printed in the policy as a part of the mutual policy conditions, and may be regarded as the capital stock of the company. It is a triple assurance to the members that all the fire losses will be paid. It is a very much larger capital proportioned to the amount at risk than that carried by any joint stock companies. Only a few joint stock fire insurance companies have net assets above one full premium on all the risks. Now, stock companies do not expect to, nor do they, pay losses from their capital stock, but they provide a reserve fund, in addition to the surplus of the favorable years, to meet emergencies. This the druggists' mutual as well as all other regular mutual companies, must do. Now, again, since the percentage of fire losses in the druggists' mutual do not average more than half those of stock companies, and as during the twelve years' history of this company, about three or four of them being very hazardous years, only in one year did the losses approach near to the full premium, that year being 90 per cent, but during the past seven years the average loss has been less than 30 per cent, of the full premium; therefore, there is not a shadow of a probability that the members will ever be called upon to pay in any of the capital of contingent obligation for losses.

DRUG STORE BOY ATE POISON FOR CAKE.

Baltimore, December 8.—That persons who work in drug stores should remember the nature of the articles offered for sale there and not suppose they are in a candy factory was demonstrated by the experience of William Dickerson, a colored boy, who made himself useful in the pharmacy of Joseph B. E. Hall. Dickerson was dusting the shelves, when he noticed a cake lying on one of them. He nibbled at it. Tasted good. Supposing that some clerk had left it there, he proceeded to enjoy the find. He did not realize his mistake until he began to feel decidedly uncomfortable in his stomach. Questioning brought out the fact that he had eaten a violent rat poison. But he didn't die. They didn't let him die.

MARYLAND DRUG COMPANY BANKRUPT.

Baltimore, December 8.—After several months of delay the Maryland Drug Co., Paul Mallum, proprietor, which went into the hands of receivers, has been declared bankrupt. This was followed by the disposal of the assets. The enterprise is now a closed episode.

The receivers endeavored to bring Muller into court. He had bought a car load of Peruna, of which only a small quantity was found in the establishment. Similarly, he had contracted for tooth brushes with a factory, and of the deliveries not more than a few gross remained. But Muller has disappeared.

Among the effects were found memoranda showing that Muller had been advertising extensively in New York papers under the head of business Opportunities, the advertisement reading as follows:

"How will \$5 per month secure a steady income? The chance of a life-time to double your nest egg! Better than real estate! Safe as United States treasury bond! No get-rich-quick scheme, but a golden opportunity for small investors: For particulars write to treasurer Modern Drug and Chemical Company, No. 414 Seventh Street, N. W., Washington, D. C."

A book kept apparently for the purpose, was seen to contain a large number of entries of persons who desired to know how the riches thus held in prospect could be acquired, and it seems that Muller obtained not a few remittances. Whether any of the investors got an acknowledgment is not known.

MARYLAND.

—The Wedgewood Club had its monthly dinner last Thursday night at the Eutaw House, William E. Brown, president of the Maryland Ph. A., presiding. Another session will not take place until the latter part of January, when the fiftieth anniversary of Dr. J. E. Hancock in the drug business will be celebrated with a banquet. The affair will be by subscription. Dr. Hancock is writing a book on the history of the drug trade in Baltimore during the last half-century, which, it is thought, will be out in time for the dinner.

—The will of Thomas P. Langdon gives \$1,000 to May Langdon Ellyson, daughter of H. Theodore Ellyson of Richmond and \$500 to Adele Langdon Stabler, daughter of Franc's Stabler of Baltimore. The residue of the estate is bequeathed to the testator's widow, Mrs. Drusilla Carter Langdon, subject to the payment of at least \$50 a month for life to his mother, Mrs. Harriet E. Langdon. The widow was named executor without bond. Mrs. Langdon has gone to Louisville to recover from the shock of her husband's death.

—Among the visiting druggists in Baltimore last week were: Dr. J. W. Hodges, Washington, D. C.; C. H. Miller of Ferthman & Miller, Waynesboro, Pa.; Dr. E. E. Wolfe, Cambridge; J. H. McCann, Washington, D. C.; J. W. Simmonson, Crisfield; Joseph B. Boyle, Westminster; James Feldmeyer, Annapolis; J. D. Nydegger, Elkins, W. Va.

KENTUCKY.

—C. Lewis Diehl who for thirty-five years has conducted a drug store at the corner of Third and Broadway, Louisville, sold his business Monday to Messrs. Treber & Meyers and the style of the firm will now be known as The Treber Drug Co. Fred W. Treber, the senior partner, has been associated with Mr. Diehl for a number of years. Mr. Diehl has been for some time thinking seriously of retiring in order that he may devote himself to researches in chemistry. He is a professor in the Louisville College of Pharmacy.

—The J. W. Fowler Drug Co., who recently suffered by fire, water and looting are dickering with Messrs. Jones, their landlords, to put a rough roof over their old stand, when the old walls have been removed from the other portions of the grounds, that they may again open, until preparations are complete for erecting a new building. Mr. Fowler holds a seven year lease on the property.

—Judge Gregory appointed appraisers last Monday

DAVID J. KUHN, Nashville, Tenn.
Treasurer, Tennessee State D. A.

for the estate of L. C. McDaniels, Louisville, the druggist who recently made an assignment to Arthur E. Mueller. His assets were found to be \$608.00, and his liabilities about \$3,000.

—The Albus Wright Drug Co. are installing a new \$4,000 soda fountain at their down town store. This firm was recently incorporated and capitalized at \$16,000.

COCAINE LAW LITTLE ENFORCED IN OMAHA.

Omaha, December 8.—The ordinance against the sale of cocaine by druggists without prescription and without registering continues to be enforced in a feeble way, and arrests are made only when specific complaints are filed. So far as the records of the police court show the only violators of this ordinance which was passed last summer are those druggists who are situated in or near the tenderloin district. The last complaint made was against J. M. Webster. Mrs. J. E. Smith, whose son, not yet of age, has become a confirmed fiend, alleges that his condition is due to purchases of the drug by him at Johnson's. His case has not yet been heard.

GEORGE BARTHOLOMEW, aged 21, who clerked for his brother, Thomas, 1334 Rebecca street, Allegheny, Pa., died after a short illness. He was a promising young druggist, and a member of the Senior class, Pittsburg.

GEORGE INNIS, a former drug miller of Poughkeepsie, N. Y., died in that city on November 26, aged about 81.

WE WANT DRUGGISTS

To send us a list of physicians who patronize them, and we will write each physician that he can obtain Phenalgin from the druggist mentioned; we will also send the physician a sample, with literature.

ETHA CHEMICAL CO.

13 West Street - - - NEW YORK

OHIO RIVER VALLEY.

"CHARLES F. DAVIS" WORKS BIG MANUFACTURERS.

Columbus, Ohio, December 8.—Charles F. Davis, presenting himself as connected with the Davis-Bridaham Drug Co., Denver, made victims of prominent Columbus drug firms.

He called at the office of the Peruna company and asked to inspect the plant. J. A. Hedges showed him around, and later gave him a letter of introduction to a jeweler, from whom he secured a diamond ring valued at \$290, giving a check in payment. The check was protested. The drug firms of Orr, Brown & Price and Kaufman, Lattimer & Co., Columbus, were also visited. The former firm advanced Davis money and both firms entertained him.

Davis is about fifty years old, dark, five feet seven tall and weighs 170 pounds. He has no connection with the Davis-Bridaham Drug Co.

ENTERTAINMENTS MAKE CLEVELAND D. A. GROW

Cleveland, December 8.—At the November meeting of the Northern Ohio D. A., at Cleveland, the following gentlemen were appointed as a board of control: Messrs. Hopp, Schellentrager, Emrich, Feuer, Tielke, Silberling and Reuss.

The secretary was voted an annual salary of \$100. Mr. Hershey of the Peruna Co., described his efforts toward raising prices. Mr. Hopp reported the N. A. R. D. meeting and his delegation received a warmly conveyed vote of thanks.

Then came lunch. The entertainment feature will be continued as it contributes mightily to the attendance, which was larger than in months.

At this month's meeting it is possible that the board of control will recommend that the \$2 per capita N. A. R. D. tax will in future be paid by the association from the \$6 annual dues.

BIG DRUG STORE FIRE IN CLEVELAND.

Cleveland, Ohio, December 8.—Sixty thousand prescriptions, many of them from some of the most noted physicians of the world, were destroyed in an explosion and fire in C. P. Hildreth's drug store at 1277 Euclid avenue, Cleveland, early Saturday evening. A clerk was sent to the basement to draw wood alcohol. He spilled some upon the basement floor. Mr. Hildreth had an errand to the basement, himself, a short time later. When he turned on the gas there was a terrific explosion and in an instant the whole place was in flames. The druggist was knocked down and burned. He recovered himself and heroically corked the half-barrel of alcohol and rolled it to a safer place. Then he made his escape.

George Fay, one of the clerks, was badly burned in trying to save the prescription files. He only succeeded in saving the latest ones. Another man who went into the basement to rescue the druggist was also burned. Loss to the store and stock will amount to about \$1,500.

OHIO HAPPENINGS.

—The Cleveland School of Pharmacy, through President Hopp, announces the appointment of the following committees: Finance and membership—Messrs. Hechler, E. L. Strong and Stecher; supplies—Messrs. Krause, Hechler and Tielke; publication—Messrs. Hankey, Kuder and Schmitt; course of study—Messrs. Schellentrager, Krause and Ende; school management—Messrs. Selzer, Haake and Neuberger.

—The State Board of Pharmacy is waging war against those druggists who attempt to conduct business

without a license. A few days ago a Newburg pharmacist was bound over to the police court. There the man told a pitiful story and said he would get a registered pharmacist. The judge discharged him. Now the board of pharmacy is wondering how the costs in the case will be paid.

—A. B. Honecker, who was a former pharmacist and then gave up his work to become police clerk of Cleveland, and who has only recently finished two terms in office, is thinking seriously of returning to the drug business. He is looking over the local field for a location.

AROUND THE GREAT LAKES.

CHICAGO DRUG TRADE CLUB.

Working Hard to Find a New Home.—Annual Election and Dinner.—Retailers Will be Admitted.

Chicago, December 8.—The annual meeting of the Chicago Drug Trade Club was held on Thursday. The most important event was the report of the committee having in charge the matter of the erection of a building.

For about a year this committee has been canvassing the subject. They had consulted with many real estate men and capitalists. Finally they had selected one offer which they recommended for acceptance.

The offer of Wilson & Co., is this: The company agrees to erect on the lot at the northwest corner of Washington and Franklin streets an eight-story building of modern steel construction, with all modern conveniences, provided the club will guarantee the rental for ten years at a proper figure. The club plan to occupy the upper floor at a rental of \$2,400 a year and lease the remaining floors to firms preferably in the drug or allied interests. The building will cost about \$150,000.

The committee was given a rising vote of thanks. It was agreed to continue it in office in order that the matter might be further gone into before entering into a formal contract. The club's lease on its present quarters in the Bismark hotel will expire next August. At present the club has one large dining room and a smaller room devoted to the billiard and pool tables. The space is insufficient.

Two tickets were voted upon—the "regular" and the "members." These were: Regular—President, C. P. Van Schaack; first vice-president, E. A. Vosburgh; second vice-president, E. D. Kenfield; secretary, B. T. Van Alen. Directors—Three years: M. L. Barrett; J. E. Bartlett, Jacob Baur, A. R. Fellows, Jas. W. Morrison, F. C. Schapper.

Members ticket: President, A. R. Fellows; first vice-president, M. L. Barrett; second vice-president, Jas. W. Morrison; secretary, J. V. Pierce; treasurer, R. A. Hevenor. Directors—three years: M. L. Barrett, J. E. Bartlett, A. R. Fellows, R. A. Hevenor, Jas. W. Morrison, J. V. Pierce.

The entire regular ticket was elected.

The annual dinner was held in the evening. Representatives of the old Chicago Drug Trade Bowling Club were present, and Dr. Thomas, as the representative of the bowlers, presented to the club the beautiful silk flag won by the bowling club in one of their first contests with an Eastern team.

It was announced that it had been decided to broaden the scope of the club and admit the leading retail druggists to membership. Mr. Wooten, a new member, in a neat speech expressed his appreciation of this new policy of the club.

CHICAGO CLERKS ASK COUNCIL'S AID.

Chicago, December 8.—The Drug Clerks' Association of Illinois has prepared and presented to the Chicago city council an ordinance limiting the hours of labor for drug clerks to ten hours a day.

In a petition accompanying the ordinance the clerks point out that a remedy is necessary, and they think it should be made a part of the public health regulations of the city.

Henry C. Reichel, president of the clerks' association, made the following statement in support of the ordinance:

"The validity of the ordinance should be sustained upon the ground that it is a measure required for the protection of the public health. It must follow as a matter of course that drug clerks are physically unable at the end of the day to give to the compounding of prescriptions that careful and accurate attention which the safety of the patient requires.

"The law regulating the practice of pharmacy in this State, as in all other states in the Union, is intended for the protection of the health of its people, and is not enacted for the sole pecuniary benefit of druggists conducting drug stores. Yet, it is a fact that half the drug stores are conducted without registered clerks, and it was admitted so by the president of the Illinois Ph. A. in convention at Bloomington this year and mentioned in his annual address."

The ordinance was drawn up by the attorney of the association and presented to the executive board of the Chicago Federation of Labor for approval. It was approved by the attorney of the federation and then indorsed by the board."

ILLINOIS.

—The following Chicago druggists were recently robbed: De Witt Spalding, Oakley Boulevard and West Harrison street, safe opened and \$65 in money taken; Frederick Behrens, West Twelfth street and Western avenue, \$85 in money; H. J. Beckwith, 291 Thirty-first street, \$26.

—Dr. Maximilian Herzog, for more than seven years professor of bacteriology and pathology at the Chicago Polyclinic, has been appointed pathologist in the bureau of government laboratories at Manila, P. I.

—Charles Tzzel has disposed of his interest in the Uzzel & Ward drug store at Granite City, and has entered the St. Louis College of Pharmacy. Mr. Ward assumed the entire control of the store.

—Harry and Lee Harlan, who have for several years been assistants to their father J. M. Harlan at his drug store in Madison, have left the store to enter Barnes Medical College, St. Louis.

—Irendecke, the Chicago cocaine retailer, on an appeal from the recent decision in the board of pharmacy case against him, again lost.

MICHIGAN.

—John DeBoe of the DeBoe Mfg. Co., manufacturing chemists of Grand Rapids, was arraigned in Police Court charged with selling adulterated extract of lemon. It is charged that his extract contained 90 per cent. of wood alcohol, as a solvent, instead of grain alcohol. Dairy and Food Commissioner Smith of Adrian, says this is the first case of the kind in Michigan, if not in the United States, and the investigation by State officers has been going on for some time. Mr. DeBoe waived examination and was held for trial at the next term of Superior court.

—It is now learned that the Ben Eaton, imprisoned in Oregon for manslaughter, is not the Michigan man, though such a story was given wide currency in this

State. The Michigan Ben Eaton is now in New Mexico, where he is filling a position as manager of a general drug and department store, at \$75 per.

—Mason & Beach entered into the drug business at Bay City twenty-five years ago. L. F. Beach says that when they started they had "about a bushel of bottles." Now they have brought the store into the front rank among the establishments in the Valley.

—Mr. and Mrs. Fred L. Heath of Hastings, entered the Green Street Whist Club recently. It was the fifteenth anniversary of their marriage and the club left nine host and hostess a beautiful set of cut glass ice cups.

—Noble R. Whalin, the Fifth avenue Grand Rapids druggist, was recently arrested, charged with violation of the liquor laws. Mr. Whalin waived examination and is held for trial in the Superior court.

—John Nardenbrook, an under sheriff of Branch county, has resigned his position for the purpose of giving his entire time to his drug business at Ray, Ind.

—A. O. Halstead, druggist of Grand Lodge, pleaded guilty to violation of the local option laws of Eaton county. The judge deferred sentence.

—C. E. Hesse, formerly of South Haven, has bought the drug stock of C. E. Armstrong, Grand Rapids.

—James Bristol, druggist of Ada, is shy \$4 in pennies and 150 cigars through the work of thieves.

—C. L. Fictel has a unique display of magazines in his windows at Calumet.

WEST OF THE MISSISSIPPI.**LABOR INVESTIGATES CLERKS' "CONDITION."**

St. Paul, December 8.—The State labor bureau will make public in a few days the results of a special investigation of the hours of labor, condition of employment and compensation of the drug clerks of the Twin Cities.

It is understood that the report will show that many clerks in the Twin Cities are on duty from fifteen to twenty-four hours a day. Inspectors have found that in many stores the clerks sleep in rooms which are connected with the main entrance by an electric bell and that, although they are behind the counters only from twelve to fifteen hours a day, they are practically on duty during the entire time.

Officials of the labor bureau do not favor the practice of requiring day clerks to get up in the night at the sound of an electric bell. They point out that a clerk who has been behind the counter more than twelve hours, on being summoned in the middle of the night is not in fit condition to fill a prescription properly.

ST. PAUL AND MINNEAPOLIS ASSOCIATION.

St. Paul, December 8.—At the November meeting of the St. Paul R. D. A., Secretary Schumacher made his report of the N. A. R. D. meeting at Washington. The following officers were elected: President, H. W. Rietzke; first vice-president, Frank Friedman; second vice-president, W. K. Collier; secretary, A. J. Schumacher; treasurer, J. P. Jelinek; executive committee, C. T. Heller, F. M. Parker, S. H. Reeve, A. A. Campbell, A. J. Schumacher.

Reports of the delegates to the N. A. R. D. convention consumed most of the time of the November meeting of the Minneapolis association. They were listened to with enthusiasm, and the association fee's well repaid for its part in the work at Washington.

SEEKS TO COMPEL BOARD TO EXAMINE HIM.

St. Paul, December 8.—To compel the State board of pharmacy to examine him, John M. Princell, drug clerk of Merriam Park, a suburb of St. Paul, asks the Hennepin county district court for a writ of mandamus. He alleges that he applied for the privilege to take the October examination, but that the board refused to examine him and has refused since that time. It is further asked that if the board refuses to comply with the order of the court a peremptory writ be issued by the court.

The board refused to examine Princell on the ground that he had not had sufficient experience. He had been in the hospital service for years, but not under the direction of a registered pharmacist.

GETTING READY FOR NEXT YEAR.

Winona, Minn., December 8.—Winona druggists have commenced preparations for the entertainment of the State convention of druggists to be held in that city on the middle of June. The general arrangements committee has been named, and, after the holidays, sub-committees will be appointed. Some of the entertaining features have been settled upon. The first evening the traveling men will present a program. The second afternoon there will be a trip to Robert Harris park and a program of sports, and the second evening a ball. Philharmonic hall will be headquarters.

MINNESOTA.

—Gus A. Dickman, who seems to have imbibed the joke habit from his employer, Fred A. Conger of St. Paul, and would not give out the name of the girl he went to Cedar Rapids, Ia., to marry, has vouchsafed the information, now that the deed has been done. The lady was Miss Harriet Henrietta Wilkinson. —F. Kuehl, who has been conducting, not only a drug store, but a saloon at Foxhove, has sold his thirst parlor. —The H. L. Collins Co. of St. Paul, has sold the druggists' label and box department of its business to Charles Weinbagen & Co. —Walter Nelson, who owns two or three drug stores in St. Paul, will invade Minneapolis and open a store in the Kenwood district. —H. W. Rietze of St. Paul, has taken the place of A. J. Schumacher on the directorate of the Minnesota Pharmaceutical Manufacturing Co. Stewart Gamble of Minneapolis has become a director of the same company in place of A. D. Thompson. —A new fraternity has been formed at the college of pharmacy, State university, called the Beta Zeta. —Mrs. C. A. Bigelow of Minneapolis, who has been longer in the drug business than any other woman in Minnesota, is refurnishing her store. —John Turge, who for many years has been at the head of the prescription department in Max Wirth's store, Duluth, is about to make one of his semi-occasional visits to his old home in France. —A well-known druggist formerly of St. Paul, has been looking over Duluth with a view to establishing a store and has decided upon Fifth avenue and First street. He will put in an entirely new stock the first of the year.

MISSOURI.

—Robert P. Heinrichs, a clerk employed at Philip Kaut's pharmacy, 1800 Lafayette avenue, St. Louis, came near being one of the city's mysterious dead when he fell into the hands of robbers last week. The timely intervention of two men, who saw him thrown into

a hallway in the rear of a saloon, saved his life. Heinrichs was able to tell little about what had happened after he had been revived at the City Hospital. He had been drinking. A man was arrested from whom Heinrich's watch was recovered. Other jewelry and some money was not recovered.

—Considerable bric-a-brac and many travel souvenirs were destroyed at the handsome home of Clifford M. Dolph, of the drug firm of Judge & Dolph, 515 Olive street, St. Louis, by an explosion of accumulated gas in a heater last week. A steam heating system had recently been installed.

MANY NEW PENNSYLVANIA PHARMACISTS.

Harrisburg, December 8.—Dr. Charles T. George, secretary of the State board of pharmacy, has completed his report on the recent examinations. It is as follows:

—At Philadelphia 226 persons presented themselves for examination 133 for registered pharmacist and 93 for registered qualified assistant pharmacist certificates. Twenty-seven succeeded as registered pharmacist and 45 as registered qualified assistant pharmacist. At the Pittsburg, 123 applicants appeared, 82 for registered pharmacist and 41 for registered qualified assistant pharmacists' certificates. Sixteen succeeded as registered pharmacists and 16 as registered qualified assistant pharmacists. The registered pharmacists are: George Ansley Beltz, Derry Station; Bertalan M. Michay, Scranton; Thomas Joseph Thonmsin, Reuben Warshawsky, Bertold C. Breude, Irvin M. Anspaeh, Dora Goldie Gerson, Max Altschuler, Deitrich E. Kinkle, George K. Levan, Sarah L. Naly, George H. Lenox, J. Henry Cameron, all of Philadelphia; John Ralph Bennett, Wilkesbarre; William Thomas Ryan, Philadelphia; Edward J. Harbach, Reading; Louis A. Spaeth, Strasburg; John W. P. Outerbridge, Philadelphia; Luther G. Smith, League Island; William Fogg Coleman, Lawndale; Marcus B. Loyer, Burdett S. Laey, Joseph J. Widmann, Jr., Clarence D. Smith, Leo Lafayette Meyer, all of Philadelphia; Calvin J. Houck, Camden, N. J.; Harry M. Dodson, Philadelphia; Edwin M. Weimer, Allegheny; Frank S. Rochefort, Duquesne; Lou A. Woodyard, Pittsburg; Albert DeLee Carlton, Sharon; Ernest E. Owen, Warren; Tony B. Rogers, Pittsburg; Almond Guy Leyda, Beaver Falls; Saterfield J. Mead, Pittsburg; Albert I. Itel, Allegheny; Charles E. Fiscus, Pittsburg; Norwin L. Kerr, Everson; Paul John Naas, Pittsburg; Patrick Thomas Fitzgerald, Wooster; Cyrus W. Davis, Conemaugh; Robert A. Sphar, Monessen, Oscar Baumgartner, Allegheny City.

Registered qualified assistant pharmacists: Monroe E. Zerphy, Lancaster; Matthew Weisbard, Philadelphia; Raymond Walthar, Mendville; Franklin P. States, Andalusia; Alfred J. Knight, Philadelphia; August L. Johnson, Shenandoah; James J. Tobin, Shenandoah; Joseph L. Sausser, Schuylkill Haven; Allen Lee Andreas, Ashfield; Samuel B. Pest, Harry LeRoy Reick, Philip Heller, all of Philadelphia; Harry A. Britton, Reading; Harry Earl Book, Port Royal; Eli S. Keyser, Philadelphia; Samuel R. Dont, Jr., Royerstown; Frank M. Garton, Philadelphia; George W. Bailey, Royersford; Albert E. Snyder, Scranton; Albert J. Smith, Millville; Paul DeLaney Witmer, Philadelphia; John P. Kranse, Lynnville; Melville Titus Huber, Gettysburg; William J. Thornton, Lenni; Frederick J. Blinzig, Titusville; Michael L. Sweeney, Shenandoah; Samuel B. Kern, John T. Macdonald, Charles H. Hargreaves, Harry P. Plum, Harry W. Bowers, Charles Roy Grammer, Franklin A. Butler, Joseph Strimpler, Harry C. Helm, all of Philadelphia; Charles C. Neff, Camden, N. J.; Edgar P. Swank, Benjamin P. Bowersox, Leslie S.

Freeman, Philadelphia; Frank E. Goulden, Wilkesbarre; Charles H. Johnson, Philadelphia; Powell Hampton, Bridgeport; Charles E. Fawcett, Pittsburg; Robert J. McKenley, Ellwood City; Wesley R. Johnston, Butler; Walter E. Schatzman, Allegheny; William P. Barry, Lawrence J. Curry, Pittsburg; James E. Evans, Sharpsburg; Frederick C. Blavney, Frank W. Smith, Emil L. Brinkhoff, Harry H. Vanderwort, Frank A. Rectenwald, Frank J. Hoffman, Pittsburg; William M. Bennett, Edwin P. King, Paul E. Hundermark, Allegheny; Harry Eisenhardt, John G. Armstrong, Lorne A. Dodds, William Scaldella, Philadelphia.

The next examination will be in the Philadelphia College of Pharmacy, on January 16.

The interesting feature of this examination and indeed all future examinations, will be the practical laboratory examination, to be held in the pharmaceutical laboratory of the above named college.

BOOK REVIEWS.

A TEXT-BOOK OF VOLUMETRIC ANALYSIS, with special reference to the volumetric processes of the Pharmacopoeia of the United States. Designed for the use of pharmacists and students. By Henry W. Schimpf, Ph. G., M. D., professor of inorganic chemistry in the Brooklyn College of Pharmacy; Member of the American Chemical Society; of the American Pharmaceutical Association, etc., etc. With sixty illustrations. Fourth edition, revised and enlarged. First thousand. 12 mo., 553 pages. \$2.50. New York, John Wiley & Sons.

The various editions of this text-book have been successively reviewed in these columns and our previous good opinion of its usefulness still obtains. The present edition is enlarged chiefly in the chapters treating of the volumetric estimation of the active principles of the more important drugs. The methods of Prescott, Gordia, Kebler, Lyons, Lloyd, Katz, Kippenburger and others have been utilized, and the work has been brought down to date in every respect. This book is evidence, if evidence be needed, that methods of volumetric analysis can be made of practical utility in every day drug store work. And what is more needed at the present time than methods which will enable the druggist to standardize his wares with accuracy, delicacy and economy of time?

THE HOSPITAL FORMULARY of the Department of Public Charities and the Department of Bellevue and allied hospitals of the city of New York. Sixth revised edition, W. E. Dreyfus, A.B., Ph.D., editor. 8 vo. 160 pages.

This edition of the Hospital Formulary is dedicated to the memory of the late Dr. Charles Rice, the editor, Dr. Dreyfus, succeeding Dr. Rice as chemist to the Department of Public Charities of this city. It contains 387 formulas and processes, a new feature being the inclusion of many working formulas used in the General Drug Department which is the general manufacturing plant, central testing laboratory and distributing bureau of the two departments named above. Richly bound in full morocco and printed on fine paper with wide page margins and untrimmed edges, this book surpasses in "make-up" any formulary we have recently examined. Only 3,000 copies have been printed and these are intended for the use of physicians and other employees of the departments named. Dr. Dreyfus informs us that there are no copies available for general distribution.

The Old Versus the New Way of Filing Prescriptions.

The following truths from the text of an attractive little brochure published by E. B. Read & Son of Baltimore, Md., should start a train of thought in the minds of all progressive druggists which would lead to improvements in their prescription departments. The truths are these: "Improvements come slowly in the drug business. Whether this be due to the ultra conservatism born of unceasing care and responsibility or to a love of the old and traditional, we would not presume to say. The condition, as a fact, remains, and every apothecary knows it. In the matter of filing prescriptions, for example, what improvement over the 'wire' and the 'book' has been noted in a half century or more? Not one, and when the frailty of the 'wire' or the clumsiness of the 'book' is considered, a sufficient reason against the use of both has been presented, for every druggist knows by personal experience that the 'wire' is weak when he would have it strong and the 'book' at its best is a cumbersome and clumsy means of preserving the prescription file." The reader will realize that there is far more truth than poetry in the foregoing statements, and he cannot but agree that the "wire" and the "book" should be relegated to the past. A small amount of money invested in a Boykin Fi-Lezy Prescription Filing Cabinet would put the druggist in possession of a system that would save him dollars in time and trouble. These cabinets are put up in several different styles, are strong and handsomely finished, and make an invaluable adjunct to any well ordered prescription department. Every druggist is advised to secure from Messrs. E. B. Read & Son a Fi-Lezy booklet which contains a full description, with illustrations of this very useful and ornamental piece of furniture.

Perfumes from Sunny France.

The modest violets grown in the valley of the Var in sunny France are dainty creatures, and are said to produce the sweetest odors in the world. It is from the violets grown in this valley that the Delettrez Violettes Celestes essence is made. Madame Rejaue pronounced this odor to be exquisite and charming, and in this expression she but voiced the silent opinion of all who have used it. This odor is but one of the many popular ones made by the famous French perfumer Delettrez at Paris, France. These odors retail from \$1.50 per bottle to \$5.00 per bottle, and can be obtained in this country only from McKesson & Robbins, 91 Fulton St., New York. This firm are sole agents for the United States, and are advertising the Delettrez line very extensively to the consumer. Druggists who want a line of perfumes that are fragrant and lasting should try a sample order of these goods.

Window Novelties Free.

A remarkably good way to make new business and also hold your old trade, is to have your show windows attractive and after you get the people inside nothing pleases them more than to have a nice booklet handed to them. The C. I. Hood Co. will send you, absolutely free, window novelties and attractive booklets.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

PROF. OSCAR OLOBERG, 87 Lake St., Chicago.

THE PROGRESSIVE DRUGGIST'S COLUMN.

If you are, or want to be, a progressive druggist, don't fail to keep your eye on this column, for it means new ideas and more profit for you. Of course, you are busy at this season, everybody is or ought to be, but don't neglect your regular lines, it don't pay. Holiday goods won't pay your expenses after Christmas, but the goods here advertised will; therefore, be wise. The following goods were advertised in last week's Era:

WELCH'S GRAPE JUICE.—Made from the best grapes according to the most improved methods, by the Welch Grape Juice Co. of Westfield, N. Y. Now is the time to order, for freezing weather is liable to put in its appearance in a day, and Grape Juice, as a rule, will freeze.

PACKER'S TAR SOAP.—Invaluable for the nursery, toilet, bath and shampoo. Made by the Packer Mfg. Co., 81-93 Fulton St., New York City.

POMPEIAN MASSAGE CREAM.—Said to be the best toilet requisite of this character ever placed upon the market. Made by the Pompeian Mfg. Co., 1066 Pearl St., Cleveland, O., who claim that every package sells another. If you are interested, write the manufacturers for attractive counter literature.

ARGENTOSE.—A product from the laboratory of Henry K. Wampole & Co., of Philadelphia, Pa. Said to be a safe and powerful astringent germicide, which is free from irritant or escharotic properties.

VERNAL PALMETTONA.—A product of the Vernal Remedy Co., 101-107 Seneca St., Buffalo, N. Y., which was formerly known as Vernal Saw Palmetto Berry Wine, and which, under the old name cost \$8.50 per dozen, but under the new name, costs but \$8.00 per dozen. The medicine, however, has not been changed. The change in name was made because the new name is more easily remembered than the old.

PISO'S CURE FOR CONSUMPTION.—It is a good seller the year around. Why not buy a half gross at one time? The Pisco Co. of Warren, Pa., say they are making a specially attractive offer for the season of 1903-04, to purchasers of half gross lots of this preparation. For further particulars address the manufacturers.

ARMY AND NAVY LIQUID GLUE.—Made by the Waechter Mfg. Co., Baltimore, Md., and claimed by them to be the only animal glue in liquid form manufactured; also to stand more heat and cold, and more easily to be applied than other glues. Write the manufacturers for samples and quotations.

STREPTOLYTIC SERUM.—Recently placed upon the market by Fred'k Stearns & Co., of Detroit, Mich., and claimed by them to be a serum that combats the streptococcus. Marketed in 20Cc. packages of two 10Cc. syro-balls, at \$3.00 per package, less 30 per cent discount, Messrs. Stearns & Co. say that it is being liberally advertised to physicians, and that every dollar's worth of it is sold by retail druggists.

DRUG STORE ADVERTISING.—If you want a system of advertising and progressive business methods which will help revolutionize your trade, cut off the coupon which appeared in the M. P. Gould Co. advertisement on page 2, and send it to the advertisers.

STORE FURNITURE.—Do you believe in advanced and improved fixtures for stores? If you do, note the advertisement of the Yeshera Mfg. Co., which appeared on page 2. This firm offer to supply you with their new catalogue showing illustrations and quoting prices upon their automatic folding store-stools which are made of steel. They ought to interest you.

CASH REGISTERS.—If you want a high grade, up-to-date cash register for very little money, on very easy terms, write to the Century Cash Register Co., 656-671 Humboldt Ave., Detroit, Mich. This firm have a plan for advertising and introducing their 20th Cen-

tury Cash Register to new trade which will undoubtedly interest you.

ARTIFICIAL DECORATIONS.—These take the form of holly sprays, holly vines, etc., and are adapted for interior decorations of all kinds during the holiday season. They are manufactured by Frank Netschert, 3½ Barclay St., New York City, who would be pleased to furnish a 68-page illustrated catalogue to all who desire one.

HANFORD'S BALSAM OF MYRRH.—This preparation is handled by the majority of the leading wholesale drug houses in the United States. They are all noted on page 5.

TIN BOXES.—The American Stopper Co., 150 Water St., Brooklyn, N. Y., are independent manufacturers of these goods, and they supply 997 of the leading proprietary concerns of the country, among whom are the manufacturers of Cascarets, Dr. Charles' Flesh Food, etc. They furnish samples and quote prices upon both small and large quantities.

ARNOLD MILK STERILIZER AND PASTEURIZER.—One of these devices should have a place in every home where there is a baby. They yield the druggist a nice profit, and he can sell them without much trouble. The Wilmot Castle Co., 26 Elm St., Rochester, N. Y., would be glad to send you free literature with your name on for distribution.

PITKIN'S BARN PAINT.—This paint is guaranteed for five years by the manufacturers, the Geo. W. Pitkin Co., of Chicago, Ill. It is the only one we know of that is guaranteed. Would it not pay you to handle it?

THE WONDERFUL DORAN LIGHT.—Constructed by the Acorn Brass Mfg. Co., 64 N. Green St., Chicago, Ill., for store and street lighting. Note their advertisement on page 13.

A Pure Grape Juice.

Scientists who have made a study relative to the value and uses of various foods, assert that the juice of the grape is one of the most nourishing fluids known. In the last few years unfermented grape juice has made enormous strides in public favor, and it is a beverage that is bound to become popular in all walks of life. There are already many imitations of the good brands upon the market, and more will appear. It would, therefore, be well for the druggist to be careful in selecting his stock and to be sure that he is getting a pure article. In this connection, we desire to call attention to Gleason's Grape Juice. This juice is produced by the Gleason Grape Juice Co., Fredonia, N. Y., and is claimed by them to be a pure juice pressed from selected Concord grapes and bottled free from preservatives or chemicals of any character. The druggist, when selecting his stock of grape juice, should remember that the Gleason Co. offer money guarantees for the purity of Gleason's grape juice.

PATENTS.

Issued December 1, 1903.

- 745,333.—William P. Dunbar, Hamburg, Germany, assignor to the firm of Ichthyol-Gesellschaft Cordes, Hermann & Co., Hamburg, Germany. Serum and process of preparing same.
- 745,380.—John F. Perry, Chicago, Ill.; Hiram Barber administrator of said Perry, deceased. Bottle-Closure.
- 745,416.—Thomas Breakell, Wirksworth, England. Mortar and Muller for grinding, crushing and mixing ores, chemicals, etc.
- 745,421.—Cyrus F. Cushing, Braintree, Mass., assignor of one-half to Francis E. Lovejoy, Boston, Mass. Stopper Confiner for Flexible Bottles, etc.
- 745,477.—John C. Bowers, Boston, Mass., assignor of one-half to George C. Bartram, Brookline, Mass. Bottle-Stopper.
- 745,546.—Edwin W. Wheelwright, Birmingham, Eng. Compound of Phosphorus and Sulfur and method of making same.
- 745,552.—Mary M. Addison, Baltimore, Md. Non-Refillable Bottle.
- 745,566.—Ira N. Burke, Butcher Ranch, Cal., assignor of one-half to E. C. Kavanaugh, Foresthill, Cal. Non-Refillable Bottle.
- 745,637.—Florentine J. Machalske, Brooklyn, N. Y. Process of producing Carbon Chlorids and Silicon.
- 745,675.—Abis L. Rosmann and Ferdinand Barthold, Milwaukee, Wis. Bottle Carrier.
- 745,702.—Alfred L. Weissenbacher, New York, N. Y., assignor to the Phoenix Cap Co., a Corporation of New York. Metallic Closure for bottles, jars, etc.
- 745,840.—William Higgins, Corbally and William G. Edmonds, Dublin, Ireland. Machine or apparatus for corking and labeling bottles or the like.
- 745,843.—Carl H. von Hoessle, Radebeul, near Dresden, assignor to Chemische Fabrik von Heyden Actien Gesellschaft, Radebeul near Dresden, Germany. Chromate of Silver.
- 745,858.—Frederick R. Johnston, Fall River, Mass. Bottle or flask.
- 745,958.—Thomas Ewan, Glasgow, Scotland, assignor to the Cassel Gold Extracting Co., Limited,

Maryhill, Glasgow, Scotland. Manufacturer of Sodium.

- 745,966.—Florentine J. Machalske, Chicago, Ill., assignor of one-half to Charles Herbert Lyon, Chicago, Ill. Process of producing Silicon chlorids, hydrochloric acid, and alkali hydroxids.
- 745,972.—Frank A. Robinson, Syracuse, N. Y. Machine for filling and sealing concealers.

TRADE MARKS.

Registered December 1, 1903.

- 41,557.—Medicinal Tonic for Malaria, chills and fevers. Gannaway Drug Co., Warren, Ark. The hyphenated word "Ma-Lol."
- 41,558.—Tonic. Bess Phelps Yocum, Scranton, Pa. A circular panel having thereon a scroll, the representation of a man clad in a night-cap and nightgown and asleep in a chair, a bed being shown in the background. Above the man are the words "They work and you sleep"; across the nightgown the name "Night Caps."
- 41,559.—Remedies for cure of certain named diseases. Louis Rosenthal, Montreal, Can. The hyphenated word "Hed-Rite."
- 41,560.—Remedy for nervous affections and a blood-purifier. Adam Kramer Schauf, New York, N. Y. The word "Hemona."
- 41,561.—Tonic for stomach, kidneys, liver and bladder. Adam Kramer Schauf, New York, N. Y. The word "Taquila."
- 41,562.—Remedy for dyspepsia, indigestion and stomach complaints. Adam Kramer Schauf, New York, N. Y. The word "Magona."
- 41,563.—Remedies for indigestion and dyspepsia. Fred Lyman Webster, Adams, N. Y. The hyphenated word "Witch-Wine."

ALBANY, N. Y.

OPIMUM AND COCAINE DECLINE.

New York, December 8.—Buyers continue to operate mainly in accordance with actual current necessities, but the aggregate volume of business is of average proportions for this season of the year and dealers show no anxiety concerning the future. The principal price changes are a decline of 10c. per lb. in quotations for opium and a reduction of 25c. per oz. in manufacturers prices of cocaine.

OPIMUM.—Lack of demand has influenced a weaker feeling and jobbing quotations show a decline to \$3.15 @ \$3.40 for 9 per cent. and \$2.25 @ \$3.50 for 11 per cent. Powdered also is lower and the revised prices are \$4.00 @ 4.25 for 13 per cent. and \$4.50 @ 4.75 for 16 per cent.

MORPHINE SULPHATE.—A fairly steady jobbing movement is in progress at prices within the old range of \$2.60 @ 2.70 for eighths in ounce boxes, \$2.55 @ 2.65 in 2½-oz. boxes, \$2.35 @ 2.45 in ounce vials, and \$2.30 @ 2.40 in 5-oz. cans.

QUININE SULPHATE.—Jobbing parcels are finding a fair consuming outlet but the market is without new feature and quotations remain steady at 25 @ 25½c. for bulk in 100-oz. tins, 25½ @ 26c. in 50-oz. tins, 26 @ 26½c. in 25-oz. tins, 27 @ 27½c. in 15 or 10-oz. tins, and 32 @ 32½c. in ounce vials.

COCAINE MURIATE.—Cable reports of lower markets abroad, together with keen competition, has caused a reduction of 25c. per oz. in manufacturers prices, and the revised jobbing quotations are on the basis of \$3.75 @ 4.00 for bulk.

MENTHOL.—Only a light demand is reported and the market is easy with jobbing prices showing a decline to \$7.00 @ 7.50 per lb. and 55 @ 60c. per oz.

ALON.—Raw material is firmer and quotations for jobbing quantities have been advanced to 56 @ 61c. according to size of order.

BALM OF GILEAD BUDS.—With the market better supplied and the demand rather slow jobbers have reduced quotations to 40 @ 55c.

OIL BERGAMOT.—New crop is on the way and holders of old are more anxious to sell. In consequence jobbing prices have been reduced to the basis of \$2.20 @ 2.45 for prime in single pound containers and \$2.00 @ 2.25 for good.

OIL SASSAPARAS.—Stronger primary markets are reported and local jobbers have advanced quotations to 60 @ 65c. for natural and 50 @ 55c. for synthetic.

TUNON SALAD OIL.—Manufacturers have reduced their prices 1c. per gal. and jobbers now quote 45 @ 50c. in 55bs. and 60 @ 70c. for less.

CANARY SEED.—Continued firmness prevails both here and abroad and jobbers have marked up quotations to 5½ @ 5¾c. for Smyrna in bags and 5½ @ 5¾c. for Sicily. Smaller quantities 6½ @ 68c.

BROMIDES.—Jobbers have reduced quotations 5c. per lb. and quote 40 @ 45c. for potassium, 45 @ 50c. for sodium and 50 @ 55c. for ammonium.

HAYBERRY BARK.—Owing to the scarcity jobbing quotations have been advanced to 30 @ 35c. for whole, and 35 @ 40c. for powdered.

SASSAPARAS PITH.—Stocks are exceedingly light and the market is strong with jobbing prices advanced to 20 @ 25c. per oz.

CUBEB BERBERIES.—Foreign markets are called higher and spot jobbing quotations show an advance to 20 @ 25c. for whole and 25 @ 30c. for powdered.

ROCK CANDY.—Values are slightly lower and jobbers quote 5-lb. boxes 10 @ 11c. for white and 10½ @ 12c. for yellow and red.

ERGOT.—Spanish is easier and jobbing parcels are obtainable at 55 @ 65c. for whole and 65 @ 75c. for powdered.

GUM KINO.—Supplies are offered more freely and jobbers have reduced quotations to 35 @ 40c. for whole and 45 @ 50c. for powdered.

FORMALDEHYDE.—Competition among importers has weakened the market and jobbing quotations show a decline to 25 @ 30c.

PERUVIAN BARK.—Values in a jobbing way are a shade easier and the revised quotations are 38 @ 42c. for city and 36 @ 40c. for country.

P. O. AUSTIN, a druggist of Morrice, Mich., is dead, after a long illness. He was 70 years old and leaves a wife and two children.

A Rheumatic Cure that Can Be Safely Recommended.

Druggists are frequently asked to recommend a cure for rheumatism, and they usually refer the customer to a physician, or call his attention to some sort of liniment which will relieve the pain. Of course liniments will give temporary relief, and as the customer usually wants a cure, would it not be better financially for the druggist to call the customer's attention to some preparation which is recommended to cure the disease? For instance, he might call attention to Swanson's "5 Drops." This preparation is made by the Swanson Rheumatic Cure Co., at Chicago Ill., and the manufacturers say that druggists can safely recommend it to cure rheumatism, neuralgia, and kindred ailments. Druggists who desire booklets and advertising matter pertaining to "5 Drops" can secure the same from the Swanson Rheumatic Cure Co., 160 Lake St., Chicago, Ill.

BUSINESS NOTICES.

THE ERA DRUGGISTS' DIRECTORY.

The 10th revision of the Era Druggists Directory, now ready, is the best edition we have yet offered. It is the standard work of its kind in this country and includes a complete list of the druggists in Costa Rica and the principal drug stores in Chile, Peru, Bolivia, Equador and Colombia.

The list of retail druggists in the United States does not quite reach the 40,000 figure which the last edition showed, but this loss is made up by increased numbers in Part III. (Manufacturers, Jobbers, etc.)

This Directory will be found invaluable to any merchant or manufacturer who does business with the trade. It is sold only by subscription, and until further notice the price will be \$5.00 per copy, net, postpaid.

The edition is limited, and we are obliged to reserve to ourselves the right to raise this price at any time.

"We are all learning more or less every day, and wide reading in one's chosen field is imperative."

But there is a great difference both in the quantity learned and the manner of reading.

The newspaper habit, the careless reading of many headlines in many dailies, does not lead to great learning.

On the other hand careful systematic reading is the medium of all education.

Why does the college student read to better advantage than the newspaper habitue?

Because his reading is selected and systematized.

System and selection in reading is, however, also possible outside college walls. The main thing is to get the right person to arrange it for you.

The Era Course in Pharmacy has been selected and systematized for the use of home students by educators of wide experience.

Write to the Pharmaceutical Era, 8 Spruce Street, New York City.

THE GRIST OF LEGISLATIVE MILLS.

Strenuous times for the legislative committees of the various pharmaceutical associations are promised for this winter. Those who will look after the druggists' interests at Albany have been examining the ground and anticipate a busy season. Several important bills are already in sight. A clause requiring a diploma from a recognized college of pharmacy as a prerequisite to registration and the granting of licenses will have the support of practically all the associations in the State. It is not likely that any considerable organized opposition to this measure will arise, and originators of the movement are confident of ultimate success. The principles represented in the last session by the Bostwick bill have not been abandoned. A new bill to prevent substitution both fraudulent and of the other sort will probably be introduced in one of the earliest sessions of the assembly. A bitter fight is anticipated, for the interests which furnish the energy to promote the movement are determined to secure drastic regulations which will appear unnecessary to the retail dealer. No honest druggist wishes to defend criminal substitution of an inferior preparation for that demanded by the physician, but the public mind is not entirely clear in regard to the exact meaning of the term "substitution," and it is feared that the commercial practice of guiding the customer in the selection of his purchase will be confused with the surreptitious tampering with prescriptions which is already forbidden by law. The retail trade is almost certain to suffer in the agitation of this question, for the druggist will be placed in a false position which he can not avoid. He will be obliged to oppose drastic measures likely to interfere with his legitimate business, and in so doing he will to the unthinking public appear to be defending a practice which no honest man can afford to treat even with complacency. A bill to change the present method of selecting members of the pharmacy board is also promised, and the discussion of the somewhat curious law now in force in this State is likely to furnish some interesting reading during the winter. Among other measures to be introduced are an anti-cocaine bill about which druggists in this city are strangely apathetic, and a regulation aimed at the exasperating trading stamp.

FOR THE UPLIFTING OF PHARMACY.

We have received a copy of the Journal of the Alumni Association of the Massachusetts College of Pharmacy, which differs from most publications of this class in that it is eminently worth reading to an "outsider." We are accustomed to have anything that is done in Boston, done seriously, and it is this quality which often gives an enterprise of more or less sectional scope a character of national importance. The alumni of the M. C. P. take their calling seriously; they are in earnest, have a definite object in view and the manner in which the task is undertaken assures us that its purpose will be accomplished. What this little journal, which will appear three time each year, expects to do, is set forth in the following words: "Our mission is to promote a mutual acquaintance and interest; to strengthen and develop the ties that already bind us together; and by the dissemination of news, the expression of hopes and aims and the exchange of ideas and sympathies to induce a mutual helpfulness and keep alive ideals and efforts that are born of college life." In other words, a truly professional spirit will be cultivated, for these pharmacists are not terrified by the encroachments of commercialism. The enterprise is free from financial entanglements. It is not the intention to compete with existing journals, for its objects are different, and no aid from advertisers will be sought. The work of editors and contributors will be performed without pay, and the expenses will be borne by the subscriptions of friends. "Should our friends fail or forsake us," says this modest and disinterested publication, "we shall die a quiet and peaceful death and ask for no obsequies." The Era hopes that peaceful death may be long deferred, and that no occasion for obsequies will ever arise. An enterprise with aims so pure and wholesome deserves to live and prosper.

PHARMACEUTICAL EDUCATION.

The journal which forms the subject of the foregoing paragraph presents some interesting statistics about colleges of pharmacy in the United States. The training of recruits to the calling seems to be well taken care of; the figures show that there are eighty-one regular colleges, besides eight or more correspondence schools. If the number of institutions of learning bears any relation to the value placed upon knowledge, pharmaceutical education has during the past fifteen years risen remarkably in public esteem. While only six new schools were organized during the years between 1870 and 1880 and the country possessed only twelve institutions devoted to pharmaceutical instruction at the beginning of this period, twenty-six colleges were opened in the last decade of the past century and twenty-one in the short time since its close. In spite of what a few pessimists say, pharmacy is rapidly gaining recognition from other sciences and professions. There are thirty-two universities in this country which offer courses in pharmacy. Of independent schools there are twenty-one; medical colleges support sixteen, while there are twelve other schools which maintain departments of pharmacy. Ohio provides more amply for the education of its pharmacists than any other state; it possesses seven schools. New York and Tennessee each

have five; Georgia, Illinois, Indiana, Iowa and Pennsylvania, four each; Michigan, Missouri and Canada, three each; Alabama, California, District of Columbia, Minnesota, Louisiana, North Carolina, Oregon, South Dakota, Texas, Virginia, Washington and Wisconsin, two each; and Kansas, Kentucky, Maine, Maryland, Massachusetts, Nebraska, New Jersey, North Dakota, Oklahoma, Rhode Island, South Carolina and West Virginia, one each. If all these colleges do their duty—and we expect that they will—there will soon be no room in this country for the sort of pharmacist who has never heard of the pharmacopoeia and who recognizes no higher authority than his jobber's price-lists.

THE OLD ORDER WILL NEVER RETURN.

While pharmaceutical education is gaining in strength, year by year, and our knowledge of the science of drugs is far more complete than formerly and also more accessible, we are nevertheless drifting farther and farther from the old order of things, still considered by many the ideal state of pharmacy when the apothecary is supposed to have been the collector, manufacturer and dispenser of all remedies. Professional spirit must be fed upon more nourishing if not more substantial food than the strange lore of the past. The science required of the modern pharmacist is very different in character from that needed fifty years ago, and many of our eminent educators and some of the most enthusiastic followers of the science do not sufficiently realize this fact. The calling has undergone a change and if the leaders in its science wish to retain their leadership, they must adapt themselves to altered conditions. The transfer of the pharmaceutical laboratory from the back room of the drug store to large buildings erected for the purpose will never be reversed. Nor is the concentration of manufacture into the hands of an especially equipped few to be deplored. The science of medicine has advanced and superior materials and more perfect standardization than would be possible in a small laboratory are demanded. The selection, standardization and preparation of the great number of remedies employed in modern medicine require so many varieties of expert knowledge that the average pharmacist could neither acquire them all in a single life-time nor employ them in a small way if he possessed them. The days of the herb closet and the back room still are gone and will never return. What the pharmacist of the future will need more than a knowledge of the modifications of strange plants is a thorough training in the art of testing. Collecting and manufacture will be entrusted to others, and he will be expected to guarantee the quality of the product.

STANDARD OF PURITY FOR FOOD PRODUCTS.

The U. S. Department of Agriculture has just published a bulletin containing standards for certain food products, thus establishing official data according to which foods are to be tested, just as the pharmacopoeia is the measuring-rod of the pharmacy inspector. It is the first published result of an Act of Congress approved on March 3, 1903, which authorized the secretary of the department to form a committee "to establish standards of purity for food products and to

determine what are regarded as adulterations therein for the guidance of the officials of the various States and the Courts of Justice." The committee which has had the matter in charge, consists of representatives of the Association of Official Agricultural Chemists of the United States and the manner of procedure seems to offer an admirable means for obtaining thoroughly satisfactory and practical standards in the shortest possible time. The data were not adopted for scientific considerations only, but the practical side of every item was kept in view by reference to actual conditions. "Before the adoption of any schedule it was submitted to the manufacturing firms and the trade immediately interested for criticism, and when requested by them, conferences for discussion have been arranged." We wonder if a more careful reference to actual requirements and possibilities would not render complaints about the standards of the pharmacopoeia less frequent. The bulletin contains definitions and standards for a number of our most important foods and a number of others are under investigation. It is worthy of remark that in the sections devoted to the spices, many of which are pharmacopoeial, no mention is made of the pharmacists' official standard.

THE ADULTERATION CRY TOO LOUD.

While we are congratulating ourselves upon the adoption of official standards and the inauguration of numerous movements for the suppression of adulteration, the chairman of the Boston Board of Health assures us that we have been needlessly frightened. Reports from various experts from all parts of the country have given us the impression that it has become almost impossible to obtain anything genuine to introduce into our stomachs, but this man of science states that the popular impression is entirely erroneous. He thinks much of our pessimism concerning the quality of the foods we eat is due to the advertisements of manufacturers who wish us to believe that their own products are the only materials which may be depended upon to be absolutely pure and worthy of confidence. He makes the startling announcement that actual harmful adulteration is extremely rare and is easily within official control. We sincerely hope that he is right and that his statement will also hold true in the matter of drugs. The public confidence in all things has been much shaken of late, and anything in the nature of a repair is very welcome. We shall soon have official standards for foods, and in a few months we may hope to receive a revised list of official drugs. Will some one now please get to work upon a list of standards for unofficial preparations.

THE WHOLESALE ALSO TAINED.

A correspondent—see the next page—this week calls attention to a surprising state of affairs in the wholesale trade. This retail druggist complains that he experiences the greatest difficulty in obtaining "what he asks for" from certain wholesale druggists. In this case there can, of course, be no general indictment for wicked fraud, for the retail dealer is not so helplessly innocent as his own customers are supposed to be. Yet there is absolutely no difference in principle between this practice and that which caused

CHARLES F. MANN, Detroit, Mich.,
Treasurer, N. A. R. D.

the retail druggist to be pilloried and cartooned in the daily press a year ago. Perhaps in time the advertisers will learn to accept existing commercial conditions as an inevitable phase of economic evolution, and trim their sails accordingly.

WHERE WILL CONSOLIDATION STOP?

Another correspondent sounds a note of alarm to the small retail druggist, and seems to prophesy a gloomy fate for the corner drug store. He describes conditions in the drug trade which are almost exact counterparts of those which some years ago led to the annihilation of the small dry-goods shops by the all-devouring department store. The prospects for the small stores seem somewhat dark, it is true, but we think our correspondent has hovered too much on the black side of the cloud. There will always be a local demand for the prescription case, for people do not, as a rule, travel several miles for medicines ordered by the doctor. Dry-goods may be bought at one's convenience; not so medicines or the immediate necessities of life. The consolidation of the food interests has not wiped out the small grocery stores; in fact the corner potato and cracker emporium is more numerous than ever. The druggist on the back street may lose his trade in brushes and patent medicines but there will always be a local demand for his professional services.

AN OLD ENEMY IN A NEW DRESS.

"Just as Good," the phrase of which we are all so heartily sick, has been worked over, refurbished up and given a fresh coat of paint. The renovated product, now "Equally Good," has been thrust upon an unsuspecting public by the New York Sun. It looks a little better in print, and is, perhaps, more smartly dressed, but it is the same old wearisome thing after all. "Just as Good," or "Equally Good," it is equally odious, and we wish somebody would take the phrase with the idea behind it, attach a millstone to it with a stout cord and drop it into the deep, deep sea.

THE DI-THYMOL-DI-IODID ADULTERATION QUESTION.

New York, December 14, 1903.

To the Editor:—The editorial in the last number of "The New Idea" (No. 4) entitled "Adulteration at the American Pharmaceutical Association" has opened up the question relative to Mr. Beringer's samples of di-thymol-di-iodide. Since it is now the desire of Mr. Beringer that this matter be made public I avail myself of the opportunity to place this occurrence in its true light. Last spring I had occasion to examine quite a large number of specimens of so-called di-thymol-di-iodids, among which were concoctions of such substances as zinc oxid, starch, ferric oxid, etc., with and without the iodine derivative; other samples were undoubtedly of home manufacture because of their greater or lesser degree of alkalinity and the presence of alkali-iodids, chlorids, calcium, silica, etc., due to imperfect washing. Among this latter class was a sample of Mr. Beringer's manufacture, which, as the examination showed, was not adulterated, but contained 6 per cent of ether insoluble matter. (A thoroughly washed and pure di-thymol-di-iodid should be entirely soluble in absolute ether.)

Thinking that some of the adulterated products might be of interest to the Committee on Adulteration of the American Pharmaceutical Association, I turned several of these specimens, without regard to origin, over to Mr. Gane. Upon my return to the city in September, I was astonished to learn from a friend of Mr. Beringer that a sample of his product had been presented before the Association among others as being adulterated to the extent of 27 per cent of ash. At the time not having access to my figures I assured this party that there was evidently a misunderstanding, and that the figures were probably nearer to 0.27 per cent than 27 per cent. I wrote at once to Mr. Beringer and explained the matter as I then understood it, and assured him that his sample had not been branded by me as being adulterated. Since, I have had opportunity of going over my notes and samples which were kept in numbered pill boxes, I find that an error was made in picking out Mr. Beringer's sample for that of another through the misreading of the number on the box. Examination of another original sealed box of Mr. Beringer's manufacture, which was in my possession, shows it to contain about 10 per cent of ether insoluble matter of alkaline reaction with alkali iodids, chlorids, silica, etc., impurities due to imperfect washing in removing the caustic alkali liquors and the accompanying salts from the precipitated di-thymol-di-iodid.

I certainly regret the fact that Mr. Beringer has been misrepresented as selling an adulterated article through the unconscious error, and I also regret that through the carelessness of someone he places on the market a di-thymol-di-iodid which contains from 6 to about 10 per cent of ether insoluble matter of a character which is calculated to do more injury than one which contains 10 per cent of such inert substances as zinc oxid, starch, etc.

In the last number of the Druggist's Circular a certain poorly informed contributor again willfully misconstrues my motives and misstates certain facts relative to my communication in the October number. The last clause of this reply, "that ash indicated the presence of impurities, which are dangerous for use as surgical antiseptics," was ordered stricken out by myself, the words, "with his none too willing consent,"

are apparently a deliberate misrepresentation of the facts. Nowhere in the reply did the statement occur that 0.27 per cent of ash was present. An ash determination is of questionable value, owing to the very high temperature necessary for the complete ashing of the product whereby considerable loss occurs in the percentage of haloid salts present. In order to determine the impurities in these products it is advisable to dissolve the substance in ether and separate the ether insoluble portion and analyze it further.

The writer of this attack should first inform himself as to the meaning of the term "adulteration" and then learn to distinguish between an "adulterated" and an "impure" product.

The accusations that I have been endeavoring to advertise phenacetin are purely childish; it is hardly necessary for me to advertise phenacetin, and it would certainly be a waste of time to do so before a society of chemists. Again, advertising of the Farbenfabriken products may be safely left to the Druggist's Circular, which does it very efficiently.

I would again advise the Druggist's Circular to devote its energies to the benefit of legitimate pharmacy on the lines already intimated in my October communication, and to cease its frantic efforts to excuse and teach adulteration and substitution. Further arguments are of little service, for "Seid Ihr nicht wie die Weiber, die beständig Zurück nur kommen auf ihr erstes Wort, Wenn man Vernunft gesprochen Stunden lang!"

(Schiller.)
V. COBLENTZ.

MORE NEW ORDER DATA FOR MR. MASON.

To the Editor:—With the concentration of trade in big chains of drug stores operated by corporations, a condition that is steadily growing in this and other cities, what will the end be?

Take, for instance, Hegeman & Co. They now have five big stores, and purpose to establish more. It is a fact that not only the retailers nearest them are suffering, but the influence is felt for very many blocks, for miles in the case of their three uptown stores.

This concentration goes rapidly on. In this city at the present time twenty-five out of two thousand stores do half of the business.

It cannot be denied that many stores must close. This will make more clerks on the market. But in these big stores half of the clerks are unregistered, simply six, eight and, in extreme cases, twelve-dollar-a-week salesmen. In a hundred employes at 200 Broadway Hegeman & Co. have only 19 licenses displayed. The patent medicine clerks get \$12 a week and commission. The drug clerks, not prescription clerks, get \$15 a week, or less. The girls at the novelty and sundry cases get far less than either.

But that store does a bigger business than sixty average stores, each having two licensed and one unlicensed man. Thus, nineteen licensed men, in this scheme of consolidation replace the one hundred and twenty men necessary before consolidation and department store pharmacies reigned. PHARMIC.

"JUST AS GOOD" JOBBERS.

December 13, 1903.

To the Editor:—Why do we hear only of the retail druggist as a substitutor? I do not mean adulteration, for we do occasionally hear that sometimes the wholesaler's product is not perfect, but substitution—the kind that seeks to put off on the purchaser something just as good.

Do you know that a retail druggist often has to almost fight to get what he wants from his wholesaler? The other day I specified a certain pharmaceutical in my order to a jobber, and he sent me his own make. I sent it back, politely referring him to the specification in the order; but he sent back his own product the second time. I had to talk very forcibly over the phone before I at last received what I wanted.

A DRUGGIST.

SHOP TALK

WAITING ON CUSTOMERS.

"How do you do, Tommy! Don't you know me?" The boy looked up and clutched at his cap, for he recognized in the speaker the lady whom he admired more than anybody else in the world, Miss Webster, his favorite school teacher.

"You are working in Mr. Brown's drug store, aren't you?" continued the young lady. "I hear that you are getting along famously."

"Who told you that?" said the boy.

"Oh, somebody. Never mind who it was. I'm coming in some day to see what you have. Have you anything nice for Christmas?"

"Oh, yes!" said Tommy. "We've got jack-knives and harmonicas and a lot of fine books about adventures and things like that."

"Miss Webster smiled.

"And perfume bottles and beautiful calendars and other nice things for girls," added the boy hastily.

"Is—is Mr. Thompson good to you?" inquired the young lady. "He is awfully cross, isn't he?"

"Cross!" said Tommy. "Why, Miss Webster, You don't know him at all. He is always just as nice as he can be."

"I suppose he is in the store all the time, isn't he?" "Not all the time," replied Tommy. "He goes for his dinner at about one."

"Oh, he does? Very well! I'm coming in some time at one o'clock so that you can wait on me. How will next Saturday do?"

Tommy was, in his heart, not quite certain about it, for he had not yet risen to the dignity of salesman-ship, but he remembered the proprieties of business and assured the young lady that she would be very welcome. When he proceeded on his way to deliver a bottle of medicine at the big house on the hill, his enthusiasm for the drug business knew no bounds.

"Mr. Thompson," said the boy in the afternoon, "Do you think I can begin to wait on customers?"

"I think so," replied the head clerk. "You can make a very respectable package now."

"How must I do it?" persisted the boy.

"Why, you have watched Mr. Brown and me haven't you? You must always be polite, of course."

"Yes, I know that," said Tommy

"And you must find out carefully just what is wanted."

"But if we haven't got what she wants, what then?"

"Oh, your customers are going to be ladies, are they? Why, try to find something else that she would like. Of course, you must be careful about it; don't suggest some outlandish thing. And if it happens to be medicine you'd better call Mr. Brown or me."

"Oh, she doesn't want to buy medicine. She—" but the boy saw that the clerks were both laughing at him, and, therefore, hastily resumed operations at the sink.

During the next two days the future salesman was on the qui vive. It seemed to the head clerk that he watched his every movement. In the back room he might be heard muttering to himself. He was rehearsing some fine speeches that he thought would be proper to address to a customer.

On Saturday morning all the cleaning and dusting was done with unusual care, and at noon Tommy's mother wondered why her son insisted upon wearing his best necktie and why he spent at least five minutes in brushing his hair and clothes, an operation which usually suffered from too much haste.

Miss Webster had not forgotten her appointment; she appeared soon after the head clerk had left the store. She inquired quietly for Tommy, and the drug-

gist discreetly withdrew behind the prescription case.

"Now, show me what you have!" said the young lady reassuringly.

The boy's carefully prepared speeches all evaporated at once. He could only call her attention in a stupid way, it seemed to him, to the holiday goods on the counters and in the show cases. She shook her head at the shiny pocket-knives and other articles highly desirable in the eyes of a boy.

"I know I am awfully hard to suit," said Miss Webster, "but you see, I'm particularly anxious to get something nice."

"Don't you like those pretty boxes with perfume bottles in them?" suggested Tommy. "Or this box of writing paper—you see it's pretty fine—it's marked 'linen.' But his customer shook her head. Nor did she fancy any of the small supply of holiday books. Finally the salesman pounced upon a pair of funny little round brushes.

"Military hair brushes! Just the thing!" said Miss Webster. "You may wrap them up for me."

"Well, you are a guy, sure enough!" said the junior clerk when the customer had departed. "To sell a girl those brushes!"

"Why? Aren't they all right?" inquired the boy anxiously.

"They're all right, but what is a girl going to do with them? They're for men, you chump!"

Tommy's spirits were quite extinguished. He had felt well pleased with himself, and now he had made a botch of it, after all. His impulse was to run after Miss Webster and tell her the uses of her purchase. But the druggist laid a restraining hand on his shoulder.

"Don't worry!" said he. "She knew what she wanted. You'll make a salesman, all right."

But the boy was not satisfied. "What can she do with them?" he inquired.

"I'll tell you what to do," said the druggist, "Don't say anything now, but wait until after Christmas. Then ask Mr. Thompson. I fancy he'll know something about it."

PSYCHOLOGY OF PATENT MEDICINES.

"I wish some one would write a book about the psychology of patent medicines," remarked a reformed manager of a pharmaceutical laboratory. "It would make mighty interesting reading."

"We used to make a lot of pills, bitters and things for little proprietary fellows out in the country. Some of them sent in only little bits of orders for a few thousand pills or so, but it paid fairly well and it was not much trouble and we rather encouraged it.

"Most of the proprietaries were built on some old recipes that had been handed down through countless generations of aunts and grandmothers, and were almost as much objects of family worship as the good Book. Some of the queerest notions imaginable were attached to these small orders.

"I remember one old chap, he and his pills had a big local reputation. We put up his preparation and printed the labels, it was a fair sort of pill too, mildly laxative, I should judge. But the funny part of it was that he wanted the pills made in two colors, white and red, I believe, and put up in separate compartments with directions to take one before and the other after meals. There was always a caution attached, under no consideration to reverse the order. I forget which was to be taken first, but it was the white, say, and the patient should take a red one out of its turn, the results might be fatal.

"I never could find out what was the object of these strange directions. You see the pills were

exactly alike, all but the color, and that old codger knew it well enough. He must have had some purpose, but what was it?

"Yes, I dare say there is a whole lot of psychology; about every patent medicine, and about most prescriptions too, for that matter."

ADULTERATION AND ETHICS.

"This hue and cry about substitution and adulteration is no new thing," said the doctor who had dropped in to talk over questions of the day with the village druggist.

"As long ago as 1669 Dr. Murrett, in his 'short view of Frauds and Abuses,' charged the apothecary with 'falsifying medicines.' I was looking up this subject only the other day and now when you come to think of it, some of the substitutes mentioned by him are so curious that the recital of them is almost enough to make one laugh." "Myrtle leaves for senna; a 'binder for a purger'; mushrooms rubbed over with chalk for agaric; hemlock for peony; sheep's lungs for fox's lungs, and the bone of an ox's heart for that of a stag's heart! It all goes to show that the traits of human nature are ever the same. Even the great Sydenham records that in his day Peruvian bark was so 'rotten, inert and adulterated' that it was necessary to increase its dose to enormous quantities, and our old friend Paris affirmed that in his time hundreds of persons were supported in London by the art of adulterating drugs, 'besides a number of women and children who found ample employment and excellent profit in counterfeiting cochineal with colored dough, isinglass with pieces of bladder and the dried skin of soles, and by filling up with powdered saffaras the holes which are bored in spice and nutmegs, for the purposes of plundering their essential oils.'"

"But to come down to present day affairs," continued the doctor, "the only way to bring to bear the power of the community for the benefit of its individual members is by the enactment and administration of law. Drugs, like Caesar's wife and boiled eggs, should not only be good but above suspicion."

"I am aware that to a considerable extent retail tradesmen are for the most part innocent or helpless in this matter of adulteration. But I assume that druggists are something more than tradesmen. They should know the quality of the wares they sell. If this assumption be true, then the druggist should have nothing to fear when the inspector calls on him for samples. He should court rather than shun investigation. No, I have but little sympathy for the man who doesn't know his business and therefore, I think the present crusade is proper. There is but one remedy for the adulteration of drugs, foods, etc., and that is to apply the existing criminal law to the adulterators. It makes me tired to hear these people talk who lack sufficient moral health and vigor to beget wholesome indignation against the perpetrators of fraud and crime in trade and commerce."

"But how about your competitor, the quack doctor?" mildly interrupted the druggist. "You say he is a fraud and yet so far as I know you have never taken any steps to rid this community of one you believe to be a fraud."

"Oh, that's different," said the doctor. "My position with regard to quacks is just this: If a man wishes to be physicked and have his broken bones set by a quack, the authorities may act wisely in not interfering; but should the assumption of the title 'doctor' by the quack deceive the man and lead him to employ the quack without knowing that he is such, then it is clearly the duty of government to interfere and to see that the quack hangs out no false signs. Just prohibit the quack from deceiving those who are in quest of a real doctor and then if people knowingly prefer the quack, let them have him. Hold the quack strictly accountable to the law the same as you do me or any legitimate physician, and I am content. Let the quack take his chance in the world. He may at least be of some use as a fool-killer."

"But please understand me. I haven't any use for the man who avowedly attempts to live upon the credulity of the public, and yet the woods is full of just such doctors. Then there is the doctor who for the sake of gaining practice, takes up some fashionable folly of the day or adopts some peculiar plan of treatment, not because convinced of its utility, but for the sake of producing a sensation in the public mind. He isn't a bit better than the physician who prescribes secret nostrums, the principle of which is all wrong; if a preparation be of real efficiency the concealment of it is inconsistent with professional liberality; and if mystery alone gives the remedy value and importance, such craft implies either disgraceful ignorance or fraudulent avarice. That's my creed in a nutshell."

The druggist could not frame a reply before the doctor was gone. As he leaned over the counter in a thoughtful mood he was heard to murmur in the language of the afflicted man of Uz: "How forcible are right words."

CHRISTMAS TRADE.

"I sometimes wonder," said a traveling man who had just returned from a long trip, "if druggists of the United States make as much of the opportunity offered them by the Christmas and New Year holiday time as they could and should? I notice that the stores in other branches of trade are, as a rule, more or less decorated for Christmas, and display prominently articles and wares of a particularly Christmas nature."

"I notice, however, that the majority of drug stores in towns that I have recently visited are not found in line, many of the proprietors doing nothing more than to set on top of the show case, or in a little more prominent place than usual, a few bottles of perfumes or some toilet sundries. It seems to me that so long as people consider the drug business a commercial enterprise, that druggist would be the most successful financially who would appreciate the line of work other successful business men are doing and take advantage of the situation. Seasonableness is a great thing to consider."

MR. QUIGLEY HAS AN ENEMY SOMEWHERE.

The following story is being passed around Syracuse about druggist Thomas F. Quigley. With a friend, he was out hunting rabbits the other day and the sport was a little dull. Mr. Quigley suddenly saw a rabbit, raised his gun and let go. The rabbit continued its journey unmolested until Mr. Quigley's friend took a chance long distance shot and dropped him in his tracks.

"What made you shoot that big hole in the ground in front of the rabbit," asked Mr. Quigley's companion.

"Well, it was this way," was the response, "He was going so fast I knew I couldn't hit him, so I shot a big hole in the ground, supposing he would fall in and break his neck."

The following story about Mr. Quigley is also told but Mr. Quigley denies it: In the course of his wanderings he spied an immense owl. "I guess I'll have him stuffed" thought the druggist-sportsman. He raised his gun. "Who—Who!" said Mr. Owl. "Thomas F. Quigley," was the answer, and Mr. Quigley blazed away. Rumor does not say as to whether a killing was made.

TAKING ADVANTAGE OF POPULAR INTEREST.

A Boston drug store has in its window a little vial which contains a small specimen of the new chemical element, radium. It is not much to look at, resembling a pinch of salt, but the little announcement card draws to it the attention of a great many passers-by, who gaze on it with absolute awe.

BOOMING THE CIGAR BUSINESS.

By C. G. BUCHANAN, Wellsburg, W. Va.

ONE day while balancing the receipts for the previous month I awoke to the fact that we were not doing a satisfactory amount of cigar business. I was somewhat puzzled to account for this as our pharmacy occupied the most prominent corner in the city.

The cigar case was in the most conspicuous portion of the store, our stock was complete, and the assortment good—consisting of all the popular and advertised brands of cigars, cigarettes and smoking tobacco. But in spite of these facts we did a very small business at the cigar counter while the cigar stores a half square on either side of us were enjoying a fine patronage.

I finally concluded that the trouble lay in the fact that we had not let people know enough about our cigars, that that branch of our business had not been advertised as it should have been. The fault once located and a resolution made to remedy it the method of so doing next claimed our attention. After considerable deliberation and investigation the following program was entered upon: We began by using window signs made by lettering upon the signs; these were headed with the weather reports and read as follows:

Weather Forecast—Cloudy and Rain.
A 5c cigar will drive away the Blues.

Weather Forecast—Colder tonight.
A good evening to read while smoking a (Havana) Cigar
10c—3 for 25c—10c straight—
2 for 25c—and 20c each.

Weather Forecast—Windy and Clear.
5c Cigar—Generously Good.

Weather Forecast—Fair and Warmer.
Cigarettes—20c.

The perfection of the cigarette maker's art.

These window signs were changed each day and while an attempt was made to advertise the different brands the principal object hoped for was that the signs might reach out and inform the passer-by that this was a store where cigars were kept.

As the result of some inquiry and careful observation, a good mailing list of smokers was secured. To each of these a copy of the following type-written letter was sent:

Mr. John Smith—
Dear Sir:

You have no doubt become so accustomed to thinking of our establishment as a place where drugs are kept that you have possibly overlooked one of our most important features, that is our Cigar Department. And yet, were you to investigate you would find that it is quite a large item in our business. You would find that our stock is an unusually complete one, consisting of almost every meritorious, recognized or advertised brand of cigars, cigarettes or smoking tobacco that you could name.

If you were to investigate still further you would find that we pay the same careful attention to the details of our cigar department that we do to those of our prescription department.

Should you remark upon the carefulness with which we have provided for every detail in this department, we would be pleased to inform you that the very nature of our business demands carefulness and promotes watchfulness and that we have simply taken these faculties with us when we transferred our attention from behind the drug counter to that of the cigars, while our thorough knowledge of the many characteristics and peculiarities of tobacco enables us to always keep our stock in that prime, "just right" condition which the true lover of a good cigar appreciates and demands.

We are so enthusiastic about the merits of our cigar department that we have rather drifted away from the main object which we had in writing you, that is to seek a share of your cigar business.

We know that you will deal where you receive the greatest value in goods and accommo-

dation for your money. We believe that we are prepared to furnish you that "greatest value," but a trial by you will convince us both. Hoping that you will see fit to grant us that favor, we are,

Yours very truly,

The Crystal Pharmacy.

These letters immediately began to produce results and in a very short time our cigar business increased wonderfully.

About two weeks after mailing the letters we sent out a private mailing card printed like the following. The border, the headline, this line "that is the same kind of feeling," and the signature being printed with red ink and the remainder with black.

When You Look in a Dictionary

You do so with the feeling that whatever you find there will be correct; That is the same kind of a feeling our customers have when they buy a cigar, for experience has taught them that our stock is complete and up to date; every article is kept in the best possible condition while the service is all that could be desired.

The Crystal Pharmacy.

It was much harder to judge the result of this card than it was that of the letter, still we have always believed that it did considerable good by helping us towards getting our new traders into the habit of dropping into our store for their cigars.

We next tried some little newspaper advertising but this not appearing of much value, we sent out the following letter:

Mr. John Smith—

Dear Sir:

Several times during the last few months we have addressed you upon a subject in which we take unusual interest. We refer to our cigar department and while we frankly confess that it has been our intention to endeavor to win a share of your patronage we feel that we are offering you something of equal value in return.

When you start out to buy a cigar you almost invariably have your mind made up as to what price you intend to pay so that cannot be a subject for our consideration. You are therefore interested in securing either a favored brand or else the best possible piece of goods for your money. Our stock being large, varied and carefully selected affords you that opportunity. You are interested in seeing that the goods have been handled in such a manner that you will receive your cigars in the best possible condition for smoking; we know that our method of keeping stock insures you that.

And lastly we believe you are pleased to receive that careful, considerate attention which we aim to give every customer.

Thanking you for all favors in the past and respectfully soliciting a continuation of the same in the future, we are,

Yours very truly,

The Crystal Pharmacy.

The next link in this follow-up system was a card headed with a burnt match. This was printed in black upon red note paper and mailed in an unsealed envelope, a burnt match being attached by glue and through a slit in the paper.

A Burnt Match

Is of just as much value to you as is the nickel-plated cigar lighter if your cigar goes out after you leave the store.

We keep a box of good matches upon our counter and you are always invited to help yourself when purchasing a cigar.

Of course we do not expect this small accommodation to win your patronage; as we rely upon the merit of our goods to do that; still it goes to prove how much we appreciate your patronage and how considerate we are of your every want.

The Crystal Pharmacy.

We hesitated some little time before sending this out as we feared it might prove expensive, but finally decided that as inasmuch as we had always kept a box of matches on the counter and had never seen fit

F. G. STICKLER, M.D.,
President S. D. Ph. A., and Director S. D. Druggists'
Mutual Insurance Co.

to do otherwise and as the invitation was going only to reputable parties, gentlemen who would in all probability appreciate the favor and not take advantage of our kindness, the experiment was worth trying, and it has proven one of our best advertisers.

That this method of advertising has been a success is evidenced by our cigar business having increased from \$1.50 a day to \$9.00 and \$10.00 and is still growing.

It is the best method of getting the attention of the smoker and is a plan that is practical for any store in any locality, the only difficulty being in securing the mailing list. The returns, however, are so large that they are well worth any effort that may be necessary to expend in that direction.

However, it will in all probability be fruitless to conduct an advertising campaign of this nature if one does not carry a decent stock as the man who carries a lot of bargain stuff, nothing meritorious, and few advertised will never receive a second call and his advertising would in that event be almost wasted.

THEORY AND PRACTICE

CURIOUS CHINESE PILLS.

Thos. Maben (Glasgow Ph. A.) described a sample of Chinese tonic pills, a box of which had been placed in his hands. The pills were relatively immense in size. Each pill consisted of a large piece of pill-mass, round, about an inch in diameter, weighing about 180 grains and covered with gold-leaf. The enormous gilt pill was enclosed in a casing of wax, the idea being doubtless to afford protection from atmospheric influences. The wax casing was loose and appeared to have been molded in two portions, the halves being joined together by gently warming the edges after the pill was enclosed. The wax was stamped with one or more stamps or "chops," a red chop be-

ing the druggist's trade mark and a golden chop the name of the pill. The pills were packed in cotton in a box covered with figured silk, bearing a red label containing the druggist's name and address and a label setting forth the virtues of the pill, which were still further advertised by means of hand bills in the Lox. Mr. Crawford who sent the pills from Singapore also sent a translation of part of one of the leaflets (Chem. & Drug.): "These pills brighten the countenance, invigorate the body, more particularly the kidneys, increase the appetite, soften the complexion (literally, make the complexion oily), quiet the heart, soothe respiration, cure fever, ringing in the ears, blurring of the vision, loss of blood, lumbago, etc." The pills are not taken entire for one dose, the patient breaking off a piece about the size of a pea when required.

ARSENIC IN REAGENTS.

A. Gautier (Comptes rend.) has by means of an extremely delicate test been able to demonstrate the presence of arsenic in most of even the purest reagents. Water after treatment with sodium carbonate and distillation from a tinned copper still contained .0007 milligram arsenic per liter; the same distilled from a glass retort and pure sodium bicarbonate, gave .0011 milligrams per 100 C. Ammonia solution made from materials supposed to be pure yielded .0033 milligram per 100 C. c.; commercial sodium bicarbonate, .016 milligram per 100 grams; pure commercial potassium nitrate, .0015 milligrams per 100 grams; potassium sulphate, .006 per 100 grams; purified ferric sulphate, containing 30 gram ferric oxide per liter, .0004 milligram per 100 C. c.; specially purified nitric acid, .00023 milligram per 100 grams; saturated solution of sulphur dioxide in water, .005 milligrams in 100 C. c. Hydrogen sulphide generated and purified in the usual way contained considerable quantities of arsenic.

DISINFECTATION WITH FORMALDEHYDE GAS.

Ravenel and Gilliland (Public Health) reach the following conclusions in a series of experiments in the practical disinfection of rooms with formaldehyde gas: The compound merits the high esteem in which it is held as a disinfectant. Special apparatus, while useful and convenient, is not absolutely necessary for the successful application of the gas. The germicidal power of formaldehyde gas depends upon certain factors which are, as yet, imperfectly understood. Other things being equal, moisture and temperature are the most important of these factors. In practice, every operation should be controlled by culture experiments, and no room which has been exposed to infection should be considered disinfected unless control cultures exposed in different parts of the room are shown to have been destroyed.

FERRUS SULPHATE AS AN ANTISEPTIC

A. J. McLaughlin (U. S. Marine Hospital Bulletin) finds that ferrous sulphate possesses little value as an antiseptic and germicide. He states that it has no restraining influence upon putrefactive changes unless it is present in proportions greater than 2 per cent. It does not permanently check putrefactive change unless it constitutes at least 5 per cent. of the mixture. As a germicide it has little or no action, even when applied under the most favorable conditions for disinfection. In experiments in which the material to be disinfected with the agent in saturated solution its action was not apparent and under the most favorable conditions it failed to destroy seven out of nine different varieties of pathogenic organisms after an exposure of one hour.

CITROZON. UROLYSIN. NERVOL.

Dr. B. Rhoden (Dtsch. Med. Zeit.) mixes crystals prepared from vanadium pentoxide, hydrochloric acid and citric acid and sodium carbonate with 30 per cent. of effervescent powder, and calls the product citrozon. It is said to contain .005 per cent. vanadium pentoxide, and is given in teaspoonful doses in a glass of

water six or eight times a day to stimulate metabolism. Urolysin is a mixture of citrozon with 10 per cent. of quinic acid, and is employed as a means to diminish the quantity of uric acid. Nervol is a mixture of citrozon and 10 per cent. of lithium bromide and effervescent powder. It is employed in hysteria, neurasthetic headache and insomnia in teaspoonful doses in a glass of water upon retiring.

THEORIES OF INDICATORS.

Julius Stieglitz (Journ. Am. Chem. Soc.) discusses the two rival theories concerning the action of indicators and shows that the ionization hypothesis of Ostwald has been overrated and that it does not give a satisfactory explanation of the phenomena. He shows that the appearance of color in a solution containing phenolphthalein cannot be due to ionization because compounds of this body also yield intense colors in the solid state and in solutions which are not electrolytes. The author explains at length the advantages of the "chromophore theory," based upon the formation of a color producing group in the molecule, in explaining the changes exhibited by phenolphthalein and methyl orange.

ICHTHYOLIDINE.

Ichthyolidine is a compound of piperazine and ichthyl sulfonic acid. It contains 7 per cent. of piperazine and is employed as a remedy for gout. It occurs as a dark brown amorphous powder and is insoluble in water and the ordinary solvents. The compound is said to diminish the quantity of uric acid produced by the body and is prescribed in doses of 3 to 6 grams per day.

SALOCREOL.

Salocreol is the result of the action of salicylic acid upon creosote. It is a brown oily liquid almost odorless and insoluble in water and easily soluble in alcohol, ether and chloroform. Applied to the skin it is easily absorbed, and produces no discoloration or irritation. It is easily decomposed by the organism and is employed chiefly as a local application for rheumatism.

PINE BUD OIL.

Haensel (Pharm. Zeit.) reports that pine buds yield .288 per cent. of a light brown oil which has an odor resembling that noticeable in pine forests when the young leaves are exposed to sunshine. It is slightly laevorotatory and is soluble in 90 per cent. alcohol and most other organic solvents.

PARAMONCHLORPHENOL PASTE, SUBSTITUTE FOR ARSENIC PASTE.

Von Dorn (Klin. Wchschr.) proposes the following paste as a substitute for arsenic paste in dental practice. Crude metallic cobalt and tropacocaine hydrochlorate in equal parts mixed with liquor paramonochlorphenol and zinc oxide in sufficient quantities to form a soft paste.

ANTITOXIN PROPERTIES OF VERATRUM VIRIDE.

M. Isham (La Med. mod.) reports a number of cases in which he had demonstrated the antitoxic properties of Veratrum viride and its alkaloids. Cases which had shown decided improvement after subcutaneous injections of this drug were eclampsia, carbolic acid poisoning, uremia, and hepatic colic.

ANTHRASOL.

Anthrasol is a clear yellow oily liquid obtained by removing the pitch, particles of coal and coloring matter from coal-tar and mixing the residue with purified tar of juniper wood. It is soluble in absolute alcohol, acetone, the oils, and paraffin. Its use is recommended in certain forms of skin disease.

GASTROCRADINE.

Gastrocradine is a name given to a soft extract prepared from the gastric mucous of the hog and the sheep. It is said to be very rich in pepsin.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries to this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Waterproofing Cloth.

(J. D. B.) Without considering the methods by which cloth is waterproofed with rubber, there are several processes in practical use by which cloth is rendered non-absorbent of water—and for all reasonable purposes waterproof—without materially affecting its color or appearance, greatly increasing its weight, or rendering it entirely air-proof. These depend mainly upon the reaction between two or more substances, in consequence of which a substance insoluble in water is deposited in the fibers of the cloth. The following processes are taken from the Scientific American Cyclopaedia of Receipts:

Lowry's Process.—Soften 4 ounces of glue in cold water and dissolve it together with 2 ounces of soap in a gallon of water, by aid of heat and agitation. The cloth is filled with this solution by boiling it with the liquid for several hours, the time required depending upon the kind of fiber and the thickness of the cloth. When properly saturated, the excess of liquid is wrung out the cloth is exposed to the air until nearly dry, then digested for five to twelve hours in the following solution: Alum, 13 ounces; salt, 15 ounces; water, 1 gallon. The cloth is then finally wrung out, rinsed in clean water, and dried at a temperature of about 80 degrees F.

Paul's process requires a small quantity of oil, but in other respects it resembles the above. The formula follows: Sodium carbonate, 1 pound; caustic lime, one-half pound; water, 2 and one-half pints. Boil together, let the mixture stand to settle, then draw off the clear lye and add to it 1 pound tallow, one-half pound rosin, previously melted together. Boil and stir occasionally for half an hour, then introduce 3 ounces of glue (previously softened) and 3 ounces of linseed oil, and continue the boiling and stirring for another half hour. In waterproofing, one-half ounce of this soap is mixed with 1 gallon of hot water and in this the goods are placed for about 24 hours, according to thickness and character. The pieces are allowed to drain until partly dried, then soaked for six hours or more in a solution prepared as follows: Aluminum sulphate, 1 pound; lead acetate, one-half pound; water, 8 gallons. Shake together, allow to settle, and draw off the clear liquid. Wring out after rinsing and dry at a temperature of 80 degrees.

Still another process we take from the Textile World: Coat the fabric with a solution consisting of 100 parts of benzole, 5 to 25 parts of talc, and 5 to 25 parts of lanoline, applied warm. Dust the fabric with powdered talc, and force the latter into the pores of the former by strong pressure. If the texture of the cloth be open, both these operations must be repeated. When dry, paint the fabric with a second solution, consisting of 1400 parts of benzole, and 5 to 25 of gutta percha or balata; then press and dry. A fabric so treated is said to retain its suppleness, to be perfectly water proof, and, to some extent, fireproof.

GEO. M. FAIRRAR, Clifton Forge, Va.,
Second Vice-President Virginia Ph. A.

Composition Powder.

(S. B.) There are many modifications of the old Thompsonian "composition powder" extant, the one most used, perhaps, being the compound powder of bayberry, or composition powder of the National Formulary. Here are some other formulas from the older "botanic" writers, the first being said to be the original Thompsonian formula:

Bayberry	2 pounds
Hemlock, inner bark	1 pound
Ginger	1 pound
Cayenne	2 ounces
Cloves	2 ounces

Dr. Elias Smith's Formula.

Bayberry	1 pound
Hemlock bark	8 ounces
Witchhazel leaves	4 ounces
Ginger	8 ounces
Cayenne	4 ounces
Cloves	2 ounces

Dr. J. T. Wells' Formula.

Nanthoxylon (?)	1 dram
Ginger	3 drams
Valerian root	3 drams
Blue calosh	3 drams
Black root (leptandra)	5 drams
Golden seal	5 drams
Pleurisy root	10 drams

Dr. J. Everett's Formula.

Bayberry	3 pounds
Ginger	2 pounds
Caraway seed	2 pounds
Cloves	8 ounces
Sassafras, bark of root	4 ounces
Cayenne	4 ounces

Formula from Howard's Domestic Medicine.

Butterfly root	1 pound
Bayberry, bark of root	1 pound
Sassafras	4 ounces
Colic root (Liatris Spicata)	4 ounces
Ginger	1 pound
Cloves	2 ounces
Cayenne	2 ounces

All finely pulverized and sifted through a fine sieve and well mixed; dose, for an adult, one teaspoonful in hot water; sweetened if most agreeable.

Elixir of Lactated Pepsin.

(B. C.) Why do you not employ the formula for compound digestive elixir of the National Formulary

which contains the equivalent of 10 grains of saccharated pepsin or 1 grain of pure pepsin to the fluid dram. This is the strength of the ordinary commercial preparations. A similar formula printed in the Era some years ago follows:

Pepsin	128 grains
Pancreatin	40 grains
Diastase or ptyalin	10 grains
Cudbear, powdered	180 grains
Dilute hydrochloric acid	20 minims
Lactic acid	3 drops
Alcohol	3 fl. ounces
Water	7 fl. ounces
Simple syrup	6 fl. ounces

Mix all of the above except the syrup, macerate for three days, agitate frequently; filter, to the filtrate add the syrup, and through the filter add enough of a mixture of alcohol and water, in the proportion of 5 to 7 by measure, to make the liquid measure of 16 fl. ounces. Some other formulas are given in the Era of December 4, last year, page 577.

Bismuth Sub-gallate.

(F. M. F.) "I respectfully request information as to whether sub-gallate of bismuth was ever called or recognized as "odorless iodoform?" If so, what was the reason advanced for so doing?"

We do not know that bismuth sub-gallate was ever designated or recognized as "odorless iodoform." Under the name of "dermatol," however, it was put forward as a substitute for iodoform. The first description of it we are able to find in any pharmaceutical journal is that which appears in the Pharmaceutische Zeitung of Berlin, June 20, 1891, page 386, where it is stated to be "an extremely fine, non-hygroscopic, odorless, saffron-yellow powder, stable towards air and light, and insoluble in the ordinary solvents. On account of its insolubility its antiseptic activity is limited to the part where it comes into direct contact with the pus microbes, resembling in this respect iodoform." This statement is supported by the United States Dispensatory which, quoting from the Gaz. Med. de Paris (June 1891), says it was used by Heintz and Liebrich as a substitute for iodoform.

Alum Baking Powder.

(C. & D.) The Era Formulary is authority for the following:

Tartaric acid	4 parts
Alum	8 parts
Sodium bicarbonate	12 parts
Potato or corn starch	3 parts
Ammonium carbonate	3 parts

Pulverize separately and sift; dry thoroughly with a low degree of heat. Mix in a dry room, and at once pack into forms, taking care to pack hard. Cover with tin foil or paraffin paper, to preserve as far as possible from the effects of moisture. Corn starch farina may be used in place of potato starch.

(2)

Dried ammonia alum	8 ounces
Sodium bicarbonate	8 1/2 ounces
Rice flour	16 ounces

Mix.

Cooling and Teething Powders.

Cardamom seeds, powdered	1/4 ounce
Cinnamon, powdered	1 ounce
Heavy magnesium carbonate	5 ounces
Mercury with chalk	4 ounces
Sodium bicarbonate	2 ounces

Eczema Ointment.

Solution of coal tar	6 fl. drams
Zinc oleate	3 ounces
Hydrous woolfat	3 ounces
Almond oil	3 fl. ounces

Chilblain Liniment.

Oil of eajuput	1 fl. ounce
Tincture of cantharides	1 fl. ounce
Soap liniment	6 fl. ounces

NEWS DEPARTMENT.

COMMERCIAL TRAVELERS

Mr. Siller.—Maidens on the Road.—Hamburg has Smaller Circuit.—Spaulding a New One.—Porter and Andrews.

A salesman whose genial features are familiar to hundreds of pharmacists is Charles Siller, of Rochester, traveling representative in Western New York and

CHARLES SILLER.

Northern Pennsylvania for Bruen, Kitchey & Co., of New York. Mr. Siller for more than thirty years has been known as a "hustler." His career began in January, 1871, when he entered the employ of Julius Zeller, who later was succeeded by his son, Max Zeller. He was with this house over thirty years, or until November, 1901. For a decade he was buyer both in the home and import departments. For twenty years he represented the house on the road, traveling as far west as the Mississippi river. Mr. Siller met with a railroad accident in July 7, 1897, resulting in the loss of his right hand, but, nothing daunted, he keeps on hustling.

George Maidens, formerly clerk at Newton's East Genesee street store, Buffalo, is now on the road for Coca-Cola.

James Grant, Wisconsin traveller for William R. Warner & Co., has been ill with pneumonia. His condition was very critical at one time.

J. P. Weber, traveling salesman for the Wisconsin Pharmaceutical Co. was taken sick at Eau Claire and was compelled to undergo an operation.

S. J. Spaulding, formerly in the retail business at Des Moines, Ia., will travel for the Moffitt-West Drug Co. of St. Louis, in South-eastern Iowa, during 1904. John M. DePew, formerly in the employ of Morrison-Plummer & Co. of Chicago, will represent the Moffitt West company in Central Illinois. Mr. DePew has traveled in Illinois for many years, and succeeds Charles E. Chandler, who retires on the first of the year, after a continuous "jaunt" of thirty-nine years as traveling salesman in the drug business.

Sam Hamberg, for the last five years the genial representative of J. Elwood Lee Co. in Eastern Pennsylvania and South to Richmond, has been obliged to shorten his trips. The Southern end will be the gainer, for Mr. Hamberg's health has lead him to choose this territory. The Pennsylvania field will be cared for by an able successor in the person of W. I. F. Dohme.

Two popular traveling men, E. D. Porter, who sold for Strong, Cobb & Co. of Cleveland, for the last eight years, and E. B. Andrews of New Haven, Conn., Massachusetts agent for Wm. R. Warner & Co., have formed a partnership as Porter & Andrews, drug and chemical brokers and manufacturers' agents, with headquarters at 370 Spitzer Building, Toledo, Ohio, and with branches in Boston, New York, Savannah, St. Louis and Chicago.

George R. Townsend, formerly of the J. Elwood Lee Co. and one of the directors of the Philadelphia Drug Athletic Association, takes the street for Armour & Co. in the digestive ferment department.

Fred Estelle, who was for many years the Western New York representative of John Wyeth & Bro. is now connected with Burrough Bros.' Mfg. Co.

N. Severin, for several years chemist of the Empire State Drug Co., Buffalo, has severed his connection with that firm and is out on the road selling preparations of his own manufacture.

W. C. Bell, northwestern representative for Sulo Palmer, with headquarters in Detroit, is spending his annual holiday vacation in this city. He is accompanied by Mrs. Bell, a former well-known young lady of Brooklyn.

Will A. Ward, who has been in St. Louis and vicinity for some time booming the sales of Stearns' Electric Paste, has made himself quite popular.

Charles P. Scott, well known in Western drug circles, has resumed his former position as representative in the West for McKesson & Robbins, and will start out on his first trip early next month. He severed his connection with the firm two years ago, and only recently returned from a trip to China and Japan.

AMONG THE BOWLERS.

A Few Pictures of the Lively Indianapolis Aggregation.—P. D. & Co. Now New York Leaders.—

Trying to Organize in Milwaukee.

Indianapolis, December 15.—The bowling mania which raged in Indianapolis last winter bids fair to be more furious this winter than ever before. The newest drug organization is presided over by Charles B. Marshall. He and the secretary-treasurer, Charles H. Benzel, are clerks in the wholesale drug house of the A. Kiefer Co. F. J. Datesman is a retail druggist, and John Pennicke is in the house of Eli Lilly & Co.

Parke, Davis & Co. won first place in the New York Association on Saturday, and their opponents, Seabury & Johnson, are now tied with two other teams for second place. Bruen, Kitchey & Co.'s work is much better than last season. Team and highest individual scores:

P. D. & Co. \$45 \$11 \$99 S. & J. \$12 792 843

Baltimore, December 5.—A little cloud arose on the horizon of the Baltimore club last week, and some of the members were apprehensive. But it seems to have been dissipated. The cloud was a difference of opinion over the question of what to do when one team shows up with only four members instead of five. The practice has been to permit the four to roll the blind box. This, some contended, is against the rules, and the question came up when the James Baily & Son quintet claimed the right to roll a blind box. The opposition aroused caused the captain of the Baily team to offer his resignation, but the difficulty was afterward adjusted. High individual scores and the standing of the teams are:

Sharp & D.	868	858	814	S. & B.	667	770	759
Kornmann	223			Vordemberge	169

James B. & Son	23	7	Sharp & D.	16	14
McCormick & Co.	18	12	Stanley & B.	12	18
Root & Herbs	20	10	Calvert D. Co.	1	29

Detroit, December 15.—Two hundred or over is getting to be a common score. The boys are elated over the splendid form shown, and are talking of a picked team with which to meet all comers at the close of the season, but more especially a team from New York. They are confident they can "clean up" anything that the effete East may have to offer. The feature of the week was the triple victory of the Michigan Drug team over Nelson, Baker & Co., last year's champions. The latter team felt their defeat keenly, and are said to have brought dogs with them, setting them to barking furiously each time a man of the opposing team stepped up to bowl. Team and highest individual scores:

P., D. & Co.	802	917	814	Stearns & Co.	678	716	748
Lawrence	205			N. O'Donnell	174		
Mich. Drug	801	767	787	N. B. & Co.	777	749	748
Dick	188			Ludwig	184		
Ingram & Co.	838	741	784	F. W. & Co.	698	702	829
Cosgrove	180			Andres	202		

Several changes in standing in the Parke, Davis & Co. interdepartmental league, the most interesting being the steady advance of the Mechanical boys. Baxter of the Pharmaceticals had the high score, 215.

Milwaukee, December 15.—An effort is being made to re-organize the Wholesale Druggists' Bowling League. Early in the season several match games were played between pick-up teams of the different wholesale firms, but the formation of a league which had been begun by Otto Welsch, a clerk with the Yahr & Lange Drug Co., was discontinued on the death of Mr. Welsch last week. It is probable, however, that an organization will be effected within the next two weeks and the season open early in January.

NEW YORK AND VICINITY.

COMING LEGISLATION.

A New Bostwick Bill Coming—Two Factions Working to Have Board of Pharmacy Appointed by Governor—Licenses for Alcohol Only—Cocaine—Pre-requisite Clause.

As was the case last winter, pharmaceutical legislation in this State promises to be vastly more important—at least in respect to the attempts at legislating made—than in any other State in the Union. Already the various legislative committees are cognizant of enough trouble ahead to make their fighting blood boil, and veterans like William Muir and Felix Hirsman, without whom the lot of the druggists in this commonwealth would be vastly more unpleasant than it now is, are girding up their loins for the fray.

At least three, very likely four, and probably a half-dozen bills proposed for and against pharmacy will occupy their attention. The three certain ones are the pre-requisite, or preliminary-education-and-college-graduation requirement bill, to which the State association is pledged; a new Bostwick-Dowling bill, the product of certain manufacturers and the County Medical Society, which is aimed at "substitution," and will likely be as obnoxious and certainly will be pushed far more intelligently than its prototype of last winter, which got through both branches and was killed by Governor Odell; a bill to abolish the present method of electing the State board of pharmacy and providing for the appointment of the members by the governor. Another bill that will likely be introduced will provide a \$5 State alcohol tax for those who do not wish to handle liquors.

The pre-requisite bill, it is generally conceded, will pass. With the State association committed to it, and the Kings County Ph. Soc., the Manhattan Ph. A. and the German Apothecaries' Soc., the three most powerful local associations in the State, among others, enthusiastically urging it, its friends are far in excess of its enemies, who, if there are any, have not and may not appear openly.

Last year, when the Bestwick, or, as it afterward in its modified form was called, the Bostwick-Dowling bill, appeared, its ostensible sponsors, the Society of Medical Jurisprudence, appeared before the committee with Assistant District Attorney Lindsay as their counsel, prepared for a snap. They did not reckon that any pharmaceutical opposition would cut much of a figure. They were badly fooled. They were compelled to modify the bill considerably. Originally it provided that "all manufacturers or importers of drugs must affix to all packages containing them a written certificate indicating purity, strength and genuineness of such drugs and their ingredients, and in cases where drugs are liable to deteriorate through lapse of time, said certificate shall furthermore state the date after which they shall not be sold," and a lot more equally senseless things.

In spite of the pharmacists' valiant opposition, this bill went through the legislature. But Governor Odell, thanks to Messrs. Muir, Hirsman, Stoddart, Bradt, Brundage, Mayer, Mingay, Muench, Thorpe, and the wholesalers, did not sign it. This year, however, the certain manufacturers who are behind the movement are wiser. Still, Governor Odell proved a good friend to the pharmacists before.

It may be that Governor Odell will be the last hope of the druggists who oppose a change in the method of choosing the board of pharmacy. The friends of the

change are not manufacturers—they are retail druggists. There are two aggregations of them, one in Brooklyn and one in Manhattan. Both are even now working hard to attain their object.

And their political strength is formidable, not so much because they are numerous, but because they have the ears of politicians. Alderman Goldwater, brother of and partner with Dr. A. L. Goldwater in three drug stores, is leader of the Manhattan division, and he has told several opponents of his scheme, one of them a legislative committee man, that his plan is certain to succeed, perhaps not this year, he concedes, as, if it passes the legislature, it may be held up by the governor, but when, as he prophesies, a Democratic governor is elected to succeed the present Republican one.

Messrs. Goldwater are prominently identified with Dr. Robinson's Board of Pharmacy Institute. They are also leaders in the so-called Greater New York Ph. Soc., which is semi-medical in membership, and has always avoided inspection of its roster.

The other faction is in Brooklyn. The board of pharmacy has been very active in that borough of late, and has found about one hundred violators there. This is a new thing for Brooklyn, which has been pretty much left alone in the past, it is pointed out, and has created a furor among those caught. Board members say: "Well, if these men appear against us at Albany, we'll simply submit our list of violators to the legislature and to the governor; that will stop them."

The members of the board, as far as the eastern section is concerned, have all expressed a perfect willingness that their election by pharmaceutical societies be done away with, but they promise a fight if the motive of the men behind the scheme is spite. Whether a political board will be a good one, they do not pretend to foretell. Whether the present movement contemplates a reduction in the number of members—now fifteen—has not materialized. But very many legislators are being proselyted on general principles. It is believed with the exception of the Greater N. Y. Ph. Soc., every association in the State will fight the movement.

To Sidney Faber is due the credit for the "\$5-license-for-alcohol-only" bill, and it was his quiet influence that brought both the German Apothecaries' Soc. and the M. Ph. A. out for it. Mr. Faber has seen the State excise officers, who seem favorably disposed. The object is to distinguish those who do not wish to sell liquor as well as alcohol from those who do. It is not known whether the State will take up this bill, though it is thought likely that it will. Mr. Faber has also received favorable comment from the Department of the Interior at Washington on his plan for a \$5 national license for alcohol only, with the same object, though in this case those who sell no liquors will benefit by \$20 in the present tax.

The anti-cocaine bill sponsored in Syracuse and recommended to the State association, is singularly devoid of partisans here. "We have enough law to protect us here in the city, if the board of health would enforce

WHEN YOU NEED TIN BOXES

Write to the folks who make them for Cascarets, Huyler's, Vaseline, Runkel, Dr. Charles, and 992 other proprietaries.

AMERICAN STOPPER COMPANY
150 Water Street, Brooklyn, N. Y.
THE LARGEST MAKER OUTSIDE THE TRUST

At Hillsmere; A Sunny Afternoon in Winter.

The above is a typical country scene down Maryland way. The man with the equilibrist's poise (or is it dancing?) is G. Blampsey. E. G. Wells, the Gude's Pepto Mangan man, has the banjo. The Era camera caught them all unsuspecting. They are members of the famous "shooters' shoot" of this city.

it," is the general opinion. But the State Association will likely sponsor the movement.

Then, no doubt, there will be po'ison bottle bills and the rest, adverse to pharmacy. The legislative committee men expect to be in Albany about every week for months. Legislation against trading stamps is also hoped for. It is said that, when the druggist is paying \$5 a thousand for these abominations, some of the big stores, whose sale of drugs affect the druggists very seriously, are favored by the stamp companies to such an extent that one store in this city gets its stamps for one-tenth what the small dealer pays. Consequently, its "double trading stamp," and "a dollar's worth of trading stamps free" days are very frequent, so frequent, in fact, as to be bringing ruin to the trading stamp company, it is asserted.

In former days the State Ph. A. legislative committee used to meet in Albany early in December and look the ground over. But ex-President Stoddart, in his two terms, changed this for economical reasons, and the first assembling was on the forenoon of the day on which the first hearing was had before the legislators. President Anderson will, it is believed, follow Mr. Stoddart's plan from choice, though his recent illness really made it obligatory.

IS VIRTUE ITS OWN REWARD?

Several Brooklyn druggists were recently fined for violating the law prohibiting the use of old bottles that are registered. A prominent druggist recently was asked for a dime's worth of carbolic acid by a little boy, who presented a soda water bottle as the container. "Just you go home and get another bottle and send a grown person for the stuff," the druggist ordered.

The boy went out, but, instead of going home, went down the street two blocks to another druggist. In a few moments he returned and tauntingly held the bottle, filled, up for the first druggist's edification.

"The other fellow broke the law twice on that sale," said he, in relating this and many like experiences to an Era representative. "He was a law breaker and I am an honest man. What was the result? The boy's family has a great deal of sickness just now, and the other fellow fills their prescriptions."

ANNUAL REUNION OF THE ALUMNI.

With class colors flaunting saucily over sober tones, with the shades tight drawn to shut out all sight or sound of the tempest outside, the library of the New York College of Pharmacy presented a cozy appearance on last Wednesday evening to the half-hundred or so element braves who ventured out to attend the annual alumni dinner.

President Charles S. Erb presided. In a neat introduction he placed Dean Henry H. Rusby at the mercy of the diners. Dean Rusby bade his hearers welcome and told some stories of Spanish-American experiences. Ewen McIntyre, "the oldest living grad," arrived while the Dean was speaking and his ovation drowned out all else for a moment. "I consider this, the first time I ever was interrupted while speaking, an honor," said Dean Rusby. Mr. McIntyre gave him a playful slap on the back. Dr. Albert H. Brundage, president of the State board of pharmacy, spoke interestingly. But formality could not prevail. Mr. McIntyre jumped up while Dr. Brundage was speaking and exclaimed:

"Yes! look around at your shelves now! Thousands of pills and tablets and fluids and everything else that must be kept in stock! There was a good old time when things were different. Then the druggist needed only one shelf bottle. He filled all his prescriptions from that. And that contained quinine. Thank you, Dr. Brundage."

And Dr. Brundage resumed.

Dr. Harry B. Ferguson told a yarn or two, James H. Rogers got well started on three, and made unmistakable hits on all; Phillip Fitz, chairman of the arrangements committee; Treasurer Edward Pfaff and President Harrigan of the Junior class also spoke, and Dr. Frederic P. Tuthill of the Brooklyn College of Pharmacy made a particularly felicitous little speech. Telegrams of regret at inability to attend were read from President Charles F. Chandler, Dean Joseph P. Remington of the Philadelphia C. U., and Professor Wilbur F. Scoville of the Massachusetts C. P. Class songs, the loving cup, instrumental music and good cigars must be mentioned as contributing to the enjoyment. There may have been a little wine, also.

BOARD'S WARNING TO PHARMACISTS.

In view of what is going to happen, every druggist in the eastern section of this State should carefully read the following:

"Sec. 196, Subdivision 1.—In the month of January, nineteen hundred and one, and annually thereafter, the proprietor of every place, in which drugs, medicines or poisons are compounded, dispensed or retailed, shall make a statement under oath to the board of pharmacy showing what licensee is in charge of the same and what other licensees or registered apprentices are engaged or employed therein together with any other facts, or data, that may be required by the board, and shall pay a fee of two dollars, and shall receive from the board of pharmacy a certificate of registration which must at all times be conspicuously displayed in said place with the certificate of registration of license of the person in charge thereof."

The above is from the State pharmacy laws. Nothing is said in it requiring the board to notify pharmacists to register; the law distinctly says they shall. However, the board has always, since the passage of the law, notified the pharmacists of their duty. It will not do so next month, believing that three years is

long enough to educate them to the exactions in this respect.

Therefore, the Era is authorized by the board to announce that every druggist who has not complied with the law of registration before the first of February, next year, will be summoned at once to court.

NEWLY REGISTERED IN THIS SECTION.

Results of last examination by Eastern branch of the board of pharmacy were better than usual, twenty-two being registered as pharmacists, as follows: Emmanuel Bronstein, Ludwig V. Ferrara, Jacob J. Franz, Charles F. Gimbernatt, Jr., Brooklyn; Walter E. Hurley, Brooklyn; Julian Rabinovitch, George I. M. Robinson, Samuel Rose, Herbert Schoenrich, Baltimore, Md.; Leon Schutzman, Johannes A. Tiedemann, Brooklyn; Jeannette Benjamin, Herman Dillon, Herman W. Dulberger, Edward Eberle, Max Flaumenbaum, Julius Kramer, James Leask, Hyman Morgenstern, Joseph M. Scheer, Brooklyn; Eugene C. Webb, Brooklyn; Oscar Wenzlering. Druggists' certificate—Frank A. Malkovosky.

NEW YORK NOTES.

—Drug Trade Club guests: H. Rueden, Paterson, N. J.; S. J. Tilden, New Lebanon, N. Y.; B. Gilpin, Baltimore; J. S. Kinnan, Toledo; C. B. Kinnan, Toledo; Jordan W. Lambert, St. Louis; H. W. Nichols, Tarrytown; Frank G. Mason, Paris; V. P. Powell, London; Algenon Henderson, Glasgow; John Wharry, St. Paul; Q. Platt, Poughkeepsie; J. W. Callinan, Summit, N. J.; E. L. D. Hester, Hasbrouck Heights, N. J.; B. C. Hawkes, Chicago; W. F. Smith, Boston; W. C. Maginnis, Boston; R. MacC. Bullington, Richmond; A. E. Hoedt, Atlanta; E. H. Monil, Philadelphia.

—Dr. Louis N. Depoyre, a prominent pharmacist and physician of Denver, Colo., who recently sold his pharmacy there, called at the Era office last week. The doctor sailed for France Thursday on the La Savoie, to pick up pointers and equipment for a new pharmaceutical manufacturing company in Denver, which he recently organized, and of which he is the head.

—Said Felix Hirseman on Saturday: "Many a drug store is turned into a ginmill because the owner is too weak not to keep liquors, which he sells at first to his intimate friends, then to an ever increasing circle of hypocrites who, in their pose before the community as abstainers, do not care to go into a saloon."

—Seen down town: S. E. Strong, treasurer, N. W. D. A.; John H. Smedley, treasurer Parke, Davis & Co., Detroit; A. J. Horlick, Racine, Wis.; William Lawton and John Conside of the C. H. & H. A. Lawton Drug Co., New Bedford, Mass.; W. L. Mix, New Haven, Conn.; George F. Brown, Rahway, N. J.

—The Goldwater drug stores as defendant were held by Judge Tierney to have violated the State pharmacy law against adulteration and sophistication in three instances, the charges being preferred by the board of pharmacy. The judge, however, imposed fine in only one case, adding the costs.

—Boericke & Tafel, the homeopathic druggists of this city and Philadelphia, have recently incorporated here for \$4,000. The incorporators are: F. A. Boericke, E. E. Boericke, J. J. Boericke, all of Philadelphia. Directors, F. A. Boericke, A. L. Tafel, G. H. Tafel all of Philadelphia.

—"The trouble with some druggists is that they can't bear to see a 5-cent piece go out of their stores," said President Oscar C. Kleine of the Kings Co. Phar. Soc. recently. "That is one reason why the board of pharmacy finds so many violations; it is petty meanness in business.

—The Vanderbeck Drug Co., which recently bought

one of Benjamin Kent's drug stores at Paterson, N. J., has been incorporated for \$50,000, by John Y. Dater, Ramsey, N. J.; Samuel I. Vanderbeck, Jr., William H. Belcher, Paterson, N. J.

—"Radium," its history extraction and properties, will be the subject of an illustrated lecture before the Cooper Union Chemical Society on Saturday evening, by Dr. Samuel A. Tucker of Columbia University.

—Lewis E. Jones, formerly prescription clerk for Heydenreich Bros, Atlantic avenue, Brooklyn and later with J. Jungman, Columbus avenue, has accepted a position with William B. Riker & Son Co.

—The annual meeting of the State board of pharmacy will be held at Albany on January 5. There is a strong belief that the new president will be Vice-President Willis G. Gregory of Buffalo.

—At the meeting of the Kings County Ph. Soc. last week a committee was appointed to receive a gift of a picture of the late Dr. John F. Golding of the Brooklyn College of Pharmacy.

—Professor Kinney of Drake University, Des Moines, Ia., asserts that he can manufacture camphor, at a cost of twenty cents a pound, from turpentine and oxalic acid.

—Harry Noonan, New York manager of the Norwich Pharmaceutical Co., is at the company's laboratories at Norwich, N. Y., for a few days.

—Frederick T. Dall, druggist at 702 Tremont avenue, filed a petition in bankruptcy with liabilities of \$3,247 and nominal assets of \$4,591.

—Dr. I. V. S. Stanislaus, director of the Hegeman & Co. laboratories at 200 Broadway married Miss B. Lillian Smith of Brooklyn.

—Charles M. Seliger and Leon Braunstein have both taken out licenses for a new store at 2137 Madison avenue.

—Charles H. Bellin has bought the store at 163 East Broadway of Julius Hammer.

—Morris Kraus and Samuel Halprin are opening a new store at 1742 Madison avenue.

—Herman W. Feeser has opened a new store at 606 Grand street, Brooklyn.

—Fred B. Losee is a new proprietor at 96 Kingston avenue, Brooklyn.

—L. Freyberger has sold 1156 Second avenue to N. Koppel.

ROUND ABOUT BUFFALO.

—Burglars of Buffalo seem to have covetous eyes upon the profitable appearance of the drug business here. There is also a coincidence in the fact that in both cases which occurred during last week the high-women sought entrance by way of the transom over the front door. Last Sunday morning, just before the usual hour of opening, the engineer of Stoddard Bros.' large establishment on Seneca street, entering somewhat earlier than usual, discovered a man at work manipulating the cash drawer. Upon being detected he fought fiercely with a hammer which he had secured from the shipping department, and, after a desperate struggle, escaped, having secured no plunder.

**BABY

PROFIT.**

Send for literature with your name to distribute. It costs you nothing.

WILMOT CASTLE CO.,
26 Elm Street, Rochester, N. Y.

Early on Thursday morning the drug store of Dedo Bros. at 408 Clinton street, was entered by burglars. The thief took \$32 from the cash register.

—N. McDonald of Depew, who was operated upon for appendicitis at the German Deaconess Hospital in Buffalo, is rapidly improving and will be able to leave the hospital in a few days.

AROUND SYRACUSE.

—In one of the suggestions which Postmaster Bruce of Syracuse has issued to the public to facilitate the sending of packages during the Christmas season is the following: "Buy stamps in advance at the Postoffice and weigh the packages at drug stores or stations, and thus avoid the crush in the corridor of the postoffice." The druggists say the Postmaster means all right, but they are afraid his advice will be followed too freely, and that they will have to furnish stamps as well as weigh hundreds of packages.

—Worden Smith, clerk at C. W. Snow & Co.'s, fell from a ladder recently and dislocated his right shoulder for the eighth time. Mr. Smith claim that he is not partial to dislocated shoulders, but that once having put it out it becomes easier every time.

—Syracuse druggists are progressing in the proposed formation of an independent ice company which will insure them ice during the summer at a reasonable price. There is some talk of combining with the meat dealers and grocers.

—A. C. Marble has opened a drug store at Marcellus. Mr. Marble was formerly in the drug department of Sibley, Lindsley & Kerr of Rochester. This makes two stores in Marcellus.

—The store of W. F. Jones at Bath, has been sold to the newly organized Jones Drug Co. C. A. Schults, long connected with the store, will be president and general manager.

—O. J. Daniels of Cicero Center, who kept a general store including a drug department, recently committed suicide by taking strychnine.

—The store of Paskell & Snow at Oneida, is being run by the assistance, R. A. Hill. Mr. Paskell is the manager at present.

—W. J. N. Gervais of Bath, has filed a petition in bankruptcy, his liabilities being about \$3,900, and assets \$2,200.

—D. A. Lawton has been at the hospital of the Good Shepherd for an operation, but is able to be about again.

—M. L. Rogers of Watertown, has a "celluloid window." Various articles are displayed in a tastful manner.

Protect Your Bank Checks.

All progressive business men insure against loss by fire, water, wind, accidents, etc., but the majority of them neglect to insure against the loss that might occur through having their bank checks raised from small amounts to larger ones. All appearances would indicate that many good business men are laying themselves open to serious financial loss by their failure to provide their business with one of the clever little machines which are manufactured by the Rochester Metal Mfg. Co., Rochester, N. Y. These machines are known by the name of "Protecticheck," and are designed to insure the owners' check against being raised by unscrupulous persons. It is apparent that the use of such a machine would not only protect the owner's check, but would also serve to increase his business standing, as its use looks and is more business-like. The Protecticheck is claimed by the manufacturers to have several distinct and original improvements. A cut of this machine with the introductory price offer on it appears in the Rochester Metal Mfg. Co.'s advertisement on the inside of the back cover.

NEW ENGLAND.

NEW HAVEN DINNER.

Annual Banquet and Meeting of the Druggists.—Waterbury Clerks Have Another Grievance.—New Metcalf Store's Big Opening.

New Haven, Conn., December 15.—The twenty-sixth annual banquet of the New Haven Ph. A. was held in this city on Tuesday evening at Warner Hall. Seventy-five members were present, besides many druggists from different parts of the State, and representatives from leading wholesale houses of New York.

The evening was opened with a business meeting, during which the election resulted as follows: President, Charles Fleischer, vice-president, S. Lloyd Salisbury, treasurer, J. Crowley; secretary, A. J. Hogdson. President Fleischer is now serving his seventh term. The executive committee were: C. H. Conway, E. Hesse, J. Eagny, John J. Alling, J. H. Marx.

During the dinner there was music, and after it a vaudeville entertainment. President Fleischer called for the toasts. Among those who responded were Mr. Donnelly of Parke, Davis & Co., Mr. Newton of Eli Lilly & Co., Mr. Isbell of Bauer & Block, Mr. Emory of the E. L. Patch Co., Boston; Paul Westhoff of the F. D. Graves Co., of this city; J. A. Levery of Bridgeport, president of the State Ph. A., and C. A. Rapelye of Hartford, secretary of the State Ph. A.

CLERKS' LOSE THEIR SUNDAY NOON HOUR.

Waterbury, Conn., December 15.—The clerks here have a new grievance in the order issued last week that hereafter all drug stores will keep open on Sundays from 8 o'clock in the morning until 10.30 at night. For the last few months they have closed on Sunday between the hours of 1 and 2 to allow the clerks a chance to get dinner. By this plan the clerk who had a day off did not have to spoil his holiday by coming to the store an hour at noon on Sunday to let the other man go to dinner. The clerks were delighted with the scheme because they could leave town for the day.

When the plan was inaugurated the proprietors' association was behind it and the two druggists in town who did not belong to the association were asked to comply. They gave their consent, but on investigation it was found that they have never complied with their agreement, so the other proprietors have agreed to keep open.

OPENING OF NEW METCALF STORE.

Boston, December 15.—To the formal opening of the new drug store of Theo. Metcalf Co., 39 Tremont street, a great number of people were invited. The invitations were quaintly conceived and read: "You are as welcome, worthy Sir, as I have words to bid you." The great store was brilliantly illuminated. The visitors were shown about by the officers of the company, Frank A. Davidson, president and treasurer; Edwin W. Shedd, vice-president; E. F. Varney, secretary and general manager, and several of the directors. In the latter part of the evening a substantial supper was served by a caterer, and souvenir boxes of chocolate bonbons and cigars were given to visitors, to whom soda water was dispensed.

Flowers in profusion were given away. The company in its long career of more than three-score years long ago passed the 1,000,000 mark in prescriptions and now returns to No. 1.

BOUND TO CATCH THEM.

Boston, December 15.—Lynn's chief crusader in preventing illegal sales of liquor, working under a fund left some years ago by James Tolman, is again on the war path, after a long period of inertia. William F. Green, druggist, was summoned to court, pleaded not guilty, and secured a continuance. The "crusader" searches his agents just before they enter a drug store to make sure that they have no liquor concealed about them. This is not because he is afraid to trust those whom he employs, but so that he can testify regarding the purchase. He stands just outside the drug store while his agents enter, and watches all proceedings. Even the court smiled when it learned of these strenuous efforts to get druggists into trouble.

THE BAY STATE.

—A public speaker in Brockton said that city had far too many drug stores and that not more than a dozen actually were needed, or could live, and that the rest—there are more than thirty—must be viewed as rum shops. Members of the trade are indignant, and one of them, Leslie T. Adams, demanded that the speaker retract. Mr. Adams stood ready to give \$1,000 to the Wales Home, a charitable institution, if the assertion could be proved. The man backed down, apologized to Mr. Adams, and modified the assertion by saying that, in his opinion, not more than a dozen pharmacies could exist profitably and legitimately and that any others would be obliged to resort to liquor selling if they kept going. Thus he did not make it appear that they already are rum shops.

—The New England Association of Chemistry Teachers at their annual business meeting, elected the following officers: President, L. C. Smith; vice-president, A. S. Perkins; secretary, H. Bisbee; treasurer, E. F. Holden; executive committee—N. H. Black, Miss Laura P. Patten and G. W. Earle. Addresses were made by K. W. Thompson, Miss E. V. Sampson, Dr. H. P. Talbot, Sidney Peterson, Miss L. P. Patten, Wilhelm Segerblom, Dr. F. J. Moore and Miss H. M. Lambert.

—James A. Quimby, a Boston clerk, after taking a headache powder at a drug store near his home, became so ill that he was removed to the hospital, where the physicians determined that he must have taken a powder in which acetanilid had been largely mixed with phenacetin. It required several hours of hard work on the part of four physicians to bring the man around.

—Several prominent druggists of Salem have come forward since the present Post Office scandal there has been made public, to state that their mail long has been tampered with, or entirely lost. They say that their letters have plainly shown that they have been opened in transmission and sealed again, remittances often being taken.

—Richard E. Morgan, a druggist in the Charlestown district of Boston, took a severe cold. It developed into an attack of hicoughs which has continued almost unabated for more than ten days. Physicians seem unable to help him, and he has become extremely weak.

—Emory T. Harris, employed by Howe & French, the Boston drug house, where he has been in service for thirty-five years or more, is a candidate for election to the board of aldermen in Cambridge. He is president of the Colored National League of Boston.

—Phillippe A. Brosseau, prominent among Fall River druggists, was invited, as State deputy of the Massachusetts Catholic Order of Foresters, to be a guest of honor at the annual banquet of the Rhode Island branch of the organization.

—Edward E. Howard, a druggist of Brockton married Miss Emma E. Sinclair of Cambridge, recently. The ceremony was performed at the home of the bride's

mother and a company of nearly one hundred and fifty was present.

—Manager Adams of Cheever's drug store, Manchester-by-the-Sea, has resigned to resume his former work as pharmacist at the Massachusetts General Hospital in Boston. He is succeeded by A. F. Metcalf of Brooklyn.

—The funeral of Henry H. Whitney, former president of the Massachusetts board of pharmacy, was held at his home in North Andover and was largely attended, and there were many floral remembrances.

—Arlington has a new pharmacy, opened by O. W. Whittemore.

RHODE ISLAND.

—The city of Providence wishes to increase its revenues from liquor license fees. Wholesale licenses now cost \$500 per annum, the rate being the same for wholesale liquor dealers and wholesale druggists. At the meeting of the common council last week, a resolution was adopted instructing the city solicitor to apply to the general assembly to pass an act authorizing the license commissioners of Providence to increase the fee for wholesale licenses to \$1,200, and for retail licenses from \$400, per annum to \$650. The whole sale druggists of Providence are opposed to the proposed increase, and, at the meeting of the Common Council referred to, a petition signed by G. L. Claffin & Co., Blanding & Blanding, Hall & Lyon Co. and the Rhode Island Drug Co., was presented, objecting to the proposed legislation. It was set forth that inasmuch as the sales made by the wholesale druggists are confined to retail druggists and physicians, and exclusively for medicinal purposes, and are but a small part of the business carried on, they ought not to be taxed at the same rate as the liquor dealer whose business is wholly the sale of liquors. The license commissioners are expected to take a reasonable view of the matter.

—Fred W. Whitford, a popular East Greenwich druggist, whose first wife died five or six years ago, is engaged to Miss Louise Bowen, daughter of Dr. William Shaw Bowen, the well-known newspaper correspondent formerly connected with some of the leading New York dailies.

—A Pawtucket pharmacist has placed a card on his soda fountain announcing that "Positively no liquor, to be drunk on the premises, is sold in this store."

CONNECTICUT.

—Eugene J. Higgins, the New Haven druggist arrested last month for a violation of the medical laws in prescribing for a patient, was tried last week. It came out that Higgins had had three months' experience in a New York hospital and on the strength of that gave prescriptions for the treatment of many kinds of ailments. He had written 19 prescriptions as far as could be learned and these had been put up at the Union pharmacy in this city. The jury brought in a verdict of guilty and reserved sentence pending the outcome of a motion for a new trial.

—The State commissioners announced licenses to four new druggists as follows: Emil Schaefer, Meriden; J. H. Baxter, Danielson; C. E. Lamar, New Haven; Walter E. Hurley, Brooklyn, N. Y.

Our Tablets made by a new process are very satisfactory.

BILLINGS CLAPP COMPANY, Boston, Mass.

PENNSYLVANIA.

MINOR DEMANDS CERTIFICATE.

Passed the Pennsylvania Board Examination, But, Though There Is No Law Preventing, He Is Not Granted a Certificate.—Druggists Want to Know Why Not.

Pittsburg, December 15.—Has the State board of pharmacy the authority to refuse to grant a minor who passed the examinations a registered certificate? This question is agitating the most prominent druggists in this locality. They insist that the vital interrogation should be definitely settled. For some time the local dealers have been complaining about this phase of the power of the board. A few days ago a young student, aged 20 years, took the examination which was supposed to entitle him to a registered certificate, that is, if he reached the required average. His examination was favorable, but the board refused to award him the certificate. In a letter which Secretary Mr. Charles T. George of the State board sent to the aspiring student, he failed to explain the reason for refusing him the papers. In a second letter, Mr. George suggested that the student communicate with a local druggist who is a member of the board. Why this unclear method should be practiced is difficult for the pharmacists to understand. They argue that there is no State law against the granting of a certificate to a minor. One leading dealer was hot in his denunciation of the practice, and said that the board was unintentionally discriminating. He suggests that the controversy should be adjusted one way or the other.

THE CLERKS' ASSOCIATION AND THE P. A. R. D.

Philadelphia, December 15.—Since the meeting of the P. A. R. D., where the clerks' association presented their communication, there has been much lively talk. At the meeting there was an effort made to table the letter but better counsels prevailed. One of the most conservative members felt that the young men had approached the P. A. R. D. in a dignified and manly way and that their requests should, as far as possible, be granted. This was what finally led to the appointment of the committee to meet with them at their next gathering.

After the Friday session of the P. A. R. D. was closed one of the members said that it was necessary that these men should be met; if possible, more than half way. If they formed an organization with the intention of acting in a disagreeable and hampering way, matters would soon be in a worse state than they were in some other cities where the druggist was compelled to keep two men, or handle his place a portion of every day by himself, or worse than that, run the place single handed the major portion of the time. The association, he said, should be met frankly, and if, on examination, their objects proved worthy and the men at the head trustworthy, a helping hand should be held out to them and everything in the power of the P. A. R. D. done to make their association a success.

DRUGGIST'S STORE, HOUSE AND MAID BURNED.

Philadelphia, December 15.—Fire destroyed the drug store and dwelling of Theodore Campbell at Sixty-third street and Overbrook avenue, Philadelphia. A colored maid, who had been asleep in a room on the third floor, lost her life. The Campbell family, as well as R. C. Strode, the druggist's clerk, had a narrow escape. The loss amounts to about \$5,000.

It was about 4 o'clock this morning that Campbell awoke, and realized that the house was on fire. He

gave the alarm. Strode heard the call in his room and hastily threw on his clothes. Then he dashed into the hall past the colored maid's door and shouted to her. Supposing that she had heard he went on downstairs to aid Campbell in rescuing his family.

The two men wrapped Mrs. Campbell and a baby boy, twenty months old, in blankets and carried them down the smoke-filled stairway and out on to the lawn. A second child, Helen, a girl of eight years, was able to get out of the house unassisted. No one, except the men, however, had time to don any clothes.

What the origin of the fire was no one could say today. It started in the cellar, where drugs and rubbish were stored.

NO LIQUOR IN PROHIBITION TERRITORY.

Pittsburg, December 15.—Much interest among the trade in centered on Senate Bill 1526, introduced several days ago in the United States Senate, and which provides that the Federal Government shall not grant liquor tax receipts to persons, druggists or others, residing in prohibition territory, State or local. Following is the full text of the bill:

"That no collector of internal revenue shall receive any tax from, nor issue any special tax receipt to any wholesale liquor dealer in malt liquors, or retail dealer in malt liquors unless such dealer shall, at time of making his application to pay such special tax, exhibit to such collector a license or permit, issued with the laws of the State or territory in which such trade or business is to be carried on authorizing him to sell distilled spirits, wines or malt liquors as they may be, at the place where such trade or business is to be carried on, and such dealer shall register with the collector the date of such license or permit, the period for which it may have been issued, and the authority issuing the same.

EATING WITH PRITCHARD IN NEW CASTLE.

New Castle, Pa., December 15.—Under the auspices of the Lawrence County R. D. A., a most successful banquet was held on last Thursday evening in this city. The affair took place at Knox's Inn. Covers were laid for 25 guests, the majority of whom are members of the association. The guest of honor was B. E. Pritchard, president of the national association. Much humor and wit were displayed, and all present pronounced the event a complete success. The only incident which marred the celebration was the sickness of four members, who were taken suddenly ill before the dinner and were unable to attend. All have totally recovered. John C. Wallace, president and George W. Clutton, secretary, had charge of the arrangements and performed their duties to perfection.

OTHER HAPPENINGS.

—The third of the series of the pharmaceutical meetings of the Philadelphia C. P. will be held on Tuesday afternoon. The following is the program: "History of the Eelectic Resinoids and their Terminology," Prof. John Uri Lloyd, Cincinnati; "Gardens of Medicinal Plants," Prof. Albert Schneider, California C. P.; "Cocca, Its Production and Use," William B. Marshall, Smithsonian Institute; "John Morgan the Founder of the First Medical School and the Originator of Pharmacy in America," M. I. Wilbert.

—B. E. Pritchard, president of the N. A. R. D., is the recipient of nearly a score of communications from leading jobbers near Pittsburg, greatly landing the Western P. A. D. A. in its effort to abolish the annoyance caused by the introducing of new remedies into the district by manufacturers. The writers are to a man heartily in favor of the suggestion.

—Samuel C. Shannon and Miss Mabelle C. Christie were married at the home of the bride's parents. They will live at 4055 Girard avenue, Philadelphia. Thomas

L. Donnegan and Miss Nellie Haines were married also. After a wedding trip South, they will locate in the suburbs of Philadelphia.

—Another new drug emporium has been opened in Knoxville, by George Breckman, who has a handsome store. Mr. Breckman recently joined the army of Benedicts, marrying Miss Leaa Lorch, whose brother is owner of an apothecary shop on Carson street.

—David Stolz goes from Philadelphia to Charles W. Snow & Co. of Syracuse, N. Y. W. S. Stuck goes to Scottsdale, Pa., R. L. Welsh to Altoona, and J. K. Clemmer to Pittsburg.

—Two robbers were arrested early one morning last week after they had made a bold but unsuccessful effort to break into Eckel's drug store, at Broad and South streets, Philadelphia.

—Joseph Calhrese, 620 Webster avenue, Pittsburg, is putting in a new store at 68 Washington street.

THE SOUTH.

ALABAMA'S NEW POISON LAW.

Montgomery, Ala., December 15.—Alabama has a new poison law. It provides that:

"It shall be unlawful for any person to retail, arsenic or any of its preparations, corrosive sublimate, white or red precipitate, bismuthide of mercury, cyanide of potassium, hydrocyanic acid, strychnia, or any poisonous vegetable, alkaloids or their salts, or the essential oil of almonds, opium or its preparations, except paregoric, and other preparations of opium, containing less than two grains to the ounce, aconite, belladonna, colchicum, conium, nux vomica, henbane, cotton root, cantharides, creosote, veratrum, digitalis and their pharmaceutical preparations, croton oil, chloroform, chloral hydrate, sulphate of zinc, mineral acids, carbolic or oxalic acids without labeling the box, vessel or paper, in which the said poisons are contained with the name of the article, the word poison, and the name and place of seller, and enter in a book kept for that purpose the name of the purchaser, the date of sale, the name of the poison and quantity purchased."

These restrictions do not apply to poisons sold on prescription. The druggist must also find that the purchaser is aware of the poisonous character of the article, and the sale can only be made when the latter "represents" that the poison is for a legitimate purpose. The penalty is from \$50 to \$250.

KENTUCKY.

—H. A. Kampfmueller's drug store, Louisville, was damaged by fire to the extent of \$1,000 on last Tuesday afternoon. Gus Kregel, a clerk, was using gasoline in the preparation of a prescription. Loss fully covered by insurance.

—A negro entered Charles A. Edelen's drug store, Louisville, and began insulting several lady customers. Mr. Edelen sprang from behind the counter and knocked the negro to the floor. He then called a policeman.

—Fire by incendiarism destroyed the drug stock of J. C. Witherspoon at Auburn. Loss \$3,200, insured for \$1,500. Mr. Witherspoon will likely quit business owing to the owner of the building refusing to re-build.

—J. W. Fowler & Co., Louisville, are holding a sale in their old building. The board of safety last Monday authorized the building inspector to allow them to open the store.

—G. L. Currey, Dean of Louisville, C. P. reports a scarcity of pharmaceutical clerks. He has on file several good openings in this State.

—E. B. Spicer, general manager of the Paracamp Co., Louisville, spent last week in Cincinnati on business.

—The Louisville C. P., senior class, will hold a mid-session examination this week.

—Prof. C. Lewis Diehl of Louisville, has sold his drug store.

MARYLAND.

—Among the visiting druggists in Baltimore: Dr. D. M. Ragan, Conowingo; John P. Patton, York, Pa.; A. Eugene DeReeves, Washington, D. C.; W. R. Rudy, Mt. Airy; W. McCarrick, Norfolk, Va.; Edward Heib. Railroad, Pa.; W. C. Downey, Washington, D. C.; L. B. Smootz, Harrisonburg, Va.; W. D. Shaw, Westminister; W. A. Minna, St. Johns, Newfoundland; L. H. Diehlman, New Windsor.

—Druggist J. O. Harrison, York road and Twenty-second street, Baltimore, has returned from a gunning trip to the Eastern shore of Maryland, and, according to common report, the entire neighborhood has been eating nothing but rabbits ever since.

—Paul Muller, president of the bankrupt Maryland Drug Co., was to have been examined last Wednesday as to what he did with a large part of the assets, but the hearing was postponed.

—Dr. Robinson, formerly manager of the Martin Remedy Co. of Baltimore, has resigned and gone to New York.

TENNESSEE.

—Charles M. McCabe and Fayette G. Durr, have founded a partnership to enter the wholesale and manufacturing drug business in Nashville. The new firm has leased the building now occupied by the Spurlock-Neal Co. on Market street.

—Lenahan & Co., of Decherd, have sold their entire stock of drugs to the Decherd pharmacy.

—The Sword Medicine Co., of Pulaski, were granted a charter with \$25,000 capital stock.

—The Tennessee Chemical Co., of Nashville, suffered a heavy loss by fire.

—A. J. Jarrell has bought S. G. Butler's drug store at Shelbyville.

—J. O. Crump has opened a store at Decherd.

OHIO RIVER VALLEY.

CINCINNATI CLERKS' UNION.

Cincinnati, Ohio, December 15.—A number of drug clerks in this city are perfecting an organization to secure shorter hours, a general wage system, and better conditions in general, especially in the matter of time off. J. H. Barlow of Indianapolis, Ind., national organizer of the Retail Clerks' Union, has made several visits to this city within the last few weeks, and the movement is now in a fair way. It is the intention of the promoters to affiliate the organization with the American Federation of Labor. Several employers, when seen by the Era correspondent, were non-committal, saying that their views would be immaterial, and might give rise to a discussion which would benefit no one and perhaps do harm. About two years ago a similar movement of clerks failed to realize an organization.

WE WANT DRUGGISTS

To send us a list of physicians who patronize them, and we will write each physician that he can obtain Phenalgin from the druggist mentioned; we will also send the physician a sample, with literature.

ETNA CHEMICAL CO.

: 13 West Street - - - NEW YORK

WANTS BIG DAMAGES, THOUGH UNHURT.

Toledo, Ohio, December 15.—Another phase in a case of great interest to druggists in this State, was recorded last week when John C. Bennett filed an amended petition in his suit against Dr. Elmer W. Heltman, a prominent physician, and William North, a leading druggist of this city, for \$25,000 damages. According to the plea, the services of the physician were engaged for treatment of the eyes, and a bottle of medicine was given to him for application. It is alleged that carbolic acid was filled into the vial, instead of the medicine prescribed, and that though both defendants were later aware of this fact, they made no move to inform him of the true contents. The medicine was not used, so no damage resulted. The defendants denounce the suit an outrage and the statements untrue.

FOR OHIO STATE PH. A. MEETING.

Cincinnati, Ohio, December 15.—The board of control of the Ohio Valley Druggists Association at their last regular weekly meeting talked over arrangements for the convention in this city next June of the Ohio State Ph. A. From present outlook, the local association will do itself proud. A committee consisting of the following was appointed to nurture the ideas presented into definite shape: Messrs. Zorn, Voss, Greenland, Greyer, Wetterstroem, Kutchbauch, Linnemann, Plath, Holzlum, De Lang and Kipp. It was also decided to remove the association's headquarters from the Atlas National Bank Building to more commodious quarters in the Johnston Building, at Fifth and Walnut streets.

STATE COMMISSIONER WANTS DRUG BULLETIN.

Columbus, Ohio, December 15.—State Dairy and Food Commissioner Ankeney, in his report covering the last year has recommended to Governor Nash the employment of a State chemist for the judging of drugs, because there is no set standard established. Another feature that will interest druggists is that Mr. Ankeney favors a bulletin to be issued to the drug trade monthly, informing dealers of goods found to be below requirements.

OHIO HAPPENINGS.

—Prof. C. T. P. Fennel of the Cincinnati C. P., was called to Xenia on December 3, to testify in the case of a saloonist charged with selling what is known as "Bishop's Beer," which it was charged caused intoxication, thereby being sold in violation of the local option law. The professor made an analysis, and his testimony was used favorably by the defense.

—Albion J. Andrews has purchased the store of Henry Adams, Fifth and Main streets, Zanesville. For the present Mr. Adams will clerk for the new owner, and later may open a pharmacy in another city in the State; one of the terms of the contract being that he not embark in the drug business at Zanesville.

—William E. Simonson of Cincinnati, the well-known druggist and chemist, who is at present making a tour of the interior parts of Alaska, has written to his business associate, Louis W. Werner, that he will return from the frozen North in the early part of next year.

—Henry Wienecke, of Lick Run was married on Thanksgiving evening. The happy couple left for a honeymoon trip which will embrace a visit to Asheville, N. C. and Washington, D. C. The bride was Miss Rose Ries, popular in local social circles.

—Alfred Willard, for the last five years clerk at Weatherhead's, Cincinnati, will remove to Cleveland to start in business for himself. Mr. Willard recently married Miss Anna Schroeder, cashier in the same establishment.

—Gus. Fechter, formerly employed in different stores in Cincinnati, but now located at Toledo, stopped in Cincinnati for a few hours while en route to New Orleans, where he will become connected with a large jobbing house.

—The store of E. C. Bradshaw, at Warren, which was closed on a mortgage several weeks ago, was sold at a private sale to Esther Thomas of Niles, for \$2,500. Thomas was the mortgagee.

—J. E. Davis, the Alexandria pharmacist, accompanied by his wife, left in the early part of the month for California, to spend the winter.

—J. I. Mercer of Portsmouth, is seriously ill with a complication of diseases which threaten to terminate in pneumonia.

—Dr. John Mary has left the employ of Mrs. Virginia Howson at Chillicothe, to locate in business at Portsmouth.

—James Hager will open a pharmacy at Gallia and John streets, Portsmouth, this month.

—W. O. May and J. Gunther have opened a new store, "The Red Cross," at Piqua.

INDIANA.

—Z. U. Loop of Galveston, recently burned out at that place, has organized the Galveston Drug Co., of which he is the principal stockholder, and will continue the business.

—The store of A. C. Handy, Morristown, who died recently, has been bought by a Mr. Handy, a nephew, who will continue the business.

—Bert McDill has succeeded Herman Hass, Twenty-fifth street and Central avenue, Indianapolis.

—Earl E. Ensley of Indianapolis, has bought out Harry Chandler at Edinburg.

—F. D. Musselman of Macy, has sold to Dr. M. M. Boggs.

AROUND THE GREAT LAKES.**CHICAGO ASSOCIATION.**

Wholesalers Promise Retailers to Discourage Opening of Stores in Sections Already Overcrowded.

Chicago, December 15.—On last Tuesday afternoon the executive board and the auxiliary association of officers of the C. R. D. A. met at the Northwestern School of Pharmacy. President Avery reported that the debts of the association have been paid and \$161 remains in the treasury. Since the last meeting, Mr. Cusack had resigned and Mr. White had been appointed. He is now working in the fifth district.

The president said that the carbolic acid ordinance was "dying in committee, and the proposed drug clerks' ordinance, was still in status quo. The feeling of the meeting was that the clerks are over-reaching themselves in trying to pass an ordinance to force shorter hours down the throats of the druggists. The association had reached an agreement with the clerks' association to take up and compromise the questions at issue on condition that a certain person, who had, in the name of the clerks' association, maligned the C. R. D. A., be retired or dropped. But that person, it is said, has since held a prominent office in the clerks' organization. The executive committee therefore regards its agreement at an end."

It appears that the C. R. D. A. does not favor East St. Louis as the place for the next meeting of the Illinois Ph. A. It was recommended that the executive board meet in Chicago on December 28 or 29 and fix

the date and a place more convenient to the druggists of this part of the State.

Mr. Bodeman reported that A. Brendecke had been convicted of selling cocaine illegally. It was unanimously voted to take up the question of expelling Brendecke from the C. R. D. A. at the next general meeting of the association. Mr. Bodemann said that he had tried to secure the indictment of Brendecke on a perjury charge on account of Brendecke's "hush money" allegations, but the other members of the board had overruled him in this, deciding that the board had its hands full in the execution of the pharmacy laws without attempting any further administration of justice.

Attorney Dudley, prosecuting attorney for the board, made an interesting speech in which he outlined the difficulties the board encountered in securing convictions in justice courts, where the juries are judges of both the law and the facts. He advocated an ordinance to enlist the police of the city in crushing the cocaine evil.

The meeting adopted a resolution declaring Mr. Bodemann the unanimous choice of the association for member of the board of pharmacy to succeed himself. Mr. Bodemann said he was not seeking the position, but if appointed he would do his duty.

Letters were read from the wholesale druggists pledging their co-operation in discouraging the opening of drug stores in sections of the city where there are already stores enough.

HE "DIED AT PAW PAW."

But Will "Rise" (From Jail) in Thirty-five Days.—Other Michigan Druggists In Court on Liquor Charges.

South Haven, December 15.—William Remus, one of the "wicked" druggists of this city, who was given 35 days in the county jail at Paw Paw and fined \$125 and costs by Judge Carr last week, has sent his brother druggists here a black edged envelope containing the following letter:

"Died at Paw Paw a young druggist of South Haven whose name is unknown. It is predicted that he will arise in about 35 days.

"Floral decorations \$ 62 50

"Funeral expenses 125 00

\$187 50

"Many thanks to friends kindly remembering him, and especially to those who witnessed the last sad rites."

Decatur is getting a taste of the dose being administered to South Haven disciples of the pestle and mortar, Edmund Peterson and Malcolm S. Carney, well-known druggists of that place, having been arraigned for alleged violation of the local option laws. They gave bail. Decatur is in the same county as South Haven, and it is intimated that other burghs will be given similar treatment, as the court is noted for non-partiality. Sheldon Coleman of Lawton, also stood trial, and was pronounced not guilty.

WISCONSIN PH. A. MEETING IN AUGUST.

Fond du Lac, Wis., December 15.—The dates for the twenty-fourth annual convention of the Wisconsin Ph. A., to be held in this city, have been set for August 2, 3 and 4. The decision was arrived at by a postal card vote in which all of the members forwarded cards to the president. The majority voted for August as the convention month. The local druggists will organize their entertainment committees next month and will make every effort to make the coming meeting surpass all former conventions, both in point of attendance and in entertainment features.

ILLINOIS.

—The H. S. McCracken Box & Label Co. is the name of a new concern making druggists' labels and boxes. It has just opened a factory at 52-54 West Van Buren street, Chicago. Harry S. McCracken is president, C. H. Harper, treasurer, and J. S. Henry, secretary. Mr. McCracken was formerly connected with the Randolph Box & Label Co. J. S. Henry was at one time in charge of the Chicago business of Lazell, Dalley & Co.

—William L. Marmon has sold his drug business and building at Bloomington, to Moore & Stevens Bros., of Memphis, Tenn. It is said the consideration was about \$75,000. The new firm takes possession January 1. Mr. Marmon had been actively engaged in the business for eighteen years. It is said the new firm were formerly employes of the Van Vleet Mansfield Drug Co., Memphis.

—The bankruptcy case of W. C. Frencksen, the well-known North avenue, Chicago, druggist, reached a speedy termination by his settlement at fifty cents on the dollar and immediate resumption of business.

—Islam Light, secretary of the Third Auxiliary Association, Chicago, recently extended his name to include a lady. In other words, he got married.

—Dr. Messerow, formerly in Milwaukee avenue, Chicago, has opened a new store at 58 Prairie avenue. It is said that his son may be put in charge.

—E. W. Johnson of Albia, Ia., who was burned out not long ago, was in Chicago last week, purchasing goods and fixtures for his new store.

—Maurice O'Connell, a graduate of the St. Louis C. P., 1900, has taken the management of the Rives pharmacy in East St. Louis.

—A. M. Reis has bought George Schreiner's drug store at 1072 Lincoln avenue, Chicago.

—W. F. Busse has announced the opening of his new store at Alton.

MICHIGAN.

—Oscar Larkins, a young drug clerk employed in the drug store of R. W. Rennie, in Detroit, attempted suicide last week by firing a bullet into his head at the home of his sister in Plymouth. He was desperately in love and worried considerably over the fear of being jilted. The doctors believe he will recover. On Thursday he made another attempt to end his existence. One of the sisters coming into his room unexpectedly discovered that he had removed the bandages from his head. He was trying to stick one of the pins into his jugular vein, for the purpose, as he stated, of bleeding to death.

—The newspapers delight in taking falls out of druggists in local option counties, as is shown by the following item in the Grand Rapids Press: "Another Montcalm county druggist started in business this week with \$200 worth of fixtures, \$250 worth of drugs and \$400 worth of liquor. He ought to make a living."

—John DeBoe of the DeBoe Mfg. Co., Grand Rapids, is under arrest again on complaint of the State food commission, charged with the sale of vanilla extract containing 90 per cent. wood alcohol. The previous arrest was for a similar adulteration of lemon extract.

A DRUGGIST GLOBE TROTTER.

There are many druggists in the United States who would dearly enjoy the trip W. W. Fordham has just finished, from Elmira, Mich., to Spokane, Wash. He is now an overland tourist with a globe-trotting record. He writes to the Era:

"The photo of the Knox car and myself was taken by A. M. Poutroy, Dickinson, N. D., who has a fine pharmacy there. I enclose a clipping from the Anaconda Standard. I was the first tourist across the northern part of the continent, and was, of course, a great curiosity. I crossed the Crow Indian reservation a short distance from where General Custer's last battle was fought. The Crows are warlike and treacherous. I also crossed the Flathead Indian reservation—they never killed a white man. Many have farms, and the squaws do the work. I saw many curious sights in the Yellowstone River valley which I followed for 400 miles. Crossed the main divide of the Rockies near Butte, Mont., on October 5. The next day, while in this high altitude, I ran into a blinding snow storm, and was obliged to stop on account of severe cold and wait until the storm was over. Saw snow-capped mountains for 200 miles. There were many dangerous places along the sides of mountains. Sliding rock does much harm both to railway tracks and wagon roads, the latter of which are usually just above and near the railroad. I traveled many miles over sharp rock which continually slide into the road. In descending the Bitter Root mountains, nine miles, my auto tires were cut more than in all the previous 2,200 miles. They were a sad sight when I arrived at Murray, Ida. At one place in Idaho I came to the end of the wagon road and had to run upon the railroad ties for one-fourth of a mile. A freight train came behind me, but halted till I found a way off the track into an old meadow, from which I followed a creek for thirty-five miles, across farms, letting down and putting up bars. At Harrison, Ida., I shipped the car on a small steamer across Coeur D'Alene Lake, 22 miles. The balance of the way to Spokane was fine going.

Mr. Fordham is a member of M. Fordham & Co., druggists of Elmira, Mich., and is removing the business to Spokane.

—H. E. Harrison, for the last thirteen years the leading druggist of Vassar, has sold his drug business and is now officiating as the cashier of the State Savings Bank of Vassar.

—C. J. Rouser is doing a rousing business at Lansing. He has put in another pharmacist, Edward Patter of Saginaw, whose name is also significant of briskness.

—Frank Gillespie, member of the drug firm of J. H. Nicholson & Co. at Hart, has taken a position with Muir & Co. at Grand Rapids.

—Joseph E. Naregan, pharmacist at Van Vranken's store, Cadillac, was married to Miss Mabel M. Stilwell of Edmore, on Wednesday.

—James Bruce, former clerk in the pharmacy of James G. Johnson at Traverse City, has opened a drug store at White Cloud.

—Francis Van Dugteren, night clerk at West's, Grand Rapids, is in St. Mary's hospital with typhoid-pneumonia.

—Burglars having designs on the cash drawers at J. G. Stoketee's, Grand Rapids, were frightened away.

—A. C. Tiffany, formerly with Moon & Co. of Boyne Falls, will open a drug store at Boyne City.

WISCONSIN.

—The twenty-second annual report of the State board of pharmacy is being distributed by Secretary A. F. Menges. Among other things it shows that six examinations were held, at which 167 were examined and 66 passed. At the present time there are 1,570 registered pharmacists holding Wisconsin certificates and 439 assistant pharmacists. There have been thirteen deaths during the year and twenty-eight have allowed their certificates to elapse.

—Many Milwaukee retail druggists have begun a warfare against owners of penny in the slot machines. The proprietors of the machines have in several instances endeavored to cut down the druggists' commission from 25 to 15 per cent., and as a result their machines have been ordered taken out.

—The State board of pharmacy last week examined one of the largest classes that has ever appeared before it. There were sixty-nine who took the examination. The sessions were held in the City Hall and at the laboratories of the Wisconsin Pharmaceutical Co., Milwaukee.

—The creditors of Charles Gundlach, the Racine druggist, who was declared bankrupt, have appointed Frank Kradwell and John Schulz, two well-known druggists, as appraisers.

—W. R. K. Johnson of Spring Valley, has purchased the City drug store at Independence. This is the second of a chain of stores that Mr. Johnson will establish.

—S. H. Brownlee of Hudson, has purchased a large drug store at Fargo, N. D., and will remove to that city on January 1.

—Jewell Bros., the Brodhead druggists, have sold to Albert J. Wagner of Tomah. A. J. Jewell will locate in Chicago.

—John Witt, a graduate of the Minnesota Institute of Pharmacy will open a drug store at Tomahawk.

WASHINGTON PROMISE COMMITTEE IN DES MOINES.

Des Moines, Iowa, December 15.—The war in patent medicine prices in Des Moines is at an end. For more than a year cut-throat prices existed.

Certain proprietary manufacturers ended the war by sending a letter to each cutter notifying him that the scale of retail prices sent out with the goods must be absolutely adhered to. It was further stated that no more supplies would be furnished unless the war was declared off.

A meeting was held in the office of the Des Moines Drug Co. last week to discuss the circular. The druggists are allowed until January 1 to put "right" prices on their wares. President J. R. Hurlburt was brought to task by the local retail association for a system of gifts and prizes carried on in connection with his sales, and an agreement was entered into to discontinue the plan. Mr. Doble of Philadelphia, representing the N. A. R. D., addressed the meeting.

WEST OF THE MISSISSIPPI.

PROPOSED IOWA LEGISLATION.

Des Moines, Ia., December 15.—Three bills to be presented to the coming legislature are of more than ordinary interest to druggists.

Ex-Governor S. B. Packard of Marshalltown, and M. J. Wragg of Waukeo, propose to incorporate in the pure food law, which has been endorsed by the Iowa board of agriculture, a section making it a crime to sell adulterated medicines. The intent of the section of the proposed law is to punish manufacturers of proprietary medicines who represent that stuff is contained in their mixtures when it is not, or furnish an adulterated article for the real. Owing to the lack of such a law Mr. Packard claims that Iowa is the dumping ground for all sorts of adulterated drugs and medicines. It is proposed to govern the sale and distribution of medicines in the same manner that the State compels manufacturers of foods and baking powders to leave out all deleterious materials.

Iowa druggists will also be interested in the proposed State marshal law for the enforcement of the liquor laws. It is proposed to have district marshals, whose sole duty it shall be to see that liquor laws are enforced. The portion of the law which applies to pharmacists is the section requiring monthly reports of all purchases and sales. Such report, if the new law is passed, will have to be made under oath and be in addition to all reports now demanded to State and county authorities.

LOCAL COMMITTEES FOR A. P. H. A.

St. Louis, December 15.—Local Secretary Joseph C. Wirthman of Kansas City, has announced the appointment of the committees for the national meeting of the A. P. H. A. to be held in Kansas City, September 5, 1904. The committees are:

Executive—Joseph C. Wirthman, chairman, Eighteenth street and Troost avenue; Ferd L. Crampton, treasurer; Paul L. Hess, S. B. Carey, all of Kansas City, Mo.

Finance—Ferd L. Crampton, chairman, 2301 Lexington avenue; J. George Wirthman, A. Breunert, F. D. Mitchell, H. C. Arnold, all of Kansas City, Mo.

Reception—William M. Fedderman, chairman, Twelfth and Main streets, Kansas City, Mo.

Membership—Paul L. Hess, chairman, 1127 Independence avenue, Kansas City, Mo.

Committee of Ladies—Mrs. Joseph C. Wirthman, chairman, Eighteenth street and Troost avenue, Kansas City, Mo.

Kansas City, Kan.—Frank E. Pellette, chairman, 8 North James street; C. E. Abraham, Samuel Gordon, G. Q. Lake.

Independence, Mo.—O. H. Gentry, chairman.

"HERBIST" IN COURT, TALKS TOO MUCH.

St. Louis, December 15.—Dr. C. Brand of 2011 Franklin avenue, who was fined several weeks ago in police court for conducting a drug store without a city license, had his case reopened by setting aside the default. He tried to convince Judge Pollard that he was not a druggist, but an "herbist," practicing a profession that he learned in London many years ago at great cost. Judge Pollard pleaded ignorance of "herbists" and Brand undertook to show him. The demonstration was very much on the order of a lecture on materia medica. He told much that was interesting if not instructive as to manufacturing liquid medicines from herbs. It was not until Dr. Brand began to tell of the diseases he could cure with the wonderful remedies that he made, that Judge Pollard awakened to the fact that he was listening to a talk that had undoubtedly been given before crowds of prospective purchasers many times. Then the speech stopped. The previous fine was again imposed.

TAKING AN EXAMINATION BY PROXY.

St. Louis, December 15.—It is said that the Missouri board of pharmacy will make every effort to cancel a certificate of registration held by a St. Louis druggist who has never been before the board. Apparently, the man was before the board three times for examination. His name was on the list and a much younger man representing him was there, it is alleged. He failed twice, and the third time made good grades. Some one reported to the board, and they went to the store to see the druggist. They saw the certificate, but not the man they knew. It is said the board members have learned the identity of the Illinois man who took the examination and will cause him to come back and explain why he did it.

MISSOURI.

—C. G. F. Meyer, president of the Meyer Bros. Drug Co., celebrated his seventy-third birthday at his home, 2733 Keokuk street, on December 9, quite informally. Last year Mr. Meyer celebrated not only his seventy-second birthday but also his semi-centennial in the drug business and it was made quite a gala occasion. At that time it was suggested by some that Mr. Meyer would retire from active business but he has not. He is still president of the immense business that he has guided to such large proportions in more than name.

—No more proprietary disinfectants for the city of St. Louis, according to the announcement of Mayor Wells. The city has been experimenting with many disinfectants, and one preparation for which \$2 a gallon was paid, was subjected to an analysis by the city chemist and found to cost in the neighborhood of five cents a gallon. That gave rise to considerable newspaper discussion and some serious consultations among the city officers. City Bacteriologist Snodgrass made a number of experiments and decided upon carbolic acid, and his recommendation was adopted.

—Ten cents for ice cream soda will be the price to confront the World's Fair visitors, if the present plans of many of the workers in the St. Louis R. D. A. have their way. During last summer many of the local druggists secured that price for cream soda and in the best residence suburbs ten cents was the usual price.

—Dr. H. M. Whelpley, professor of microscopy at the St. Louis C. P., has secured a particle of radium, which he is showing to his classes at night. There was much rivalry among the two hundred students to get on the early divisions of the class to see the radium exhibit at night.

—The annual ball given by the St. Louis R. D. A. is announced for the Odeon on January 28, the date being subject to change. The committee of arrangements is, Prof. H. M. Friedewald, Prof. E. A. Bernius and Theo. F. Hagenow.

—Scott Wilson has purchased an interest in the Reinhardt-Miller Drug Co. store at Union. The Reinhardt-Miller store is one of the best properties and most up-to-date stores in any of the inland Missouri cities.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories.
Twelve Teachers Thorough Course.

NEXT TERM BEGINS JANUARY 4, 1904.

Address Inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

—C. O. Schleiter has purchased the Funke brothers pharmacy in East St. Louis and will take immediate charge. Mr. Schleiter is a brother of A. G. Schleiter, who owns three drug stores in the East Side cities.

—Miss Kathryn O'Kife and Miss Emma Walker are the feminine members of the St. Louis C. P. senior class, and Miss A. E. Kaye is the sole lady member of the junior class.

—A. R. Shuttles of the correspondence department of Meyer Bros. Drug Co., was married to Miss Agnes Wakeman, a stenographer in the same department.

—Adolph W. Biltz, druggist at Soudard street and South Broadway, has returned from an extended hunting trip in Arkansas and reports excellent shooting.

—Frederick W. Grabenschorer, who has been manager of the City Hall drug store, St. Louis, has opened a new store at Tower Grove and Hunt avenues.

—Dr. Henry M. Whelpley, well known in the drug world, gave the first St. Louis exhibition of radium at the Academy of Science on December 7.

—The St. Louis Drug Clerks' Society has announced the annual ball to take place at the Masonic Temple in the Odeon, tonight.

Put Them All on Record.

Frederick Stearns & Co. are not only in accord with the spirit of Resolution C, relative to asking manufacturing chemists to abstain from selling to dispensing physicians, etc., passed by the N. A. R. D. at its Cleveland meeting last year, but they would have the association go still further and make a straight unqualified demand upon manufacturers to abstain from selling at all to physicians. They have always refrained from selling directly to physicians themselves and they believe other manufacturing houses could do business in the same manner if they would.

Their attitude towards the retail trade in this respect should be appreciated by every retail druggist. The local druggist is the one who should supply the physician with what he needs, and Frederick Stearns & Co. are logical when they say they believe the manufacturer has no moral right to compete with his own customers. If he wishes to encourage physicians in dispensing by supplying them with his own products, that is his own affair; but he should then cut loose from the retail drug trade and not ask for their support also. The N. A. R. D. through its executive committee should call upon every manufacturer to declare his attitude on this question and thus put himself on record. The druggist should know who his friends in the trade are. There is no chance for the retailer to retain his physicians' supply business if the manufacturer will quote closer prices to the physician than he does to the pharmacist on precisely the same orders. Frederick Stearns & Co. have never sold directly to physicians and their policy in this matter should be supported.

Tullar Co. Victorious.

The Tullar Co., manufacturers of the well-known Tullar syringes, health appliances, etc., this city, advise the trade of the decision of Judge Hoyt H. Wheeler of the U. S. Circuit Court in the suit brought against them by the Marvel Co. and others. It was in connection with this suit that representations were made that the Tullar Co. would be put out of business and the trade was warned not to deal in the Tullar goods. The final decree of the Court dismisses the complainants' bill, the costs to the Tullar Co. to be taxed. This is a victory for the defendant, and the trade need have no fear of being made parties to royalty litigation.

THEORY VERSUS PRACTICE.

Theory is not bad, but practice is better in any business. If you have planned to keep posted by reading the Era advertising columns each week, do not let anything interfere in carrying out your plans, for the week you miss may mean a financial loss to you which might have been averted if you had done as you planned to do. Are you familiar with the following, which appeared in the December 10th issue?

PROTOS—Claimed by the manufacturers, the Protos Co., 1052 Madison St., Chicago, to be a great food for children and adults who are deficient in muscular development. If your wholesale druggist does not handle it write direct to the manufacturers for particulars and samples, and don't forget to mention the Era when doing so.

NAILTRIM—Made by the firm who pay the expressman and claim to treat you right, The Rochester Metal Mfg. Co., Rochester, N. Y., who say that it is the best of its kind in many ways. It is made of German silver, has three files instead of one, and a removable knife. Sold on handsome display stands at \$2.00 per dozen.

COLD PUSH—This is the season when you need it. It is recommended by Dr. Chas. A. Pusheck, 1619 Diversey Blvd., Chicago, Ill., as a cure for all colds, coughs, croup, bronchitis, etc. This popular remedy has been reduced from \$1.75 to \$1.35 per dozen.

SYRUP OF FIGS—The genuine, made by the California Fig Syrup Co., San Francisco, Cal., who furnish advertising matter free of charge on application. The price is \$4.00 per dozen to the trade, but a discount of 5 per cent. is allowed on all single orders amounting to \$24.00 or over.

DRUGGISTS' RINGS—Very attractive and suitable presents for members of the drug trade; made of sterling silver oxidized with ruby or emerald eyes. They are sent prepaid to any address upon receipt of the price. Note the J. Arthur Co. advertisement on page 21 for further information.

PYROLIGNEINE—A product of the Pyroligneine Co., Winchester, Tenn., who claim that it is a new wood derivative which reduces pain and inflammation in the most expeditious manner without injury to the tissues. The manufacturers also claim that it is being liberally advertised and that you will have calls for it.

WAYSIDE RHYMES—A book which contains the jolliest and funniest rhymes and epigrams ever written. For further description and price see page 20.

THE SANITARY STILL—Manufactured by the A. H. Peirce Mfg. Co., 127 N. Green St., Chicago, Ill., and claimed by them to be the only still recognized by the U. S. Government, and to differ from the other stills upon the market in that it not only purifies the water, but aerates it at the same time. You should have one. Write them for catalogue and prices.

DRUGGISTS' PINS—They are unique, emblematical and attractive; made of oxidized silver with ruby eyes, and sent prepaid upon receipt of 25c in coin or stamps, by the Bryan Supply Co., Bryan, O. A cut of this pin appears upon page 21.

THE RELIANCE PRESCRIPTION FILE—Made by the Reliance Cabinet File Co., 1010 Dayton St., Cincinnati, O., and claimed by them to be the only practical device on the market; has a capacity for 1,000 prescriptions. If you are interested, write the Reliance Co. for testimonials and their catalogue showing their line of druggists' filing devices and specialties.

DECORATED TIN BOXES—The Savage Mfg. Co., Richards & Coffey Sts., Brooklyn, N. Y., submit free of charge original designs for decorated tin boxes. If you are in need of anything in this line, it would be to your advantage to secure some of this firm's bright, snappy ideas for new designs.

BURDICK & SON, Rose & Hamilton Streets ALBANY, N. Y.

BUSINESS RESTRICTED TO CURRENT NECESSITIES.

New York, December 15.—As usual at this season, holiday affairs, stock taking, and annual settlements are receiving considerable attention. Consequently business is restricted almost entirely to actual current necessities of the consuming trade, and the market presents little in the way of new features of important price changes.

OPIMUM.—Only a light consuming demand is reported and jobbing quotations are nominally steady at the decline noted last week to \$3.15@3.40 for 9 per cent. and \$3.25@3.50 for 11 per cent. Powdered is finding a moderate jobbing outlet at 4.00@4.25 for 13 per cent. and \$4.50@4.75 for 16 per cent.

MORPHINE SULPHATE.—Dealers' report a continued steady trade demand with jobbing quotations unchanged at \$2.60@2.70 for eighths in ounce-boxes, \$2.25 @2.35 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.30@2.40 in 5-oz. cans.

QUININE SULPHATE.—Jobbing quantities continue to find a fair consuming outlet but there is an absence of new features and prices are unchanged but steady at 25@25½¢ for bulk in 100-oz. tins, 25½@26¢, in 50-oz. tins, 26@26½¢, in 25-oz. tins, 27@27½¢, in 15 or 10-oz. tins and 32@32½¢ in ounce-vials.

CAMPHOR.—Refiners have advanced their prices 1c. per lb. and the revised jobbing quotations are 56½@57c. for bulk in lbs., and 57@57½c. for cakes in cases for broken lots the quoted range is 62@65c.

SIMARUBA BARK.—Supplies are more abundant and the market is easier, with jobbing quotations showing a decline to 60@70c. for whole and 65@75c. for powdered.

OIL PEPPERMINT.—Primary markets in the West are stronger and with local stocks under better control, spot values are decidedly firmer, the quotations in a jobbing way showing an advance to \$3.05@3.30 for Western, \$3.15@3.40 for Wayne County and \$3.85@4.10 for H. G. H. or redistilled.

SILVER NITRATE.—Owing to weaker markets for metal, the prices of manufacturers have been reduced 1¼c. per oz. and jobbing quotations show a decline to 43@48c. for crystals and 45@50c. for fused.

SARSAPARILLA.—Mexican is easier owing to freer arrivals from producing markets and local jobbers have reduced quotations to 19@24c. for whole, 21@26c. for cut or crushed and 23@29c. for powdered.

IPECAC.—Rio is easier in sympathy with corresponding conditions in European markets and jobbing quotations show a decline to \$1.70@1.95 for whole and \$1.80@2.05 for powdered.

UNION SALAD OIL.—Values at producing points have reacted since the decline noted last week. Manufacturers have advanced prices 2c. per gal. and the jobbing quotations are 47@52c. in barrels and 62@72c. For less, according to size of order.

OIL SASSAFRAS.—Natural is exceedingly scarce both on spot and in producing markets and values are decidedly higher. For strictly prime the jobbing range is 70@75c. but for inferior grades the inside figure could probably be snared.

YERBA SANTA.—Supplies are very light and concentrated in few hands, and jobbing quotations have been marked up to 18@28c.

Resigned Presidency of National Licorice Co.

Owing to the continued ill-health of F. P. Scudder, necessitating the relinquishment of his official duties, he resigned the presidency of the National Licorice Company on Dec. 8, retaining his membership on the board, the personnel of which remains unchanged. The officers elected on that date and members of the board are as follows: President, Adolphe E. Smylie; vice-president, Henry Rowley; secretary and treasurer, H. W. Petherbridge; F. P. Scudder and Milton Hopkins.

Carbolic Acid that Melts at 40 Degrees Centigrade.

The U. S. Pharmacopoeia requires that purified carbolic acid shall melt at not lower than 35 degrees C. A lower melting point indicates more hydrated acid, and a higher melting point indicates less hydrated acid and a purer product. Therefore, when we are informed by responsible manufacturers that their product has the high melting point of 40 degrees C. we can but infer that this product is one of the purest, if not the purest one of the kind upon the market. Such a product as the one spoken of is claimed by the Mallinckrodt Chemical Works, St. Louis, Mo., to be exemplified in their Gilt Label brand of carbolic acid. The "M. C. W." products have always had the reputation of being among the leaders, and as such they should have the druggist's careful consideration.

The Pharmaceutical Era.

BUSINESS NOTICES.

THE ERA DRUGGISTS' DIRECTORY.

The 10th revision of the Era Druggists Directory, now ready, is the best edition we have yet offered. It is the standard work of its kind in this country and includes a complete list of the druggists in Costa Rica and the principal drug stores in Chile, Peru, Bolivia, Ecuador and Colombia.

The list of retail druggists in the United States does not quite reach the 40,000 figure which the last edition showed, but this loss is made up by increased numbers in Part III. (Manufacturers, Jobbers, etc.)

This Directory will be found invaluable to any merchant or manufacturer who does business with the trade. It is sold only by subscription, and until further notice the price will be \$5.00 per copy, net, postpaid.

The edition is limited, and we are obliged to reserve to ourselves the right to raise this price at any time.

"We are all learning more or less every day, and wide reading in one's chosen field is imperative."

But there is a great difference both in the quantity learned and the manner of reading.

The newspaper habit, the careless reading of many headlines in many dailies, does not lead to great learning.

On the other hand careful systematic reading is the medium of all education.

Why does the college student read to better advantage than the newspaper habitué?

Because his reading is selected and systematized.

System and selection in reading is, however, also possible outside college walls. The main thing is to get the right person to arrange it for you.

The Era Course in Pharmacy has been selected and systematized for the use of home students by educators of wide experience.

Write to the Pharmaceutical Era, 8 Spruce Street, New York City.

THE STRENUOUS LIFE AND DRUG ABUSE.

An Omaha divine last week announced that fully ten per cent. of the population of the surrounding territory was composed of drug habitues. The proportion seems very large but the reverend speaker produced evidence of startling character. He said that one drug firm in the neighborhood purchased cocaine in lots of \$5,000 worth at a time, and that a drug clerk testified that his first duty after opening the store in the morning was to put up the alkaloid in five and ten cent packages in preparation for the active demand of the day. That indicates a state of affairs in the prosperous West which has no parallel in the eastern part of the country. We hope the report is exaggerated, and that the condition is not so serious as it seems, but it is impossible to deny that the evil is far more threatening than most of us realize. If the abuse is one-tenth as widespread as this report seems to show, no sacrifice on the part of reputable druggists which will save their calling from disgrace can be too great. It is an evil that threatens the good name of the entire trade, and no entirely successful measure for its suppression has yet been devised. Illinois has a drastic cocaine law, and the campaign has been prosecuted with vigor and ability, yet there are many who doubt that the means adopted are sufficient to effect a cure. An authority recently declared that evils like the abuse of drugs and alcohol take a more violent hold upon Americans than upon persons of any other nationality, and that this fact is due to the excessive strenuousness of American life. The truth of this statement is probably a matter of opinion, but in any case the evil is no common abuse that can be met with mere resolutions and propaganda. The monster is an extremely vigorous reality and it must be met with equal vigor.

BODEMANN, THE STRENUOUS.

Probably no one is by nature and temperament better fitted to cope with the cocaine evil than our friend Mr. Bodemann of Chicago, and the druggists of his town have shown good sense in trying to secure his services at the head of the board of pharmacy for another year. He has given the enemies of pharmacy no rest, and he has in consequence suffered all possible manner of abuse. He has been slandered and

threatened and vilified in the papers. Last week he was arrested for having caused sundry injuries to an eye that had probably been resting upon him apprehensively for some weeks. Not even an alibi was necessary to prove our friend's innocence. No doubt all this would be very annoying to the average citizen and we are sorry to see abuse heaped upon the head of one guilty only of having done his duty, yet we do not pity Mr. Bodemann overmuch. We have a strong suspicion that he is having the time of his life, to use a pretty colloquialism. We do not believe that he has had so much fun since he was a boy, and we are pleased to think that his peculiar abilities will continue to operate in the interests of decent pharmacy for many years to come.

TRADING STAMPS, TRADE DEMORALIZERS.

Of all the devices for compelling the feet of customers to one's own place of business, the trading stamp is the most insinuating and diabolical in its ingenuity and its possibilities for evil. As a means of advertising it is now so effective that no single merchant can afford to ignore it, and as a form of price-cutting it promises to be more insidious and difficult of control than all others. Its attractiveness and its astonishing effectiveness are largely due to its power of appealing to several of the universal human weaknesses at the same time. The stamp giving dealer appears to give something for nothing, an attraction which only the exceptionally strong can resist; the element of uncertainty mildly excites the gambling instinct of the purchaser and the anticipation of a gift of unknown qualities at some vague time in the future keeps the imagination pleasantly occupied. People flock to stores where stamps are distributed because they seem to make two purchases for one expenditure, and the delightful wonder as to what particular splendor will result and the pleasing task of selecting an apparent gift are irresistible, especially to the average feminine mind. All branches of trade in and about New York are suffering from a trading stamp epidemic. Not only department stores but groceries, meat shops and retail stores of all sorts have surrendered to the common demand. Strange tales of curious developments of the stamp nuisance have been going the rounds. A New Jersey undertaker shop is said to have displayed a stamp sign, but as it soon disappeared we may assume that some wag merely tried to create a smile at the expense of a solemn establishment. In another town a corner saloon advertised a popular brand of stamps with the result that many wives urged their husbands to "take a drink" at a certain bar, and enthusiasm ran so high that the police were obliged to interfere, upon what legal grounds we can not imagine.

THE ENDLESS POSSIBILITIES.

The trading stamp as a means of advertising is an unmitigated success. An announcement in the morning papers that a double portion of stamps will be distributed at a certain time and place will be eagerly read by thousands of women who never look at the conventional lists of bargains, a form of advertising which no longer seems to enjoy popular confidence. A very clever trick employed by some of the larger

firms to induce people to visit the stores or even certain counters is to print coupons in the daily advertisements, the coupons to be cut out and exchanged at the place designated for trading stamps. Diligent readers may thus collect quantities of the little squares without making a single purchase, but in the mean time the store has accomplished its purpose. The stamp's wonderful possibilities are, perhaps, best exhibited in its ability to focus attention upon any particular article of merchandise. In this respect it is far superior to the ordinary bargain sale announcement. All that is necessary to stimulate the demand for any article is to offer extra stamps. In order to secure stamps representing three dollars with a purchase involving one dollar in cash, many women will travel several miles and forego a too critical examination of the goods. These are only a few of the many ways in which an ingenious merchant may employ trading stamps to lure his rival's patrons to his own counters. Perhaps this monstrosity is only a passing fad which will disappear as suddenly as it has risen, but in the meantime the effects are sufficiently serious. It is a deadly weapon in competitive warfare, one that is far more easily taken up than laid aside, and one which is nearly as dangerous at the breech as at the muzzle.

TO ABOLISH THE TRADING STAMP.

The trading stamp has been roundly denounced on all sides, but its virulence has apparently not yet reached its height. In one week recently several druggists' associations condemned it by resolution, but at the same time another body of pharmacists felt compelled to adopt its use, let us hope as a business expedient for self-defense. Movements are on foot with a view to putting a stop to the nuisance by legal enactment, but whether any of these campaigns will be successful remains to be seen. The merchants of Massachusetts last year secured the passage of an anti-trading-stamp measure, but it never became a law. Possibly the same difficulties will not be encountered in other places, but it is well to recognize the fact that there will be no smooth and easy sailing. No doubt legislative bodies can be found who will be willing to declare the giving away of trading stamps and coupons illegal, but upon broad grounds it is difficult to see how any law can deal effectively with the question. It is a means of advertising that differs in no essential from the giving of cards, calendars, etc., and it will be difficult to forbid one without also rendering the other illegal. It will be a courageous legislator who will dare undertake the regulation of advertising not in restraint of trade, yet this is precisely an action which must be taken in the not distant future if competition continues to run riot as it has done during the past few years. The multiplication of trade association all for the purpose of combatting evils of competition shows that independence and rivalry have created conditions which are no longer tolerable. The trading stamp in the drug trade is a serious problem. It threatens to neutralize all the good accomplished by years of association work. Everyone recognized in it a form of price-cutting, but it is a form which is extremely difficult to control. Probably the most effective weapon that can be employed against it is organization and mutual

agreement, a weapon which has hitherto also been the most effective means of controlling prices. Organization is the only remedy available for most of the evils of trade and it is strange that the rank and file are so slow to recognize its benefits.

TRADING STAMPS AND THE CONTRACT PLAN.

Some one propounds this question: "Does the druggist who gives trading stamps with goods sold under contract to maintain prices violate his contract?" Whenever this question has been brought up at association meetings, the giving of stamps coupons or premiums has always been declared equivalent to a cut in prices equal to the value of the premium given. The value of the trading stamps given with a dollar purchase is usually supposed to be about four cents. Stamps, therefore, represent a four per cent reduction in price. This is the common sense view of the matter, but it is quite possible that the courts might not recognize common sense as good law. If a dealer under contract to maintain prices may not add to the goods sold any gift of recognized value, would he be permitted to give advertising matter of other forms, perhaps of trifling value? It is not at all certain that the law would recognize any distinction whatever. And if a druggist can legally give away the usual number of stamps with contract goods, what will prevent his giving a greater number equivalent to any reduction in price which he may see fit to make? All good druggists will recognize in the trading stamp an ingenious invention of the evil one, and studiously avoid it—if they can.

PHILANTHROPY GONE WRONG.

The Interdenominational Committee Organized for the Suppression of Drug Addiction has gone out of business. As our readers will remember, the committee with the long name and the lofty purpose was composed of a large number of gentlemen prominent in different church organizations. The secretary of the committee and promoter of the enterprise was a retired doctor of divinity, who had discovered, or, at least, knew some one who had discovered a cure for the opium habit, and wished to devote his life to the philanthropic occupation of rescuing the perishing—for a consideration, of course. The enterprise gained the support of the church authorities and was heralded far and wide in religious and secular newspapers as a noble effort to drag victims out of an abyss from which no one seemed disposed to save them. Only a few weeks ago a prominent Chicago daily printed a column editorial about the cure of the drug habit, lauding the semi-theological undertaking to the skies, and entirely ignoring the real work accomplished by Mr. Bodemann and his heroic band. Either the reverend promoter was plentifully supplied with cash persuasives or his press agent possessed uncommon ability, for he received more lovely free notices than any ordinary saint could reasonably expect to merit after death. But in spite of all these advantages the business refused to prosper, and the promoter has been cast adrift by the reverend committee. The fact that their secretary had been fined as a law breaker and had been shown to be a charlatan and a fraud seems not to have influenced them in the least. Their resolution suggests tears rather than righteous indig-

C. F. G. MEYER, St. Louis, Mo.
President, Meyer Bros.' Drug Co.

nation. They sorrowfully resolved to discontinue "partly because the newspapers could not be made to appreciate the uprightness of its motives and partly because the contributing public has held the purse strings too tight." The long resolution closes with an expression of confidence in the philanthropic secretary who will continue the business and who admits that he organized the committee as a business venture. The remedy promoted turns out to be a "shot-gun" secret preparation, good for nearly all the evils under the sun and of admittedly doubtful value in the treatment of morphinism. It was perhaps too much to expect of the distinguished members of the committee that they acknowledge to the world that they had been misled, but to dismiss their deceiver with a gratuitous recommendation seems to the ordinary, crude, commercial mind slightly queer as to ethics.

JOURNAL OF THE DRUG CLERKS' CIRCLE.

The Drug Clerks' Circle of this city has a pleasant habit of publishing a journal to commemorate and enliven its annual hall. The year's production is an unusually successful issue, and reflects credit upon everyone connected with its preparation: It brings to the fore those things which it is designed to make known, entertains the initiated with pleasant gossip, and all without wearying the reader. It proclaims the hopes and purposes of the organization, presents a number of portraits of prominent members and is printed "only for our friends." Yet there is much between its covers to interest any one who is neither a drug clerk nor a resident of New York. The Circle is a body of pharmacists who take their work seriously, and are determined that it shall be estimated at its true value. The journal gravely announces that the Circle will no longer be content to endorse candidates of other associations; it expects to present its own candidate, a drug clerk who will look after the interests of the drug clerks. In order to secure sufficient support it is prepared to employ canvassers to perform the necessary organization work. In its energy and the abundance of its financial support, this society of clerks might serve as a wholesome example to older pharmaceutical associations. The battles of this world are not won without earnestness of purpose.

The Handsome Interior of John J. Strasser's Drug Store, Trenton, N. J.

The above photograph represents the interior of the store owned by John J. Strasser, at Pennington and Princeton avenue, Trenton, N. J. This store occupies one of the best positions in the city, overlooking the monument erected in memory of the battle of Trenton, where the American soldiers defeated the Hessians during the Revolution. As one enters he is impressed with the unique and, at the same time, luxurious fittings. The wood-work is of heavy, dark-stained oak with a background of dark green. The ceiling is of metal, heavily panelled and decorated in green and old gold. The floor is of yellow tiling, inlaid with star-shaped blocks of red. In the center is a large basin, some ten feet in diameter and filled with water, from which springs a cluster of artificial lily pads, illumined by small vari-colored incandescent lights. This basin,

contains innumerable gold and silver fish. The basin is surrounded by a number of large natural palms and rubber plants and many of these are placed at other points in the store. The afternoon brightness shining in through the windows, gives a softening touch to this scene and makes of the store a literal sun parlor. Mr. Strasser, who is to be seen in the illustration standing by the fountain and who owns the building of which his store forms the first floor, does a large and successful prescription business and believes in entertaining his customers while they wait. To add to this he has installed a mellow-toned Regina music box which plays the latest and most popular airs. The large soda fountain is closed on Sunday. On being asked the reason, the genial proprietor replied that he believed in giving his clerk a rest on at least one day in the week. Many strangers are turned away on this account, but the rule is never departed from.

READS THE ERA FROM COVER TO COVER.

We have received a letter from our mutual friend Mr. Bruno Batt, who is still interested in the affairs of his pharmaceutical friends, although other interests have weaned him away from the drug business.

Mr. Batt is now presiding over the Sanecura Wells Co., Mineral Wells, Texas. He writes among other things:

Although I am out of the drug business, I find myself perusing the Era from cover to cover as of yore. It is always a welcome messenger from my old friends and acquaintances.

Mr. Warren's death shocked me. The success of the N. A. R. D. with the proprietors elated me; and the "phenactine" plea before Commissioner Allen amused me. The commissioner's reply did not disappoint me. The result reminded me of the happy termination of your attempt to reduce the alcohol tax—none of the druggists would have wanted it had they received it.

THE PROPRIETORS AT WORK.

The results of the anti-cutting campaign recently inaugurated by "individual" manufacturers are still below the surface in this city, but reports from distant points indicate that something substantial is being accomplished. Des Moines, Iowa, has already felt the beneficent effects. It seems that cutting of the most vicious sort has been going on in that town. Last week the cutters received letters from proprietors couched in vigorous language insisting that their product be sold only at prices sent out with the goods. This action has had the desired effect, and the druggists are probably feeling grateful to the N. A. R. D., although that body waives all claims to credit for the activity of the only real controllers of prices.

SHOP TALK

CHRISTMAS IS WHAT WE MAKE IT.

The boy who cleans bottles and graduates and saves steps generally in Brown's drug store, was a little late on Christmas morning.

"Hello Tommy!" shouted the junior clerk. "What did you get?"

"Oh, lots of things!" replied that important personage hurrying out with a broom to sweep the walk clear of snow before the arrival of the proprietor and early customers.

The clerk stood looking after him, dust-cloth in hand. He did not feel very brisk, for the day promised little to him. He could hear the boy stamping and scraping out in the cold and from time to time sending vociferous greetings up or down the street. When he heard Tommy kicking the balls of snow from his heels upon the edge of the curb preparatory to coming in, he leisurely resumed his dusting.

"Do you mean to say that you are having Christmas at your house?" said he to the boy now warming a pair of chapped hands at the radiator.

"Of course!" replied Tommy, his eyes round with astonishment.

"Presents and all that?"

The boy could only nod.

"I never knew you had any rich uncles or aunts."

"We haven't!" said Tommy. "I bought most of 'em myself."

"You!" said the clerk. "On two dollars and a half a week?"

"Huh!" sniffed the boy. "It's a good deal. My mother says so."

"Well, what did you get for yours?"

"I got these," holding up a pair of red mittens. "My mother made em—and a pair of car-muffs—and a book to write my examples in—and an eraser—and a pencil. What did you get?"

The clerk exhibited a shining scarf-pin.

"Gee!" said Tommy. "That's fine all right."

"It's from my sister."

"She's mighty good to you," said Tommy.

"Oh, I don't know," replied the clerk. "I gave her more than that—a fine cut-glass punch bowl. Besides, she's rich. She married a dentist."

"What's a punch-bowl?" asked the boy presently. "It's to make punch in. Don't you know anything?"

"Make punch?"

The clerk nodded. "It's to drink—got wine in it."

"Do rich people drink that? We drink coffee."

"Oh, not all the time, you idiot. I don't know if my sister knows how at all. It's a nice thing to have anyway."

The proprietor and the head clerk came in quite in their usual manner without particular bursts of enthusiasm, which surprised the boy not a little. He supposed Christmas was of the highest importance to everybody. The druggist informed him that after he had delivered one or two bottles of medicine, he might make a holiday of the remainder of the day.

Tommy trudged away through the snow thinking himself the most fortunate person in the whole world, and who shall say that he was not? When he returned he found Dr. Jenkin's horse and sleigh at the door.

"Cold!" inquired the old doctor cheerily, as Tommy came in.

"Not very!" said the boy pulling his cap from his tousled hair.

"That prescription is urgent, is it?" called the druggist from the other end of the store.

"I'm afraid so," replied the doctor. "I have not seen the patient, but from what the little girl told me,

I think it ought not to wait. It looks like pneumonia and I ought to call there, but the people are so poor—you know how it is—I am not sure that they can pay for the medicine."

"I'm very sorry," said the druggist to Tommy, "but this bottle ought to go at once—to Mrs. Blake, over the river. Do you know where that is?"

Tommy nodded.

"It's a shame," said the doctor, "to make the boy tramp away out there, in this weather too. Hold on, my boy! Do you want a ride? I simply must see that case. I can't let people suffer even if they are poor."

So Tommy had a sleigh-ride. Tucked under the big robe and his face sheltered behind the doctor's shaggy shoulder, he did not feel the cold, nor did he mind the snow which the best horse in town threw into their faces.

"It's a bitter day," said the doctor. "You'd better come in to get warm."

They picked their way through the broken fence to the poor little house which looked dreary enough. Once inside, the doctor disappeared into a doorway to a bedroom beyond, and Tommy was soon perched upon a rickety chair with feet propped upon the edge of the little stove which seemed sadly unequal to the work it was expected to perform. Three children hung timidly on the other side of the room.

"Merry Christmas!" said Tommy. "Hope your stockings were full."

The largest little girl shook her head.

"Santy didn't come here," said she. "Mommy's sick, p'raps that's why," glancing knowingly at her small charges.

Tommy was overcome, for after all, a boy is a savage only on the surface. He felt in all of his pockets, but not even a peanut did he find.

"Hurry up, Sonny!" said the doctor buttoning his overcoat. "I'll take you back to the store. H-m," he mused to himself when they were again rushing into the wind. "I wonder if I ought not to notify the authorities. Lack of nourishment, pure and simple."

"What have you in the line of prepared foods?" said he stamping into the store.

While the boy stood huggin' the radiator, there was a great bustling behind the prescription case and the head clerk made one or two trips out into the cold.

Tommy made a second trip across the river that day, this time accompanied by a big basket. And he was not sorry to go although it consumed nearly half of his holiday.

MONKEY-SHINES IN EVANS DRUG STORE WINDOWS.

Arrayed as monkeys and with the pranks and capers of the real article, two boys attracted large crowds to one of the windows of Evans' drug store, at 1012 Market street, Philadelphia. Their acrobatic feats and juggling interested the onlookers and caused great laughter. In the rear of the window stood a cabinet, with a placard bearing the information that during the next ten days an illusion called "The Disappearing Monkey" would be exhibited in the gift room on the second floor of the store. The illusion is calculated to puzzle the spectators. One of the monkey impersonators opens the cabinet and shows his companion within. He then closes the door, opens it again, and the monkey inside has disappeared and so on. The change is accomplished with great rapidity, and is calculated to defy efforts to determine how the monkey gets in and out. Between times the artificial monkeys go through their tricks, and a boy plays the piano.

THE STAMP PROBLEM STILL UNSOLVED.

"The troubles of a druggist," said a Syracuse drug store proprietor the other day, "are on the increase." Not the least among our bogies is the stamp nuisance. People are getting so they come in, throw a \$5 bill on the counter and ask for a two cent stamp. They pocket their change and walk out without even saying thank you. Strange to say many people believe that we make a profit on every stamp sold and I suppose they wonder why we don't have special bargain days in stamps."

"The other day I started in to put up a prescription that would ordinarily take me twenty minutes. I was interrupted twelve times, eight times for stamps once for the directory and three times for the use of the telephone. It took me an hour and a quarter to put up that prescription."

Stamp selling is an especial nuisance to a certain Syracuse store located near the postoffice. The proprietor of that store in speaking of the time required to wait on the stamp-buying population said:

"On Sunday I sell \$6 worth of stamps. I figured out that one stamp to each applicant means 300 trips to the cash drawer and then back again for the change. This takes about a half minute at least. Divide 150 minutes by 60 that makes 2½ hours. That is a low estimate of the time expended most any Sunday in accommodating people with stamps. Week days, of course, there is not such a demand." The other day a nice old lady entered a drug store to get some stamps to put on a small package. A pipe had burst in the soda water fountain and the two clerks were busy trying to repair it.

"Can I get some postage stamps?" she asked. "Certainly," replied the clerk, climbing down from the top of the fountain. "How much will this cost," she asked, handing him the package.

After weighing it he replied, "seven cents, madam, but I haven't any stamps so I will have to give you four two's."

"But," began the nice old lady as she gave him seven cents, "I only wanted three two's and a one."

The clerk finally convinced her that she would have to give him another cent, since she had put the stamps on the package. She rummaged about in her purse and something dropped out.

"There it goes," said she. "It's a penny and went right down there on the floor. Don't you see it?" After searching some time with indifferent success the clerk suggested meekly: "Perhaps it was a button, madam."

"I beg your pardon, sir, it ain't no button I dropped. My buttons are all sewed on, I thank you."

After another search the clerk found a button on the floor. Showing it to the nice old lady he said triumphantly, "It was a button, madam." The nice old lady murmured something and paid the final installment for the stamp.

"Talk about your unabridged nerve," said the clerk after she had gone out, "that's the limit."

In their efforts to get bills changed some people go into a drug store and ask for a stamp and put it on the letter before paying for it. They often feel abused and offended when the druggist gently but firmly informs them that he cannot change the bill and that they still owe him two cents.

In spite of its many inconveniences the druggists generally agree that their business is improved by extending this courtesy and besides they think so long as the public has the habit they might just as well indulge in it or, perhaps, rather tolerate it.

CORRESPONDENT GETS MIXED ON STORES.

An Era man was waiting for a car on a St. Louis street corner the other day, when an attractive sea of show windows caught his eye, and, from the display of bottled goods, jars and bright boxes, his first impression was, "a very pretty drug window." He started over to make the acquaintance of the druggist. Half way across the street he stopped. It was a grocery store. A large jar of walnuts, smaller jars

of nut kernels, bottles of syrups, oils, condiments and fancy cake boxes made the display. Has it ever occurred to you how much the lines are getting alike in appearance?

THE GUM BLASTED CONSTABLE HAD SIX CENTS LEFT.

"Alf" Hammer, who has a big drug store in Des Moines, Iowa, got the best of a Dallas county constable a few days ago. Mr. Hammer has a happy faculty of turning defeat into victory, and this is one of the secrets of his business success. Hammer had been told that hunting was good in the vicinity of Campbell, and, being a devotee of the rod and gun, he shouldered the latter, and, with his faithful pointer started to look for trails. He found the spot which had been recommended to him, and was soon on a hot scent. A constable from Adel was also on a hot scent and the constable succeeded in bagging Hammer before Hammer bagged his game. Hammer was taken to the county seat and fined \$1 and costs, amounting to \$7 in all.

The justice took the \$1 and the constable took the costs.

"Looks like I ought at least to get a supper out of this," said Mr. Hammer.

"Sure," said the constable, and a few minutes later constable and druggist and several friends were cramming down oysters and celery with a wash which is said to have been procured by signing a certain "permit."

When the constable paid the bill and set up the cigars for the druggist and his Adel friends he had spent Hammer's \$6 and \$2 more.

"I think I have had my money's worth," said the druggist, as he took a train for Des Moines.

"And I'm afraid I'll not be able to arrest many more druggists hunting near here," said the constable as he made a desperate effort to jingle a penny and a five cent piece, which was all the change he had left in his jeans.

FAMOUS CHIEFLY FOR ITS FAMOUS PATRONS!

Connor's drug store, Philadelphia, has gone out of existence. For many years after its opening it was the leading drug store of Philadelphia, and as such ministered to the wants of the present King of England while, as Prince of Wales, he visited the city. Possibly a royal headache was relieved by one of those famous powders made in the store, of which a sign states that "150,000 have been sold, curing 150,000 headaches." Clara Louise Kellogg was one of the original stockholders in the store when it was opened under the proprietorship of Helmboldt, who afterward made a fortune in the business in New York. General Grant purchased cigars in the store. President Lincoln frequently sent bell boys to the store for articles he needed. The Emperor of Brazil was fond of a brand of cough drops made there and patronized the store frequently during the Centennial. Practically all the noted generals, politicians, singers and actors of the last half century knew the store. Helmboldt, who first had charge, turned the business over to a brother, from whom it was purchased by George P. Conner. The latter's lease expired this month.

MODERN THERAPEUTICS.*

DR. A. HERZFELD.

NOTWITHSTANDING the enormous progress we have made in medical science, the internal treatment of a great number of diseases is still empirical. Knowing this in sufficiency, every scientifically educated medical man ought to endeavor to give the empiricism a scientific basis and to adapt the treatment of a given disease to the latest researches and discoveries in that particular department.

In our modern therapeutics we pay more attention to hygienic and dietetic treatment than in former years, and the medicinal treatment is often only a small measure of our therapeutics in combatting disease. Our older therapeutics consisted largely in big quantities of decoctions, infusions, etc., but to-day we have more accurate dosage, stricter indications in the use of alkaloids, extracts, coal tar preparations, sera and organoherapeutics. Every physician can find in these preparations one of which may assist him in his therapeutic measures.

In view of these facts, is not the modern therapeutic pessimism which we so frequently meet, as much unjustified as a polypragmasia? Although in the medicinal treatment there is a golden rule, "ne quid nimis," I do not by any means agree with one of our great medical professors in therapeutics and materia medica in this city that a half dozen drugs will answer all purposes in the treatment of diseases. Such an assertion tends to increase the ignorance already prevailing about the better and accurate knowledge of drugs, and intensifies this pessimism in our therapeutics.

This I find is the main reason for the enormous multiplication of medicaments going on at the present time. Gigantic is the number of patent medicines ready to come to the assistance of the medical man insufficiently educated in materia medica and therapeutics. Chemists, pharmacists, laymen, even our professional brethren, work so eagerly and invent so rapidly that the ordinary mortal cannot find his way through the chaos, and the ordinary homo sapiens might waste a lifetime merely in following up the literature of the wonderful inventions.

A large number of these secret preparations are a direct humbug. Still, there are others which have a certain value, based upon the cause mentioned above that is, the insufficient knowledge of the medical man in materia medica. Prescribing is simplified, the proprietary preparation is very convenient, the doctor prescribes no physiological or chemical antagonists, the mixture seemingly satisfies all requirements of the patient, is up to date, and, last but not least, the physician is not compelled to overstrain his already seriously overtaxed gray matter. It is apparent, therefore, that the manufacturer of proprietary medicine looks out for the welfare of our patients more than the ever-busy medicus who continues his life in the dolce far niente of his pessimism, and does not make the least attempt to perfect himself in this very important branch of medical science, but wastes his time in discussing why the forande rotundum is not a perfect circle.

Now, let us see what products the manufacturer of proprietary medicines brings to our attention. Adorned with a more or less scientific or mysterious name the patent medicine begins its career usually with success. Sometimes it finds an early grave, but then it reappears on the surface in a new attire better prepared, restored and strengthened to take up the fight with its competitors and bring its ingenious inventor high respect and a handsome fortune.

What do we understand by the term, proprietary medicine or nostrum? All preparations consisting of one or more mixtures of several chemical or pharmaceutical products, brought into trade under a new

name, which, when the formula is known, can be made by any pharmacist, and whose composition is unknown to the physician employing them. Name and composition are as a rule protected by law. This definition excludes all chemical and pharmaceutical products, which, even when protected by law, do not represent mechanical mixtures, but products of pharmaceutical and chemical research, as all coal tar products and many iron preparations, and all such chemical and pharmaceutical mixtures as bear their accurate formula on the label. This definition has been made a law for all proprietary articles in all states of the German Empire.

Every preparation is secret or nostrum whose contents are not known. The manufacturer of proprietary medicines ostensibly makes us acquainted with the mysterious contents of his mixture, so as to satisfy inquisitive science. He mentions several or even all ingredients, but without their respective quantities. Some manufacturers are even so ingenious as to give names of chemicals unknown to chemical science.

It is an interesting fact that often the newly-invented name of the mixture has nothing to do with its composition. A favorite method of naming a preparation is the combination of two or more syllables of the combining bodies. In this way are originated very peculiar pseudo scientific names. The formulas of many mixtures are not always the same, the manufacturer finding it necessary to effect a change at times. The combination may be subject to slight chemical changes, the valuable combination may be imitated, or it may be changed on general principles.

Most in favor are fluids and tablets. The former keep better, with a sufficient addition of alcohol or glycerin. The latter owe their popularity to their agreeable and convenient form. In the addition of alcohol the manufacturer is often not over particular; a very frequently prescribed food contains, according to the analysis of Bruns, over twenty-five per cent. of alcohol; it can, therefore, be prescribed conveniently for sick people who are strict anti-alcoholists.

The very convenient tablets, some of them as hard as flint, allow the stamping of initials on the surface, so that the mentally burdened physician may readily see which valuable medicament he is handling, and thus prevent the waste of mental potential energy.

Proprietary medicines in powder form are not in favor, as they undergo decomposition caused by chemical reaction more readily.

Pills in all colors of the spectrum and gelatine capsules are more in favor, as both conceal their age, a fact of the greatest importance to the manufacturer of secret medicines.

The era of patent medicines began with pills, iron or cathartic. Shortly afterward, wines, tinctures, elixirs—nothing but ordinary pharmaceutical products such as any pharmacy apprentice can prepare when the formula is known—were added. The appearance of coal tar products again marked a sudden and considerable increase in the number of proprietary medicines. For this purpose the cheapest and most convenient are selected, and endless is the number of secret preparations whose most important constituent is the cheap and convenient acetanilid. We all know that among others this one cumulative, very often, produces even in very small doses, symptoms of poisoning, and serious disturbances in the circulation as a cardiac depressant. I will have occasion to speak on the properties of acetanilid at another place in this paper.

Even mixtures of opium and its alkaloids are manufactured and brought into commerce as proprietaries. Some of you will recollect a patent medicine analyzed by Dr. Eccles of Brooklyn, that contained a considerable quantity of morphine, to be used as a remedy for opium, morphine, alcohol and tobacco habits. In Germany, Prof. Levin of the University of Berlin, only a short time ago analyzed a preparation containing a large quantity of morphine that was used con-

*Read before the Manhattan Pharmaceutical Association and the German Medical Society.

stantly in a sanatorium for the morphia habit and by those who had left the institution "perfectly cured."

A frequently prescribed mixture is used for nervousness and contains bromide of potassium, a considerable quantity of chloral. extr. Cannabis indica, extr. hyoscyamus, alcohol and water. Not thinking or knowing that this preparation contains chloral, the innocent physician adds more of this dangerous drug. Such prescribing may lead to the convenient announcement, "Death due to heart failure." The very latest in the field of secret medicines are the phosphoglycerin food mixtures and organic therapeutics, brought out by the enormous demand which the legitimate product in such therapeutics have created in the last few years.

At this point I would like to state that I do not desire to attack honest and honorable manufacturers, whose good and standard preparations are well known and who publish the contents of their preparations and modus operandi, but only those who abuse legitimate pharmacy, chemistry and medicine. It is certainly not difficult to tell the difference.

When did this prescribing, so profitable for the manufacturer and fatal for medical science commence, and what progress have we made in the retrograde metamorphosis? To obtain a positive basis for an answer we have examined a large number of prescription books, collections in various pharmacies in New York, Brooklyn and Newark in totally different localities, going back to 1850. The following are some of the results obtained:

No secret medicine appeared from 1850 to 1873. The prescriptions of those days consisted exclusively of pharmaceutical preparations, made by the pharmacist on the doctor's prescription. As yet the M. D. himself did not dispense machine-made tablets of inaccurate composition. In the year of our Lord, 1874, the first proprietary article put in its appearance, and in 1,500 prescriptions from 1874 to 1880, the percentage of prescriptions into which patent medicines entered was 2. From 1880 to 1890 it was 5. Up to 1895 it was 12; in 1898, was 15, and in 1902-3, 20.

The high tide of this form of prescribing has not yet been reached, for one of the largest pharmacies of this city, where from 250 to 350 prescriptions are prepared daily, reported to me that from last January to September the percentage of proprietary medicine in prescriptions was 25. The proportions given above are obtained from nearly 50,000 prescriptions. Gentlemen, consider for one moment—all prescriptions one quarter are proprietary preparations! And only "nostrums" were counted, whose accurate composition was unknown to the physician at the time he prescribed.

I saw some wonderful things among those prescriptions, and one which particularly struck my attention I will not hesitate to save from oblivion. It was prescribed by a well-known colleague, an apparent lumen among those who believe in him, a visiting physician in two hospitals, a professor and teacher in a New York medical school, ergo not a lesser light. The remarkable prescription reads as follows:

R
Remedium spontaneum Radway, one bottle.
Sig.—Use as directed.

This is the way to prescribe Radway's Ready Relief in the language of old Rome. The druggist who called attention to this wonderful and rare prescription told me that he could not understand the use of the lingua Latin in this prescription. The capitals, R. R. R., would have been entirely sufficient, and no substitution would have been practiced. Gentlemen, I call your attention to this prescription not merely as a curiosity, but for another and more important reason, and that is to show that medical men who claim to be scientifically educated and often think themselves superior to other humans, are not ashamed of prescribing patent medicines advertised in the daily newspapers.

Let us now consider patent medicines from the

commercial standpoint. For that purpose we analyzed some of those most prescribed. The first specimen appears in powder and tablet form, the latter stamped with initials to aid the brain of the medical man. It consists of Sodii bicarbonate, 2; acetanilid, 7; caffein citrate, 1. An ounce costs the pharmacist one dollar. The actual value is about three cents an ounce. Another is a similar product of an inventive mind and greatly enjoys the consideration of medical men. It is sodii bicarbonate, 3; acetanilid, 6; ammon. carbon. 1. Same cost, but worth one cent less than the first. As you see, gentlemen, acetanilid is the main ingredient here as it is in most of the patented headache powders. Acetanilid dissolves only slowly in the stomach and intestines, the succeeding dose finds the first only partially dissolved, and in this way cumulative symptoms of poisoning are produced by the liberated anilin.

The next sample consists of magnesium and epsom salts, precipitated in aqueous solution of carbonate of soda the resulting milky fluid contains the magma of carbonate of magnesium in suspension after the washing out of the sulphate of soda. This proprietary medicine is extensively prescribed for acid indigestion. It cost 34 cents a bottle and is actually worth five.

Another specimen is a frequently prescribed and extensively advertised plaster, beneficial in pneumonia, bronchitis, pleurisy, and all other diseases that end in "itis." Contains kaolin (formerly fuller's earth) glycerin and boracic acid. After a sufficient heating of these chemicals to remove the H₂O and to improve the odor, oils of peppermint, wintergreen and eucalyptus are added. The idea of this mixture is based upon the affinity of glycerin for water, and when brought in contact with the skin absorbs the water and thus acts as an irritant. This odoriferous paste cost 68 cents a pound. Actual value about 8 cents.

These specimens of proprietary medicines may prove to you gentlemen that if the ingenious inventors and manufacturers of such products can well afford to supply the medical fraternity with calendars, prescription books, lead pencils, note books, picture books, and pictures for children and adults, they should give you an automobile.

Leaving the commercial standpoint, I want to call your attention in a few words to patented pills, coated with sugar, gelatin or keratin. To tell their age is entirely beyond human power. My friend, Dr. I. Noble of New York, succeeded in shooting a number of sugar coated pills into a board one inch thick without injuring any of the projectiles. Dr. A. Jacobi told us a similar incident; he found a number of gelatin coated pills in the faeces of a patient. Dr. Sidney A. Stein of this city reports a case of a bicarbonate of soda tablet which resisted every attempt to pulverize with the heel, but left a dent in a hard wood floor. These pills remind me of the antimony family pills of our fathers, intended as cathartic for generations, a valuable heirloom in each family.

The "sample" is the keynote which leads and introduces the physician into the mysteries of secret medicaments. This sample is of the utmost importance. The valuable materia morbi is demonstrated ad oculos, hence the physician will not be able to prescribe the same in powder form, when such a liquid, and vice versa, not infrequently occurs in legitimate pharmaceutical and chemical preparations.

After the medical man has sufficiently admired and thoroughly digested the sample, if such is possible, a prescription for the same will soon appear. One such prescribed bottle will pay the expenses of a dozen samples and the necessary advertising literature. In this literature we are sure to find a number of names of obscure physicians, but, not infrequently, also that of a so-called medical authority, or well-known specialist, whose services were obtained by the old reliable handshake.

Only a short time ago, a number of physicians in a neighboring town decided to manufacture their own proprietary medicines and to divide the spoils, which,

as you have seen, are not small. A number of my colleagues have received their pharmacopœia or formulary, and I intend to subject their products to a nearer inspection. Their foremost and most important discovery is an elixir containing pepsin, trypsin, rennin, amylopsin, and diastase, in an aromatic solution of hydrochloric and distearyl-glycero-phosphoric acid. So reads their introduction to the drama.

I am extremely sorry that I received my sample too late for closer inspection, but by only superficial examination one recognizes at once the therapeutic jewel. The secretions of the stomach, mouth and pancreas are held in solution by hydrochloric acid and in this wonderful, so-called distearyl-glycero-phosphoric acid. The discovery of the latter product is left to the chemistry of the future. Their label reads, "Before eating, in excessive acidity from any cause; after eating, in a deficiency or absence of acid secretion." As you like it! "For infants, five drops with each artificial feeding, in flatulence, colic and green stools. It contains lecithin, is capable of digesting all foods and has a tonic action on the cells of the mucus membrane. As vehicle highly recommended for all drugs and is very good in the making of junket. Vomiting in pregnancy is easily relieved by it, and externally it is splendid in the washing and disinfection of wounds and ulcers." Even the most capricious medical man cannot expect more of a medicament than this!

These wonderful products of our progress in science are manufactured by physicians. There is now existing a Caesarian firm, that tries to solve the money problem by drawing the medical men into its mysterious circles. The M. D. can take as many ten dollar shares as he feels like. They paid 20 per cent. dividends last year, to the doctors connected with the concern. All the doctor is requested to do is to prescribe their tablets as often as possible, if not oftener. After the medical men are sufficiently interested in this secret preparation, and their attention is called to it by advertisements in medical journals and even in the directories of several medical societies, there will occasionally appear an advertisement in the daily papers, with the notice: "Indorsed by physicians."

Gentlemen, the practice of prescribing medicaments of unknown composition is objectionable. Such practice is an insult to all science, art and progress. The prescriber loses all criticism, all initiative, all therapeutic effort. By this objectionable practice he brings medical science into disrepute, he harms his patients bodily and financially. How can he individualize by working with an unknown quantity? Does not the physician stamp himself as an ignoramus, and does not the prescribing doctor consider for one moment that if the patient finds out what wonderful, ingenious product was prescribed for his good money, the doctor will himself be the loser, as the patient can very often buy such prescriptions in any department store. The physician becomes a walking advertise ment of a patent medicine factory.

It not rarely happens that a pharmacist secures the attention of the doctor's patient, and as he is well acquainted with nostrums, tries to sell him something better. In this way the senseless prescribing of secret medicaments leads to swindle and substitution. It seems to me that our present materia medica contains drugs which may be of service in the treatment of disease, even to the worst pessimist, and that we do not yet need to have our prescriptions dictated to us by a patent medicine manufacturer. Short and concise are the following words of Dr. A. Eschner of Philadelphia, in the Journal of the American Medical Association, No. 18, 1903: "It must be clear that the prescribing of medicines of unknown or concealed composition is unscientific, unprofessional, unfair, if not prejudicial to the sick, unprogressive, unstimulating, and, most of all, unnecessary."

The cure of the plague lies alone with the physician. As soon as he stops prescribing these senseless products, this mysticism in our modern therapeutics will come to an end.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION, neither do we answer queries to this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at two cents each, except a few issues which are out of print, for which we charge twenty-five cents each.

Chlorodyne.

(A. G. S.) Any number of formulas have been published for this preparation; that one under the title of "chloroform anodyne" in the National Formulary being about as good as any of them. The British Pharmacopœia gives a similar formula under the title "Tinctura Chloroformi et Morphinae." It is as follows:

Chloroform	1 fl. ounce
Ether	2 fl. drams
Rectified spirit	1 fl. ounce
Hydrochlorate of morphine	8 grains
Diluted hydrocyanic acid	½ fl. ounce
Oil of peppermint	4 minims
Liquid extract of liquorice	1 fl. ounce
Treacle	1 fl. ounce
Syrup	a sufficiency

Dissolve the hydrochlorate of morphine and oil of peppermint in the spirit, and add the chloroform and ether. Mix the liquid extract of liquorice and treacle with three fluid ounces of syrup, add this to the previously formed solution, mix them thoroughly, add the hydrocyanic acid, and increase the volume to eight fluid ounces by further addition of syrup.

Dose.—5 to 10 minims.

2. Here is a formula taken from a paper read by A. B. Stevens before the Michigan Pharmaceutical Association in 1892:

Chloroform	2 fl. ounces
Ether	½ fl. ounce
Tincture cannabis indica	2 fl. ounces
Tincture capsicum	1 fl. ounce
Sulphate of morphia	18 grains
Oil of peppermint	16 minims
Hydrocyanic acid dilute	1 fl. ounce
Glycerin	2 fl. ounces
Water	1 fl. ounce
Alcohol, enough to make	16 fl. ounces

3. Chandler's Chlorodyne:

Muriate of morphine	8 grains
Fluid extract of cannabis Indica	½ dram
Oil of peppermint	30 drops
Tincture of capsicum	15 drops
Chloroform	2 drams
Alcohol (68 per cent.)	1 ounce
Pure glycerin	1 ounce

Kaposi's Ointment for Eczema.

(Bern) There are a number of formulas for ointments ascribed to Kaposi, but it is quite likely that one of the following will answer your purpose:

Naphthol	1 dram
Green soap	5 drams
Pulverized kaolin	40 grains
Prepared lard	1 ounce

Make an ointment, to be used in eczema, where the skin is thickened by the persistency of the disease. Commence by lathering the affected parts daily for every two or three days, and if the skin is thickened the froth of the soap may be allowed to dry on, so as to hasten the falling of the horny crust.

H. C. BOCKOVEN, Clark, S. D.
Treasurer, South Dakota Mutual Fire Insurance Co.

Ointment for Scaly Skin Diseases (Kaposi).

Simple lead plaster.....	1 ounce
Vaseline	1 ounce
Essence of bergamot or lavender.....	15 minims

Make an ointment. Said to be useful for detaching the scales and crusts in certain skin diseases, especially in eczema squamosum, when the skin is dry and covered with scales of epidermis. "Does not cause any burning sensation, even on excoriated surfaces."

Secretaries of Boards of Pharmacy.

(C. Drug Co.) The following is a list of the secretaries of board of pharmacy of the States and Territories of the United States: Alabama, E. P. Galt, Selma; Arizona, A. G. Hulett, Phoenix; Arkansas, J. W. Beidelman, Little Rock; California, John Calvert, San Francisco; Colorado, C. H. Wells, Pueblo; Connecticut, W. L. Mix, New Haven; Delaware, A. Dougherty, Wilmington; District of Columbia, H. A. Johnston, Washington; Florida, E. Berger, Tampa; Georgia, G. F. Payne, Atlanta; Illinois, L. T. Hoy; Springfield; Indiana, H. E. Glick, Lafayette; Iowa, C. W. Phillips, Des Moines; Kansas, W. E. Sherriff, Ellsworth; Kentucky, J. W. Gayle, Frankfort; Louisiana, F. C. Godbold, New Orleans; Maine, P. L. Lord, Calais; Maryland, D. R. Millard, Baltimore; Massachusetts, C. F. Nixon, Leominster; Michigan, John D. Muir, Grand Rapids; Minnesota, H. G. Webster, Minneapolis; Mississippi, S. L. Caine, Columbus; Missouri, A. Brandenberger, Jefferson City; Montana, Frederick A. Woehner, Great Falls; Nebraska, E. L. Wilson, St. Paul; Nevada, F. J. Steinmitz, Carson City; New Hampshire, G. F. Underhill, Concord; New Jersey, H. A. Jorden, Bridgeton; New Mexico, A. J. Fischer, Santa Fe; New York, Warren L. Bradt, Albany; North Carolina, F. W. Hancock, Oxford; North Dakota, W. S. Parker, Lisbon; Ohio, W. R. Ogier, Columbus; Oklahoma, F. B. Lillie, Guthrie, Oregon, A. Yerrington, Eugene; Pennsylvania, C. T. George, Harrisburg; Rhode Island, H. A. Pierce, Providence; South Carolina, M. H. Sandifer, Rock Hill; South Dakota, E. C. Bent, Dell Rapids; Tennessee, R. L. Eves, Nashville; Utah, C. H. McCoy, Salt Lake; Vermont, J. G. Bellrose; Burlington; Virginia, T. A. Miller, Richmond; Washington, P. Jensen, Tacoma; West Virginia, A. Walker, Sutton; Wisconsin, A. F. Menges, Madison; Wyoming, Griff H. Maghee, Rawlins.

Liquid Depilatory.

(R. J. M.) In further reply to your query, this journal, December 10, 1903, page 604, we are pleased to print the following formula communicated to us by Dr. W. E. Dreyfus, chemist to the department of Public Charities, this city:

Sodium sulphide	25-35 parts
Glycerin	25 parts
Water, enough to make.....	100 parts
Oil of nutmeg, q. s. to perfume.	

Dr. Dreyfus says that aromatic vinegar is one of the best applications for the skin following the use of a depilatory. It neutralizes the caustic action of the base and possesses valuable antiseptic properties.

Caring for a Tile Floor.

(Manager) "What is a good substance to lay the dust in sweeping a tile floor?"

A retail druggist we know says the most satisfactory substance he has used is damp hardwood sawdust, not too wet. This is sprinkled upon the floor and afterward swept up with a soft floor brush, not with a broom. Besides this treatment he washes the floor once or oftener a week with hot water in which a little sal soda has been dissolved. May be some one of our readers has a better method.

Union Salad Oil.

(W. D.) "Union salad oil" is a cottonseed oil manufactured by the Union Oil Company, Providence, R. I. An "olive flavored" cottonseed oil is also marketed by the same company.

Books on Window Dressing.

(L. L. K.) We are not familiar with the book on "window trimming" you name and suggest you write to the Merchants Record and Show Window, 324 Dearborn street, Chicago, Ill., for information.

GATHERED FORMULAS.

Chocolate Worm Cakes.

Jalap, in powder.....	3/4 ounces
Mercurous chloride.....	3/4 ounces
Santonin, fine powder.....	87 grains
Essence of vanilla.....	4 fl. drams
Chocolate, powdered.....	4 1/2 ounces
Refined sugar.....	72 ounces
Mucilage of acacia.....	q. s.

Mix to form a mass, and divide into 720 cakes.

Petroleum Emulsion.

Calcium hypophosphite.....	160 grains
Sodium hypophosphite.....	1/2 ounce
Gum acacia, powdered.....	4 ounces
Elixir of gluside.....	80 minims
Essence of almond.....	40 minims
Liquid paraffin.....	8 fl. ounces
Distilled water.....	12 fl. ounces

Liver Tablets.

Iridin	24 grains
Dry extract of enomyms.....	24 grains
Extract of cascara sagrada.....	48 grains
Extract of nux vomica.....	3 grains
Green extract of hyoscyamus.....	16 grains

Mix and divide into 48 tablets.

Compound Damiana Tablets.

Ferrous hypophosphite.....	1/4 ounce
Quinine sulphate.....	1/2 ounce
Extract of coca.....	1 ounce
Extract of damiana.....	2 ounces

Mix and divide into suitable tablets.

Blood Purifying Tablets.

Calcium sulphide	1 ounce
Milk, sugar, a sufficient quantity.	

Mix and divide into suitable tablets.

NEWS DEPARTMENT.

AMONG THE BOWLERS.

The work of Howe of Dodge & Oleott was the feature of Saturday's games in the W. D. T. B. A. His scores were 218, 170 and 187 for the three games, two of which his team won. Thomas, Lanman & Kemp's leader, also did splendid work, averaging 186 for three games. The team and high individual scores: Lanman & K. 839 725 700 Dodge & O. 765 775 797 Thomas 190 Howe 218 R. & H. 741 845 773 Nat'l Lead. 665 769 772 Bode 195 Agneau 197

Standings:

	W.	L.		W.	L.
Parke, D. & Co.	8	1	Dodge & O.	4	5
Seabury & J.	6	3	Lanman & K.	5	7
Bruen, R. & Co.	6	3	Roessler & H.	5	7
National Lead.	6	6	Sharp & D.	2	10

Philadelphia, December 22.—Johnson & Johnson, the old New York winners, are playing in their regular form among their new associates in the Philadelphia W. D. B. L. They have won fifteen and lost no games thus far, and have the high team three-game score of 2,577. Stevens of J. & J., has the high three-game score of 603. Buchanan has the high score of 236 for one game, and the J. Ellwood Lee Co. has the high team score for one game, 943. The standings are:

	W.	L.		W.	L.
Johnson & Johnson	15	0	Wanderers	4	8
J. Ellwood Lee Co.	12	3	P. D. A. Blue	6	15
Smith, Kline & P.	9	3	P. D. A. Red	2	13
Phila. C. P.	9	6	Hance Bros. & W.	0	9

Baltimore, December 22.—The D. T. B. C. closed the first third of its season last week with five of the six teams not very far apart. As for the Calverts, they are plucky, and defeat does not in the least discourage them. It is their first season.

Scores for the last series:

McCuk & Co.	893	820	820	Sharp & D.	874	812	869
E. Smuck	219	Leffler	198	
Stanley & B.	708	823	834	Calvert Drug	627	740	637
Lockwood	192	Ellicott and Parker, ea.	176			
Jas. B. & Son	797	871	919	Root & H.	859	862	867
Fairley	226	Beaumont	232		

Standings:

	W.	L.		W.	L.
James B. & Son	25	8	Sharp & D.	17	16
Root & Herbs	21	12	Stanley & B.	15	18
McCormick & Co.	20	13	Calvert Drug Co.	1	32

Detroit, December 22.—The coming champions of the League, the Parke, Davis & Co. team, were not up to their usual form last week, and the lucky team to catch them in a crippled condition was the Michigan Drug, which ran off with two games out of three. This is the first series the P. D. & Co. team has lost this season. The league has decided to take a rest for the next two weeks on account of the holiday season. High team and highest individual scores:

P. D. & Co.	817	786	853	Mich. Drug	761	828	859
Deity	193	Cole	203	
Ingram & Co.	860	788	798	Stearns & Co.	817	747	738
Cosgrove	202	S. O'Donnell	178		
P. W. & Co.	708	697	687	N. P. & Co.	725	789	804
Gendernilk	193	Walsh	194		

The standings:

W. L.	W. L.		
Parke, D. & Co.	23 4	Stearns & Co.	11 11
Nelson, B. & Co.	15 9	F. F. Ingram & Co.	11 10
Mich. Drug Co.	13 11	F. W. & C.	5 22

The Parke-Davis league games developed great interest during the week owing to close competition between several of the teams. The Chemicals, the leaders, lost two and Stock won three games, thus leaving only three games between first and second places, while the Pharmacenticals, by winning three games from Mechanical, pulled up to two from second place. The high score for the evening was rolled by J. Smith, of Publication, 225, and his team had the high team score of 870.

Indianapolis, December 22.—Indianapolis is the hot bed of bowling clubs this winter, the sport having received a great impetus from the fact that the National Bowling Association met in this city a few months ago. The last to organize as a bowling league were the drug clerks and pharmacists of this city who heretofore have not been noted for indulgence in pastimes of any kind except on the rarest occasions. The Druggists league, organized five weeks ago, consists of four clubs of 20 members each, and, of these, ten men from each club knock the pins every Tuesday. The names of the clubs are the "Y-P's", made up for the most part of employes of the Mooney-Mueller Drug Co.; the "Kieferettes" of the A. Kiefer Drug Co.; "The Lillys" of the Eli Lilly & Co., manufacturing pharmacists; and the "White Elephants," a local organization of retail druggists. The boys who call themselves "Colts" are all willing to achieve great scores, but as yet have not made any remarkable records. A few have made good individual scores though averages are all low. Thirty games have thus far been rolled. The highest average was made by George Morrison of the White Elephants, 161.

St. Paul, December 22.—The Minnesota Retail Drug Clerks' association has organized a bowling league and will follow the popular sport for the winter. The members bowl every Friday afternoon at the Pfister alleys. St. Paul, playing three games each afternoon, the season being ten such afternoons. The losers of this league will buy the winners something which they may choose, such as a banquet. The two teams are called the Tinctures and the Spirits. In the first day's play the Spirits took two games from the Tinctures. Watins of the Spirits, made high score in the last game with 204.

JOHN THOMAS FARR, an old resident of Philadelphia, died recently. He was a native of England, and came to this country in 1842. He entered the employ of Farr, Powers & Weightman, taking charge of the manufacture of their quinine department. In 1861 he opened a pharmacy in Frankford avenue, Philadelphia, where he continued until he retired in 1887.

ROBERT J. C. WALKER DEAD.

He was General Manager and Junior Partner of the Firm of Powers & Weightman, Philadelphia, and a Man of Great Ability.

Philadelphia, December 22.—Robert James Cochran Walker is dead. He was born in Cochranville, Pa., in 1838. He received his education in Massachusetts, attaining the degree of L.L. B. in 1858 from the Harvard Law School, and was admitted to the bar on his twenty-first birthday.

His first business location was in New Orleans, but not suiting him, he came to Philadelphia, qualifying before the Pennsylvania bar, and entering political life. He served two terms in councils, acting as chairman of the finance committee, and was a member of the original building commission. He removed to Williamsport in 1878, and was in 1880 elected to congress from that district, serving with distinction but declining a second nomination.

He was married to Mr. William Weightman's only daughter in 1862 and went into the firm in January, 1893. At that time Mr. Weightman was seriously ill and for several months the care of that enormous business devolved upon him. His previous training had been on entirely different lines, but with ripe experience he administered affairs there in a manner that evoked admiration.

He was a traveler in many lands, going abroad frequently, and twice made trips around the world. He was possibly better known to the trade in New York City than in Philadelphia, as he was in that city two or three days each week, looking after the New York branch.

He was a member of the Union League and Art Clubs of Philadelphia, and the Players and Metropolitan in New York. He leaves no living descendants, his son having died in 1891. His home life was perfect and the charming hospitality dispensed at his palatial dwelling at 1336 Walnut street, brought a large circle of intimates about him.

As owner of the Saturday Evening Post, in the management of which he was very active, and of which he was for some time the editor, Mr. Walker greatly extended his circle of acquaintances. His health had not been good since an operation, five years ago, for appendicitis. A heavy cold aggravating the condition of his health, added to weakness of his heart, caused his death.

NEW COMMITTEE OF THE N. A. R. D.

The following committees have been appointed by President B. E. Pritchard of the N. A. R. D.:

National legislation—John G. Beck, Baltimore; John C. Gallagher, Jersey City; W. H. Gale, Chicago; J. B. Sutton, Mobile, Ala.; H. B. Guilford, Rochester, N. Y.; J. Ferris Belt, Wilmington, Del.; W. J. Bullock, New Bedford, Mass.; F. A. Snow, Topeka, Kan.; V. H. Chastian, Milton, Ore.; F. B. Haymaker, Clarksburg, W. Va.

Commercial and Fraternal Relations—P. W. Vaughan, Durham, N. C.; Wm. McIntyre, Philadelphia; Edw. Williams, Madison, Wis.; O. C. Bastian, South Bend, Ind.; J. C. Burton, Stroud, Okla.

Pharmacy Laws—Lewis C. Hopp, Cleveland; A. H. Webber, Cadillac, Mich.; F. C. Godbold, New Orleans; John K. Williams, Hartford, Conn.; Geo. M. Pederson, Harlem, Ia.

Form of Organization—Geo. D. Case, Milledgeville, Ga.; Dr. J. L. Ormsbee, Springfield, Mo.; A. D. Smith, Manchester, N. H.; W. W. Parr, Spokane, Wash.; Geo. B. Williams, Albuquerque, N. M.

Auditing—Edw. L. Baldwin, San Francisco; Robt. M. Soper, Providence, R. I.; H. C. Groves, Ocala, Fla.; A. M. Robinson, Bangor, Me.; F. G. Stuckles, Mellette, S. D.

Transportation—P. E. Wolcott, Indianapolis; A. J. Schumacher, St. Paul; E. R. Sparks, Burlington, N. J.; C. A. Willenbrink, Covington, Ky.; D. J. Kulu, Nashville, Tenn.; John Leverty, Bridgeport, Conn.; F. J. Mobbs, Hot Springs, Ark.; W. S. Kirby, Dallas, Tex.; E. Muir, Quebec, Can.; W. S. Parker, Lisbon, N. D.; P. H. Haile, Lynchburg, Va.; G. R. Lewis, Cripple Creek, Mo.; Chas. E. Lathrop, Omaha; A. C. Smith, Salt Lake City; R. E. Harris, Helena, Mont.

IS VIRTUE ITS OWN REWARD?

The following plaintive protest is funny. It is from a letter mailed to pretty nearly all of the patent medicine manufacturers of the country by the San Francisco Call. The Call in last July decided to reject the cut rate advertising of the Owl and No Percentage drug stores of San Francisco, because those advertisements contained matter detrimental to the patent medicine manufacturers, who were, of course, Call advertisers. This is the protest:

"For years it has been the policy of The Call not to permit one advertiser to attack another in its columns. In the long run, this policy which is based on justice, pays, but in the light of the action of manufacturers at present it would appear that they are perfectly content that virtue should be its own reward. Ask yourself what extra inducement you have made to this paper to help you in this menace to your business which exists in San Francisco. For five months we have declined quarter and half page ads from the Owl and No Percentage drug companies, some of them containing the name of but one remedy advertised in our columns, and yet, with barely a single exception, the manufacturers have sent no increased orders, and, during all this period, have given the other papers the same full line of their advertising. I submit it to you to inform me if it is really any advantage to a newspaper to strive to protect the business of proprietary medicine manufacturers, and if they really desire to see the cut rate practice of druggists discontinued."

—ALABAMA.—The Federal Court has adjudged the Lily Drug Co. of Eudley, a bankrupt after a prolonged fight made by the defendant company against this ruling. The board of pharmacy has registered the following: Theo. Gwens, Gurley; J. J. Moore, Montgomery; E. C. Jackson, Glenwood; J. G. Connell, T. V. Ordway, F. L. Ward, R. D. McGuire, J. C. Lauders, Amistown; M. F. Mooly, Jr., Piedmont; A. J. Clayton, Eufaula; R. D. Shuprine, Safford.

NEW YORK AND VICINITY.

INTERDENOMINATIONAL DRUG COMMITTEE DISBANDED.

The Interdenominational Committee to Suppress Drug Addiction, which as the Era told in the issue of December 10, was only a private business enterprise of Dr. W. N. Ritchie, an ex-minister, has disbanded.

This action is announced and explained by the committee with the long name in a preamble and resolutions. The preamble says that it gives up because the newspapers failed to appreciate the uprightness of the work and because the public was not prodigal enough in its aid. The newspapers were bled for free advertising for some time, however, in the belief that the work was philanthropic.

So the splendid advertising Dr. Ritchie's private business had by the committee, containing such names as, the Rev. K. F. Sample, D. D., ex-Moderator of the Presbyterian General Assembly; Thomas O. Conant, LL. D., editor of the Examiner; the Rev. Francis E. Marston, D. D., pastor of Bethany Presbyterian Church, New York, W. W. Westervelt, elder in the Dutch Reformed Church; the Rev. William T. Sabine, D.D., Bishop of the Protestant Episcopal Reformed Church; Gen. Horatio C. King, clerk of Plymouth Church, Brooklyn, and the Rev. Alfred Blewitt, chaplain of Manhattan State Hospital, is withdrawn.

The resolutions "resolve":

First, That we recommend to the Rev. W. N. Ritchie, D. D., that hereafter he conduct this institution strictly as a business, eliminating its so-called charitable feature.

Second, That in the future in all documents and advertisements regarding the cure no use whatever be made of the names of the committee in connection with it, either individually or collectively.

Third, That this committee be and is hereby dissolved and that we adjourn sine die.

Nothing in the above shall in any wise be deemed as reflecting on the integrity, character or motives of the Rev. W. N. Ritchie, D. D., or on the value of the remedy.

DRUGGIST HOLDS UP HOLD-UP MAN.

He was a very foolish burglar to try to rob Dr. Marlborough Hall, the druggist at 1322 Broadway. He made a purchase of the doctor, who, while wrapping it up, remarked a seeming intimacy between the customer and a counter case. Dr. Hall walked around in front of the counter. "Kindly disgorge," he commanded. The customer stared. "It pains me greatly, but you really must not run away with any of my store," the doctor insisted. The customer grew indignant. It failed to work. One hand found his collar and another pulled the confiscated articles from his pockets. There were three packages of Lister's fumigators and several other articles, including a bottle of bay rum from Rafter's pharmacy at Fourth avenue and Twenty-fifth street.

Dr. Hall found that the rascal had 50 cents. He transferred it to his till, allowing the fellow to keep goods to that value. Then he told him to walk up Broadway very fast. Mr. Rafter soon had his bay rum again. Burglars should not forget that Dr. Hall is an athlete.

BOARD OF PHARMACY UNDER CIVIL SERVICE.

The State board of pharmacy has been declared by the attorney general to be amenable to the civil service laws.

Though the full text of the decision has not been received here it is believed by the local members of the board that the sole effect will be that hereafter any new employe must be chosen from an eligible list, which will be made up from the usual civil service examina-

tions. It is not believed that the ruling is or can be retroactive, and therefore there is expectation that present employes will be immune.

A NOTE OF ENCOURAGEMENT.

An encouraging result of the activity of the board of pharmacy has become manifest in the analysis of the last batch of drug samples. These show that Manhattan pharmacists average very much, possibly 60 per cent., better in their showing than formerly. That means vindication of the board's policy in vigorously prosecuting all offenders, whether they be offenders through carelessness or intent.

That, as previously stated in the Era, the last samples will assay nearly 50 per cent. bad is due to the fact that they are mostly from a district not accustomed to inspectors' visits, where the same sort of carelessness, or whatever it should be called, obtains now as did obtain in other parts of the city previous to the recent shaking up of the board. But now these districts must share the board's attention, the members say, and the sooner it is realized the better. "Brooklyn will soon be in as good shape as Manhattan," a member of the board said on Saturday, "because we are going to pursue the same course there as we did here."

Two retail druggists who didn't see how their samples could be had, disputed Dr. George A. Ferguson's analysis, and hired one made on their own behalf. The first the board heard of it was when Secretary Charles S. Erb received letters from them, in which they said Dr. Ferguson was all right, they were sorry to say, and, "please find enclosed \$25," etc.

AMERICAN CHEMICAL SOC. ANNUAL MEETING.

The annual meeting of the American Chemical Society will be held at St. Louis on December 28 to 30. The American Association for the Advancement of Science will have a meeting at the same time and place, and the two societies will share the auspices. President Long and Dr. J. U. Nef of the A. C. S. are among those who will deliver addresses. Headquarters will be the Southern Hotel. There will be balloting for the election of four three-year councilors for the A. C. S., the candidates being T. W. Richards, Edward Hart, Marston T. Bogert, Charles Baskerville, T. J. Parker, George C. Stone, Henry P. Talbot, L. M. Dennis and Edmund H. Miller.

CHANGES AMONG THE ARMY PHARMACISTS.

R. E. Hale, to Camp Thomas, Ga.; R. E. Gregg, to U. S. A. T. 'Kilpatrick'; W. McFarland, to Ft. Mansfield, Mass.; D. B. Miller, to General Hospital, Presidio; T. Schuman, to Ft. McKenzie, Wash.; G. Westerdaal, to Ft. Yellowstone, Wyo.; J. Dykstra, to Ft. Des Moines, Iowa; H. J. Walls, to Ft. Preble, Me.; J. Waters, to P. I.; W. Peake, to P. I.; W. Baigent, to Cuba; E. Hartman, to Ft. Wadsworth, N. Y.; P. J. Maloney, to P. I., and G. W. Morgan, to Wash. Bks., D. C.

AMERICAN STOPPER COMPANY

150 Water Street, Brooklyn, N. Y.

THE LARGEST MAKER OUTSIDE THE TRUST

HOLIDAYS HALTED BY THE HOLIDAYS.

The organizers for the proprietary manufacturers of the Washington Promise plan, Lee M. Evans of the Peruna Co., and E. C. Pease of the World's Dispensary Medical Association, have found themselves up against an unsurmountable obstacle—the holiday season—when department store men are as accessible as the Sultan's harem. So there will be a cessation of work for a few days. After the first of the year, Mr. Evans believes, it will not take long to get the schedule established.

G. A. S. BALL WILL BE GREAT EVENT.

If the German Apothecaries' Society ball at Terrace Garden on January 21 is not better attended than any of its predecessors it will not be the fault of S. V. B. Swann, chairman of the entertainment committee, who has mailed invitations to hundreds of druggists and traveling men of the city, requesting the latter to serve on the reception committee. The unbounded hospitality of the society is extended, and wives and sweethearts should be present. The affair promises to be a magnificent success.

NEW YORK NOTES.

—Drug Trade Club guests: E. B. Jackson, M. D., Houston, Tex.; J. H. Chambers, St. Louis; M. de Rambaiville, Paris; P. Kreisemann, Milwaukee; J. K. McDermid, London; R. W. Woodward, Elizabeth, N. J.; J. B. Booth, Pittsburg; D. M. Parry, Indianapolis; James Inglis, Detroit; H. Chamberlain, Chattanooga; T. N. Jeffrey, Columbus, O.; A. N. Farquhar, York, Pa.; D. A. Tompkins, Charlotte, N. C.; E. F. Hartshorn, Newark, N. J.; Daniel Davenport, Bridgeport, Conn.; Homer P. Clark, St. Paul.

—The importance of complying with the law was strikingly shown the other day when two men died after an alcohol orgie. The bottle they had drunk from contained wood alcohol and bore the label of Druggist N. Wolfert. But the label also read: "Poison—for external use only." Non-compliance with the law would have meant great trouble in that case.

—The thief had barely thrust half of him through the glass door of Charles S. Erb's pharmacy at Sixty-fifth street and Amsterdam avenue at midnight, when the faithful St. Bernard bestirred himself. The intruder didn't tarry. The board of pharmacy records are under that dog's pillow, and the dog weighs 250 pounds.

—A burglar entered Clifford E. Anthony's store at 384 Seneca street, Buffalo, and stole \$3 from the cash register. On the same night an attempt was made to enter the drug store of Charles E. Martzloff, William and Jefferson streets, Buffalo, by cutting the glass around the window lock.

—Judgments lately secured in this city: Crescent Chemical Manufacturing Co. against Charles Glaubach, \$28; J. Elwood Lee Co. against the Merchant Marine Hospital service, \$274; Sharp & Dohme against Aguilla J. Wells, \$116.

—Joseph B. Glenn, druggist at 76 Fourth avenue, and the National Surety Co. as his bondsman were losers in a suit brought against them for violation of the State excise laws, the forfeit being \$500 and the costs \$208.

—Don't forget to register your store in January. The board of pharmacy has forwarded necessary papers to every pharmacist in the Eastern section, but there will be no further concessions than the law allows.

—R. W. Reid, brother of the senior member of Reid & Yeomans, 752 Union street, Brooklyn, and Reid, Yeomans & Cubit, Manhattan, has opened a new store at 300 Clinton street, Brooklyn.

—A. Moses, Sr., of A. Moses' Sons & Co., the sponge

firm, left with Mrs. Moses for a trip to the sponge fisheries in Carribean waters.

—Tonight the Drug Clerks' Circle are wearing dress suits at Terrace Garden. It is the fifth annual ball, and a half-thousand couples are expected to participate in the Grand march.

—J. F. Doring has left the Manhattan pharmacy on Broadway where he was manager, to join Otto Boediker's force at Fifty-fourth street and Sixth avenue.

—E. J. Crammond, for several years with Julius Kalish, has succeeded J. F. Farley at Eighth avenue and One Hundred and Thirty-ninth street.

—Richard Hillier, son of the late James K. Hillier of R. Hillier's Son Co., this city, has entered the employ of J. L. Hopkins & Co. as buyer.

—J. C. Schmitt, formerly clerk for R. J. Owens, has bought out Joseph Mueller at DeKalb and Nostrand avenues, Brooklyn.

—The jobbers report outside holiday trade as exceptionally good, something that cannot be said for the city trade.

—The French Drug Co., proprietary medicines, 29 Beekman street, were damaged by fire to the extent of \$1,500.

—Joseph Ostrewicz has added to his possessions in the acquirement of another store, at 44 Madison street.

—The store of the late Justus Liebel at 2035 Amsterdam avenue, has been sold by the heirs to A. F. Wiggers.

—Vitold Drossness, formerly of Drossness & Taub, has succeeded C. A. Henrichsen at 1,800 Amsterdam avenue.

—Lewis A. Lotz has bought the store at Tinton avenue and Home street of Mr. Itho.

—Edwin E. Faiber succeeds Ludwig & Faiber at Inwood, L. I.

—Aaron Singer has opened a new store at 68 Rivington street.

—Jacob Halpern has opened a new store at 34 Fulton street.

NEW ENGLAND.**CONDITIONS BETTER.**

Annual Report of the Massachusetts Board of Pharmacy Shows Improvement in Conditions.—High Standard Maintained.

Boston, December 22.—The eighteenth annual report to the governor by the board of pharmacy shows that conditions have improved. Commercially, the improvement during the last year has been notable. The cut-rate evil no longer exists in many of the towns and cities. A more fraternal spirit has been established everywhere. In the larger cities department store rivals still are found, yet not to the great extent of former years.

Examinations have been on the same lines as heretofore, special emphasis being given to identification. More careful preparation is advised, and all candidates are urged to attend a school of pharmacy. Experience gained in a drug store is of little value, the report says, if there has not been good early schooling.

Enforcement of liquor laws has been rigid and a better condition now prevails. The board received many

FREE RUBINAT WATER
OFFER LIMITED. GET IN QUICKLY

J. N. FERRER, P. O. Box 71, New York City

complaints regarding sales of poisons, but has no jurisdiction, as this is in the hands of the board of health.

During the year there were 34 examinations, for 329 candidates, 92 of whom were accepted. Twelve certificates were suspended for periods ranging from three months to five years.

The report of the board's agent, Simon B. Harris, gives the names of the twenty druggists in the State who died during the year, and there is a fitting tribute to F. H. Butler, whose term recently expired, after a continuous service lasting eighteen years.

THE BAY STATE.

—Dennis J. O'Brien, a well-known pharmacist in Lowell, was arrested on the charge of violation of the liquor laws by an inspector who entered just as a customer was about to receive a pint bottle, which, it is asserted, contained whiskey. To hustle a man off to the station and book him there has never before been done with druggists complained of for violation of the liquor laws. Mr. O'Brien secured bail immediately. There is general indignation in Lowell regarding the treatment he received.

—H. J. Sorel, a Fall River druggist, because of the prevalence of burglaries, purchased a "warranted" watch dog. First night that the dog was left in the store he wrecked the place. All the burglars in Massachusetts would have done less damage. Next morning the place looked as if it had been struck by a cyclone. The dog is for sale, and is guaranteed to be "full of playful tricks."

—Dr. P. N. Brunelle, a Lowell druggist, brought suit against an electric light company for \$15,000 damages for injuries sustained. Some months ago the Era told of the accident which befell Dr. Brunelle, who, while in the cellar of his pharmacy, came in contact with a live and exposed electric wire, as a result of which he was severely burned, and lost four fingers.

—Albert L. Gardner, a druggist in the Brighton district, Boston, is a voluntary petitioner in bankruptcy. His liabilities are nearly \$2,500, assets \$5,600, in which he includes a \$3,000 life insurance policy. His son, Albert L. Gardner, Jr., is a creditor for \$110 for services, and Emma W. Aiken claims \$400 for services as a servant.

—A large building owned by Leandre Bolduc, a Fall River druggist, and occupied in part by him for a pharmacy, has just been moved to an opposite corner. Curiously, the movers stupidly set the building "wrong end to" in its new location, and it had to be turned around again.

—P. Elmer Doliber, for ten years employed by C. H. & J. Price, Salem, has resigned to go to Fall River to become manager of Anthony's drug store. In leaving Salem, Mr. Doliber carried several prescriptions representing the good feeling of his old-time employers.

—C. E. Woodward's store at 129 Summer street, Boston, has been purchased by Jaynes & Co., who now have several retail stores in the "Hub." E. S. Kelley, formerly of Kelley & Durkee, Boylston street, has been placed in charge of the prescription department.

—A fire which partly destroyed two business blocks in Fall River did considerable damage through water and smoke to the drug store of Charles A. Baker, where an explosion of chemicals added to the danger and helped to spread the flames.

—Clinton B. Wasgate, 1024 Saratoga street, Boston, pleaded guilty to a charge of illegally selling liquor and paid a fine of \$50. M. J. O'Connor, clerk for Edwin J. Marsh, 536 Saratoga street, on a similar charge pleaded not guilty.

—By mutual consent, the drug firm of Sunter & Millane, in Holyoke, made up of Alexander E. Sunter

and Martin F. Millane, has been dissolved. Mr. Millane retires and Mr. Sunter continues.

—Charles L. Dean of Dean, Foster & Co., druggists' sundries and glassware, was re-elected mayor of Malden. This is Mr. Dean's sixth term as mayor. He is thought to have Senatorial ambitions.

—Springfield druggists recently received friendly calls from John P. Merrill, now engaged in the hotel business in Augusta, Me., but who formerly was prominent as a druggist in Springfield.

—William J. Lewis, long a druggist in the employ of G. E. Blanchard of Whitinsville, has decided to study medicine at the Bowdoin Medical College. He is succeeded by Josiah J. Gibbs.

—The stores of Samuel A. Neil and G. S. Cheney & Co., in adjoining buildings in Union street, Boston, were ransacked thoroughly by burglars, though very little was stolen.

—F. E. Brooks' store in Woburn was damaged considerably by fire. The insurance people settled to Mr. Brooks' entire satisfaction, and he is now having a half-price sale.

—Two young men were arrested for stealing from Callan's drug store in Cambridge. One was fined \$15 and the other was sentenced to thirty days. Both appealed.

—Frank E. Willard, until recently manager of the Cunningham Drug Co.'s West Somerville branch, has been transferred to the Inman Square store of the company.

—Notable improvements have been carried out in the pharmacy of F. M. Pease & Son, in Lee, giving the store an entirely new appearance.

—Louis D. Poirier, a Fall River druggist, is now well settled in his own building near the corner of Pleasant and Chaffin streets.

—Damage to the amount of from \$350 to \$400 was done by fire in the drug store of Thomas R. Grimes in South Boston.

—The Norwood Drug Co., a new enterprise in Franklin, has assigned to G. A. Streeter for the benefit of creditors.

—The drug store of Seward L. Stickney, Beverly, has been sold to Charles and Ernest Burton of Amesbury.

—Russell G. Melville, a druggist in Lynn, has assigned to Frank N. Danforth for the benefit of creditors.

—The store of the late Frank Smith, East Bridge-water was sold to Hiram P. Gerald of Whitman.

—Three men in Malden tried to get into Sheldon's drug store. They did not succeed.

NEW HAMPSHIRE.

—At the last examination by the State board of registration, the following succeeded: George A. Foster, Dover; Robert W. Cushing, Manchester; Robert E. Allen, Canaan, and Fred S. Lovis, Boston, Mass., in the senior class examinations; and John H. Turcotte, Manchester, in the junior class.

—Arthur H. Merchant, a young clerk in the employ of the E. Brewster Company, at Dover, broke into his employers' place of business in the night time, expressly

We will supply you with free literature with your name to distribute, on application.

WILMOT CASTLE COMPANY,
26 Elm Street, Rochester N. Y.

to secure prussic acid, several ounces of which he swallowed. Despondency.

VERMONT.

—The Supreme Court of Vermont will be asked to determine the constitutionality of the law forbidding the issuing of trading stamps by one firm to be redeemed by another. The case is the outcome of the arrest of a drug clerk at Burlington, who gave stamps which a regular trading-stamp company later redeemed, instead of the pharmacy itself receiving them back.

—Z. B. Hopkins of Brandon, is a new member of the State board of pharmacy. He was appointed by Governor McCullough. His commission covers a term of five years and begins on December 1.

—Frank Eldred, a Burlington druggist, recently convicted of selling liquor to minors, has determined to go out of the drug trade.

PENNSYLVANIA.

SOME CRITICISM OF PHILADELPHIA SCHEDULE.

Philadelphia, December 22.—Several members of the P. A. R. D. were together in an informal gathering. One of them, discussing the work that the association had done, said that for his part, had it not been for looking mean, he would have pulled out of the concern long ago. They had succeeded in organizing, or rather affiliating an organization with the national association, he and his friends paid their dues, and that was the end of it.

Another followed with the complaint that, although the concern had coerced the major portion of the men into signing a schedule that was dictated by a cutter who boasts of keeping a small sized department store as well as a drug store, and who, having fixed prices and kindly printed the schedule for the committee on his own presses, they had failed in one or two little instances that were pertinent.

There has been much criticism along this line. At the time the schedule was prepared, no ten-cent articles were placed in it. When, however, the various members signed it, they put their signatures to an agreement fixing the absolute price of ten and five-cent articles, as a class by themselves. As the major portion of these goods are not and cannot be placed on the cut-off list, there are many men who feel that they should not be restricted as long as one or two concerns are actively engaged in marking down prices on the lesser articles.

Sooner or later a discussion is bound to arise that will threaten the peace and harmony of the present happy family.

THE PHILADELPHIA COLLEGE HOUSE.

Philadelphia, December 22.—The success of the college house of the Philadelphia C. P. grows each day. Since its establishment the men living there have shown their appreciation by tendering a reception and dance to the ladies who have, as an auxiliary committee, been so painstaking in bringing the house to its present high standard. This was followed by an entertainment given to the senior class. At the latter function, the entire programme was rendered by the student residents.

The house has now been running about two months and is almost full, the students not being slow to appreciate the genial, homelike association that it provides. It is the intention of the committee to add in the near future a recreation room, which will contain among other things a hand-ball court. With this, it is expected that the building will be nearly perfect.

PHILADELPHIA COLLEGE OF PHARMACY MEETING

Philadelphia, December 22.—The meeting on last Tuesday afternoon was a notable one on account of the number and importance of the papers presented, and was exceedingly well attended. Prof. Samuel P. Sadtler occupied the chair.

The first speaker was Prof. John Uri Lloyd of Cincinnati, who gave an address on "The History of the Eclectic Resinoids and their Terminology." He said that Prof. John King was the first one to attempt to establish a nomenclature concerning a class of products that came into existence through his experimentation and influence. Professor King first called these substances "resins" to differentiate them from the alkaloids, and when the cry was for a single word, he uniformly used for them the termination "in" in contradistinction to the termination "ia," which was then generally used for alkaloids.

M. I. Wilbert gave an illustrated talk on the "Early History of Medicine in America." Prof. Albert Schneider of the California College of Pharmacy, sent a communication on "Gardens of Medicinal Plants." William B. Marshall of the Smithsonian Institution, presented a comprehensive paper on the "Production and Use of Cocoa." Professor Kraemer exhibited hides or so-called "Ceroons" used for packing Honduras sarsaparilla, which were received from Lehn & Fink; some specimens of ginseng received from Jacob Suttler; a large aquarium, presented by Whitall Tatum & Co.; and specimens of a Hercules beetle and a Green Tiger beetle, which he had received from Luis Javier Guier of Costa Rica.

OTHER HAPPENINGS.

—With the announcement that Winfield Scott Smith, a prominent pharmacist, has opened a spacious new establishment at Homewood and Frankstown avenues, East End, Pittsburg, develops a general dissatisfaction among the proprietors of ten drug emporiums, who have been in that section for from three to twenty years, and have established a fair trade, but who say that there is no room for another store.

—Gustave Apenzeller, one of the oldest and best known German apothecaries in Philadelphia, was stricken down with apoplexy on Thursday last. He was removed to the Methodist Hospital, where he lay unconscious until Saturday, when he recognized Mrs. Apenzeller for the first time. He was about concluding arrangements for the purchase of a fine place in the northern part of the city.

—The mid-season examinations at the Pittsburg C. P. will be participated in by two of the largest classes in its history. The senior class consists of 64 aspirants for the distinction of registered pharmacists, while the junior class boasts of 87 candidates. At present there is a scarcity of clerks in this district.

—J. S. Gleghorn, of 125 Brushton avenue, Pittsburg, has just finished extensive improvements, among them a fine new laboratory on the second floor. Since the repairs have been made Mr. Gleghorn has decided to name the store the "Woman's Drug Store" because the women customers are in the majority.

—Lorenz Riott, the well-known Washington avenue, Pittsburg, druggist, has remodelled his store. Besides installing a new electric light plant and fountain, he has enlarged to 50x19 feet, and now has one of the finest stores on the "Hilltop."

—James Kerr, Jr., one of the oldest druggists in Pittsburg, has disposed of his establishment to Theodore Cappel was formerly located at Atwood and Forbes streets.

THE SOUTH.

KENTUCKY DRUG CLERKS "AGITATING."

Louisville, December 22.—The drug clerks of Kentucky are seriously discussing the probability of a Drug Clerks' Union, which is believed, will be formed in a very short time. The clerks throughout the State are said to be strongly in favor of organizing, should a competent leader appear, and they would immediately join.

Local clerks say the long hours are the most objectionable feature of their work. They go on duty at 7:30 o'clock in the morning and remain at the store until 11 o'clock, with only an occasional night off. The average salary is \$45 a month. This they consider a slender return for the preparation required. They say if they organize and determine to strike they would without doubt tie up the drug business of the State.

KENTUCKY DRUGGISTS' FIRE INSURANCE.

Tomsville, December 22.—Simon N. Jones, of the committee for the organization of the druggists' insurance company, said that he believed the company would be organized within a very short time and would result in a large saving to the druggists. Most of the druggists in the State are now paying a rate of from one to two dollars a hundred for insurance in the old line companies. Mr. Jones also said the promoters of the new company have gathered statistics to show that the fire loss in drug houses is no higher than in most other lines of business, although the insurance companies consider this business as extra hazardous. The headquarters will probably be in Louisville.

KENTUCKY.

—The Renz Drug Co., Louisville, having bought the stock and fixtures of the bankrupt firm of L. C. McDaniels, will shortly occupy the store. Mr. Renz said that he would make extensive improvements. Byron Davidson and Walter Renz, formerly connected with its other store, will manage the new business.

—Dr. J. W. Fowler, president of the J. W. Fowler Drug Co., Louisville, is about to take legal measures to secure the possession of their store, recently gutted by fire and smoke for a longer term, pending the tearing down of the walls.

—George B. Myers purchased from the Louisville Trust Co. the stock and fixtures of Joseph Wagner who recently assigned. Mr. Myers will also have a store at Eighteenth and Southgate.

—The drug firm of Schlosser Bros., Louisville, has been dissolved by mutual consent, J. J. Schlosser retiring. The business will be conducted under the old style by Peter Schlosser.

VIRGINIA.

—R. L. Harrison has moved into a handsomely equipped new store on the site of his old one in that part of Richmond known as Fulton. Mr. Harrison gained quite a wide reputation last Spring by doing business and keeping up water, gas and telephons connection while his store was being moved across a block.

—Hot drinks are growing in demand in Richmond, and nearly all the pharmacies that run soda fountains during the warm months have put in chocolate boilers and other apparatus for dispensing hot drinks during the cold season.

—The T. A. Miller Drug Co. have opened a very handsome retail pharmacy at Franklin and Shaffer streets, Richmond. The Broad street store of the same firm has been remodeled.

—Both wholesale and retail druggists report increased

business for December and prosperity is indicated by many improvements.

—The Owens & Minor Drug Co., Richmond, has put in a handsome soda fountain and hot drink apparatus.

—A. S. Briggs, Main and First streets, Richmond, has refitted his store.

MARYLAND.

—Dr. Daniel Base, of the faculty of the Maryland C. P. lectured last week on radium and radio-active substances. He illustrated with experiments on the X-ray machine, showing the characteristics of the X-rays, which are also found in radium, and those of the cathode rays, which are given off by radium.

—Druggist J. P. Sullivan, Carey and Mulberry streets, Baltimore, last week received a cablegram, announcing the serious illness of his mother in Ireland, and immediately engaged passage on the next steamer sailing out of New York. Some months ago he went to Ireland on a similar errand, his father being critically ill.

—A representative of Dr. Munyon was in Baltimore last week and conferred with officers of the R. D. A. relative to complaints made that the house was violating the tripartite agreement. The representative promised that the plan would be faithfully lived up to in the future.

—Henry W. Fehsenfeld has sold his retail drug store at Clinton and Boston streets, Baltimore, to W. A. Fryor, formerly located at Greenmount avenue and Madison street.

—John Söhl, one of the oldest druggists in Baltimore, has sold his pharmacy at Stricker and Fayette streets, to Joseph McDonald, formerly a clerk in the employ of John Wiesel.

—Mr. Kaiser, agent of the N. A. R. D., was called to Frederick last week to investigate demoralization by prize price-cutting. He returned to Baltimore.

PLANS FOR NEXT OHIO MEETING.

Cincinnati, December 22.—The entertainment committee of the Ohio Valley D. A., has been busy during the last week making preliminary arrangements for the State Ph. A. convention in this city next June. Popular subscriptions will be asked for. Plans are also under way to give a series of entertainments to help raise the necessary funds. The following sub-committees have been selected:

Lectures—Theo. D. Wetterstroem, Emil Zorn and Julius Greger.

Emkrest Dances—Ed. Voss, Carl Plath, L. P. Holzhauser, J. F. Kuchbauch, Frank H. Freericks.

Subscriptions—John H. Linnemann, Theo. D. Wetterstroem, Alfred DeLang, Ed. Kipp, H. B. Waltermann, Robt. Broenland and A. O. Zwick.

The Era Course Helped Him.

Medford, Ore., December 14, 1903.

Gentlemen:—Thanks to the Era Course in Pharmacy and a little hard work, I passed the Oregon State Board of Examiners. With kind regards, I remain, respectfully yours,

J. RALPH WOODFORD.

E. I. Santal Perles

Bottles of 50, with yellow wrapper

Write for Samples and Prices

BILLINGS CLAPP CO., - - Boston

OHIO RIVER VALLEY.

DR. THOMAS' APPOINTMENT PLEASES OHIOANS.

Zanesville, Ohio, December 22.—The news received her last week to the effect that Dr. Charles E. Thomas, a negro, has been appointed one of the three commissioners to represent the State of Alabama at the International Tuberculosis Conference to be held in Washington, D. C., next April, has caused considerable gratification to a number of veteran pharmacists in this city. Twenty years or more ago, "Charley" Thomas arrived in this city from Pomeroy, friendless and without a cent, and secured employment in the drug store of the late Kennedy M. Bausch, as a porter. At Mr. Bausch's suggestion Thomas began the study of medicine in 1888 at Ann Arbor University and took a degree in medicine. In 1896 he matriculated for a post graduate course in a Brooklyn, N. Y., college, and upon graduating located at Annstow, Ala., opened a small drug store, and also practiced medicine. The small store grew under his able management and in later years was made a wholesale house.

THAT OVERBECK CASE POPS UP AGAIN.

Cincinnati, December 22.—Era readers will remember the Overbeck case, in which a verdict against Druggist B. H. Overbeck of this city, was misread by the judge. The jury had intended an unfavorable verdict, but the judge's error saved Mr. Overbeck, temporarily, at least from paying damages.

The plaintiff was a nurse who had partaken of coffee that was dosed with arsenic by a servant, who had bought it from Mr. Overbeck. The nurse charged that the pharmacist was negligent in making the sale.

DRUGGISTS ENTERTAINED BY DR. HARTMAN.

Columbus, December 22.—The members of the Columbus D. A. were the guests of Dr. S. B. Hartman of the Peruna Co., at the latter's commodious hotel. The first part of the evening was spent in card games, for which six prizes were distributed by the host. At the conclusion of the card playing an enjoyable luncheon was served. Nearly one hundred druggists were present, and, through President G. B. Topping of the association, Dr. Hartman was officially thanked for his hospitality.

NEW PHARMACY SCHOOL FOR OHIO.

Lebanon, Ohio, December 22.—The plan of the National Normal University, located here, to organize a school of pharmacy, is still in the process of formation. The idea seems to have met with favor, and its success is looked upon by the faculty as a foregone conclusion. The dean will be Dr. F. H. Frost, State inspector of drugs, and the other members will be selected later.

OHIO HAPPENINGS.

—Andrew W. Bain, pharmacist at the City Hospital, Cincinnati, saved his sight, by exercising his learning. As it is, he will have to wear a bandage over his left eye for some time. The accident occurred while Bain was emptying sulphuric acid from a larger into a smaller bottle. A portion of the acid was spilled, splashing into his eye. He applied cold water and soothing lotions until the hospital physician arrived.

—The Columbus Drug Co. of Columbus, were victimized last week by a swindler, who has been operating in this State for several months, numbering among his victims quite a few druggists. He represents himself as an agent for a certain directory, secures \$5 to bind

a contract for the purchase of the book and that is the last heard of him.

—The store of C. E. Crute on South Main Street, Mansfield, was sold at assignee's sale on December 11 to William G. Black of Mansfield for \$2,700. The new owner took immediate possession and will open for business within a short time. Guy Lantzbaugh, formerly head clerk for W. M. Barton, will act in a similar capacity for Black.

—The New Mercantile Library Building on Walnut street, between Fourth and Fifth streets, Cincinnati, is rapidly nearing completion, and the quarters which will be occupied by Miss Cora Dow as a drug store will then be ready for occupancy. This will make the sixth store, all cut-rate, that Miss Dow controls.

—Druggists from near-by towns in Cincinnati recently were: W. R. Fee, Milford; R. A. Brown, Dover, Ky.; Homer Sayers, Xenia, Ohio; Henry B. Osborne, Manchester; L. N. Dole, North Vernon, Ind.; A. H. Cochrane, Berea, Ky.; John Ulrich, Aurora, Ind., and C. W. Montgomery, Bethel.

—Wirster Bros. of Portsmouth, suffered the loss of a number of valuable articles, through a visit of two shoplifters. An investigation developed the fact that the perpetrators were the wives of prominent business men.

—The pharmacy of Harry Bristle at Spring Grove avenue and Toffner street, Cincinnati, has undergone entire remodeling, giving it an appearance of which the owner is deservedly proud.

—J. I. Mercer, the Portsmouth druggist, who has been seriously ill for several weeks with a complication of diseases, has taken a turn for the better, and is now on the high road to recovery.

—Howard N. Gillard of Milford, colored, who recently passed the State examination as assistant pharmacist, is the only colored person in the Southern part of Ohio who holds that honor.

—J. J. Brown has retired from business at Springfield, to engage in the manufacture of chairs at Hillsboro. Roth & Livingston purchased his store.

—George A. Chambers, the Mt. Pleasant druggist, aspires to be postmaster, and the town paper says his opponent will end in the post mortem class.

—J. C. Firmin, the Findlay druggist, presented the police department with a punching bag last week and was officially thanked for his generosity.

—James Hager has opened his new store in Portsmouth and has secured for clerk John Rapp, recently with Fisher & Streich, in the same city.

—William Eger, in partnership with his brother at 1933 Central avenue, Cincinnati, quietly married Miss Johanna Mueller several weeks ago.

—Charles Tobey has succeeded to the management of the store of N. Tobey & Co. at Troy, through the recent demise of his father, N. Tobey.

—J. H. Bohn will celebrate the Sixtieth anniversary of the establishment of his Camden store in the early part of January.

—Newton Garrett of Hillsboro spent several days in Cincinnati in connection with the affairs of the State Ph. A.

—P. F. Vollnogle of New Waterford, was seriously burned on December 10, by the explosion of a gasoline lamp.

—Ray Richey has become associated in the management of his brother Ross' store at Toledo.

—The Dennis Medicine Co. of Portsmouth, recently suffered loss by fire.

—Haley & Distel, Portsmouth, have installed new fixtures.

AROUND THE GREAT LAKES.

SWIFT THE NEW HEAD.

Elected General Manager of Parke, Davis & Co.—Was Manager of Canadian Branch—His Progressive Career—Professor Ryan a New Director.

Detroit, December 22.—Ernest G. Swift, for eleven years general manager of all the Canadian business of Parke, Davis & Co., was elected at a special meeting of the board of directors of that concern to succeed the late William M. Warren in the general management of the business. This recognition of Mr. Swift is a deserved compliment to his ability and energy. He is only forty-two years of age, being born in Rawden, Quebec, in 1861, yet he has spent more than a quarter of a century in the drug business, his experience having embraced every phase of the trade.

Mr. Swift spent several years in the wholesale drug house of Lyman, Clare & Co., now Lyman, Sons & Co., of Montreal. Then he took a four-year course in the Montreal College of Pharmacy, meanwhile serving in a retail store. He came to Detroit and to Parke, Davis & Co. in August, 1883, to a position as assistant in the finishing department, where, through his energy and willingness, he, by successive degrees, was promoted to foreman of the capsule and gelatine coating department, purchasing agent, assistant superintendent and, in 1892, nine years after, manager of the Canadian business. This meant not alone the management of the manufacturing laboratory in Walkerville, but carried with it the management of all the Canadian business, advertising, manufacturing and selling, the supervision of the traveling salesmen, and the management of the branch house in Montreal. Suffice it to say that Mr. Swift has, in eleven years, made the Dominion of Canada one of the strongholds of Parke, Davis & Co.

In 1897 he was made a director of the corporation. For some months he will be obliged to manage the Canadian business in connection with the discharge of his new duties. He is regarded by the directors as a man of remarkable executive ability, and a man whose personality attracts and commands attention and confidence.

With this appointment Mr. Swift forswears his allegiance to King Edward and comes back to Detroit again, where he has been active socially and politically ever since his assumption of the Canadian business of the firm. During his residence in Walkerville he has three times been elected mayor of that town, and its people are planning to give him a great farewell reception.

Prof. Frank G. Ryan has been elected a director to succeed Mr. Warren, Mr. Swift already having been a member of the board. Professor Ryan is very well known and highly esteemed by the retail trade from his connection with the A. Ph. A. and his former connection with the Philadelphia College of Pharmacy. He is chief pharmacist in Parke, Davis & Co.'s scientific department.

BODEMANN DIDN'T BLACK BERNAUER'S EYE.

Chicago, December 22.—The fight against cocaine sellers in Chicago will go merrily on. Numerous attacks on the board of pharmacy culminated in the arrest of President Bodemann on a warrant sworn out by one Joseph Bernauer, who charged Mr. Bodemann with having assaulted him and imparting a variegated black, blue and green tinge to one of his eyes. Mr. Bodemann said he never saw the man until the case came up in court. The matter was disposed of before Justice Gib-

son, before whom the complaining witness appeared in court and apologized, admitting that his black eye came from a fall. He admitted he had not seen Mr. Bodemann since November 11, whereas the optical decoration had been acquired something over two weeks after that date. Bernauer, it is said, is being prosecuted for non-registration, or rather, for practicing pharmacy without the necessary registration. Just why his attorney, Brillow, permitted him to bring such a suit is not known. Brillow, who recently admitted that he advised Bredecke, the cocaine seller, to continue selling the drug, on the ground that it would be impossible to prove the presence of cocaine chemically, asserts that he is attorney for the Druggists' Protective Association. It is believed that this organization begins and ends with Bredecke, Bernauer and their friends. A few years ago an organization similar in name was started, and \$1,000 was collected by its attorneys, Brady & O'Donnell, who made way with the money and were indicted for it.

THE FIRST COMMENCEMENT.

Northwestern University School of Pharmacy is the First, and Graduates a Brilliant Class.

Chicago, December 22.—Graduating exercises of the School of Pharmacy of Northwestern University were held in Assembly Hall, University Building, on Friday afternoon. The program opened with music, which was followed by an invocation pronounced by the Rev. Amos W. Patten, D. D.

The address of the day, by Prof. Francis E. Lloyd of the Teachers' College, Columbia University, on "The Scientific Attitude in Every Day Life," was one which was peculiarly adapted to the day and the occasion and gave scope for the expression of views on the relation of the sciences to modern conditions and surroundings and the duties and privileges of men of scientific training.

A musical number followed the address, after which the degrees were conferred by President James of the university.

The announcements and music were followed by the presentation on behalf of the senior class by Frank Alex. Milne. The exercises closed with a benediction.

Degrees were conferred as follows:

Pharmaceutical chemist—H. V. Bonicel, Buenos Ayres, Argentine Republic; C. A. Hammett, Portchester, N. Y.

Graduate in pharmacy—L. N. Alt, Chicago; R. E. Bates Grinnel, Ia.; C. R. Clothier, Polo, Ill.; L. F. Good, Salem, S. D.; C. P. Hallam, Shabbona, Ill.; W. A. N. Hieber, Chicago; C. L. M. Klinck, Bristow, Ia.; G. S. Kolar, Chicago; A. G. Macomber, Cascade, Ia.; W. C. Magoun, Sioux City, Ia.; H. C. Metzger, Cairo, Ill.; F. A. Milne, DuQuoin, Ill.; J. P. Nolan, Chicago; J. B. Pendergrast, Hogansville, Ga.; M. H. Potter, Piggott, Ark.; F. C. Sheeran, Fairbault, Minn.; H. W. Sublett, Bowling Green, Ky.; W. W. Thiedohr, Streator, Ill.; W. B. Wetzel, Waukegan, Ill.; C. D. Wheeler, Belvidere, Ill.; F. P. Wray, Pella, Ia.

Northwestern is the first of the season among the pharmacy schools to graduate a class.

WE WANT DRUGGISTS

To send us a list of physicians who patronize them, and we will write each physician that he can obtain Phenalgin from the druggist mentioned; we will also send the physician a sample, with literature.

ETNA CHEMICAL CO.

313 West Street - - - NEW YORK

S. LACHANCE, Montreal, Que.
President, Council of the Quebec Ph. A.

MICHIGAN.

—Frank W. Hoyt, president of the A. H. Lyman Co. of Manistee, has disposed of his interests in that concern and has accepted a responsible position with the Yahr & Lange Drug Co. of Milwaukee. C. B. Sherman, former secretary of the A. H. Lyman Co., has been promoted to the general superintendency of the Manistee company.

—Leonard Short, head clerk for the last five years for the A. H. Lyman Co. of Manistee, has gone to California to engage in fruit growing. Mr. Short is six and a half feet tall, in spite of the family name, and is as fat as a match.

—A. A. Jackola is the latest addition to the drug force at Calumet, having opened a new store in the Sorsen block. His store has some of the finest fixtures in the copper country.

—The Charles Drug Co. of Paw Paw, run full page ads in the papers of that town during the holidays. The druggists of Van Buren county are nothing if not enterprising.

—C. H. Houghtaling of Quincy, is again in the drug business after a rest of six and a half years. He has purchased the R. D. M. Turner stock, taking immediate possession.

—Frank L. McClintic, formerly in the drug business at Charlotte, has organized a medicine company at Battle Creek and will turn out a remedy called "Salax."

—Oscar P. Goodrode, another indicted South Haven druggist, was arraigned and gave bail for his appearance for trial at the January term.

—A new fountain was added to the equipment of the Glass drug store at Schoolcraft in time to have hot soda on tap for the holidays.

—Jams G. Johnson of Traverse City, is in Kentucky for a short time, looking after his oil interests there.

—W. H. Stone, druggist at Portland for many years, has sold to W. D. Crane and will remove to Allegan.

—W. H. Vaughn formerly on the road for Henry Thayer & Co., has opened a store at Muskegon.

ILLINOIS.

—Gus. A. Grigsby, a chemist's helper for M. C. Barrett & Co., 219 Lake street, Chicago, was arrested, charged with stealing \$400 worth of goods. His salary was \$9 a week, yet he paid \$45 a month rent, it is said, for his flat at 3012 Indiana avenue, and had much valuable furniture. When arrested he is reported to have had \$40 worth of vanilla beans in his pockets.

—Henry Cook, for twenty years assistant sundries buyer for Morrison, Plummer & Co., Chicago, but for the last three years in charge of the sundries department of the Yahr-Lange Co., Milwaukee, will, on January 1, become buyer for the Houston Drug Co., at Houston, Tex.

—M. Gold & Co. have bought Houts' drug store at 425 West Seventy-first street, Eggleston. Mr. Gold was at one time in the drug business at Elsdon. Mr. Houts has proprietary medicine interests to which he will devote his time.

—In the Era of December 10 it was erroneously reported that B. T. Van Alen was elected secretary of the Chicago Drug Trade Club. Instead Harold Sorby was re-elected secretary, and Mr. Van Alen was elected treasurer.

—The drug store of Harris C. Nelson at Van Buren and Halsted street, Chicago, was robbed on December 12, the burglars securing about \$75 in money and some goods.

—The next meeting of the Illinois board of pharmacy will be held at Springfield on January 12 and the one following in Chicago on February 16.

—Pellikan Bros, succeed V. L. Blahnik at Twenty-Sixth and Troy streets, Chicago.

INDIANA INCIDENTS.

—Wood & Haney at Peru, have dissolved partnership. Mr. Hood retains the old location. Joseph Haney has opened a new store.

—Samuel A. Barrow of Harrison, O., has sold his store which is on the Indiana side of the town, to Rudolph Kern.

—The drug store at Morristown owned by the late A. C. Handy, has been bought by his nephew, W. P. Handy.

—J. M. Ball, formerly of Waveland, has started a store at Terre Haute.

—W. M. Baggs has bought the store of F. D. Musselman at Macy.

WISCONSIN BOARD OF PHARMACY EXAMINATION.

At the last examination there were sixty-nine applicants of whom thirty-nine were successful, as follows:

Frederick H. Gielle, Ashland; Leonard G. Elleg, Manitowoc; Ira G. Brownell, Palmyra; Adolph A. Shaper, Milwaukee; Harry C. T. A. Koerner, Janesville; Herman H. Jewett, Iron River; William H. Hoessler, La Crosse; Joseph B. Holzer, Green Bay; Ottmar T. Birck, Milwaukee; Max R. Hummel, Milwaukee; Robert G. Williams, Tomah; George W. Prandel, Wausau; Frank A. Harris, Milwaukee; John H. Williams, Oconomowoc.

Assistants pharmacists—James H. Mahoney, Waukesha; Frederick J. Baker, Janesville; Samuel W. Stephens, Milwaukee; H. August Langenhain, Ableman; A. A. Meyer, Superior; William N. Nussbaum, New London; Almer O. Anderson, La Crosse; Emil A. Rasmussen, Marshfield; Henry J. Grevesmuehl, Milwaukee; Willard R. Demme, Madison; J. Paul Dennett, Janesville; M. J. Knrzer, Milwaukee; Alvin E. Peters, Milwaukee; A. Rheinhold Wardin, Redesburg; Matthew Jorgenson, Kenosha; William B. Philbrick, Wausau; L. C. Wareham, Baraboo; Arthur W. Splitz, Milwaukee; Mathew D. Boehm, Shawano; Miles W. Avery, Friendship; Arthur Tuttle, Oconomowoc; H. H. Adams, Milwaukee; Cliff Russell, Milwaukee; Frederick G. Weichmann, Wausau; Edwin W. J. Fenelon, Waukesha.

WEST OF THE MISSISSIPPI.

LOOKING IN THE OLD DIRECTORIES.

St. Louis, December 22.—Even the worm will turn. St. Louis R. D. A. members have rebelled against the advance in price of \$2 for directories, and those who have not already purchased will allow their customers to look through old books. The directory company this year asked \$7 for the book that has so long sold for \$5. Few druggists ordered. At the quarterly meeting of the R. D. A. the subject was brought up. The advance was universally condemned by the fifty members present, and, while no definite action was taken, one member who took part in the discussion said of the effect: "I'll wager the contents of my cigar case against an ice cream soda that not a member that was present at the meeting buys a directory."

The annual ball was discussed and a revised committee on arrangements appointed as follows: J. W. Johnson, chairman; H. W. Friedewald, Leland Miller, T. F. Hagenow, Otto Ude and Emil Bernius members. The date is January 28.

MUST RE-LABEL REFILLED BOTTLES.

St. Louis, December 22.—The St. Louis Court of Appeals affirmed a judgment against Frank H. Westman, a druggist at 2744 Cass avenue, and set forth the duty of druggists to re-label, when refilling a bottle of poison.

In the case in question, a bottle bearing a carbolic acid label was refilled in the Westman store and the scratched and marred label not changed. The Court held that, had the label been renewed, there would have been no question as to the contents. The plaintiff had mashed a finger while at work and sent his 12-year old son to Westman's for some arnica, giving him a bottle that had contained carbolic acid. The testimony as to what the boy asked for was conflicting and was discarded. Peterson used the acid as a dressing for the wound on his finger, and as a result was compelled to have the member amputated.

In deciding the case, the court dwelt entirely on the failure of the clerk to re-label the bottle.

ST. LOUIS CLERKS ENJOY THEIR DANCE.

St. Louis, December 22.—The St. Louis drug clerks' twenty-fifth annual ball on December 17, was the most successful of the series. More than 120 couples were on the floor at the Odeon entertainment hall. Although the program was long, many extras were danced. N. J. Pieppert is president of the society; R. Roesewetter, vice-president; George H. Somers, secretary, and H. A. Wolf, treasurer. The ball committee was: Reception—George M. Sebeu, Leon A. Phillibert, Doctor S. Rehfeldt, J. G. Gibson, William S. Barnickel and Oscar A. Bausch; Charles Witt, C. G. Mueller, I. S. Schulherr, F. A. Christopher, Price Mansfield and R. Roesewetter.

NEW MEMBERS OF THE A. P. H. A.

St. Louis, December 22.—Dr. H. M. Whelpley, secretary of the A. P. H. A. Council announces the election of the following new members: Henry Donohue, 702 Washington street, San Francisco; John D. Muir, Grand Rapids; Charles Edward McCauley, Oak Park, Ill.; Alfred L. Walker, Detroit; John S. Hogue, Macon, Ga.; Julius Greenthal, 1174 Michigan avenue, Detroit; Charles F. Mann, 960 Woodward avenue, Detroit; Arthur H. Webber, Cadillac, Mich.

MISSOURI.

—The annual dinner of the St. Louis Paint, Drug and Oil Club, at the Mercantile Club, was a most enjoyable event. The year has been an especially good one

for St. Louis merchants in these lines. M. T. Davis and D. K. Blair of the World's Fair commission, were the guests of the club. The dinner was arranged by H. P. Fritsch, A. A. Eberson and Fred Sultan. President P. Hanamar presided.

—The Senior class of the St. Louis C. P. this year is known by the usual name, Omega Psi. Charles E. Kraeger of Pekin, Ill., who has for several years been the owner of a good store, is president; James E. Stone of Warrensburg, Mo., vice-president; Arthur F. Zahn of St. Louis, secretary; Henry F. Sum of St. Louis, treasurer; L. Y. Rogers of Center, Texas, sergeant at arms.

—The Christmas vacation of the Barnes Medical College Pharmacy department began on December 18. The first half year of the school's existence has proved a pleasant surprise to those in charge. Much better results have been secured than was expected, owing to the late announcement that the school was to be organized for work this winter.

—Drs. Alexander McCulley, Emanuel Urban and P. T. Kuapp, formerly connected with the city dispensary system, St. Louis, and arrested on charges of stealing drugs from the poor house supply department, were discharged in court last week. The superintendent of the poor house failed to prosecute.

—The St. Louis C. P. students have adopted the following as a college yell:

Ipecac, Opium, Syrup of Squills,
Jalap, Gentian, to cure your ills,
Razze, Dazze, Conium, Zea, St. Louis Pharmacy.

—St. Louis druggists have been sharp competitors for Christmas trade. The freedom with which signs and window displays have been used has excited much comment among salesmen. Almost without exception, the druggists report good business.

—Dr. H. G. Van Aller, for some time manager of Judge & Dolph's St. Louis, has been succeeded by O. W. Lauburg. Dr. Van Aller has withdrawn from active business to promote some interests of his own that will be announced shortly.

—The Mutual Benefit drug store at Ninth and Chestnut streets, St. Louis, has been closed and the stock moved back to the parent store, the Anti-Monopoly at Sixth and Market streets.

—A. W. Panley, St. Louis, is the owner of two stores and is contemplating the opening of a third at Grand avenue and Herbert street. He has already purchased ground for a building.

—Cyrus W. Wallbridge, wholesale druggist and ex-mayor of St. Louis, presented that City's claims for the next Republican National Convention.

—O. D. Meyer, well known to St. Louis druggists as a relief clerk, announces the opening of a store at Delmar and Taylor avenues.

—B. H. Blumpe, druggist at 804 North Broadway, St. Louis, has returned from a three days' hunting trip in the Ozarks.

—J. K. Lilly, president of Eli Lilly & Co., Indianapolis, made his annual call on the St. Louis jobbers last week.

—Otto C. Hanser, a St. Louis boy, has been placed in charge of the Frick-Hahn Co.'s store in Baden.

—J. M. Hutchinson of Troy, has opened a store at Carrollton.

OBITUARY.

DR. FRED J. ROTHACHER.

Dr. Fred J. Rothacher, one of Detroit's best known physicians and pharmacists, and brother of ex-City Pharmacist Dr. Jacob W. Rothacher, is dead. Late in the afternoon of his death he was called up at his office on the telephone by a young woman friend. They were chatting gaily when, she says, the doctor remarked: "I feel strange." Then she noticed his voice was growing fainter, and finally he did not answer at all. Feeling that something was wrong, she called up a grocery store under his office. The grocer hurried up and found Dr. Rothacher lying on the floor in a semi-conscious condition, the receiver still in his hand. He died about midnight. For a number of years Rothacher was proprietor of a drug store at 1202 Gratiot avenue. He was graduated in medicine only a year ago. He was 36 years old, and a Mason in high standing. Apoplexy was the cause of his sudden death.

J. B. ATKINS, the Omaha, Neb., pioneer druggist, died at Los Angeles, Cal. Mr. Atkins went to Omaha in 1886 and had been prominently connected with the drug trade of the city from that time until last August when he was compelled to retire from business on account of ill-health. He was born in Detroit, 65 years ago, and during the earlier years of his life was engaged in the drug business in Iowa, Idaho, Montana and New Mexico. He fought in the Union army during the Civil War, and afterward made a short stay on the Pacific coast where he was engaged in mining. He went to California last October hoping that the change of climate might benefit his health. He was a prominent Mason.

DR. CORNELIUS N. O'LEARY of New York City, was killed by a motor train in Brooklyn, on Saturday night. Dr. O'Leary was born in Ireland sixty-four years ago, and came to this country with his father when a boy. Upon the death of his father in 1864 he succeeded him as professor of philosophy and classics at Manhattan College. In 1870 he was connected with the board of health in the capacity of inspector, and resigned that position to become one of the old city commission of pharmacy.

HENRY REUTER, for many years traveling salesman with the wholesale house of the Winkelmann & Brown Drug Co., and afterward with its successor,

the Stanley Brown Drug Co., Baltimore, died last week after a protracted illness. He was a native of the Monumental City and a prominent member of the Masonic fraternity, which was represented at the funeral by Monumental Commandry, Knights Templar. He was 59 years old and enjoyed great popularity.

BEDFORD B. HOPKINS died at his home in Milwaukee, Wis., on December 2, aged 69 years. Mr. Hopkins was born at Clarence, Erie county, N. Y. Early in life he moved to Owego, N. Y., where he worked for J. L. Pinney until 1852, when he removed to Milwaukee. He first entered the employ of the wholesale drug company of H. Bosworth & Sons, and in 1866 became a partner in the firm.

WARREN SMITH, long prominent as a druggist in Chicopee, Mass., died from Bright's disease, in his sixty-seventh year. He was born in Vernon, Conn. His store was burned last Summer, but he never knew it, being too ill to be told. He was prominent in the Masonic fraternity. Three daughters and two sons survive him.

ROBERT G. SMITH of Waterloo, N. Y., died last week. Mr. Smith went to Waterloo in 1867 and was engaged there in the drug business until 1895 when he was succeeded by his son. He was seventy-six years of age. His wife survives him. He was for over sixty years a member of the Presbyterian Church, being ruling elder and Sunday-school superintendent.

J. M. GIVEN, prominent druggist of Chandlerville, Ohio, died on December 15. He was born in 1837 at Chandlerville and embarked in business there in 1870. He was a well-known Odd Fellow and funeral services were conducted by that lodge. A wife and two children survive.

JAMES F. THAYER, a well-known druggist doing business on Richmond street, Providence, died on Thursday morning. His death was caused by dilation of the heart, superinduced by a badly ulcerated tooth. He was in his twenty-eighth year and leaves a widow.

CHARLES REID of Wauseon, Ohio, died from exposure at Napoleon, Ohio, on December 15, at midnight, while delivering a message from one town to another. Medical aid was secured, but too late to render aid.

CHARLES W. TOMFOHRDE, a native of St. Louis and for nineteen years proprietor of a drug store at 1827 Cass avenue, that city, died on December 14. He was 45 years old, and is survived by a widow.

JOHN J. SMITH, the oldest employe of the New York branch of Parke, Davis & Co., for whom he was shipping clerk, died of apoplexy last week, aged 55 years.

STEPHEN B. PAPPAZOGLU, junior member of Rotu Pappazoglu & Cie., Kazanlik, Bulgaria, for whom Ungerer & Co. of this city are the American agents, is dead.

DR. J. R. ADAMS of the firm of J. R. Adams & Son, Petersburg, Ind., is dead. The business will be continued by his son, McCrillis Adams.

E. O. AUSTIN, for 25 years a prominent druggist at Morrice, Mich., is dead, aged 70 years. He was a veteran of the Civil War.

N. J. HALPIN, druggist in Brandon, Man., Can., is dead.

The Latest Suppository Machine.

The old-fashioned method of making suppositories by hand and the use of molds can now be relegated to the past, for the accompanying cut is a reproduction of a new and improved suppository machine which the F. J. Stokes Machine Co., Ninth and Thompson streets, Philadelphia, Pa., have just placed upon the market, and which is said to be so low in price that no druggist can afford to be without one. The Stokes Co. claim that this machine is the best of its class, and that it combines strength and neatness of design with facility of operation. An Era representative who saw the machine in operation predicts that it will soon share the reputation held by the Eureka Tablet Machine, also made by this firm. Druggists who are interested in a good suppository machine at a low price should correspond with the Stokes Co. for prices and information specifying the No. 10 machine.

We are in receipt of "Mycological Notes," Nos. 10 to 14, inclusive, published by C. G. Lloyd, Cincinnati, Ohio. In these are recorded the work that is being done in this interesting field by Mr. Lloyd and his collaborators. No better description of the character of this work is needed than to say that if you collect "puff balls" and will send the specimens to C. G. Lloyd, 224 West Court street, Cincinnati, Ohio, he will undertake to see that they are described, published and illustrated in a satisfactory manner and that due credit will be given you in "Mycological Notes."

KAMINSKY WINS SUIT AGAINST JUNGMAN.

A suit for \$174 in payment for "solidified formaldehyde," etc., brought by the Dr. George Leininger Chemical Co. of Chicago against J. Jungman the big druggist of this city, was won by the plaintiff. It was tried before a jury.

Saul H. Kaminsky, vice-president of the company, represented his firm during the suit.

Mr. Jungman claimed the shipment he received was on consignment and was not a sale, and that he was induced to take the consignment through the turning in at the time by Kaminsky of about a dozen "orders" from physicians and hospitals, most of which orders were fraudulent, and by Kaminsky's representations that he had from eight to a dozen detail men among the 1,000 physicians in the neighborhood, not one of whom Mr. Jungman ever received an order from. For his side two physicians showed that the orders from them, turned in by Kaminsky to Jungman, had been filled by the company and paid for before Jungman got the goods to fill them with. William C. Bolton, president of the Bolton Drug Co., vice-president of Wm. B. Riker & Son Co., officer of the United Drug Co. and the Drug Merchants of America, said the drug was not in general use in Brooklyn, and that of \$1,000 worth he, through his five stores, Rikers', and the two thousand members of the Drug Merchants of America, had managed to dispose of about \$400 worth. Mr. Kaminsky asserts that he is in good favor elsewhere than here.

The Leininger company's suit against the Kalish Pharmacy will come up in a few days. It was postponed from last Saturday because Oscar G. Kalish had been erroneously named as defendant instead of the Kalish Pharmacy, a corporation.

A NEW LABELING MACHINE.

It Should Interest Druggists and Proprietary Medicine Manufacturers.

People living in this progressive age, as a rule, are never surprised at the magnitude of any invention, and it could not, therefore, be expected that any of our readers would be surprised when their attention was called to even as novel an invention as a bottle label-

ing machine. Nevertheless, if they are not surprised they will undoubtedly be interested in so valuable an invention as the original of the above cut. This machine is made by the New York Labeling Machine Co., at 407 Broome St., New York City, and is designed for labeling flat, panel or square bottles on one or two sides. It will label from 80 to 110 gross of any of these style bottles in nine hours, is adjustable for different sizes of bottles, and when front and back labels are used, it puts them on simultaneously. An Era representative who saw the machine at work says: "While running at its slowest speed, this machine put on \$4 labels on 42 bottles in one minute, and did it better and neater than could be done by hand. It even placed one label on top of another so perfectly that the edge of the under label could not be seen at all. No one of the labels showed any sign of a wrinkle or a particle of oozing paste, and the labels were put on to stay." The manufacturers claim that this machine is the only perfect automatic bottle labeling machine in the world, and that several big proprietary medicine manufacturers who are using them at the present time say that they are perfectly satisfactory in every way. As every machine is guaranteed, a purchaser runs no risk, and it therefore seems as if every concern labeling many bottles must see the advantage of owning such a device. Any of our readers who are interested in this machine should write to the above firm for particulars, or call at their factory and see the machine in operation.

NORTHWESTERN UNIVERSITY SCHOOL OF PHARMACY . . .

NORTHWESTERN UNIVERSITY BUILDING, CHICAGO.

Unsurpassed New Equipment. Seven Laboratories.
Twelve Teachers Thorough Course.

NEXT TERM BEGINS JANUARY 4, 1904.

Address Inquiries to

PROF. OSCAR OLDBERG, 87 Lake St., Chicago.

MORE BUSINESS NEXT YEAR.

Present conditions indicate that the coming year is to be a very prosperous one for the live druggist. The campaign against price demoralization is producing good results, prices are gradually getting better, and the incompetents are being weeded out of the business. The country is prosperous, and natural conditions could not be better. Taking all things into consideration, there does not seem to be any plausible reason why the retail druggist should not have a better business in 1904, and now that the holiday rush is over he should prepare for next year's business at once by laying out his plans and going after it in earnest. Don't delay, but rather start out this minute by reading this column and getting posted on the good things you didn't see in last week's issue.

THE NEW CALUMET PRESCRIPTION SCALE.—Made in cherry or oak, has 3 1/4 inch pans, with swing tray for weights, also sink for weights cut into the marble slab. A cut of this scale may be seen in Robert Stevenson & Co.'s advertisement on the outside of the back cover.

PROTECTICHECK.—This machine is made by the Rochester Metal Mfg. Co. at Rochester, N. Y., who claim that it has several distinct and original improvements and that it not only insures your check against being raised, but increased your credit standing, as its use looks and is more business-like. For special introductory price, note their advertisement on the inside of the back cover.

DR. BRUSH'S KUMYSS.—The late Professor John H. Ripley in a lecture to the nurses said: "I say Brush's because that it the best Kumyss made. In a certain proportion of cases it even excels all other food." The New York depot for Kumyss is 217 W. 123rd St., and the Philadelphia depot is at 1109 Cherry St.

SYRUP OF FIGS.—The original and reliable product made by the California Fig Syrup Co. at San Francisco, Cal. Costs \$4 per dozen and retails at 50 cents per bottle. A special discount of five per cent is allowed on all single orders amounting to \$24 or over, and advertising matter is furnished free of charge on application to the manufacturers.

SERGEANT'S DOG REMEDIES. They are made by the Polk Miller Drug Co. at Richmond, Va., who claim that all dog troubles are easily and surely remedied when these preparations are used. They may be obtained from all drug jobbers, or direct from the manufacturers.

STAINOFF.—A sample cake and particulars may be obtained from the D. M. Steward Mfg. Co. by application to their New York, Chattanooga or Chicago office.

HUNTER'S SIFTER AND MIXER.—The J. H. Day Co., Cincinnati, O., make this popular machine, and claim that perfect powdered preparations always result from its use. This firm also make hand machines of all descriptions for the use of retail druggists, and power machines for larger manufacturers. Write for Catalogue E.

NEEDHAM'S RED CLOVER.—Claimed by D. Needham's Sons, Inter-Ocean Bldg., Chicago, Ill., to have been a standard blood purifier for twenty-five years. It is put up in three forms, Blossoms, which cost \$4 per dozen; Fluid Extract, \$8 per dozen, and Solid Extract, \$20 per dozen. The manufacturers supply literature upon demand.

DRUG MILLS.—Messrs. Mead & Co., 19th St. & M. C. R. R., Station B, Detroit, Mich., claim for their drug mills that they will grind more material with less power than any other machine, and will grind more

uniformly. This firm will grind samples of any material sent freight prepaid, and will return with statement of the time consumed in grinding. Send for illustrated catalogue, mentioning the Era.

TOOTHACHE GUM.—The product of the Steratol Chemical Co., Oceanus, New York City, sells at 10 cents per bottle, and is marketed on attractive show cards at 35 cents per dozen. The manufacturers claim that Steratol Toothache Gum is the best advertised, best in looks, best in quality and by far the best seller.

ARDENTER MUSTARD.—Has been for years one of the most reliable brands of mustard upon the market. Made by W. G. Dean & Son, 361 Washington St., New York. This firm also manufacture D. & S. Licorice.

SIMON'S TOILET PREPARATIONS.—They have made France famous the world over. Druggists who desire expensive imported samples free of the Simon face cream, powder and soap, should correspond with Geo. J. Wallau, Inc., 4 Stone St., New York.

DUROY WINES.—Fifty bottles free with every 12 gallon keg of Duroy Port Wine at \$1.75 a gallon, and 12 quart bottles free with first order for 12 gallons at \$2.00 per gallon, also labels for bottling, is the offer made in the Duroy & Haines Co. advertisement on page 7.

Change of Plan Favoring Those Who Wish to Win an Automobile.

Owing to the fact that Dr. Pierce has received so many letters from pharmacists in the United States complaining that they did not receive his prize book describing his offer of \$30,000 in Automobiles and Cash Registers for the best window displays until late in December—only two weeks before Christmas—and as those two weeks are the most important weeks for a window display in the whole year, he has decided to make a change. As one prominent pharmacist put it: "The discontinuance of the display of perfumery and Christmas articles just before Christmas would mean quite a loss to me in holiday sales. Then, after Christmas, of course I would have just one week to make your display if everything would be ready. But, as you probably know, the last two weeks before Christmas is a very busy time."

For these reasons the President of the World's Dispensary Medical Association has decided to extend the time for the first display to the month of January for all those who did not have a display in December. Thus, those who wish to win an Automobile or Cash Register will have to make a week's window display for Dr. Pierce's medicines during January, 1904—if they have not already made it in December. Then a week in February, a week in March, and a week in April. This is the biggest window display offer made by any proprietary house, being ten (10) automobiles and a hundred and fifty (150) cash registers of the very finest type.

Send to Prize Department, World's Dispensary, Buffalo, N. Y., for copy of the prize book.

FROM VARIOUS STATES.

—WASHINGTON.—The Farmers' drug store of J. J. Hoepfner at Colfax, was recently robbed of valuable watches and chains and other articles. Robert Maxwell, a druggist of New Orleans, married Miss Mary Shallenburg of Spokane. The couple will live in the latter city.

—NEBRASKA.—A chattel mortgage has been foreclosed on George W. McColl of Belden. K. C. Roderts of Hastings, has sold. Jones & Emick Co. succeed A. A. Weigel at Winnetoon.

—NEVADA.—R. J. Reese and H. J. Duncan have opened a pharmacy in Reno.

HOLIDAY AFFAIRS RECEIVING ATTENTION.

New York, December 22.—Business in all departments continues restricted mainly to current requirements of consumers and holiday affairs are receiving increased attention, but the general market is without discouraging feature, and the outlook is considered of a satisfactory character.

OPIMUM.—The consuming demand is light and unimportant and the undertone of the market is easy in sympathy with corresponding conditions at primary sources of supply, but jobbing quotations are nominally at \$3.15@3.40 for 9 per cent. and \$3.25@3.50 for 11 per cent. Powdered continues to find a moderate jobbing outlet at \$4.00@4.25 for 13 per cent. and \$4.50@4.75 for 16 per cent.

MORPHINE SULPHATE.—Jobbing parcels are moving moderately into channels of consumption, but buyers are keeping close to actual wants when making purchases, and prices remain unchanged at \$2.60@2.70 for eighths in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials, and \$2.30@2.40 in 5-oz. cans.

QUININE SULPHATE.—Dealers report a continued absence of new features. At the Amsterdam bark sale on Thursday last the average unit value was a shade lower but the market for quinine rules steady with jobbing quotations well sustained at the old range of 25@25½c. for bulk in 100-oz. tins, 25½@26c. in 50-oz. tins, 26@26½c. in 25-oz. tins, 27@27½c. in 15 or 10-oz. tins, and 32@32½c. in ounce vials.

CAMPHOR.—Jobbers have revised their quotations and the figures are 56@56½c. for bulk in bbls. and 62@65c. for less, 59½@57c. for cakes in cases and 63@65c. for less, 58@58½c. for ounce-cakes in cases and 64@68c. for less, 61½@62c. for 24s in cases and 67@70c. for less, 59@59½c. for ounce cakes in pound boxes, by the case and 65@67c. for less, 62½@63c. for 24s in pound boxes, by the case and 68@72c. for less.

QUICKSLYME.—Foreign markets are easier and jobbers have reduced quotations to 70@75c.

CHICLE.—Values are easier owing to manipulation in first hands and jobbing parcels are obtainable at 52@57c.

CANNABIS INDICA.—Higher prices in London have influenced a stronger feeling here and jobbing prices show an advance to \$1.35@1.50.

SILVER NITRATE.—Values have reacted slightly and jobbers have advanced quotations to 45@50c. for crystals and 47@52c. for fused.

COTTON ROOT BARK.—The market is better supplied and jobbing quotations have been reduced to 22@27c. for whole and 27@32c. for powdered.

ALON.—Stronger crude material has influenced a firmer feeling and jobbers have advanced prices to 50@55c.

ROCK CANDY SYRUP.—Owing to an easier market for sugar jobbing quotations have been reduced to 48@49c. in bbls., 50@51c. in half-bbls., 54@55c. in 10-gal. kegs, and 58@59c. in 5-gal. kegs.

MENTHOL.—Keen competition and unsettled foreign markets have caused jobbers to reduce quotations to 86@87c. per lb. and 48@55c. per oz.

OL. PEPPERMINT.—Jobbing quotations for H. G. H. and redistilled have been reduced to \$3.50@3.75 as to quantity. Western is unchanged at \$3.05@3.30 and Wayne Co. \$3.15@3.40. The outlook is considered favorable to early improvement.

GRAINS OF PARADISE.—Slow trading has resulted in an easier market, and quotations for jobbing parcels have declined to 20@25c. for whole and 25@30c. for powdered.

CASSIA BARK.—Values are lower in primary markets and spot jobbing quotations have been reduced to 14@18c. for whole and 16@20c. for powdered.

GOOD PLACE TO HAVE A DRUGGIST.

Des Moines, Iowa, December 15.—Dell G. Morgan of Council Bluffs, president of the Iowa Ph. A. and mayor of his town, has been honored with a place on the legislative committee of the Iowa League of Municipalities and will be a conspicuous figure before the Iowa legislature this winter. Mr. Morgan, because of his aggressive attitude in municipal affairs, is regarded as one of the foremost mayors of Iowa, and his friends among the druggists are very proud of the record which he is making.

BUSINESS NOTICES.

THE ERA DRUGGISTS' DIRECTORY.

The 10th revision of the Era Druggists Directory, now ready, is the best edition we have yet offered. It is the standard work of its kind in this country and includes a complete list of the druggists in Costa Rica and the principal drug stores in Chile, Peru, Bolivia, Ecuador and Colombia.

The list of retail druggists in the United States does not quite reach the 40,000 figure which the last edition showed, but this loss is made up by increased numbers in Part III. (Manufacturers, Jobbers, etc.)

This Directory will be found invaluable to any merchant or manufacturer who does business with the trade. It is sold only by subscription, and until further notice the price will be \$5.00 per copy, net, postpaid.

The edition is limited, and we are obliged to reserve to ourselves the right to raise this price at any time.

"We are all learning more or less every day, and wide reading in one's chosen field is imperative."

But there is a great difference both in the quantity learned and the manner of reading.

The newspaper habit, the careless reading of many headlines in many dailies, does not lead to great learning.

On the other hand careful systematic reading is the medium of all education.

Why does the college student read to better advantage than the newspaper habit?

Because his reading is selected and systematized.

System and selection in reading is, however, also possible outside college walls. The main thing is to get the right person to arrange it for you.

The Era Course in Pharmacy has been selected and systematized for the use of home students by educators of wide experience.

Write to the Pharmaceutical Era, 8 Spruce Street, New York City.

THE CLOSE OF THE YEAR, 1903.

The date of the present issue marks the close of another year. In pharmacy it has been a eventful year in many ways. The profession or calling has been passing through something of a crisis and the outlook has often been ominous, but 1903 has shown clearing skies and brighter prospects for the future. The new methods developed in the course of industrial progress, improved processes of manufacture and more effective exploitation by means of skillful advertising and highly specialized salesmanship, had disturbed the relations between the people and the pharmacy developed during the last century along purely scientific channels. For a long time medicine and pharmacy had developed along parallel lines by the accumulations of scientific inquiry, and while the former has been able to continue its growth without serious disturbance from purely commercial enterprise, the latter has been subjected to the stress of all the competitive forces that have transformed the industrial world. The element which busied itself with the progress of the calling in the fields of education and research, has long either ignored these altered conditions or has regarded them purely as evils which must be overcome, and has sought to eliminate forces which are as relentless and as indifferent to mere human propaganda as the precession of the equinoxes. It has gradually been borne in upon the more alert minds that scientific development and commercial enterprise are not hopelessly antagonistic, and this has led to a more thorough adaptation of methods to actual and inevitable circumstances. It is now admitted by even the most conservative teachers, that the pharmacist best fitted to survive in his calling is not the student poring over his books and test-tubes in the seclusion of his study and laboratory. He must be equipped for the struggle for commercial existence, an equipment in which a scientific training may serve as a weapon of both offense and defense. He must be both a professional man and a man of business. One of the most hopeful lessons of the year is the evidence that modern conditions are developing men of precise, by these abilities, who are not only ready to make use of the latest discoveries of science but are at the same time also able to guard their interests in the world of competition.

PROFESSIONAL SIDE NOT LOSING GROUND.

In the eighteenth annual report of the Massachusetts board of pharmacy, we find the following encouraging statement. "Pharmacy of to-day is a combination of science and business, and the pharmacist is both a business man and a professional one; but we think the professional side is not losing ground, and that the pharmacists of Massachusetts as a rule, take pride in their calling, and are willing to do all they can to help us maintain a high standard of pharmacy in our Commonwealth." One means of maintaining a high standard which has been much denounced and ridiculed in other states and has the confidence of the druggists of Massachusetts is high educational requirements for registration. Not only are the board of pharmacy examinations relatively severe, but the only college of pharmacy in the State is maintained in a high degree of efficiency and enjoys the hearty support of the calling. There has been considerable hardship due to scarcity of registered clerks but no concessions in the matter of professional training have been made to the demands of commerce. Under these conditions the professional standing must of necessity rise. While the scientific side of the calling is receiving additional recognition, the commercial interests of the pharmacists are not suffering from neglect. The state is now thoroughly organized under the fair profits banners of the N. A. R. D. and the improvement in trade conditions is marked. Similar changes may be observed in other parts of the country, although it may be in a smaller measure than in Massachusetts. Pharmacy laws are more rigid in requiring a thorough professional training and, what is of far greater importance, are more generally enforced than ever before.

THE N. A. R. D.

The movement for better prices of which the N. A. R. D. is the chief agent and exponent, has gained very substantially in strength during the past year. Early in the year the direct contract and serial numbering plan was put into operation in the face of considerable opposition and was received with enthusiasm by the entire retail trade. The working of the plan has been uniformly successful and has been highly satisfactory both to the firm which undertook its introduction and to the retail distributors. The adoption of this plan by the N. A. R. D. and the support of its methods as the only certain means of controlling the cut rate evil has done much to restore the waning confidence of the rank and file in their national organization. Almost equal in importance to the adoption of a practical method of maintaining prices was the recognition accorded to the association's demands by the wholesale and manufacturing branches of the trade. Until the present year the N. A. R. D. has been obliged to carry on its anti-cutting campaigns unaided and even hampered by indifference of the jobbers and proprietors. Now all this is changed. The wholesale druggists as represented by their national association have endorsed the N. A. R. D. and the proprietors have appeared at a convention of retail druggists to explain why they preferred not to adopt the plan and pledging them-

selves to accomplish results in their own way. The resulting campaign is under way and success is promised definitely. Whether the proprietor's present methods fail or succeed will not affect the very important victory gained by the N. A. R. D. which has merely suspended judgment on the manufacturers effort and has not modified its demands for the contract in the least. In this respect the national association now occupies an enviable position. It is no longer urging the adoption of untried schemes amid the sneers of the incredulous, but is demanding results leaving the formulation of plans to others. In one particular, the situation of the N. A. R. D. has not been materially improved during the past year, and that is in the matter of financial support. The druggists of the country still fail to grant it sufficient support, but that also promises to cease from troubling before long. The successes of the last few months can not fail to strengthen confidence in the national body, and the executive committee now has an opportunity to consider ways and means for placing the treasury upon a more satisfactory basis.

VOLUME XXX.

The present issue contains the index to volume XXX. of our journal. A glance through its columns gives one a realizing sense of the vast number of subjects which have received attention in our columns during the past six months. The drug business has grown to mammoth proportions during the last few decades, and its interests are now so manifold that even a weekly journal must select its material carefully to present a correct history of current events. Things move rapidly now-a-days, and the druggist who ignores the markets and the doing of his fellow-craftsmen for weeks at a time is not as progressive as the times demand that he should be. A review of trade happenings once a week is none too often, and it is not improbable that in the near future the American pharmacist will demand news of his special line of business even more frequently. The apothecaries and druggists of Germany and Austria have their pharmaceutical news twice a week, and are the business men of this country less progressive than those of Europe? The need of frequent publications seems to be more generally recognized in the older countries abroad than upon this continent. Most of the principal European nations have their weekly pharmaceutical journals. England has at least three. Yet the Era is the only publication of its class that appears every week upon this continent. While much of the news which interests the trade is purely ephemeral, losing its value after it becomes a few days old, there is also much that no progressive druggist can afford to forget permanently. It is this current history together with the purely technical article that renders a file of journals far more valuable than any text-book. The journal presents all events and discoveries in the actual present, while the text-book takes a more distant and perhaps a more coldly critical view in which accessory events do not appear. No file is of much value without an index, and the present number with its index completes our semi-annual history of the drug trade.

SHOP TALK

GET OFF MY FIELD! WHOSE VINEYARD IS THAT!

"More counter-prescribing cases!" remarked the druggist, laying aside his journal.

"Yes," replied the C. P. "that is one of those everlasting things, like the sea and the hills and the war between capital and labor."

"I don't understand you."

"I mean that the question is an eternal one. As it was in the beginning and always shall be, it is a perpetual problem for the medicine man to whet his moral sense upon."

"Do you mean to say that there is any question about it?"

"It is a problem that in the nature of things will never be entirely solved. The ancient calling of the apothecary will never be completely carved up to the satisfaction of everybody."

"Shucks! It is simple enough," said the druggist with the air of a scholar about to recite a well-learned lesson. "The patient has an ailment, the doctor finds out what is the matter with him and prescribes the remedy, and the druggist prepares the medicine."

"Theoretically, yes! It looks simplicity itself. Let me advise you to beware of all theories that are too all-fired simple. There are always a thousand or more strings tied to them to keep them from blowing away."

"Isn't that all there is to it?" inquired the druggist with some surprise.

The C. P. shook his head. "That much of it is all on the surface where everybody can see it. Let me ask you a question. Are all your sales on prescription?"

"Of course not! Only a small proportion."

"Who prescribes the medicines that are never ordered by the doctor?"

"Why, nobody! The people themselves, I suppose."

"Friends, relatives, newspapers, patent medicine advertisements, all of them less competent to prescribe than the druggist."

"People don't run to the doctor for every little thing."

"Why not?"

"Because it is not worth while. Most of the ailments are too trifling and doctors' visits are expensive."

"So your theory doesn't always hold. As a matter of fact the doctors do only a very little of the prescribing although they think they ought to have a monopoly of it. Everybody prescribes for himself more or less, and every mother is constantly at it, deciding daily and hourly about the needs of her children, regulating their diet, putting flannel and kerosene on Johnny's throat and feeding cough-syrup to Susie. According to your scheme, the law ought to forbid all that. It is the doctor's business."

"As a general thing, it would be better, you know," said the druggist.

"I doubt it," replied the sage. "The average mother is a tip-top doctor. She knows her patient from top to bottom. She has made a study of them. Besides, if your theory were to be applied rigidly, the average father of a family could not earn enough to pay the doctor's bills. The medical men would gobble the entire income of the country."

"Oh, it wouldn't be as bad as that."

"No, because people must eat and have things to wear before they dose their insides. But apply your rule anyway, and there would be mighty little prescribing at all. It would knock the entire medicine business endwise."

"How?"

"If no one could prescribe but the doctors, there wouldn't be much call for medicines. All the cough mixtures, patent tonics and the thousands of other preparations would have to go to the rubbish heap. That would be the end of a vast, flourishing business."

"Then what is all the trouble about?"

"It is the same old fight between the doctor and the apothecary. The medical man knows that the drug man can often prescribe very intelligently, and is afraid of his competition. It is the old cry. 'This is my field; get off!' The doctor has his own field pretty well fenced in by this time and is beginning to look hard at his neighbor's vineyard. In some cases, the druggist is, of course, unable to do the best thing. The theory is applied to him by law, and there you are. The part of the scheme that applies to the other fellows is not enforced by law, so that the druggist gets squeezed, as usual. It is contrary to law even to advise about the goods one is selling."

"But no druggist can avoid doing a little of it"

"Of course not. And nobody can really object to that, you know. What the doctors kick against is competition, and even a mother's advice to her small son to stop eating green apples is that."

"Pharmacists don't charge for advice."

"Not as a general thing. The intent of the law is to prevent the half-educated pharmacist from posing as a doctor to the injury of the public. As usual when such beautifully simple theories are involved, the thing is applied too rigidly."

"Still we must have some law about it."

"Why must every law squeeze the druggist hardest of all? Suppose I have a cold, and ask a friend what to do. 'Quinine and whisky,' he will say most probably. I go away and dose myself accordingly, and no one has the least objection. But let a drug clerk do the same thing, and he may go to jail."

"And besides all that," said the druggist, "the doctors can compete with the druggists all they please. In some places they dispense all their medicines and buy them direct from the manufacturers at that."

"That is where the druggists failed to protect their interests. They should have secured a law prohibiting dispensing by physicians."

"They have laws like that in some countries," said the druggist. "I wonder if it will ever come to that here."

"I believe," said the sage, "that pharmacists ought to look out for legislation likely to cut into their rights rather than to work for the gouging of the other fellow. Powerful legislation committees is what they need."

"That will not stop all legislation."

"The mills must have their grist to grind," said the sage, "even though nobody needs the output. Perhaps in time no one will be allowed to put anything into his mouth without first consulting a registered and triple-diplomated practitioner. Then the doctors will own the earth and the fulness thereof."

TYPES AND PECULIARITIES OF CUSTOMERS.

The old drug clerk was in a reminiscent mood. For the years he had followed his occupation he had seen the ups and downs of human life. He had prepared the medicine for the mother who had brought to the world the child whose life was to cloud hers with trials and disappointment. He had sold the dainty perfume to the charming high-born maiden, with her dreams of the noma of power and lordly castles where wealthy nobles dwell. With his own hands he

had put up the remedy that had restored to health the aged minister of the Gospel who had officiated at the christenings, marriages and obsequies of more than half of the community. He was qualified to talk on some of the phases of life, and his listener knew that he would prove interesting.

"I believe that this kind of a life gives one more opportunities than any other to see into the true inwardness of humanity. What do you know about the personality of another individual? Can you justly estimate his conceptions of hope or fear, his sensations of pleasure or pain, his ideas of happiness or misery? Embark in the drug business and I think you will be able, if you are observing, to understand more about the personal make-up of the community than you ever did before."

"I have answered night-calls for all classes of individuals. The physician hurrying to make an emergency call, the frightened mother who wanted a doctor for her sick child, the father who wished an undertaker to lay out his dead son, the 'rounder' who must have his 'pick-me-up' to put him in shape for the morrow's duties, the convivial individual to whom a 'bracer' would prove a god-send—all have called on me for assistance."

"I have witnessed comedy that verged on the ridiculous. Once I was called up by a man who wanted some corn plasters. I wrapped them up and he threw down a two-dollar bill to pay for them. I started to get the change, when he said, 'Here you poor devil, keep the change for yourself. You look about half-fed, and you appear to need the money more than I do. I made a few hundred on the races to-day and expect to win some more tomorrow. Brings a fellow luck to give to charity.' First time I ever hear of a drug clerk taking the place of the traditional hunch-back to bring a gamester luck."

"I have had squabbles with cranks who wanted to use the telephone and then cursed me because they could not get the people they called. I even had counterfeit money passed on me in the night. Why, once I was called up to give a man a quarter of a pound of linseed meal, and when I told him it would be a quarter of a dollar he said it was too much, threatened to call on the 'boss' the next morning and to use his influence to have me discharged on the ground of 'extortion.' Said I took advantage of his necessity and would rue the night I met him. There might be 'people' I could 'work' but he wasn't one of them. He finally took the package and had it charged. Sure enough, he came down the next morning with vengeance in his eye. I had taken the precaution to post the proprietor and he said that I did right. I was out to breakfast when the interview took place, but from what the proprietor afterward told me it was a stormy one. I retained my place and we never saw anything of our friend until one day about eight months later when he came in and purchased five cents' worth of Epsom salt. I weighed out two ounces and although he looked at the package as though he expected to get a pound or so, he never said a word. He had learned his lesson."

"After working behind the drug store counter for years you will never be surprised at any exhibition of character; the types and peculiarities of customers run the whole gamut of humanity."

FOUND A SCHEME FOR DOING FAVORS.

"I made a hit this year, and it didn't cost me anything," said a Columbus avenue druggist on the day after Christmas, "I believe the idea I followed out was original with me, too."

"Every day for two weeks before Christmas in the years back I had been requested for boxes, boxes of all sorts and shapes, weights and colors. They were desired, of course to wrap gifts in. After a few successes in meeting demands my stock always would run out, and I would have to say, 'I am very sorry, but I haven't a thing that you could use.' Sometimes

especially with old customers, these refusals hurt, and I could see them looking toward my shelves when just what they wanted was visible—but full—in a manner that plainly showed that they doubted both my veracity and my willingness to oblige.

"But I prepared this year—I began six months ahead of time. That is, simply, I destroyed no conveniently-shaped cartons, but, packing them into a small space as possible by making them hold each other when they would, I stored them in a dry corner down stairs. They were not in my way.

"By the time the demand began this fall I was ready. I got a nice assortment up stairs in the back room. 'A box?' I would reply to a request. 'Let me see, I don't know for certain whether I can find what you want, but I'll do my best if you'll just be patient for a moment,' or something on that order. Then I would post into the back room, after a moment or two of visible meditation, and get the box, never in a hurry, however, often filling a prescription, copying one or doing some one of the other innumerable things always cropping up in a prescription room. When I returned, after a few moments of ostensible hunting, with the coveted box and the cheerful assurance, 'I believe I've found just what I want, Mrs. Brown. I emptied this.' Of course I had emptied it—at some time or other.

"I thought, as long as I was trying the experiment, that I would put in another. So I dropped in each box a neat little card containing a printed statement of a few bargains in toilet accessory gifts. They are sure to be read, for they are picked up just at the moment when the finder's mind is on the subject of presents.

"I've given away two or three hundred of these boxes, that is, have done that many distinct favors to the people of my neighborhood, more than I could do during all of the rest of the year put together, and it hasn't cost me a cent. Does it pay? It certainly will, and pay big."

AN ARGUMENT FOR WOMEN CLERKS.

"Every drug store of any size should have a clerk of the gentler sex," said a Syracuse druggist. "My neighbor across the way taught me that lesson. I noticed for some reason that he had a flock of women falling over each other to get into his store at times when I had only a few. I couldn't understand it, since I had a good stock and displayed it as well as he. I asked my wife about it and she, as usual, helped me out of my difficulty. She began asking questions among her friends and soon found the root of the trouble.

"The best thing you can do," said she, "is to get a woman clerk in your store before your rival gets all the trade."

"I thought she was poking fun at me, but she was in earnest.

"You see," she continued, "there are lots of things a woman wants to buy that she is too modest to ask a man for and, other things being equal, she will go where she can make her wants known to a woman. Perhaps the drug clerk does not think anything about it, but a modest woman always experiences a severe shock when she has to buy certain articles and medicines of a man."

"It did not take me long to discover that my wife was right. I kept watch the next day and saw several ladies come in and look around to see if there was not a woman who could wait upon them. There was none, and they had to tell their wants to a man. Of course, it may be a false modesty and all that, yet if your wife or daughter had to buy any one of many things I might mention you would feel much better if you knew she could deal with a woman rather than a man, perhaps a fresh young upstart of a clerk who would giggle to himself after she is gone. I now have a young woman in my employ and am fast working up a trade among the women."

COUNTER PRESCRIBING NOT THE WORST CRIME.

Beaver Falls, Pa., December 20, 1903.

To the Editor:—In the past month I have read several articles regarding the arrest and conviction of drug clerks accused of counter prescribing.

It seems to me that a man has a perfect right to compound simple remedies for customers who state that they need a laxative, have a cold, headache, or other trifling ailment, but it seems as if the doctors want all the money to be had when a man is in need of medicine.

Take the average doctor. He carries his own medicines, or has them in his office; he compounds prescriptions for patients, charges them for the same and leaves the druggist to look out for his own prescriptions. If this practice continues there will be no use for a prescription counter in a drug store.

My opinion is simply this: A druggist has as much right to prescribe as a doctor has to compound his own remedies. A man cannot always afford the cost of medical advice when by stating his case to some reliable druggist he can get something to benefit him and in most cases effect a cure. I don't believe in druggists taking upon themselves the responsibilities of cases of sickness and attempting to diagnose and treat them, but I refer to those cases which are simple and in which the customer explains his own ailment.

If for instance, a man came in, said he had a bad cold in his head, and the druggist were to say, "Why, you had better see a doctor," he would go to the medical man, have his pulse felt, his tongue examined and get some quinine and some laxative. The doctor charges him \$1.00 for his fee and 50 cents for medicine and the druggist sits in his store and whistles for the prescription.

One doctor recently came into the store and showed us a new case he had just bought. It contained 30 or 40 bottles and he left it to be filled. We filled it for him. Before that time he had sent a goodly number of prescriptions, now he is using our medicines and when he needs more he will probably order from the wholesaler.

Talk about your "easy marks," but the druggists are IT, especially here.

C. E. HARRINGTON.

SOCIALISM THE REMEDY.

Frankfort, N. Y., December 21 1903.

To the Editor:—Socialism is the remedy not only for the drug man but for the world. Rent, interest and profit are the causes of all crime, misery and unhappiness. Abolish the cause—do not cut off the thistle tops but dig out the roots and social order will come out of the present chaos.

The drug man uses wood alcohol in vanilla extract, also sells whiskey, adulterates, etc., etc. The grocery man and every other man in trade does wrong for profit. I know our brothers will say "lack of incentive"; but never fear! The present generation will not disturb this crazy system—future generations may be more wise. The big stores will grow and there is no hope for the small fry—the survival of the slickest, you know.

A factory here has just laid off 400 men—middle of winter—the average workman is 30 days from the poor-house and so it goes on. Paupers and millionaires, and he who cries out against present injustice is a traitor!

CHAS. WILLIAMSON.

DR. OTTO A. WALL, St. Louis, Mo.

TRY DECENT JOBBING HOUSES.

Vailsburg, N. J., December 22, 1903.

To the Editor:—On page 624 of the Era a pharmacist complains that jobbers substitute. Let him deal with decent jobbing houses, and he will not get it in the "neck," but will get "what he asks for."

Pharmaceutically yours,

JOHN PEEFFER.

JOTTINGS FROM A PHARMACIST'S NOTE BOOK.*

By PROF. C. B. LOWE, Philadelphia, Pa.

I HAVE been thinking within recent years that these state meetings should be made as practical as possible and to further that end, that the majority of the papers read before us should be of a practical nature. One or two state associations go further than this and exclude all purely scientific papers, claiming that the proper place for them, is the Scientific Section of the American Pharmaceutical Association. I think the latter view an extreme one, but I am certain that the papers which elicit the most discussion are those which touch us in our every day life. With that end in view I give you today some jottings from my mental note book. First.

The Prescription Department.—This should not have merely the room that is left after the wants of the other departments of the store have been provided for, but it should be sufficiently commodious for two or three (in the average store) to work at the same time without getting in each other's way. It should also be well lighted if possible, and kept clean, neat and orderly, for order should be the first law of the drug store as well as that of Heaven. The manager of my store is a crank in this respect. I hardly dare lay anything down on the prescription counter without its being whisked out of sight. I sometimes get provoked at his ultra zeal. I don't know how many times a day he sweeps the floor of the prescription department. I tell him sometimes that the dust would not look any worse on the floor than it does on the bottles, but if he errs at all, it is in the right direction, the chances for mistakes are much less in an orderly store. I know a store where the unwritten law seems to be to never put anything away, as it takes less time to hunt for it when you want it.

*Read at a meeting of the Pennsylvania Pharm. Assn.

I have noticed a difference in the manner of weighing at the prescription counter, some use a spatula tapping it gently, as I was taught to others weigh directly from the bottle. The former method seems more accurate, the latter more expeditious. Duplicates of all the powders in the store should be kept on the prescription counter and the liquid preparations as near as possible. A good way of designating similar looking drugs, especially salts of the same base which would naturally be grouped together, is to paste upon the container a large capital letter, for example, B for Potassium Bromide, C for Potassium Chlorate, I for Potassium Iodide. A modern way for arranging pill cupboards is to have the shelves attached to doors, the bottles being kept in their places by stout wires. One row is upon the inner side of the outer door, then an inner door with a row both upon the outer and inner sides and finally a row against the wall; the doors should be hung upon stout hinges and open away from the window, thus allowing the light to shine into the cupboards. This question of light was not thought of in one case that I know of, hence the bottles are always in the shadow. The keeping of prescriptions is a somewhat hackneyed subject. When proprietor of a city store I used to bind them in books which were kept in binding cases that preserved them perfectly; but the cases were somewhat expensive, took up considerable room and were not very convenient in renewing on account of being bound so closely together. The heavy brass wire answers well. I keep the files in a hallway adjoining the store, 5,000 prescriptions of renewals being kept on each file, the numbers being stenciled on the wall in large black letters over each file. My method of keeping account of renewals is illustrated by the blanks shown you. It has proven of much value in keeping our charge accounts straight and in the renewing of prescriptions.

Capsules continue to be prescribed much more largely than pills. As a rule I think I prefer to fill them dry, as probably a less troublesome method for the pharmacist and a better one for patient on account of their greater solubility, but care must be taken to wipe them carefully, especially if they have been filled with a bitter substance. We always make a note on the margin of the recipe of the mode of filling and size of capsules, e. g., dry No. 3, or mass No. 2. We lately had a prescription calling for 2 grains of ichthyol and 2 drops of gualiac in each capsule. The ichthyol is a solvent for gelatin and the gualiac on account of its oily nature is difficult to make into a mass. I made the ichthyol into a mass with powdered licorice root, divided and placed in the capsules, then dropped in the gualiac and sealed the capsules.

The telephone while at times a nuisance because it always seems to ring in the imperative mood, is proving increasingly valuable, for besides the calls which you would naturally expect to get from nearby customers, it brings us into touch with more distant ones, thus enabling a good store to extend its business. It is a great time saver in case of doubtful prescriptions, and we are frequently called to the phone by a physician to take down a prescription; such prescriptions, however, should always be verified by being called back to the doctor.

Shop Furniture.—I have lately had my attention called to some shop bottles purchased by a pharmacist about two years ago, they are square with a groove just above the bottom. He thought on account of their low price that he was getting a bargain, but through want of proper annealing many of them have broken at the base of the neck so that he is utterly disgusted. Moral: The lowest priced goods are often the dearest in the long run. My attention has also been called to some elegant shop furniture made by a manufacturer of good reputation, which has split badly. It would seem to me wise in purchasing shop furniture that the manufacturer be required to give a written guarantee that this will not occur.

Printing.—I was lately impressed with an article in one of the drug journals which spoke of the drug-

gist's printing being to some extent an index of the character of the store. I show you some bill heads, note heads, telephone prescription and renewal blanks which I think are quite neat. You will notice that the color of the paper is light blue and that of the ink dark blue. I am thinking of adopting (in time) the same color and style for all my labels thus making the printing of the store entirely distinctive and characteristic.

The Drug Store Grounds.—If the printing may be made characteristic (if you cannot the grounds adjoining the store (if so fortunate as to have them) be made also an advertisement of most pleasing character. From various reasons I have never been able to do much with plants in the store, although my wife has had fine success in the house, but I think the Pelham Pharmacy grounds do reflect credit upon the care which my son has bestowed upon them and indirectly have been an excellent advertisement for the store.

The Sunday question has been a perplexing one in Philadelphia the past year, for between the municipal authorities and the Sabbath Association the poor pharmacist has been "between the devil and the deep blue sea," fines having fallen upon both the just and the unjust. I have never sold soda water on Sunday because I have felt that the day should be as far as possible a day of rest, and it certainly would not be that if my clerks have to dispense soda water from early till late. I think it possible to educate your customers into supplying their wants on Saturday. I am sure that our Saturday business has been greater since the Sunday laws have been more strictly observed.

The proper treatment of the customer is a question of much importance, for it may make all the difference between success and failure. Pleasant words for each customer, especially for the children are "trade winners." Don't, however, go to an extreme and sloop over. I know a brilliant lawyer who on account of an entire absence of dignity has impressed the public far less than his ability warrants. How shall we treat our cranky and fault-finding customers? Shall we allow our bosoms to be riled, lose our tempers and say sharp things in return? As I get older I am becoming more of a philosopher, I am able to see that these unpleasant peculiarities simply differentiate mankind from one another and keep us from coming down to the dead level of uniform pleasantness. I do not advocate allowing your customers to run riot over you; a pleasant explanation is frequently all that is necessary. Complaints are often made through ignorance or misunderstanding. When I am sure I am right I always maintain my position firmly but gentlemanly. My manager who is younger and quicker tempered has hard work sometimes to maintain a judicial temper, but I tell him life is too short to get angry very often, besides anger is injurious to health, and to some extent a confession of the weakness of your side of the argument.

SENTENCE SERMONS.

Shining lives seldom come out of soft circumstances.

Denouncing sin is not the same as renouncing it.

Half of life's sorrow is but weeping over weeds. A good push will scare the devil more than a whole lot of preaching.

Pride dies in the heart when love looks out of the eyes.

The best way to pray for the poor is with your own basket and store.

You cannot make clouds for others and live in the clear light yourself.

Men who are great on little things are apt to be little on great things.

The Christian is sure to be lean if he keeps his manna laid up in a museum.—Chicago Tribune.

Native Vender of Opium in Camp.

PREPARING OPIUM IN THE ISLANDS OF THE PACIFIC.

By An Ex-UNITED STATES SOLDIER.

The Natives of the Southern Islands Have Odd Processes.

THE writer has been travelling in the islands of the southern Pacific ocean for nearly three years. During this time I visited the islands of the Philippine archipelago, the Sulu group, Borneo, Gilbert islands, Guam and other places, and the following notes on the processes of gathering and preparing opium were suggested by the scenes I witnessed while making this tour.

The poppy head of the opium-producing plant is not an uncommon sight in many of the countries referred to, for there are Chinese and Japanese residents and also many natives of the different tribes who smoke opium. In fact, I found it quite common for large numbers of persons in these southern islands to partake of the drug. Most of the drug is supposed to be imported from China, but there are numerous portions of the islands in which the Chinese, native Indians, and occasionally some Europeans have begun opium growing.

The poppy head is usually lanced about three or four o'clock in the afternoon of the day of collection, and as soon as this is done, the opium-forming juices exude. This substance collects upon the plant growth in such a manner that it can be removed next morning in a cake-like form.

The exuded material is collected into kettles, the form of the kettle varying in the different islands. The general design is that of an open-top arrangement, in which some dozen pounds of the collected and dried oozing can be placed.

Sorting and Manipulating.

After the collection follows the operation of sorting according to color, density, fiber, smell, taste, fineness, etc. This process requires skill and judgment, and usually the work is done under the direct supervision of the owner of the opium lands or the overseer. After the grades are separated, the processes of storing for future use are arranged for.

One of the retaining pots is illustrated on this page. It consists of a stone vessel which is adjusted

in a bamboo frame. The stone is sometimes only the sand-stone of the country, but is sometimes solid rock, cut out with much labor with native tools. In a few instances the storage devices consisted of small pots resting upon wooden stands upon which rows of the pots are placed.

Working.

The first actual mechanical or manual processes through which the opium passes is a sort of kneading upon a smooth board. The natives use a board of one of the big trees of the southern sea islands. It is sometimes placed on the ground and sometimes on wooden legs. The manipulating begins with a dark, putty-like ball of stock containing one or one and one-half lbs. of opium. The ball is heated upon a small oven. These ovens are made from the remarkable sandstone abundant in the Philippines. A fire-clay mixture unites the stones, and this bakes hard under heat and results in a very servicable oven.

The Golden Yellow Tint.

What is known as the golden yellow tint marks the completion of the process, and is usually developed as the last stages are reached. The workmen must now knead the opium by hand until the proper shades are secured indicating that the stock is near the required standard.

Preparing for Markets.

The final operation involves the making up of the stock into forms for sale in the markets. The Chinese and the natives of all these islands consume quantities of the home-made article, although this grade is not so good as that imported, and is much less expensive. The cakes of opium are made into one-pound packages for shipment, or for sale to the large agencies in Borneo, or other points, while for local trade among the Moros of Mindanao, or the natives of the more northern portions of the Philippines, packages of smaller sizes are made. In fact there are packages as small as pills. In packing, poppy chaff is mixed in between the packages to keep the load equal, and steady.

Transportation.

The native carriers of the Isla de Mindanao, the Sulu archipelago and other sections have strange ways of trotting over the mountain trails with packages of opium put up in loads having much the appearance of tea chests. There are very few vehicles in this part of the world, and the native runners and packers are the freighters. Two men carry about 80 pounds suspended from a pole on the shoulders.

Some of the native opium manufacturers put up the packages in skin cases, consisting of a series of little packages of the stock sewn up in one large package

Collecting Pots and Apparatus for Working Opium.

6
Oven Used in Heating Opium Mass.

with the hide as shown in the figure. The hide of the water-buffalo, or the native caribou is commonly used. This makes a very tight package that can be shipped.

Signs.

There are, of course, laws forbidding the use of opium in all of the municipalities of this part of the world and smoking is not carried on openly. But there are thousands of small towns, barrios and hamlets in all of these islands of the Southern Pacific where the natives are without law or order, and here the people smoke opium without restraint. They do not smoke only when they have no stock. There is no law or any official to prevent. I refer to the barrios of the river ex-pirates, the ladrone villages of the jungle, and the interior hamlets of the Moros of lake Lanao where white man has as yet never had authority.

These observations apply to the use of opium among the natives of the islands of the southern Philippines, and such islands as are within an area of some two or three thousand miles.

THEORY AND PRACTICE

TWO COLOR REACTIONS OF YOHIMBIN.

G. Meillera (Journ. Pharm. et Chim.) reports that yohimbin gives with cane sugar and sulphuric acid the same color reaction as the gallic acids. To obtain the reaction a small particle of the alkaloid is dissolved in a few drops of sulphuric acid diluted with an equal volume of water in a small porcelain dish, and treated at once with a trace of saccharose, glucose or furfurol. The mixture is then warmed upon the water bath, until a wine red color, develops. After cooling it is tested with the spectroscopie. A broad absorption band is observed in the blue between 110 and 135 of the Saletsch spectroscopie. Another color reaction of yohimbin is similar to that of other alkaloids; upon heating with nitric acid a yellow residue results which with ammonia yields an ochre color.

ANILINE POISONING.

Wrzosek, St. Horosziewicz and Rzegocinski (Apot. Zeit.) state that aniline is a poison of the central nervous system as well as a blood poison. Poisoning may occur through the lungs, stomach or the unbroken skin, and is eliminated from the organism in the urine partly unchanged and partly converted into other bodies. The compound, and a decomposition products act upon the central nervous system as well as a blood poison. Poisoning must be referred to changes in the central nervous system except the decrease of red blood corpuscles, cyanosis, the formation of methemoglobin and jaundice. The anatomic changes following aniline poisoning are not very characteristic. In acute poisoning death results, at least in animals, from paralysis of the central nervous system.

EUMYDRIN, A NEW MYDRIATIC.

Lindenmeyer (Berl. Klin. Wechschr.) describes eumydrin a new mydriatic prepared by converting the tertiary base of atropine into a quaternary base. In this way the action of the alkaloid upon the central nervous system is said to be suppressed while its activity upon the peripheral system is retained. The toxicity of the new modification is claimed to be less than one-fiftieth that of atropine. Eumydrin forms a white odorless powder which is easily soluble in water. In dilute solution it is intermediate between the usual one per cent. homatropine solution and atropine; in more concentrated mixtures it approaches the activity of atropine.

RADIUM, THE RAREST OF ELEMENTS.

Sir W. Ramsay in a recent address before the London Institution states that radium is by far the most rare of all known elements. It forms only ten-millionth part of the pitch-blende in which it is found. This mineral has been largely worked by the Austrian Government for uranium, and radium itself was found in the residues to which Madame Curie had access. Since the discovery of the element the exportation of the residues has been prohibited with the result that pure radium is now £50,000, or about \$250,000, for the fifteenth part of an ounce.

THERAPEUTIC YEAST PREPARATIONS.

J. L. Baker (Jour. Fed. Brew. Inst.) states that the efficacy of yeast as an internal remedy depends upon the enzymes present, also to a certain extent upon the improved nutrition derived from its easily digestible constituents. As a lotion its action depends upon the bactericidal power of the products of fermentation. The therapeutic value of permanent yeast preparations is measured by the quantity of enzymes present.

NEW COLOR REACTION FOR SESAME OIL.

H. Kreis (Chem. Zeit.) in an article on sesame oil describes a new color reaction useful in detecting this material in mixtures. Five C.c. of sesame oil shaken with 5 C.c. of 75 per cent. sulphuric acid and 3 C.c. of hydrogen peroxide solution, yield an intense olive-green color. This reaction depends upon the presence of a characteristic body named sesamol and is said to be capable of detecting 5 per cent. of sesame oil in olive, cotton-seed, arachis, almond, peach, linseed or castor oils.

9
Opium Packed for Export.

NEWS DEPARTMENT.

AMONG THE BOWLERS.

Philadelphia, December 29.—In the last games rolled the J. Elwood Lee Co. took three straight from Hance Bros. & White. The highest totals for the series were won by C. L. Wells of J. Elwood Lee Co., 555, and Hendrickson of H. B. & W., 454. The scores are:

J. E. Lee Co., 722 857 829 H. B. & W., 672 641 590

Standings:

	W.	L.		W.	L.
Johnson & J.	15	0	Wanderers	4	8
J. Elwood Lee Co.	15	3	P. D. Blue	6	15
Smith, K. & French	9	3	P. D. A. Red	2	13
Phila. C. P.	9	6	Hance Bros. & W.	0	12

Baltimore, December 29.—The players of the Baltimore Drug Trade Bowling Club rolled only two games last week, Friday's contests being omitted on account of Christmas. The total and high individual scores:

Root & H. 735 839 826 Stanley & B. 798 758 745
 Beaumont 194 Lockwood 188
 McCik & Co. 810 780 815 Calvert Drug. 753 745 731
 Brauer 235 Ellicott 203

Standing:

	W.	L.		W.	L.
James B. & Son	25	8	Sharp & D.	17	16
Root & H.	23	13	Stanley & B.	16	20
McCormick & Co.	23	13	Calvert Drug Co.	1	35

Detroit, December 29.—Last week was an "off" one among the bowlers. The men have been doing a little practice work, however, as one team is afraid of the other, and is determined not to let any advantage slip by. The P. D. & Co. averages were officially announced on Saturday night. Lawrence held first place until the final round, when Smith succeeded in ousting him. Chemical kept their position as leaders from the beginning, but Stock is hammering along, and is proving dangerous to them now. Canada, the tail-enders, have taken their expected brace, and from this time on will cause trouble all along the line. The individual averages of the four leaders of the league are: J. Smith, 174; Lawrence, 172; Siffer, 165; Helme, 161. These are for 36 games.

AMONG THE TRAVELERS.

Carragan's New Loving Cup.—Things Pretty Nice in St. Louis.—Christian a Millionaire.—

Love's New Position.

Sydney H. Carragan, popular leader of the Parke, Davis & Co. travelers, received from "the boys" a splendid cut glass punch bowl and stand, with all its accessories. A little dinner at the Drug Trade Club was made the occasion for the presentation, which was made in a neat speech by Frank Cuddy, and was followed in short speeches by Drs. Takamine and Tuthill and Messrs. Mariager and Carr.

The head of the traveling men's department of a St. Louis drug house reported last week that there will be remarkably few changes in the hustlers this year. He said that his traveling men had been doing well and he was able to come to terms with those who had presented their requests for next year, and believes other houses must be doing the same, as he has had few applications.

A. V. HENNICKE.

Mr. Hennicke, in the picture is sitting in the Christy drug store dispensary, Pittsburg, Pa., and the camera was worked by the capable manager of the store, Miss Juliet Jennings. Mr. Hennicke is a traveler for McKesson & Robbins, celebrating his twentieth year with them last summer, and needs no introduction to most of our readers in Pennsylvania, with whom he has become an old and trusted friend.

Among traveling salesmen in Baltimore last week were J. H. Wells of Ladd & Coffin, New York; C. W. M. Nicholls of David Green & Co., Arabics, New York; J. Frank Egerton, representing the Granitonic Hair Food Co., the Ozomulsion company and T. A. Slocum company; Robert L. Tye, Merck & Co., New York, and W. A. Munn of St. John's, New Foundland, manufacturer of cod-liver oil.

E. F. Cordell, Jr., a son of Dr. Cordell of Baltimore, will in the future represent William R. Warner & Co., of Philadelphia, in Baltimore, taking the place of Dr. E. C. J. Miller, who has gone to West Virginia to practice medicine.

Mr. and Mrs. John Paul Jones will celebrate the twenty-fifth anniversary of their marriage on Jan. 2, at 1304 West Lexington street, Baltimore. Mr. Jones, it seems almost unnecessary to say, is New York State representative for Sharp & Dohme.

Col. John W. Love, well-known and popular as a former New Haven, Conn., retail druggist and prominent in N. A. R. D. circles, is now in Boston for Eli Lilly & Co.

WE have some interesting literature on Konseals which we would be glad to mail with samples to physicians in your locality. Send us list and we will mention your name.

J. M. GROSVENOR & CO., - Boston, Mass.

J. P. Christian, the genial ex-Sharp & Dohme traveler, who recently went to the Transvaal as fiscal agent for a big mining promotion company, is back with an ultra-expansive smile. Mr. Christian, according to assays, is a couple times a millionaire now.

Charles A. Nichols, formerly clerk for the Ashland Drug Co. of Mansfield, O., and recently connected with Caldwell & Bloom of the same city, has accepted a position as traveling salesman with the Hess Medicine Co. of Ashland, Ohio.

NEW YORK AND VICINITY.

DRUG CLERKS' BALL.

Nearly a Thousand, Including Many Prominent Guests, Gather on Christmas Eve in Terrace Garden.

Nearly a thousand drug clerks and their friends spent Christmas eve at Terrace Garden, where the Drug Clerks' Circle held its fifth and most successful annual ball. The music was delightful, the gowns beautiful, the arrangements perfect in every detail. Dancing began early, the grand march started about midnight, and it was nearly dawn when the lights were put out.

Several hundred dollars, proceeds of the ball, will be used in hiring an organizer to canvass for new members and, possibly, to establish new quarters further uptown.

To these officers and members of committees is due the credit for the splendid success of the ball: Ph. Lewy, president; Louis B. Epstein, vice-president; Joseph Kahn, Ph. D., treasurer; Isidore Straffer, financial secretary; B. Colle, corresponding secretary; W. S. Sindy, recording secretary; I. Bernstein, trustee; J. Gollobin, sergeant-at-arms; arrangement committee—Jos. R. Beck, chairman; Jos. A. Hertenberg, J. M. Gordon, Oscar Bean, N. Klugman, H. Rudey, S. Rodin, H. Harkavy, H. Davidson, J. S. Gutkin, L. Wiener, S. Laurie, J. D. Robbins; reception committee—Harry Bookstaber, chairman; I. Luntz, S. Norman, S. Stein, D. Robinson, A. Deutch, H. Bletzler, A. Ratnow, N. Gillman, B. Thome, M. Levin, A. Tunen, M. Silverman; floor committee—D. A. Lutz, chairman; B. Levin, floor manager; H. N. Scheckman, assistant floor manager; M. Kupersmith, J. Ziporkes, J. A. Braudie, H. Blumenthal, Ph. Halpern, B. Kopolowitz, D. Katz, J. Sher, Ch. Hochlerner, J. Landes, R. Jaffe.

Among the guests present were: Dr. William C. Anderson, president State Ph. A.; Charles S. Erb, president Manhattan Ph. A., who also, with Dr. George A. Diekmann, represented the board of pharmacy; President Joseph Weinstein of the New York R. D. A.; Peter Diamond, A. Bakst, in whose store the circle was organized, and many others, including prominent retail druggists and their wives.

PRE-REQUISITE COMMITTEE MEETS.

When the board of pharmacy holds its annual meeting at Albany next week there also will be called a special meeting of the pre-requisite committee of the State Association. The committee consists of C. O. Bigelow, New York; William Muench, Syracuse; George Reimann, Buffalo, and A. B. Huested, Albany. Dr. William C. Anderson, president of the State Association will attend. A pre-requisite bill will undoubtedly be drafted.

Dr. Anderson anticipates much legislative activity this winter. While the pre-requisite bill and a cocaine bill which has been drafted by the Syracuse R. D. A. and was turned over by Dr. Anderson to the legislative committee, will likely be the only measures endorsed by the association, there probably will be, Dr. Anderson says, a plentitude of bills adverse to pharmacy.

WAGES NOT SO LOW AT HEGEMAN'S.

That part of a letter from "Pharmac," printed in a recent number of the Era, that relates to the internal affairs of the Hegeman & Co. store at 200 Broadway, is pronounced untrue by Mr. Ramsay, head of the company.

"There is not another store in the city which pays its employees better than we do," said Mr. Ramsay. "Our pay rolls prove it. Now here, in this store, we have 125 employees, instead of 100, as 'Pharmac' stated. There isn't a clerk on the patent medicine side who gets as low as \$12 a week. They get fifteen, eighteen, twenty, and each also receives a commission of from \$5 up on his sales. The manager of that department gets \$65. In our drug department the wages are never as low as \$15, as 'Pharmac' says, but these also range into eighteen, twenty, and more, besides each clerk getting a commission, not on what he sells, but upon the sales of the department. Prescription clerks are better paid. Soda clerks get \$12 and 14, the ones who have been with us longest, 16 and 18, and the head man \$22. Even the cigar men, who certainly are not registered, get \$16 and \$18. We haven't a 'six-dollar-a-week' salesman in the place, at so low a figure. One of them, a boy, gets \$7, but others get more. One of the laboratory men gets \$35 a week.

"We have about 35 registered people here, instead of 19, as 'Pharmac' stated. He must have simply counted the licenses displayed on the messenger department wall. Moreover, in the patent medicine department all but one, a boy who has been with me a long time, are registered.

"We always keep a man; as long as he is all right he is sure of his job. If we were such hard people to work for why is it that the clerks are always trying to get places here? The things that are true here are also true in our other stores—we pay good wages.

NEW YORK DRUGGIST'S FALL KILLS HIM.

Charles E. Monell, a wealthy and prominent druggist of 2 First avenue, New York, walked from a window in the sleeping apartments over his store on last Saturday morning falling to the sidewalk and breaking his skull and back. Mr. Monell was an old man, and had been almost blind for some time, though too sensitive to admit his affliction. Several times he had become lost when out alone. A year ago, to be nearer his business, he left his home with his son-in-law and daughter, Dr. and Mrs. Dana S. Hubbard of 143 West One Hundred and Third street, and moved into the rooms above the store. Mr. Monell died at Bellevue Hospital on Monday night.

WE WANT DRUGGISTS

To send us a list of physicians who patronize them, and we will write each physician that he can obtain Phenalgin from the druggist mentioned; we will also send the physician a sample, with literature.

ETNA CHEMICAL CO.

13 West Street - - NEW YORK

THIRD JUSTICE SITS ON EXCISE QUESTION.

Justice W. S. Andrews of Syracuse will soon give an opinion in a case brought against a druggist by State Excise Commissioner Cullinan for alleged illegal sale of liquor. This case is particularly interesting as already two other Supreme Court justices, Davy and Greenbaum, have rendered opinions in similar cases when the defense was the same as in the case before Justice Andrews, that is that the clerk sold the liquor in violation of a standing order from his employer, the latter therefore not being responsible. The opinions of Justice Davy and Greenbaum were conflicting, however, being respectively favorable and adverse to the druggist. The present suit is against John W. and Charles W. Barnes, who had a store in Syracuse, and the Fidelity & Casualty Co., their guarantors. John W. Barnes is dead, but his brother who continued the business, swore George W. Barnes, his son, made the sale. The attorney for the State said that the question at issue was most important, and that if the State loses the point, provisions of the liquor tax will be substantially null and void, as in not more than one out of fifty cases is any sale made by the proprietor, and that in practically all cases it could be claimed that instructions had been given as contended in the present case. He contended that the suit was an action on a contract. Mr. Barnes' attorney quoted from Justice Davy's decision, from which an appeal has been taken, and claimed the suit was to recover on a penalty and was in the nature of a criminal proceeding, rather than an action on a contract.

PRETTY CHRISTMAS PARTY TO EMPLOYEES.

One of the pleasantest events of the holiday season in the drug circles was a buffet luncheon given on last Thursday by Fairchild Bros. & Foster to their employees. It was a complete surprise to the guests, who numbered about 140. A big table in the work room on the fourth floor at 74 Laight street fairly groaned with all the good things prepared by Maresi's chefs, and was decorated with potted plants presented to members of the firm by the members of the office staff.

B. T. Fairchild welcomed the guests to the "Christmas party," as it was called, and E. W. Dusenberry responded, after which Messrs. S. W. Fairchild and M. G. Foster also spoke. There was music during and after the luncheon, which began at 12:30, and at three o'clock the annual presents in gold were distributed among the employees, and the rest of the day was declared a holiday.

NEW YORK NOTES.

—Seen down town: J. C. Pratt, manager Detroit section traveling service of Parke, Davis & Co.; Dr. E. M. Houghton of the bacteriological department, Parke, Davis & Co.; H. J. M. Ellis, Singapore, Strait Settlements; Ira Ulman head of Colonial Park Drug Co., retailers of this city, who is attending a medical school in Baltimore; John W. Jennings, Washington, D. C.; Frank P. Dalzell, Cold Spring, N. Y.; Messrs. Webb Souers and Ralston, who form the new Iowa Drug Co. at Des Moines, Ia., and came to buy.

—John R. Wall, druggist of 632 Sixth avenue, has confessed judgment for \$3,392 in favor of Anna Von Wollenrodt on nine notes dated November 20, 1901, payable at intervals of six months up to forty-two months from date, for a loan. He has been in business there since February 1, 1901.

—A reduction of 10 per cent in rates ordered on several classes of risks by the local Fire Insurance Exchange was announced on Tuesday. This affects many

of the wholesale drug trade and is a concession for which they have long been working through their brokers.

—The Drug Trade Club will have its annual New Year's celebration to-day. From noon to 3 o'clock a table d'hôte luncheon will be served, while Scherber's orchestra plays, and from 3 to 6 the Old Crow Quartette will amuse with recitations and song.

—A patent medicine firm, in advertising to the trade, includes the name of Henry P. Crosher, the Greenwich street drug swindler, in the list of jobbers from whom its goods may be obtained.

—Franklin H. Kalbfleisch, head of the chemical company that bears his name, was presented with a handsome barometer, thermometer and ship's-bell clock by his employees.

—Charles De Veau, for many years well known as a messenger between the retail druggists up New Rochelle way to the city wholesale firms, died recently from pneumonia.

—Magnus & Lauer, the essential oils and perfumers' supplies people, gave their regular annual luncheon to their employes at the Drug Trade Club on last Thursday.

—Drug Trade Club guests from out of town: M. J. Osborn, Chicago; F. P. Wölnlich, Detroit; V. A. Bradbury, Evanston, Wyo.; Charles E. Dodd, Albany, N. Y.

—One of the big department stores has been notified to pay \$25 for selling weak spirit of camphor, but promises to fight the matter out in court.

—Tomorrow night is "Christmas Tree" night with the New York Retail Druggists' Bowling Association.

—A slight blaze in A. Greenbaum's pharmacy at 2331 Third avenue resulted in damage of \$25.

—Because of no quorum there was no meeting of the Manhattan Ph. A. this month.

AT ROCHESTER.

—R. J. Strassenburgh & Co., who for eighteen years have been in the retail drug business and for ten years in the manufacturing and wholesaling of drugs and chemicals, have decided to sell out their retail business, with the sole exception of drugs proper. The beautiful new fountain set up a year ago will be displaced, the stock of cigars will be taken out and the shelves rid of all patent medicines. The store after this change takes place will close every day at 6 P. M. The retail store of Strassenburgh & Houghton at 418 West avenue, will be continued. Mr. Strassenburgh has only a part interest in this business.

—February 17 is the date of the next board examination in Rochester, under the supervision of B. M. Hyde. There will be no examination after that until May.

—Owing to its nearness to Christmas no bowling match was held last week. It is expected that a challenge will be forthcoming from the Buffalo team before long.

—There are rumors of many changes in local drug stores with the advent of the new year.

CLERKS DENOUNCE STAMPS.

The Springfield Union Announces That, Should Their Employers Adopt Stamps, They will Have to Handle Them Themselves.

Springfield, Mass., December 29.—Since the recent meeting the Worcester County Ph. A. at which it was formally voted to adopt trading stamps, the Drug Clerks' Union in Springfield held a meeting and emphatically voted not to handle stamps of any kind, nor coupons exchangeable for photographs, or any similar scheme, denouncing them all as cheap. The clerks declare they will not handle the stamps, even if their employers see fit to follow Worcester's course. If the druggists adopt the system, the clerks say, they will have to give out the stamps themselves. As the clerks belong to the Central Union they will have the parent body back of them.

HOAGLAND DRUG CO. NOT SOLD.

Boston, December 29.—Reports which have from time to time recently gained some currency that the Hoagland Drug Company of this city was considering the matter of selling out its business, or at least bringing about some change, appear to lack foundation, according to Ralph Hoagland, president of the company, who said positively to the Era representative that no change is even contemplated in the affairs of the company, and that the conduct of its business will continue as in the past, the officers of the company remaining just as they now are. Mr. Hoagland stated that some changes and improvements in the arrangement of their business offices might be brought about before long, but not in the business itself.

DRUGGIST ARRESTED ON COUNTERFEITING CHARGE.

Boston, December 29.—"Dr." Edward B. Wiggin of the West End, whose profession is ostensibly that of a druggist, with another "doctor" is charged with making and passing counterfeit money. Secret Service agents allege that the two prisoners have counterfeited \$5, \$10 and \$20 notes on various local banks. Their arrest was due to carelessness in passing counterfeit \$10 notes in Manchester, N. H., where both formerly lived. Wiggin's lodgings in Boston showed no evidence of being a counterfeiting plant, but in the rooms of the other were found a camera, acids and chemicals, scales, and paper similar to that used in making money.

MR. CANNING RETIRES FROM CHOIR.

Boston, December 29.—Henry Canning, one of Boston's old-time druggists and once a president of the old National Retail Druggists' Association, a precursor of the N. A. R. D., who has been a church singer for forty-three consecutive years, deciding to retire, made Christmas Day his last one in the choir gallery. He first sang for more than ten years at St. Joseph's Catholic Church, and later went over to St. Augustine's Church in South Boston. His voice is bass, and he long has been famous as a soloist.

THE BAY STATE.

—In Salem there are several drug stores which date back a half-century or longer. One in particular remains quaint and old-fashioned. It is that of Edward L. Rogers, in Essex street, and was established fifty-two years ago by Joseph Chamberlain, who later was succeeded by J. T. Tudbury, and he in turn by the present owner. The prescription books have been carefully pre-

served, and in them are prescriptions calling for things seldom heard of in these days.

—All the way from County Kerry, Ireland, an order came to George E. Fairbanks, a druggist in Worcester. It was in the form of a postal note remittance and asked for a dollar bottle of "Magic Oil" like one which the writer said he had bought of Mr. Fairbanks twenty years ago, and which helped his rheumatism. Mr. Fairbanks does not recall the "Magic Oil," but though he cannot fill the order he intends to reply to his writer.

—Suit has been entered in the District Court in Worcester against the Henry L. Green pharmacy in an action of tort in which the complainant, a woman, alleges that when in the store a month or so ago, one of the cigar lighters set fire to her clothing, damaging her dress and further resulting in her suffering bodily injury and pain. For all this she thinks she ought to receive \$500.

—Allan Adams, employed as prescription clerk in Hall's drug store, Somerville, recently became a father, and a number of leading business men in that city induced him to visit the Board of Trade building in West Somerville, where he was given, in behalf of his child, a handsome silver "Paternity Cup." It was announced that it must be considered as a "challenge cup."

—Abington has a new Law and Order League which is trying to make its influence felt by causing the sheriff to raid John Hanley's drug store in North Abington, but the officer merely served a summons on the druggist to appear in court to state his position regarding sales of liquors.

—The business of H. M. & L. W. Cross, Melrose, has been bought by Charles Bass, who has a pharmacy in Brookline. Lewis W. Cross of the Melrose firm died about a year ago and his brother Herbert M. Cross has since conducted the business.

—G. B. Moulton, a Danvers druggist who is about to move into a new store, is having a special closing-out sale of his stock so that in his new store he can begin with practically everything fresh.

—Dr. C. H. Shattuck, druggist at Balardvale, has been up before the court in Andover on a charge that he maintained a liquor nuisance at his pharmacy. He was discharged.

—At C. W. Blake & Co.'s store in Bedford Centre, burglars stole six or seven hundred cigars of the choicest kinds, ignoring the cheaper brands.

—Winslow W. MacMillan, a Gloucester druggist, recently slipped in the street and severely injured his knee cap.

—The first electric sign ever seen in Whitman is at H. H. Hovey's pharmacy.

—E. E. Wood, druggist in Millbury, is seriously ill.

RICHARD E. MORGAN, a druggist who has had stores in Springfield, Holyoke and Boston, Mass., died at the home of his daughter, in West Springfield. Death was due to that form of paralysis known as multiple sclerosis. He was sixty-four years of age, was born in Wales. During the Civil War he became a hospital steward in the Thirty-Seventh Massachusetts Regiment. He is survived by two married daughters, one of whom resides in San Francisco.

PENNSYLVANIA.

NEW BOARD REGULATIONS.

Practical Tests Required of Applicants for Managers' Certificates.—Believed This will be Followed by Pre-Requisite Legislation.

Philadelphia, December 29.—The State board of pharmacy announces that it is ready to put into operation the plans that were foreshadowed exclusively in the Era. Mr. Cliffe, the Philadelphia member, officially gives notice, that at the next examination, on Saturday, January 16, a solid practical service will be required of each applicant for the registered manager's certificate. This will commence at 8:30 o'clock A. M., lasting in sections until 11:30, the examination will continue from 1 until 6 p. m. The practical work will not be required from the candidates for qualified assistants.

Since Mr. Cliffe became a member of the board he has vigorously fought for this extra qualification, with the backing of every pharmacist in the city, and the execution was postponed until this time solely for lack of facilities. The Philadelphia examinations have always been held in the old Central High School Building, but the new ideas being brought to the attention of the board of trustees of the Philadelphia C. P., it was taken up by Mr. Pile, one of the oldest and most influential members of that body, with the result that it was deemed wise to grant the examination board the privilege of the laboratories.

The board announces that all applicants must send written notice of their intention to take the examination, at least ten days in advance, to Dr. George at Harrisburg. This is imperative. The staff of assistants is now being selected, and the practical work will be watched with all the rigidity that characterizes the college tests.

The legislative committee of the Philadelphia A. R. D. are much pleased with the new stand taken by the board. One of them thinks the step so wise that it will be followed soon with a bill compelling every applicant to show some college experience. If successful in pushing a bill through making some experience necessary, it will be followed at the next session with one calling for a diploma showing a full pharmaceutical education as a pre-requisite to board examination.

BIG PREPARATIONS FOR ANNUAL MEETING.

Pittsburg, December 29.—Elaborate arrangements are being made for the celebration in an appropriate manner of the seventh annual election of the Western Pennsylvania R. D. A., which takes place on February 24. The following committee has been selected to arrange for the affair: Lester L. Lorch, H. O. Damer, L. E. Sutter, C. A. Schaefer, Edward Rosenmoyer, H. J. O'Donnell, Adolph Schmidt, J. R. Thompson, C. T. Bundy, Charles Heim, Jr., John Bailey, W. H. Forst, E. T. Morgan, J. J. Walker and J. W. Hyde, Jr. The event, which promises to be the most successful in the history of the association, will take place at the association headquarters, 624 Sixth avenue. Candidates for the offices have not yet announced themselves.

OTHER HAPPENINGS.

—The Pennsylvania Brewers' Association is out with the complaint that numerous local druggists are infringing upon their rights and are breaking the liquor laws. Under the Brook's law no druggist is permitted to sell malt liquor without a license. It is alleged that many

druggists are selling malt extract by the glass. This beverage, according to the brewers, contains 9 per cent. alcohol, while beer contains only three per cent. What the druggists will do in the matter is difficult to predict, but some who do not sell the beverage are under the impression that their competitors are treading on dangerous ground.

—There are many complaints from competitors because a Pittsburg retail drug firm on the day preceding Christmas distributed among the physicians in the neighborhood quart bottles of whiskey. Accompanying this token was a neat little card bearing the inscription: "A Merry Christmas and a Happy New Year," and a notice that the senders would be under obligations to the recipient for any patronage he could swing to their store.

—E. A. Schaefer and wife of Pittsburg, have gone to California to spend the winter. Both are in ill health and it is thought that the invigorating climate of California will greatly help them. Mr. Schaefer several months ago disposed of his store at 1436 Fifth avenue to Salbaum Brothers.

—The wife of Mr. James Sieling, who operates a drug store at 2129 Wylie avenue, Pittsburg, is dangerously ill from scarlet fever. Mrs. Sieling is known to the trade on account of her activity in the drug department.

—Edward Lecrone of Lecrone Bros & Clarke, the popular Hazelwood, Pittsburg, medicine men, is confined to his bed with typhoid fever.

—Fire destroyed the experimental laboratory of Harlan Page, Allen street and Green Lane, Mt. Airy, Philadelphia, on Wednesday morning.

THE SOUTH.

DENTISTS PROPOSE PATENT LAW CHANGE.

Washington, D. C., December 29.—A new bill in the house is very nearly in line with the patent law changes asked by the N. A. R. D. This bill is drafted for the National Association of Dentists, and provides that Section 4886, Revised Statutes, shall be amended by adding thereto this paragraph:

"But no patent shall be granted upon any art of treating human diseases, or ailment, or disability, or upon any device adapted to be used in the treatment of human disease or disability, or attached to the human body and used as a substitute for any lost part thereof, or upon any art of making such device, unless such device is adapted to be put on the market and sold."

A few words added to the above amendment would shape it to meet the requirements of the N. A. R. D. The dentists are very much in earnest.

KENTUCKY.

—The J. W. Fowler Drug Co., Louisville, have sued the owners of the Masonic Temple, recently destroyed by fire, for \$5,000 alleged to have been stipulated as a forfeit in the event of the tenants being forced to move out within a year after May, 1903, and ask a restraining order to prevent further work of remodeling or rendering the property untenable until the same is paid.

—The drug stores of H. L. McClean and Cox Brothers at Wilmore, Ky., were damaged by fire last Thurs-

ERNEST G. SWIFT, Detroit, Mich.,
General Manager, Parke, Davis & Co.

day. Dr. McClean's loss will reach \$10,000. There was no insurance, that on Dr. McClean's store having expired Wednesday the day before.

—A divorce was granted Dr. Deig, formerly a pharmacist at Jackson and Walnut streets, Louisville, from Mary Lillie Deig, upon the ground of abandonment. They were married on February 12, 1889.

TENNESSEE.

—The wholesale druggists report the largest "jug trade" in the history of the business, due to the liquor law, which allows the open sale of whiskey in any but six of the cities of Tennessee. The law is gotten around by sending the proscribed red-eye direct to the customer, although the order must come through a retail druggist who is responsible for the bill. The U. S. internal revenue department admits the information that since the passage of the law abolishing saloons in Tennessee, except in the larger cities, the revenue upon distilled spirits has increased 10 per cent.

—Fire recently destroyed the woman's dormitory of Walden University, colored, of Nashville, resulting in thirteen deaths and the wounding of thirty young women through jumping from windows. The students of the pharmaceutical and dental departments were aroused from their dormitory adjoining and saved several of the young women.

—On January 1 the Spurlock-Neal company moved into the building recently purchased by them in Market street, Nashville, and to which a \$25,000 addition was built.

AROUND THE GREAT LAKES.

WHAT CHICAGO DRUG CLERKS ARE DOING.

Chicago, December 29.—The Drug Clerks' Association has set out to compel the observance of the pharmacy laws, according to the statement of its leaders. It is reported that this matter is being urged before the trade unions of the city, the claim being made that women and children are employed to do the work of registered pharmacists and that the inspectors of the board of pharmacy are so few that it is impossible for them to ferret out all the violations. The clerks are emphasizing the importance of the enforcement of the pharmacy laws and the danger to the public health which arises from their non-observance. It is said that members of a number of labor organizations have pledged themselves to boycott stores which do not hire union help. The ordinance before the city council asking for shorter hours for drug clerks is fathered by the drug clerks' association, and, it is said, is in the special care of I. B. Kronberger, treasurer of the association. Ten hours a day and sixty a week are the hours asked.

MICHIGAN.

—A Port Huron druggist sold a valuable bottle of perfumery to a lady customer. In a few days the bottle was returned with the request that it be exchanged for another kind of perfumery. It was several days before the druggist found that his customer had filled the bottle with water before she had returned it.

—No show windows at Hancock this season presented a more beautiful appearance than those of George H. Nichols. The color scheme and the artistic taste exhibited in the arrangement of Christmas goods amid the holly wreathes, evergreens and palms were of a striking order.

—J. A. Skinner, druggist of Cedar Springs, means to have one of the largest stores in Northern Kent county. He has just bought out Wheeler & Sons, competitors, and will add the stock and fixtures to his already well-equipped store.

—Druggist Pleasant of Van Buren county has been arrested, charged with the illegal sale of liquor, and a newspaper wag remarks: "Why shouldn't a man with a name like that sell an occasional 'sniffle'?"

—While a clerk in Koon & Hopperstead's store at Muskegon was lighting a taper in the show window, some of the decorations ignited and the entire display was destroyed. The loss will reach about \$100.

—H. L. Labar has installed a row of modern all-glass show cases in his store at Fife Lake. Few villages of 450 inhabitants can boast of a drug store with such modern features.

POLITICAL ATTACK ON MORGAN.

Des Moines, Iowa, December 29.—In the heat of political fighting at Council Bluffs, the otherwise highly respected name of Mayor Dell G. Morgan, president of the Iowa P. A., has been dragged into unpleasant prominence by Attorney S. B. Wadsworth, who is said to want to make the race against Morgan for the executive office. Mr. Wadsworth has filed charges with a court of jurisdiction alleging that President Morgan has been guilty of maladministration in office, and asks that he be ousted. It is charged that he permitted gambling houses to run. Those best acquainted believe that the attack is unjust and animated by political bitterness.

DEATH OF JOHN KEESHAN.

Cincinnati, December 29.—John Keeshan, the oldest druggist in the city, died Sunday night, aged 73 years. He had been ill for the past month with a complication of ailments due to advanced age, and his demise was not unexpected.

Mr. Keeshan was born in Ireland. His parents came to this country when he was only one year of age, and after a short stay in New York, made the trip in winter over the Alleghenies by wagon, and down the river in a flatboat from Pittsburg. The family settled in Cincinnati, and, after attending the public schools, Keeshan took a course in pharmacy and was graduated with high honors. He entered the pharmacy of Henry Harrison situated at Fourth and Main streets, and remained there until he was 21 years old, when he branched out for himself, opening a store at Sixth and Walnut streets. This store he operated over half a century, and then he removed to 611 Walnut street. Failing health caused him to give up the business, but after a short rest he re-embarked in the trade at Race and Commerce streets. This store he operated until recently, when he was forced to retire. Mr. Keeshan was married twice, and a widow and four children survive him.

ILLINOIS.

—William L. Marmon has sold his wholesale and retail drug business at 115 North Main street, Bloomington, to Moore & Stevens Bros. of Memphis, Tenn. This sale marks the termination of the control of this business by the Marmon family, in whose possession it has been for fifty years. The sale includes the three-story building.

—Dr. Dally and W. F. Hinds have bought the drug store of the late B. A. Harding at Blackstone. Dr. Dally visited Chicago recently to purchase new stock.

—J. W. Johnson of Pana, has bought the drug store belonging to the estate of the late Dr. M. H. Smith at Manchester.

—Louis J. Pelikan has bought out V. L. Blahnik at Troy and Twenty-fourth streets, Chicago.

—T. B. Dillon is reported to have opened a drug store at Cullom.

—Robert Endsley has opened a new drug store at Westfield.

A window display in the store of Chas. Leedom, 1403 Filbert St., Philadelphia, showing the lithograph arbor display turned out by Welch Grape Juice Co.

SELANI REEVE VAN DUZER, prominent in the wholesale drug business in New York City and England, died at his home in Newburgh, N. Y., on Saturday. He also had residences at Thomasville, Ga., and Alexandria Bay. He was born in 1823 in New York City. Mr. Van Duzer's paternal ancestors came to this country from Holland in the latter part of the seventeenth century and settled in New York State in the lower part of the valley of the Hudson River. Mr. Van Duzer is survived by a widow and three children, Frederick Van Duzer, president of the American Society in London; Henry Sayre Van Duzer, a graduate of Harvard and a prominent lawyer in New York, and Mrs. Frank V. Burton of Newbury.

GUSTAVE APPEZZELLER, Philadelphia, who was stricken with apoplexy recently, is dead. He was buried from his late home in South Twelfth street.

"The Innovation"

The Modern SODA WATER DISPENSING
and DISPLAY APPARATUS

THE "INNOVATION."

The only new idea in soda fountain construction for the past seventy-one years.

Reference to the magnificent advertisement of the American Soda Fountain Company which is to be found on pages 2 and 3 of this issue will show the soda water dispensers of the United State an entirely new departure in the serving of the great American beverage. All operations are reversed. The soda water dispenser instead of turning round with his back to the customer and drawing syrups and soda from an apparatus against the wall, is now enabled to face the music at every stage of the game and to draw his syrups from clean porcelain containers and his soda water from handsome onyx drafts in plain sight of the customer, his syrup and soda drafts all being a part of the front or dispensing counter.

This dispensing counter is fitted with the latest and best workboards and contains a refrigerator or cooling device which keeps the front counter at all times cold.

There is ample storage for ice cream, fruits, extra bottles, etc., under the dispensing slab.

The display apparatus at the back is arranged to attract an extra amount of attention from the customer. The magnificence of the "Innovation Dispensing and Display Apparatus" cannot be described in words. The effect is simply dazzling.

The first one ever installed at Philadelphia for Mr. Stoeber of the great Broad Street Station Pharmacy has not only given satisfaction from the first moment of its installation, but Mr. Stoeber's letter on advertising page 2 will tell the soda water dispenser what he thinks about the "Innovation Dispensing and

Display Apparatus." He tells the whole story in a short sentence of twenty-four well chosen words. Mr. Stoeber could not have said more had he written a book.

We have known for months that as soon as the "Innovation" was placed upon the market that it would completely revolutionize the soda water business. Mr. Stoeber says exactly these same words in his letter and it is a prophesy which is bound to be fulfilled.

There are so many points in favor of the "Innovation" that they cannot be told in a short article. Sloppy floors caused by passing a full glass of soda water from the wall apparatus at the back to the front counter from the overflowing of glasses, ill smells resulting from rotting wood and sour cream and syrups, unsightly uncleanness, water bugs and disorder of all sorts are things of the past.

The "Innovation Dispensing and Display Apparatus" is built to order to fit space. The salesmen of the American Soda Fountain Company are completely equipped with photographs, plans, specifications, etc., and will give the dispenser any and all information he may require upon the subject on request.

If you are interested, and we know you cannot help but be, address at once the nearest office of the American Soda Fountain Company and you will have instantaneous attention.

PURCHASES LIMITED TO ACTUAL CONSUMING REQUIREMENTS.

New York, December 29.—As the year draws to a close the volume of business shows steady shrinkage, buyers as a rule limiting their purchases to actual consuming requirements. Consequently prices throughout the list show very little fluctuation and about the only important change is a further material advance in values of refined camphor.

OPIMUM.—Dealers report a continued light and unimportant consuming inquiry with the market easy in tone under the influences heretofore noted, but jobbing quotations remain nominally unchanged at \$3.15@3.40 for 9 per cent. and \$3.25@3.50 for 11 per cent. Powdered is moving moderately in small lots at prices within the old range of \$4.00@4.25 for 13 per cent. and \$4.50@4.75 for 16 per cent.

MORPHINE SULPHATE.—Jobbing parcels continue to move moderately into channels of consumption and quotations remain unchanged at \$2.60@2.70 for eighths in ounce-boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce-vials and \$2.30@2.40 in 5-oz. cans, according to brand and quantity.

QUININE SULPHATE.—The volume of business is of about the usual average at this season of the year, but there is a continued absence of new features and the market has a quiet and uninteresting appearance. Jobbing quotations, however, are steadily maintained at the old range of 25@25½¢ for bulk in 100-oz. tins, 25½¢@26¢ in 50-oz. tins, 26@26½¢ in 25-oz. tins, 27@27½¢ in 15 or 10-oz. tins, and 32@32½¢ in ounce vials.

CAMPHOR.—Owing to the strong position of crude in foreign markets, refiners have further advanced their prices 2c. per lb. and the revised jobbing quotations have been marked up to 59@59½¢ for bulk in bbls. and 55@56¢ for less, 59½¢@60c. for cakes in cases and 60@61¢ for less, 61@61½¢ for ounce cakes in cases and 71@71½¢ for less, 64½¢@65¢ for 24s in cases and 71@73¢ less, 62@62½¢ for ounce cakes in pound boxes by the case and 68@70c. for less, 65½¢@66¢ for 24s in pound boxes, by the case and 71 @ 75c for less.

UNION SALAD OIL.—Manufacturers have advanced their prices 2c. per gal. and jobbing quotations are correspondingly higher, the revised range being 49@51c. in bbls. and 64@74c for less.

OIL CITRONELLA.—Strictly prime quality is scarce and higher both here and abroad, and jobbing quotations have been advanced to 42@52c. as to size of order.

WORMSEED.—Primary markets show considerable strength owing to scarcity and jobbers have advanced spot quotations to 23@25c. for whole and 27@32c. for powdered.

HARLEM OIL.—Owing to keen competition among importers the market is unsettled. Gross lots are obtainable at \$2.45@2.70 but by the doz. the quotation is unchanged at 35@50c.

ELM BARK.—Select of prime quality in 5-lb. bundles is very scarce and the jobbing range of prices has been advanced to 45@45c. as to quantity.

CULVERS ROOT.—Producers are firmer in their views, but jobbers are yet willing to sell at the old range of 20@25c. for whole and 30@35c. for powdered.

CARNAUBA WAX.—Spot stocks are exceedingly small and the market is stronger with jobbing quotations showing an advance to 35@40c.

COB LIVER OIL.—Values are lower as a result of keen competition and jobbers quote \$125@150 per bbl. for Norwegian and \$4.50@5.00 per gal. for less. Newfoundland is quoted \$3.00@3.15 per gal. by the bbl. and \$3.50@3.75 for less.

COCHINEAL.—Stocks continue to diminish and jobbers have further advanced quotations to 55@60c. for whole and 60@65c. for powdered.

OIL WORMWOOD.—Supplies are more abundant and the tone of the market easier with jobbing quotations reduced to \$4.00@4.25 for pure and \$3.25@3.75 for ordinary.

CYRUS P. WALBRIDGE FOR VICE-PRESIDENT.

St. Louis, December 29.—Cyrus P. Walbridge, president of the J. S. Merrell Drug Co., is just now receiving considerable attention from the daily and weekly press as a possible candidate for vice-president on the Republican ticket. The first serious suggestion was made made in a local weekly of excellent standing this week and immediately there was a welcome chorus. At Washington where the National Committee met to select another city than St. Louis in which to hold the big meeting that was wanted as a World's Fair feature, Mr. Walbridge came in for much notice.

Mr. Walbridge has many strong points. His middle name is Patrick. He is a hustling business man who always finds time to do things for the public. He was an excellent mayor for St. Louis. He is now making an excellent president for the Business Men's League, and is known to the leading business and professional men of nearly every city in the Union.
