HE RECENT ABRANGEMENT BETWEEN THE BANKS OF ENGLAND AND FRANCE.

is has been known for several days that an arrangement of a penliar nature has been made between the Banks of France England, and some of its most important details have a made public, but much indistingtness still remains in inds of many as to its exact nature and as to its proba-We consequences. Four questions naturally suggest them--lat, What is the nature of the arrangement itself ? ally, Why did the Bank of France desire it ? Srdly, Why If the Bank of England agree to it ? 4thly, What will be ults as far as we can venture to anticipate them P

The arrangement itself has been popularly but erro. aly described as a loan. In reality it is an exchange. Bank of England have agreed to take 2,000,0005 at a in exchange for two millions of gold at the usual rate* and by the French law for the interchange of the two main A loan would have affected the Banking Dopartand of the Bank of England, but this operation will not in a, It is an operation solely of the Lame Department. By law, the Bank of England are enabled to hold one-fifth d the stock of hullion in the Lame Department in allver, all the exercise of the privilege, which has been disuasd for even years, is now to be resumed. The Bank of England agreed with that of France to substitute so much silver a so much gold. The whole effect of the arrangement, then it is completed, upon the published accounts of the bat of England, will be that the line marked "silver "allion," which has so long been a black in the second "allion," which has so long been a black in the second fas Issue Department, will contain 2,000,000/, and that gold selfion in that account will be less by two millions ming than it would otherwise have been. In the published touts of the Bank of France, which do not distinguish of from allyer bullion, the arrangement will make no

At the French Mint I Mingram ma waight is cold

berefore of gold=1.5} of eitver,

The Bank of England has further agreed to return, if called on within a certain stipulated time, 2,000,000/ of silver to the Bank of France, but in the meantime the former is to to the Bank of France, but in the meantime the former is to have as much control over the silver in its coffers as the lat-ter has over the gold in its coffers. Each Bank is to have the whole and undisputed command of its entire treasure. The Issue Department of the Bank of England has bought so much silver to be delivered immediately, and has engaged to sell as much silver to be delivered hereafter; and this is the whole of the contract. There are no minor stipulations whatever. It has been stated that the Bank of France had given a pledge, more or less definite, that in consideration of this arrangement with the Bank of England it would not re-cer to those anomalous purchases of gold which have of hate been disturbing the bullion market. But such is not the case. We have the best authority for saying that the Bank of Engbeen disturbing the bullion market. But such is not the case. We have the best authority for saying that the Bank of Eng-land has not exasted any stipulations of that nature from the Bank of France; that it has not desired to fetter or to be responsible for the free action of the latter; and that in consequence the Bank of France may resume its former course as soon as it chooses to do so.

and their reserve was more than 17,000,000%, and they con-

elder that this is amply sufficient. The difficulty of the Bank of France, it is said, is not the amount of bullion they hold, but the nature of that bulkion. In their seventeen millions, the proportions are in round numbers :---

Gold Silver	**************************************	4,000,000 13,000,000
	and the stand of the second stand	

If every notcholder knew that he could obtain an approximities percentage on his note by getting it changed, depend on it, they say, 'he will get it changed. The same causes which have drained the rest of France of silver (except for the smallest purposes and of insufficient quantities even for these purposes) would begin to not upon us also; in a short time we should be drained of the whole of our thirteen millions of silver.' And this, they say, is the reason for their pro-posing this anomalous arrangement to the Directors of the Bank of England. One remark must occur to every one when he hears this reasoning. It is the remark that no Bank ever ought to be in this position. There must be some fault somewhere; there must either be had management or bad legislation;

THE ECONOMIST.

[Nov. 24, 1860.

there must be some peculiar error; or there could hardly be so peculiar a perplexity. For what is the allegation P The Bank of France say we have a large reserve, but it is not the kind of reserve we want. It is in the wrong metal; it is not gold but silver. The alternative is irresistible that either the Directors of the Bank have themselves made an error in hoarding a reserve in the wrong metal, or that cir-cumstances beyond their power have forced upon them a hoard which they find they cannot use. They have a useless reserve they themselves tell us; either, therefore, they have voluntarily selected it—in which case they are to blame; or it has, by an unfortunate necessity, been forced upon them —in which case they are not to blame.

Nor is this the only remark which must îmmediately be ade. There is another very obvious but very important made. one. This useless reserve is a misfortune, not to the Bank one. This useries reserve is a mislortune, not to the Bank of France only, not to the French only, but to us also, to Europe, and to the whole monetary world. We have 13 millions sterling thus locked away in a great banking esta-blishment, which does not dare to use any part of that sum for fear it may be deprived of all of it: And we have all been sufferers in consequence. The French demand for gold has been disturbing us for several weeks.

In truth, the entire difficulty is caused by the French currency laws. There has been a question whether there is a double standard of value in France, and we will not, therefore, use the phrase, but there is indisputably a *double* paying medium. Both gold and silver circulate in France; both are legal tenders to any amount ; and there is a fixed relation between them. A certain quantity of silver by law will pay adebt of 1,000 frances, and a certain quantity of gold will pay it also. One effect of this twofold currency has been often pointed out. The metal which is relatively depreciated will come into exclusive use; every one will pay their debts in the least valuable metal, not in the most valuable; in the medium which they can obtain most easily, not in the medium which they obtain less easily. But we have now to remark a different effect. Some of the holders of the more valuable metal may be in a difficulty. If they are bound to pay either the less or the more valuable metal to their creditors, and they have not the former, they must use the latter. In consequence, in a country where two metals are a paying medium, those bankers who store up either metal for the necessary purposes of their business run a great risk. If it increases in value, there may be a run upon them, not because their credit is impaired, but because the metal they have chosen is desired.

It may be said that a banker so circumstanced has the emedy in his own hands. He can sell the more valuable metal himself. As his stock of bullion has risen to a premium, he can sell and obtain that premium. But in the present case, it is said, the Bank of France would not probably be permitted by law, and certainly would not be permitted by the Executive, to sell silver in the open market. By the operation of law and what is stronger than law, they can only hold silver for the purposes of paying their liabilities with it : they would not be permitted to become silver-sellers. An exceptional transaction with the Bank of England may be tolerated and has been licensed, because the silver is only gone to a place of deposit which is known, and transferred to a substantial firm which has contracted to replace it; but no ordinary sale of silver would be legal, or at any rate would be permitted.

e difficulty of the Bank of France is therefore intelligible, and the reason for it is clear. The Bank were encourage by their monetary legislation to hold their reserve in a me hich has increased in value, and which would therefore be drained from them if they used it ; they have been further restricted by law and authority from making use of the only dequate remedy, for they have been prevented from selling heir stock of silver at its enhanced value in the markets of their the world.

What, then, is the motive of the Bank of England in agreeing to this arrangement? She has no pecuniary object whatever, as we have the best reason to believe. Her managers wish to as we have the best reason to believe. Her managers wish to promote the convenience of the Bank of France, and to aid it in the artificial difficulties which we have described. They have taken, as they believe, means to secure themselves from loss: their duty to their proprietors required them to do so. But they hope for no profit; and as the transaction is to them only an exchange of one metal for another, with an

engagement to re-exchange the two, it is evident that they

ought not to expect any. What then, lastly, will be the effect of this peer arrangement upon the general market both here and France? We have left ourselves but little space to an this question, and yet it is probably that in whi readers take the greatest interest. It is certain a readers take the greatest interest. It is certain that the momentary effect here has been exceedingly good. The vary rapid rise in the Bank rate was partly caused by an appre-hension of what the Bank of France might do, and had partly in itself enhanced that apprehension in the minds of very many persons. Now it is fondly hoped that we know the worst. We have seen, it is thought, the real nature of the partle of France and we have seen how to satisfy these in that th wants of France, and we have seen how to satisfy them

We by no means wish to be prophets of evil. In so far as the confidence which now prevails is but the regular recovery the confidence which now prevails is but the regular recovery from the undue apprehension of some days since, we are happy to believe that it is legitimate and right. We would not say a word which would disturb it. Nor would we say a word in criticism of the step which the Bank of England have taken, of which indeed all good judges of the money market speak most highly. But we feel it to be our duy to say a few words to prevent legitimate confidence from degenerating into sanguine miscalculation. First, the step which the Bank of England have taken is one which by its nature cannot be repeated. The Bank can only hold one-fifth of its entire stock of bullion in silver. 13,000,0001: one-fifth of that sum is [2,600,0002, and the

13,000,000/: one-fifth of that sum is (2,600,000/, and the legal limit is therefore not far off. The Bank of England, we must remember, must pay its notes in gold; silver with us is only a legal tender to the amount of forty shilling. Accordingly, the Bank runs a risk with every pound of silver it holds. It may have to sell it in the market possibly on disadvantageous terms. The Bank, therefore, must run ao risk of being forced to make a sacrifice, and if they now were to take at all more than two millions of silver, they would certainly be running some risk.

would certainly be running some nak. Secondly, there are no less than five causes of the data of bullion on the Bank of France, and, to some extent, upon us, none of which this transfer from one to the other has any tendency to diminish. These are,—a deficient har-vest; a large foreign expenditure, both of our Government and of the French; large foreign monetary operations in France, both by way of loan and for the construction of railways; both by way of loan and for the construction of railways; political disturbance, which a restless policy may any day augment; and, lastly, the general augmentation of the trade of the world, on which we last week remarked, and which is being a discourse of the state of the state of the source of the state of the sta having a dispersive effect on the precious metals now, just as the diminution of trade had the opposite effect in 1856. While these causes are in operation, we cannot but look to a continuance of the drain.

Lastly, we hope-at least we try to hope-that the happy effects of this temporary arrangement may not prevent the effects of this temporary arrangements are of interest prope Bank of France from conforming its rate of interest properly, and with the necessary caution, to the market rate. Expe-rience shows that this is the sole remedy for a drain of bi-lion—the only way in which capital can be retained at here or can be attracted from abroad. If the momentary aid of the Bank of England be used for momentary purposes, to fide over passing difficulties, to allay political apprehensions, all will be well ; but all will not be well if an agreeable pallis-tive be mistaken for an effectual remody, if the Bank of France or the Emperor—if it be true that the Emperer intervans —permanently refuses to take the only course which theory warrants or experience confirms.

NEAPOLITAN DIFFICULTIES

PROBABLY few monarchs or statesmen ever had to deal with PROBABLY few monarchs or statesmen ever had to deal a problem of greater difficulty than that which The Emanuel and Count Cavour are now endeavouring to a at Naples. Everything combines to make it onerons delicate. They have to reconstruct a Government circumstances of peril and embarrassment almost if not a gether without precedent. The country has been that o quered, and half embraced. The new King has been chosen universal suffrage, and chosen with every appearance universal suffrage, and chosen with every apper unanimity; but the choice was suggested and rende ble by an invasion from the South, and was cleared

invasion from the North. The Crown was in reality won for Victor Emanuel, and presented to him, by one who was either an unavowed agent or an unauthorised adventurer ; and it was accepted while its previous wearer still dings to it and still remains within the territory. The new Administration has to bridge over a double gulf;—the gulf between slavery and freedom, and the gulf between an old hereditary dynasty and a new, elected, and *quasi*-foreign King. It has to do this in the face of opposition in front and reaction in the rear ;—it has to do it with the means it finds at hand; and it has to do it without an hour's delay. Those who labour at such a task should be charitably interpreted and lemiently judged. The difficulties in their way seem to us to have been very inadequately estimated, and the mistakes they have made to have been very needlessly exaggerated.

The first difficulty was in the formation of the new Admimistration. Energy had to be provided for, skill to be secured, and provincial jealousies to be, as far as possible, evaded or soothed down. Of course the first maxim in similar cases would suggest that Neapolitans should be appointed wherever they were available, and if suitable men could not be found in Naples, that those employed should be men of commanding position or universally admitted superiority of ability or fame. Thenatural man to have placed at the head of the new Government, if he had been fit for it, was of course Garibaldi. To his supremacy every one would have bowed. But unluckily it was obvious that Garibaldi had none of the qualifications of a statesman or an organiser—a fact which he himself would have been the first to avow and proclaim. There were no doubt Neapolitan nobles of wealth, high character, and respectable ability ; but unfortunately, since the late Goverament had for years proscribed every man of emiment talent and liberal opinions, most of those who were known as patriots were also exiles ; and those who remained were either wholly inexperienced in public affairs, or had gained their experience by serving a monarch, any connection with whom made their genuine liberality and attachment to the good cause a matter for suspicion. The appointment of Farini as Lieutenant-Governor was doubtless suggested by his experience in Romagna and the lesser Duchies; and there can be no question as to his ability, fidelity, and zeal. But, unfortunately, he was a stranger to Naples; his reputation, though high, was scarcely wide enough or preeminent enough to reconcile the Neapolitan nobles (who are proud and often wealthy, but not always wise or wellinformed) to the rule of a Romagnese civilian ; and he was not on the best of terms with the Liberator, as the events in Italy had shown. On the whole, therefore, it is probable that the appointment was an error—though a very natural me, and in no way n corrupt one. It is to be reg

The composition of the Council of Ministers, too, has been swerely criticised, but scarcely, we think, with sufficient reason. Some of the members, no doubt, labour under the objection of having been absent from Naples for the last twelve years,—but, as we have already observed, what active eminent Liberal has not of necessity been an exile f Some are men of no great social standing or territorial wealth; but, important as these qualifications are, practical ability is at such a crisis still more indispensable. The constitution of the Cabinet might, however, we admit, have been in some points more irreproachable; but it contains at least five names which every one is glad to see there. Poerio's sufferings and reputation give him an irrefragable title, though his abilities may not be of the very first order; but all Neapolitans have confidence in his character and views. Scialoja, too, the Minister of Justice. Some modifications may be desirable, and will probably be made; but on the whole the Administration is not one the nomination of which can fairly be treated as a blunder. The treatment of Garibaldi's army is, however, the pro-

The treatment of Garibaldi's army is, however, the proecoding which has called forth the strongest censure; and assuredly, at first sight, the refusal of Victor Emanuel to adopt and embody the troops which had won him his new tingdom, and to recognise and confirm the officers in the swaral ranks conferred upon them by the Liberator, does look like unwisdom and ingratitude. But the case was one of great difficulty. A large proportion of the troops were mether regular soldiers nor picked men; their discipline was most imperfect, their pretensions were extravagantly high, and in their miscellaneous multitude were numbers whom no General who valued the character of his army would wish to retain. The judgment of Garibaldi in the choice of men, too, was notoriously not always as agacious and reliable as his moral character and his military skill; and we can well understand that the nominations of his officers would need careful revision before they could be definitively sanctioned. What the King has done is to issue a proclamation thanking the Army of Liberation, declaring that they " have " deserved well of their country," and referring the question as to what proportion of them shall be retained and amalgamated with the regular forces, and what officers' commissions shall be confirmed, to a commission composed of a majority of Garibaldians. This appears to us at once the wisest and the fairest course that could be adopted; and had it been resolved on and announced in the first instance it is probable that little discontent would have arisen. But, unfortunately, while the matter was under discussion between Garibaldi and the King — the former insisting on the acceptance of his officers and soldiers in the mass, and the latter demurring to the claim—a considerable number of all ranks disbanded, or threw up their positions in disgust, and have wandered away, spreading ill-feeling in all directions.

1303

We believe that the reactionary insurgent movements spoken of as having manifested themselves in various parts of the Neapolitan dominions, have not yet assumed any importance. But if not promptly and vigorously repressed they may become formidable. Notwithstanding the apparent unanimity, and the unquestionable preponderance, of the popular vote in favour of Vietor Emanuel, it cannot be doubted that there does exist, not only a Bourbon party, but an antiannexation party, as well as a few Republicans. These parties, singly insignificant, might give much trouble were they to unite. The Neapolitan Administration must be prepared to act against them instantly and vigorously by flying columns. But the most essential matter of all is to reduce Gaeta, and expel the dethroned monarch without an hour's delay. As long as that fortress holds out, and Francis II. keeps his ground in any portion of his territory, so long will partial disturbances and reactionary outbursts prevent the consolidation and tranquillity of the New State from being complete. The prolongation of the siege, to which these disturbances are owing, is, we must not forget, in reality the work of Louis Napoleon; and on every ground, therefore, the strongest influence that our Government can bring to bear upon him should be exerted to induce him to rescind his incomprehensible and inconsistent instructions warranting the interference.

THE REPUBLICAN PRESIDENT'S CREED.

THE SUCCESS OF the Republican candidate for the Presidency, in the United States will prove one of the greatest events of modern times, if it indicates, as we trust, no mere accidental fluctuation of public opinion in the direction of the Anti-Slavery cause, but the commencement of a permanent and sustained movement. It will be impossible to say how far this will prove to be as we should wish, till we see the details of the popular vote. It is a discouraging fact that the Republican President will not at first be supported by a Republican majority in either House of Congress, but there is good reason to hope that, now the tide has fairly turned, this defect may be remedied at the next Congressional elections.

It would be a great mistake to suppose that Mr Abraham Lincoln is an extreme man. His views seem to us to fall far short of what may fairly be termed even a statesmallike Anti-Slavery creed. Few in England have the smallest sympathy with the extreme party of Abolition, —those who maintain that to hold a serf for a single day in slavery after you have the power to release him is a deadly sin, —that Washington and Jefferson deserve infamy for holding slaves themselves, and admitting any compromise on the subject into the Constitution of the United States. This kind of fanaticism is a species of political insanity. The statesman will believe that the order of the most imperfect Government is better than anarchy, especially if it contain within it principles by which it may be gradually purified and improved. He will accept his position and use all the means within his reach to improve it. He will not throw away

THE ECONOMIST.

the only political instruments within his power because they are indelibly marked with traces of the evil he wishes to re-more. It is not, therefore, because Mr Abraham Lincoln is very far from representing the extreme party of Abolition that we call this views moderate within the limits of states-manlike moderation. But few Englishmen, only knowing that the Anti-Slavery candidate for the Presidency has at last triumphed, would be prepared to hear what his views really are. That they have roused the South to threats of imme-diate secession, which in some cases at least may not impro-bably be in part carried into effect, will scarcely be credited when we lay before our readers what the new President's erred on the Slavery question really is. when we lay before our readers what ereed on the Slavery question really is.

1304

He is not opposed to a Fagitive Slave Law, though he would modify the one actually in operation. He thinks it He is not opposed to a Fagitive Slave Law, though he would modify the one actually in operation. He thinks it would be impossible to uphold the Constitution as between Slave States and Free States without some Fugitive Slave Law, so long as Slave States exist at all. He has not, we believe, declared himself as yet even in favour of prohi-biling the internal Slave Trade between the different States, —a measure which is the only efficient step towards the ex-tinction of slavery that is constitutionally within the power of Congress to effect. He has declared himself in favour of abolishing slavery within the Congressional district of Columbia (in which the capital Washington stands), but only under conditions which would entirely obliterate all the revolu-tionary character of the measure, —namely, that it should be

" the profile of the Southern States are entitled to a Con-"gressional Fugitive Slave Law. Having said that, I have " had nothing to say in regard to the existing Fugitive Slave " Law further than that I think it should have been framed so as to be free from some of the objections that pertain to

"It without lessening its efficacy." With regard to the abolition of the internal Slave Trade etween the different States, Mr Lincoln says -- I am pledged to nothing about it. It is a subject to which I

"redressing or preventing all the wrongs in the world ; he "id do think that it is charged with preventing and reduces ing all wrongs which are wrong to itself. This Goron "ment is expressly charged with the duty of providing for the general welfare. We believe that the spreading on and perpetuity of the institution of slavery impairs the general welfare. We believe may, we know, that that "general welfare. We believe may, we know, that that the cult on itself. The only thing which has ever threatened the perpetuity the destruction of the Government under which we "live, is this very thing. To repress this thin "we think, is providing for the general welfare And he stands explicitly pledged to exterminate, so far as Cuba a co-operation of English and American cruises we effect this. He stands pledged to abolish slavery in C lombia (the district round Washington) under the condition we have shown. He stands pledged to pledge himself resist the admission of new Slave States, his whole influent will be exerted to give the free party in such States amp means for the fair expression of their wishes on the subject. Yet, on the whole, no doubt the great importance of the fact the best of the free party in a such States amp

XUM

means for the fair expression of their wishes on the subject. Yet, on the whole, no doubt the great importance of the election is less in its immediate results than in showing that the tide of public opinion is turning against alavery in the States. We must remember what this means. It is far more significant than the expression of conviction which an English election gives. The most hitter opponent of pure democracy,—and none regard its evils in a graver light than ourselves,—must admit that when the least enlightened, the worst opinion of a nation, at last after a long hesitation, dednares against a national arise, the victory is mean const opinion of a nation, at last after a long seatance, declares against a national orime, the victory is more complete than it would be where the best intelligence and culture of a nation declares against it. The more absolutely we are convinced that universal suffrage in America drowns the voice of the best educated and most refined classes in the North, the better satisfied must we rofined classes in the North, the better satisfied must we be to learn from the elections there that the public opinion is turning against slavery. It shows that the dread and oppo-sition to it has become general at a social level which might remain comparatively unaffected in England, in spite of a perfect unanimity amongst the electoral classes hare. The strength of a chain is tested by its least reliable links, — and the least reliable links of the social chain in the Northern States have proved to us that they are streng enough now to resist the bribes and menaces of the Southern party.

THE CLEAR POINTS IN THE NEW ZEALAND CASUS BELLI.

CASUS BELLI. THE New Zealand statesmen have fairly frightened English editors by the mass of their published evidence with regard to the origin of the Maori war. The English pai-ticians here who represent the Bishop of New Zealand's party found their argument mainly on their own perplasity. (Can it have been right, they say, 'to doclare war on a 'question so intrieste that an Englishman gets lost in the 'maxe ?' Even those, on the other hand, who incline to support the New Zealand Government and to justify the war, declare that they cannot use their way through the particular dispute, and profess themselves obliged to found their argument on the broader ground of the false relations that have arisen between the settlers and the Maorie, and the mecassity for a more rational system of dealing with them. accessity for a more rational system of dealing with th

necessity for a more rational system of dealing with them. The question, however, is too important to settle in this summary manner. If the ecclesiastical party in New Zea-and are right in asserting that the war has originated in a clear and gross injustice, the Home Government ought to send out not only troops amply sufficient to restore order, but a preremptory recall to the present Governor by whose authority the war has been declared. The result would of course be a change of Government in New Zealand, and a tem-porary triumpt to the ecclesiastical party. We say that this ought to be done if it be true that the policy of the Governor has been either unjust or reckless. We in England are doned to study the question at issue sufficiently carefully to resolve this doubt. Politicians here cannot with any decoacy tarue off the responsibility of weighing a question on which the character of Great Britain for equity and mercy andonbiedly

THE ECONOMIST.

ds. It is one of the gravest responsibilities of a con-ional system in a great empire, that those who form side public opinion should wade through much tedious nee in the interests of justice. If public opinion is in actiu way to check our administration, it must be up to follow the history of many a political crisis which much encombered with novel difficulties to be; on the s, attractive.

salient points of the New Zealand war are by no The allient points of the New Zealand war are by no no intricate as they are often represented. After a ry careful study of many of the voluminous documents for us, we can at least present some certain conclusions indicates to us to clear the policy of the ablest Colonial exerminent we have almost ever had from the charges mati against it. It has been the great misfortune of that overment that it has been served by most incapable litary subordinates, and we have much reason from the diams before us to fear that General Pratt is but little if y improvement on Colonel Gold. We believe that had the diary leaders been competent to their task, the policy of a Gevenment would have been not only strictly just, but incutly merciful to the natives. The disastrous military wits must not be allowed to measure the merits of the civil and y in

need then to lay before our readers such points as clearly established concerning the origin of this war. If, we think, justify the Colonial Government mand in the course which it has parsued. We pro

deem clearly establish justify the Corona. New Zealand in the course which it has pursued. In the first place, the pretended conspiracy, the special seek-gater a particular and long-coveted piece of land, which has an imposed to the New Zealand Government by its ecclesi-ical adversaries there, and by one of our own contemporaries are seen to be without the slightest foundation. It has been that the Governor went to Taranaki with his eye upon a long desired by the settlers The sense to be without the slightest foundation. It has been dimated that the Governor went to Taranaki with his eye upon particular piece of valuable land, long desired by the settlers here, and which he was determined to attain for them; that it his parpose he held a meeting explaining to the natives so wish of the Government to buy any land which the native roprietors were willing to sell; in case they could make a soil title to it and not otherwise; that one proprietor of the systed block was in attendance, and eager to make an offer is which whose a cagerly accepted; that no sorupulous munisation into the claims of others ever took place at all; and that, in abort, the whole proceedings of the Governor were that, in short, the whole proceedings of the Governor were dat this one purchase, and conducted on a previous under-ding with the native vendor. Now this is certainly not It is established with absolute certainty, by the debates House of Representatives in New Zealand, that the more was pursuing no new course at Taranaki, -- that had previously amounced exactly the same policy with gad to a sale of land at Auckland, -- that he did no more this case than in that, -- that the Prime Minister was abwhile ignorant of the intention of any native to offer land fr mile at Taranaki, -- that scarcely two or three Europeans the aware of it even in the colony ; in short, that the special for in question was quite an unpremeditated result of the Governor's general land policy, and was not an arrière pensée Governor's general and poincy, and was not an arrow poince in his mind at the time he announced that policy in Taranaki. This which vitally affects the moral colour and good faith of the Governor in the matter, is put beyond all doubt by the minute which is transmitted and the debates in the New head

hand Assembly. Ment, it is put beyond all doubt that the purchase of the alin question was effected by the same officers, the same state of inquiry, on the same principles, and with even mate care, than previous purchases of blocks of land in the the neighbourhood. The Waitars block, now in dispute, the neighbourhood. night after precisely the same kind of investigation as booght after precisely the same kind of investigation and Bell block, of the purchase of which the Bishop expressed formal approval in a pastoral letter to his churches at Plymouth in 1855. Yet on this block also the rebel The Plymouth in 1855. Yet on this blook also the rebel in Plymouth in 1855. Yet on this blook also the rebel in Wirenu Kingi made some claim, demanding a may compensation, which, as he could make out no title, the disallowed,—with the consent apparently of the estimatical critics of the Government, since this purchase is the Biahop's full approval. The title to the land now in fights, though exactly of the same kind, and investigated with even greater care, is condenned by the same parties at any every as inadequately made out in detail, but as resting a file authority of ufficers of the Crown, instead of on the

decision of an independent Court. That the Government has decision of an independent Court. That the Government has long been anxious to establish a Court expressly for investi-gating native land questions, has been known over since 1858. The difficulties in the way are not of its making. But why should the juriediction of officers which was quite atisfactory five years ago, be suddenly disputed as wholly unjust now

Thirdly, it is certain that not only all the occupying tenants of the land in question, but many others beside, have been made parties to the sale. The land is for the most part quite made parties to the sale. The land is for the most part quite uncultivated, in many parts of it "the thistles standing so "thick that a horseman cannot pass,"—and no title is set up to it by any one living upon it which has not been satisfied. Many of the emigrant Ngatiawa in Queen Charlotte's Sound, at Wellington, and elsewhere, have also been consulted, and their agreement to the sale obtained. The challenge to all claimants was printed, eight or nine months previous to the sale, in the native paper the Maori Messenger, and the claims of all claimants carefully examined, and this by the very officers who have hitherto been regarded as fast friends to the natives,—and who have effected the purchase of from 20,000,000 to 25,000,000 of acres in New Zealand, with no important subsequent dispute. important subsequent dispute.

Fourthly, in spite of Archdeacon Hadfield's assertion to the contrary in his recent pamphlet, it becomes abundantly evident that W. Kingi has never asserted, and does not now assert, any individual proprietary right to the land in ques-tion. No one can read Archdeacon Hadfield's cross-examination before the New Zealand House of Assembly, nor the letters put in from W. Kingi to himself in which such a claim was said to be made, without being fully satisfied of this. No personal claim is anywhere made. A *tribal* claim is apparently asserted, but nothing more. Such a tribal claim had never been pressed in the previous purchases of the Bell block and other blocks of land. The Land Commissioner went over the land in the first instance with a brother of W. Kingi's, and heard from him the statement of the different claims to the land. And, according to the express statement of the brother of the present rebel leader, his own claims were chiefly North of the Waitara river, and not in the pre-sent block. At all events, sixty acres of land were excluded from this purchase on the express ground that Kingi had some doubtful claims to it, and even Archdeacon Hadfield admits that he enonot say how far Kingi's claim was or was not limited to these sixty acres. Fifthly, Archdeacon Hadfield's assertion that only ten or

twelve natives with any valid claim to the land had agreed to the sale, while perhaps 90 or 100 others with valid claims had not agreed to it at all, is not supported by a particle of evidence. There may, so doubt, be more than that number of emigrant natives willing to make a claim, if they thought they could get any good by it. But this is all. It is clear from his cross-examination that Archdescon Hadfield is supremely ignorant on all the local details of the question, that natives who knew him to be friendly to Kingi and opposed to the British Government had assured him that there were that number of claimants, that they themselves were claimants, and so forth. But such declarations from absente natives who only vaguely assert that some of their ancestors had lived there, and had thus transmitted them a right, goes for very little. From the evidence of the Chief Land Commissioner, it is clear that native land-claims to distant waste lands are the vaguest things in the world. Mr Maclean men-tions one case in which a native told him that he thought he had a claim to some of the disputed land, and asked him to investigate it for him. He did so, and the Maori was disappointed to find how trivial it was. The only value that these absentee claims really have is derived from the desire of the English to purchase. Otherwise they would never be remembered at all. There is absolutely no evidence to show that the recent purchase was made with any less care or justice than any other pur-chase on the New Zealand soil.

Lastly, it is demonstrated that the real opposition made by W. Kingi was grounded on his general dislike to the ensrouchwents of the English. A letter from him to the Governor, dated 11th February, 1859, distinctly laysdown the boundaries beyond which he will not permit the English to buy land. There is no question of title in this letter; it is a question of the limits of the English settlement. After tracing the division line through a long list of places, he proceeds :-- "The

" boundaries of the land which is for ourselves is at Mokau. "boundaries of the land which is for ourselves is at Mokau. "These lands will not be given by us into the Governor's "and your hands, lest we resemble the sea-birds which perch "upon a rock: when the tide flows, the rock is covered by "the sea, and the birds take flight, for they have no resting "place." This letter makes perfectly clear the true ground of W. Kingi's opposition. And we must say that, after an anxious examination of Archdeacon Hadfield's position, we do not believe that it is substantiated by any one tangible fact.

Agriculture.

LAND; FACILITY OF TRANSFER.

In has ever been a subject of wonder that the owners of land in England should be the chief opponents of every measure proposed for the emancipation of land from the feudal trammels by which it is encumbered. Indeed, with the exception of the lawyers, the attornies more especially, the landowners may be said to be the only opponents of improvement m the law of real pipoperty. Indirectly the whole community suffers from the barbarous state of Indirectly the whole community suffers from the barbarous state of our real property law, but the most direct sufferers are the land-owners. If the title to land was simple, and its transfer easy, the value of all landed property would be prodigiously increased. To a certain extent the obscurity of the subject has prevented the owners of land from fully appreciating the evils incident to the existing system, and has alarmed them at the prospect of changes they do not quite comprehend. The attornies form an active body in the South of Lincolnabire, and the cost of the law expenses in the transfer was nearly as much in the one as in the other, although in the former case the purchase was to the extent of 1,100 acres. It had always been said that they were so aristocratic that they did not wish their land to fall into the possession of tenant-farmers. Such was not the case, for they were only too happy to see tenant-farmers become landed proprietors, because it gave them a greater interest in the welfare of the State." This, though just and sound enough, was a limited view of the subject. It is quite true that the cost of conveyance and the investigation of title to land falls far more heavily on the larger than the smaller properties, because the difficulties of title arise from circumstances altogether unconnected with the magnitude of the transaction. Every title must in strictness be traced for 60 years or upwards, and in that period as many dealings with the property may occur with re-spect to a small property as a large one, and as each transaction forms a step or item in the title which has to be investigated, questioned, and vouched for after long periods of time have elapsed, the chances of blots - real, technical, orimaginary---may easily be con-ceived. Nay, the titles to anall properties often passing through less shiftli handa, and the transactions being less able to bear expense, ments and entails which unhappity for the owners of land that is wpermits. Great as are the m. its of Sir Richard Bethell's and Sir Hugh Cairns' measures for simplifying titles to land, they inceasarily partiale more of the lawaret of pallatives than of complete remedies. A complete remedy must some day be sought in a thorough revision of the law of real property and its adaptation to the wants and the intelligence of the present age.

¹ Whether farmers would avail themselves of opportunities to p chase farms so generally as Sir M. Cholmeler appears to suppose be a question, though doubtless in many cases the more wealthy me bers of the class would do so. It must be remembered, howe that farmers are traders, or rather manufacturers, soaking to m a living by the employment of their capital and their perso exertions, not persons living on revenue derived from land, at therefore it is generally more advantageous to rent land and emp the whole of their capital in its cultivation, than to sink to li a portion in purchasing farms us would be necessary to em them to carry on businesses of any considerable extent. It we be better for the farmer that his farm should be purchased some person who desires to derive a permanent income from

them to carry on businesses of any considerable extent. If we be better for the farmer that his farm should be purchased some person who desires to derive a permanent income from and who is both able and willing to make such outlays in per-nent inprovements as will justify the farmer in giving a high ry The man of business, or the man of moderate fortune of which p only consists of land, is usually the best landlord a farmer 'c have, and it is into such hands that land would more frequen go, if there were greater facilities for its purchase and sale. This subject was the other day also recommended to the stat ton of an agricultural meeting at Maidstone, by Mr Charles Ih ton, the member for that town, who said,--'' Most, if not present, probably knew by experience what an immeme amount money was obliged to be expended, what a dreary waste of it was necessitated, in order to convey a piece of land from A to it f Smith wanted to sell Jones a house, a ship, or 20,000 in sto the transaction could be effected in a few minutes; but the p chase of half an acre of meedow land was an arduous, expensi-tedious enterprise, not to be undertaken without much forethous and consideration........The effect of this was not only to reac-the sale of land a very slow and costly operation, but to prev-its changing hands at all except in large masses, so that in Engla more than in any other country the acquisition of land was an evil to every class in the community, and especially to landowners themselves, for it had been shown that if landed p perty could be transferred with greater facility, its increased ra-in the market would be equivalent to three years' more purchas the to effect a great improvement. We hope and believe that measure of at least equal efficacy will be passed in the next sea through the exertions of the Attorney-General, Sir Richard Beth

LOOKING FORWARD .- THE ALMANACKS. ing matters and the Litchen Gardener's Calendar are very fal portions of the contents of the "Farmer's Almanack", with the agricultural history of 1860 which we find in the "A Farmer's Almanack " is an addition at once useful and interest There is also a very concise yet comprehensive calendar of farmers is also a very concise yet concise operations.

THE ECONOMIST.

Boos, No. 3, is almost devoted to the question of supply of the raw material, giving a review of the more prominent facts in regard to supply from the United States, East Indies, Brazil, Africe, West Indies, &c., with a summary of the extent of the home and export trade of Great Britain.

Africa, West Indies, &c., with a summary of the extent of the home and export trade of Great Britain. More than one thousand years before the Christian era we cer-minly read in the Bible of linen being manufactured in Egypt, but we balieve that before that date the manufacture of cottons was known in India, for in one of the hymns of the Rigreda reference is made to "cotton in the looms" in India. Muslins we know take their name from Mosal in Mesopotamia. Those manufactured by the natives of Dacca are of that fineness of tex-me that a single pound of cotton was spun into a length of 250 miles. It remained for Mesers Houldsworth, of Manchester, to spin a year from a pound of cotton nearly 400 miles in length. One word more as to the antiquity of the cotton manufacture and we have done. Herodotus, writing in the fifth century n. o., speaking of the usages of India, says " the wild trees bear fleeces for their frait, surpassing those of the sheep in beauty and excellence, and the natives clothe themselves in cloths made therefrom." We think we have said enough to provo that the manufacture of otton is an ancient institution, and by no means so upstart in growth as some imagine when they snear at cotton lords. We must now leave all those who wish to trace the growth of this mighty manufacture to consult Mr Man's account of it from the time when Edward the 3rd, in 1328, invited some Flemings to originzate to this country, and who, in settling at Manchester, laid the basis of the British woollen manufacture in the manufacture of what were then called "*Manchester cottons*," up to the last two contaries, when the imports of cotton hatos. In 1738 commences the history of those wonderful inventions when being the power of almost unlimited production to

in 1763.85 bis in 1607, to 1,225,989,072 lbs in 1859. In 1738 commences the history of those wonderful inventions which, giving the power of almost unlimited production to our people, have revolutionised the manufacturing world. The distaft had been laid aside for the spinning wheel—the minning wheel for a machine for spinning by rollers, which forms the bass of all the spinning machinery in our present stupendous factories. In 1743, Mir John Kay, of Bury, invented the fly shuttle and picking peg, which enabled one man unsided to weave double the quantity he had hitherto done. Next followed Mr. karnest Earnshaw in 1758, who, it is said, invented the spinning machine end onton reel, which he destroyed, on the plea that it would be the ruin of the working classes. In 1758 a second patent was take out by Lewis Paul for the improvement in the carding process, which formed the basis of the great improvement made and patented afterwards by Arkwright, by which the carding or roving was made continuous. The period thus embraced from 1785 to 1760 might be called the transition state of the cotton trade. Legislative enactments endeavoured to foster the home trade by leyying a duty of 4d per b on cotton yam imported from India, Troping was made commute. The particle matching was made commuted to the particle matching and the second state of the cotton trade. Legislative enactments endeavoured to foster the home trade by laying a duty of 4d per lb on cotton yarn imported from India, but with this "protection" the total value of cotton manufactures was only about 200,000. In 1762 the art of dyeing "Turkey red" was discovered. The art of printing calicoes was introduced in 1675, and in 1764 was first practised in Lancashire, but it was not until the year 1764 that James Hargreaves discovered the spinning jenay. In 1769, Mr, afterwards Sir Richard Arkwright, patented the spinning or water frame. Mr Peel, the father of the late Sir Robert Peel, was one of the first to adopt it. In 1779, Samuel Crompton, of Bolton, invented the admirable machine which, combining Hargreaves and Arkwright's inventions, came to be known by the name of the spinning jenny and to be employed to a far greater extent than the water frame.

abopted as to supersede the spinning jenny and to be employed to a far greater extent than the water frame. But let it not be supposed that all these vast discoveries for the economising both human labour and the cost of production went on without the most violent opposition on the part of those who thought machinery would supersede human labour altogether. Moles rose and destroyed the machines and jennies which Har-greaves and others had supplied to spinners and weavers. Ark-wright's mill near Chorley was destroyed in the presence of a large sympathising police and military force. Mr Peel (Sir Robert's father) had his machines at Oldham thrown into the river! This was in 1779. Now this mighty manufacture employs directly 1,600,000 people, and indirectly gives employment to ten times that number, ts asy nothing of those whom it clothes. But still the cotton trade progressed. In 1782 an Act was passed with the view of protecting it, by prohibiting the exportation of engraved copperplates, and to punish the enticement of any workman employed in priming calicoes to go beyond the seas, under a penalty of 500/ or twelve months' imprisonment, and these penalties were in several cases enforced. In 1783, Arkwright's machinery for spinning, seisted by the atmospheric engine, was first used at Manchester ; and in the same year bouncies were given on the export of British printed and dyed calicoes. What should we think in these days of allowing...

rinted and dyed cancers. It is a second state of the second state

eotton of the first 50 years of the century (1700 to 1800) only in-creased 50 per cent., in the later half its increase was equal to 1782 per cent., or nearly 36 times as great. From 1771 to 1780, before Arkwright's patent was thrown open, the increase was 71⁴/₂ per cent.; from 1781 to 1790, when Arkwright's patent was thrown open in 1765 it are 2101 reasons.

1307

from 1781 to 1790, when Arkwright's patent was thrown open in 1785, it was 3194 per cent. But let us trace the effects of machinery on the cost of production. In 1780, Crompton received 42s per lb for his No. 86 yarn, which was equal to about 60s for No. 100's, which at that period it was impossible to spin in this country. The prices received for those same 100's in 1800 was 9s 5d, or about one-sixth of the value of 1780—and in 1859, 2s 4d. The following table_will, however, illustrate this more clearly :--

			177	9.				
Count	lost of ning			Haw 1 18 of		Fotal 1 Val		ab
		d		1.1.8	d		d	
40	 14	0		3	3	 . 20	9	
60	 25	0		3	3	 . 34	0	
80	 42	0	185	3	3	 . 54	3	
40	 0	6		0	7	 . 1	1	
60	 0	81		0	8	 . 1	44	
80	 0	11		0	10	 . 1	9	Sec.

But if machinery has had this marvellous effect in lowering the cost of the manufactured article, what shall we say of the effect which demand has had in stimulating the production of the raw

In 1782 a panic was produced in Manchester, in consequence-of 7,102 oags, or about 1,400,000 lbs, having been imported between December and April: the price then was 31d per lb. America had not then commenced supplying us with cotton. The price fell in 1790 to 17d per lb, but rose again in 1799 to 37d per lb, and in 1800 it was 29d per lb; in 1859, 62d for United States Uplands, and 42d for East India Surats.

According to	table 1, the q	uanti	ty of cotton-	- 17

whe

230,257,000 There certainly seems a discrepancy in the amount that ought to be on hand on the 31st December, 1859, of 35,044,696 lbs, but when we consider that the amount of cotton imported in 1859 amounted to 1,225,989,072 lbs, the discrepancy hardly amounts to 3 per cent., and very possibly is explained away by the note Mr Mann appends to his table to which we have referred. We mention this apparent discrepancy not as a matter of consequence, but in order to be able to speak with unqualified praise the accuracy of the tables which Mr Mann appends to his valuable work. It is a work which, apart from its statistical value, will be read with unfeigned interest by all those who wish to trace step by step the progress that has been made in the production, cultivastep the progress that has been made in the production, cultiva-tion, and manufacture, of this mighty plant, this clothier of mankind.

GENERAL LITERATURE.

GENERAL LITTERATURE.
THE IMPERIAL ATLAS OF MODERN GEOGRAPHY: an Extensive Series of Maps, Embracing the Most Recent Discoveries, and the Latest Political Divisions in all Parts of the World. Com-piled and Engraved from the Most Authentic Sources, under the Supervision of W. G. BLACKIS, Ph.D., F.R.G.S., Editor of the "Imperial Gazetteer." London: Blackie and Son, Warwick square, E.C.; Glasgow and Edinburgh. 1860. Parts 16 to 36, concluding the Work.
THIS is the concluding portion of a very beautiful Atlas, of which we reviewed the earlier numbers several months ago. The size is convenient, and the engraving exquisitely clear, with judiciously varied type. The value of the work is much enhanced by an Alphabetical Index, which purports to contain every place in every map, with its latitude and longitude, and the number of the map in which it is to be found. The Editor states in his preface.

XUM

THE ECONOMIST.

Nov. 24, 1860.

that "special prominence is given in this work to Great Britain and her colonies, which occupy no less than nincton sheets, being about a fourth of the whole Atlas. The maps of the Isthmus of Gaucaus, Arabia, and Independent Tartary, are new features, as are likewise some of those of the sees and occans, and the series of maps devoted to illustrating the Islands of the Indian Arahipelago, a region rich in almost every description of useful product, whose importance is becoming daily more and more recognized." We may remark that more than one branch of study is facilitated by the large scale on which the Indian, Pacific, and Atlantic Islands are here elimeteted. The peculiar forms assumed by the moun-tain ranges are often very striking, as for instance in the Island of Tahiti, which looks like two circles joined together, each contain-ing a central point from which the mountains radiate to the see. The Editor lays great stress on having a simed to make this Atlas

ing a central point from which the mountains radiate to the sea. The Editor lays great stress on having aimed to make this Atlas "fully abreast of the present advanced state of geographical infor-mation," but there are several dotails in which he can scarcely be held to have made good his claim. The map of New Zealand, for instance, is full of defects. Although each of the two chief islands has, since 1853, been divided into several proviness (possessing separate local legislatures), no bint of the fact is given in this map, except that the name of Canterbury is printed across the eastern part of the Canterbury Province (that part which formed the original " Canterbury Province (that part which formed the original " Canterbury Settlement). Again, the little river which runs through Christchurch, the capital of Canterbury, is here called the " Shakspeare," although that name was exchanged in the earliest days of the colony for the " Avon," ander which name it appears in two maps in our possession. Br Blackie, however, appears to be still less acquainted with the Heathcote, a river which called the "Shakspeare," although that name was exchanged in the earliest days of the colony for the "Avon," under which name it appears in two maps in our possession. Dr Blackie, however, appears to be still less acquainted with the Heathcote, a river which is met by the Avon just before flowing into the sea, and which, being a much larger river, and only two miles distant from Christ-church at one point, is of more importance to the colonists, as it brings up heavy goods to the capital in vessels too large for the navigation of the Avon. Now the Heathcote river is set down in the map before us without any name at all, and being half hidden by the name of Christchurch, can searcely be seen without a mi-croacope. Indeed, the scale of this map ought to have been very much larger. It is considerably less than the scale on which the Sandwich Islands and Port Natal are given, -places of far less interest to the English public. Very many names are consequently omitted for want of room, which are well known both in public and private. Among the omissions is that of Napier, the capital town of Hawke's Ray Province, but perhaps it was not built when this map was designed, which (from a note on the same sheet relative to the interior of New Guinea) appears to have been in 1856. The same reason, however, will not account for the omission of the fact that Mount Tongariro is a velcano, and one of quite recent activity. quite recent activity

quite recent activity. In the maps of Africa, we cannot of course expect to have the very latest corrections, seeing that every year brings us fresh information. It may be as well to remark, however, that the large lake in South Africa, here marked at its northern extremity as Lake Taganyika, and at its southern end as Lake Maravi or Nyanja, is now known to be, not one, but *huo* lakes, the northern-most of which really bears the name here given to it, while the name of the southern lake is Nyazaa,—Lake Nyanaa (as Captain Burton spalls the name) being the name of a *third* lake to the north of Lake Taganyika. Great confusion has hitherto prevailed concerning the relative names and positions of these lakes, a confu-sion from which Livingstone himself was not exempt; but all readers who wish to have clear ideas on the subject may be referred to Captain Burton's recently-published "Lake Regions of Central Africa," on whose authority we have here spoken.

Africa," on whose authority we have here spoken. Another objection we have to make is that no regular system is followed in the delineation of mountains. In the American maps, the heights of the chief mountains are given, and the volcanoes are usually distinguished by the added "V." But the heights of the Alpine peaks are never stated, not even in the case of Mont Blanc, and Etna and Vesuvius are not marked as volcances, either in the map or the Index. In the map of the Indian Archipelago, the excellent plan is adopted of colouring with red the active volcances; but why Europe and America are not similarly trested, does not appear. Why, too, we would ask, are the Cordillera de Anshuae and the Sierra de la Madre, in the map of Mexico, shorn of their names? Why is the noble peak of the ever-burning Orizaba, " the Mountain of the Star," not only deprived of the eharacteristic "V.," but at down as Mount Citaltepetl? Why is Uxual the only site of Central American runs which is indicated as such? the well-known names of Copan (here speit Capan), Palenque, and the Pyramids of Cholula unnamed? (All these antiguished, and the Pyramids of Cholula unnamed? (All these antiguished, and the Pyramids of Cholula unnamed? (All these antiguished, and the Pyramids of Copan (here speit Capan). In the maps of Italy, we find, of course, no trues of the seconty-

In the maps of Italy, we find, of course, no trace of the recently-changed political boundaries, the delineation of which may well be suspended for the present. But we may remark in passing, that we never before heard that the Italian name of Florence was Florence.

In conclusion, we should remark that we have spoken only of ch details as we have closely examined, and shall be glad if the vestigations of other critics show that the proportion of errors in In conclu

these beautiful maps is small in comparis a with the

Over the Curres. By Chantorrs Charris, Autho Combes." In Two Vols. The 'Hudeon Birer'' and 'South Wales'' pursue work of the theoremany of the statue of the town of the two, 'A may in the faging of the state of a mation and the sprace of the delived in a notice of Mr Atkinson's work, 'A 'Tavoli in the faging of the state of a state from Rietschel's monument at Manich speaks well as to be read and imposing qualities of the t

A Wire to Omne. By FREMERIC: GREETARCKER, Anthor of "The Two Convicts," Ac. Translated by EDENDED ROUT-IMDE. London: Routledge, 1860. This is a story of life in Butaria, written by one who seems to be well acquainted with its various features. To our taste it is tedious and disagreeable, the main action consisting of the adventures of fit young marchants, with groups of misserable and degraded natives in the background. Nearly the only respectable indivi-duals in the book are two German couples, who change lovers with a facility which, happily, does not find much favour on this side of the German Ocean. We cannot recommend "A Wife to Order."

THE ECONOMIST.

The Chamber then asks :-

1310

May

tensively in wooden ones than heretofore. In the second place :--A host of regulations weigh on French shipping from which that of England is exempt. The number and the composition of our crews is imposed on us. A vessel which might be newigated by a smaller number of men is obliged to carry the number fixed by the regulations. Exigency in this matter has been carried to such an extent that we have been obliged to employ an extra cabin-boy for every ta men. When a vessel, in retarning to France, enters a different port to that from which she sailed, her owner must carry back her crewto that place, or pay the ex-penses of their journey. He is not allowed, as the English are, so to fix the wages of his samen as to emancipate himself from this charge. Lastly, frequent levices of sailors are made for the service of the Govern-ment, and by them the shipowner is at certain moments deprived of the capitain, the officers, and this obliges him to pay wages all the more excessive, from the fact that the law of the 2d of December, 1793, requires that the capitain, the officers, and three-fourths of the crew, shall be French.

The Chamber admits that many of the preceding evils may be removed, and it expresses a hope that the Government will endea-vour to get rid of them. But it says that there is a still graver one which the Government cannot touch :--

That evil is the want of exports as freight for our vessels. In addition

The productions of their manufactures with which they supply all the markets of lin globe, the English possess coal which they supply all the markets of lin globe, the English possess coal which they supply all the markets of lin globe, the English possess coal which they transport every where, for it is everywhere necessary. Assured of a freight to carry to every destination, they have only to occupy themselves with seeking a re-turn freight; and that freight, even when taken at amoderate rate, gives them for the whole voyage a sufficient remuteration. We are very far from enjoying the same advantage. Our vessels on having have only wines as the bulk of their cargoes. Whose are not in all contributions objects of large consumption, and they can consequently only be imported into them in small quantities. Our vessels have consequently to remain a long time in our ports awaiting their complete freight in articles of our manufacture, or in agricultural productions which are less domanded than wises. These delays occasion expenses of all kinds : wars not tear of versues at anord, interest on capital, assurances, wages of the crews, &c. Often to avoid these expenses vessels leave with half angoes, and sometimes even in ballast. Arrived at their destination they find themeelves in presence of English vessels with a price which his much lower than that which is necessary to them to compensate the deficit in their out-going freight. It is only by the differential duties which they acnot the totalning cargoes and Foreign flags, that our vessels slowly succeed in obtaining cargoes and Foreign flags, that our vessels slowly succeed in obtaining cargoes and Foreign flags, that our vessels slowly succeed in obtaining cargoes and inferenting their return to France. The Chamber mentions yet another cause of inferiority for the foreign. As regards Australia for example, their vessels take out parts; but French where seeks coals, and their vessels take out parts; but French waines and brandices, and brandis, and to other mere

employing large vessels; those of 500 or 600 tons at the outside alone suit them; but this causes a large increase in general and oth

her expenses. In conclusion, the Chamber, after some observations as to the In conclusion, the Chamber, after some observations as to the importance of merchant shipping in a national point of view, admits that the differential duties require revision, they being in some cases 100 per cent, and in others only 30 or 40. It offers, if required, to lend its aid in effecting such a revision, but it repeats that French shipping cannot compete with the English on equal terms; it says that the Treaty of Com-merce has established reciprocity, but not equality, between the two countries, and that as in that treaty England admitted that her manufactures are so superior to those of France, that she could receive the latter without any duty and allow her own to be taxed 25 or 30 per cent. in France, so " in a treaty of navigation she ought to accept a similar principle; that is to say, confine herself to asking that the differential duties in France shall cease to be prohibitive of her navigation in order to become moderately pro-tective of French shipping in the proportion of its inferiority to tective of French shipping in the proportion of its inferiority to that of England." The Chamber adds a complaint that in certain that of England." The Chamber acts a complaint that in the the English ports duties are levied on French vessels from which the vessels of those ports are exempt; the consequence of which is to subject the former to a great disadvantage, and even to violate the treaty of 1826.

e Chamber of Commerce of Nantes, in its address, begins by m

The Chamber does not disguise from itself that in its present situation, The Chamber does not disguise from itself that in its present situation, then all branches of manufactures have seen the protective duties they

enjoyed lowered in a proportion more or less considerable, the and absolute maint would be illogical.

It even adds that such maintenance might be dangere much as England, repenting of making concessions without any return, might make reprisals which would be prej French shipping. Nevertheless, it says, there must be pr

The protection to our flag may be restricted within reasons but it wurt be maintained. That is the principle which the Cha-not heaitste to proclaim as essential to the prosperity and ex-existence of our merchast ahipping. Our shipping is, in fu branches of industry, that which can least be abandoned to the petition of its rivals, principally those of England.

braches of industry, that which can least be abandoned to the fram exa-petition of its rivals, principally those of England. The Chamber then goes on to enumerate the causes of the in-feriority of the French shipping to the English. What it says on these points is naturally the same in substance as what was urged by the Bordeaux Chamber. But it describes as the "first and principal" cause of inferiority, the absence of sufficient out-geing reights. It admits, however, that French vessels get coal in Eng-land which serve as such freights, but that this subjects them to heavy expenses for assurance, wages, pilotage, commission, tes, also to loss of time and risks, all which it says cannot be estimated at less than 30f a ton ; and it cries "it is with this heavy charge that we have to enter into competition with our rivals, who are no only more favoured than we are, but find their freights at home." As a proof that French shipping is dearer than the English, the Chamber alleges, among other things, that in Canada the English can get vessels constructed 30 or 40 per cent. chasper than they can be made in France. It admits that the Treaty of Commerce will diminish the price of iron used in shipbuilding, but then it ary, it must not be forgotten that French vessels at present aftast were constructed of materials which paid the old duties. Another point of inferiority—not noticed by the Bordeaux Chamber—is that the French have none of those "establishments of credit" which the Dutch, and particularly the English possess in the principal markets of India and China.

of India and China. The Chamber of Nantes, then, insists that the shipping interest must have protection ; and as to the amount thereof it says:— The maximum protection to French manufactures stipulated in the Treaty of Commerce with England of the 23rd Janary is 30 per cent. We do not think that we have the right to demand more for shipping, but we think that any less protection would be insufficient. In the analyses which precede, your readers have the case of the French shipping interest. They will doubtless think-that the removal of the Governmental restrictions and impositions of which that interest complains would be fair and just; but that its repre-sentations about the dearness of building ships, the difficulty of procuring freights, the impossibility of competing with the English, &c., &c., are of no more value than the arguments by which other branches of commercial enterprise in France endeavour to prove that they are entitled to protection. An Imperial decree just issued allows the importation into Corsies of stockfish on the same terms as into France, and the export of fire-wood, timber, and certain descriptions of back also on that same terms as from the Continent.

same terms as from the Continent.

A serious misprint in my last letter requires correction: the subvention proposed to be allowed to the Transatiantic Steam Navigation affair, taken up by the Compagnie Generale Maritime under the auspices of the Credit Mobilier, is 9,000,000f, not, as printed, 29,000,000f.

printed, 29,000,000f. The Castoms returns brought out to-day show that the im-port duties for the month of October last were 10,278,000f; whilst in the corresponding month of last year they were 15,429,5775, and in that of the year before 12,952,112f: for the first three months of the present year they were 110,873,000f; same period last year 157,680,174f; and same period of 1858, 154,737,688f. The decline is no doubt large, but it is owing to the abolition and reductions of duties effected in the past year. In the gaussition of goods imported, however, there is not only no falling of but a large increase; and this proves that the reforms have perfectly suc-ceeded. In my next I will give the customary details of the goods imported, and also of those exported. Want of space prevents me from doing so to-day. fro

imported, and also of those exported. Want of space prevents no from doing so to-day. Subjoined is the market report :--FLOUR.--The quotations at *Paris*, yesterday, were 61f to 64f the mark of 159 kilogs; they were lower than those of the preceding week, but were firm. Of four marks, disposable was 61f 50c, and the current month 61f to 61f 25c; for Docember, for which some large sales were made, 60f 25c, and some 60f 50c; for March and April, 60f 75c and 61f were given.

that "special prominence is given in this work to Great Britain and her colonies, which occupy no less than nineteen sheets, being about a fourth of the whole Atlas. The maps of the Isthmus of Caucasus, Arabia, and Independent Tartary, are new features, as are likewise some of those of the sens and occans, and the series of maps devoted to illustrating the Islands of the Indian Archipelago. a region rich in almost every description of useful product, who importance is becoming daily more and more recognised." V We may remark that more than one branch of study is facilitated by the large scale on which the Indian, Pacific, and Atlantic Islands the large scale on which the housing racine, and Atlante hands are here delineated. The peculiar forms assumed by the moun-tain ranges are often very striking, as for instance in the Island of Tahiti, which looks like two circles joined together, each contain-ing a central point from which the mountains radiate to the sea.

Taint, which yours not wo thick the mountains radiate to the sea. The Editor lays great stress on having aimed to make this Atlas "fully abreast of the present advanced state of geographical infor-mation," but there are several details in which he can scarcely be held to have made good his claim. The map of New Zealand, for instance, is full of defects. Although each of the two chief islands has, since 1853, been divided into several provinces (possessing separate local legislatures), no hint of the fact is given in this map, except that the name of Canterbury is printed across the eastern part of the Canterbury Province (that part which formed the original "Canterbury Settlement). Again, the little river which runs through Christchurch, the capital of Canterbury, is here called the "Shakspeare," although that name was exchanged in the earliest days of the colony for the "Avon," under which name it appears in two maps in our possession. Dr Blackie, however, appears to be still less acquainted with the Heathcote, a river which is met by the Avon just before flowing into the sea, and which, being a much larger river, and only two miles distant from Christbeing a much larger river, and only two miles distant from Christ-church at one point, is of more importance to the colonists, as it brings up heavy goods to the capital in vessels too large for the navigation of the Avon. Now the Heathcote river is set down in navigation of the Avon. Now the Heathcote river is set down in the map before us without any name at all, and being half hidden by the name of Christchurch, can scarcely be seen without a mi-croscope. Indeed, the scale of this map ought to have been very much larger. It is considerably less than the scale on which the Saudwich Islands and Port Natal are given,—places of far less interest to the English public. Very many names are consequently omitted for want of room, which are well known both in public and private. Among the omissions is that of Nanier, the capital and private. Among the omissions is that of Napier, the capital town of Hawke's Bay Province, but perhaps it was not built when town of frawke's hay Frovince, out percaps it was not out when this map was designed, which (from a note on the same sheet relative to the interior of New Guinea) appears to have been in 1856. The same reason, however, will not account for the omission of the fact that Mount Tongariro is a volcano, and one of quite recent activity.

In the maps of Africa, we cannot of course expect to have the very latest corrections, seeing that every year brings us fresh information. It may be as well to remark, however, that the large lake in South Africa, here marked at its northern extremity as Lake Taganyika, and at its southern end as Lake Maravi or Nyanja, is now known to be, not one, but now lakes, the northerners of which results here the name here given to it while the Nyanja, is now known to be, not one, but have lakes, the northern-most of which really bears the name here given to it, while the name of the southern lake is Nyassa,—Lake Nyanza (as Captain Burton spells the name) being the name of a third lake to the north of Lake Taganyika. Great confusion has hitherto prevailed concerning the relative names and positions of these lakes, a confu-sion from which Livingstone himself was not exempt; but all weaders who wish to have clear ideas on the subject may be reformed readers who wish to have clear ideas on the subject may be referred to Captain Burton's recently-published "Lake Regions of Central Africa," on whose authority we have here spoken.

Another objection we have to make is that no regular system is followed in the delineation of mountains. In the American maps, the heights of the chief mountains are given, and the volcances are usually distinguished by the added "V." But the heights of the Alpine peaks are never stated, not even in the case of Mont Blanc, Alpine peaks are never stated, not even in the case of Mont Blanc, and Etna and Vesuvius are not marked as volcances, either in the map or the Index. In the map of the Indian Archipelago, the excellent plan is adopted of colouring with red the active volcances; but why Europe and America are not similarly treated, does not appear. Why, too, we would ask, are the Cordillera de Anahuac and the Sierra de la Madre, in the map of Mexico, shorn of their names? Why is the noble peak of the ever-burning Orizaba, "the Mountain of the Star," not only deprived of the characteristic "V.," but set down as Mount Citaltepetl? Why is Uxmal the only site of Central American ruins which is indicated as such? the well-known names of Copan (here speit Capan). Canal the only site of Central American runs which is indicated as such? the well-known names of Copan (here speit Capan), Palenque, and Ocosingo (here speit as Ocacingo) being left un-distinguished, and the Pyramids of Cholula unnamed? (All these antiquities were marked in the maps published by the Society for the Diffusion of Useful Knowledge, about twenty years ago.)

In the maps of Italy, we find, of course, no trace of the recently-changed political boundaries, the delineation of which may well be suspended for the present. But we may remark in passing, that we never before heard that the Italian name of Florence was Florenze.

In conclusion, we should remark that we have spoken only of such details as we have closely examined, and shall be glad if the investigations of other critics show that the proportion of errors in these beautiful maps is small in comparison with the wide ground over which they range.

OVER THE CLUYS. By CHARLOTTE CHANTES, Author of "Ferny Combes." In Two Vols. London : Smith and Elder. 1860. It is not often that one family contains three novelists of genuine merit, but such is certainly the case with the vigorous stock of the Kingsleys. The author of "Westward Ho!" still remains the re-presentative type of the race; but his brother and sister, though of lesser range and brilliancy of genius, are, in their own spheres, quite as real as he. Mrs Chanter is already favourably known by her pleasant little hand-book of the "Ferny Combes" of Devon-shire, and in the tale before us she still treads the old familiar ground. One might say, in German phraseology, that the beauty shire, and in the tale before us she still treads the old familiar ground. One might say, in German phraseology, that the beauty of Devonshire was "wrought into the consciousness" of the Kingsleys, so frequently and so vividly do they delineate the varied fascinations of its scenery, and the fresh, stirring life of its inhabitants. The chief centres of the present tale are a lenely old country house, named Harscourt, on the North coast, and the in-land town of "Torford," on the river Tor. The author has mostly avoided giving the names of real places ; whether to avoid poaching on the ground of "Westward Ho," or to obtain a license in goo-rranhical matters not compatible with strict accuracy, is best known on the ground of "Westward Lio," or to obtain a needed in geo-graphical matters not compatible with strict accuracy, is best known to herself. But the speciality of the descriptions, at once picture sque and minute, leave but little doubt that most of the localities are real, and that every foot of ground described is well known to the writer.

The action of the story turns upon the practice of smuggling, and its deteriorating influences on the habits and characters of those concerned in it. There is no very clear skeleton of plot,— artistic construction is not a Kingsley characteristic. The book may be said to consist of the lives and adventures of the Dawsons and Mountjoys, with occasional episodes about their friends and enemies. The heroine, Gratians or Grace Dawson, familiarly called "Tye," is a well-conceived and well-delineated character. and Mountjoys, with occasional episodes about their friends and enemies. The heroine, Gratians or Grace Dawson, familiarly called "Tye," is a well-conceived and well-delineated character. With a brutal father and a weak brother, her home is destitute of all hopeful or refining influences, and her only sunshine is derived from her playmate, Edward Mountjoy, and his mother. Of course she partakes in all the boyish sports of her brother and Edward-riding, fishing, and scrambling "over the cliffs"; but the native pride and grace of her character preserve her from any taint of the hoyden, and she gradually develops into a loveable specimen of womanhood. Reginald Dawson, her unstable and self-indulgent brother, is equally well drawn ; Edward Mountjoy, though a pleas-ing sketch, is less clearly worked out. Lily Fowler, Reginald's first love, is decidedly a failure. love, is decidedly a failure. There has been quite an over-supply of Lilys and Lilians in the novels of the last few years, and we are getting rather tired of them. The race first came in with Tenny-sons "Airy, fairy Lilian," who is undenbtedly the "typical form" son's "Airy, fairy Lilian," who is undenbtedly the "typical form" underlying them all, though modified variously according to the taste of each separate writer. The Lillian of "Alton Locke" was a nearer approach than any we have seen to the original character suggested by Tennyson's poem. Mrs Chanter's Lily, on the con-trary, is tender-hearted,—"the spirit-child, the spirit-woman"; but does not impress us as being drawn from life. Perhaps a cha-racter of the sort here intended could only be drawn successfully by such rare and exceptional geniuses as those who gave us Ariel and Mignon. In less gifted hands, the "spirit-woman" is apt to sink into a piece of mere generalised sentimentality. We should have liked to present some of the stirring scenes of underlying

We should have liked to present some of the stirring scenes of adventure, but they are too long for extract. We therefore select the following, the opening scene of the story, as a specimen of the author's style. Perhaps, in the adventures of Gratians and her companions, she has retraced some of the wanderings of her own childhood, by the rocks and waves of her favourite Devonshire*:-

companions, she has retraced some of the wanderings of her own childhood, by the rocks and waves of her favourite Devonshire":--" Let us go home aver the cliff, Edward; the tide is rising fast." The speaker was a girl about ten years old, tail for her age, and slender, with light brown hair, bleached from exposure and neglect, streaming over her shoulders. Her small, well-formed bare feet, as they preased the short turf, were the fairest thing about her. She was dressed in a coarse sort of smock frock, of ne particular fashion, and a hood with a deep cape hanging down to her waist. She had two companions--lada--one three or four years older than herself, a sturdy, handsome fallow, the other much about her own age, and greatly resembling her. " Oh, Tye !" exclaimed the younger boy, " the cliff is so much farther round, and the hill is so atcep, and I'm so tired, let us go the shorter way, by the beach;" and senting himself on the turf, he lada the string of speckied trout beside him. " If you go by the beach," and make haste. If you are quick we may manage it, but the wave run high." In a few moments they were sliding down a low part of the cliff, over which the stream they had been rifting feel splashing into a deep pool on the beachs. The alide was composed of large round pebbles, no very easy walking for those weary little feet. But the girl kept up stondily by the side of her elder two cliff rises into a precipice, and vast blocks of stone jutting out into " For the convenience of intending readers, we add the following result

⁶ For the convenience of intending readers, we add the following result of a careful textual oriticiam. Chap. 32 properly ends on the 9th line of p. 296 (vol. 2), and the paragraphs which follow (pp. 296-3) ought to be inserted at the close of the concluding chapter of the tale, immediately be-fore the final paragraph there given.

THE ECONOMIST.

Nov. 24, 1860.]

the sea count to prevent all further progress; but the children knew the coast well, and climbed like goate. See! now they stand all three on a great rock, pause, and look where next to spring. The eldest springs first, and calls to the girl to follow. She is over, her arms round the boy to atady herself. They totter for a moment, then regain their footion, and she alides off the rock to make room for Regie. Another spring, apother totter, and they are over that danger in a little cove, where, in-stead of rough stones and rugged rocks, small white pebbles form their path. However smooth the pith, there is no time for loitering. "We must ran ; we shall thus gain a few moments," said Edward, " and mo-ments are of importance to us; the tide is higher than I thought." They run as well as they are able, and now they reach arother barrier, higher and more jagged than the first. They climb, they scramble, keeping as near the cliff as they can, for the tide is close upon them.

and more jagged than the first. They climb, they scramble, keeping as near the cliff as they can, for the tide is close upon them. "The Blower !" muttered Edward, if the tide is in it, we are in dam-er." The beyounger boy eaught the word: "The Blower, Edward ! oh, liet us go back" "Impossible !" was the reply. "We could not pass the Foot now. Course! standy ! be as quick as you can; we must heap the Blower !" "We have langud it before, you know, Edward," and the girl. "Yes," thought Edward; "but not in such as this." They stood at the edge of the dreaded Blower, which is formed by several gigantic masses of rock thrown together. Under one of these, the aca forces its way; it is not above three ar four feet across, and about eight feet deep, and may easily be crossed at low tide ; but it is a different thing when the see, bolling and surging in the narrow channel, renders the head gliddy and the foot unsteady. Edward leaned over; the water was gurgling at the bottom. "We have time!" he cried, " quick !"----but as he spolve there came a 'booming and 'bising, and a volume of water runsed up through the aperture, drenching them in a moment. "Jump between the was over. "Come Regie," and he held out bis hands: the boy jumped clear and was asfe. "Now, Tye, quick !!" The child was over-tised, she paused, she trembled, she let the favourable moment pass, and then also jumped—jumped whort, and was in the Blower. The wave receded : Tye stood supported by a small ladge of rock, clutching a projecting angle with both hands. She could nut hope to buffst many wave=certain destruction seemed to await her. "She must be anved, he shall be saved!" cried the frantic boy. But only the helpless children heard him, and the see-birds started from their nests at his cries. Poor Tyel the seconds were like years to her ! All the little incidents of her short life roos up before her, and in a moment she thought hought hought hought hought bought hought hought hought hought bought hought hought is dreaded." Gotto is an the second were li

heard him, and the sea-birds started from their nests at his cries. Poor Tyel the seconds were like years to her! All the little incidents of her short life rose up before her, and in a moment she thought how sorry Edward and Regie would be, and how they would miss her. A wave came: fortunately for her, not a strong one; but as it was, she only retained her hold by creeping closer between two of the rocks, while the water nearly sufficient of the strong one; but as it was, she only retained her hold by creeping closer between two of the rocks, while the water nearly sufficient of the strong one; but as it was, she marstill in the Blower. "Lie down, Regie, and put your hands over the rock, with the backs downwards;" and Tye called on Edward to hook his heads in theirs. The ready wit of the girlawed the life of her friend ; a violent ware at that moment burst through the Blower, and Edward was lifted by its farce on a level with the rock. "Pull towards you, Regie,—pull hard!" And in spite of that dreadful surf, in a moment Edward was by their side.

The ART-JOURNAL. November, 1860. Arthur Hall, Virtue, and Co. Ir is well known to all who have studied the fine collection of Turner now in the possession of the country, that that artist, before yielding himself up to the style which is peculiarly his own, trained his brush by the assidueus initiation of many great masters in very varied schools of painting. The success which attended his efforts in so many dissimilar styles is, perhaps, a unique instance in the history of art. Stimulated by the admiration that Wilkie's in the history of art. Stimulated by the admiration that Wilkie's "Willage Politicians" excited, Turner painted in 1807 the "Coun-try Blacksmith," an engraving of which is in the Art-Journal before us. The picture is devoid of the delicate finish and the numerous little touches of humour that Wilkie would have given numerous fittle touches of humour that Wikke would have given in treating the subject, but it is full of character and life, and stands high as a genre picture. The other steel engravings in the present number give us "Killarney; the Lower Lake," by Mr Anthony, a picture in the Royal collection at Osborne, and J. Durham's group of "Paul and Virginia." The latter subject is very simply and gracefully treated, though the head and countenance of Vir-juin are written to maxim and hear. The charter activity ginia are rather too massive and heavy. The chapter entitled "Rome, and her Works of Art," is peculiarly worthy of notice as containing remarkably delicate engravings of some of Raffaelle's best works. "The "Hudson River" and "South Wales" pursue the even tenor of their way, and a few interesting illustrations are copied in a notice of Mr Atkinson's work, "Travels in the Regions of the Upper and Lower Amoor." A small engraving of the statue of Lather from Rietschel's monument at Munich speaks well as to the model and improvement and the model. the grand and imposing qualities of that work.

A WITE TO ORDER. BY FREDERION GERSTAECRER, Author of "The Two Convicts," &c. Translated by EDMUND ROUT-LEDGE. London: Routledge. 1860. THIS is a story of life in Batavia, written by one who seems to be well acquainted with its various features. To our taste it is tedious and disagreeable, the main action consisting of the adventures of fast young merchants, with groups of miserable and degraded natives in the background. Nearly the only respectable indivi-duals in the book are two German couples, who change lovers with a facility which, happily, does not find much favour on this side of the German Ocean. We cannot recommend "A Wife to Order."

Foreign Correspondence,

(FROM OUR CORRESPONDENT.) PARIS, Thursday, PARIS, Thursday. Contrary to general expectation, the directors of the Bank ot France did not on Thursday last augment the rate of discount. It was, however, not without a great deal of hesitation, and after, I helieve, holding two meetings, that they came to that resolution; and most probably they would not have adopted it at all if the Government had not exercised pressure on them. Since then the matter has been under daily consideration, and at the weekly meet-ing held to-day it was fully discussed; but the previous resolution was adhered to. In keeping the discount at 4½ per cent, when that at London is at 6, the Bank of France of course acts in vio-tation of sound rule and of the teachings of experience. But it is lation of sound rule and of the teachings of experience. But it is not at liberty to comport itself according to rule when the conve-nience of the Government lies the other way, for it is, though a private concern, a Government instrument; and the Government fears that an increase of interest would give such a check to corr private concern, a Government instrument; and the Government fears that an increase of interest would give such a check to com-merce as to cause a sort of crisis, and that it is most anxious to avoid. Perhaps, however, the very step it has taken may contri-bute greatly to bring on the evil it wishes to prevent. In the meantime, one of the directors of the Bank of France, M. Mallet, has gone to London to endeavour to negotiate with the Bank of England for an exchange of 50,000,000f silver for the same sum in gold. Whether he will succeed or not, you will know better than we do here; the belief is that he will, and if so the Bank of France will be relieved for a time, for it is gold that it wants, its stock of silver being large.

France will be relieved for a time, for it is gold that it wants, its stock of silver being large. The Bourse has been a good deal agitated during the week, but it closes higher to-day than last Thursday. The shares of the Bank of France have in particular undergone great fluctuations: on Thursday last they were 2,905f; on Friday they rose to 2,935f; on Saturday to 2,950f; and on Monday to 2,980f; but on Tuesday they came down to 2,945f; yesterday they remained at the same figure, and to-day they have fallen to 2,910f. This is of more than last Thursday, and 70f less than last Monday. What "reasonable reason" the Bourse had for sending them up so high, under present circumstances it would be difficult to state. The following are the general quotations of the week :---The following are the general quotations of the week :-

The shipping interest has been thrown into considerable agitation by the statement that negotiations are now going on between the English and French Governments for the purpose of effecting a thorough revision of, that is a large reduction in, the differen-tial duties in favour of French shipping. The Chambers of Com-merce of Bordeaux and Nantes have addressed long and earnest remonstrances to the Government on this subject; and it is ex-pected that the Chambers of Havre and Marseilles will follow their example. As the matter is of considerable analysis of the Bordeaux and Nantes docume As the matter is of considerable importance, I give an

The Bordeaux Chamber, after a few preliminary observations,

No one can allege that our merchant shipping is able to strangle even equal terms against that of England. The most decisive experience that effect has long since been obtained. tot

THE ECONOMIST.

1310

indirect commerce, much graver and per-r merchant shipping would ensue ? equen es to o

It next goes on to explain why French shipping is inferior to English. In the first place, ships in France, it says, cannot be built so cheaply as in England, —timber, iron, sheet iron, copper, hemp, and anchors being dearer : iron in particular is so, and that is a great disadvantage, seeing that the tendency is to con-struct vessels entirely of that material, or to employ it more exbuilt so cheaply as in Lagiana, — Limber, iron, sneet iron, copper hemp, and anchors being dearer: iron in particular is so, an that is a great disadvantage, seeing that the tendency is to con struct vessels entirely of that material, or to employ it more ex-tensively in wooden ones than heretofore. In the second place :-

tensively in wooden ones than heretofore. In the second place :---A host of regulations weigh on French shipping from which that of England is exempt. The number and the composition of our crews is imposed on us. A vessel which might be navigated by a snaller number of men is obliged to carry the number fixed by the regulations. Exigency in this matter has been carried to such an extent that we have been obliged to employ an extra cabin-boy for every ten men. When a vessel, in returning to France, enters a different port to that from which she sailed, her owner must carry back her crew to that place, or pay the ex-penses of their journey. He is not allowed, as the English are, so to fix the wages of his seamen as to emancipate himself from this charge. Lastly, frequent levies of sailors are made for the service of the Govern-sailors he requires, and this obliges him to pay wages all the more excessive, from the fact that the law of the 2d of December, 1793, requires that the captain, the officers, and three-fourths of the crew, shall be French. The Chamber admits that many of the preceding evils may be

The Chamber admits that many of the preceding evils may be removed, and it expresses a hope that the Government will endea-vour to get rid of them. But it says that there is a still graver one which the Government cannot touch :--

vour to get rid of them. But it says that there is a still graver one which the Government cannot touch :--That evil is the want of exports as freight for our vessels. In addition to the productions of their manufactures with which they supply all the markets of the globe, the English possess coal which they supply all the other productions of their manufactures with which they supply all the markets of the globe, the English possess coal which they transport every where, for it is everywhere necessary. Assured of a freight to carry to every destination, they have only to occupy themselves with seeking a re-turn freight; and that freight, even when taken at a moderate rate, gives them for the whole voyage a sufficient remunseration. We are very far from enjoying the same advantage. Our vessels on leaving have only wines as the bulk of their cargoer. Wines are not in all countries objects of large consumption, and they can consequently only be imported into them in small quantities. Our vessels have conse-questly to remain a long time in our ports awalting their complete freight in articles of our manufacture, or in agricultural productions which are less demanded than wines. These delays occasion expenses of all kinds i were and tear of vessels at anchor, interest on capital, assurances, wages of the crews, &c. Often to avoid these expenses vessels leave with half cargoes, and sometimes even in ballast. Arrived at their destination they find themselves in presence of English vessels with which they cannot dispute the freight which may be offered for any other country than France; for their competitors content themselves with a price which is much lower than that which is necessary to them to compensate the de-fict in their out-going freight. It is only by the differential duties which strike direct importations under foreign flags, that our vessels solvy suc-ceed in obtaining cargoes and is effecting their return to France. It results from these difficulitis and embarrassments that in the same space of tim

foreign. As regards Australia for example, their vessels take out passengers as well as merchandise, and bring back wool at a cheap rate; but French vessels take no passengers to Australia, and no other merchandise than wines and brandies, and to return they only get small quantities of wool. One consequence of all this, says the Chamber, is that French shipowners cannot think of employing large vessels; those of 500 or 600 tons at the outside alone suit them; but this causes a large increase in general and other expenses. other expense

other expenses. In conclusion, the Chamber, after some observations as to the importance of merchant shipping in a national point of view, admits that the differential duties require revision, they being in some cases 100 per cent., and in others only 30 or 40. It offers, if required, to lead its aid in effecting such a revision, but it repeats that French shipping cannot compete with the English on equal terms; it says that the Treaty of Com-merce has established *reciprocity*, but not *equality*, between the two countries, and that as in that treaty England admitted that her manufactures are so superior to those of France, that she could receive the latter without any duty and allow her own to be taxed 25 or 30 per cent. in France, so "in a treaty of navigation she ought to accept a similar principle; that is to say, confine herself to asking that the differential duties in France shall cease to be prohibitive of her navigation in order to become moderately pro-tective of French shipping in the proportion of its inferiority to that of England." The Chamber adds a complaint that in certain English ports duties are levied on French vessels of those ports are exempt; the consequence of which is to subject the former to a great disadvantage, and even to violate the treaty of 1826. clusion, the Chamber, after some observations as to the In con treaty of 1826.

Chamber of Commerce of Nantes, in its address, begins by TI

making an important admission :--The Chamber does not disguise from itself that in its present situation, when all branches of manufactures have seen the protective duties they

enjoyed lowered in a proportion more or less considerable, the complete and absolute maintenance of the stafs gue solely in favour of ahipping would be illogical.

ould be illogical. It even adds that such maintenance might be dangerous, inar intervention of making concessions without gettin much as England, repenting of making concessions without getting any return, might make reprisals which would be prejudicial to French shipping. Nevertheless, it says, there must be protection.

The protection to our flag may be restricted within reasonable limits, but it must be maintained. That is the principle which the Chamber does not hesitate to proclaim as essential to the prosperity and even to the existence of our merchant shipping. Our shipping is, in fact, of all branches of industry, that which can least be abandoned to the free com-petition of its rivals, principally those of England.

The Chamber then goes on to enumerate the causes of the in-feriority of the French shipping to the English. What it says on these points is naturally the same in substance as what was urged by the Bordeaux Chamber. But it describes as the "first and these points is naturally the same in substance as what was urged by the Bordeaux Chamber. But it describes as the "first and principal" cause of inferiority, the absence of sufficient out-going freights. It admits, however, that French vessels get coal in Eng-land which serve as such freights, but that this subjects them to heavy expenses for assurance, wages, pilotage, commission, &c., also to loss of time and risks, all which it says cannot be estimated at less than 30f a ton; and it cries "it is with this heavy charge that we have to enter into competition with our rivals, who are not only more favoured than we are, but find their freights at home." As a proof that French shipping is dearer than the English, the Chamber alleges, among other things, that in Canada the English can get vessels constructed 30 or 40 per cent, cheaper than they can be made in France. It admits that the Treaty of Commerce will diminish the price of iron used in shipbuilding, but then it says, it must not be forgotten that French vessels at present afloat ware constructed of materials which paid the old duties. Another point of inferiority—not noticed by the Bordeaux Chamber—is that the French have none of those "establishments of credit" which the Dutch, and particularly the English possess in the principal markets of India and China. The Chamber of Nantes, then, insists that the shipping interest by th

The Chamber of Nantes, then, insists that the shipping interest ust have protection; and as to the amount thereof it says :--The maximum protection to French manufactures stipulated in the reaty of Commerce with England of the 23rd January is 30 per cent. We do not think that we have the right to decand more for shipping.

Treaty

Treaty of Commerce with England of the 23rd January is 30 per cent. We do not think that we have the right to demand more for shipping, but we think that any less protection would be insufficient. In the analyses which precede, your readers have the case of the French shipping interest. They will doubtless think that the removal of the Governmental restrictions and impositions of which that interest complains would be fair and just; but that its repre-sentations about the dearness of building ships, the difficulty of procuring force the impossibility of commercing with the English sentations about the dearness of building ships, the difficulty of procuring freights, the impossibility of competing with the English, &c., &c., are of no more value than the arguments by which other branches of commercial enterprise in France endeavour to prove that they are entitled to protection. An Imperial decree just issued allows the importation into Corsica of stockfish on the same terms as into France, and the export of fire-wood, timber, and certain descriptions of bark also on the same terms as from the Continent. A serious minoring in my last letter requires correction the

A serious misprint in my last letter requires correction : the subvention proposed to be allowed to the Transstantic Steam Navigation affair, taken up by the Compagnie Generale Maritime under the auspices of the Credit Mobilier, is 9,000,000f, not, m printed, 29,000,000f.

The Customs returns brought out to-day show that the import duties for the month of October last were 10,278,000f; while port duties for the month of October last were 10,278,000f; whilst in the corresponding month of last year they were 15,429,577f, and in that of the year before 12,952,112f: for the first three months of the present year they were 110,873,000f; same period last year 157,680,174f; and same period of 1858, 154,737,688f. The decline is no doubt large, but it is owing to the abolition and reductions of duties effected in the past year. In the quantities of goods imported, however, there is not only no falling off but a large increase; and this proves that the reforms have perfectly suc-ceeded. In my next I will give the customary details of the goods imported, and also of those exported. Want of space prevents me from doing so to-day. fre

imported, and also of those exported. Want of space prevents me from doing so to-day. Subjoined is the market report :--FLOUR.-The quotations at *Paris*, yesterday, were 61f to 64f the sack of 159 kilogs; they were lower than those of the preceding week, but were firm. Of four marks, disposable was 61f 50c, and the current month 61f to 61f 25c; for December, for which some large sales were made, 60f 25c, and some 60f 50c; for March and April, 60f 75c and 61f re given. MARKETS IN THE MANUFACTURING DISTRICTS.

The demand for goods in the manufacturing markets held this week has fallen off, and, in some instances, prices have had an drooping tendency. The stocks have rather accumulated, owing to the present high range in the value of money in the discount market. Wool has changed hands slowly, but we have no alter-ation to notice in its value. On the whole, the iron trade is healthy, at about previous rates. Coals have continued in demand, at very full prices at very full prices

MAXCHESTER, Nov. 22.—Business has this week been extremely Canadi limited, though generally at the reduction reported at the end of bars, 5 last week. To-day there has been rather a better feeling, arising 51 los.

chiefly from less distrust of the money market, and partly from the anticipations held out in yesterday's mail from Calcutta that some material modification of the Indian tariff is contemplated. Other-wise, advices from the East have still been on the whole unsatis-factory. The home trade houses, this being as usual their dullest season, are much occupied in taking stock, and accordingly are not buyers. Yarns have generally been lower, in sympathy with cotton buyers. cotton.

30-6, 40 reed, Bad End Long Cleth, 45 3 6 0 8 74 8 6 7 4 7 1 BraDronz.—There is a more cheerful feeling in the demand for wool, and what buyers there are find prices exceedingly firm. There is but a quiet market for yarns. Things are, however, certainly not werse than last week. The business doing in the merchants' warehouses is below an average of former years for Bradford-made goods. Fancy manufacturers are becoming better employed. We hear of a few considerable American orders, but the Geomen buyers onepete way gravingly the C

rman buyers operate very sparingly. MINGHAM.—The trade of this town confinues steady, and is the German buyers operate very sparingly. BIRMINGHAM.—The trade of this town continues steady, and is not, upon the whole, in an unsatisfactory state. There is a regular flow of orders on account of the country trade, and as these are given out by the factors as rapidly as they are received, the man-facturers are enabled to keep their men at work average time, though the actual number of orders on the books is small, except in the are of the largest actual blocks are

LERDS.—The cloth balls have had a moderate attendance of buyers, and in seasonable goods a fair amount of small purchases was made.

-The flannel trade has been a little more animated. KOCHDALE.—The Hannel trade has been a little more animated, still there has not been a great deal of business done. The demand is confined almost entirely to sensonable articles, and fancy fannels are greatly in request. Yorkshire goods, unless it be linseys, meet with fair sale. Prices in general are well maintained. Wool is very firm in price, but purchases are made only to supply imme-diate wants. ROCHDALE .e wants.

HALIFAX .- The worsted trade of this district has shown so The demand for yarns for the home market has been more cheerful. The demand for yarns for the home market has been more lively, and spinners are better employed. In the piece department also there have been more inquiries, and it is said that the trade with the East has rather revived by the Chinese intelligence. In wool

the East has rather revived by the Chinese intelligence. In wool there has been a tolerably large business done, at very firm rates. HUDDERSTIELD.—Our market is still very quiet. Stocks are still on the increase, but there is very little disposition on the part of the manufacturers generally to give way in prices to any extent. LENCESTER.—Many branches of the hosiery trade are quiet, but the tone of business generally is healthy, and, although the de-mand for goods is by no means active, there is confidence in the market. At Loughborough, Hinckley, and other country districts, there is not much change to notice. Wools are firm, and continue bich in price. Yarm also are stiff.

market. At Longhborough, Hinckley, and other country districts, there is not much change to notice. Wools are firm, and continue high in price. Yarns also are stiff. NOTTISGHAM.—The foreign buyers who are in the lace market are not purchasing in large quantities, and the trade generally is in a very dull and unsatisfactory state. The Americans are operating only sparingly, and the home trade is extremely flat. There is not much change to report in the hosiery trade. BELFART.—The improved aspect of the foreign markets has given more animation to general business; and, with firmness of value and the existence of only light stocks, prospects are favourable for the finished goods department. In the home trade, a more active inquiry has been experienced; this, however, chiefly in the lines well known as the principal sources whence consumers draw their supplies. Sanguine bleachers look forward to a considerable in-crease in the demand for goods by continental houses at the open-ing of the new year. Buyers have been taking stocks of linens in crease in the demand for goods by continental houses at the open-ing of the new year. Buyers have been taking stocks of linens in the brown state with more prudence, and the quantities of cloth left unsold at the close of each day's market have been comparatively small. The immense consumption of prime warps now going on at the steam-loom factories has kept down stocks so much, in par-ticular counts, that spinners of such yarns look for higher prices; and in most cases these have been obtained. WOVENHARTFOX.—The official list of prices of Staffordshire finished iron is as follows:—Common Staffordshire bars, 71 10s, at the works; best bars, 81 00s; sheets, 91; doubles, 100 10s; nail sheets, 91 10s; latten, 127; boiler plates, 91; best and best best in proportion; common rods, 77 10s; hoops, 82 10s; gas strip, 81; Canada plates, 127; and all other sorts in proportion. Welch bars, 52 75, 64 to 52 10s. The nominal price of rails in Wales is 51 10s.

In 1850, the stock of bullion in the Bank of England kept increasing, notwithstanding the exchanges were ad-verse. This evidently arose from the desire manifested by some countries on the Continent to get rid of their gold, in consequence of the Californian discoveries.

In 1857, the prominent features were the panic at Ham-burg and the failure of numerous German houses here, as well as of the Northumberland and Durham District Bank ; but, although the rapid increase in the "other" securities in the Bank of England denoted a continued panic-rush for money, the relodgment of the proceeds as other deposits had at last led to an increase in the Bank's reserve. The notes and coin in the Banking Department represented a total of 2,398,3674, so that the over-issue of 2,000,0004 was virtually

It is easy to understand why the Bank of France wishes to retain the silver in her possession—viz, because it is at a premium of 15f to 16f per mille, and of course if the Bank of France were to make payments in silver, a general run to obtain it for the sake of the premium would take place.

The advices received from America this morning state that a very heavy fall has taken place in all descrip-tions of securities; and also that the exchanges on England and France are falling—say $107\frac{1}{2}$ to 8. The excitement caused by the election of a Republican Pre-sident is immense; and it is thought that the fall in the fund here here here the election of a security of the s funds has been brought about for electioneering purposes. We mention this circumstance, as the low price might cause investments in American securities, which might still further unfavourably influence the exchanges against this country

The discount market to-day presents a somewhat unsettled Singular to state, there has been a very fair appearance. demand for discount at the Bank of England at the Bank rate. In Lombard street the rate of discount is from 5 to 51 per cent., and considerable transactions have taken place at both those rates. We also can state that six months' bills have been discounted at $5\frac{1}{2}$. The rate of money on the Stock Exchange is 3 per cent. on Government securities, and very abundant. We may also state that money is very abundant at Paris, Brussels, and Amsterdam. The ex-changes this afternoon are generally lower. changes this after

THE ECONOMIST

ENGLISH FUNDS.—The public have certainly been investing in the English funds during the week, and large purchases have also been made on account of the Courts of Chancery and Bankruptcy, but the im-petus given to Consols has chiefly arisen from the arrangement made between the Banks of France and Eng-land. Consols, which in the early part of the week were 981 and. Consols, which in the early part of the week were $93\frac{1}{2}$ improved on that arrangement being made known to $93\frac{1}{2}$ for money, and $93\frac{1}{2}$ for the account, at which prices

they close this afternoon. FOREIGN FUNDS.—The principal feature in foreign funds has been the rise in Turkish Bonds—the New Loan from 57 to 583 9, the Old Loan from 72 to 731 1.

The cause of this rise is that it is generally credited that M. Mirès and Co. have contracted a loan for 16,000,000l sterling at the price of 531. A portion of the 3,000,000l of Hazine Tavilis, which falls due in December, is to be re-Hazine ceived in payment. An absurd report is in circulation that this loan will be offered to the public at 60, or some say 65. We presume it is the French public who are to be thus favoured, for as Turkish Bonds are selling at from $58\frac{1}{2}$ to 59-the dividends on which are secured on quite as good if not better security than the new bonds can possibly offer-it is not likely that the English public will subscribe for the New Loan at 60 or 65, which is stated to have been contracted for at 53¹/₄, merely to put an enormous profit in the pockets of Messrs Mirès and Co.

We deprecate this loan as ruinous to Turkey, and, if we may judge from the state of public feeling here, it will be very difficult if not impossible to place it on the English very market; and considering the drain of bullion that has been going on in France, we almost wonder that the French Government does not withhold its sanction to have it introduced on the Paris Bourse, as a loan of this magnitude must tend to augment a drain of bullion, which, if continued, may be attended with very serious results to France. who may find herself placed in precisely the same position as England was in 1825 when she advanced so freely to the South Ame-rican States. Freuch Rentes close 70.15. The market for The market for other foreign securities is rather firmer.

Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day :----

BULLION.-We subjoin Messrs Pixley, Abell, and Lang-ley's circular, which gives an account of the bullion transactions of the week, and also those in India Government loan notes :-

loan notes :--Gold.-Since our last circular (15th instant) we have to report the arrival of the Sussex and Water Nymph, from Melbourne, bringing, together, 571,000?; and the La Plata, from the West Indies, with 61,000. These amounts, although large, have not proved sufficient for the wants of the exporters; and about 90,0001 in bar gold and sovereigos have been taken from the Bank. The withdrawals would probably have continued, in the absence of further Australian arrivals, but for an arrangement made be-tween the Banks of England and France, whereby the former has agreed to lend the latter the sum of 2,000,0001 in gold, a similar amount of silver being deposited with the Bank of England as security. There is at present no fixed time for the repayment of this loan. As regards the Bank of England, a clause of their charter empowers them to hold one quarter of their reserve of bullion in silver, should they deem it desirable. Considerable bullion in silver, should they deem it desirable. Considerable difference of opinion prevails as to the ultimate beneficial effect of the arrangements alluded to. The Anglesea, with 230,000*i* has now been out 72 days, and the Suffolk, with 293,500*i*, 56 days; both vessels are from Melbourne. The Seine has taken 1,320*i* to the West Indies, and the Pera 78,000*i* to the East—50*i* of which, was for Malta. was for Malta.

Silver .- Our market continues very inactive. The bars Silver.—Our market continues very inactive. The bars per La Plata have been sold at 5s 14d per ounce standard—a decline of §d from the last fixed price. The arrivals have been 32,000 per La Plata, from the West Indies; 1,344l per Tagus, from Lisbon. 10,380l has been shipped per Seine for the West Indies. Mexican Dollars.—There is nothing doing in Mexican dollars, and quotations are nominal, at 5s 25d. The next arrival from Mexico may be expected about the 29th inst. The Borussia, from New York has been the for the Seine and York.

and quotations are nominal, at 55 24d. The next arrival from Mexico may be expected about the 29th inst. The Borussia, from New York, has brought 5,000 in Mexican dollars. Exchange on India remains the same as at date of our last. Bank drafts at sixty days' sight on Bombay and Calcutta are sell-ing at 1s 113d to 25 04d; bills with documents, 1s 114d to 1s 1143d; Madras drafts at sixty days' sight (Bank), 1s 114d to 1s 1143d; Madras drafts at sixty days' sight (Bank), 1s 114d to 2s. India Government Loan Notes have improved the last few days, but transactions are on a very limited scale, and any slight de-mand or supply immediately affects the market. The rise may be considered equal to about 1 per cent., and we quote 5 per Cents. ered equal to about 1 per cent., and we quote 5 per Cents. consid

considered equal to about 1 per cent., and we quote 5 per Cents. 95, and $5\frac{1}{2}$ per Cents. 101. Quotations for Bullion.—Gold.—Bar gold, 77s 10d per oz std; bar gold, fine, 77s 10d per oz std; bar gold refinable, 78s $1\frac{1}{2}d$ per oz std. Silver.—Bar silver, 5s $1\frac{1}{2}d$ per oz std; bar silver, 5s $5\frac{1}{2}d$ per oz 5 grs gold, 5s $1\frac{1}{2}d$ per oz std; fine cake silver, 5s $5\frac{1}{2}d$ per oz Mexican dollars, 5s $2\frac{1}{2}d$ per oz; Spanish dollars (Carolus), 6s 2d per oz, last price.

s.-About 40,000l claims on the estates of Me FAILURE Laurence, Mortimore, and Schrader have been proved. dividend meeting is fixed for the 14th proximo. The

A meeting of the creditors of Mr Charles Hallowell Carew, who failed some time since, has been held, to consider a proposal made for the payment of the creditors' claims. It was mentioned that in about two years the whole of the debts, 26,000/, are likely to be paid in full. It was proposed to insure Mr Carew's life for 22,500/, and from sums already in hand to pay 4s or 5s in the pound about February next, and further dividends as the assets are realised. All legal proceedings against Mr Carew are to ase for twelve months, upon satisfactory arrangements being carried out to effect the liquidation as proposed

In the Bankruptcy Court there has been an examination sitting in the case of Mr George V. Jackson, described as a commission merchant of New Broad street, who has un-secured debts and liabilities to the amount of 18,0924, and including whose case presents some peculiar features, numerous transactions in acccommodation bills.

A meeting has taken place of the creditors of Messrs J. and E. Williams, sugar agents, of Fenchurch street, who stopped payment on the 10th instant. The balance sheet presented by Messrs Theodore Jones and Co., accountants, estimates the liabilities at 42,2814, and the assets at 33,6204. The cause of the suspension was the failure of Messrs H. Holmaear and Co., sugar refiners, who owed 10,000/ to this

THE ECONOMIST.

estate. Some discussion took place with reference to certain goods in transitu, and to the probability of the assets being diminished in connection with them. The advisability of further information on this point was urged by several creditors. It was proposed on behalf of the firm to pay 15s in the pound, viz., 5s at one month, 5s at two months, 2s 6d at four months, and 2s 6d at six months, the last instalment to be secured. This offer was not agreed to, a committee of investigation being appointed, which will re-port to an adjourned meeting. The attendance was someport to an adjourned meeting. The attendance was some-what numerous, and comprised partners in some of the first firms in Mincing lane.

A dividend of about 6d in the pound is about to be declared in the Bankruptcy Court among the joint creditors of Messrs A. J. and H. Jacobs, glass merchants, of Finsbury and Australia, who failed in 1855, with liabilities to the amount of 17,1091. This estate, under inspection, has already yielded 5s 6d in the pound.

Assets to the amount of 1,000l will shortly be divided amongst the creditors to the amount of 30,000l of George Montagu Evans, solicitor, of Farnham, who absconded .

Mr Blackwell, of Dudley and Bilston, who lately failed, has expressed a desire to pay his creditors 20s in the pound, but the two largest claimants, the Birmingham Banking Company and the Northampton Banking Company, at a meeting held on Tuesday last, objected to this, as they thought that it would be more to the advantage of the creditors, and to Mr Blackwell himself, that he should attempt to pay only half that sum. On condition that a proposal to that effect should be made, the banks would consent to stand by while Mr Blackwell liquidated to this extent the claims that all the other creditors had upon him, Mr Blackwell's proposition, therefore, was to pay his creditors 10s in the pound in two years, in instalments of La 3d every three months. This composition being paid to the general creditors, then the banks were to take, pro ratâ, half Mr Blackwell's profits until their claims had also been met. Mr Blackwell himself then stated that this was the best proposition that he could make ; but if he lived to liquidate the claims which the banks had upon him, he should feel a pleasure in making up to the general creditors the other 10s in the pound. Ultimately the proposition was adopted unanimously, and the gentlemen present agreed to assist Mr Blackwell to carry it out.

MISCELLANEOUS .- The committee of the London shareholders of the Geelong and Melbourne Railway have issued a circular, announcing the repayment of the share capital, with all arrears of interest, on the 1st of December, and of the debentures due on the 1st of January next. Mr Cooke, the London agent of the Company, though his arrears of salary are not yet paid, has delivered over to the bankers the share registers of the Company and all documents in his session, and has proffered his services to facilitate the distribution of the payments on account of the share capital and interest. The committee have appointed three trustees —the chairman (Mr Richard Potter), Lord Alfred Churchill, M.P., and Mr Robert Brooks, M.P.—to receive the con-tributions of shareholders and bondholders towards a fund for the purpose of paying the debt due to Mr Cooke, for his untiring energy, his determined stand in opposition to all attempts to damage the claim of the English proprietors against the Colonial Government, and for his unrequited and, of late, gratuitous services in bringing about this final settlement. It is suggested that every sharele'der should subscribe one shilling upon each pare of 200 and for subscribe one shilling upon each share of 201, and five

shillings upon each bond of 100/. In Mr E. F. Satterthwaite's circular, it is observed that at the latest date the reports of business throughout the United States were very favourable and money easy, with low exchange on Europe. The improved state of things is perhaps best evidenced by the trade reports at the port of New York. for the first ten months of the present year. They show an increase of exports of 25,537,000 dols, a decrease of im-They show an ports of 10,074,000 dols, and a decrease in export of specie These returns show conclusively the of 17,815,000 dols. advantage America is gaining from her large crops of cotton and corn, and clearly account for the adverse state to Eng-

And term, and terminy measurements. A special general meeting of the shareholders of the Lon-don Discount Company has been held for the purpose of

deciding upon the proposition of a section of the directors, that the Company be voluntarily wound up. The chairman (Mr Bevan) detailed the reasons which had guided them in coming to the decision they had, namely, the losses the Company had experienced lately. The directors were afraid of the future, and hence their desire to wind up. It was left to the member for Hull to show what was the great impediment to its future success, namely, the refusal of the Bank of England to rediscount for the discount houses, which was not the came when the undertaking was started. It was shown that the Company in the course of its four years' operations had discounted commercial bills to the extent of 33,000,0001, had made gross profits of 83,000/, and net profits of 60,000/, of which 40,000l was absorbed in losses, namely, 22,000l by the exceptional failures in the leather trade, and 18,000/ in the ordinary course, leaving about an equal amount divided amongst the shareholders in the shape of dividend; that at the present moment the balance of loss against the Company was 7,000%. A resolution was finally carried by a. large majority that the London Discount Company be volun-tarily wound up, and two of the directors and the secretary were appointed to see the same carried into effect.

Two new Indian banking establishments have been formed viz., the Bank of Kurrachee, with a capital of 250,0000, with power of increase to 1,000,0001. The direction is composed of native end European residents at the port of Kurrachee. The other project is that of the Central Bank of Western India; a Mr Gordon has been appointed the manager, and Mr R. Davidson, of the Mercantile Bank of India, has been appointed agent in London.

It is understood that Mr Kirkman Daniel Hodgson, of the firm of Finlay, Hodgson, and Co., is the Bank director who will be recommended in March next to succeed Mr Latham as Deputy-Governor.

With regard to the position of the Bank of Upper Canada, the last advices from Toronto mention that a meeting had been held between representatives of that institution and of some of the other leading banks of the province—namely, the Bank of Montreal, the Commercial Bank, and the Bank of British America. The object apparently was to obviate any feeling of uneasiness that might have been created by the recent allegations against the management of the Bank of Upper Canada, and to devise measures of mutual support in case of necessity. An arrangement is stated to have been come to under which they will sustain each other with specie on any emergency. "The banks," it is observed by the Toronto Leader, "are in the habit of receiving one another's notes as a matter of course, but the mutual confidence is henceforth to lead to a more extended mutual support. Under the new arrangement nothing but a universal panie, such as sometimes takes place during a period of commercial crisis, can deprive any one bank of a supply of specie that is for all practical purposes un-limited." The same journal refers to rumours bear-ing on the probability of the Government deposits being withdrawn from the Bank of Upper Canada, and announces that they are totally without foundation. At the same time a denial is given to an assertion that the Govern-At the ment have become responsible for the advances made by this bank to the Grand Trunk Railway. The security for those bank to the Grand Trunk Railway. advances consists of property belonging to the Grand Trunk Company in three States of the American Union-Vermont, New Hampshire, and Maine, and which "is of the most un-doubted character and ample in amount." The question The question whether such security, however ample, can in any case be regarded as strictly suitable for banking purposes is not dis-cussed, but a declaration is put forth that " not a dollar of the amount advanced by the bank to the Grand Trunk Railway Company is in peril.'

COMPARATIVE EXCHANGES.

The Commercial Times.

PORTAGE ON LETTERS FOR MONTE VIDEO, BUENOS ANRES, AND PARAGUAX.—On the 1st January next and thenceforward, the former Bitlish rate of postage between the Republic of the Uruguay (including Monte Video) and the United Kingdom, namely, one shilling for a letter not exceeding half an ounce in weight (which postage was reduced last year under a postal convention which the Legislature of the Uruguay has refused to ratify), will be reimposed. From the same date the British postage upon letters for Buenos Ayres, or any other part of the Argentine Confederation, as well as upon letters for the Republic of Paraguay, which was reduced simultaneously with the postage to the Uruguay, will in like manner be raised from sixpasce to one shilling for a letter not ex-ceding half an ounce, and will thus be made uniform with the British into the Uruguay and Brazil. For heavier letters the postage will in-crease according to the usual scale. The postage must, as heretofore, in all cases be paid in advance, or the letters cannot be forwarded.

COMMERCIAL EPITOME. FRIDAY NIGHT.

FRIDAY NIGHT. The imports of foreign produce, this week, having been on an unusually large scale—viz., 57,760 quarters of wheat; 15,680 barley; 20,040 oats; 7,830 aneks and 12,250 barrels of flour—the demand for all kinds of English wheat at Mark hase, this morning, was heavy in the extreme. Searcely a sample changed hands, and, to have forced sales, 3s to 4s per quarter less money, when com-pared with Monday, must have been submitted to. The present high range in the value of mrs. 7 seemed to have a depressing in-fluence upon the market per crist. Foreign wheat was nominal in price, and nearly all kinds ' spring corn gave way is per quarter. Country flour was is per 280 lbs cheaper. At Liverpool to-day, most articles of grain way taken off at about Tuesday's currency.

currency. Advices from New York to the 10th inst. state that both wheat and flour continued in good request for export purposes. Messrs Briggs and Co., of Alexandria, writing on the 10th inst.,

Manars Briggs and Co., of Alexandria, writing on the 10th inst., ceeding half an ounce, and will thus be made uniform with the British rais to the Uruguay and Brazil. For heavier letters the postage will in-trans according to the usual scale. The postage must, as heretofore, in all cases be paid in advance, or the letters cannot be forwarded. MAILS ARRIVED. THE ECONOMIST.

anage in port, freights are firmly maintained, say at 78 3d to 7a 9d per larter for beans to the United Kingdom for orders, and other grain and ed in propertion. To a direct port, 6s 6d to 7s for beans or wheat. harter parties for vessels to arrive are offering on easier terms. By namer to Liverpool rates have been reduced to 7s 3d per quarter. Charter

The business transacted during the week in the Liverpool cotton market has been again on a very limited scale, and the sales amount to 33,000 bales only, of which 25,000 bales have been taken amount to 33,000 bales only, of which 25,000 bales have been taken by spinners, 4,000 on speculation, and 4,000 bales for export. Quotations are about ad per lb lower than on Friday last. At the commencement of the week the market was very depressed, but in the last few days the money market having become somewhat easier, there has been an improved demand, and the sales yester-day and to-day have amounted to 10,000 bales each day. In reference to the new group of outton. Measure Neill Brotherst

To Europe To Chine, &c	1860. bales 389,140] 192,518	*******	bales 508,856 132,750	*
Total	581,658		641,606	

Showing a gross decrease of 59,948 bales; but the falling off in exports to Europe, as against last year, is 119,716 bales. The Chinese have, on the contrary, taken nearly 60,000 bales in excess purchases in 1859. of their

The ten market has been in a very inactive state, and prices have shown a tendency to give way. New Monings have changed hands at 19 9d to 2s 1d per lb. The show of samples is tolerably good.

Throughout the week the demand for all descriptions of sugar has been in a most inactive state, and the quotations have ruled somewhat easier.

Coffee has commanded about previous rates, but the demand as been wholly confined to immediate wants. The cocco sales

has been wholly confined to immediate wants. The coccos sales have gone off heavily. Very little business has been passing in rice; however, no quo-table change has taken place in prices. Most descriptions of fruit have commanded rather more atten-tion, and the quotations generally have been well supported. A circular from Zurich, forwarded by Messrs Rognin and Hoff-mann, states that the silk trade was tolerably active. Steady pur-chases had been made on English and Russian account. The quantity of silk that passed condition was, in September, for Zurich, 52,587 lbs in 1860, 48,376 lbs in 1859, and 48,166 in 1855: for Bâle, 22,976 lbs in 1860, 16,205 lbs in 1859, and 20,315 in 1858. Since the 1st January, for Zurich and Bâle, 618,922 lbs in 1860, 651,986 lbs in 1859, and 553,512 lbs in 1858. The result of the Liverpool rag sales is thus reported by Messrs W. Greame and Co.:—

W. Greame and Co. :-

W. Greame and Co. :--We had a large attendance of buyers, and notwithstanding the suddan and extraordinary rise in the rate of discount by the Bank of England, the competition, with few exceptions, was active throughout. The total quantity offered consisted of 3,144 bales. Woollens, of which there was a very choice selection, were eagerly competed for, particularly the finer qualities, and prices ruled on an average about 5 per cent. higher than at our June sales; but for inferior and low qualities there was less demand, and on these, prices must be quoted about 5 per cent. lower. For the best qualities of Italian, Spanish, and American cloth the biddings were very spirited : superfine tailors' clippings realised 55s to 55s 6d, fine blues 53s to 60s, do. blacks 40s 6d to 46s 6d, do. browns and greens 31s to 38s, do. reds 51s 6d to 56s, ordinary and low blacks, browns, green, and greys 16s 6d to 22s, as in quality. The Americans being held about beir market value were withdrawn. Fine white flannels were eagerly competed for, and realised 44s to 51s, ordinary and low do. 25s to 22s 6d, white Tunis 16s to 17s 6d, coloured thitted 16s 6d to 20s; Australian woollens part sold at 12s; Turkey common woollens neglected and all withdrawn Tunis 16a to 17a 6d, coloured knitted 18a 6d to 20a; Australian woollens part sold at 12a; Turkey common woollens neglected and all withdrawn for want of competition. Cottons were in fair request; some parcels of Egyptian were engerly competed for by Scotch buyers; there was also a very active demand for a mixed parcel of Australian, which realised 12a to 12a 9d, being the highest price ever obtained for this class. The follow-ing are the prices obtained for the leading descriptions:--Italian PC 21e, SC 16a, TC 13a 6d; Australian white 15a 9d to 17s, coloured and mixed 10^a 3d to 12a 9d; Egyptian whites 14a to 15a, blue 11a 6d to 12a 3d,

coloured (one lot) 10s 6d; Turkey coloured (one lot) 11s 9d; East India site 15s, coloured withdrawn. The saltpetre market has continued heavy, on rather easi

terms. The public sales of wool continue to be well attended by buyer from the manufacturing districts. Sydney and Port Philip quali-ties have changed hands at the opening quotations; but Cape par-the have miled somewhat lower in price. Hemp has moved off No business of importance has taken place in run. Brandy and

The business of imported previous rates. Find a brandy and grain spirits have supported previous rates. We have very little change to notice in the value of either oils

otels or metals. The tallow market has continued steady. To-day, P. Y.C. on the spot has sold at 60s 9d. All the year, the price is 60s 3d; for December, 60s 6d; January to March, 61s; April to June, 59s; October to December, 58s 6d per owt, sellers. Town tallow is 60s net cash. A telegram from St Petersburg states that the season's shipments are rather over 128,000 casks.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, Nov. 7 .- FLOUR AND MEAL .- With a fair demand for NEW YORK, Nov. 7.— FLOUB AND MEAL.— With a fair demand for the local and Eastern trade, as also for export, the market for State and Western flour was firm on Saturday, and on Monday, under the influence of the favourable European advices, holders were enabled to establish an advance 5 to 10 cents per bbl. The ex-treme firmness in freights served to materially restrict operations for shipment, however, and the aggregate sales are, therefore, odin-paratively small. The market opened less buoyantly yesterday, and, before the close of 'Change, became dull and heavy, and the improvement realised the previous day was partly lost. The busi-

Nov. 24, 1860.

THE ECONOMIST.

1319

ness transacted was light, amounting to 36,000 bbls, and the aggre-gate sales are 10,000 bbls, the market closing heavily at our ad-justed quotations below, but with a tendency to a further reduc-tion. Canada flour has been in light request, and the sales for the three days foot up to 1,200 bbls, including 400 yesterday. We quote:--State, superfine brands, 5.35 to 5.50 dols; State, extra brands, 5.55 to 5.60 dols; Michigan, fancy brands, 5.35 to 5.40 dols; Ohio, common brands, 5.45 to 5.50 dols; Ohio, fancy brands, 5.55 to 5.65 dols; Ohio, fair extra, 5.80 to 5.85 dols, Ohio, good and choice extra brands, 5.90 to 7.25 dols; Michigan, Wisconsin, Indiana, &c., 5.60 to 5.85 dols; Genesee, fancy brands, 5.65 to 5.85 dols; Genesee, extra brands, 5.90 to 7.50 dols; Missouri, 5.80 to 7.50 dols; Canada, 5.75 to 7.60 dols per bbl. Southern foor has been in limited request, though prices are without marked decline. Baroar, from 1st Jan. to Slat October;

ExPORT, from Iai Jan. to Slat October; barrels 1,501,021 | 1859 616,074 1860 ... EXPORT, from lat to 6th November. 1860 barrels 22.340

barrels 23,565 Wheat Flour ..

GRAIN .- The market for wheat was without important alteration. GRAIN.—The market for wheat was without important alteration. Transactions since Friday comprise 306,000 bushels; 3,100 Canada Clab. 1.28 dol; 6,000 winter red Western, 1.33 dol to 1.35 dol; 23,000 amber Wisconsin, 1.27 dol to 1.28 dol; 4,500 white Ohio, 1.45 dol; and 21,000 Milwaukee Club, 1.25 dol to 1.26 dol, closing heavy. Corn has met with ready sale, chiefly at slightly improved prices: the sales aggregate 255,000 bushels, closing heavy at 71c to 72c for Southern mixed, 72c to 74c for round yellow, 71c to 72c for Western mixed, and 70c to 71c for unsound; other kinds are umbhanged. unchanged.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARE LANE, FRIDAY EVENING, The leading markets held since we last wrote have been rather scantily supplied with home-grown wheat, chiefly in poor condition; nevertheless, owing to the continued influx of foreign produce, the accumulation of stock in our warehouses, and the prospect of large arrivals during the remainder of the year, the demand has ruled heavy, and prices have not been supported. The best wheats have given way 1s to 2s-other kinds, 2s to 3s per qr, at which decline millers have operated with great caution. There has been much less activity in the sale for both English and foreign barley, and the currencies have declined 2s to 3s per qr. There has been a fair, but by no means active, sale for malt at previous quotations. Oats, though in but moderate supply, have met a dull inquiry at 6d to 1s per qr less money. Very little change has taken place in the value of beans, but peas have receded 2s per quarter. The best English and foreign flour has commanded former terms; but inferior parcels have sold at 1s per 280 lbs be-neath merions rates neath previous rates.

The future range in the value of produce is now regarded with much anxiety by the home-growers. According to the last return, the total imports of foreign and colonial grain into the United Kingdom in October amounted to 1,345,518 qrs; of flour and meal to 818,302 cwts. To show the great excess in the arrivals, we in-

sert the annexed comparison of arrivals in October in the four pre vious years :-

	COMPABIS	MON	OF IMPORT	В.		
	Oct., 1856.		Oct., 1857.		Oct., 1858.	Det., 1869.

Barley	113,482		121,587		168,580	 177.600
Oats	139,870		187,187		246,347	
Еуе	6,084		13,864		20,948	 1,626
Beans	6,197		14,557		36,930	 32,316
Pean	4,105		4,959		20,024	 34,652
Indian corn	150,166		156,983		282,363	 208,504
Flour	161,213		122,492		179,835	 94,832

From the above comparison, it would appear that the arrivals of both wheat and flour, last month, were on a scale of great magnitude—the increase in them, compared with the four previous years, being as follows :-

			WHEAT.	Quarters.	
Increase	compared	with	1859 :	489,235	
	-	-	1858	559,638	
	-	-	1857	455,152	
-	-	-	1856	410,438	
			FLOUR,	owts.	
Increase	compared	with	1859	716,607	
	-		1858	631,604	
-			1857	688,947	
-		-	1856	650,226	

Considering the great excess in the importations last month, together with the present state of the money market, we are not surprised at the present inactive state of the trade.

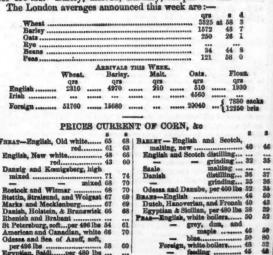

The demand for wheat on the Continent has been far from ctive, but no change of importance has taken place in the quota-Most other articles have sold to a fair extent on former tions. In the United States, large quantities of wheat and flour terms. still continue to find buyers for export purposes.

In Scotland, wheat has been disposed of on rather easier terms, and the demand for spring corn has fallen off, although the ship-ments to the South continue on a full average scale.

The Irish markets have been extremely inactive, and prices enerally have ruled lower. The quantities sold for England have seen comparatively trifling.

Very little English wheat was received fresh up to our market to-day; nevertheless, the demand was heavy in the extreme, and to have forced sales, 3s to 4s per qr less money must have been submitted to. All foreign wheats were lower to sell, and spring corn gave way 1s per qr. Flour was rather cheaper.

Mr Ed. Rainford reports the state of the floating trade as fol-

COLONIAL AND FOREIGN PRODUCE MARKETS. TRANSACTIONS OF THE WEEK. IS DAT'S MARKETS, SEE "POST For Rr

MINCING LANE, FRIDAT MORNING.

SUGAR .- There has not been any revival of the demand this week, but SUGAR.—There has not been any revival of the demand this week, out the importers generally refrain from pressing sales at lower prices. On Wednesday same soft Pennerg sold rather under the previous value; otherwise questations exhibit no change, and West India remains firm on account of its scarcity. By auction, 204 casks Barbadoes realised 41s to dfs for low to fine yellow, including which the transcitions to preservely evening amounted to 484 casks. A cargo of Mauritius, the first of the new crop, has arrived. The lendings has week did not exceed 870 tone, while 4.565 tons were delivered; consequently, the stock shows another important falling off, being 56,500 tons, against 65,700 tons in 1859. The Netherland Trading Company's Java sale held yesterday went off at 1 gilder advance.

Mouritius .- There were not any public sales yesterday, and scarcely ny business done by private contract.

Bengal .- Small sales are reported by private contract.

Penang.-Of 5,732 bags, two-thirds found buyers at, and after the sales: brown, 35s to 38s 6d ; low to good yellow, 39s to 43s per cwt.

Java .- 656 baskets 48 bags about one-third part sold at 41s for low oft yellow; the remainder bought in at 41s to 44s 6d for low to fine. Madras .- 3,100 bags have sold privately at 32s 6d for low soft dark

Madras.-3,100 bags have sold privately at 22s 6d for low soft dark brown sorts; a small portion native, 34s 6d to 35s 6d per cwt. Foreign.-At auction, yesterday, 200 cases Babia were withdrawn, three being no offera made at the previous value: low to fine brown, 35s 6d to 40s. A floating cargo of Havans, No. 11 to 11¹/₂, is reported for the United Kingdom at 28s. Refined.-Several nales have been effected upon terms rather favourable to the buyers: common grocery goods cannot be quoted under 50s 6d; crashed, 48s to 49s 6d per cwt. Morassus still meet with inquiries at full prices, but the market is very barely supplied. 50 puns Trisidad hav sold at 21s per cwt. RUM.-Very few sales have taken place this week, but former prices are maintained. A small parcel of fine Demerara is reported at 2s 1d per proof gallos.

are maintained. A small parcel of fine Demerara is reported at 2s 1d per proof gallon. Gono.—Cocoa is exceedingly dull, and 330 bags Trinidad by auction yestarday, consisting of small lots, only partly sold at 64s to 71s 6d per cwt for low grey to good mixed red, being barely previous rates. Tra.—The trade have bought to a moderate extent from the recent arrivals within the past two days, prices occasionally ruling rather tower. No further public sales were announced this morning. Corres.—The demend is by no means active, and general quotations remain about the same as before. Fine qualities of East India have not quite sustained their late extremely bigh value with increased supplies, while plantation Ceylon went off steadily. 176 casks 265 barrels and bags chiefly found buyers: fine fine ordinary to middling, 68s to 72s. 167 cases Neilgherry brought 64s to 70s 6d. 1,702 bags Cannon's Mysore: good to fine, 87s to 103s. Of 2,227 bags Rio, nearly half sold at 59s to 63s per cwt for good to fine ordinary. Ritcz.—The week's business has been smaller than for some time past, but former prices are supported. A floating cargo of pinky Madras found buyers at 12s. Sales on the spot have been exceedingly limited. By anction, 10,960 bags Java partly sold; widdling broken to good middling white, 13s to 14s. 3,680 bags Neorancie Arrsoan, damaged and re-packed, obtained 10s to 11s per cwt. Incours and DELIVERUES of Neorancie Arrsoan, damaged and re-packed, obtained 10s to 11s per cwt.

The converse of daty-free goods for expert are not given now, and the total will be shown under the imai of home consamption. SFRCER.—Black pepper is dull with a large stock. By auction, 4,062 bags partly sold at 3% dto 4d per 1b for common to fair quality. White has been less readily saleable. 537 bags Singapore partly found purchasers at 6d to 6½ d for middling to good. 12 casks bold limed nutnegs sold at 1s 9d per 1b, 60 bags Bengal rough ginger went at 31s. 400 cases Cochin sold rather dearer towards the latter part of the sale: wormy qualities, small to middling, 35s to 49s. A few lots Jamaica went at 71s to 120s per cwt. Zanzibar cloves are still in demand, and sales have been effected at 4d per 1b cash. SALTERERE.—A few contracts have been made in Bengal at irregular prices, and the market is still inactive. The last transactions were at 40s cash for refraction 7¼, and 39s 33 per cwt for refraction 10½ per cent. Increase and Disarverne of Sacres to Societ 17, with Stocuss en land. 1860.

grain at 18s to 18s 6d, and middling bold grain at 17s per cwt. Sc

Grain at 10s to 10s tot, and initiating boin grain at 1/2 per cwt. Bome business is also reported by private contract. CoCEINEAL.—The market has been quiet. 359 bags in the public sales about half acid at prices showing little alteration, excepting for black Teneriffe at 3s 3d to 3s 8d, which went cheaper; Teneriffe silvers brought 2s 11d to 3s 1d; Honduras, low to good, 3s to 3s 6d; dead grain, 2s 4d to 3s 6d; blacks, 3s 5d to 4s 7d per 1b.

Lac Drz.--166 chests common marks were thiefly taken in at 4d to 36 per lb this week. The sales in other kinds have been of undersan

SHELLAC .cwt.

ewt. The small quantity sold on the spot does not establish any change in quotations. RUBER-Pare is lower, selling at 1s 11d to 2s 53d for common to fine quality. No business has transpired in East India. METALE.—Few soles of importance have been effected this week. Scotch pig fron closes at 52s 6d for mixed Nos. Manufactured descrip-tions are quiet. Contracts to a moderate extent occurred in spelter, at 197 17s (6d to 200, and 200 2s 6d for arrival. Tin has sold at 133s for good Straits; Banca quoted at 134s. No change in Brith. Copper re-mains the same as before. Lead presents no change. HEMT.—Russian is quiet. By auction, 530 bales chiefly sold : superior roping, 236 to 26 per ton. Privately, the sales are limited. The jute matint has not improved. 2,100 bales, by suction, on Wednesday, partly sold irregularly at 137 los to 227 5s per ton for low middling to fine quality.

fine quality. H1DEs.-The public sales yesterday went off at lower rates by \$d to

d. per ib. LINSEED.—Arrivals keep light, and the demand active. Calcutta, 60s; Bombay, 65s. A large business has been transacted for arrival: Odesse, Sec., 58s for the United Kingdom, 1s more for the Continent; Calcutta

Scc., 59s for the United Kingdom, 1s more for the Continent; Calcuta aftoat, 59s per quarter. OILS.--Sperm dull at 1017 to 1027 10s. Pels seal commands 401. Cod, 371 to 381. Olive continues to sell very slowly: Gallipoli, 607; other sorts, 557 to 577 per tun. Stacks of cocco-nut are much reduced: Cochin commands 56s; Celyon, 54s. The market for palm was lower in the early part of the week, but it has since recovered, and fine quality cannot he obtained under 48s. The market for linseed oil is freely supplied, and the present quotation is 29s 6d to 29s 9d; 30s to 30s 3d for monthly deliverieg, January to March. Large arrivals of rape oil have unnettid the market: foreign refined, 44s to 44s 6d; brown, 42s per cwt. TURFENTINE.-Rough is quoted at 11s. Spirits sell very slowly:

rican, 33a per ewt.

TALLOW .- There has not been much business done for actual ALLOW. — Inere has not been much business done for actual con-sumption, and the market continues quiet, the quotations raling 6d lower. This morning, 1st sort Petersburg Y C closes at 60s 9d for delivery to the end of the year, 60s 6d to 60s 9d; spring, 61s per cwt.

POSTSCRIPT.

FRIDAY EVENING

Pti

ar 10 di D

SUGAR.-The market was dull to-day, but not lower. West India commands extreme rates, and the week's business amounts to 763 casks. 1,300 bags low Madras were bought in above the value.

1,300 bags low Madras were bought in above the value. Corwars. --115 cesks 793 bags plantation Ceylon sold at steady prices. 377 carse 62 bags Teillicherry brought 63s 64 to 69s. 204 bags Malsher were bought in at 64s 6d to 65s. 274 bales 190 quarter bales Mochs of indirect import were bought in: small berry 105s to 110s. A cargo of St Domingo bas sold at 63s 3d per cwt for the Mediterranean. Rtcz.--3,452 bags Necrancic Arracan partly sold: new rather heated, 10s 6d; damaged, 3s 6d to 11s; old bought in above the value. 500 bags new Bongal were taken in at 14s 6d for good middling; and 240 bags old low middling broken at 12s 3d per cwt. SALTPETHE.--600 bags Bombay chiefly sold: refraction 33 to 30h 38r to 33s 6d per cwt.

38s to 38s 6d per cwt.

33s to 38s 6d per cwt. COCHINEAL.—A large portion of 360 bags found buyers: Honduras silver, 2s 3d to 3s 5d; Teneriffe silver, 2s 10d to 3s; biack, 3s 4d to 3s 8d. Mexican and Honduras blacks bought in. GARSING.—1,514 bales were bought in at 17s 6d per cwt. OIL.—Cochin coccently by auction, sold at 55s 3d to 55s 6d; Ceyles, 53s 6d to 53s 9d. 467 casks palm part sold at 47s 3d to 55s 6d; Ceyles, 53s 6d to 53s 9d. 467 casks palm part sold at 47s 3d to 47s 6d per owt. Japan fish oil brought 291 to 31/5s per tun. TALLOW.—Town was reduced to 61s 9d. "X.C., 60s to 60s 6d; January to March, 61s. By auction, 35 chests South American were bought in. 107 casks Australian part sold at 56s 6d; to 55s 6d. 254 casks Petersburg unbracked taken in at 59s 6d per ewt.

ADDITIONAL NOTICES.

REFINED SUGAR .- There is no alteration worth noting in the hom

REFIRED SUGAR.—There is no alteration worth noting in the un-market for refined sugar. GREAN FRUIT.—Change of wind has brought arrivals. A parcel of Madeira oranges, sold by Keeling and Hunt at public sale, brought fair prices, quality being good. A cargo from Fayal will be offered this week. Messina lemons 2s per case lower. Black Spanish nots without alter-ation; Barcelona held for an advance, stock reduced; Para 2s per bar-rel higher. Almeria grappe, 30s to 40s per barrel, in accordance with multite and mondition. quality and condition.

quality and condition. Day Fautr.-In new currants nothing can be bought under 27s, and in old 25s seems to be the only price for all qualities. For fine new, 34s has been and for about 50 tons. The principal trads of the week has been in Gulf, which as 32s to 33s seems a very favourite description with dealers, being black and clean bold fruit. Valencias are quiet, but 42s continues the price. Figs have been offered at auction largely during

THE ECONOMIST.

the week. They are selling in large quantities, the quality being better and prices lower now than they have been for some years, with prospect of little or no supply for after Christmas trade. SEDS.—The supplies of seed have been moderate, and prices have been the sector.

well supported. English Woot.-There is more inquiry this week for English wools,

Enclaim Wools. The same as last week. COLONIAL AND FOREIGN WOOL.—The sales continue firm at opening prices for Australian wools. Some large lots of Caps of inferior descrip-tion have been withdrawn, as this sort is heavy, at a decline of 1d on last tion have been withdrawn, as this fort is neavy, at a decline of a on last sale's rates. FLAX.—Market firm. Have quiet at the quotations. SILE.—The large anticipated arrival of Chinas having taken place, there has been a good deal of business done at a reduction of about 9d to 1a 3d per ib. Good fine silk is very scarce. Bengal silk is still heavy. Tonacco.—A fair demand has existed for home trade descriptions, a single how members demonstrated for home trade descriptions.

d prices have remained unchanged. For exportation, sales have been

and prices have remained unchanged. For exportation, sales have been effected to some extent. TIMBER.—A very, heavy sapply of wood cargoes has filled the docks almost to overflowing, and with great delay in the discharging of ships. There is not much business to be expected before the year ends, and meantime the London prices do not admit of variation. Shipbuilding timber costinues high in price, and the supply of it is very limited. Staves are little noticed.

timber continues high in price, and the supply of it is very limited. Biaves are little noticed. PROVISIONS. There has been a rapid fall in the bacon market; trade very dull, and a further depreciation may be expected. Friesland quality very inferior; prices much lower.

METROPOLITAN CATTLE MARKET. THURBOAT, Nov. 22.—Only a moderate supply of beasts, chiefly in middling condition, was on offer in to-day's market. The few primes bused on alle were disposed of somewhas freely at Monday's currency. Otherwise the beef tade was heavy, at barely late rates. We were seantily applied with sheep, which moved of slowly at about previous rates. The cuilding of the sheep was by no means prime. The best calves were the tam desrer, but inferior yeal was a dull inquiry. Per 8 lbs to sink the offal.

HOP MARKET. FRIDAT, Nev. 23.—There is a better trade for all hops since the post-pensanet of the payment of hop duty, and many planters have withdrawn their new hops from sale, fine samples of which are very searce.

POTATO MARKET. SOUTHWARK WATERSDE, Monday, Nov. 19.—During the past week the strivals coastwise have been moderate, but large both foreign and by rail, and a further decline in prices has been the consequence. The following are this day's quotations:—York Regents, 110s to 130s; Lincolnshire ditto, 100s to 115s; Dumbar ditto, 120s to 140s; Perth, Forfar, and Fifeshire ditto, 100s to 115s; French whites, 100s to 110s; Belgian ditto, 90s to 95s; Dutch ditto, 50s to 90s per ton. THURBDAY, Nov. 22.—Since the wind shifted, large supplies of potatoes have come to hand by watar conveyance, and by rail average quantities

continue to arrive. The market in consequence is amply stored, and there is no improvement in trade in consequence, and prices have a lowering tondency, although there is no material change from Monday last. York Regents, from 110s to 130s; Kent and Ewsen ditto, 110s to 140s; Sortah ditto, 100s to 120s; Dunhars, 120s to 150s; French, 90s to 105s; Belgian, 80s to 85s; Prussian, 85s to 95s per ton.

HAY MARKETS.-THUBBDAY. SMITHFIELD.-Meadow hay, 21 10s to 51 10s; clover, 31 10s to 51 15s; and straw, 11 10s to 11 16s per load. Trade dull. CUMBERLAND.-Meadow hay, 22 10s to 51 10s; clover, 31 10s to 51 12s; and straw, 11 10s to 11 16s per load. A alow trade. WHITEOHAFEL.-Meadow hay, 22 10s to 51 10s; clover, 31 10s to 51 12s; and straw, 11 10s to 11 16s per load. Supply good and trade dull.

COAL MARKET. LIVERPOOL MARKETS.

WOOL.

WOOL, (FROM OUE OWN CORRESPONDENT.) FRIDAY, Nov. 23.—Although we cannot report a very active demand there is nevertheless a fair amount of business doing in all useful kinds of foreign, and prices show great firmness generally, and an upward tendency for such descriptions as are rather scarce. CORN.

CORN. (FROM OUR OWN COMINFORMET.) FRIDAT, Nov. 23.—The corn market was moderately attended. Fair consumptive inquiry for wheat at late raiss. Flour dull and without change. Indian corn and beans in moderate request, and a turn easier. Outs and oatmeal rather lower.

TUESDAY, Nov. 20. BANKRUPTS.

- T. Barson, Weining energy and the second seco

DEVERY LANE THEATHE.—The neat little comedy " Les Pattes de Mouche," which met with so favourable a reception when performed by the French company in the summer, was on Monday night produced in English guise at this theatre, as a two-act comedy, entitled "The Billet Doux." The peculiar quality of the original French piece was its extreme nestness, and the quiet manner in which the little complicated dilemma upon which it was based was developed. In the English piece a livelier vein has been introduced, and the part of the leading female agent, which in the hands of Mile. Delphine Fix was of the highest order of comedy, while Mr Charles Mathews assumed the smart intriguing vein, more appropriate to comsdict or farce. Sociert or Fixe Arss.—The lecture-session of the Society for the Encouragement of the Fine Arts was commenced on Thursday evening. The programme of the lectures of this society for the ssauon embraces every branch of the fine arts—painting, sculpture, architecture, music, &c.

EPITOME OF RAILWAY NEWS.

TRAFFIC REFURNS.—The traffic returns of railways in the United King dom for the week ending Nov.10 amounted to 514,020l, and for the corre sponding week of last year to 460,750l, showing an increase of 33,270l. The gross receipts of the eight railways having their termini in the metropolis amounted to 214,476l, and for the corresponding week of 1859 to 208,8984, showing an increase of 5,578l.

THE NEW RAILWAY STATION AT PINLICO.—The opening of the Viotoria station at Pimlico is a most desirable event in connection with the railway accommodation of the metropolis. The station is 1,000 feet long, its extreme width being 480 feet.

BAILWAY AND MINING SHARE MARKET. LONDON.

LONDON. MONDAT, Nov. 19.—The railway market was steady, but very inactive-business being generally suspended, owing to the uncertainty respecting the future course of the money market. In the colonial market the principal fluctaations were in Grand Trunk of Canada stock, which, after receding to 23, railied to 24 to 3. The ordinary bonds left off at 47 49, and the preference 77 to 79. Atlantic and St Lawrence abares were heavy, while Great Western of Canada improved. Few transactions cocurred in forsign descriptions. South Austrian and Lombardo-Venetian remained at § to § dis., while Pernambuco were a fraction better, at 4 to 35 dis. In American securities there was a considerable rise in the shares of the Illinois Central and New York and Eris. Mines were dull and occasionally lower. Joints stock bank shares, on the other hand, continued firm. In miscellameous descriptions a reduction took place in Mediterranean Extension Telegraph and Koyal Mail Steam.

and Koyal Mail Steam. TUESDAY, Nov. 20.—The railway market opened steadily, but a decline soon took place, from which there was no recovery. Nearly all the leading stooks closed a to 3 per cent lower. North-Eastern descriptions, however, and Sheffield alightly advanced. In colonial descriptions, a fall of 1 per cent. occurred in Grand Trunk of Canada stock, the last price being 223 to 234. Great Western shares also receded to 114 to 3. Foreign railways generally closed without change. South Anstrian and Lombardo-Venetian, however, were heavy at 1 to 3 dis., and Pernambuco at 44 to 33 dis. Nova Scotia Government bonds were quoted lower. In American securities, the shares of the Illinois Central and New York and Eris again advanced. Mines were steady at an occasional rise. Joint stock banks closed about the same as yesterday. In miscellancous descriptions there was an im-provement in London Discount, and a further decline in Royal Mail Steam. Victoria debentures, new, were last quoted 106 to 2; Canadian Five per Cents., 103 to 3.

Cents., 108 to $\frac{1}{4}$. WEDDEESDAT, Nov. 21.—British railway stocks were flat in the morning infaympathy with the provincial markets, but afterwards: allied with Console. After official hours, however, there was again a tendency to heariness, and the final prices were in some cases lower than yesterday. Lancashire and Yorkshire and South-Western, especially, receded $\frac{1}{2}$ to $\frac{1}{2}$ to Grand Trunk of Canada stock was again heavy, closing at 22¹ to 23. Great Western ahares remained at 11¹ to $\frac{1}{2}$. Foreign railways were in little demand, and almost the only change was a recovery in Lom-bardo-Venetian to $\frac{1}{2}$ to $\frac{1}{2}$ dis. In American securities the bonds of the Michigan Central improved. Mines were quiet, but in several instances showed an advance. Joint stock banks were also firmer. In miscellaneous descriptions, Royal Mail Steam shares again declined, while Mediteranean Extension Telegraph partially railied. THURSDAT, Nov. 23.—The railway market to-day showed increased firm-

Besteriptions, Royai Mail Steam shares again declined, While Mediseranean Extension Telegraph partially rallied.
 THURSDAY, Nov. 23.—The railway market to-day showed increased firmmas, and several stocks closed at an advance. Midland was oblefly in demand, and improved 1; per cest. The only fluctuations of importance in the colonial market were in Grand Trunk of Canada stock, which was to-day a fraction higher, at 22; to 23; Great Western shares were also in better damand. In foreign descriptions, South Austrian and Lombardo-Venetian improved to 1 to 5 discount. American railway securities were seensily steady; Pennsylvania Central bonds and shares, however, were slightly weaker. Mines were again firm. Bank shares continued with an upward tendency; Ottoman were quoted 18; to 4. In miscellaneous descriptions, Canada Land receded, while Royal Mail Steam recovered 17. Victoria debentures, new, 106; to 5; Canadian Zivo per Centa, 102; to 106].
 FRIDAY, Nov. 23.—The railway share market to-day was inactive. Prices generally steady. Caledonian stock were advanced 5 per sent. Great Westers and South-Eastern were firm, and Lancashire and Yorkshires, 114; to 5; South Eastern, 72 to 5; Midland, 132 to 1; Lancashire and Yorkshires, 114; to 5; South Eastern, 72 to 4; Midland, 132 to 54; and Great Northere, 114; to 5; to 7-16 dis. The Canadian and Indian lines were a little firster, as 9-16 to 7-16 dis. The Canadian and Indian lines were a little firster, as 9-16 to 7-16 dis. The Canadian and Indian lines were a little firster, as 9-16 to 7-16 dis.

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT. CHEAP, LIGHT AND DURABLE ROOFING. CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced off-cent and particularly applicable for warm climates lst. It is a non-conductor. Sud. It is portable, being packed in rolls, and not liable to damage in carriage. Red. It offers a saving of halt the timber usually re-quired.

extract. A converte a saving of main the tabler beauty re-quired. 46b. If can easily be applied by any any restantiated person. 46b. From its lightness, weighing only about 44 libs to the square of 100 feet, the cost of carriage is small. INODOROUTS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining from houses, to equalise the temperature. Price Oxe PEREY PER Square Fow. CROGGON and CO'S PATENT FELTED SHEATH-ING for Covering Blaip? Bettoms, &c., and DEY HAIR FELT, for Covering Steam Bollers, Pipes, &c., preventing the reliation of Hest, d saving 25 per cest, of Fuel.

ent. of Fael. Bamples, testimonials, and fall instruction on appli-ation to CBOGGON and CO, 3 Dowgate hill, London and at 3 Goree Plazzas, Liverpool.

DR DE JONGH'S (Knight of the Order of Leopold of Belgium) IGHT-BROWN COD LIVER OIL.

A Prescribed by the most Eminent Medical Men. the safest, speediest, and must effectual remedy for MesuParton, cHENGIE BORORENTS, ASTRAMA, COURD RHEUMATISM, GOUT, GENETIAT, DISEASES OF THE SHIT, RICHTE, INFANTURE WASTING, AND ALL SCHOPULOUS AFFECTIONS.

Extensive experience, and the recorded testimony of numberiess eminant medical practitioners, prove that a halfpint of Dr de Jongh's Oll is far mare efficacious than a quart of any other kind. Hence, as it is incom-parably the best, so it is likewise unquestionably the chaspest.

strong margest. Palatableness, speedy efficacy, safety, and scout nisely recommend this unrivalled preparation wallds. No other oil can possibly Fronton -and Renericial RESULTS.

Opinion of Sir HENNEY MANSH, Bart, M.D., T.C.D., Physician in Ordinary to the Queen, in Ireland; Presi-dent of the Royal College of Physicians in Ireland; Visiting Physician to Steverens' Hospital; Consulting Physician to the City of Dublin, St. Vincent, and Rotunda Hespitals, do., do. "I have frequently prescribed Dr de Jongh's Light Brown Cod Liver Oll I Consider it to be a very pure Oil, not likely to create disgust, and a therapsuic agent of great value. "Merrico Square, Dublin, "September 6, 1860."

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Fure White Zine Paint is cheaper than White Load. It is most durable and beautiful paint known, and does not stain or discolour with the London atmos-

CHEATNESS. — Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface here hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, well as desirable on every consideration.

well as desirable on every consideration. ADULTERATIONS. — Prejudices is caused by some Paint Grinders selling Zino Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cent. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint allogether. That Painters have never seen the best Zinc Paint is evident, or they would not use any other paint for their best work. To prevent the prejudice which the inferior article must produce, each Oak of Pure White Zinc is stamped "HUEBUCK, LONDON, PATENT."
