RIT is referred to by many students as being so career-oriented as to eliminate any interest in other creative or personal activities. RIT is one of the best higher education facilities in the U.S. today. It is true that the administration stresses education and goal orientation to develop the necessary career skills. This is the reason that most students come here. The students education does not begin or end in the classroom. What the student gets out of his/her education is a matter of personal choice. Many students are concerned about the poor quality of student life here on campus, but are unwilling to do anything about it. They cannot see past the apathy of the majority of the students and leave with bitter memories of campus life at the institute. Then there is the rest of the student body who take advantage of the activities available to the RIT community and leave the campus with fond memories and a well-rounded education.

The 1984 Techmila has tried to capture the diversity of the RIT student body and the campus community. It is a cross sectional view of what RIT has to offer and of how the student can take advantage of the multiplicity of events ongoing within the RIT community. This volume of Techmila is a synthesis of the people and events which have composed our lives and times here at RIT.

J. Payne

J. Payne

J. Payne

Career education is not just one among many formal institutional goals at RIT, nor is it a recently developed sideline. Since the mid 1880s, high quality preparation for careers has been our reason for existence, and at RIT we continually find new ways to prepare you for your future. For this reason, RIT today enrolls students from all 50 states and more than 50 nations.

While we have many exciting facts to share with you about RIT, there's one special word we'd like you to associate with RIT: quality. Why quality? Because our emphasis on careers goes hand-in-hand with excellent facilities, strong academic programs, talented faculty, and opportunities for personal development. We'd like to give you an initial look at the programs and services of Rochester Institute of Technology.

If we offered only a handful of academic programs, it would be easy to provide a "snapshot" view of study at RIT. But with the Institute's nine colleges, offering approximately 200 areas of study, it's hard to tell the story in just a few words. There are some characteristics, however, that describe all our academic programs. RIT has earned a reputation for its diversity, for the rigor of its programs, and for the exciting study opportunities that are available on and off campus.

RIT's diversity is readily seen in our list of program offerings. Study areas in the College of Science, for example, range from the traditional fields of chemistry and biology to such specialized career areas as nuclear medicine technology and biomedical computing. Within each of our colleges you'll find extensive course offerings, addressing many advanced topics and specialty areas. The chart on the inside of this brochure outlines the undergraduate program areas offered by each of our colleges.

Rigor, too, is a characteristic of study at RIT. Our standards are high. We take the educational process seriously and, as a result, our programs are thorough and demanding. At the same time, we provide you with the learning resources and support you need to succeed in your studies. You'll find that RIT's high standards are supported by excellent facilities, modern equipment, up-to-date teaching methods, and a faculty sensitive to your needs.

In closing, the school of printing is superior in all aspects and outrageous.

## Book Specifications

The 1984 *Techmila* has been published in a limited edition of two thousand copies with funds generated by the *Techmila* staff and an operating budget funded by the Student Directorate of the Rochester Institute of Technology. This is the eighty-third volume.

*Techmila* was printed by offset lithography by the Hunter Publishing Company of Winston-Salem, North Carolina. It is printed on Warren's Cameo Gloss, Dull, and Embossed (80 + 100#) stock. The duotones are printed in black and PMS 416 grey. The cover is a 2 part, "c" grade bookcloth, black, and lexetone grey. The end-sheets are 80lb grey carolina coverstock.

The headlines are set in Korinna and the body copy is set in Metrolite. The black and white reproductions throughout the book are printed with 150 line per inch screens. Folio has been over-run in 800 copies, bound in 12 point carolina coverstock.

FOLIO '84 is published by TECHMILA Rochester Institute of Technology, One Lomb Memorial Drive, Rochester, NY 14623. Folio is supported by the College of Fine and Applied Arts, the College of Graphic Arts and Photography and partially funded by the Student Directorate of Rochester Institute of Technology. All rights reserved.

FOLIO '84 is printed on sub 100 Warren Cameo dull coated stock by the Hunter Publishing Company Winston-Salem, North Carolina. Two thousand copies are distributed within TECHMILA '84, and a limited edition of 800 copies are adhesive bound tipped into 12 pt. Grey Carolina cover stock.

FOLIO Committee: Tom Baratz and Geoff Michaud, Editors.

John Payne photographed the 3-dimensional work using a 4x5 view camera, and a 2¼ camera to copy the 2-dimensional work.

#### COLLEGE OF FINE & APPLIED ARTS

Here is the home for more than 700 artists — students and faculty, apprentices and masters, a kaleidoscope world of talent, hard work and imagination. Here these artists have discovered the firm foundation and the abundant creative sources they need to develop and master their skills. Ebony, porcelain, oils, inks, silver, type, acrylics, silks, plaster, glass, pastels and sometimes technology emerge as artistic statements.

Medical Illustration

Medical illustration is a rapidly expanding field. RIT's program prepares the artist to make accurate statements visually, combining artistic proficiency with scientific information. Graduates go on to careers in the medical research field, in teaching hospitals or for publishers or community health programs.

A medical illustrator is a professional artist with biomedical training who furthers visual communications in science. Students must be admitted to this specialized program before enrolling in the School of Art and Design. At RIT, you'll be educated as an observer because you'll need the comprehension that comes with direct exposure to a subject before you can make your illustrations uniformly reliable and informative. Most of your time will be spent in practice rather than theory, and you'll view operating room techniques early in your education.

Ceramics

Being a potter I am involved in developing a unique vocabulary of form. But where is this form derived from. Presently, most of my inspirations come from my experience and my direct contact with forms in the external world. Objects, whether they are architectural, natural, or geometric present themselves to me. I observe them and try to capture their essence in my work. But the pot must retain, its pot identity, by reflecting its vessel history.

There is a constant dialogue that goes on between the clay and me. My work is a communicative device to reflect my thinking process. My present concern is to make functional pots; that is pots that fulfill an aesthetic function. But sometimes they acquire a utilitarian function as well.

Giving a material a new life is a constant challenge. It is a pursuit that keeps the mind and the body active. As I grow with time my objects will too. But at any given stage in my creative development the work should reflect me.

Tom Farbanish  
Glass

Hot glass involves learning the manual skills of glass blowing and mold blowing, both accomplished with a blow pipe and hand tools. Furnace construction and casting is also a part of your education here. A past class project involved building some of the glass furnaces that students now use in the program. As a freshman you'll start with basic glass blowing and cutting and grinding techniques. You'll be exposed to glass as a material, studying its properties, aesthetics and its ancient and contemporary history. Gaining competence in techniques that serve your ideas is paramount for you as a studio glass artist.

Inspiration the threshold between silence and light. Silence, the unmeasurable, desire to be, to express, the source of new need, meets light, the measurable giver of all presence. It is a total harmony felt without knowing, without reservation, without articism, without choice. It is a feeling of total harmony as though you were meeting your maker, the maker being that of nature, because nature is the maker of all that is made.

Sight then came about and through sight was felt the total harmony. Art, instantaneously felt, was the first word, the first utterance. It could have been, "Ah" just that. What a powerful word. It expresses so much with just so few letters.

All material in nature, the mountains, streams, the air and we, are made of light which has been spent, this crumpled mass called material cast a shadow, and the shadow belongs to light. From the shadow we see matter, feel matter, sense matter, the light received while in the confines of RIT's shadow, is unable to matter.

I was attracted to RIT by the spacious, well-equipped studio space and the world renown teaching staff in the Metalcrafts and Jewellery department. Through these people, Hans Christensen, Gary Griffen, Leonard Urso and others, my naivete to design, drawing, hollowware and jewelry began to develop into the vocabulary of form and skill that will provide a foundation for future learning and growth. These people along with other faculty members exposed me to the many different aspects of aesthetics. They also exposed me to a variety of new interests and areas of exploration which serve as building blocks for present and future works.

My work revolves around the natural forms found on the beaches of North Carolina, and from the architectural forms and spaces found in homes, bridges and buildings found all over the world.

I've grown tremendously both emotionally and professionally during my years at RIT, and I hope to continue this growth in the years to come.

Computer Engineering

The Department of Computer Engineering offers a Bachelor of Science degree and plans to begin offering masters degrees in the newly emerging discipline of computer engineering. The programs emphasize strong foundations in computer science, electrical engineering and mathematical sciences. It is upon these that the discipline of computer engineering emerges as a distinct entity in the study and development of integrated hardware/software systems. The study of programming languages, algorithms, and operating systems along with circuits, electronics, and system theory enable our graduates to apply an orderly algorithmic approach to the design of digital systems that incorporate significant processing elements. The study of these topics along with computer architecture in the departmental courses enable our students to effectively integrate applications objectives into VLSI (Very Large Scale Integrated circuit) designs. Experience in real time systems also enhances the image of our graduates. We have found our graduates to be very successful in the development of contemporary hardware/software systems.

## MUNSELL COLOR SCIENCE LABORATORY

INAUGURATED FEBRUARY 17, 1984

School of Photographic Arts & Sciences  
Rochester Institute of Technology

In 1983, the trustees of the Munsell Color Foundation, Inc. resolved to dissolve the foundation and transfer its assets to the establishment and operation of the Munsell Color Science Laboratory of R.I.T. The

Munsell Color Foundation, Inc. promotes education and research in color science. It was founded as a memorial to Professor Albert H. Munsell, founder of the Munsell Color Corporation and originator of the

Munsell Color Order System. The Laboratory operates under the leadership of Professor Franc Grum, R.I.T.'s first Richard S. Hunter Professor.

R.I.T.'s new degree program in micro-electronic engineering is unique in the nation. It is offered through the College of Engineering. Micro-electronic engineering combines coursework in electrical engineering, photoscience, physics, chemistry, and liberal arts. Dr. Fuller is director of the program. Pictured in the middle is an oxide semiconductor field effect transistor operational amplifier. This is a low power consumption, low noise, high gain amplifier. Top left is a microscopic enlargement of one trace from the above amplifier.

Factory of the Future.

This model of a flexible packaging manufacturer is a miniature factory designed and built in the industrial engineering laboratory of R.I.T.'s College of Engineering.

How lovingly, how joyously they worked  
In mosaic and marble, silver and gold;  
In the rich brown wood of a tree,  
In ivory,  
Leather and copper and glass,  
Those craftsmen of old.  
Today the mind of man has a thousand arms  
Ready to do his bidding. Fingers of steel  
Follow the delicate blueprint of a dream:  
Print, rivet, stitch a seam;  
By their own wonder make new wonders real.  
But still the hand that guides the sleek machine —  
The power saw, the drill press — or, above  
The earth's receding curves  
Pilots a plane,  
Is still the hand that serves,  
And work can still be done with joy, with love.

Allerest®, Desenex®, Cruex®, CaldeCORT®. In Rochester, they're more than popular brand names on drug store and supermarket shelves. As products of Pennwalt's Pharmaceutical Division, they, along with other consumer and prescription products, play an important part in Rochester's economy.

Over 700 people work at Pennwalt Pharmaceutical in the

development, manufacturing and marketing of quality health care products. Pennwalt takes pride in its contributions to America's good health and to Rochester's continuing economic growth.

**PROFESSIONALISM IS AT THE  
HEART OF EVERYTHING WE DO...**

**AND WHAT WE DO CAN PUT  
CHALLENGE AND REWARD  
INTO YOUR CAREER...**

A professional, supportive atmosphere which recognizes and rewards individual contributions... a modern, full-service 547-bed major teaching hospital affiliated with the University of Rochester... a caring environment where challenges match the variety of settings in which you can practice your skills. Rochester General Hospital is this and more.

Consider our competitive salary and benefits package... the kind you'd expect from a progressive setting where professionalism is at the heart of everything we do.

Investigate the many aspects of Rochester General Hospital. A phone call or letter could put you where you can be the professional you truly are.

**R.I.T. STUDENTS:**

Pastor Joe Burress & the members of

**VICTORY BAPTIST CHURCH**

invite you to attend services located at 32 Wildbriar Road.

**Key emphasis:**

- God's salvation for every person in every situation.
  - HEARING IMPAIRED—the building is equipped with sound amplification for the hearing impaired (induction loop utilizes hearing aids with a "T" position.)
  - MOBILITY IMPAIRED—the building is designed with no steps and is equipped to meet the needs of those persons confined to wheel chairs.
- Teaching and preaching the entire Word of God, the Bible, to people of all ages.
  - All services provided graded classes for children 2 years-adults.
  - Nursery care is provided & supervised by a Registered Nurse for all services.
- The family and the Lordship of Christ in the home.

**Schedule of Services:**

Sunday: Worship Services 8:30 AM & 11:00 AM  
Sunday School 9:45 AM  
Evening Service 7:00 PM  
Wednesday: Mid-Week Service 7:00 PM
