PREFACE.

THE purpose of this volume is to supply, in as compact a form as is consistent with clearness, the orthography, pronunciation, meaning, and etymology of all English words which are likely to be encountered by the general reader or the student. Words of an exclusively technical or scientific nature are in general omitted, — both to reserve space for the adequate treatment of words in general use, and because the limited class of persons who desire information of this kind would in any case refer to encyclopedias or glossaries devoted to an especial field.

Although the book is small, it will be found to contain a more copious vocabulary and fuller definitions of the essential words, than many dictionaries of greater bulk. The illustrations, which have been profusely used wherever they could aid the understanding of the subject, will be found in many cases to afford a clearer explanation than could be given by the use of words.

Arrangement of Words. — The great condensation of the book is due in part to the exclusion of definitions of derived words, which are in fact self-explanatory as soon as the root-word is thoroughly defined. For instance, under the vocabulary word **Blame** (p. 38), **Blamable** is defined, but not **Blamableness** or **Blamably**; **Blameless**, but not **Blamelessly** or **Blamelessness**; **Blameworthy**, but not **Blameworthiness**: the words, however, are given; also their pronunciation is invariably indicated by accents, or by respelling when necessary; so also is the part of speech, by the conventional signs uniformly employed. — But the principal saving of space is due to the system of referring words, formed upon a common prefix, to the first of these words which occurs alphabetically; explaining there the prefix fully and once for all. For example, the inseparable prefix **In-**, having a negative force, is fully accounted for in its regular alphabetical place; its euphonic changes (into **i-** before *gn-*; **il-** before *l-*; **im-** before *m* and *p*; and **ir-** before *r-*) are described; and then reference is made to the five vocabulary words under which such formatives are grouped: viz.: —

Ignoble , covering	13 words, and occupying	1/3 of a column.
Illaudable , covering	20 words, and occupying	1/3 of a column.
Immaculate , covering	132 words, and occupying	3 columns.
Inability , covering	415 words, and occupying	10 1/2 columns.
Irrational , covering	34 words, and occupying	1 1/2 columns.
Total	614 words, occupying	14 1/2 columns.

In the Unabridged Dictionary the corresponding words, as ascertained by measurement, fill 147 of its much ampler columns; and — by reason of the strictly alphabetical arrangement of that work — extend over 65 pages (words of different derivation being of course intermingled with them), as against 7 1/2 pages of this volume.

Another similar economy, which has effected the saving of much space, is illustrated by the following entry (p. 32): —

Be-, prefix, has sometimes an intensive force, as *besprinkle*. Prefixed to nouns or adjectives, it often has the meaning *to make*, and transforms them into verbs: thus **BEDIM**, **BEFOOL**, mean *to make dim*, *to make a fool of*. Sometimes it has the meaning of *by*, as **BESIDE**. For words beginning with **Be-** not found in this vocabulary, see the original word: thus, for **BEDAUB**, **BEDIM**, etc., see **DAUB**, **DIM**, etc.

A like saving has been effected in the case of many of these prolific prefixes. Thus, **Re-**, with its form **Red-**, having been accounted for (p. 335), the generality of words so constructed are

disposed of by the note: "It may be prefixed to almost any verb and many substantives, the word so formed being usually self-explanatory." Still, when a difference in either pronunciation or meaning has taken place, both forms are given and defined: for instance, **Recollect'** and **Recollect'** are combined in a single paragraph (p. 337), as being of identical derivation; but their widely divergent meanings are adequately defined; while their primitive meaning is left to be sought under **Collect**.

System of Grouping.—A saving similar to that made by associating words having the same prefix has been accomplished by consolidating into one paragraph words derived from the same root, *provided* they have the same initial letter. Thus, under the noun **Air** (p. 10) are given, first, the direct derivatives, the verb, **To Air**, the noun **Airing**, adjective **Airy**, adverb **Airily**, noun **Airiness**; then follow, alphabetically, the derived compounds—viz.: **Air'bath**, **-bed**, **-bladder**, etc.,—of which there are 16; and the result is that 21 words are adequately accounted for in 42 lines, although a space equal to 5 of these lines is given to an illustration showing the construction of an AIR-PUMP; whereas the corresponding words occupy just 200 lines of the broader columns of the Unabridged. Again, under **Water** (p. 499), this book covers 49 words in 190 lines, or about 2 columns, including 6 illustrations; while in the Unabridged the word and its derivations fill $7\frac{3}{4}$ columns, or 837 lines.—It must be explained, however, that, while words of identical etymology have been thus systematically grouped, great care has been taken to indicate the difference between words having the same spelling and pronunciation, but a different etymology. Thus, on page 399, there are 4 separate paragraphs headed **Sound**, both the meaning and origin of these words and their derivations being totally distinct. There are also 3 entirely different words, **Smack** (p. 392), yet of the same pronunciation. This point is dwelt upon because, in many elaborate dictionaries, words from totally different sources and of dissimilar meanings have been grouped as if they were of identical origin—which is hopelessly confusing to a student of the language.—It should, however, be understood that only words having the same initial letter are thus associated; but reference is made to cognate words, if they begin with a different prefix or compound, so as to show their common origin, however widely they may be separated alphabetically. For instance, the paragraph **Stand** (p. 410) includes 20 words and phrases which fall alphabetically under *stand*; and these fill but 55 lines, or about two thirds of a column. To trace out the significance of this group of allied words, the student should examine each of them, with its derivatives. For example, in the case of **STAND**, its derivatives **UNDERSTAND**, **UNDERSTANDING**, etc., are grouped among the 67 words associated under the leading word **Under**; as are **WITHSTAND**, etc., under **With**. By this system many pages have been saved in the aggregate. While words have been thus grouped in accordance with their etymologies, the etymologies themselves have necessarily been omitted, in order to secure the extreme brevity of the work. Those who desire the etymologies will find them given, with a fullness not sought in much bulkier works, in the slightly larger *Condensed Dictionary of the English Language*, of which the present volume is an abridgment.

Pronunciation.—The marks indicating pronunciation have been made as few and as simple as is consistent with clearness and precision. The leading word of each paragraph is respelled phonetically; but subsequent words within the paragraph are respelled only in instances where the pronunciation changes, or where for any reason it might be doubtful.*—An unmarked vowel, followed by a consonant in the same syllable, is short (as *am, end, in, odd, sun*): an unmarked vowel forming a syllable by itself, or ending a syllable, is long, or has its name sound (as *a, be, di-al, no, fu-el, by*); but *a*, not under the accent, forming or ending a syllable, has a brief sound of *a in far*, or in some cases a brief sound of long *a in fate*. Vowel sounds which are not thus explained by their position, also the sounds of such consonants as have more than one sound, are marked in accordance with the key-line at the foot of each two adjoining pages. The diacritical marks there employed are self-explanatory, with the exception of that which designates the nasal sound illustrated in the key-line by the French word *boxbox*. This *n* indicates that the preceding vowel is nasal, but care should be taken that the back part of the tongue is not pressed against the palate as is done in producing the English *ng*. For example, in making the French sound

* Where alternative pronunciations are given for the leading word, the choice between them is understood to apply to the subsequent words in the paragraph, unless these are otherwise marked. For instance, in the paragraph **Retroact** (p. 348), the pronunciation of the first two syllables of all words in the paragraph may be either *rĕ'tro-* or *rĕ'tro-*.

ON we may proceed as if about to say *ong* (as in *song*), but stop before the sound *ng* is produced. Similarly the other French nasal vowels can be produced.

For the sake of brevity, the second part of a compound word in the body of a paragraph is not respelled, if its true pronunciation is given in its alphabetical place in the vocabulary: thus, in the paragraph **Sheep** (p. 379), the compounds SHEEP-WALK, SHEEP'S-EYE, are presumed to require no respelling, since the few persons unaware of the pronunciation of the second word in the compound can seek it in its own place in the vocabulary. But in cases where there is a deviation from the sound of the original word, this is indicated by respelling, — as in HOUSEWIFE, under the vocabulary word **House** (p. 183). — In the large class of verbs and verbal adjectives spelled alike and terminating in *-ate* (as DEGENERATE, DUPLICATE, ELABORATE), the attempt has not been made to mark the different quantity of the *a* in the final syllable, which is always given its long sound, as found in the verb; but, in fact, it has a less prolonged sound in the adjectives, derived adverbs, and abstract nouns — approximating or falling into that of short *e*.

The editor's thanks are due to Mr. ZENAS W. BLISS, of The Riverside Press, Cambridge, Mass., for many valuable suggestions and criticisms made while the book was passing through the press under his critical eye.

The Appendix. — After the conclusion of the vocabulary, there is given an Appendix, which contains: —

I. A Pronouncing Vocabulary of Biblical, Classical, Mythological, Historical, and Geographical Proper Names.

II. Abbreviations used in Writing and Printing.

III. Arbitrary Signs used in Writing and Printing.

IV. Metric System of Weights and Measures.

Most of these sections require no explanation. But of the one devoted to proper names — including those which occur in Biblical, Classical, Egyptian, Hindoo, Modern, and Norse history and literature — the editor may explain that, after much inquiry, he was unable to find that such a collection had ever been made. Accordingly, starting upon the foundation of the Classical and Biblical vocabularies of Webster's Unabridged, and gathering from a variety of sources the names which occur in other literatures, he formed the consolidated *Pronouncing Vocabulary of Proper Names* (pp. 521-620). In this, the origin and pronunciation of all proper names which the reader is likely to encounter are indicated by the same system of marking employed in the body of the book.
