DESCRIPTIVE ANNUAL CATALOGUE
OF

BULBS

AND OTHER

FLOWERING ROOTS

WITH DIRECTIONS FOR THEIR

CULTURE AND MANAGEMENT

OFFERED BY

J. M. THORBURN & CO. 1025

Growers and Importers of Seeds. DUPLICATE

15 John Street, New York. EXCHANGED

LIBRARY OF CONGRESS
COPYRIGHT
No. _____
WASH.

Orders for BULBS should be forwarded from September to November, inclusive. In open Winter, or at the South, they may be planted as long as the ground can be worked.

All Orders sent before the first of October will be sure to be filled; after that time the supply of many sorts frequently become exhausted.

1872.

*The Following CATALOGUES are Published during the
Year :*

*No. 1.—Catalogue of VEGETABLE, AGRICULTURAL, &c., SEEDS,
ready in January.*

*No. 2.—Catalogue of FLOWER SEEDS containing Directions for
their Cultivation, with over 1,000 Varieties, ready in Feb-
ruary.*

*No. 3.—Catalogue of TREE and SHRUB SEEDS, with Directions
for their Cultivation, containing over 300 Varieties, ready
in February.*

*No. 4.—Catalogue of FRENCH HYBRID GLADIOLUS, and other
Spring Bulbs, ready in February.*

*No. 5.—Catalogue of DUTCH BULBOUS ROOTS, with Directions
for their Management, ready in September.*

*No. 6.—Catalogue and Almanac, with Directions for the Cultiva-
tion of Vegetables in the SOUTHERN STATES, ready in
November.*

 *TRADE LISTS of the above, for See I Merchants, published
in January, May, August and October.*

Entered according to Act of Congress, in the year 1872, by

JAMES M. THORBURN & CO..

In the office of the Librarian of Congress, Washington, D. C.

HYACINTHS.

The preferable season for planting HYACINTHS in the open ground, is in October and November, but they can be set out at any later time, as long as the ground is open and the Bulbs remain sound.

The best compost for the Bulbs is the following: One-third river or sea sand, one-third well rotted cow manure, and one-third good garden mould. The beds composed of the above compost should be well dug, to the depth of fourteen inches, and raised from two to four inches above the level of the walks, and in Winter may be covered with withered leaves, long manure, or with light earth formed of decayed leaves from the woods. They should be planted about four inches deep, and from six to eight inches apart. *To prevent mice from eating the bulbs, don't cover with litter until the ground has frozen hard.*

For the culture of HYACINTHS in pots, prepare the above compost, adding if possible, a quantity of leaf mould. The most favorable time for planting is September, October and November. The size of the pot depends upon the number of Bulbs planted in a single one; three or four Bulbs in a pot of six or seven inches in diameter, has a rich and massive effect; one or two Bulbs in each may be planted in proportionately smaller pots—two Bulbs in each is very effective, and generally preferred. In potting, each Bulb should remain two-thirds above the surface of the soil; when thus planted, water them well, to imbue the Bulbs firmly within the soil, allowing them to remain in this condition for one or two days; then bury the pots in the open ground to the depth of six inches, for six weeks, in which position the preparatory root-growth is made necessary to a vigorous development of their flower scapes. After the period adverted to, take up the pots and remove them to a greenhouse, or a room where fire is usually made, care being taken to screen the leaf-growth made in darkness for a few days after being disembedded. They will need moderate occasional watering, until they begin to grow, when they should have an abundance of air in mild weather, and plenty of water from the saucers whilst in a growing state.

For culture in glasses, the Bulbs should be so placed that only the base of each touch the water, then place them, for the first ten days, in a dark but cool closet or room, to promote the shooting of the roots, after which expose them to the light and air as much as possible; *avoid placing them near gas.* The water should be changed as it becomes impure; draw the roots entirely out of the glasses, rinse off the fibres in clean water, and wash the inside of the glass well. The water should never be allowed to freeze, as it would not only burst the glass, but cause the fibres to decay. When the Bulbs are well advanced, give them a soft shower of rain water every day. This causes the Bells to open rapidly, and enlarges the flowers. Single HYACINTHS generally succeed better in glasses than double ones, but those of the latter marked ** are also adapted for water.

Parties unacquainted with the different varieties, by stating with their order whether wanted for pot, glass or garden culture, will do well to leave the selection to us, as they may rest assured that such selection will be made in a most judicious and liberal manner.

Beautiful Collections of Bulbous Roots.

☞ These Assortments are made up only of fine and standard sorts that are known to give satisfaction.

No. 1.—ASSORTMENTS OF

6 Fine Named Double and Single Hyacinths, for pots, glasses or open border.....	}	\$2.50

HYACINTHS.

The Single Flowered Varieties are generally more effective than the Double ones, and, as a general rule, the former succeeds better than the latter in glasses.

The Double Varieties are distinguished by an asterisk (*).

All single Hyacinths succeed well in water, and those of the Double ones marked thus ** are also adapted for glasses.

DARK BLUE AND VIOLET HYACINTHS.

	EACH.		EACH.
*Albion, <i>cery dark, splendid</i>	\$0.35	L'Ami du Cœur, <i>violet blue</i>	\$0.20

		Reine Blanche, pure white	.40
		Rousseau, rosy eye	.25
		Semiramis, rosy eye	.25
		*Sceptre d'Or, yellow eye	.25
		*Sultan Achmet, pure white, with rosy eye	.35

TULIPS.

Our collection of beautiful TULIPS, will be found particularly worthy of notice; almost every variety and shade of color is now in them that was formerly to be found only in the oldest sorts of Florists' varieties.

Most of these TULIPS are equally well calculated for pot culture and for the flower-border. They can readily be brought forward for early bloom in the green-house, or even in the dwelling house; and in the Border they group admirably with other varieties of Early Bulbs, or form by themselves most beautiful contrasts of color, when planted upon the bedding system.

EARLY FLOWERING, or BEDDING TULIPS.

Admirably adapted for culture in pots, edgings or beds, flowering immediately after the Duc Van Thols.

	each.	per doz.
Abbesse de St. Denis, red and white.....	\$0.08	\$0.75

AMARYLLIS.

These Bulbs, which are so remarkable for their beautiful flowers, should be cultivated in-doors, and but moderately watered, unless they show indications of flowering. The soil most suitable for their culture is a good, friable, highly-decomposed turfy loam, with one-fourth part of rich leaf mould or pulverized manure, and the ordinary proportion of sand in mixture.

NEW HYBRID PRIZE SORTS, *most beautiful collection*, \$10.00 each.

	each.
Atamasco, <i>changeable, from pink to white</i>	\$0.15

Vittata, <i>striped, white and red</i>	1.25

ARUM.

The following varieties are for the green-house, except the A. Dracunculus, which is hardy, and a very curious species; the stalks of the leaves are spotted with brown and purple, like the body of a snake. The others should be potted in the Autumn, and kept dormant until Spring.

	each.
Crininum, <i>eccentric and beautiful</i>	\$1.00
Dracunculus (Dragon Flower), <i>brown</i>20
Tenuifolia, <i>fennel-leaved</i>75

CROCUS.

FOR POTS AND BORDERS.

A universal favorite, being one of the earliest ornaments of the Garden, neat, dwarf, and compact in growth.

For flowering in Pots, Hedge-hogs, Baskets, &c., they should be plunged in the open ground for three weeks after planting, precisely in the same manner as directed for Hyacinths.

	per doz.	per 100.

Maximus, <i>bright crimson, very showy</i>		
Mixed colors.....	per doz.	

CYCLAMENS.

Are among the most desirable Bulbs for Winter-house blooming; of very neat, compact habit, rich variegated foliage and unique flowers, continuing to bloom for nearly three months. They are easily cultivated in pots, and should be planted by September, and allowed to dry away in May, keeping the Bulbs in sand through the Summer.

GLADIOLUS.

The following varieties are the only sorts to be had at this season of the year, and they are generally planted in pots in Autumn, and require to be kept in a warm room or Green-house, except those * which are hardy and may be planted out; it is best, however, to give them a slight protection.

The FRENCH HYBRIDS, for Spring planting, will be in by November. These form a family of Bulbs of rare beauty. Splendid varieties have been originated within the last five or six years by hybridation. Every year is now adding varieties of most exquisite tint and shade; and from the time of year at which they bloom, and the long continuance of their flowers in perfection, they become one of the greatest ornaments of the Garden, at a season when flowers of vivid tint are scarce. Very valuable flowers for vases.

Descriptive Catalogue of 100 varieties will be ready in January.

ISMENE.

A Green-house Bulb, adapted also for open air culture in the Summer, and having an Amaryllis-like habit, and handsome, funnel-shaped, richly fragrant blossoms. They should be potted in the Autumn, and kept dormant till early Spring, and then planted in a very sandy, dry border.

	Each.
Calathina, <i>white</i>	\$.40
Undulata, <i>white</i>30

IXIAS.

Are tender, but beautiful and picturesque; of a wide range of colors—some two or three blended in the same flower. They are most effective when planted in stores of three and six in a pot, from three to five inches in diameter. They should be freely watered within twelve hours after planting. After that period the rule of management should be in seldom but free waterings, for a month or six weeks, until the root-growth is formed. It is a good plan to plunge the pots in dry ashes or gravel, within a pit or frame, exposed in all mild weather by day and night, but protected externally with mats or straw from intense frost.

LILIUM, (Lilies.)

FOR THE GARDEN.—*Not ready till the 1st to the 15th of October.*

These require very little care—the principal thing, indeed, to be attended to is to forbear disturbing them too often. All these kinds when once planted should be left as long as possible untouched. The Auratum cannot bear manure; ordinary light soil suits them best. We should call particular attention to the LILIUM LANCIFOLIUM (Japan Lily) as the most magnificent species; and the varieties, though very distinct, are almost equally handsome. They are remarkable on account of the clear, deep rose color of their flowers, which are all rugged with rubies and garnets, and sparkle with crystal points.

	Each.	ꝑ doz.
AURATUM (GOLDEN JAPAN LILY), <i>white ground with purple spots flaked and striped with gold, 4 to 6 feet high</i>	\$0.40	\$4.00

SNOWDROPS.

Perhaps no Spring Flower is a more general favorite than the SNOWDROP. The earliest flowering of its varieties is the common Single sort, which is also very graceful and beautiful, commencing to bloom before the snow is fairly off of the ground in the Spring; this is succeeded by the double-flowered variety with its elegant drooping snow-white blossoms.

	ꝓ doz.	ꝓ 100.
Galanthus nivalis, (<i>Single Snowdrops</i>).....	\$0.30	\$1.75
