V. Part of a Letter from the Reverend Mr. Samuel Carte, Rector of St. Margaret's Parish in Leicefter, to Mr. Humfrey Wanley, F. R. S. Concerning an Ancient Tessellated, or Mosaic Work. at Leicester.

SIR.

Take this Opportunity to fend you a draught, made by one Benjamin Garland, of the Opus Tessellatum, full extant in a Cellar here, over against the Elm Trees, near All-Saints Church. It is generally called Action, by such Authors as mention it; but the bare Inspection of it will convince you, that it is a Representation of the Fable, which fays, that a Person having found fault with Venus, she, to be revenged of him, engaged her Son Cupid to make him fall in Love with a Monfter.

It was first discovered about 40 Years ago, upon digging of the Cellar, at about a Yard and half under the common present Surface of the Earth. What extent the whole Pavement was of is not known; but this Figure, which, by order of the Master of the House, was preserved, is an Octogon, surrounded by a List, as you See the Fi- see in part represented in the corners of the Picture herewith fent you. Without this, tho' not here represented. is a Twist or Wreath of various Colours; and round that, is a fecond List like the former. These two Lists, with the Wreath between them, are 6 Inches and a thoroad. The downright and transverse Diamet rs of the Area are just a Yard; but the others, leading from corner to corner, are a Yard and two Inches and an half. The Man, from Head to Foot, is two Foot and 4 1 Inches. Cupid feems

gure.

(325)

feems to be two Foot; but his Feet, as well as the bottom of the Monster, are spoiled, the Tessellæ representing them being gone. You will easily understand, that the whole Area of the Figure, which is here left blank, ought to be fill'd up with white Tessellæ, in like manner as you see some Intervals of the Figures here. I hope, that what foregoes, will serve to give you a just Idea of this Piece of Antiquity, but forbear to make any Reslections on it, as knowing that your Genius and Studies qualify you for that much better than my self. I am,

Sir,

Leicester, August 7: 1710. Your Affectionate Friend and humble Servant,

SAMUEL CARTE

VI. An Account of the Repetition of an Experiment of the late Dr. Hooke's, concerning two Liquors, which, when mixt together, will possess less space, than when separate: With another Experiment confirming the same. By Mr. F. Hauksbee, F.R. S.

HE Experiment related by the late Ingenious Experimentor Dr. Hooke, in one of his Papers (delivered to me by Mr. Waller) is concerning two Liquors, which, when mixt together, would possess sefs space than when separate; which he calls a Penetration of Dimensions: And adds surther, that this Penetration is the cause of Heat, of Fire, of Flame, of the Power of Heat,
