## INTRODUCTION.

The present volume contains the meteorological observations made at the central meteorological observatory and all the stations in Japan during the month of January, 1915.

All observations and computations have been conducted uniformly throughout the empire, according to the instructions given by the central meteorological observatory. Among the instructions, the following are in particular to be noted.

*Hours of Observations.*—The Central Standard Time (mean time of the meridian 135° E.) is adopted in all localities, except in Taiwan and Manchuria, where the Western S. T. i. e. mean time of the meridian 120° E. is followed. For Sunshine duration the apparent solar time is used.

*Pressure.*—The barometric readings in millimetres are reduced only to freezing point, unless otherwise stated; the corrections to sea level and to standard gravity are given at the bottom of the respective pages.

*Temperature.*—The degrees are given in Centigrade; those below zero are shown by adding 100 to avoid the minus sign; thus 99° for -1°, 95° for -5°, etc.

*Days with Precipitation.*—The number of days with precipitation is counted only when the amount is 0.1 mm or more in a day; but for those days with either snow, hail or graupel, the amount is not taken into consideration.

*Clear and Cloudy Days.*—The mean amount of cloud for a clear day is less than 2 exclusive, and for a cloudy day is more than 8 inclusive.

*Days with Gales.* —As such are counted the days on which the maximum velocity reaches or exceeds 10 metres per second.

The occurrence of phenomena is recorded with international symbols.
