DATE ISSUED TO

**This book must not  
be taken from the  
Library building.**

This work was presented to the Department of Botany through W. C. Coker on Nov. 16, 1945, by Mrs. R. F. Willingham, Hotel Robert E. Lee, Winston-Salem, N. C. Mrs. Willingham was Miss Rosa Eleanor Fries, a double first cousin of Miss Adelaide Fries, through whose good offices the book was presented.

The first 3 volumes <sup>+ vol. 5</sup> are ~~said by Miss Fries to be~~ in the possession of The Academy of Natural Sciences of Philadelphia, where are also his herbarium and many of his books. Miss Fries says the other three volumes contain original drawings but, according to her rather vague memory, they were not in color.

We find from this volume that 33 figures shown herein appear also in Conspectus Fungorum of Albertini and Schweinitz (1805), which we have. There is nothing in this volume to show when it was produced or that Schweinitz was the author, but on the fly-leaf is written in pencil "Lewis D. de Schweinitz Drawn & painted by him at Niesky." The book was inherited from his collections by the ladies above mentioned, who are great granddaughters of de Schweinitz.

Miss Adelaide Fries tells W. C. Coker on Nov. 17, 1945, that the signature using the "de" rather than "von" was not due to his having married a Frenchwoman but because at that time, when practically all scientific work was in Latin, it was supposed that "de" was more appropriate for Latin than "von."
